

Possible Science Island 2021 Extensions:

- Students can master coding in Minecraft with Prodigy Learning's "Coding in Minecraft" here <https://codingcredentials.com/> Then, CODE using the AGENT a 6th and final experiment on the undeveloped piece of Science Island. Perhaps they can code the agent to build their lab setting and determine why errors occurred along the way and adjust their coding accordingly.

Credentials & Curriculum Pathway

- Students can create a 6th experiment on the undeveloped part of Science Island in creative mode to illustrate their ability to construct an experiment to test a game feature as a hypothesis if their teacher feels this is an essential skill extension.
- Visit some of the famous scientists that line the link between islands to learn more about how they impact society even today with their legendary work. Perhaps choose one for an in-depth dive into their life, discoveries and their impact long after their lifetime.
