

# Climate Warriors: Extensions

LEVEL UP your coding skills with [Prodigy Learning](#) and their [Coding Credentials](#) program! The agent is an amazing resource in Minecraft that is often under-utilized by students. Consider checking out Prodigy Learning and their coding courses, and revisiting the lesson to use the agent to help with design challenges, such as building an elevator or creating a labyrinth in the museum gardens.

## Credentials & Curriculum Pathway

## Other Extension Ideas:

- Consider bringing this lesson back home to Canada and letting students open a world and locate a village near a tree line or forest.
- Once they locate the village they can practice and determine a code that would see their AGENT build a firewall, or other protective measures in the event of a fire in the nearby forest.
- Set the trees on fire to simulate a forest fire and have students run their code to demonstrate the effectiveness of their solution.
- Ask students to demonstrate or discuss with you the similarities and differences involved in other natural disasters. How do floods compare? High winds?
- Are their similar solutions that work for most climate disasters and can student build demonstrations of those common solutions?
