

# Ellipse

STUDY FOR FE

Compare these equations with the ones in NCEES® FE Handbook?

## Standard Equation:

$$\frac{(x-h)^2}{a^2} + \frac{(y-k)^2}{b^2} = 1$$

**Center**  $(h, k)$

**Vertices**  $(h \pm a, k)$   $(h, k \pm b)$

**Eccentricity < 1**  $e = \sqrt{1 - \left(\frac{b^2}{a^2}\right)} = \frac{c}{a}$

$$c^2 = a^2 - b^2$$

**Focus**  $(h \pm c, k)$

**Directrix**  $x = h \pm \frac{a}{e} = h \pm \frac{a^2}{c}$

- Circle has eccentricity = 0
- Ellipse has + sign between squares.
- 'a' is always greater than 'b'
- If 'a' shows up under 'x<sup>2</sup>', we have a wide/fat ellipse.

# Ellipse

STUDY FOR FE

This form is not given in NCEES® FE Handbook?

## Standard Equation:

$$\frac{(x-h)^2}{b^2} + \frac{(y-k)^2}{a^2} = 1$$

Center  $(h, k)$

Vertices  $(h, k \pm a)$   $(h \pm b, k)$

Eccentricity  $< 1$   $e = \sqrt{1 - \left(\frac{b^2}{a^2}\right)} = c/a$

$$c^2 = a^2 - b^2$$

Focus  $(h, k \pm c)$

Directrix  $y = k \pm \frac{a}{e} = k \pm \frac{a^2}{c}$

- Ellipse has + sign between squares.
- 'a' is always greater than 'b'
- If 'a' shows up under 'y<sup>2</sup>', we have a tall/slim ellipse.
