Total commodity contracts	**34,360**	**(26,530)**	**7,830**	43,232	(34,799)	8,433
Derivative payables with appropriate legal opinions	**$ 1,144,452**	**$ (1,102,835)** [c]	**$ 41,617**	$ 1,592,147	$ (1,542,857) [c]	$ 49,290
Derivative payables where an appropriate legal opinion has not been either sought or obtained	**15,697**		**15,697**	21,366		21,366
Total derivative payables recognized on the Consolidated Balance Sheets	**$ 1,160,149**		**$ 57,314**	$ 1,613,513		$ 70,656

(a) The prior period amounts have been revised. This revision had no impact on the Firm's Consolidated Balance Sheets or its results of operations.
(b) Exchange traded derivative balances that relate to futures contracts are settled daily.
(c) Included netted cash collateral receivables of $52.1 billion and $60.7 billion related to OTC and OTC-cleared derivatives at December 31, 2013, and December 31, 2012, respectively.

In addition to the cash collateral received and transferred that is presented on a net basis with net derivative receivables and payables, the Firm receives and transfers additional collateral (financial instruments and cash). These amounts mitigate counterparty credit risk associated with the Firm's derivative instruments but are not eligible for net presentation, because (a) the collateral is non-cash financial instruments (generally U.S. government and agency securities and other G7 government bonds), (b) the amount of collateral held or transferred exceeds the fair value exposure, at the individual counterparty level, as of the date presented, or (c) the collateral relates to derivative receivables or payables where an appropriate legal opinion has not been either sought or obtained.

The following tables present information regarding certain financial instrument collateral received and transferred as of December 31, 2013 and 2012, that is not eligible for net presentation under U.S. GAAP. The collateral included in these tables relates only to the derivative instruments for which appropriate legal opinions have been obtained; excluded are (i) additional collateral that exceeds the fair value exposure and (ii) all collateral related to derivative instruments where an appropriate legal opinion has not been either sought or obtained.

Derivative receivable collateral

	2013			2012		
December 31, (in millions)	Net derivative receivables	Collateral not nettable on the Consolidated balance sheets	Net exposure	Net derivative receivables	Collateral not nettable on the Consolidated balance sheets	Net exposure
Derivative receivables with appropriate legal opinions	**$ 50,025**	**$ (12,414)** [(a)]	**$ 37,611**	$ 45,982	$ (11,350) [(a)]	$ 34,632

Derivative payable collateral[(b)]

	2013			2012		
December 31, (in millions)	Net derivative payables	Collateral not nettable on the Consolidated balance sheets	Net amount[(c)]	Net derivative payables	Collateral not nettable on the Consolidated balance sheets	Net amount[(c)]
Derivative payables with appropriate legal opinions	**$ 41,617**	**$ (6,873)** [(a)]	**$ 34,744**	$ 49,290	$ (20,109) [(a)]	$ 29,181

(a) Represents liquid security collateral as well as cash collateral held at third party custodians. For some counterparties, the collateral amounts of financial instruments may exceed the derivative receivables and derivative payables balances. Where this is the case, the total amount reported is limited to the net derivative receivables and net derivative payables balances with that counterparty.

(b) Derivative payable collateral relates only to OTC and OTC-cleared derivative instruments. Amounts exclude collateral transferred related to exchange-traded derivative instruments.

(c) Net amount represents exposure of counterparties to the Firm.

Liquidity risk and credit-related contingent features

In addition to the specific market risks introduced by each derivative contract type, derivatives expose JPMorgan Chase to credit risk – the risk that derivative counterparties may fail to meet their payment obligations under the derivative contracts and the collateral, if any, held by the Firm proves to be of insufficient value to cover the payment obligation. It is the policy of JPMorgan Chase to actively pursue, where possible, the use of legally enforceable master netting arrangements and collateral agreements to mitigate derivative counterparty credit risk. The amount of derivative receivables reported on the Consolidated Balance Sheets is the fair value of the derivative contracts after giving effect to legally enforceable master netting agreements and cash collateral held by the Firm.

While derivative receivables expose the Firm to credit risk, derivative payables expose the Firm to liquidity risk, as the derivative contracts typically require the Firm to post cash or securities collateral with counterparties as the fair value of the contracts moves in the counterparties' favor or upon specified downgrades in the Firm's and its subsidiaries' respective credit ratings. Certain derivative contracts also provide for termination of the contract, generally upon a downgrade of either the Firm or the counterparty, at the fair value of the derivative contracts. The following table shows the aggregate fair value of net derivative payables related to OTC and OTC-cleared derivatives that contain contingent collateral or termination features that may be triggered upon a ratings downgrade, and the associated collateral the Firm has posted in the normal course of business, at December 31, 2013 and 2012.

OTC and OTC-cleared derivative payables containing downgrade triggers

December 31, (in millions)	**2013**	2012
Aggregate fair value of net derivative payables	**$ 24,631**	$ 40,844
Collateral posted	**20,346**	34,414

The following table shows the impact of a single-notch and two-notch downgrade of the long-term issuer ratings of JPMorgan Chase & Co. and its subsidiaries, predominantly JPMorgan Chase Bank, National Association ("JPMorgan Chase Bank, N.A."), at December 31, 2013 and 2012, related to OTC and OTC-cleared derivative contracts with contingent collateral or termination features that may be triggered upon a ratings downgrade. Derivatives contracts generally require additional collateral to be posted or terminations to be triggered when the predefined threshold rating is breached. A downgrade by a single rating agency that does not result in a rating lower than a preexisting corresponding rating provided by another major rating agency will generally not result in additional collateral, except in certain instances in which additional initial margin may be required upon a ratings downgrade, or termination payment requirements. The liquidity impact in the table is calculated based upon a downgrade below the lowest current rating of the rating agencies referred to in the derivative contract.

Liquidity impact of downgrade triggers on OTC and OTC-cleared derivatives

	2013		2012	
December 31, (in millions)	Single-notch downgrade	Two-notch downgrade	Single-notch downgrade	Two-notch downgrade
Amount of additional collateral to be posted upon downgrade[(a)]	**$ 952**	**$ 3,244**	$ 1,234	$ 4,090
Amount required to settle contracts with termination triggers upon downgrade[(b)]	**540**	**876**	857	1,270

(a) Includes the additional collateral to be posted for initial margin. Prior period amounts have been revised to conform with the current presentation.
(b) Amounts represent fair value of derivative payables, and do not reflect collateral posted.

Impact of derivatives on the Consolidated Statements of Income

The following tables provide information related to gains and losses recorded on derivatives based on their hedge accounting designation or purpose.

Fair value hedge gains and losses

The following tables present derivative instruments, by contract type, used in fair value hedge accounting relationships, as well as pretax gains/(losses) recorded on such derivatives and the related hedged items for the years ended December 31, 2013, 2012 and 2011, respectively. The Firm includes gains/(losses) on the hedging derivative and the related hedged item in the same line item in the Consolidated Statements of Income.

	Gains/(losses) recorded in income			Income statement impact due to:	
Year ended December 31, 2013 (in millions)	Derivatives	Hedged items	Total income statement impact	Hedge ineffectiveness[e]	Excluded components[f]
Contract type					
Interest rate[a]	**$ (3,469)**	**$ 4,851**	**$ 1,382**	**$ (132)**	**$ 1,514**
Foreign exchange[b]	**(1,096)** [d]	**864**	**(232)**	**–**	**(232)**
Commodity[c]	**485**	**(1,304)**	**(819)**	**38**	**(857)**
Total	**$ (4,080)**	**$ 4,411**	**$ 331**	**$ (94)**	**$ 425**

	Gains/(losses) recorded in income			Income statement impact due to:	
Year ended December 31, 2012 (in millions)	Derivatives	Hedged items	Total income statement impact	Hedge ineffectiveness[e]	Excluded components[f]
Contract type					
Interest rate[a]	$ (1,238)	$ 1,879	$ 641	$ (28)	$ 669
Foreign exchange[b]	(3,027) [d]	2,925	(102)	–	(102)
Commodity[c]	(2,530)	1,131	(1,399)	107	(1,506)
Total	$ (6,795)	$ 5,935	$ (860)	$ 79	$ (939)

	Gains/(losses) recorded in income			Income statement impact due to:	
Year ended December 31, 2011 (in millions)	Derivatives	Hedged items	Total income statement impact	Hedge ineffectiveness[e]	Excluded components[f]
Contract type					
Interest rate[a]	$ 532	$ 33	$ 565	$ 104	$ 461
Foreign exchange[b]	5,684 [d]	(3,761)	1,923	–	1,923
Commodity[c]	1,784	(2,880)	(1,096)	(10)	(1,086)
Total	$ 8,000	$ (6,608)	$ 1,392	$ 94	$ 1,298

(a) Primarily consists of hedges of the benchmark (e.g., London Interbank Offered Rate ("LIBOR")) interest rate risk of fixed-rate long-term debt and AFS securities. Gains and losses were recorded in net interest income. The current presentation excludes accrued interest.

(b) Primarily consists of hedges of the foreign currency risk of long-term debt and AFS securities for changes in spot foreign currency rates. Gains and losses related to the derivatives and the hedged items, due to changes in foreign currency rates, were recorded in principal transactions revenue and net interest income.

(c) Consists of overall fair value hedges of physical commodities inventories that are generally carried at the lower of cost or market (market approximates fair value). Gains and losses were recorded in principal transactions revenue.

(d) Included $(556) million, $(3.1) billion and $4.9 billion for the years ended December 31, 2013, 2012 and 2011, respectively, of revenue related to certain foreign exchange trading derivatives designated as fair value hedging instruments.

(e) Hedge ineffectiveness is the amount by which the gain or loss on the designated derivative instrument does not exactly offset the gain or loss on the hedged item attributable to the hedged risk.

(f) The assessment of hedge effectiveness excludes certain components of the changes in fair values of the derivatives and hedged items such as forward points on foreign exchange forward contracts and time values.

Cash flow hedge gains and losses

The following tables present derivative instruments, by contract type, used in cash flow hedge accounting relationships, and the pretax gains/(losses) recorded on such derivatives, for the years ended December 31, 2013, 2012 and 2011, respectively. The Firm includes the gain/(loss) on the hedging derivative and the change in cash flows on the hedged item in the same line item in the Consolidated Statements of Income.

	Gains/(losses) recorded in income and other comprehensive income/(loss)[c]				
Year ended December 31, 2013 (in millions)	Derivatives – effective portion reclassified from AOCI to income	Hedge ineffectiveness recorded directly in income[d]	Total income statement impact	Derivatives – effective portion recorded in OCI	Total change in OCI for period
Contract type					
Interest rate[a]	**$ (108)**	**$ –**	**$ (108)**	**$ (565)**	**$ (457)**
Foreign exchange[b]	**7**	**–**	**7**	**40**	**33**
Total	**$ (101)**	**$ –**	**$ (101)**	**$ (525)**	**$ (424)**

	Gains/(losses) recorded in income and other comprehensive income/(loss)[c]				
Year ended December 31, 2012 (in millions)	Derivatives – effective portion reclassified from AOCI to income	Hedge ineffectiveness recorded directly in income[d]	Total income statement impact	Derivatives – effective portion recorded in OCI	Total change in OCI for period
Contract type					
Interest rate[a]	$ (3)	$ 5	$ 2	$ 13	$ 16
Foreign exchange[b]	31	–	31	128	97
Total	$ 28	$ 5	$ 33	$ 141	$ 113

	Gains/(losses) recorded in income and other comprehensive income/(loss)[c]				
Year ended December 31, 2011 (in millions)	Derivatives – effective portion reclassified from AOCI to income	Hedge ineffectiveness recorded directly in income[d]	Total income statement impact	Derivatives – effective portion recorded in OCI	Total change in OCI for period
Contract type					
Interest rate[a]	$ 310	$ 19	$ 329	$ 107	$ (203)
Foreign exchange[b]	(9)	–	(9)	(57)	(48)
Total	$ 301	$ 19	$ 320	$ 50	$ (251)

(a) Primarily consists of benchmark interest rate hedges of LIBOR-indexed floating-rate assets and floating-rate liabilities. Gains and losses were recorded in net interest income.

(b) Primarily consists of hedges of the foreign currency risk of non-U.S. dollar-denominated revenue and expense. The income statement classification of gains and losses follows the hedged item – primarily noninterest revenue and compensation expense.

(c) The Firm did not experience any forecasted transactions that failed to occur for the years ended December 31, 2013, 2012 or 2011.

(d) Hedge ineffectiveness is the amount by which the cumulative gain or loss on the designated derivative instrument exceeds the present value of the cumulative expected change in cash flows on the hedged item attributable to the hedged risk.

Over the next 12 months, the Firm expects that $4.6 million (after-tax) of net losses recorded in AOCI at December 31, 2013, related to cash flow hedges will be recognized in income. The maximum length of time over which forecasted transactions are hedged is 10 years, and such transactions primarily relate to core lending and borrowing activities.

Net investment hedge gains and losses

The following tables present hedging instruments, by contract type, that were used in net investment hedge accounting relationships, and the pretax gains/(losses) recorded on such instruments for the years ended December 31, 2013, 2012 and 2011.

	Gains/(losses) recorded in income and other comprehensive income/(loss)					
	2013		2012		2011	
Year ended December 31, (in millions)	Excluded components recorded directly in income[a]	Effective portion recorded in OCI	Excluded components recorded directly in income[a]	Effective portion recorded in OCI	Excluded components recorded directly in income[a]	Effective portion recorded in OCI
Contract type						
Foreign exchange derivatives	**$ (383)**	**$ 773**	$ (306)	$ (82)	$ (251)	$ 225
Foreign currency denominated debt	**–**	**–**	–	–	–	1
Total	**$ (383)**	**$ 773**	$ (306)	$ (82)	$ (251)	$ 226

(a) Certain components of hedging derivatives are permitted to be excluded from the assessment of hedge effectiveness, such as forward points on foreign exchange forward contracts. Amounts related to excluded components are recorded in current-period income. The Firm measures the ineffectiveness of net investment hedge accounting relationships based on changes in spot foreign currency rates, and therefore there was no ineffectiveness for net investment hedge accounting relationships during 2013, 2012 and 2011.

Gains and losses on derivatives used for specified risk management purposes

The following table presents pretax gains/(losses) recorded on a limited number of derivatives, not designated in hedge accounting relationships, that are used to manage risks associated with certain specified assets and liabilities, including certain risks arising from the mortgage pipeline, warehouse loans, MSRs, wholesale lending exposures, AFS securities, foreign currency-denominated liabilities, and commodities-related contracts and investments.

	Derivatives gains/(losses) recorded in income		
Year ended December 31, (in millions)	**2013**	2012	2011
Contract type			
Interest rate[a]	**$ 617**	$ 5,353	$ 8,084
Credit[b]	**(142)**	(175)	(52)
Foreign exchange[c]	**1**	47	(157)
Commodity[d]	**178**	94	41
Total	**$ 654**	$ 5,319	$ 7,916

(a) Primarily relates to interest rate derivatives used to hedge the interest rate risks associated with the mortgage pipeline, warehouse loans and MSRs. Gains and losses were recorded predominantly in mortgage fees and related income.

(b) Relates to credit derivatives used to mitigate credit risk associated with lending exposures in the Firm's wholesale businesses, and single-name credit derivatives used to mitigate credit risk arising from certain AFS securities. These derivatives do not include the synthetic credit portfolio or credit derivatives used to mitigate counterparty credit risk arising from derivative receivables, both of which are included in gains and losses on derivatives related to market-making activities and other derivatives. Gains and losses were recorded in principal transactions revenue.

(c) Primarily relates to hedges of the foreign exchange risk of specified foreign currency-denominated liabilities. Gains and losses were recorded in principal transactions revenue and net interest income.

(d) Primarily relates to commodity derivatives used to mitigate energy price risk associated with energy-related contracts and investments. Gains and losses were recorded in principal transactions revenue.

Gains and losses on derivatives related to market-making activities and other derivatives

The Firm makes markets in derivatives in order to meet the needs of customers and uses derivatives to manage certain risks associated with net open risk positions from the Firm's market-making activities, including the counterparty credit risk arising from derivative receivables. These derivatives, as well as all other derivatives (including the synthetic credit portfolio) that are not included in the hedge accounting or specified risk management categories above, are included in this category. Gains and losses on these derivatives are primarily recorded in principal transactions revenue. See Note 7 on pages 234–235 of this Annual Report for information on principal transactions revenue.

Credit derivatives

Credit derivatives are financial instruments whose value is derived from the credit risk associated with the debt of a third-party issuer (the reference entity) and which allow one party (the protection purchaser) to transfer that risk to another party (the protection seller). Credit derivatives expose the protection purchaser to the creditworthiness of the protection seller, as the protection seller is required to make payments under the contract when the reference entity experiences a credit event, such as a bankruptcy, a failure to pay its obligation or a restructuring. The seller of credit protection receives a premium for providing protection but has the risk that the underlying instrument referenced in the contract will be subject to a credit event.

The Firm is both a purchaser and seller of protection in the credit derivatives market and uses these derivatives for two primary purposes. First, in its capacity as a market-maker, the Firm actively manages a portfolio of credit derivatives by purchasing and selling credit protection, predominantly on corporate debt obligations, to meet the needs of customers. Second, as an end-user, the Firm uses credit derivatives to manage credit risk associated with lending exposures (loans and unfunded commitments) and derivatives counterparty exposures in the Firm's wholesale businesses, and to manage the credit risk arising from

certain AFS securities and from certain financial instruments in the Firm's market-making businesses. For more information on the synthetic credit portfolio, see the discussion on page 222 of this Note. Following is a summary of various types of credit derivatives.

Credit default swaps

Credit derivatives may reference the credit of either a single reference entity ("single-name") or a broad-based index. The Firm purchases and sells protection on both single-name and index-reference obligations. Single-name CDS and index CDS contracts are typically OTC-cleared derivative contracts. Single-name CDS are used to manage the default risk of a single reference entity, while index CDS contracts are used to manage the credit risk associated with the broader credit markets or credit market segments. Like the S&P 500 and other market indices, a CDS index comprises a portfolio of CDS across many reference entities. New series of CDS indices are periodically established with a new underlying portfolio of reference entities to reflect changes in the credit markets. If one of the reference entities in the index experiences a credit event, then the reference entity that defaulted is removed from the index. CDS can also be referenced against specific portfolios of reference names or against customized exposure levels based on specific client demands: for example, to provide protection against the first $1 million of realized credit losses in a $10 million portfolio of exposure. Such structures are commonly known as tranche CDS.

For both single-name CDS contracts and index CDS contracts, upon the occurrence of a credit event, under the terms of a CDS contract neither party to the CDS contract has recourse to the reference entity. The protection purchaser has recourse to the protection seller for the difference between the face value of the CDS contract and the fair value of the reference obligation at settlement of the credit derivative contract, also known as the recovery value. The protection purchaser does not need to hold the debt instrument of the underlying reference entity in order to receive amounts due under the CDS contract when a credit event occurs.

Credit-related notes

A credit-related note is a funded credit derivative where the issuer of the credit-related note purchases from the note investor credit protection on a reference entity or an index. Under the contract, the investor pays the issuer the par value of the note at the inception of the transaction, and in return, the issuer pays periodic payments to the investor, based on the credit risk of the referenced entity. The issuer also repays the investor the par value of the note at maturity unless the reference entity experiences a specified credit event (or one of the entities that makes up a reference index). If a credit event occurs, the issuer is not obligated to repay the par value of the note, but rather, the issuer pays the investor the difference between the par value of the note and the fair value of the defaulted reference obligation at the time of settlement. Neither party to the credit-related note has recourse to the defaulting reference entity. For a further discussion of credit-related notes, see Note 16 on pages 288–299 of this Annual Report.

The following tables present a summary of the notional amounts of credit derivatives and credit-related notes the Firm sold and purchased as of December 31, 2013 and 2012. Upon a credit event, the Firm as a seller of protection would typically pay out only a percentage of the full notional amount of net protection sold, as the amount actually required to be paid on the contracts takes into account the recovery value of the reference obligation at the time of settlement. The Firm manages the credit risk on contracts to sell protection by purchasing protection with identical or similar underlying reference entities. Other purchased protection referenced in the following tables includes credit derivatives bought on related, but not identical, reference positions (including indices, portfolio coverage and other reference points) as well as protection purchased through credit-related notes.

The Firm does not use notional amounts of credit derivatives as the primary measure of risk management for such derivatives, because the notional amount does not take into account the probability of the occurrence of a credit event, the recovery value of the reference obligation, or related cash instruments and economic hedges, each of which reduces, in the Firm's view, the risks associated with such derivatives.

Total credit derivatives and credit-related notes

	Maximum payout/Notional amount			
December 31, 2013 (in millions)	Protection sold	Protection purchased with identical underlyings[b]	Net protection (sold)/purchased[c]	Other protection purchased[d]
Credit derivatives				
Credit default swaps	**$ (2,601,581)**	**$ 2,610,198**	**$ 8,617**	**$ 8,722**
Other credit derivatives[a]	**(95,094)**	**45,921**	**(49,173)**	**24,192**
Total credit derivatives	**(2,696,675)**	**2,656,119**	**(40,556)**	**32,914**
Credit-related notes	**(130)**	**–**	**(130)**	**2,720**
Total	**$ (2,696,805)**	**$ 2,656,119**	**$ (40,686)**	**$ 35,634**

	Maximum payout/Notional amount			
December 31, 2012 (in millions)	Protection sold	Protection purchased with identical underlyings[b]	Net protection (sold)/purchased[c]	Other protection purchased[d]
Credit derivatives				
Credit default swaps	$ (2,954,705)	$ 2,879,105	$ (75,600)	$ 42,460
Other credit derivatives[a]	(66,244)	5,649	(60,595)	33,174
Total credit derivatives	(3,020,949)	2,884,754	(136,195)	75,634
Credit-related notes	(233)	–	(233)	3,255
Total	$ (3,021,182)	$ 2,884,754	$ (136,428)	$ 78,889

(a) Other credit derivatives predominantly consists of put options on fixed income portfolios.
(b) Represents the total notional amount of protection purchased where the underlying reference instrument is identical to the reference instrument on protection sold; the notional amount of protection purchased for each individual identical underlying reference instrument may be greater or lower than the notional amount of protection sold.
(c) Does not take into account the fair value of the reference obligation at the time of settlement, which would generally reduce the amount the seller of protection pays to the buyer of protection in determining settlement value.
(d) Represents protection purchased by the Firm on referenced instruments (single-name, portfolio or index) where the Firm has not sold any protection on the identical reference instrument.

The following tables summarize the notional and fair value amounts of credit derivatives and credit-related notes as of December 31, 2013 and 2012, where JPMorgan Chase is the seller of protection. The maturity profile is based on the remaining contractual maturity of the credit derivative contracts. The ratings profile is based on the rating of the reference entity on which the credit derivative contract is based. The ratings and maturity profile of credit derivatives and credit-related notes where JPMorgan Chase is the purchaser of protection are comparable to the profile reflected below.

Protection sold – credit derivatives and credit-related notes ratings[a]/maturity profile

December 31, 2013 (in millions)	<1 year	1–5 years	>5 years	Total notional amount	Fair value of receivables[b]	Fair value of payables[b]	Net fair value
Risk rating of reference entity							
Investment-grade	**$ (365,660)**	**$ (1,486,394)**	**$ (130,597)**	**$ (1,982,651)**	**$ 31,727**	**$ (5,629)**	**$ 26,098**
Noninvestment-grade	**(140,540)**	**(544,671)**	**(28,943)**	**(714,154)**	**27,426**	**(16,674)**	**10,752**
Total	**$ (506,200)**	**$ (2,031,065)**	**$ (159,540)**	**$ (2,696,805)**	**$ 59,153**	**$ (22,303)**	**$ 36,850**

December 31, 2012 (in millions)	<1 year	1–5 years	>5 years	Total notional amount	Fair value of receivables[b]	Fair value of payables[b]	Net fair value
Risk rating of reference entity							
Investment-grade	$ (409,748)	$ (1,383,644)	$ (224,001)	$ (2,017,393)	$ 16,690	$ (22,393)	$ (5,703)
Noninvestment-grade	(214,949)	(722,115)	(66,725)	(1,003,789)	22,355	(36,815)	(14,460)
Total	$ (624,697)	$ (2,105,759)	$ (290,726)	$ (3,021,182)	$ 39,045	$ (59,208)	$ (20,163)

(a) The ratings scale is based on the Firm's internal ratings, which generally correspond to ratings as defined by S&P and Moody's.
(b) Amounts are shown on a gross basis, before the benefit of legally enforceable master netting agreements and cash collateral received by the Firm.

Note 7 – Noninterest revenue

Investment banking fees

This revenue category includes equity and debt underwriting and advisory fees. Underwriting fees are recognized as revenue when the Firm has rendered all services to the issuer and is entitled to collect the fee from the issuer, as long as there are no other contingencies associated with the fee. Underwriting fees are net of syndicate expense; the Firm recognizes credit arrangement and syndication fees as revenue after satisfying certain retention, timing and yield criteria. Advisory fees are recognized as revenue when the related services have been performed and the fee has been earned.

The following table presents the components of investment banking fees.

Year ended December 31, (in millions)	2013	2012	2011
Underwriting			
Equity	**$ 1,499**	$ 1,026	$ 1,181
Debt	**3,537**	3,290	2,934
Total underwriting	**5,036**	4,316	4,115
Advisory	**1,318**	1,492	1,796
Total investment banking fees	**$ 6,354**	$ 5,808	$ 5,911

Principal transactions

Principal transactions revenue includes realized and unrealized gains and losses recorded on derivatives, other financial instruments, and private equity investments.

Principal transactions revenue also includes certain realized and unrealized gains and losses related to hedge accounting and specified risk management activities disclosed separately in Note 6, including: (a) certain derivatives designated in qualifying hedge accounting relationships (primarily fair value hedges of commodity and foreign exchange risk), (b) certain derivatives used for specific risk management purposes, primarily to mitigate credit risk, foreign exchange risk and commodity risk, and (c) other derivatives, including the synthetic credit portfolio. See Note 6 on pages 220–233 of this Form Annual Report for information on the income statement classification of gains and losses on derivatives.

Principal transactions revenue also includes revenue associated with market-making and client-driven activities that involve physical commodities. The Firm, through its Global Commodities Group within CIB ("Commodities Group") generally provides risk management, investment and financing solutions to clients globally both through financial derivatives transactions, as well as through physical commodities transactions. On the financial side, the Commodities Group engages in OTC derivatives transactions (e.g., swaps, forwards, options) and exchange-traded derivatives referencing various types of commodities (see below and Note 6 – Derivative instruments for further information). On the physical side, the Commodities Group engages in the purchase, sale, transport, and storage of power, gas, liquefied natural gas, coal, crude oil, refined products, precious and base metals among others. Realized gains and losses and unrealized losses arising from market-making and client-driven activities involving physical commodities inventories that are generally carried at the lower of cost or market (market approximates fair value), subject to any applicable fair value hedge accounting adjustments, are recorded in principal transactions revenue. Fees relating to storage and transportation are recorded in other income. These fees are generally recognized over the arrangement period. Expenses relating to such activities are recorded in other expense (see Note 11 on page 249 of this Annual Report for further information). Additional information on the physical commodities business can be found in Note 2 – Business Changes and Developments on pages 192–194 of this Annual Report.

The following table presents principal transactions revenue by major underlying type of risk exposures. This table does not include other types of revenue, such as net interest income on trading assets, which are an integral part of the overall performance of the Firm's client-driven market-making activities.

Year ended December 31, (in millions)	2013	2012	2011
Trading revenue by risk exposure			
Interest rate[a]	**$ 776**	$ 3,922	$ (873)
Credit[b]	**2,424**	(5,460)	3,393
Foreign exchange	**1,540**	1,436	1,154
Equity	**2,526**	2,504	2,401
Commodity[c]	**2,073**	2,363	2,823
Total trading revenue[d][e]	**9,339**	4,765	8,898
Private equity gains[f]	**802**	771	1,107
Principal transactions	**$ 10,141**	$ 5,536	$ 10,005

(a) Includes a pretax gain of $665 million for the year ended December 31, 2012, reflecting the recovery on a Bear Stearns-related subordinated loan.

(b) Includes $5.8 billion of losses incurred by CIO from the synthetic credit portfolio for the six months ended June 30, 2012, and $449 million of losses incurred by CIO from the retained index credit derivative positions for the three months ended September 30, 2012; and losses incurred by CIB from the synthetic credit portfolio.

(c) Includes realized gains and losses and unrealized losses on physical commodities inventories that are generally carried at the lower of cost or market (market approximates fair value), subject to any applicable fair value hedge accounting adjustments, and gains and losses on commodity derivatives and other financial instruments that are carried at fair value through income. Commodity derivatives are frequently used to manage the Firm's risk exposure to its physical commodities inventories. Gains/(losses) related to commodity fair value hedges were $(819) million, $(1.4) billion and $(1.1) billion for the years ended December 31, 2013, 2012 and 2011, respectively.

(d) Principal transactions revenue included DVA related to structured notes and derivative liabilities measured at fair value in CIB. DVA gains/(losses) were $(452) million, $(930) million, and $1.4 billion for the years ended December 31, 2013, 2012 and 2011, respectively.

(e) During the fourth quarter of 2013, the Firm implemented a funding valuation adjustment ("FVA") framework in order to incorporate the impact of funding into its valuation estimates for over-the-counter ("OTC") derivatives and structured notes. As a result the Firm recorded a $1.5 billion loss in principal transactions revenue in the fourth quarter of 2013, reported in the CIB. This reflects an industry migration towards incorporating the cost of unsecured funding in the valuation of such instruments.

(f) Includes revenue on private equity investments held in the Private Equity business within Corporate/Private Equity, as well as those held in other business segments.

Lending- and deposit-related fees
This revenue category includes fees from loan commitments, standby letters of credit, financial guarantees, deposit-related fees in lieu of compensating balances, cash management-related activities or transactions, deposit accounts and other loan-servicing activities. These fees are recognized over the period in which the related service is provided.

Asset management, administration and commissions
This revenue category includes fees from investment management and related services, custody, brokerage services, insurance premiums and commissions, and other products. These fees are recognized over the period in which the related service is provided. Performance-based fees, which are earned based on exceeding certain benchmarks or other performance targets, are accrued and recognized at the end of the performance period in which the target is met. The Firm has contractual arrangements with third parties to provide certain services in connection with its asset management activities. Amounts paid to third-party service providers are predominantly expensed, such that asset management fees are recorded gross of payments made to third parties.

The following table presents components of asset management, administration and commissions.

Year ended December 31, (in millions)	2013	2012	2011
Asset management			
Investment management fees[a]	**$ 8,044**	$ 6,744	$ 6,449
All other asset management fees[b]	**505**	357	241
Total asset management fees	**8,549**	7,101	6,690
Total administration fees[c]	**2,101**	2,135	2,171
Commissions and other fees			
Brokerage commissions	**2,321**	2,331	2,753
All other commissions and fees	**2,135**	2,301	2,480
Total commissions and fees	**4,456**	4,632	5,233
Total asset management, administration and commissions	**$ 15,106**	$ 13,868	$ 14,094

(a) Represents fees earned from managing assets on behalf of Firm clients, including investors in Firm-sponsored funds and owners of separately managed investment accounts.
(b) Represents fees for services that are ancillary to investment management services, such as commissions earned on the sales or distribution of mutual funds to clients.
(c) Predominantly, includes fees for custody, securities lending, funds services and securities clearance.

Mortgage fees and related income
This revenue category primarily reflects CCB's Mortgage Production and Mortgage Servicing revenue, including: fees and income derived from mortgages originated with the intent to sell; mortgage sales and servicing including losses related to the repurchase of previously-sold loans; the impact of risk management activities associated with the mortgage pipeline, warehouse loans and MSRs; and revenue related to any residual interests held from mortgage securitizations. This revenue category also includes gains and losses on sales and lower of cost or fair value adjustments for mortgage loans held-for-sale, as well as changes in fair value for mortgage loans originated with the intent to sell and measured at fair value under the fair value option. Changes in the fair value of CCB MSRs are reported in mortgage fees and related income. Net interest income from mortgage loans is recorded in interest income. For a further discussion of MSRs, see Note 17 on pages 299–304 of this Annual Report.

Card income
This revenue category includes interchange income from credit and debit cards and net fees earned from processing credit card transactions for merchants. Card income is recognized as earned. Annual fees and direct loan origination costs are deferred and recognized on a straight-line basis over a 12-month period. Expense related to rewards programs is recorded when the rewards are earned by the customer and netted against interchange income.

Credit card revenue sharing agreements
The Firm has contractual agreements with numerous co-brand partners and affinity organizations (collectively, "partners"), which grant the Firm exclusive rights to market to the customers or members of such partners. These partners endorse the credit card programs and provide their customer and member lists to the Firm, and they may also conduct marketing activities and provide awards under the various credit card programs. The terms of these agreements generally range from three to ten years.

The Firm typically makes incentive payments to the partners based on new account originations, charge volumes and the cost of the partners' marketing activities and awards. Payments based on new account originations are accounted for as direct loan origination costs. Payments to partners based on charge volumes are deducted from interchange income as the related revenue is earned. Payments based on marketing efforts undertaken by the partners are expensed by the Firm as incurred and reported as noninterest expense.

Other income
Included in other income is operating lease income of $1.5 billion, $1.3 billion and $1.2 billion for the years ended December 31, 2013, 2012 and 2011, respectively. Additionally, included in other income is a net pre-tax gain of approximately $1.3 billion, from the sale of the Visa B Shares. See Note 2 on pages 192–194 of this Annual Report for more information.

Note 8 – Interest income and Interest expense

Interest income and interest expense is recorded in the Consolidated Statements of Income and classified based on the nature of the underlying asset or liability. Interest income and interest expense includes the current-period interest accruals for financial instruments measured at fair value, except for financial instruments containing embedded derivatives that would be separately accounted for in accordance with U.S. GAAP absent the fair value option election; for those instruments, all changes in fair value, including any interest elements, are reported in principal transactions revenue. For financial instruments that are not measured at fair value, the related interest is included within interest income or interest expense, as applicable.

Details of interest income and interest expense were as follows.

Year ended December 31, (in millions)	**2013**	2012	2011
Interest income			
Loans	**$33,489**	$ 35,832	$ 37,098
Securities	**7,812**	7,939	9,215
Trading assets	**8,426**	9,039	11,142
Federal funds sold and securities purchased under resale agreements	**1,940**	2,442	2,523
Securities borrowed	**(127)** [c]	(3) [c]	110
Deposits with banks	**918**	555	599
Other assets[a]	**538**	259	606
Total interest income	**52,996**	56,063	61,293
Interest expense			
Interest-bearing deposits	**2,067**	2,655	3,855
Short-term and other liabilities[b]	**2,125**	1,788	2,873
Long-term debt	**5,007**	6,062	6,109
Beneficial interests issued by consolidated VIEs	**478**	648	767
Total interest expense	**9,677**	11,153	13,604
Net interest income	**43,319**	44,910	47,689
Provision for credit losses	**225**	3,385	7,574
Net interest income after provision for credit losses	**$43,094**	$ 41,525	$ 40,115

(a) Largely margin loans.
(b) Includes brokerage customer payables.
(c) Negative interest income for the years ended December 31, 2013 and 2012, is a result of increased client-driven demand for certain securities combined with the impact of low interest rates; the offset of this matched book activity is reflected as lower net interest expense reported within short-term and other liabilities.

Note 9 – Pension and other postretirement employee benefit plans

The Firm's defined benefit pension plans and its other postretirement employee benefit ("OPEB") plans (collectively the "Plans") are accounted for in accordance with U.S. GAAP for retirement benefits.

Defined benefit pension plans

The Firm has a qualified noncontributory U.S. defined benefit pension plan that provides benefits to substantially all U.S. employees. The U.S. plan employs a cash balance formula in the form of pay and interest credits to determine the benefits to be provided at retirement, based on eligible compensation and years of service. Employees begin to accrue plan benefits after completing one year of service, and benefits generally vest after three years of service. The Firm also offers benefits through defined benefit pension plans to qualifying employees in certain non-U.S. locations based on factors such as eligible compensation, age and/or years of service.

It is the Firm's policy to fund the pension plans in amounts sufficient to meet the requirements under applicable laws. The Firm does not anticipate at this time any contribution to the U.S. defined benefit pension plan in 2014. The 2014 contributions to the non-U.S. defined benefit pension plans are expected to be $49 million of which $32 million are contractually required.

JPMorgan Chase also has a number of defined benefit pension plans that are not subject to Title IV of the Employee Retirement Income Security Act. The most significant of these plans is the Excess Retirement Plan, pursuant to which certain employees previously earned pay credits on compensation amounts above the maximum stipulated by law under a qualified plan; no further pay credits are allocated under this plan. The Excess Retirement Plan had an unfunded projected benefit obligation in the amount of $245 million and $276 million, at December 31, 2013 and 2012, respectively.

Effective March 19, 2012, pursuant to the WaMu Global Settlement, JPMorgan Chase Bank, N.A. became the sponsor of the WaMu Pension Plan. This plan's assets were merged with and into the JPMorgan Chase Retirement Plan effective as of December 31, 2012.

Defined contribution plans

JPMorgan Chase currently provides two qualified defined contribution plans in the U.S. and other similar arrangements in certain non-U.S. locations, all of which are administered in accordance with applicable local laws and regulations. The most significant of these plans is The JPMorgan Chase 401(k) Savings Plan (the "401(k) Savings Plan"), which covers substantially all U.S. employees. The 401(k) Savings Plan allows employees to make pretax and Roth 401(k) contributions to tax-deferred investment portfolios. The JPMorgan Chase Common Stock Fund, which is an investment option under the 401(k) Savings Plan, is a nonleveraged employee stock ownership plan.

The Firm matches eligible employee contributions up to 5% of benefits-eligible compensation (e.g., base pay) on an annual basis. Employees begin to receive matching contributions after completing a one-year-of-service requirement. Employees with total annual cash compensation of $250,000 or more are not eligible for matching contributions. Matching contributions vest after three years of service for employees hired on or after May 1, 2009. The 401(k) Savings Plan also permits discretionary profit-sharing contributions by participating companies for certain employees, subject to a specified vesting schedule.

OPEB plans

JPMorgan Chase offers postretirement medical and life insurance benefits to certain retirees and postretirement medical benefits to qualifying U.S. employees. These benefits vary with the length of service and the date of hire and provide for limits on the Firm's share of covered medical benefits. The medical and life insurance benefits are both contributory. Postretirement medical benefits also are offered to qualifying U.K. employees.

JPMorgan Chase's U.S. OPEB obligation is funded with corporate-owned life insurance ("COLI") purchased on the lives of eligible employees and retirees. While the Firm owns the COLI policies, COLI proceeds (death benefits, withdrawals and other distributions) may be used only to reimburse the Firm for its net postretirement benefit claim payments and related administrative expense. The U.K. OPEB plan is unfunded.

The following table presents the changes in benefit obligations, plan assets and funded status amounts reported on the Consolidated Balance Sheets for the Firm's U.S. and non-U.S. defined benefit pension and OPEB plans.

As of or for the year ended December 31,	Defined benefit pension plans					
	U.S.		Non-U.S.		OPEB plans[d]

Accumulated benefit obligation, end of year	**$ (10,685)**	$(11,447)	**$ (3,406)**	$ (3,221)	**NA**	NA

(a) Represents plans with an aggregate overfunded balance of $5.1 billion and $2.8 billion at December 31, 2013 and 2012, respectively, and plans with an aggregate underfunded balance of $540 million and $612 million at December 31, 2013 and 2012, respectively.
(b) At December 31, 2013 and 2012, approximately $429 million and $418 million, respectively, of U.S. plan assets included participation rights under participating annuity contracts.
(c) At December 31, 2013 and 2012, defined benefit pension plan amounts not measured at fair value included $96 million and $137 million, respectively, of accrued receivables, and $104 million and $310 million, respectively, of accrued liabilities, for U.S. plans; and at December 31, 2012, $47 million of accrued receivables, and $46 million of accrued liabilities, for non-U.S. plans.
(d) Includes an unfunded accumulated postretirement benefit obligation of $34 million and $31 million at December 31, 2013 and 2012, respectively, for the U.K. plan.

Gains and losses

For the Firm's defined benefit pension plans, fair value is used to determine the expected return on plan assets. Amortization of net gains and losses is included in annual net periodic benefit cost if, as of the beginning of the year, the net gain or loss exceeds 10% of the greater of the projected benefit obligation or the fair value of the plan assets. Any excess is amortized over the average future service period of defined benefit pension plan participants, which for the U.S. defined benefit pension plan is currently nine years. In addition, prior service costs are amortized over the average remaining service period of active employees expected to receive benefits under the plan when the prior service cost is first recognized. The average remaining amortization period for current prior service costs is six years.

For the Firm's OPEB plans, a calculated value that recognizes changes in fair value over a five-year period is used to determine the expected return on plan assets. This value is referred to as the market related value of assets. Amortization of net gains and losses, adjusted for gains and losses not yet recognized, is included in annual net periodic benefit cost if, as of the beginning of the year, the net gain or loss exceeds 10% of the greater of the accumulated postretirement benefit obligation or the market related value of assets. Any excess net gain or loss is amortized over the average expected lifetime of retired participants, which is currently thirteen years; however, prior service costs resulting from plan changes are amortized over the average years of service remaining to full eligibility age, which is currently two years.

The following table presents pretax pension and OPEB amounts recorded in AOCI.

December 31,	Defined benefit pension plans					
	U.S.		Non-U.S.		OPEB plans	
(in millions)	**2013**	2012	**2013**	2012	**2013**	2012

OPEB plans	**13.88**	10.10	5.22	**NA**	NA	NA

Plan assumptions

JPMorgan Chase's expected long-term rate of return for U.S. defined benefit pension and OPEB plan assets is a blended average of the investment advisor's projected long-term (10 years or more) returns for the various asset classes, weighted by the asset allocation. Returns on asset classes are developed using a forward-looking approach and are not strictly based on historical returns. Equity returns are generally developed as the sum of inflation, expected real earnings growth and expected long-term dividend yield. Bond returns are generally developed as the sum of inflation, real bond yield and risk spread (as appropriate), adjusted for the expected effect on returns from changing yields. Other asset-class returns are derived from their relationship to the equity and bond markets. Consideration is also given to current market conditions and the short-term portfolio mix of each plan; as a result, in 2013 the Firm generally maintained the same expected return on assets as in the prior year.

For the U.K. defined benefit pension plans, which represent the most significant of the non-U.S. defined benefit pension plans, procedures similar to those in the U.S. are used to develop the expected long-term rate of return on plan assets, taking into consideration local market conditions and the specific allocation of plan assets. The expected long-term rate of return on U.K. plan assets is an average of projected long-term returns for each asset class. The return on equities has been selected by reference to the yield on long-term U.K. government bonds plus an equity risk premium above the risk-free rate. The expected return on "AA" rated long-term corporate bonds is based on an implied yield for similar bonds.

The discount rate used in determining the benefit obligation under the U.S. defined benefit pension and OPEB plans was selected by reference to the yields on portfolios of bonds with maturity dates and coupons that closely match each of the plan's projected cash flows; such portfolios are derived from a broad-based universe of high-quality corporate bonds as of the measurement date. In years in which these hypothetical bond portfolios generate excess cash, such excess is assumed to be reinvested at the one-year forward rates implied by the Citigroup Pension Discount Curve published as of the measurement date. The discount rate for the U.K. defined benefit pension plan represents a rate implied from the yield curve of the year-end iBoxx £ corporate "AA" 15-year-plus bond index.

The following tables present the weighted-average annualized actuarial assumptions for the projected and accumulated postretirement benefit obligations, and the components of net periodic benefit costs, for the Firm's significant U.S. and non-U.S. defined benefit pension and OPEB plans, as of and for the periods indicated.

Weighted-average assumptions used to determine benefit obligations

	U.S.		Non-U.S.	
December 31,	**2013**	2012	**2013**	2012
Discount rate:				
Defined benefit pension plans	**5.00%**	3.90%	**1.10 - 4.40%**	1.40 - 4.40%

Year when rate will reach ultimate	**2017**	2017	2017	**–**	–	–

The following table presents the effect of a one-percentage-point change in the assumed health care cost trend rate on JPMorgan Chase's total service and interest cost and accumulated postretirement benefit obligation.

Year ended December 31, 2013 (in millions)	1-Percentage point increase	1-Percentage point decrease
Effect on total service and interest cost	$ 1	$ (1)
Effect on accumulated postretirement benefit obligation	31	(26)

At December 31, 2013, the Firm increased the discount rates used to determine its benefit obligations for the U.S. defined benefit pension and OPEB plans in light of current market interest rates, which will result in a decrease in expense of approximately $84 million for 2014. The 2014 expected long-term rate of return on U.S. defined benefit pension plan assets and U.S. OPEB plan assets are 7.00% and 6.25%, respectively. For 2014, the initial health care benefit obligation trend assumption has been set at 6.50%, and the ultimate health care trend assumption and the year to reach the ultimate rate remains at 5.00% and 2017, respectively, unchanged from 2013. As of December 31, 2013, the interest crediting rate assumption remained at 5.00% while the assumed rate of compensation increase decreased to 3.50%.

JPMorgan Chase's U.S. defined benefit pension and OPEB plan expense is sensitive to the expected long-term rate of return on plan assets and the discount rate. With all other assumptions held constant, a 25-basis point decline in the expected long-term rate of return on U.S. plan assets would result in an aggregate increase of approximately $39 million in 2014 U.S. defined benefit pension and OPEB plan expense. A 25-basis point decline in the discount rate for the U.S. plans would result in an increase in 2014 U.S. defined benefit pension and OPEB plan expense of approximately an aggregate $26 million and an increase in the related benefit obligations of approximately an aggregate $254 million. A 25-basis point decrease in the interest crediting rate for the U.S. defined benefit pension plan would result in a decrease in 2014 U.S. defined benefit pension expense of approximately $32 million and a decrease in the related projected benefit obligations of approximately $130 million. A 25-basis point decline in the discount rates for the non-U.S. plans would result in an increase in the 2014 non-U.S. defined benefit pension plan expense of approximately $15 million.

Investment strategy and asset allocation

The Firm's U.S. defined benefit pension plan assets are held in trust and are invested in a well-diversified portfolio of equity and fixed income securities, cash and cash equivalents, and alternative investments (e.g., hedge funds, private equity, real estate and real assets). Non-U.S. defined benefit pension plan assets are held in various trusts and are also invested in well-diversified portfolios of equity, fixed income and other securities. Assets of the Firm's COLI policies, which are used to partially fund the U.S. OPEB plan, are held in separate accounts with an insurance company and are invested in funds intended to replicate equity and fixed income indices.

The investment policy for the Firm's U.S. defined benefit pension plan assets is to optimize the risk-return relationship as appropriate to the needs and goals using a global portfolio of various asset classes diversified by market segment, economic sector, and issuer. Assets are managed by a combination of internal and external investment managers. Periodically the Firm performs a comprehensive analysis on the U.S. defined benefit pension plan asset allocations, incorporating projected asset and liability data, which focuses on the short- and long-term impact of the asset allocation on cumulative pension expense, economic cost, present value of contributions and funded status. As the U.S. defined benefit pension plan is overfunded, the investment strategy for this plan was adjusted in 2013 to provide for greater liquidity. Currently, approved asset allocation ranges are: U.S. equity 0% to 45%, international equity 0% to 40%, debt securities 0% to 80%, hedge funds 0% to 20%, and real estate 0% to 10%, real assets 0% to 10% and private equity 0% to 20%. Asset allocations are not managed to a specific target but seek to shift asset class allocations within these stated ranges. Investment strategies incorporate the economic outlook and the anticipated implications of the

macroeconomic environment on the various asset classes while maintaining an appropriate level of liquidity for the plan. The Firm regularly reviews the asset allocations and asset managers, as well as other factors that impact the portfolio, which is rebalanced when deemed necessary.

For the U.K. defined benefit pension plans, which represent the most significant of the non-U.S. defined benefit pension plans, the assets are invested to maximize returns subject to an appropriate level of risk relative to the plans' liabilities. In order to reduce the volatility in returns relative to the plans' liability profiles, the U.K. defined benefit pension plans' largest asset allocations are to debt securities of appropriate durations. Other assets, mainly equity securities, are then invested for capital appreciation, to provide long-term investment growth. Similar to the U.S. defined benefit pension plan, asset allocations and asset managers for the U.K. plans are reviewed regularly and the portfolio is rebalanced when deemed necessary.

Investments held by the Plans include financial instruments which are exposed to various risks such as interest rate, market and credit risks. Exposure to a concentration of credit risk is mitigated by the broad diversification of both U.S. and non-U.S. investment instruments. Additionally, the investments in each of the common/collective trust funds and registered investment companies are further diversified into various financial instruments. As of December 31, 2013, assets held by the Firm's U.S. and non-U.S. defined benefit pension and OPEB plans do not include JPMorgan Chase common stock, except through indirect exposures through investments in third-party stock-index funds. The plans hold investments in funds that are sponsored or managed by affiliates of JPMorgan Chase in the amount of $2.9 billion and $1.8 billion for U.S. plans and $242 million and $220 million for non-U.S. plans, as of December 31, 2013 and 2012, respectively.

The following table presents the weighted-average asset allocation of the fair values of total plan assets at December 31 for the years indicated, as well as the respective approved range/target allocation by asset category, for the Firm's U.S. and non-U.S. defined benefit pension and OPEB plans.

	Defined benefit pension plans								
	U.S.			Non-U.S.			OPEB plans[c]		
	Target	% of plan assets		Target	% of plan assets		Target	% of plan assets	
December 31,	Allocation	**2013**	2012	Allocation	**2013**	2012	Allocation	**2013**	2012
Asset category									
Debt securities[a]	0-80%	**25%**	20%	64%	**63%**	72%	50%	**50%**	50%
Equity securities	0-85	**48**	41	35	**36**	27	50	**50**	50
Real estate	0-10	**4**	5	–	**–**	–	–	**–**	–
Alternatives[b]	0-50	**23**	34	1	**1**	1	–	**–**	–
Total	100%	**100%**	100%	100%	**100%**	100%	100%	**100%**	100%

(a) Debt securities primarily include corporate debt, U.S. federal, state, local and non-U.S. government, and mortgage-backed securities.
(b) Alternatives primarily include limited partnerships.
(c) Represents the U.S. OPEB plan only, as the U.K. OPEB plan is unfunded.

Fair value measurement of the plans' assets and liabilities

For information on fair value measurements, including descriptions of level 1, 2, and 3 of the fair value hierarchy and the valuation methods employed by the Firm, see Note 3 on pages 195–215 of this Annual Report.

(a) At December 31, 2013 and 2012, common/collective trust funds primarily included a mix of short-term investment funds, domestic and international equity investments (including index) and real estate funds.
(b) Unfunded commitments to purchase limited partnership investments for the plans were $1.6 billion and $1.4 billion for 2013 and 2012, respectively.
(c) Real assets include investments in productive assets such as agriculture, energy rights, mining and timber properties and exclude raw land to be developed for real estate purposes.
(d) Corporate debt securities include debt securities of U.S. and non-U.S. corporations.
(e) Other consists of money markets, exchange-traded funds and participating and non-participating annuity contracts. Money markets and exchange-traded funds are primarily classified within level 1 of the fair value hierarchy given they are valued using market observable prices. Participating and non-participating annuity contracts are classified within level 3 of the fair value hierarchy due to lack of market mechanisms for transferring each policy and surrender restrictions.
(f) At December 31, 2013 and 2012, the fair value of investments valued at NAV were $2.7 billion and $4.4 billion, respectively, which were classified within the valuation hierarchy as follows: $100 million and $400 million in level 1, $1.9 billion and $2.5 billion in level 2 and $700 million and $1.5 billion in level 3.
(g) At December 31, 2013 and 2012, excluded U.S. defined benefit pension plan receivables for investments sold and dividends and interest receivables of $96 million and $137 million, respectively; and at December 31, 2012, excluded non-U.S. defined benefit pension plan receivables for investments sold and dividends and interest receivables of $47 million.
(h) At December 31, 2013 and 2012, excluded $102 million and $306 million, respectively, of U.S. defined benefit pension plan payables for investments purchased; and $2 million and $4 million, respectively, of other liabilities; and at December 31, 2012, excluded non-U.S. defined benefit pension plan payables for investments purchased of $46 million.
(i) There were no assets or liabilities classified as level 3 for the non-U.S. defined benefit pension plans as of December 31, 2013 and 2012.

The Firm's U.S. OPEB plan was partially funded with COLI policies of $1.7 billion and $1.6 billion at December 31, 2013 and 2012, respectively, which were classified in level 3 of the valuation hierarchy.

Note 10 – Employee stock-based incentives

Employee stock-based awards

In 2013, 2012 and 2011, JPMorgan Chase granted long-term stock-based awards to certain employees under its Long-Term Incentive Plan, which was last amended in May 2011 ("LTIP"). Under the terms of the LTIP, as of December 31, 2013, 266 million shares of common stock were available for issuance through May 2015. The LTIP is the only active plan under which the Firm is currently granting stock-based incentive awards. In the following discussion, the LTIP, plus prior Firm plans and plans assumed as the result of acquisitions, are referred to collectively as the "LTI Plans," and such plans constitute the Firm's stock-based incentive plans.

Restricted stock units ("RSUs") are awarded at no cost to the recipient upon their grant. Generally, RSUs are granted annually and vest at a rate of 50% after two years and 50% after three years and are converted into shares of common stock as of the vesting date. In addition, RSUs typically include full-career eligibility provisions, which allow employees to continue to vest upon voluntary termination, subject to post-employment and other restrictions based on age or service-related requirements. All RSUs awards are subject to forfeiture until vested and contain clawback provisions that may result in cancellation under certain specified circumstances. RSUs entitle the recipient to receive cash payments equivalent to any dividends paid on the underlying common stock during the period the RSUs are outstanding and, as such, are considered participating securities as discussed in Note 24 on page 311 of this Annual Report.

Under the LTI Plans, stock options and stock appreciation rights ("SARs") have generally been granted with an exercise price equal to the fair value of JPMorgan Chase's common stock on the grant date. The Firm typically awards SARs to certain key employees once per year; the Firm also periodically grants employee stock options and SARs to individual employees. The 2013, 2012 and 2011 grants of SARs become exercisable ratably over five years (i.e., 20% per year) and contain clawback provisions similar to RSUs. The 2013, 2012 and 2011 grants of SARs contain full-career eligibility provisions. SARs generally expire ten years after the grant date.

The Firm separately recognizes compensation expense for each tranche of each award as if it were a separate award with its own vesting date. Generally, for each tranche granted, compensation expense is recognized on a straight-line basis from the grant date until the vesting date of the respective tranche, provided that the employees will not become full-career eligible during the vesting period. For awards with full-career eligibility provisions and awards granted with no future substantive service requirement, the Firm accrues the estimated value of awards expected to be awarded to employees as of the grant date without giving consideration to the impact of post-employment restrictions. For each tranche granted to employees who will become full-career eligible during the vesting period, compensation expense is recognized on a straight-line basis from the grant date until the earlier of the employee's full-career eligibility date or the vesting date of the respective tranche.

The Firm's policy for issuing shares upon settlement of employee stock-based incentive awards is to issue either new shares of common stock or treasury shares. During 2013, 2012 and 2011, the Firm settled all of its employee stock-based awards by issuing treasury shares.

In January 2008, the Firm awarded to its Chairman and Chief Executive Officer up to 2 million SARs. The terms of this award are distinct from, and more restrictive than, other equity grants regularly awarded by the Firm. Effective January 2013, the Compensation Committee and Board of Directors determined that, while all the requirements for vesting of these awards have been met, vesting should be deferred for a period of up to 18 months (i.e., up to July 22, 2014), to enable the Firm to make progress against the Firm's strategic priorities and performance goals, including remediation relating to the CIO matter. The SARs, which will expire in January 2018, will become exercisable no earlier than July 22, 2014, and have an exercise price of $39.83 (the price of JPMorgan Chase common stock on the date of grant). Vesting will be subject to a Board determination taking into consideration the extent of such progress and such other factors as it deems relevant. The expense related to this award is dependent on changes in fair value of the SARs through the date when the vested number of SARs are determined, if any, and the cumulative expense is recognized ratably over the service period, which was initially assumed to be five years but, effective in the first quarter of 2013, has been extended to six and one-half years. The Firm recognized $14 million, $5 million and $(4) million in compensation expense in 2013, 2012 and 2011, respectively, for this award.

RSUs, employee stock options and SARs activity

Compensation expense for RSUs is measured based on the number of shares granted multiplied by the stock price at the grant date, and for employee stock options and SARs, is measured at the grant date using the Black-Scholes valuation model. Compensation expense for these awards is recognized in net income as described previously. The following table summarizes JPMorgan Chase's RSUs, employee stock options and SARs activity for 2013.

	RSUs		Options/SARs			
Year ended December 31, 2013 (in thousands, except weighted-average data, and where otherwise stated)	Number of shares	Weighted-average grant date fair value	Number of awards	Weighted-average exercise price	Weighted-average remaining contractual life (in years)	Aggregate intrinsic value
Outstanding, January 1	142,006	$ 40.49	115,906	$ 42.44		
Granted	46,171	46.92	12,563	46.77		
Exercised or vested	(62,331)	43.28	(35,825)	37.32		
Forfeited	(4,605)	40.77	(4,007)	39.44		
Canceled	NA	NA	(1,562)	104.49		
Outstanding, December 31	121,241	$ 41.47	87,075	$ 44.24	5.6	$ 1,622,238
Exercisable, December 31	NA	NA	46,855	47.50	4.2	904,017

The total fair value of RSUs that vested during the years ended December 31, 2013, 2012 and 2011, was $2.9 billion, $2.8 billion and $5.4 billion, respectively. The weighted-average grant date per share fair value of stock options and SARs granted during the years ended December 31, 2013, 2012 and 2011, was $9.58, $8.89 and $13.04, respectively. The total intrinsic value of options exercised during the years ended December 31, 2013, 2012 and 2011, was $507 million, $283 million and $191 million, respectively.

Compensation expense

The Firm recognized the following noncash compensation expense related to its various employee stock-based incentive plans in its Consolidated Statements of Income.

Year ended December 31, (in millions)	**2013**	2012	2011
Cost of prior grants of RSUs and SARs that are amortized over their applicable vesting periods	**$ 1,440**	$ 1,810	$ 1,986
Accrual of estimated costs of RSUs and SARs to be granted in future periods including those to full-career eligible employees	**779**	735	689
Total noncash compensation expense related to employee stock-based incentive plans	**$ 2,219**	$ 2,545	$ 2,675

At December 31, 2013, approximately $848 million (pretax) of compensation cost related to unvested awards had not yet been charged to net income. That cost is expected to be amortized into compensation expense over a weighted-average period of 1.0 year. The Firm does not capitalize any compensation cost related to share-based compensation awards to employees.

Cash flows and tax benefits

Income tax benefits related to stock-based incentive arrangements recognized in the Firm's Consolidated Statements of Income for the years ended December 31, 2013, 2012 and 2011, were $865 million, $1.0 billion and $1.0 billion, respectively.

The following table sets forth the cash received from the exercise of stock options under all stock-based incentive arrangements, and the actual income tax benefit realized related to tax deductions from the exercise of the stock options.

Year ended December 31, (in millions)	**2013**	2012	2011
Cash received for options exercised	**$ 166**	$ 333	$ 354
Tax benefit realized[(a)]	**42**	53	31

(a) The tax benefit realized from dividends or dividend equivalents paid on equity-classified share-based payment awards that are charged to retained earnings are recorded as an increase to additional paid-in capital and included in the pool of excess tax benefits available to absorb tax deficiencies on share-based payment awards.

Valuation assumptions

The following table presents the assumptions used to value employee stock options and SARs granted during the years ended December 31, 2013, 2012 and 2011, under the Black-Scholes valuation model.

Year ended December 31,	**2013**	2012	2011
Weighted-average annualized valuation assumptions			
Risk-free interest rate	**1.18%**	1.19%	2.58%
Expected dividend yield	**2.66**	3.15	2.20
Expected common stock price volatility	**28**	35	34
Expected life (in years)	**6.6**	6.6	6.5

The expected dividend yield is determined using forward-looking assumptions. The expected volatility assumption is derived from the implied volatility of JPMorgan Chase's stock options. The expected life assumption is an estimate of the length of time that an employee might hold an option or SAR before it is exercised or canceled, and the assumption is based on the Firm's historical experience.

Note 11 – Noninterest expense

The following table presents the components of noninterest expense.

Year ended December 31, (in millions)	2013	2012	2011
Compensation expense	$ 30,810	$ 30,585	$ 29,037
Noncompensation expense:			
Occupancy expense	3,693	3,925	3,895
Technology, communications and equipment expense	5,425	5,224	4,947
Professional and outside services	7,641	7,429	7,482
Marketing	2,500	2,577	3,143
Other expense[a][b]	19,761	14,032	13,559
Amortization of intangibles	637	957	848
Total noncompensation expense	39,657	34,144	33,874
Total noninterest expense	$ 70,467	$ 64,729	$ 62,911

(a) Included firmwide legal expense of $11.1 billion, $5.0 billion and $4.9 billion for the years ended December 31, 2013, 2012 and 2011, respectively.

(b) Included FDIC-related expense of $1.5 billion, $1.7 billion and $1.5 billion for the years ended December 31, 2013, 2012 and 2011, respectively.

Note 12 – Securities

Securities are classified as AFS, held-to-maturity ("HTM") or trading. Securities classified as trading assets are discussed in Note 3 on pages 195–215 of this Annual Report. Predominantly all of the Firm's AFS and HTM investment securities (the "investment securities portfolio") is held by CIO in connection with its asset-liability management objectives. At December 31, 2013, the average credit rating of the debt securities comprising the investment securities portfolio was AA+ (based upon external ratings where available, and where not available, based primarily upon internal ratings which correspond to ratings as defined by S&P and Moody's). AFS securities are carried at fair value on the Consolidated Balance Sheets. Unrealized gains and losses, after any applicable hedge accounting adjustments, are reported as net increases or decreases to accumulated other comprehensive income/(loss). The specific identification method is used to determine realized gains and losses on AFS securities, which are included in securities gains/(losses) on the Consolidated Statements of Income. HTM debt securities, which management has the intent and ability to hold until maturity, are carried at amortized cost on the Consolidated Balance Sheets. For both AFS and HTM debt securities, purchase discounts or premiums are amortized into interest income.

Other-than-temporary impairment

AFS debt and equity securities and HTM debt securities in unrealized loss positions are analyzed as part of the Firm's ongoing assessment of other-than-temporary impairment ("OTTI"). For most types of debt securities, the Firm considers a decline in fair value to be other-than-temporary when the Firm does not expect to recover the entire amortized cost basis of the security. For beneficial interests in securitizations that are rated below "AA" at their acquisition, or that can be contractually prepaid or otherwise settled in such a way that the Firm would not recover substantially all of its recorded investment, the Firm considers an OTTI to have occurred when there is an adverse change in expected cash flows. For AFS equity securities, the Firm considers a decline in fair value to be other-than-temporary if it is probable that the Firm will not recover its amortized cost basis.

Potential OTTI is considered using a variety of factors, including the length of time and extent to which the market value has been less than cost; adverse conditions specifically related to the industry, geographic area or financial condition of the issuer or underlying collateral of a security; payment structure of the security; changes to the rating of the security by a rating agency; the volatility of the fair value changes; and the Firm's intent and ability to hold the security until recovery.

For AFS debt securities, the Firm recognizes OTTI losses in earnings if the Firm has the intent to sell the debt security, or if it is more likely than not that the Firm will be required to sell the debt security before recovery of its amortized cost basis. In these circumstances the impairment loss is equal to the full difference between the amortized cost basis and the fair value of the securities. For debt securities in an unrealized loss position, including AFS securities the Firm has the intent and ability to hold, the expected cash flows to be received from the securities are evaluated to determine if a credit loss exists. In the event of a credit loss, only the amount of impairment associated with the credit loss is recognized in income. Amounts relating to factors other than credit losses are recorded in OCI.

The Firm's cash flow evaluations take into account the factors noted above and expectations of relevant market and economic data as of the end of the reporting period. For securities issued in a securitization, the Firm estimates cash flows considering underlying loan-level data and structural features of the securitization, such as subordination, excess spread, overcollateralization or other forms of credit enhancement, and compares the losses projected for the underlying collateral ("pool losses") against the level of credit enhancement in the securitization structure to determine whether these features are sufficient to absorb the pool losses, or whether a credit loss exists. The Firm also performs other analyses to support its cash flow projections, such as first-loss analyses or stress scenarios.

For equity securities, OTTI losses are recognized in earnings if the Firm intends to sell the security. In other cases the Firm considers the relevant factors noted above, as well as the Firm's intent and ability to retain its investment for a period of time sufficient to allow for any anticipated recovery in market value, and whether evidence exists to support a realizable value equal to or greater than the carrying value. Any impairment loss on an equity security is equal to the full difference between the amortized cost basis and the fair value of the security.

Realized gains and losses

The following table presents realized gains and losses and credit losses that were recognized in income from AFS securities.

Year ended December 31, (in millions)	2013	2012	2011
Realized gains	**$1,302**	$2,610	$1,811
Realized losses	**(614)**	(457)	(142)
Net realized gains[a]	**688**	2,153	1,669
OTTI losses			
Credit-related	**(1)**	(28)	(76)
Securities the Firm intends to sell	**(20)** [b]	(15) [b]	–
Total OTTI losses recognized in income	**(21)**	(43)	(76)
Net securities gains	**$ 667**	$2,110	$1,593

(a) Proceeds from securities sold were within approximately 2% of amortized cost in 2013, and within approximately 4% of amortized cost in 2012 and 2011.
(b) Excludes realized losses of $12 million and $24 million for the years ended December 31, 2013 and 2012, respectively that had been previously reported as an OTTI loss due to the intention to sell the securities.

The amortized costs and estimated fair values of the investment securities portfolio were as follows for the dates indicated.

	2013				2012

Total available-for-sale debt securities	37,687	104	11,028	146	48,715	250
Available-for-sale equity securities	–	–	–	–	–	–
Held-to-maturity securities	–	–	–	–	–	–
Total securities with gross unrealized losses	$ 37,687	$ 104	$ 11,028	$ 146	$ 48,715	$ 250

Other-than-temporary impairment

The following table presents OTTI losses that are included in the securities gains and losses table above.

Year ended December 31, (in millions)	2013	2012	2011
Debt securities the Firm does not intend to sell that have credit losses			
Total OTTI[a]	**$ (1)**	$ (113)	$ (27)
Losses recorded in/ (reclassified from) AOCI	**–**	85	(49)
Total credit losses recognized in income[b]	**(1)**	(28)	(76)
Securities the Firm intends to sell	**(20)** [c]	(15) [c]	–
Total OTTI losses recognized in income	**$ (21)**	$ (43)	$ (76)

(a) For initial OTTI, represents the excess of the amortized cost over the fair value of AFS debt securities. For subsequent impairments of the same security, represents additional declines in fair value subsequent to previously recorded OTTI, if applicable.

(b) Subsequent credit losses may be recorded on securities without a corresponding further decline in fair value if there has been a decline in expected cash flows.

(c) Excludes realized losses of $12 million and $24 million for the years ended December 31, 2013 and 2012, respectively that had been previously reported as an OTTI loss due to the intention to sell the securities.

Changes in the credit loss component of credit-impaired debt securities

The following table presents a rollforward for the years ended December 31, 2013, 2012 and 2011, of the credit loss component of OTTI losses that have been recognized in income, related to AFS debt securities that the Firm does not intend to sell.

Year ended December 31, (in millions)	2013	2012	2011
Balance, beginning of period	**$ 522**	$ 708	$ 632
Additions:			
Newly credit-impaired securities	**1**	21	4
Losses reclassified from other comprehensive income on previously credit-impaired securities	**–**	7	72
Reductions:			
Sales and redemptions of credit-impaired securities	**(522)**	(214)	–
Balance, end of period	**$ 1**	$ 522	$ 708

Gross unrealized losses

Gross unrealized losses, including those that have been in an unrealized loss position for 12 months or more, have generally increased since December 31, 2012. The Firm has recognized the unrealized losses on securities it intends to sell. As of December 31, 2013, the Firm does not intend to sell any securities with a loss position in AOCI, and it is not likely that the Firm will be required to sell these securities before recovery of their amortized cost basis. Except for the securities reported in the table above for which credit losses have been recognized in income, the Firm believes that the securities with an unrealized loss in AOCI are not other-than-temporarily impaired as of December 31, 2013.

Contractual maturities and yields

The following table presents the amortized cost and estimated fair value at December 31, 2013, of JPMorgan Chase's investment securities portfolio by contractual maturity.

By remaining maturity December 31, 2013 (in millions)	Due in one year or less	Due after one year through five years	Due after five years through 10 years	Due after 10 years[c]	Total

Fair value	–	4	1	23,726	23,731
Average yield[b]	–%	6.86%	6.48%	3.53%	3.53%

(a) U.S. government-sponsored enterprises were the only issuers whose securities exceeded 10% of JPMorgan Chase's total stockholders' equity at December 31, 2013.

(b) Average yield is computed using the effective yield of each security owned at the end of the period, weighted based on the amortized cost of each security. The effective yield considers the contractual coupon, amortization of premiums and accretion of discounts, and the effect of related hedging derivatives. Taxable-equivalent amounts are used where applicable. The effective yield excludes unscheduled principal prepayments; and accordingly, actual maturities of securities may differ from their contractual or expected maturities as certain securities may be prepaid.

(c) Includes securities with no stated maturity. Substantially all of the Firm's residential mortgage-backed securities and collateralized mortgage obligations are due in 10 years or more, based on contractual maturity. The estimated duration, which reflects anticipated future prepayments based on a consensus of dealers in the market, is approximately five years for agency residential mortgage-backed securities, two years for agency residential collateralized mortgage obligations and three years for nonagency residential collateralized mortgage obligations.

Note 13 – Securities financing activities

JPMorgan Chase enters into resale agreements, repurchase agreements, securities borrowed transactions and securities loaned transactions (collectively, "securities financing agreements") primarily to finance the Firm's inventory positions, acquire securities to cover short positions, accommodate customers' financing needs, and settle other securities obligations.

Securities financing agreements are treated as collateralized financings on the Firm's Consolidated Balance Sheets. Resale and repurchase agreements are generally carried at the amounts at which the securities will be subsequently sold or repurchased. Securities borrowed and securities loaned transactions are generally carried at the amount of cash collateral advanced or received. Where appropriate under applicable accounting guidance, resale and repurchase agreements with the same counterparty are reported on a net basis. For further discussion of the offsetting of assets and liabilities, see Note 1 on pages 189–191 of this Annual Report. Fees received and paid in connection with securities financing agreements are recorded in interest income and interest expense on the Consolidated Statements of Income.

The Firm has elected the fair value option for certain securities financing agreements. For further information regarding the fair value option, see Note 4 on pages 215–218 of this Annual Report. The securities financing agreements for which the fair value option has been elected are reported within securities purchased under resale agreements; securities loaned or sold under repurchase agreements; and securities borrowed on the Consolidated Balance Sheets. Generally, for agreements carried at fair value, current-period interest accruals are recorded within interest income and interest expense, with changes in fair value reported in principal transactions revenue. However, for financial instruments containing embedded derivatives that would be separately accounted for in accordance with accounting guidance for hybrid instruments, all changes in fair value, including any interest elements, are reported in principal transactions revenue.

The following table presents as of December 31, 2013 and 2012, the gross and net securities purchased under resale agreements and securities borrowed. Securities purchased under resale agreements have been presented on the Consolidated Balance Sheets net of securities sold under repurchase agreements where the Firm has obtained an appropriate legal opinion with respect to the master netting agreement, and where the other relevant criteria have been met. Where such a legal opinion has not been either sought or obtained, the securities purchased under resale agreements are not eligible for netting and are shown separately in the table below. Securities borrowed are presented on a gross basis on the Consolidated Balance Sheets.

	2013			2012		
December 31, (in millions)	Gross asset balance	Amounts netted on the Consolidated Balance Sheets	Net asset balance	Gross asset balance	Amounts netted on the Consolidated Balance Sheets	Net asset balance
Securities purchased under resale agreements						
Securities purchased under resale agreements with an appropriate legal opinion	**$ 354,814**	**$ (115,408)**	**$ 239,406**	$ 381,377	$ (96,947)	$ 284,430
Securities purchased under resale agreements where an appropriate legal opinion has not been either sought or obtained	**8,279**		**8,279**	10,983		10,983
Total securities purchased under resale agreements	**$ 363,093**	**$ (115,408)**	**$ 247,685** [(a)]	$ 392,360	$ (96,947)	$ 295,413 [(a)]
Securities borrowed	**$ 111,465**	**N/A**	**$ 111,465** [(b)(c)]	$ 119,017	N/A	$ 119,017 [(b)(c)]

(a) At December 31, 2013 and 2012, included securities purchased under resale agreements of $25.1 billion and $24.3 billion, respectively, accounted for at fair value.

(b) At December 31, 2013 and 2012, included securities borrowed of $3.7 billion and $10.2 billion, respectively, accounted for at fair value.

(c) Included $26.9 billion and $28.4 billion at December 31, 2013 and 2012, respectively, of securities borrowed where an appropriate legal opinion has not been either sought or obtained with respect to the master netting agreement. The prior period amounts have been revised with a corresponding impact in the table below. This revision had no impact on the Firm's Consolidated Balance Sheets or its results of operations.

The following table presents information as of December 31, 2013 and 2012, regarding the securities purchased under resale agreements and securities borrowed for which an appropriate legal opinion has been obtained with respect to the master netting agreement. The below table excludes information related to resale agreements and securities borrowed where such a legal opinion has not been either sought or obtained.

	2013				2012			
		Amounts not nettable on the Consolidated Balance Sheets[a]				Amounts not nettable on the Consolidated Balance Sheets[a]		
December 31, (in millions)	Net asset balance	Financial instruments[b]	Cash collateral	Net exposure	Net asset balance	Financial instruments[b]	Cash collateral	Net exposure
Securities purchased under resale agreements with an appropriate legal opinion	**$ 239,406**	**$ (234,495)**	**$ (98)**	**$ 4,813**	$ 284,430	$ (282,468)	$ (998)	$ 964
Securities borrowed	**$ 84,531**	**$ (81,127)**	**$ –**	**$ 3,404**	$ 90,609	$ (87,651)	$ –	$ 2,958

(a) For some counterparties, the sum of the financial instruments and cash collateral not nettable on the Consolidated Balance Sheets may exceed the net asset balance. Where this is the case the total amounts reported in these two columns are limited to the balance of the net reverse repurchase agreement or securities borrowed asset with that counterparty. As a result a net exposure amount is reported even though the Firm, on an aggregate basis for its securities purchased under resale agreements and securities borrowed, has received securities collateral with a total fair value that is greater than the funds provided to counterparties.

(b) Includes financial instrument collateral received, repurchase liabilities and securities loaned liabilities with an appropriate legal opinion with respect to the master netting agreement; these amounts are not presented net on the Consolidated Balance Sheets because other U.S. GAAP netting criteria are not met.

The following table presents as of December 31, 2013 and 2012, the gross and net securities sold under repurchase agreements and securities loaned. Securities sold under repurchase agreements have been presented on the Consolidated Balance Sheets net of securities purchased under resale agreements where the Firm has obtained an appropriate legal opinion with respect to the master netting agreement, and where the other relevant criteria have been met. Where such a legal opinion has not been either sought or obtained, the securities sold under repurchase agreements are not eligible for netting and are shown separately in the table below. Securities loaned are presented on a gross basis on the Consolidated Balance Sheets.

	2013				2012			
December 31, (in millions)	Gross liability balance	Amounts netted on the Consolidated Balance Sheets	Net liability balance		Gross liability balance	Amounts netted on the Consolidated Balance Sheets	Net liability balance	
Securities sold under repurchase agreements								
Securities sold under repurchase agreements with an appropriate legal opinion	**$ 261,265**	**$ (115,408)**	**$ 145,857**		$ 301,352	$ (96,947)	$ 204,405	
Securities sold under repurchase agreements where an appropriate legal opinion has not been either sought or obtained[a]	**14,508**		**14,508**		11,155		11,155	
Total securities sold under repurchase agreements	**$ 275,773**	**$ (115,408)**	**$ 160,365**	[c]	$ 312,507	$ (96,947)	$ 215,560	[c]
Securities loaned[b]	**$ 25,769**	**N/A**	**$ 25,769**	[d][e]	$ 30,458	N/A	$ 30,458	[d][e]

(a) Includes repurchase agreements that are not subject to a master netting agreement but do provide rights to collateral.

(b) Included securities-for-securities borrow vs. pledge transactions of $5.8 billion and $6.9 billion at December 31, 2013 and 2012, respectively, when acting as lender and as presented within other liabilities in the Consolidated Balance Sheets.

(c) At December 31, 2013 and 2012, included securities sold under repurchase agreements of $4.9 billion and $3.9 billion, respectively, accounted for at fair value.

(d) At December 31, 2013 and 2012, included securities loaned of $483 million and $457 million, respectively, accounted for at fair value.

(e) Included $397 million and $889 million at December 31, 2013 and 2012, respectively, of securities loaned where an appropriate legal opinion has not been either sought or obtained with respect to the master netting agreement.

The following table presents information as of December 31, 2013 and 2012, regarding the securities sold under repurchase agreements and securities loaned for which an appropriate legal opinion has been obtained with respect to the master netting agreement. The below table excludes information related to repurchase agreements and securities loaned where such a legal opinion has not been either sought or obtained.

	2013				2012			
		Amounts not nettable on the Consolidated balance sheets[a]				Amounts not nettable on the Consolidated balance sheets[a]		
December 31, (in millions)	Net liability balance	Financial instruments[b]	Cash collateral	Net amount[c]	Net liability balance	Financial instruments[b]	Cash collateral	Net amount[c]
Securities sold under repurchase agreements with an appropriate legal opinion	**$ 145,857**	**$ (142,686)**	**$ (450)**	**$ 2,721**	$ 204,405	$ (202,925)	$ (162)	$ 1,318
Securities loaned	**$ 25,372**	**$ (25,125)**	**$ —**	**$ 247**	$ 29,569	$ (28,465)	$ —	$ 1,104

(a) For some counterparties the sum of the financial instruments and cash collateral not nettable on the Consolidated Balance Sheets may exceed the net liability balance. Where this is the case the total amounts reported in these two columns are limited to the balance of the net repurchase agreement or securities loaned liability with that counterparty.

(b) Includes financial instrument collateral transferred, reverse repurchase assets and securities borrowed assets with an appropriate legal opinion with respect to the master netting agreement; these amounts are not presented net on the Consolidated Balance Sheets because other U.S. GAAP netting criteria are not met.

(c) Net amount represents exposure of counterparties to the Firm.

JPMorgan Chase's policy is to take possession, where possible, of securities purchased under resale agreements and of securities borrowed. The Firm monitors the value of the underlying securities (primarily G7 government securities, U.S. agency securities and agency MBS, and equities) that it has received from its counterparties and either requests additional collateral or returns a portion of the collateral when appropriate in light of the market value of the underlying securities. Margin levels are established initially based upon the counterparty and type of collateral and monitored on an ongoing basis to protect against declines in collateral value in the event of default. JPMorgan Chase typically enters into master netting agreements and other collateral arrangements with its resale agreement and securities borrowed counterparties, which provide for the right to liquidate the purchased or borrowed securities in the event of a customer default. As a result of the Firm's credit risk mitigation practices with respect to resale and securities borrowed agreements as described above, the Firm did not hold any reserves for credit impairment with respect to these agreements as of December 31, 2013 and 2012.

For further information regarding assets pledged and collateral received in securities financing agreements, see Note 30 on page 325 of this Annual Report.

Transfers not qualifying for sale accounting

In addition, at December 31, 2013 and 2012, the Firm held $14.6 billion and $9.6 billion, respectively, of financial assets for which the rights have been transferred to third parties; however, the transfers did not qualify as a sale in accordance with U.S. GAAP. These transfers have been recognized as collateralized financing transactions. The transferred assets are recorded in trading assets, other assets and loans, and the corresponding liabilities are recorded in other borrowed funds, accounts payable and other liabilities, and long-term debt, on the Consolidated Balance Sheets.

Note 14 – Loans

Loan accounting framework

The accounting for a loan depends on management's strategy for the loan, and on whether the loan was credit-impaired at the date of acquisition. The Firm accounts for loans based on the following categories:

- Originated or purchased loans held-for-investment (i.e., "retained"), other than purchased credit-impaired ("PCI") loans
- Loans held-for-sale
- Loans at fair value
- PCI loans held-for-investment

The following provides a detailed accounting discussion of these loan categories:

Loans held-for-investment (other than PCI loans)

Originated or purchased loans held-for-investment, other than PCI loans, are measured at the principal amount outstanding, net of the following: allowance for loan losses; net charge-offs; interest applied to principal (for loans accounted for on the cost recovery method); unamortized discounts and premiums; and net deferred loan fees or costs. Credit card loans also include billed finance charges and fees net of an allowance for uncollectible amounts.

Interest income

Interest income on performing loans held-for-investment, other than PCI loans, is accrued and recognized as interest income at the contractual rate of interest. Purchase price discounts or premiums, as well as net deferred loan fees or costs, are amortized into interest income over the life of the loan to produce a level rate of return.

Nonaccrual loans

Nonaccrual loans are those on which the accrual of interest has been suspended. Loans (other than credit card loans and certain consumer loans insured by U.S. government agencies) are placed on nonaccrual status and considered nonperforming when full payment of principal and interest is in doubt, which for consumer loans, excluding credit card, generally occurs when principal or interest is 90 days or more past due unless the loan is both well secured and in the process of collection. A loan is determined to be past due when the minimum payment is not received from the borrower by the contractually specified due date or for certain loans (e.g., residential real estate loans), when a monthly payment is due and unpaid for 30 days or more. Consumer, excluding credit card, loans that are less than 90 days past due may be placed on nonaccrual status when there is evidence that full payment of principal and interest is in doubt (e.g., performing junior liens that are subordinate to nonperforming senior liens). Finally, collateral-dependent loans are typically maintained on nonaccrual status.

On the date a loan is placed on nonaccrual status, all interest accrued but not collected is reversed against interest income. In addition, the amortization of deferred amounts is suspended. Interest income on nonaccrual loans may be recognized as cash interest payments are received (i.e., on a cash basis) if the recorded loan balance is deemed fully collectible; however, if there is doubt regarding the ultimate collectibility of the recorded loan balance, all interest cash receipts are applied to reduce the carrying value of the loan (the cost recovery method). For consumer loans, application of this policy typically results in the Firm recognizing interest income on nonaccrual consumer loans on a cash basis.

A loan may be returned to accrual status when repayment is reasonably assured and there has been demonstrated performance under the terms of the loan or, if applicable, the terms of the restructured loan.

As permitted by regulatory guidance, credit card loans are generally exempt from being placed on nonaccrual status; accordingly, interest and fees related to credit card loans continue to accrue until the loan is charged off or paid in full. However, the Firm separately establishes an allowance for the estimated uncollectible portion of accrued interest and fee income on credit card loans. The allowance is established with a charge to interest income and is reported as an offset to loans.

Allowance for loan losses

The allowance for loan losses represents the estimated probable credit losses inherent in the held-for-investment loan portfolio at the balance sheet date. Changes in the allowance for loan losses are recorded in the provision for credit losses on the Firm's Consolidated Statements of Income. See Note 15 on pages 284–287 of this Annual Report for further information on the Firm's accounting polices for the allowance for loan losses.

Charge-offs

Consumer loans, other than risk-rated business banking, risk-rated auto and PCI loans, are generally charged off or charged down to the net realizable value of the underlying collateral (i.e., fair value less costs to sell), with an offset to the allowance for loan losses, upon reaching specified stages of delinquency in accordance with standards established by the Federal Financial Institutions Examination Council ("FFIEC"). Residential real estate loans, non-modified credit card loans and scored business banking loans are generally charged off at 180 days past due. In the second quarter of 2012, the Firm revised its policy to charge-off modified credit card loans that do not comply with their modified payment terms at 120 days past due rather than 180 days past due. Auto and student loans are charged off no later than 120 days past due.

Certain consumer loans will be charged off earlier than the FFIEC charge-off standards in certain circumstances as follows:

- A charge-off is recognized when a loan is modified in a TDR if the loan is determined to be collateral-dependent. A loan is considered to be collateral-dependent when repayment of the loan is expected to be provided solely by the underlying collateral, rather than by cash flows from the borrower's operations, income or other resources.
- Loans to borrowers who have experienced an event (e.g., bankruptcy) that suggests a loss is either known or highly certain are subject to accelerated charge-off standards. Residential real estate and auto loans are charged off when the loan becomes 60 days past due, or sooner if the loan is determined to be collateral-dependent. Credit card and scored business banking loans are charged off within 60 days of receiving notification of the bankruptcy filing or other event. Student loans are generally charged off when the loan becomes 60 days past due after receiving notification of a bankruptcy.
- Auto loans are written down to net realizable value upon repossession of the automobile and after a redemption period (i.e., the period during which a borrower may cure the loan) has passed.

Other than in certain limited circumstances, the Firm typically does not recognize charge-offs on government-guaranteed loans.

Wholesale loans, risk-rated business banking loans and risk-rated auto loans are charged off when it is highly certain that a loss has been realized, including situations where a loan is determined to be both impaired and collateral-dependent. The determination of whether to recognize a charge-off includes many factors, including the prioritization of the Firm's claim in bankruptcy, expectations of the workout/restructuring of the loan and valuation of the borrower's equity or the loan collateral.

When a loan is charged down to the estimated net realizable value, the determination of the fair value of the collateral depends on the type of collateral (e.g., securities, real estate). In cases where the collateral is in the form of liquid securities, the fair value is based on quoted market prices or broker quotes. For illiquid securities or other financial assets, the fair value of the collateral is estimated using a discounted cash flow model.

For residential real estate loans, collateral values are based upon external valuation sources. When it becomes likely that a borrower is either unable or unwilling to pay, the Firm obtains a broker's price opinion of the home based on an exterior-only valuation ("exterior opinions"), which is then updated at least every six months thereafter. As soon as practicable after the Firm receives the property in satisfaction of a debt (e.g., by taking legal title or physical possession), generally, either through foreclosure or upon the execution of a deed in lieu of foreclosure transaction with the borrower, the Firm obtains an appraisal based on an inspection that includes the interior of the home ("interior appraisals"). Exterior opinions and interior appraisals are discounted based upon the Firm's experience with actual liquidation values as compared to the estimated values provided by exterior opinions and interior appraisals, considering state- and product-specific factors.

For commercial real estate loans, collateral values are generally based on appraisals from internal and external valuation sources. Collateral values are typically updated every six to twelve months, either by obtaining a new appraisal or by performing an internal analysis, in accordance with the Firm's policies. The Firm also considers both borrower- and market-specific factors, which may result in obtaining appraisal updates or broker price opinions at more frequent intervals.

Loans held-for-sale

Held-for-sale loans are measured at the lower of cost or fair value, with valuation changes recorded in noninterest revenue. For consumer loans, the valuation is performed on a portfolio basis. For wholesale loans, the valuation is performed on an individual loan basis.

Interest income on loans held-for-sale is accrued and recognized based on the contractual rate of interest.

Loan origination fees or costs and purchase price discounts or premiums are deferred in a contra loan account until the related loan is sold. The deferred fees and discounts or premiums are an adjustment to the basis of the loan and therefore are included in the periodic determination of the lower of cost or fair value adjustments and/or the gain or losses recognized at the time of sale.

Held-for-sale loans are subject to the nonaccrual policies described above.

Because held-for-sale loans are recognized at the lower of cost or fair value, the Firm's allowance for loan losses and charge-off policies do not apply to these loans.

Loans at fair value

Loans used in a market-making strategy or risk managed on a fair value basis are measured at fair value, with changes in fair value recorded in noninterest revenue.

For these loans, the earned current contractual interest payment is recognized in interest income. Changes in fair value are recognized in noninterest revenue. Loan origination fees are recognized upfront in noninterest revenue. Loan origination costs are recognized in the associated expense category as incurred.

Because these loans are recognized at fair value, the Firm's nonaccrual, allowance for loan losses, and charge-off policies do not apply to these loans.

See Note 4 on pages 215–218 of this Annual Report for further information on the Firm's elections of fair value accounting under the fair value option. See Note 3 and Note 4 on pages 195–215 and 215–218 of this Annual Report for further information on loans carried at fair value and classified as trading assets.

PCI loans

PCI loans held-for-investment are initially measured at fair value. PCI loans have evidence of credit deterioration since the loan's origination date and therefore it is probable, at acquisition, that all contractually required payments will not be collected. Because PCI loans are initially measured at fair value, which includes an estimate of future credit losses, no allowance for loan losses related to PCI loans is recorded at the acquisition date. See page 274 of this Note for information on accounting for PCI loans subsequent to their acquisition.

Loan classification changes

Loans in the held-for-investment portfolio that management decides to sell are transferred to the held-for-sale portfolio at the lower of cost or fair value on the date of transfer. Credit-related losses are charged against the allowance for loan losses; losses due to changes in interest rates or foreign currency exchange rates are recognized in noninterest revenue.

In the event that management decides to retain a loan in the held-for-sale portfolio, the loan is transferred to the held-for-investment portfolio at the lower of cost or fair value on the date of transfer. These loans are subsequently assessed for impairment based on the Firm's allowance methodology. For a further discussion of the methodologies used in establishing the Firm's allowance for loan losses, see Note 15 on pages 284–287 of this Annual Report.

Loan modifications

The Firm seeks to modify certain loans in conjunction with its loss-mitigation activities. Through the modification, JPMorgan Chase grants one or more concessions to a borrower who is experiencing financial difficulty in order to minimize the Firm's economic loss, avoid foreclosure or repossession of the collateral, and to ultimately maximize payments received by the Firm from the borrower. The concessions granted vary by program and by borrower-specific characteristics, and may include interest rate reductions, term extensions, payment deferrals, principal forgiveness, or the acceptance of equity or other assets in lieu of payments.

Such modifications are accounted for and reported as troubled debt restructurings ("TDRs"). A loan that has been modified in a TDR is generally considered to be impaired until it matures, is repaid, or is otherwise liquidated, regardless of whether the borrower performs under the modified terms. In certain limited cases, the effective interest rate applicable to the modified loan is at or above the current market rate at the time of the restructuring. In such circumstances, and assuming that the loan subsequently performs under its modified terms and the Firm expects to collect all contractual principal and interest cash flows, the loan is disclosed as impaired and as a TDR only during the year of the modification; in subsequent years, the loan is not disclosed as an impaired loan or as a TDR so long as repayment of the restructured loan under its modified terms is reasonably assured.

Loans, except for credit card loans, modified in a TDR are generally placed on nonaccrual status, although in many cases such loans were already on nonaccrual status prior to modification. These loans may be returned to performing status (the accrual of interest is resumed) if the following criteria are met: (a) the borrower has performed under the modified terms for a minimum of six months and/or six payments, and (b) the Firm has an expectation that repayment of the modified loan is reasonably assured based on, for example, the borrower's debt capacity and level of future earnings, collateral values, loan-to-value ("LTV") ratios, and other current market considerations. In certain limited and well-defined circumstances in which the loan is current at the modification date, such loans are not placed on nonaccrual status at the time of modification.

Because loans modified in TDRs are considered to be impaired, these loans are measured for impairment using the Firm's established asset-specific allowance methodology, which considers the expected re-default rates for the modified loans. A loan modified in a TDR remains subject to the asset-specific allowance methodology throughout its remaining life, regardless of whether the loan is performing and has been returned to accrual status and/or the loan has been removed from the impaired loans disclosures (i.e., loans restructured at market rates). For further discussion of the methodology used to estimate the Firm's asset-specific allowance, see Note 15 on pages 284–287 of this Annual Report.

Foreclosed property

The Firm acquires property from borrowers through loan restructurings, workouts, and foreclosures. Property acquired may include real property (e.g., residential real estate, land, and buildings) and commercial and personal property (e.g., automobiles, aircraft, railcars, and ships).

The Firm recognizes foreclosed property upon receiving assets in satisfaction of a loan (e.g., by taking legal title or physical possession). For loans collateralized by real property, the Firm generally recognizes the asset received at foreclosure sale or upon the execution of a deed in lieu of foreclosure transaction with the borrower. Foreclosed assets are reported in other assets on the Consolidated Balance Sheets and initially recognized at fair value less costs to sell. Each quarter the fair value of the acquired property is reviewed and adjusted, if necessary, to the lower of cost or fair value. Subsequent adjustments to fair value are charged/credited to noninterest revenue. Operating expense, such as real estate taxes and maintenance, are charged to other expense.

Loan portfolio

The Firm's loan portfolio is divided into three portfolio segments, which are the same segments used by the Firm to determine the allowance for loan losses: Consumer, excluding credit card; Credit card; and Wholesale. Within each portfolio segment, the Firm monitors and assesses the credit risk in the following classes of loans, based on the risk characteristics of each loan class:

Consumer, excluding credit card[a]	Credit card	Wholesale[c]
Residential real estate – excluding PCI • Home equity – senior lien • Home equity – junior lien • Prime mortgage, including option ARMs • Subprime mortgage Other consumer loans • Auto[b] • Business banking[b] • Student and other Residential real estate – PCI • Home equity • Prime mortgage • Subprime mortgage • Option ARMs	• Credit card loans	• Commercial and industrial • Real estate • Financial institutions • Government agencies • Other[d]

(a) Includes loans held in CCB, and prime mortgage loans held in the AM business segment and in Corporate/Private Equity.

(b) Includes certain business banking and auto dealer risk-rated loans that apply the wholesale methodology for determining the allowance for loan losses; these loans are managed by CCB, and therefore, for consistency in presentation, are included with the other consumer loan classes.

(c) Includes loans held in CIB, CB and AM business segments and in Corporate/Private Equity. Classes are internally defined and may not align with regulatory definitions.

(d) Other primarily includes loans to SPEs and loans to private banking clients. See Note 1 on pages 189–191 of this Annual Report for additional information on SPEs.

The following tables summarize the Firm's loan balances by portfolio segment.

December 31, 2013 (in millions)	Consumer, excluding credit card	Credit card[a]	Wholesale	Total
Retained	**$ 288,449**	**$ 127,465**	**$ 308,263**	**$ 724,177** [b]
Held-for-sale	**614**	**326**	**11,290**	**12,230**
At fair value	**–**	**–**	**2,011**	**2,011**
Total	**$ 289,063**	**$ 127,791**	**$ 321,564**	**$ 738,418**

December 31, 2012 (in millions)	Consumer, excluding credit card	Credit card[a]	Wholesale	Total
Retained	$ 292,620	$ 127,993	$ 306,222	$ 726,835 [b]
Held-for-sale	–	–	4,406	4,406
At fair value	–	–	2,555	2,555
Total	$ 292,620	$ 127,993	$ 313,183	$ 733,796

(a) Includes billed finance charges and fees net of an allowance for uncollectible amounts.
(b) Loans (other than PCI loans and those for which the fair value option has been elected) are presented net of unearned income, unamortized discounts and premiums, and net deferred loan costs of $1.9 billion and $2.5 billion at December 31, 2013 and 2012, respectively.

The following table provides information about the carrying value of retained loans purchased, sold and reclassified to held-for-sale during the periods indicated. These tables exclude loans recorded at fair value. The Firm manages its exposure to credit risk on an ongoing basis. Selling loans is one way that the Firm reduces its credit exposures.

	2013				2012			
Years ended December 31, (in millions)	Consumer, excluding credit card	Credit card	Wholesale	Total	Consumer, excluding credit card	Credit card	Wholesale	Total
Purchases	**$ 7,616** [a][b]	**$ 328**	**$ 697**	**$ 8,641**	$ 6,601 [a][b]	$ –	$ 827	$ 7,428
Sales	**4,845**	**–**	**4,232**	**9,077**	1,852	–	3,423	5,275
Retained loans reclassified to held-for-sale	**1,261**	**309**	**5,641**	**7,211**	–	1,043	504	1,547

(a) Purchases predominantly represent the Firm's voluntary repurchase of certain delinquent loans from loan pools as permitted by Ginnie Mae guidelines. The Firm typically elects to repurchase these delinquent loans as it continues to service them and/or manage the foreclosure process in accordance with applicable requirements of Ginnie Mae, the Federal Housing Administration ("FHA"), Rural Housing Services ("RHS") and/or the U.S. Department of Veterans Affairs ("VA").
(b) Excluded retained loans purchased from correspondents that were originated in accordance with the Firm's underwriting standards. Such purchases were $5.7 billion and $1.4 billion for the years ended December 31, 2013 and 2012, respectively.

The following table provides information about gains/(losses) on loan sales by portfolio segment.

Year ended December 31, (in millions)	**2013**	2012	2011
Net gains/(losses) on sales of loans (including lower of cost or fair value adjustments)[a]			
Consumer, excluding credit card	**$ 313**	$ 122	$ 131
Credit card	**3**	(9)	(24)
Wholesale	**(76)**	180	121
Total net gains/(losses) on sales of loans (including lower of cost or fair value adjustments)	**$ 240**	$ 293	$ 228

(a) Excludes sales related to loans accounted for at fair value.

Consumer, excluding credit card, loan portfolio

Consumer loans, excluding credit card loans, consist primarily of residential mortgages, home equity loans and lines of credit, auto loans, business banking loans, and student and other loans, with a focus on serving the prime consumer credit market. The portfolio also includes home equity loans secured by junior liens, prime mortgage loans with an interest-only payment period, and certain payment-option loans originated by Washington Mutual that may result in negative amortization.

The table below provides information about retained consumer loans, excluding credit card, by class.

December 31, (in millions)	2013	2012
Residential real estate – excluding PCI		
Home equity:		
Senior lien	**$ 17,113**	$ 19,385
Junior lien	**40,750**	48,000
Mortgages:		
Prime, including option ARMs	**87,162**	76,256
Subprime	**7,104**	8,255
Other consumer loans		
Auto	**52,757**	49,913
Business banking	**18,951**	18,883
Student and other	**11,557**	12,191
Residential real estate – PCI		
Home equity	**18,927**	20,971
Prime mortgage	**12,038**	13,674
Subprime mortgage	**4,175**	4,626
Option ARMs	**17,915**	20,466
Total retained loans	**$ 288,449**	$ 292,620

Delinquency rates are a primary credit quality indicator for consumer loans. Loans that are more than 30 days past due provide an early warning of borrowers who may be experiencing financial difficulties and/or who may be unable or unwilling to repay the loan. As the loan continues to age, it becomes more clear that the borrower is likely either unable or unwilling to pay. In the case of residential real estate loans, late-stage delinquencies (greater than 150 days past due) are a strong indicator of loans that will ultimately result in a foreclosure or similar liquidation transaction. In addition to delinquency rates, other credit quality indicators for consumer loans vary based on the class of loan, as follows:

- For residential real estate loans, including both non-PCI and PCI portfolios, the current estimated LTV ratio, or the combined LTV ratio in the case of junior lien loans, is an indicator of the potential loss severity in the event of default. Additionally, LTV or combined LTV can provide insight into a borrower's continued willingness to pay, as the delinquency rate of high-LTV loans tends to be greater than that for loans where the borrower has equity in the collateral. The geographic distribution of the loan collateral also provides insight as to the credit quality of the portfolio, as factors such as the regional economy, home price changes and specific events such as natural disasters, will affect credit quality. The borrower's current or "refreshed" FICO score is a secondary credit-quality indicator for certain loans, as FICO scores are an indication of the borrower's credit payment history. Thus, a loan to a borrower with a low FICO score (660 or below) is considered to be of higher risk than a loan to a borrower with a high FICO score. Further, a loan to a borrower with a high LTV ratio and a low FICO score is at greater risk of default than a loan to a borrower that has both a high LTV ratio and a high FICO score.
- For scored auto, scored business banking and student loans, geographic distribution is an indicator of the credit performance of the portfolio. Similar to residential real estate loans, geographic distribution provides insights into the portfolio performance based on regional economic activity and events.
- Risk-rated business banking and auto loans are similar to wholesale loans in that the primary credit quality indicators are the risk rating that is assigned to the loan and whether the loans are considered to be criticized and/or nonaccrual. Risk ratings are reviewed on a regular and ongoing basis by Credit Risk Management and are adjusted as necessary for updated information about borrowers' ability to fulfill their obligations. For further information about risk-rated wholesale loan credit quality indicators, see page 279 of this Note.

Residential real estate – excluding PCI loans

The following table provides information by class for residential real estate – excluding retained PCI loans in the consumer, excluding credit card, portfolio segment.

The following factors should be considered in analyzing certain credit statistics applicable to the Firm's residential real estate – excluding PCI loans portfolio: (i) junior lien home equity loans may be fully charged off when the loan becomes 180 days past due, and the value of the collateral does not support the repayment of the loan, resulting in relatively high charge-off rates for this product class; and (ii) the lengthening of loss-mitigation timelines may result in higher delinquency rates for loans carried at the net realizable value of the collateral that remain on the Firm's Consolidated Balance Sheets.

Total retained loans	**$ 17,113**	$ 19,385	**$ 40,750**	$ 48,000

(a) Individual delinquency classifications included mortgage loans insured by U.S. government agencies as follows: current included $4.7 billion and $3.8 billion; 30–149 days past due included $2.4 billion and $2.3 billion; and 150 or more days past due included $6.6 billion and $9.5 billion at December 31, 2013 and 2012, respectively.

(b) These balances, which are 90 days or more past due but insured by U.S. government agencies, are excluded from nonaccrual loans. In predominantly all cases, 100% of the principal balance of the loans is insured and interest is guaranteed at a specified reimbursement rate subject to meeting agreed-upon servicing guidelines. These amounts have been excluded from nonaccrual loans based upon the government guarantee. At December 31, 2013 and 2012, these balances included $4.7 billion and $6.8 billion, respectively, of loans that are no longer accruing interest because interest has been curtailed by the U.S. government agencies although, in predominantly all cases, 100% of the principal is still insured. For the remaining balance, interest is being accrued at the guaranteed reimbursement rate.

(c) Represents the aggregate unpaid principal balance of loans divided by the estimated current property value. Current property values are estimated, at a minimum, quarterly, based on home valuation models using nationally recognized home price index valuation estimates incorporating actual data to the extent available and forecasted data where actual data is not available. These property values do not represent actual appraised loan level collateral values; as such, the resulting ratios are necessarily imprecise and should be viewed as estimates.

(d) Junior lien represents combined LTV, which considers all available lien positions, as well as unused lines, related to the property. All other products are presented without consideration of subordinate liens on the property.

(e) Refreshed FICO scores represent each borrower's most recent credit score, which is obtained by the Firm on at least a quarterly basis.

(f) At December 31, 2013 and 2012, included mortgage loans insured by U.S. government agencies of $13.7 billion and $15.6 billion, respectively.

(g) At December 31, 2013 and 2012, excluded mortgage loans insured by U.S. government agencies of $9.0 billion and $11.8 billion, respectively. These amounts have been excluded from nonaccrual loans based upon the government guarantee.

$ 87,162	$ 76,256	**$ 7,104**	$ 8,255	**$ 152,129**	$ 151,896			

The following tables represent the Firm's delinquency statistics for junior lien home equity loans and lines as of December 31, 2013 and 2012.

December 31, 2013 (in millions, except ratios)	Delinquencies			Total loans	Total 30+ day delinquency rate
	30–89 days past due	90–149 days past due	150+ days past due		
HELOCs:[a]					
Within the revolving period[b]	**$ 341**	**$ 104**	**$ 162**	**$ 31,848**	**1.91%**
Beyond the revolving period	**84**	**21**	**46**	**4,980**	**3.03**
HELOANs	**86**	**26**	**16**	**3,922**	**3.26**
Total	**$ 511**	**$ 151**	**$ 224**	**$ 40,750**	**2.17%**

December 31, 2012 (in millions, except ratios)	Delinquencies			Total loans	Total 30+ day delinquency rate
	30–89 days past due	90–149 days past due	150+ days past due		
HELOCs:[a]					
Within the revolving period[b]	$ 514	$ 196	$ 185	$ 40,794	2.19%
Beyond the revolving period	48	19	27	2,127	4.42
HELOANs	125	58	23	5,079	4.06
Total	$ 687	$ 273	$ 235	$ 48,000	2.49%

(a) These HELOCs are predominantly revolving loans for a 10-year period, after which time the HELOC converts to a loan with a 20-year amortization period, but also include HELOCs originated by Washington Mutual that require interest-only payments beyond the revolving period.

(b) The Firm manages the risk of HELOCs during their revolving period by closing or reducing the undrawn line to the extent permitted by law when borrowers are experiencing financial difficulty or when the collateral does not support the loan amount.

Home equity lines of credit ("HELOCs") beyond the revolving period and home equity loans ("HELOANs") have higher delinquency rates than do HELOCs within the revolving period. That is primarily because the fully-amortizing payment that is generally required for those products is higher than the minimum payment options available for HELOCs within the revolving period. The higher delinquency rates associated with amortizing HELOCs and HELOANs are factored into the loss estimates produced by the Firm's delinquency roll-rate methodology, which estimates defaults based on the current delinquency status of a portfolio.

Impaired loans

The table below sets forth information about the Firm's residential real estate impaired loans, excluding PCI loans. These loans are considered to be impaired as they have been modified in a TDR. All impaired loans are evaluated for an asset-specific allowance as described in Note 15 on pages 284–287 of this Annual Report.

December 31, (in millions)	Home equity				Mortgages				Total residential real estate – excluding PCI	
	Senior lien		Junior lien		Prime, including option ARMs		Subprime			
	2013	2012	**2013**	2012	**2013**	2012	**2013**	2012	**2013**	2012
Impaired loans										
With an allowance	**$ 567**	$ 542	**$ 727**	$ 677	**$ 5,871**	$ 5,810	**$ 2,989**	$ 3,071	**$ 10,154**	$ 10,100
Without an allowance[a]	**579**	550	**592**	546	**1,133**	1,308	**709**	741	**3,013**	3,145
Total impaired loans[b]	**$ 1,146**	$ 1,092	**$ 1,319**	$ 1,223	**$ 7,004**	$ 7,118	**$ 3,698**	$ 3,812	**$ 13,167**	$ 13,245
Allowance for loan losses related to impaired loans	**$ 94**	$ 159	**$ 162**	$ 188	**$ 144**	$ 70	**$ 94**	$ 174	**$ 494**	$ 591
Unpaid principal balance of impaired loans[c]	**1,515**	1,408	**2,625**	2,352	**8,990**	9,095	**5,461**	5,700	**18,591**	18,555
Impaired loans on nonaccrual status[d]	**641**	607	**666**	599	**1,737**	1,888	**1,127**	1,308	**4,171**	4,402

(a) Represents collateral-dependent residential mortgage loans that are charged off to the fair value of the underlying collateral less cost to sell. The Firm reports, in accordance with regulatory guidance, residential real estate loans that have been discharged under Chapter 7 bankruptcy and not reaffirmed by the borrower ("Chapter 7 loans") as collateral-dependent nonaccrual TDRs, regardless of their delinquency status.

(b) At December 31, 2013 and 2012, $7.6 billion and $7.5 billion, respectively, of loans modified subsequent to repurchase from Government National Mortgage Association ("Ginnie Mae") in accordance with the standards of the appropriate government agency (i.e., FHA, VA, RHS) are not included in the table above. When such loans perform subsequent to modification in accordance with Ginnie Mae guidelines, they are generally sold back into Ginnie Mae loan pools. Modified loans that do not re-perform become subject to foreclosure.

(c) Represents the contractual amount of principal owed at December 31, 2013 and 2012. The unpaid principal balance differs from the impaired loan balances due to various factors, including charge-offs, net deferred loan fees or costs; and unamortized discounts or premiums on purchased loans.

(d) As of December 31, 2013 and 2012, nonaccrual loans included $3.0 billion and $2.9 billion, respectively, of TDRs for which the borrowers were less than 90 days past due. For additional information about loans modified in a TDR that are on nonaccrual status refer to the Loan accounting framework on pages 258–260 of this Note.

The following table presents average impaired loans and the related interest income reported by the Firm.

Year ended December 31, (in millions)	Average impaired loans			Interest income on impaired loans[a]			Interest income on impaired loans on a cash basis[a]		
	2013	2012	2011	**2013**	2012	2011	**2013**	2012	2011
Home equity									
Senior lien	**$ 1,151**	$ 610	$ 287	**$ 59**	$ 27	$ 10	**$ 40**	$ 12	$ 1
Junior lien	**1,297**	848	521	**82**	42	18	**55**	16	2
Mortgages									
Prime, including option ARMs	**7,214**	5,989	3,859	**280**	238	147	**59**	28	14
Subprime	**3,798**	3,494	3,083	**200**	183	148	**55**	31	16
Total residential real estate – excluding PCI	**$ 13,460**	$ 10,941	$ 7,750	**$ 621**	$ 490	$ 323	**$ 209**	$ 87	$ 33

(a) Generally, interest income on loans modified in TDRs is recognized on a cash basis until such time as the borrower has made a minimum of six payments under the new terms.

Loan modifications

As required under the terms of certain settlements, the Firm is required to provide borrower relief, which will include, for example, reductions of principal and forbearance. For further information on the global and RMBS settlements, see Business changes and developments in Note 2 on pages 192–194 of this Annual Report.

Modifications of residential real estate loans, excluding PCI loans, are generally accounted for and reported as TDRs. There were no additional commitments to lend to borrowers whose residential real estate loans, excluding PCI loans, have been modified in TDRs.

TDR activity rollforward

The following table reconciles the beginning and ending balances of residential real estate loans, excluding PCI loans, modified in TDRs for the periods presented.

Year ended December 31, (in millions)	Home equity						Mortgages						Total residential real estate – excluding PCI

(a) Includes charge-offs on unsuccessful trial modifications.

Nature and extent of modifications

Making Home Affordable ("MHA"), as well as the Firm's proprietary modification programs, generally provide various concessions to financially troubled borrowers including, but not limited to, interest rate reductions, term or payment extensions and deferral of principal and/or interest payments that would otherwise have been required under the terms of the original agreement.

The following table provides information about how residential real estate loans, excluding PCI loans, were modified under the Firm's loss mitigation programs during the periods presented. This table excludes Chapter 7 loans where the sole concession granted is the discharge of debt. At December 31, 2013, there were approximately 36,700 of such Chapter 7 loans, consisting of approximately 8,800 senior lien home equity loans, 21,700 junior lien home equity loans, 3,100 prime mortgage, including option ARMs, and 3,100 subprime mortgages.

	Home equity						Mortgages								
	Senior lien			Junior lien			Prime, including option ARMs			Subprime			Total residential real estate - excluding PCI		
Year ended Dec. 31,	**2013**	2012	2011	**2013**	2012	2011	**2013**	2012	2011	**2013**	2012	2011	**2013**	2012	2011

Other[c]	**–**	–	29	**–**	–	7	**23**	29	68	**14**	8	26	**11**	11	35

(a) Prior period amounts have been revised to conform with the current presentation.

(b) Represents concessions granted in permanent modifications as a percentage of the number of loans permanently modified. The sum of the percentages exceeds 100% because predominantly all of the modifications include more than one type of concession. A significant portion of trial modifications include interest rate reductions and/or term or payment extensions.

(c) Represents variable interest rate to fixed interest rate modifications.

Financial effects of modifications and redefaults

The following table provides information about the financial effects of the various concessions granted in modifications of residential real estate loans, excluding PCI, under the Firm's loss mitigation programs and about redefaults of certain loans modified in TDRs for the periods presented. Because the specific types and amounts of concessions offered to borrowers frequently change between the trial modification and the permanent modification, the following tables present only the financial effects of permanent modifications. These tables also exclude Chapter 7 loans where the sole concession granted is the discharge of debt.

Year ended December 31, (in millions, except weighted-average data and number of loans)	Home equity						Mortgages								
	Senior lien			Junior lien			Prime, including option ARMs			Subprime			Total residential real estate – excluding PCI

Balance of loans that redefaulted within one year of permanent modification[(a)]	**$ 26**	$ 30	$ 18	**$ 20**	$ 46	$ 52	**$ 164**	$ 255	$ 340	**$ 106**	$ 156	$ 281	**$ 316**	$ 487	$ 691

(a) Represents loans permanently modified in TDRs that experienced a payment default in the periods presented, and for which the payment default occurred within one year of the modification. The dollar amounts presented represent the balance of such loans at the end of the reporting period in which such loans defaulted. For residential real estate loans modified in TDRs, payment default is deemed to occur when the loan becomes two contractual payments past due. In the event that a modified loan redefaults, it is probable that the loan will ultimately be liquidated through foreclosure or another similar type of liquidation transaction. Redefaults of loans modified within the last 12 months may not be representative of ultimate redefault levels.

Approximately 85% of the trial modifications approved on or after July 1, 2010 (the approximate date on which substantial revisions were made to the HAMP program), that are seasoned more than six months have been successfully converted to permanent modifications.

The primary performance indicator for TDRs is the rate at which permanently modified loans redefault. At December 31, 2013, the cumulative redefault rates of residential real estate loans that have been modified under the Firm's loss mitigation programs, excluding PCI loans, based upon permanent modifications that were completed after October 1, 2009, and that are seasoned more than six months, are 20% for senior lien home equity, 20% for junior lien home equity, 15% for prime mortgages, including option ARMs, and 26% for subprime mortgages.

Default rates of Chapter 7 loans vary significantly based on the delinquency status of the loan and overall economic conditions at the time of discharge. Default rates for Chapter 7 residential real estate loans that were less than 60 days past due at the time of discharge have ranged between approximately 10% and 40% in recent years based on the economic conditions at the time of discharge. At December 31, 2013, Chapter 7 residential real estate loans included approximately 20% of senior lien home equity, 11% of junior lien home equity, 33% of prime mortgages, including option ARMs, and 23% of subprime mortgages that were 30 days or more past due.

At December 31, 2013, the weighted-average estimated remaining lives of residential real estate loans, excluding PCI loans, permanently modified in TDRs were 6 years for senior lien home equity, 7 years for junior lien home equity, 10 years for prime mortgages, including option ARMs and 8 years for subprime mortgage. The estimated remaining lives of these loans reflect estimated prepayments, both voluntary and involuntary (i.e., foreclosures and other forced liquidations).

Other consumer loans

The table below provides information for other consumer retained loan classes, including auto, business banking and student loans.

December 31, (in millions, except ratios)	Auto		Business banking		Student and other		Total other consumer

Total retained loans	**$52,757**	$49,913	**$18,951**	$ 18,883	**$11,557**	$ 12,191	**$ 83,265**	$ 80,987
Loans by risk ratings[c]								
Noncriticized	**$ 9,968**	$ 8,882	**$13,622**	$ 13,336	**NA**	NA	**$ 23,590**	$ 22,218
Criticized performing	**54**	130	**711**	713	**NA**	NA	**765**	843
Criticized nonaccrual	**38**	4	**316**	386	**NA**	NA	**354**	390

(a) Individual delinquency classifications included loans insured by U.S. government agencies under the Federal Family Education Loan Program ("FFELP") as follows: current included $4.9 billion and $5.4 billion; 30-119 days past due included $387 million and $466 million; and 120 or more days past due included $350 million and $428 million at December 31, 2013 and 2012, respectively.

(b) These amounts represent student loans, which are insured by U.S. government agencies under the FFELP. These amounts were accruing as reimbursement of insured amounts is proceeding normally.

(c) For risk-rated business banking and auto loans, the primary credit quality indicator is the risk rating of the loan, including whether the loans are considered to be criticized and/or nonaccrual.
(d) December 31, 2013 and 2012, excluded loans 30 days or more past due and still accruing, which are insured by U.S. government agencies under the FFELP, of $737 million and $894 million, respectively. These amounts were excluded as reimbursement of insured amounts is proceeding normally.

Other consumer impaired loans and loan modifications

The table below sets forth information about the Firm's other consumer impaired loans, including risk-rated business banking and auto loans that have been placed on nonaccrual status, and loans that have been modified in TDRs.

December 31, (in millions)	Auto		Business banking		Total other consumer[c]	
	2013	2012	**2013**	2012	**2013**	2012
Impaired loans						
With an allowance	**$ 96**	$ 78	**$ 475**	$ 543	**$ 571**	$ 621
Without an allowance[a]	**47**	72	**—**	—	**47**	72
Total impaired loans	**$ 143**	$ 150	**$ 475**	$ 543	**$ 618**	$ 693
Allowance for loan losses related to impaired loans	**$ 13**	$ 12	**$ 94**	$ 126	**$ 107**	$ 138
Unpaid principal balance of impaired loans[b]	**235**	259	**553**	624	**788**	883
Impaired loans on nonaccrual status	**113**	109	**328**	394	**441**	503

(a) When discounted cash flows, collateral value or market price equals or exceeds the recorded investment in the loan, the loan does not require an allowance. This typically occurs when the impaired loans have been partially charged off and/or there have been interest payments received and applied to the loan balance.
(b) Represents the contractual amount of principal owed at December 31, 2013 and 2012. The unpaid principal balance differs from the impaired loan balances due to various factors, including charge-offs; interest payments received and applied to the principal balance; net deferred loan fees or costs; and unamortized discounts or premiums on purchased loans.
(c) There were no impaired student and other loans at December 31, 2013 and 2012.

The following table presents average impaired loans for the periods presented.

Year ended December 31, (in millions)	Average impaired loans[b]		
	2013	2012	2011
Auto	**$ 132**	$ 111	$ 92
Business banking	**516**	622	760
Total other consumer[a]	**$ 648**	$ 733	$ 852

(a) There were no impaired student and other loans for the years ended 2013, 2012 and 2011.
(b) The related interest income on impaired loans, including those on a cash basis, was not material for the years ended 2013, 2012 and 2011.

Loan modifications

The following table provides information about the Firm's other consumer loans modified in TDRs. All of these TDRs are reported as impaired loans in the tables above.

December 31, (in millions)	Auto		Business banking		Total other consumer[c]	
	2013	2012	**2013**	2012	**2013**	2012
Loans modified in troubled debt restructurings[a][b]	**$ 107**	$ 150	**$ 271**	$ 352	**$ 378**	$ 502
TDRs on nonaccrual status	**77**	109	**124**	203	**201**	312

(a) These modifications generally provided interest rate concessions to the borrower or term or payment extensions.
(b) Additional commitments to lend to borrowers whose loans have been modified in TDRs as of December 31, 2013 and 2012 were immaterial.
(c) There were no student and other loans modified in TDRs at December 31, 2013 and 2012.

TDR activity rollforward

The following table reconciles the beginning and ending balances of other consumer loans modified in TDRs for the periods presented.

Year ended December 31, (in millions)	Auto			Business banking			Total other consumer		
	2013	2012	2011	**2013**	2012	2011	**2013**	2012	2011
Beginning balance of TDRs	**$ 150**	$ 88	$ 91	**$ 352**	$ 415	$ 395	**$ 502**	$ 503	$ 486
New TDRs	**90**	145	54	**66**	104	195	**156**	249	249
Charge-offs post-modification	**(10)**	(9)	(5)	**(10)**	(9)	(11)	**(20)**	(18)	(16)
Foreclosures and other liquidations	**–**	–	–	**–**	(1)	(3)	**–**	(1)	(3)
Principal payments and other	**(123)**	(74)	(52)	**(137)**	(157)	(161)	**(260)**	(231)	(213)
Ending balance of TDRs	**$ 107**	$ 150	$ 88	**$ 271**	$ 352	$ 415	**$ 378**	$ 502	$ 503

Financial effects of modifications and redefaults

For auto loans, TDRs typically occur in connection with the bankruptcy of the borrower. In these cases, the loan is modified with a revised repayment plan that typically incorporates interest rate reductions and, to a lesser extent, principal forgiveness. Beginning September 30, 2012, Chapter 7 auto loans are also considered TDRs.

For business banking loans, concessions are dependent on individual borrower circumstances and can be of a short-term nature for borrowers who need temporary relief or longer term for borrowers experiencing more fundamental financial difficulties. Concessions are predominantly term or payment extensions, but also may include interest rate reductions.

The balance of business banking loans modified in TDRs that experienced a payment default, and for which the payment default occurred within one year of the modification, was $43 million, $42 million and $80 million, during the years ended December 31, 2013, 2012 and 2011, respectively. The balance of auto loans modified in TDRs that experienced a payment default, and for which the payment default occurred within one year of the modification, was $54 million and $46 million during the years ended December 31, 2013 and 2012, respectively. The corresponding amount for the year ended December 31, 2011 was insignificant. A payment default is deemed to occur as follows: (1) for scored auto and business banking loans, when the loan is two payments past due; and (2) for risk-rated business banking loans and auto loans, when the borrower has not made a loan payment by its scheduled due date after giving effect to the contractual grace period, if any.

The following table provides information about the financial effects of the various concessions granted in modifications of other consumer loans for the periods presented.

Year ended December 31,	Auto			Business banking		
	2013	2012	2011	**2013**	2012	2011
Weighted-average interest rate of loans with interest rate reductions – before TDR	**13.66%**	12.64%	12.45%	**8.37%**	7.33%	7.55%
Weighted-average interest rate of loans with interest rate reductions – after TDR	**4.94**	4.83	5.70	**6.05**	5.49	5.52
Weighted-average remaining contractual term (in years) of loans with term or payment extensions – before TDR	**NM**	NM	NM	**1.1**	1.4	1.4
Weighted-average remaining contractual term (in years) of loans with term or payment extensions – after TDR	**NM**	NM	NM	**3.1**	2.4	2.6

Purchased credit-impaired loans

PCI loans are initially recorded at fair value at acquisition; PCI loans acquired in the same fiscal quarter may be aggregated into one or more pools, provided that the loans have common risk characteristics. A pool is then accounted for as a single asset with a single composite interest rate and an aggregate expectation of cash flows. With respect to the Washington Mutual transaction, all of the consumer PCI loans were aggregated into pools of loans with common risk characteristics.

On a quarterly basis, the Firm estimates the total cash flows (both principal and interest) expected to be collected over the remaining life of each pool. These estimates incorporate assumptions regarding default rates, loss severities, the amounts and timing of prepayments and other factors that reflect then-current market conditions. Probable decreases in expected cash flows (i.e., increased credit losses) trigger the recognition of impairment, which is then measured as the present value of the expected principal loss plus any related foregone interest cash flows, discounted at the pool's effective interest rate. Impairments are recognized through the provision for credit losses and an increase in the allowance for loan losses. Probable and significant increases in expected cash flows (e.g., decreased credit losses, the net benefit of modifications) would first reverse any previously recorded allowance for loan losses with any remaining increases recognized prospectively as a yield adjustment over the remaining estimated lives of the underlying loans. The impacts of (i) prepayments, (ii) changes in variable interest rates, and (iii) any other changes in the timing of expected cash flows are recognized prospectively as adjustments to interest income.

The Firm continues to modify certain PCI loans. The impact of these modifications is incorporated into the Firm's quarterly assessment of whether a probable and significant change in expected cash flows has occurred, and the loans continue to be accounted for and reported as PCI loans. In evaluating the effect of modifications on expected cash flows, the Firm incorporates the effect of any foregone interest and also considers the potential for redefault. The Firm develops product-specific probability of default estimates, which are used to compute expected credit losses. In developing these probabilities of default, the Firm considers the relationship between the credit quality characteristics of the underlying loans and certain assumptions about home prices and unemployment based upon industry-wide data. The Firm also considers its own historical loss experience to-date based on actual redefaulted modified PCI loans.

The excess of cash flows expected to be collected over the carrying value of the underlying loans is referred to as the accretable yield. This amount is not reported on the Firm's Consolidated Balance Sheets but is accreted into interest income at a level rate of return over the remaining estimated lives of the underlying pools of loans.

If the timing and/or amounts of expected cash flows on PCI loans were determined not to be reasonably estimable, no interest would be accreted and the loans would be reported as nonaccrual loans; however, since the timing and amounts of expected cash flows for the Firm's PCI consumer loans are reasonably estimable, interest is being accreted and the loans are being reported as performing loans.

The liquidation of PCI loans, which may include sales of loans, receipt of payment in full by the borrower, or foreclosure, results in removal of the loans from the underlying PCI pool. When the amount of the liquidation proceeds (e.g., cash, real estate), if any, is less than the unpaid principal balance of the loan, the difference is first applied against the PCI pool's nonaccretable difference for principal losses (i.e., the lifetime credit loss estimate established as a purchase accounting adjustment at the acquisition date). When the nonaccretable difference for a particular loan pool has been fully depleted, any excess of the unpaid principal balance of the loan over the liquidation proceeds is written off against the PCI pool's allowance for loan losses. Because the Firm's PCI loans are accounted for at a pool level, the Firm does not recognize charge-offs of PCI loans when they reach specified stages of delinquency (i.e., unlike non-PCI consumer loans, these loans are not charged off based on FFIEC standards).

The PCI portfolio affects the Firm's results of operations primarily through: (i) contribution to net interest margin; (ii) expense related to defaults and servicing resulting from the liquidation of the loans; and (iii) any provision for loan losses. The PCI loans acquired in the Washington Mutual transaction were funded based on the interest rate characteristics of the loans. For example, variable-rate loans were funded with variable-rate liabilities and fixed-rate loans were funded with fixed-rate liabilities with a similar maturity profile. A net spread will be earned on the declining balance of the portfolio, which is estimated as of December 31, 2013, to have a remaining weighted-average life of 8 years.

Residential real estate – PCI loans

The table below sets forth information about the Firm's consumer, excluding credit card, PCI loans.

December 31, (in millions, except ratios)	Home equity		Prime mortgage		Subprime mortgage		Option ARMs		Total PCI	
	2013	2012	**2013**	2012	**2013**	2012	**2013**	2012	**2013**	2012

Total unpaid principal balance	**$19,830**	$22,343	**$11,876**	$13,884	**$ 5,471**	$ 6,326	**$19,223**	$22,591	**$56,400**	$65,144

(a) Carrying value includes the effect of fair value adjustments that were applied to the consumer PCI portfolio at the date of acquisition.

(b) Management concluded as part of the Firm's regular assessment of the PCI loan pools that it was probable that higher expected credit losses would result in a decrease in expected cash flows. As a result, an allowance for loan losses for impairment of these pools has been recognized.

(c) Represents the aggregate unpaid principal balance of loans divided by the estimated current property value. Current property values are estimated, at a minimum, quarterly, based on home valuation models using nationally recognized home price index valuation estimates incorporating actual data to the extent available and forecasted data where actual data is not available. These property values do not represent actual appraised loan level collateral values; as such, the resulting ratios are necessarily imprecise and should be viewed as estimates. Current estimated combined LTV for junior lien home equity loans considers all available lien positions, as well as unused lines, related to the property.

(d) Refreshed FICO scores represent each borrower's most recent credit score, which is obtained by the Firm on at least a quarterly basis.

Approximately 20% of the PCI home equity portfolio are senior lien loans; the remaining balance are junior lien HELOANs or HELOCs. The following tables set forth delinquency statistics for PCI junior lien home equity loans and lines of credit based on unpaid principal balance as of December 31, 2013 and 2012.

December 31, 2013 (in millions, except ratios)	Delinquencies			Total loans	Total 30+ day delinquency rate
	30–89 days past due	90–149 days past due	150+ days past due		
HELOCs:[a]					
Within the revolving period[b]	**$ 243**	**$ 88**	**$ 526**	**$ 12,670**	**6.76%**
Beyond the revolving period[c]	**54**	**21**	**82**	**2,336**	**6.72**
HELOANs	**24**	**11**	**39**	**908**	**8.15**
Total	**$ 321**	**$ 120**	**$ 647**	**$ 15,914**	**6.84%**

December 31, 2012 (in millions, except ratios)	Delinquencies			Total loans	Total 30+ day delinquency rate
	30–89 days past due	90–149 days past due	150+ days past due		
HELOCs:[a]					
Within the revolving period[b]	$ 361	$ 175	$ 591	$ 15,915	7.08%
Beyond the revolving period[c]	30	13	20	666	9.46
HELOANs	37	18	44	1,085	9.12
Total	$ 428	$ 206	$ 655	$ 17,666	7.30%

(a) In general, these HELOCs are revolving loans for a 10-year period, after which time the HELOC converts to an interest-only loan with a balloon payment at the end of the loan's term.
(b) Substantially all undrawn HELOCs within the revolving period have been closed.
(c) Includes loans modified into fixed-rate amortizing loans.

The table below sets forth the accretable yield activity for the Firm's PCI consumer loans for the years ended December 31, 2013, 2012 and 2011, and represents the Firm's estimate of gross interest income expected to be earned over the remaining life of the PCI loan portfolios. The table excludes the cost to fund the PCI portfolios, and therefore the accretable yield does not represent net interest income expected to be earned on these portfolios.

Year ended December 31, (in millions, except ratios)	Total PCI		
	2013	2012	2011
Beginning balance	**$ 18,457**	$ 19,072	$ 19,097
Accretion into interest income	**(2,201)**	(2,491)	(2,767)
Changes in interest rates on variable-rate loans	**(287)**	(449)	(573)
Other changes in expected cash flows[a]	**198**	2,325	3,315
Balance at December 31	**$ 16,167**	$ 18,457	$ 19,072
Accretable yield percentage	**4.31%**	4.38%	4.33%

(a) Other changes in expected cash flows may vary from period to period as the Firm continues to refine its cash flow model and periodically updates model assumptions. For the year ended December 31, 2013, other changes in expected cash flows were due to refining the expected interest cash flows on HELOCs with balloon payments, partially offset by changes in prepayment assumptions. For the years ended December 31, 2012 and December 31, 2011, other changes in expected cash flows were principally driven by the impact of modifications, but also related to changes in prepayment assumptions.

The factors that most significantly affect estimates of gross cash flows expected to be collected, and accordingly the accretable yield balance, include: (i) changes in the benchmark interest rate indices for variable-rate products such as option ARM and home equity loans; and (ii) changes in prepayment assumptions.

Since the date of acquisition, the decrease in the accretable yield percentage has been primarily related to a decrease in interest rates on variable-rate loans and, to a lesser extent, extended loan liquidation periods. Certain events, such as extended or shortened loan liquidation periods, affect the timing of expected cash flows and the accretable yield percentage, but not the amount of cash expected to be received (i.e., the accretable yield balance). While extended loan liquidation periods reduce the accretable yield percentage (because the same accretable yield balance is recognized against a higher-than-expected loan balance over a longer-than-expected period of time), shortened loan liquidation periods would have the opposite effect.

Credit card loan portfolio

The credit card portfolio segment includes credit card loans originated and purchased by the Firm. Delinquency rates are the primary credit quality indicator for credit card loans as they provide an early warning that borrowers may be experiencing difficulties (30 days past due); information on those borrowers that have been delinquent for a longer period of time (90 days past due) is also considered. In addition to delinquency rates, the geographic distribution of the loans provides insight as to the credit quality of the portfolio based on the regional economy.

While the borrower's credit score is another general indicator of credit quality, the Firm does not view credit scores as a primary indicator of credit quality because the borrower's credit score tends to be a lagging indicator. However, the distribution of such scores provides a general indicator of credit quality trends within the portfolio. Refreshed FICO score information, which is obtained at least quarterly, for a statistically significant random sample of the credit card portfolio is indicated in the table below; FICO is considered to be the industry benchmark for credit scores.

The Firm generally originates new card accounts to prime consumer borrowers. However, certain cardholders' FICO scores may decrease over time, depending on the performance of the cardholder and changes in credit score technology.

The table below sets forth information about the Firm's credit card loans.

As of or for the year ended December 31, (in millions, except ratios)	2013	2012
Net charge-offs	**$ 3,879**	$ 4,944
% of net charge-offs to retained loans	**3.14%**	3.95%
Loan delinquency

Equal to or greater than 660	**85.1%**	84.1%
Less than 660	**14.9**	15.9

Credit card impaired loans and loan modifications

The table below sets forth information about the Firm's impaired credit card loans. All of these loans are considered to be impaired as they have been modified in TDRs.

December 31, (in millions)	2013	2012
Impaired credit card loans with an allowance[a][b]		
Credit card loans with modified payment terms[c]	**$ 2,746**	$ 4,189
Modified credit card loans that have reverted to pre-modification payment terms[d]	**369**	573
Total impaired credit card loans	**$ 3,115**	$ 4,762
Allowance for loan losses related to impaired credit card loans	**$ 971**	$ 1,681

(a) The carrying value and the unpaid principal balance are the same for credit card impaired loans.
(b) There were no impaired loans without an allowance.
(c) Represents credit card loans outstanding to borrowers enrolled in a credit card modification program as of the date presented.
(d) Represents credit card loans that were modified in TDRs but that have subsequently reverted back to the loans' pre-modification payment terms. At December 31, 2013 and 2012, $226 million and $341 million, respectively, of loans have reverted back to the pre-modification payment terms of the loans due to noncompliance with the terms of the modified loans. The remaining $143 million and $232 million at December 31, 2013 and 2012, respectively, of these loans are to borrowers who have successfully completed a short-term modification program. The Firm continues to report these loans as TDRs since the borrowers' credit lines remain closed.

The following table presents average balances of impaired credit card loans and interest income recognized on those loans.

Year ended December 31, (in millions)	2013	2012	2011
Average impaired credit card loans	**$ 3,882**	$ 5,893	$ 8,499
Interest income on impaired credit card loans	**198**	308	463

Loan modifications

JPMorgan Chase may offer one of a number of loan modification programs to credit card borrowers who are experiencing financial difficulty. Most of the credit card loans have been modified under long-term programs for borrowers who are experiencing financial difficulties. Modifications under long-term programs involve placing the customer on a fixed payment plan, generally for 60 months. The Firm may also offer short-term programs for borrowers who may be in need of temporary relief; however, none are currently being offered. Modifications under all short- and long-term programs typically include reducing the interest rate on the credit card. Substantially all modifications are considered to be TDRs.

If the cardholder does not comply with the modified payment terms, then the credit card loan agreement reverts back to its pre-modification payment terms. Assuming that the cardholder does not begin to perform in accordance with those payment terms, the loan continues to age and will ultimately be charged-off in accordance with the Firm's standard charge-off policy. In addition, if a borrower successfully completes a short-term modification program, then the loan reverts back to its pre-modification payment terms. However, in most cases, the Firm does not reinstate the borrower's line of credit.

The following table provides information regarding the nature and extent of modifications of credit card loans for the periods presented.

Year ended December 31,	New enrollments		
(in millions)	2013	2012	2011
Short-term programs	**$ –**	$ 47	$ 167
Long-term programs	**1,180**	1,607	2,523
Total new enrollments	**$ 1,180**	$ 1,654	$ 2,690

Financial effects of modifications and redefaults

The following table provides information about the financial effects of the concessions granted on credit card loans modified in TDRs and redefaults for the periods presented.

Year ended December 31, (in millions, except weighted-average data)	2013	2012	2011
Weighted-average interest rate of loans – before TDR	**15.37%**	15.67%	16.05%
Weighted-average interest rate of loans – after TDR	**4.38**	5.19	5.28
Loans that redefaulted within one year of modification[a]	**$ 167**	$ 309	$ 687

(a) Represents loans modified in TDRs that experienced a payment default in the periods presented, and for which the payment default occurred within one year of the modification. The amounts presented represent the balance of such loans as of the end of the quarter in which they defaulted.

For credit card loans modified in TDRs, payment default is deemed to have occurred when the loans become two payments past due. A substantial portion of these loans is expected to be charged-off in accordance with the Firm's standard charge-off policy. Based on historical experience, the estimated weighted-average default rate was expected to be 30.72%, 38.23% and 35.47% for credit card loans modified as of December 31, 2013, 2012 and 2011, respectively.

Wholesale loan portfolio

Wholesale loans include loans made to a variety of customers, ranging from large corporate and institutional clients to high-net-worth individuals.

The primary credit quality indicator for wholesale loans is the risk rating assigned each loan. Risk ratings are used to identify the credit quality of loans and differentiate risk within the portfolio. Risk ratings on loans consider the probability of default ("PD") and the loss given default ("LGD"). PD is the likelihood that a loan will default and not be repaid. The LGD is the estimated loss on the loan that would be realized upon the default of the borrower and takes into consideration collateral and structural support for each credit facility.

Management considers several factors to determine an appropriate risk rating, including the obligor's debt capacity and financial flexibility, the level of the obligor's earnings, the amount and sources for repayment, the level and nature of contingencies, management strength, and the industry and geography in which the obligor operates. The Firm's definition of criticized aligns with the banking regulatory definition of criticized exposures, which consist of special mention, substandard and doubtful categories. Risk ratings generally represent ratings profiles similar to those defined by S&P and Moody's. Investment-grade ratings range from "AAA/Aaa" to "BBB-/Baa3." Noninvestment-grade ratings are classified as noncriticized ("BB+/Ba1 and B-/B3") and criticized ("CCC+"/"Caa1 and below"), and the criticized portion is further subdivided into performing and nonaccrual loans, representing management's assessment of the collectibility of principal and interest. Criticized loans have a higher probability of default than noncriticized loans.

Risk ratings are reviewed on a regular and ongoing basis by Credit Risk Management and are adjusted as necessary for updated information affecting the obligor's ability to fulfill its obligations.

As noted above, the risk rating of a loan considers the industry in which the obligor conducts its operations. As part of the overall credit risk management framework, the Firm focuses on the management and diversification of its industry and client exposures, with particular attention paid to industries with actual or potential credit concern. See Note 5 on page 219 in this Annual Report for further detail on industry concentrations.

The table below provides information by class of receivable for the retained loans in the Wholesale portfolio segment.

As of or for the year ended December 31, (in millions, except ratios)	Commercial and industrial		Real estate	
	2013	2012	**2013**	2012
Loans by risk ratings				
Investment grade	**$ 57,690**	$ 61,870	**$ 52,195**	$ 41,796
Noninvestment grade:				
Noncriticized	**43,477**	44,651	**14,381**	14,567
Criticized performing	**2,385**	2,636	**2,229**	3,857
Criticized nonaccrual	**294**	708	**346**	520
Total noninvestment grade	**46,156**	47,995	**16,956**	18,944
Total retained loans	**$ 103,846**	$ 109,865	**$ 69,151**	$ 60,740
% of total criticized to total retained loans	**2.58%**	3.04 %	**3.72%**	7.21%
% of nonaccrual loans to total retained loans	**0.28**	0.64	**0.50**	0.86
Loans by geographic distribution[a]				
Total non-U.S.	**$ 34,440**	$ 35,494	**$ 1,369**	$ 1,533
Total U.S.	**69,406**	74,371	**67,782**	59,207
Total retained loans	**$ 103,846**	$ 109,865	**$ 69,151**	$ 60,740
Net charge-offs/(recoveries)	**$ 99**	$ (212)	**$ 6**	$ 54
% of net charge-offs/(recoveries) to end-of-period retained loans	**0.10%**	(0.19)%	**0.01%**	0.09%
Loan delinquency[b]				
Current and less than 30 days past due and still accruing	**$ 103,357**	$ 109,019	**$ 68,627**	$ 59,829
30–89 days past due and still accruing	**181**	119	**164**	322
90 or more days past due and still accruing[c]	**14**	19	**14**	69
Criticized nonaccrual	**294**	708	**346**	520
Total retained loans	**$ 103,846**	$ 109,865	**$ 69,151**	$ 60,740

(a) The U.S. and non-U.S. distribution is determined based predominantly on the domicile of the borrower.
(b) The credit quality of wholesale loans is assessed primarily through ongoing review and monitoring of an obligor's ability to meet contractual obligations rather than relying on the past due status, which is generally a lagging indicator of credit quality. For a discussion of more significant risk factors, see page 279 of this Note.
(c) Represents loans that are considered well-collateralized and therefore still accruing interest.
(d) Other primarily includes loans to SPEs and loans to private banking clients. See Note 1 on pages 189–191 of this Annual Report for additional information on SPEs.

The following table presents additional information on the real estate class of loans within the Wholesale portfolio segment for the periods indicated. The real estate class primarily consists of secured commercial loans mainly to borrowers for multi-family and commercial lessor properties. Multifamily lending specifically finances apartment buildings. Commercial lessors receive financing specifically for real estate leased to retail, office and industrial tenants. Commercial construction and development loans represent financing for the construction of apartments, office and professional buildings and malls. Other real estate loans include lodging, real estate investment trusts ("REITs"), single-family, homebuilders and other real estate.

December 31, (in millions, except ratios)	Multifamily		Commercial lessors	
	2013	2012	**2013**	2012
Real estate retained loans	**$ 44,389**	$ 38,030	**$ 15,949**	$ 14,668
Criticized	**1,142**	2,118	**1,323**	1,951
% of criticized to total real estate retained loans	**2.57%**	5.57%	**8.30%**	13.30%
Criticized nonaccrual	**$ 191**	$ 249	**$ 143**	$ 207
% of criticized nonaccrual to total real estate retained loans	**0.43%**	0.65%	**0.90%**	1.41%

(table continued from previous page)

Financial institutions		Government agencies		Other[d]		Total retained loans	
2013	2012	**2013**	2012	**2013**	2012	**2013**	2012
$ 26,712	$ 22,064	**$ 9,979**	$ 9,183	**$ 79,494**	$ 79,533	**$ 226,070**	$ 214,446

Wholesale impaired loans and loan modifications

Wholesale impaired loans are comprised of loans that have been placed on nonaccrual status and/or that have been modified in a TDR. All impaired loans are evaluated for an asset-specific allowance as described in Note 15 on pages 284–287 of this Annual Report.

The table below sets forth information about the Firm's wholesale impaired loans.

December 31, (in millions)	Commercial and industrial		Real estate		Financial institutions		Government agencies		Other		Total retained loans	
	2013	2012	**2013**	2012	**2013**	2012	**2013**	2012	**2013**	2012	**2013**	2012
Impaired loans												
With an allowance	**$ 236**	$ 588	**$ 258**	$ 375	**$ 17**	$ 6	**$ 1**	$ –	**$ 85**	$ 122	**$ 597**	$ 1,091
Without an allowance[a]	**58**	173	**109**	133	**8**	2	**–**	–	**73**	76	**248**	384
Total impaired loans	**$ 294**	$ 761	**$ 367**	$ 508	**$ 25**	$ 8	**$ 1**	$ –	**$ 158**	$ 198	**$ 845**	$ 1,475
Allowance for loan losses related to impaired loans	**$ 75**	$ 205	**$ 63**	$ 82	**$ 16**	$ 2	**$ –**	$ –	**$ 27**	$ 30	**$ 181**	$ 319
Unpaid principal balance of impaired loans[b]	**448**	957	**454**	626	**24**	22	**1**	–	**241**	318	**1,168**	1,923

(a) When the discounted cash flows, collateral value or market price equals or exceeds the recorded investment in the loan, the loan does not require an allowance. This typically occurs when the impaired loans have been partially charged-off and/or there have been interest payments received and applied to the loan balance.

(b) Represents the contractual amount of principal owed at December 31, 2013 and 2012. The unpaid principal balance differs from the impaired loan balances due to various factors, including charge-offs; interest payments received and applied to the carrying value; net deferred loan fees or costs; and unamortized discount or premiums on purchased loans.

The following table presents the Firm's average impaired loans for the years ended 2013, 2012 and 2011.

Year ended December 31, (in millions)	**2013**	2012	2011
Commercial and industrial	**$ 412**	$ 873	$ 1,309
Real estate	**484**	784	1,813
Financial institutions	**17**	17	84
Government agencies	**–**	9	20
Other	**211**	277	634
Total[a]	**$ 1,124**	$ 1,960	$ 3,860

(a) The related interest income on accruing impaired loans and interest income recognized on a cash basis were not material for the years ended December 31, 2013, 2012 and 2011.

Loan modifications

Certain loan modifications are considered to be TDRs as they provide various concessions to borrowers who are experiencing financial difficulty. All TDRs are reported as impaired loans in the tables above.

The following table provides information about the Firm's wholesale loans that have been modified in TDRs, including a reconciliation of the beginning and ending balances of such loans and information regarding the nature and extent of modifications during the periods presented.

Years ended December 31, (in millions)	Commercial and industrial			Real estate			Other[b]			Total		
	2013	2012	2011	**2013**	2012	2011	**2013**	2012	2011	**2013**	2012	2011

Increases to existing TDRs	**4**	183	96	**–**	–	16	**–**	–	–	**4**	183	112
Charge-offs post-modification	**(9)**	(27)	(30)	**(3)**	(2)	(146)	**–**	(7)	–	**(12)**	(36)	(176)
Sales and other[a]	**(553)**	(274)	(412)	**(51)**	(118)	(714)	**(39)**	(87)	(13)	**(643)**	(479)	(1,139)
Ending balance of TDRs	**$ 77**	$ 575	$ 531	**$ 88**	$ 99	$ 176	**$ 33**	$ 22	$ 43	**$ 198**	$ 696	$ 750
TDRs on nonaccrual status	**$ 77**	$ 522	$ 415	**$ 61**	$ 92	$ 128	**$ 30**	$ 22	$ 35	**$ 168**	$ 636	$ 578
Additional commitments to lend to borrowers whose loans have been modified in TDRs	**19**	44	147	**–**	–	–	**–**	2	–	**19**	46	147

(a) Sales and other are largely sales and paydowns, but also includes performing loans restructured at market rates that were removed from the reported TDR balance of $12 million, $44 million and $152 million during the years ended December 31, 2013, 2012 and 2011 respectively. Loans that have been removed continue to be evaluated along with other impaired loans to determine the asset-specific component of the allowance for loan losses (see page 260 of this Note).

(b) Includes loans to Financial institutions, Government agencies and Other.

Financial effects of modifications and redefaults

Wholesale loans modified as TDRs are typically term or payment extensions and, to a lesser extent, deferrals of principal and/or interest on commercial and industrial and real estate loans. For the years ended December 31, 2013, 2012 and 2011, the average term extension granted on wholesale loans with term or payment extensions was 2.1 years, 1.1 years and 3.3 years, respectively. The weighted-average remaining term for all loans modified during these periods was 2.0 years, 3.6 years and 4.5 years respectively. Wholesale TDR loans that redefaulted within one year of the modification were $1 million, $56 million and $96 million during the years ended December 31, 2013, 2012 and 2011, respectively. A payment default is deemed to occur when the borrower has not made a loan payment by its scheduled due date after giving effect to any contractual grace period.

Note 15 – Allowance for credit losses

JPMorgan Chase's allowance for loan losses covers the consumer, including credit card, portfolio segments (primarily scored); and wholesale (risk-rated) portfolio, and represents management's estimate of probable credit losses inherent in the Firm's loan portfolio. The allowance for loan losses includes an asset-specific component, a formula-based component and a component related to PCI loans, as described below. Management also estimates an allowance for wholesale and consumer lending-related commitments using methodologies similar to those used to estimate the allowance on the underlying loans. During 2013, the Firm did not make any significant changes to the methodologies or policies used to determine its allowance for credit losses; such policies are described in the following paragraphs.

The asset-specific component of the allowance relates to loans considered to be impaired, which includes loans that have been modified in TDRs as well as risk-rated loans that have been placed on nonaccrual status. To determine the asset-specific component of the allowance, larger loans are evaluated individually, while smaller loans are evaluated as pools using historical loss experience for the respective class of assets. Scored loans (i.e., consumer loans) are pooled by product type, while risk-rated loans (primarily wholesale loans) are segmented by risk rating.

The Firm generally measures the asset-specific allowance as the difference between the recorded investment in the loan and the present value of the cash flows expected to be collected, discounted at the loan's original effective interest rate. Subsequent changes in impairment are reported as an adjustment to the provision for loan losses. In certain cases, the asset-specific allowance is determined using an observable market price, and the allowance is measured as the difference between the recorded investment in the loan and the loan's fair value. Impaired collateral-dependent loans are charged down to the fair value of collateral less costs to sell and therefore may not be subject to an asset-specific reserve as for other impaired loans. See Note 14 on pages 258–283 of this Annual Report for more information about charge-offs and collateral-dependent loans.

The asset-specific component of the allowance for impaired loans that have been modified in TDRs incorporates the effects of foregone interest, if any, in the present value calculation and also incorporates the effect of the modification on the loan's expected cash flows, which considers the potential for redefault. For residential real estate loans modified in TDRs, the Firm develops product-specific probability of default estimates, which are applied at a loan level to compute expected losses. In developing these probabilities of default, the Firm considers the relationship between the credit quality characteristics of the underlying loans and certain assumptions about home prices and unemployment, based upon industry-wide data. The Firm also considers its own historical loss experience to date based on actual redefaulted modified loans. For credit card loans modified in TDRs, expected losses incorporate projected redefaults based on the Firm's historical experience by type of modification program. For wholesale loans modified in TDRs, expected losses incorporate redefaults based on management's expectation of the borrower's ability to repay under the modified terms.

The formula-based component is based on a statistical calculation to provide for incurred credit losses in performing risk-rated loans and all consumer loans, except for any loans restructured in TDRs and PCI loans. See Note 14 on pages 258–283 of this Annual Report for more information on PCI loans.

For scored loans, the statistical calculation is performed on pools of loans with similar risk characteristics (e.g., product type) and generally computed by applying loss factors to outstanding principal balances over an estimated loss emergence period. The loss emergence period represents the time period between the date at which the loss is estimated to have been incurred and the ultimate realization of that loss (through a charge-off). Estimated loss emergence periods may vary by product and may change over time; management applies judgment in estimating loss emergence periods, using available credit information and trends.

Loss factors are statistically derived and sensitive to changes in delinquency status, credit scores, collateral values and other risk factors. The Firm uses a number of different forecasting models to estimate both the PD and the loss severity, including delinquency roll rate models and credit loss severity models. In developing PD and loss severity assumptions, the Firm also considers known and anticipated changes in the economic environment, including changes in home prices, unemployment rates and other risk indicators.

A nationally recognized home price index measure is used to estimate both the PD and the loss severity on residential real estate loans at the metropolitan statistical areas ("MSA") level. Loss severity estimates are regularly validated by comparison to actual losses recognized on defaulted loans, market-specific real estate appraisals and property sales activity. The economic impact of potential modifications of residential real estate loans is not included in the statistical calculation because of the uncertainty regarding the type and results of such modifications.

For risk-rated loans, the statistical calculation is the product of an estimated PD and an estimated LGD. These factors are differentiated by risk rating and expected maturity. In assessing the risk rating of a particular loan, among the factors considered are the obligor's debt capacity and financial flexibility, the level of the obligor's earnings, the amount and sources for repayment, the level and nature of contingencies, management strength, and the industry and geography in which the obligor operates. These factors are based on an evaluation of historical and current information, and involve subjective assessment and interpretation. Emphasizing one factor over another or considering additional factors could impact the risk rating assigned by the Firm to that loan. PD estimates are based on observable external through-the-cycle data, using credit-rating agency default statistics. LGD estimates are based on the Firm's history of actual credit losses over more than one credit cycle.

Management applies judgment within an established framework to adjust the results of applying the statistical calculation described above. The determination of the appropriate adjustment is based on management's view of loss events that have occurred but that are not yet reflected in the loss factors and that relate to current macroeconomic and political conditions, the quality of underwriting standards and other relevant internal and external factors affecting the credit quality of the portfolio. For the scored loan portfolios, adjustments to the statistical calculation are accomplished in part by analyzing the historical loss experience for each major product segment. Factors related to unemployment, home prices, borrower behavior and lien position, the estimated effects of the mortgage foreclosure-related settlement with federal and state officials and uncertainties regarding the ultimate success of loan modifications are incorporated into the calculation, as appropriate. For junior lien products, management considers the delinquency and/or modification status of any senior liens in determining the adjustment. In addition, for the risk-rated portfolios, any adjustments made to the statistical calculation also consider concentrated and deteriorating industries.

Management establishes an asset-specific allowance for lending-related commitments that are considered impaired and computes a formula-based allowance for performing consumer and wholesale lending-related commitments. These are computed using a methodology similar to that used for the wholesale loan portfolio, modified for expected maturities and probabilities of drawdown.

Determining the appropriateness of the allowance is complex and requires judgment by management about the effect of matters that are inherently uncertain. Subsequent evaluations of the loan portfolio, in light of the factors then prevailing, may result in significant changes in the allowances for loan losses and lending-related commitments in future periods. At least quarterly, the allowance for credit losses is reviewed by the Chief Risk Officer, the Chief Financial Officer and the Controller of the Firm and discussed with the Risk Policy and Audit Committees of the Board of Directors of the Firm. As of December 31, 2013, JPMorgan Chase deemed the allowance for credit losses to be appropriate (i.e., sufficient to absorb probable credit losses inherent in the portfolio).

Allowance for credit losses and loans and lending-related commitments by impairment methodology

The table below summarizes information about the allowance for loan losses, loans by impairment methodology, the allowance for lending-related commitments and lending-related commitments by impairment methodology.

	2013			
Year ended December 31, (in millions)	Consumer, excluding credit card	Credit card	Wholesale	Total
Allowance for loan losses				
Beginning balance at January 1,	$ 12,292	$ 5,501	$ 4,143	$ 21,936
Gross charge-offs	2,754	4,472	241	7,467
Gross recoveries	(847)	(593)	(225)	(1,665)

Formula-based	8	—	637	645
Total allowance for lending-related commitments	$ 8	$ —	$ 697	$ 705
Lending-related commitments by impairment methodology				
Asset-specific	$ —	$ —	$ 206	$ 206
Formula-based	56,057	529,383	446,026	1,031,466
Total lending-related commitments	$ 56,057	$ 529,383	$ 446,232	$ 1,031,672

(a) Write-offs of PCI loans are recorded against the allowance for loan losses when actual losses for a pool exceed estimated losses that were recorded as purchase accounting adjustments at the time of acquisition. Any write-offs of PCI loans are recognized when the underlying loan is removed from a pool (e.g., upon liquidation).

(b) Includes risk-rated loans that have been placed on nonaccrual status and loans that have been modified in a TDR.

(c) The asset-specific credit card allowance for loan losses is related to loans that have been modified in a TDR; such allowance is calculated based on the loans' original contractual interest rates and does not consider any incremental penalty rates.

(d) Consumer, excluding credit card, charge-offs for the year ended December 31, 2012, included $747 million of charge-offs for Chapter 7 residential real estate loans and $53 million of charge-offs for Chapter 7 auto loans.

Note 16 – Variable interest entities

For a further description of JPMorgan Chase's accounting policies regarding consolidation of VIEs, see Note 1 on pages 189–191 of this Annual Report.

The following table summarizes the most significant types of Firm-sponsored VIEs by business segment. The Firm considers a "sponsored" VIE to include any entity where: (1) JPMorgan Chase is the principal beneficiary of the structure; (2) the VIE is used by JPMorgan Chase to securitize Firm assets; (3) the VIE issues financial instruments with the JPMorgan Chase name; or (4) the entity is a JPMorgan Chase–administered asset-backed commercial paper conduit.

Line-of-Business	*Transaction Type*	*Activity*	*Annual Report page references*
CCB	Credit card securitization trusts	Securitization of both originated and purchased credit card receivables	289
	Other securitization trusts	Securitization of originated student loans	290-292
	Mortgage securitization trusts	Securitization of originated and purchased residential mortgages	290-292
CIB	Mortgage and other securitization trusts	Securitization of both originated and purchased residential and commercial mortgages, automobile and student loans	290-292
	Multi-seller conduits	Assist clients in accessing the financial markets in a cost-efficient manner and structures transactions to meet investor needs	292-296
	Investor intermediation activities:		
	Municipal bond vehicles		293-294
	Credit-related note and asset swap vehicles		294-296

The Firm's other business segments are also involved with VIEs, but to a lesser extent, as follows:

- Asset Management: Sponsors and manages certain funds that are deemed VIEs. As asset manager of the funds, AM earns a fee based on assets managed; the fee varies with each fund's investment objective and is competitively priced. For fund entities that qualify as VIEs, AM's interests are, in certain cases, considered to be significant variable interests that result in consolidation of the financial results of these entities.
- Commercial Banking: CB makes investments in and provides lending to community development entities that may meet the definition of a VIE. In addition, CB provides financing and lending related services to certain client-sponsored VIEs. In general, CB does not control the activities of these entities and does not consolidate these entities.
- Corporate/Private Equity: The Private Equity business, within Corporate/Private Equity, may be involved with entities that are deemed VIEs. However, the Firm's private equity business is subject to specialized investment company accounting, which does not require the consolidation of investments, including VIEs.

The Firm also invests in and provides financing and other services to VIEs sponsored by third parties, as described on page 296 of this Note.

Significant Firm-sponsored variable interest entities

Credit card securitizations

The Card business securitizes originated and purchased credit card loans, primarily through the Chase Issuance Trust (the "Trust"). The Firm's continuing involvement in credit card securitizations includes servicing the receivables, retaining an undivided seller's interest in the receivables, retaining certain senior and subordinated securities and maintaining escrow accounts.

The Firm is considered to be the primary beneficiary of these Firm-sponsored credit card securitization trusts based on the Firm's ability to direct the activities of these VIEs through its servicing responsibilities and other duties, including making decisions as to the receivables that are transferred into those trusts and as to any related modifications and workouts. Additionally, the nature and extent of the Firm's other continuing involvement with the trusts, as indicated above, obligates the Firm to absorb losses and gives the Firm the right to receive certain benefits from these VIEs that could potentially be significant.

The underlying securitized credit card receivables and other assets of the securitization trusts are available only for payment of the beneficial interests issued by the securitization trusts; they are not available to pay the Firm's other obligations or the claims of the Firm's other creditors.

The agreements with the credit card securitization trusts require the Firm to maintain a minimum undivided interest in the credit card trusts (which is generally 4%). As of December 31, 2013 and 2012, the Firm held undivided interests in Firm-sponsored credit card securitization trusts of $14.3 billion and $15.8 billion, respectively. The Firm maintained an average undivided interest in principal receivables owned by those trusts of approximately 30% and 28% for the years ended December 31, 2013 and 2012, respectively. The Firm also retained $130 million and $362 million of senior securities and $5.5 billion and $4.6 billion of subordinated securities in certain of its credit card securitization trusts as of December 31, 2013 and 2012, respectively. The Firm's undivided interests in the credit card trusts and securities retained are eliminated in consolidation.

Firm-sponsored mortgage and other securitization trusts

The Firm securitizes (or has securitized) originated and purchased residential mortgages, commercial mortgages and other consumer loans (including automobile and student loans) primarily in its CIB and CCB businesses. Depending on the particular transaction, as well as the respective business involved, the Firm may act as the servicer of the loans and/or retain certain beneficial interests in the securitization trusts.

The following table presents the total unpaid principal amount of assets held in Firm-sponsored private-label securitization entities, including those in which the Firm has continuing involvement, and those that are consolidated by the Firm. Continuing involvement includes servicing the loans, holding senior interests or subordinated interests, recourse or guarantee arrangements, and derivative transactions. In certain instances, the Firm's only continuing involvement is servicing the loans. See Securitization activity on page 297 of this Note for further information regarding the Firm's cash flows with and interests retained in nonconsolidated VIEs, and pages 297–298 of this Note for information on the Firm's loan sales to U.S. government agencies.

	Principal amount outstanding			JPMorgan Chase interest in securitized assets in nonconsolidated VIEs[d][e][f]

(a) Excludes U.S. government agency securitizations. See pages 297–298 of this Note for information on the Firm's loan sales to U.S. government agencies.
(b) Consists of securities backed by commercial loans (predominantly real estate) and non-mortgage-related consumer receivables purchased from third parties. The Firm generally does not retain a residual interest in its sponsored commercial mortgage securitization transactions.
(c) The prior period has been reclassified to conform with the current presentation methodology.
(d) The table above excludes the following: retained servicing (see Note 17 on pages 299–304 of this Annual Report for a discussion of MSRs); securities retained from loans sales to U.S. government agencies; interest rate and foreign exchange derivatives primarily used to manage interest rate and foreign exchange risks of securitization entities (See Note 6 on pages 220–233 of this Annual Report for further information on derivatives); senior and subordinated securities of $151 million and $30 million, respectively, at December 31, 2013, and $131 million and $45 million, respectively, at December 31, 2012, which the Firm purchased in connection with CIB's secondary market-making activities.
(e) Includes interests held in re-securitization transactions.
(f) As of December 31, 2013 and 2012, 69% and 74%, respectively, of the Firm's retained securitization interests, which are carried at fair value, were risk-rated "A" or better, on an S&P-equivalent basis. The retained interests in prime residential mortgages consisted of $551 million and $170 million of investment-grade and $260 million and $171 million of noninvestment-grade retained interests at December 31, 2013 and 2012, respectively. The retained interests in commercial and other securitizations trusts consisted of $3.9 billion and $4.1 billion of investment-grade and $80 million and $164 million of noninvestment-grade retained interests at December 31, 2013 and 2012, respectively.

Residential mortgage

The Firm securitizes residential mortgage loans originated by CCB, as well as residential mortgage loans purchased from third parties by either CCB or CIB. CCB generally retains servicing for all residential mortgage loans originated or purchased by CCB, and for certain mortgage loans purchased by CIB. For securitizations serviced by CCB, the Firm has the power to direct the significant activities of the VIE because it is responsible for decisions related to loan modifications and workouts. CCB may also retain an interest upon securitization.

In addition, CIB engages in underwriting and trading activities involving securities issued by Firm-sponsored securitization trusts. As a result, CIB at times retains senior and/or subordinated interests (including residual interests) in residential mortgage securitizations upon securitization, and/or reacquires positions in the secondary market in the normal course of business. In certain instances, as a result of the positions retained or reacquired by CIB or held by CCB, when considered together with the servicing arrangements entered into by CCB, the Firm is deemed to be the primary beneficiary of certain securitization trusts. See the table on page 296 of this Note for more information on consolidated residential mortgage securitizations.

The Firm does not consolidate a residential mortgage securitization (Firm-sponsored or third-party-sponsored) when it is not the servicer (and therefore does not have the power to direct the most significant activities of the trust) or does not hold a beneficial interest in the trust that could potentially be significant to the trust. At December 31, 2013 and 2012, the Firm did not consolidate the assets of certain Firm-sponsored residential mortgage securitization VIEs, in which the Firm had continuing involvement, primarily due to the fact that the Firm did not hold an interest in these trusts that could potentially be significant to the trusts. See the table on page 296 of this Note for more information on the consolidated residential mortgage securitizations, and the table on the previous page of this Note for further information on interests held in nonconsolidated residential mortgage securitizations.

Commercial mortgages and other consumer securitizations

CIB originates and securitizes commercial mortgage loans, and engages in underwriting and trading activities involving the securities issued by securitization trusts. CIB may retain unsold senior and/or subordinated interests in commercial mortgage securitizations at the time of securitization but, generally, the Firm does not service commercial loan securitizations. For commercial mortgage securitizations the power to direct the significant activities of the VIE generally is held by the servicer or investors in a specified class of securities ("controlling class"). See the table on page 296 of this Note for more information on the consolidated commercial mortgage securitizations, and the table on the previous page of this Note for further information on interests held in nonconsolidated securitizations.

The Firm also securitizes student loans. The Firm retains servicing responsibilities for all originated and certain purchased student loans and has the power to direct the activities of these VIEs through these servicing responsibilities. See the table on page 296 of this Note for more information on the consolidated student loan securitizations, and the table on the previous page of this Note for further information on interests held in nonconsolidated securitizations.

Re-securitizations

The Firm engages in certain re-securitization transactions in which debt securities are transferred to a VIE in exchange for new beneficial interests. These transfers occur in connection with both agency (Fannie Mae, Freddie Mac and Ginnie Mae) and nonagency (private-label) sponsored VIEs, which may be backed by either residential or commercial mortgages. The Firm's consolidation analysis is largely dependent on the Firm's role and interest in the re-securitization trusts. During the years ended December 31, 2013, 2012 and 2011, the Firm transferred $25.3 billion, $10.0 billion and $24.9 billion, respectively, of securities to agency VIEs, and $55 million, $286 million and $381 million, respectively, of securities to private-label VIEs.

Most re-securitizations with which the Firm is involved are client-driven transactions in which a specific client or group of clients are seeking a specific return or risk profile. For these transactions, the Firm has concluded that the decision-making power of the entity is shared between the Firm and its client(s), considering the joint effort and decisions in establishing the re-securitization trust and its assets, as well as the significant economic interest the client holds in the re-securitization trust; therefore the Firm does not consolidate the re-securitization VIE.

In more limited circumstances, the Firm creates a re-securitization trust independently and not in conjunction with specific clients. In these circumstances, the Firm is deemed to have the unilateral ability to direct the most significant activities of the re-securitization trust because of the decisions made during the establishment and design of the trust; therefore, the Firm consolidates the re-securitization VIE if the Firm holds an interest that could potentially be significant.

Additionally, the Firm may invest in beneficial interests of third-party securitizations and generally purchases these interests in the secondary market. In these circumstances, the Firm does not have the unilateral ability to direct the most significant activities of the re-securitization trust, either because it wasn't involved in the initial design of the trust, or the Firm is involved with an independent third party sponsor and demonstrates shared power over the creation of the trust; therefore, the Firm does not consolidate the re-securitization VIE.

As of December 31, 2013 and 2012, the Firm did not consolidate any agency re-securitizations. As of December 31, 2013 and 2012, the Firm consolidated $86 million and $76 million, respectively, of assets, and $23 million and $5 million, respectively, of liabilities of private-label re-securitizations. See the table on page 296 of this Note for more information on the consolidated re-securitization transactions.

As of December 31, 2013 and 2012, total assets (including the notional amount of interest-only securities) of nonconsolidated Firm-sponsored private-label re-securitization entities in which the Firm has continuing involvement were $2.8 billion and $4.6 billion, respectively. At December 31, 2013 and 2012, the Firm held approximately $1.3 billion and $2.0 billion, respectively, of interests in nonconsolidated agency re-securitization entities, and $6 million and $61 million, respectively, of senior and subordinated interests in nonconsolidated private-label re-securitization entities. See the table on page 290 of this Note for further information on interests held in nonconsolidated securitizations.

Multi-seller conduits

Multi-seller conduit entities are separate bankruptcy remote entities that purchase interests in, and make loans secured by, pools of receivables and other financial assets pursuant to agreements with customers of the Firm. The conduits fund their purchases and loans through the issuance of highly rated commercial paper. The primary source of repayment of the commercial paper is the cash flows from the pools of assets. In most instances, the assets are structured with deal-specific credit enhancements provided to the conduits by the customers (i.e., sellers) or other third parties. Deal-specific credit enhancements are generally structured to cover a multiple of historical losses expected on the pool of assets, and are typically in the form of overcollateralization provided by the seller. The deal-specific credit enhancements mitigate the Firm's potential losses on its agreements with the conduits.

To ensure timely repayment of the commercial paper, and to provide the conduits with funding to purchase interests in or make loans secured by pools of receivables in the event that the conduits do not obtain funding in the commercial paper market, each asset pool financed by the conduits has a minimum 100% deal-specific liquidity facility associated with it provided by JPMorgan Chase Bank, N.A. JPMorgan Chase Bank, N.A. also provides the multi-seller conduit vehicles with uncommitted program-wide liquidity facilities and program-wide credit enhancement in the form of standby letters of credit. The amount of program-wide credit enhancement required is based upon commercial paper issuance and approximates 10% of the outstanding balance.

The Firm consolidates its Firm-administered multi-seller conduits, as the Firm has both the power to direct the significant activities of the conduits and a potentially significant economic interest in the conduits. As administrative agent and in its role in structuring transactions, the Firm makes decisions regarding asset types and credit quality, and manages the commercial paper funding needs of the conduits. The Firm's interests that could potentially be significant to the VIEs include the fees received as administrative agent and liquidity and program-wide credit enhancement provider, as well as the potential exposure created by the liquidity and credit enhancement facilities provided to the conduits. See page 296 of this Note for further information on consolidated VIE assets and liabilities.

In the normal course of business, JPMorgan Chase makes markets in and invests in commercial paper, including commercial paper issued by the Firm-administered multi-seller conduits. The Firm held $4.1 billion and $8.3 billion of the commercial paper issued by the Firm-administered multi-seller conduits at December 31, 2013 and 2012, respectively. The Firm's investments were not driven by market illiquidity and the Firm is not obligated under any agreement to purchase the commercial paper issued by the Firm-administered multi-seller conduits.

Deal-specific liquidity facilities, program-wide liquidity and credit enhancement provided by the Firm have been eliminated in consolidation. The Firm or the Firm-administered multi-seller conduits provide lending-related commitments to certain clients of the Firm-administered multi-seller conduits. The unfunded portion of these commitments was $9.1 billion and $10.8 billion at December 31, 2013 and 2012, respectively, and are reported as off-balance sheet lending-related commitments. For more information on off-balance sheet lending-related commitments, see Note 29 on pages 318–324 of this Annual Report.

VIEs associated with investor intermediation activities

As a financial intermediary, the Firm creates certain types of VIEs and also structures transactions with these VIEs, typically using derivatives, to meet investor needs. The Firm may also provide liquidity and other support. The risks inherent in the derivative instruments or liquidity commitments are managed similarly to other credit, market or liquidity risks to which the Firm is exposed. The principal types of VIEs for which the Firm is engaged in on behalf of clients are municipal bond vehicles, credit-related note vehicles and asset swap vehicles.

Municipal bond vehicles

The Firm has created a series of trusts that provide short-term investors with qualifying tax-exempt investments, and that allow investors in tax-exempt securities to finance their investments at short-term tax-exempt rates. In a typical transaction, the vehicle purchases fixed-rate longer-term highly rated municipal bonds and funds the purchase by issuing two types of securities: (1) puttable floating-rate certificates and (2) inverse floating-rate residual interests ("residual interests"). The maturity of each of the puttable floating-rate certificates and the residual interests is equal to the life of the vehicle, while the maturity of the underlying municipal bonds is typically longer. Holders of the puttable floating-rate certificates may "put," or tender, the certificates if the remarketing agent cannot successfully remarket the floating-rate certificates to another investor. A liquidity facility conditionally obligates the liquidity provider to fund the purchase of the tendered floating-rate certificates. Upon termination of the vehicle, proceeds from the sale of the underlying municipal bonds would first repay any funded liquidity facility or outstanding floating-rate certificates and the remaining amount, if any, would be paid to the residual interests. If the proceeds from the sale of the underlying municipal bonds are not sufficient to repay the liquidity facility, in certain transactions the liquidity provider has recourse to the residual interest holders for reimbursement. Certain residual interest holders may be required to post collateral with the Firm, as liquidity provider, to support such reimbursement obligations should the market value of the municipal bonds decline.

JPMorgan Chase Bank, N.A. often serves as the sole liquidity provider, and J.P. Morgan Securities LLC serves as remarketing agent, of the puttable floating-rate certificates. The liquidity provider's obligation to perform is conditional and is limited by certain termination events, which include bankruptcy or failure to pay by the municipal bond issuer or credit enhancement provider, an event of taxability on the municipal bonds or the immediate downgrade of the municipal bond to below investment grade. In addition, the Firm's exposure as liquidity provider is further limited by the high credit quality of the underlying municipal bonds, the excess collateralization in the vehicle, or in certain transactions, the reimbursement agreements with the residual interest holders.

The long-term credit ratings of the puttable floating rate certificates are directly related to the credit ratings of the underlying municipal bonds, the credit rating of any insurer of the underlying municipal bond, and the Firm's short-term credit rating as liquidity provider. A downgrade in any of these ratings would affect the rating of the puttable floating-rate certificates and could cause demand for these certificates by investors to decline or disappear. However, a downgrade of JPMorgan Chase Bank, N.A.'s short-term rating does not affect the Firm's obligation under the liquidity facility.

As remarketing agent, the Firm may hold puttable floating-rate certificates of the municipal bond vehicles. At December 31, 2013 and 2012, the Firm held $262 million and $252 million, respectively, of these certificates on its Consolidated Balance Sheets. The largest amount held by the Firm at any time during 2013 was $470 million, or 4.8%, of the municipal bond vehicles' aggregate outstanding puttable floating-rate certificates. The Firm did not have and continues not to have any intent to protect any residual interest holder from potential losses on any of the municipal bond holdings.

The Firm consolidates municipal bond vehicles if it owns the residual interest. The residual interest generally allows the owner to make decisions that significantly impact the economic performance of the municipal bond vehicle, primarily by directing the sale of the municipal bonds owned by the vehicle. In addition, the residual interest owners have the right to receive benefits and bear losses that could potentially be significant to the municipal bond vehicle. The Firm does not consolidate municipal bond vehicles if it does not own the residual interests, since the Firm does not have the power to make decisions that significantly impact the economic performance of the municipal bond vehicle. See page 296 of this Note for further information on consolidated municipal bond vehicles.

The Firm's exposure to nonconsolidated municipal bond VIEs at December 31, 2013 and 2012, including the ratings profile of the VIEs' assets, was as follows.

December 31, (in billions)	Fair value of assets held by VIEs	Liquidity facilities	Excess/(deficit)[a]	Maximum exposure
Nonconsolidated municipal bond vehicles				
2013	**$ 11.8**	**$ 6.9**	**$ 4.9**	**$ 6.9**
2012	14.2	8.0	6.2	8.0

	Ratings profile of VIE assets[b]						
	Investment-grade				Noninvestment-grade		
December 31, (in billions, except where otherwise noted)	AAA to AAA-	AA+ to AA-	A+ to A-	BBB+ to BBB-	BB+ and below	Fair value of assets held by VIEs	Wt. avg. expected life of assets (years)
2013	**$ 2.7**	**$ 8.9**	**$ 0.2**	**$ –**	**$ –**	**$ 11.8**	**7.2**
2012	3.1	11.0	0.1	–	–	14.2	5.9

(a) Represents the excess/(deficit) of the fair values of municipal bond assets available to repay the liquidity facilities, if drawn.
(b) The ratings scale is presented on an S&P-equivalent basis. The prior period has been reclassified to conform with the current presentation.

Credit-related note and asset swap vehicles

Credit-related note vehicles

The Firm structures transactions with credit-related note vehicles in which the VIE purchases highly rated assets, such as asset-backed securities, and enters into a credit derivative contract with the Firm to obtain exposure to a referenced credit which the VIE otherwise does not hold. The VIE then issues credit-linked notes ("CLNs") with maturities predominantly ranging from one to ten years in order to transfer the risk of the referenced credit to the VIE's investors. Clients and investors often prefer using a CLN vehicle since the CLNs issued by the VIE generally carry a higher credit rating than such notes would if issued directly by JPMorgan Chase. As a derivative counterparty in a credit-related note structure, the Firm has a senior claim on the collateral of the VIE and reports such derivatives on its Consolidated Balance Sheets at fair value. The collateral purchased by such VIEs is predominantly investment grade. The Firm divides its credit-related note structures broadly into two types: static and managed.

In a static credit-related note structure, the CLNs and associated credit derivative contract either reference a single credit (e.g., a multi-national corporation), or all or part of a fixed portfolio of credits. In a managed credit-related note structure, the CLNs and associated credit derivative generally reference all or part of an actively managed portfolio of credits. An agreement exists between a portfolio manager and the VIE that gives the portfolio manager the ability to substitute each referenced credit in the portfolio for an alternative credit. The Firm does not act as portfolio manager; its involvement with the VIE is generally limited to being a derivative counterparty. As a net buyer of credit protection, in both static and managed credit-related note structures, the Firm pays a premium to the VIE in return for the receipt of a payment (up to the notional of the derivative) if one or more of the credits within the portfolio defaults, or if the losses resulting from the default of reference credits exceed specified levels. The Firm does not provide any additional contractual financial support to the VIE. In addition, the Firm has not historically provided any financial support to the CLN vehicles over and above its contractual obligations. Since each CLN is established to the specifications of the investors, the investors have the power over the activities of that VIE that most significantly affect the performance of the CLN. Furthermore, the Firm does not generally have a variable interest that could potentially be significant. Accordingly, the Firm does not generally consolidate these credit-related note entities. As a derivative counterparty, the Firm has a senior claim on the collateral of the VIE and reports such derivatives on its Consolidated Balance Sheets at fair value. Substantially all of the assets purchased by such VIEs are investment-grade.

Asset swap vehicles

The Firm structures and executes transactions with asset swap vehicles on behalf of investors. In such transactions, the VIE purchases a specific asset or assets and then enters into a derivative with the Firm in order to tailor the interest rate or foreign exchange currency risk, or both, according to investors' requirements. Generally, the assets are held by the VIE to maturity, and the tenor of the derivatives would match the maturity of the assets. Investors typically invest in the notes issued by such VIEs in order to obtain exposure to the credit risk of the specific assets, as well as exposure to foreign exchange and interest rate risk that is tailored to their specific needs. The derivative transaction between the Firm and the VIE may include currency swaps to hedge assets held by the VIE denominated in foreign currency into the investors' local currency or interest rate swaps to hedge the interest rate risk of assets held by the VIE; to add additional interest rate exposure into the VIE in order to increase the return on the issued notes; or to convert an interest-bearing asset into a zero-coupon bond.

The Firm's exposure to asset swap vehicles is generally limited to its rights and obligations under the interest rate and/or foreign exchange derivative contracts. The Firm historically has not provided any financial support to the asset swap vehicles over and above its contractual obligations. The Firm does not generally consolidate these asset swap vehicles, since the Firm does not have the power to direct the significant activities of these entities and does not have a variable interest that could potentially be significant. As a derivative counterparty, the Firm has a senior claim on the collateral of the VIE and reports such derivatives on its Consolidated Balance Sheets at fair value. Substantially all of the assets purchased by such VIEs are investment-grade.

Exposure to nonconsolidated credit-related note and asset swap VIEs at December 31, 2013 and 2012, was as follows.

December 31, 2013 (in billions)	Net derivative receivables	Total exposure	Par value of collateral held by VIEs[a]
Credit-related notes			
Static structure	**$ –**	**$ –**	**$ 4.8**
Managed structure	**–**	**–**	**3.9**
Total credit-related notes	**–**	**–**	**8.7**
Asset swaps	**0.4**	**0.4**	**7.7**
Total	**$ 0.4**	**$ 0.4**	**$ 16.4**

December 31, 2012 (in billions)	Net derivative receivables	Total exposure	Par value of collateral held by VIEs[a]
Credit-related notes			
Static structure	$ 0.5	$ 0.5	$ 7.3
Managed structure	0.6	0.6	5.6
Total credit-related notes	1.1	1.1	12.9
Asset swaps	0.4	0.4	7.9
Total	$ 1.5	$ 1.5	$ 20.8

(a) The Firm's maximum exposure arises through the derivatives executed with the VIEs; the exposure varies over time with changes in the fair value of the derivatives. The Firm relies on the collateral held by the VIEs to pay any amounts due under the derivatives; the vehicles are structured at inception so that the par value of the collateral is expected to be sufficient to pay amounts due under the derivative contracts.

The Firm consolidated Firm-sponsored and third-party credit-related note vehicles with collateral fair values of $311 million and $483 million, at December 31, 2013 and 2012, respectively. These consolidated VIEs included some that were structured by the Firm where the Firm provides the credit derivative, and some that have been structured by third parties where the Firm is not the credit derivative provider. The Firm consolidated these vehicles, because it held positions in these entities that provided the Firm with control of certain vehicles. The Firm did not consolidate any asset swap vehicles at December 31, 2013 and 2012.

VIEs sponsored by third parties

VIE used in FRBNY transaction

In conjunction with the Bear Stearns merger in June 2008, the Federal Reserve Bank of New York ("FRBNY") took control, through an LLC formed for this purpose, of a portfolio of $30.0 billion in assets, based on the value of the portfolio as of March 14, 2008. The assets of the LLC were funded by a $28.85 billion term loan from the FRBNY and a $1.15 billion subordinated loan from JPMorgan Chase. The JPMorgan Chase loan was subordinated to the FRBNY loan and bore the first $1.15 billion of any losses of the portfolio. Any remaining assets in the portfolio after repayment of the FRBNY loan, repayment of the JPMorgan Chase loan and the expense of the LLC was for the account of the FRBNY. The extent to which the FRBNY and JPMorgan Chase loans were repaid depended on the value of the assets in the portfolio and the liquidation strategy directed by the FRBNY. The Firm did not consolidate the LLC, as it did not have the power to direct the activities of the VIE that most significantly impact the VIE's economic performance. In June 2012, the FRBNY loan was repaid in full and in November 2012, the JPMorgan Chase loan was repaid in full. During the year ended December 31, 2012, JPMorgan Chase recognized a pretax gain of $665 million reflecting the recovery on the $1.15 billion subordinated loan plus contractual interest.

Consolidated VIE assets and liabilities

The following table presents information on assets and liabilities related to VIEs consolidated by the Firm as of December 31, 2013 and 2012.

	Assets				Liabilities		
December 31, 2013 (in billions)[a]	Trading assets – debt and equity instruments	Loans	Other[d]	Total assets[e]	Beneficial interests in VIE assets[f]	Other[g]	Total liabilities
VIE program type

Firm-sponsored credit card trusts	$ –	$ 51.9	$ 0.8	$ 52.7	$ 30.1	$ –	$ 30.1
Firm-administered multi-seller conduits	–	25.4	0.1	25.5	17.2	–	17.2
Municipal bond vehicles	9.8	–	0.1	9.9	11.0	–	11.0
Mortgage securitization entities[b]	1.4	2.0	–	3.4	2.3	1.1	3.4
Other[c]	0.8	3.4	1.1	5.3	2.6	0.1	2.7
Total	$ 12.0	$ 82.7	$ 2.1	$ 96.8	$ 63.2	$ 1.2	$ 64.4

(a) Excludes intercompany transactions which were eliminated in consolidation.
(b) Includes residential and commercial mortgage securitizations as well as re-securitizations.
(c) Primarily comprises student loan securitization entities. The Firm consolidated $2.5 billion and $3.3 billion of student loan securitization entities as of December 31, 2013 and 2012, respectively.
(d) Includes assets classified as cash, derivative receivables, AFS securities, and other assets within the Consolidated Balance Sheets.
(e) The assets of the consolidated VIEs included in the program types above are used to settle the liabilities of those entities. The difference between total assets and total liabilities recognized for consolidated VIEs represents the Firm's interest in the consolidated VIEs for each program type.
(f) The interest-bearing beneficial interest liabilities issued by consolidated VIEs are classified in the line item on the Consolidated Balance Sheets titled, "Beneficial interests issued by consolidated variable interest entities." The holders of these beneficial interests do not have recourse to the general credit of JPMorgan Chase. Included in beneficial interests in VIE assets are long-term beneficial interests of $31.8 billion and $35.0 billion at December 31, 2013 and 2012, respectively. The maturities of the long-term beneficial interests as of December 31, 2013, were as follows: $3.8 billion under one year, $20.6 billion between one and five years, and $7.4 billion over five years, all respectively.
(g) Includes liabilities classified as accounts payable and other liabilities in the Consolidated Balance Sheets.

Supplemental information on loan securitizations

The Firm has securitized and sold a variety of loans, including residential mortgage, credit card, automobile, student and commercial (primarily related to real estate) loans, as well as debt securities. The primary purposes of these securitization transactions were to satisfy investor demand and to generate liquidity for the Firm.

For loan securitizations in which the Firm is not required to consolidate the trust, the Firm records the transfer of the loan receivable to the trust as a sale when the accounting criteria for a sale are met. Those criteria are: (1) the transferred financial assets are legally isolated from the Firm's creditors; (2) the transferee or beneficial interest holder can pledge or exchange the transferred financial assets; and (3) the Firm does not maintain effective control over the transferred financial assets (e.g., the Firm cannot repurchase the transferred assets before their maturity and it does not have the ability to unilaterally cause the holder to return the transferred assets).

For loan securitizations accounted for as a sale, the Firm recognizes a gain or loss based on the difference between the value of proceeds received (including cash, beneficial interests, or servicing assets received) and the carrying value of the assets sold. Gains and losses on securitizations are reported in noninterest revenue.

Securitization activity

The following tables provide information related to the Firm's securitization activities for the years ended December 31, 2013, 2012 and 2011, related to assets held in JPMorgan Chase-sponsored securitization entities that were not consolidated by the Firm, and where sale accounting was achieved based on the accounting rules in effect at the time of the securitization.

	2013		2012		2011	
Year ended December 31, (in millions, except rates)[a]	Residential mortgage[d]	Commercial and other[f][g]	Residential mortgage[d][e]	Commercial and other[f][g]	Residential mortgage[d][e]	Commercial and other[f][g]
Principal securitized	**$ 1,404**	**$ 11,318**	$ –	$ 5,421	**$ –**	$ 5,961
All cash flows during the period:						
Proceeds from new securitizations[b]	**$ 1,410**	**$ 11,507**	$ –	$ 5,705	**$ –**	$ 6,142
Servicing fees collected	**576**	**5**	662	4	755	4
Purchases of previously transferred financial assets (or the underlying collateral)[c]	**294**	**–**	222	–	772	–
Cash flows received on interests	**156**	**325**	185	163	235	178

(a) Excludes re-securitization transactions.

(b) Proceeds from residential mortgage securitizations were received in the form of securities. During 2013, $1.4 billion of residential mortgage securitizations were classified in level 2 of the fair value hierarchy. Proceeds from commercial mortgage securitizations were received as securities and cash. During 2013, $11.3 billion of commercial mortgage securitizations were classified in level 2 of the fair value hierarchy, and $207 million of proceeds from commercial mortgage securitizations were received as cash. During 2012, $5.7 billion of commercial mortgage securitizations were classified in level 2 of the fair value hierarchy. During 2011, $4.0 billion and $2.1 billion commercial mortgage securitizations were classified in levels 2 and 3 of the fair value hierarchy, respectively.

(c) Includes cash paid by the Firm to reacquire assets from off-balance sheet, nonconsolidated entities – for example, loan repurchases due to representation and warranties and servicer clean-up calls.

(d) Includes prime, Alt-A, subprime, and option ARMs. Excludes sales for which the Firm did not securitize the loan (including loans sold to Ginnie Mae, Fannie Mae and Freddie Mac).

(e) There were no residential mortgage securitizations during 2012 and 2011.

(f) Includes commercial and student loan securitizations.

(g) Key assumptions used to measure retained interests originated during the year included weighted-average life (in years) of 8.3, 8.8 and 1.7 for the years ended December 31, 2013, 2012, and 2011, respectively, and weighted-average discount rate of 3.2%, 3.6% and 3.5% for the years ended December 31, 2013, 2012, and 2011, respectively.

Loans and excess mortgage servicing rights sold to agencies and other third-party-sponsored securitization entities

In addition to the amounts reported in the securitization activity tables above, the Firm, in the normal course of business, sells originated and purchased mortgage loans and certain originated excess mortgage servicing rights on a nonrecourse basis, predominantly to Ginnie Mae, Fannie Mae and Freddie Mac (the "Agencies"). These loans and excess mortgage servicing rights are sold primarily for the purpose of securitization by the Agencies, which also provide credit enhancement of the loans and excess mortgage servicing rights through certain guarantee provisions. The Firm does not consolidate these securitization vehicles as it is not the primary beneficiary. For a limited number of loan sales, the Firm is obligated to share a portion of the credit risk associated with the sold loans with the purchaser. See Note 29 on pages 318–324 of this Annual Report for additional information about the Firm's loan sales- and securitization-related indemnifications. See Note 17 on pages 299–304 of this Annual Report for additional information about the impact of the Firm's sale of certain excess mortgage servicing rights.

The following table summarizes the activities related to loans sold to U.S. government-sponsored agencies and third-party-sponsored securitization entities.

Year ended December 31, (in millions)	2013	2012[e]	2011[e]
Carrying value of loans sold[a]	**$ 166,028**	$ 179,008	$ 149,247
Proceeds received from loan sales as cash	**$ 782**	$ 195	$ 122
Proceeds from loan sales as securities[b]	**163,373**	176,592	146,704
Total proceeds received from loan sales[c]	**$ 164,155**	$ 176,787	$ 146,826
Gains on loan sales[d]	**302**	141	133

(a) Predominantly to U.S. government agencies.
(b) Predominantly includes securities from U.S. government agencies that are generally sold shortly after receipt.
(c) Excludes the value of MSRs retained upon the sale of loans. Gains on loan sales include the value of MSRs.
(d) The carrying value of the loans accounted for at fair value approximated the proceeds received upon loan sale.
(e) Prior periods have been revised to conform with the current presentation.

Options to repurchase delinquent loans

In addition to the Firm's obligation to repurchase certain loans due to material breaches of representations and warranties as discussed in Note 29 on pages 318–324 of this Annual Report, the Firm also has the option to repurchase delinquent loans that it services for Ginnie Mae loan pools, as well as for other U.S. government agencies under certain arrangements. The Firm typically elects to repurchase delinquent loans from Ginnie Mae loan pools as it continues to service them and/or manage the foreclosure process in accordance with the applicable requirements, and such loans continue to be insured or guaranteed. When the Firm's repurchase option becomes exercisable, such loans must be reported on the Consolidated Balance Sheets as a loan with a corresponding liability. As of December 31, 2013 and 2012, the Firm had recorded on its Consolidated Balance Sheets $14.3 billion and $15.6 billion, respectively, of loans that either had been repurchased or for which the Firm had an option to repurchase. Predominantly all of these amounts relate to loans that have been repurchased from Ginnie Mae loan pools. Additionally, real estate owned resulting from voluntary repurchases of loans was $2.0 billion and $1.6 billion as of December 31, 2013 and 2012, respectively. Substantially all of these loans and real estate owned are insured or guaranteed by U.S. government agencies. For additional information, refer to Note 14 on pages 258–283 of this Annual Report.

JPMorgan Chase's interest in securitized assets held at fair value

The following table outlines the key economic assumptions used to determine the fair value, as of December 31, 2013 and 2012, of certain of the Firm's retained interests in nonconsolidated VIEs (other than MSRs), that are valued using modeling techniques. The table also outlines the sensitivities of those fair values to immediate 10% and 20% adverse changes in assumptions used to determine fair value. For a discussion of MSRs, see Note 17 on pages 299–304 of this Annual Report.

	Commercial and other	
December 31, (in millions, except rates and where otherwise noted)[a]	**2013**	2012
JPMorgan Chase interests in securitized assets[b]	**$ 520**	$ 1,488
Weighted-average life (in years)	**5.5**	6.1
Weighted-average discount rate[b]	**3.8%**	4.1%
Impact of 10% adverse change	**$ (9)**	$ (34)
Impact of 20% adverse change	**(18)**	(65)

(a) The Firm's interests in prime mortgage securitizations were $552 million and $341 million, as of December 31, 2013 and 2012, respectively. These include retained interests in Alt-A loans and re-securitization transactions. The Firm's interests in subprime mortgage securitizations were $91 million and $68 million, as of December 31, 2013 and 2012, respectively.
(b) Incorporates the Firm's weighted-average loss assumption.

The sensitivity analysis in the preceding table is hypothetical. Changes in fair value based on a 10% or 20% variation in assumptions generally cannot be extrapolated easily, because the relationship of the change in the assumptions to the change in fair value may not be linear. Also, in the table, the effect that a change in a particular assumption may have on the fair value is calculated without changing any other assumption. In reality, changes in one factor may result in changes in another, which might counteract or magnify the sensitivities. The above sensitivities also do not reflect risk management practices the Firm may undertake to mitigate such risks.

Loan delinquencies and liquidation losses

The table below includes information about components of nonconsolidated securitized financial assets, in which the Firm has continuing involvement, and delinquencies as of December 31, 2013 and 2012.

	Securitized assets		90 days past due		Liquidation losses	
As of or for the year ended December 31, (in millions)	**2013**	2012	**2013**	2012	**2013**	2012
Securitized loans[a]						
Residential mortgage:						
Prime/ Alt-A & Option ARMs	**$ 90,381**	$ 106,667	**$ 14,882**	$ 22,865	**$ 4,688**	$ 9,118
Subprime mortgage	**28,008**	31,264	**7,726**	10,570	**2,420**	3,013
Commercial and other	**98,018**	81,834	**2,350**	4,077	**1,003**	1,265
Total loans securitized[b]	**$ 216,407**	$ 219,765	**$ 24,958**	$ 37,512	**$ 8,111**	$ 13,396

(a) Total assets held in securitization-related SPEs were $271.7 billion and $295.8 billion, respectively, at December 31, 2013 and 2012. The $216.4 billion and $219.8 billion, respectively, of loans securitized at December 31, 2013 and 2012, excludes: $50.8 billion and $72.0 billion, respectively, of securitized loans in which the Firm has no continuing involvement, and $4.5 billion and $4.0 billion, respectively, of loan securitizations consolidated on the Firm's Consolidated Balance Sheets at December 31, 2013 and 2012.

(b) Includes securitized loans that were previously recorded at fair value and classified as trading assets.

Note 17 – Goodwill and other intangible assets

Goodwill and other intangible assets consist of the following.

December 31, (in millions)	**2013**	2012	2011
Goodwill	**$ 48,081**	$ 48,175	$ 48,188
Mortgage servicing rights	**9,614**	7,614	7,223
Other intangible assets:			
Purchased credit card relationships	**$ 131**	$ 295	$ 602
Other credit card-related intangibles	**173**	229	488
Core deposit intangibles	**159**	355	594
Other intangibles	**1,155**	1,356	1,523
Total other intangible assets	**$ 1,618**	$ 2,235	$ 3,207

Goodwill

Goodwill is recorded upon completion of a business combination as the difference between the purchase price and the fair value of the net assets acquired. Subsequent to initial recognition, goodwill is not amortized but is tested for impairment during the fourth quarter of each fiscal year, or more often if events or circumstances, such as adverse changes in the business climate, indicate there may be impairment.

The goodwill associated with each business combination is allocated to the related reporting units, which are determined based on how the Firm's businesses are managed and how they are reviewed by the Firm's Operating Committee. The following table presents goodwill attributed to the business segments.

December 31, (in millions)	**2013**	2012	2011
Consumer & Community Banking	**$ 30,985**	$ 31,048	$ 30,996
Corporate & Investment Bank	**6,888**	6,895	6,944
Commercial Banking	**2,862**	2,863	2,864
Asset Management	**6,969**	6,992	7,007
Corporate/Private Equity	**377**	377	377
Total goodwill	**$ 48,081**	$ 48,175	$ 48,188

The following table presents changes in the carrying amount of goodwill.

Year ended December 31, (in millions)	**2013**	2012	2011
Balance at beginning of period[a]	**$ 48,175**	$ 48,188	$ 48,854
Changes during the period from:			
Business combinations	**64**	43	97
Dispositions	**(5)**	(4)	(685)
Other[b]	**(153)**	(52)	(78)
Balance at December 31,[a]	**$ 48,081**	$ 48,175	$ 48,188

(a) Reflects gross goodwill balances as the Firm has not recognized any impairment losses to date.

(b) Includes foreign currency translation adjustments and other tax-related adjustments.

Impairment testing

Goodwill was not impaired at December 31, 2013 or 2012, nor was any goodwill written off due to impairment during 2013, 2012 or 2011.

The goodwill impairment test is performed in two steps. In the first step, the current fair value of each reporting unit is compared with its carrying value, including goodwill. If the fair value is in excess of the carrying value (including goodwill), then the reporting unit's goodwill is considered not to be impaired. If the fair value is less than the carrying value (including goodwill), then a second step is performed. In the second step, the implied current fair value of the reporting unit's goodwill is determined by comparing the fair value of the reporting unit (as determined in step one) to the fair value of the net assets of the reporting unit, as if the reporting unit were being acquired in a business combination. The resulting implied current fair value of goodwill is then compared with the carrying value of the reporting unit's goodwill. If the carrying value of the goodwill exceeds its implied current fair value, then an impairment charge is recognized for the excess. If the carrying value of goodwill is less than its implied current fair value, then no goodwill impairment is recognized.

The Firm uses the reporting units' allocated equity plus goodwill capital as a proxy for the carrying amounts of equity for the reporting units in the goodwill impairment testing. Reporting unit equity is determined on a similar basis as the allocation of equity to the Firm's lines of business, which takes into consideration the capital the business segment would require if it were operating independently, incorporating sufficient capital to address regulatory capital requirements (including Basel III), economic risk measures and capital levels for similarly rated peers. Proposed line of business equity levels are incorporated into the Firm's annual budget process, which is reviewed by the Firm's Board of Directors. Allocated equity is further reviewed on a periodic basis and updated as needed.

The primary method the Firm uses to estimate the fair value of its reporting units is the income approach. The models project cash flows for the forecast period and use the perpetuity growth method to calculate terminal values. These cash flows and terminal values are then discounted using an appropriate discount rate. Projections of cash flows are based on the reporting units' earnings forecasts, which include the estimated effects of regulatory and legislative changes (including, but not limited to the Dodd-Frank Wall Street Reform and Consumer Protection Act (the "Dodd-Frank Act")), and which are reviewed with the Operating Committee of the Firm. The discount rate used for each reporting unit represents an estimate of the cost of equity for that reporting unit and is determined considering the Firm's overall estimated cost of equity (estimated using the Capital Asset Pricing Model), as adjusted for the risk characteristics specific to each reporting unit (for example, for higher levels of risk or uncertainty associated with the business or management's forecasts and assumptions). To assess the reasonableness of the discount rates used for each reporting unit management compares the discount rate to the estimated cost of equity for publicly traded institutions with similar businesses and risk characteristics. In addition, the weighted average cost of equity (aggregating the various reporting units) is compared with the Firms' overall estimated cost of equity to ensure reasonableness.

The valuations derived from the discounted cash flow models are then compared with market-based trading and transaction multiples for relevant competitors. Trading and transaction comparables are used as general indicators to assess the general reasonableness of the estimated fair values, although precise conclusions generally cannot be drawn due to the differences that naturally exist between the Firm's businesses and competitor institutions. Management also takes into consideration a comparison between the aggregate fair value of the Firm's reporting units and JPMorgan Chase's market capitalization. In evaluating this comparison, management considers several factors, including (a) a control premium that would exist in a market transaction, (b) factors related to the level of execution risk that would exist at the firmwide level that do not exist at the reporting unit level and (c) short-term market volatility and other factors that do not directly affect the value of individual reporting units.

While no impairment of goodwill was recognized, the Firm's Mortgage Banking business in CCB remains at an elevated risk of goodwill impairment due to its exposure to U.S. consumer credit risk and the effects of economic, regulatory and legislative changes. The valuation of this business is particularly dependent upon economic conditions (including primary mortgage interest rates, lower mortgage origination volume, new unemployment claims and home prices), regulatory and legislative changes (for example, those related to residential mortgage servicing, foreclosure and loss mitigation activities), and the amount of equity capital required. The assumptions used in the discounted cash flow valuation models including the amount of capital necessary given the risk of business activities to meet regulatory capital requirements were determined using management's best estimates. The cost of equity reflected the related risks and uncertainties, and was evaluated in comparison to relevant market peers. Deterioration in these assumptions could cause the estimated fair values of these reporting units and their associated goodwill to decline, which may result in a material impairment charge to earnings in a future period related to some portion of the associated goodwill.

Mortgage servicing rights

Mortgage servicing rights represent the fair value of expected future cash flows for performing servicing activities for others. The fair value considers estimated future servicing fees and ancillary revenue, offset by estimated costs to service the loans, and generally declines over time as net servicing cash flows are received, effectively amortizing the MSR asset against contractual servicing and ancillary fee income. MSRs are either purchased from third parties or recognized upon sale or securitization of mortgage loans if servicing is retained.

As permitted by U.S. GAAP, the Firm elected to account for its MSRs at fair value. The Firm treats its MSRs as a single class of servicing assets based on the availability of market inputs used to measure the fair value of its MSR asset and its treatment of MSRs as one aggregate pool for risk management purposes. The Firm estimates the fair value of MSRs using an option-adjusted spread ("OAS") model, which projects MSR cash flows over multiple interest rate scenarios in conjunction with the Firm's prepayment model, and then discounts these cash flows at risk-adjusted rates. The model considers portfolio characteristics, contractually specified servicing fees, prepayment assumptions, delinquency rates, costs to service, late charges and other ancillary revenue, and other economic factors. The Firm compares fair value estimates and assumptions to observable market data where available, and also considers recent market activity and actual portfolio experience.

The fair value of MSRs is sensitive to changes in interest rates, including their effect on prepayment speeds. MSRs typically decrease in value when interest rates decline because declining interest rates tend to increase prepayments and therefore reduce the expected life of the net servicing cash flows that comprise the MSR asset. Conversely, securities (e.g., mortgage-backed securities), principal-only certificates and certain derivatives (i.e., those for which the Firm receives fixed-rate interest payments) increase in value when interest rates decline. JPMorgan Chase uses combinations of derivatives and securities to manage changes in the fair value of MSRs. The intent is to offset any interest-rate related changes in the fair value of MSRs with changes in the fair value of the related risk management instruments.

The following table summarizes MSR activity for the years ended December 31, 2013, 2012 and 2011.

As of or for the year ended December 31, (in millions, except where otherwise noted)	2013	2012	2011
Fair value at beginning of period	**$ 7,614**	$ 7,223	$ 13,649
MSR activity:			
Originations of MSRs	**2,214**	2,376	2,570
Purchase of MSRs	**1**	457	33
Disposition of MSRs[a]	**(725)**	(579)	–
Net additions	**1,490**	2,254	2,603
Changes due to collection/realization of expected cash flows[b]	**(1,102)**	(1,228)	(1,910)
Changes in valuation due to inputs and assumptions:			
Changes due to market interest rates and other[c]	**2,122**	(589)	(5,392)
Changes in valuation due to other inputs and assumptions:			
Projected cash flows (e.g., cost to service)[d]	**109**	(452)	(1,757)
Discount rates	**(78)**	(98)	(1,238)
Prepayment model changes and other[e]	**(541)**	504	1,268
Total changes in valuation due to other inputs and assumptions	**(510)**	(46)	(1,727)
Total changes in valuation due to inputs and assumptions[b]	**$ 1,612**	$ (635)	$ (7,119)
Fair value at December 31,[f]	**$ 9,614**	$ 7,614	$ 7,223
Change in unrealized gains/(losses) included in income related to MSRs held at December 31,	**$ 1,612**	$ (635)	$ (7,119)
Contractual service fees, late fees and other ancillary fees included in income	**$ 3,309**	$ 3,783	$ 3,977
Third-party mortgage loans serviced at December 31, (in billions)	**$ 822**	$ 867	$ 910
Servicer advances, net of an allowance for uncollectible amounts, at December 31, (in billions)[g]	**$ 9.6**	$ 10.9	$ 11.1

(a) Predominantly represents excess mortgage servicing rights transferred to agency-sponsored trusts in exchange for stripped mortgage backed securities ("SMBS"). In each transaction, a portion of the SMBS was acquired by third parties at the transaction date; the Firm acquired and has retained the remaining balance of those SMBS as trading securities. Also includes sales of MSRs in 2013 and 2012.

(b) Included changes related to commercial real estate of $(5) million, $(8) million and $(9) million for the years ended December 31, 2013, 2012 and 2011, respectively.

(c) Represents both the impact of changes in estimated future prepayments due to changes in market interest rates, and the difference between actual and expected prepayments.

(d) For the year ended December 31, 2013, the increase was driven by the inclusion in the MSR valuation model of servicing fees receivable on certain delinquent loans.

(e) Represents changes in prepayments other than those attributable to changes in market interest rates. For the year ended December 31, 2013, the decrease was driven by changes in the inputs and assumptions used to derive prepayment speeds, primarily increases in home prices.

(f) Included $18 million, $23 million and $31 million related to commercial real estate at December 31, 2013, 2012, and 2011, respectively.

(g) Represents amounts the Firm pays as the servicer (e.g., scheduled principal and interest to a trust, taxes and insurance), which will generally be reimbursed within a short period of time after the advance from future cash flows from the trust or the underlying loans. The Firm's credit risk associated with these advances is minimal because reimbursement of the advances is typically senior to all cash payments to investors. In addition, the Firm maintains the right to stop payment to investors if the collateral is insufficient to cover the advance. However, certain of these servicer advances may not be recoverable if they were not made in accordance with applicable rules and agreements.

During the year ended December 31, 2011, the fair value of the MSR decreased by $6.4 billion. This decrease was predominantly due to a decline in market interest rates, which resulted in a loss in fair value of $5.4 billion. These losses were offset by gains of $5.6 billion on derivatives used to hedge the MSR asset; these derivatives are recognized on the Consolidated Balance Sheets separately from the MSR asset. Also contributing to the decline in fair value of the MSR asset was a $1.7 billion decrease related to revised cost to service and ancillary income assumptions incorporated in the MSR valuation. The increased cost to service assumptions reflected the estimated impact of higher servicing costs to enhance servicing processes, particularly loan modification and foreclosure procedures, including costs to comply with Consent Orders entered into with banking regulators. The increase in the cost to service assumption contemplated significant and prolonged increases in staffing levels in the core and default servicing functions. The decreased ancillary income assumption was similarly related to a reassessment of business practices in consideration of the Consent Orders and the existing industry-wide regulatory environment, which was broadly affecting market participants.

Also in the fourth quarter of 2011, the Firm revised its OAS assumption and updated its proprietary prepayment model; these changes had generally offsetting effects. The Firm's OAS assumption is based upon capital and return requirements that the Firm believes a market participant would consider, taking into account factors such as the pending Basel III capital rules. Consequently, the OAS assumption for the Firm's portfolio increased by approximately 400 basis points and decreased the fair value of the MSR asset by approximately $1.2 billion.

Finally, in the fourth quarter of 2011, the Firm further enhanced its proprietary prepayment model to incorporate: (i) the impact of the Home Affordable Refinance Program ("HARP") 2.0, and (ii) assumptions that to limit modeled refinancings due to the combined influences of relatively strict underwriting standards and reduced levels of expected home price appreciation. In the aggregate, these refinements increased the fair value of the MSR asset by approximately $1.2 billion.

The following table presents the components of mortgage fees and related income (including the impact of MSR risk management activities) for the years ended December 31, 2013, 2012 and 2011.

Year ended December 31, (in millions)	2013	2012	2011
CCB mortgage fees and related income			
Net production revenue:			
Production revenue	**$2,673**	$ 5,783	$3,395
Repurchase losses	**331**	(272)	(1,347)
Net production revenue	**3,004**	5,511	2,048
Net mortgage servicing revenue			
Operating revenue:			
Loan servicing revenue	**3,552**	3,772	4,134
Changes in MSR asset fair value due to collection/realization of expected cash flows	**(1,094)**	(1,222)	(1,904)
Total operating revenue	**2,458**	2,550	2,230
Risk management:			
Changes in MSR asset fair value due to market interest rates and other[(a)]	**2,119**	(587)	(5,390)
Other changes in MSR asset fair value due to other inputs and assumptions in model[(b)]	**(511)**	(46)	(1,727)
Change in derivative fair value and other	**(1,875)**	1,252	5,553
Total risk management	**(267)**	619	(1,564)
Total CCB net mortgage servicing revenue	**2,191**	3,169	666
All other	**10**	7	7
Mortgage fees and related income	**$5,205**	$ 8,687	$2,721

(a) Represents both the impact of changes in estimated future prepayments due to changes in market interest rates, and the difference between actual and expected prepayments.

(b) Represents the aggregate impact of changes in model inputs and assumptions such as projected cash flows (e.g., cost to service), discount rates and changes in prepayments other than those attributable to changes in market interest rates (e.g., changes in prepayments due to changes in home prices). For the year ended December 31, 2013, the decrease was driven by changes in the inputs and assumptions used to derive prepayment speeds, primarily increases in home prices.

The table below outlines the key economic assumptions used to determine the fair value of the Firm's MSRs at December 31, 2013 and 2012, and outlines the sensitivities of those fair values to immediate adverse changes in those assumptions, as defined below.

December 31, (in millions, except rates)	2013	2012
Weighted-average prepayment speed assumption ("CPR")	**8.07%**	13.04%
Impact on fair value of 10% adverse change	**$ (362)**	$ (517)
Impact on fair value of 20% adverse change	**(705)**	(1,009)
Weighted-average option adjusted spread	**7.77%**	7.61%
Impact on fair value of 100 basis points adverse change	**$ (389)**	$ (306)
Impact on fair value of 200 basis points adverse change	**(750)**	(591)

CPR: Constant prepayment rate.

The sensitivity analysis in the preceding table is hypothetical and should be used with caution. Changes in fair value based on variation in assumptions generally cannot be easily extrapolated, because the relationship of the change in the assumptions to the change in fair value are often highly interrelated and may not be linear. In this table, the effect that a change in a particular assumption may have on the fair value is calculated without changing any other assumption. In reality, changes in one factor may result in changes in another, which would either magnify or counteract the impact of the initial change.

Other intangible assets

Other intangible assets are recorded at their fair value upon completion of a business combination or certain other transactions, and generally represent the value of customer relationships or arrangements. Subsequently, the Firm's intangible assets with finite lives, including core deposit intangibles, purchased credit card relationships, and other intangible assets, are amortized over their useful lives in a manner that best reflects the economic benefits of the intangible asset. The $617 million decrease in other intangible assets during 2013 was predominantly due to $637 million in amortization.

The components of credit card relationships, core deposits and other intangible assets were as follows.

	2013			2012		
December 31, (in millions)	Gross amount[a]	Accumulated amortization[a]	Net carrying value	Gross amount	Accumulated amortization	Net carrying value
Purchased credit card relationships	**$ 3,540**	**$ 3,409**	**$ 131**	$ 3,775	$ 3,480	$ 295
Other credit card-related intangibles	**542**	**369**	**173**	850	621	229
Core deposit intangibles	**4,133**	**3,974**	**159**	4,133	3,778	355
Other intangibles[b]	**2,374**	**1,219**	**1,155**	2,390	1,034	1,356

(a) The decrease in the gross amount and accumulated amortization from December 31, 2012, was due to the removal of fully amortized assets.
(b) Includes intangible assets of approximately $600 million consisting primarily of asset management advisory contracts, which were determined to have an indefinite life and are not amortized.

Amortization expense

The following table presents amortization expense related to credit card relationships, core deposits and other intangible assets.

Year ended December 31, (in millions)	2013	2012	2011
Purchased credit card relationships	**$ 195**	$ 309	$ 295
Other credit card-related intangibles	**58**	265	106
Core deposit intangibles	**196**	239	285
Other intangibles	**188**	144	162
Total amortization expense	**$ 637**	$ 957	$ 848

Future amortization expense

The following table presents estimated future amortization expense related to credit card relationships, core deposits and other intangible assets at December 31, 2013.

Year ended December 31, (in millions)	Purchased credit card relationships	Other credit card-related intangibles	Core deposit intangibles	Other intangibles	**Total**
2014	$ 96	$ 51	$ 102	$ 111	$ 360
2015	12	39	26	92	169
2016	9	34	14	86	143
2017	5	29	7	61	102
2018	3	20	5	52	80

Impairment testing

The Firm's intangible assets are tested for impairment annually or more often if events or changes in circumstances indicate that the asset might be impaired.

The impairment test for a finite-lived intangible asset compares the undiscounted cash flows associated with the use or disposition of the intangible asset to its carrying value. If the sum of the undiscounted cash flows exceeds its carrying value, then no impairment charge is recorded. If the sum of the undiscounted cash flows is less than its carrying value, then an impairment charge is recognized in amortization expense to the extent the carrying amount of the asset exceeds its fair value.

The impairment test for indefinite-lived intangible assets compares the fair value of the intangible asset to its carrying amount. If the carrying value exceeds the fair value, then an impairment charge is recognized in amortization expense for the difference.

Note 18 – Premises and equipment

Premises and equipment, including leasehold improvements, are carried at cost less accumulated depreciation and amortization. JPMorgan Chase computes depreciation using the straight-line method over the estimated useful life of an asset. For leasehold improvements, the Firm uses the straight-line method computed over the lesser of the remaining term of the leased facility or the estimated useful life of the leased asset. JPMorgan Chase has recorded immaterial asset retirement obligations related to asbestos remediation in those cases where it has sufficient information to estimate the obligations' fair value.

JPMorgan Chase capitalizes certain costs associated with the acquisition or development of internal-use software. Once the software is ready for its intended use, these costs are amortized on a straight-line basis over the software's expected useful life and reviewed for impairment on an ongoing basis.

Note 19 – Deposits

At December 31, 2013 and 2012, noninterest-bearing and interest-bearing deposits were as follows.

December 31, (in millions)	**2013**	2012
U.S. offices		
Noninterest-bearing	**$ 389,863**	$ 380,320
Interest-bearing		
Demand[a]	**84,631**	53,980
Savings[b]	**450,405**	407,710
Time (included **$5,995** and $5,140 at fair value)[c]	**91,356**	90,416
Total interest-bearing deposits	**626,392**	552,106
Total deposits in U.S. offices	**1,016,255**	932,426
Non-U.S. offices		
Noninterest-bearing	**17,611**	17,845
Interest-bearing		
Demand	**214,391**	195,395
Savings	**1,083**	1,004
Time (included **$629** and $593 at fair value)[c]	**38,425**	46,923
Total interest-bearing deposits	**253,899**	243,322
Total deposits in non-U.S. offices	**271,510**	261,167
Total deposits	**$ 1,287,765**	$ 1,193,593

(a) Includes Negotiable Order of Withdrawal ("NOW") accounts, and certain trust accounts.
(b) Includes Money Market Deposit Accounts ("MMDAs").
(c) Includes structured notes classified as deposits for which the fair value option has been elected. For further discussion, see Note 4 on pages 215–218 of this Annual Report.

At December 31, 2013 and 2012, time deposits in denominations of $100,000 or more were as follows.

December 31, (in millions)	**2013**	2012
U.S. offices	**$ 74,804**	$ 70,008
Non-U.S. offices	**38,412**	46,890
Total	**$113,216**	$116,898

At December 31, 2013, the maturities of interest-bearing time deposits were as follows.

December 31, 2013 (in millions)	U.S.	Non-U.S.	**Total**
2014	$ 73,130	$ 37,394	$ 110,524
2015	5,395	361	5,756
2016	6,274	402	6,676
2017	1,387	55	1,442
2018	1,845	201	2,046
After 5 years	3,325	12	3,337
Total	$ 91,356	$ 38,425	$ 129,781

Note 20 – Accounts payable and other liabilities

Accounts payable and other liabilities consist of payables to customers; payables to brokers, dealers and clearing organizations; payables from failed securities purchases; income taxes payables; accrued expense, including interest-bearing liabilities; and all other liabilities, including litigation reserves and obligations to return securities received as collateral.

The following table details the components of accounts payable and other liabilities.

December 31, (in millions)	**2013**	2012
Brokerage payables[a]	**$ 116,391**	$ 108,398
Accounts payable and other liabilities[b]	**78,100**	86,842
Total	**$ 194,491**	$ 195,240

(a) Includes payables to customers, brokers, dealers and clearing organizations, and securities fails.
(b) Includes $25 million and $36 million accounted for at fair value at December 31, 2013 and 2012, respectively.

Note 21 – Long-term debt

JPMorgan Chase issues long-term debt denominated in various currencies, although predominantly U.S. dollars, with both fixed and variable interest rates. Included in senior and subordinated debt below are various equity-linked or other indexed instruments, which the Firm has elected to measure at fair value. Changes in fair value are recorded in principal transactions revenue in the Consolidated Statements of Income. The following table is a summary of long-term debt carrying values (including unamortized original issue discount, valuation adjustments and fair value adjustments, where applicable) by remaining contractual maturity as of December 31, 2013.

By remaining maturity at December 31,		2013				2012
(in millions, except rates)		Under 1 year	1-5 years	After 5 years	**Total**	Total
Parent company						
Senior debt:	Fixed rate	**$ 11,100**	**$ 49,241**	**$ 40,733**	**$ 101,074**	$ 99,716
	Variable rate	**12,411**	**22,790**	**5,829**	**41,030**	38,765
	Interest rates[a]	**0.38-6.25%**	**0.35-7.25%**	**0.19-6.40%**	**0.19-7.25%**	0.26-7.25%
Subordinated debt:	Fixed rate	**$ 2,904**	**$ 4,966**	**$ 7,328**	**$ 15,198**	$ 16,312
	Variable rate	**–**	**4,557**	**9**	**4,566**	3,440
	Interest rates[a]	**1.92-5.13%**	**0.63-6.13%**	**3.38-8.53%**	**0.63-8.53%**	0.61-8.53%
	Subtotal	**$ 26,415**	**$ 81,554**	**$ 53,899**	**$ 161,868**	$ 158,233
Subsidiaries						
Federal Home Loan Banks ("FHLB") advances:	Fixed rate	**$ 1,029**	**$ 2,022**	**$ 185**	**$ 3,236**	$ 4,712
	Variable rate	**11,050**	**39,590**	**8,000**	**58,640**	37,333

	Variable rate	**–**	**–**	**3,269**	**3,269**	3,268
	Interest rates[a]	**–%**	**–%**	**0.74-8.75%**	**0.74-8.75%**	0.81-8.75%
	Subtotal	**$ –**	**$ –**	**$ 5,445**	**$ 5,445**	$ 10,399
Total long-term debt[b][c][d]		**$ 45,434**	**$ 146,911**	**$ 75,544**	**$ 267,889** [f][g]	$ 249,024
Long-term beneficial interests:						
	Fixed rate	**$ 353**	**$ 7,537**	**$ 3,068**	**$ 10,958**	$ 10,393
	Variable rate	**3,438**	**13,056**	**4,378**	**20,872**	24,579
	Interest rates	**0.19-5.63%**	**0.19-5.35%**	**0.04-15.93%**	**0.04-15.93%**	0.23-13.91%
Total long-term beneficial interests[e]		**$ 3,791**	**$ 20,593**	**$ 7,446**	**$ 31,830**	$ 34,972

(a) The interest rates shown are the range of contractual rates in effect at year-end, including non-U.S. dollar fixed- and variable-rate issuances, which excludes the effects of the associated derivative instruments used in hedge accounting relationships, if applicable. The use of these derivative instruments modifies the Firm's exposure to the contractual interest rates disclosed in the table above. Including the effects of the hedge accounting derivatives, the range of modified rates in effect at December 31, 2013, for total long-term debt was (0.18)% to 8.00%, versus the contractual range of 0.12% to 8.75% presented in the table above. The interest rate ranges shown exclude structured notes accounted for at fair value.

(b) Included long-term debt of $68.4 billion and $48.0 billion secured by assets totaling $131.3 billion and $112.8 billion at December 31, 2013 and 2012, respectively. The amount of long-term debt secured by assets does not include amounts related to hybrid instruments.

(c) Included $28.9 billion and $30.8 billion of long-term debt accounted for at fair value at December 31, 2013 and 2012, respectively.

(d) Included $2.7 billion and $1.6 billion of outstanding zero-coupon notes at December 31, 2013 and 2012, respectively. The aggregate principal amount of these notes at their respective maturities is $4.5 billion and $3.0 billion, respectively.

(e) Included on the Consolidated Balance Sheets in beneficial interests issued by consolidated VIEs. Also included $2.0 billion and $1.2 billion of outstanding structured notes accounted for at fair value at December 31, 2013 and 2012, respectively. Excluded short-term commercial paper and other short-term beneficial interests of $17.8 billion and $28.2 billion at December 31, 2013 and 2012, respectively.

(f) At December 31, 2013, long-term debt in the aggregate of $24.6 billion was redeemable at the option of JPMorgan Chase, in whole or in part, prior to maturity, based on the terms specified in the respective notes.

(g) The aggregate carrying values of debt that matures in each of the five years subsequent to 2013 is $45.4 billion in 2014, $43.3 billion in 2015, $36.3 billion in 2016, $32.5 billion in 2017 and $34.8 billion in 2018.

The weighted-average contractual interest rates for total long-term debt excluding structured notes accounted for at fair value were 2.56% and 3.09% as of December 31, 2013 and 2012, respectively. In order to modify exposure to interest rate and currency exchange rate movements, JPMorgan Chase utilizes derivative instruments, primarily interest rate and cross-currency interest rate swaps, in conjunction with some of its debt issues. The use of these instruments modifies the Firm's interest expense on the associated debt. The modified weighted-average interest rates for total long-term debt, including the effects of related derivative instruments, were 1.54% and 2.33% as of December 31, 2013 and 2012, respectively.

The Parent Company has guaranteed certain long-term debt of its subsidiaries, including both long-term debt and structured notes sold as part of the Firm's market-making activities. These guarantees rank on parity with all of the Firm's other unsecured and unsubordinated indebtedness. Guaranteed liabilities were $478 million and $1.7 billion at December 31, 2013 and 2012, respectively.

The Firm's unsecured debt does not contain requirements that would call for an acceleration of payments, maturities or changes in the structure of the existing debt, provide any limitations on future borrowings or require additional collateral, based on unfavorable changes in the Firm's credit ratings, financial ratios, earnings or stock price.

Junior subordinated deferrable interest debentures held by trusts that issued guaranteed capital debt securities
On May 8, 2013, the Firm redeemed approximately $5.0 billion , or 100% of the liquidation amount, of the following eight series of guaranteed capital debt securities ("trust preferred securities"): JPMorgan Chase Capital X, XI, XII, XIV, XVI, XIX and XXIV, and BANK ONE Capital VI. Other income for the year ended December 31, 2013, reflected a modest loss related to the redemption of trust preferred securities. On July 12, 2012, the Firm redeemed $9.0 billion, or 100% of the liquidation amount, of the following nine series of trust preferred securities: JPMorgan Chase Capital XV, XVII, XVIII, XX, XXII, XXV, XXVI, XXVII and XXVIII. Other income for the year ended December 31, 2012, reflected $888 million of pretax extinguishment gains related to adjustments applied to the cost basis of the redeemed trust preferred securities during the period they were in a qualified hedge accounting relationship.

At December 31, 2013, the Firm had outstanding 9 wholly owned Delaware statutory business trusts ("issuer trusts") that had issued guaranteed capital debt securities.

The junior subordinated deferrable interest debentures issued by the Firm to the issuer trusts, totaling $5.4 billion and $10.4 billion at December 31, 2013 and 2012, respectively, were reflected on the Firm's Consolidated Balance Sheets in long-term debt, and in the table on the preceding page under the caption "Junior subordinated debt" (i.e., trust preferred securities). The Firm also records the common capital securities issued by the issuer trusts in other assets in its Consolidated Balance Sheets at December 31, 2013 and 2012. The debentures issued to the issuer trusts by the Firm, less the common capital securities of the issuer trusts, qualified as Tier 1 capital as of December 31, 2013 and 2012.

The following is a summary of the outstanding trust preferred securities, including unamortized original issue discount, issued by each trust, and the junior subordinated deferrable interest debenture issued to each trust, as of December 31, 2013.

December 31, 2013 (in millions)	Amount of trust preferred securities issued by trust[a]	Principal amount of debenture issued to trust[b]	Issue date	Stated maturity of trust preferred securities and debentures	Earliest redemption date	Interest rate of trust preferred securities and debentures	Interest payment/ distribution dates
Bank One Capital III	$ 474	$ 675	2000	2030	Any time	8.75%	Semiannually
Chase Capital II	482	498	1997	2027	Any time	LIBOR + 0.50%	Quarterly
Chase Capital III	296	305	1997	2027	Any time	LIBOR + 0.55%	Quarterly
Chase Capital VI	241	249	1998	2028	Any time	LIBOR + 0.625%	Quarterly
First Chicago NBD Capital I	249	257	1997	2027	Any time	LIBOR + 0.55%	Quarterly
JPMorgan Chase Capital XIII	465	480	2004	2034	2014	LIBOR + 0.95%	Quarterly
JPMorgan Chase Capital XXI	836	837	2007	2037	Any time	LIBOR + 0.95%	Quarterly
JPMorgan Chase Capital XXIII	643	644	2007	2047	Any time	LIBOR + 1.00%	Quarterly
JPMorgan Chase Capital XXIX	1,500	1,500	2010	2040	2015	6.70%	Quarterly
Total	$ 5,186	$ 5,445					

(a) Represents the amount of trust preferred securities issued to the public by each trust, including unamortized original issue discount.
(b) Represents the principal amount of JPMorgan Chase debentures issued to each trust, including unamortized original-issue discount. The principal amount of debentures issued to the trusts includes the impact of hedging and purchase accounting fair value adjustments that were recorded on the Firm's Consolidated Financial Statements.

Note 22 – Preferred stock

At December 31, 2013 and 2012, JPMorgan Chase was authorized to issue 200 million shares of preferred stock, in one or more series, with a par value of $1 per share.

In the event of a liquidation or dissolution of the Firm, JPMorgan Chase's preferred stock then outstanding takes precedence over the Firm's common stock for the payment of dividends and the distribution of assets.

The following is a summary of JPMorgan Chase's preferred stock outstanding as of December 31, 2013 and 2012.

	Contractual rate in effect at December 31, 2013	Shares at December 31,[a]		Carrying value (in millions) at December 31,		Earliest redemption date	Share value and redemption price per share[b]
		2013	2012	**2013**	2012		
Fixed-to-Floating Rate Non-Cumulative Perpetual Preferred Stock, Series I	7.900%	**600,000**	600,000	**$ 6,000**	$ 6,000	4/30/2018	$ 10,000
8.625% Non-Cumulative Perpetual Preferred Stock, Series J	N/A	**–**	180,000	**–**	1,800	9/1/2013	10,000
5.50% Non-Cumulative Perpetual Preferred Stock, Series O	5.500%	**125,750**	125,750	**1,258**	1,258	9/1/2017	10,000
5.45% Non-Cumulative Perpetual Preferred Stock, Series P	5.450%	**90,000**	–	**900**	–	3/1/2018	10,000
Fixed-to-Floating Rate Non-Cumulative Perpetual Preferred Stock, Series Q	5.150%	**150,000**	–	**1,500**	–	5/1/2023	10,000
Fixed-to-Floating Rate Non-Cumulative Perpetual Preferred Stock, Series R	6.000%	**150,000**	–	**1,500**	–	8/1/2023	10,000
Total preferred stock		**1,115,750**	905,750	**$ 11,158**	$ 9,058		

(a) Represented by depositary shares.
(b) The redemption price includes the amount shown in the table plus any accrued but unpaid dividends.

Dividends on the Fixed-to-Floating Rate Non-Cumulative Perpetual Preferred Stock, Series I shares are payable semiannually at a fixed annual dividend rate of 7.90% through April 2018, and then become payable quarterly at an annual dividend rate of three-month LIBOR plus 3.47%. Dividends on the 5.50% Non-Cumulative Preferred Stock, Series O and the 5.45% Non-Cumulative Preferred Stock, Series P are payable quarterly. Dividends on the Fixed-to-Floating Rate Non-Cumulative Perpetual Preferred Stock, Series Q shares are payable semi-annually at a fixed annual rate of 5.15% through April 2023, and then become payable at a dividend rate of three-month LIBOR plus 3.25%. Dividends on the Fixed-to-Floating Rate Non-Cumulative Perpetual Preferred Stock, Series R shares are payable semi-annually at a fixed annual dividend rate of 6.00% through July 2023, and then become payable at a dividend rate of three-month LIBOR plus 3.30%.

The Series O Non-Cumulative Preferred Stock was issued in August 2012. Series P Non-Cumulative Preferred Stock was issued in February 2013; Series Q Fixed-to-Floating Non-Cumulative Preferred Stock was issued in April 2013; and Series R Fixed-to-Floating Rate Non-Cumulative Preferred Stock, Series R was issued in July 2013.

On September 1, 2013, the Firm redeemed all of the outstanding shares of its 8.625% Non-Cumulative Preferred Stock, Series J at their stated redemption value.

Redemption rights

Each series of the Firm's preferred stock may be redeemed on any dividend payment date on or after the earliest redemption date for that series. The Series O, Series P, Series Q and Series R preferred stock may also be redeemed following a capital treatment event, as described in the terms of that series. Any redemption of the Firm's preferred stock is subject to non-objection from the Federal Reserve.

Subsequent events

Issuance of preferred stock

On January 22, 2014, January 30, 2014, and February 6, 2014, the Firm issued $2.0 billion , $850 million, and $75 million, respectively, of noncumulative preferred stock.

Note 23 – Common stock

At December 31, 2013 and 2012, JPMorgan Chase was authorized to issue 9.0 billion shares of common stock with a par value of $1 per share.

Common shares issued (newly issued or distributed from treasury) by JPMorgan Chase during the years ended December 31, 2013, 2012 and 2011 were as follows.

Year ended December 31, (in millions)	**2013**	2012	2011
Total issued – balance at January 1 and December 31	**4,104.9**	4,104.9	4,104.9
Treasury – balance at January 1	**(300.9)**	(332.2)	(194.6)
Purchase of treasury stock	**(96.1)**	(33.5)	(226.9)
Share repurchases related to employee stock-based awards[a]	**–**	(0.2)	(0.1)
Issued from treasury:			
Employee benefits and compensation plans	**47.1**	63.7	88.3

Total issued from treasury	**48.3**	65.0	89.4
Total treasury – balance at December 31	**(348.8)**	(300.9)	(332.2)
Outstanding	**3,756.1**	3,804.0	3,772.7

(a) Participants in the Firm's stock-based incentive plans may have shares withheld to cover income taxes.

At December 31, 2013, 2012, and 2011, respectively, the Firm had 59.8 million, 59.8 million and 78.2 million warrants outstanding to purchase shares of common stock. The warrants were originally issued pursuant to the U.S. Treasury Capital Purchase Program in 2008, and are currently traded on the New York Stock Exchange. The warrants are exercisable, in whole or in part, at any time and from time to time until October 28, 2018, at an exercise price of $42.42 per share. The number of shares issuable upon the exercise of each warrant and the warrant exercise price is subject to adjustment upon the occurrence of certain events, including in the case of: stock splits, subdivisions, reclassifications or combinations of common stock; cash dividends or distributions to all holders of the Firm's common stock of assets, rights or warrants (and with respect to cash dividends, only to the extent regular quarterly cash dividends exceed $0.38 per share (as adjusted for any stock split, reverse stock split, reclassification or similar transaction)); pro rata repurchases of common stock (as defined in the warrants) pursuant to an offer available to substantially all holders of common stock; and certain business combinations (as defined in the warrants) requiring the approval of the Firm's stockholders or a reclassification of the Firm's common stock.

On March 13, 2012, the Board of Directors authorized a $15.0 billion common equity (i.e., common stock and warrants) repurchase program. The amount of equity that may be repurchased is also subject to the amount that is set forth in the Firm's annual capital plan that is submitted to the Federal Reserve as part of the CCAR process. The following table shows the Firm's repurchases of common equity for the years ended December 31, 2013, 2012 and 2011, on a trade-date basis. As of December 31, 2013, $8.6 billion of authorized repurchase capacity remained under the program.

Year ended December 31, (in millions)	**2013**	2012	2011
Total number of shares of common stock repurchased	**96**	31	229
Aggregate purchase price of common stock repurchases	**$ 4,789**	$ 1,329	$ 8,827
Total number of warrants repurchased	**–**	18	10
Aggregate purchase price of warrant repurchases	**$ –**	$ 238	$ 122

The Firm may, from time to time, enter into written trading plans under Rule 10b5-1 of the Securities Exchange Act of 1934 to facilitate repurchases in accordance with the common equity repurchase program. A Rule 10b5-1 repurchase plan allows the Firm to repurchase its equity during periods when it would not otherwise be repurchasing common equity – for example, during internal trading "black-out periods." All purchases under a Rule 10b5-1 plan must be made according to a predefined plan established when the Firm is not aware of material nonpublic information. For additional information regarding repurchases of the Firm's equity securities, see Part II, Item 5: Market for registrant's common equity, related stockholder matters and issuer purchases of equity securities, on pages 20–21 of JPMorgan Chase's 2013 Form 10-K.

On March 18, 2011, the Board of Directors raised the Firm's quarterly common stock dividend from $0.05 to $0.25 per share, effective with the dividend paid on April 30, 2011, to shareholders of record on April 6, 2011. On March 13, 2012, the Board of Directors increased the Firm's quarterly common stock dividend from $0.25 to $0.30 per share, effective with the dividend paid on April 30, 2012, to shareholders of record on April 5, 2012. On May 21, 2013, the Board of Directors increased the Firm's quarterly common stock dividend from $0.30 per share to $0.38 per share, effective with the dividend paid on July 31, 2013, to shareholders of record on July 5, 2013.

As of December 31, 2013, approximately 290 million unissued shares of common stock were reserved for issuance under various employee incentive, compensation, option and stock purchase plans, director compensation plans, and the warrants sold by the U.S. Treasury as discussed above.

Note 24 – Earnings per share

Earnings per share ("EPS") is calculated under the two-class method under which all earnings (distributed and undistributed) are allocated to each class of common stock and participating securities based on their respective rights to receive dividends. JPMorgan Chase grants restricted stock and RSUs to certain employees under its stock-based compensation programs, which entitle recipients to receive nonforfeitable dividends during the vesting period on a basis equivalent to the dividends paid to holders of common stock; these unvested awards meet the definition of participating securities. Options issued under employee benefit plans that have an antidilutive effect are excluded from the computation of diluted EPS.

The following table presents the calculation of basic and diluted EPS for the years ended December 31, 2013, 2012 and 2011.

Year ended December 31, (in millions, except per share amounts)	**2013**	2012	2011
Basic earnings per share			
Net income	**$ 17,923**	$ 21,284	$ 18,976
Less: Preferred stock dividends	**805**	653	629
Net income applicable to common equity	**17,118**	20,631	18,347
Less: Dividends and undistributed earnings allocated to participating securities	**525**	754	779
Net income applicable to common stockholders	**$ 16,593**	$ 19,877	$ 17,568
Total weighted-average basic shares outstanding	**3,782.4**	3,809.4	3,900.4
Net income per share	**$ 4.39**	$ 5.22	$ 4.50
Diluted earnings per share			
Net income applicable to common stockholders	**$ 16,593**	$ 19,877	$ 17,568
Total weighted-average basic shares outstanding	**3,782.4**	3,809.4	3,900.4
Add: Employee stock options, SARs and warrants[(a)]	**32.5**	12.8	19.9
Total weighted-average diluted shares outstanding[(b)]	**3,814.9**	3,822.2	3,920.3
Net income per share	**$ 4.35**	$ 5.20	$ 4.48

(a) Excluded from the computation of diluted EPS (due to the antidilutive effect) were options issued under employee benefit plans and the warrants originally issued in 2008 under the U.S. Treasury's Capital Purchase Program to purchase shares of the Firm's common stock. The aggregate number of shares issuable upon the exercise of such options and warrants was 6 million, 148 million and 133 million for the years ended December 31, 2013, 2012 and 2011, respectively.

(b) Participating securities were included in the calculation of diluted EPS using the two-class method, as this computation was more dilutive than the calculation using the treasury stock method.

Note 25 – Accumulated other comprehensive income/(loss)

AOCI includes the after-tax change in unrealized gains and losses on AFS securities, foreign currency translation adjustments (including the impact of related derivatives), cash flow hedging activities, and net loss and prior service costs/(credit) related to the Firm's defined benefit pension and OPEB plans.

Year ended December 31, (in millions)	Unrealized gains/ (losses) on AFS securities[a]	Translation adjustments, net of hedges	Cash flow hedges	Defined benefit pension and OPEB plans	Accumulated other comprehensive income/(loss)
Balance at December 31, 2010	$ 2,498	$ 253	$ 206	$ (1,956)	$ 1,001
Net change	1,067 [b]	(279)	(155)	(690)	(57)
Balance at December 31, 2011	$ 3,565 [c]	$ (26)	$ 51	$ (2,646)	$ 944
Net change	3,303 [d]	(69)	69	(145)	3,158
Balance at December 31, 2012	$ 6,868 [c]	$ (95)	$ 120	$ (2,791)	$ 4,102
Net change	**(4,070)** [e]	**(41)**	**(259)**	**1,467**	**(2,903)**
Balance at December 31, 2013	**$ 2,798** [c]	**$ (136)**	**$ (139)**	**$ (1,324)**	**$ 1,199**

(a) Represents the after-tax difference between the fair value and amortized cost of securities accounted for as AFS.
(b) The net change for 2011 was due primarily to increased market value on U.S. government agency issued MBS and obligations of U.S. states and municipalities, partially offset by the widening of spreads on non-U.S. corporate debt and the realization of gains due to portfolio repositioning.
(c) Included after-tax unrealized losses not related to credit on debt securities for which credit losses have been recognized in income of $(56) million at December 31, 2011. There were no such losses at December 31, 2012 and 2013.
(d) The net change for 2012 was predominantly driven by increased market value on non-U.S. residential MBS, corporate debt securities and obligations of U.S. states and municipalities, partially offset by realized gains.
(e) The net change for 2013 was primarily related to the decline in fair value of U.S. government agency issued MBS and obligations of U.S. states and municipalities due to market changes, as well as net realized gains.

The following table presents the before- and after-tax changes in the components of other comprehensive income/(loss).

	2013			2012			2011		
Year ended December 31, (in millions)	Pretax	Tax effect	After-tax	Pretax	Tax effect	After-tax	Pretax	Tax effect	After-tax
Unrealized gains/(losses) on AFS securities:									
Net unrealized gains/(losses) arising during the period	**$(5,987)**	**$ 2,323**	**$(3,664)**	$ 7,521	$(2,930)	$ 4,591	$ 3,361	$(1,322)	$ 2,039

Foreign exchange and other	**(14)**	**5**	**(9)**	(21)	8	(13)	(1)	–	(1)
Net change	**2,319**	**(852)**	**1,467**	(269)	124	(145)	(1,129)	439	(690)
Total other comprehensive income/(loss)	**$(4,793)**	**$ 1,890**	**$(2,903)**	$ 5,147	$(1,989)	$ 3,158	$ (58)	$ 1	$ (57)

(a) The pretax amount is reported in securities gains in the Consolidated Statements of Income.
(b) Reclassifications of pretax realized gains/(losses) on translation adjustments and related hedges are reported in other income in the Consolidated Statements of Income. The amounts were not material for the year ended December 31, 2013.
(c) The pretax amount is reported in the same line as the hedged items, which are predominantly recorded in net interest income in the Consolidated Statements of Income.
(d) The pretax amount is reported in compensation expense in the Consolidated Statements of Income.

Note 26 – Income taxes

JPMorgan Chase and its eligible subsidiaries file a consolidated U.S. federal income tax return. JPMorgan Chase uses the asset and liability method to provide income taxes on all transactions recorded in the Consolidated Financial Statements. This method requires that income taxes reflect the expected future tax consequences of temporary differences between the carrying amounts of assets or liabilities for book and tax purposes. Accordingly, a deferred tax asset or liability for each temporary difference is determined based on the tax rates that the Firm expects to be in effect when the underlying items of income and expense are realized. JPMorgan Chase's expense for income taxes includes the current and deferred portions of that expense. A valuation allowance is established to reduce deferred tax assets to the amount the Firm expects to realize.

Due to the inherent complexities arising from the nature of the Firm's businesses, and from conducting business and being taxed in a substantial number of jurisdictions, significant judgments and estimates are required to be made. Agreement of tax liabilities between JPMorgan Chase and the many tax jurisdictions in which the Firm files tax returns may not be finalized for several years. Thus, the Firm's final tax-related assets and liabilities may ultimately be different from those currently reported.

A reconciliation of the applicable statutory U.S. income tax rate to the effective tax rate for each of the years ended December 31, 2013, 2012 and 2011, is presented in the following table.

Effective tax rate

Year ended December 31,	**2013**	2012	2011
Statutory U.S. federal tax rate	**35.0%**	35.0%	35.0%
Increase/(decrease) in tax rate resulting from:			
U.S. state and local income taxes, net of U.S. federal income tax benefit	**2.2**	1.6	1.6
Tax-exempt income	**(3.1)**	(2.9)	(2.1)
Non-U.S. subsidiary earnings[a]	**(4.9)**	(2.4)	(2.3)
Business tax credits	**(5.4)**	(4.2)	(4.0)
Nondeductible legal expense[b]	**8.0**	(0.2)	0.9
Other, net	**(1.0)**	(0.5)	–
Effective tax rate	**30.8%**	26.4%	29.1%

(a) Includes earnings deemed to be reinvested indefinitely in non-U.S. subsidiaries.

(b) The prior periods have been revised to conform with the current presentation.

The components of income tax expense/(benefit) included in the Consolidated Statements of Income were as follows for each of the years ended December 31, 2013, 2012, and 2011.

Income tax expense/(benefit)

Year ended December 31, (in millions)	**2013**	2012	2011
Current income tax expense/(benefit)			
U.S. federal	**$ (1,316)**	$ 3,225	$ 3,719
Non-U.S.	**1,308**	1,782	1,183
U.S. state and local	**(4)**	1,496	1,178
Total current income tax expense/ (benefit)	**(12)**	6,503	6,080
Deferred income tax expense/(benefit)			
U.S. federal	**7,080**	2,238	2,109
Non-U.S.	**10**	(327)	102
U.S. state and local	**913**	(781)	(518)
Total deferred income tax expense/ (benefit)	**8,003**	1,130	1,693
Total income tax expense	**$ 7,991**	$ 7,633	$ 7,773

Total income tax expense was $8.0 billion in 2013 with an effective tax rate of 30.8%. The relationship between current and deferred income tax expense is largely driven by the reversal of significant deferred tax assets as well as prior year tax adjustments and audit resolutions. Total income tax expense includes $531 million, $200 million and $76 million of tax benefits recorded in 2013, 2012, and 2011, respectively, as a result of tax audit resolutions.

The preceding table does not reflect the tax effect of certain items that are recorded each period directly in stockholders' equity and certain tax benefits associated with the Firm's employee stock-based compensation plans. The tax effect of all items recorded directly to stockholders' equity resulted in an increase of $2.1 billion in 2013, a decrease of $1.9 billion in 2012, and an increase of $927 million in 2011.

U.S. federal income taxes have not been provided on the undistributed earnings of certain non-U.S. subsidiaries, to the extent that such earnings have been reinvested abroad for an indefinite period of time. Based on JPMorgan Chase's ongoing review of the business requirements and capital needs of its non-U.S. subsidiaries, combined with the formation of specific strategies and steps taken to fulfill these requirements and needs, the Firm has determined that the undistributed earnings of certain of its subsidiaries would be indefinitely reinvested to fund current and future growth of the related businesses. As management does not intend to use the earnings of these subsidiaries as a source of funding for its U.S. operations, such earnings will not be distributed to the U.S. in the foreseeable future. For 2013, pretax earnings of approximately $3.4 billion were generated and will be indefinitely reinvested in these subsidiaries. At December 31, 2013, the cumulative amount of undistributed pretax earnings in these subsidiaries approximated $28.5 billion. If the Firm were to record a deferred tax liability associated with these

undistributed earnings, the amount would be approximately $6.4 billion at December 31, 2013.

Tax expense applicable to securities gains and losses for the years 2013, 2012 and 2011 was $261 million, $822 million, and $617 million, respectively.

Deferred income tax expense/(benefit) results from differences between assets and liabilities measured for financial reporting purposes versus income tax return purposes. Deferred tax assets are recognized if, in management's judgment, their realizability is determined to be more likely than not. If a deferred tax asset is determined to be unrealizable, a valuation allowance is established. The significant components of deferred tax assets and liabilities are reflected in the following table as of December 31, 2013 and 2012.

Deferred taxes

December 31, (in millions)	2013	2012
Deferred tax assets		
Allowance for loan losses	**$ 6,593**	$ 8,712
Employee benefits	**4,468**	4,308
Accrued expenses and other	**9,179**	12,393
Non-U.S. operations	**5,493**	3,537
Tax attribute carryforwards	**748**	1,062
Gross deferred tax assets	**26,481**	30,012
Valuation allowance	**(724)**	(689)
Deferred tax assets, net of valuation allowance	**$ 25,757**	$ 29,323
Deferred tax liabilities		
Depreciation and amortization	**$ 3,196**	$ 2,563
Mortgage servicing rights, net of hedges	**5,882**	5,336
Leasing transactions	**2,352**	2,242
Non-U.S. operations	**4,705**	3,582
Other, net	**3,459**	4,340
Gross deferred tax liabilities	**19,594**	18,063
Net deferred tax assets	**$ 6,163**	$ 11,260

JPMorgan Chase has recorded deferred tax assets of $748 million at December 31, 2013, in connection with U.S. federal and state and local net operating loss carryforwards and foreign tax credit carryforwards. At December 31, 2013, the U.S. federal net operating loss carryforwards were approximately $1.5 billion; the state and local net operating loss carryforward was approximately $156 million; and the U.S. foreign tax credit carryforward was approximately $203 million. If not utilized, the U.S. federal net operating loss carryforwards and the state and local net operating loss carryforward will expire between 2027 and 2030; and the U.S. foreign tax credit carryforward will expire in 2022.

The valuation allowance at December 31, 2013, was due to losses associated with non-U.S. subsidiaries.

At December 31, 2013, 2012 and 2011, JPMorgan Chase's unrecognized tax benefits, excluding related interest expense and penalties, were $5.5 billion, $7.2 billion and $7.2 billion, respectively, of which $3.7 billion, $4.2 billion and $4.0 billion, respectively, if recognized, would reduce the annual effective tax rate. Included in the amount of unrecognized tax benefits are certain items that would not affect the effective tax rate if they were recognized in the Consolidated Statements of Income. These unrecognized items include the tax effect of certain temporary differences, the portion of gross state and local unrecognized tax benefits that would be offset by the benefit from associated U.S. federal income tax deductions, and the portion of gross non-U.S. unrecognized tax benefits that would have offsets in other jurisdictions. JPMorgan Chase is presently under audit by a number of taxing authorities, most notably by the Internal Revenue Service, New York State and City, and the State of California as summarized in the Tax examination status table below. Based upon the status of all of the tax examinations currently in process, it is reasonably possible that over the next 12 months the resolution of some of these examinations could result in a significant reduction in the gross balance of unrecognized tax benefits; however, at this time, it is not possible to reasonably estimate the amount of the reduction, if any.

The following table presents a reconciliation of the beginning and ending amount of unrecognized tax benefits for the years ended December 31, 2013, 2012 and 2011.

Unrecognized tax benefits

Year ended December 31, (in millions)	2013	2012	2011
Balance at January 1,	**$ 7,158**	$ 7,189	$ 7,767
Increases based on tax positions related to the current period	**542**	680	516
Decreases based on tax positions related to the current period	**–**	–	(110)
Increases based on tax positions related to prior periods	**88**	234	496
Decreases based on tax positions related to prior periods	**(2,200)**	(853)	(1,433)
Decreases related to settlements with taxing authorities	**(53)**	(50)	(16)
Decreases related to a lapse of applicable statute of limitations	**–**	(42)	(31)
Balance at December 31,	**$ 5,535**	$ 7,158	$ 7,189

After-tax interest (benefit)/expense and penalties related to income tax liabilities recognized in income tax expense were $(184) million, $147 million and $184 million in 2013, 2012 and 2011, respectively.

At December 31, 2013 and 2012, in addition to the liability for unrecognized tax benefits, the Firm had accrued $1.2 billion and $1.9 billion, respectively, for income tax-related interest and penalties.

JPMorgan Chase is continually under examination by the Internal Revenue Service, by taxing authorities throughout the world, and by many states throughout the U.S. The following table summarizes the status of significant income tax examinations of JPMorgan Chase and its consolidated subsidiaries as of December 31, 2013.

Tax examination status

December 31, 2013	Periods under examination	Status
JPMorgan Chase – U.S.	2003 - 2005	Field examination completed, JPMorgan Chase intends to appeal
JPMorgan Chase – U.S.	2006 - 2010	Field examination
Bear Stearns – U.S.	2003 – 2005	Refund claims under review
Bear Stearns – U.S.	2006 – 2008	Field examination
JPMorgan Chase – United Kingdom	2006 – 2011	Field examination
JPMorgan Chase – New York State and City	2005 – 2007	Field examination
JPMorgan Chase – California	2006 – 2010	Field examination

The following table presents the U.S. and non-U.S. components of income before income tax expense for the years ended December 31, 2013, 2012 and 2011.

Income before income tax expense - U.S. and non-U.S.

Year ended December 31, (in millions)	2013	2012	2011
U.S.	**$ 17,229**	$ 24,895	$ 16,336
Non-U.S.[(a)]	**8,685**	4,022	10,413
Income before income tax expense	**$ 25,914**	$ 28,917	$ 26,749

(a) For purposes of this table, non-U.S. income is defined as income generated from operations located outside the U.S.

Note 27 – Restrictions on cash and intercompany funds transfers

The business of JPMorgan Chase Bank, National Association ("JPMorgan Chase Bank, N.A.") is subject to examination and regulation by the OCC. The Bank is a member of the U.S. Federal Reserve System, and its deposits in the U.S. are insured by the FDIC.

The Federal Reserve requires depository institutions to maintain cash reserves with a Federal Reserve Bank. The average amount of reserve balances deposited by the Firm's bank subsidiaries with various Federal Reserve Banks was approximately $5.3 billion and $5.6 billion in 2013 and 2012, respectively.

Restrictions imposed by U.S. federal law prohibit JPMorgan Chase and certain of its affiliates from borrowing from banking subsidiaries unless the loans are secured in specified amounts. Such secured loans to the Firm or to other affiliates are generally limited to 10% of the banking subsidiary's total capital, as determined by the risk-based capital guidelines; the aggregate amount of all such loans is limited to 20% of the banking subsidiary's total capital.

The principal sources of JPMorgan Chase's income (on a parent company-only basis) are dividends and interest from JPMorgan Chase Bank, N.A., and the other banking and nonbanking subsidiaries of JPMorgan Chase. In addition to dividend restrictions set forth in statutes and regulations, the Federal Reserve, the OCC and the FDIC have authority under the Financial Institutions Supervisory Act to prohibit or to limit the payment of dividends by the banking organizations they supervise, including JPMorgan Chase and its subsidiaries that are banks or bank holding companies, if, in the banking regulator's opinion, payment of a dividend would constitute an unsafe or unsound practice in light of the financial condition of the banking organization.

At January 1, 2014, JPMorgan Chase's banking subsidiaries could pay, in the aggregate, $29.8 billion in dividends to their respective bank holding companies without the prior approval of their relevant banking regulators. The capacity to pay dividends in 2014 will be supplemented by the banking subsidiaries' earnings during the year.

In compliance with rules and regulations established by U.S. and non-U.S. regulators, as of December 31, 2013 and 2012, cash in the amount of $17.2 billion and $25.1 billion, respectively, and securities with a fair value of $1.5 billion and $0.7 billion, respectively, were segregated in special bank accounts for the benefit of securities and futures brokerage customers. In addition, as of December 31, 2013 and 2012, the Firm had other restricted cash of $3.9 billion and $3.4 billion, respectively, primarily representing cash reserves held at non-U.S. central banks and held for other general purposes.

Note 28 – Regulatory capital

The Federal Reserve establishes capital requirements, including well-capitalized standards, for the consolidated financial holding company. The OCC establishes similar capital requirements and standards for the Firm's national banks, including JPMorgan Chase Bank, N.A., and Chase Bank USA, N.A.

There are two categories of risk-based capital: Tier 1 capital and Tier 2 capital. Tier 1 capital consists of common stockholders' equity, perpetual preferred stock, noncontrolling interests in subsidiaries and trust preferred securities, less goodwill and certain other adjustments. Tier 2 capital consists of preferred stock not qualifying as Tier 1 capital, subordinated long-term debt and other instruments qualifying as Tier 2 capital, and the aggregate allowance for credit losses up to a certain percentage of risk-weighted assets. Total capital is Tier 1 capital plus Tier 2 capital. Under the risk-based capital guidelines of the Federal Reserve, JPMorgan Chase is required to maintain minimum ratios of Tier 1 and Total capital to risk-weighted assets, as well as minimum leverage ratios (which are defined as Tier 1 capital divided by adjusted quarterly average assets). Failure to meet these minimum requirements could cause the Federal Reserve to take action. Banking subsidiaries also are subject to these capital requirements by their respective primary regulators. As of December 31, 2013 and 2012, JPMorgan Chase and all of its banking subsidiaries were well-capitalized and met all capital requirements to which each was subject.

The following table presents the regulatory capital, assets and risk-based capital ratios for JPMorgan Chase and its significant banking subsidiaries at December 31, 2013 and 2012. These amounts are determined in accordance with regulations issued by the Federal Reserve and/or OCC. The table reflects the Firm's and JPMorgan Chase Bank, N.A.'s implementation of rules that provide for additional capital requirements for trading positions and securitizations ("Basel 2.5"). Basel 2.5 rules became effective for the Firm and JPMorgan Chase Bank, N.A. on January 1, 2013. The implementation of these rules in the first quarter of 2013 resulted in an increase of approximately $150 billion and $140 billion, respectively, in the Firm's and JPMorgan Chase Bank, N.A.'s risk-weighted assets compared with the Basel I rules at March 31, 2013. The implementation of these rules also resulted in decreases of the Firm's Tier 1 capital and Total capital ratios of 140 basis points and 160 basis points, respectively, at March 31, 2013, and decreases of JPMorgan Chase Bank, N.A.'s Tier 1 capital and Total capital ratios of 130 basis points and 150 basis points, respectively, at March 31, 2013. Implementation of Basel 2.5 in the first quarter of 2013 did not impact Chase Bank USA, N.A.'s RWA or Tier 1 capital and Total capital ratios.

December 31,	JPMorgan Chase & Co.[d]		JPMorgan Chase Bank, N.A.[d]		Chase Bank USA, N.A.[d]		Well-capitalized ratios[e]	Minimum capital ratios[e]
(in millions, except ratios)	**2013**	2012	**2013**	2012	**2013**	2012		
Regulatory capital								
Tier 1[a]	**$ 165,663**	$ 160,002	**$ 139,727**	$ 111,827	**$ 12,956**	$ 9,648		
Total	**199,286**	194,036	**165,496**	146,870	**16,389**	13,131		
Assets								
Risk-weighted[b]	**$1,387,863**	$1,270,378	**$1,171,574**	$1,094,155	**$100,990**	$103,593		
Adjusted average[c]	**2,343,713**	2,243,242	**1,900,770**	1,815,816	**109,731**	103,688		
Capital ratios								
Tier 1[a]	**11.9%**	12.6%	**11.9%**	10.2%	**12.8%**	9.3%	6.0%	4.0%
Total	**14.4**	15.3	**14.1**	13.4	**16.2**	12.7	10.0	8.0
Tier 1 leverage	**7.1**	7.1	**7.4**	6.2	**11.8**	9.3	5.0 [f]	3.0 [g]

(a) At December 31, 2013, for JPMorgan Chase and JPMorgan Chase Bank, N.A., trust preferred securities were $5.3 billion and $600 million, respectively. If these securities were excluded from the calculation at December 31, 2013, Tier 1 capital would be $160.4 billion and $139.1 billion, respectively, and the Tier 1 capital ratio would be 11.6% and 11.9%, respectively. At December 31, 2013, Chase Bank USA, N.A. had no trust preferred securities.

(b) Included off-balance sheet risk-weighted assets at December 31, 2013, of $315.9 billion, $304.0 billion and $14 million, and at December 31, 2012, of $304.5 billion, $297.1 billion and $16 million, for JPMorgan Chase, JPMorgan Chase Bank, N.A. and Chase Bank USA, N.A., respectively.

(c) Adjusted average assets, for purposes of calculating the leverage ratio, included total quarterly average assets adjusted for unrealized gains/(losses) on securities, less deductions for disallowed goodwill and other intangible assets, investments in certain subsidiaries, and the total adjusted carrying value of nonfinancial equity investments that are subject to deductions from Tier 1 capital.

(d) Asset and capital amounts for JPMorgan Chase's banking subsidiaries reflect intercompany transactions; whereas the respective amounts for JPMorgan Chase reflect the elimination of intercompany transactions.

(e) As defined by the regulations issued by the Federal Reserve, OCC and FDIC.

(f) Represents requirements for banking subsidiaries pursuant to regulations issued under the FDIC Improvement Act. There is no Tier 1 leverage component in the definition of a well-capitalized bank holding company.

(g) The minimum Tier 1 leverage ratio for bank holding companies and banks is 3% or 4%, depending on factors specified in regulations issued by the Federal Reserve and OCC.

Note: Rating agencies allow measures of capital to be adjusted upward for deferred tax liabilities, which have resulted from both nontaxable business combinations and from tax-deductible goodwill. The Firm had deferred tax liabilities resulting from nontaxable business combinations totaling $192 million and $291 million at December 31, 2013 and 2012, respectively; and deferred tax liabilities resulting from tax-deductible goodwill of $2.8 billion and $2.5 billion at December 31, 2013 and 2012, respectively.

A reconciliation of the Firm's Total stockholders' equity to Tier 1 capital and Total qualifying capital is presented in the table below.

December 31, (in millions)	2013	2012
Tier 1 capital		
Total stockholders' equity	**$ 211,178**	$ 204,069
Effect of certain items in AOCI excluded from Tier 1 capital	**(1,337)**	(4,198)
Qualifying hybrid securities and noncontrolling interests[a]	**5,618**	10,608
Less: Goodwill[b]	**45,320**	45,663
Other intangible assets[b]	**2,012**	2,311
Fair value DVA on structured notes and derivative liabilities related to the Firm's credit quality	**1,300**	1,577
Investments in certain subsidiaries and other	**1,164**	926
Total Tier 1 capital	**165,663**	160,002
Tier 2 capital		
Long-term debt and other instruments qualifying as Tier 2	**16,695**	18,061
Qualifying allowance for credit losses	**16,969**	15,995
Other	**(41)**	(22)
Total Tier 2 capital	**33,623**	34,034
Total qualifying capital	**$ 199,286**	$ 194,036

(a) Primarily includes trust preferred securities of certain business trusts.
(b) Goodwill and other intangible assets are net of any associated deferred tax liabilities.

Note 29 – Off-balance sheet lending-related financial instruments, guarantees, and other commitments

JPMorgan Chase provides lending-related financial instruments (e.g., commitments and guarantees) to meet the financing needs of its customers. The contractual amount of these financial instruments represents the maximum possible credit risk to the Firm should the counterparty draw upon the commitment or the Firm be required to fulfill its obligation under the guarantee, and should the counterparty subsequently fail to perform according to the terms of the contract. Most of these commitments and guarantees expire without being drawn or a default occurring. As a result, the total contractual amount of these instruments is not, in the Firm's view, representative of its actual future credit exposure or funding requirements.

To provide for probable credit losses inherent in consumer (excluding credit card) and wholesale lending commitments, an allowance for credit losses on lending-related commitments is maintained. See Note 15 on pages 284–287 of this Annual Report for further discussion regarding the allowance for credit losses on lending-related commitments. The following table summarizes the contractual amounts and carrying values of off-balance sheet lending-related financial instruments, guarantees and other commitments at December 31, 2013 and 2012. The amounts in the table below for credit card and home equity lending-related commitments represent the total available credit for these products. The Firm has not experienced, and does not anticipate, that all available lines of credit for these products will be utilized at the same time. The Firm can reduce or cancel credit card lines of credit by providing the borrower notice or, in some cases, without notice as permitted by law. The Firm may reduce or close home equity lines of credit when there are significant decreases in the value of the underlying property, or when there has been a demonstrable decline in the creditworthiness of the borrower. Also, the Firm typically closes credit card lines when the borrower is 60 days or more past due.

Other guarantees and commitments[f]	**654**	**256**	**1,484**	**4,392**	**6,786**	6,780	**(99)**	(75)

(a) At December 31, 2013 and 2012, reflects the contractual amount net of risk participations totaling $476 million and $473 million, respectively, for other unfunded commitments to extend credit; $14.8 billion and $16.6 billion, respectively, for standby letters of credit and other financial guarantees; and $622 million and $690 million, respectively, for other letters of credit. In regulatory filings with the Federal Reserve these commitments are shown gross of risk participations.

(b) At December 31, 2013 and 2012, included credit enhancements and bond and commercial paper liquidity commitments to U.S. states and municipalities, hospitals and other non-profit entities of $18.9 billion and $21.3 billion, respectively, within other unfunded commitments to extend credit; and $17.2 billion and $23.2 billion, respectively, within standby letters of credit and other financial guarantees. These commitments also include liquidity facilities to nonconsolidated municipal bond VIEs; for further information, see Note 16 on pages 288–299 of this Annual Report.

(c) At December 31, 2013 and 2012, included unissued standby letters of credit commitments of $42.8 billion and $44.4 billion, respectively.

(d) At December 31, 2013 and 2012, collateral held by the Firm in support of securities lending indemnification agreements was $176.4 billion and $165.1 billion, respectively. Securities lending collateral comprises primarily cash and securities issued by governments that are members of the Organisation for Economic Co-operation and Development ("OECD") and U.S. government agencies.

(e) At December 31, 2013 and 2012, the amount of commitments related to forward-starting reverse repurchase agreements and securities borrowing agreements were $9.9 billion and $13.2 billion, respectively. Commitments related to unsettled reverse repurchase agreements and securities borrowing agreements with regular-way settlement periods were $28.3 billion and $21.7 billion, at December 31, 2013 and 2012, respectively.

(f) At December 31, 2013 and 2012, included unfunded commitments of $215 million and $370 million, respectively, to third-party private equity funds; and $1.9 billion and $1.5 billion, respectively, to other equity investments. These commitments included $184 million and $333 million, respectively, related to investments that are generally fair valued at net asset value as discussed in Note 3 on pages 195–215 of this Annual Report. In addition, at both December 31, 2013 and 2012, included letters of credit hedged by derivative transactions and managed on a market risk basis of $4.5 billion.

(g) For lending-related products, the carrying value represents the allowance for lending-related commitments and the guarantee liability; for derivative-related products, the carrying value represents the fair value.

Other unfunded commitments to extend credit
Other unfunded commitments to extend credit generally comprise commitments for working capital and general corporate purposes, extensions of credit to support commercial paper facilities and bond financings in the event that those obligations cannot be remarketed to new investors as well as committed liquidity facilities to clearing organizations.

Also included in other unfunded commitments to extend credit are commitments to noninvestment-grade counterparties in connection with leveraged and acquisition finance activities, which were $18.3 billion at December 31, 2013. In the fourth quarter of 2013, the Firm implemented prospectively interagency guidance that revised the Firm's definition of leveraged lending to include all Commercial and Industrial borrowers, whether or not they are affiliated with financial sponsors, which meet certain leverage criteria and use of proceeds purpose tests related to a buyout, acquisition or capital distribution. Prior to this change, the Firm defined leveraged lending as primarily being affiliated with a financial sponsor-related company and used internal risk grades to identify the leveraged lending portfolio. For further information, see Note 3 and Note 4 on pages 195–215 and 215–218 respectively, of this Annual Report.

In addition, the Firm acts as a clearing and custody bank in the U.S. tri-party repurchase transaction market. In its role as clearing and custody bank, the Firm is exposed to intra-day credit risk of the cash borrowers, usually broker-dealers; however, this exposure is secured by collateral and typically extinguished through the settlement process by the end of the day. Tri-party repurchase daily balances averaged $307 billion and $370 billion for the years ended December 31, 2013 and 2012, respectively.

Guarantees
U.S. GAAP requires that a guarantor recognize, at the inception of a guarantee, a liability in an amount equal to the fair value of the obligation undertaken in issuing the guarantee. U.S. GAAP defines a guarantee as a contract that contingently requires the guarantor to pay a guaranteed party based upon: (a) changes in an underlying asset, liability or equity security of the guaranteed party; or (b) a third party's failure to perform under a specified agreement. The Firm considers the following off-balance sheet lending-related arrangements to be guarantees under U.S. GAAP: standby letters of credit and financial guarantees, securities lending indemnifications, certain indemnification agreements included within third-party contractual arrangements and certain derivative contracts.

As required by U.S. GAAP, the Firm initially records guarantees at the inception date fair value of the obligation assumed (e.g., the amount of consideration received or the net present value of the premium receivable). For certain types of guarantees, the Firm records this fair value amount in other liabilities with an offsetting entry recorded in cash (for premiums received), or other assets (for premiums receivable). Any premium receivable recorded in other assets is reduced as cash is received under the contract, and the fair value of the liability recorded at inception is amortized into income as lending and deposit-related fees over the life of the guarantee contract. For indemnifications provided in sales agreements, a portion of the sale proceeds is allocated to the guarantee, which adjusts the gain or loss that would otherwise result from the transaction. For these indemnifications, the initial liability is amortized to income as the Firm's risk is reduced (i.e., over time or when the indemnification expires). Any contingent liability that exists as a result of issuing the guarantee or indemnification is recognized when it becomes probable and reasonably estimable. The contingent portion of the liability is not recognized if the estimated amount is less than the carrying amount of the liability recognized at inception (adjusted for any amortization). The recorded amounts of the liabilities related to guarantees and indemnifications at December 31, 2013 and 2012, excluding the allowance for credit losses on lending-related commitments, are discussed below.

Standby letters of credit and other financial guarantees
Standby letters of credit ("SBLC") and other financial guarantees are conditional lending commitments issued by the Firm to guarantee the performance of a customer to a third party under certain arrangements, such as commercial paper facilities, bond financings, acquisition financings, trade and similar transactions. The carrying values of standby and other letters of credit were $945 million and $649 million at December 31, 2013 and 2012, respectively, which were classified in accounts payable and other liabilities on the Consolidated Balance Sheets; these carrying values included $265 million and $284 million, respectively, for the allowance for lending-related commitments, and $680 million and $365 million, respectively, for the guarantee liability and corresponding asset.

The following table summarizes the types of facilities under which standby letters of credit and other letters of credit arrangements are outstanding by the ratings profiles of the Firm's customers, as of December 31, 2013 and 2012.

Standby letters of credit, other financial guarantees and other letters of credit

December 31, (in millions)	2013		2012	
	Standby letters of credit and other financial guarantees	Other letters of credit	Standby letters of credit and other financial guarantees	Other letters of credit
Investment-grade[a]	**$ 69,109**	**$ 3,939**	$ 77,081	$ 3,998
Noninvestment-grade[a]	**23,614**	**1,081**	23,848	1,575
Total contractual amount	**$ 92,723**	**$ 5,020**	$ 100,929	$ 5,573
Allowance for lending-related commitments	**$ 263**	**$ 2**	$ 282	$ 2
Commitments with collateral	**40,410**	**1,473**	42,654	1,145

(a) The ratings scale is based on the Firm's internal ratings which generally correspond to ratings as defined by S&P and Moody's.

Advised lines of credit

An advised line of credit is a revolving credit line which specifies the maximum amount the Firm may make available to an obligor, on a nonbinding basis. The borrower receives written or oral advice of this facility. The Firm may cancel this facility at any time by providing the borrower notice or, in some cases, without notice as permitted by law.

Securities lending indemnifications

Through the Firm's securities lending program, customers' securities, via custodial and non-custodial arrangements, may be lent to third parties. As part of this program, the Firm provides an indemnification in the lending agreements which protects the lender against the failure of the borrower to return the lent securities. To minimize its liability under these indemnification agreements, the Firm obtains cash or other highly liquid collateral with a market value exceeding 100% of the value of the securities on loan from the borrower. Collateral is marked to market daily to help assure that collateralization is adequate. Additional collateral is called from the borrower if a shortfall exists, or collateral may be released to the borrower in the event of overcollateralization. If a borrower defaults, the Firm would use the collateral held to purchase replacement securities in the market or to credit the lending customer with the cash equivalent thereof.

Derivatives qualifying as guarantees

In addition to the contracts described above, the Firm transacts certain derivative contracts that have the characteristics of a guarantee under U.S. GAAP. These contracts include written put options that require the Firm to purchase assets upon exercise by the option holder at a specified price by a specified date in the future. The Firm may enter into written put option contracts in order to meet client needs, or for other trading purposes. The terms of written put options are typically five years or less. Derivative guarantees also include contracts such as stable value derivatives that require the Firm to make a payment of the difference between the market value and the book value of a counterparty's reference portfolio of assets in the event that market value is less than book value and certain other conditions have been met. Stable value derivatives, commonly referred to as "stable value wraps", are transacted in order to allow investors to realize investment returns with less volatility than an unprotected portfolio and are typically longer-term or may have no stated maturity, but allow the Firm to terminate the contract under certain conditions.

Derivative guarantees are recorded on the Consolidated Balance Sheets at fair value in trading assets and trading liabilities. The total notional value of the derivatives that the Firm deems to be guarantees was $56.3 billion and $61.7 billion at December 31, 2013 and 2012, respectively. The notional amount generally represents the Firm's maximum exposure to derivatives qualifying as guarantees. However, exposure to certain stable value contracts is contractually limited to a substantially lower percentage of the notional amount; the notional amount on these stable value contracts was $27.0 billion and $26.5 billion at December 31, 2013 and 2012, respectively, and the maximum exposure to loss was $2.8 billion at both December 31, 2013 and 2012. The fair values of the contracts reflect the probability of whether the Firm will be required to perform under the contract. The fair value related to derivatives that the Firm deems to be guarantees were derivative payables of $109 million and $122 million and derivative receivables of $37 million and $80 million at December 31, 2013 and 2012, respectively. The Firm reduces exposures to these contracts by entering into offsetting transactions, or by entering into contracts that hedge the market risk related to the derivative guarantees.

In addition to derivative contracts that meet the characteristics of a guarantee, the Firm is both a purchaser and seller of credit protection in the credit derivatives market. For a further discussion of credit derivatives, see Note 6 on pages 220–233 of this Annual Report.

Unsettled reverse repurchase and securities borrowing agreements

In the normal course of business, the Firm enters into reverse repurchase agreements and securities borrowing agreements that settle at a future date. At settlement, these commitments require that the Firm advance cash to and accept securities from the counterparty. These agreements generally do not meet the definition of a derivative, and

therefore, are not recorded on the Consolidated Balance Sheets until settlement date. At December 31, 2013 and 2012, the amount of commitments related to forward starting reverse repurchase agreements and securities borrowing agreements were $9.9 billion and $13.2 billion, respectively. Commitments related to unsettled reverse repurchase agreements and securities borrowing agreements with regular way settlement periods were $28.3 billion and $21.7 billion at December 31, 2013 and 2012, respectively.

Loan sales- and securitization-related indemnifications

Mortgage repurchase liability

In connection with the Firm's mortgage loan sale and securitization activities with the GSEs and other mortgage loan sale and private-label securitization transactions, as described in Note 16 on pages 288–299 of this Annual Report, the Firm has made representations and warranties that the loans sold meet certain requirements. The Firm has been, and may be, required to repurchase loans and/or indemnify the GSEs (e.g., with "make-whole" payments to reimburse the GSEs for their realized losses on liquidated loans) and other investors for losses due to material breaches of these representations and warranties. To the extent that repurchase demands that are received relate to loans that the Firm purchased from third parties that remain viable, the Firm typically will have the right to seek a recovery of related repurchase losses from the third party. Generally, the maximum amount of future payments the Firm would be required to make for breaches of these representations and warranties would be equal to the unpaid principal balance of such loans that are deemed to have defects that were sold to purchasers (including securitization-related SPEs) plus, in certain circumstances, accrued interest on such loans and certain expense.

On October 25, 2013, the Firm announced that it had reached a $1.1 billion agreement with the FHFA to resolve, other than certain limited types of exposures, outstanding and future mortgage repurchase demands associated with loans sold to the GSEs from 2000 to 2008 ("FHFA Settlement Agreement"). The majority of the mortgage repurchase demands that the Firm had received from the GSEs related to loans originated from 2005 to 2008.

The Firm has recognized a mortgage repurchase liability of $681 million and $2.8 billion as of December 31, 2013 and 2012, respectively. The amount of the mortgage repurchase liability at December 31, 2013, relates to repurchase losses associated with loans sold in connection with loan sale and securitization transactions with the GSEs that are not covered by the FHFA Settlement Agreement (e.g., post-2008 loan sale and securitization transactions, mortgage insurance rescissions and certain mortgage insurance settlement-related exposures, as well as certain other specific exclusions).

The following table summarizes the change in the mortgage repurchase liability for each of the periods presented.

Summary of changes in mortgage repurchase liability

Year ended December 31, (in millions)	2013	2012	2011
Repurchase liability at beginning of period	**$ 2,811**	$ 3,557	$ 3,285
Net realized losses[a][b]	**(1,561)**	(1,158)	(1,263)
Reclassification to litigation reserve[c]	**(179)**	–	–
Provision for repurchase losses[d]	**(390)**	412	1,535
Repurchase liability at end of period	**$ 681**	$ 2,811	$ 3,557

(a) Presented net of third-party recoveries and include principal losses and accrued interest on repurchased loans, "make-whole" settlements, settlements with claimants, and certain related expense. Make-whole settlements were $414 million, $524 million and $640 million, for the years ended December 31, 2013, 2012 and 2011, respectively.

(b) The 2013 amount includes $1.1 billion, for the FHFA Settlement Agreement.

(c) Prior to December 31, 2013, in the absence of a repurchase demand by a party to the relevant contracts, the Firm's decision to repurchase loans from private-label securitization trusts when it determined it had an obligation to do so was recognized in the mortgage repurchase liability. Pursuant to the terms of the RMBS Trust Settlement, all repurchase obligations relating to the subject private-label securitization trusts, whether resulting from a repurchase demand or otherwise, are now recognized in the Firm's litigation reserves for this settlement. The RMBS Trust Settlement is fully accrued as of December 31, 2013.

(d) Included a provision related to new loan sales of $20 million, $112 million and $52 million, for the years ended December 31, 2013, 2012 and 2011, respectively.

Private label securitizations

The liability related to repurchase demands associated with private label securitizations is separately evaluated by the Firm in establishing its litigation reserves.

On November 15, 2013, the Firm announced that it had reached a $4.5 billion agreement with 21 major institutional investors to make a binding offer to the trustees of 330 residential mortgage-backed securities trust issued by J.P.Morgan, Chase, and Bear Stearns ("RMBS Trust Settlement") to resolve all representation and warranty claims, as well as all servicing claims, on all trust issued by J.P.Morgan, Chase, and Bear Stearns between 2005 and 2008. The RMBS Trust Settlement may be subject to court approval.

In addition, from 2005 to 2008, Washington Mutual made certain loan level representations and warranties in connection with approximately $165 billion of residential mortgage loans that were originally sold or deposited into private-label securitizations by Washington Mutual. Of the $165 billion, approximately $75 billion has been repaid. In addition, approximately $47 billion of the principal amount of such loans has liquidated with an average loss severity of 59%. Accordingly, the remaining outstanding principal balance of these loans as of December 31, 2013, was approximately $43 billion, of which $10 billion was 60 days or more past due. The Firm believes that any repurchase

obligations related to these loans remain with the FDIC receivership.

For additional information regarding litigation, see Note 31 on pages 326–332 of this Annual Report.

Loans sold with recourse
The Firm provides servicing for mortgages and certain commercial lending products on both a recourse and nonrecourse basis. In nonrecourse servicing, the principal credit risk to the Firm is the cost of temporary servicing advances of funds (i.e., normal servicing advances). In recourse servicing, the servicer agrees to share credit risk with the owner of the mortgage loans, such as Fannie Mae or Freddie Mac or a private investor, insurer or guarantor. Losses on recourse servicing predominantly occur when foreclosure sales proceeds of the property underlying a defaulted loan are less than the sum of the outstanding principal balance, plus accrued interest on the loan and the cost of holding and disposing of the underlying property. The Firm's securitizations are predominantly nonrecourse, thereby effectively transferring the risk of future credit losses to the purchaser of the mortgage-backed securities issued by the trust. At December 31, 2013 and 2012, the unpaid principal balance of loans sold with recourse totaled $7.7 billion and $9.3 billion, respectively. The carrying value of the related liability that the Firm has recorded, which is representative of the Firm's view of the likelihood it will have to perform under its recourse obligations, was $131 million and $141 million at December 31, 2013 and 2012, respectively.

Other off-balance sheet arrangements

Indemnification agreements – general
In connection with issuing securities to investors, the Firm may enter into contractual arrangements with third parties that require the Firm to make a payment to them in the event of a change in tax law or an adverse interpretation of tax law. In certain cases, the contract also may include a termination clause, which would allow the Firm to settle the contract at its fair value in lieu of making a payment under the indemnification clause. The Firm may also enter into indemnification clauses in connection with the licensing of software to clients ("software licensees") or when it sells a business or assets to a third party ("third-party purchasers"), pursuant to which it indemnifies software licensees for claims of liability or damages that may occur subsequent to the licensing of the software, or third-party purchasers for losses they may incur due to actions taken by the Firm prior to the sale of the business or assets. It is difficult to estimate the Firm's maximum exposure under these indemnification arrangements, since this would require an assessment of future changes in tax law and future claims that may be made against the Firm that have not yet occurred. However, based on historical experience, management expects the risk of loss to be remote.

Credit card charge-backs
Chase Paymentech Solutions, Card's merchant services business and a subsidiary of JPMorgan Chase Bank, N.A., is a global leader in payment processing and merchant acquiring.

Under the rules of Visa USA, Inc., and MasterCard International, JPMorgan Chase Bank, N.A., is primarily liable for the amount of each processed credit card sales transaction that is the subject of a dispute between a cardmember and a merchant. If a dispute is resolved in the cardmember's favor, Chase Paymentech will (through the cardmember's issuing bank) credit or refund the amount to the cardmember and will charge back the transaction to the merchant. If Chase Paymentech is unable to collect the amount from the merchant, Chase Paymentech will bear the loss for the amount credited or refunded to the cardmember. Chase Paymentech mitigates this risk by withholding future settlements, retaining cash reserve accounts or by obtaining other security. However, in the unlikely event that: (1) a merchant ceases operations and is unable to deliver products, services or a refund; (2) Chase Paymentech does not have sufficient collateral from the merchant to provide customer refunds; and (3) Chase Paymentech does not have sufficient financial resources to provide customer refunds, JPMorgan Chase Bank, N.A., would recognize the loss.

Chase Paymentech incurred aggregate losses of $14 million, $16 million, and $13 million on $750.1 billion, $655.2 billion, and $553.7 billion of aggregate volume processed for the years ended December 31, 2013, 2012 and 2011, respectively. Incurred losses from merchant charge-backs are charged to Other expense, with the offset recorded in a valuation allowance against Accrued interest and accounts receivable on the Consolidated Balance Sheets. The carrying value of the valuation allowance was $5 million and $6 million at December 31, 2013 and 2012, respectively, which the Firm believes, based on historical experience and the collateral held by Chase Paymentech of $208 million and $203 million at December 31, 2013 and 2012, respectively, is representative of the payment or performance risk to the Firm related to charge-backs.

Clearing Services - Client Credit Risk
The Firm provides clearing services for clients entering into securities purchases and sales and derivative transactions, with central counterparties ("CCPs"), including exchange traded derivatives ("ETDs") such as futures and options, as well as cleared over-the-counter ("OTC-cleared") derivative contracts. As a clearing member, the Firm stands behind the performance of its clients, collects cash and securities collateral (margin) as well as any settlement amounts due from or to clients, and remits them to the relevant CCP or client in whole or part. There are two types of margin. Variation margin is posted on a daily basis based on the value of clients' derivative contracts. Initial margin is posted at inception of a derivative contract, generally on the basis of the potential changes in the variation margin requirement for the contract.

As clearing member, the Firm is exposed to the risk of non-performance by its clients, but is not liable to clients for the performance of the CCPs. Where possible, the Firm seeks to mitigate its risk to the client through the collection of appropriate amounts of margin at inception and throughout the life of the transactions and can also cease provision of clearing services if clients do not adhere to their obligations under the clearing agreement. In the event of non-performance by a client, the Firm would close out the client's positions and access available margin. The CCP would utilize any margin it holds to make itself whole, with any remaining shortfalls required to be paid by the Firm as clearing member.

The Firm reflects its exposure to non-performance risk of the client through the recognition of margin payables or receivables to clients and CCPs, but does not reflect the clients underlying securities or derivative contracts in its Consolidated Financial Statements.

It is difficult to estimate the Firm's maximum possible exposure through its role as clearing member, as this would require an assessment of transactions that clients may execute in the future. However, based upon historical experience, and the credit risk mitigants available to the Firm, management believes it is unlikely that the Firm will have to make any material payments under these arrangements and the risk of loss is expected to be remote.

For information on the derivatives that the Firm executes for its own account and records in its Consolidated Financial Statements, see Note 6 on pages 220–233 of this Annual Report.

Exchange & Clearing House Memberships
Through the provision of clearing services, the Firm is a member of several securities and derivative exchanges and clearinghouses, both in the U.S. and other countries. Membership in some of these organizations requires the Firm to pay a pro rata share of the losses incurred by the organization as a result of the default of another member. Such obligations vary with different organizations. These obligations may be limited to members who dealt with the defaulting member or to the amount (or a multiple of the amount) of the Firm's contribution to the guarantee fund. Alternatively, these obligations may be a full pro-rata share of the residual losses after applying the guarantee fund. It is difficult to estimate the Firm's maximum possible exposure under these membership agreements, since this would require an assessment of future claims that may be made against the Firm that have not yet occurred. However, based on historical experience, management expects the risk of loss to be remote.

Guarantees of subsidiaries
In the normal course of business, JPMorgan Chase & Co. ("Parent Company") may provide counterparties with guarantees of certain of the trading and other obligations of its subsidiaries on a contract-by-contract basis, as negotiated with the Firm's counterparties. The obligations of the subsidiaries are included on the Firm's Consolidated Balance Sheets, or are reflected as off-balance sheet commitments; therefore, the Parent Company has not recognized a separate liability for these guarantees. The Firm believes that the occurrence of any event that would trigger payments by the Parent Company under these guarantees is remote.

The Parent Company has guaranteed certain debt of its subsidiaries, including both long-term debt and structured notes sold as part of the Firm's market-making activities. These guarantees are not included in the table on page 319 of this Note. For additional information, see Note 21 on pages 306–308 of this Annual Report.

Note 30 – Commitments, pledged assets and collateral

Lease commitments

At December 31, 2013, JPMorgan Chase and its subsidiaries were obligated under a number of noncancelable operating leases for premises and equipment used primarily for banking purposes, and for energy-related tolling service agreements. Certain leases contain renewal options or escalation clauses providing for increased rental payments based on maintenance, utility and tax increases, or they require the Firm to perform restoration work on leased premises. No lease agreement imposes restrictions on the Firm's ability to pay dividends, engage in debt or equity financing transactions or enter into further lease agreements.

The following table presents required future minimum rental payments under operating leases with noncancelable lease terms that expire after December 31, 2013.

Year ended December 31, (in millions)	
2014	$ 1,936
2015	1,845
2016	1,687
2017	1,529
2018	1,267
After 2018	6,002
Total minimum payments required[a]	14,266
Less: Sublease rentals under noncancelable subleases	(2,595)
Net minimum payment required	$ 11,671

(a) Lease restoration obligations are accrued in accordance with U.S. GAAP, and are not reported as a required minimum lease payment.

Total rental expense was as follows.

Year ended December 31, (in millions)	**2013**	2012	2011
Gross rental expense	**$ 2,187**	$ 2,212	$ 2,228
Sublease rental income	**(341)**	(288)	(403)
Net rental expense	**$ 1,846**	$ 1,924	$ 1,825

Pledged assets

At December 31, 2013, assets were pledged to maintain potential borrowing capacity with central banks and for other purposes, including to secure borrowings and public deposits, and to collateralize repurchase and other securities financing agreements. Certain of these pledged assets may be sold or repledged by the secured parties and are identified as financial instruments owned (pledged to various parties) on the Consolidated Balance Sheets. At December 31, 2013 and 2012, the Firm had pledged assets of $251.3 billion and $236.4 billion, respectively, at Federal Reserve Banks and FHLBs. In addition, as of December 31, 2013 and 2012, the Firm had pledged $60.6 billion and $74.5 billion, respectively, of financial instruments it owns that may not be sold or repledged by the secured parties. The prior period amount (and the corresponding pledged assets parenthetical disclosure for securities on the Consolidated Balance Sheets) have been revised to conform with the current period presentation. Total assets pledged do not include assets of consolidated VIEs; these assets are used to settle the liabilities of those entities. See Note 16 on pages 288–299 of this Annual Report for additional information on assets and liabilities of consolidated VIEs. For additional information on the Firm's securities financing activities and long-term debt, see Note 13 on pages 255–257, and Note 21 on pages 306–308, respectively, of this Annual report. The significant components of the Firm's pledged assets were as follows.

December 31, (in billions)	**2013**	2012
Securities	**$ 68.1**	$ 110.1
Loans	**230.3**	207.2
Trading assets and other	**145.2**	155.5
Total assets pledged	**$ 443.7**	$ 472.8

Collateral

At December 31, 2013 and 2012, the Firm had accepted assets as collateral that it could sell or repledge, deliver or otherwise use with a fair value of approximately $726.7 billion and $757.1 billion, respectively. This collateral was generally obtained under resale agreements, securities borrowing agreements, customer margin loans and derivative agreements. Of the collateral received, approximately $543.5 billion and $545.0 billion, respectively, were sold or repledged, generally as collateral under repurchase agreements, securities lending agreements or to cover short sales and to collateralize deposits and derivative agreements.

Note 31 – Litigation

Contingencies

As of December 31, 2013, the Firm and its subsidiaries are defendants or putative defendants in numerous legal proceedings, including private, civil litigations and regulatory/government investigations. The litigations range from individual actions involving a single plaintiff to class action lawsuits with potentially millions of class members. Investigations involve both formal and informal proceedings, by both governmental agencies and self-regulatory organizations. These legal proceedings are at varying stages of adjudication, arbitration or investigation, and involve each of the Firm's lines of business and geographies and a wide variety of claims (including common law tort and contract claims and statutory antitrust, securities and consumer protection claims), some of which present novel legal theories.

The Firm believes the estimate of the aggregate range of reasonably possible losses, in excess of reserves established, for its legal proceedings is from $0 to approximately $5.0 billion at December 31, 2013. This estimated aggregate range of reasonably possible losses is based upon currently available information for those proceedings in which the Firm is involved, taking into account the Firm's best estimate of such losses for those cases for which such estimate can be made. For certain cases, the Firm does not believe that an estimate can currently be made. The Firm's estimate involves significant judgment, given the varying stages of the proceedings (including the fact that many are currently in preliminary stages), the existence in many such proceedings of multiple defendants (including the Firm) whose share of liability has yet to be determined, the numerous yet-unresolved issues in many of the proceedings (including issues regarding class certification and the scope of many of the claims) and the attendant uncertainty of the various potential outcomes of such proceedings. Accordingly, the Firm's estimate will change from time to time, and actual losses may vary.

Set forth below are descriptions of the Firm's material legal proceedings.

Bear Stearns Hedge Fund Matter. In September 2013, an action brought by Bank of America and Banc of America Securities LLC (together "BofA") in the United States District Court for the Southern District of New York against Bear Stearns Asset Management, Inc. ("BSAM") relating to alleged losses resulting from the failure of the Bear Stearns High Grade Structured Credit Strategies Master Fund, Ltd. and the Bear Stearns High Grade Structured Credit Strategies Enhanced Leverage Master Fund, Ltd. was dismissed after the court granted BSAM's motion for summary judgment. BofA has determined not to appeal the dismissal.

CIO Investigations and Litigation. The Firm is responding to a consolidated shareholder purported class action, a consolidated purported class action brought under the Employee Retirement Income Security Act and shareholder derivative actions that have been filed in New York state court and the United States District Court for the Southern District of New York, as well as shareholder demands and government investigations, relating to losses in the synthetic credit portfolio managed by the Firm's Chief Investment Office ("CIO"). The Firm continues to cooperate with ongoing government investigations, including by the United States Attorney's Office for the Southern District of New York and the State of Massachusetts. The purported class actions and shareholder derivative actions are in early stages with defendants' motions to dismiss pending.

Credit Default Swaps Investigations and Litigation. In July 2013, the European Commission (the "EC") filed a Statement of Objections against the Firm (including various subsidiaries) and other industry members in connection with its ongoing investigation into the credit default swaps ("CDS") marketplace. The EC asserts that between 2006 and 2009, a number of investment banks acted collectively through the International Swaps and Derivatives Association ("ISDA") and Markit Group Limited ("Markit") to foreclose exchanges from the potential market for exchange-traded credit derivatives by instructing Markit and ISDA to license their respective data and index benchmarks only for over-the-counter ("OTC") trading and not for exchange trading, allegedly to protect the investment banks' revenues from the OTC market. The Firm submitted a response to the Statement of Objections in January 2014. The U.S. Department of Justice (the "DOJ") also has an ongoing investigation into the CDS marketplace, which was initiated in July 2009.

Separately, the Firm is a defendant in nine purported class actions (all consolidated in the United States District Court for the Southern District of New York) filed on behalf of purchasers and sellers of CDS and asserting federal antitrust law claims. Each of the complaints refers to the ongoing investigations by the EC and DOJ into the CDS market, and alleges that the defendant investment banks and dealers, including the Firm, as well as Markit and/or ISDA, collectively prevented new entrants into the CDS market, in order to artificially inflate the defendants' OTC revenues.

Foreign Exchange Investigations and Litigation. The Firm has received information requests, document production notices and related inquiries from various U.S. and non-U.S. government authorities regarding the Firm's foreign exchange trading business. These investigations are in the early stages and the Firm is cooperating with the relevant authorities.

Since November 2013, a number of class actions have been filed in the United Stated District Court for the Southern District of New York against a number of foreign exchange dealers, including the Firm, for alleged violations of federal and state antitrust laws and unjust enrichment based on an alleged conspiracy to manipulate foreign exchange rates reported on the WM/Reuters service.

Interchange Litigation. A group of merchants and retail associations filed a series of class action complaints relating to interchange in several federal courts. The complaints alleged that Visa and MasterCard, as well as certain banks, conspired to set the price of credit and debit card interchange fees, enacted respective rules in violation of antitrust laws, and engaged in tying/bundling and exclusive dealing. All cases were consolidated in the United States District Court for the Eastern District of New York for pretrial proceedings.

The parties have entered into an agreement to settle those cases, for a cash payment of $6.05 billion to the class plaintiffs (of which the Firm's share is approximately 20%) and an amount equal to ten basis points of credit card interchange for a period of eight months to be measured from a date within 60 days of the end of the opt-out period. The agreement also provides for modifications to each credit card network's rules, including those that prohibit surcharging credit card transactions. The rule modifications became effective in January 2013. In December 2013, the Court issued a decision granting final approval of the settlement. A number of merchants have filed notices of appeal. Certain merchants that opted out of the class settlement have filed actions against Visa and MasterCard, as well as against the Firm and other banks.

Investment Management Litigation. The Firm is defending two pending cases that allege that investment portfolios managed by J.P. Morgan Investment Management ("JPMIM") were inappropriately invested in securities backed by residential real estate collateral. Plaintiffs Assured Guaranty (U.K.) and Ambac Assurance UK Limited claim that JPMIM is liable for losses of more than $1 billion in market value of these securities. Discovery is proceeding.

Italian Proceedings.

City of Milan. In January 2009, the City of Milan, Italy (the "City") issued civil proceedings against (among others) JPMorgan Chase Bank, N.A. and J.P. Morgan Securities plc in the District Court of Milan alleging a breach of advisory obligations in connection with a bond issue by the City in June 2005 and an associated swap transaction. The Firm has entered into a settlement agreement with the City to resolve the City's civil proceedings.

Four current and former JPMorgan Chase employees and JPMorgan Chase Bank, N.A. (as well as other individuals and three other banks) were directed by a criminal judge to participate in a trial that started in May 2010. As it relates to JPMorgan Chase individuals, two were acquitted and two were found guilty of aggravated fraud with sanctions of prison sentences, fines and a ban from dealing with Italian public bodies for one year. JPMorgan Chase (along with other banks involved) was found liable for breaches of Italian administrative law, fined €1 million and ordered to forfeit the profit from the transaction (for JPMorgan Chase, totaling €24.7 million). JPMorgan Chase and the individuals are appealing the verdict, and none of the sanctions will take effect until all appeal avenues have been exhausted. The first appeal hearing took place in January 2014.

Parmalat. In 2003, following the bankruptcy of the Parmalat group of companies ("Parmalat"), criminal prosecutors in Italy investigated the activities of Parmalat, its directors and the financial institutions that had dealings with them following the collapse of the company. In March 2012, the criminal prosecutor served a notice indicating an intention to pursue criminal proceedings against four former employees of the Firm (but not against the Firm) on charges of conspiracy to cause Parmalat's insolvency by underwriting bonds and continuing derivatives trading when Parmalat's balance sheet was false. A preliminary hearing is scheduled for February 2014, at which the judge will determine whether to recommend that the matter go to a full trial.

In addition, the administrator of Parmalat commenced five civil actions against JPMorgan Chase entities including: two claw-back actions; a claim relating to bonds issued by Parmalat in which it is alleged that JPMorgan Chase kept Parmalat "artificially" afloat and delayed the declaration of insolvency; and similar allegations in two claims relating to derivatives transactions.

Lehman Brothers Bankruptcy Proceedings. In May 2010, Lehman Brothers Holdings Inc. ("LBHI") and its Official Committee of Unsecured Creditors (the "Committee") filed a complaint (and later an amended complaint) against JPMorgan Chase Bank, N.A. in the United States Bankruptcy Court for the Southern District of New York that asserts both federal bankruptcy law and state common law claims, and seeks, among other relief, to recover $8.6 billion in collateral that was transferred to JPMorgan Chase Bank, N.A. in the weeks preceding LBHI's bankruptcy. The amended complaint also seeks unspecified damages on the grounds that JPMorgan Chase Bank, N.A.'s collateral requests hastened LBHI's bankruptcy. The Court dismissed the counts of the amended complaint that sought to void the allegedly constructively fraudulent and preferential transfers made to the Firm during the months of August and September 2008.

The Firm has also filed counterclaims against LBHI alleging that LBHI fraudulently induced the Firm to make large clearing advances to Lehman against inappropriate collateral, which left the Firm with more than $25 billion in claims (the "Clearing Claims") against the estate of Lehman Brothers Inc. ("LBI"), LBHI's broker-dealer subsidiary. LBHI and the Committee have filed an objection to the claims asserted by JPMorgan Chase Bank, N.A. against LBHI with respect to the Clearing Claims, principally on the grounds that the Firm had not conducted the sale of the securities collateral held for such claims in a commercially reasonable manner. The Clearing Claims, together with approximately $3 billion of other claims of the Firm against Lehman entities, have been paid in full, subject to the outcome of the objections filed by LBHI and the Committee. Discovery is ongoing.

LBHI and several of its subsidiaries that had been Chapter 11 debtors have filed a separate complaint and objection to derivatives claims asserted by the Firm alleging that the amount of the derivatives claims had been overstated and

challenging certain set-offs taken by JPMorgan Chase entities to recover on the claims. The Firm responded to this separate complaint and objection in February 2013. Discovery is ongoing.

LIBOR and Other Benchmark Rate Investigations and Litigation. JPMorgan Chase has received subpoenas and requests for documents and, in some cases, interviews, from federal and state agencies and entities, including the DOJ, the Commodity Futures Trading Commission (the "CFTC"), the Securities and Exchange Commission (the "SEC") and various state attorneys general, as well as the European Commission, the U.K. Financial Conduct Authority (the "FCA"), Canadian Competition Bureau, Swiss Competition Commission and other regulatory authorities and banking associations around the world relating primarily to the process by which interest rates were submitted to the British Bankers Association ("BBA") in connection with the setting of the BBA's London Interbank Offered Rate ("LIBOR") for various currencies, principally in 2007 and 2008. Some of the inquiries also relate to similar processes by which information on rates is submitted to the European Banking Federation ("EBF") in connection with the setting of the EBF's Euro Interbank Offered Rates ("EURIBOR") and to the Japanese Bankers' Association for the setting of Tokyo Interbank Offered Rates ("TIBOR") as well as to other processes for the setting of other reference rates in various parts of the world during similar time periods. The Firm is cooperating with these inquiries. In December 2013, JPMorgan Chase reached a settlement with the European Commission regarding its Japanese Yen LIBOR investigation and agreed to pay a fine of €79.9 million. Investigations by the European Commission with regard to other reference rates remain open. In January 2014, the Canadian Competition Bureau announced that it has discontinued its investigation related to Yen LIBOR.

In addition, the Firm has been named as a defendant along with other banks in a series of individual and class actions filed in various United States District Courts in which plaintiffs make varying allegations that in various periods, starting in 2000 or later, defendants either individually or collectively manipulated the U.S. dollar LIBOR, Yen LIBOR and/or Euroyen TIBOR rates by submitting rates that were artificially low or high. Plaintiffs allege that they transacted in loans, derivatives or other financial instruments whose values are impacted by changes in U.S. dollar LIBOR, Yen LIBOR, or Euroyen TIBOR and assert a variety of claims including antitrust claims seeking treble damages.

The U.S. dollar LIBOR-related purported class actions have been consolidated for pre-trial purposes in the United States District Court for the Southern District of New York. In March 2013, the Court granted in part and denied in part the defendants' motions to dismiss the claims, including dismissal with prejudice of the antitrust claims, and the United States Court of Appeals for the Second Circuit dismissed the appeals for lack of jurisdiction. In September 2013, certain plaintiffs filed amended complaints and others sought leave to amend their complaints to add additional allegations. Defendants have moved to dismiss the amended complaints and have opposed the requests to amend. Those motions remain pending.

The Firm has also been named as a defendant in a purported class action filed in the United States District Court for the Southern District of New York on behalf of plaintiffs who purchased or sold exchange-traded Euroyen futures and options contracts. The action alleges manipulation of Yen LIBOR. Defendants have filed a motion to dismiss.

The Firm has also been named as a nominal defendant in a derivative action in the Supreme Court of New York in the County of New York against certain current and former members of the Firm's board of directors for alleged breach of fiduciary duty in connection with the Firm's purported role in manipulating LIBOR. The defendants have filed a motion to dismiss.

Madoff Litigation and Investigations. In January 2014, certain of the Firm's bank subsidiaries entered into settlements with various governmental agencies in resolution of investigations relating to Bernard L. Madoff Investment Securities LLC ("BLMIS"). The Firm and certain of its subsidiaries also entered into settlements with several private parties in resolution of civil litigation relating to BLMIS.

JPMorgan Chase Bank, N.A. entered into a Deferred Prosecution Agreement (the "DPA") with the United States Attorney's Office for the Southern District of New York (the "U.S. Attorney") in which it agreed to forfeit $1.7 billion to the United States as a non-tax-deductible payment. JPMorgan Chase Bank, N.A. also consented, subject to the terms and conditions of the DPA, to the filing by the U.S. Attorney of an Information charging the bank with failure to maintain an adequate anti-money laundering program, and a failure to file a suspicious activity report in the United States in October 2008 with respect to BLMIS, in violation of the Bank Secrecy Act. Pursuant to the DPA, the U.S. Attorney will defer any prosecution of JPMorgan Chase Bank, N.A. for a two-year period and will dismiss the Information with prejudice at the end of that time if the bank is in compliance with its obligations under the DPA. The DPA has been approved by the court.

JPMorgan Chase Bank, N.A., JPMorgan Bank and Trust Company, N.A. and Chase Bank USA, N.A., have also consented to the assessment of a $350 million Civil Money Penalty by the Office of the Comptroller of the Currency ("OCC") in connection with various Bank Secrecy Act/Anti-Money Laundering deficiencies, including in relation to the BLMIS fraud. In addition, JPMorgan Chase Bank, N.A. has agreed to the assessment of a $461 million Civil Money Penalty by the Financial Crimes Enforcement Network ("FinCEN") for failure to detect and adequately report suspicious transactions relating to BLMIS. The FinCEN penalty, but not the OCC penalty, has been deemed satisfied by the forfeiture payment to the U.S. Attorney.

Additionally, the Firm and certain subsidiaries, including JPMorgan Chase Bank, N.A., have agreed to enter into settlements with the court-appointed trustee for BLMIS (the "Trustee") and with plaintiffs representing a class of former

BLMIS customers who lost all or a portion of their principal investments with BLMIS. As part of these settlements, the Firm and the bank have agreed to pay the Trustee a total of $325 million. Separately, the Firm and the bank have agreed to pay the class action plaintiffs $218 million, as well as attorneys' fees, in exchange for a release of all damages claims relating to BLMIS. The settlements with the Trustee and the class action plaintiffs are subject to court approval. BLMIS customers who did not suffer losses on their principal investments are not eligible to participate in the class action settlement, and certain customers in that category have stated that they intend to pursue claims against the Firm.

Also, various subsidiaries of the Firm, including J.P. Morgan Securities plc, have been named as defendants in lawsuits filed in Bankruptcy Court in New York arising out of the liquidation proceedings of Fairfield Sentry Limited and Fairfield Sigma Limited (together, "Fairfield"), so-called Madoff feeder funds. These actions seek to recover payments made by the funds to defendants totaling approximately $155 million. Pursuant to an agreement with the Trustee, the liquidators of Fairfield have voluntarily dismissed their action against J.P. Morgan Securities plc without prejudice to re-filing. The other actions remain outstanding.

In addition, a purported class action was brought by investors in certain feeder funds against JPMorgan Chase in the United States District Court for the Southern District of New York, as was a motion by separate potential class plaintiffs to add claims against the Firm and certain subsidiaries to an already pending purported class action in the same court. The allegations in these complaints largely track those raised by the Trustee. The Court dismissed these complaints and plaintiffs have appealed. In September 2013, the United States Court of Appeals for the Second Circuit affirmed the District Court's decision. The plaintiffs have petitioned the entire Court for a rehearing of the appeal and the Court has deferred decision pending a ruling by the United States Supreme Court on a potentially related issue.

The Firm is a defendant in five other Madoff-related investor actions pending in New York state court. The allegations in all of these actions are essentially identical, and involve claims against the Firm for, among other things, aiding and abetting breach of fiduciary duty, conversion and unjust enrichment. The Firm has moved to dismiss these actions.

Additionally, a shareholder derivative action has been filed in New York state court against the Firm, as nominal defendant, and certain of its current and former Board members, alleging breach of fiduciary duty for failure to maintain effective internal controls to detect fraudulent transactions.

MF Global. The Firm has responded to inquiries from the CFTC relating to the Firm's banking and other business relationships with MF Global, including as a depository for MF Global's customer segregated accounts.

J.P. Morgan Securities LLC has been named as one of several defendants in a number of purported class actions filed by purchasers of MF Global's publicly traded securities asserting violations of federal securities laws and alleging that the offering documents contained materially false and misleading statements and omissions regarding MF Global. The actions have been consolidated before the United States District Court for the Southern District of New York. Discovery is ongoing.

Mortgage-Backed Securities and Repurchase Litigation and Related Regulatory Investigations. JPMorgan Chase and affiliates (together, "JPMC"), Bear Stearns and affiliates (together, "Bear Stearns") and Washington Mutual affiliates (together, "Washington Mutual") have been named as defendants in a number of cases in their various roles in offerings of mortgage-backed securities ("MBS"). These cases include purported class action suits on behalf of MBS purchasers, actions by individual MBS purchasers and actions by monoline insurance companies that guaranteed payments of principal and interest for particular tranches of MBS offerings. Following the settlements referred to under "Repurchase Litigation" and "Government Enforcement Investigations and Litigation" below, there are currently pending and tolled investor and monoline insurer claims involving MBS with an original principal balance of approximately $74 billion, of which $67 billion involves JPMC, Bear Stearns or Washington Mutual as issuer and $7 billion involves JPMC, Bear Stearns or Washington Mutual solely as underwriter. The Firm and certain of its current and former officers and Board members have also been sued in shareholder derivative actions relating to the Firm's MBS activities, and trustees have asserted or have threatened to assert claims that loans in securitization trusts should be repurchased.

Issuer Litigation – Class Actions. The Firm is a defendant in three purported class actions brought against JPMC and Bear Stearns as MBS issuers (and, in some cases, also as underwriters of their own MBS offerings) in the United States District Courts for the Eastern and Southern Districts of New York. The Firm has reached an agreement in principle to settle one of these purported class actions, pending in the United States District Court for the Eastern District of New York. Motions to dismiss have largely been denied in the remaining two cases pending in the United States District Court for the Southern District of New York, which are in various stages of litigation.

Issuer Litigation – Individual Purchaser Actions. In addition to class actions, the Firm is defending individual actions brought against JPMC, Bear Stearns and Washington Mutual as MBS issuers (and, in some cases, also as underwriters of their own MBS offerings). These actions are pending in federal and state courts across the United States and are in various stages of litigation.

Monoline Insurer Litigation. The Firm is defending five pending actions relating to monoline insurers' guarantees of principal and interest on certain classes of 14 different Bear Stearns MBS offerings. These actions are pending in

federal and state courts in New York and are in various stages of litigation.

Underwriter Actions. In actions against the Firm solely as an underwriter of other issuers' MBS offerings, the Firm has contractual rights to indemnification from the issuers. However, those indemnity rights may prove effectively unenforceable in various situations, such as where the issuers are now defunct. There are currently such actions pending against the Firm in federal and state courts in various stages of litigation.

Repurchase Litigation. The Firm is defending a number of actions brought by trustees or master servicers of various MBS trusts and others on behalf of purchasers of securities issued by those trusts. These cases generally allege breaches of various representations and warranties regarding securitized loans and seek repurchase of those loans or equivalent monetary relief, as well as indemnification of attorneys' fees and costs and other remedies. Deutsche Bank National Trust Company, acting as trustee for various MBS trusts, has filed such a suit against JPMC, Washington Mutual and the FDIC in connection with a significant number of MBS issued by Washington Mutual; that case is described in the Washington Mutual Litigations section below. Other repurchase actions, each specific to one or more MBS transactions issued by JPMC and/or Bear Stearns, are in various stages of litigation.

In addition, the Firm received demands by securitization trustees that threaten litigation, as well as demands by investors directing or threatening to direct trustees to investigate claims or bring litigation, based on purported obligations to repurchase loans out of securitization trusts and alleged servicing deficiencies. These include but are not limited to a demand from a law firm, as counsel to a group of 21 institutional MBS investors, to various trustees to investigate potential repurchase and servicing claims. These investors purported to have 25% or more of the voting rights in as many as 191 different trusts sponsored by the Firm or its affiliates with an original principal balance of more than $174 billion (excluding 52 trusts sponsored by Washington Mutual, with an original principal balance of more than $58 billion). Pursuant to a settlement agreement with the group of institutional investors, JPMC and the investor group have made a binding offer to the trustees of MBS issued by JPMC and Bear Stearns that provides for the payment of $4.5 billion and the implementation of certain servicing changes to mortgage loans serviced by JPMC, to resolve all repurchase and servicing claims that have been asserted or could have been asserted with respect to the 330 MBS trusts. The offer, which is subject to acceptance by the trustees, and potentially a judicial approval process, does not resolve claims relating to WaMu MBS. JPMC and the trustees have agreed to toll and forbear from asserting repurchase and servicing claims with respect to most of the JPMC and Bear Stearns trusts subject to the settlement during the pendency of the settlement approval process.

There are additional repurchase and servicing claims made against trustees not affiliated with the Firm, but involving trusts that the Firm sponsored, which have been tolled.

Derivative Actions. Seven shareholder derivative actions relating to the Firm's MBS activities have been filed to date against the Firm, as nominal defendant, and certain of its current and former officers and members of its Board of Directors, in New York state court and California federal court. In one of the actions, the Firm's motion to dismiss was granted and the dismissal was affirmed on appeal. Defendants have filed, or intend to file, motions to dismiss the remaining actions.

Government Enforcement Investigations and Litigation. The Firm resolved actual and potential civil claims by the DOJ and several State Attorneys General relating to residential mortgage-backed securities activities by JPMC, Bear Stearns and Washington Mutual, in addition to resolving litigation by the Federal Housing Finance Agency, the Federal Deposit Insurance Corporation and the National Credit Union Administration. The Firm paid a total of $9.0 billion, which is comprised of a $2.0 billion civil monetary penalty and $7.0 billion in compensatory payments (including $4.0 billion to resolve the Federal Housing Finance Agency litigation) and made a commitment to provide $4.0 billion in borrower relief before the end of 2017. In connection with this settlement, including the resolution of litigation by the Federal Housing Finance Agency, the Federal Deposit Insurance Corporation and the National Credit Union Administration, the Firm agreed to waive its right to seek indemnification from the Federal Deposit Insurance Corporation, in its capacity as receiver for Washington Mutual Bank and in its corporate capacity, with respect to any portion of this settlement relating to residential mortgage-backed securities activities of Washington Mutual Bank. The Firm retained its rights to seek indemnification from the Federal Deposit Insurance Corporation for all other liabilities relating to the residential mortgage-backed securities activities of Washington Mutual Bank.

Simultaneously with the resolution of litigation by the Federal Housing Finance Agency, the Firm also agreed to resolve Fannie Mae's and Freddie Mac's repurchase claims associated with whole loan purchases from 2000 to 2008, for $1.1 billion.

The Firm is responding to an ongoing investigation being conducted by the Criminal Division of the United States Attorney's Office for the Eastern District of California relating to MBS offerings securitized and sold by the Firm and its subsidiaries. The Firm has also received other subpoenas and informal requests for information from federal and state authorities concerning the issuance and underwriting of MBS-related matters. The Firm continues to respond to these MBS-related regulatory inquiries.

In addition, the Firm is responding to and cooperating with requests for information from the U.S. Attorney's Office for the District of Connecticut, subpoenas and requests from the SEC Division of Enforcement, and a request from the Office of the Special Inspector General for the Troubled Asset Relief Program to conduct a review of certain activities, all of which relate to, among other matters, communications with counterparties in connection with certain secondary market trading in MBS.

The Firm has entered into agreements with a number of entities that purchased MBS that toll applicable limitations periods with respect to their claims, and has settled, and in the future may settle, tolled claims. There is no assurance that the Firm will not be named as a defendant in additional MBS-related litigation.

Mortgage-Related Investigations and Litigation. The Attorney General of Massachusetts filed an action against the Firm, other servicers and a mortgage recording company, asserting claims for various alleged wrongdoings relating to mortgage assignments and use of the industry's electronic mortgage registry. The court granted in part and denied in part the defendants' motion to dismiss the action, which remains pending.

The Firm is named as a defendant in a purported class action lawsuit relating to its mortgage foreclosure procedures. The plaintiffs have moved for class certification.

Two shareholder derivative actions have been filed in New York Supreme Court against the Firm's Board of Directors alleging that the Board failed to exercise adequate oversight as to wrongful conduct by the Firm regarding mortgage servicing. These actions seek declaratory relief and damages. In October 2012, the Court consolidated the actions and stayed all proceedings pending the plaintiffs' decision whether to file a consolidated complaint after the Firm completes its response to a demand submitted by one of the plaintiffs under Section 220 of the Delaware General Corporation Law.

In February 2014, the Firm entered into a settlement with the United States Attorney's Office for the Southern District of New York, the Federal Housing Administration ("FHA"), the United States Department of Housing and Urban Development ("HUD") and the United States Department of Veterans Affairs ("VA") resolving claims relating to the Firm's participation in federal mortgage insurance programs overseen by FHA, HUD and VA. Under the settlement, JPMorgan Chase will pay $614 million and agree to enhance its quality control program for loans that are submitted in the future to FHA's Direct Endorsement Lender program. This settlement releases the Firm from False Claims Act, FIRREA and other civil and administrative liability for FHA and VA insurance claims that have been paid to JPMorgan Chase since 2002 through the date of the settlement.

The Civil Division of the United States Attorney's Office for the Southern District of New York is conducting an investigation concerning the Firm's compliance with the Fair Housing Act ("FHA") and Equal Credit Opportunity Act ("ECOA") in connection with its mortgage lending practices. In addition, two municipalities are pursuing investigations into the impact, if any, of alleged violations of the FHA and ECOA on their respective communities. The Firm is cooperating in these investigations.

Municipal Derivatives Litigation. Several civil actions were commenced in New York and Alabama courts against the Firm relating to certain Jefferson County, Alabama (the "County") warrant underwritings and swap transactions. The claims in the civil actions generally alleged that the Firm made payments to certain third parties in exchange for being chosen to underwrite more than $3 billion in warrants issued by the County and to act as the counterparty for certain swaps executed by the County. The County filed for bankruptcy in November 2011. In June 2013, the County filed a Chapter 9 Plan of Adjustment, as amended (the "Plan of Adjustment"), which provided that all the above-described actions against the Firm would be released and dismissed with prejudice. In November 2013, the Bankruptcy Court confirmed the Plan of Adjustment, and in December 2013, certain sewer rate payers filed an appeal challenging the confirmation of the Plan of Adjustment. All conditions to the Plan of Adjustment's effectiveness, including the dismissal of the actions against the Firm, were satisfied or waived and the transactions contemplated by the Plan of Adjustment occurred in December 2013. Accordingly, all the above-described actions against the Firm have been dismissed pursuant to the terms of the Plan of Adjustment. The appeal of the Bankruptcy Court's order confirming the Plan of Adjustment remains pending.

Petters Bankruptcy and Related Matters. JPMorgan Chase and certain of its affiliates, including One Equity Partners ("OEP"), have been named as defendants in several actions filed in connection with the receivership and bankruptcy proceedings pertaining to Thomas J. Petters and certain affiliated entities (collectively, "Petters") and the Polaroid Corporation. The principal actions against JPMorgan Chase and its affiliates have been brought by a court-appointed receiver for Petters and the trustees in bankruptcy proceedings for three Petters entities. These actions generally seek to avoid certain purported transfers in connection with (i) the 2005 acquisition by Petters of Polaroid, which at the time was majority-owned by OEP; (ii) two credit facilities that JPMorgan Chase and other financial institutions entered into with Polaroid; and (iii) a credit line and investment accounts held by Petters. The actions collectively seek recovery of approximately $450 million. Defendants have moved to dismiss the complaints in the actions filed by the Petters bankruptcy trustees.

Power Matters. The United States Attorney's Office for the Southern District of New York is investigating matters relating to the bidding activities that were the subject of the July 2013 settlement between J.P. Morgan Ventures Energy Corp. and the Federal Energy Regulatory Commission. The Firm is cooperating with the investigation.

Referral Hiring Practices Investigations. The SEC and DOJ are investigating, among other things, the Firm's compliance with the Foreign Corrupt Practices Act and other laws with respect to the Firm's hiring practices related to candidates referred by clients, potential clients and government officials, and its engagement of consultants in the Asia Pacific region. The Firm is cooperating with these investigations. Separate inquiries on these or similar topics have been made by other authorities, including authorities in other jurisdictions, and the Firm is responding to those inquiries.

Sworn Documents, Debt Sales and Collection Litigation Practices. The Firm has been responding to formal and informal inquiries from various state and federal regulators regarding practices involving credit card collections litigation (including with respect to sworn documents), the sale of consumer credit card debt and securities backed by credit card receivables. In September 2013, JPMorgan Chase Bank, N.A., Chase Bank USA, N.A. and JPMorgan Bank and Trust Company, N.A. (collectively, the "Banks") entered into a consent order with the OCC regarding collections litigation processes pursuant to which the Banks agreed to take certain corrective actions in connection with certain of JPMorgan Chase's credit card, student loan, auto loan, business banking and commercial banking customers who defaulted on their loan or contract.

Separately, the Consumer Financial Protection Bureau and multiple state Attorneys General are conducting investigations into the Firm's collection and sale of consumer credit card debt. The California and Mississippi Attorneys General have filed separate civil actions against JPMorgan Chase & Co., Chase Bank USA, N.A. and Chase BankCard Services, Inc. alleging violations of law relating to debt collection practices.

Washington Mutual Litigations. Proceedings related to Washington Mutual's failure are pending before the United States District Court for the District of Columbia and include a lawsuit brought by Deutsche Bank National Trust Company, initially against the FDIC, asserting an estimated $6 billion to $10 billion in damages based upon alleged breach of various mortgage securitization agreements and alleged violation of certain representations and warranties given by certain Washington Mutual, Inc. ("WMI") subsidiaries in connection with those securitization agreements. The case includes assertions that JPMorgan Chase may have assumed liabilities for the alleged breaches of representations and warranties in the mortgage securitization agreements. The District Court denied as premature motions by the Firm and the FDIC that sought a ruling on whether the FDIC retained liability for Deutsche Bank's claims. Discovery is underway.

An action filed by certain holders of Washington Mutual Bank debt against JPMorgan Chase, which alleged that JPMorgan Chase acquired substantially all of the assets of Washington Mutual Bank from the FDIC at a price that was allegedly too low, remains pending. JPMorgan Chase and the FDIC moved to dismiss this action and the District Court dismissed the case except as to the plaintiffs' claim that the Firm tortiously interfered with the plaintiffs' bond contracts with Washington Mutual Bank prior to its closure. Discovery is ongoing.

JPMorgan Chase has also filed a complaint in the United States District Court for the District of Columbia against the FDIC in its capacity as receiver for Washington Mutual Bank and in its corporate capacity asserting multiple claims for indemnification under the terms of the Purchase & Assumption Agreement between JPMorgan Chase and the FDIC relating to JPMorgan Chase's purchase of most of the assets and certain liabilities of Washington Mutual Bank.

* * *

In addition to the various legal proceedings discussed above, JPMorgan Chase and its subsidiaries are named as defendants or are otherwise involved in a substantial number of other legal proceedings. The Firm believes it has meritorious defenses to the claims asserted against it in its currently outstanding legal proceedings and it intends to defend itself vigorously in all such matters. Additional legal proceedings may be initiated from time to time in the future.

The Firm has established reserves for several hundred of its currently outstanding legal proceedings. The Firm accrues for potential liability arising from such proceedings when it is probable that such liability has been incurred and the amount of the loss can be reasonably estimated. The Firm evaluates its outstanding legal proceedings each quarter to assess its litigation reserves, and makes adjustments in such reserves, upwards or downwards, as appropriate, based on management's best judgment after consultation with counsel. During the years ended December 31, 2013, 2012 and 2011, the Firm incurred $11.1 billion, $5.0 billion and $4.9 billion, respectively, of legal expense. There is no assurance that the Firm's litigation reserves will not need to be adjusted in the future.

In view of the inherent difficulty of predicting the outcome of legal proceedings, particularly where the claimants seek very large or indeterminate damages, or where the matters present novel legal theories, involve a large number of parties or are in early stages of discovery, the Firm cannot state with confidence what will be the eventual outcomes of the currently pending matters, the timing of their ultimate resolution or the eventual losses, fines, penalties or impact related to those matters. JPMorgan Chase believes, based upon its current knowledge, after consultation with counsel and after taking into account its current litigation reserves, that the legal proceedings currently pending against it should not have a material adverse effect on the Firm's consolidated financial condition. The Firm notes, however, that in light of the uncertainties involved in such proceedings, there is no assurance the ultimate resolution of these matters will not significantly exceed the reserves it has currently accrued; as a result, the outcome of a particular matter may be material to JPMorgan Chase's operating results for a particular period, depending on, among other factors, the size of the loss or liability imposed and the level of JPMorgan Chase's income for that period.

Note 32 – International operations

The following table presents income statement-related and balance sheet-related information for JPMorgan Chase by major international geographic area. The Firm defines international activities for purposes of this footnote presentation as business transactions that involve clients residing outside of the U.S., and the information presented below is based predominantly on the domicile of the client, the location from which the client relationship is managed, or the location of the trading desk. However, many of the Firm's U.S. operations serve international businesses.

As the Firm's operations are highly integrated, estimates and subjective assumptions have been made to apportion revenue and expense between U.S. and international operations. These estimates and assumptions are consistent with the allocations used for the Firm's segment reporting as set forth in Note 33 on pages 334–337 of this Annual Report.

The Firm's long-lived assets for the periods presented are not considered by management to be significant in relation to total assets. The majority of the Firm's long-lived assets are located in the United States.

As of or for the year ended December 31, (in millions)	Revenue[b]	Expense[c]	Income before income tax expense	Net income	Total assets	
2013

(a) Substantially reflects the U.S.
(b) Revenue is composed of net interest income and noninterest revenue.
(c) Expense is composed of noninterest expense and the provision for credit losses.
(d) Total assets for the U.K. were approximately $451 billion, $498 billion, and $510 billion at December 31, 2013, 2012 and 2011, respectively.

Note 33 – Business segments

The Firm is managed on a line of business basis. There are four major reportable business segments – Consumer & Community Banking, Corporate & Investment Bank, Commercial Banking and Asset Management. In addition, there is a Corporate/Private Equity segment. The business segments are determined based on the products and services provided, or the type of customer served, and they reflect the manner in which financial information is currently evaluated by management. Results of these lines of business are presented on a managed basis. For a definition of managed basis, see Explanation and Reconciliation of the Firm's use of non-GAAP financial measures, on pages 82–83 of this Annual Report. For a further discussion concerning JPMorgan Chase's business segments, see Business Segment Results on pages 84–85 of this Annual Report.

The following is a description of each of the Firm's business segments, and the products and services they provide to their respective client bases.

Consumer & Community Banking

CCB serves consumers and businesses through personal service at bank branches and through ATMs, online, mobile and telephone banking. CCB is organized into Consumer & Business Banking, Mortgage Banking (including Mortgage Production, Mortgage Servicing and Real Estate Portfolios) and Card. Consumer & Business Banking offers deposit and investment products and services to consumers, and lending, deposit, and cash management and payment solutions to small businesses. Mortgage Banking includes mortgage origination and servicing activities, as well as portfolios comprised of residential mortgages and home equity loans, including the PCI portfolio acquired in the Washington Mutual transaction. Card issues credit cards to consumers and small businesses, provides payment services to corporate and public sector clients through its commercial card products, offers payment processing services to merchants, and provides auto and student loan services.

Corporate & Investment Bank

CIB offers a broad suite of investment banking, market-making, prime brokerage, and treasury and securities products and services to a global client base of corporations, investors, financial institutions, government and municipal entities. Within Banking, the CIB offers a full range of investment banking products and services in all major capital markets, including advising on corporate strategy and structure, capital-raising in equity and debt markets, as well as loan origination and syndication. Also included in Banking is Treasury Services, which includes transaction services, comprised primarily of cash management and liquidity solutions, and trade finance products. The Markets & Investor Services segment of the CIB is a global market-maker in cash securities and derivative instruments, and also offers sophisticated risk management solutions, prime brokerage, and research. Markets & Investor Services also includes the Securities Services business, a leading global custodian which holds, values, clears and services securities, cash and alternative investments for investors and broker-dealers, and manages depositary receipt programs globally.

Commercial Banking

CB delivers extensive industry knowledge, local expertise and dedicated service to U.S. and U.S. multinational clients, including corporations, municipalities, financial institutions and non-profit entities with annual revenue generally ranging from$20 million to $2.0 billion. CB provides financing to real estate investors and owners. Partnering with the Firm's other businesses, CB provides comprehensive financial solutions, including lending, treasury services, investment banking and asset management to meet its clients' domestic and international financial needs.

Asset Management
AM, with client assets of $2.3 trillion, is a global leader in investment and wealth management. AM clients include institutions, high-net-worth individuals and retail investors in every major market throughout the world. AM offers investment management across all major asset classes including equities, fixed income, alternatives and money market funds. AM also offers multi-asset investment management, providing solutions to a broad range of clients' investment needs. For individual investors, AM also provides retirement products and services, brokerage and banking services including trusts and estates, loans, mortgages and deposits. The majority of AM's client assets are in actively managed portfolios.

Corporate/Private Equity
The Corporate/Private Equity segment comprises Private Equity, Treasury and CIO, and Other Corporate, which includes corporate staff units and expense that is centrally managed. Treasury and CIO are predominantly responsible for measuring, monitoring, reporting and managing the Firm's liquidity, funding and structural interest rate and foreign exchange risks, as well as executing the Firm's capital plan. The major Other Corporate units include Real Estate, Central Technology, Legal, Compliance, Finance, Human Resources, Internal Audit, Risk Management, Oversight & Control, Corporate Responsibility and various Other Corporate groups. Other centrally managed expense includes the Firm's occupancy and pension-related expense that are subject to allocation to the businesses.

Segment results

The following tables provide a summary of the Firm's segment results for 2013, 2012 and 2011 on a managed basis. Total net revenue (noninterest revenue and net interest income) for each of the segments is presented on a fully taxable-equivalent ("FTE") basis. Accordingly, revenue from investments that receive tax credits and tax-exempt securities is presented on a basis comparable to taxable investments and securities; this non-GAAP financial measure allows management to assess the comparability of revenue arising from both taxable and tax-exempt sources. The corresponding income tax impact related to tax-exempt items is recorded within income tax expense/(benefit).

The increase in equity levels for the lines of businesses since December 31, 2012, is largely driven by the evolving regulatory requirements and higher capital targets the firm has established under Basel III Advanced approach.

Segment results and reconciliation[a]

As of or the year ended December 31, (in millions, except ratios)	Consumer & Community Banking[b]			Corporate & Investment Bank			Commercial Banking

(a) Managed basis starts with the reported U.S. GAAP results and includes certain reclassifications as discussed below that do not have any impact on net income as reported by the lines of business or by the Firm as a whole.

(b) The 2012 and 2011 data for certain income statement line items (predominantly net interest income, compensation and noncompensation expense) and balance sheet items were revised to reflect the transfer of certain technology and operations, as well as real estate-related functions and staff, from Corporate/Private Equity to CCB, effective January 1, 2013.

(c) Segment managed results reflect revenue on a FTE basis with the corresponding income tax impact recorded within income tax expense/(benefit). These adjustments are eliminated in reconciling items to arrive at the Firm's reported U.S. GAAP results.

(a) Affiliates include trusts that issued guaranteed capital debt securities ("issuer trusts"). The Parent received dividends of $5 million, $12 million and $13 million from the issuer trusts in 2013, 2012 and 2011, respectively. For further discussion on these issuer trusts, see Note 21 on pages 306-308 of this Annual Report.
(b) Prior periods were revised to conform with the current presentation.
(c) At December 31, 2013, long-term debt that contractually matures in 2014 through 2018 totaled $26.4 billion, $23.8 billion, $22.5 billion, $16.6 billion and $18.7 billion, respectively.
(d) For information regarding the Firm's guarantees of its subsidiaries' obligations, see Note 21 and Note 29 on pages 306-308 and 318-324, respectively, of this Annual Report.

(a) TBVS and ROTCE are non-GAAP financial measures. Tangible book value per share represents the Firm's tangible common equity divided by period-end common shares. ROTCE measures the Firm's annualized earnings as a percentage of tangible common equity. For further discussion of these measures, see Explanation and Reconciliation of the Firm's Use of Non-GAAP Financial Measures on pages 82–83 of this Annual Report.

(b) Share prices shown for JPMorgan Chase's common stock are from the New York Stock Exchange. JPMorgan Chase's common stock is also listed and traded on the London Stock Exchange and the Tokyo Stock Exchange.

(c) Return on Basel I risk-weighted assets is the annualized earnings of the Firm divided by its average RWA.

(d) Basel 2.5 rules became effective for the Firm on January 1, 2013. The implementation of these rules in the first quarter of 2013 resulted in an increase of approximately $150 billion in RWA compared with the Basel I rules. The implementation of these rules also resulted in decreases of the Firm's Tier 1 capital, Total capital and Tier 1 common capital ratios by 140 basis points, 160 basis points and 120 basis points, respectively, at March 31, 2013. For further discussion of Basel 2.5, see Regulatory capital on pages 161–165 of this Annual Report.

(e) The Firm began estimating its total HQLA as of December 31, 2012, based on its current understanding of the Basel III LCR rules. See HQLA on page 172 of this Annual Report.

(f) Basel I Tier 1 common capital ratio ("Tier 1 common ratio") is Tier 1 common capital ("Tier 1 common") divided by risk-weighted assets. The Firm uses Tier 1 common capital along with the other capital measures to assess and monitor its capital position. For further discussion of the Tier 1 common ratio, see Regulatory capital on pages 161–165 of this Annual Report.

(g) Included held-to-maturity securities of $24.0 billion and $4.5 billion at December 31, 2013 and September 30, 2013. Held-to-maturity balances for the other periods were not material.

(h) Included unsecured long-term debt of $199.4 billion, $199.2 billion, $199.1 billion, $206.1 billion, $200.6 billion, $207.3 billion and $213.4 billion, and $235.4 billion, respectively, for the periods presented.

(i) Effective January 1, 2013, interns are excluded from the firmwide and business segment headcount metrics. Prior periods were revised to conform with this presentation.

(j) Excludes the impact of residential real estate PCI loans. For further discussion, see Allowance for credit losses on pages 139–141 of this Annual Report.

Active foreclosures: Loans referred to foreclosure where formal foreclosure proceedings are ongoing. Includes both judicial and non-judicial states.

Active online customers: Users of all internet browsers and mobile platforms who have logged in within the past 90 days.

Active mobile customers: Users of all mobile platforms, which include: SMS, mobile smartphone and tablet, who have logged in within the past 90 days.

Allowance for loan losses to total loans: Represents period-end allowance for loan losses divided by retained loans.

Assets under management: Represent assets actively managed by AM on behalf of its Private Banking, Institutional and Retail clients. Includes "Committed capital not Called," on which AM earns fees. Excludes assets managed by American Century Companies, Inc., in which the Firm sold its ownership interest on August 31, 2011.

Beneficial interests issued by consolidated VIEs: Represents the interest of third-party holders of debt, equity securities, or other obligations, issued by VIEs that JPMorgan Chase consolidates.

Benefit obligation: Refers to the projected benefit obligation for pension plans and the accumulated postretirement benefit obligation for OPEB plans.

Chase Liquid℠ cards - Refers to a prepaid, reloadable card product.

Client advisors: Investment product specialists, including private client advisors, financial advisors, financial advisor associates, senior financial advisors, independent financial advisors and financial advisor associate trainees, who advise clients on investment options, including annuities, mutual funds, stock trading services, etc., sold by the Firm or by third-party vendors through retail branches, Chase Private Client locations and other channels.

Client assets: Represent assets under management as well as custody, brokerage, administration and deposit accounts.

Client investment managed accounts: Assets actively managed by Chase Wealth Management on behalf of clients. The percentage of managed accounts is calculated by dividing managed account assets by total client investment assets.

Credit cycle: A period of time over which credit quality improves, deteriorates and then improves again (or vice versa). The duration of a credit cycle can vary from a couple of years to several years.

CUSIP number: A CUSIP (i.e., Committee on Uniform Securities Identification Procedures) number consists of nine characters (including letters and numbers) that uniquely identify a company or issuer and the type of security and is assigned by the American Bankers Association and operated by Standard & Poor's. This system facilitates the clearing and settlement process of securities. A similar system is used to identify non-U.S. securities (CUSIP International Numbering System).

Deposit margin/deposit spread: Represents net interest income expressed as a percentage of average deposits.

Exchange traded derivatives: Derivative contracts that are executed on an exchange and settled via a central clearing house.

FICO score: A measure of consumer credit risk provided by credit bureaus, typically produced from statistical models by Fair Isaac Corporation utilizing data collected by the credit bureaus.

Forward points: Represents the interest rate differential between two currencies, which is either added to or subtracted from the current exchange rate (i.e., "spot rate") to determine the forward exchange rate.

Group of Seven ("G7") nations: Countries in the G7 are Canada, France, Germany, Italy, Japan, the United Kingdom and the United States.

G7 government bonds: Bonds issued by the government of one of the G7 nations.

Headcount-related expense: Includes salary and benefits (excluding performance-based incentives), and other noncompensation costs related to employees.

Home equity - senior lien: Represents loans and commitments where JP Morgan Chase holds the first security interest on the property.

Home equity - junior lien: Represents loans and commitments where JP Morgan Chase holds a security interest that is subordinate in rank to other liens.

Interchange income: A fee paid to a credit card issuer in the clearing and settlement of a sales or cash advance transaction.

Investment-grade: An indication of credit quality based on JPMorgan Chase's internal risk assessment system. "Investment grade" generally represents a risk profile similar to a rating of a "BBB-"/"Baa3" or better, as defined by independent rating agencies.

LLC: Limited Liability Company.

Loan-to-value ("LTV") ratio: For residential real estate loans, the relationship, expressed as a percentage, between the principal amount of a loan and the appraised value of the collateral (i.e., residential real estate) securing the loan.

Origination date LTV ratio

The LTV ratio at the origination date of the loan. Origination date LTV ratios are calculated based on the actual appraised values of collateral (i.e., loan-level data) at the origination date.

Current estimated LTV ratio

An estimate of the LTV as of a certain date. The current estimated LTV ratios are calculated using estimated collateral values derived from a nationally recognized home price index measured at the metropolitan statistical area ("MSA") level. These MSA-level home price indices comprise actual data to the extent available and forecasted data where actual data is not available. As a result, the estimated collateral values used to calculate these ratios do not represent actual appraised loan-level collateral values; as such, the resulting LTV ratios are necessarily imprecise and should therefore be viewed as estimates.

Combined LTV ratio

The LTV ratio considering all lien positions related to the property. Combined LTV ratios are used for junior lien home equity products.

Managed basis: A non-GAAP presentation of financial results that includes reclassifications to present revenue on a fully taxable-equivalent basis. Management uses this non-GAAP financial measure at the segment level, because it believes this provides information to enable investors to understand the underlying operational performance and trends of the particular business segment and facilitates a comparison of the business segment with the performance of competitors.

Master netting agreement: An agreement between two counterparties who have multiple derivative contracts with each other that provides for the net settlement of all contracts, as well as cash collateral, through a single payment, in a single currency, in the event of default on or termination of any one contract.

Mortgage product types:

Alt-A

Alt-A loans are generally higher in credit quality than subprime loans but have characteristics that would disqualify the borrower from a traditional prime loan. Alt-A lending characteristics may include one or more of the following: (i) limited documentation; (ii) a high combined loan-to-value ("CLTV") ratio; (iii) loans secured by non-owner occupied properties; or (iv) a debt-to-income ratio above normal limits. A substantial proportion of the Firm's Alt-A loans are those where a borrower does not provide complete documentation of his or her assets or the amount or source of his or her income.

Option ARMs

The option ARM real estate loan product is an adjustable-rate mortgage loan that provides the borrower with the option each month to make a fully amortizing, interest-only or minimum payment. The minimum payment on an option ARM loan is based on the interest rate charged during the introductory period. This introductory rate is usually significantly below the fully indexed rate. The fully indexed rate is calculated using an index rate plus a margin. Once the introductory period ends, the contractual interest rate charged on the loan increases to the fully indexed rate and adjusts monthly to reflect movements in the index. The minimum payment is typically insufficient to cover interest accrued in the prior month, and any unpaid interest is deferred and added to the principal balance of the loan. Option ARM loans are subject to payment recast, which converts the loan to a variable-rate fully amortizing loan upon meeting specified loan balance and anniversary date triggers.

Prime

Prime mortgage loans are made to borrowers with good credit records and a monthly income at least three to four times greater than their monthly housing expense (mortgage payments plus taxes and other debt payments). These borrowers provide full documentation and generally have reliable payment histories.

Subprime

Subprime loans are loans to customers with one or more high risk characteristics, including but not limited to: (i) unreliable or poor payment histories; (ii) a high LTV ratio of greater than 80% (without borrower-paid mortgage insurance); (iii) a high debt-to-income ratio; (iv) an occupancy type for the loan is other than the borrower's primary residence; or (v) a history of delinquencies or late payments on the loan.

Multi-asset: Any fund or account that allocates assets under management to more than one asset class.

NA: Data is not applicable or available for the period presented.

Net charge-off/(recovery) rate: Represents net charge-offs/(recoveries) (annualized) divided by average retained loans for the reporting period.

Net yield on interest-earning assets: The average rate for interest-earning assets less the average rate paid for all sources of funds.

NM: Not meaningful.

Over-the-counter derivatives ("OTC"): Derivative contracts that are negotiated, executed and settled bilaterally between two derivative counterparties, where one or both counterparties is a derivatives dealer.

Over-the-counter cleared derivatives ("OTC cleared"): Derivative contracts that are negotiated and executed bilaterally, but subsequently settled via a central clearing house, such that each derivative counterparty is only exposed to the default of that clearing house.

Overhead ratio: Noninterest expense as a percentage of total net revenue.

Participating securities: Represents unvested stock-based compensation awards containing nonforfeitable rights to dividends or dividend equivalents (collectively, "dividends"), which are included in the earnings per share calculation using the two-class method. JPMorgan Chase grants restricted stock and RSUs to certain employees under its stock-based compensation programs, which entitle the recipients to receive nonforfeitable dividends during the vesting period on a basis equivalent to the dividends paid to holders of common stock. These unvested awards meet the definition of participating securities. Under the two-class method, all earnings (distributed and undistributed) are allocated to each class of common stock and participating securities, based on their respective rights to receive dividends.

Personal bankers: Retail branch office personnel who acquire, retain and expand new and existing customer relationships by assessing customer needs and recommending and selling appropriate banking products and services.

Portfolio activity: Describes changes to the risk profile of existing lending-related exposures and their impact on the allowance for credit losses from changes in customer profiles and inputs used to estimate the allowances.

Pre-provision profit/(loss): Represents total net revenue less noninterest expense. The Firm believes that this financial measure is useful in assessing the ability of a lending institution to generate income in excess of its provision for credit losses.

Pretax margin: Represents income before income tax expense divided by total net revenue, which is, in management's view, a comprehensive measure of pretax performance derived by measuring earnings after all costs are taken into consideration. It is one basis upon which management evaluates the performance of AM against the performance of their respective competitors.

Principal transactions revenue: Principal transactions revenue includes realized and unrealized gains and losses recorded on derivatives, other financial instruments, private equity investments, and physical commodities used in market making and client-driven activities. In addition, Principal transactions revenue also includes certain realized and unrealized gains and losses related to hedge accounting and specified risk management activities including: (a) certain derivatives designated in qualifying hedge accounting relationships (primarily fair value hedges of commodity and foreign exchange risk), (b) certain derivatives used for specified risk management purposes, primarily to mitigate credit risk, foreign exchange risk and commodity risk, and (c) other derivatives, including the synthetic credit portfolio.

Purchased credit-impaired ("PCI") loans: Represents loans that were acquired in the Washington Mutual transaction and deemed to be credit-impaired on the acquisition date in accordance with the guidance of the Financial Accounting Standards Board ("FASB"). The guidance allows purchasers to aggregate credit-impaired loans acquired in the same fiscal quarter into one or more pools, provided that the loans have common risk characteristics (e.g., product type, LTV ratios, FICO scores, past due status, geographic location). A pool is then accounted for as a single asset with a single composite interest rate and an aggregate expectation of cash flows.

Real assets: Real assets include investments in productive assets such as agriculture, energy rights, mining and timber properties and exclude raw land to be developed for real estate purposes.

Real estate investment trust ("REIT"): A special purpose investment vehicle that provides investors with the ability to participate directly in the ownership or financing of real-estate related assets by pooling their capital to purchase and manage income property (i.e., equity REIT) and/or mortgage loans (i.e., mortgage REIT). REITs can be publicly- or privately-held and they also qualify for certain favorable tax considerations.

Receivables from customers: Primarily represents margin loans to prime and retail brokerage customers which are included in accrued interest and accounts receivable on the Consolidated Balance Sheets.

Reported basis: Financial statements prepared under U.S. GAAP, which excludes the impact of taxable-equivalent adjustments.

Retained loans: Loans that are held-for-investment (i.e. excludes loans held-for-sale and loans at fair value).

Risk-weighted assets ("RWA"): Risk-weighted assets consist of on- and off-balance sheet assets that are assigned to one of several broad risk categories and weighted by factors representing their risk and potential for default. On-balance sheet assets are risk-weighted based on the estimated credit risk associated with the obligor or counterparty, the nature of any collateral, and the guarantor, if any. Off-balance sheet assets such as lending-related commitments, guarantees, derivatives and other applicable off-balance sheet positions are risk-weighted by multiplying the contractual amount by the appropriate credit conversion factor to determine the on-balance sheet credit equivalent amount, which is then risk-weighted based on the same factors used for on-balance sheet assets. Risk-weighted assets also incorporate a measure for market risk related to applicable trading assets-debt and equity instruments, and foreign exchange and commodity derivatives. The resulting risk-weighted values for each of the risk categories are then aggregated to determine total risk-weighted assets.

Sales specialists: Retail branch office and field personnel, including relationship managers and loan officers, who specialize in marketing and sales of various business banking products (i.e., business loans, letters of credit, deposit accounts, Chase Paymentech, etc.) and mortgage products to existing and new clients.

Seed capital: Initial JPMorgan capital invested in products, such as mutual funds, with the intention of ensuring the fund is of sufficient size to represent a viable offering to clients, enabling pricing of its shares, and allowing the manager to develop a track record. After these goals are achieved, the intent is to remove the Firm's capital from the investment.

Short sale: A short sale is a sale of real estate in which proceeds from selling the underlying property are less than the amount owed the Firm under the terms of the related mortgage and the related lien is released upon receipt of such proceeds.

Structural Interest Rate Risk: Represents interest rate risk of the non-trading assets and liabilities of the firm.

Suspended foreclosures: Loans referred to foreclosure where formal foreclosure proceedings have started but are currently on hold, which could be due to bankruptcy or loss mitigation. Includes both judicial and non-judicial states.

Taxable-equivalent basis: In presenting managed results, the total net revenue for each of the business segments and the Firm is presented on a tax-equivalent basis. Accordingly, revenue from investments that receive tax credits and tax-exempt securities is presented in the managed results on a basis comparable to taxable investments and securities; the corresponding income tax impact related to tax-exempt items is recorded within income tax expense.

Trade-date and settlement-date: For financial instruments, the trade-date is the date that an order to purchase, sell or otherwise acquire an instrument is executed in the market. The trade-date may differ from the settlement-date, which is the date on which the actual transfer of a financial instrument between two parties is executed. The amount of time that passes between the trade-date and the settlement-date differs depending on the financial instrument. For repurchases under the common equity repurchase program, except where the trade-date is specified, the amounts disclosed are presented on a settlement-date basis. In the Capital Management section on pages 160–167, of this Form 10-K, and where otherwise specified, repurchases under the common equity repurchase program are presented on a trade-date basis because the trade-date is used to calculate the Firm's regulatory capital.

Troubled debt restructuring ("TDR"): A TDR is deemed to occur when the Firm modifies the original terms of a loan agreement by granting a concession to a borrower that is experiencing financial difficulty.

Unaudited: Financial statements and information that have not been subjected to auditing procedures sufficient to permit an independent certified public accountant to express an opinion.

U.S. GAAP: Accounting principles generally accepted in the United States of America.

U.S. government-sponsored enterprise obligations: Obligations of agencies originally established or chartered by the U.S. government to serve public purposes as specified by the U.S. Congress; these obligations are not explicitly guaranteed as to the timely payment of principal and interest by the full faith and credit of the U.S. government.

U.S. Treasury: U.S. Department of the Treasury.

Value-at-risk ("VaR"): A measure of the dollar amount of potential loss from adverse market moves in an ordinary market environment.

Wallet: Proportion of fee revenues based on estimates of investment banking fees generated across the industry (i.e. the revenue wallet) from investment banking transactions in M&A, equity and debt underwriting, and loan syndications. Source: Dealogic, a third party provider of investment banking competitive analysis and volume-based league tables for the above noted industry products.

Warehouse loans: Consist of prime mortgages originated with the intent to sell that are accounted for at fair value and classified as trading assets.

Washington Mutual transaction: On September 25, 2008, JPMorgan Chase acquired certain of the assets of the banking operations of Washington Mutual Bank ("Washington Mutual") from the FDIC.

Board of Directors

Linda B. Bammann [4, 5]

FIRM OVERVIEW

Marianne Lake, Chief Financial Officer

February 25, 2014

JPMorgan Chase & Co.

Agenda

	Page
JPMorgan Chase overview	**1**
New financial architecture	6
Balance sheet/NII and credit update	15
Expense, investments and outlook	21
Appendix – investor topics	27
Appendix – other	32

JPMorgan Chase – extremely strong fundamentals and well positioned to adapt

JPMorgan Chase overview

Excellent client franchises

- Four best-in-class client franchises – each performing strongly
- Together driving significant synergies – diversification, complete platform, scale and efficiencies
- Demonstrated earnings capacity, resilience and superior returns
- Maintain best-in-class margins and improve operating leverage
- Experienced management teams with deep talent

Regulatory, control and simplification agendas

- Executing on our regulatory and control agendas
  - Significant effort – will make us a better company
- Business simplification agenda – reduce complexity and focus on core competencies

New financial architecture

- Optimize returns against capital targets
  - Manage at granular level – legal entity, sub-LOB, product and client level
  - Focus on impact to broader franchise and client relationships
- Continue progress towards Firm's capital targets while balancing capital returns
- Transition year – protect franchise value and future earnings power

Performance summary

JPMorgan Chase overview

$mm, excluding EPS

	FY2010	FY2011	FY2012	FY2013	Excl. DVA/FVA & sig items[2] FY2012	Excl. DVA/FVA & sig items[2] FY2013
Revenue (FTE)[1]	$104,842	$99,767	$99,890	$99,798	$103,035	$99,907
Credit costs	16,639	7,574	3,385	225	8,010	5,725

Commercial Banking	26	30	28	19		
Asset Management	26	25	24	23		

Excl. total legal expense & FRM[5]

Comments

- Diversification of our business has enabled us to invest through-the-cycle and maintain strong returns on increasing levels of capital
  - Despite significant items, the rate environment and mortgage volatility – stable revenue for the last 3 years
    - NIR >50% of total revenue, across a broad set of categories and growing strongly
  - Expense – maintained adjusted overhead ratio of ~58-59% over last 3 years

Note: Totals may not sum due to rounding
[1] See note 1 on slide 48
[2] See note 2 on slide 48
[3] See note 4 on slide 49
[4] Estimated impact of final Basel 2.5 Rules and Basel III Advanced NPR reflected in 2012, but not in 2010 and 2011
[5] See note 3 on slide 49

Maintain excellent client-based franchises

JPMorgan Chase overview

Key drivers/statistics/highlights ($B, except where noted)

		2013	CAGR 2010-2013
CCB	CBB deposits (Avg)	$435	8.4%
	Client inv. assets (EOP)	189	12.4
	Mortgage originations[1]	166	NM
	Card sales volume	420	10.3
	Auto originations	26	4.3
	Merchant processing volume	750	16.9
CIB	Loans (EOP)	$108	8.6%
	Client deposits (Avg)[2]	384	15.6
	AUC ($T, EOP)	20	8.3
	Average VaR ($mm)[3]	47	NM
CB	Loans (EOP)	$137	11.5%
	Deposits (Avg)	198	12.6
AM	AUM (EOP)	$1,598	7.2%
	Long-term AUM Flows	90	NM
	Loans (EOP)	95	29.4
	Deposits (Avg)	140	17.5

Note: For footnoted information, refer to slide 42

Four unparalleled client franchises…

- ~50% of U.S. households have a Chase relationship
- ~80% of Fortune 500 companies are our clients[4]
- #1 customer satisfaction among largest banks for the 2nd year in a row[5]
- Nearly 900 new quality clients added in CB in 2013

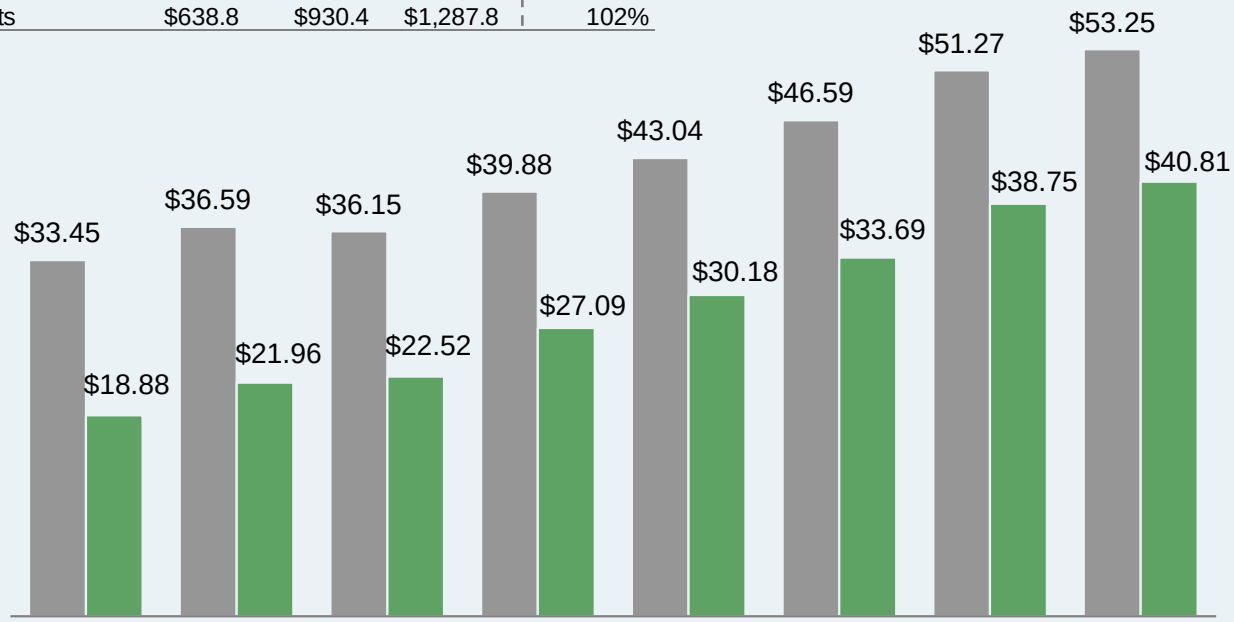
…each performing strongly…

- **CCB**
  - Deposit growth more than 2x industry average[6]
  - #1 credit card issuer in the U.S.[7]
  - Record credit card sales and client investment assets
- **CIB**
  - Top 3 in 15 product categories out of 16[8]
  - #1 in global IB fees with 8.6% market share[9] – up 110 bps from 2012
  - #1 in markets revenue with 16.0% market share[10] – up 140 bps from 2012
    - FICC: 18.6% market share[10] – up 300 bps from 2012
- **CB**
  - 14 consecutive quarters of loan growth
  - #1 traditional Middle Market syndicated lender in the U.S.
  - #1 U.S. multifamily lender
  - Strong credit performance – <5 bps net charge-offs in 2012 and 2013
- **AM**
  - 19 consecutive quarters of positive long-term flows
  - 80% of 10-year mutual fund AUM in top 2 quartiles
  - 29% pretax margin[11], up 90 bps YoY

…and together driving $18B of gross synergies

- Record gross IB revenue from CB clients[12]
- CB clients generate 29% of NA IB fees
- ~55% of retail mortgages & ~40% of Chase branded cards sold through branches
- ~55% of CB clients & ~35% of PB households visit branches each quarter
- CWM assets managed by AM increased by 34% YoY to $90B

Book value per share – growing our fortress balance sheet



JPMorgan Chase overview

Key metrics since FY2006[1]

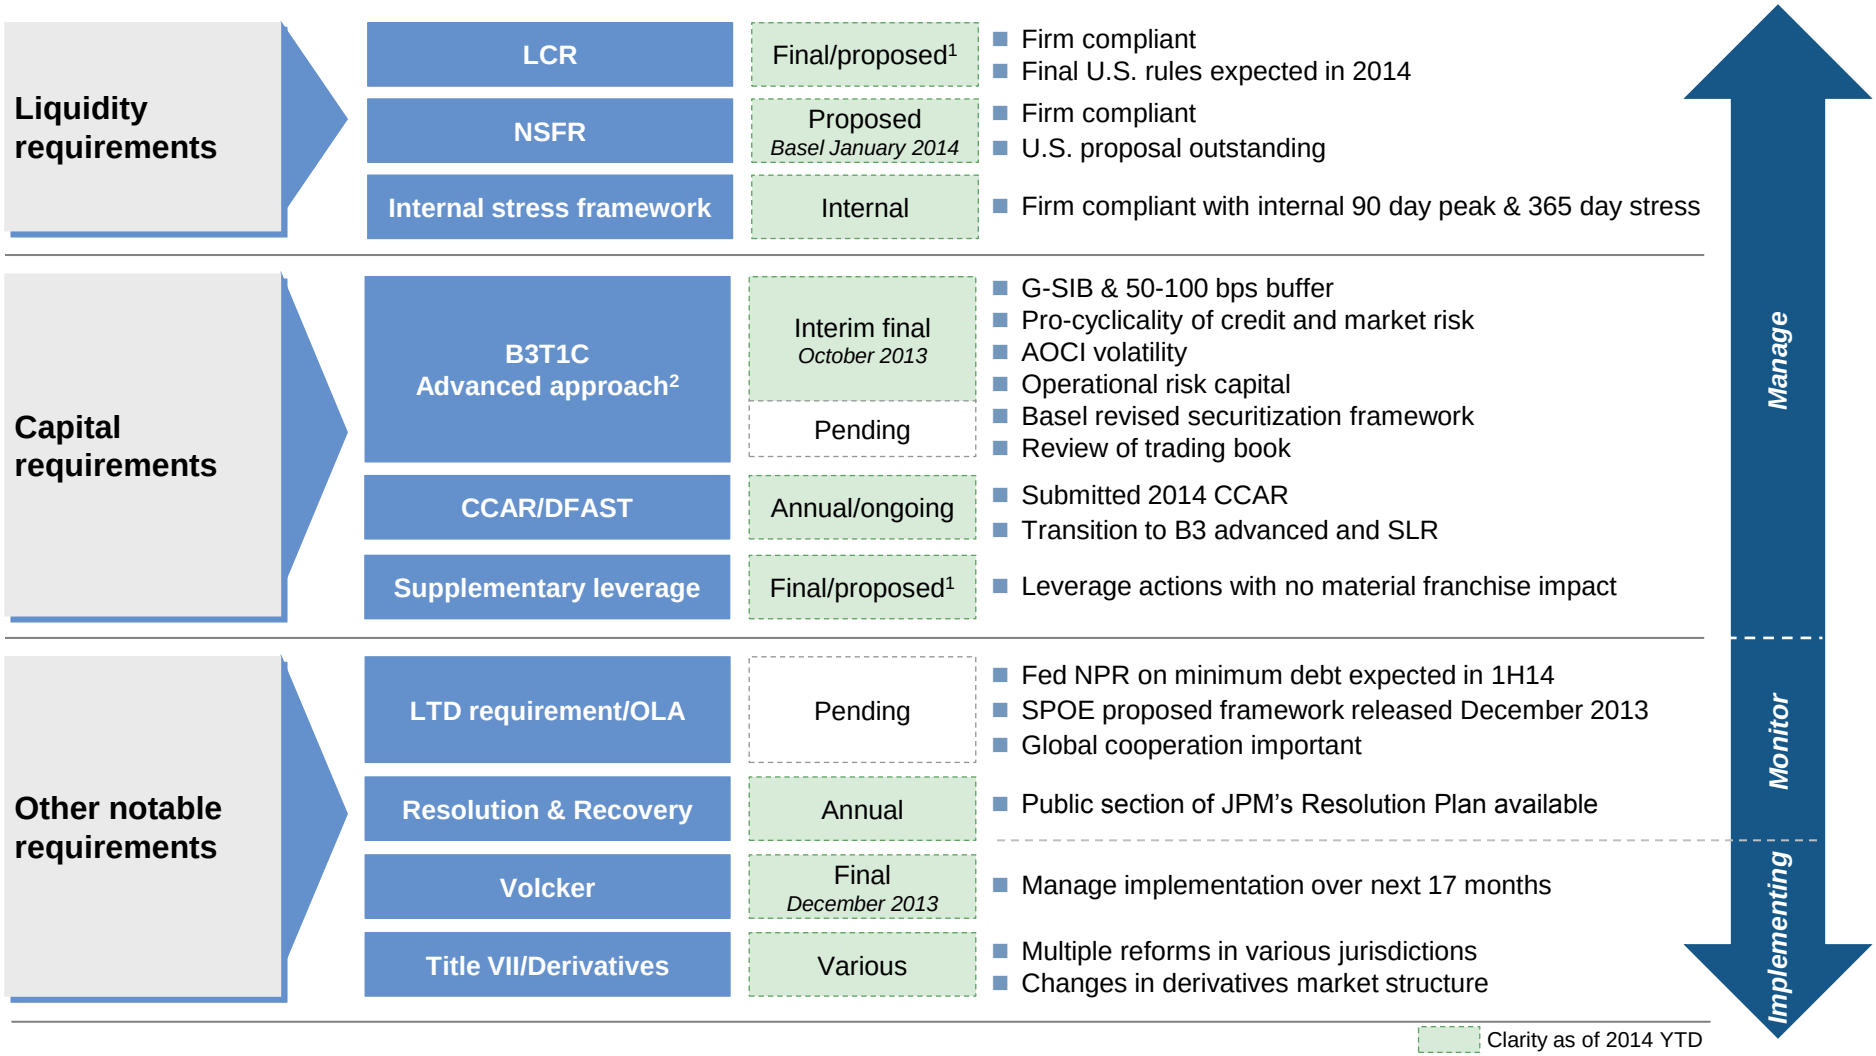
($B)	2006	2010	2013	%Δ '06-'13
Tangible common equity	$65.4	$118.0	$153.3	134%
Basel I Tier 1 common	7.3%	9.8%	10.7%	3.4%[2]
Loan loss reserve	$7.3	$32.3	$16.3	$9.0[2]
EOP Deposits	$638.8	$930.4	$1,287.8	102%

B3T1C of 9.5% as of 4Q13

Growth	YoY	5Y[3]	10Y[3]
BVPS	4%	8%	9%
TBVPS	5	13	9

Shares outstanding (EOP)	2006	2007	2008	2009	2010	2011	2012	2013
	3.5B	3.4B	3.7B	3.9B	3.9B	3.8B	3.8B	3.8B

- Durbin – Card Act – Reg E
- Controls – Regulatory assessments – Liquidity compliance



Since 2010, JPM's profits were ~$76B, despite ~$20B in after-tax legal expense and ~$9B of regulatory costs
Over last 4 years, added ~$47B to capital after return to shareholders of ~$23B

[1] See note 4 on slide 49
[2] Actual change
[3] CAGR

Agenda

	Section
JPMorgan Chase overview	1
New financial architecture	**6**
Balance sheet/NII and credit update	15
Expense, investments and outlook	21
Appendix – investor topics	27
Appendix – other	32

New financial architecture

- For many of the rules above, there are compliance considerations at the LOB, sub-LOB and legal entity levels

The Firm has made significant progress toward compliance and is well-positioned against a clearer framework

Note: For footnoted information, refer to slide 43; estimated compliance based on current understanding of rules

What to expect in 2014

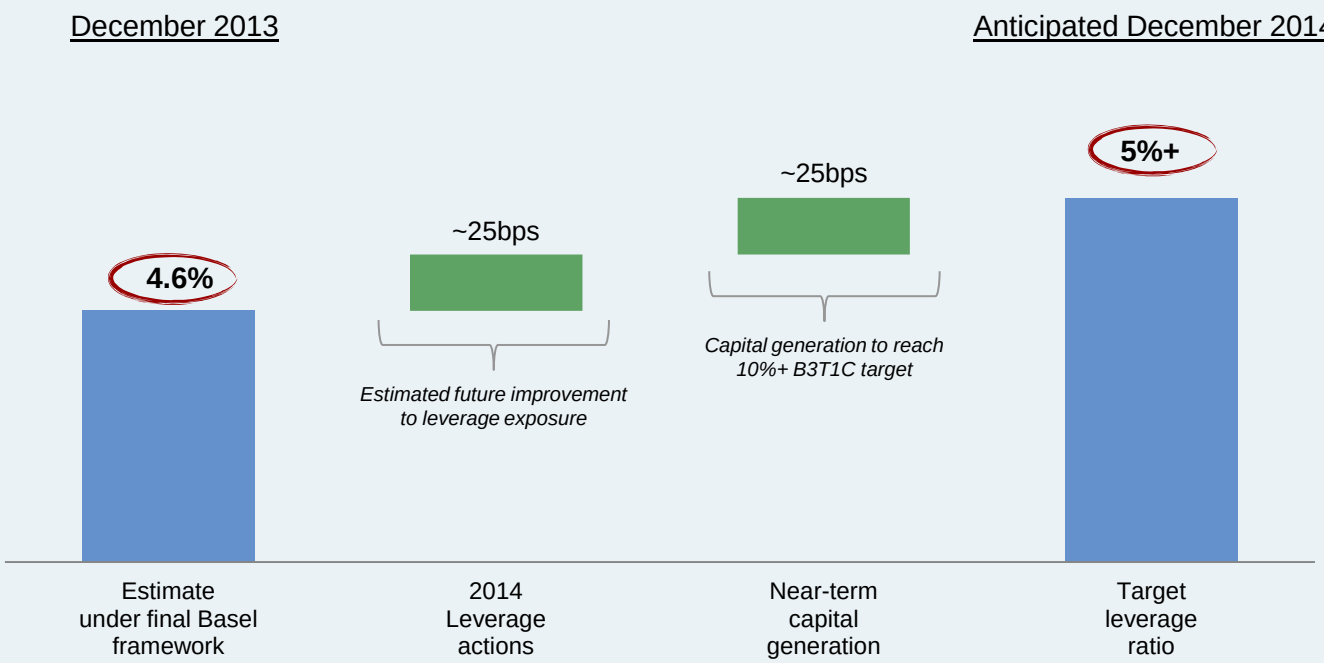
New financial architecture

2014 objectives[1]		Estimated 4Q13	2014 Objectives
Liquidity	Firm & Bank LCR[2] and NSFR	>100%	>100%
	JPM internal 90 day peak & 365[3] day stress	>100%	>100%
Capital[4]	Basel III Tier 1 common ratio	9.5%	10%+
	Basel III Tier 1 capital ratio	10.2%	11%+/-
	Firm SLR[5]	4.6%[6]	5%+
	Bank SLR[5,6]	4.6%[6]	5%+
	Available Resources for OLA[7]	~19%	~2x current equity capitalization rate

Stated target for Firm of 5.5%+/- and 6%+ for Bank, over time

Comments

- JPM approved to exit Basel III Advanced Parallel
  - Effective 2Q14, the Firm will be subject to Basel III Adv.
  - Report on a transition basis; binding constraint lower of Standardized or Advanced
- In addition, continue to report and manage to our Basel III Advanced fully phased-in capital ratios



Maximizing returns within the new financial architecture while staying focused on broader franchise and client relationships

[1] Based on current rules and minimums
[2] Firm compliant with both Basel and U.S. proposed rules; Bank compliant with Basel rules
[3] While 2014 objective is >100%, it allows for management actions within capital impact tolerance
[4] See note 4 on slide 49
[5] Basel framework; both Bank & Firm SLR under U.S. NPR of 4.7%
[6] Corresponds to the Firm's lead bank, JPMorgan Chase Bank, National Association
[7] Available resources include Basel III Tier 1 common equity, preferred and trust preferred securities, as well as holding company unsecured long-term debt with maturities greater than 1 year

Basel III Supplementary Leverage Ratio ("SLR")

New financial architecture

Firm pro forma Basel III SLR with exposure reduction and capital generation – illustrative case

Excludes the following:

- Issuance of preferred
- Additional capital generation
- Leverage actions in 2015
- ~30 bps for Derivatives PFE model change[1]

Bank	***4.6%***	***5%+***

Anticipated 2014 leverage actions

- Run-off in CCB as well as legacy structured credit portfolios in CIB
- Reduce discretionary short-term financing transactions (repos) in CIB
- Targeted reduction of non-operating deposits in CB/CIB
- Additional cash collateral netting and reduced derivative margin requirements

Leverage compliance achievable with minimal client or financial impact

[1] Derivatives Potential Future Exposure (PFE) model change denotes change from Current Exposure Method (CEM) to Non-Internal Models Methodology (NIMM). Best estimate of impact is ~40 bps for the Bank

G-SIB and balance sheet optimization

New financial architecture

Commentary

- **JPM falls within the 2.5% G-SIB bucket**
  - G-SIB score is a function of our operating model, including our complete platform, leadership positions and market share, which we believe are a competitive advantage
  - CIB is the main contributor to the Firm's score, but also key to synergies
- **JPM is currently at 9.5%, consistent with peers' average target**
  - All peers operating above stated targets – peer average >10% – which is consistent with JPM's target

Basel III Tier 1 common capital – 4Q13 peer comparison

	JPM	Peer average[1]
Tier 1 common regulatory minimum	9.5%	8.5%
Reported	9.5%	>10%
Target	10%+	~9.5%

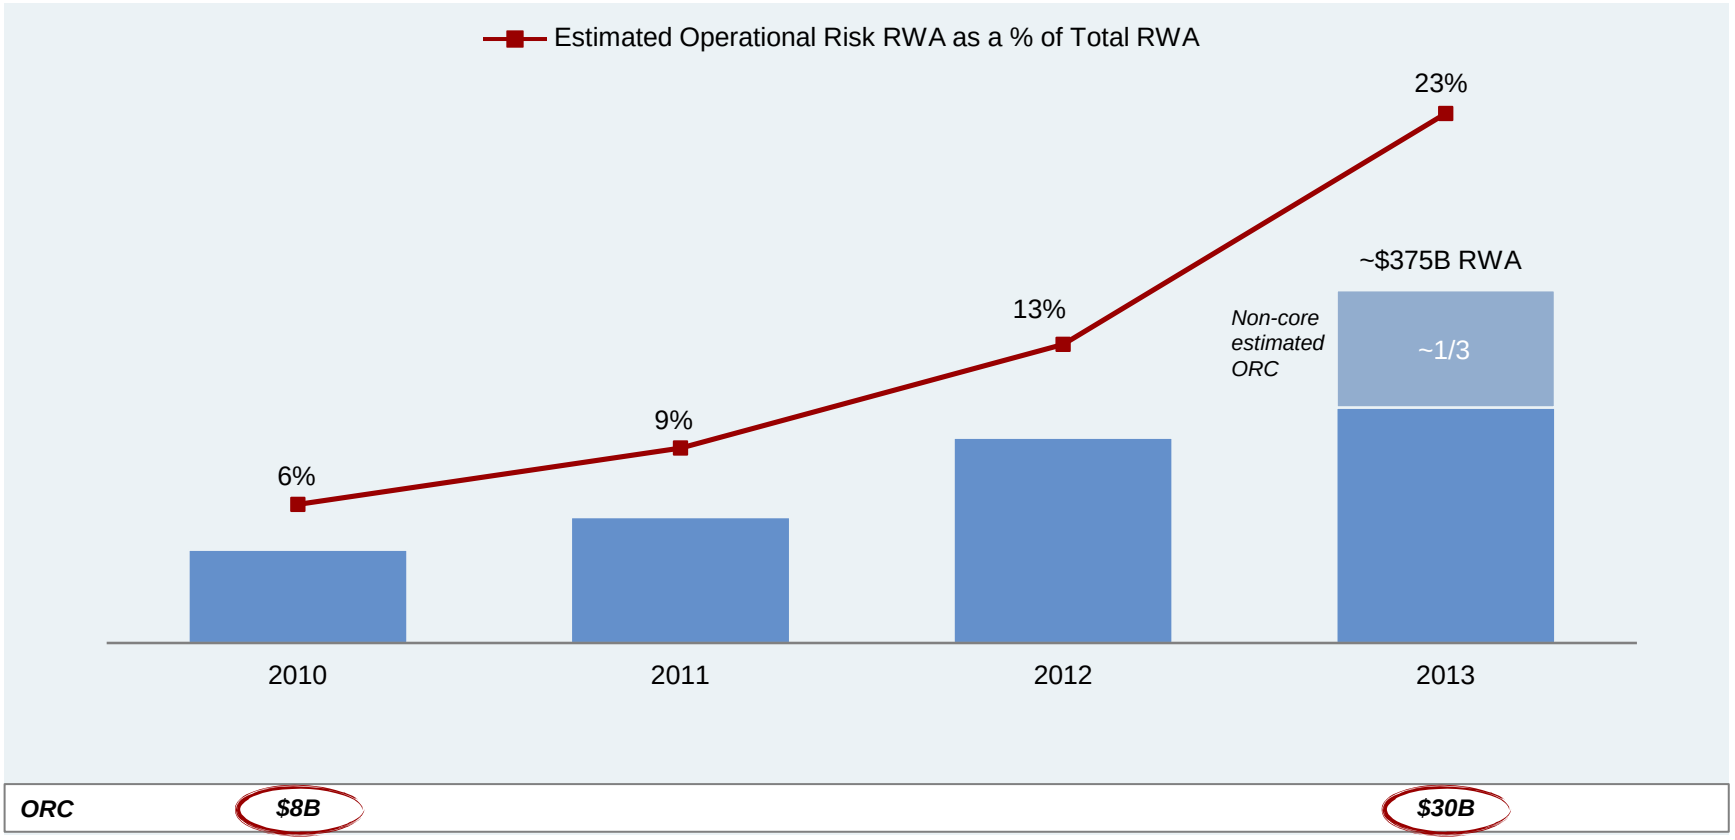
Benefits of JPM operating model

- Two great brands
- Diversification and depth of funding access
- Complete platform – deep client relationships and global reach
- Competitive pricing through scale advantage
- Experienced management team – deep bench

Equates to $6-7B net income contribution[4]

$18B gross synergies[2]
Revenue: $15B, Expense: $3B

Only $3-6B required to be SVA positive on an incremental 50-100 bps of B3T1C[3,4]



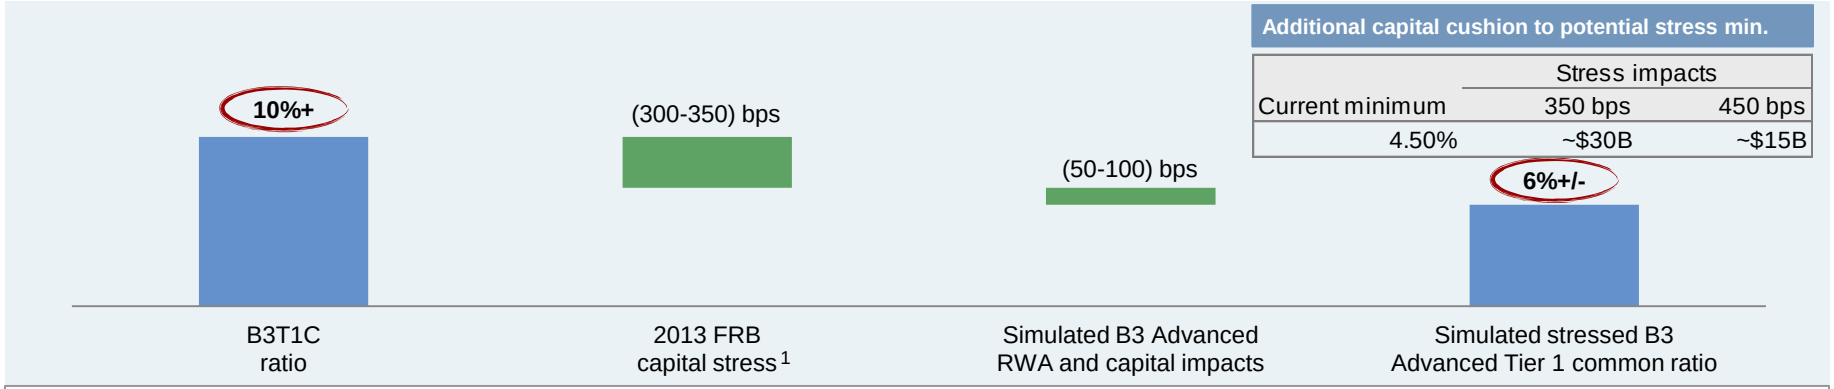
Synergies drive positive SVA on any incremental capital

Source: Company disclosures
[1] Peers include BAC, C, GS, MS and WFC
[2] For additional details on synergies, refer to slide 29
[3] Assumes 12% cost of equity based on the 5-year historical average using CAPM and $1,591B Basel III RWA as of December 31, 2013
[4] Assumes 50% overhead ratio and 38% tax rate

Operational Risk Capital ("ORC") Overview

New financial architecture

JPM operational risk RWA growth from 2010-2013



Large losses have a long-term impact on capital – not reflecting current risk exposure

Capital simulations

New financial architecture

Basel III advanced simulation under stress

Firm Leverage	***5.5%+/-***	***(150) bps+/-***	***0 bps+***	***~4%** (current B1 minimum)*

Note: Minimum requirements for CCAR may evolve over time

Baseline Basel III advanced simulation – after dividends, before share repurchases ($B)

	2013	2014		2015
Analysts estimated net income[2]		~$23		~$24
RWA, beginning	**$1,650**	**$1,591**		**$1,550**
Models and run-off, net of growth	*(59)*	*(40)*	2015 RWA projected to be down ~$150B from YE2012 incl. the impact of ORC	*(50)*
RWA, at year-end	**$1,591**	**$1,550**		**$1,500**
Pre-share repurchase B3T1C (%)[3]	9.5%	≥10.5%		≥11.5%
Cumulative excess capital at 10% B3T1C		**>$10**		**~$30**

Note: Totals may not sum due to rounding

[1] ~300 bps FRB capital impact excludes ~110 bps impact of Basel 2.5 market risk rule, effective 1Q13, and ~50 bps impact of projected repurchases

[2] Reflects Bloomberg average of analysts' estimates for net income of $23.1B in 2014 and $24.2B in 2015 as of 2/19/14

[3] Includes net income after common stock and existing preferred dividends, AOCI and employee issuance

Capital targets withstand stress scenarios and should allow for excess capital to be used or returned

We believe our stock price is attractive – even significantly above current valuation

New financial architecture

Capital hierarchy

- Available capital is used to support business growth
- Excess capital is used to:
  - Pay common stock dividends – objective to increase payout over time from current levels
  - Share repurchases – offset employee issuance and consider additional repurchases

Reasons why JPM stock is attractive

- Exceptional franchises – will continue to deliver strong profitability and returns
- JPM has traded at a discount to peers since the crisis on a P/E and P/TBVPS vs. ROTCE regression basis
- JPM stock price reflects cost of equity of ~10%[1], which implies a TTC ROTCE for JPM of 13%[1] – below target of 15-16%

Capital return framework

- JPM's view of share repurchases takes capital hierarchy and valuation into account
- Based upon regression analysis of P/TBVPS vs. ROTCE – repurchasing stock at prices significantly higher than current levels creates shareholder value

Source: SNL Financial, FactSet, Alacra

[1] Cost of equity based on most recent one-month average using Capital Asset Pricing Model (GEM3 historical beta used). TTC ROTCE based on Gordon Growth Model

Common equity allocation and performance targets

New financial architecture

Common equity and performance targets ($B)

	Retained common equity				
	2013 Investor Day	2014 Investor Day	Pro forma 2013 ROE[1]	TTC ROE target	Basel III Tier 1 Common
Total Consumer & Community Banking	$46.0	$51.0 [2]	21%	20%+	9.5%
Consumer & Business Banking	*11.0*	*10.9*	26%	30%+	*9.5%*

Corporate	*28.0*	*25.7*			
Total Firm (ex. Corporate Goodwill[8])	**$153.0**	**~$161 at 10%**		**15-16%**[9]	**10%+**
Memo: Corporate Goodwill[8]	*$42.0*	*$42.0*			

A

Corporate detail as of 1/1/2014 ($B)

	Retained common equity		
	2013 Investor Day at 9.5%	2014 Investor Day at 10%	Comments
Legacy Portfolio & Model Enhancements	$19.1	$12.4	Accelerated benefits of short-term legacy portfolios and model enhancements
Private Equity/Other Corporate	8.9	13.2	Includes PE, retained operational risk capital, real estate, BOLI/COLI, DTA, and pension
Total Corporate	**$28.0**	**$25.7**	

A Corporate net income ~0+/- with legal expense offsetting return on Corporate assets

Note: Totals may not sum due to rounding

[1] Reflects 2013 net income divided by 2014 retained common equity

[2] Includes $3B of legacy mortgage servicing operational risk capital held at CCB level

[3] TTC Mortgage Banking ROE excludes liquidating portfolios

[4] TTC Auto & Student ROE excludes liquidating student lending portfolio

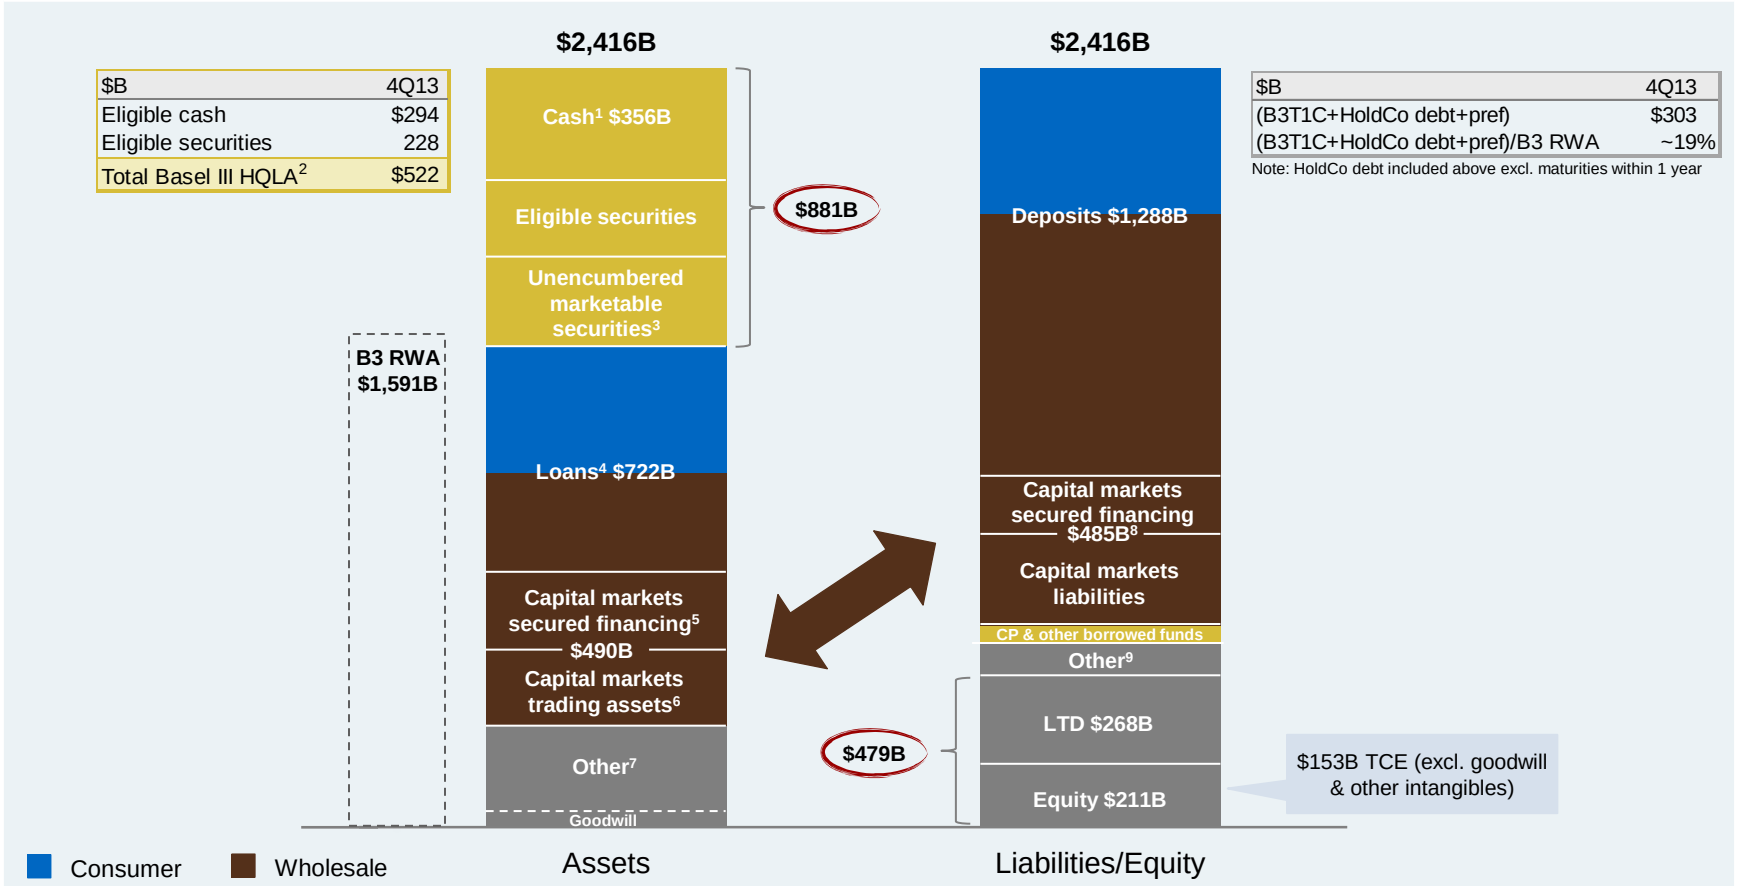
[5] Excludes FVA/DVA; CIB's pro forma ROE using reported net income was 14%; see note 5 on slide 49

[6] AM pretax margin target at 30-35% TTC; see note 6 on slide 49

[7] Cost of preferred embedded in LOB targets

[8] Total Firm goodwill of $48B

[9] Total Firm ROTCE



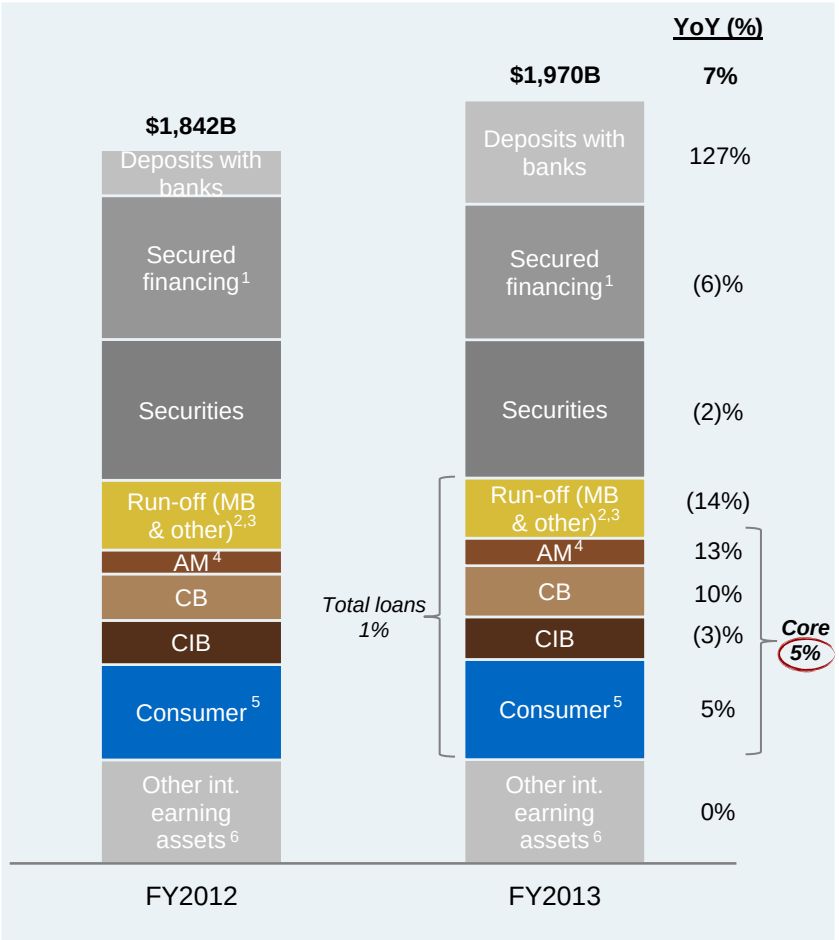
Agenda

	Section
JPMorgan Chase overview	1
New financial architecture	6
Balance sheet/NII and credit update	**15**
Expense, investments and outlook	21
Appendix – investor topics	27
Appendix – other	32

JPMorgan Chase fortress balance sheet

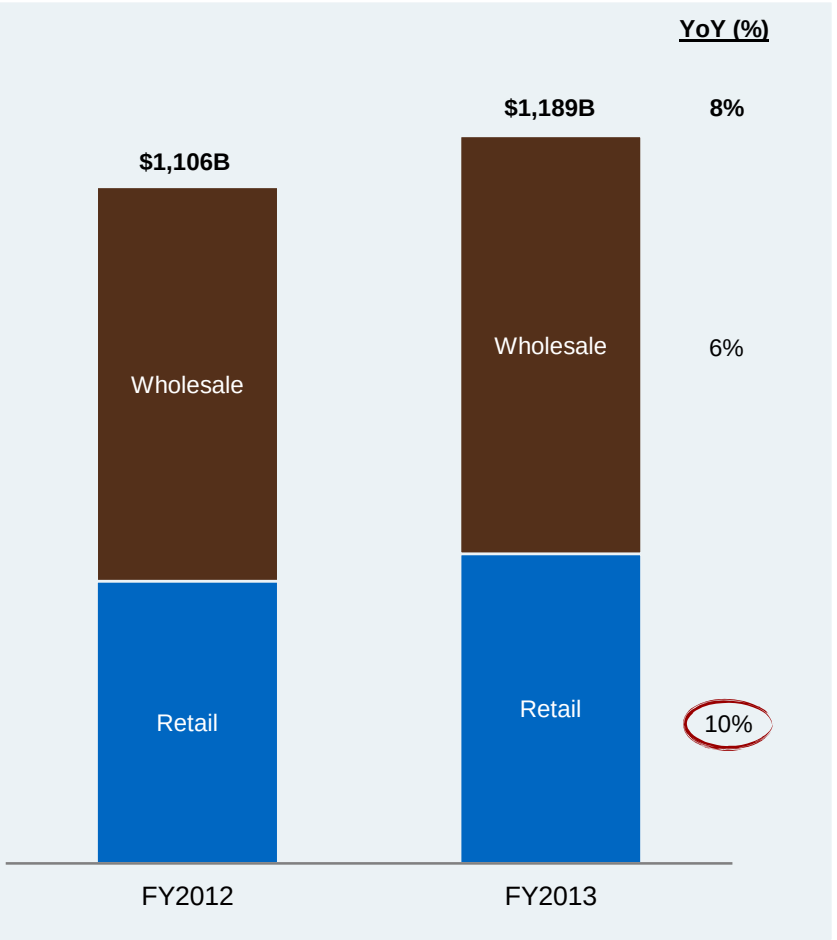
Balance sheet/NII and credit update

JPMorgan Chase EOP balance sheet – December 31, 2013 ($B)



- ~$900B cash and high quality assets
- 57% loan-to-deposit ratio[10]
- HoldCo pre-funding[11]: greater than 18 months
- ~$30B wholesale ST unsecured debt[12]

Note: Totals may not sum due to rounding; for footnoted information, refer to slide 44



Interest-earning assets and deposit growth

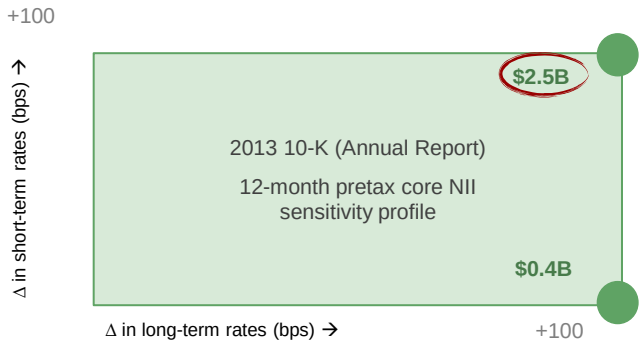
Balance sheet/NII and credit update

Total average interest-earning assets ($B)

Total average deposits ($B)

Expect core loan growth of 5%+/- in 2014[7]

Note: For footnoted information, refer to slide 45



Illustrative earnings power of the balance sheet – NII

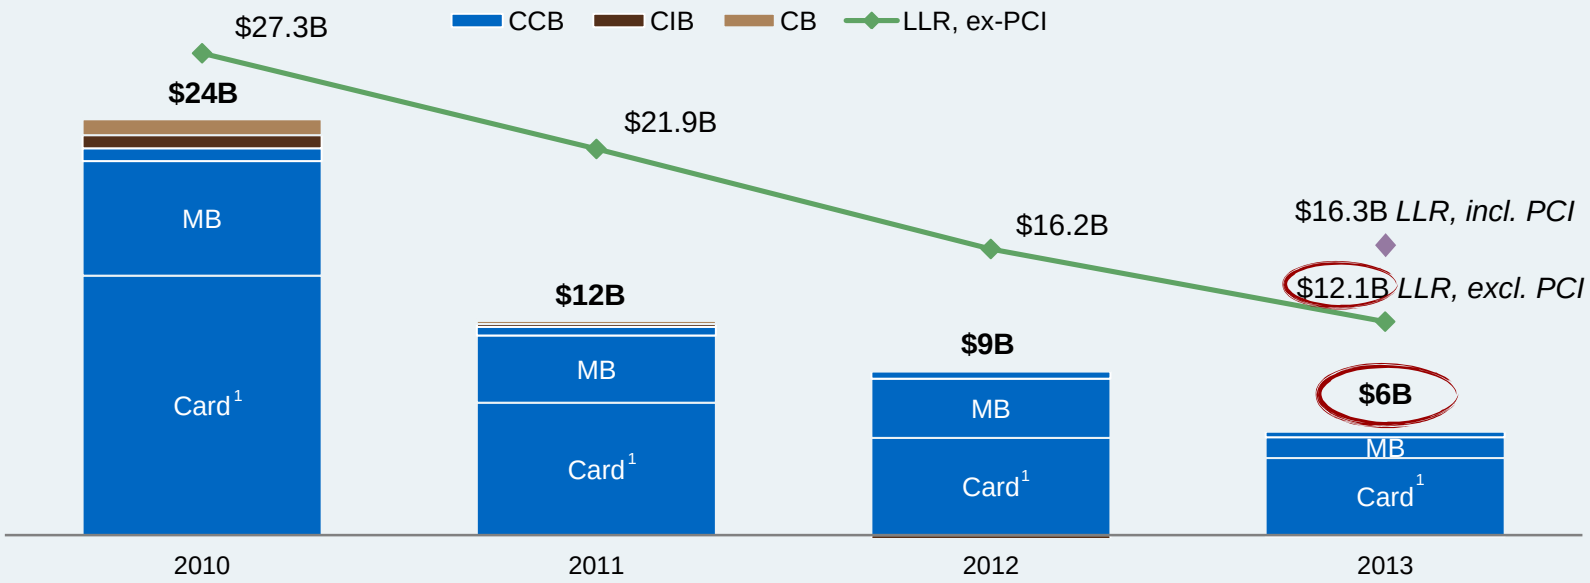
Balance sheet/NII and credit update

Commentary

- The average Firm NIM from 2005-2010 was 2.95%
  - 2013 NIM was 2.23% due to prolonged low rates, legacy loan run-off and liquidity requirements
- Firm NIM over the next rate cycle could be **~2.65%-2.75%**
  - Expect that normalization of rates and balance sheet mix will increase NIM ~60 bps+/-
    - Largely driven by front-end rates as the Fed tightens
  - Expect increased competition for deposits and loan run-off will further decrease expected NIM (15 bps+/-)

EaR – potential NII increase

Firm NIM simulation



Expect core NIM and NII to be relatively stable over the next two years
Most significant upside will occur when front-end rates increase

Note: Managed basis

Credit quality trends

Balance sheet/NII and credit update

NCOs by line of business ($B)

Adjusted NPLs[2]	$15B	$10B	$8B	$6B	4Q13
NCO rate MB[3]	3.59%[4]	2.70%	2.10%[5]	0.96%[6]	0.57%[6]
NCO rate Card[7]	9.73%	5.44%	3.95%	3.14%	2.86%

Strong coverage and reserve position

- The Firm's net charge-offs and nonperforming loans are down 84%[8] and 52%[8], respectively, from peak levels
- MB NCI – reserve of $2.6B as of 2013; expect to reduce to $1.5B+/- by YE 2015
- MB PCI – reserve of $4.2B as of 2013
- Card – reserve of $3.8B as of 2013

Expect an incremental $1B+/- in releases over next two years[9] – majority in 2014
Expect $200mm+/- release for each MB and Card in 1Q14

Note: For footnoted information, refer to slide 46

Net charge-off trends and estimates

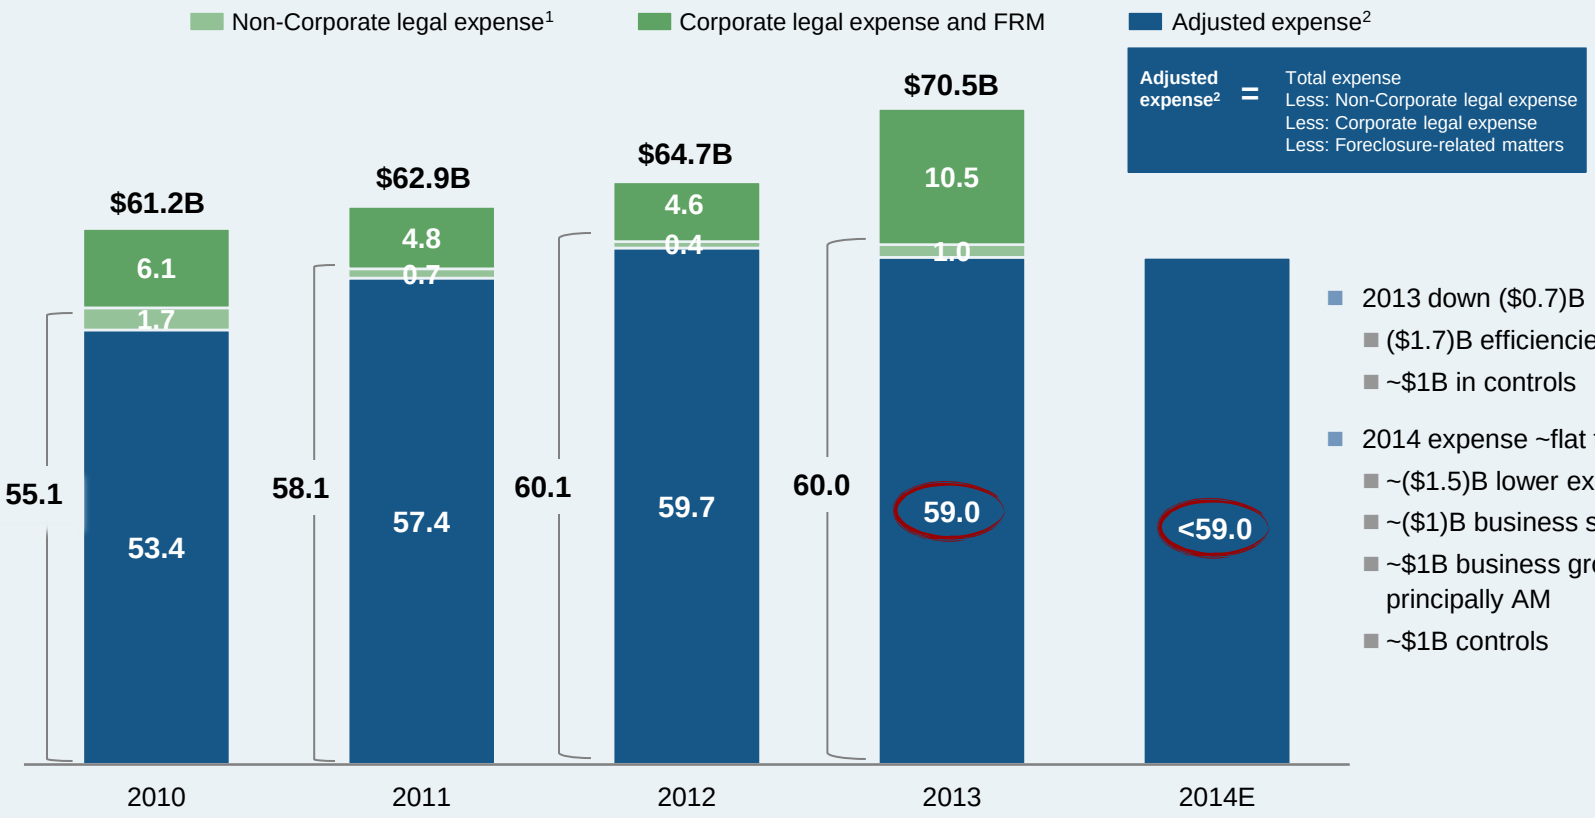
Balance sheet/NII and credit update

Through-the-cycle (TTC) net charge-off estimates

		2013 NCO rate (%)	4Q13 NCO rates (%)	TTC NCO rate (%)
CCB	MB[1]	0.96%[2]	0.57%[2]	0.25%+/-[3]
	Card[4]	3.14	2.86	3.75+/-
	Auto	0.31	0.39	0.75
	Business Banking[5]	0.92	1.11	1.00
CIB	CIB excl. trade and conduits	(0.16)	(0.09)	1.00
	Trade and conduits	(0.01)	0.03	0.05
CB	CB	0.03	0.07	0.50
AM	Lending	0.06	0.02	0.15
	Mortgage[6]	0.03	0.04	0.05
		~$6B NCOs		**~$7B NCOs**

Note: For footnoted information, refer to slide 47

Expect NCO rates in Card, CIB and CB to remain low in 2014 and 2015
Expect firmwide NCOs of $5B+/- in 2014 and <$5B in 2015



Agenda

	Page
JPMorgan Chase overview	1
New financial architecture	6
Balance sheet/NII and credit update	15
Expense, investments and outlook	**21**
Appendix – investor topics	27
Appendix – other	32

Firmwide expense targets – strong expense discipline

Expense, investments and outlook

Firmwide adjusted expense ($B); headcount in 000s

- 2013 down ($0.7)B
  - ($1.7)B efficiencies offset by
  - ~$1B in controls
- 2014 expense ~flat to down
  - ~($1.5)B lower expense in MB[3]
  - ~($1)B business simplification
  - ~$1B business growth, principally AM
  - ~$1B controls

Adj. Overhead Ratio	52%	58%	58%	59%	
Total Headcount[4]	258	280	276	265	260
CCB[4]	158	177	173	157	149

- 2014 headcount down ~5K
- CCB headcount down ~8K in 2014

[1] Excludes FRM
[2] Adjusted expense newly defined as total expense, excluding total legal expense and FRM; former definition of adjusted expense only excluded Corporate legal expense and FRM
[3] MB expense reduction excludes the impact of $0.4B legal expense and $0.3B FRM in 2013
[4] Includes employees and contractors; 2013 headcount adjusted for ~1,250 reduction effective January 1, 2014

Business simplification

Expense, investments and outlook

Simplifying our business

- Exiting products non-core to our customers or with outsized operational risk – for example:
  - One Equity Partners
  - Physical commodities
  - Global Special Opportunities Group (GSOG)
  - Student lending originations
  - Canadian Money Orders
  - Co-branded business debit cards and gift cards
  - Rationalization of products in Mortgage Banking[1]
  - Identity theft protection
  - Credit insurance
- Discontinuing certain business with select clients:
  - Lending to check cashing businesses
  - Transaction services for ~500 Correspondent Banking clients
  - Checking accounts for certain foreign domiciled clients
  - Checking accounts for foreign Politically Exposed Persons

Financial impact of business simplification ($B)

	2014 impact	Run-rate impact
Revenue	$1.5	$2.8
Expense	(0.9)	(2.3)
Pre-tax income	0.6	0.4
Net income	$0.3	$0.3

Expense reductions lag revenue reductions

[1] Not included in the analysis – already captured in normalization of Mortgage Banking in the simulation on slide 25

Overview of select investments

Expense, investments and outlook

Expense and net income impact of cumulative spend from select investments ($mm)

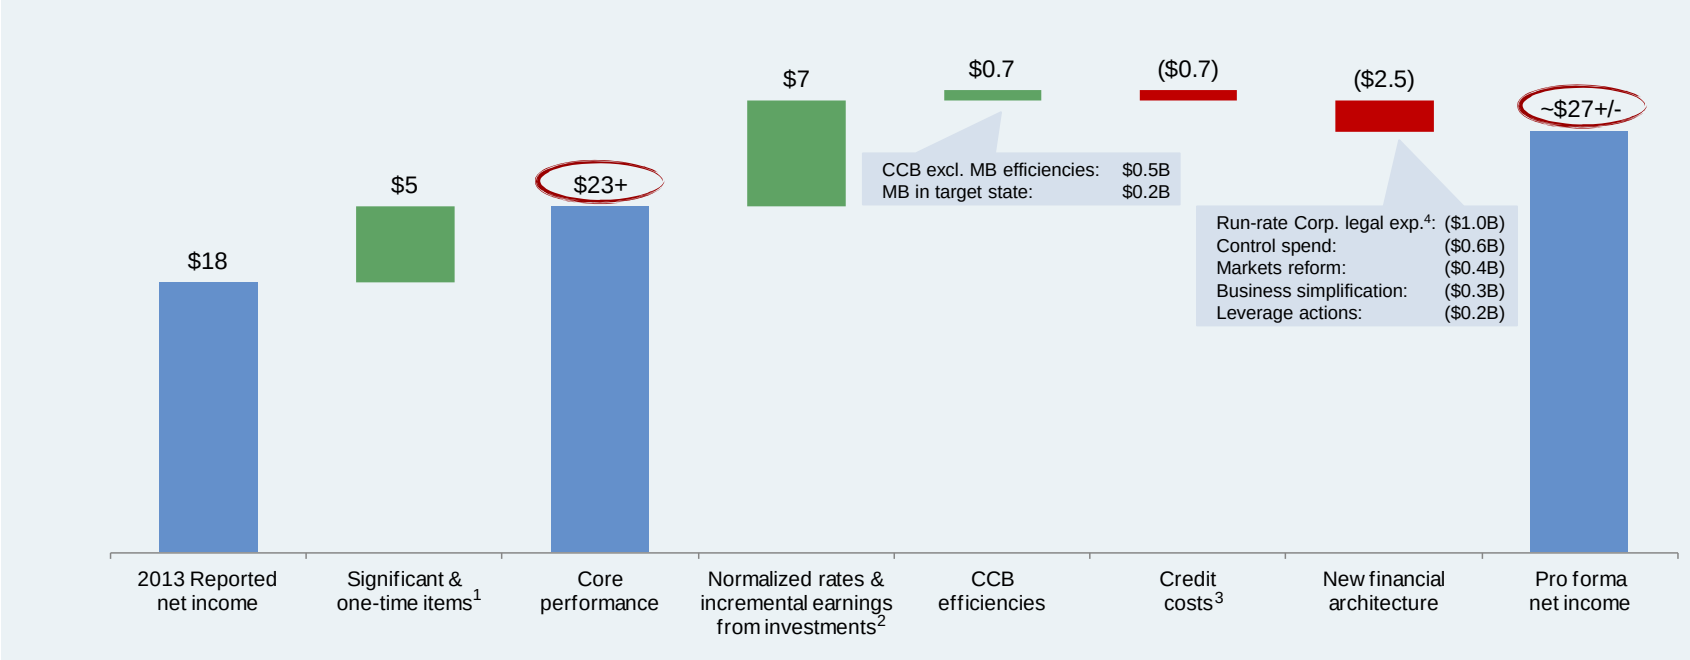
LOB	Investment	Status	Comments	Target annual net income
CCB	Branch builds	✓	■ Portfolio of branches opened from 2002-2012 ■ Average branch contributes $1mm+ to pretax income when mature ■ 4-year+/- break-even and 7-year+/- payback for 2002-2012 portfolio	>$600
	Business Banking	✓	■ Expansion market branches fully staffed ■ Approaching core market productivity levels	600+/-
	Chase Private Client	✓	■ Added 2,100+ CPC locations since beginning of 2011 ■ 22K clients as of 2011; 100K+ clients as of 2012; 215K+ clients as of 2013 ■ $14B net new money in 2013	600+/-
CIB	OTC Clearing & Collateral Management	*In progress*	■ OTC Clearing has delivered a global platform and top 3 market share ■ Timing of steady state dependent on implementation of final EMEA & APAC rules	150+/-
	Global Prime Brokerage build-out	✓	■ Build out international platform to facilitate clients' regional strategies ■ Successful launch of international PB in EMEA in 2011; Asia launch in 2014	175+/-
	Global Corporate Bank	✓	■ Committed to meeting needs of international clients ■ ~200 bankers hired since 2009	600+/-
	Equities electronic trading	✓	■ Focused on building best-in-class electronic trading capabilities ■ Grew low-touch equities revenue at 21% CAGR since 2010	100+/-
CB	Middle Market expansion[1]	*Ongoing*	■ Expand CB coverage into new markets ■ New cities added in 2013 include Tacoma and Jacksonville ■ Continue to add ~200 clients per year	450+/-
AM	Private Bankers/ IM sales expansion IM business initiatives	*Ongoing*	■ Hired ~700 PB client advisors and ~300 IM sales people since beginning of 2010 ■ Expansion investments contributed net income of ~$100mm in 2013	800+/-

✓ *Indicates investment complete*

2013 expense[2]	~$2.6B
2013 net income	~$1B

~$4,100

Expect $3.5B+/- of net income in 2017 run-rate



[1] Includes WaMu, as well as out-of-footprint expansion markets

[2] Expense for aggregate investments reflects expenses related to select investments with overhead ratios higher than business average

Earnings power – simulation

Expense, investments and outlook

Net income build simulation ($B) – 4-5 year horizon

RWA	**$1.6T**	**$1.6T**	**~$1.6T**
ROTCE	**11%**	**15%**	**15-16%**
Overhead ratio[5]	**71%**	**59%[6]**	**~55%+/-**

Note: Numbers may not sum due to rounding for illustrative purposes. Figures are tax effected at an incremental tax rate of 38%, where applicable

[1] Includes 2013 disclosed significant items. See note 2 on slide 48

[2] Represents estimated NII benefit from normalized rates (includes incremental charge-offs to support loan growth; overlap with investments and MB has been removed)

[3] Increase in NCOs due to normalized through-the-cycle rates and assumes no release

[4] Simulation includes assumed total pretax legal expense of $2B. Amount is for illustrative purposes only, and is not intended to be forward-looking guidance. Actual amounts may vary from assumed amount

[5] Managed basis

[6] Represents adjusted overhead ratio

Normalized rates combined with flat RWA delivers ROTCE of 15-16% and implied overhead ratio of ~55%+/-

Conclusion

Excellent client franchises

- Four best-in-class client franchises – each performing strongly
- Together driving significant synergies – diversification, complete platform, scale and efficiencies
- Demonstrated earnings capacity, resilience and superior returns
- Maintain best-in-class margins and improve operating leverage
- Experienced management teams with deep talent

Regulatory, control and simplification agendas

- Executing on our regulatory and control agendas
  - Significant effort – will make us a better company
- Business simplification agenda – reduce complexity and focus on core competencies

New financial architecture

- Optimize returns against capital targets
  - Manage at granular level – legal entity, sub-LOB, product and client level
  - Focus on impact to broader franchise and client relationships
- Continue progress towards Firm's capital targets while balancing capital returns
- Transition year – protect franchise value and future earnings power

[1] Direct reports include business heads only

Benefits of universal banking model continue to grow

Appendix – investor topics

Select revenue cross-sell examples (2013 data)

- CB and CIB cross-sell: ~$4.1B
  - ~$2.4B: TS revenue reported in CB (>80% of CB clients use TS products)
  - ~$1.7B: gross IB revenue from CB clients (29% of NA IB fees[2])
- AM and CIB cross-sell: ~$1.1B
  - AM is an important client of CIB's global custody and fund services
  - The Private Bank (PB) is a key distribution channel for CIB equity offerings
  - Referrals between CIB and PB result in incremental IB transactions/PB clients
- AM and CCB cross-sell: ~$0.7B – JPM IM products sold through branches (incl. CPC); leveraging PB platform to offer managed product solutions to CPC clients
- AM and CB cross-sell: ~$0.5B – Sale of IM products to CB clients
- CB and CCB cross-sell: ~$0.4B – Card Services revenue from CB clients; ~55% of CB clients visit a branch quarterly
- CIB and CCB cross-sell: ~$0.3B – Includes $0.2B of TS products sold through CBB clients

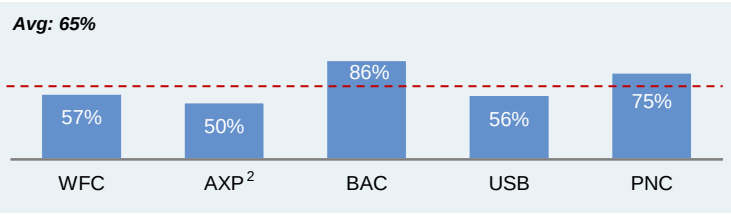
- ~$2.3B: Global Corporate Bank incremental revenue between 2009 and 2013
- ~$0.4B: Gross FX revenue generated by TSS clients

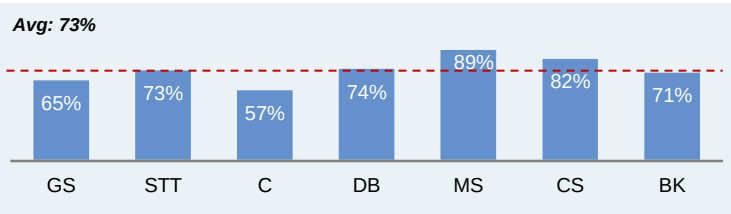
- ~$1.1B: IM products sold through the PB

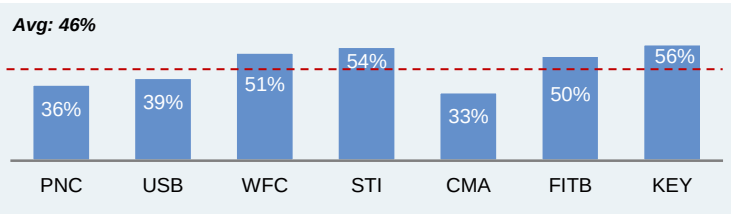
- ~$1.6B: Credit cards sold through branches
- ~$0.3B: Products sold to Card customers
- ~$0.1B: Bus. Banking referrals to Paymentech
- ~$1.6B: Mortgage originations through branches

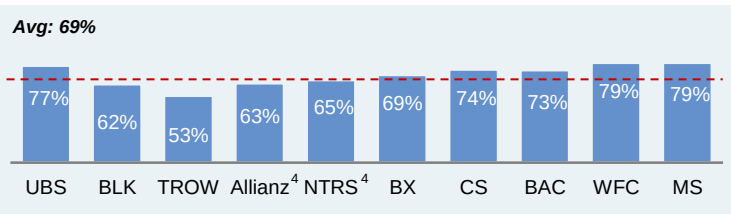
- Primarily procurement, also includes technology, operations and other

Other network benefits – branding, funding and earnings diversification









Note: Totals may not sum due to rounding

[1] Cross-sell revenue counted in both LOBs generating the revenue in partnership and therefore must be divided by 2 as they are totaled into the $14B for 2012 and $15B for 2013

[2] Calculated based on gross domestic IB fees for SLF, M&A, Equity Underwriting and Bond Underwriting

JPM efficiency versus best-in-class peers

Appendix – investor topics

	JPMorgan Chase	Best-in-class	
	JPM overhead ratio	Best-in-class peer[1] overhead ratios weighted by JPM revenue mix	Peer overhead ratios[1]
CCB	60%	54% WFC & AXP	
CIB	60%[3] (excl. FVA/DVA)	67% GS (excl. FVA/DVA) & STT	
CB	37%	37% Avg. of PNC & USB	
AM	71%	70% UBS WM & BLK	
Overhead ratio (excl. FVA/DVA)	69%[3]	69%[5]	

Note: JPM data presented on a managed basis; JPM and peer data represent full-year 2013 data, except where noted; all data for CIB and peer banking businesses is excl. FVA/DVA

[1] Peer data reflects JPM equivalent business segment results with the exception of Goldman Sachs, T. Rowe Price, Blackrock and Blackstone

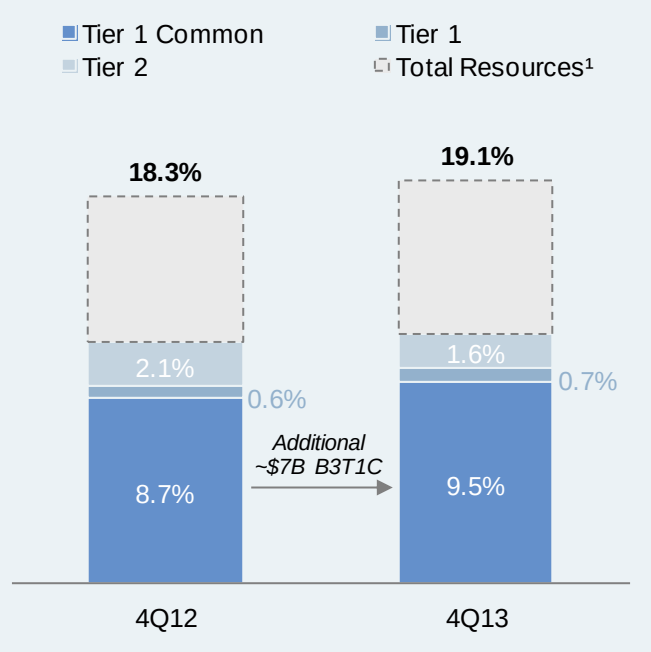
[2] For American Express U.S. Card Services (USCS), estimated rewards expense is removed from expenses and netted against revenue, consistent with industry practice

[3] See note 5 on slide 49

[4] Allianz Asset Management and Northern Trust Personal Financial Services results as of 3Q13

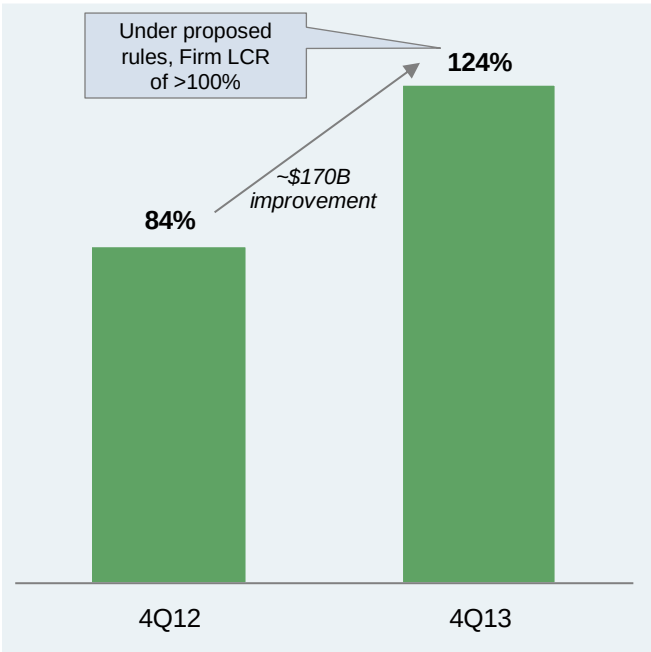
[5] Best-in-class overhead ratio represents Wells Fargo Community Banking, American Express USCS, Goldman Sachs, State Street Investment Servicing, US Bancorp Wholesale Banking and CRE, PNC Corporate & Institutional Banking, UBS International Wealth Management and Wealth Management Americas and Blackrock weighted based on JPM's revenue mix

Basel III capital and liquidity – JPM well positioned



Appendix – investor topics

Commentary



- 4Q13 estimated 9.5% Basel III Tier 1 Common Ratio
- Firm continues to maintain Available Resources[1] in anticipation of Orderly Liquidation Authority ("OLA") requirements
- Based on our understanding of current definitions, Firm is compliant with both LCR and NSFR requirements
- HoldCo pre-funding: greater than 18 months

Estimated capital and liquidity metrics

Basel III Capital (as % of RWA)[2]

Basel III LCR[3]

Basel III NSFR[4]

Higher capital and increased liquidity are key foundations of JPM's fortress balance sheet

[1] Include Basel III Tier 1 common equity, preferred and trust preferred securities, as well as holding company unsecured long-term debt with maturities greater than 1 year
[2] Using Advanced Approach method
[3] 4Q12 LCR calculation based on old Basel III rules. 4Q13 LCR calculation based on new Basel III rules published in January 2013
[4] Based on the Firm's current understanding of the proposed rules

Average client deposits	318.8	355.8	383.7
Assets under custody ($T)	16.9	18.8	20.5
ALL/EOP loans ex-conduits and trade[8]	3.06%	2.52%	2.02%
Net charge-off/(recovery) rate	0.18	(0.26)	(0.07)
Average VaR ($mm)	$76	$96	$47

[1] See notes 1 and 5 on slides 48 and 49, respectively
[2] Lending revenue includes net interest income, fees, gains or losses on loan sale activity, gains or losses on securities received as part of a loan restructuring, and the risk management results related to the credit portfolio (excluding trade finance)
[3] Credit Adjustments & Other primarily includes net credit portfolio credit valuation adjustments ("CVA") and associated hedging activities; debit valuation adjustments ("DVA") on structured notes and derivative liabilities; funding valuation adjustments ("FVA") on OTC derivatives and structured notes; and nonperforming derivative receivable results
[4] Actual numbers for all periods, not over/under
[5] Return on equity excluding both FVA (effective 4Q13) and DVA, a non-GAAP financial measure, was 17%, 19% and 15% for FY2013, FY2012 and FY2011, respectively
[6] Overhead ratio excluding FVA (effective 4Q13) and DVA, a non-GAAP financial measure, was 60%, 62% and 68% for FY2013, FY2012 and FY2011, respectively
[7] Compensation expense as a percentage of total net revenue excluding both FVA (effective 4Q13) and DVA, a non-GAAP financial measure, was 30%, 32% and 36% for FY2013, FY2012 and FY2011, respectively
[8] ALL/EOP Loans as reported was 1.15%, 1.19% and 1.35% for FY2013, FY2012 and FY2011, respectively
[9] Represents FY2013 rank of JPM Fixed Income Markets revenue of 10 leading competitors (which have released FY2013 as of 2/18/14; HSBC TTM 3Q13 basis)

Leadership positions

Corporate & Investment Bank

- 48% of revenue is international for FY2013
- International deposits increased 46% from FY2010 driven by growth across regions
- International loans up 32% from FY2010

Banking

- Improved ranking to #2 in Global Equity and Equity-related
- #1 in combined Fedwire and CHIPS volume
- FY2013 total international electronic funds transfer volume up 40% from FY2010

Markets & Investor Services

- #1 Fixed income markets revenue share of top 10 investment banks[9]
- International AUC up 46% from FY2010; represents 45% of FY2013 total AUC
- JPM ranked #1 for FY2013, FY2012, FY2011 and FY2010 for both All-America Fixed Income Research and Equity Research

Commercial Banking[1]

$mm	2011	2012	2013

Net income/(loss)	$919	($2,022)	($5,978)

[1] See note 1 on slide 48

Notes on slide 4 – Maintain excellent client-based franchises

1. CAGR 2010-2013 for mortgage originations was 2%
2. Represents client deposits and other third-party liabilities
3. Represents total CIB trading and Credit Portfolio VaR
4. As of FY2012
5. By both J.D. Power (April 2013) and the American Customer Satisfaction Index (ACSI) for the second straight year (December 2012 and 2013); Chase ranked #4 by J.D. Power (April 2013) for customer satisfaction in retail banking among large bank peers
6. Based on FDIC 2013 Summary of Deposits survey per SNL Financial
7. Based on disclosures by peers and internal estimates as of 4Q13; based on loans outstanding
8. Dealogic FY2013 wallet rankings for Banking and Coalition 3Q13 YTD rankings for Markets & Investor Services; includes Origination & Advisory, Equities and FICC
9. Dealogic for 2013 (vs. 7.5% in 2012)
10. Rank of JPM Markets and Fixed Income Markets revenue of 10 leading competitors based on reported information, excluding FVA/DVA
11. As of FY2013
12. Based on gross IB fees for SLF, M&A, Equity Underwriting and Bond Underwriting as of FY2013

Notes on slide 7 – New financial architecture

Note: LCR – Liquidity Coverage Ratio; NSFR – Net Stable Funding Ratio; B3T1C – Basel III Tier 1 common CCAR – Comprehensive Capital Analysis Review; SLR – Supplementary Leverage Ratio; OLA – Orderly Liquidity Authority; SPOE – Single Point of Entry

1. Basel rules finalized. U.S. NPR released October 2013; final rule pending
2. Monitor Basel standardized approaches

Notes on slide 16 – JPMorgan Chase fortress balance sheet

1. In addition to eligible cash included in High Quality Liquid Assets ("HQLA"), cash balance includes non-operational deposits with third party banks and float (considered inflows under Basel III Liquidity Coverage Ratio ("LCR")), as well as operational cash primarily used for settlement purposes
2. HQLA is the estimated amount of assets the Firm believes will qualify for inclusion in the Basel III LCR
3. The Firm has approximately $282 billion of unencumbered marketable securities, such as equity and fixed income securities available to raise liquidity if required
4. Net of allowance for loan losses
5. Other capital secured financing includes resales, securities borrowed and cash and due from banks from CIB not included in the $881 billion total cash and unencumbered securities
6. Includes CIB trading assets and derivatives receivables
7. Includes other assets, other intangible assets, MSR, premises and equipment, accrued interest and accounts receivable and non-CIB trading assets
8. Includes trading liabilities, Fed funds purchased and securities loaned or sold under repurchase agreements, VIEs, other borrowed funds and other liabilities all in CIB and derivatives payable
9. Includes accounts payable and other liabilities, Fed funds purchased and securities loaned or sold under repurchase agreements and VIEs (excluding CIB)
10. Loan-to-deposit ratio is calculated on a gross loans basis
11. Number of months of pre-funding: the Firm targets pre-funding of the parent holding company to ensure that both contractual and non-contractual obligations can be met for at least 18 months assuming no access to wholesale funding markets
12. Includes wholesale CP funding and a portion of other borrowed funds, which are unsecured

Notes on slide 17 – Interest-earning assets and deposit growth

1. Includes federal funds sold and securities purchased under resale agreements and securities borrowed
2. MB run-off portfolio includes WaMu purchased credit-impaired, discontinued products, broker originated loans, limited documentation loans, and certain loans with effective combined loan to value ratios greater than 80%
3. Other includes Card run-off portfolio, including certain legacy WaMu loans, legacy balance transfer programs and terminated partner portfolios (e.g., Kohl's), and CBB run-off portfolio, including discontinued products
4. Includes Wholesale loans originated by AM and other Wholesale loans that are held in Corporate
5. Includes CBB, MB and Card, Merchant Services & Auto loans and prime mortgage loans held by AM and Corporate that are classified as Consumer loans (classification is consistent with SEC filings)
6. Includes trading assets (debt instruments) and other assets (incl. margin loans)
7. Will depend on decisions to retain or sell mortgage loans

Notes on slide 19 – Credit quality trends

1. Card, Merchant Services & Auto
2. 2012 NPLs are impacted by regulatory guidance issued in the first quarter of 2012 as a result of which the Firm began reporting performing junior liens that are subordinate to nonaccrual senior liens as nonaccrual loans and by regulatory guidance issued in the third quarter of 2012 requiring loans not reaffirmed by the borrower and discharged under Chapter 7 bankruptcy to be reported as nonaccrual loans. For reference, reported NPLs were $14,841mm, $9,993mm, $10,892mm and $8,540mm for 2010, 2011, 2012 and 2013, respectively
3. Represents Real Estate Portfolios (“REP”) only; excludes the impact of purchased credit-impaired loans acquired as part of the WaMu transaction
4. Excludes a one-time $632mm adjustment related to the timing of when the Firm recognizes charge-offs on delinquent loans
5. Excludes the effect of incremental net charge-offs based on regulatory guidance
6. Excludes PCI write-offs of $53mm
7. Represents Credit Card only; excludes loans held-for-sale
8. Based on peak levels of NCOs and reported NPLs in 3Q09
9. Represents net reduction to reserves

Notes on slide 20 – Net charge-off trends and estimates

1. Represents Real Estate Portfolios (“REP”) only; excludes the impact of purchased credit-impaired loans acquired as part of the WaMu transaction
2. Excludes PCI write-offs of $53mm
3. TTC NCO rate of 0.25%+/- will depend on portfolio mix of mortgage and home equity
4. Excludes loans held-for-sale
5. CBB reported NCO rate was 1.79% in 2013 and 2.13% in 4Q13, including Business banking and the impact of retail overdraft losses
6. Includes mortgages originated in PB but held in CIO

Notes

Notes on non-GAAP financial measures

1. In addition to analyzing the Firm's results on a reported basis, management reviews the Firm's results and the results of the lines of business on a "managed" basis, which is a non-GAAP financial measure. The Firm's definition of managed basis starts with the reported U.S. GAAP results and includes certain reclassifications to present total net revenue for the Firm (and each of the business segments) on a fully taxable-equivalent ("FTE") basis. Accordingly, revenue from investments that receive tax credits and tax exempt securities is presented in the managed results on a basis comparable to taxable securities and investments. This non-GAAP financial measure allows management to assess the comparability of revenue arising from both taxable and tax-exempt sources. The corresponding income tax impact related to tax-exempt items is recorded within income tax expense. These adjustments have no impact on net income as reported by the Firm as a whole or by the lines of business.

2. The Firm presents revenue, credit costs, expense, net income and earnings per share excluding certain reported significant items. These measures should be viewed in addition to, and not as a substitute for, the Firm's reported results. Management believes this information helps investors understand the effect of these items on reported results and provides an additional presentation of the Firm's performance. The tables below provide a reconciliation of reported results to these non-GAAP measures.

2013	Revenue	Credit costs	Expense	Net income	Reported EPS
Reported	$99,798	($225)	($70,467)	$17,923	$4.35
Adjustments:					
Gain on sale of Visa shares	(1,310)			(812)	(0.21)
Gain on sale of One Chase Manhattan Plaza	(493)			(306)	(0.08)
FVA/DVA	1,912			1,221	0.31
Reduced reserves in CCB		(5,500)		(3,409)	(0.86)
Firmwide legal expense (a)			847	1,052	0.27
Corporate legal expense (b)			9,720	7,572	1.92
Adjusted	$99,907	($5,725)	($59,900)	$23,241	$5.70

(a) 4Q13
(b) 2Q13 and 3Q13

2012	Revenue	Credit costs	Expense	Net income	Reported EPS
Reported	$99,890	($3,385)	($64,729)	$21,284	$5.20
Adjustments:					
WaMu bankruptcy settlement - Merger-related	(1,126)			(687)	(0.17)
DVA	930			577	0.15
CIO trading losses	5,787			3,588	0.90
CIO securities gains	(1,013)			(628)	(0.16)
Treasury extinguishment gains on redeemed TruPS	(888)			(551)	(0.14)
Merger-related – Maiden Lane B-Note	(545)			(338)	(0.08)
Reduced reserves in CCB		(4,625)		(2,867)	(0.72)
Foreclosure-related matters			900	558	0.14
Corporate legal expense			3,198	1,983	0.50
Benefit from tax adjustments				(620)	(0.16)
Adjusted	$103,035	($8,010)	($60,631)	$22,299	$5.46

Notes

Notes on non-GAAP financial measures (cont'd)

3. Adjusted expense, a non-GAAP financial measure, excludes firmwide legal expense and expense related to foreclosure-related matters ("FRM"). Where indicated, this definition formerly only excluded Corporate legal expense and disclosed FRM. Management believes this information helps investors understand the effect of these items on reported results and provides an alternate presentation of the Firm's performance.

4. Tangible common equity ("TCE"), return on tangible common equity ("ROTCE"), tangible book value per share ("TBVPS"), Tier 1 common under Basel I and III rules, Tier 1 capital under Basel III rules, and the supplementary leverage ratio ("SLR") are each non-GAAP financial measures. TCE represents the Firm's common stockholders' equity (i.e., total stockholders' equity less preferred stock) less goodwill and identifiable intangible assets (other than MSRs), net of related deferred tax liabilities. ROTCE measures the Firm's earnings as a percentage of TCE. TBVPS represents the Firm's tangible common equity divided by period-end common shares. Tier 1 common under Basel I and III rules, and Tier 1 capital and the SLR under Basel III rules, are used by management, bank regulators, investors and analysts to assess and monitor the Firm's capital position and liquidity. TCE, ROTCE, and TBVPS are meaningful to the Firm, as well as analysts and investors in assessing the Firm's use of equity. For additional information on Tier 1 common under Basel I and III, and Tier 1 capital and the SLR under Basel III rules, see Regulatory capital on pages 161-165 of JPMorgan Chase & Co.'s Annual Report on Form 10-K for the year ended December 31, 2013. All of the aforementioned measures are useful to the Firm, as well as analysts and investors, in facilitating comparisons of the Firm with competitors.

5. CIB provides several non-GAAP financial measures which exclude the impact of FVA (effective Q4 2013) and DVA on: net revenue, net income, overhead ratio, compensation ratio and return on equity. Further, the impact of FVA/DVA is excluded from the calculation of the firmwide overhead ratio. These measures are used by management to assess the underlying performance of the business and for comparability with peers. The ratio for the allowance for loan losses to period-end loans is calculated excluding the impact of trade finance loans and consolidated Firm-administered multi-seller conduits, to provide a more meaningful assessment of CIB's allowance coverage ratio.

Additional notes on financial measures

6. Pretax margin represents income before income tax expense divided by total net revenue, which is, in management's view, a comprehensive measure of pretax performance derived by measuring earnings after all costs are taken into consideration. It is, therefore, another basis that management uses to evaluate the performance of AM against the performance of their respective peers.

CONSUMER & COMMUNITY BANKING

Gordon Smith, Chief Executive Officer Consumer & Community Banking

February 25, 2014

JPMorgan Chase & Co.

Agenda

	Page
Consumer & Community Banking	**1**
Consumer & Business Banking	17
Mortgage Banking	31
Card Services	48
Appendix	68

The Chase Consumer & Community Banking ("CCB") franchise has leadership positions across all its businesses

Strong financial returns	■ FY 2013 ROE: CCB: 23%; Consumer & Business Banking ("CBB"): 26%; Mortgage Banking: 16%; Card, Merchant Services & Auto: 31%
Powerful customer franchise	■ Consumer relationships with almost half of U.S. households ■ #1 in customer satisfaction among the largest banks for the 2nd year in a row[1]
Firmwide capabilities to meet customer needs	■ Chase Private Client integration with J.P. Morgan Private Bank investments platform ■ Business Banking access to Commercial Bank specialty lending and Treasury Services
Attractive footprint	■ Branch network concentrated in the highest growth U.S. markets ■ #1 ATM and #2 retail branch network for the 2nd year in a row[2]
Leading position in digital banking	■ #1 online financial services destination (Chase.com)[3] and #1 mobile banking functionality[4]
World-class payments franchise	■ #1 in total U.S. credit and debit payments volume[5] ■ #2 wholly-owned merchant acquirer[6] ■ Proprietary end-to-end payments solution
National, scale lending businesses	■ #1 credit card issuer in the U.S. based on loans outstanding[7] and #1 U.S. co-brand credit card issuer[7] ■ #2 mortgage originator[8] and servicer[8] ■ #3 non-captive auto lender[9]

Note: For footnoted information, refer to Appendix

The underlying performance of the business is strong

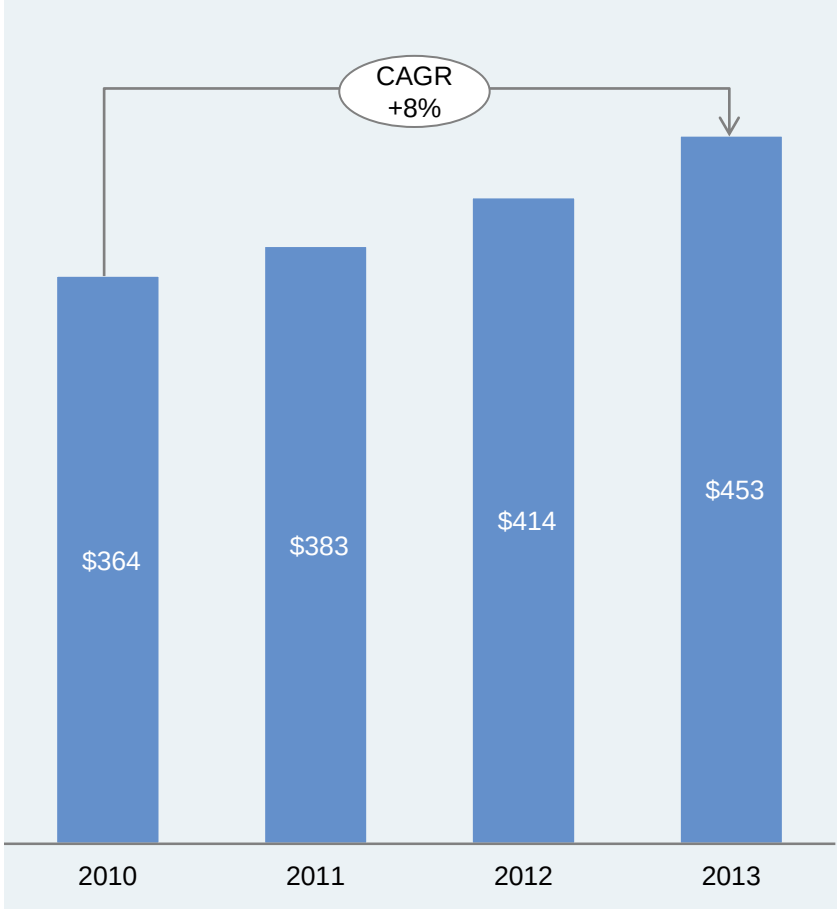
[1] Real Estate Portfolios only, excluding purchased credit-impaired (PCI) loans; 2013 actuals exclude PCI write-offs of $53mm
[2] Through-the-cycle net charge-off rate of 0.25% +/- will depend on portfolio mix of mortgage and home equity
[3] Target ROE excludes liquidating real estate portfolios
[4] Excludes held-for-sale loans

We have exceeded our 2013 targets and are updating 2014 targets

	2013 Investor Day targets	2013 performance	2014 updated targets
Consumer & Business Banking **Card, Merchant Services & Auto**	■ ~3% expense growth in 2013 ■ 3-4K[1] headcount reduction by YE 2014	✓ 2.7% expense growth in 2013 ✓ Reduced headcount by 5.5K[1] in 2013	■ ~1% expense growth in 2014 ■ ~2K[1] headcount reduction in 2014
Mortgage Banking	■ Full year expense down $3B in 2014 vs. 2012 ■ 13-15K[1] headcount reduction by YE 2014	✓ Reduced $1.5B in expense in 2013 ✓ Reduced headcount by 11K[1,2] in 2013	■ Expense reduction of ~$2B[3] from 2013 to 2014 ■ ~6K[1] headcount reduction in 2014

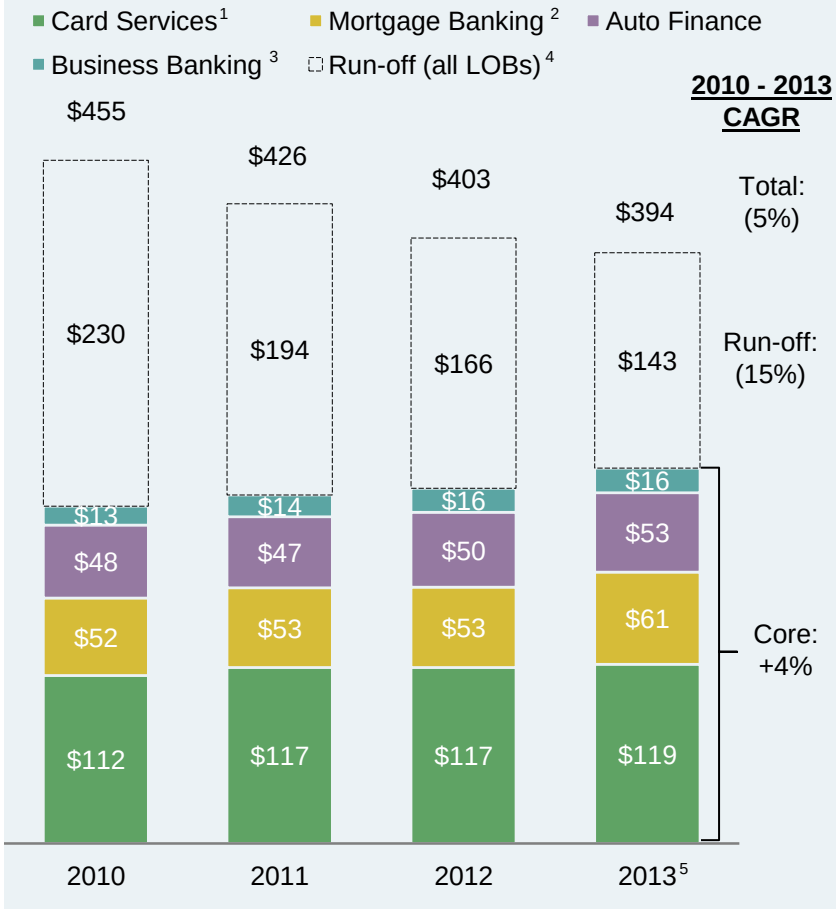
While we continue to control costs, we also continue to invest in the business

Source: Chase internal data
[1] Includes employees and contractors
[2] 2013 headcount reduction of 11K includes 1,250 effective January 1, 2014
[3] Includes reductions of ~$0.4B related to litigation and ~$0.3B related to foreclosure-related matters



We expect to exit 2016 with expense ~$2B lower than 2014 expense

Key expense reduction initiatives across CCB



- Reduce cost-to-serve through use of digital channels and self-service for transactional needs
- Automate manual controls and processes
- Simplify our business through exit of non-core products
- Further consolidate operating centers
- Continue optimizing our branch network and operating model based on customer needs and branch usage trends
- Consolidate and rationalize vendors
- Continue to actively manage down mortgage default inventory

Deposit growth has been strong and core loans show continued growth

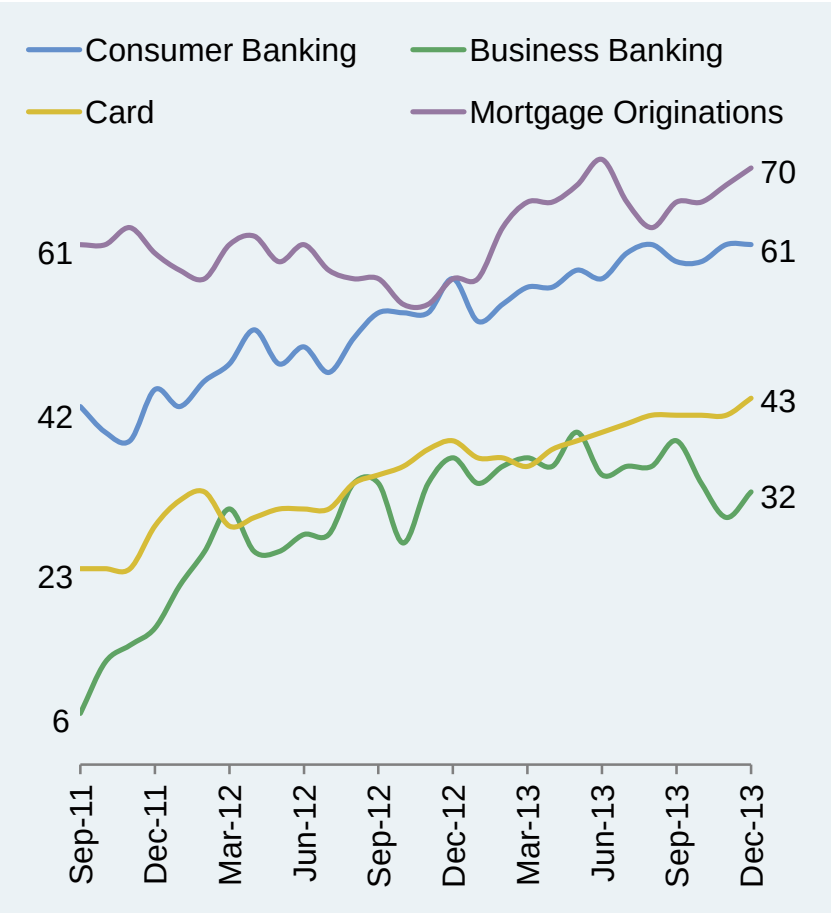
CCB average deposits ($B)

CCB end of period loans ($B)

Source: Chase internal data; numbers may not sum due to rounding

[1] Card Services core loans exclude certain legacy WaMu loans, legacy balance transfer programs, and certain terminated partner portfolios; Core loans include held-for-sale loans

[2] Mortgage Banking core loans exclude WaMu purchased credit-impaired, discontinued products, broker originated loans, limited documentation loans, and certain loans with effective combined loan to value ratios greater than 80%; and include loans repurchased from Ginnie Mae pools



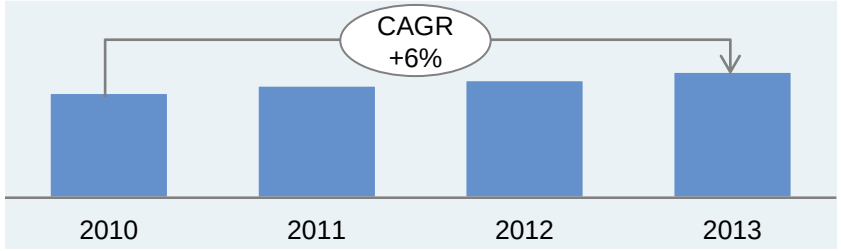
[3] Business Banking core loans exclude WaMu loans and Chase stated income (unverified self-stated) loans

[4] Includes Student Lending

[5] 2013 includes securities-based lending loans of $0.5B

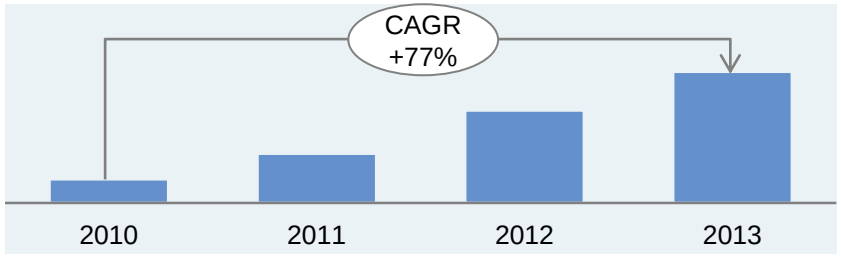
Customer experience continues to improve…

Net promoter scores[1]



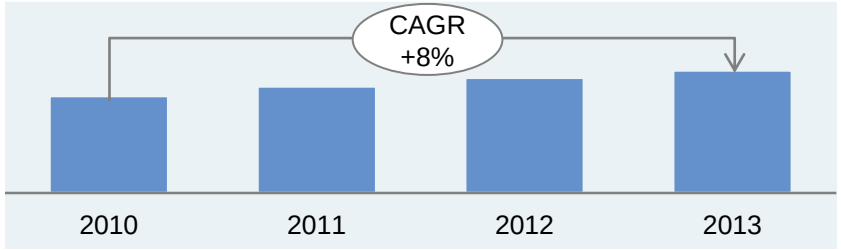
J.D. Power rankings

Line of Business	2010 rank	2013 rank
Retail Banking[2]	#13	#4
Small Business[3]	#22	#1 in West, Midwest, and South #5 in Northeast
Credit Card[4]	#5	#3
Mortgage Banking[5]	Originations: #12 Servicing: #13	Originations: #5 Servicing: #5

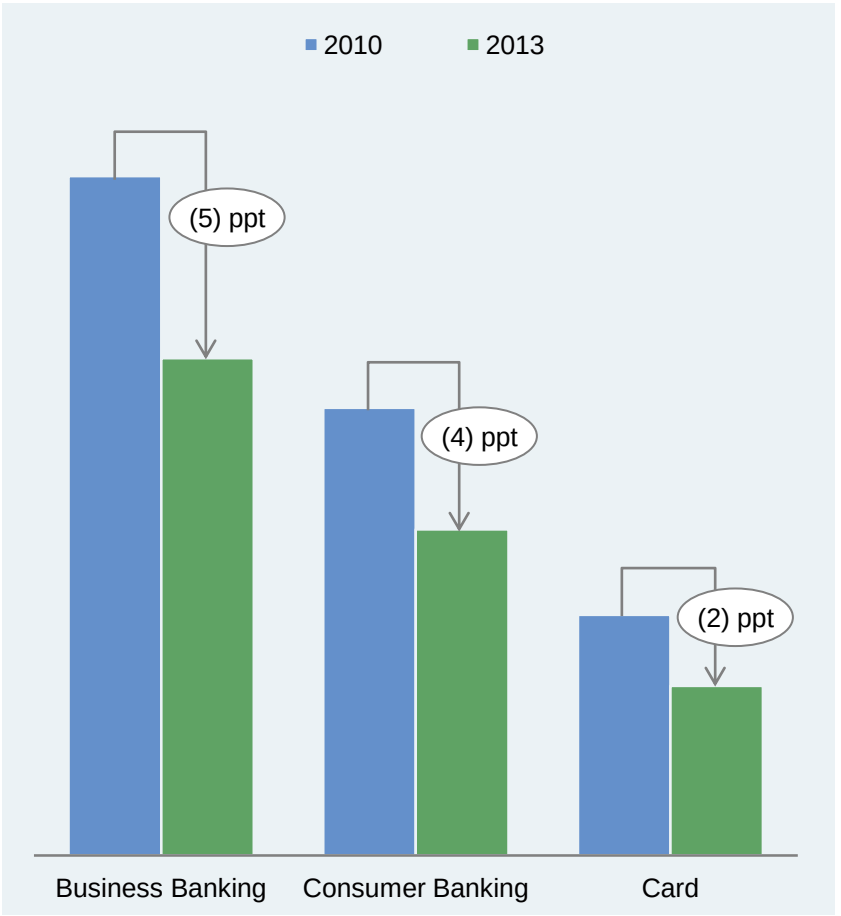


Note: For footnoted information, refer to Appendix

…resulting in deeper relationships and lower attrition with existing customers



Average deposit and investment balance per household[1]



Net new investments per investment household

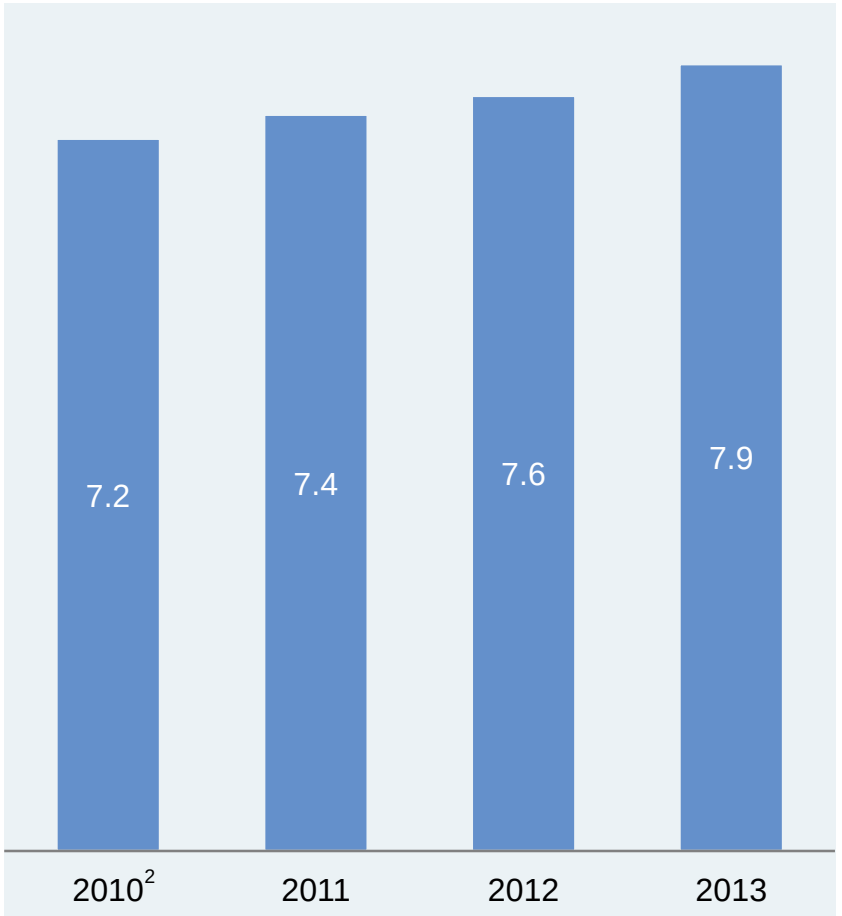
Credit card spend per account[2]

Household attrition rates[3]

Source: Chase internal data

[1] Includes households with Chase Liquid® cards

[2] Reflects accounts that had sales activity during the year; excludes Commercial Card and certain terminated partner portfolios



[3] Includes households that close all Chase accounts; average of annualized monthly attrition rate over 12 months

We continue to leverage the strength of our franchise to deepen relationships

Leveraging the strength of the franchise

Commercial Banking	~55% of Commercial Bank customers visit a branch each quarter
Asset Management	~35% of Private Banking households visit a branch each quarter ~$90B of Chase client assets
Card Services	~40% of Chase branded cards sold through branches ~70% of Chase Paymentech new sales sourced from Business Banking
Mortgage Banking	~55% of retail mortgages originated through branches

Number of products & services[1] per Consumer Bank household

Source: Chase internal data

[1] Products and services counted in the Chase cross-sell definition include deposits (interest checking, money market, etc.), credit (mortgage loans, credit cards, etc.), investments, and services (online banking, mobile banking, etc.)

[2] Previously disclosed 2010 cross-sell of 6.7 has been restated to include mobile banking and pre-authorized transfers

We are responding to the current environment…

Continuing to strengthen controls

- Established Controls organization
- Significant investments to ensure quality

Disciplined focus on distinct customer segments

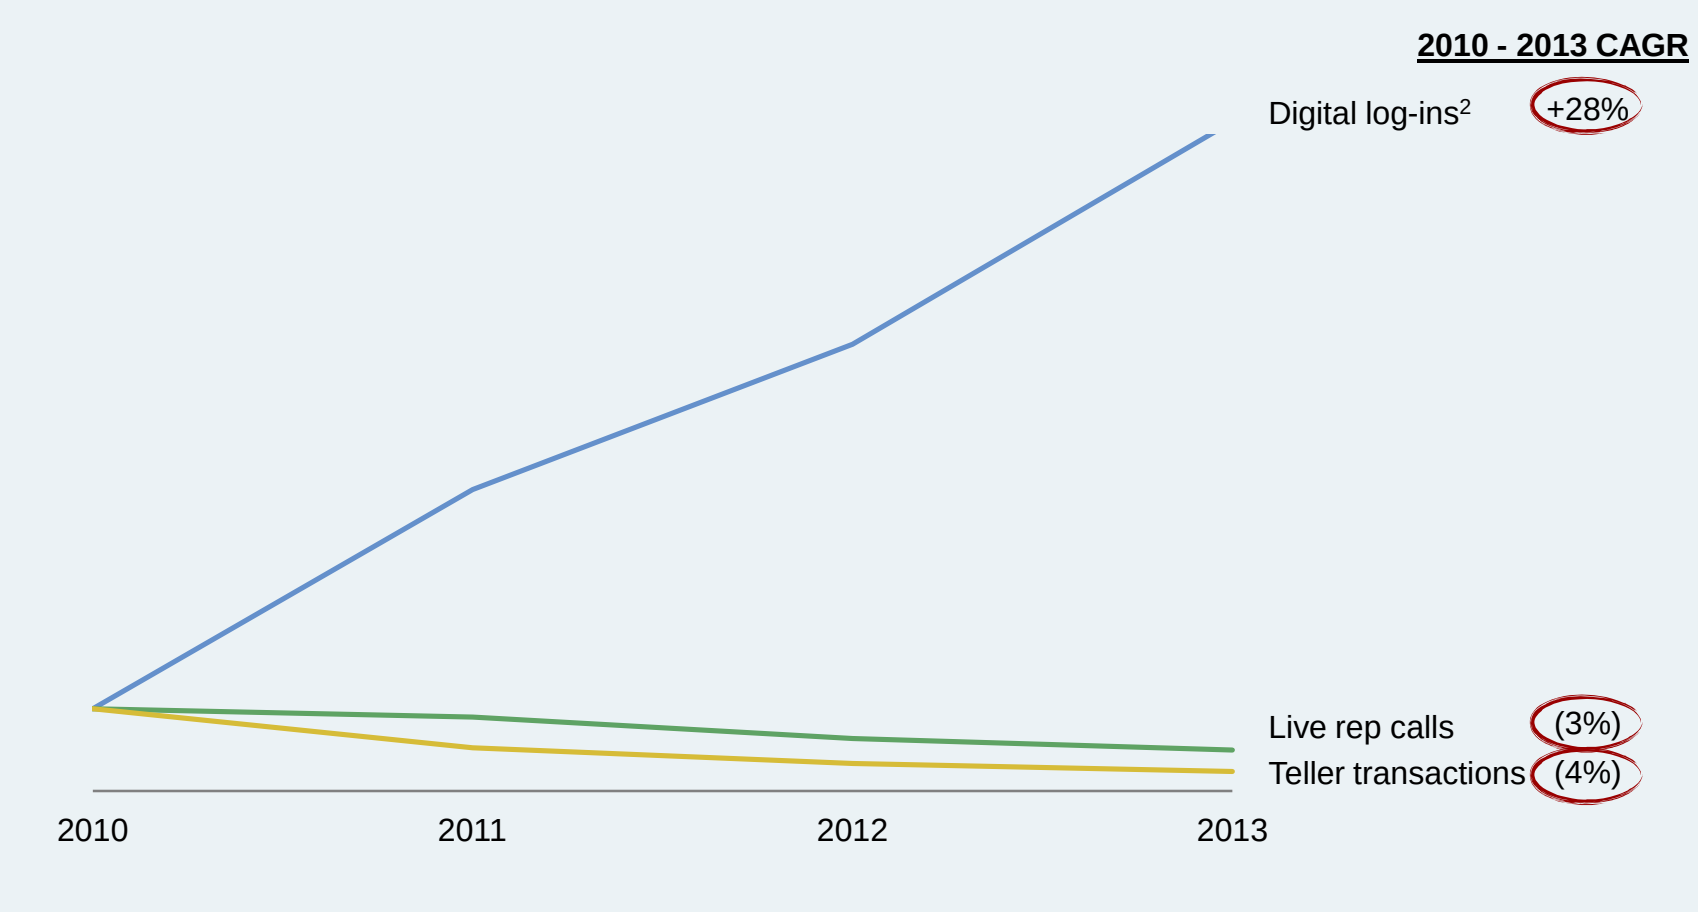
- Simplifying our product offering
- Products targeted to specific market segments
- Exiting products non-core to our customers and de-risking through client exits
  - Less than $100mm reduction in pretax income

Rationalizing the cost structure

- Digital self-service
- Optimize branch network
  - Less density
  - Smaller branches
- Automation of processes and controls
  - Fewer people

… and have proven that we can successfully adapt our business to changes

Example: Card Services



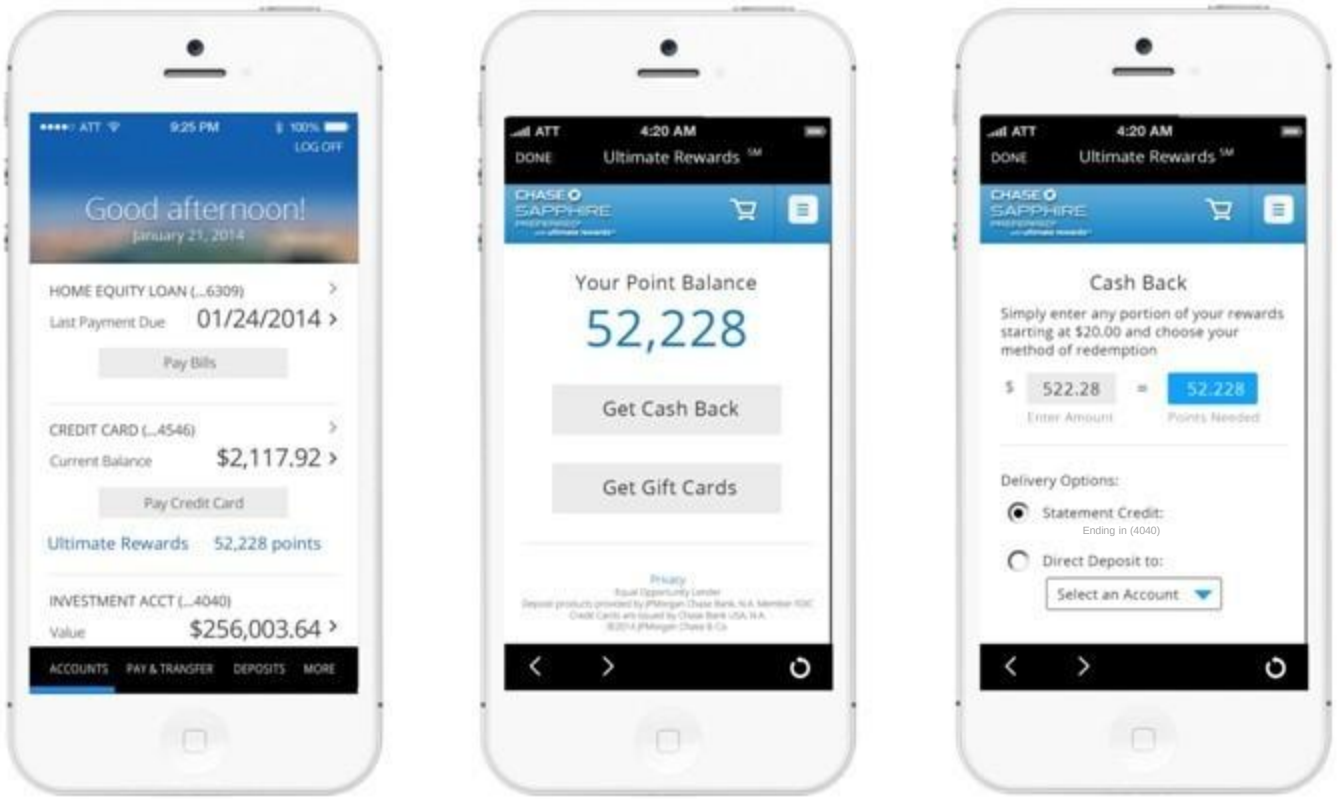
Market changes	Response	Chase performance (2008 vs. 2013)
■ CARD Act ■ Pricing and fee restrictions ■ Payment allocation ■ Time to make payments ■ Payment processing ■ Pricing review ■ Recession ■ Competitive pressures	■ Developed products focused on specific customer segments ■ Launched simplified rewards program ■ Reduced balance transfer volumes ■ Refined offer targeting within our risk appetite ■ Reduced non-core partnerships and products	■ Strong financial results ■ ROE increased from 14% to 26%[1] ■ Net revenue rate up ~240bps ■ Net charge-off rate down ~190bps ■ Industry-leading sales volume growth

Source: Chase internal data

[1] Excluding the impact of changes in loan loss reserves

Customers are increasingly using digital channels for self-service…

Chase servicing interactions per household, indexed to 2010[1]

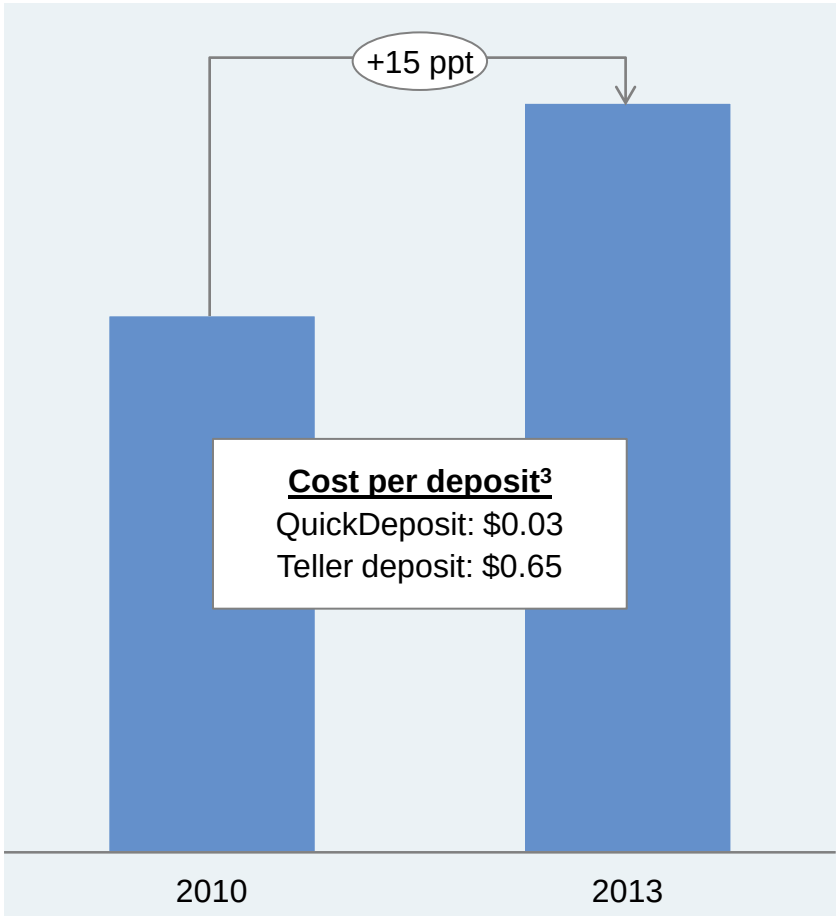


[1] Analysis includes Chase Consumer & Business Banking and Card lines of business
[2] Digital log-ins includes Online and Mobile

… which will have significant cost benefits

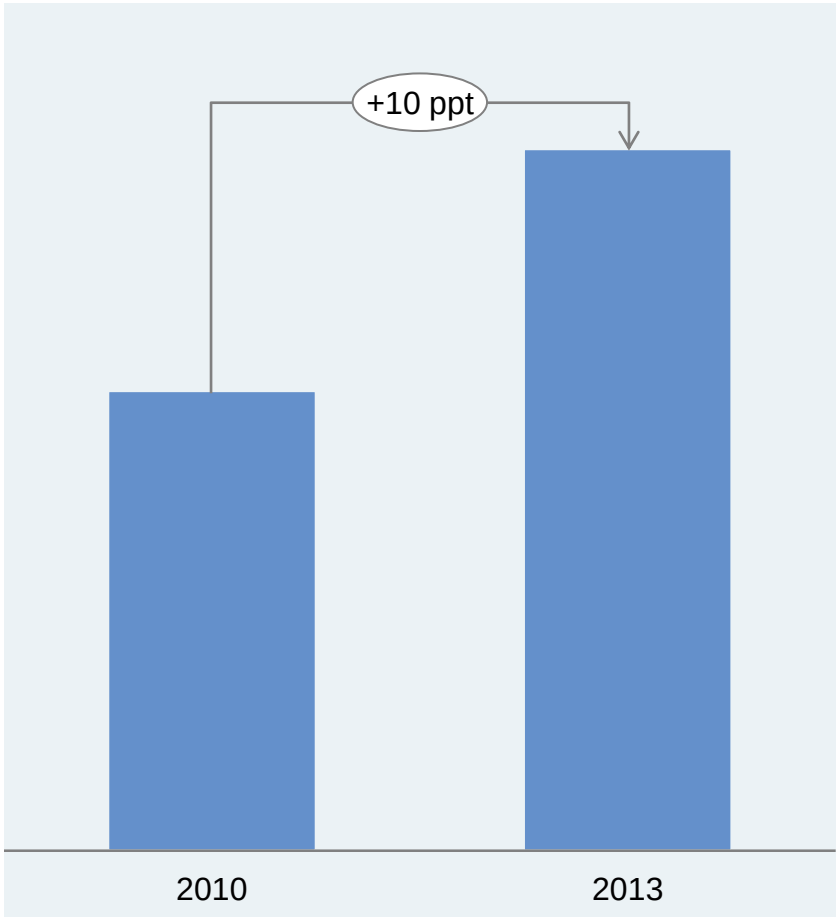
Example: Ultimate Rewards mobile app redemption activity

- Enabled mobile app-based reward redemptions in December 2013
- Within first month, app-based redemptions reached 15% of daily redemption volume



A mobile redemption costs ~$0.01[1] vs. a call center redemption cost of ~$3[1]

Source: Chase internal data



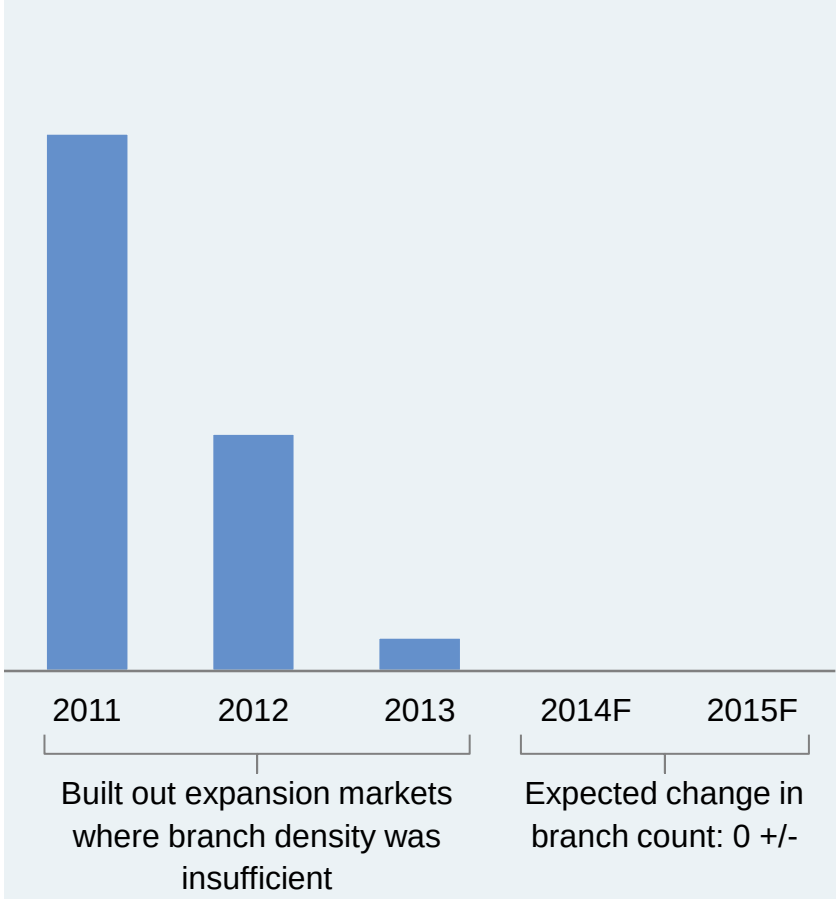
[1] Based on variable cost; call center redemption cost based on average redemption transaction time of ~4 minutes

We are leveraging the digital trend to lower cost-to-serve

% of deposits through self-service[1]

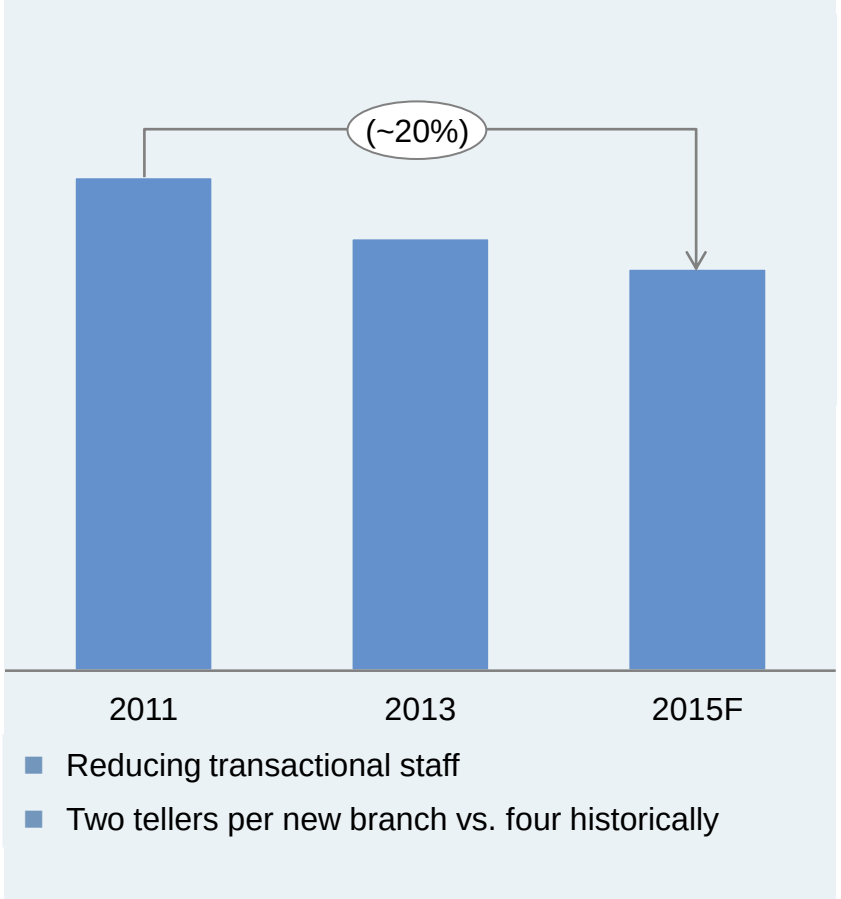
% of statements delivered electronically[2]

Source: Chase internal data



[1] Based on Consumer Banking customers

[2] Across all CCB Business



[3] Based on variable cost; teller deposit cost based on average deposit transaction time of ~1 minute

The Chase branch network of the future will be more efficient, automated, and consultative

Net change in Chase branches over time

Consumer Bank total branch staff[1]

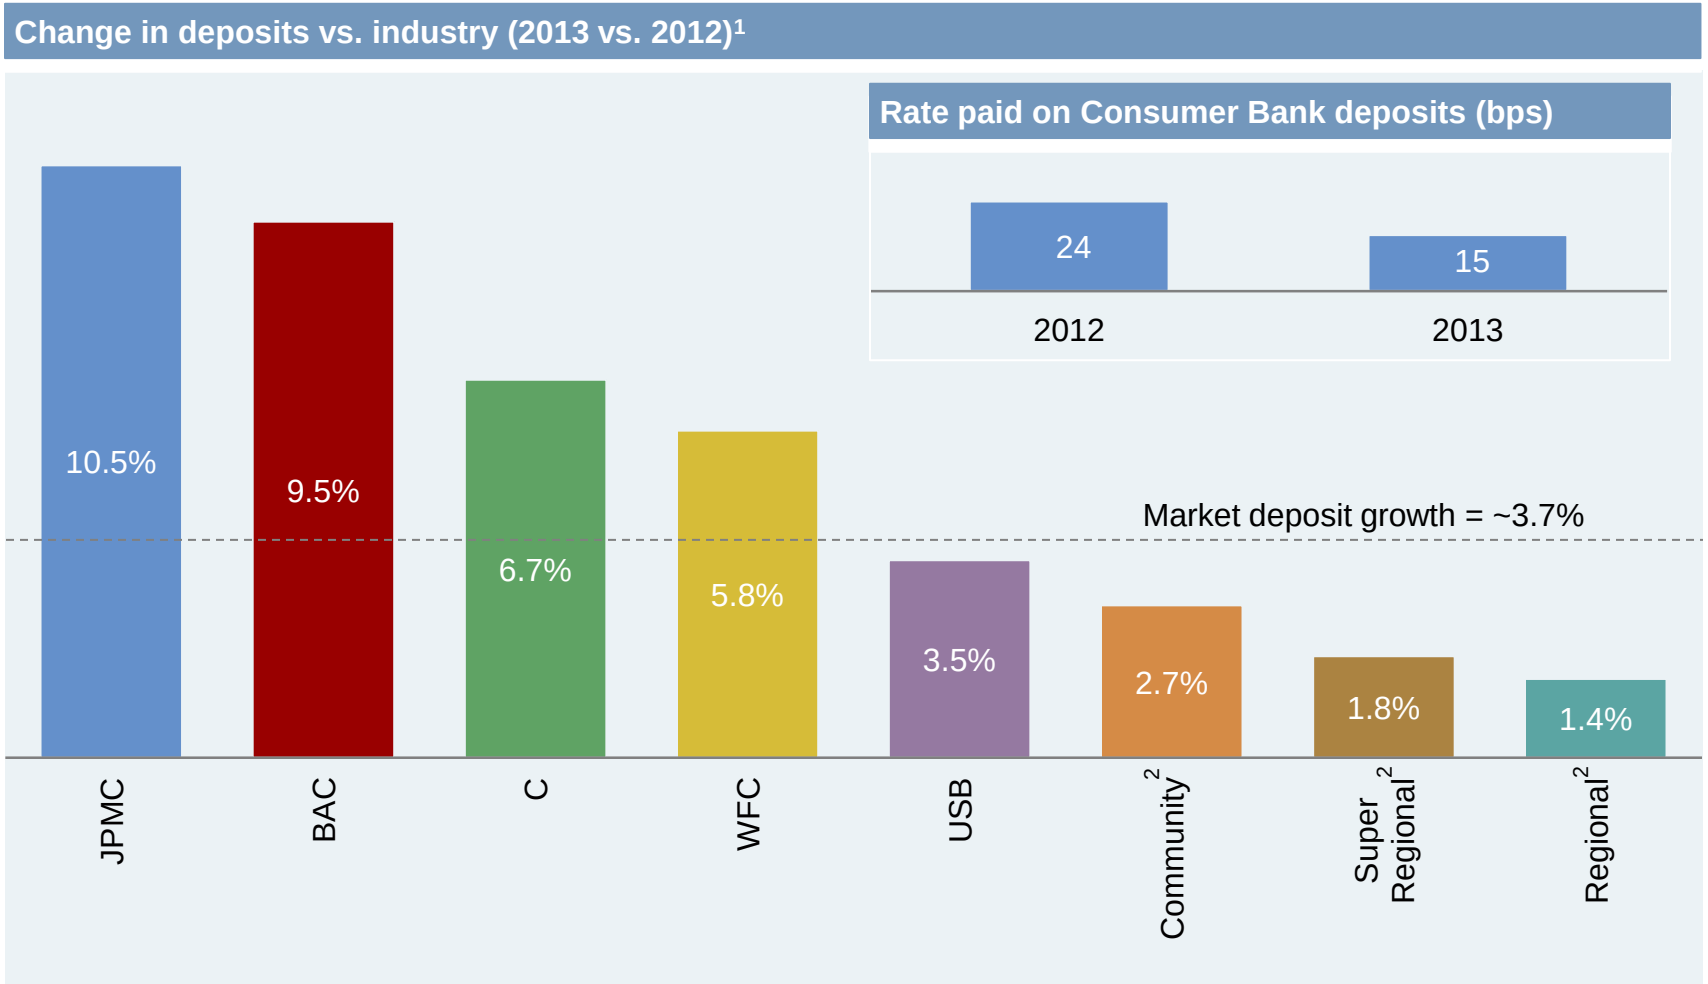
Customer satisfaction and retention are at all time highs

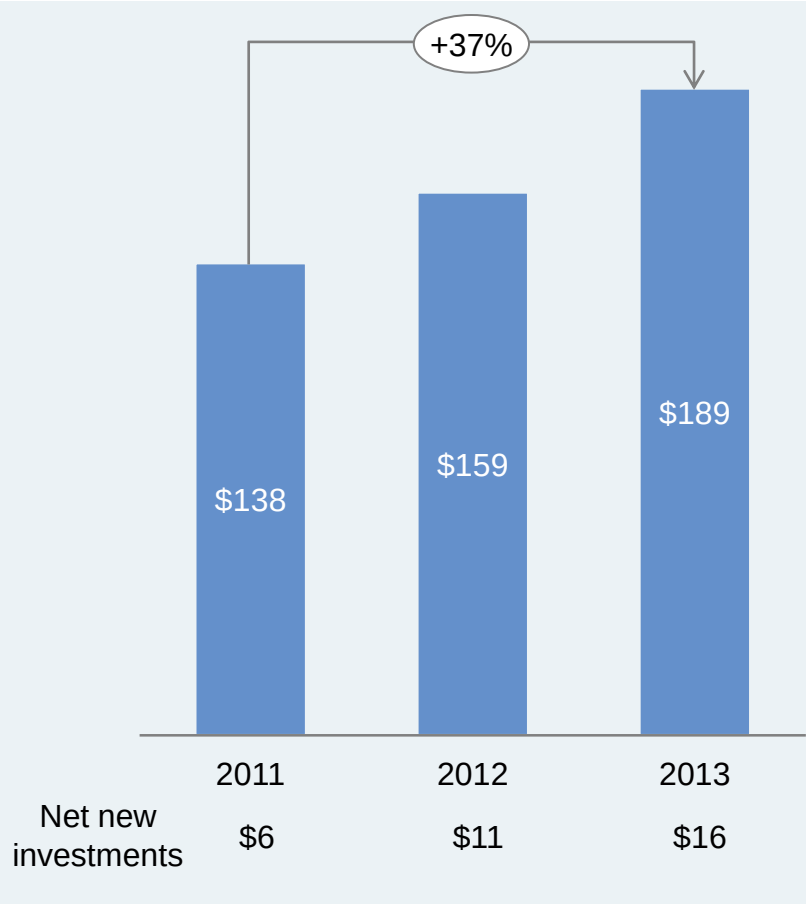
Consumer Bank overall satisfaction[1]



Household attrition (annualized rate)[2]

Source: Chase internal data
Note: Consumer bank only
[1] Top 2 box on a 10 point scale, overall satisfaction
[2] Adjusted for incremental 25K households in October 2012 due to escheatment rule changes

Deposit balance growth remains strong, and outperforms the industry



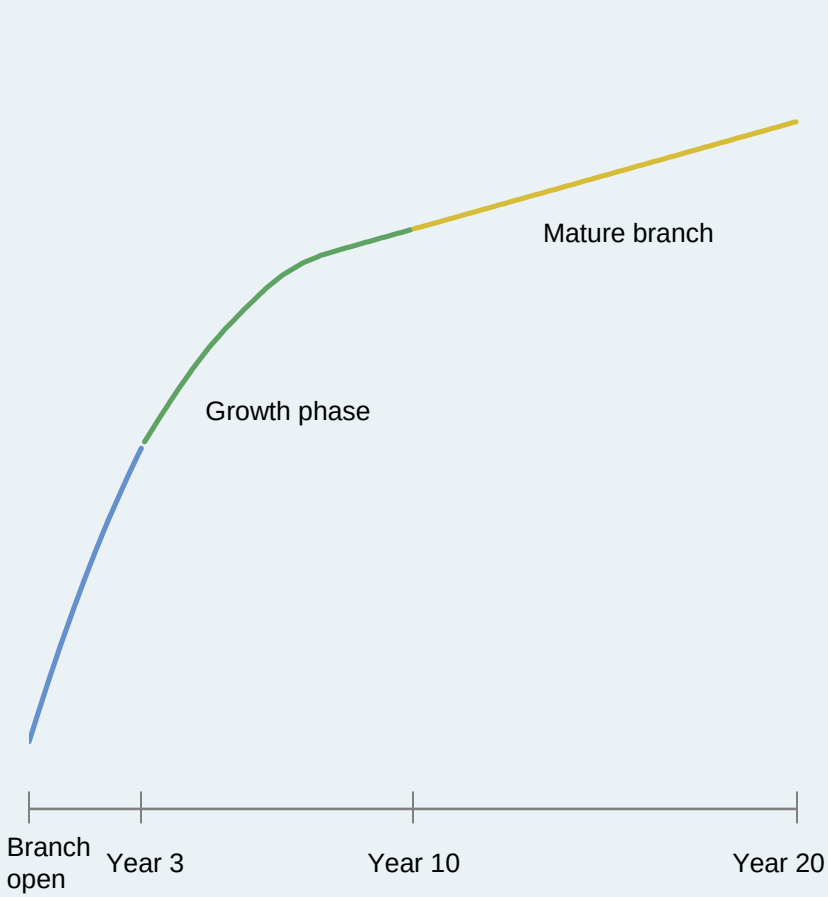
Source: Based on FDIC Summary of Deposits survey per SNL Financial as of June 2013

[1] All branches with $1B+ in deposits at any point in the last ten years excluded to adjust for commercial deposits and capture only consumer and small business deposits; includes all commercial banks, credit unions, savings banks, and savings institutions as defined by the FDIC

[2] Named competitors are excluded from the Super Regional bucket; Super Regionals defined as banks ranked 7-50 in retail deposit volume per SNL (minimum retail deposits in the group ~$10B), PNC, and TD Bank; Regionals defined as banks ranked 51-150 by retail deposits (minimum retail deposits in the group ~$2.9B); Community banks defined as all other institutions

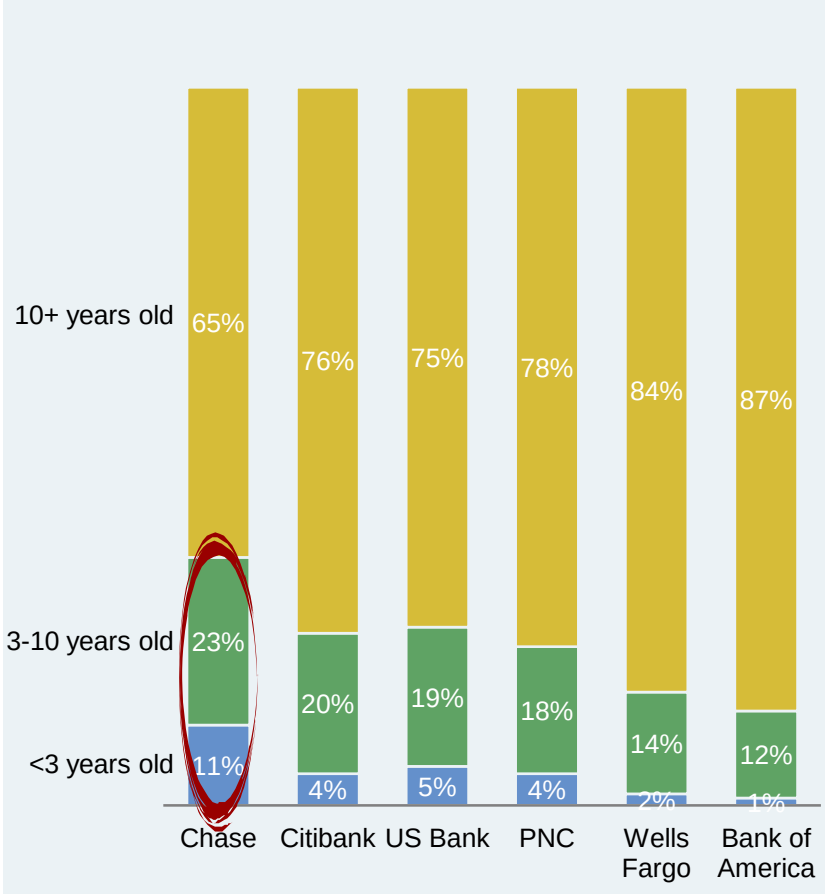
Investment balance growth is at record levels

Client investment assets ($B)



Source: Chase internal data

Key takeaways



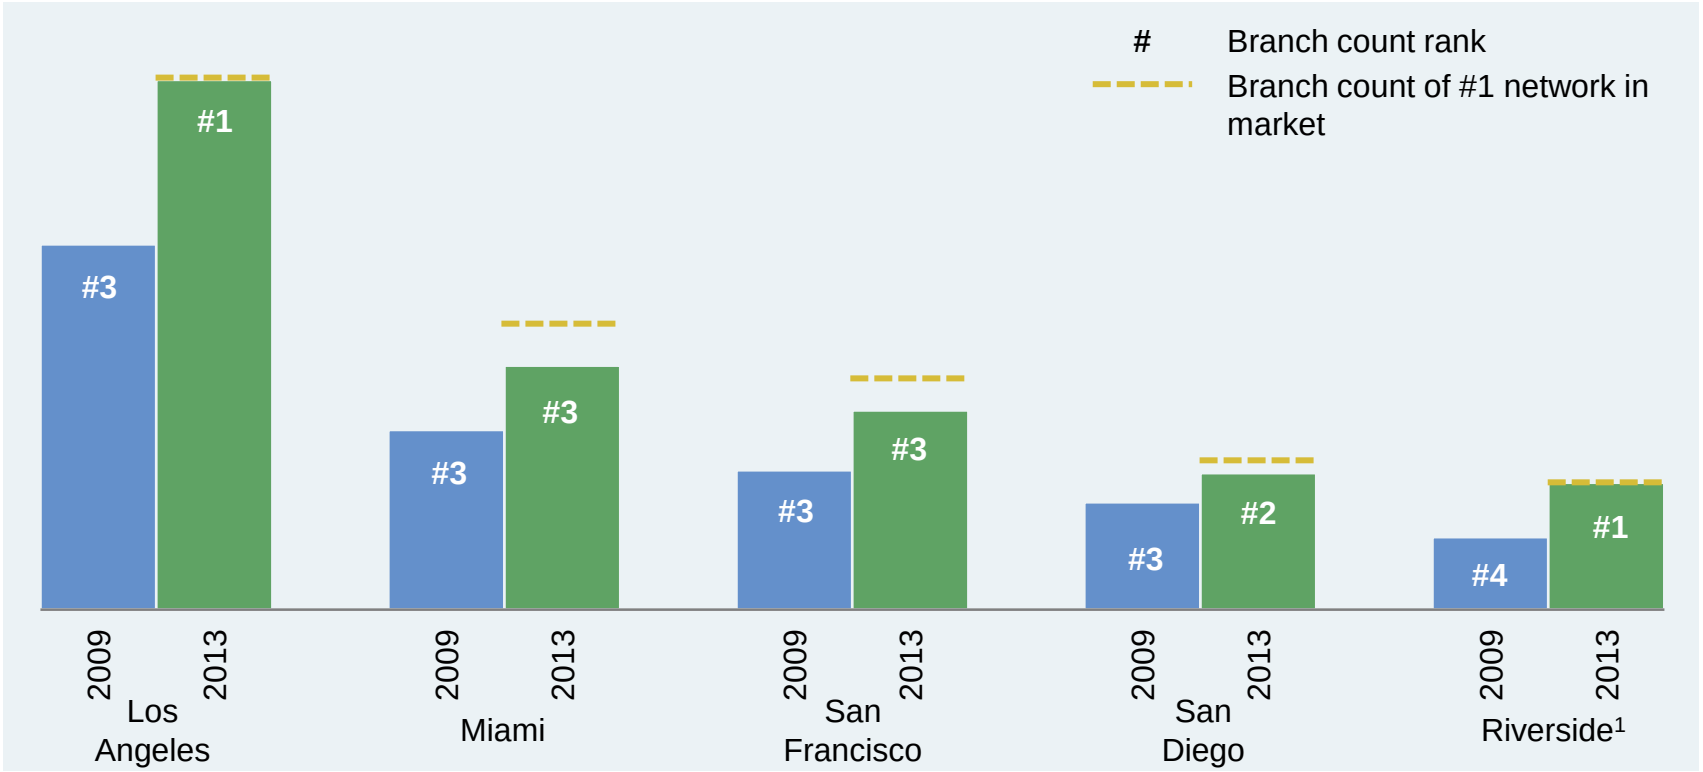
- Investments are critical to becoming our customers' primary bank
- Growth has been driven by $33B of net new investment flows over the past 3 years
- 70% of revenue is fee-based
- Chase Private Client is key to more investment relationships with our currently deposit-only clients
- We are leveraging JPM Asset Management product capabilities and infrastructure to support further investment growth

Our investments in the network will continue to drive future growth

Typical branch consumer household growth

Branch network age (%)

1/3 of our branches are in the growth phase



Source: Internal Chase data; SNL Financial
Note: Excludes branches for which SNL lacks open date information

Core elements of strategic vision

Optimize our branch network	■ Branch footprint ■ Transactions to advice
Lower cost-to-serve	■ Efficiency through innovations ■ Branch staffing models
Deepen relationships	■ Become customers' primary bank ■ Chase Private Client

We have completed our build-out in key expansion markets, resulting in an attractive footprint

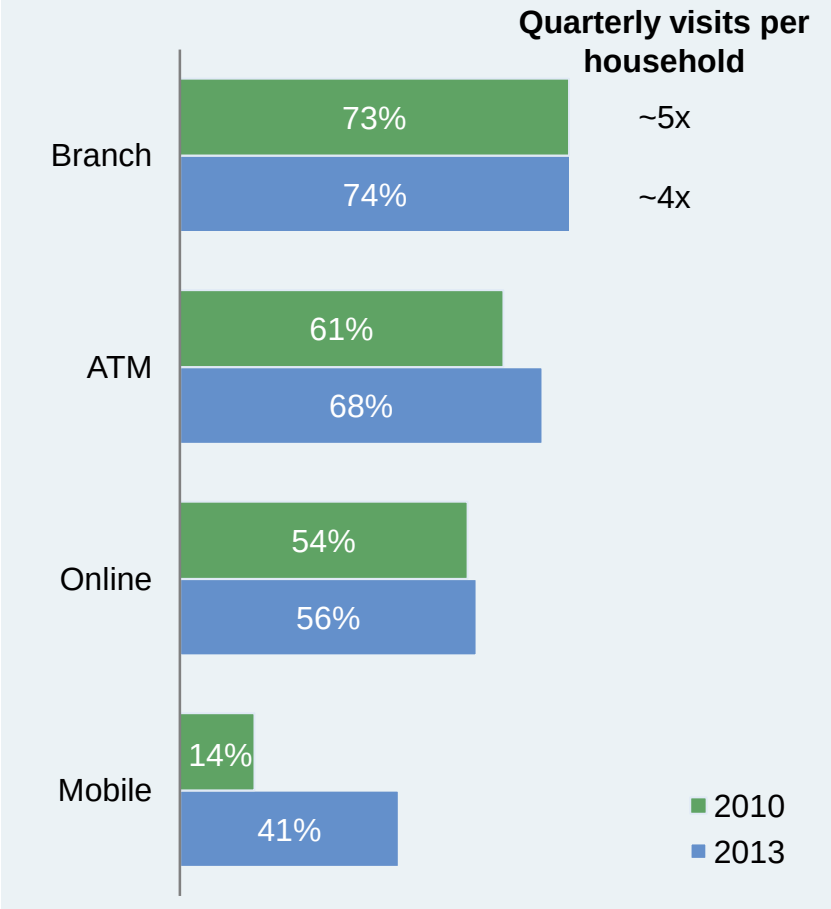
Chase branch count and rank in select expansion markets

Key highlights

- ~2/3 of new builds in California and Florida
- #1 branch share in the top three deposit markets
- Markets in our footprint account for ~2/3 of deposit and investment opportunity in the U.S.[2]

Source: SNL Financial; Chase internal data
[1] JPMC is tied for #1 branch count rank in Riverside
[2] Market indicates Core Based Statistical Area

We will continue to optimize our network



Network activity

		2011	2012	2013
Beginning branch count		5,268	5,508	5,614
Network management	Total new branches opened	282	179	156
	New builds	*260*	*150*	*132*
	Relocations	*22*	*29*	*24*
	Total branches closed	(42)	(73)	(140)
	Consolidations	*(20)*	*(44)*	*(116)*
	Relocations	*(22)*	*(29)*	*(24)*
	Net branches opened	240	106	16

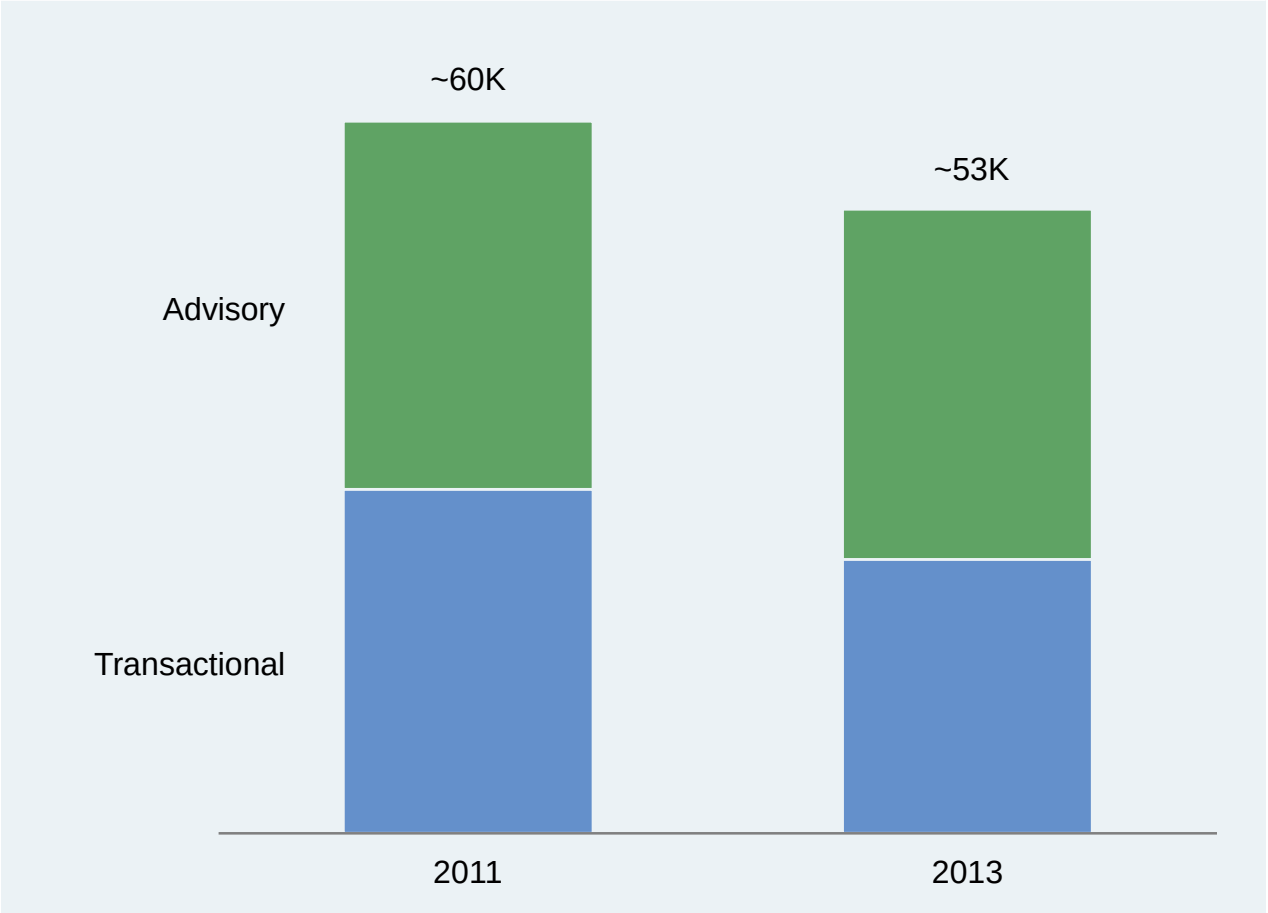
[2] Data for fourth quarter; includes ATM / Express Banking Kiosk and mobile

We are optimizing how we run our branches …

Traditional branch

Branch of the future



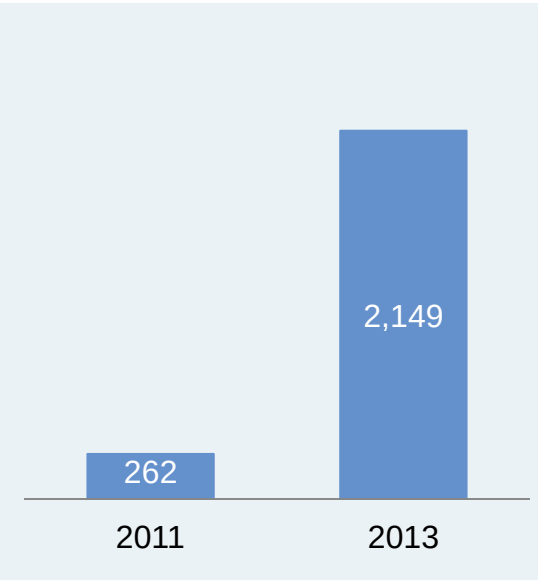
Branch headcount	9	6	↓
% advisory staff[1]	40%	60%	↑
# Express Banking Kiosks	0	2	↑
# of offices	1	3	↑
Square footage	4,400	2,500-3,500	↓

[1] Advisory staff includes Bankers, Business Banking Relationship Managers, Financial Advisors; Transactional staff includes Tellers, Sales & Service Associates, Branch Managers, and Assistant Branch Managers

… which has enabled us to reduce branch staff

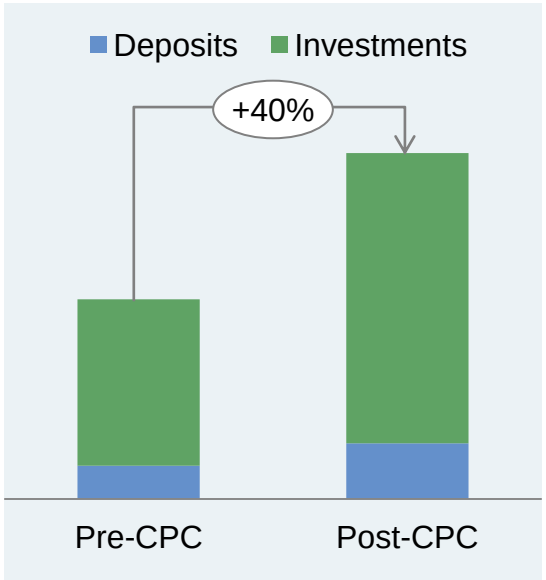
CBB year-end network branch staff[1]

Key takeaways



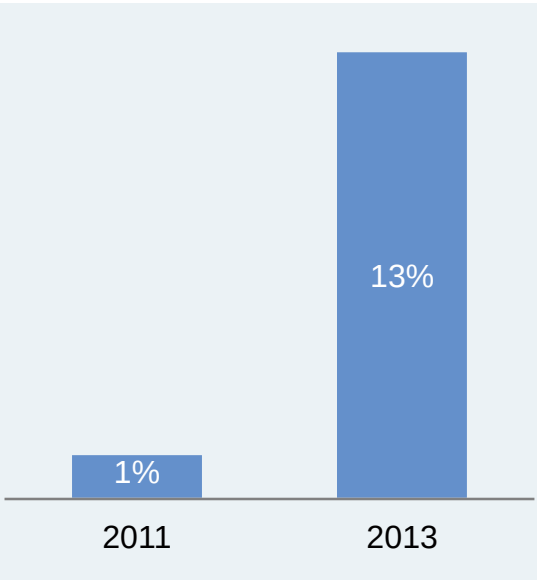
- 2/3 of branch expenses are people-related
- Overall branch staff is down 7K over the last two years
- Expect continued staffing declines as customer self-service trends continue

Source: Chase internal data



[1] Includes Tellers (FTE), Bankers, Assistant Branch Managers, Sales & Service Associates, Financial Advisors, and Business Banking Relationship Managers; excludes Branch Managers

Chase Private Client has deepened relationships with our affluent customers



Branches offering Chase Private Client

Average deposits & investments per CPC household ($K)

CPC penetration of eligible households[1]

Key takeaways

- CPC roll-out is largely complete; now offered in 2,000+ branches covering 70% of our affluent clients
- Clients are growing their relationships with Chase
- Significant progress in penetrating affluent households
  - 1/3 of the way to our $100B target
  - Substantial opportunity remains

Source: Chase internal data

[1]CPC-eligible household defined as Segment III households in the CPC footprint; yearly penetration calculated based on eligible household count as of year-end 2013

Summary

- Strong underlying performance drivers
- Our branch build-out and Chase Private Client expansion are largely complete and performing well
- We have an attractive footprint and will continue to optimize our network
- We are focused on operating our branches more efficiently and will continue to drive down cost-to-serve as customer behavior changes

Agenda

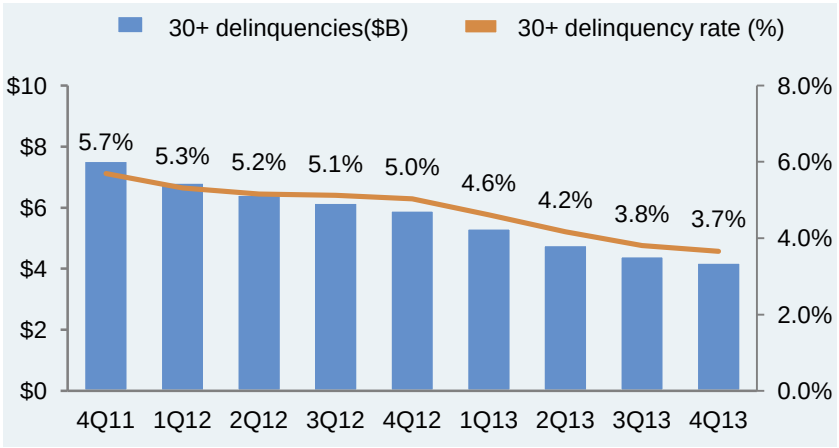
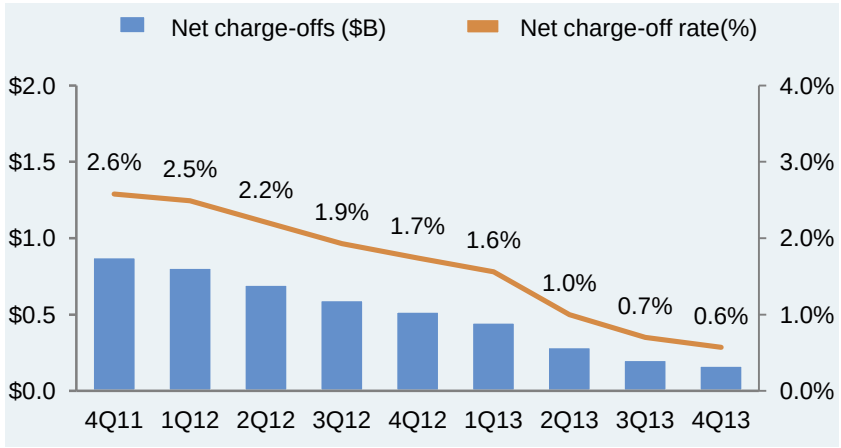
Home price index (HPI) – peak to September 2013

Months of inventory

30+ day delinquent units (K) through September 2013

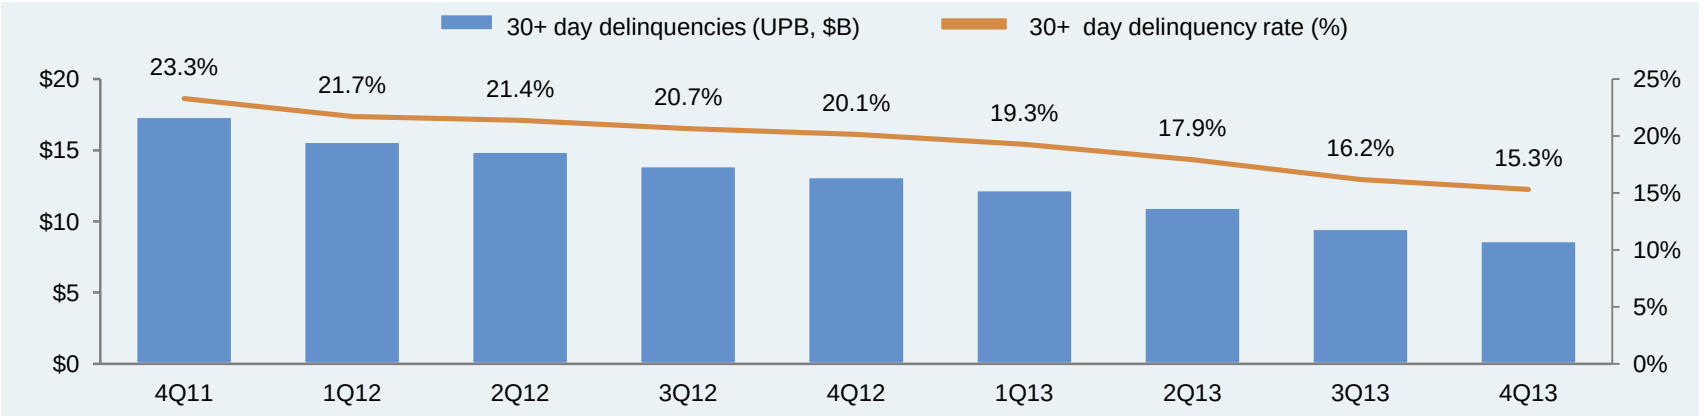


Source: CoreLogic; Realtor.org; Chase internal data



[1] Seasonally adjusted annualized

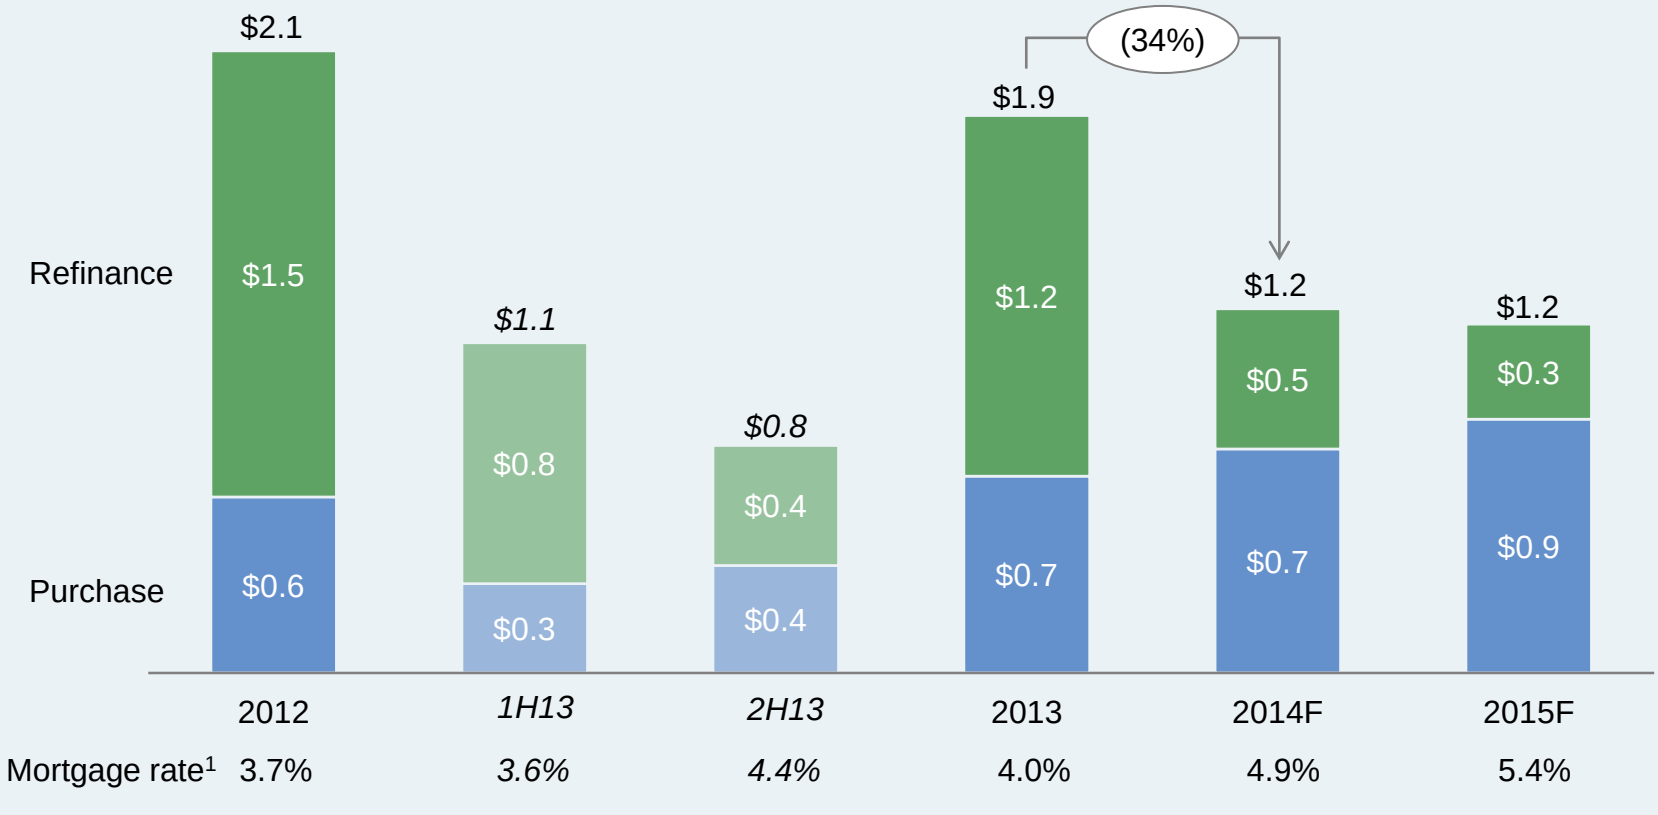
We continue to see improving credit performance in Real Estate Portfolios



Non-credit impaired 30+ day delinquencies[1]

Non-credit impaired net charge-offs[2]

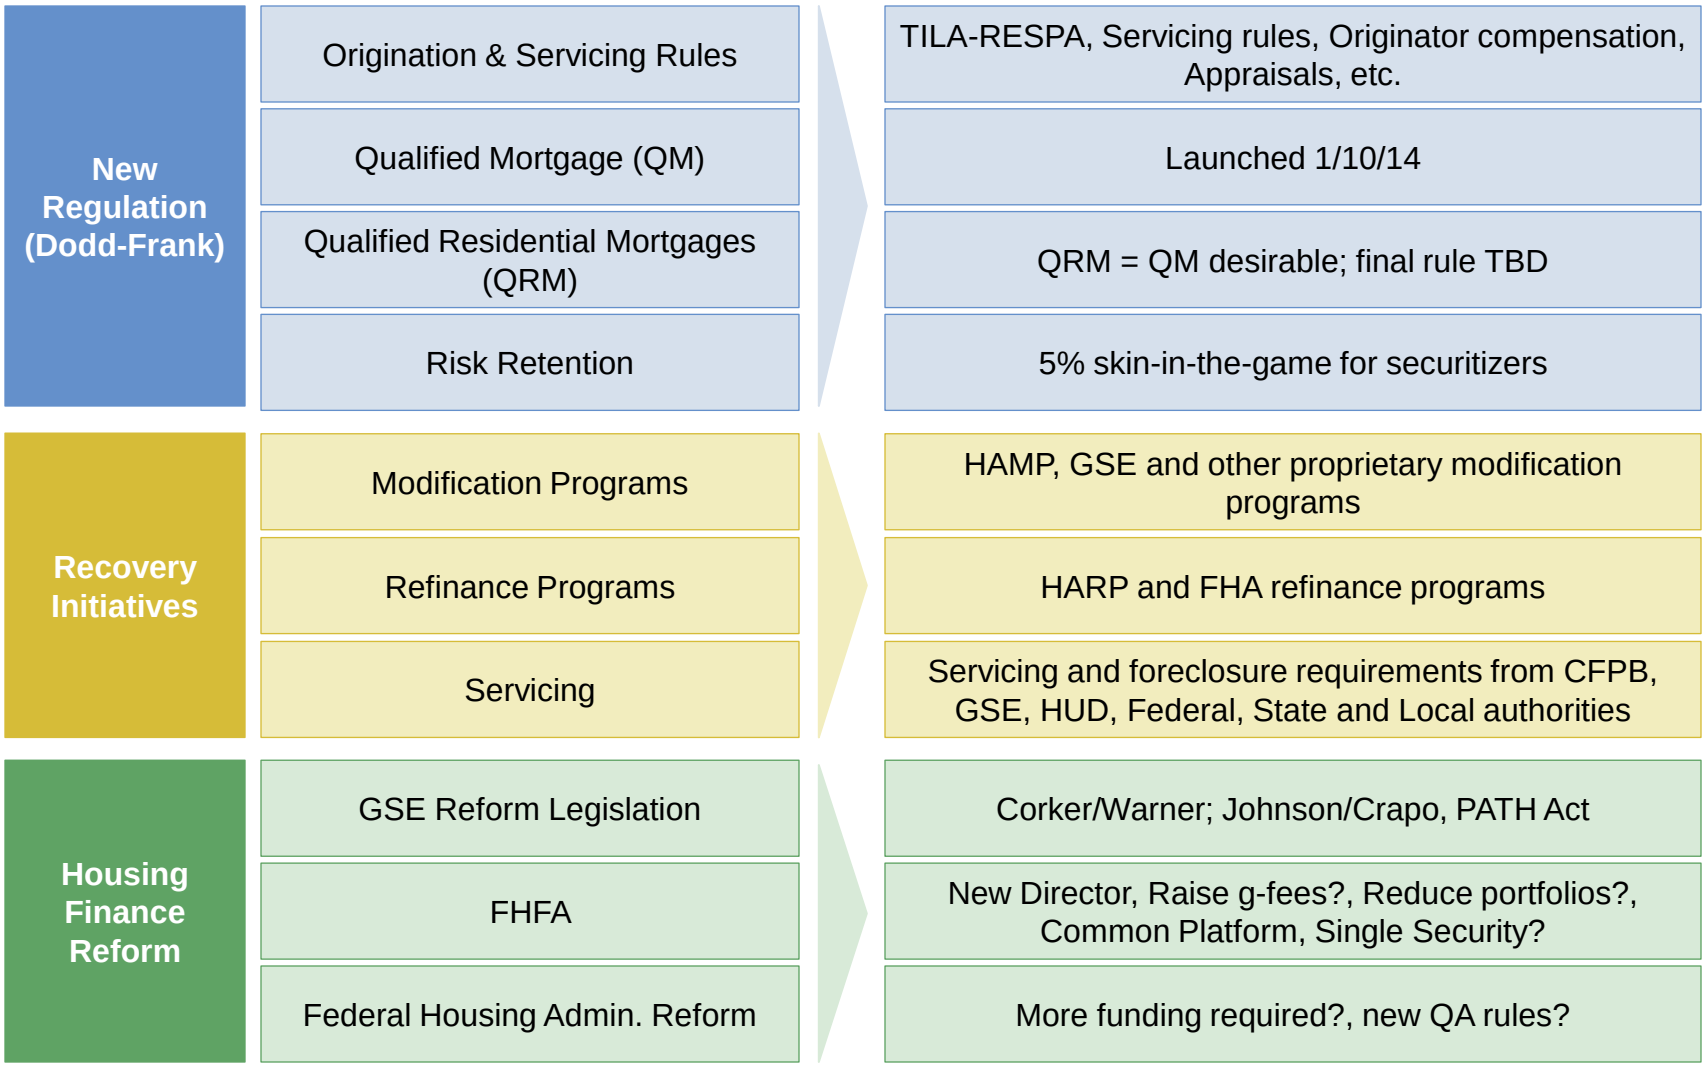
Purchased credit-impaired 30+ day delinquencies



Source: Chase internal data

[1] Based on carrying value

[2] 3Q12 and 4Q12 net charge-offs exclude the effect of Chapter 7 Bankruptcy discharge adjustment based on regulatory guidance; 4Q13 net charge-offs exclude PCI write-offs of $53mm

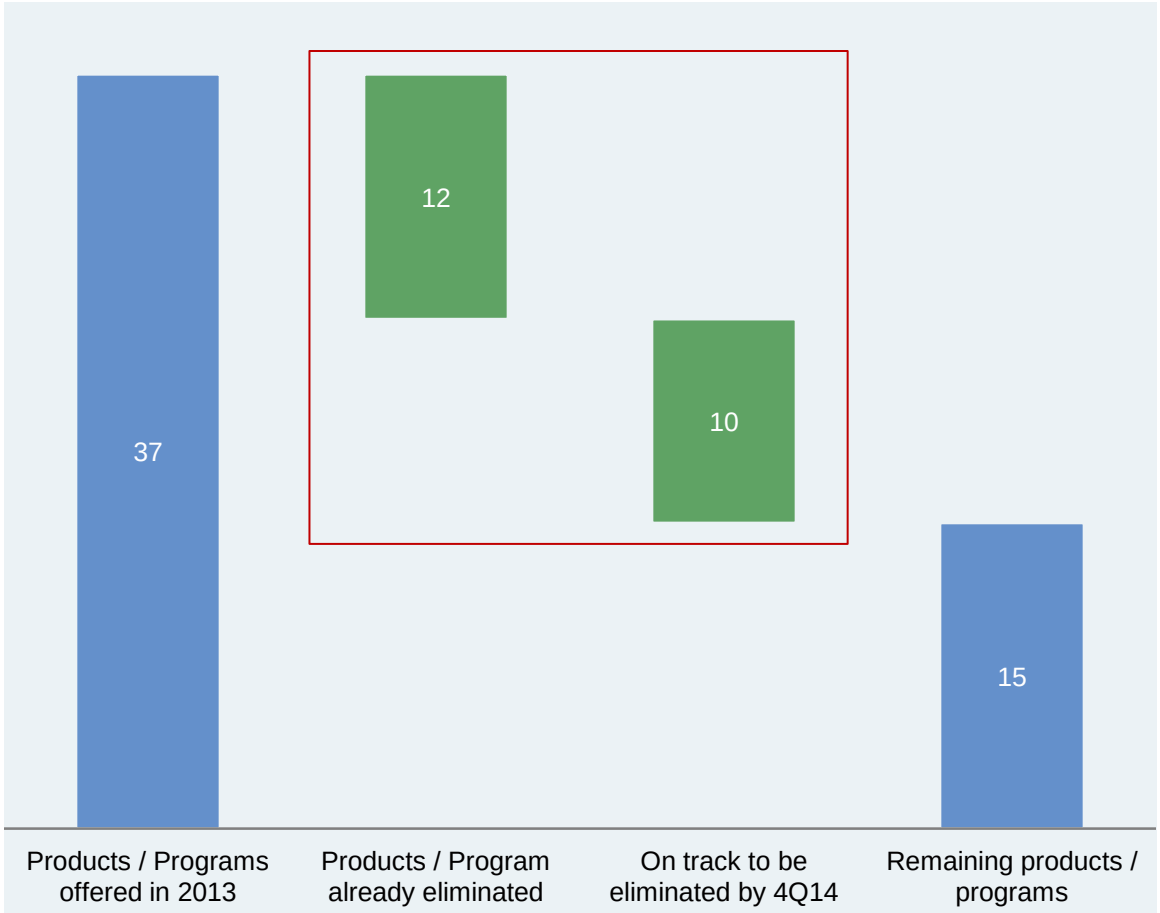


The mortgage market is projected to decline 34% in 2014 and remain relatively flat in 2015

Market size ($T)

Note: 2012 through 2013 Inside Mortgage Finance; 2014F - 2015F reflects average of forecasts from Fannie Mae (1/10/14), Freddie Mac (1/16/14), and MBA (1/14/14)
[1] Mortgage rate reflects conforming 30-yr PMMS (Primary Mortgage Market Survey) rate issued by Freddie Mac

Significant regulatory and legal complexity exists



Despite the challenges and complexities, we are committed to being in the mortgage business and will adjust our business model to be successful over the long-run

Production	■ Simplify our product set and invest in new technology to enhance the customer experience ■ Leverage our balance sheet ■ Price to reflect higher servicing risks and expense
Servicing	■ Actively manage down our default inventory ■ Smaller, higher quality servicing book ■ Continue to invest in technology to improve operations

Our efforts will lead to a smaller, less volatile, and higher quality mortgage business

We are simplifying our product set to reduce complexity and further de-risk the business

Product / Program simplification

Source: Chase internal data

Examples of eliminated Products / Programs

- Agency Interest Only Fixed / ARM
- Partnership Rewards Program
- Non-agency relationship credit program (NARC)
- Annual Renewal / Draw HELOC
- 2nd Lien Home Equity Loan

We will continue to invest in technology to enhance the home financing process for customers

Example: Chase My New Home Mobile App

- Mobile app launched in 4Q12 to help customers find and finance a home
- Critical to capture mortgage customers via mobile / internet
- 360,000 app downloads to date

Example: Mortgage Express

- We continue to build out a new originations platform that leverages technology and process, leading to best-in-class customer satisfaction
  - Reduced originations operations expense as a result of efficient and consistent processes
  - Better customer experience by providing better loan tracking through process and lower, more consistent cycle times

We have seen strong improvements in customer satisfaction

Our mortgage penetration of Chase Private Client households continues to improve

% of Chase Private Client households that originated a mortgage with Chase[1]

Source: Chase internal data

[1] Of those households that originated a mortgage during each specified time period

Key drivers of success

- Strong partnership between the CPC Bankers, Advisors, and Mortgage Bankers
- Compelling value proposition
  - Closing cost discounts
  - Dedicated processing and underwriting queue
  - Expanded credit and specialty underwriting review
  - Enhanced servicing
- Proactive pipeline management
- Enhanced CPC training and marketing tools

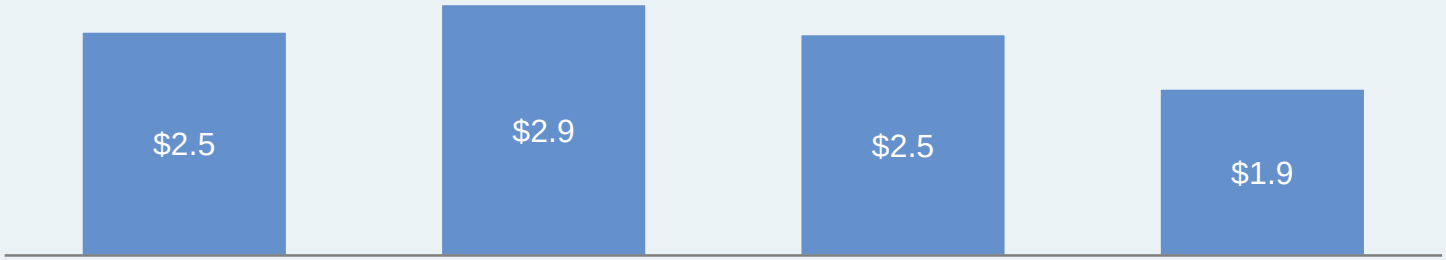
Leverage our balance sheet: Real Estate Portfolios simulation

Real Estate Portfolios — simulated ending loan balance runoff and pretax income ($mm)

	2010	2011	2012	2013	2014F	2015F
Ending Balances ($B)	$223	$198	$177	$168	$170	$175
Ongoing ($B)	*37*	*36*	*36*	*46*	*65*	*85*
Legacy ($B)	*186*	*162*	*141*	*122*	*105*	*90*
Net revenue	$5,547	$4,592	$4,092	$3,512	$3,000	$2,800
Net charge-offs[1]	6,450	3,805	3,341	1,107	450+/-	400+/-
Change in allowance[1]	1,781	(230)	(3,850)	(3,800)	TBD[2]	TBD[2]
Expense	1,627	1,521	1,653	1,553	1,300	1,100
Pretax income / (loss)	**($4,311)**	**($504)**	**$2,948**	**$4,652**	**$1,250+/-**	**$1,300+/-**
Pretax income / (loss) excluding change in allowance	**($2,530)**	**($734)**	**($902)**	**$852**	**$1,250+/-**	**$1,300+/-**

Commentary

- Ongoing loan growth driven by higher jumbo originations as well as increased retention of conforming-eligible loans
- Quality of legacy loans continues to improve



Source: Chase internal data

[1] Net charge-offs exclude purchased credit-impaired (PCI) loans; net charge-offs and change in allowance exclude $53mm of PCI write-offs in 2013

[2] Future reserve actions not simulated

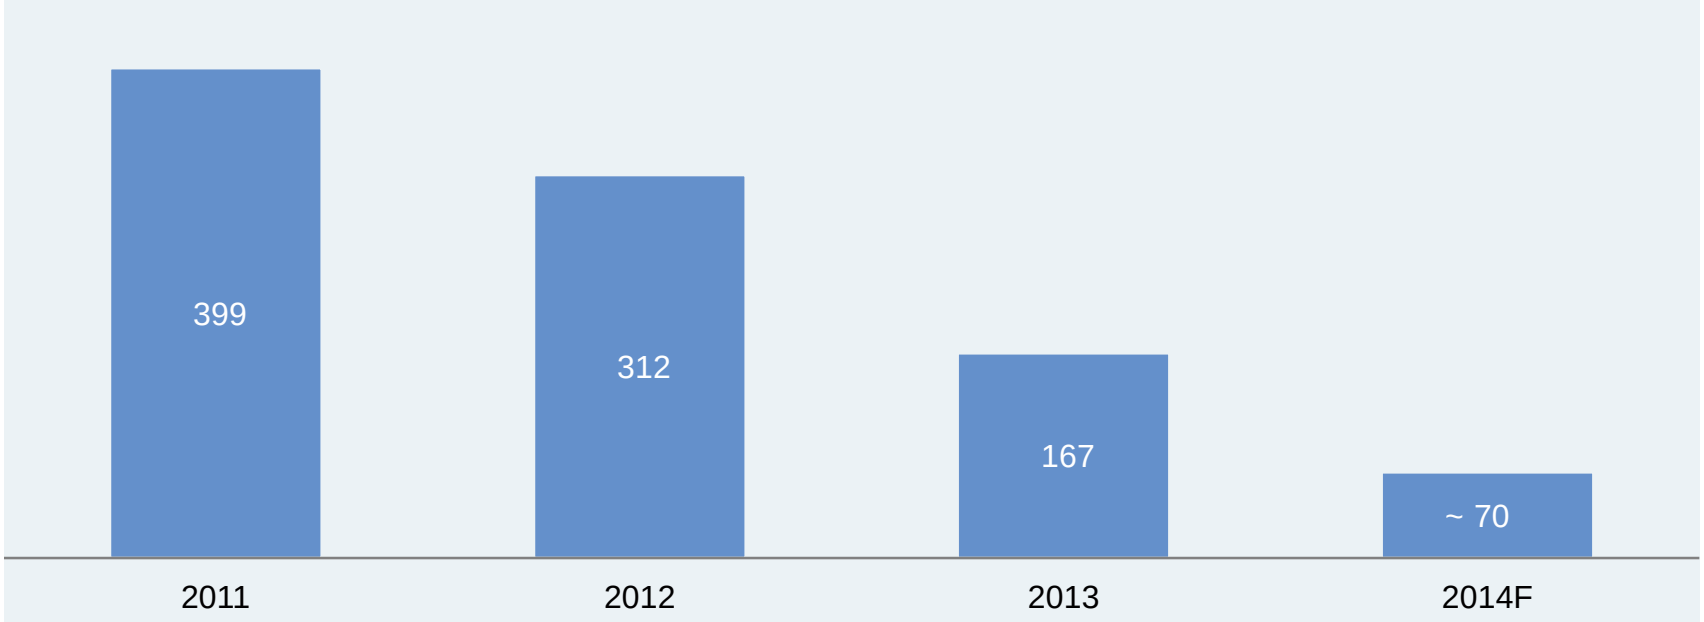
We are investing in the future, but the next few years will be challenging

Production expense[1] ($B)

	2012	1H13 Annualized	2H13 Annualized	2014F
Market size[2]	$2.1T	$2.2T	$1.6T	$1.2T

Commentary

- Given headwinds, anticipate Mortgage Production pretax income to be negative in 2014
- Expect 2014 production expense to decline ~30% from 2013
- Initiatives to improve profitability include:
  - Investing in technology to improve operational efficiency
  - Optimizing retail loan officer coverage based on local market opportunity
  - Continuing to utilize centralized call centers for lower opportunity geographies
  - Maintaining price discipline for risk adjusted returns as opposed to market share



Source: Chase internal data

[1] 2012 and 2H13 production expense and pretax margin (%) normalized to exclude $0.2B and $0.4B of non-MBS-related legal expense, respectively

[2] Inside Mortgage Finance for 2012 and 2013. 2014F reflects average of forecasts from Fannie Mae (1/10/14), Freddie Mac (1/16/14), and MBA (1/14/14)

In Servicing, we are actively managing down our existing default inventory to reduce expense

Foreclosure inventory (K)

Commentary

- Reduction in default volume and increased efficiencies in core servicing will continue to drive servicing and default costs down
- Expect servicing and default expense of $500mm+/- in 4Q14

Source: Chase internal data

Core servicing is an attractive business

- We have competitive advantages in core servicing
  - Funding advantages
  - Mortgage Servicing Rights (“MSR”) risk management expertise
  - Higher barriers to entry due to required compliance and controls infrastructure
- We will continue to invest in technology
  - Improved process and technology workflow for customer service representatives
  - Leverage voice recognition software analytics to effectively manage incoming call volume
  - Improve customer adoption of paperless and self-service

Going forward, our business will have lower risk and volatility

In $mm, except where otherwise noted	2013	2013 Investor Day through-the-cycle	Through-the- cycle
Pretax Income			
Mortgage Production	$825	$1,500	$1,000
Mortgage Servicing	($372)	$1,000	$600
Real Estate Portfolios	$4,652	$1,000	$1,100
Mortgage Banking	**$5,105**	**$3,500**	**$2,700**
Key statistics / assumptions			
Mortgage Production			
Market volume	$1.9T[1]	$1.5T	$1.5T
Mortgage Servicing			
Third-party mortgage loans serviced[2]	$816B	$1.0T	$600B
Real Estate Portfolios			
Loans (end of period)	$168B	$125B	$175B
Net charge-off rate[3]	96bps	35bps	25bps+/-[4]

Source: Chase internal data
[1] Inside Mortgage Finance
[2] Mortgage only
[3] Excludes purchased credit-impaired (PCI) loans; 2013 actuals exclude PCI write-offs of $53mm
[4] Through-the-cycle net charge-off rate of 25bps+/- will depend on portfolio mix of mortgage and home equity

Key changes from last year

- Originations pricing updated to reflect servicing risk resulting in:
  - Lower modeled market share
  - Smaller, higher quality servicing book
  - Less exposure to default servicing
- Greater percent of loans originated for portfolio; continue best execution

Summary

The business will face challenges in the near term…

- Production: pretax income to be negative in 2014
- Servicing: expect servicing and default expense of $500mm+/- in 4Q14
- Real Estate Portfolios: ~$1.25B in pretax income excluding changes in reserves in 2014

…but we are taking steps to return the business to profitability

- Build a streamlined and simpler business
- Actively de-risk the business
- Rightsize production
- Strategically invest in technology to create a unique customer experience

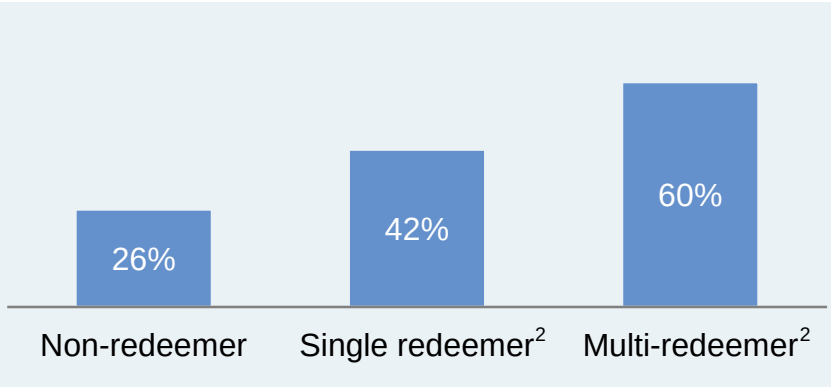
Core elements of strategic vision

Deliver best-in-class rewards	■ Continue to build and market Ultimate Rewards and Co-brand partner products ■ Leverage “non-point” value proposition
Drive digital engagement	■ Continue digital innovation ■ Improve customer experience by providing access through preferred channels ■ Drive cost efficiencies
Lead payments innovation	■ Deliver innovative payment solutions to both consumers and merchants ■ Rapidly scale via large existing consumer and merchant base ■ Leverage ChaseNet to deliver seamless online and mobile payment solutions, enabled by control over entire transaction

Creating a single rewards platform through Ultimate Rewards has improved the customer experience while lowering cost-to-serve

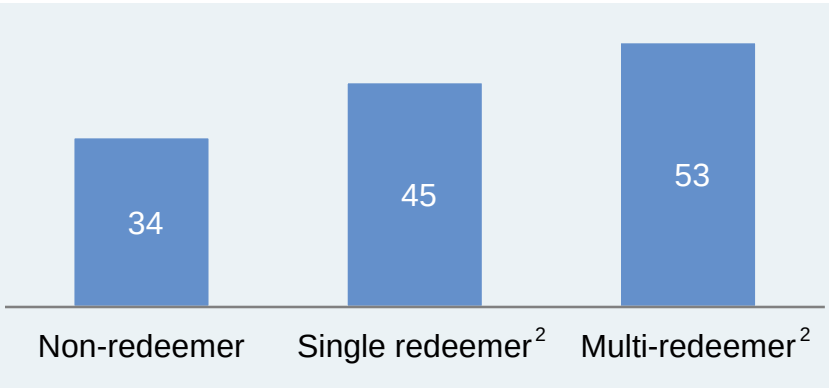
Greater engagement and satisfaction

- Since launch of Ultimate Rewards:
  - Percentage of accounts actively spending up 18 percentage points[1]
  - Spend on those accounts up 37%[1]
- UltimateRewards.com website customer satisfaction rating of 83 out of 100[2]
- More than 50% of Ultimate Rewards accounts are actively engaged in the rewards program



Improved servicing efficiencies

- 78% of Ultimate Rewards redemptions now occur through digital channels
- The percentage of redemption orders processed by a Customer Service Specialist has decreased by 11 percentage points
- Customer communication has been migrated to digital channels



[1] Based on Chase branded rewards accounts excluding Commercial Card and certain terminated partners, comparing full year 2008 to full year 2013
[2] Ultimate Rewards had a ForeSee® online satisfaction rating of 83 in the month of December. ForeSee is a registered trademark of ForeSee Results, Inc.

We will continue to build on our successful rewards products

[4] Consumer Card and Small Business

Our proprietary ChaseNet platform has been launched …

ChaseNet

Consumer **Merchant**

Progress to date

- ✓ Platform launched as planned
- ✓ In pilot mode with select merchants
- ✓ Streamlined operating standards in place
- ✓ System tested and scalable

… enabling us to deliver an enhanced experience to consumers and merchants

Consumer

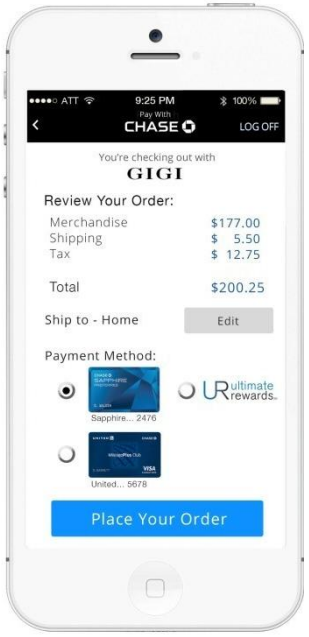
- "Quick Checkout" – simplified checkout for online/mobile payments
- Targeted merchant offers
- Pay with points
- Chase Wallet

Merchant

- Deliver a new, simple payment option to customers
- Simplified pricing
- Lower shopping cart abandonment
- Reduced fraud leveraging tokenization
- Deliver targeted merchant offers

We will deliver a simplified checkout experience for Chase cardholders and merchants, positioning us to become the preferred digital "way to pay"

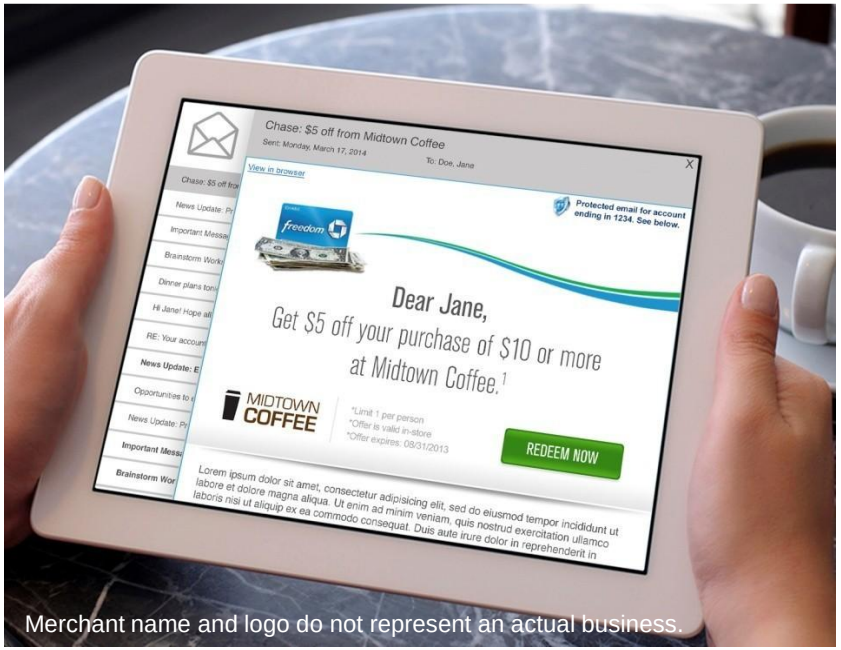
Chase "Quick Checkout"



1 Consumer sees product and payment options

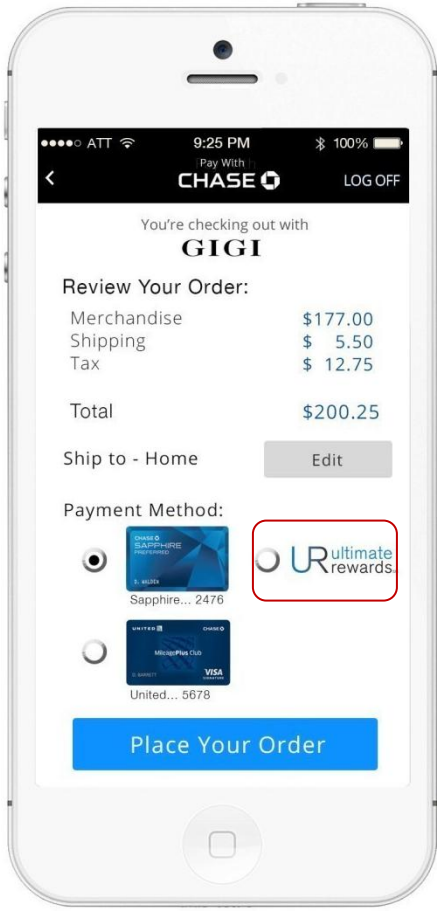
2 Consumer logs into Chase digital wallet

3 Consumer confirms information and places order



- Auto-fill shipping address, address changes, new card numbers
- Online / mobile checkout in **~30 seconds vs. 2 minutes**
- 34mm[1] active online users on "day 1"

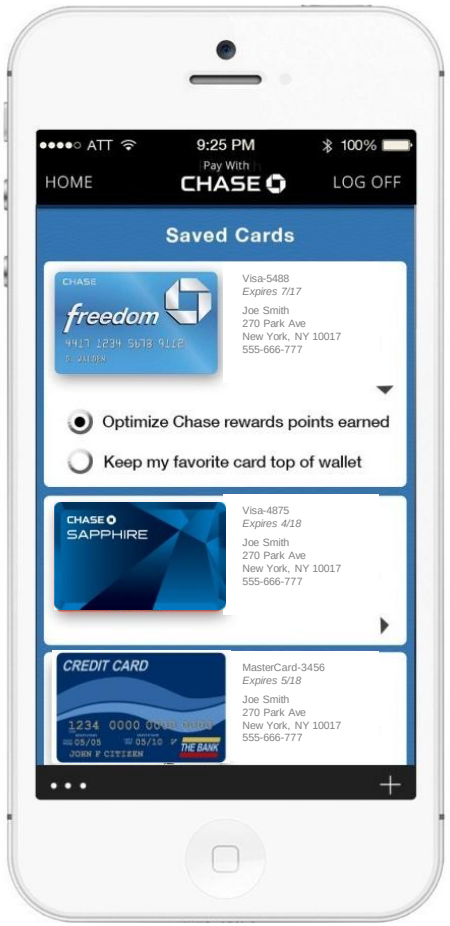
[1] Chase customers using internet browsers and mobile platforms who have been active in the past 90 days



We are also developing new ways to bring merchants and customers together

Compelling offers

- ChaseNet allows merchants to tailor offers based on customer behaviors and specific purchase history



Pay with points

- Leverages card and Ultimate Rewards customer base
- Access to new currency for both merchants and consumers

Chase Wallet will make online and mobile shopping simple

Chase Wallet

Auto-population of all Chase cards

With 100mm+ open cards, we can scale very quickly[1]

Auto-update of Chase cards when lost/stolen/expired

Customers won't have to re-enter card information

Allow non-Chase products

Open platform to boost adoption and convenience

[1] Includes consumer and small business credit, debit, and prepaid cards

We are also focused on ensuring the safety and security of all transactions

Tokenization replaces real account data with a highly secure "token" which is useless when taken out of the secure environment

1 **Wallet** sends token to **Merchant**

2 **Merchant** sends token for approval

3 **Chase** responds with approval

Tokenization will reduce fraud

Summary

- Underlying performance drivers are strong, and we continue to gain market share of general purpose credit card sales volume
- Credit quality of our portfolio is excellent; credit trends remain positive
- Tight focus on expense management resulting in a strong efficiency ratio
- Adoption of digital channels continues to enhance the customer experience and lower costs
- Strength of our issuing and acquiring businesses positions us well to innovate in payments

The Chase Consumer & Community Banking ("CCB") franchise has leadership positions across all businesses

Strong financial returns	■ FY 2013 ROE: CCB: 23%; Consumer & Business Banking ("CBB"): 26%; Mortgage Banking: 16%; Card, Merchant Services & Auto: 31%
Powerful customer franchise	■ Consumer relationships with almost half of U.S. households ■ #1 in customer satisfaction among the largest banks for the 2nd year in a row[1]
Firmwide capabilities to meet customer needs	■ Chase Private Client integration with J.P. Morgan Private Bank investments platform ■ Business Banking access to Commercial Bank specialty lending and Treasury Services
Attractive footprint	■ Branch network concentrated in the highest growth U.S. markets ■ #1 ATM and #2 retail branch network for the 2nd year in a row[2]
Leading position in digital banking	■ #1 online financial services destination (Chase.com)[3] and #1 mobile banking functionality[4]
World-class payments franchise	■ #1 in total U.S. credit and debit payments volume[5] ■ #2 wholly-owned merchant acquirer[6] ■ Proprietary end-to-end payments solution
National, scale lending businesses	■ #1 credit card issuer in the U.S. based on loans outstanding[7] and #1 U.S. co-brand credit card issuer[7] ■ #2 mortgage originator[8] and servicer[8] ■ #3 non-captive auto lender[9]

Notes on slides 2 and 67 – The scope and quality of the Chase Consumer & Community Banking ("CCB") franchise would be nearly impossible to replicate

1. Based on the American Customer Satisfaction Index
2. Based on disclosures by peers as of 4Q13
3. Per compete.com as of December 2013
4. Forrester Research's 2013 Global and U.S. Mobile Banking Functionality Rankings
5. Based on Nilson Report as of May 2013
6. Based on Nilson Report ranking largest merchant acquirers for 2012
7. Based on disclosures by peers and internal estimates as of 4Q13
8. Based on Inside Mortgage Finance as of 4Q13
9. Per Auto count data for December 2013 YTD

Notes on slide 8 – Customer experience continues to improve…

1. Source: Chase internal relationship surveys; NPS = % promoters minus % detractors
2. J.D. Power U.S. Retail Banking Satisfaction Study 4/18/13 and 1/1/10; among large bank peers
3. J.D. Power U.S. Small Business Banking Satisfaction Study Results 10/31/13 and 10/21/10; ranking system changed from national to regional ranking in 2013
4. J.D. Power U.S. Credit Card Satisfaction Study 8/22/13 and 8/19/10
5. J.D. Power U.S. Primary Mortgage Origination Satisfaction Study 11/14/13 and 11/18/10 and J.D. Power U.S. Primary Mortgage Servicer Satisfaction Study 7/18/13 and 8/26/10

Notes on slide 54 – Among affluent consumers, we are ahead of peers in consideration and are more consistently the primary card in wallet

1. Issuer-level consideration; survey question = “We’d like you to think about the next time you would choose a new credit card. How likely would you be to consider each of the following credit cards?”; % of survey respondents that selected one of the top 2 boxes (“Only one” or “one of 2 or 3 I would consider”) on a 5 point scale
2. Phoenix Global Wealth Monitor survey question for network = “Regarding your primary credit or charge card, the card that you charge the most dollars on: What type of card is it? (Select one)” and survey question for card = “What is the name of the company that issues your primary card?”

COMMERCIAL BANKING

Doug Petno, Chief Executive Officer of Commercial Banking

February 25, 2014

JPMorgan Chase & Co.

Commercial Banking

A proven business model

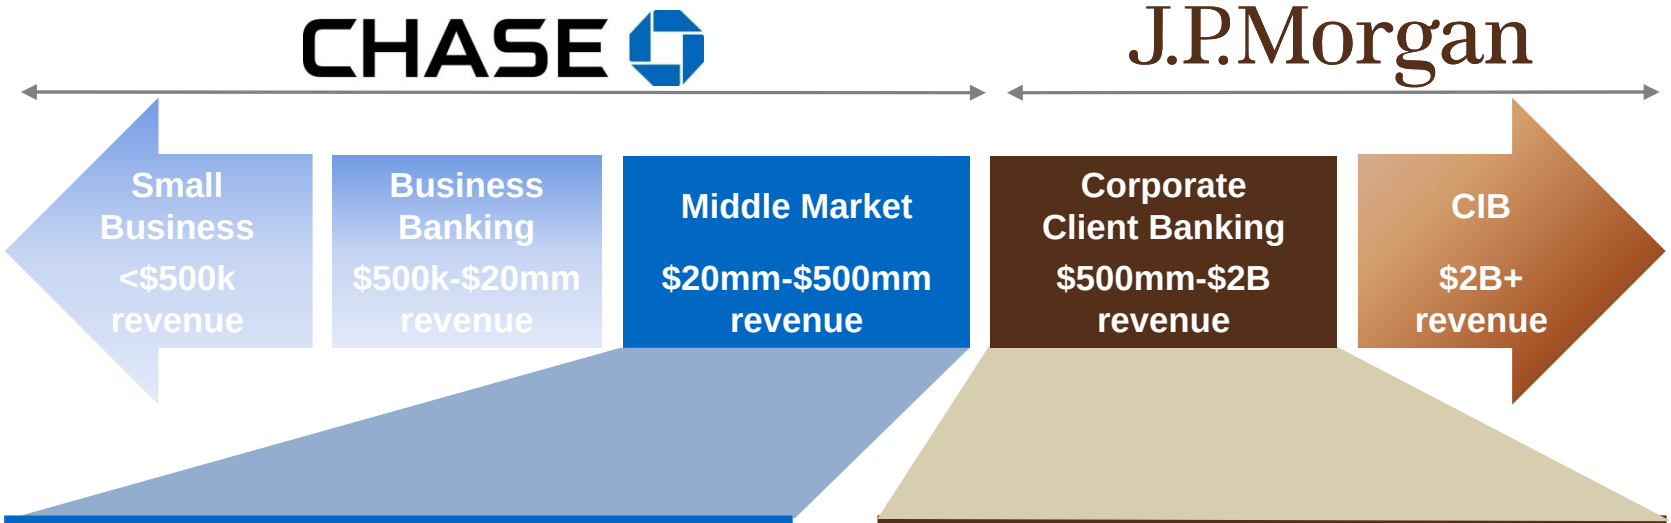
Franchise strength

- Platform aligned to best serve client needs
- JPMC's leading global capabilities delivered locally – unique competitive advantage
- Seasoned and experienced team deeply rooted in local communities
- High quality customer base through rigorous client selection and focus
- Best-in-class credit performance through the cycle
- Stable and resilient earnings

2013 performance

- Executing on core strategies – expanded and deepened client base
- Adapting to changing regulatory and market environment
- Strong 2013 financial results despite challenging environment:
  - Revenue: $7.0B
  - Net income: $2.6B
  - ROE: 19%

Outlook



- Challenging environment in 2014 but expected improvement in the medium/long-term
- At 9.5% Basel III capital, we will be able to absorb near-term pressures and continue to generate strong returns
- 2014 priorities: Continue to adapt to higher capital and regulatory requirements, maintain discipline and execute against our growth strategy

Agenda

	Page
Franchise strength	**2**
2013 performance	10
Outlook	18

Our business

Commercial & Industrial overview

Middle Market Banking

- 43% of CB revenues
- Long standing client relationships
  - ~19,000 clients, ~36,000 prospects
  - Includes government, nonprofit and healthcare clients
- Local delivery model
- #1 traditional MM syndicated lender in the U.S.[1]

Corporate Client Banking

- 26% of CB revenues
- Larger, mostly public companies with complex needs
  - ~1,600 corporate clients, ~1,100 prospects
  - Served by dedicated industry coverage teams
- Strong partnership with CIB – more than doubled IB revenues since 2006

Coverage model structured to best serve our clients' needs

Note: Data as of YE2013. Dollar ranges beneath segment title represent clients' annual revenue. Middle Market Banking abbreviated as MM. Corporate Client Banking abbreviated as CCB. CB's Commercial & Industrial (C&I) grouping is internally defined to include certain client segments (MM, which includes Government, Nonprofit & Healthcare Clients, and CCB) and will not align with regulatory definitions

[1] Thomson Reuters as of YE2013. Traditional MM is defined as credit facilities of < $100mm from clients with < $500mm in revenue

Our business

Commercial Real Estate overview

Commercial Term Lending

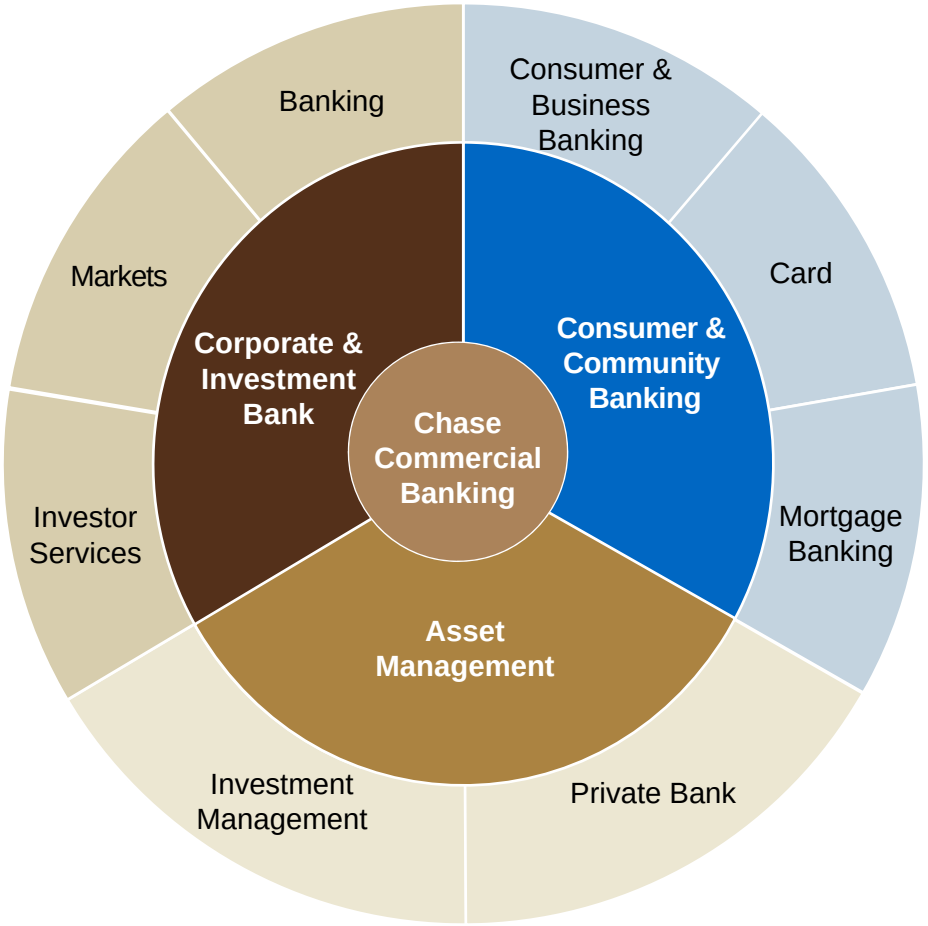
- 17% of CB revenue
- $49B in loans
- Stabilized properties
- Acquired with WaMu in 2008
- #1 multifamily lender in U.S.[1]

Real Estate Banking

- 8% of CB revenue
- $19B in credit commitments
- Top-tier sponsors
- Institutional quality assets
- Diversified portfolio and products

Community Development Banking

- 3% of CB revenue
- $4B in credit commitments
- Specialized construction lending for affordable housing



■ Uses Chase brand ■ Uses J.P. Morgan brand

Note: Data as of YE2013 except where noted. Commercial Term Lending abbreviated as CTL. Real Estate Banking abbreviated as REB. Community Development Banking abbreviated as CDB. CB's Commercial Real Estate (CRE) grouping is internally defined to include certain client segments (REB, CTL and CDB) and will not align with regulatory definitions

[1] SNL Financial based on FDIC data as of 3Q13

Our platform

A unique competitive advantage as a part of JPMC

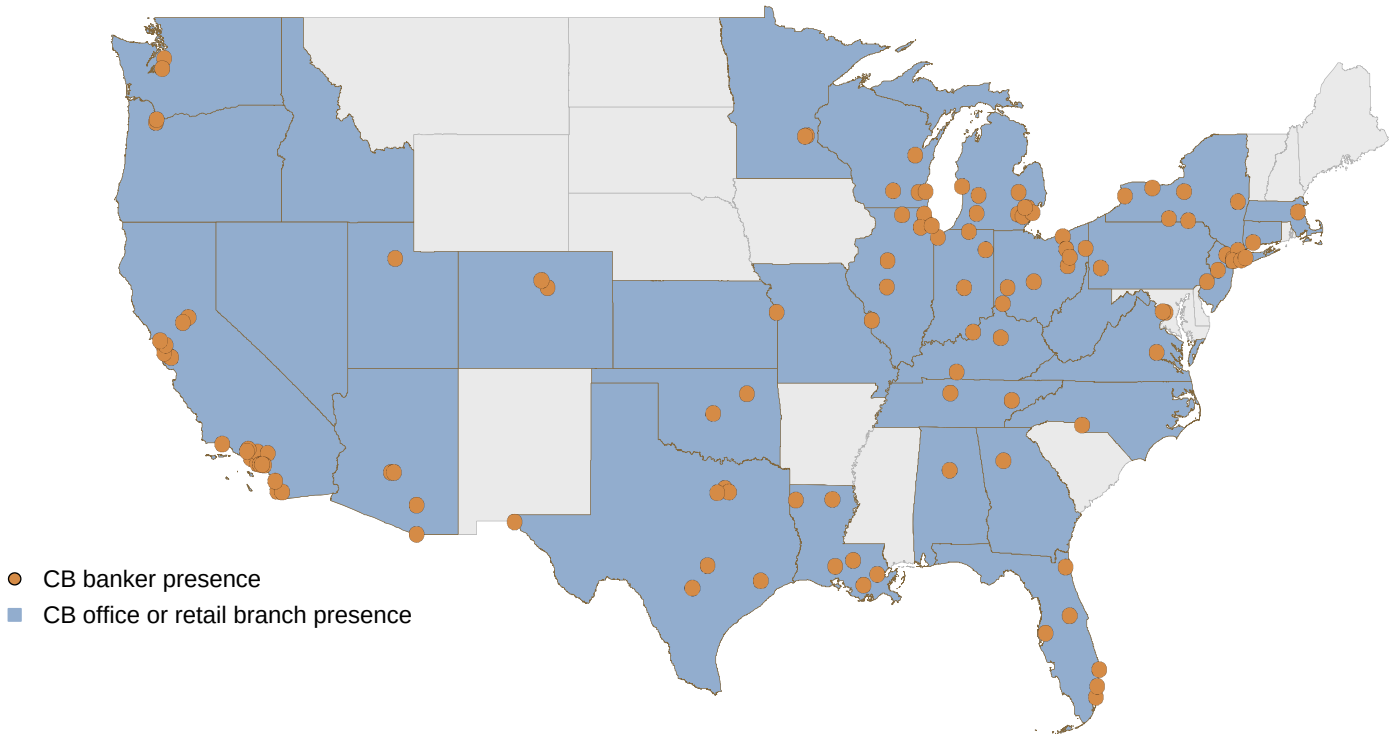
Corporate & Investment Bank

- Treasury Services revenue of $2.4B
- Record IB revenues of $1.7B

Consumer & Community Banking

- Card Services revenue of $438mm
- ~18mm branch transactions in 2013

Asset Management



- Investment Management revenue of ~$500mm
- ~$100B of AuM

Scale and stability | **Iconic brands** | **Access to talent** | **Broad product capability**

Note: Data as of YE2013. All cross-sell information represents gross revenue, transactions or assets generated by CB clients. Investment Banking (IB) includes Banking and Markets revenue. Card Services includes Commercial Card and Paymentech revenue

Our people and presence

Global JPMC capabilities delivered locally

- Presence in 119 U.S. cities, 40+ of the top 50 MSAs and 13 major international cities
- Leverages Chase's extensive branch network and CIB's presence in 60 countries
- ~1,300 bankers[1]; average 20+ years of industry experience

Single point of contact → **Local decision making** → **Rooted in local communities**

[1] Based on total number of revenue producing employees

Our clients

Rigorous client selection

Our client selection criteria

- Strategic clients with broad and complex needs
- Strong management track record
- Reputable in local markets
- Share our risk philosophy
- Preferred industries
- Transparent operations

Results in a high quality client base…

- Long-term, deep relationships: average of ~9 products/client
- Well-diversified portfolio of clients in our target segments
- Lower credit, operating and reputational risk
- We know our clients

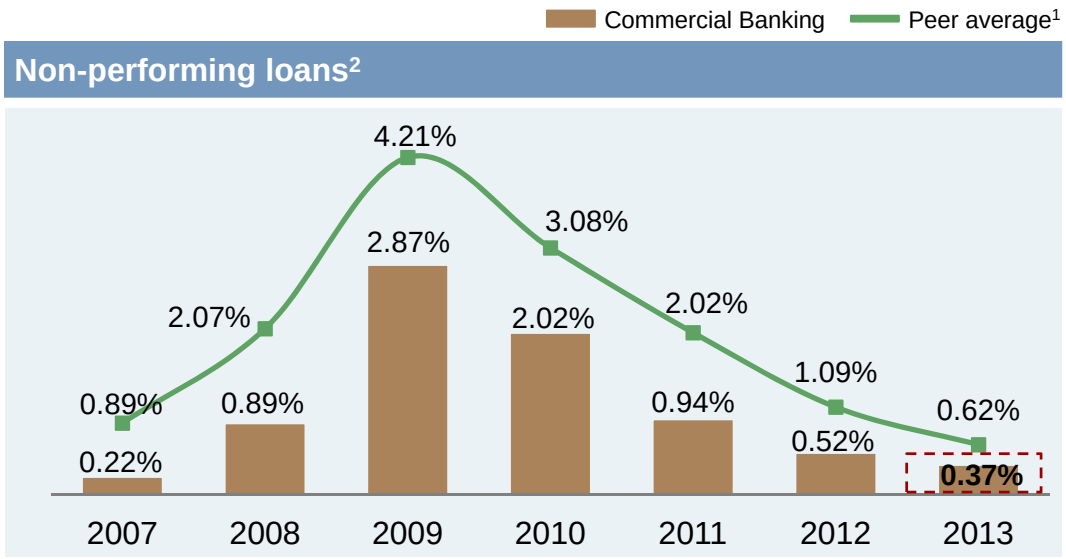
…and a positive impact on economics

- Higher revenue per client given broad product needs
- Lower cost-to-serve (e.g., capital requirements, on-boarding, monitoring)
- Greater earnings resiliency
- Stronger returns

Our credit culture and discipline

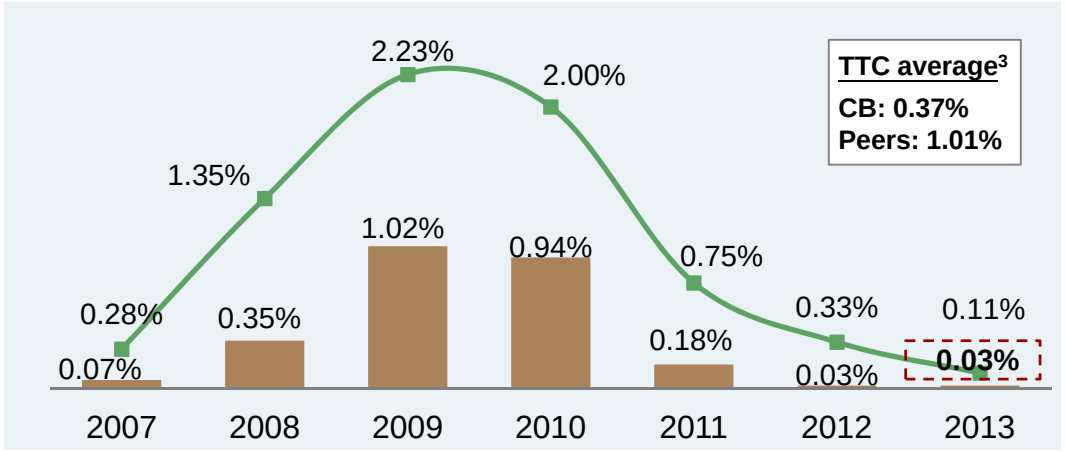
Through-the-cycle credit costs below our target of 50bps

Portfolio quality driven by…



Strong credit culture

- Discipline over growth
- Joint ownership between banking and risk teams
- Experienced credit and risk teams in market
- Deep local knowledge

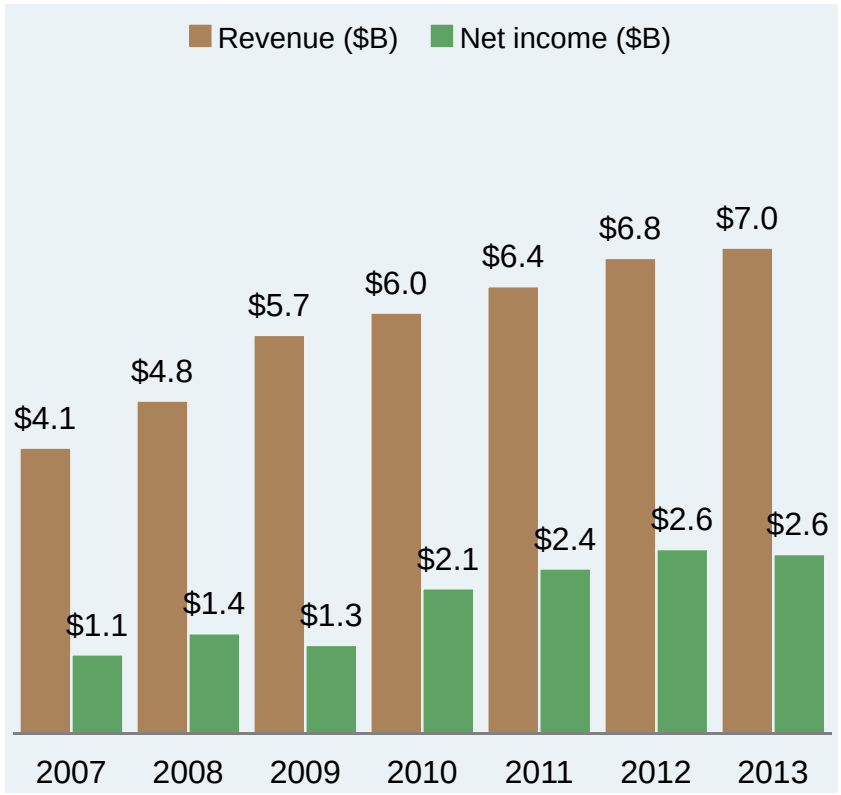


Risk discipline

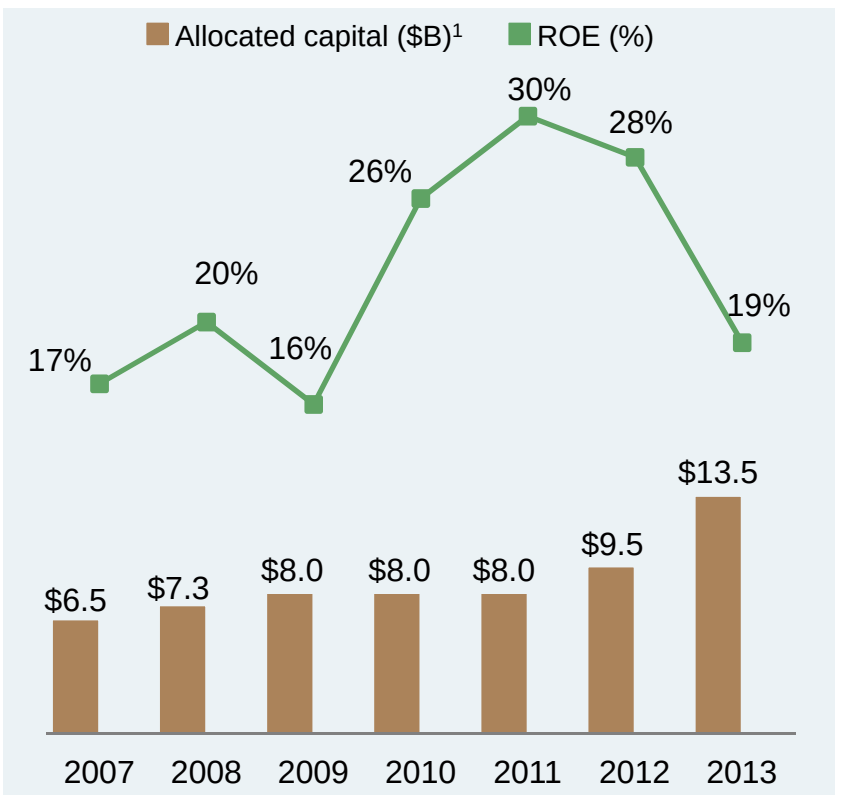
- Granular, high quality portfolio
- Prudent with private equity sponsors
- Sound structures
- Cyclical risks managed
- New originations carefully monitored

Non-performing loans[2]

Net charge-offs



[1] Peer averages include CB-equivalent segments or wholesale portfolios at BAC, CMA, FITB, KEY, PNC, USB, WFC
[2] Based on end of period loans
[3] Through-the-cycle, 2007-2013 average



Our through-the-cycle performance

Resilient, high quality earnings

Resilient earnings

Strong ROE despite higher capital and continued investment in the business

High quality clients → **Credit & expense discipline** → **Broad product capability** → **Capital efficiency**

[1] Average allocated common equity for the period

FRANCHISE STRENGTH

Agenda

	Page
Franchise strength	2
2013 performance	**10**
Outlook	18

2013 results

Strong underlying business performance

Delivered strong performance

- Disciplined loan growth
- Higher deposits, particularly DDA[1]
- Strong credit performance
- Expense discipline

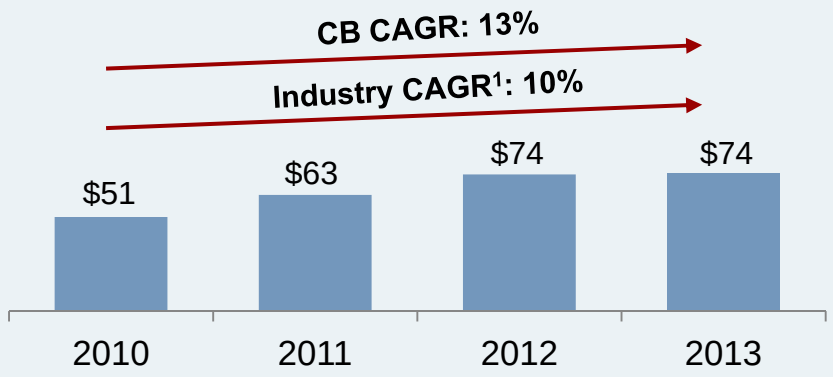
Deepened client relationships

- Footprint expansion
- Record IB revenues
- Strong growth across key products

Adapted to regulatory changes

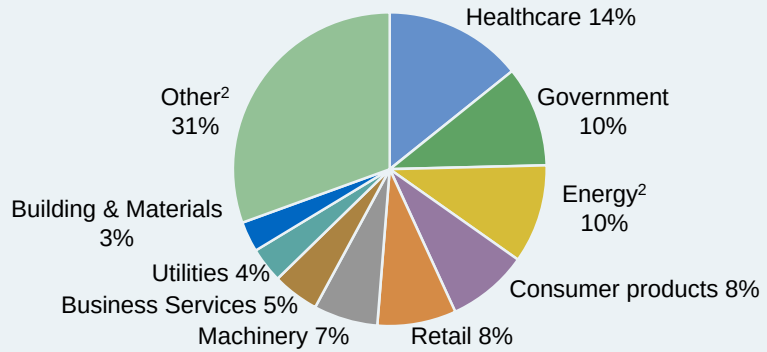
- Higher capital due to Basel III
- Higher compliance and control expenses

Record



($B, except where noted)	2012	2013	YoY (%)
Total loan balance (EOP)	128	137	7%
Net charge-offs (%)	0.03%	0.03%	
Non-performing loans (%)	0.52%	0.37%	
Total deposits (avg.)	196	198	1%
Overhead ratio (%)	35%	37%	
Return on equity (%)	28%	19%	
Investment Banking revenue[2]	1.6	1.7	5%
Card Services revenue[2] ($mm)	381	438	15%
International revenue[3] ($mm)	238	261	10%
Allocated capital	9.5	13.5	42%
Dedicated regulatory FTEs[4]	64	215	236%

[1] Demand Deposit Accounts
[2] Investment Banking and Card Services revenue represent gross revenue generated by CB clients. Investment Banking includes Banking and Markets revenue. Card Services includes Commercial Card and Paymentech revenue
[3] Denotes overseas revenue from U.S. multinational clients
[4] Full-time equivalents



C&I loan growth

Maintaining discipline even when the industry is easing

CB C&I loans ($B, EOP)

Diversified portfolio (2013 C&I loans, EOP)

2013 industry observations

- Demand slowed versus initial years of economic recovery in 2010-2012
  - Less pure interest rate driven demand
  - Clients remained cautious and held onto cash
  - Record leveraged finance activity from institutions, replacing bank loans for larger corporate clients
- Fierce competition from traditional competitors and new non-bank lenders
- Easing of credit standards[3] and very aggressive pricing

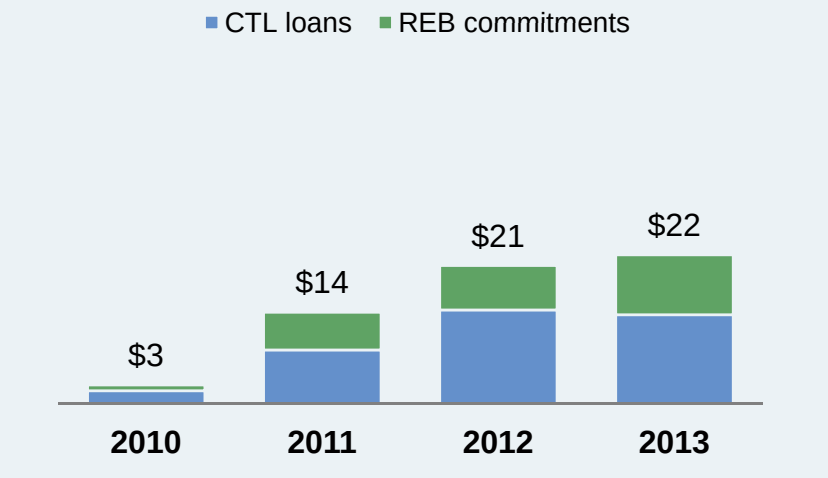
CB performance summary

- Outperformed industry in both growth and credit quality since onset of recovery
- Growth lagged industry in 2013
  - Passed on deals that didn't meet our credit standards or economic hurdle rates
  - Competitors refinanced lower quality loans from portfolio
  - Maintained focus on core industries with selective exposure to private equity transactions
- Revolver utilization of 30% remains low

Proven track record and well-positioned for an economic expansion

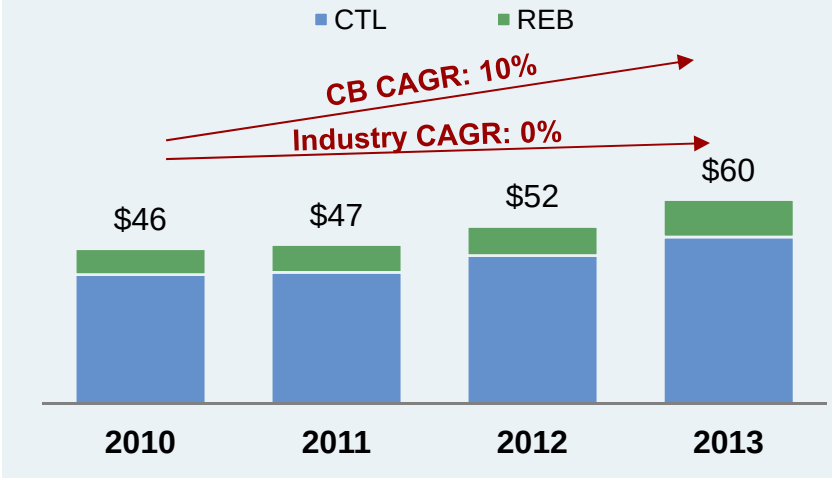
Note: CB's C&I grouping is internally defined to include certain client segments (MM, which includes Government, Nonprofit & Healthcare Clients, and CCB) and will not align with regulatory definitions

[1] Industry data sourced from FRB H.8 Assets and Liabilities of Commercial Banks in the United States (not seasonally adjusted)



[2] "Energy" includes Oil & Gas and Metals & Mining. "Other" includes nine additional industry groups

[3] Based on FRB Senior Loan Officer Opinion Survey on Bank Lending Practices – released 2/3/2014



CRE loan growth

Capturing market opportunity

Credit originations ($B)[1]

Loan balances ($B, EOP)[1]

Sector fundamentals remain strong

- Strong multifamily fundamentals
- Modest commercial construction aiding stability
- 33% of $3.1T CRE debt maturing between 2014-2016[2]
- Sound credit structures

Scale advantage → **Client and asset selection** → **Rigorous underwriting standards** → **Market conditions closely monitored**

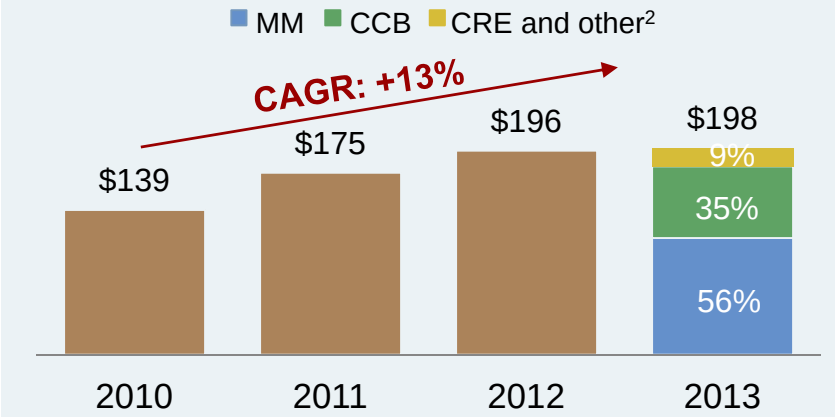
Note: CB's Commercial Real Estate (CRE) grouping is internally defined to include certain client segments (REB, CTL and CDB) and will not align with regulatory definitions

[1] Excludes CDB

[2] Source: Trepp, LLC and FRB Flow of Funds Data, Balance Sheets, and Integrated Macroeconomic Accounts, as of 3Q13

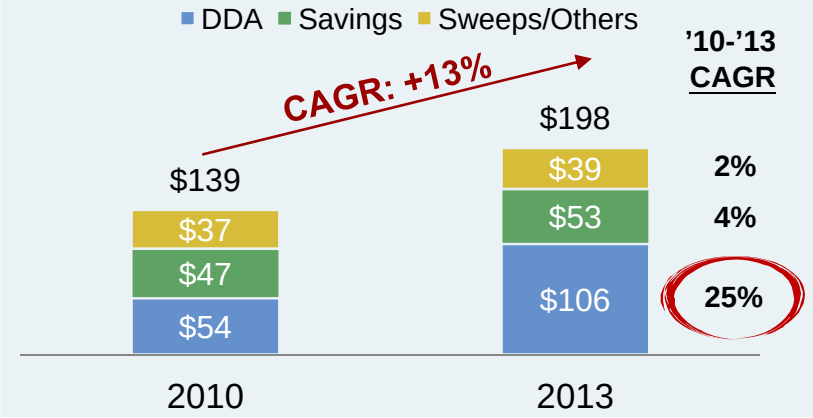
Deposit growth

Stable and diversified deposit base



Excellent deposit gathering franchise

- 17,000+ depository clients
- Complete set of cash management products to attract valuable operating deposits
- 54% of deposit base comprised of DDA, with strong growth over 2012
- Stable spreads in 2013
- $2.4B revenue generated from deposits and product fees



Managing deposits closely

- Regulatory changes will impact the value of certain types of deposits, but we are actively managing through pricing
- Expect non-operating deposits to decline as economy improves[1]
- Well-positioned for a rising rate environment

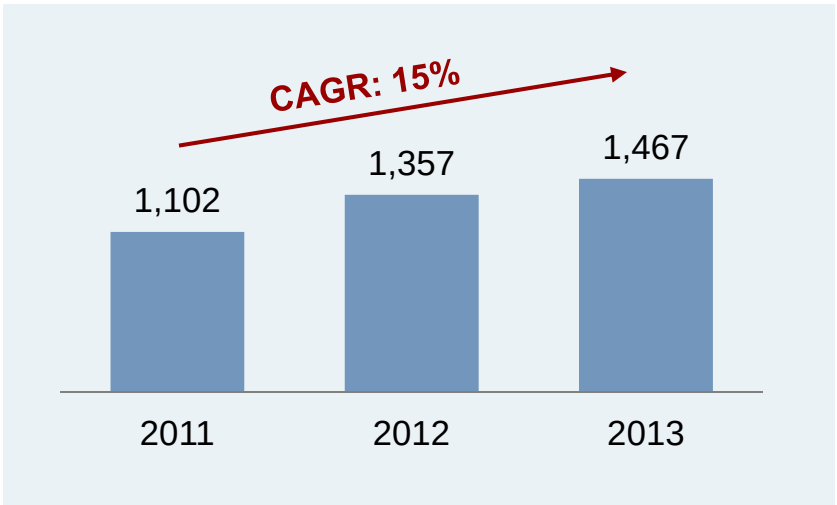
Average deposits ($B)

Deposit mix by type ($B)

Our deposits will be very valuable as interest rates rise

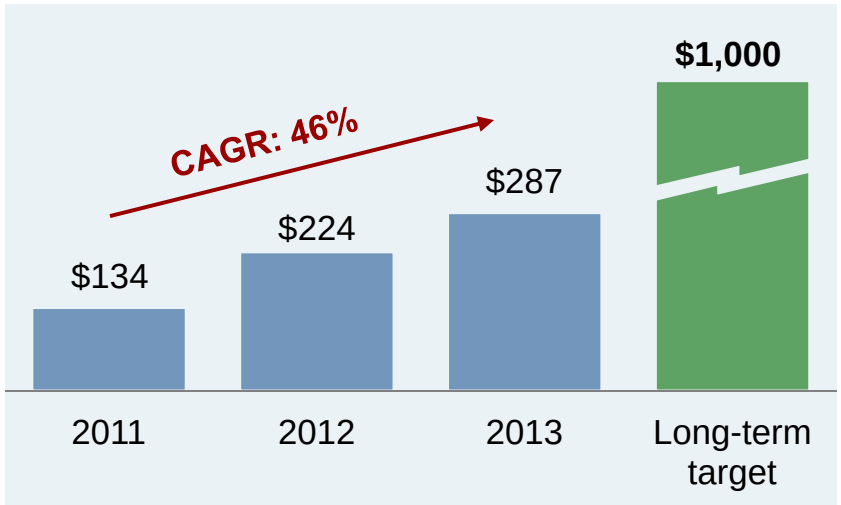
Note: Deposits represent client deposits and other third party liabilities. DDA = Demand Deposit Account

[1] Non-operating deposits include deposits in excess of what a client requires to fund their transactional/operating needs



[2] Includes REB, CDB and CTL

Expanding our client base



Growth in high potential markets

- Expanded into 5 of the top 15 MSAs
- Huge growth opportunity – ~16,500 prospects in expansion markets
- Delivered differentiated model into new markets (well-received by clients)
- Positive return contribution as we reach scale

Total expansion clients

Total expansion revenue ($mm)

Competitive advantage

[1] Investment Banking and Card Services revenue represent gross revenue generated by CB clients. Investment Banking includes Banking and Markets revenue. Card Services includes Commercial Card and Paymentech revenue

[2] Denotes overseas revenue from U.S. multinational clients

Agenda

	Page
Franchise strength	2
2013 performance	10
Outlook	**18**

Market outlook

Well-positioned to absorb near-term challenges and benefit from market opportunities

Near-term, we face some challenges…

- Regulatory changes
- Low deposit spreads
- Intense competition
- Slow economic recovery

…but are best positioned against these challenges...

- Strong credit portfolio
- Regulatory and compliance infrastructure
- Investing for the future
- Power of JPMorgan Chase platform

…and will benefit as the U.S. economy recovers

- Rising deposit spreads
- Increased business borrowing
- Greater M&A and capital markets activity
- Increase in international activity

Business targets

Strong through-the-cycle returns

		2013 result	Long-term target	
Key revenue growth initiatives	Middle Market expansion	**$287mm**	**$1.0B**	Making strong progress towards our long-term revenue targets
	Investment Banking[1]	**$1.7B**	**$2.0B+**	
	International[2]	**$261mm**	**$500mm**	
			TTC target	
Overhead & credit costs	Overhead ratio	**37%**	**35%**	Maintaining expense and risk discipline while investing in the business
	Net charge-offs	**0.03%**	**0.50%**	
Returns	Return on equity	**19%**	**18% +/-**	Strong TTC ROE despite higher capital

Note: TTC = through-the-cycle

[1] Investment Banking revenue represents gross revenue generated by CB clients. Includes Banking and Markets revenue

[2] Denotes overseas revenue from U.S. multinational clients

2014 priorities

Continue to deliver for our clients

- ☑ **Ensure a fortress compliance and control environment**
- ☑ **Fully adapt to regulatory capital, liquidity and leverage requirements**
- ☑ **Maintain risk discipline – monitor market conditions**
- ☑ **Execute our growth strategy**
- ☑ **Invest in our people and platform**

Deliver for our clients

ASSET MANAGEMENT

Mary Erdoes, Chief Executive Officer Asset Management

February 25, 2014

JPMorgan Chase & Co.

A consistently growing, sustainable, world-class global client franchise

Strong investment culture

- 80% of 10-year mutual fund AUM in top 2 quartiles
- Retention of top talent and senior portfolio managers both over 95%
- A rigorous, client-focused, fiduciary culture for nearly 200 years

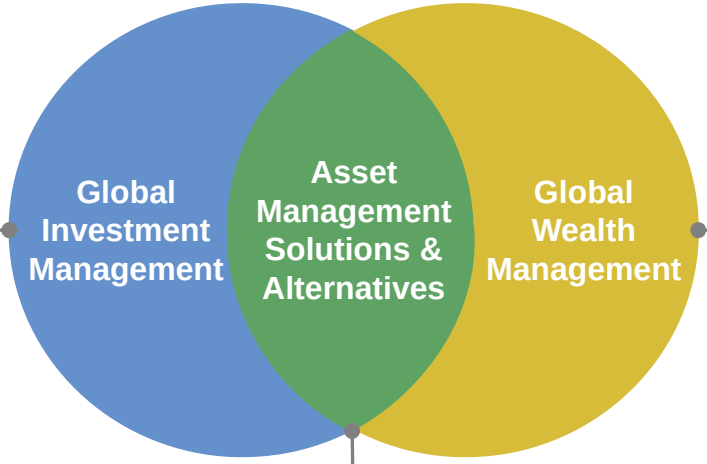
Growth engine within JPMC

- Consistency: predictable, high growth business – revenues, earnings, ROE
- Breadth: diversified earnings from multiple products, channels, and regions
- Depth: solid global client-centric franchises, each with significant room to grow

World's best clients

- J.P. Morgan Private Bank unmatched in serving the world's wealthiest
- Serving institutional and individual clients in over 130 countries
- 60% of the world's largest pensions, sovereigns, and central banks

Difficult to replicate



- Celebrating 100-year relationships in the Private Bank
- Integrated model of Private Banking/Investment Management strengthens our franchise
- Invaluable benefit of being part of JPMorgan Chase

An integrated model with unique advantages

Pretax margin	30-35%	30% (avg)	29%
ROE	25%+	29% (avg)	23%

3+ years

Revenue $11B → $15B | **Pretax income $3B → $5B** | **Client assets $2T → $3T**

CORPORATE & INVESTMENT BANK

Mike Cavanagh, Co-Chief Executive Officer Corporate & Investment Bank
Daniel Pinto, Co-Chief Executive Officer Corporate & Investment Bank

February 25, 2014

JPMorgan Chase & Co.

Introduction

Market-leading performance

- Market-leading positions across key business segments
  - #1 in Global IB Fees[1]; 8.6% share, up from 7.5% in FY2012
  - Markets revenue share of 10 leading competitors[2] 16.0% for FY2013, up 140 bps from FY2012; #1 in Fixed Income Markets[2]

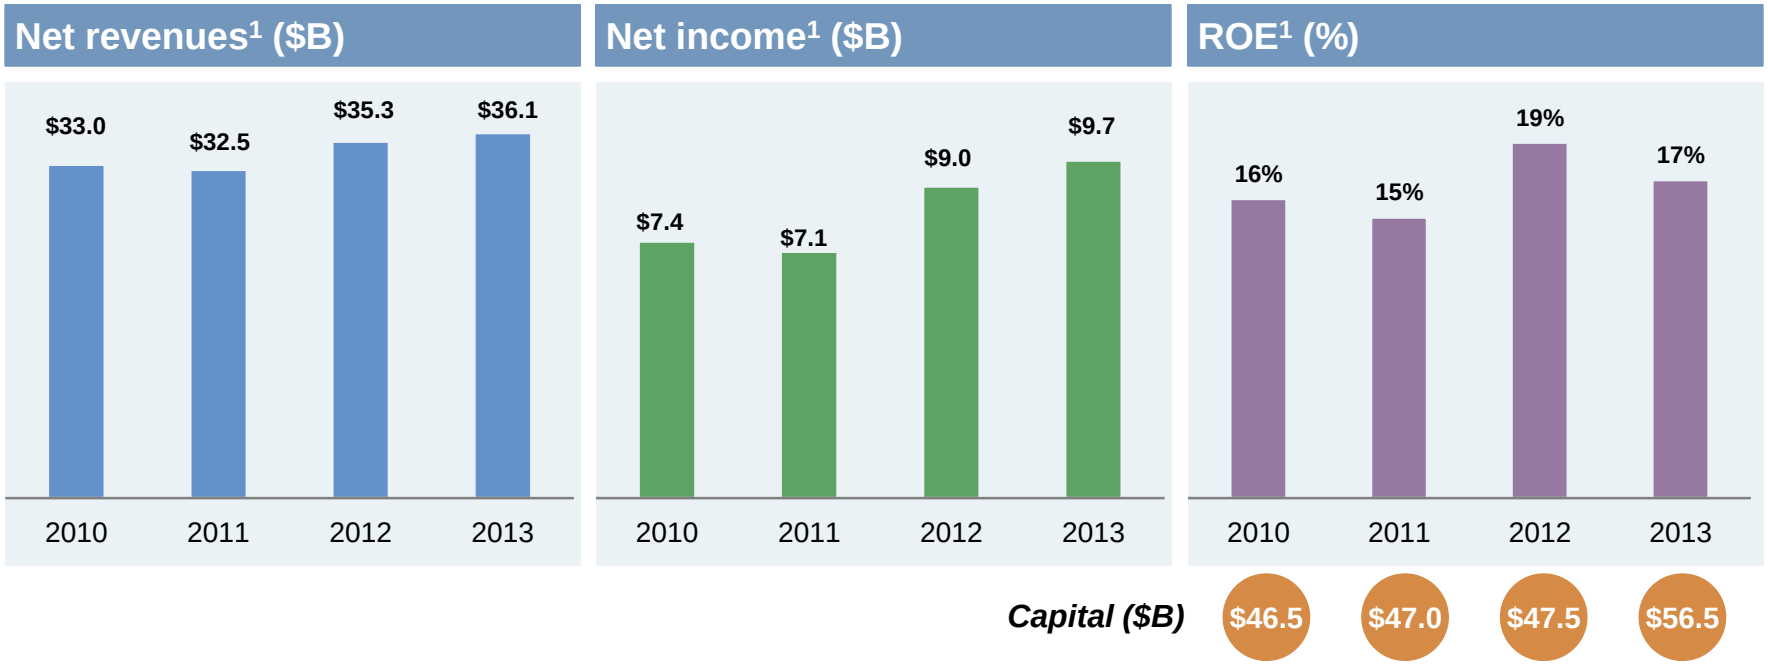
Client-driven franchise

- Strong synergies with the rest of JPM
- Completeness of capabilities and integrated coverage enables deeper client relationships
- Global reach with strong U.S. base to capture long-term international growth

Management priorities

- Optimize businesses while continuing to invest in core growth opportunities
- Continue to adapt to evolving regulations and market structure changes
- Maintain expense discipline while absorbing increased regulatory and controls costs

Through-the-cycle capital & ROE



- Continued optimization of RWA and capital
- Fortress balance sheet optimized for leverage ratio, liquidity stress, and rising rates
- Best-in-class ROE through-the-cycle

[1] Dealogic FY2013 wallet rankings
[2] Represents FY2013 rank and share of JPM Total Markets and Fixed Income Markets revenue of 10 leading competitors

Agenda

	Page
Market-leading performance	**2**
Client-driven franchise	7
Management priorities	14
Through-the-cycle capital & ROE	24

Stable earnings and best-in-class return on equity

Highlights

Continued growth

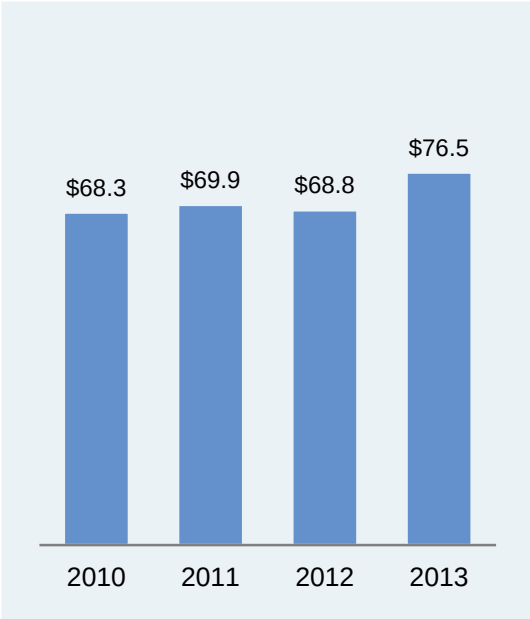
- FY2013 net income of over $9.7B, up $2.3B (+32%) from FY2010[1]

Sound expense discipline

- Overhead Ratio of 60%[1], among the lowest of peers

Strong client partnerships

- Raised $1.5T of capital for our clients during FY2013



Financial strength enables investment in future

[1] Net revenues, net income, ROE, and overhead ratio excluding FVA (effective 4Q13) and DVA, are non-GAAP financial measures. Throughout this presentation, CIB provides several non-GAAP financial measures which exclude the impact of FVA (effective 4Q13) and DVA on: revenues, net income, overhead ratio, comp/revenue ratio, non-comp/revenue ratio and return on equity. These measures are used by management to assess the underlying performance of the business and for comparability with peers. For additional information on non-GAAP measures, please refer to the Notes section of the Firmwide presentation.

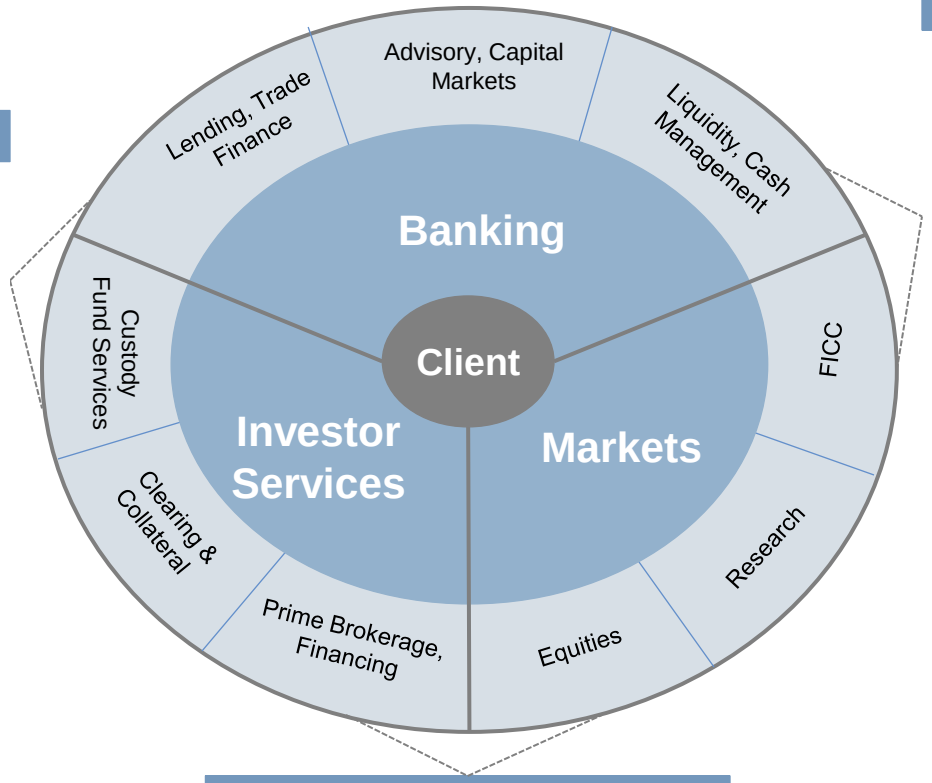
As part of JPM, CIB taps into a broad firmwide client franchise

LOB	Synergy
Commercial Bank	■ Treasury Services distributed through the CB ■ Investment Banking for corporate clients of CB ■ Markets products (mainly FX and Rates)
Asset Management	■ Distribution through Private Bank for CIB equity offerings ■ Referrals
Consumer & Community Banking	■ Treasury Services products for small business clients ■ Risk management for Chase Mortgage ■ Distribution of Chase Paymentech services



CLIENT-DRIVEN FRANCHISE

CIB scale and completeness has facilitated an integrated client coverage model

Client example

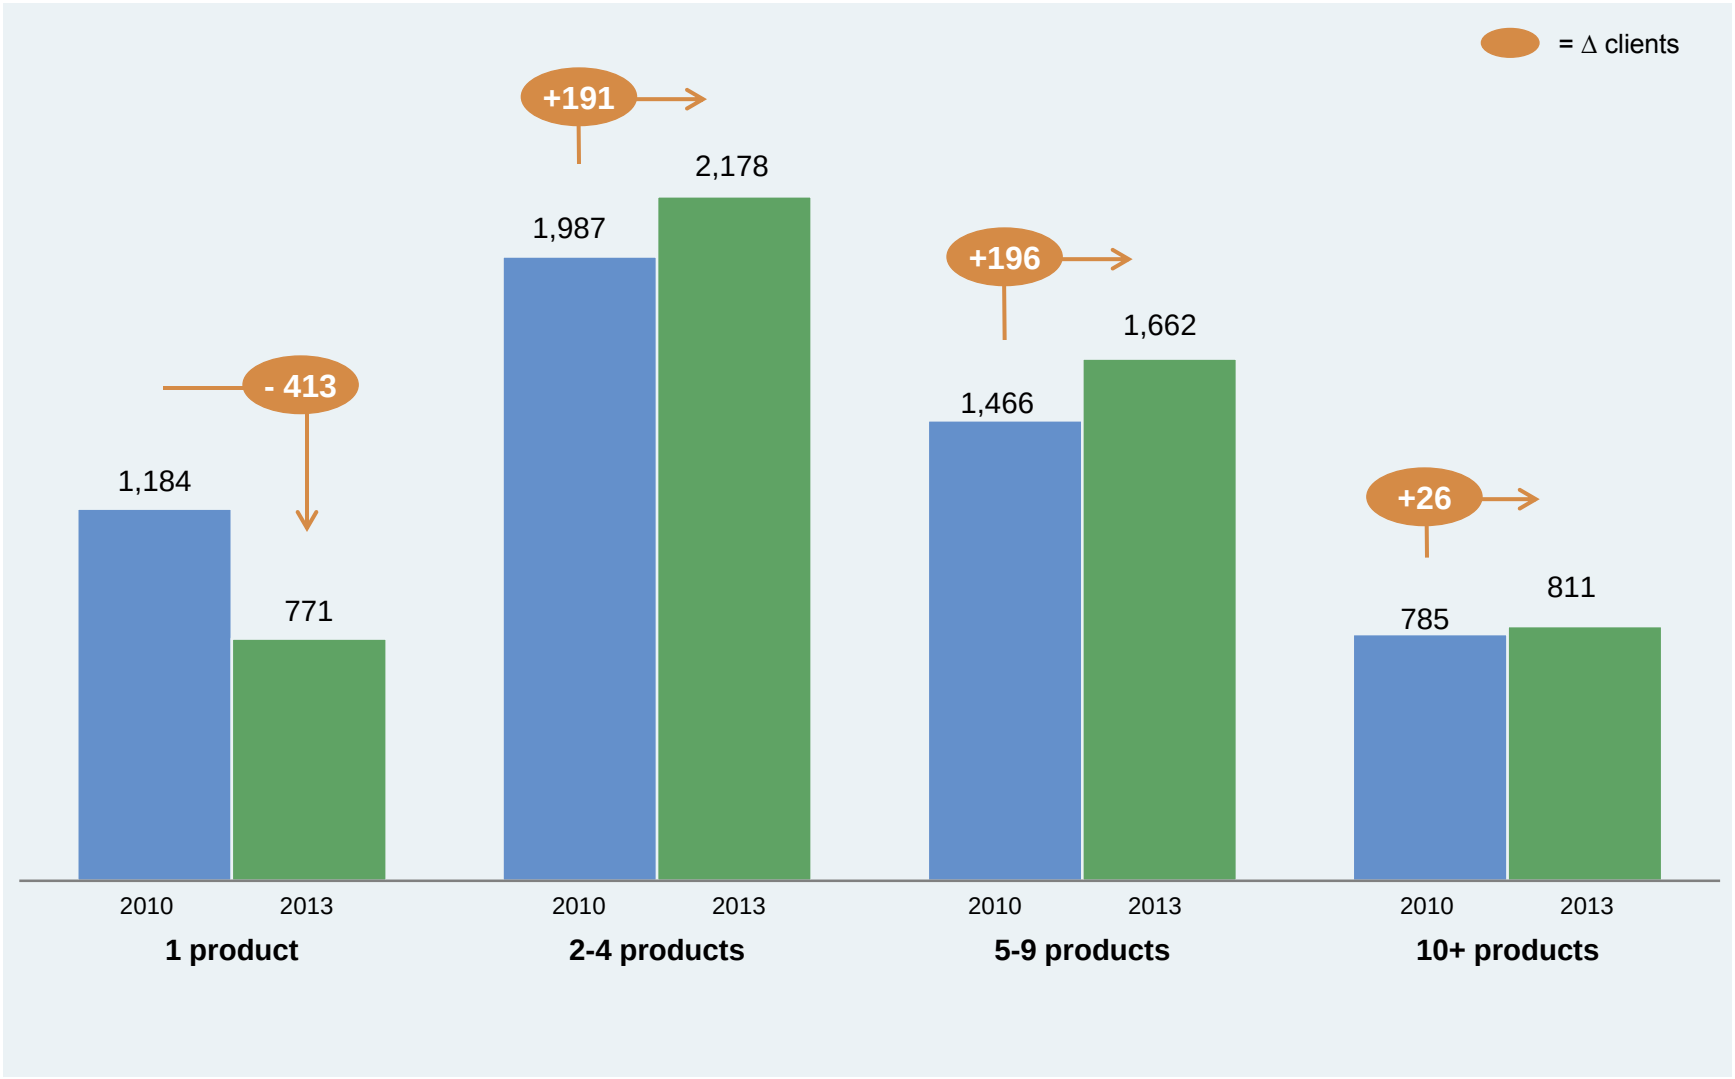
Leading European Insurance Co.

- Pitched and won increased custody mandate
- Extended optimally sized credit facility to support client requirements

Client example

Multinational Corporates

- Corporate clients with Treasury services relationships can receive FX payments through standard payment channels
- FX desk in Markets prices and executes trades in line with other comparable market flows
- Holistic approach for FX payments, cash management, and execution opportunities

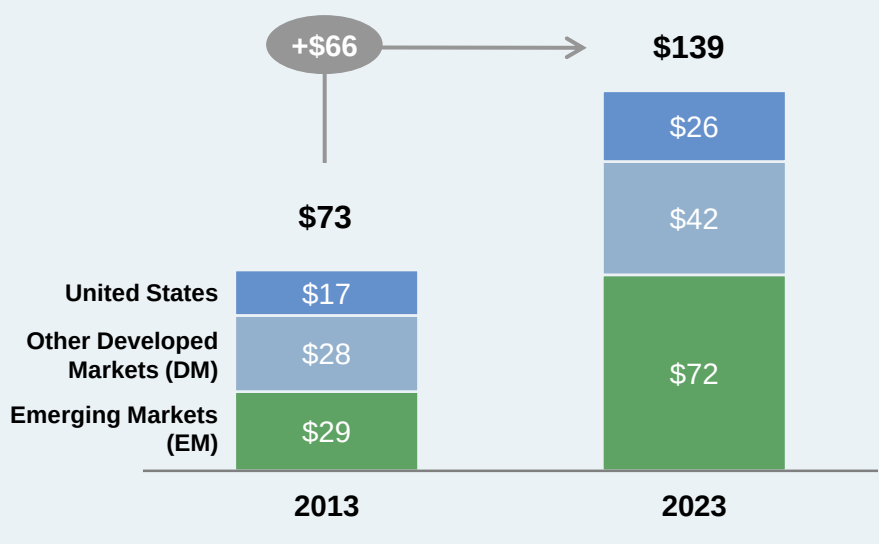


Client example

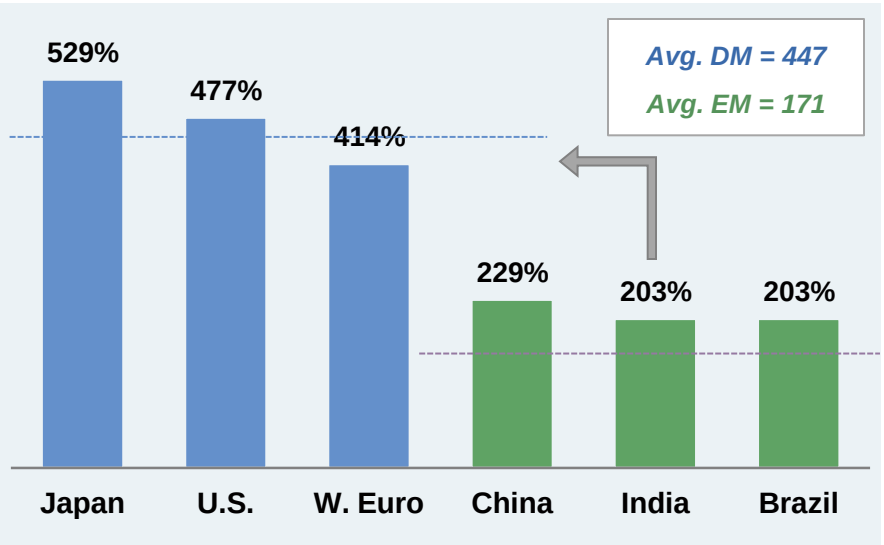
Large Asset Manager

- Historically a longstanding client of Markets, Banking, and Custody
- Expanded relationship to include Prime Brokerage

Integrated coverage with portfolio approach drives deep and broad client relationships



Increased product penetration (number of clients)



Note: Multi-year product trends for active clients in 2010, which is roughly ~75% of current client base

Long-term macro trends favor global wholesale banks

Market-leading performance	2
Client-driven franchise	7
Management priorities	**14**
Through-the-cycle capital & ROE	24

Management priorities

2014 CIB priorities

1. **Optimize business mix while investing in core growth opportunities**

2. **Adapt to evolving regulatory landscape and market structure changes**

3. **Maintain expense discipline while absorbing increased regulatory and controls costs**

1 Optimize business mix while investing in core growth opportunities

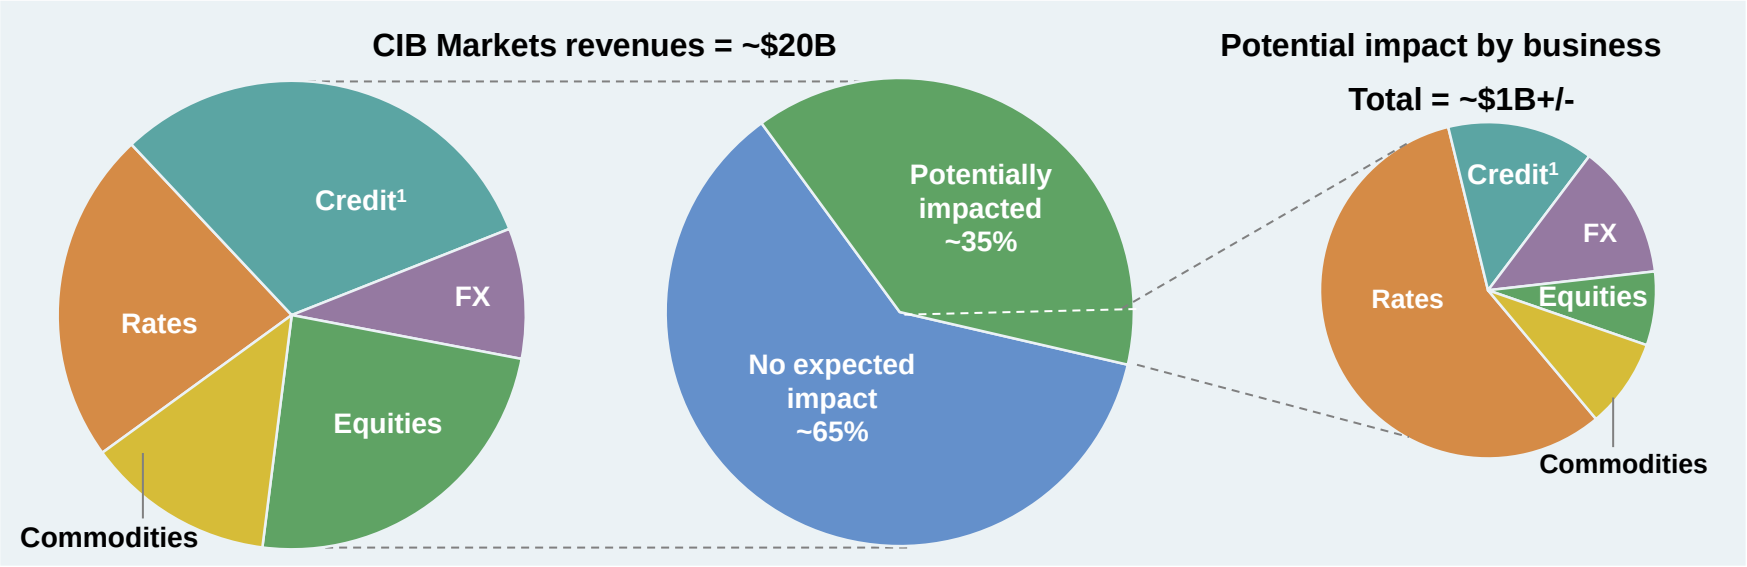
Exiting businesses that are either non-core or no longer fit risk profile

Notable exits	Description
Physical Commodities	■ Optimizing commodities business to better fit banking business model
Global Special Opportunities	■ Strong track record of investments in U.S./European mezzanine and Asian principal financing ■ Not a core offering to CIB clients
Pre-paid cards	■ Limited scalability and low operating margins ■ Operational risk
Select Foreign Correspondent Banks	■ Exiting relationships with select correspondent banks as we optimize business for heightened regulatory and compliance costs

No significant ROE impact

1 Optimize business mix while investing in core growth opportunities

Continued investment in key businesses of our core franchise



Key businesses	Description
Prime Brokerage	■ EMEA – Completed build of end-to-end operating platform in EMEA, now fully positioned to capture strong growth ■ Asia – Core platform launched in 2014, ramping up over next several years
Electronic Trading	■ Significant progress with increase in electronic trading activity in Equities (+49% average daily trading volume vs. 2011) and FX (+50% in annual trading value vs. 2011) ■ Continue to develop electronic market making capabilities – JPM was the top ranked bank by volume in U.S. Treasuries trading on electronic interdealer platforms in 2013
Equities	■ Strengthening Equities position while focusing on bottom line ■ Leveraging our strength in ECM, Derivatives, and Equity Research ■ Cash e-trading capabilities now on par with leaders – volume growth outpacing market volumes in all regions
OTC Clearing & Collateral Management	■ More than 200 relationships and 2,000+ legal entities on-boarded in the 3 phases of CFTC mandated clearing; established top 3 market share ■ Replicate U.S. execution and seamless on-boarding of clients in EMEA ■ Continue to expand CCP and product footprint

Initiatives tracking to 2015 growth targets

2 Adapt to evolving regulatory landscape and market structure changes

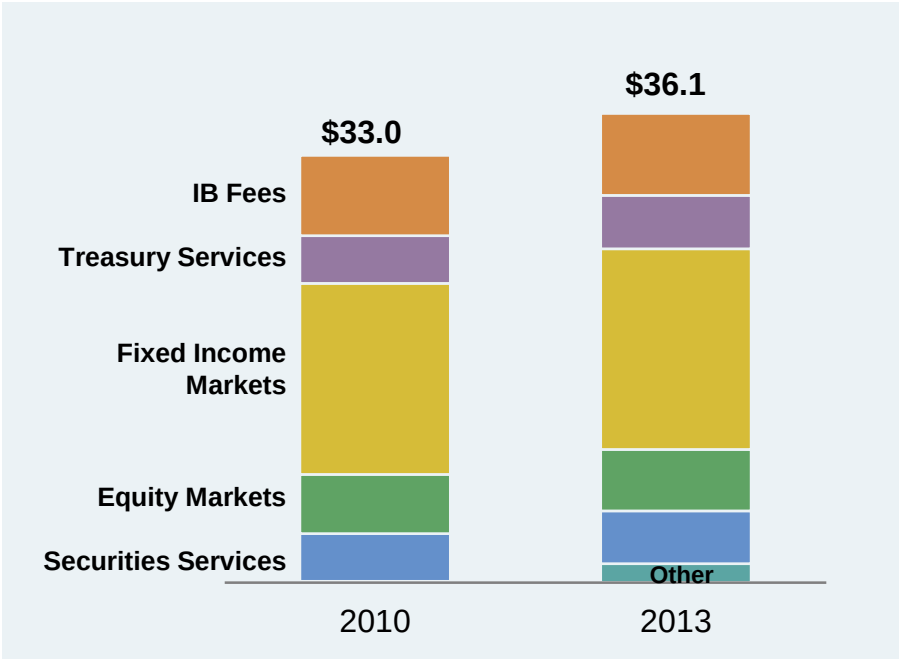
Impact of global derivatives regulatory changes could be approximately $1B+/-

CIB Markets business: Potential impact from market structure regulations

[1] Credit includes Securitized Products

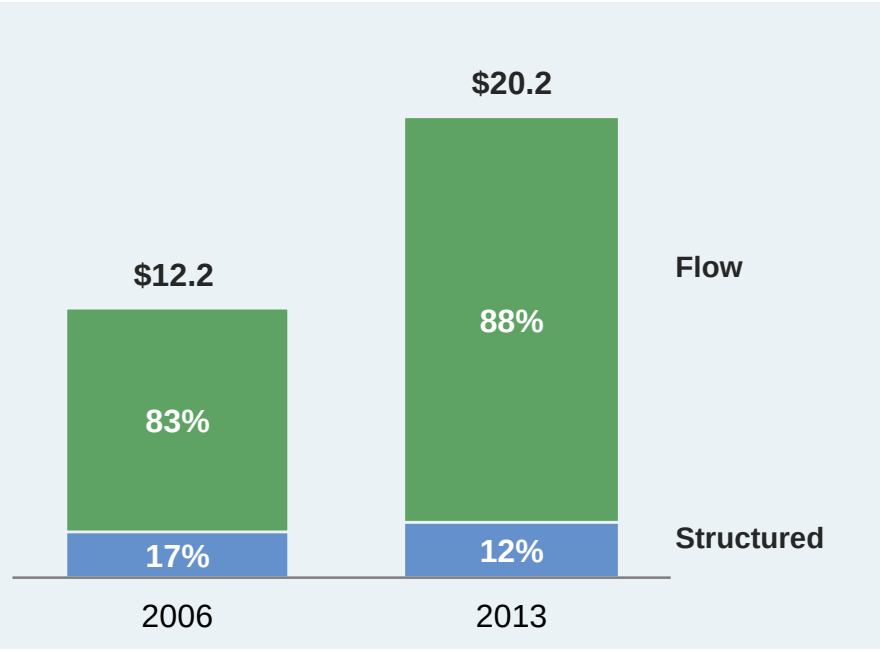
Management commentary

Regulation	Comment
Post-trade transparency	■ Live in U.S. for CFTC products ■ Impact limited to date but difficult to isolate and quantify
Clearing	■ Live in U.S. for CFTC products, with no significant impact ■ Credit sensitive corporates exempt
SEF trading	■ Went live last week in U.S. for Rates – too early to observe impact
Initial margin on un-cleared swaps	■ Additional funding cost for initial margin expected to be significant, but phase-in over a long period



Expected timing by region

U.S.	Europe	Asia
In progress	2016	2016+
In progress	2014+	In progress - Japan only
2014	End 2016	2016+
2015+	2015+	2015+



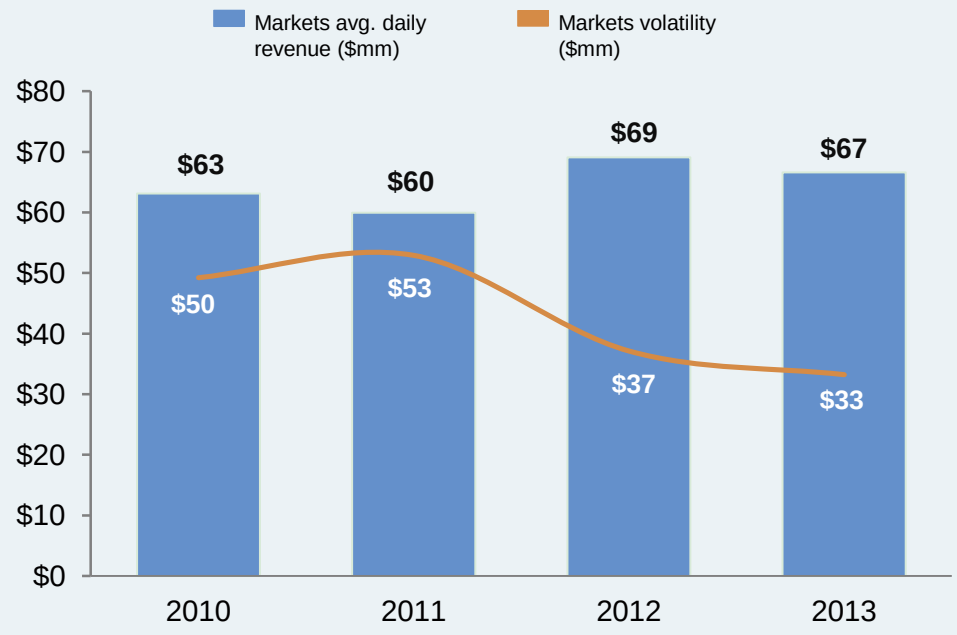
2 Adapt to evolving regulatory landscape and market structure changes

Our business is well diversified, with resiliency across macro conditions

Total CIB revenue by product[1] ($B)

Markets revenue by flow vs. structured ($B)

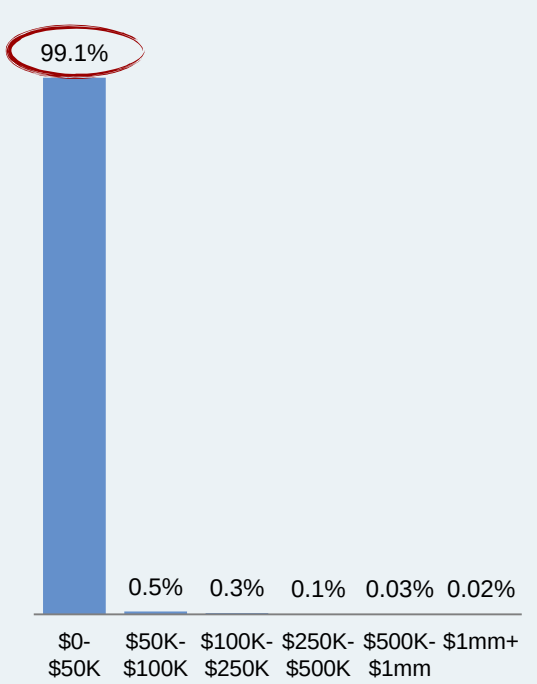
Client-driven and diversified business model



- CIB business model is well diversified with a mix of advisory, execution, and operational services
- Markets more driven by client flows, risk appetite, and bid/ask spread, than by interest rate or credit cycle
- Trending markets with moderate levels of volatility generally positive for trading volume

[1] Revenues excluding FVA (effective 4Q13) and DVA, are a non-GAAP financial measure. "Other" includes Lending and CVA & Other excluding FVA/DVA

2 Adapt to evolving regulatory landscape and market structure changes

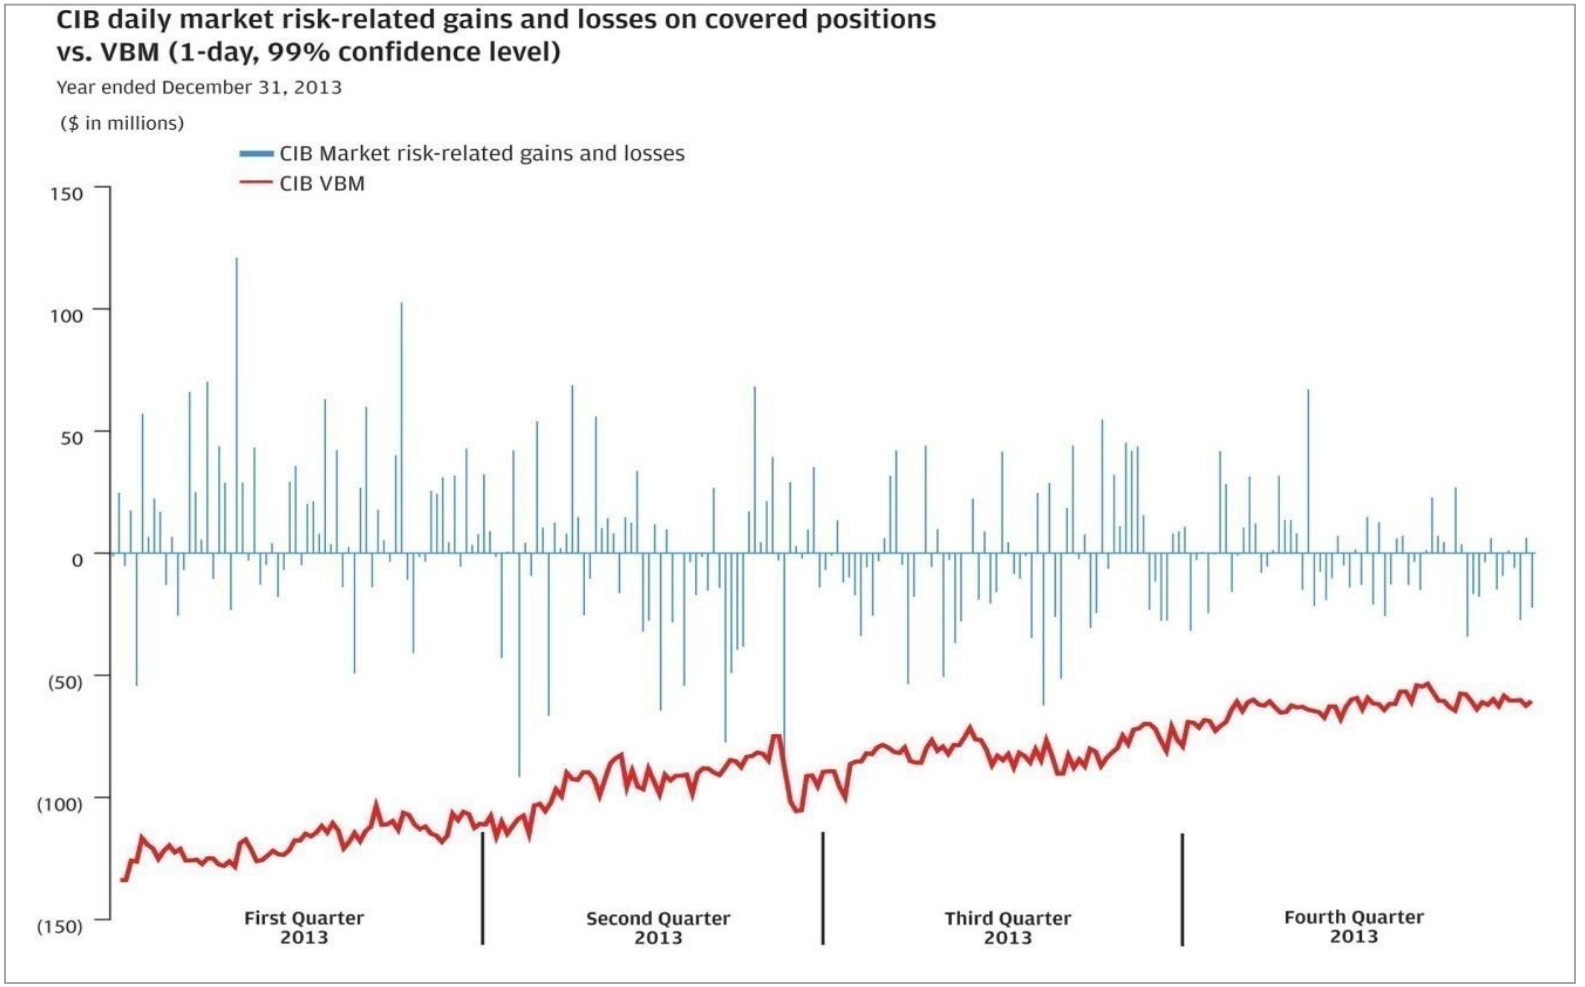


Our market-making business is flow-driven and client-focused

Markets average daily revenue and volatility[1] ($mm)

	2010	2011	2012	2013
# of trading day losses	8	26	4[3]	0
CIB VaR ($mm)[2]	$99	$76	$84	$42

JPM client trade volume distribution by revenue/trade buckets

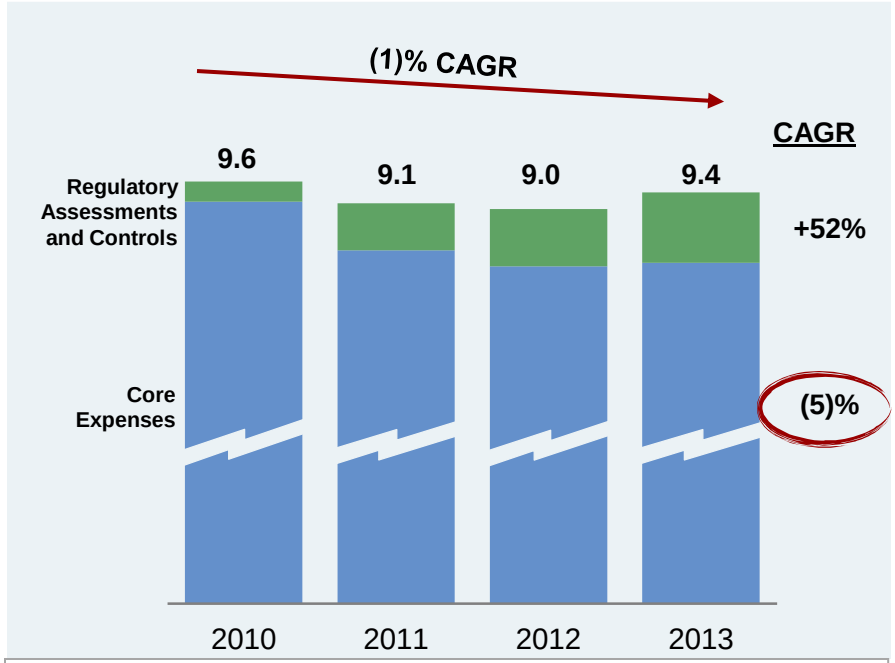


- Stable revenues indicative of client franchise with a flow-driven model – e.g., ~78% of Markets revenue is from trades below $500K in revenue/trade
- Bright-line prop trading desks have been discontinued

[1] Volatility equals standard deviation
[2] EOP total CIB trading and credit portfolio VaR. 2012 and 2013 include VaR related to synthetic credit portfolio ("SCP") transferred from CIO to CIB on 7/2/12; management uses trading loss days excluding FVA (effective 4Q13) and DVA, a non-GAAP financial measure, to provide a more meaningful comparison to each period
[3] Reflects trading loss days excl. FVA/DVA and excl. SCP; 7 trading day losses excl. FVA/DVA and incl. SCP

2 Adapt to evolving regulatory landscape and market structure changes

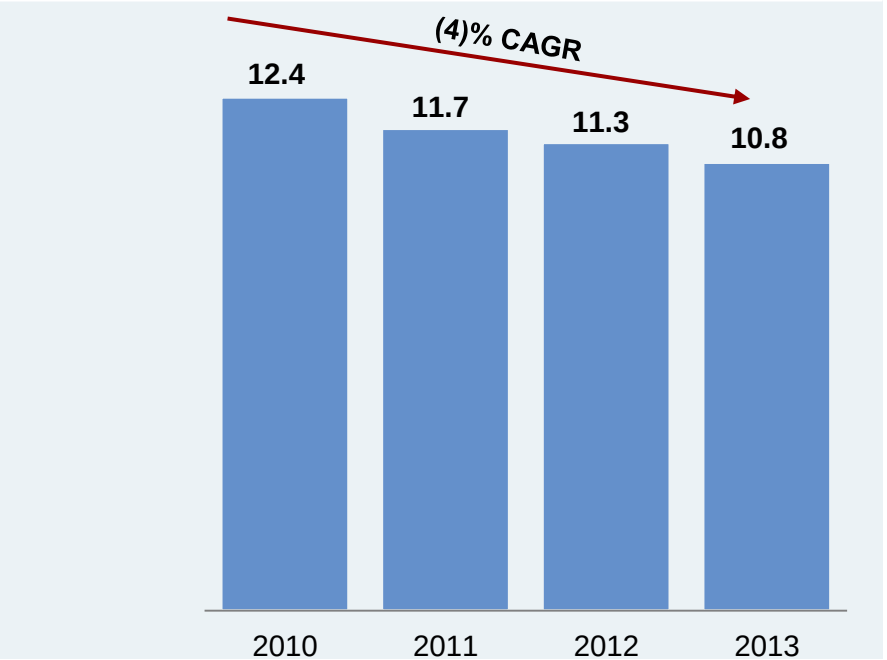
We believe our business model is fundamentally compliant with the Volcker rule



- Revenue generation in Markets is driven by client flows
- Commitment to provide liquidity and deploy capital to serve clients remains core to our franchise
- Implementation will be challenging but manageable

Note: From "Regulatory Capital Disclosure – Market Risk Pillar 3 Report", December 31, 2013; VBM = VaR-based Measure

3 Maintain expense discipline



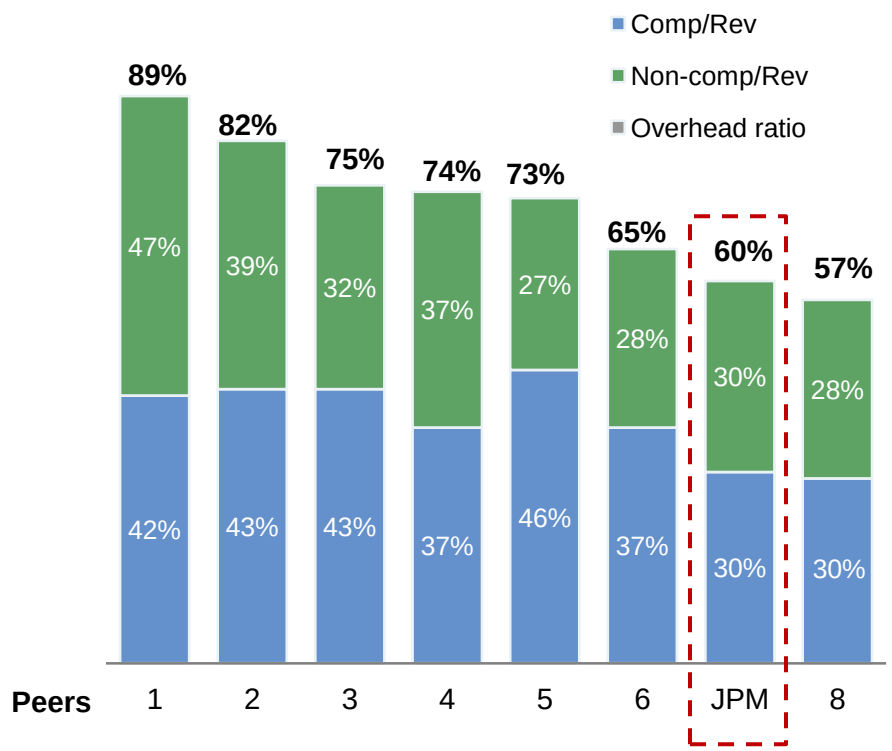
Expense discipline across both non-comp and comp have offset increases in regulatory and controls spend

Pro forma non-compensation expense[1,2] ($B)

	2010	2011	2012	2013
Overhead ratio[3]	68%	68%	62%	60%
Non-comp/Rev[3]	32%	32%	30%	30%

Compensation expense ($B)

	2010	2011	2012	2013
Comp/Rev[3]	36%	36%	32%	30%
Revenue growth (excl. FVA/DVA)	←		+3% CAGR	→



- Significant investment in enhancing controls driven by AML / KYC, trading surveillance, cyber uplift
- Increase in control spend for legal, compliance, operations and risk functions
- Disciplined SVA accrual driven framework for compensation

[1] Excludes Commodities transaction fees and related expenses; litigation losses included as core expense
[2] Regulatory assessments include FDIC, UK Bank levy, FSA and other regulatory fees. Controls expense includes both Corporate-allocated and CIB incremental expense
[3] Overhead, comp/revenue and non-comp/revenue ratios exclude FVA and DVA impact. 2010 compensation expense of $12.4B includes $0.6B related to UK Bank Payroll tax, while the comp/revenue and overhead ratios in 2010 excludes the UK Bank Payroll Tax impact

3 Maintain expense discipline while absorbing increased regulatory and controls costs

Able to maintain both market-leading overhead ratio and high revenue productivity

FY2013 overhead ratio vs. peers (%)[1]

Revenue per headcount[2] ($mm/FTE)[3] – 3Q13 YTD

	JPM	Best in class[4]		Average[4]	
		$	%Δ	$	%Δ
Origination & Advisory	**2.0**	**2.1**	**(7)%**	**1.6**	**18%**
Equities[5]	**1.7**	**2.0**	**(18)%**	**1.7**	**(4)%**
FICC	**3.5**	**3.9**	**(11)%**	**2.9**	**18%**

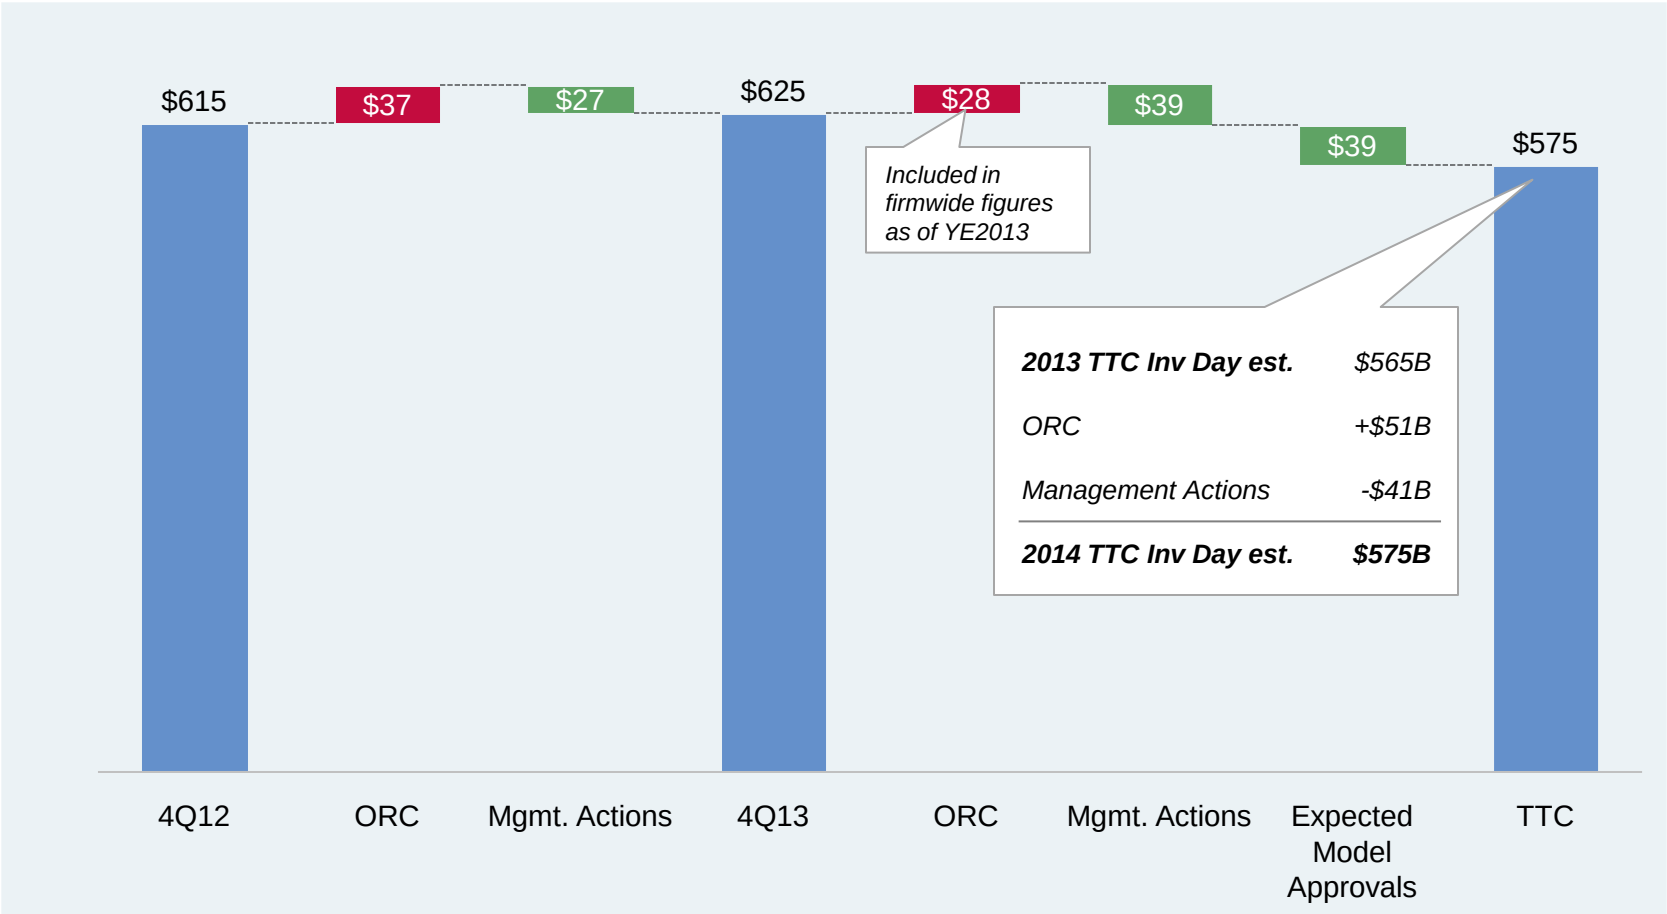
Note: Coalition outside-in estimates of JPM and competitor revenues

[1] JPM estimates; represents CIB/IB equivalent segments of competitors, excluding the impact of FVA (effective 4Q13 for JPM) and DVA, which are non-GAAP financial measures

[2] Front office headcount includes revenue generating headcount across all levels of seniority and front office administrative staff

[3] Coalition 3Q13 YTD revenue figures, 3Q13 YTD headcount figures; headcount includes sales, trading, research, advisory, ECM, DCM

[4] Coalition Index banks include: BAC, BARC, BNPP, CITI, CS, DB, GS, JPM, MS, UBS; average excludes JPM



[5] Equities only includes Cash Equities, Equity Derivatives, Converts (Securities)

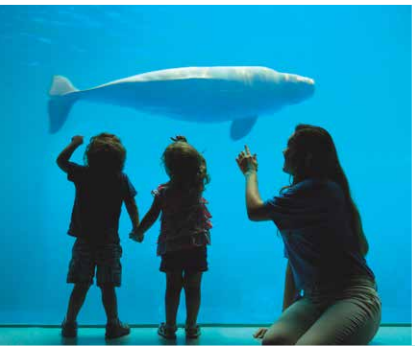
Unrated or Non-investment grade	13%

Total: $6.6B

*Amounts do not foot due to rounding

Through-the-cycle (TTC) ROE



Through-the-cycle ("TTC") RWA, Capital and Returns ($B)				
Business	TTC RWA	TTC Capital[1]	TTC ROE	Outlook for achieving returns
Banking	$140	$14.7	17%+/-	■ Higher rate environment for deposits ■ Normalized credit costs ■ Coverage efficiencies
Markets	$335	$35.2	14%+/-	■ Leading businesses, flow and scale model, strong client franchise ■ Regulatory impact
Investor Services	$75	$7.9	19%+/-	■ Higher rate environment for deposits ■ Ongoing efficiency improvements ■ Market structure driven initiatives
Run-off & Other	$25	$3.2	N/A	
CIB	$575	$61.0	15%+/-	

[1] Represents allocated equity

In summary…

- **Deep client franchise,** supported by our **scale, completeness and global reach.**
- **Fortress balance sheet** with strong capital and liquidity position**, with earnings power** to continue to invest in business
- Continued **headwinds in regulatory and controls environment –** but will make the firm more resilient and lead to new business opportunities
- **International** will continue to be a key priority and **long-term driver of growth,** despite short-term slowing as we focus on strengthening controls
- **Disciplined expense management** with room to generate more efficiencies, creating the capacity to invest in the future
- **Very strong pool of talent** across the CIB and focused on continuing to attract and retain the best

ANNUAL REPORT 2014

JPMorgan Chase & Co.

Financial Highlights

As of or for the year ended December 31, (in millions, except per share, ratio data and headcount)	2014	2013
Reported basis[a]		
Total net revenue	$ 94,205	$ 96,606
Total noninterest expense	61,274	70,467
Pre-provision profit	32,931	26,139
Provision for credit losses	3,139	225
Net income	$ 21,762	$ 17,923
Per common share data		
Net income per share:		
Basic	$ 5.34	$ 4.39
Diluted	5.29	4.35
Cash dividends declared	1.58	1.44
Book value	57.07	53.25
Tangible book value[b]	44.69	40.81
Selected ratios		
Return on common equity	10%	9%
Return on tangible common equity[b]	13	11
Common equity Tier 1 ("CET1") capital ratio[c]	10.2	10.7
Tier 1 capital ratio[c]	11.6	11.9
Total capital ratio[c]	13.1	14.4
Selected balance sheet data (period-end)		
Loans	$ 757,336	$ 738,418
Total assets	2,573,126	2,415,689
Deposits	1,363,427	1,287,765
Total stockholders' equity	232,065	211,178
Headcount	241,359	251,196

(a) Results are presented in accordance with accounting principles generally accepted in the United States of America (U.S. GAAP), except where otherwise noted.
(b) Non-GAAP financial measure. For further discussion, see "Explanation and Reconciliation of the Firm's Use of Non-GAAP Financial Measures" in this Annual Report.
(c) Basel III Transitional rules became effective on January 1, 2014; prior period data is based on Basel I rules. As of December 31, 2014, the ratios presented are calculated under the Basel III Advanced Transitional Approach. CET1 capital under Basel III replaced Tier 1 common capital under Basel I. Prior to Basel III becoming effective, Tier 1 common capital under Basel I was a non-GAAP financial measure. For further discussion, see "Regulatory capital" in this Annual Report.

JPMorgan Chase & Co. (NYSE: JPM) is a leading global financial services firm with assets of $2.6 trillion and operations worldwide. The firm is a leader in investment banking, financial services for consumers and small businesses, commercial banking, financial transaction processing and asset management. A component of the Dow Jones Industrial Average, JPMorgan Chase & Co. serves millions of consumers in the United States and many of the world's most prominent corporate, institutional and government clients under its J.P. Morgan and Chase brands.

Information about J.P. Morgan's capabilities can be found at jpmorgan.com and about Chase's capabilities at chase.com. Information about JPMorgan Chase & Co. is available at jpmorganchase.com.

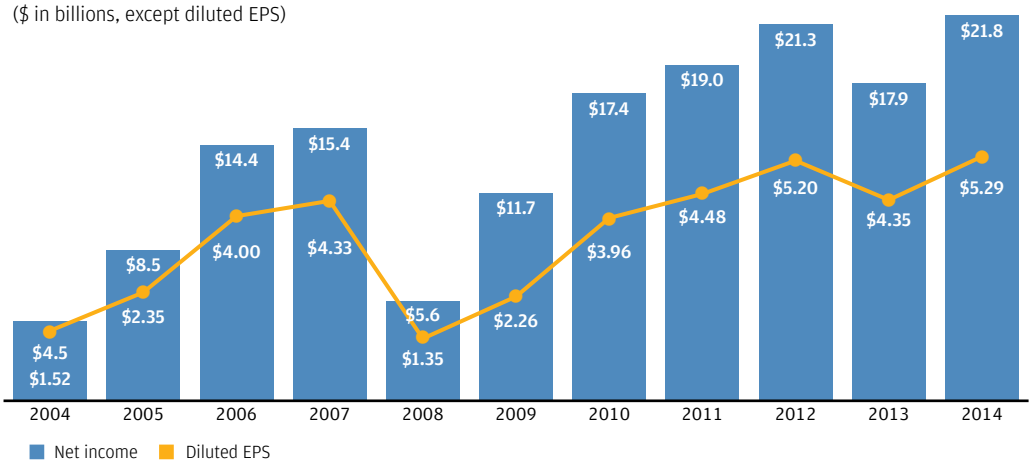
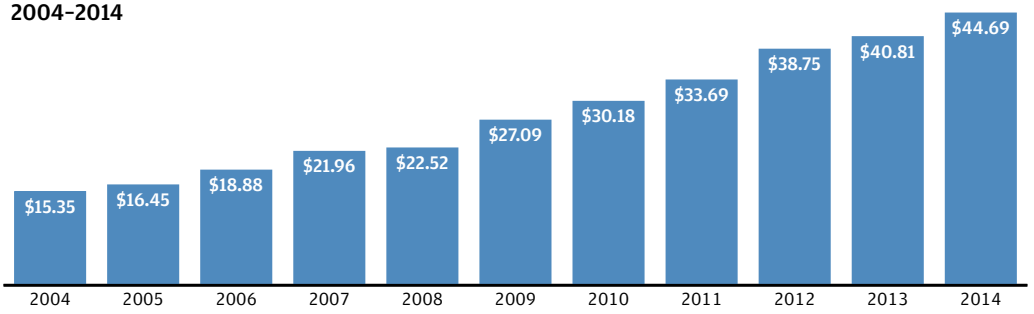
JPMorgan Chase & Co.

Dear Fellow Shareholders,



Jamie Dimon,
Chairman and
Chief Executive Officer

Seven years ago, the world was shaken by the global financial crisis. And since then, our company has been dealing with extraordinary challenges as a result of that crisis. We have endured an unprecedented economic, political and social storm – the impact of which will continue to be felt for years and possibly decades to come. What is most striking to me, in spite of all the turmoil, is that our company became safer and stronger – and it never stopped supporting clients, communities and the growth of economies around the world.



I feel extraordinarily privileged to work for this great company with such talented people. Our management team and our employees do outstanding work every single day – sometimes under enormous pressure – while dealing with an extreme number of complex business and regulatory issues. The way our people and our firm are able to address our challenges and admit our mistakes while continuing to grow our businesses and support our clients fills me with pride.

Our company earned a record $21.8 billion in net income on revenue[1] of $97.9 billion in 2014. In fact, we have delivered record results in the last four out of five years, and we hope to continue to deliver in the future. Our financial results reflected strong underlying performance across our businesses. Over the course of last year, our four franchises maintained – and even strengthened – our leadership positions and continued to gain market share, improve customer satisfaction and foster innovation. We also continued to deliver on our many commitments – including business simplification, regulatory requirements, controls, expense discipline and capital requirements.

Earnings and Diluted Earnings per Share
2004–2014
($ in billions, except diluted EPS)

Tangible Book Value per Share
2004–2014

[1] Represents managed revenue

Bank One/JPMorgan Chase & Co. tangible book value per share performance vs. S&P 500

	Bank One (A)	S&P 500 (B)	Relative Results (A) – (B)
Performance since becoming CEO of Bank One (3/27/2000–12/31/2014)[a]:			
Compounded annual gain	12.7%	5.3%	7.4%
Overall gain	434.9%	105.1%	329.8%
	JPMorgan Chase & Co. (A)	**S&P 500 (B)**	**Relative Results (A) – (B)**
Performance since the Bank One and JPMorgan Chase & Co. merger (7/1/2004–12/31/2014):			
Compounded annual gain	14.1%	8.0%	6.1%
Overall gain	300.5%	124.5%	176.0%

Tangible book value over time captures the company's use of capital, balance sheet and profitability. In this chart, we are looking at heritage Bank One shareholders and JPMorgan Chase & Co. shareholders. The chart shows the increase in tangible book value per share; it is an aftertax number assuming all dividends were retained vs. the S&P 500 (a pretax number with dividends reinvested).

[a] On March 27, 2000, Jamie Dimon was hired as CEO of Bank One

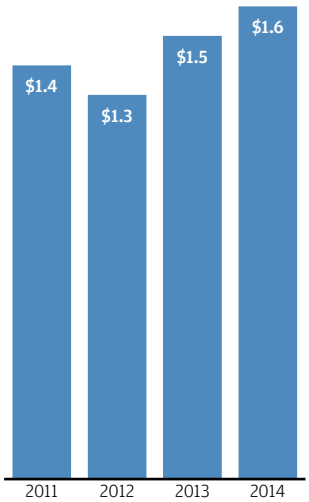
We believe that, in 2014, we continued to deliver for our shareholders. The table above shows the growth in tangible book value per share, which we believe is a conservative measure of value. You can see that the tangible book value per share has grown far more than the Standard & Poor's 500 Index (S&P 500) in both time periods. For Bank One shareholders since March 27, 2000, the stock has performed far better than most financial companies and the S&P 500. And since the JPMorgan Chase & Co. merger with Bank One on July 1, 2004, we have performed well versus other financial companies and slightly below the S&P 500. The details are shown in the table below.

Stock total return analysis

	Bank One	S&P 500	S&P Financials Index
Performance since becoming CEO of Bank One (3/27/2000–12/31/2014)[a]:			
Compounded annual gain	10.4%	4.0%	2.2%
Overall gain	328.3%	78.8%	37.4%
	JPMorgan Chase & Co.	**S&P 500**	**S&P Financials Index**
Performance since the Bank One and JPMorgan Chase & Co. merger (7/1/2004–12/31/2014):			
Compounded annual gain	7.5%	8.0%	0.9%
Overall gain	113.3%	124.5%	9.5%

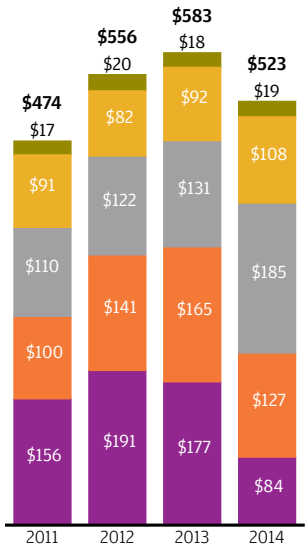
This chart shows actual returns of the stock, with dividends included, for heritage shareholders of Bank One and JPMorgan Chase & Co. vs. the Standard & Poor's 500 Index (S&P 500) and the Standard & Poor's Financials Index (S&P Financials Index).

[a] On March 27, 2000, Jamie Dimon was hired as CEO of Bank One



However, our stock performance has not been particularly good in the last five years. While the business franchise has become stronger, I believe that legal and regulatory costs and ***future uncertainty*** regarding legal and regulatory costs have hurt our company and the value of our stock and have led to a price/earnings ratio lower than some of our competitors. We are determined to limit (we can never completely eliminate them) our legal costs over time, and as we do, we expect that the strength and quality of the underlying business will shine through.

JPMorgan Chase continued to support consumers and businesses and make a significant positive impact on our communities. In 2014, the firm **provided credit and raised capital of more than $2.1 trillion for our clients.** The firm also has hired nearly 8,700 military veterans since 2011 as a proud founding member of the 100,000 Jobs Mission, which recently has increased the goal to 300,000 jobs. Our firm was there to help small businesses – we **provided $19 billion of credit to U.S. small businesses**, which allowed them to develop new products, expand operations and hire more workers. In total, we **provided $197 billion of credit to consumers.** And we provided credit and raised capital of **more than $75 billion for nonprofit and government entities, including states, municipalities, hospitals and universities.** Our strength allows us to be there for our clients and communities in good times – and, more important, in bad times. In the face of many difficult challenges, we never stopped doing our job, and we demonstrated that the work we do matters. And we also continue to build our business by investing in infrastructure, systems, technology and new products and by adding bankers and branches around the world.



New and Renewed Credit and Capital for Clients

at December 31,

[b] Represents activities associated with the safekeeping and servicing of assets

In this letter, I will discuss the issues highlighted below. I also encourage you to read the letters written by several of our business leaders about our main businesses, our critical operations and controls, and some of our corporate responsibility efforts.

As usual, this letter will describe some of our successes and opportunities, as well as our challenges and issues. The main sections of the letter are as follows:

I. We have an outstanding franchise — our company has emerged as an endgame winner, but we need to earn it every day

II. We build for the long term — we manage through-the-cycle, and we always are prepared for the toughest of times

III. We will successfully navigate the new global financial architecture (and we are well on our way to having fortress controls)

IV. We have a solid strategy and believe our future outlook is very good — but, as usual, there still are a lot of things to think and worry about

V. We have a fully engaged board, an exceptional management team and a strong corporate culture

I. WE HAVE AN OUTSTANDING FRANCHISE – OUR COMPANY HAS EMERGED AS AN ENDGAME WINNER, BUT WE NEED TO EARN IT EVERY DAY

If you think back 10, 20 or 30 years ago, my predecessors and I struggled to try to build a great company, which we hoped would emerge as an endgame winner. The ultimate outcome was unclear – and many competitors did not survive (this is true for most large-scale consolidating industries). Even for those of us that did, it was quite a struggle. Today, it is clear that our company is an endgame winner – both in the United States and globally – which is invaluable in *any* industry. And while we have had some difficult times since the financial crisis, the power of the franchise has shone through. We also know that future success is not guaranteed – only consistently good management over a long period of time can ensure long-term success in any business. But we certainly are in a very good place.

We have delivered good multi-year financial results (strong margins and returns and low volatility) and have shown a great ability to adapt to changes – both from the marketplace and the regulatory environment

We always compare our margins and returns with those of our best competitors in each business. The chart below, which is very similar to a chart we showed at our Investor Day, shows some of these numbers for 2014. We believe that the right discipline is to compare each of our businesses against *its* best competitor. It is a mistake just to look at the consolidated numbers and compare them – every company has a different mix of businesses. The chart below also shows how our businesses compare in terms of margins,

JPMorgan Chase Is in Line with Best-in-Class Peers in Both Efficiency and Returns

	Efficiency			Returns		
	JPM 2014 overhead ratios	Best-in-class peer overhead ratios[2] weighted by JPM revenue mix	JPM target overhead ratios	JPM 2014 ROE	Best-in-class peer ROTCE[4] weighted by JPM equity mix	JPM target ROE
Consumer & Community Banking	58%	55% WFC	~50%	18%	16% WFC	20%
Corporate & Investment Bank	62%[1]	60% Citi	55%-60%	13%[1]	14% Citi	13%
Commercial Banking	39%	38% PNC	35%	18%	13% PNC	18%
Asset Management	71%	69% UBS WM & BLK	≤70%	23%	27% BEN	25%+
JPMorgan Chase	60%[1]	59%[1]	55%+/-	13%[3]	13%	~15%[3]

[1] Excludes legal expense
[2] Best-in-class overhead ratio represents implied expenses of comparable peer segments weighted by JPMorgan Chase (JPM) revenue: Wells Fargo Community Banking (WFC), Citi Institutional Clients Group (Citi), PNC Corporate and Institutional Banking (PNC), UBS Wealth Management and Wealth Management Americas (UBS WM) and BlackRock (BLK), and JPM Corporate segment
[3] Represents ROTCE for total JPMorgan Chase. Goodwill is primarily related to the Bank One merger and prior acquisitions and is predominantly retained by Corporate
[4] Best-in-class ROTCE represents implied net income minus preferred stock dividends of comparable peers weighted by JPM tangible common equity: WFC, Citi, PNC, Franklin Templeton (BEN) and JPM Corporate segment

our target margins in a normal environment and, most important, our return on equity (ROE). On most of these measures, we are very close to the best-in-class competitor.

A good company should be able to earn competitive margins over an extended period of time regardless of economic conditions while investing and without taking excessive risk

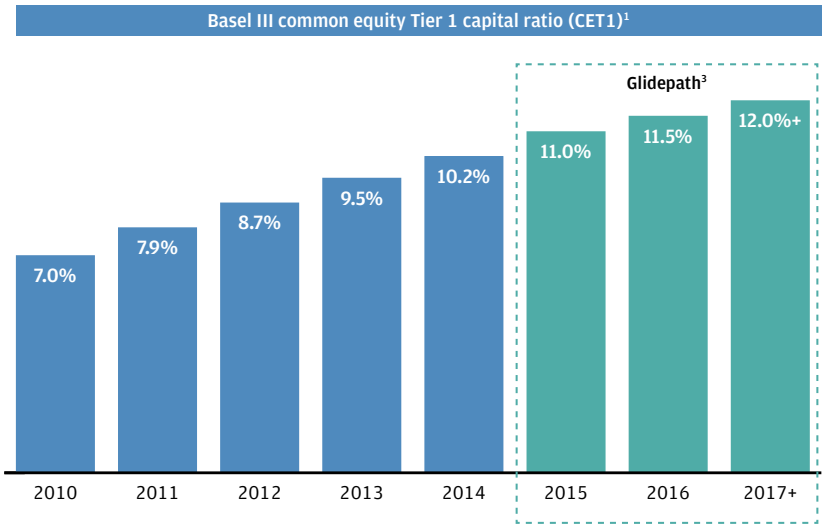
Any company can improve earnings in the short run by taking on additional risk or cutting back on investments. Any company can grow rapidly if it takes on too much risk – but that usually is the kind of growth one comes to regret. Our margins have been quite good, even as we have been investing for the long run. These investment expenses lower our short-term returns, but they are "good" expenses. In addition to the tremendous amount that we invest annually in technology and infrastructure, some examples of where we have invested over the past five years are:

- 448 retail branches in the United States
- 28 wholesale offices abroad
- 2,498 Chase Private Client locations/ branches, supported by 594 new Private Client advisors
- 20 Commercial Banking expansion cities, including approximately 350 Commercial Banking bankers
- 205 small business bankers

A good company always should be investing while it also is waste cutting; i.e., cutting out any unnecessary expenses. However, I often have received bad advice on what are unnecessary expenses. For example, spending on important strategic off-sites, research and development for innovation, marketing that has a positive return – those are good expenses. We take a bus trip annually to visit branches, operating centers and clients. It is both fun and enormously productive – and it is not an unnecessary expense – it makes us a better company.

Even our annual Retail National Sales Conference with the top 5% of our branch bankers, loan officers and tellers is critical – we spend time working together, we learn a lot and we get to thank these outstanding employees at an awards recognition dinner. While it is perfectly reasonable in tough times to dramatically reduce the cost of that conference, it is unwise to cancel it. I have been to every single one of these events since I started running Bank One, and I intend to continue that tradition.

We earned adequate returns while building an increasingly stronger capital base



During these challenging years, our company has confronted difficult markets, billions of dollars of additional regulatory costs, billions of dollars of costs due to changes in products and services, and, unfortunately, very high legal costs. And we have had to hold an increasing amount of capital throughout this time. While there is no question that these events did reduce our performance and returns, we have been able to adapt, meet the new rules and perform fairly well financially.

The chart below shows earnings, the capital we returned to shareholders through dividends and stock buybacks, our returns on tangible common equity and our high quality liquid assets (HQLA). High quality liquid assets essentially are deposits held at the Federal Reserve and central banks, agency mortgage-backed securities and Treasuries, and they are the component of our balance sheet that has grown most dramatically. Only HQLA count for liquid assets under banking regulators' definition of liquidity – and we currently have more than is required by the regulators.

The chart below also shows that even after dramatically increasing capital and liquidity, both of which reduce returns on capital, we were able to earn an adequate return on tangible common equity, grow our capital base as needed and still return capital to shareholders.

Capital, Liquidity, Returns

($ in billions, except ratios)

Earnings	$ 17	$ 19	$ 21	$ 18	$ 22
Total capital returned[2]	4	13	6	10	11
HQLA	NA	NA	341	522	600
ROTCE	15%	15%	15%	11%	13%

[1] Basel III rules became effective on January 1, 2014. The ratios presented for 2010-2014 are calculated under the Basel III Advanced Fully Phased-In Approach and, for 2010-2013, reflect the firm's best estimate based on its understanding of the rules in the relevant period
[2] Represents common dividends plus stock buybacks, which are gross of employee issuance
[3] Reflects the firm's Basel III CET1 ratio glidepath for 2015-2017+

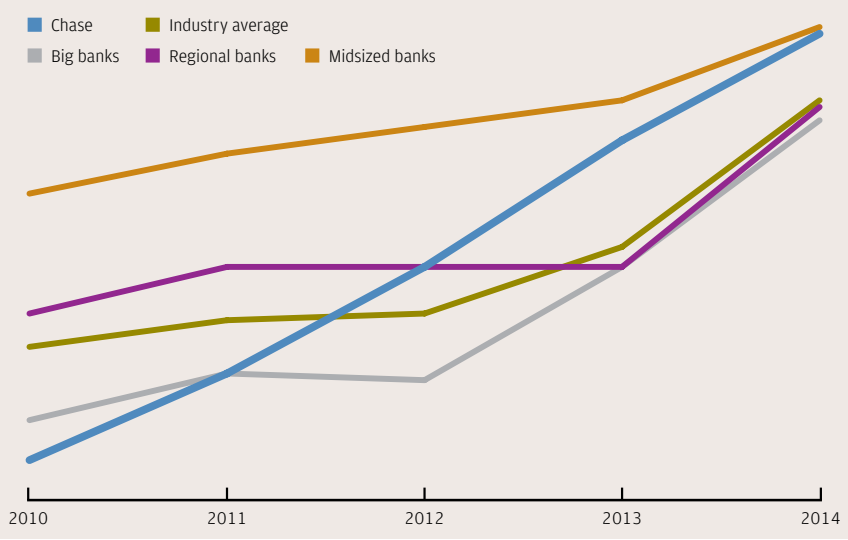
Leading Client Franchises

Building exceptional client franchises

We have built our client franchises over time with substantial share gains and opportunity for more

		2006	2014	
Consumer & Community Banking	Deposits market share	3.6%[1]	7.5%	■ Relationships with ~50% of U.S. households
	# of top 50 Chase markets where we are #1 (top 3) deposits	11 (25)	15 (40)	■ #1 customer satisfaction among largest U.S. banks for the third consecutive year[14]
	Card sales market share	16%[2]	21%[2]	■ #1 primary banking relationship share in Chase footprint[15]
	Merchant processing volume	#3[3]	#1[4]	■ #1 U.S. credit card issuer based on loans outstanding[2]
				■ ~50% of U.S. e-Commerce volume[16]
Corporate & Investment Bank	Global Investment Banking fees[5]	#2	#1	■ >80% of Fortune 500 companies do business with us
	Market share[5]	8.6%	8.1%	■ Top 3 in 15 product categories out of 16[17]
	Total Markets[6,7]	#8	#1	■ #1 in both U.S. and EMEA Investment Banking fees[18]
	Market share[6,7]	7.9%	16.2%	■ #1 in Global debt, equity and equity-related[18]
	FICC[6,7]	#7	#1	■ #1 in Global long-term debt and Loan syndications[18]
	Market share[6,7]	9.1%	18.6%	■ Top 3 Custodian globally with AUC of $20.5 trillion
	Equities[6,7]	#8	#3	■ #1 USD clearinghouse with 19.2% share in 2014[19]
	Market share[6,7]	6.0%	11.5%	
Commercial Banking	# of states with Middle Market banking presence	22	30	■ Average loans grew by 13% CAGR 2006-2014[20]
	# of states with top 3 Middle Market banking market share[8]	6	10	■ Industry-leading credit performance TTC – 8 consecutive quarters of net recoveries or single-digit NCO rate
	Multifamily lending[9]	#28	#1	■ Leveraging the firm's platform – average ~9 products/client
	Gross Investment Banking revenue ($ in billions)	$0.7	$2.0	
	% of North America Investment Banking fees	16%	35%	
Asset Management	Global active long-term open-end mutual fund AUM flows[10]	#2	#1	■ 84% of 10-year long-term mutual fund AUM in top 2 quartiles[21]
	AUM market share[10]	1.8%	2.5%	■ 23 consecutive quarters of positive long-term AUM flows
	Overall Global Private Bank *(Euromoney)*	#5	#1	■ Revenue growth >70% and long-term AUM growth >80% since 2006
	Client assets market share[11]	~1%	~2%	■ Doubled Global Wealth Management client assets (2x industry rate) since 2006[22]
	U.S. Hedge Fund Manager *(Absolute Return)*[12]	#11[13]	#2	
	AUM market share[12]	1.4%	3.4%	

For footnoted information, refer to slides 11 and 50 in the 2015 Firm Overview Investor Day presentation, which is available on JPMorgan Chase & Co.'s website at (http://investor.shareholder.com/jpmorganchase/presentations.cfm), under the heading Investor Relations, Investor Presentations, JPMorgan Chase 2015 Investor Day, Firm Overview, and on Form 8-K as furnished to the SEC on February 24, 2015, which is available on the SEC's website (www.sec.gov). Further, for footnote 20, CAGR represents compound annual growth rate



Our businesses have been able to gain market share, which only happens when we are creating happy clients

Importantly, much of the growth has been organic. Please review some of the numbers in the chart above – they speak for themselves. If you had asked me back in 2006 if we could have accomplished those kinds of market share numbers, I would have been skeptical. And, fortunately, we have plenty of areas where we still can grow or do better – I will talk about this in a later section of this letter.

Most of our businesses have exhibited improving customer satisfaction

The chart on the next page shows the great progress that our Consumer Bank has made in improving satisfaction scores. In fact, American Customer Satisfaction Index named Chase #1 in customer satisfaction among large banks in 2014. We have received even better scores than most of the regional banks and essentially are equal in ranking to the midsized banks. (We still are not satisfied, however, and want to be even better.) We believe that our customer satisfaction has been going up for multiple reasons: error rate reduction, better products and services, good old-fashioned service with a smile, and, importantly, innovations like deposit-friendly ATMs and continual improvement in online and mobile banking services. While the chart shows satisfaction in the Consumer Bank, we also have had increasing customer satisfaction scores in our small business, mortgage, auto finance and credit card franchises.

Consumer Satisfaction Score: 2010-2014 [1]

Our mix of businesses works for clients – and for shareholders

All companies, including banks, have a slightly different mix of businesses, products and services. The most critical question is, "***Does what you do work for clients?***" Our franchise does work for clients by virtue of the fact that we are gaining share in each of our businesses, and it works for shareholders by virtue of the fact that we are earning decent returns – and some of our competitors are not.

Other considerations are whether your company has "moats" – is it protected in some way from debilitating competition or events? And has it performed consistently – in good times and in bad? We believe that we have well-fortified moats in the form of economies of scale, brand, expertise, technology and operations, and – importantly – competitive advantages created by our ability to cross sell (more on this later in this letter). In addition, we have performed fairly consistently in good times and in bad. Even in 2008, the worst year in perhaps 75 years for financial companies, we earned 6% return on common tangible equity – not great but not bad, all things considered. Additionally, we have embedded strengths that are hard to replicate – the knowledge and cohesiveness of our people, our long-standing client relationships, our technology and product capabilities, our fortress balance sheet and our global presence in more than 100 countries.

Our mix of businesses leads to effective cross sell and substantial competitive advantages. We are not a conglomerate of separate, unrelated businesses – we are an operating company providing financial services to consumers, companies and communities

A conglomerate is a group of unrelated businesses held under one umbrella holding company. There is nothing wrong with a conglomerate, but we are not that. In our case, whether you are an individual, a company (large or small) or a government, when you walk in the front door and talk with our bankers, we provide you with essential financial products, services and advice. We have a broad product offering and some distinct capabilities, which, combined, create a mix of businesses that works well for each of our client segments.

Part of our mix of businesses, however, is not unique. While we divide our company into four distinct businesses, the truth is that many regional banks do a lot of what three of our four businesses do (i.e., Chase Consumer & Community Banking, Commercial Banking and Asset Management). The biggest difference between us and regional banks is our global Corporate & Investment Bank (and the non-U.S. part of our Asset Management business).

Our broad product set and some of our unique capabilities (some we inherited, and some we built carefully over time), combined with effective cross sell, create substantial competitive advantage. The examples below make some of those advantages clear:

- Commercial Banking now generates 35% of our U.S. investment banking business. This means we are able to bring JPMorgan Chase's exceptional Investment Bank to serve hundreds of midsized corporations and institutions with the best global investment banking products and services in the industry. We can do this because our Commercial Bank is in hundreds of towns across the country where we can serve clients locally – person to person – and also bring the best of JPMorgan Chase to them.
- Around the world, we can bring exceptional private banking services to CEOs and company owners or help private banking clients with their global commercial banking needs.
- Because of our international footprint, we bring global banking services – from cash management to M&A – to approximately 2,500 of our more than 20,000 Corporate Client Banking and Middle Market Banking clients, who are rapidly expanding overseas and who need these services from someone they know and can trust.
- We market Chase Paymentech, our merchant acquirer, through our branches to small businesses, through the Commercial Bank to midsized companies and through our Corporate & Investment Bank to large, multinational corporations.

America's financial system is still the best the world has ever seen – it is large and diverse – and it serves the best economy the world has ever seen, which also is large and diverse

America's financial system still is the best the world has ever seen, and it includes not just banks but asset managers, private equity, venture capital, individual and corporate investors, non-bank financial companies, and public and private markets. In fact, in the United States, banks are a much smaller part of the financial system and the economy than in most other countries. And there is a great need for the services of all banks, from large global banks to smaller regional and community banks.

Our large global Corporate & Investment Bank does things that regional and community banks simply cannot do. We offer unique capabilities to large corporations, large investors and governments, including federal institutions, states and cities. For example, we provide extensive credit lines or raise capital for these clients, often in multiple jurisdictions and in multiple currencies. We essentially manage the checking accounts for these large institutions, often in many different countries. On the average day, JPMorgan Chase moves approximately $6 trillion for these types of institutions. On the average day, we raise or lend $6 billion for these institutions. On the average day, we buy or sell approximately $800 billion of securities to serve investors and issuers. In 2014, our Corporate & Investment Bank raised $61 billion for states, cities, governments and universities, including funds to renovate the historic Arthur Ashe (Tennis) Stadium in New York City, revenue

bonds to assist municipalities and hospitals, and green bonds to finance environmentally beneficial projects such as green buildings, clean water and renewable energy. As a firm, we spend approximately $700 million a year on research so that we can educate investors, institutions and governments about economies, markets and companies. The needs of these clients will be met – one way or another – by large financial institutions that can bear the costs and risks involved. Simply put, if it is not done by a large American financial institution, it will be done by a large non-American financial institution.

Regional and community banks are critical to their communities – in fact, we are a huge supporter and their largest banking partner. These banks are deeply embedded in their communities, many of which are not served by larger banks. They have an intimate knowledge of the local economy and local small businesses, which allows them to cost-effectively serve those clients. JPMorgan Chase, as a traditional "money center bank" and "bankers' bank," in fact, is the largest banker in America to regional and community banks. We provide them with many services so they can continue to serve their clients. For example, we directly lend to them, we process payments for them, we finance some of their mortgage activities, we raise capital for them (both debt and equity), we advise them on acquisitions, and we buy and sell securities for them. We also provide them with interest rate swaps and foreign exchange both for themselves – to help them hedge some of their exposures – and for their clients.

However, large does not necessarily mean complex (and things should be complex only for a good reason)

Many of the activities we do that are considered large are easy to understand. All of our 5,600 Chase consumer branches do essentially the same thing, and many of our large global transactions are not any more complicated than a loan for a middle market client.

While we agree with the concept that you should keep things as simple as possible, some things, by their very nature, are more complex. And that complexity cannot be reduced by wishful thinking. In fact, basic lending, whether to a large company or a midsized company, is one of the more complex things we do because one must understand the economy, the nature of the business and often the types of collateral involved. There are many judgmental factors to consider as well, which might include the character of the borrower, the growth prospects of the business, and an understanding of the products and services and technology of the business.

There are understandable questions about the role that large financial institutions play. Some of these questions make people nervous, in part because they do not understand the larger picture. These are important questions, and we always are willing to help explain what we do and why we do it. Taken in small component pieces, these activities generally are easier to understand. While some may criticize a bank's activities instead of taking the time to understand them, this does not contribute to a genuinely constructive dialogue around the role of banks.

People also should ask themselves one basic question: ***Why do banks offer these services?*** The fact is, almost everything we do is because clients want and need our various and sometimes complex services. (We do many activities that are ancillary to clients' direct needs, but we must do these things to provide clients with what they need. For example, in order to support our operation, we run global data centers, we hedge our own exposures and we maintain liquid pools of investments.)

I would venture to say that banking is not as complex as making airplanes, discovering effective pharmaceuticals, building safe cars, developing innovative electronics and, of course, understanding nuclear physics. There are huge benefits to the complexity involved in those other industries – but there also are sometimes negative consequences. The question for society is: Are we, in total,

better off or worse off because of some of the great products and services that come with complexity? The answer in our opinion is a resounding yes, though you should always strive to minimize the risks. But we want to acknowledge that the difference with banks, as pointed out by critics, is that if and when they make mistakes, they can severely harm the economy. This concern is legitimate, and I will talk about it in a later section.

Larger does not necessarily mean more risky

For example, many large banks had no problem navigating the financial crisis, while many smaller banks went bankrupt. Many of these smaller banks went bankrupt because they were undiversified, meaning that most of their lending took place in a specific geography. A good example was when oil collapsed in the late 1980s. Texas banks went bankrupt because of their direct exposure to oil companies and also because of their exposure to real estate whose value depended largely on the success of the oil business. Since the crisis began seven years ago, more than 500 smaller banks have gone bankrupt, and JPMorgan Chase has contributed approximately $8 billion to the Federal Deposit Insurance Corporation to help pay for the resolution of those banks.

And, yes, there are both costs and benefits to size and complexity

The benefits of size are obvious: huge economies of scale, the ability to serve large clients and make large investments, and safe diversification, among others. And, yes, there sometimes are clear negatives to size – usually in the form of arrogance, greed, complacency or lack of attention to detail. (There also are many small businesses afflicted with these diseases – they kill companies both large and small.) Good companies get the benefits of size and continuously are fighting off the negatives. And there are lots of winners and losers, particularly as industries consolidate. In every industry, you will see companies that benefit from size – and those that don't.

Our size and strength allow us to create benefits for society by helping economies and communities around the world grow and prosper

We are able to do our part in supporting communities and economies around the world because we are strong, stable and permanent. And because of this strength and stability, we can continue to support our clients in good times and, more important, in the toughest of times. The most important thing we can do is keep our company healthy and vibrant so that we can serve the needs of customers, consumers and businesses and help local economies and the thousands of cities and various communities around the world where we operate to grow and prosper.

In addition, we strongly believe in being a good corporate citizen. We are one of the most philanthropic companies in the world (we give away more than $200 million a year), but we are able to do much more than provide money. We bring the skills, resources and global knowledge of our entire firm to support the economic growth and progress of communities across the globe. One example is our research, such as studying how our communities analyze labor market conditions so they can get better at training people for jobs or how cities can further develop their economies. See Peter Scher's Corporate Responsibility letter on page 58 for more details on our efforts to support cities and communities around the globe. Following are three unique initiatives that we'd like to focus on:

JPMorgan Chase Institute. We will be officially launching an exciting new initiative called the JPMorgan Chase Institute, which is a global think tank dedicated to delivering data-rich analyses, expert insights and thought leadership for the public good. Drawing on the knowledge, market access, broad relationships and resources across the firm, the JPMorgan Chase Institute will help inform both business and policy decisions by grounding them with facts, data and thoughtful analysis. Our aim is to help decision makers – policymakers, businesses and nonprofit leaders – appreciate the scale,

granularity, diversity and interconnectedness of the global economic system to inform smarter decisions and good policies that advance global prosperity for consumers, businesses and countries. The research agenda will include groundbreaking analytic work on the financial behavior of individuals, insights on the small business sector, and expert profiling of global trade and capital flows.

Detroit. We brought all of our resources to bear in a special, coordinated way, which we never have done before, to try to help the city of Detroit. We have been doing business there for more than 80 years and already are the largest consumer, commercial and investment bank serving Detroit's consumers and companies. But we wanted to do more to help kick-start the city's recovery. This effort is a $100 million commitment, which includes investments, philanthropy and our people working in tandem with a set of city leaders who have come together to work toward a common purpose. Our initial interest in undertaking this effort was made possible because of our faith in the extraordinary work and talent of Mayor Duggan and Gov. Snyder (and Kevyn Orr, who recently left as Emergency Manager). Their dedication to coherently, comprehensively and pragmatically attacking the city's enormous problems made us want to do more. In fact, everything we have done to help is the result of asking a broad array of the city's leaders what they really needed and then working with them to come up with some creative solutions. Let me give just a few examples:

- We expanded the city's effort to systematically map every single parcel in Detroit and provided the technology assistance so that residents can use their phones to continually update the database.
- We helped provide financing for people who wanted to purchase land or to buy and renovate homes.
- We supported nonprofit organizations, including Focus: HOPE, in their efforts to help people gain skills from job training programs.
- We helped small businesses get access to the advice, training and other resources needed to grow, including a new commercial kitchen at Eastern Market that will allow more food businesses to expand.
- We provided lending for development – both commercial development to let businesses like Global Titanium expand jobs and residential development and new construction of apartment buildings in Detroit's urban core and neighborhoods.
- We created the Detroit Service Corps to bring more than 50 of our top managers to work full time with Detroit nonprofits to help them analyze challenges, solve problems and give them the best chance for success.

Helping Detroit's economy recover and thrive would be a shining example of American resilience and ingenuity at work.

Military and veterans. Another effort that we want you to know about is what JPMorgan Chase has done to help position military members, veterans and their families for success in their post-service lives through employment, housing and educational programs. In 2011, JPMorgan Chase and 10 other companies launched the 100,000 Jobs Mission, setting a goal of collectively hiring 100,000 veterans. The 100,000 Jobs Mission now includes more than 190 companies that have collectively hired more than 217,000 veterans since 2011 and has pledged to hire a total of 300,000 veterans. JPMorgan Chase hired over 1,800 veterans in 2014, nearly a 40% year-over-year increase, for a total of nearly 8,700 veterans hired since 2011. Further, we expanded our employment programs to address the unique needs of women veterans and military spouses. We hope that this makes you as proud of JPMorgan Chase as it does for all of us.

II. WE BUILD FOR THE LONG TERM – WE MANAGE THROUGH-THE-CYCLE, AND WE ALWAYS ARE PREPARED FOR THE TOUGHEST OF TIMES

Our paramount responsibility to society and to our clients is to be there in good times and bad times

We have a huge obligation to society – not only must we never fail, but we need to be steadfast. Never failing means having the financial strength, liquidity, margins, and strong and diverse earnings where you can weather any storm. It also means having the ability to adapt, survive and even thrive through the cycles.

Steadfast means that you will be there no matter what happens, and being there means that you can continue to properly serve your clients even in tough times. In the toughest of times, it is not about making a profit. It is about helping your clients survive. I should point out that in the toughest of times, particularly in 2009, JPMorgan Chase rolled over and extended credit to small and medium-sized businesses a total of $63 billion, to governments and nonprofits a total of $110 billion, and to large corporations a total of $1.1 trillion. I will talk more about this later.

We extensively manage our risks so that we can survive in any scenario. The Federal Reserve's stress test is a tough measure of our survival capability – though our ability to survive is stronger than that test implies

We are fanatics about stress testing and risk management. It is in our best interest to protect this company – for the sake of our shareholders, clients, employees and communities. If you went to our risk committee meetings, you would see a number of professionals working to thoughtfully manage and reduce our risk – we don't want a bunch of cowboys trying to increase it. We run hundreds of stress tests a week, across our global credit and trading operations, to ensure our ability to withstand and survive many bad scenarios. These scenarios include events like what happened in 2008, other historically damaging events and also new situations that might occur. Our stress tests include analyzing extremely bad outcomes relating to the Eurozone, Russia and the Middle East.

Regarding the Eurozone, we must be prepared for a potential exit by Greece. We continually stress test our company for possible repercussions resulting from such an event (even though, in our opinion, after the initial turmoil, it is quite possible that it would prompt greater structural reform efforts by countries that remain). Also regarding geopolitical crises, one of our firm's great thinkers, Michael Cembalest, reviewed all of the major geopolitical crises going back to the Korean War, which included multiple crises involving the Soviet Union and countries in the Middle East, among others. Only one of these events derailed global financial markets: the 1973 war in the Middle East that resulted in an oil embargo, caused oil prices to quadruple and put much of the world into recession. We stress test frequently virtually every country and all credit, market and interest rate exposures; and we analyze not only the primary effects but the secondary and tertiary consequences. And we stress test for extreme moves – like the one you recently saw around oil prices. Rest assured, we extensively manage our risks.

The Federal Reserve's Comprehensive Capital Analysis and Review (CCAR) stress test is another tough measure of our survival capability. The stress test is good for our industry in that it clearly demonstrates the ability of each and every bank to be properly capitalized, even after an extremely difficult environment. Specifically, the test is a nine-quarter scenario where unemployment suddenly goes to 10.1%, home prices drop 25%, equities plummet approximately 60%, credit losses skyrocket and market-making loses a lot of money (like in the Lehman Brothers crisis).

To make sure the test is severe enough, the Fed essentially built into *every* bank's results some of the insufficient and poor decisions that *some* banks made during the crisis. While I don't explicitly know, I believe that the Fed makes the following assumptions:

- The stress test essentially assumes that certain models don't work properly, particularly in credit (this clearly happened with mortgages in 2009).
- The stress test assumes all of the negatives of market moves but none of the positives.
- The stress test assumes that all banks' risk-weighted assets would grow fairly significantly. (The Fed wants to make sure that a bank can continue to lend into a crisis and still pass the test.) This could clearly happen to any one bank though it couldn't happen to all banks at the same time.
- The stress test does not allow a reduction for stock buybacks and dividends. Again, many banks did not do this until late in the last crisis.

I believe the Fed is appropriately conservatively measuring the above-mentioned aspects and wants to make sure that each and every bank has adequate capital in a crisis without having to rely on good management decisions, perfect models and rapid responses.

We believe that we would perform far better under the Fed's stress scenario than the Fed's stress test implies. Let me be perfectly clear – I support the Fed's stress test, and we at JPMorgan Chase think that it is important that the Fed stress test each bank the way it does. But it also is important for our shareholders to understand the difference between the Fed's stress test and what we think actually would happen. Here are a few examples of where we are fairly sure we would do better than the stress test would imply:

- We would be far more aggressive on cutting expenses, particularly compensation, than the stress test allows.
- We would quickly cut our dividend and stock buyback programs to conserve capital. In fact, we reduced our dividend dramatically in the first quarter of 2009 and stopped all stock buybacks in the first quarter of 2008.
- We would not let our balance sheet grow quickly. And if we made an acquisition, we would make sure we were properly capitalized for it. When we bought Washington Mutual (WaMu) in September of 2008, we immediately raised $11.5 billion in common equity to protect our capital position. There is no way we would make an acquisition that would leave us in a precarious capital position.
- And last, our trading losses would unlikely be $20 billion as the stress test shows. The stress test assumes that dramatic market moves all take place on one day and that there is very little recovery of values. In the real world, prices drop over time, and the volatility of prices causes bid/ask spreads to widen – which helps market-makers. In a real-world example, in the six months after the Lehman Brothers crisis, J.P. Morgan's actual trading results were $4 billion of losses – a significant portion of which related to the Bear Stearns acquisition – which would not be repeated. We also believe that our trading exposures are much more conservative today than they were during the crisis.

Finally, and this should give our shareholders a strong measure of comfort: During the ***actual*** financial crisis of 2008 and 2009, ***we never lost money in any quarter***.

We hope that, over time, capital planning becomes more predictable. We do not believe that banks are trying to "game" the system. What we are trying to do is understand the regulatory goals and objectives so we can properly embed them in our decision-making process. It is critical for the banking system that the treatment of capital is coherent and

consistent over time and is not in any way capricious. Capital is precious, and it needs to be deployed intelligently in the business or properly returned to shareholders. If shareholders do not have a clear understanding of capital management and have unreasonable expectations, then that capital will be devalued. This is a bad outcome for all involved.

While there always will be cycles, we need to keep our eye on the important things, too – the outlook for long-term growth is excellent

The needs of countries, companies, investor clients and individuals will continue to grow over time. The chart below shows some of the long-term growth that is expected in some critical areas, including the underlying growth of gross domestic product and trade, investable/financial assets, infrastructure and capital markets activities. This is the *fuel* that will drive our business in the future.

Therefore, we take a long-term perspective on investing. How we currently view low net interest margins is a good example of making decisions for the long run

To capture our share of the growth in our underlying businesses, we need to continually invest in bankers, branches and capabilities (research, products and technology) to drive down our costs and better serve our clients. It is a lot of hard work that needs to be supported by all of our critical functions, from finance and human resources to operations and controls. This kind of investing should not be done in a stop-start way to manage short-term profitability.

Quarterly earnings – even annual earnings – frequently are the result of actions taken over the past five or 10 years. Our company continued to invest through the crisis – often when others could not – in order to capture future growth.

Global Macro Themes

	2014	2024	Growth

[1] 2025 estimate

A very good current example of how we view investing and long-term decision making is how we are dealing with the squeeze on our net interest margins (NIM) due to extremely low interest rates. The best example of this is in our consumer business, where NIM has gone from 2.95% to 2.20% (from 2009 to 2014). This spread reduction has reduced our net interest income by $2.5 billion, from $10 billion to $7.5 billion – or if you look at it per account, from $240 to $180. Since we strongly believe this is a temporary phenomenon and we did not want to take more risk to increase our NIM (which we easily could have done), we continued to open new accounts. Over those years, we added 4.5 million accounts – and, in fact, very good sizable accounts. This has reduced our operating margins from 36% to 32%, but we don't care. When normal interest rates return, we believe this will add $3 billion to revenue and improve our operating margin to more than 40%.

Our long-term view means that we do not manage to temporary P/E ratios – the tail should not wag the dog

Price/earnings (P/E) ratios, like stock prices, are temporary and volatile and should not be used to run and build a business. We have built one great franchise, our way, which has been quite successful for some time. As long as the business being built is a real franchise and can stand the test of time, one should not overreact to Mr. Market. This does not mean we should not listen to what investors are saying – it just means we should not overreact to their comments – particularly if their views reflect temporary factors. While the stock market over a long period of time is the ultimate judge of performance, it is not a particularly good judge over a short period of time. A more consistent measure of value is our tangible book value, which has had healthy growth over time. Because of our conservative accounting, tangible book value is a very good measure of the growth of the value of our company. In fact, when Mr. Market gets very moody and depressed, we think it might be a good time to buy back stock.

I often have received bad advice about what we should do to earn a higher P/E ratio. Before the crisis, I was told that we were too conservatively financed and that more leverage would help our earnings. Outsiders said that one of our weaknesses in fixed income trading was that we didn't do enough collateralized debt obligations and structured investment vehicles. And others said that we couldn't afford to invest in initiatives like our own branded credit cards and the buildout of our Chase Private Client franchise during the crisis. Examples like these are exactly the reasons why one should not follow the herd.

While we acknowledge that our P/E ratio is lower than many of our competitors' ratio, one must ask why. I believe our stock price has been hurt by higher legal and regulatory costs and continues to be depressed due to future *uncertainty* regarding both.

We still face legal uncertainty though we are determined to reduce it over time. Though we still face legal uncertainty (particularly around foreign exchange trading), we are determined to reduce it and believe it will diminish over time. I should point out that while we certainly have made our share of costly mistakes, a large portion of our legal expense over the last few years has come from issues that we acquired with Bear Stearns and WaMu. These problems were far in excess of our expectations. Virtually 70% of all our mortgage legal costs, which have been extraordinary (they now total close to $19 billion), resulted from those two acquisitions. In the Bear Stearns case, we did not anticipate that we would have to pay the penalties we ultimately were required to pay. And in the WaMu case, we thought we had robust indemnities from the Federal Deposit Insurance Corporation and the WaMu receivership, but as part of our negotiations with the Department of Justice that led to our big mortgage settlement, we had to give those up. In case you were wondering: No, we would not do something like Bear Stearns

again – in fact, I don't think our Board would let me take the call. The WaMu deal might still make sense but at a much lower price to make up for the ongoing legal uncertainty (including the government's ability to take away our bargained-for indemnities). I did not, and perhaps could not, have anticipated such a turn of events. These are expensive lessons that I will not forget.

Part of the issue around legal costs is that banks are now frequently paying penalties to five or six different regulators (both domestic and international) on exactly the same issue. This is an unprecedented approach that probably warrants a serious policy discussion – especially if those regulators (as at least some of them have acknowledged) don't take into account what is being paid to the others. For now, it's simply a reality for big banks, and certainly for us, that when one or more employees do something wrong, we'll hear from multiple regulators on the subject.

The good news is that our legal costs are coming down and, we hope, will normalize by 2016.

Uncertainty remains around regulatory requirements, though we believe this will diminish over time, too. That uncertainty is particularly acute around the extra capital that JPMorgan Chase will have to hold because of the new Global Systemically Important Bank (G-SIB) rules, the ultimate impact of the Volcker Rule, total loss-absorbing capacity, CCAR and Recovery & Resolution. And it's because of that uncertainty that a majority of the time I spend with analysts and investors these days is devoted to regulation. Very little time is spent talking about the actual business, like client transactions, market share gains or other business drivers. Many questions still remain, and they are hard to explain or are difficult to answer, including: Why did American regulators simply double the G-SIB capital requirements for American banks versus all other global banks? Will higher capital requirements be added later? Given that much uncertainty, which is greater for JPMorgan Chase than for most other banks, it is understandable that people would pay less for our earnings than they otherwise might pay.

Having said all this, the contours of all of the new regulations have emerged, and we believe that regulatory uncertainty will diminish over time. And, we hope, so will the drag on our P/E ratio.

Think like a long-term investor, manage like an operator

So our ultimate goal is to think like a long-term investor – build great franchises, strengthen moats and have good through-the-cycle financial results. Achieve the benefits of scale and eliminate the negatives. Develop great long-term achievable strategies. And manage the business relentlessly, like a great operator. Finally, continue to develop excellent management that keeps it all going. As Thomas Edison said, "Vision without execution is hallucination."

III. WE WILL SUCCESSFULLY NAVIGATE THE NEW GLOBAL FINANCIAL ARCHITECTURE (AND WE ARE WELL ON OUR WAY TO HAVING FORTRESS CONTROLS)

We have meaningfully simplified the company

While I have said that it is good housekeeping to keep our company as simple as possible, we have done an extraordinary amount of cleaning out this past year. More important, last year, we *said* that we would do it, and this year we actually *did it*. The chart below shows that we did it by shedding businesses, reducing products and materially de-risking by reducing certain types of clients that simply create too much risk in the new world. In total, we have reduced approximately $25 billion in assets through this effort. All of this makes the work of our compliance and control executives that much easier, as they can focus more on what's important.

We are well on our way to having fortress controls

The intense effort over the last few years now is yielding real results and will go a long way in protecting the company in the future. When we are done, we hope not just to have met the heightened expectations of our regulators but to have exceeded them. In addition to successfully completing CCAR (which we will strive to do every year), there are other examples of tangible progress. Following are some of our accomplishments:

- **Strengthened compliance.** We have added approximately 8,000 people across the firm with a mission to strengthen our compliance capabilities. We have further aligned global leadership to drive focus and consistency across key risk areas such as AML/BSA (Anti-Money Laundering/

Executed Significant Business Simplification Agenda

Operating with fortress principles

Simplifying our business

- ✓ Completed the spin-out of One Equity Partners and closed on the sale of a portion of our Private Equity portfolio
- ✓ Exited physical commodities business
- ✓ Sold Global Special Opportunities Group portfolio
- ✓ Exit in process of majority of Broker Dealer Services business
- ✓ Terminated transaction services for ~500 Foreign Correspondent Banking clients
- ✓ Ceased originating student loans
- ✓ Announced exit of Sears Canada and several smaller non-core card partnerships
- ✓ Announced exit of International Commercial Card
- ✓ Sold interest in Carlson Wagonlit Travel agency
- ✓ Sold Retirement Plan Services unit
- ✓ Exited prepaid card and Order to Pay businesses
- ✓ Sold health savings account business

Other meaningful business actions

- ✓ Simplified Mortgage Banking products from 37 to 18 products as of 2014, with a target of further reducing to 15
- ✓ Rationalized Global Investment Management products: reduced U.S. funds # by net 6%, Asia funds net 4% and Europe funds net 2% in 2014
- ✓ De-risking through client selection –discontinuing certain businesses with select clients:
  - ✓ Exited ~8,000 clients in Business Banking and Commercial Banking
  - ✓ Exited ~5,500 foreign Politically Exposed Person relationships
- ✓ Sold significant portion of CIB's trade finance EXIM/ECA[2] portfolio

Incremental financial impact[1]

($ in billions)	2015	2016 and beyond
Revenue	$1.6 ▼	$0.7 ▼
Expense	$1.6 ▼	$0.6 ▼

[1] Does not include impact of the One Equity Partners and Private Equity portfolio sale
[2] EXIM = Export-Import Bank; ECA = Export Credit Agency

Bank Secrecy Act), fiduciary risk, market conduct risk, employee compliance and privacy. We have enhanced our policies and implemented new procedures and technology support.

- **New anti-money laundering systems deployed.** We have implemented Mantas, an industry-leading transaction monitoring platform, for all U.S. dollar payment transactions. This provides a significant improvement in our transaction monitoring capabilities and allows us to decommission multiple less effective legacy systems. We also have upgraded our processes and technology support in AML investigations and sanctions. We have more to do, but a strong foundation is in place.
- **Foreign correspondent banking review.** Given the regulatory scrutiny around these activities, we have exited many relationships with foreign correspondent banks where we have risk-related concerns or where we needed to simplify our business. In addition to the relationship exits, we have improved our controls for foreign correspondent banking activities, including enhancing our technology to better monitor U.S. dollar correspondent bank transactions – which allowed us to implement 10 new transaction monitoring scenarios to better track millions of transactions each day.
- **Enhanced controls in connection with payday lender practices.** We reviewed our policies, systems and processes to decrease financial burdens on our customers and hinder payday lenders' ability to engage in predatory collection practices. And then we did the following: eliminated multiple return item fees, enhanced our policy and systems for stop payment requests, and allowed account closure with a pending transaction and/or a negative balance. (NACHA rules originally did not allow a bank to close an account with a pending transaction. Consumers wanted to close the account to stop payday lenders from trying to take money from the account on a daily basis.) In addition, we are working with NACHA to develop new standards for the entire industry.
- **Mortgage servicing improvements.** As one of the United States' largest mortgage lenders, some of our practices were not designed to handle the unprecedented increase in volume that occurred as a result of the financial crisis. Therefore, we reviewed the areas that needed enhancement and took the appropriate actions. We focused on improving our operating model, we dedicated more than 10,000 employees to assist customers that were having difficulty making payments, and we improved our communications with customers to provide better counseling and more clarity about the options available. We also invested more than 280,000 hours of our technology employees' time to improve our Mortgage Servicing business, including enhancing the loan modification application to improve the systems that track and manage customer complaints and responses.
- **Model review.** More than 300 employees are working in Model Risk and Development. In 2014, this highly specialized team completed over 500 model reviews, implemented a system to assess the ongoing performance of the 1,000+ most complex models in the firm, and continued to enhance capital and loss models for our company.

Fortunately, most of our strategies stay essentially the same

Many banks will have to make some fairly drastic changes to their strategies, and because various banks are facing different overarching constraints, those strategies may be dramatically dissimilar. We are fortunate that our strategies will remain essentially the same, which allows us to avoid the upheaval, both internally and externally with clients, that often comes when strategies need to be changed dramatically.

However, a small percentage of our products and services will require some surgery (more on that later). In addition, because some companies are making large strategic moves, we would expect to see an ongoing shift in market shares and pricing. It is possible that we will benefit from both of these trends.

While uncertainty remains, the contours to the new rules are largely known, and we have made enormous progress adapting to them

The chart below describes the new rules and regulations with which we need to comply. And remember, these new rules affect each product, business, legal entity and client. Every requirement has a few hundred

2015 Financial Architecture

	Description	Selected requirements	Selected JPMorgan Chase actions
Capital	■ Improving the banking sector's ability to absorb losses arising from financial and economic stress	■ 750+ requirements with 21 regulators involved ■ ~27 different capital ratio requirements	■ 950+ people ■ 20,000+ pages of supporting documentation ■ 225+ new models
Liquidity	■ Ensuring banks hold sufficient liquid assets to survive acute liquidity stress ■ Prevent overreliance on short-term wholesale funding	■ 500+ requirements ■ 15+ jurisdictional variations expected	■ 400+ people ■ Process and store 1+ billion records per day from 200+ feeds
Recovery & Resolution	■ Ensuring the resiliency of firms to prevent failure ■ Preparing living wills	■ Annual global recovery plan ■ Annual resolution plans for 34 entities, with plans by business and critical operations ■ 10+ jurisdictions issued or proposed Recovery & Resolution regulation, with more expected	■ 1,000+ people ■ 1+ million work hours devoted annually
Mortgages	■ Reforming the nation's housing finance system ■ Expanding origination, servicing and securitization regulation	■ 90+ new, proposed or amended rules, notices and regulations contained within ~13,000 pages of regulatory text ■ ~2,000 pages of systemic reform legislation introduced	■ ~800,000 compliance training hours ■ ~1.4 million work hours dedicated to systems and process implementation
Data reporting and management	■ Enhancing data-related capabilities by increasing accountability and transparency for data quality ■ Improving the firm's ability to collect, manage and report on data in order to facilitate greater market and product transparency	■ 11 principles with 1,000+ requirements ■ 3,300+ pages of requirements, principles and guidance	■ 1,000+ people working across 43 business groups ■ 120+ distinct programs with 1,400+ milestones
Derivatives	■ Enhancing pre- and post-trade transparency ■ Promoting use of electronic trading venues and central clearing ■ Bolstering capital and margin requirements	■ 99 proposed or finalized regulations (U.S.) and 237 final articles (European Union) ■ 3,150+ pages of requirements and guidance	■ 700+ people ■ 60 workstreams
Volcker	■ Restricting banks from undertaking certain types of market activities ■ Controlling risks associated with certain trading and funds-related activity	■ 1,000+ pages covering 36 requirements, with 5 regulators involved	■ 300+ people ■ 7 trading metrics reported monthly across 15 business areas

Note: This list of regulations is not comprehensive; estimates of resources are approximate

detailed rules around it to which we need to adapt. While it is a lot of work, we believe we will be able to successfully accomplish all of it. We have spoken about many of these rules and requirements in the past so we won't go into greater detail here, other than on the new G-SIB capital rules, which will have some material effects on some of our businesses.

Intense effort is going into understanding and adapting to the new G-SIB capital rules. Last year, we described how we had to manage the company to satisfy several new constraints (all of the liquidity, leverage, capital and CCAR requirements). To do this, we were *pushing* these new rules and requirements all the way down to the product and client levels. The G-SIB capital rules are a new constraint that we also need to manage to, and for JPMorgan Chase, they possibly are the most important constraint, though this may change over time. Therefore, we also need to push the new G-SIB rules to the product and client levels.

Unlike RWA, which lets one measure the risk embedded in each asset and, thus, the capital needed to hold against it, G-SIB is multivariate. G-SIB is not a simple calculation. It requires thousands of calculations, and it does not look at just assets – it looks at products, services, assets, type of client (i.e., international and financial or corporate) and collateral type, among others in order to determine capital levels.

G-SIB will have its highest impact on non-operating deposits, gross derivatives, the clearing business in general and certain clients, particularly financial institutions, including central banks. At the end of the day, we believe that we can manage through this process and reduce our capital requirements while maintaining our core franchises. To the extent that these changes materially impact clients, we will do it thoughtfully and carefully and help them find appropriate alternatives.

G-SIB is not a direct measure of risk. The G-SIB calculations show that JPMorgan Chase is the most Global Systemically Important Bank, and, therefore, we have to hold more capital than any other bank in the world. Some of our shareholders believe that this designation implies that before the additional capital is held, we may be the riskiest institution, too. But G-SIB is not a true measure of risk, like RWA or CCAR. (And as shareholders have mentioned to me, many of these measures do not indicate how they would look at risk; i.e., margins, earnings diversification and actual performance in tough times, in addition to criteria such as capital and liquidity.)

In fact, parts of G-SIB are very risk insensitive – for example, it does not measure our actual and largest risks in credit markets (still our largest exposures) – and it adds a lot of capital for some activities that have absolutely no risk involved. One example will suffice: We take non-operating deposits (deposits that are very short term in nature from investors so they can manage their short-term cash needs) from central banks and large financial institutions. We have approximately $350 billion of non-operating deposits, a large portion from financial institutions, which we immediately turn around and deposit at the Federal Reserve, and this is risk-free to us. We mostly do this as an accommodation to large institutions that need to move extensive sums of money around and we generate minimal earnings from this activity. We recently announced that we are going to reduce these deposits by $100 billion, which in the context of the firm's broader actions will reduce our common equity requirements by approximately $3.5 billion. (Since these changes involve some of the largest financial institutions in the world, we are doing this very carefully and are trying to make sure that clients have access to alternatives such as access to money market funds and direct access to Federal Reserve facilities.)

We hope to learn a lot more about the G-SIB calculations. Many questions remain, which we hope will be answered over time such as:

- It is unclear (it has not been made transparent to us) how and why these calculations are supposed to reflect systemic risk. In addition, they are relative calculations, which means that even if we and everybody else all reduced these exposures, our surcharge would not change, while presumably systemic risk would drop.
- It is unclear how these calculations take into consideration the extensive number of new rules and regulations that are supposed to reduce systemic risk (i.e., total loss-absorbing capacity, net stable funding ratio, liquidity coverage ratio, supplementary leverage ratio and the new Recovery & Resolution rules).
- It is unclear why the U.S. regulators doubled the calculations versus everyone else in the world, particularly since the U.S. banking system, as a percentage of the U.S. economy, is smaller than in most other countries.

G-SIB is important, and we take it seriously. The G-SIB capital surcharge, however calculated, is an important part of our capital needs. And since we are outsized, relative to our competitors (our capital surcharge currently is estimated as 4.5% of risk-weighted assets, yet many of our competitors are between 2%-4% of risk-weighted assets), we will be more comfortable when the surcharge is reduced. We already have begun to lower the surcharge by 0.5%, and, over time, expect to do more than that. Marianne Lake and Daniel Pinto gave details on this topic in their Investor Day presentations. The regulators have made it clear that these are important measures of global systemic risk, and they have given us a clear road map to how we can reduce these exposures – and we are going to take that road.

We must and will meet the regulators' demands on Recovery & Resolution – whatever it takes

A critical part of eliminating "Too Big to Fail" is meeting the regulators' demands on Recovery & Resolution. The Recovery Plan is the first line of defense in a crisis situation and serves as the road map for how to prevent the firm from actually failing. It gives the regulators the comfort that the firm has done sufficient upfront planning and analysis and has an outline for how the firm could recover if confronted with a severe financial crisis. The plan essentially helps the regulators understand the comprehensive set of alternatives and actions available to enable the firm to fully recover and prevent a failure. Resolution Plans, on the other hand, are the playbooks for how the company can be restructured or unwound in an orderly way in the event of a failure so that other banks and the general economy would not suffer. The plans outline for the regulators a set of strategies, necessary information and detailed plans by legal entity. For instance, JPMorgan Chase has reported that it has 34 legal entities and branches housing the vast majority of the firm's essential operations and businesses. Each legal entity has to be understood by the regulators and must have distinct intercompany agreements and a comprehensive plan in place to manage the legal entity in the event that it needs to be resolved. We have taken these requirements very seriously as evidenced by the more than 1,000 people working diligently on the extensive Recovery & Resolution requirements. In addition, we are working to reduce the number of entities we have and to simplify our structure and inter-entity arrangements. We need to satisfy all of our regulators on these plans, and we will do whatever it takes to meet their expectations.

There have been two critical developments toward giving governments and regulators comfort on Recovery & Resolution, which, according to some key regulators, will effectively end Too Big to Fail and will

be completed in 2015. First, the regulators have almost finished plans around total loss-absorbing capacity, which will require large banks to hold a lot of additional long-term debt, which could be converted to equity in the event of a failure and thereby enable the firm to remain open to serve customers and markets. Second, the industry agreed to put in place specific rules and guidelines on how to deal globally with derivatives contracts of a failed institution. This gives regulators and governments the knowledge that, in a failure, derivatives contracts can be properly managed and will not make the situation worse.

The industry will be stronger and safer because of all of the new regulations, and the future is bright for well-run banks

There is no question that, today, the global banking system is safer and stronger – possibly more so than it has ever been. That is not to say that the changes do not create a whole range of challenges, complexities and new risks (which we will talk about in the next section). But at the end of the day, the system will be safer and more stable than ever. I may sound a little like Voltaire's optimistic character Dr. Pangloss for saying this, but I am hopeful that in the next five to 10 years, high-quality banks will be thriving in their work to support economies and help society.

IV. WE HAVE A SOLID STRATEGY AND BELIEVE OUR FUTURE OUTLOOK IS VERY GOOD – BUT, AS USUAL, THERE STILL ARE A LOT OF THINGS TO THINK AND WORRY ABOUT

We already have spoken about the fact that most of our strategy will stay essentially the same and that while some areas may require a little surgery, we strongly believe we will be able to successfully navigate the new world. Some of that surgery will slow down our growth a little bit in certain areas, but we are quite optimistic that we can grow in others.

Most of our growth will be organic – we have been doing this successfully for a decade – and opportunities abound

We are optimistic that all of our businesses can grow, and, below, I describe some initiatives that are particularly exciting.

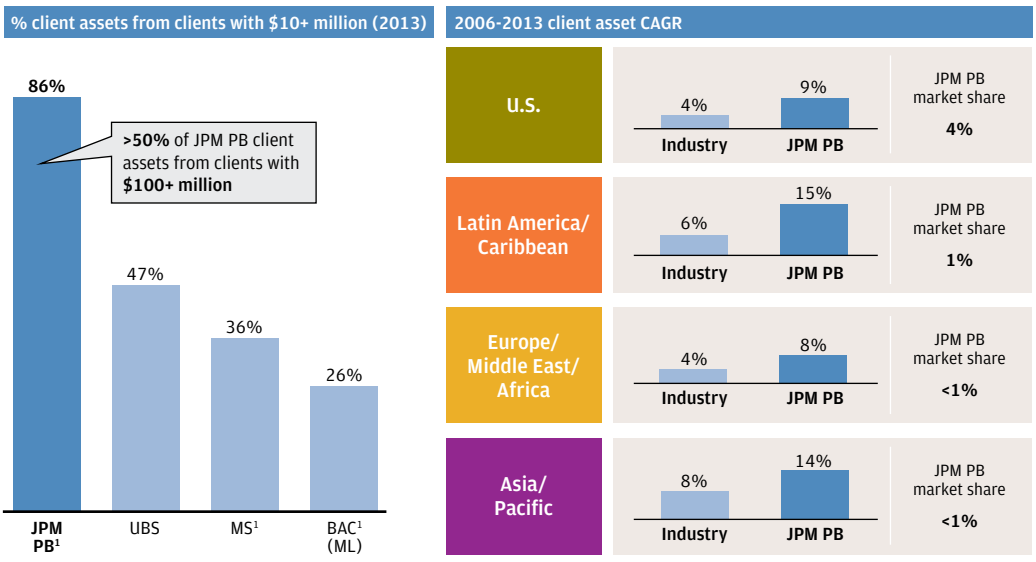
Chase Private Client started as a gleam in our eye back in 2010. Chase Private Client branches are dedicated to serving our affluent clients' investment needs. From one test branch (which didn't go very well, but, fortunately, we kept on trying), we now have more than 2,500 Chase Private Client offices. They now manage investments and deposits of $190 billion. While the branch buildout is essentially complete, we think the potential for growth remains large.

Small business. We are making our premier products and services work better together for a more holistic experience for our small business customers, whose time and attention should be spent on running their business, not going to the bank. We see a huge opportunity in this fragmented market – there is no dominant bank for the 28 million small businesses in the United States. At JPMorgan Chase, we serve 3.9 million American small businesses across Business Banking, Card Services and Chase Commerce Solutions, and we have successfully grown all of these businesses. We want to become the easiest bank to do business with, and we are working hard to speed applications, simplify forms and add digital conveniences. For example, we want a small business to fill out an application that can qualify it for Ink® (our small business credit card), Paymentech, deposits and loans all at once. We believe that if we bundle the services that small businesses really want and also provide meaningful advice, we can dramatically grow this business. Looking ahead, we know small businesses become large companies at a much more rapid pace than in years past. Serving these companies well now can solidify long-term client relationships that could span several lines of business in the future.

Excellent prospects for our Corporate & Investment Bank. Our Corporate & Investment Bank is an example of a business that has had exceptional relative multi-year performance. And even recently when it has been under a lot of regulatory pressure due to higher capital constraints and other regulatory demands, the business has been able to earn a 13% return on equity[1]. It is an endgame winner, and it benefits substantially from the rest of the company, which helps drive its best-in-class results.

However, in our current environment, we don't expect a lot of growth or robust returns as we adjust to the new world. But we continue to believe that the long run is quite attractive. At Investor Day, we showed that the Corporate & Investment Bank in 2006 was #1, #2 or #3 in eight of the 16 product categories that we are in. Now we are #1, #2 or #3 in 15 of the 16 product categories that we are in. But the exciting part is a program that Daniel Pinto calls Path to #1, which shows when you divide those 16 businesses into sub-businesses and geographies, there are lots of areas where we are not close to #1, #2 or #3, and, in most of those places, we should be able to improve. So as the business goes through an inordinate amount of change, the underlying needs of our clients continue to grow, and we will grow with them and believe we can gain share, too.

[1] Excludes legal expense



We are going to do a better job of covering family and private offices in both the Private Bank and the Investment Bank. Family offices have become larger, more sophisticated and more global, and they actively buy minority or whole stakes in businesses. More than 2,300 families across the globe had assets of $1 billion or more in 2014. Together, they control over $7 trillion in assets, a number that has grown in excess of 10% since 2011. While J.P. Morgan already works with many of these families as clients, we believe we can do a far better job of providing the full range of products and services offered by our Private Bank and Investment Bank.

Private banking will grow for years. In Mary Erdoes' Investor Day presentation, she showed that while we have the best private bank in the United States, our business still is rather small, and there is plenty of room to grow. This is even truer in Asia Pacific and Latin America. The chart below shows how strong our business is and illustrates that there is plenty of room to grow our market share internationally.

Retail banking presence still has room to grow. While we cannot acquire a retail bank in the United States, we can – and intend to – enter cities where we have never been. We will keep those cities we might choose to enter a surprise – but we hope to begin doing this in 2016. And remember, when we enter a city, we can bring the full force of JPMorgan Chase to bear, from retail, small business and private banking to middle market and local coverage of large corporations.

We particularly are excited about our payments business in total. The combination of Chase Paymentech, our merchant acquirer, ChaseNet, our proprietary Visa-supported network, and ChasePay, our proprietary wallet, allows us to offer merchants – large and small – better deals in terms of economics, simpler contracts, better data and more effective marketing to their clients. It also allows us to better serve consumer clients with a wide variety of offers and ease of use. We are going to be very aggressive in growing this business, and we will be disappointed if we don't announce some exciting and potentially market-changing ventures.

Trusted Advisor to the World's Most Sophisticated Clients

Every +10 basis points in market share internationally = $150+ million of revenue

[1] PB = Private Bank; MS = Morgan Stanley; BAC = Bank of America (Merrill Lynch)

Big, fast data. We continue to leverage the data generated across JPMorgan Chase, as well as data that we purchase to create intelligent solutions that support our internal activities and allow us to provide value and insights to our clients. For example, we are monitoring our credit card and treasury services transactions to catch fraudulent activities before they impact our clients, we are helping our clients mitigate costs by optimizing the collateral they post in support of derivatives contracts, and we are highlighting insights to our merchant acquiring and co-brand partners.

There always will be new emerging competitors that we need to keep an eye on

New competitors always will be emerging – and that is even truer today because of new technologies and large changes in regulations. The combination of these factors will have a lot of people looking to compete with banks because they have fewer capital and regulatory constraints and fewer legacy systems. We also have a healthy fear of the potential effects of an uneven playing field, which may be developing. Below are some areas that we are keeping an eye on.

Large banks outside the United States are coming. In terms of profitability, the top two Chinese banks are almost twice our size. Thirty years ago, Industrial and Commercial Bank of China operated in only a handful of countries, but it now has branches or subsidiaries in more than 50 countries. It has a huge home market and a strategic reason to follow the large, rapidly growing global Chinese multinationals overseas. It may take 10 years, but we'd be foolish to discount their ambition and resources. We're also seeing world-class banks emerge and grow in places like India and Brazil, and Japanese and Canadian banks are coming on strong, too. Many of these banks are supported in their expansionary efforts by their government and will not need to live by some of the same rules that we in the United States must adhere to, including capital requirements. We welcome the competition, but we are worried that an uneven playing field may hamper us many years from now.

Silicon Valley is coming. There are hundreds of startups with a lot of brains and money working on various alternatives to traditional banking. The ones you read about most are in the lending business, whereby the firms can lend to individuals and small businesses very quickly and – these entities believe – effectively by using Big Data to enhance credit underwriting. They are very good at reducing the "pain points" in that they can make loans in minutes, which might take banks weeks. We are going to work hard to make our services as seamless and competitive as theirs. And we also are completely comfortable with partnering where it makes sense.

Competitors are coming in the payments area. You all have read about Bitcoin, merchants building their own networks, PayPal and PayPal look-alikes. Payments are a critical business for us – and we are quite good at it. But there is much for us to learn in terms of real-time systems, better encryption techniques, and reduction of costs and "pain points" for customers.

Some payments systems, particularly the ACH system controlled by NACHA, cannot function in real time and, worse, are continuously misused by free riders on the system. There is a true cost to allowing people to move money. For example, it costs retailers 50-70 basis points to use cash (due to preventing fraud and providing security, etc.). And retailers often will pay 1% to an intermediary to guarantee that a check is good. A guaranteed check essentially is the same as a debit card transaction for which they want to pay 0%. For some competitors, free riding is the only thing that makes their competition possible. Having said that, we need to acknowledge our own flaws. We need to build a real-time system that properly charges participants for usage, allows for good customer service, and minimizes fraud and bad behavior.

Rest assured, we analyze all of our competitors in excruciating detail – so we can learn what they are doing and develop our own strategies accordingly.

Cybersecurity, fraud and privacy need intensive investment on the part of your entire company, and we must do it in collaboration with the government and regulators

Matt Zames describes on page 40 some of the efforts we are making on cyber. What I want to emphasize to our shareholders is the absolute, critical and immediate need to combat cybersecurity threats and the related issues of fighting fraud and protecting privacy. In these areas, we will do whatever it takes to protect the company and its clients. Regarding privacy, I do not believe that most people fully understand what no longer is private and how their information is being bought, sold and used. As a bank, we are appropriately restricted in how we can use our data, but we have found many examples of our data being misused by a third party. We are going to be very aggressive in limiting and controlling how third parties can use JPMorgan Chase data.

It is critical that government and business and regulators collaborate effectively and in real time. Cybersecurity is an area where government and business have been working well together, but there is much more to be done. And if it is not done in a concerted way, we all will pay a terrible price.

The banking system is far safer than it has been in the past, but we need to be mindful of the consequences of the myriad new regulations and current monetary policy on the money markets and liquidity in the marketplace – particularly if we enter a highly stressed environment

There are many new rules, and, in conjunction with current monetary policy, they already are having a large effect on money markets and liquidity in the marketplace. One famous scientist once said, "A Rule of Three (ART): A statistical specification with more than three explanatory variables is meaningless." Simply put, it is impossible to figure out the cumulative effect of all these changes even in a benign environment. But what is far more important is what the effect of these changes might be if we enter a *stressed environment*. As a risk policy matter, we need to make the assumption that there will be unpredictable and unintended consequences – sometimes these are to good effect, but what we need to worry about are those that have a potentially bad effect.

In the rest of this section, we will look at how the table is set – what is going on that is the same or different than in the past. Later in this section, we will speculate on what might happen differently if we enter a new crisis.

Most important, we will enter the next crisis with a banking system that is stronger than it has ever been

Each individual bank is safer than before, and the banking sector overall is stronger and sounder because, among other things:

- Capital levels are far higher today than before the crisis and, by some measures, higher than they have ever been. For example, a very basic measure of capital, going back around 100 years, was a simple ratio of equity to assets. In the last six years, it's back to high numbers not seen since the late 1930s.
- Highly liquid assets held by banks probably are much higher than ever before.
- Many exotic and complex products are gone.
- Many standardized derivatives are moving to clearinghouses.
- Both consumer and commercial loans are underwritten to better standards than before the crisis.
- Transparency to investors is far higher.
- Boards and regulators are far more engaged.

But many things will be different – for example, there will be far more risk residing in the central clearinghouses, and non-bank competitors will have become bigger lenders in the marketplace

Clearinghouses will be the repository of far more risk than they were in the last crisis because more derivatives will be cleared in central clearinghouses. It is important to remember that clearinghouses consolidate – but don't necessarily eliminate – risk. That risk, however, is mitigated by proper margining and collateral. We have long maintained that it is important to stress test central clearinghouses in a similar way that banks are stress tested to make sure the central clearinghouses' capital and resources are sufficient for a highly stressed environment. Clearinghouses are a good thing but not if they are a point of failure in the next crisis.

Non-bank competitors are increasingly beginning to do basic lending in consumer, small business and middle market. In middle market syndicated lending, their share recently has increased from 3% a few years ago to 5% today, and many people estimate that it will continue to increase over the years to come. There is nothing wrong with having competitors, including non-bank competitors. However, they will act differently from banks in the next stressed environment. I will write about this later in this section when we go through a thought exercise of the next crisis.

There already is far less liquidity in the general marketplace: why this is important to issuers and investors

Liquidity in the marketplace is of value to both issuers of securities and investors in securities. For issuers, it reduces their cost of issuance, and for investors, it reduces their cost when they buy or sell. Liquidity can be even more important in a stressed time because investors need to sell quickly, and without liquidity, prices can gap, fear can grow and illiquidity can quickly spread – even in supposedly the most liquid markets.

Some investors take comfort in the fact that spreads (i.e., the price between bid and ask) have remained rather low and healthy. But market depth is far lower than it was, and we believe that is a precursor of liquidity. For example, the market depth of 10-year Treasuries (defined as the average size of the best three bids and offers) today is $125 million, down from $500 million at its peak in 2007. The likely explanation for the lower depth in almost all bond markets is that inventories of market-makers' positions are dramatically lower than in the past. For instance, the total inventory of Treasuries readily available to market-makers today is $1.7 trillion, down from $2.7 trillion at its peak in 2007. Meanwhile, the Treasury market is $12.5 trillion; it was $4.4 trillion in 2007. The trend in dealer positions of corporate bonds is similar. Dealer positions in corporate securities are down by about 75% from their 2007 peak, while the amount of corporate bonds outstanding has grown by 50% since then.

Inventories are lower – not because of one new rule but because of the multiple new rules that affect market-making, including far higher capital and liquidity requirements and the pending implementation of the Volcker Rule. There are other potential rules, which also may be adding to this phenomenon. For example, post-trade transparency makes it harder to do sizable trades since the whole world will know one's position, in short order.

Recent activity in the Treasury markets and the currency markets is a warning shot across the bow

Treasury markets were quite turbulent in the spring and summer of 2013, when the Fed hinted that it soon would slow its asset purchases. Then on one day, October 15, 2014, Treasury securities moved 40 basis points, statistically 7 to 8 standard deviations – an unprecedented move – an event that is supposed to happen only once in every 3 billion years or so (the Treasury market has only been around for 200 years or so – of course, this should make you question statistics to begin with). Some currencies recently have had similar large moves. Importantly, Treasuries and major country currencies are considered the most *standardized* and *liquid* financial instruments in the world.

The good news is that almost no one was significantly hurt by this, which does show good resilience in the system. But this happened in what we still would consider a fairly benign environment. If it were to happen in a stressed environment, it could have far worse consequences.

Some things never change – there will be another crisis, and its impact will be felt by the financial markets

The trigger to the next crisis will not be the same as the trigger to the last one – but there will be another crisis. Triggering events could be geopolitical (the 1973 Middle East crisis), a recession where the Fed rapidly increases interest rates (the 1980-1982 recession), a commodities price collapse (oil in the late 1980s), the commercial real estate crisis (in the early 1990s), the Asian crisis (in 1997), so-called "bubbles" (the 2000 Internet bubble and the 2008 mortgage/housing bubble), etc. While the past crises had different roots (you could spend a lot of time arguing the degree to which geopolitical, economic or purely financial factors caused each crisis), they generally had a strong effect across the financial markets.

While crises look different, the anatomy of how they play out does have common threads. When a crisis starts, investors try to protect themselves. First, they sell the assets they believe are at the root of the problem. Second, they generally look to put more of their money in safe havens, commonly selling riskier assets like credit and equities and buying safer assets by putting deposits in strong banks, buying Treasuries or purchasing very safe money market funds. Often at one point in a crisis, investors can sell only less risky assets if they need to raise cash because, virtually, there may be no market for the riskier ones. These investors include individuals, corporations, mutual funds, pension plans, hedge funds – pretty much everyone – each individually doing the right thing for themselves but, collectively, creating the market disruption that we've witnessed before. This is the "run-on-the-market" phenomenon that you saw in the last crisis.

And now, a thought exercise of what might be different in the next crisis

It sometimes is productive to conduct a thought exercise – in effect trying to re-enact a "run on the market" but, in this case, applying the new rules to see what effect they might have. Even though we must necessarily be prepared for a crisis at all times, we hope a real crisis is many years down the road. And in the United States, we would be entering the crisis with a banking system that is far stronger than in the past, which, on its own, could reduce the probability *and* severity of the next crisis. We are not going to guess at the potential cause of the crisis, but we will assume that, as usual, we will have the normal "run-on-the-market" type of behavior by investors. So let's now turn to look at how a crisis might affect the markets in the new world.

The money markets (deposits, repos, short-term Treasuries) will behave differently in the next crisis

- Banks are required to hold liquid assets against 100% of potential cash outflows in a crisis. Liquid assets essentially are cash held at central banks, Treasuries and agency mortgage-backed securities. Outflows are an estimate of how much cash would leave the bank in the first 30 days of a crisis. This would include things like deposit outflows, depending on the type of deposit, and revolver take-downs, depending primarily on the type of borrower. In my opinion, banks and their board of directors will be very reluctant to allow a liquidity coverage ratio below 100% – even if the regulators say it is okay. And, in particular, no bank will want to be the *first* institution to report a liquidity coverage ratio below 100% for fear of looking weak.

- In a crisis, weak banks lose deposits, while strong banks usually gain them. In 2008, JPMorgan Chase's deposits went up more than $100 billion. It is unlikely that we would want to accept new deposits the next time around because they would be considered non-operating deposits (short term in nature) and would require valuable capital under both the supplementary leverage ratio and G-SIB.

- In a crisis, everyone rushes into Treasuries to protect themselves. In the last crisis, many investors sold risky assets and added more than $2 trillion to their ownership of Treasuries (by buying Treasuries or government money market funds). This will be even more true in the next crisis. But it seems to us that there is a greatly reduced supply of Treasuries to go around – in effect, there may be a shortage of all forms of good collateral. Currently, $13 trillion of Treasuries are outstanding, but, according to our estimates, less than half of this amount is effectively free to be sold. Approximately $6 trillion is accounted for by foreign exchange reserve holdings for foreign countries that have a strong desire to hold Treasuries in order to manage their currencies. The Federal Reserve owns $2.5 trillion in Treasuries, which it has said it will not sell for now; and banks hold $0.5 trillion, which, for the most part, they are required to hold due to liquidity requirements. Many people point out that the banks now hold $2.7 trillion in "excess" reserves at the Federal Reserve (JPMorgan Chase alone has more than $450 billion at the Fed). But in the new world, these reserves are not "excess" sources of liquidity at all, as they are required to maintain a bank's liquidity coverage ratio. In a crisis, if banks turn away deposits, most investors will have other options, which include:

  1. Buying Treasuries directly.
  2. Buying money market funds, which own Treasuries.
  3. Buying repos, which are collateralized by Treasuries.
  4. Investing directly at the Fed for a limited set of investors (government-sponsored enterprises, money funds).
  5. Purchasing credit instruments like commercial paper.

Buyers of credit (loans, secured loans, underwriting and investments) will be more reluctant to extend credit

- In the crisis, many banks lent against various forms of good collateral (but not necessarily the highest quality collateral) to help clients create liquidity and navigate through the crisis. The collateral often came with significant haircuts and was of the type that banks thought they easily could risk-manage, and, for the most part, they did. In the last crisis, JPMorgan Chase did tens of billions of this type of lending. In the next crisis, banks will have a hard time increasing this type of credit because it will require capital and more liquidity.
- In a crisis, clients also draw down revolvers (for JPMorgan Chase alone, this peaked at approximately $20 billion at one point in 2009) – sometimes because they want to be conservative and have cash on hand and sometimes because they need the money. As clients draw down revolvers, risk-weighted assets go up, as will the capital needed to support the revolver. In addition, under the advanced Basel rules, we calculate that capital requirements can go up more than 15% because, in a crisis, assets are calculated to be even riskier. This certainly is very procyclical and would force banks to hoard capital.
- In addition, banks may have a decrease in capital because new regulatory capital rules require losses on investment securities to reduce regulatory capital. This would be particularly true if interest rates were rising in the next crisis, which cannot be ruled out. (Typically, Treasury yields drop dramatically in a crisis, and that possibly could happen in this case, too, especially as they would be in short supply. But, again, one cannot rely on this.)
- In the last crisis, some healthy banks used their investment portfolios to buy and hold securities or loans. In the next crisis, banks will not be able to do that because buying most types of securities or loans would increase their RWA and reduce their liquidity.

- In the last crisis, banks underwrote (for other banks) $110 billion of stock issuance through rights offerings. Banks might be reluctant to do this again because it utilizes precious capital and requires more liquidity.
- It is my belief that in a crisis environment, non-bank lenders will not continue rolling over loans or extending new credit except at exorbitant prices that take advantage of the crisis situation.

On the other hand, banks continued to lend at fair prices in the last crisis because of the long-term and total relationship involved. Banks knew they had to lend freely because effectively they are the "lender of last resort" to their clients as the Federal Reserve is to the banks. ***This is a critical point: JPMorgan Chase and most other banks understood their vital role in actively lending to clients.*** In 2008 and 2009, JPMorgan Chase rolled over more than $260 billion of loans and credit facilities to small businesses, middle market companies and large companies, in addition to $18 billion for states and municipalities, hospitals and nonprofits. We rolled over these capital and lending commitments to support our clients and always maintained fair (and not rapacious) pricing, reflecting our long-term relationship with them.

The markets in general could be more volatile — this could lead to a more rapid reduction of valuations

The items mentioned above (low inventory, reluctance to extend credit, etc.) make it more likely that a crisis will cause more volatile market movements with a rapid decline in valuations even in what are very liquid markets. It will be harder for banks either as lenders or market-makers to "stand against the tide."

But the American financial markets and, more important, the American economy generally have been extraordinarily resilient

Banks may be less able to act positively in the next crisis, but they also are far stronger and unlikely, in our opinion, to create the next crisis. Many other actors in the financial system, from hedge funds to long-term investors, including corporations and large money managers, will, at some point, step in and buy assets. The government, of course, always is able to step in and play an important role.

In addition, regulators can improve the liquidity rules to allow banks to provide liquidity on a more "graduated" basis against more types of assets and give more flexibility on the "margin" than is required. That is, they can give themselves both gas and brakes; i.e., change liquidity rules to fit the environment. In addition, we should try to eliminate procyclical rules, which can exacerbate a crisis.

Fundamentally, as long as the economy is not collapsing, financial markets generally recover. Whatever the turn of events, JPMorgan Chase will have the capability to play its role in supporting clients and communities in the countries in which we operate.

V. WE HAVE A FULLY ENGAGED BOARD, AN EXCEPTIONAL MANAGEMENT TEAM AND A STRONG CORPORATE CULTURE

We want to be a standard-bearer in the industry when it comes to meeting the heightened standards demanded by our regulators – and not just because it's required but because we think it's the right thing to do for our shareholders, clients, employees and communities. And we want to do this across all measures – from our controls to board governance, the cultivating of a strong culture and how we are fighting cyber attacks to how we treat our clients. It starts at the top – with the Board of Directors.

Your Board is fully engaged in all critical matters

The entire Board is fully engaged in the affairs of the company. Board members are fully engaged in the company, from setting the agenda of the Board meetings to reviewing strategy and demanding strong controls to determining CEO compensation and succession planning. Board members also are increasingly engaged in regulatory and shareholder affairs. Several of the Board members meet regularly with our key regulators and major shareholders.

Management succession planning is a priority of the Board. Regarding succession planning, the Board always must be prepared for the "hit-by-the-bus" scenario (which, of course, is not my preference), but ongoing succession planning for the medium and long term is the highest priority of the Board. Importantly, our Board members have complete access to and relationships with the key senior people and continually interact with them, both formally and informally. Both the Board members and I believe that, under all scenarios, this company has several capable potential successors.

The full Board meets without the CEO at every Board meeting. Going way back to Bank One's Board more than a decade ago and before it was mandated, the Board would meet without the CEO (that's me) because we all thought it was best for Board members to have an open conversation about the CEO and the company without feeling any pressure. The Board continues that practice today. New rules mandate that directors meet at least once a year without the CEO – yet our Board does so at every Board meeting; i.e., eight times a year. And usually at the end of the session, the Lead Director comes to see me to give feedback and guidance about what the Board is thinking and what it wants.

We have a strong corporate culture – but we must continuously strengthen it

JPMorgan Chase has served its shareholders, customers and communities with distinction for more than 200 years. Since we were founded, our company has been guided by a simple principle that perhaps was best articulated by J.P. Morgan, Jr., in 1933, when he said: "I should state that at all times, the idea of doing only first-class business, and that in a first-class way, has been before our minds." We continue to strive to meet that principle.

Acknowledging mistakes – and learning from them – is part of the fabric of this company. We also recognize that we have made a number of mistakes – some of them quite painful and costly – over the last several years. One of the things we learned was that we needed to redouble our efforts around culture – not reinvent our culture but recommit to it and ensure that it is an enduring strength of this institution. While we have done an extensive amount of work over the past year and a half to make sure we get this right, we know that it can't be a one-time effort. It's like keeping physically fit – you can't get in shape and expect to stay that way if you stop exercising.

Our efforts around culture and conduct are substantial and include the following:

We will continuously reinforce our business principles. Back in July 2004 at the close of the JPMorgan Chase and Bank One merger, we sent a small blue book to all employees outlining the capabilities of the combined firm, as well as our mission and business principles. While much has changed over the past decade, our commitment to these principles remains the same. In July 2014, we marked the 10-year anniversary of JPMorgan Chase and Bank One coming together to form this exceptional company. It was fitting that on this special occasion, we rededicated ourselves to those same business principles by distributing the rearticulated business principles on How We Do Business to every person in the company. These core principles (which are written in plain English and include lots of specific examples) describe how we want to conduct business, and they will continue to guide us as we move forward. What we are doing ***differently*** today is that we are taking substantial actions to continuously inculcate our employees and our leadership on these principles:

- We want to make the How We Do Business principles part of every major conversation at the company – from the hiring, onboarding and training of new recruits to town halls and management meetings.
- We conduct a substantial amount of ongoing training and certification, from the Code of Conduct for all employees to the Code of Ethics for Finance Professionals that applies to the CEO, Chief Financial Officer, Controller and all professionals of the firm worldwide serving in a finance, accounting, corporate treasury, tax or investor relations role.
- We have enhanced our leadership training. We have thousands of educational programs, and we have consistently trained the top several hundred people on leadership. But we did not train people when they became first-time managers or, importantly, managers of managers. This will be another opportunity to drive home our How We Do Business principles. The heart of this training provides the chance to teach our leadership how to do the right thing – not the easy thing – and to continually reinforce the principle of treating others in the way you would like to be treated.
- We also developed a pilot program within our Corporate & Investment Bank in Europe, the Middle East and Africa on How We Do Business, which includes focus groups and other efforts to analyze cultural themes and address any concerns around conduct and behavior. This year, we have taken the learnings from that pilot and will be rolling them out in a global, firmwide Culture and Conduct Program.

These initiatives will make us a better company. We hope they will reduce any bad behavior. No human endeavor can ever be perfect, but we are hopeful that as incidences of bad behavior decline and as management's responses to bad behavior are vigorous, governments and regulators will appreciate the intensity of our efforts.

Compensation has been consistent and fair and is awarded with proper pay-for-performance

Our long-term success depends on the talents of our employees. And our firm's compensation system plays a significant role in our ability to attract, retain and motivate the highest quality workforce. We design our compensation program to encompass best practices, support our business objectives and enhance shareholder value. For example:

- We do not have change-of-control agreements, special executive retirement plans, golden parachutes or things like special severance packages for senior executives.
- We do not pay bonuses for completing a merger, which we regard as part of the job. (When a merger has proved successful, compensation might go up.)

- We virtually have no private "deals" or multi-year contracts for senior management.
- We always have looked at financial performance as a critical factor, but not the only factor, in pay-for-performance. We have formulas (which always have been properly charged for capital usage) for how we accrue compensation, but we do not pay it out in a formulaic way to anyone. Financial performance alone is not a comprehensive picture of performance. Broader contributions are important, like qualitative skills such as leadership attributes, character and integrity, and management ability. This also includes recruiting, coaching and training, building better systems and fostering innovation, just to name a few.
- We also have invoked comprehensive clawbacks of previously granted awards and/or repayment of previously vested awards when we thought it was appropriate. In 2014 alone, more than 200 employees had compensation reduced for risk- and control-related events. Importantly, many more than that were terminated for poor performance or ethical lapses during the course of the year.

Compensation alone is not enough, and one should not confuse good compensation with good morale. Getting compensation right is critical – everyone wants to feel they are being paid fairly, and most people have other alternatives. But proper compensation alone is not enough. I have seen many companies try to make up for politics, bureaucracy and low morale with high compensation – it does not work. When a company has been doing poorly, or treats its customers badly, the company should expect low morale. What employees want to see is that the company faces its issues, reduces politics and bureaucracy, and improves customer service and satisfaction. Maintaining a corporate culture where the right people are promoted and everyone is treated with respect is as important as compensation. Then morale will improve, and employees will be proud of where they work every day.

We need to operate like a partnership. If, for example, a company's largest, and perhaps most important, business unit is under enormous stress and strain, unlikely to earn money regardless of who is in charge, a manager might ask his or her best leader to take on the job of running that business. This may be the toughest job in the company, one that will take years to work through before the ship has been righted. When the manager asks a leader to take on the responsibility, she quite appropriately will want to know whether she will be supported in the toughest of times: "Will you make sure the organization doesn't desert me?" "Will you stop the politics of people using my unit's poor performance against me?" "Will you compensate me fairly?" My answer to these questions would be yes. And as long as I thought she was doing the job well, I would want to pay her like our best leaders, profits aside. Conversely, we all know that a rising tide lifts all boats. When that's the case, paying that leader too much possibly is the worst thing one can do – because it teaches people the wrong lesson.

We still believe deeply in share ownership. We would like all our senior managers to have a large portion of their net worth in the company. We believe this fosters partnership. While some make the argument that it causes excessive risk taking – we disagree. The first people to lose all of their money if a company fails are the shareholders and the management team. We want your management team to be good stewards of your capital and to treat it as they would their own. It is formulaic compensation plans, where people are paid solely on financial performance, that can cause undue risky and bad behavior.

The entire Operating Committee gets involved in compensation – it is not done in a back room. One way we make sure we are fair and just with compensation is that the entire Operating Committee spends a substantial amount of time reviewing the compensation of our top 500 people – this way, we have

internal justice, we can review someone's total performance across all measures, and we can understand how a manager manages up, down and across the organization – not just up.

We want to have the best people, and competitive compensation is critical. We must continue to pay our people properly, competitively and well for doing a good job. It is imperative at JPMorgan Chase that we continue to attract and retain the best.

We treat all of our people fairly. While we generally talk about compensation for the most senior managers, the compensation levels of our entire employee population are fairly similar to that of the U.S. population's household income distribution. We invest a significant amount of time and money to ensure that all of our employees are properly compensated. We still have a defined benefit pension plan for most of our employees that provides a fixed income upon retirement to supplement Social Security and any other savings they have. We also provide a 401(k) plan with matching dollars. In addition, we have excellent healthcare plans that incentivize people to take care of themselves. For example, premiums are lower if an employee gets an annual physical examination or stops smoking. We also subsidize these healthcare plans more for lower paid employees (at 90%) versus our higher paid employees (who are at 50%). And each year, we are recognized as a great place to work by various groups, including *Working Mother* 100 Best Companies, Top 100 Military Friendly Employers by *G.I. Jobs* magazine and Best Employers for Healthy Lifestyles by the National Business Group on Health, among many others.

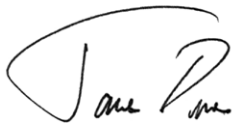
As we centralize all risk functions, we also must be certain that line of business CEOs remain empowered to manage their business end to end

We always have tried to be very thoughtful about which functions are centralized or decentralized at the company. We always have centralized functions that can create huge economies of scale like data centers or utilities that are used by the entire company (like general ledgers and payroll) or critical control functions (like Corporate Legal, firmwide accounting policies, etc.). We try to decentralize where we can and when it makes sense to do so. For example, while a lot of finance functions reside at Corporate (like accounting policy), some finance people are devoted to only one line of business, so we keep them within that line of business. We do this to provide direct accountability, speed up decision making and minimize bureaucracy.

In the new world, in order to improve the consistency of controls, regulators have demanded that most risk and control functions be centralized, including Risk, Compliance, Finance, Oversight & Control, Audit and Legal. In doing this, we have given huge amounts of additional authority to functions at our corporate headquarters. Corporate headquarters can sometimes forget that it exists only because there is a banker in front of a client somewhere. The Home Depot, one of America's great companies, does not call its corporate headquarters the corporate headquarters – it's called Store Support Center to remind employees every day why they are there: to support the stores and the clients. This still remains true at JPMorgan Chase – we at Corporate would not be here if we didn't have our bankers in front of clients.

We need to work hard to get the best of both centralization and decentralization. And we need to manage Corporate so the line of business CEOs and management teams are fully responsible and empowered to manage their businesses. Centralization should not mean demoralizing bureaucracy or slowing down services as multiple committees and layers

sign off on every decision and stifle innovation. We have been managing through this process with our eyes wide open. The Operating Committee members of the company spend a considerable amount of time to make sure we get this right.



We need to develop the right culture and avoid creating a culture of finger-pointing. We need to analyze our mistakes because that is the only way we can fix them and consistently improve. But we cannot allow this to devolve into crippling bureaucratic activity or create a culture of backstabbing and blame. We need to develop a safe environment where people can raise issues and admit and analyze mistakes without fear of retribution. We must treat people properly and respectfully – even if we have to make tough decisions.

I believe this company currently has the best management team with whom I have ever been associated – and I mean their character, culture and capabilities. I now ask questions that I did not ask when I was a younger manager: "Would I want to work for these managers?" "Would I want my children to work for these managers?" My answer would not always have been yes, but now it is. These leaders have navigated the last several years with fortitude and a smile, driving results, making tough decisions and treating each other as complete partners. They are the reason why both performance and morale remain strong in this environment.

CLOSING COMMENTS

I feel enormously fortunate to be part of the remarkable 200-year journey of this exceptional company.

I wish you all could see our employees and your management team at work, particularly in these challenging times. If you did, I know that you, like me, would be bursting with appreciation and pride and have great comfort in knowing that our wonderful legacy will continue.

Jamie Dimon
Chairman and Chief Executive Officer

April 8, 2015

A Culture of Excellence

Matt Zames

Our firm has a rich, 200-year history of serving its clients and customers with integrity and establishing relationships based on trust. It is our responsibility to preserve and build upon the solid values on which this firm was founded. The tone we set as stewards of the firm is critical, and managing a culture of excellence, as well as integrity, requires us to have a sophisticated and comprehensive infrastructure.

The Chief Operating Office is central to delivering operational excellence. It is responsible for many of the firm's corporate utilities, including Treasury, the Chief Investment Office, Global Technology, Operations, Oversight & Control, Compliance, Corporate Strategy, Global Real Estate, Global Security & Military Affairs and Regulatory Affairs, among others. In 2014, we focused a great deal on what it means to be a Global Systemically Important Bank (G-SIB) and how best to ensure we manage to the needs of our critical stakeholders – shareholders, clients, customers and employees – given our significance to worldwide markets and the global economy. We continue to respond to the changing regulatory landscape, including requirements for G-SIBs, and we are evaluating the businesses we manage and the products and services we offer in the context of these new requirements. As an example, we announced the firm is targeting up to a $100 billion reduction in non-operating wholesale deposits. At a minimum, we are committed to ensuring we remain safely within the 4.5% G-SIB capital surcharge bucket and are looking at additional actions to potentially reduce our surcharge by an incremental 50 basis points.

Last year, we published Business Principles, key themes around which we want to drive the firm. These principles are fundamental to our success and provide guidance for our identity as a company while informing our firmwide strategic priorities.

EXCEPTIONAL CLIENT SERVICE

OPERATIONAL EXCELLENCE

A COMMITMENT TO INTEGRITY, FAIRNESS AND RESPONSIBILITY

A GREAT TEAM AND WINNING CULTURE

We distributed the principles to our employees and regulators and followed up with a more extensive "How We Do Business – The Report," which is available on our public website.

We recently launched a firmwide Culture and Conduct Program to further reinforce the behavioral standards implicit in these Business Principles. The program is not about reinventing our culture but recommitting to it. It considers our culture, business models, tone from senior executives, governance and incentive structures; how they influence daily decision making at all levels; and the impact of those decisions on our clients, our reputation and the integrity of the markets. Our objective is to instill in our employees a strong sense of personal accountability through broad, deep integration of common standards across businesses and geographies. In 2015, we will develop a suite of metrics to enable management to keep a pulse on how we are doing in regard to our company culture and with respect to specific conduct risks. We have committed, in 2015, that each line of business and function will implement a Culture and Conduct Program aligned to the firmwide framework.

Execution against our principles requires us to be ever mindful of new opportunities to reduce complexity and improve efficiency. As part of our business simplification strategy, we spun off One Equity Partners, the firm's private equity

unit, which was completed in early January 2015. We realized significant savings through the reshaping of our workforce and consolidation of jobs in the right locations, creating efficiencies in labor and real estate costs and promoting consistency in our control culture. We are committed to managing expenses tightly, eliminating waste, and running the firm in a nimble and flexible manner.

We continue to look for additional opportunities to do business in smarter ways. For example, over the last few years, the firm made a significant investment in telecommunications and collaboration tools to facilitate alternatives to air travel. We have rationalized the population of vendors, in large part through the establishment of preferred vendors in categories such as information technology (IT), real estate services, printing, and marketing and advertising. In addition, we are in the process of rationalizing our population of law firms and physical security vendors.

We will not compromise on the control environment and, to that end, continue to tighten data controls for ourselves, as well as for our third parties. This involves fortifying our defenses to ensure all of our managers, employees and vendors are following the appropriate security and hygiene practices with regard to work email, password protection, data encryption, system entitlements and social media. We continue to carefully monitor third-party systems and to increase our oversight of all the vendors with whom we work to make sure their protections are adequate.

Liquidity and interest rate risk management continue to be important

Liquidity and interest rate risk management are fundamental to how we manage the firm and take on increasing importance for the firm as a G-SIB. As we advance our thinking in response to an evolving set of regulatory requirements, we are driving a coordinated approach to management of the firm's balance sheet.

2014 featured final versions of important regulatory liquidity rules, notably the liquidity coverage ratio by U.S. banking regulators and Basel's final rule on the net stable funding ratio, with which we are compliant. We devoted significant resources to understanding the potential liquidity impact of changing Fed monetary policy and rising rates, particularly the impact on our wholesale deposit base. As a direct result of this effort, we further refined and improved our internal stress framework. We continue to be in compliance with our internal measures.

We progressed our technology buildout to enable more flexible and timely liquidity stress testing for the enterprise and major legal entities. We further evolved the Liquidity Risk Oversight group, which provides independent assessment, measurement, monitoring and control of liquidity risk. We established a firmwide program to set up a best-in-class intraday liquidity management process and infrastructure in preparation for a changing market environment and emerging regulatory expectations.

We continue to actively manage our investment securities portfolio of over $340 billion, the primary vehicle used to offset the firm's loan and deposit mismatch and moderate firmwide structural interest rate risk. In 2014, we further increased the proportion of investment securities that we intend to hold to maturity to nearly $50 billion, which will help to mitigate Basel III capital volatility in a rising rate environment. The average yield of our investment securities portfolio increased by 45 basis points from a yield of 2.32 in 2013 to 2.77 in 2014 despite generally lower interest rates, and we maintained an average portfolio rating of AA+.

Cybersecurity remains a top priority

In 2014, we experienced cyber threats of an unprecedented scale. This included a data breach we incurred last summer, which we voluntarily disclosed. We continue to discover and block new and unique malware, viruses and phishing attempts to obtain access to our data. Importantly, cyber attacks to date have not resulted in material harm to our clients or customers and have not had a material adverse impact on our results or operations.

To defend against these threats, we spent more than $250 million in 2014 on our cyber capabilities. We established three global Security Operations Centers to monitor, detect and defend the firm. We organized cyber defense exercises to test our capabilities and conducted an independent assessment of our cybersecurity program to identify actions for continual improvement. We doubled the number of cybersecurity personnel over the past two years and hired top-notch security experts.

Over the next two years, we will increase our cybersecurity spend by nearly 80% and enhance our cyber defense capabilities with robust testing, advanced analytics and

improved technology coverage. We will strengthen our partnerships with government agencies to understand the full spectrum of cyber risks in the environment and increase our response capabilities.

Technology is critical to our competitive advantage and to the protection of our clients and customers

Over the past six years, the firm has invested 8%-9% of its annual revenue to fund our global technology capabilities, one of the largest investments we make at JPMorgan Chase. Even as we are committed to expense management, we will not compromise our investment opportunities for the future, especially as they relate to innovative and efficient delivery to our clients and customers and protection of their security.

Demand for technology continues to grow. IT supports 318,000 desktops, 66,000 servers in 32 strategic data centers, 25,000 databases and 7,100 business applications. Our global telecommunications network connects our presence in 60 countries along with our 5,600 Chase branches and 18,000 ATMs. We have more than 35 million active online, and over 19 million active mobile, clients and customers. We process approximately $6 trillion of payments daily on behalf of the firm and its clients and customers.

In 2015, approximately 50% of our technology investment spend will be in support of our strategic business priorities, including:

- Digital: End-to-end digital commerce across web, mobile and future channels and across our businesses.
- Data & Analytics: Leveraging of our firmwide data assets for operational stability, customer value, revenue generation, and risk and security.
- Mobile, Unified Communications: Communications channel integration into business applications to enrich interaction among employees, clients and customers.
- Next Generation Cloud Infrastructure: Increased cloud footprint to enhance cost efficiency and flexibility using highly elastic, on-demand, self-service infrastructure.
- Next Generation Development: Increased developer productivity, quality and pace of application delivery.
- Security & Controls: Framework to address the increasing volume, pace and sophistication of security threats.

In addition, we will continue to innovate in 2015 by improving branch automation and efficiency, extending our electronic trading platforms, launching an advisor workstation platform for Asset Management and implementing a new commercial real estate loan originations system.

Our focus on the control agenda has become "business as usual"

We have made substantial investments and transformative changes to strengthen our control environment. Since the creation of Oversight & Control in 2012 to embed greater focus and discipline on controls within each business, the group has successfully integrated into each business and function to make the control agenda a core strategy and priority.

Over the past few years, Oversight & Control has significantly enhanced the quality of, and standard requirements for, our business self-assessment process, designed to identify and assess key operating risks in each area. We introduced common control reporting on a range of metrics and, in 2015, will further develop capabilities to analyze trends and conduct impact analysis across businesses. Of the original 24 enterprise-wide programs established in 2013 to tackle top control issues, many now are complete, and the work has transitioned from projects to business-as-usual operations. We anticipate closing the lion's share of the programs in 2015.

The compliance agenda is continuously evolving

Our firm's compliance capabilities have improved significantly over the past year. 2014 was focused on execution across the foundational components of the compliance program. We enhanced standards and protocols across core practices, strengthened our employee compliance program, and continue to evolve and develop

trade and e-communications surveillance programs. Building a world-class Anti-Money Laundering (AML) program remains a top priority, and a significant amount of work has been completed on the Bank Secrecy Act/AML and Sanctions programs, including a new, global set of Know Your Customer standards.

This year, Compliance will focus on enhancing standards for market conduct risk, fiduciary responsibilities, employee compliance and regulatory reporting. Ongoing strategic technology investments and process improvements will position us to continue delivering in a heightened regulatory environment.

Conclusion

We understand the importance of operational excellence, effective risk management across all risk categories, a fortress infrastructure, and a culture that is rooted in integrity, fairness and responsibility. We have addressed new challenges by applying lessons learned more effectively, and we are able to respond more quickly owing to the talent of our people and our investments in infrastructure and controls.

We continue to strengthen our client- and customer-centered culture and set high standards for performance as we invest in targeted growth opportunities and first-rate systems and operations, simplify our businesses and redouble expense management efforts. Our Business Principles will be our guidepost as we make decisions each step of the way. We are indebted to our predecessors for the solid foundation we inherited and will be vigilant in our commitment to maintaining the world-class reputation we have worked so hard to build. The company is well-positioned to help our clients and customers to the fullest, with integrity, and that is what we intend to do. To achieve our objectives, we must execute strategically and with urgency.

Matt Zames
Chief Operating Officer

2014 HIGHLIGHTS AND ACCOMPLISHMENTS

- Evaluated business activities in light of G-SIB; committed to operating at or below the 4.5% G-SIB capital surcharge bucket
- Targeted a $100 billion reduction in non-operating wholesale deposits
- Launched a firmwide Culture and Conduct Program to reinforce our Business Principles across all businesses and functions globally
- Met liquidity regulatory requirements; advanced our own internal framework, including technology capabilities and independent risk oversight
- Maintained AA+ average rating in our investment securities portfolio; improved the average yield of investment securities from 2.32 in 2013 to 2.77 in 2014 despite low rate environment
- Spun off One Equity Partners as part of ongoing business simplification efforts
- Managed expenses tightly through, among other things, creating economies of scale through consolidation of jobs in strategic locations and establishment of preferred vendors
- Matured our efforts to further strengthen controls, including transitioning many enterprise-wide programs to business-as-usual
- For the sixth consecutive year, invested 8%-9% of the firm's annual revenue in global technology capabilities and digital innovation
- Processed an average of approximately $6 trillion in payments daily
- Spent more than $250 million in 2014 to protect the firm from cyber attacks and will increase cyber spend by nearly 80% over the next two years

Consumer & Community Banking

Gordon Smith

I'm proud to say that Consumer & Community Banking (CCB) has grown stronger in 2014, adding more customers, building market share and improving the customer experience across all of our channels. Today, we've earned relationships with nearly half of all U.S. households and 3.9 million small businesses. In 2014, we added approximately 600,000 new CCB households, bringing our total to almost 58 million. As important, we've deepened the relationships with our existing customers. More people consider Chase their primary bank than any other bank in our footprint, and customer attrition has reached historic lows. More customers are doing business with Chase, and they are staying with us for the long term.

Leading the industry

Our core strategy for CCB for the past four years has been to build lifetime, engaged relationships with our customers. That begins and ends with a consistent and outstanding customer experience across Chase. I have yet to see any business that can grow over time without happy customers. And in our business, where customers have extensive choices across all of our products, that's acutely true.

We're pleased with our progress. I don't think anyone can ever declare victory on the customer experience, but we can celebrate the success we've had. One key measure that we track is our Net Promoter Score (NPS), which simply is how many customers say they would refer a friend to Chase. Since mid-2011, our NPS has roughly doubled in Consumer Banking and Card and tripled in Business Banking. In fact, nearly all CCB businesses are at or close to all-time highs.

We also received validation from respected outside groups. The American Customer Satisfaction Index named Chase #1 in customer satisfaction among large banks in 2014. J.D. Power ranked us #3 in Highest Customer Satisfaction in Mortgage Originations (up from #12 in 2010) and #2 in Mortgage Servicing (up from #13 in 2010). In Business Banking, we are #1 or #2 in every region (up from #22 in 2010).

Building stronger relationships with customers has led to measurable improvement in our leadership positions. This year, the Federal Deposit Insurance Corporation (FDIC) named us #1 in deposit growth among the largest 50 U.S. banks. We are the #1 credit card issuer, #1 in total U.S. credit and debit payments volume, the #2 mortgage originator and servicer, and the #3 non-captive auto lender. Chase is #1 in ATMs and #2 in branches, and chase.com is the #1 online banking portal. Forrester Research named us #1 in mobile banking functionality for the third consecutive year.

With our combination of scale, leading products and outstanding service, we wouldn't trade our franchise for anyone's.

2014 financial results

Across CCB, our businesses delivered strong underlying results throughout 2014 despite market and industry headwinds. Our net income was $9.2 billion, down from $11.1 billion in 2013. Our revenue of $44.4 billion was down 5% from $46.5 billion in 2013, primarily due to the smaller mortgage originations market during 2014. In 2014, we also experienced lower reserve releases across the Mortgage and Credit Card businesses and felt the continued impact of lower deposit margins. While credit performance still is very strong, the rate of improvement compared with last year has slowed. Overall, we ended the year with a strong return on equity (ROE) of 18%, just under our long-term target of 20% ROE.

We particularly are pleased that we achieved this positive momentum while hitting our aggressive expense target. Since 2012, we have taken

$3.2 billion of expense out of CCB, and we are on track to reduce expenses by an additional $2 billion by the end of 2016. Staying disciplined and being as efficient as possible allow us to invest back into our businesses and create strong returns for all of you who have chosen to invest in our company.

CCB demonstrated significant growth in nearly every business in 2014.

Here are some highlights from our businesses:

Consumer & Business Banking

Consumer & Business Banking deposits were up 8% to nearly half a trillion dollars by the end of the year. We talked about customer attrition reaching historic lows – it is down 4% since 2010. To put this in perspective, that equates to 1 million Consumer Banking households and an incremental $15 billion in deposits.

Chase Private Client (CPC) continues to be a notable success. We have grown to more than 325,000 CPC clients, up 51% from 2013. Client investment assets were up 13%. Since 2012, we've tripled our net new CPC deposits and investments, with 60% of new investments coming from customers who are investing with Chase for the first time. With 55% of affluent households living within two miles of a Chase branch or ATM, we feel well-positioned to continue that growth.

Business Banking loan originations were up 28% in 2014. Loans were up 6%, and deposits were up 12%. And we are extremely proud that we were the #1 Small Business Administration lender for women and minorities in the United States for the third year in a row.

Mortgage

The 2014 mortgage market was one of the most challenging we have faced. We have been very focused on transforming our Mortgage franchise to a simpler, higher quality and less volatile business. In 2014, Mortgage originations were down 53% from 2013 due to the challenging rate environment. But we didn't forget the industry lessons learned over the past several years and remained disciplined. We ceded some market share to focus on our strategy of acquiring high-quality loans. And we actively reduced our foreclosure inventory from roughly 170,000 in 2013 to 90,000 in 2014.

One of the lessons we learned from the industry crisis in Mortgage is that complexity kills. We have reduced the number of mortgage products from 37 to 18, and by the end of 2015, it will be down to 15. Yet those 15 products still will meet 97% of customers' needs. I'm sure the 22 products we are exiting were developed with good intentions to help customers, but they created unnecessary complexity for employees and more expense and execution risk than we needed.

Mortgage Banking also has made tremendous progress in reducing expenses. Mortgage expenses were down 30% over 2013.

Credit Card and Payments

Card Services sales volume of $465.6 billion was up 11% year-over-year, outperforming the industry for the 28th consecutive quarter. Credit trends continue to improve, and credit card net charge-offs were down 12% from 2013. Our Merchant Services business processes nearly half of the total e-commerce payment volume in the United States. Our processing volume was $847.9 billion, up 13% year-over-year.

Payments is one of the most interesting areas in our business as consumers are adapting to new ways to pay. We like our strategic position as both a bank that issues cards for consumers and a payment processor for merchants. Through ChaseNet, we also have our own network and can complete every aspect of the payment transaction.

One of the most exciting developments of the year was Apple Pay™. Chase participated as both a consumer issuer and a merchant acquirer. Chase cardholders can register their cards in Apple Pay™ and make digital payments simply by hitting a fingerprint button on their iPhone® 6. Our merchant customers will be able to use our software development kit to enable payments online, in-app and in-store. Tokenization will make those payments safe and secure.

Auto

In Auto, we continue to grow while maintaining our credit discipline. Our originations volume of $27.5 billion was up 5%, with our average loans up 4%. Here, too, we have stayed disciplined by retaining high credit standards. Our average FICO score on loan originations was 32 points higher than the industry average.

Digital

Digital is transforming our industry. We've seen tremendous growth rates in customer adoption of our digital services. The number of customers who are active on Chase mobile went from 8.2 million in 2011 to 19.1 million in 2014. On average, we added about 18,000 new mobile users per day throughout 2014.

Quite simply, we plan to be the bank of choice for digitally savvy customers. Digital is core to our commitment to an outstanding customer experience. We're bringing digital service to everything from routine deposits to credit card applications, rewards redemptions and mortgage application tracking.

Today's customers expect to be able to transact with us whenever and wherever they choose, whether that's through a superior digital experience, a convenient ATM or a neighborhood branch. Every experience needs to be personal, easy and fast.

With advances in technology, customers will be able to complete 90% of teller transactions at our smart ATMs by the end of 2016. We have made things easier by increasing withdrawal limits and allowing customers to receive their cash in any bill denomination they choose. Mobile also is changing quickly. Customers now can securely view their balances without having to log in and print statements directly from their phone.

Customers aren't choosing between digital and branches – they are using both. When our customers use digital, we see lower attrition, and we're more likely to be their primary bank. We know that our customers still want to come into the branch when they need advice or support, but for a basic transaction, they increasingly prefer to do it themselves.

Here are some of the indicators of the rapid growth in digital in just one year:

- 19 million mobile app users, up 20%
- 45 million Mobile QuickDeposit℠ transactions, up 25%
- 30 million Mobile Chase QuickPay℠ transactions, up 80%
- 60 million in Mobile Bill Pay, up 30%
- 200 million deposits made in a Chase ATM, up 10%

Providing a best-in-class digital experience also is more efficient for the bank. It costs us 3 cents to accept a deposit made from a smartphone and 8 cents for one at an ATM. With our new technologies, we have lowered our costs per deposit by ~50% in 2014 versus 2007.

Our 5,600 branch network is one of our most important assets for acquiring and deepening relationships. Last year, our branches helped nearly 20,000 first-time homebuyers and 400,000 new small businesses and approved more than 1 million credit cards for customers. We've built a footprint that covers the highest growth markets in the United States. But now that our buildout is complete, we won't open as many new branches over the next few years. As all effective retailers do, we continually review locations to determine where we can consolidate and still remain convenient for customers. As a result, our overall branch count will be down slightly from prior years.

Controls: Strengthen and simplify our business

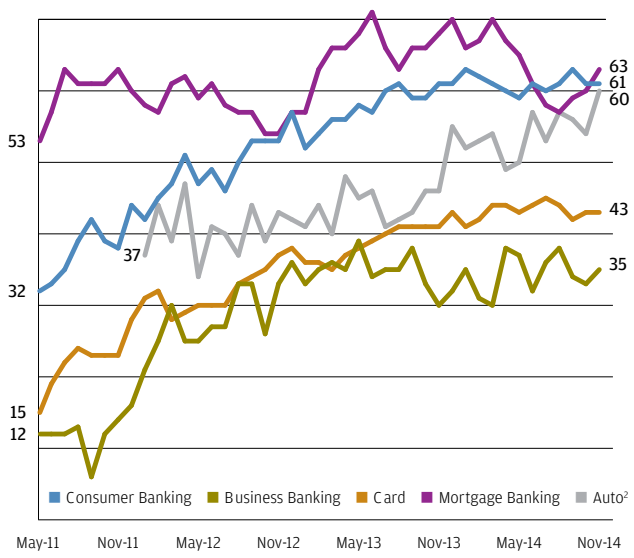
Over the past two years, we have made significant investments in improving our controls. We hired dedicated teams to focus on de-risking the business and invested in technology to automate more processes and reduce manual errors. As one example, we have strengthened our Anti-Money Laundering (AML) procedures with a technology fix. Employees must fill out every data field before completing a new customer application.

Throughout 2014, we made excellent progress on our control agenda. We exited 5,000 Politically Exposed Person relationships and 4,000 relationships with small businesses in high-risk geographies and industries. And we closed more than 100,000 accounts through AML screening and monitoring processes. We hope that by the end of 2015, we will have closed most of our legacy issues and invested in a stronger, simpler and safer business for the long term.

As we move forward into 2015, our core strategy is focused on three key areas: customers, controls and profitability. We will continue to focus on a great customer experience while investing in the best mobile and digital capabilities in the industry. We will continue to further simplify our business by reducing the number of non-core products we have and investing in automation. And to deliver shareholder value, we will meet our expense targets and drive out unnecessary costs while continuing to invest in our business.

Conclusion

Across CCB, we feel very well-positioned for the future. The CCB Leadership Team and I are so proud to serve our customers and shareholders and to lead this exceptional business. Thank you for your investment in our company.



Gordon Smith
CEO, Consumer & Community Banking

2014 HIGHLIGHTS AND ACCOMPLISHMENTS

- Consumer relationships with almost half of U.S. households
- #1 among large banks in the 2014 American Customer Satisfaction Index survey for the third year in a row
- #1 primary banking relationship share in our footprint
- #1 in deposit growth among the largest 50 U.S. banks by the FDIC
- Outpaced the industry in deposit growth for the third consecutive year
- #1 in deposit share in three of the largest deposit markets
- #1 most visited banking portal in the United States – chase.com; #1 mobile banking functionality
- #1 Small Business Administration lender for women and minorities in the United States for the third year in a row
- #1 credit card issuer in the United States based on loans outstanding
- #1 U.S. co-brand credit card issuer
- #1 in total U.S. credit and debit payments volume
- #1 wholly-owned merchant acquirer in the United States
- #2 mortgage originator; #2 mortgage servicer
- #3 non-captive auto lender

The Branch of the Future is here today

In our branches, state-of-the-art smart ATMs allow customers to self-serve for transactions. Today, 50% of all transactions can be made at an ATM. By the end of 2016, that number will be 90%.

Corporate & Investment Bank

Daniel Pinto

In 2014, the Corporate & Investment Bank (CIB) continued to deliver for clients on the strength of its unique scale, its complete range of offerings and its global reach.

By any measure, the J.P. Morgan CIB is an outstanding franchise. No other firm places so consistently among the top ranks of products across Investment Banking, Markets and Investor Services. Our 2014 performance stands as an example of our ability to adapt to new capital and regulatory rules while optimizing our business, capturing efficiencies and targeting expense reductions – even as we continued to invest for the future.

With a global roster of 7,200 clients, counting more than 80% among the Fortune 500, the CIB offers an inventory of integrated financial products and services. To serve that client base, the CIB has more than 51,000 employees and a presence in 60 countries. Our expertise runs the gamut across investment banking, market-making, investor services, treasury services and research. The work we accomplished in 2014 on behalf of our clients is reflected in our top-tier rankings across the CIB's spectrum of products and services.

Last year, J.P. Morgan helped clients raise $1.6 trillion in capital, a 7% increase over the previous year. Of that amount, $61 billion was raised on behalf of states, local governments, hospitals, universities, school districts and nonprofits. Those funds were earmarked to build research facilities, construct children's hospitals, finance clean water projects through green bonds and extend new rail lines in cities to alleviate traffic congestion, among other public service projects. The CIB also was the #1 firm in U.S. dollar clearing for clients with a 19% share on Fedwire and the Clearing House Interbank Payments System (CHIPS).

It is a franchise that would be extremely difficult to replicate, especially in the regulatory and economic environment we encounter today.

But we are not complacent. Nor do we take our top rankings for granted. In an evolving industry, we must be willing to anticipate and embrace change, operate efficiently and be vigilant in ensuring that our conduct doesn't just meet high standards – it sets them.

In a year marked by uneven economic recovery in Europe, low market volatility and the implementation of additional capital standards, the ability to embrace change and adapt enabled the CIB to maintain its leading market share across all business lines and generate strong returns on $34.6 billion in net revenue – the highest among our corporate and investment bank peers.

With an improving global economy in 2015, I am confident that many of the headwinds we encountered last year will turn into tailwinds. As the recovery spreads throughout regions, countries and industry sectors, we foresee CEOs gaining confidence to pursue more opportunities. We remain one of the few truly global banks that can provide the complete array of products and services to fuel corporate growth, which, in turn, underpins economic expansion.

Earnings

For the year, the CIB reported net income of $6.9 billion on net revenue of $34.6 billion with a reported return on equity (ROE) of 10%. Excluding legal expense, the CIB earned $8.7 billion with an ROE of 13%. Investment Banking fees of $6.6 billion were up 4% from the year before. And since 2010, the CIB's Global Investment Banking fees have risen by 25% compared with 17% for the rest of the industry, according to Dealogic.

Combined revenue in Treasury Services and Securities Services rose by 15% during the past five years, far outpacing the rest of the top players' 2% gain.

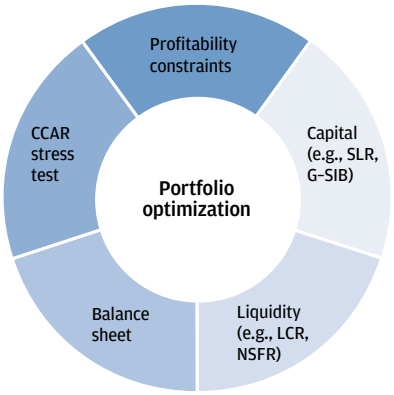
The Corporate & Investment Bank's broad range of products and services has the positive effect of smoothing out business fluctuations in different market and economic environments. For example, since 2010, the CIB

experienced overall volatility in annual revenue of just 4% compared with 6% for its top competitors. That stability, across fixed income and equity markets, is rooted in our tradition of strong risk management.

What's more, this year's ROE is calculated on $61 billion of allocated capital, which is $13.5 billion, or 28%, greater today than it was in 2012.

But strong results going forward depend upon our maintaining a disciplined approach to expenses. Since 2010, we have reduced front office costs by more than $2 billion. Although much of that reduction has been offset by cost increases in controls, litigation and regulatory fees, we believe those areas are reaching a peak and will normalize over time.

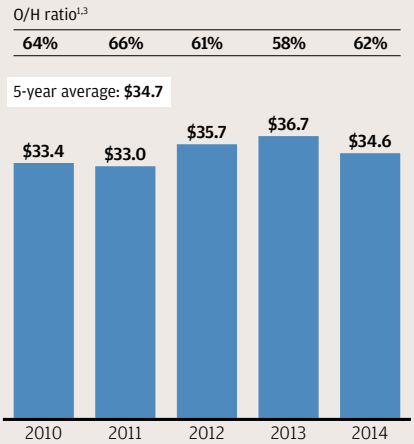
Over the next three years, we have targeted expense reductions of $2.8 billion, partly coming from more end-to-end efficiencies in technology and operations and a better allocation of resources according to the depth of client relationships. We also expect to capture cost savings from divestitures and simplification efforts already undertaken in 2014.



Serving clients = gaining share

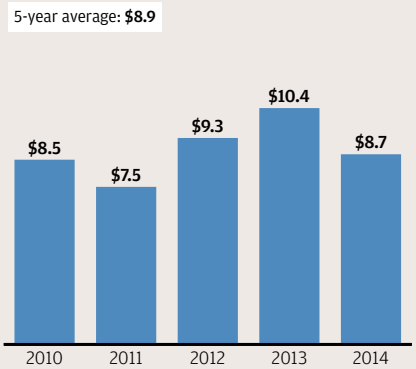
J.P. Morgan gained share and continued to hold top-tier positions across our lines of business, a testament to the firm's client focus and resiliency. In a difficult year, the CIB share of Investment Banking fee revenue led the industry at 8.1%, maintaining its #1 ranking for the sixth year in a row, according to Dealogic.

Also impressive is our ability to work collaboratively across business lines, making it easier for clients to realize their strategic growth plans. For instance, by collaborating across the firm, the CIB once again was able to facilitate client strategies through its partnerships, notably with Asset Management and Commercial Banking. In fact, more Commercial Banking business flowed to the CIB during 2014 than ever before, generating a record $2 billion in Investment Banking revenue, up by 18% compared with the year before. The power of our partnership with Commercial Banking has been an important factor in bolstering J.P. Morgan's market share, even as the overall industry wallet has declined in recent years.



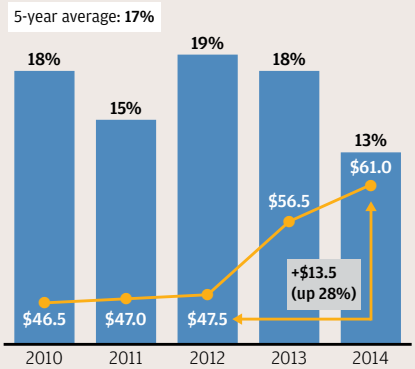
In 2014, our client demographic continued its shift toward international business. Since 2010, the CIB's combined revenue from Europe, the Middle East and Africa (EMEA), Asia Pacific and Latin America grew by

Optimizing the Businesses under Multiple Constraints



Net Revenue and Overhead Ratio[1,2]

($ in billions)



Net Income[1,2,3]

($ in billions)

ROE[1,3] (%) and Capital

($ in billions)

[1] Net revenue, net income, ROE and overhead (O/H) ratio, exclude FVA (effective 2013) and DVA, non-GAAP financial measures, for 2013 and prior years. These measures are used by management for assessment of the underlying performance of the business and for comparability with peers

[2] All years have been revised for preferred dividends

[3] All years exclude the impact of legal expense

DVA = debit valuation adjustment; FVA = funding valuation adjustment; GAAP = generally accepted accounting principles in the U.S.; LCR = liquidity coverage ratio; NSFR = net stable funding ratio; SLR = supplementary leverage ratio

12%. In recent years, international clients collectively have accounted for half of our revenue. They are progressively seeking a broader range of our services and using more of J.P. Morgan's product lineup. As of 2014, about half of our international clients use five or more products, while single-product client relationships have declined by 30%. Internationally, loans grew by 24%, assets under custody are up 36% and cross-border revenue with corporate clients has grown by 13% since 2010.

In Investor Services, clients entrusted J.P. Morgan with $20.5 trillion in assets under custody, up from $16.1 trillion in 2010, driven by asset appreciation, as well as client inflows.

Treasury Services operating deposits have nearly doubled since 2010. In Markets, we now have an 11.5% market share in equities due to a 7% gain in revenue since 2010 compared with revenue for the rest of the top 10 banks, which is down collectively by 7%. And in fixed income markets, our share has consistently ranked #1 during the last five years.

Achieving completeness while simplifying

Having a complete set of core products, accessible to clients across a global network, does not mean we intend to be all things to all people.

As a result of shifts in the regulatory and market environments, we shed ancillary businesses in 2014, including the Global Special Opportunities Group investment portfolio, as well as our physical commodities activities – though we kept our core financial commodities business.

No industry operates in a static environment, least of all ours, so we recognize the necessity of being adaptable and nimble. The CIB has established a successful track record of optimizing its business model while adjusting to multiple regulatory and other constraints, among them leverage, liquidity, Comprehensive Capital Analysis and Review stress testing, G-SIB and Basel rules. We push down to a very granular level in the organization the achievement of strong risk-adjusted returns in order to maximize long-term shareholder value. For our newest constraint, G-SIB, the CIB will be optimizing capital usage across clients, products and G-SIB factors.

In implementing those efforts, along with others, we have simplified our structure, improved our overall risk profile, and focused our attention on the business lines most valuable to clients and the CIB. By selectively narrowing our business, we also improved our ability to invest in the technologies and services our clients will require and demand in the future while making us stronger for the long term.

"How We Do Business — The Report"

During the course of last year, one of our most important projects was a self-examination leading to an in-depth report called "How We Do Business – The Report." J.P. Morgan's culture and conduct must be based on integrity, respect for our colleagues and, above all, a commitment to always act in our clients' best interests. In putting the lessons we've learned into practice, we are escalating issues promptly. We also have developed enhanced training programs and are working with our regulators around the world to improve our communication and transparency. When every one of our employees comes to work in the morning, the guiding principle should be, and I believe it is, to do the right thing for our clients at all times.

Drawing from the report, we have rededicated ourselves to the principles espoused by J.P. Morgan, Jr., in 1933 when he said: "I should state that at all times, the idea of doing only first-class business, and that in a first-class way, has been before our minds."

Our strategies

We are continually looking for ways to improve, be more efficient and serve our clients better. Efficiency is not a code word for eliminating worthwhile and beneficial products and services. To us, it means cultivating and mining our business to find ways we can provide our services faster, better and more effectively.

Efficiency means making incremental investments to enhance and expand what we offer, closing gaps to increase our longer term profitability and embracing the raft of change that is sure to define our industry going forward. We also will be looking to leverage a best-in-class infrastructure across the CIB, retiring duplicative platforms and participating in industry utilities to perform non-proprietary functions across our lines of business.

In our Global Investment Banking business, we will build on our leadership positions across advisory, investing in sectors and geographies where we see areas of opportunity and continued growth.

At the same time, we are making the necessary investments across our Markets businesses and are implementing trading technologies to ensure we are operationally prepared to capture client flows in whichever form our clients want to trade. Already, we have seen gains through our efforts to date. Equity e-commerce volume is up by 22% in the United States and by 57% in EMEA, just in the last year. Recently, we have

consistently captured share gains in foreign exchange e-commerce, and we hold top-tier rankings on most of the major multi-dealer platforms.

As an active market-maker, we can foresee the increasing complexity that will define the Markets business. Our strategy recognizes that change is inevitable, even if its exact nature cannot be foretold. But in whatever form our clients need us, the CIB will be prepared to capture client flow in all its various forms. Whether it's by voice, electronic or direct market access; whether we are acting on a principal basis or on an agency basis, we will be there for our clients with the products they want.

Our Treasury Services business will focus on the needs of global multinationals to capture the cross-border payments and foreign exchange business associated with increasing global trade flows. With our investments in electronic commerce, we actively will pursue opportunities to migrate clients to electronic solutions and look for more efficiencies across our technology platforms.

Our Investor Services business, which contains some of our most important businesses on behalf of institutional investors and broker-dealers, has made great strides to improve the end-to-end client experience. We want to make doing business with us as easy as possible – from sales to onboarding to operations and technology to client service.

From a capital perspective, the CIB will continue to be affected by rules based on risk-weighted assets. We will adjust our mix of capital-intensive businesses accordingly and fine-tune the platform as needed. We are intent on reducing our capital-footprint and on keeping ourselves nimble while remaining true to our reputation of providing liquidity and capital in any market environment.

Looking ahead, the signals are positive for a global economy that is gaining momentum. Increasing confidence among consumers and CEOs is expected to continue. That would underpin strong corporate earnings and healthy markets and sustain the active level of merger and acquisition (M&A) activity that marked 2014. Our M&A practice particularly was strong in 2014, with improved wallet share on global industry-wide volume that was up by 26% for the year. We believe 2015 will be another active period in which clients will look to us for global advisory capabilities and cross-border expertise. Our proven track record includes advising on the largest, most complex deals, which, in many cases, involved acquisition financing and strategies to address shareholder views and other marketplace forces.

Emerging markets economies are becoming increasingly important in global commerce. Both as consumers and as sources of new products and services, multinational companies are expanding their operations in those economies and will require the breadth of services J.P. Morgan uniquely is able to provide.

In 2015, we will execute our strategy in a way that optimizes capital, supports our clients and aids economic growth. Global institutions turn to J.P. Morgan because it has the talent, expertise and portfolio of services needed to conduct their business. We look forward to continuing that tradition in 2015 and beyond.

Daniel Pinto
CEO, Corporate & Investment Bank

2014 HIGHLIGHTS AND ACCOMPLISHMENTS

- The Corporate & Investment Bank delivered market-leading performance in 2014; $34.6 billion in net revenue was the largest in the industry.
- J.P. Morgan helped clients raise $1.6 trillion in capital – 7% more than in the previous year. Of that amount, $61 billion was raised on behalf of states, local governments and public institutions to finance educational facilities, healthcare, environmental projects and other similar purposes.
- Clients entrusted J.P. Morgan with $20.5 trillion in assets under custody, up from $16.1 trillion in 2010.
- Treasury Services and Securities Services revenue rose by 15% during the past five years, far outpacing the rest of the top players' 2% gain.
- The CIB has more than 51,000 employees with a presence in 60 countries, serving 7,200 of the world's most significant corporates and financial institutions, governments and nonprofit organizations.
- No other firm in 2014 placed so consistently among the top ranks of products across Investment Banking, Markets and Investor Services.
- The CIB is targeting $2.8 billion in expense reductions by 2017, including capturing cost savings from divestitures and simplification efforts already undertaken in 2014.
- The firm's business mix is increasingly becoming international; since 2010, the CIB's combined revenue from EMEA, Asia Pacific and Latin America has grown by 12%.

Commercial Banking

Douglas Petno

Our commitment is to be the best commercial bank by helping our clients succeed and by making a positive difference in our communities. In 2014, this meant investing in our business and controls, remaining focused on our clients, and continuing to execute our proven strategy with discipline and patience.

For the year, Commercial Banking (CB) delivered strong results, earning $2.6 billion of net income on revenue of $6.9 billion. Our continued expense discipline and exceptional credit performance helped us achieve a return on equity of 18%. We are quite proud of these results as our business continues to navigate changes in the regulatory landscape and adapt to shifting market pressures.

The drivers of our success remain consistent over time: We have an outstanding client franchise, real competitive advantages and a sustainable growth plan. I'm proud to convey our progress for 2014 and share our exciting plans for 2015.

Everything starts with our clients

Selecting the best clients is absolutely critical to the value of our franchise and is deeply embedded in our culture. We seek clients that are highly reputable, share our risk philosophy, have strong management teams and work in preferred industries we truly understand. We believe that we are judged by the company we keep, and, as such, our fantastic client franchise is the foundation for our entire business.

With our global reach and broad-based capabilities, we empower our bankers to be there for our clients with advice, capital and industry insights. By knowing their business, supporting their ambitions and understanding their challenges, we are able to best serve our clients and build strong relationships.

Trust and relationships are often reinforced in times of trouble. That was the case for one of our clients, a large beverage distributor based in the Seattle area. A few years ago, an unexpected industry sales tax increase caused the company to lose a significant portion of revenue within a short time period. The family-run business needed patience to execute a long-term recovery plan and avoid dramatic job reductions. During this stressful and challenging period, our beverage industry bankers consistently met with senior managers at the company to provide advice and guidance while they developed their plan. In 2014, the company successfully completed its turnaround. Staying with our clients through times like this, and earning their trust and gratitude, is the reason we come to work each day. We pride ourselves on our relationship focus and the loyal support we provide our clients.

Real competitive advantages

Our clients rely on our industry-leading capabilities and comprehensive services that no other commercial bank can provide. As part of JPMorgan Chase, CB is uniquely positioned with access to the #1 investment bank, a leading asset management business, comprehensive payments and treasury services, and an extensive branch footprint. Today, our typical client uses nine of our products and services, and it is common to see our longer-term relationships use more than 20.

When our clients seek to make more efficient payments, generate better reporting, and securely process transactions from their own customers, we leverage our market-leading commercial payments platforms. In 2014, less than 30% of our clients utilized our commercial card and merchant services capabilities. We believe we can double the usage rates of both of these products over time.

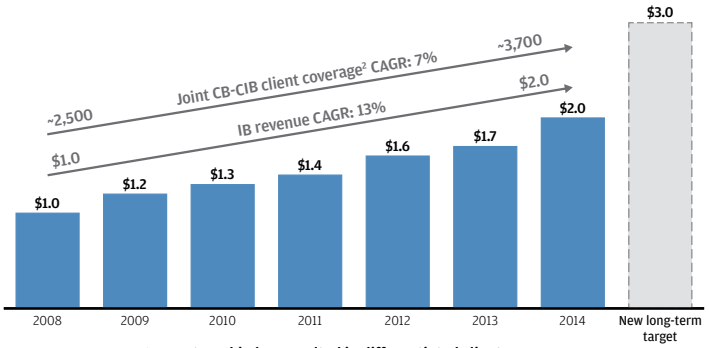
Collaborating with the Corporate & Investment Bank (CIB) enables us to bring differentiated advice and market access to our clients. In 2014, CB relationships generated a record $2 billion in investment banking revenue, representing 35% of the CIB's North American investment banking revenue and reaching the revenue target we set in

2011. We accomplished this by advising 75 clients on strategic transactions and executing more than 1,200 capital markets financings. As we expand our coverage, we believe we can do even more for our clients. We have set a new, long-term goal of $3 billion in investment banking revenue, and we are confident our partnership with the CIB will enable us to deliver over time.

While our platform and capabilities differentiate us, our success ultimately hinges on our people. We have 7,300 employees, including 1,400 bankers in 118 U.S. cities and 14 international locations. These employees average 20 years of experience, have deep industry expertise and are firmly rooted in their local communities. I'm incredibly proud of the quality and integrity of our people. Their continuous focus on our clients and positive impact in their communities never cease to impress.

Sustainable growth

We continue to execute our disciplined, long-term growth plan, which is designed to add new, high-quality clients and deepen those relationships over time. We are growing our customer base by selectively expanding our geographic footprint and focusing on key growth industries.



In 2014, we continued to pursue our market expansion strategy in the United States, increasing our footprint to 34 new markets, where we served nearly 1,700 clients and generated $327 million in revenue. We are on our way to reaching our long-term revenue target of $1 billion from these expansion markets.

To enhance our long-standing industry leadership positions, we are adding specialized bankers and underwriters in many key industries such as technology, healthcare, and food and agriculture. Industry specialization allows us to better deliver client-specific solutions, manage industry risks and demonstrate continuity across the industry life cycle. We see real opportunities to expand our relationships in these key industries and have positioned our teams to best serve these markets.

More and more of our Middle Market Banking clients expect their international activity to increase and be a meaningful percentage of total sales in the next few years. Our International Banking team is well-positioned to help these clients grow and operate in overseas markets. We've added dedicated resources in 14 key international locations and have access to JPMorgan Chase's international footprint in 60 countries.

Commercial Banking Gross Investment Banking Revenue[1]

($ in billions)

CIB partnership has resulted in differentiated client coverage

In our real estate businesses, we continue to see an excellent opportunity to grow our loan portfolio. We believe we can add high-quality assets through the current market environment, as well as benefit from the $1 trillion of industry maturities that are due over the next three years. In addition, our lending platform is unique in the market and has allowed us to support new clients throughout the life of their loans. We are well-positioned to take advantage of this tremendous opportunity and be a stable source of capital for clients.

Clear priorities

Our priorities for 2015 reflect our mission. To help our clients succeed and make a difference in our communities, we will continue to invest in our business and hire the best people in our markets. We will focus on delivering individual customer solutions to build deeper, stronger relationships. We will continue to safeguard our clients and our business by maintaining our fortress controls. This means understanding all risks in our business and investing in process improvements as needed.

I am incredibly proud of the entire Commercial Banking team. Because of its leadership and fortitude, we've been able to successfully adapt to the evolving regulatory environment and remain disciplined in a competitive market. 2014 showed the real power of our franchise, and I am excited about what we will achieve this year and beyond for our shareholders, clients and employees.

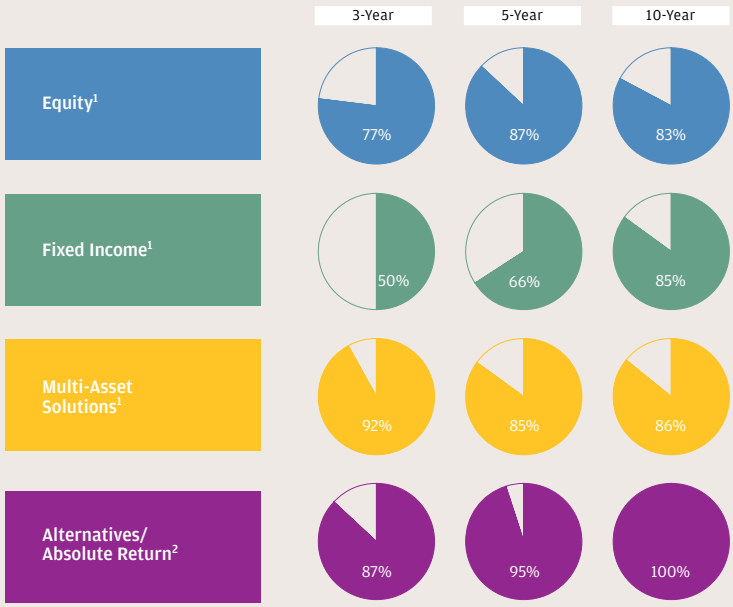
Asset Management

Mary Callahan Erdoes

At J.P. Morgan Asset Management, we take great pride in the fact that so many institutions and individuals around the world entrust us to manage their money. Clients rely on our advice, ideas and solutions for some of their most meaningful life events, from saving for college or retirement to securing their family's future to supporting philanthropic and charitable endeavors. With a heritage dating back nearly 200 years, we know how important it is to earn clients' trust, and we recognize that it is our responsibility to re-earn that trust every day.

Our strong fiduciary culture enables us to stay focused first and foremost on our top priority: long-term investment performance. This core principle of our business, combined with advice-driven client coverage teams, has enabled us to build a leading global client franchise that delivers superior investment strategies to our clients and strong financial performance to our shareholders.

Consistently reporting strong investment performance for clients



Success, both for our clients and our business, begins with our continuous investment in research for our clients. Our investment management platform, for example, has a global network of more than 600 portfolio managers, 250 research analysts and 30 market strategists.

Our research-based approach has led to 84% of our 10-year long-term mutual fund assets under management (AUM) placing in the top two performance quartiles and 228 of our mutual funds being 4- or 5-star rated. It is worth noting that our performance is not the result of strength in one particular asset class or region. It represents top-tier performance spanning asset classes around the world.

Client flows

Clients around the globe vote with their feet, and they continue to entrust us with more of their assets every year. In 2014, our client assets grew to $2.4 trillion as we received an additional $100 billion in net long-term client asset flows. In fact, since 2010, we have averaged $100 billion per year in net long-term client asset flows.

% of 2014 Assets Under Management Over Peer Median[1]/Benchmark[2]
(net of fees)

[1] Represents the proportion of retail open-ended mutual fund assets that are ranked above peer category median

[2] Represents the proportion of GIM assets in mutual funds, commingled funds and segregated portfolios that are exceeding (net of management fees) their respective official benchmark. Excludes private equity, real assets and other longer-dated or closed-end investment strategies

For footnoted information, refer to slides 23 and 24 in the 2015 Asset Management Investor Day presentation, which is available on JPMorgan Chase & Co.'s website at http://investor.shareholder.com/jpmorganchase/presentations.cfm, under the heading JPMorgan Chase 2015 Investor Day, Asset Management, and on Form 8-K as furnished to the SEC on February 24, 2015, which is available on the SEC's website at www.sec.gov.

We also have achieved 23 consecutive quarters of positive long-term AUM flows, a milestone that few, if any, of our competitors can match. Our active equity mutual fund flows ranked #2 in the industry in 2014, marking our third consecutive year ranking in the top three. In fixed income, we ranked #4 in long-term active mutual fund AUM flows, and, importantly, we are the only firm that ranked in the top four in each of the past five years.

Creating strong financial performance for shareholders

We are proud of being able to deliver such impactful results to our clients while, at the same time, delivering first-rate financial performance to our shareholders. In 2014, we achieved revenue growth of 5%, pre-tax income growth of 5%, pre-tax margin of 29% and return on equity of 23%.

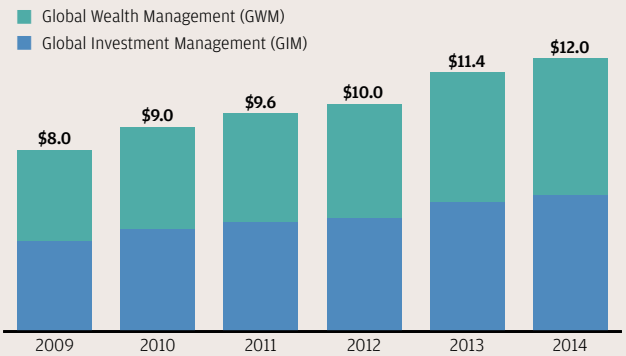
Within the business, each of our client franchises – Global Investment Management (GIM) and Global Wealth Management (GWM) – continues to deliver impressive growth. In 2014, both businesses achieved record annual revenue and strong pre-tax earnings growth. Given the long-term approach we take to running our business, we are even prouder of our sustained performance over the past five years.

GIM

Since 2009, GIM has a compound annual growth rate (CAGR) of 9% for revenue and 7% for pre-tax earnings. That success is due, in large part, to our core strengths of being insight driven, taking a long-term approach and leveraging our global talent. Our retail funds business has had impressive asset gains, with five-year growth of 120%. Our institutional business is growing faster than the market in all client channels – insurance, defined contribution, U.S. endowments and foundations, sovereign wealth funds and defined benefit.

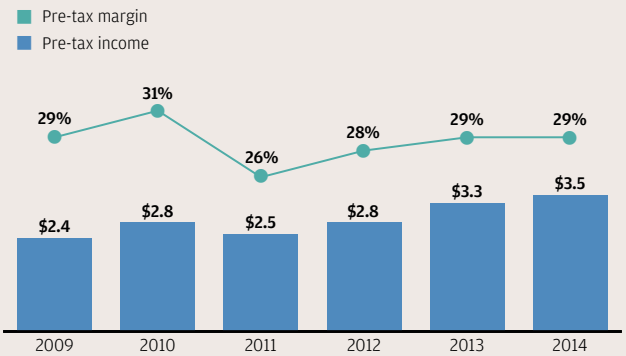
GWM

It is an equally powerful story in GWM, where revenue and pre-tax income have increased at a CAGR of 8% and 7%, respectively, since 2009. We continue to differentiate ourselves in the marketplace as the firm that can offer unparalleled insights to help clients fulfill their vision. As an example of our clients' commitment to GWM, more than 50% of our assets come from clients with at least $100 million entrusted with the firm. All of our clients, no matter the size of their relationship with us, choose to work with J.P. Morgan because we take the time to get to know their personal needs, and we can help them across both sides of their balance sheet.



Continuously reinvesting for the future

Our success would not be possible without continued reinvestment in the business – both to expand our offering and to maintain a strong control and risk environment. Our long-term commitment to building the best possible franchise means that we always are focused on ways to improve our business across all market cycles.



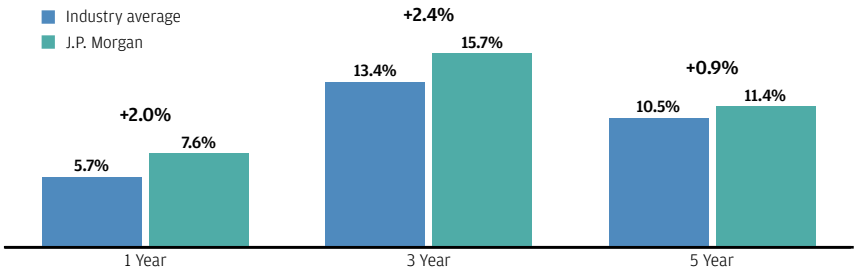
Adding top advisors to cover more clients

We continue to invest in bringing on world-class talent. Over the last five years, we hired and trained hundreds of new advisors. Expanding our client coverage teams enables us to help more clients around the world who need investment expertise and long-

Revenue
($ in billions)

Pre-tax Income
($ in billions)

term solutions. We have nearly 20,000 people serving clients in more than 130 countries across the globe, including 60% of the world's largest pension funds, sovereign wealth funds and central banks; more than 3,000 global financial intermediaries; and many of the world's wealthiest individuals and families.



Leader in Alternatives

We are one of the leading alternatives providers, with $214 billion in alternatives/absolute return client assets across our client franchises. That places us ahead of nearly all of the largest players in this space. Much of our growth is due to our focus on innovating to meet client needs. In 2014, we introduced more than 30 new strategies focusing on timely themes that include private technology late-stage equity, emerging markets growth equity, specialty insurance and credit, liquid alternatives and infrastructure.

High-growth multi-asset solutions platform

In 2015, we are faced with global central bank policy divergence, regulatory changes, complex geopolitical issues and increasing market volatility. Given this landscape, investors are looking for solutions providers who can act quickly and offer go-anywhere and absolute return-focused strategies to complement their portfolios.

SmartRetirement 2035 (S&P Target Date 2035)[1]

[1] Fund and index performance as of 12/31/14. Fund performance is net of fees. SmartRetirement performance is reflective of U.S. select shares. S&P Target Date 2035 total return USD represents Total Return Index. Past performance is not indicative of future performance, which may vary. Industry average source: Morningstar, *Strategic Insight* and eVestment

GIM's multi-asset solutions business is designed to help clients in this regard. The business has seen tremendous growth over the past five years, with a CAGR of 31%. That places us firmly in front of the industry average of 13%. Our momentum includes having our SmartRetirement offering named 2014 U.S. Allocation Fund Manager of the Year by Morningstar, with seven of its nine vintages in the top decile over the past five years.

A strong position with room to grow

We are incredibly proud of how our business has evolved over the past years, decades and centuries. We are doing more for clients than ever before, and our commitment to first-class business in a first-class way has created a franchise that would be hard to replicate. It is a great privilege to be entrusted with so many client assets from around the world. In return, we are committed to working hard every day to continue to generate value for clients, shareholders and employees.

- #1 Large Fund of Hedge Funds Manager of the Year, *Institutional Investor*

Corporate Responsibility

Peter Scher

A common challenge facing communities around the world is the need for greater economic growth and more widely shared prosperity. Creating more jobs, starting and expanding businesses, and removing barriers to opportunity will not only benefit society but, by extension, our firm.

At the core of our business, JPMorgan Chase is in a unique position to help our clients navigate an ever more complex global economy and spur the growth that fuels their progress. We not only understand the challenges clients are facing, we have the skills, resources and expertise to make a meaningful difference in helping solve them.

Our corporate responsibility work has the same objective – to use the skills, resources and expertise of our firm to support the economic growth and progress of our communities. In recent years, we have sharpened that focus. With millions of people around the world migrating to urban areas, cities are fast becoming the key drivers of global economic growth – and essential linchpins in expanding access to opportunity. So we have refocused many of our efforts on helping develop strategies to bolster the long-term economic vitality of the world's cities.

In 2014, we developed and expanded our programs with a focus on three distinct challenges:

First, we are helping metropolitan regions compete more effectively in the global economy. Through our Global Cities Initiative with the Brookings Institution, we have expanded our work to help cities in the United States, Europe, Asia and Latin America develop strategies for increasing international trade and investment ties.

Second, we are helping cities around the world address one of their biggest challenges: the need for a better trained workforce to fill the millions of jobs left open due to a shortage of applicants with the right skills. Through our New Skills at Work program, we are developing strategies that align workforce training with the skills employers seek and are providing much-needed data to strengthen workforce systems.

Finally, we are helping cities create thriving small business sectors centered around high-growth industries through our Small Business Forward initiative.

All of these challenges come together in Detroit. In 2014, we made a $100 million, five-year commitment to the city's economic recovery that brings together both business and philanthropic resources to support and accelerate some of the most innovative efforts underway to revitalize an iconic American city. But we're putting more than just our money to work; our people have significant expertise to offer, and, in 2014, we sent a dozen of our top managers from around the world to Detroit to work with local nonprofits. It's a model we plan to replicate and expand in the coming years.

Underpinning all of these efforts is the belief that achieving meaningful impact requires us to apply the same standard to our philanthropic investments as we do to our business investments: a genuine commitment to accountability, transparency and impact.

To that end, we recently formed a five-year partnership with the Urban Institute, one of the most well-respected nonprofit research organizations in the United States, to assess our major philanthropic initiatives – to analyze our efforts, produce independent research and strengthen our programs – further advancing our commitment to maximum impact for our communities and accountability to our shareholders.

We are very proud of our work over this past year and are committed to making our communities and our firm even stronger.

Peter Scher
Head of Corporate Responsibility

Invested in Detroit

JPMorgan Chase has roots in Detroit going back to the 1930s, supporting our clients and the community through the investments, loans and other services that are core to our business. And while we recognize that the city's challenges remain significant, JPMorgan Chase believes that Detroit has the ingredients and intrinsic strengths to rebuild a vibrant, modern economy.

In 2014, JPMorgan Chase launched a $100 million, five-year commitment to support and accelerate the dynamic recovery that is underway in Detroit:

- Community Development: We provided $40 million in responsive, long-term investment capital to two leading community development financial institutions to finance vital projects that often lack access to traditional sources of capital.
- Stronger Neighborhoods: Our support of the Detroit Land Bank Authority and our innovative partnership with a local community bank to provide rehabilitation loan financing are accelerating the city's ambitious efforts to reduce blight and stabilize neighborhoods.
- Workforce Readiness: We are helping the city strengthen its workforce system, build partnerships between employers and training programs, and give residents access to training in the skills employers are seeking.
- Small Business Growth: We are partnering with local nonprofits to help Detroit's vibrant small businesses access the resources and expertise needed to get their businesses off the ground.

Detroit's recovery will take time, but we are excited by the progress we have seen so far. We're in the city for the long term, and we will continue to learn and adapt as we work with our partners to help tackle Detroit's challenges.

New Skills at Work

In December 2013, we launched New Skills at Work, a $250 million, five-year workforce readiness initiative to close skills gaps in sectors where employers struggle to fill vacancies and to help job seekers access the education and training required for these positions. A key component of the program is focused on research that provides actionable data to better understand the dynamics of labor markets. Based on those findings, we directed grants to support innovative nonprofit programs around the world that demonstrate success working with employers to articulate demand in growing sectors and training workers in those high-demand areas. Here are some examples:

- In Houston, we co-chaired a task force composed of businesses, training programs and educational institutions that developed UpSkill Houston, a five-year plan to raise awareness of middle-skill job opportunities, increase access to technical education and training, and improve the alignment between employers and education/training providers.

- In Europe, we provided data-driven, country-specific analyses that map the latest employment trends and identify barriers to full and inclusive employment in the United Kingdom, Germany, Spain and France. In conjunction with U.K.-based Institute for Public Policy Research, we released a comprehensive review of European jobs and skills.
- In New York City, we published a report that identified high-growth employment sectors for middle-skill jobs and outlined recommendations to address the skills gaps impeding employment in these industries. We supported an innovative partnership among a large employer, a social service organization and a community college that helps young adults in a low-income community acquire the credentials needed to secure a job in the expanding healthcare sector.

Global Cities Initiative

The Global Cities Initiative (GCI), a joint project launched by the Brookings Institution and JPMorgan Chase in 2012, equips metropolitan leaders with the data, policy ideas and networks needed to support the economic growth of metropolitan regions through trade and investment.

In 2014, GCI introduced innovative research, including an analysis of the role foreign direct investment (FDI) plays in rebuilding metro economies, a report on the economic contributions of foreign students to U.S. cities, an analysis of the changing patterns of London's exports, and research on the global competitiveness of Munich, Hong Kong and Mumbai.

Supporting this new research, GCI held high-profile convenings around the world that brought together leaders from business, government and nonprofits to explore best practices and catalyze local action. GCI held meetings in Hong Kong, London, Louisville-Lexington, Munich, Phoenix and Seattle — each of which attracted hundreds of participants interested in understanding how their metropolitan area was developing trade and investment strategies.

To transform knowledge about global trade and investment into local action, GCI launched the Global Cities Exchange (GCX) — an academy for cities seeking to develop and implement actionable global strategies. By the end of 2014, GCX had enrolled 28 cities, of which 12 had completed export strategies, and six were working on FDI strategies.

Small Business Forward

Small businesses act as vital engines driving job creation and economic development, but many entrepreneurs lack access to the resources needed for growth. In 2014, JPMorgan Chase launched Small Business Forward, a $30 million, five-year initiative to catalyze small business development in cities around the world.

We know that having a good business idea is only part of what it takes for entrepreneurs to succeed. They also need access to investors, training, facilities, customers and export opportunities. Research has shown that these supports become even more effective when they target clusters of small businesses working in the same sector and geography. According to a study conducted by the Initiative for a Competitive Inner City and supported by JPMorgan Chase, businesses in well-established clusters outpaced overall regional growth by more than 300% between 2003 and 2011.

Small Business Forward supports nonprofits around the world that provide small business clusters with the critical resources they need to succeed. By helping regional economies build on their core assets to develop thriving enterprises, we are strengthening communities across the globe.

2014 HIGHLIGHTS AND ACCOMPLISHMENTS

Developing local economies and communities

- Provided $2.6 billion to low- and moderate-income communities through our community development lending and equity investments to build or preserve 35,100 units of affordable housing, serve 5,000 students, create nearly 2,200 manufacturing jobs and serve 380,000 patients at healthcare facilities.
- Implemented year one of the firm's New Skills at Work program, a $250 million, five-year initiative to strengthen local workforce systems by providing real-time data and supporting partners to align training with employer and job seeker needs (see previous page).
- Committed $5 million over two years to help underserved youth across the United States obtain the skills necessary to build lasting careers and partnered with other organizations to create almost 50,000 summer jobs for teens and learning opportunities for more than 54,000 young people in 14 cities. In 2014, we released a report highlighting best practices from our network of nonprofit partners and identifying opportunities to advance summer youth programs.

- Expanded The Fellowship Initiative, a JPMorgan Chase college-access program for young men of color that provides academic, leadership and experiential learning opportunities for 120 student Fellows in New York, Chicago and Los Angeles to develop the knowledge, skills and networks needed to complete high school and succeed in college and beyond.
- Expanded the impact of the Global Cities Initiative beyond the United States and assessed the global competitiveness of European and Asian cities, convened leaders from around the world and broadened the reach of the Global Cities Exchange network of cities (see previous page).
- Exceeded 560,000 hours of volunteer service by JPMorgan Chase employees globally and provided $3.3 million of technical assistance to nonprofits through Technology for Social Good, an initiative utilizing our employees' skills to develop technology solutions for the social sector.

Honoring U.S. military and veterans

- Continued our leadership of the 100,000 Jobs Mission, a coalition of employers formed in 2011 that collectively hired more than 217,000 U.S. veterans and military spouses by the end of 2014 and raised its hiring goal to 300,000 hires. From 2011 through March 2015, JPMorgan Chase has hired nearly 8,700 veterans.
- Supported research conducted by RAND Corporation to capture the lessons and experiences from 100,000 Jobs Mission companies on integrating veterans into the private sector workforce.
- Exceeded the first-year goal of the firm's $20 million, five-year commitment by deploying $8 million to help U.S. military veterans and their families develop in-demand job skills, retain quality employment, increase college graduation rates and connect to stable housing opportunities.
- Awarded more than 750 newly renovated, mortgage-free homes worth over $125 million to veterans and their families since 2010.

Supporting small business development

- Provided $19 billion in new credit to small businesses across the United States and was recognized as the #1 lender by units to women- and minority-owned businesses for the third consecutive year by the U.S. Small Business Administration.
- Launched Small Business Forward, a $30 million, five-year commitment to support small business clusters that provide comprehensive support services to entrepreneurs (see previous page).
- Awarded $3 million to support small businesses making a positive impact in communities across the United States through our Mission Main Street Grants® program.

Strengthening financial capability

- Launched the Financial Solutions Lab, a $30 million, five-year initiative to identify, test and expand promising innovations to help Americans increase savings, improve credit and build assets. The first Lab competition focuses on supporting solutions to help consumers manage their household finances.
- Committed $35 million over two years to support and expand proven financial capability programs with nonprofits globally, investing in the development of technology-driven products and services designed to meet consumer needs, the infrastructure to expand the availability of these products and services, and the research to evaluate and share best practices with the field.

Promoting sustainable investment

- Underwrote more than $2.2 billion in green bonds – debt issuances where proceeds are directed toward environmentally beneficial or climate-friendly purposes – in 2014.
- Provided founding sponsorship of NatureVest, an initiative of The Nature Conservancy to attract investment capital to conservation.
- Invested $5 million through a new joint investment with the U.K. government in Novastar Ventures to develop early-stage businesses that provide essential basic services to underserved communities in East Africa.
- Announced the first investments through the Global Health Investment Fund, an innovative financing vehicle structured by JPMorgan Chase and the Bill & Melinda Gates Foundation, to support the final development and distribution of a new treatment for cholera and a powerful diagnostic for tuberculosis.

Increasing transparency with stakeholders

- Convened senior business leaders and leading national policy groups to foster open conversations about Chase products, policies and public policy matters that impact, in particular, low- and moderate-income communities, communities of color and people with disabilities.
- Released an Environmental and Social Policy Framework, after extensive engagement with external stakeholders, to communicate our approach to environmental and social risks in our business.
- Collaborated with Ceres to engage a group of external stakeholders in a dialogue focused on sharing perspectives and priorities to help us enhance our approach to human rights.

(a) Share prices shown for JPMorgan Chase's common stock are from the New York Stock Exchange. JPMorgan Chase's common stock is also listed and traded on the London Stock Exchange and the Tokyo Stock Exchange.
(b) TBVPS and ROTCE are non-GAAP financial measures. TBVPS represents the Firm's tangible common equity divided by common shares at period-end. ROTCE measures the Firm's annualized earnings as a percentage of tangible common equity. For further discussion of these measures, see Explanation and Reconciliation of the Firm's Use of Non-GAAP Financial Measures on pages 77–78.
(c) HQLA represents the Firm's estimate of the amount of assets that qualify for inclusion in the liquidity coverage ratio under the final U.S. rule ("U.S. LCR") as of December 31, 2014, and under the Basel III liquidity coverage ratio ("Basel III LCR") for prior periods. The Firm did not begin estimating HQLA until December 31, 2012. For additional information, see HQLA on page 157.
(d) Basel III Transitional rules became effective on January 1, 2014; prior period data is based on Basel I rules. As of December 31, 2014 the ratios presented are calculated under the Basel III Advanced Transitional Approach. CET1 capital under Basel III replaced Tier 1 common capital under Basel I. Prior to Basel III becoming effective on January 1, 2014, Tier 1 common capital under Basel I was a non-GAAP financial measure. See Regulatory capital on pages 146–153 for additional information on Basel III and non-GAAP financial measures of regulatory capital.
(e) Included held-to-maturity securities of $49.3 billion and $24.0 billion at December 31, 2014 and 2013, respectively. Held-to-maturity balances for the other periods were not material.
(f) Included unsecured long-term debt of $207.5 billion, $199.4 billion, $200.6 billion, $231.3 billion and $238.2 billion respectively, as of December 31, of each year presented.
(g) Excludes the impact of residential real estate purchased credit-impaired ("PCI") loans. For further discussion, see Allowance for credit losses on pages 128–130.

FIVE-YEAR STOCK PERFORMANCE

The following table and graph compare the five-year cumulative total return for JPMorgan Chase & Co. ("JPMorgan Chase" or the "Firm") common stock with the cumulative return of the S&P 500 Index, the KBW Bank Index and the S&P Financial Index. The S&P 500 Index is a commonly referenced U.S. equity benchmark consisting of leading companies from different economic sectors. The KBW Bank Index seeks to reflect the performance of banks and thrifts that are publicly traded in the U.S. and is composed of 24 leading national money center and regional banks and thrifts. The S&P Financial Index is an index of 85 financial companies, all of which are components of the S&P 500. The Firm is a component of all three industry indices.

The following table and graph assume simultaneous investments of $100 on December 31, 2009, in JPMorgan Chase common stock and in each of the above indices. The comparison assumes that all dividends are reinvested.

December 31, (in dollars)	2009	2010	2011	2012	2013	**2014**
JPMorgan Chase	$ 100.00	$ 102.30	$ 81.87	$ 111.49	$ 152.42	**$ 167.48**
KBW Bank Index	100.00	123.36	94.75	125.91	173.45	**189.69**
S&P Financial Index	100.00	112.13	93.00	119.73	162.34	**186.98**
S&P 500 Index	100.00	115.06	117.48	136.27	180.39	**205.07**

This section of JPMorgan Chase's Annual Report for the year ended December 31, 2014 ("Annual Report"), provides Management's discussion and analysis ("MD&A") of the financial condition and results of operations of JPMorgan Chase. See the Glossary of Terms on pages 309–313 for definitions of terms used throughout this Annual Report. The MD&A included in this Annual Report contains statements that are forward-looking within the meaning of the Private Securities Litigation Reform Act of 1995. Such statements are based on the current beliefs and expectations of JPMorgan Chase's management and are subject to significant risks and uncertainties. These risks and uncertainties could cause the Firm's actual results to differ materially from those set forth in such forward-looking statements. Certain of such risks and uncertainties are described herein (see Forward-looking Statements on page 169) and in JPMorgan Chase's Annual Report on Form 10-K for the year ended December 31, 2014 ("2014 Form 10-K"), in Part I, Item 1A: Risk factors; reference is hereby made to both.

INTRODUCTION

JPMorgan Chase & Co., a financial holding company incorporated under Delaware law in 1968, is a leading global financial services firm and one of the largest banking institutions in the U.S., with operations worldwide; the Firm had $2.6 trillion in assets and $232.1 billion in stockholders' equity as of December 31, 2014. The Firm is a leader in investment banking, financial services for consumers and small businesses, commercial banking, financial transaction processing and asset management. Under the J.P. Morgan and Chase brands, the Firm serves millions of customers in the U.S. and many of the world's most prominent corporate, institutional and government clients.

JPMorgan Chase's principal bank subsidiaries are JPMorgan Chase Bank, National Association ("JPMorgan Chase Bank, N.A."), a national banking association with U.S. branches in 23 states, and Chase Bank USA, National Association ("Chase Bank USA, N.A."), a national banking association that is the Firm's credit card-issuing bank. JPMorgan Chase's principal nonbank subsidiary is J.P. Morgan Securities LLC ("JPMorgan Securities"), the Firm's U.S. investment banking firm. The bank and nonbank subsidiaries of JPMorgan Chase operate nationally as well as through overseas branches and subsidiaries, representative offices and subsidiary foreign banks. One of the Firm's principal operating subsidiaries in the U.K. is J.P. Morgan Securities plc, a subsidiary of JPMorgan Chase Bank, N.A.

JPMorgan Chase's activities are organized, for management reporting purposes, into four major reportable business segments, as well as a Corporate segment. The Firm's consumer business is the Consumer & Community Banking ("CCB") segment. The Corporate & Investment Bank ("CIB"), Commercial Banking ("CB"), and Asset Management ("AM") segments comprise the Firm's wholesale businesses. For a description of the Firm's business segments, and the products and services they provide to their respective client bases refer to Business Segment Results on pages 79–104, and Note 33.

This executive overview of the MD&A highlights selected information and may not contain all of the information that is important to readers of this Annual Report. For a complete description of events, trends and uncertainties, as well as the enterprise risks and critical accounting estimates affecting the Firm and its various lines of business, this Annual Report should be read in its entirety.

Financial performance of JPMorgan Chase

Tier 1 capital	**11.6**	11.9	

(a) Basel III Transitional rules became effective on January 1, 2014; December 31, 2013 data is based on Basel I rules. As of December 31, 2014 the ratios presented are calculated under the Basel III Advanced Transitional Approach. CET1 capital under Basel III replaced Tier 1 common capital under Basel I. Prior to Basel III becoming effective on January 1, 2014, Tier 1 common capital under Basel I was a non-GAAP financial measure. See Regulatory capital on pages 146–153 for additional information on Basel III and non-GAAP financial measures of regulatory capital.

Summary of 2014 Results

JPMorgan Chase reported record full-year 2014 net income of $21.8 billion, and record earnings per share of $5.29, on net revenue of $94.2 billion. Net income increased by $3.8 billion, or 21%, compared with net income of $17.9 billion, or $4.35 per share, in 2013. ROE for the year was 10%, compared with 9% for the prior year.

The increase in net income in 2014 was driven by lower noninterest expense, largely offset by higher provision for credit losses and lower net revenue. The decrease in noninterest expense was driven by lower legal expense as well as lower compensation expense.

The provision for credit losses increased from the prior year as result of a lower level of benefit from reductions in the consumer allowance for loan losses, partially offset by lower net charge-offs. The decrease in the consumer allowance for loan losses was predominantly the result of continued improvement in home prices and delinquencies in the residential real estate portfolio. The wholesale provision reflected a continued favorable credit environment.

Total firmwide allowance for credit losses was $14.8 billion resulting in a loan loss coverage ratio of 1.55%, excluding the purchase credit-impaired ("PCI") portfolio, compared with 1.80% in the prior year. The Firm's allowance for loan losses to nonperforming loans retained, excluding the PCI portfolio and credit card, was 106% compared with 100% in 2013.

Firmwide, net charge-offs were $4.8 billion for the year, down $1.0 billion, or 18% from 2013. Nonperforming assets at year-end were $8.0 billion, down $1.7 billion, or 18%.

The Firm's results reflected solid underlying performance across its four major reportable business segments, with continued strong lending and deposit growth. Consumer & Community Banking was #1 in deposit growth for the third consecutive year and Consumer & Business Banking within Consumer & Community Banking was #1 in customer satisfaction among the largest U.S. banks for the third consecutive year as measured by The American Customer Satisfaction Index ("ACSI"). Credit card sales volume (excluding Commercial Card) was up 11% for the year. The Corporate & Investment Bank maintained its #1 ranking in Global Investment Banking Fees and moved up to a #1 ranking in Europe, Middle East and Africa ("EMEA"), according to Dealogic. Commercial Banking loans increased to $149 billion, an 8% increase compared with the prior year. Commercial Banking also had record gross investment banking revenue of $2.0 billion, up 18% compared with the prior year. Asset Management achieved twenty-three consecutive quarters of positive net long-term client flows and increased average loan balances by 16% in 2014.

The Firm maintained its fortress balance sheet, ending the year with an estimated Basel III Advanced Fully Phased-in CET1 capital ratio of 10.2%, compared with 9.5% in the prior year. Total deposits increased to $1.4 trillion, up 6% from the prior year. Total stockholders' equity was $232 billion at December 31, 2014. (The Basel III Advanced Fully Phased-in CET1 capital ratio is a non-GAAP financial measure, which the Firm uses along with the other capital measures, to assess and monitor its capital position. For further discussion of the Firm's capital ratios, see Regulatory capital on pages 146–153.)

During 2014, the Firm continued to serve customers, corporate clients and the communities in which it does business. The Firm provided credit to and raised capital of $2.1 trillion for its clients during 2014; this included $19 billion lent to U.S. small businesses and $75 billion to nonprofit and government entities, including states, municipalities, hospitals and universities.

The discussion that follows highlights the performance of each business segment compared with the prior year and presents results on a managed basis. For more information about managed basis, as well as other non-GAAP financial measures used by management to evaluate the performance of each line of business, see pages 77–78.

Consumer & Community Banking net income was $9.2 billion, a decrease of 17% compared with the prior year, due to higher provision for credit losses and lower net revenue, partially offset by lower noninterest expense. Net interest income decreased, driven by spread compression and lower mortgage warehouse balances, largely offset by higher deposit balances in Consumer & Business Banking

and higher loan balances in Credit Card. Noninterest revenue decreased, driven by lower mortgage fees and related income. The provision for credit losses was $3.5 billion, compared with $335 million in the prior year. The current-year provision reflected a $1.3 billion reduction in the allowance for loan losses and total net charge-offs of $4.8 billion. Noninterest expense decreased from the prior year, driven by lower Mortgage Banking expense.

Corporate & Investment Bank net income was $6.9 billion, a decrease of 22% compared with the prior year, primarily reflecting lower revenue as well as higher noninterest expense. Banking revenues decreased from the prior year primarily due to lower Lending revenues, driven by mark to market losses on securities received from restructured loans, compared to gains in the prior year, partially offset by higher investment banking fees. Markets & Investor Services revenues increased slightly from the prior year as 2013 included losses from FVA/DVA, primarily driven by FVA implementation, while the current year reflected lower Fixed Income Markets revenue. Credit Adjustments & Other revenue was a loss of $272 million. Noninterest expense increased compared with the prior year driven by higher noncompensation expense, predominantly due to higher legal expense and investment in controls. This was partially offset by lower performance-based compensation expense.

Commercial Banking net income was $2.6 billion, flat compared with the prior year, reflecting lower net revenue and higher noninterest expense, predominantly offset by a lower provision for credit losses. Net interest income decreased from the prior year, reflecting yield compression, the absence of proceeds received in the prior year from a lending-related workout, and lower purchase discounts recognized on loan repayments, partially offset by higher loan balances. Noninterest revenue increased, reflecting higher investment banking revenue, largely offset by business simplification and lower lending fees. Noninterest expense increased from the prior year, largely reflecting higher investments in controls.

Asset Management net income was $2.2 billion, an increase of 3% from the prior year, reflecting higher net revenue and lower provision for credit losses, predominantly offset by higher noninterest expense. Noninterest revenue increased from the prior year, due to net client inflows and the effect of higher market levels, partially offset by lower valuations of seed capital investments. Noninterest expense increased from the prior year, as the business continues to invest in both infrastructure and controls.

Corporate net income was $864 million, an increase compared with a loss in the prior year. The current year included $821 million of legal expense, compared with $10.2 billion of legal expense, which included reserves for litigation and regulatory proceedings, in the prior year.

Business outlook

The following forward-looking statements are based on the current beliefs and expectations of JPMorgan Chase's management and are subject to significant risks and uncertainties. These risks and uncertainties could cause the Firm's actual results to differ materially from those set forth in such forward-looking statements. See Forward-Looking Statements on page 169 and the Risk Factors section on pages 8–17.

Over the past few years, the Firm has been adapting to the regulatory environment while continuing to serve its clients and customers, invest in its businesses, and deliver strong returns to its shareholders. The Firm's initiatives include building a fortress control environment, de-risking and simplification of the organization, a disciplined approach to managing expense, evolving its capital assessment framework as well as rigorous optimization of the Firm's balance sheet and funding.

The Firm has been devoting substantial resources to execute on its control agenda. The Oversight and Control function, established in 2012, has been working closely and extensively with the Firm's other control disciplines, including Compliance, Risk Management, Legal, Internal Audit, and other functions, to address the Firm's control-related projects that are cross-line of business and that have significant regulatory impact or respond to regulatory actions. The Firm's investment in the control agenda and investment in technology, are considered by management to be essential to the Firm's future.

The Firm has substantially completed executing its business simplification agenda. In 2013, the Firm ceased originating student loans, exited certain high risk customers and became more selective about on-boarding certain customers. Following on these initiatives, in 2014, the Firm exited several non-core credit card co-branded relationships, sold the Retirement Plan Services business within AM, exited certain prepaid card businesses, reduced its offering of mortgage banking products, completed the sale of the CIB's Global Special Opportunity Group investment portfolio, and the sale and liquidation of a significant part of CIB's physical commodities business. In January 2015, the Firm completed the "spin out" of the One Equity Partners ("OEP") private equity business (together with a sale of a portion of the OEP portfolio to a group of private equity firms). These actions will allow the Firm to focus on core activities for its core clients and reduce risk to the Firm. While it is anticipated that these exits will reduce revenues and expenses, they are not expected to have a meaningful impact on the Firm's profitability.

The Firm's simplification agenda, however, is more extensive than exiting businesses, products or clients that were non-core, not at scale or not returning the appropriate level of return. The Firm is also focused on operational and structural simplicity, and streamlining and centralizing certain operational functions and processes in order to attain more consistencies and efficiencies across the Firm. To that end, the Firm is working on simplifying its legal entity structure, simplifying its Global Technology function,

rationalizing its use of vendors, and optimizing its real estate location strategy.

As the Firm continues to experience an unprecedented increase in regulation and supervision, it continues to evolve its financial architecture to respond to this changing landscape. In 2014, the Firm exceeded the minimum capital levels required by the current rules and intends to continue to build capital in response to the higher Global Systemically Important Bank ("G-SIB") capital surcharge proposed by U.S. banking regulators. In addition, the Firm is adapting its capital assessment framework to review businesses and client relationships against G-SIB and applicable capital requirements, and imposing internal limits on business activities to align or optimize the Firm's balance sheet and RWA with regulatory requirements in order to ensure that business activities generate appropriate levels of shareholder value.

The Firm intends to balance return of capital to shareholders with achieving higher capital ratios over time. The Firm expects the capital ratio calculated under the Basel III Standardized Approach to become its binding constraint by the end of 2015, or slightly thereafter. The Firm anticipates reaching Basel III Fully Phased-In Advanced and Standardized CET1 ratios of approximately 11% by the end of 2015 and is targeting a Basel III CET1 ratio of approximately 12% by the end of 2018, assuming a 4.5% G-SIB capital surcharge. If the Firm's G-SIB capital surcharge is lower than 4.5%, the Firm will adjust its Basel III CET1 target accordingly.

Likewise, the Firm will be evolving its funding framework to ensure it meets the current and proposed more stringent regulatory liquidity rules, including those relating to the availability of adequate Total Loss Absorbing Capacity ("TLAC") at G-SIB organizations. The Firm estimated that it had, as of December 31, 2014, approximately 15% minimum TLAC as a percentage of Basel III Advanced Fully Phased-in RWA, excluding capital buffers currently in effect, based on its understanding of how the Financial Stability Board's proposal may be implemented in the U.S. While the precise composition and calibration of TLAC, as well as the conformance period, are yet to be defined by U.S. banking regulators, the Firm expects the requirement will lead to incremental debt issuance by the Firm and higher funding costs over the next few years.

The Firm expects it will continue to make appropriate adjustments to its businesses and operations in the year ahead in response to ongoing developments in the legal and regulatory, as well as business and economic, environment in which it operates. The Firm intends to take a disciplined approach to growing revenues and controlling expenses in light of its capital and liquidity constraints. The Firm's deep client relationships and its investments in its businesses, including branch optimization, new card relationships, expansion into new markets, and hiring additional sales staff and client advisors, are expected to generate significant revenue growth over the next several years. At the same time, the Firm intends to leverage its scale and improve its operating efficiencies so that it can fund these growth initiatives, as well as maintain its control and technology programs, without increasing its expenses. As a result, the Firm anticipates achieving a managed overhead ratio of approximately 55% over the next several years, including the impact of revenue growth.

2015 Business Outlook

JPMorgan Chase's outlook for the full-year 2015 should be viewed against the backdrop of the global and U.S. economies, financial markets activity, the geopolitical environment, the competitive environment, client activity levels, and regulatory and legislative developments in the U.S. and other countries where the Firm does business. Each of these inter-related factors will affect the performance of the Firm and its lines of business.

Management expects core loan growth of approximately 10% in 2015. The Firm continues to experience charge-offs at levels lower than its through-the-cycle expectations; if favorable credit trends continue, management expects the Firm's total net charge offs could remain low, at an amount modestly over $4 billion in 2015, and expects a reduction in the consumer allowance for loan losses over the next two years.

Firmwide adjusted expense in 2015 is expected to be approximately $57 billion, excluding Firmwide legal expenses and foreclosure-related matters.

In Consumer & Business Banking within CCB, management expects continued spread compression in the deposit margin and a modest decline in net interest income in the first quarter of 2015. In Mortgage Banking within CCB, management expects quarterly servicing expense to decline to below $500 million by the second quarter of 2015 as default volume continues to decline. In Card Services within CCB, management expects the revenue rate in 2015 to remain at the low end of the target range of 12% to 12.5%.

In CIB, Markets revenue in the first quarter of 2015 will be impacted by the Firm's business simplification initiatives completed in 2014, resulting in a decline of approximately $500 million, or 10%, in Markets revenue and a decline of approximately $300 million in expense, compared to the prior year first quarter. Based on strong performance to date, particularly in January, management currently expects 2015 first quarter Markets revenue to be higher than the prior year first quarter, even with the negative impact of business simplification; however, Markets revenue actual results will depend on performance through the remainder of the quarter, which can be volatile.

Overall, the Firm expects the impact from its business simplification initiatives will be a reduction of approximately $1.6 billion in revenue and a corresponding reduction of approximately $1.6 billion in expense resulting in no meaningful impact on the Firm's 2015 anticipated net income.

CONSOLIDATED RESULTS OF OPERATIONS

The following section provides a comparative discussion of JPMorgan Chase's Consolidated Results of Operations on a reported basis for the three-year period ended December 31, 2014. Factors that relate primarily to a single business segment are discussed in more detail within that business segment. For a discussion of the Critical Accounting Estimates Used by the Firm that affect the Consolidated Results of Operations, see pages 161–165.

Revenue

Year ended December 31, (in millions)	2014	2013	2012
Investment banking fees	$ 6,542	$ 6,354	$ 5,808
Principal transactions[a]	10,531	10,141	5,536
Lending- and deposit-related fees	5,801	5,945	6,196
Asset management, administration and commissions	15,931	15,106	13,868
Securities gains	77	667	2,110
Mortgage fees and related income	3,563	5,205	8,687
Card income	6,020	6,022	5,658
Other income[b]	2,106	3,847	4,258
Noninterest revenue	50,571	53,287	52,121
Net interest income	43,634	43,319	44,910
Total net revenue	$ 94,205	$ 96,606	$ 97,031

(a) Included funding valuation adjustments ((“FVA”) effective 2013)) and debit valuation adjustments (“DVA”) on over-the-counter (“OTC”) derivatives and structured notes, measured at fair value. FVA and DVA gains/(losses) were $468 million and $(1.9) billion for the years ended December 31, 2014 and 2013, respectively. DVA losses were ($930) million for the year ended December 31, 2012.

(b) Included operating lease income of $1.7 billion, $1.5 billion and $1.3 billion for the years ended December 31, 2014, 2013 and 2012, respectively.

2014 compared with 2013

Total net revenue for 2014 was down by $2.4 billion, or 2%, compared with the prior year, predominantly due to lower mortgage fees and related income, and lower other income. The decrease was partially offset by higher asset management, administration and commissions revenue.

Investment banking fees increased compared with the prior year, due to higher advisory and equity underwriting fees, largely offset by lower debt underwriting fees. The increase in advisory fees was driven by the combined impact of a greater share of fees for completed transactions, and growth in industry-wide fee levels. The increase in equity underwriting fees was driven by higher industry-wide issuance. The decrease in debt underwriting fees was primarily related to lower bond underwriting compared with a stronger prior year, and lower loan syndication fees on lower industry-wide fee levels. Investment banking fee share and industry-wide data are sourced from Dealogic, an external vendor. For additional information on investment banking fees, see CIB segment results on pages 92–96, CB segment results on pages 97–99, and Note 7.

Principal transactions revenue, which consists of revenue primarily from the Firm's client-driven market-making and private equity investing activities, increased compared with the prior year as the prior year included a $1.5 billion loss related to the implementation of the FVA framework for OTC derivatives and structured notes. The increase was also due to higher private equity gains as a result of higher net gains on sales. The increase was partially offset by lower fixed income markets revenue in CIB, primarily driven by credit-related and rates products, as well as the impact of business simplification initiatives. For additional information on principal transactions revenue, see CIB and Corporate segment results on pages 92–96 and pages 103–104, respectively, and Note 7.

Lending- and deposit-related fees decreased compared with the prior year, reflecting the impact of business simplification initiatives and lower trade finance revenue in CIB. For additional information on lending- and deposit-related fees, see the segment results for CCB on pages 81–91, CIB on pages 92–96 and CB on pages 97–99.

Asset management, administration and commissions revenue increased compared with the prior year, reflecting higher asset management fees driven by net client inflows and the effect of higher market levels in AM and CCB. The increase was offset partially by lower commissions and other fee revenue in CCB as a result of the exit of a non-core product in the second half of 2013. For additional information on these fees and commissions, see the segment discussions of CCB on pages 81–91, AM on pages 100–102, and Note 7.

Securities gains decreased compared with the prior year, reflecting lower repositioning activity related to the Firm's investment securities portfolio. For additional information, see the Corporate segment discussion on pages 103–104 and Note 12.

Mortgage fees and related income decreased compared with the prior year. The decrease was predominantly due to lower net production revenue driven by lower volumes due to higher levels of mortgage interest rates, and tighter margins. The decline in net production revenue was partially offset by a lower loss on the risk management of mortgage servicing rights (“MSRs”). For additional information, see the segment discussion of CCB on pages 85–87 and Note 17.

Card income remained relatively flat but included higher net interchange income on credit and debit cards due to growth in sales volume, offset by higher amortization of new account origination costs. For additional information on credit card income, see CCB segment results on pages 81–91.

Other income decreased from the prior year, predominantly as a result of the absence of two significant items recorded in Corporate in 2013, namely: a $1.3 billion gain on the sale of Visa shares and a $493 million gain from the sale of One Chase Manhattan Plaza. Lower valuations of seed capital investments in AM and losses related to the exit of non-core portfolios in Card also contributed to the decrease. These items were partially offset by higher auto lease income as a result of growth in auto lease volume, and a benefit from a tax settlement.

Net interest income increased slightly from the prior year, predominantly reflecting higher yields on investment securities, the impact of lower interest expense, and higher average loan balances. The increase was partially offset by lower yields on loans due to the run-off of higher-yielding loans and new originations of lower-yielding loans, and lower average interest-earning trading asset balances. The Firm's average interest-earning assets were $2.0 trillion, and the net interest yield on these assets, on a fully taxable-equivalent ("FTE") basis, was 2.18%, a decrease of 5 basis points from the prior year.

2013 compared with 2012

Total net revenue for 2013 was down by $425 million, or less than 1%. The 2013 results were driven by lower mortgage fees and related income, net interest income, and securities gains, predominantly offset by higher principal transactions revenue, and asset management, administration and commissions revenue.

Investment banking fees increased compared with the prior year, reflecting higher equity and debt underwriting fees, partially offset by lower advisory fees. Equity and debt underwriting fees increased, driven by strong market issuance and greater share of fees in equity capital markets and loans. Advisory fees decreased, as industry-wide M&A fee levels declined. Investment banking fee share and industry-wide data are sourced from Dealogic, an external vendor.

Principal transactions revenue increased compared with the prior year, reflecting CIB's strong equity markets revenue, partially offset by a $1.5 billion loss from implementing a FVA framework for OTC derivatives and structured notes in the fourth quarter of 2013, and a $452 million loss from DVA on structured notes and derivative liabilities (compared with a $930 million loss from DVA in the prior year). The prior year also included a $5.8 billion loss on the synthetic credit portfolio incurred by CIO in the six months ended June 30, 2012; a $449 million loss on the index credit derivative positions retained by CIO in the three months ended September 30, 2012; and additional modest losses incurred by CIB from the synthetic credit portfolio in the last six months of 2012. These losses were partially offset by a $665 million gain recognized in 2012 in Corporate, representing the recovery on a Bear Stearns-related subordinated loan.

Lending- and deposit-related fees decreased compared with the prior year, largely due to lower deposit-related fees in CCB, resulting from reductions in certain product and transaction fees.

Asset management, administration and commissions revenue increased from 2012, driven by higher investment management fees in AM due to net client inflows, the effect of higher market levels, and higher performance fees, and to higher investment sales revenue in CCB.

Securities gains decreased compared with the prior-year period, reflecting the results of repositioning the CIO available-for-sale ("AFS") portfolio.

Mortgage fees and related income decreased in 2013 compared with 2012, reflecting lower Mortgage Banking net production and servicing revenue. The decrease in net production revenue was due to lower margins and volumes. The decrease in net servicing revenue was predominantly due to lower MSR risk management results.

Card income increased compared with the prior year period, driven by higher net interchange income on credit and debit cards and higher merchant servicing revenue due to growth in sales volume.

Other income decreased in 2013 compared with the prior year, predominantly reflecting lower revenues from significant items recorded in Corporate. In 2013, the Firm recognized a $1.3 billion gain on the sale of Visa shares, a $493 million gain from the sale of One Chase Manhattan Plaza, and a modest loss related to the redemption of TruPS. In 2012, the Firm recognized a $1.1 billion benefit from the Washington Mutual bankruptcy settlement and an $888 million extinguishment gain related to the redemption of TruPS. The net decrease was partially offset by higher revenue in CIB, largely from client-driven activity.

Net interest income decreased in 2013 compared with the prior year, primarily reflecting the impact of the runoff of higher yielding loans and originations of lower yielding loans, and lower trading-related net interest income. The decrease in net interest income was partially offset by lower long-term debt and other funding costs. The Firm's average interest-earning assets were $2.0 trillion in 2013, and the net interest yield on those assets, on a FTE basis, was 2.23%, a decrease of 25 basis points from the prior year.

Provision for credit losses

Year ended December 31, (in millions)	2014	2013	2012
Consumer, excluding credit card	**$ 419**	$ (1,871)	$ 302
Credit card	**3,079**	2,179	3,444
Total consumer	**3,498**	308	3,746
Wholesale	**(359)**	(83)	(361)
Total provision for credit losses	**$ 3,139**	$ 225	$ 3,385

2014 compared with 2013

The provision for credit losses increased by $2.9 billion from the prior year as result of a lower benefit from reductions in the consumer allowance for loan losses, partially offset by lower net charge-offs. The consumer allowance release in 2014 was primarily related to the consumer, excluding credit card portfolio, and reflected the continued improvement in home prices and delinquencies in the residential real estate portfolio. The wholesale provision reflected a continued favorable credit environment. For a more detailed discussion of the credit portfolio and the allowance for credit losses, see the segment discussions of CCB on pages 81–91, CIB on pages 92–96 and CB on pages 97–99, and the Allowance for credit losses section on pages 128–130.

2013 compared with 2012

The provision for credit losses decreased by $3.2 billion compared with the prior year, due to a higher benefit from reductions in the allowance for loan losses, as well as lower net charge-offs partially due to incremental charge-offs recorded in 2012 in accordance with regulatory guidance on certain loans discharged under Chapter 7 bankruptcy. The consumer allowance release in 2013 reflected the improvement in home prices in the residential real estate portfolio and improvement in delinquencies in the residential real estate and credit card portfolios. The 2013 wholesale provision reflected a favorable credit environment and stable credit quality trends.

Noninterest expense

Year ended December 31, (in millions)	2014	2013	2012
Compensation expense	**$30,160**	$30,810	$30,585
Noncompensation expense:			
Occupancy	**3,909**	3,693	3,925
Technology, communications and equipment	**5,804**	5,425	5,224
Professional and outside services	**7,705**	7,641	7,429
Marketing	**2,550**	2,500	2,577
Other[a][b]	**11,146**	20,398	14,989
Total noncompensation expense	**31,114**	39,657	34,144
Total noninterest expense	**$61,274**	$70,467	$64,729

(a) Included firmwide legal expense of $2.9 billion, $11.1 billion and $5.0 billion for the years ended December 31, 2014, 2013 and 2012, respectively.

(b) Included FDIC-related expense of $1.0 billion, $1.5 billion and $1.7 billion for the years ended December 31, 2014, 2013 and 2012, respectively.

2014 compared with 2013

Total noninterest expense decreased by $9.2 billion, or 13%, from the prior year, driven by lower other expense (in particular, legal expense) and lower compensation expense.

Compensation expense decreased compared with the prior year, predominantly driven by lower headcount in CCB's Mortgage Banking business, lower performance-based compensation expense in CIB, and lower postretirement benefit costs. The decrease was partially offset by investments in the businesses, including headcount, for controls.

Noncompensation expense decreased compared with the prior year, due to lower other expense, predominantly reflecting lower legal expense. Lower expense for foreclosure-related matters and lower production and servicing-related expense in CCB's Mortgage Banking business, lower FDIC-related assessments, and lower amortization expense due to the completion of the amortization of certain intangibles, also contributed to the decline. The decrease was offset partially by investments in the businesses, including for controls, and costs related to business simplification initiatives across the Firm. For a further discussion of legal expense, see Note 31. For a discussion of amortization of intangibles, refer to Note 17.

2013 compared with 2012

Total noninterest expense was up by $5.7 billion, or 9%, compared with the prior year, predominantly due to higher legal expense.

Compensation expense increased in 2013 compared with the prior year, due to the impact of investments across the businesses, including front office sales and support staff, and costs related to the Firm's control agenda; these were partially offset by lower compensation expense in CIB and in CCB's Mortgage Banking business, reflecting the effect of lower servicing headcount.

Noncompensation expense increased in 2013 from the prior year. The increase was due to higher other expense, reflecting $11.1 billion of firmwide legal expense, predominantly in Corporate, representing additional reserves for several litigation and regulatory proceedings, compared with $5.0 billion of expense in the prior year. Investments in the businesses, higher legal-related professional services expense, and costs related to the Firm's control agenda also contributed to the increase. The increase was offset partially by lower mortgage servicing expense in CCB and lower occupancy expense for the Firm, which predominantly reflected the absence of charges recognized in 2012 related to vacating excess space.

Income tax expense

Year ended December 31, (in millions, except rate)	**2014**	2013	2012
Income before income tax expense	**$29,792**	$25,914	$28,917
Income tax expense	**8,030**	7,991	7,633
Effective tax rate	**27.0%**	30.8%	26.4%

2014 compared with 2013

The decrease in the effective tax rate from the prior year was largely attributable to the effect of the lower level of nondeductible legal-related penalties, partially offset by higher 2014 pretax income, in combination with changes in the mix of income and expense subject to U.S. federal, state and local income taxes, and lower tax benefits associated with tax adjustments and the settlement of tax audits. For additional information on income taxes, see Critical Accounting Estimates Used by the Firm on pages 161–165 and Note 26.

2013 compared with 2012

The increase in the effective tax rate compared with the prior year was predominantly due to the effect of higher nondeductible legal-related penalties in 2013. This was largely offset by the impact of lower pretax income, in combination with changes in the mix of income and expense subject to U.S. federal, state and local taxes, business tax credits, tax benefits associated with prior year tax adjustments and audit resolutions.

CONSOLIDATED BALANCE SHEETS ANALYSIS

Selected Consolidated balance sheets data

December 31, (in millions)	2014	2013	Change
Assets

Consolidated balance sheets overview

JPMorgan Chase's total assets and total liabilities increased by $157.4 billion and $136.6 billion, respectively, from December 31, 2013.

The following is a discussion of the significant changes in the Consolidated balance sheets from December 31, 2013.

Cash and due from banks and deposits with banks

The net increase was attributable to higher levels of excess funds primarily as a result of growth in deposits. The Firm's excess funds were placed with various central banks, predominantly Federal Reserve Banks.

Federal funds sold and securities purchased under resale agreements

The decrease in federal funds sold and securities purchased under resale agreements was predominantly attributable to a shift in the deployment of the Firm's excess cash by Treasury to deposits with banks and to client activity, including a decline in public deposits that require collateral.

Trading assets and liabilities–debt and equity instruments

The increase in trading assets and liabilities predominantly related to client-driven market-making activities in CIB was primarily driven by higher levels of debt securities and trading loans. For additional information, refer to Note 3.

Trading assets and liabilities–derivative receivables and payables

The increase in both receivables and payables was predominantly due to client-driven market-making activities in CIB, specifically in interest rate derivatives as a result of market movements; commodity derivatives predominantly driven by the significant decline in oil prices; and foreign exchange derivatives reflecting the appreciation of the U.S. dollar against certain currencies. The increases were partially offset by a decline in equity derivatives. For additional information, refer to Derivative contracts on pages 125–127, and Notes 3 and 5.

Securities

The decrease was predominantly due to lower levels of non-U.S. residential mortgage-backed securities and U.S. Treasuries, partially offset by higher levels of obligations of U.S. states and municipalities and U.S. residential mortgage-backed securities. For additional information related to securities, refer to the discussion in the Corporate segment on pages 103–104, and Notes 3 and 12.

Loans and allowance for loan losses

The increase in loans was attributable to higher consumer and wholesale loans. The increase in consumer loans was due to prime mortgage originations in CCB and AM, as well as credit card, business banking and auto loan originations in CCB, partially offset by paydowns and charge-offs or liquidation of delinquent loans. The increase in wholesale loans was due to a favorable credit environment throughout 2014, which drove an increase in client activity.

The decrease in the allowance for loan losses was driven by a reduction in the consumer allowance, predominantly as a result of continued improvement in home prices and delinquencies in the residential real estate portfolio. For a more detailed discussion of the loan portfolio and the allowance for loan losses, refer to Credit Risk Management on pages 110–111, and Notes 3, 4, 14 and 15.

Accrued interest and accounts receivable
The increase was due to higher receivables from security sales that did not settle, and higher client receivables related to client-driven market-making activities in CIB.

Mortgage servicing rights
For additional information on MSRs, see Note 17.

Other assets
The decrease was driven by several factors, including lower deferred tax assets; lower private equity investments due to sales, partially offset by unrealized gains; and lower real estate owned.

Deposits
The increase was attributable to higher consumer and wholesale deposits. The increase in consumer deposits reflected a continuing positive growth trend, resulting from strong customer retention, maturing of recent branch builds, and net new business. The increase in wholesale deposits was driven by client activity and business growth. For more information on consumer deposits, refer to the CCB segment discussion on pages 81–91; the Liquidity Risk Management discussion on pages 156–160; and Notes 3 and 19. For more information on wholesale client deposits, refer to the AM, CB and CIB segment discussions on pages 100–102, pages 97–99 and pages 92–96, respectively, and the Liquidity Risk Management discussion on pages 156–160.

Federal funds purchased and securities loaned or sold under repurchase agreements
The increase in federal funds purchased and securities loaned or sold under repurchase agreements was predominantly attributable to higher financing of the Firm's trading assets-debt and equity instruments. The increase was partially offset by client activity in CIB. For additional information on the Firm's Liquidity Risk Management, see pages 156–160.

Commercial paper
The increase was due to commercial paper issuances in the wholesale markets consistent with Treasury's liquidity and short-term funding plans and, to a lesser extent, a higher volume of liability balances related to CIB's liquidity management product whereby clients choose to sweep their deposits into commercial paper. For additional information on the Firm's other borrowed funds, see Liquidity Risk Management on pages 156–160.

Accounts payable and other liabilities
The increase was attributable to higher client payables related to client short positions, and higher payables from security purchases that did not settle, both in CIB. The increase was partially offset by lower legal reserves, largely reflecting the settlement of legal and regulatory matters.

Beneficial interests issued by consolidated VIEs
The increase was predominantly due to net new consolidated credit card and municipal bond vehicles, partially offset by a reduction in conduit commercial paper issued to third parties and the deconsolidation of certain mortgage securitization trusts. For further information on Firm-sponsored VIEs and loan securitization trusts, see Off-Balance Sheet Arrangements on pages 74–75 and Note 16.

Long-term debt
The increase was due to net issuances, consistent with Treasury's long-term funding plans. For additional information on the Firm's long-term debt activities, see Liquidity Risk Management on pages 156–160.

Stockholders' equity
The increase was due to net income and preferred stock issuances, partially offset by the declaration of cash dividends on common and preferred stock, and repurchases of common stock. For additional information on accumulated other comprehensive income/(loss) ("AOCI"), see Note 25; for the Firm's capital actions, see Capital actions on page 154.

OFF-BALANCE SHEET ARRANGEMENTS AND CONTRACTUAL CASH OBLIGATIONS

In the normal course of business, the Firm enters into various contractual obligations that may require future cash payments. Certain obligations are recognized on-balance sheet, while others are off-balance sheet under U.S. GAAP. The Firm is involved with several types of off-balance sheet arrangements, including through nonconsolidated special-purpose entities ("SPEs"), which are a type of VIE, and through lending-related financial instruments (e.g., commitments and guarantees).

Special-purpose entities

The most common type of VIE is an SPE. SPEs are commonly used in securitization transactions in order to isolate certain assets and distribute the cash flows from those assets to investors. SPEs are an important part of the financial markets, including the mortgage- and asset-backed securities and commercial paper markets, as they provide market liquidity by facilitating investors' access to specific portfolios of assets and risks. SPEs may be organized as trusts, partnerships or corporations and are typically established for a single, discrete purpose. SPEs are not typically operating entities and usually have a limited life and no employees. The basic SPE structure involves a company selling assets to the SPE; the SPE funds the purchase of those assets by issuing securities to investors.

JPMorgan Chase uses SPEs as a source of liquidity for itself and its clients by securitizing financial assets, and by creating investment products for clients. The Firm is involved with SPEs through multi-seller conduits, investor intermediation activities, and loan securitizations. See Note 16 for further information on these types of SPEs.

The Firm holds capital, as deemed appropriate, against all SPE-related transactions and related exposures, such as derivative transactions and lending-related commitments and guarantees.

The Firm has no commitments to issue its own stock to support any SPE transaction, and its policies require that transactions with SPEs be conducted at arm's length and reflect market pricing. Consistent with this policy, no JPMorgan Chase employee is permitted to invest in SPEs with which the Firm is involved where such investment would violate the Firm's Code of Conduct. These rules prohibit employees from self-dealing and acting on behalf of the Firm in transactions with which they or their family have any significant financial interest.

Implications of a credit rating downgrade to JPMorgan Chase Bank, N.A.

For certain liquidity commitments to SPEs, JPMorgan Chase Bank, N.A. could be required to provide funding if its short-term credit rating were downgraded below specific levels, primarily "P-1", "A-1" and "F1" for Moody's, Standard & Poor's and Fitch, respectively. These liquidity commitments support the issuance of asset-backed commercial paper by Firm-administered consolidated SPEs. In the event of a short-term credit rating downgrade, JPMorgan Chase Bank, N.A., absent other solutions, would be required to provide funding to the SPE, if the commercial paper could not be reissued as it matured. The aggregate amounts of commercial paper outstanding held by third parties as of December 31, 2014 and 2013, was $12.1 billion and $15.5 billion, respectively. The aggregate amounts of commercial paper outstanding could increase in future periods should clients of the Firm-administered consolidated SPEs draw down on certain unfunded lending-related commitments. These unfunded lending-related commitments were $9.9 billion and $9.2 billion at December 31, 2014 and 2013, respectively. The Firm could facilitate the refinancing of some of the clients' assets in order to reduce the funding obligation. For further information, see the discussion of Firm-administered multi-seller conduits in Note 16.

The Firm also acts as liquidity provider for certain municipal bond vehicles. The Firm's obligation to perform as liquidity provider is conditional and is limited by certain termination events, which include bankruptcy or failure to pay by the municipal bond issuer or credit enhancement provider, an event of taxability on the municipal bonds or the immediate downgrade of the municipal bond to below investment grade. See Note 16 for additional information.

Off–balance sheet lending-related financial instruments, guarantees, and other commitments

JPMorgan Chase provides lending-related financial instruments (e.g., commitments and guarantees) to meet the financing needs of its customers. The contractual amount of these financial instruments represents the maximum possible credit risk to the Firm should the counterparty draw upon the commitment or the Firm be required to fulfill its obligation under the guarantee, and should the counterparty subsequently fail to perform according to the terms of the contract. Most of these commitments and guarantees expire without being drawn or a default occurring. As a result, the total contractual amount of these instruments is not, in the Firm's view, representative of its actual future credit exposure or funding requirements. For further discussion of lending-related financial instruments, guarantees and other commitments, and the Firm's accounting for them, see Lending-related commitments on page 125 and Note 29. For a discussion of liabilities associated with loan sales-and securitization-related indemnifications, see Note 29.

Contractual cash obligations

The accompanying table summarizes, by remaining maturity, JPMorgan Chase's significant contractual cash obligations at December 31, 2014. The contractual cash obligations included in the table below reflect the minimum contractual obligation under legally enforceable contracts with terms that are both fixed and determinable. Excluded from the below table are certain liabilities with variable cash flows and/or no obligation to return a stated amount of principal at the maturity.

The carrying amount of on-balance sheet obligations on the Consolidated balance sheets may differ from the minimum contractual amount of the obligations reported below. For a discussion of mortgage repurchase liabilities and other obligations, see Note 29.

Contractual cash obligations

By remaining maturity at December 31, (in millions)	2014					2013
	2015	2016-2017	2018-2019	After 2019	**Total**	Total
On-balance sheet obligations						
Deposits[a]	**$ 1,345,919**	**$ 8,200**	**$ 3,318**	**$ 4,160**	**$ 1,361,597**	$ 1,286,587

(a) Excludes structured notes where the Firm is not obligated to return a stated amount of principal at the maturity of the notes, but is obligated to return an amount based on the performance of the structured notes.
(b) Primarily includes dividends declared on preferred and common stock, deferred annuity contracts, pension and postretirement obligations and insurance liabilities. Prior periods were revised to conform with the current presentation.
(c) For further information, refer to unsettled reverse repurchase and securities borrowing agreements in Note 29.
(d) Includes accrued interest and future contractual interest obligations. Excludes interest related to structured notes where the Firm's payment obligation is based on the performance of certain benchmarks.
(e) Includes noncancelable operating leases for premises and equipment used primarily for banking purposes and for energy-related tolling service agreements. Excludes the benefit of noncancelable sublease rentals of $2.2 billion and $2.6 billion at December 31, 2014 and 2013, respectively.
(f) At December 31, 2014 and 2013, included unfunded commitments of $147 million and $215 million, respectively, to third-party private equity funds; and $961 million and $1.9 billion of unfunded commitments, respectively, to other equity investments.

CONSOLIDATED CASH FLOWS ANALYSIS

(in millions)	Year ended December 31, 2014	2013	2012
Net cash provided by/(used in)			
Operating activities	**$ 36,593**	$ 107,953	$ 25,079
Investing activities	**(165,636)**	(150,501)	(119,825)

Effect of exchange rate changes on cash	**(1,125)**	272	1,160
Net decrease in cash and due from banks	**$ (11,940)**	$ (13,952)	$ (5,879)

Operating activities

JPMorgan Chase's operating assets and liabilities support the Firm's capital markets and lending activities, including the origination or purchase of loans initially designated as held-for-sale. Operating assets and liabilities can vary significantly in the normal course of business due to the amount and timing of cash flows, which are affected by client-driven and risk management activities and market conditions. The Firm believes cash flows from operations, available cash balances and the Firm's ability to generate cash through short- and long-term borrowings are sufficient to fund the Firm's operating liquidity needs.

Cash provided by operating activities in 2014 predominantly resulted from net income after noncash operating adjustments and reflected higher net proceeds from loan securitizations and sales activities when compared with 2013. In 2013 cash provided reflected a decrease in trading assets from client-driven market-making activities in CIB, resulting in lower levels of debt securities. Cash used in 2013 for loans originated and purchased with an initial intent to sell was slightly higher than the cash proceeds received from sales and paydowns of loans and reflected significantly higher levels of activities over the prior-year period. Cash provided during 2012 resulted from a decrease in securities borrowed reflecting a shift in the deployment of excess cash to resale agreements as well as lower client activity in CIB; partially offset by a decrease in accounts payable and other liabilities predominantly due to lower CIB client balances.

Investing activities

The Firm's investing activities predominantly include loans originated to be held for investment, the investment securities portfolio and other short-term interest-earning assets. Cash used in investing activities during 2014, 2013, and 2012 resulted from increases in deposits with banks, attributable to higher levels of excess funds; in 2014, cash was used for growth in wholesale and consumer loans, while in 2013 and 2012 cash used reflected growth in wholesale loans. Partially offsetting these cash outflows in 2014 and 2013 was a net decline in securities purchased under resale agreements due to a shift in the deployment of the Firm's excess cash by Treasury, and a net decline in consumer loans in 2013 and 2012 from paydowns and portfolio runoff or liquidation of delinquent loans. In 2012, additional cash was used for securities purchased under resale agreements. All years reflected cash proceeds from net maturities and sales of investment securities.

Financing activities

The Firm's financing activities includes cash from customer deposits, and cash proceeds from issuing long-term debt, and preferred and common stock. Cash provided by financing activities in 2014 predominantly resulted from higher consumer and wholesale deposits. The increase in consumer deposits reflected a continuing positive growth trend resulting from strong customer retention, maturing of recent branch builds, and net new business. The increase in wholesale deposits was driven by client activity and deposit growth. Cash provided in 2013 was driven by growth in both wholesale and consumer deposits, net proceeds from long-term borrowings, and net issuance of preferred stock; partially offset by a decrease in securities loaned or sold under repurchase agreements, predominantly due to changes in the mix of the Firm's funding sources. Cash provided in 2012 was due to growth in both consumer and wholesale deposits and an increase in federal funds purchased and securities loaned or sold under repurchase agreements due to higher secured financings of the Firm's assets. In all periods, cash proceeds were offset by repurchases of common stock and cash dividends on common and preferred stock.

* * *

For a further discussion of the activities affecting the Firm's cash flows, see Balance Sheet Analysis on pages 72–73.

EXPLANATION AND RECONCILIATION OF THE FIRM'S USE OF NON-GAAP FINANCIAL MEASURES

The Firm prepares its Consolidated Financial Statements using U.S. GAAP; these financial statements appear on pages 172–176. That presentation, which is referred to as "reported" basis, provides the reader with an understanding of the Firm's results that can be tracked consistently from year to year and enables a comparison of the Firm's performance with other companies' U.S. GAAP financial statements.

In addition to analyzing the Firm's results on a reported basis, management reviews the Firm's results and the results of the lines of business on a "managed" basis, which is a non-GAAP financial measure. The Firm's definition of managed basis starts with the reported U.S. GAAP results and includes certain reclassifications to present total net revenue for the Firm (and each of the reportable business segments) on a FTE basis. Accordingly, revenue from investments that receive tax credits and tax-exempt securities is presented in the managed results on a basis comparable to taxable investments and securities. This non-GAAP financial measure allows management to assess the comparability of revenue arising from both taxable and tax-exempt sources. The corresponding income tax impact related to tax-exempt items is recorded within income tax expense. These adjustments have no impact on net income as reported by the Firm as a whole or by the lines of business.

Management also uses certain non-GAAP financial measures at the business-segment level, because it believes these other non-GAAP financial measures provide information to investors about the underlying operational performance and trends of the particular business segment and, therefore, facilitate a comparison of the business segment with the performance of its competitors. Non-GAAP financial measures used by the Firm may not be comparable to similarly named non-GAAP financial measures used by other companies.

The following summary table provides a reconciliation from the Firm's reported U.S. GAAP results to managed basis.

	2014			2013			2012		
Year ended December 31, (in millions, except ratios)	Reported Results	Fully taxable-equivalent adjustments[a]	Managed basis	Reported Results	Fully taxable-equivalent adjustments[a]	Managed basis	Reported Results	Fully taxable-equivalent adjustments[a]	Managed basis

(a) Predominantly recognized in CIB and CB business segments and Corporate.

Calculation of certain U.S. GAAP and non-GAAP financial measures

Certain U.S. GAAP and non-GAAP financial measures are calculated as follows:

Book value per share ("BVPS")
Common stockholders' equity at period-end / Common shares at period-end

Overhead ratio
Total noninterest expense / Total net revenue

Return on assets ("ROA")
Reported net income / Total average assets

Return on common equity ("ROE")
Net income* / Average common stockholders' equity

Return on tangible common equity ("ROTCE")
Net income* / Average tangible common equity

Tangible book value per share ("TBVPS")
Tangible common equity at period-end / Common shares at period-end

* Represents net income applicable to common equity

Tangible common equity ("TCE"), ROTCE and TBVPS are each non-GAAP financial measures. TCE represents the Firm's common stockholders' equity (i.e., total stockholders' equity less preferred stock) less goodwill and identifiable intangible assets (other than MSRs), net of related deferred tax liabilities. ROTCE measures the Firm's earnings as a percentage of average TCE. TBVPS represents the Firm's TCE at period-end divided by common shares at period-end. TCE, ROTCE, and TBVPS are meaningful to the Firm, as well as investors and analysts, in assessing the Firm's use of equity.

Additionally, certain credit and capital metrics and ratios disclosed by the Firm are non-GAAP measures. For additional information on these non-GAAP measures, see Credit Risk Management on pages 110–111, and Regulatory capital on pages 146–153.

Tangible common equity

(in millions, except per share and ratio data)	Period-end		Average		
	Dec 31, 2014	Dec 31, 2013	Year ended December 31, 2014	2013	2012
Common stockholders' equity	$ 212,002	$ 200,020	$ 207,400	$ 196,409	$ 184,352
Less: Goodwill	47,647	48,081	48,029	48,102	48,176
Less: Certain identifiable intangible assets	1,192	1,618	1,378	1,950	2,833
Add: Deferred tax liabilities[a]	2,853	2,953	2,950	2,885	2,754
Tangible common equity	$ 166,016	$ 153,274	$ 160,943	$ 149,242	$ 136,097
Return on tangible common equity	NA	NA	13%	11%	15%
Tangible book value per share	$ 44.69	$ 40.81	NA	NA	NA

(a) Represents deferred tax liabilities related to tax-deductible goodwill and to identifiable intangibles created in nontaxable transactions, which are netted against goodwill and other intangibles when calculating TCE.

Core net interest income

In addition to reviewing net interest income on a managed basis, management also reviews core net interest income to assess the performance of its core lending, investing (including asset-liability management) and deposit-raising activities. These activities exclude the impact of CIB's market-based activities. The core data presented below are non-GAAP financial measures due to the exclusion of CIB's market-based net interest income and related assets. Management believes this exclusion provides investors and analysts another measure by which to analyze the non-market-related business trends of the Firm and provides a comparable measure to other financial institutions that are primarily focused on core lending, investing and deposit-raising activities.

Core net interest income data

Year ended December 31, (in millions, except rates)	2014	2013	2012
Net interest income - managed basis[a][b]	$ 44,619	$ 44,016	$ 45,653
Less: Market-based net interest income[c]	5,552	5,492	6,223
Core net interest income[a][c]	$ 39,067	$ 38,524	$ 39,430
Average interest-earning assets	$ 2,049,093	$ 1,970,231	$ 1,842,417
Less: Average market-based earning assets	510,261	504,218	499,339
Core average interest-earning assets	$ 1,538,832	$ 1,466,013	$ 1,343,078
Net interest yield on interest-earning assets - managed basis	2.18%	2.23%	2.48%
Net interest yield on market-based activities[c]	1.09	1.09	1.25
Core net interest yield on core average interest-earning assets[c]	2.54%	2.63%	2.94%

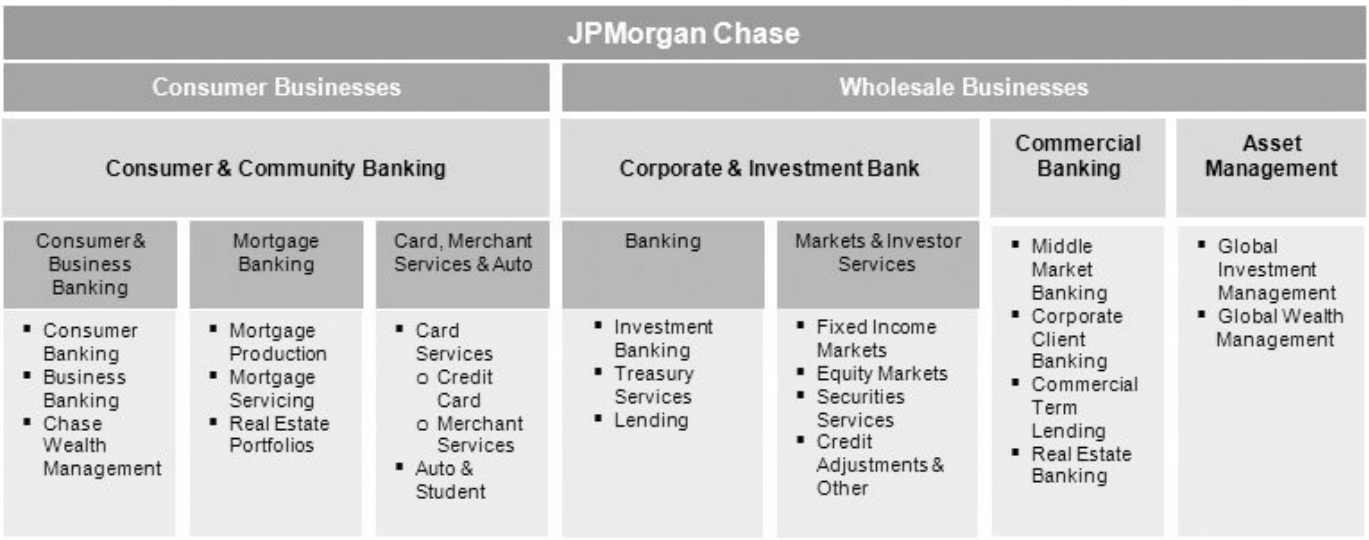
(a) Interest includes the effect of related hedging derivatives. Taxable-equivalent amounts are used where applicable.

(b) For a reconciliation of net interest income on a reported and managed basis, see reconciliation from the Firm's reported U.S. GAAP results to managed basis on page 77.

(c) Effective with the fourth quarter of 2014, the Firm changed the methodology it uses to allocate preferred stock dividends to the lines of business. Prior period amounts were revised to conform with the current allocation methodology. The Firm's Consolidated balance sheets and consolidated results of operations were not affected by this reporting change. For further discussion please see Preferred stock dividend allocation reporting change on pages 79–80.

2014 compared with 2013

Core net interest income increased by $543 million in 2014 to $39.1 billion, and core average interest-earning assets increased by $72.8 billion to $1.5 trillion. The increase in net interest income in 2014 predominantly reflected higher yields on investment securities, the impact of lower interest expense, and higher average loan balances. The increase was partially offset by lower yields on loans due to the run-off of higher-yielding loans and new originations of lower-yielding loans. The increase in average interest-earning assets largely reflected the impact of higher average balance of deposits with banks. These changes in net interest income and interest-earning assets resulted in the core net interest yield decreasing by 9 basis points to 2.54% for 2014.



2013 compared with 2012

Core net interest income decreased by $906 million in 2013 to $38.5 billion, and core average interest-earning assets increased by $122.9 billion to $1.5 trillion. The decline in net interest income in 2013 primarily reflected the impact of the runoff of higher-yielding loans and originations of lower-yielding loans. The decrease in net interest income was partially offset by lower long-term debt and other funding costs. The increase in average interest-earning assets reflected the impact of higher deposits with banks. The core net interest yield decreased by 31 basis points to 2.63% in 2013, primarily reflecting the impact of a significant increase in deposits with banks and lower loan yields, partially offset by the impact of lower long-term debt yields and deposit rates.

BUSINESS SEGMENT RESULTS

The Firm is managed on a line of business basis. There are four major reportable business segments – Consumer & Community Banking, Corporate & Investment Bank, Commercial Banking and Asset Management. In addition, there is a Corporate segment.

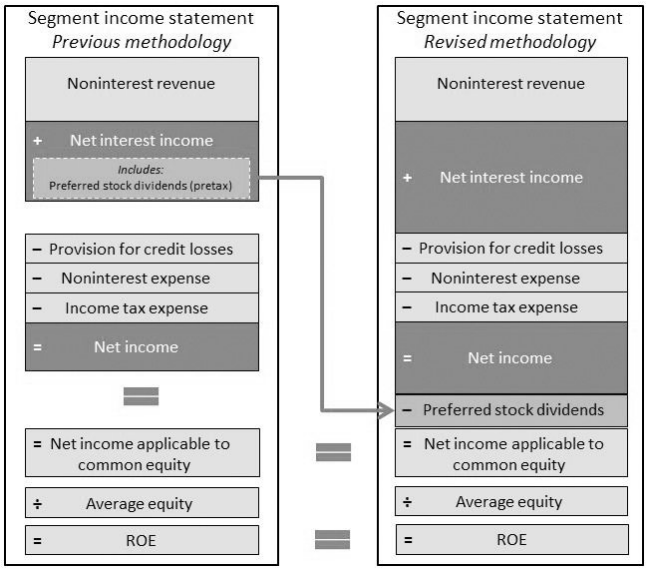
The business segments are determined based on the products and services provided, or the type of customer served, and they reflect the manner in which financial information is currently evaluated by management. Results of these lines of business are presented on a managed basis. For a definition of managed basis, see Explanation and Reconciliation of the Firm's use of non-GAAP financial measures, on pages 77–78.

Description of business segment reporting methodology

Results of the business segments are intended to reflect each segment as if it were essentially a stand-alone business. The management reporting process that derives business segment results allocates income and expense using market-based methodologies. The Firm continues to assess the assumptions, methodologies and reporting classifications used for segment reporting, and further refinements may be implemented in future periods.

Revenue sharing

When business segments join efforts to sell products and services to the Firm's clients, the participating business segments agree to share revenue from those transactions. The segment results reflect these revenue-sharing agreements.



Funds transfer pricing

Funds transfer pricing is used to allocate interest income and expense to each business and transfer the primary interest rate risk exposures to the Treasury group within Corporate. The allocation process is unique to each business segment and considers the interest rate risk, liquidity risk and regulatory requirements of that segment as if it were operating independently, and as compared with its stand-alone peers. This process is overseen by senior management and reviewed by the Firm's Asset-Liability Committee ("ALCO").

Preferred stock dividend allocation reporting change

As part of its funds transfer pricing process, the Firm allocates substantially all of the cost of its outstanding preferred stock to its reportable business segments, while retaining the balance of the cost in Corporate. Prior to the fourth quarter of 2014, this cost was allocated to the Firm's reportable business segments as interest expense, with an offset recorded as interest income in Corporate. Effective with the fourth quarter of 2014, this cost is no longer included in interest income and interest expense in the segments, but rather is now included in net income applicable to common equity to be consistent with the presentation of firmwide results. As a result of this reporting change, net interest income and net income in the reportable business segments increases; however, there was no impact to the segments' return on common equity ("ROE"). The Firm's net interest income, net income, Consolidated balance sheets and consolidated results of operations were not impacted by this reporting change, as preferred stock dividends have been and continue to be distributed from retained earnings and, accordingly, were never reported as a component of the Firm's consolidated net interest income or net income. Prior period segment and core net interest income amounts throughout this Annual Report have been revised to conform with the current period presentation.

The following chart depicts how preferred stock dividends were allocated to the business segments before and after the aforementioned methodology change.

Business segment capital allocation changes

Each business segment is allocated capital by taking into consideration stand-alone peer comparisons, regulatory capital requirements (as estimated under Basel III Advanced Fully Phased-In) and economic risk measures. The amount of capital assigned to each business is referred to as equity. On at least an annual basis, the Firm assesses the level of capital required for each line of business as well as the assumptions and methodologies used to allocate capital to its lines of business and updates the equity allocations to its lines of business as refinements are implemented. For further information about these capital changes, see Line of business equity on page 153.

Expense allocation

Where business segments use services provided by support units within the Firm, or another business segment, the costs of those services are allocated to the respective business segments. The expense is generally allocated based on actual cost and upon usage of the services provided. In contrast, certain other expense related to certain corporate functions, or to certain technology and operations, are not allocated to the business segments and are retained in Corporate. Retained expense includes: parent company costs that would not be incurred if the segments were stand-alone businesses; adjustments to align certain corporate staff, technology and operations allocations with market prices; and other items not aligned with a particular business segment.

Segment Results – Managed Basis[(a)]

The following table summarizes the business segment results for the periods indicated.

Year ended December 31,	Total net revenue			Total noninterest expense			Pre-provision profit/(loss)		
(in millions)	**2014**	2013	2012	**2014**	2013	2012	**2014**	2013	2012
Consumer & Community Banking	**$ 44,368**	$ 46,537	$ 50,278	**$ 25,609**	$ 27,842	$ 28,827	**$ 18,759**	$ 18,695	$ 21,451

(a) Effective with the fourth quarter of 2014, the Firm changed the methodology it uses to allocate preferred stock dividends to the lines of business. Prior period amounts for net revenue, pre-provision profit/(loss) and net income/(loss) for each of the business segments were revised to conform with the current allocation methodology. The Firm's Consolidated balance sheets and consolidated results of operations were not affected by this reporting change. For further discussion please see Preferred stock dividend allocation reporting change in Business Segment Results on pages 79–80.

Consumer & Community Banking serves consumers and businesses through personal service at bank branches and through ATMs, online, mobile and telephone banking. CCB is organized into Consumer & Business Banking, Mortgage Banking (including Mortgage Production, Mortgage Servicing and Real Estate Portfolios) and Card, Merchant Services & Auto ("Card"). Consumer & Business Banking offers deposit and investment products and services to consumers, and lending, deposit, and cash management and payment solutions to small businesses. Mortgage Banking includes mortgage origination and servicing activities, as well as portfolios comprised of residential mortgages and home equity loans, including the PCI portfolio acquired in the Washington Mutual transaction. Card issues credit cards to consumers and small businesses, provides payment services to corporate and public sector clients through its commercial card products, offers payment processing services to merchants, and provides auto and student loan services.

Overhead ratio	**58**	60	57

Note: As discussed on pages 79–80, effective with the fourth quarter of 2014 the Firm changed its methodology for allocating the cost of preferred stock to its reportable business segments. Prior periods have been revised to conform with the current period presentation.

Note: In the discussion and the tables which follow, CCB presents certain financial measures which exclude the impact of PCI loans; these are non-GAAP financial measures. For additional information, see Explanation and Reconciliation of the Firm's Use of Non-GAAP Financial Measures.

2014 compared with 2013

Consumer & Community Banking net income was $9.2 billion, a decrease of $1.9 billion, or 17%, compared with the prior year, due to higher provision for credit losses and lower net revenue, partially offset by lower noninterest expense.

Net revenue was $44.4 billion, a decrease of $2.2 billion, or 5%, compared with the prior year. Net interest income was $28.4 billion, down $554 million, or 2%, driven by spread compression and lower mortgage warehouse balances, largely offset by higher deposit balances in Consumer & Business Banking and higher loan balances in Credit Card. Noninterest revenue was $16.0 billion, a decrease of $1.6 billion, or 9%, driven by lower mortgage fees and related income.

The provision for credit losses was $3.5 billion, compared with $335 million in the prior year. The current-year provision reflected a $1.3 billion reduction in the allowance for loan losses and total net charge-offs of $4.8 billion. The prior-year provision reflected a $5.5 billion reduction in the allowance for loan losses and total net charge-offs of $5.8 billion. For more information, including net charge-off amounts and rates, see Consumer Credit Portfolio.

Noninterest expense was $25.6 billion, a decrease of $2.2 billion, or 8%, from the prior year, driven by lower Mortgage Banking expense.

2013 compared with 2012

Consumer & Community Banking net income was $11.1 billion, an increase of $270 million, or 3%, compared with the prior year, due to lower provision for credit losses and lower noninterest expense, predominantly offset by lower net revenue.

Net revenue was $46.5 billion, a decrease of $3.7 billion, or 7%, compared with the prior year. Net interest income was $29.0 billion, down $480 million, or 2%, driven by lower deposit margins, lower loan balances due to net portfolio runoff and spread compression in Credit Card, largely offset by higher deposit balances. Noninterest revenue was $17.6 billion, a decrease of $3.3 billion, or 16%, driven by lower mortgage fees and related income, partially offset by higher card income.

The provision for credit losses was $335 million, compared with $3.8 billion in the prior year. The current-year provision reflected a $5.5 billion reduction in the allowance for loan losses and total net charge-offs of $5.8 billion. The prior-year provision reflected a $5.5 billion reduction in the allowance for loan losses and total net charge-offs of $9.3 billion, including $800 million of incremental charge-offs related to regulatory guidance. For more information, including net charge-off amounts and rates, see Consumer Credit Portfolio on pages 113–119.

Noninterest expense was $27.8 billion, a decrease of $985 million, or 3%, from the prior year, driven by lower mortgage servicing expense, partially offset by investments in Chase Private Client expansion, higher non-MBS related legal expense in Mortgage Production, higher auto lease depreciation, and costs related to the control agenda.

Active mobile customers (in thousands)	**19,084**	15,629	12,359

(a) Net charge-offs and the net charge-off rates excluded $533 million and $53 million of write-offs in the PCI portfolio for the years ended December 31, 2014 and 2013, respectively. These write-offs decreased the allowance for loan losses for PCI loans. For further information on PCI write-offs, see Allowance for Credit Losses on pages 128–130.
(b) Net charge-offs and net charge-off rates for the year ended December 31, 2012, included $800 million of charge-offs, recorded in accordance with regulatory guidance on certain loans discharged under Chapter 7 bankruptcy and not reaffirmed by the borrower ("Chapter 7 loans") to be charged off to the net realizable value of the collateral and to be considered nonaccrual, regardless of their delinquency status. Excluding these charges-offs, net charge-offs for the year ended December 31, 2012, would have been $8.5 billion and excluding these charge-offs and PCI loans, the net charge-off rate for the year ended December 31, 2012, would have been 2.45%.
(c) Excludes PCI loans. The Firm is recognizing interest income on each pool of PCI loans as they are all performing.
(d) At December 31, 2014, 2013 and 2012, nonperforming assets excluded: (1) mortgage loans insured by U.S. government agencies of $7.8 billion, $8.4 billion and $10.6 billion, respectively, that are 90 or more days past due; (2) student loans insured by U.S. government agencies under the Federal Family Education Loan Program ("FFELP") of $367 million, $428 million and $525 million respectively, that are 90 or more days past due; (3) real estate owned ("REO") insured by U.S. government agencies of $462 million, $2.0 billion and $1.6 billion, respectively. These amounts have been excluded based upon the government guarantee.
(e) Prior periods were revised to conform with the current presentation.
(f) The allowance for loan losses for PCI loans of $3.3 billion, $4.2 billion and $5.7 billion at December 31, 2014, December 31, 2013, and December 31, 2012, respectively; these amounts were also excluded from the applicable ratios.
(g) Includes eATMs, formerly Express Banking Kiosks ("EBK"). Prior periods were revised to conform with the current presentation.

2014 compared with 2013

Consumer & Business Banking net income was $3.4 billion, an increase of $500 million, or 17%, compared with the prior year, due to higher net revenue.

Net revenue was $18.2 billion, up 5% compared with the prior year. Net interest income was $11.1 billion, up $384 million, or 4% compared with the prior year, driven by higher deposit balances, largely offset by deposit spread compression. Noninterest revenue was $7.2 billion, up $430 million, or 6%, driven by higher investment revenue, reflecting record client investment assets, higher debit card revenue, reflecting an increase in transaction volume, and higher deposit-related fees as a result of an increase in customer accounts.

Noninterest expense was $12.1 billion, flat from the prior year, reflecting lower costs driven by efficiencies implemented in the business, offset by the increased cost of controls.

2013 compared with 2012

Consumer & Business Banking net income was $2.9 billion, a decrease of $281 million, or 9%, compared with the prior year, due to higher noninterest expense, partially offset by higher noninterest revenue.

Net revenue was $17.4 billion, up 1% compared with the prior year. Net interest income was $10.7 billion, flat compared with the prior year, driven by higher deposit balances, offset by lower deposit margin. Noninterest revenue was $6.7 billion, an increase of 3%, driven by higher investment sales revenue and debit card revenue, partially offset by lower deposit-related fees.

Noninterest expense was $12.2 billion, up 6% from the prior year, reflecting continued investments in the business, and costs related to the control agenda.

2014 compared with 2013

Mortgage Banking net income was $1.7 billion, a decrease of $1.5 billion, or 48%, from the prior year, driven by a lower benefit from the provision for credit losses and lower net revenue, partially offset by lower noninterest expense.

Net revenue was $7.8 billion, a decrease of $2.4 billion, or 24%, compared with the prior year. Net interest income was $4.2 billion, a decrease of $529 million, or 11%, driven by spread compression and lower loan balances due to portfolio runoff and lower warehouse balances. Noninterest revenue was $3.6 billion, a decrease of $1.9 billion, or 34%, driven by lower mortgage fees and related income.

The provision for credit losses was a benefit of $217 million, compared with a benefit of $2.7 billion in the prior year. The current year reflected a $700 million reduction in the allowance for loan losses, reflecting continued improvement in home prices and delinquencies. The prior year included a $3.8 billion reduction in the allowance for loan losses. Net charge-offs were $483 million, compared with $1.1 billion in the prior year.

Noninterest expense was $5.3 billion, a decrease of $2.3 billion, or 30%, from the prior year, due to lower expense in production and servicing reflecting lower headcount-related expense, the absence of non-MBS related legal expense and lower expense on foreclosure-related matters.

2013 compared with 2012

Mortgage Banking net income was $3.2 billion, a decrease of $257 million, or 7%, compared with the prior year, driven by lower net revenue, predominantly offset by a higher benefit from the provision for credit losses and lower noninterest expense.

Net revenue was $10.2 billion, a decrease of $3.9 billion, or 28%, compared with the prior year. Net interest income was $4.8 billion, a decrease of $258 million, or 5%, driven by lower loan balances due to net portfolio runoff. Noninterest revenue was $5.5 billion, a decrease of $3.7 billion, driven by lower mortgage fees and related income.

The provision for credit losses was a benefit of $2.7 billion, compared with a benefit of $490 million in the prior year. The current year reflected a $3.8 billion reduction in the allowance for loan losses due to continued improvement in home prices and delinquencies. The prior year included a $3.9 billion reduction in the allowance for loan losses.

Noninterest expense was $7.6 billion, a decrease of $1.5 billion, or 17%, from the prior year, due to lower servicing expense, partially offset by higher non-MBS related legal expense in Mortgage Production.

(a) Prior periods were revised to conform with the current presentation.
(b) Includes provision for credit losses.

2014 compared with 2013

Mortgage Production pretax income was $294 million, a decrease of $557 million, or 65%, from the prior year, reflecting lower revenue, largely offset by lower expense and higher benefit from repurchase losses. Mortgage production-related revenue, excluding repurchase losses, was $1.5 billion, a decrease of $2.1 billion, from the prior year, driven by lower volumes due to higher levels of mortgage interest rates and tighter margins. Production expense was $1.6 billion, a decrease of $1.4 billion, or 47%, from the prior year, driven by lower headcount-related expense and the absence of non-MBS related legal expense.

Mortgage Servicing pretax income was $404 million, compared with a loss of $338 million in the prior year, reflecting lower expenses and lower MSR risk management loss, partially offset by lower net revenue. Mortgage net servicing-related revenue was $2.7 billion, a decrease of $200 million, or 7%, from the prior year, driven by lower average third-party loans serviced and lower revenue from an exited non-core product, partially offset by lower MSR asset amortization expense as a result of lower MSR asset value. MSR risk management was a loss of $28 million, compared with a loss of $268 million in the prior year. See Note 17 for further information regarding changes in value of the MSR asset and related hedges. Servicing expense was $2.3 billion, a decrease of $702 million, or 24%, from the prior year, reflecting lower headcount-related expense and lower expense for foreclosure related matters.

Real Estate Portfolios pretax income was $2.1 billion, down $2.7 billion, or 57%, from the prior year, due to a lower benefit from the provision for credit losses and lower net revenue, partially offset by lower noninterest expense. Net revenue was $3.2 billion, a decrease of $451 million, or 12%, from the prior year, driven by lower net interest income as a result of spread compression and lower loan balances due to portfolio runoff. The provision for credit losses was a benefit of $223 million, compared with a benefit of $2.7 billion in the prior year. The current-year provision reflected a $700 million reduction in the allowance for loan losses, $400 million from the non credit-impaired allowance and $300 million from the purchased credit-impaired allowance, due to continued improvement in home prices and delinquencies. The prior-year provision reflected a $3.8 billion reduction in the allowance for loan losses, $2.3 billion from the non credit-impaired allowance and $1.5 billion from the purchased credit-impaired allowance. Net charge-offs were $477 million, compared with $1.1 billion in the prior year. See Consumer Credit Portfolio on pages 113–119 for the net charge-off amounts and rates. Noninterest expense was $1.4 billion, a decrease of $180 million, or 12%, compared with the prior year, driven by lower FDIC-related expense and lower foreclosed asset expense due to lower foreclosure inventory.

2013 compared with 2012

Mortgage Production pretax income was $851 million, a decrease of $2.7 billion from the prior year, reflecting lower margins, lower volumes and higher legal expense, partially offset by a benefit in repurchase losses. Production-related revenue, excluding repurchase losses, was $3.6 billion, a decrease of $3.0 billion, or 45%, from the prior year, largely reflecting lower margins and lower volumes from rising rates. Production expense was $3.1 billion, an increase of $341 million, or 12%, from the prior year, due to higher non-MBS related legal expense and higher compensation-related expense. Repurchase losses for the current year reflected a benefit of $331 million, compared with repurchase losses of $272 million in the prior year. The current year reflected a reduction in the repurchase liability largely as a result of the settlement with the GSEs.

Mortgage Servicing pretax loss was $338 million, compared with a pretax loss of $1.1 billion in the prior year, driven by lower expense, partially offset by a MSR risk management loss. Mortgage net servicing-related revenue was $2.9 billion, a decrease of $78 million. MSR risk management was a loss of $268 million, compared with income of $616 million in the prior year, driven by the net impact of various changes in model inputs and assumptions. See Note 17 for further information regarding changes in value of the MSR asset and related hedges. Servicing expense was $3.0 billion, a decrease of $1.8 billion, or 37%, from the prior year, reflecting lower costs associated with the Independent Foreclosure Review and lower servicing headcount.

Real Estate Portfolios pretax income was $4.8 billion, up $1.7 billion from the prior year, or 54%, due to a higher benefit from the provision for credit losses, partially offset by lower net revenue. Net revenue was $3.7 billion, a decrease of $602 million, or 14%, from the prior year. This decrease was due to lower net interest income, resulting from lower loan balances due to net portfolio runoff, and lower noninterest revenue due to higher loan retention. The provision for credit losses was a benefit of $2.7 billion, compared with a benefit of $509 million in the prior year. The current-year provision reflected a $3.8 billion reduction in the allowance for loan losses, $2.3 billion from the non credit-impaired allowance and $1.5 billion from the purchased credit-impaired allowance, reflecting continued improvement in home prices and delinquencies. The prior-year provision included a $3.9 billion reduction in the allowance for loan losses from the non credit-impaired allowance. Net charge-offs were $1.1 billion, compared with $3.3 billion in the prior year. Prior-year total net charge-offs included $744 million of incremental charge-offs reported in accordance with regulatory guidance on certain loans discharged under Chapter 7 bankruptcy. Noninterest expense was $1.6 billion, a decrease of $100 million, or 6%, compared with the prior year, driven by lower foreclosed asset expense due to lower foreclosure inventory, largely offset by higher FDIC-related expense.

Nonperforming assets[d][e]	**$ 389**	$ 519	$ 599

(a) Predominantly consists of prime mortgages originated with the intent to sell that are accounted for at fair value.

(b) Predominantly represents prime mortgage loans repurchased from Government National Mortgage Association ("Ginnie Mae") pools, which are insured by U.S. government agencies.

(c) At December 31, 2014, 2013 and 2012, excluded mortgage loans insured by U.S. government agencies of $9.7 billion, $9.6 billion and $11.8 billion respectively, that are 30 or more days past due. These amounts have been excluded based upon the government guarantee. For further discussion, see Note 14 which summarizes loan delinquency information.

(d) At December 31, 2014, 2013 and 2012, nonperforming assets excluded: (1) mortgage loans insured by U.S. government agencies of $7.8 billion, $8.4 billion and $10.6 billion respectively, that are 90 or more days past due; and (2) REO insured by U.S. government agencies of $462 million, $2.0 billion and $1.6 billion, respectively. These amounts have been excluded based upon the government guarantee.

(e) Prior periods were revised to conform with the current presentation.

Credit data and quality statistics

As of or for the year ended December 31, (in millions, except ratios)	2014	2013	2012
Net charge-offs/ (recoveries), excluding PCI loans:[a][b]			
Home equity	$ 473	$ 966	$ 2,385
Prime mortgage, including option ARMs	22	41	454
Subprime mortgage	(27)	90	486
Other	9	10	16
Total net charge-offs/ (recoveries), excluding PCI loans	**$ 477**	$ 1,107	$ 3,341
Net charge-off/(recovery) rate, excluding PCI loans:[b]			
Home equity	0.87%	1.55%	3.28%
Prime mortgage, including option ARMs	0.04	0.09	1.07
Subprime mortgage	(0.43)	1.17	5.43
Other	1.76	1.70	2.37
Total net charge-off/ (recovery) rate, excluding PCI loans	0.41	0.96	2.68
Net charge-off/(recovery) rate – reported:[a][b]			
Home equity	0.65%	1.17%	2.52%
Prime mortgage, including option ARMs	0.03	0.05	0.58
Subprime mortgage	(0.27)	0.74	3.54
Other	1.76	1.70	2.37
Total net charge-off/ (recovery) rate – reported	0.29	0.64	1.79
30+ day delinquency rate, excluding PCI loans[c]	2.67%	3.66%	5.03%
Allowance for loan losses, excluding PCI loans	$ 2,168	$ 2,568	$ 4,868
Allowance for PCI loans[a]	3,325	4,158	5,711
Allowance for loan losses	**$ 5,493**	$ 6,726	$ 10,579
Nonperforming assets[d]	5,786	6,919	8,439
Allowance for loan losses to period-end loans retained	3.24%	4.00%	5.97%
Allowance for loan losses to period-end loans retained, excluding PCI loans	1.76	2.23	4.14

(a) Net charge-offs and the net charge-off rates excluded $533 million and $53 million of write-offs in the PCI portfolio for the years ended December 31, 2014 and 2013, respectively. These write-offs decreased the allowance for loan losses for PCI loans. For further information on PCI write-offs, see Allowance for Credit Losses on pages 128–130.

(b) Net charge-offs and net charge-off rates for the year ended December 31, 2012, included $744 million of charge-offs related to regulatory guidance. Excluding these charges-offs, net charge-offs for the year ended December 31, 2012, would have been $1.8 billion, $410 million and $416 million for the home equity, prime mortgage, including option ARMs, and subprime mortgage portfolios, respectively. Net charge-off rates for the same period, excluding these charge-offs and PCI loans, would have been 2.41%, 0.97% and 4.65% for the home equity, prime mortgage, including option ARMs, and subprime mortgage portfolios, respectively.

(c) The 30+ day delinquency rate for PCI loans was 13.33% 15.31% and 20.14% at December 31, 2014, 2013 and 2012, respectively.

(d) Excludes PCI loans. The Firm is recognizing interest income on each pool of PCI loans as they are all performing.

Mortgage servicing-related matters

The financial crisis resulted in unprecedented levels of delinquencies and defaults of 1-4 family residential real estate loans. Such loans required varying degrees of loss mitigation activities. Foreclosure is usually a last resort, and accordingly, the Firm has made, and continues to make, significant efforts to help borrowers remain in their homes.

The Firm has entered into various Consent Orders and settlements with federal and state governmental agencies and private parties related to mortgage servicing, origination, and residential mortgage-backed securities activities. The requirements of these Consent Orders and settlements vary, but in the aggregate, include cash compensatory payments (in addition to fines) and/or "borrower relief," which may include principal reduction, refinancing, short sale assistance, and other specified types of borrower relief. Other obligations required under certain Consent Orders and settlements, as well as under new regulatory requirements, include enhanced mortgage servicing and foreclosure standards and processes. The Firm has satisfied or is committed to satisfying these obligations within the mandated timeframes.

The mortgage servicing Consent Orders and settlements are subject to ongoing oversight by the Mortgage Compliance Committee of the Firm's Board of Directors. In addition, certain of the Consent Orders and settlements are the subject of ongoing reporting to various regulators and independent overseers.

The Firm's compliance with the Global Settlement and the RMBS Settlement are detailed in periodic reports published by the independent overseers.

Provision for credit losses	**3,432**	2,669	3,953
Noninterest expense[(a)]	**8,176**	8,078	8,216
Income before income tax expense	**6,708**	8,142	6,752
Net income	**$ 4,074**	$ 4,907	$ 4,099
Return on common equity	**21%**	31%	24%
Overhead ratio	**45**	43	43
Equity (period-end and average)	**$ 19,000**	$ 15,500	$16,500

(a) Included operating lease depreciation expense of $1.2 billion, $972 million and $817 million for the years ended December 31, 2014, 2013 and 2012, respectively.

2014 compared with 2013

Card net income was $4.1 billion, a decrease of $833 million, or 17%, compared with the prior year, predominantly driven by higher provision for credit losses and lower net revenue.

Net revenue was $18.3 billion, down $573 million or 3% compared with the prior year. Net interest income was $13.2 billion, a decrease of $409 million, or 3%, from the prior year primarily driven by spread compression in Credit Card and Auto, partially offset by higher average loan balances. Noninterest revenue was $5.2 billion, down $164 million, or 3%, from the prior year. The decrease was primarily driven by higher amortization of new account origination costs and the impact of non-core portfolio exits, largely offset by higher auto lease income and net interchange income from higher sales volume.

The provision for credit losses was $3.4 billion, compared with $2.7 billion in the prior year. The current-year provision reflected lower net charge-offs and a $554 million reduction in the allowance for loan losses. The reduction in the allowance for loan losses was primarily related to a decrease in the asset-specific allowance resulting from increased granularity of the impairment estimates and lower balances related to credit card loans modified in TDRs, runoff in the student loan portfolio, and lower estimated losses in auto loans. The prior-year provision included a $1.7 billion reduction in the allowance for loan losses.

Noninterest expense was $8.2 billion, up $98 million, or 1% from the prior year primarily driven by higher auto lease depreciation expense and higher investment in controls, predominantly offset by lower intangible amortization and lower remediation costs.

2013 compared with 2012

Card net income was $4.9 billion, an increase of $808 million, or 20%, compared with the prior year, driven by lower provision for credit losses.

Net revenue was $18.9 billion, flat compared with the prior year. Net interest income was $13.6 billion, down $261 million, or 2%, from the prior year. The decrease was primarily driven by spread compression in Credit Card and Auto and lower average credit card loan balances, largely offset by the impact of lower revenue reversals associated with lower net charge-offs in Credit Card. Noninterest revenue was $5.3 billion, an increase of $229 million, or 4%, compared with the prior year primarily driven by higher net interchange income, auto lease income and merchant servicing revenue, largely offset by lower revenue from an exited non-core product and a gain on an investment security recognized in the prior year.

The provision for credit losses was $2.7 billion, compared with $4.0 billion in the prior year. The current-year provision reflected lower net charge-offs and a $1.7 billion reduction in the allowance for loan losses due to lower estimated losses reflecting improved delinquency trends and restructured loan performance. The prior-year provision included a $1.6 billion reduction in the allowance for loan losses. The Credit Card net charge-off rate was 3.14%, down from 3.95% in the prior year; and the 30+ day delinquency rate was 1.67%, down from 2.10% in the prior year. The Auto net charge-off rate was 0.31%, down from 0.39% in the prior year.

Noninterest expense was $8.1 billion, a decrease of $138 million, or 2%, from the prior year. This decrease was due to one-time expense items recognized in the prior year related to the exit of a non-core product and the write-off of intangible assets associated with a non-strategic relationship. The reduction in expenses was partially offset by increased auto lease depreciation and payments to customers required by a regulatory Consent Order during 2013.

Origination volume (in billions)	**27.5**	26.1	23.4

The following are brief descriptions of selected business metrics within Card, Merchant Services & Auto.

Card Services includes the Credit Card and Merchant Services businesses.

Merchant Services processes transactions for merchants.

Total transactions – Number of transactions and authorizations processed for merchants.

Commercial Card provides a wide range of payment services to corporate and public sector clients worldwide through the commercial card products. Services include procurement, corporate travel and entertainment, expense management services, and business-to-business payment solutions.

Sales volume – Dollar amount of cardmember purchases, net of returns.

Open accounts – Cardmember accounts with charging privileges.

Auto origination volume – Dollar amount of auto loans and leases originated.

Total allowance for loan losses to period-end loans	**2.18**	2.49	3.41

(a) Net charge-offs and net charge-off rates for the year ended December 31, 2012, included $53 million of charge-offs of Chapter 7 loans. Excluding these incremental charge-offs, net charge-offs for the year ended December 31, 2012 would have been $135 million, and the net charge-off rate would have been 0.28%.

(b) Average credit card loans included loans held-for-sale of $509 million, $95 million and $433 million for the years ended December 31, 2014, 2013 and 2012, respectively. These amounts are excluded when calculating the net charge-off rate.

(c) Period-end credit card loans included loans held-for-sale of $3.0 billion and $326 million at December 31, 2014 and 2013, respectively. There were no loans held-for-sale at December 31, 2012. These amounts are excluded when calculating delinquency rates and the allowance for loan losses to period-end loans.

(d) Excluded student loans insured by U.S. government agencies under the FFELP of $654 million, $737 million and $894 million at December 31, 2014, 2013 and 2012, respectively, that are 30 or more days past due. These amounts have been excluded based upon the government guarantee.

(e) Nonperforming assets excluded student loans insured by U.S. government agencies under the FFELP of $367 million, $428 million and $525 million at December 31, 2014, 2013 and 2012, respectively, that are 90 or more days past due. These amounts have been excluded from nonaccrual loans based upon the government guarantee.

Total Markets & Investor Services	**22,788**	22,615	23,355
Total net revenue	**$34,633**	$34,786	$34,762

(a) Return on equity excluding FVA (effective 2013) and DVA, a non-GAAP financial measure, was 17% and 19% for the years ended December 31, 2013 and 2012, respectively.

(b) Overhead ratio excluding FVA (effective 2013) and DVA, a non-GAAP financial measure, was 59% and 61% for the years ended December 31, 2013 and 2012, respectively.

(c) Compensation expense as a percentage of total net revenue excluding FVA (effective 2013) and DVA, a non-GAAP financial measure, was 30% and 32% for the years ended December 31, 2013 and 2012, respectively.

(d) Includes results of the synthetic credit portfolio that was transferred from the CIO effective July 2, 2012.

(e) Consists primarily of credit valuation adjustments ("CVA") managed by the credit portfolio group, and FVA (effective 2013) and DVA on OTC derivatives and structured notes. Results are presented net of associated hedging activities and net of CVA and FVA amounts allocated to Fixed Income Markets and Equity Markets.

Prior to January 1, 2014, CIB provided several non-GAAP financial measures excluding the impact of implementing the FVA framework (effective 2013) and DVA on: net revenue, net income, compensation ratio, overhead ratio, and return on equity. Beginning in the first quarter 2014, the Firm did not exclude FVA and DVA from its assessment of business performance; however, the Firm continues to present these non-GAAP measures for the periods prior to January 1, 2014, as they reflected how management assessed the underlying business performance of the CIB in those prior periods. In addition, the ratio for the allowance for loan losses to end-of-period loans, also a non-GAAP financial measure, is

calculated excluding the impact of consolidated Firm-administered multi-seller conduits and trade finance, to provide a more meaningful assessment of CIB's allowance coverage ratio. These measures are used by management to assess the underlying performance of the business and for comparability with peers.

2014 compared with 2013
Net income was $6.9 billion, down 22% compared with $8.9 billion in the prior year. These results primarily reflected lower revenue as well as higher noninterest expense. Net revenue was $34.6 billion, flat compared with the prior year.

Banking revenue was $11.8 billion, down 3% from the prior year. Investment banking fees were $6.6 billion, up 4% from the prior year. The increase was driven by higher advisory and equity underwriting fees, partially offset by lower debt underwriting fees. Advisory fees were $1.6 billion up 24% on stronger share of fees for completed transactions as well as growth in the industry-wide fee levels, according to Dealogic. Equity underwriting fees were $1.6 billion up 5%, driven by higher industry wide issuance. Debt underwriting fees were $3.4 billion, down 4%, primarily related to lower loan syndication fees on lower industry-wide fee levels and lower bond underwriting fees. The Firm also ranked #1 globally in fees and volumes share across high grade, high yield and loan products. The Firm maintained its #2 ranking for M&A, and improved share of fees both globally and in the U.S. compared to the prior year. Treasury Services revenue was $4.1 billion, down 1% compared with the prior year, primarily driven by lower trade finance revenue as well as the impact of business simplification initiatives, largely offset by higher net interest income from increased deposits. Lending revenue was $1.1 billion, down from $1.7 billion in the prior year, driven by losses, compared with gains in the prior periods, on securities received from restructured loans, as well as lower net interest income.

Markets & Investor Services revenue was $22.8 billion, up 1% from the prior year. Fixed Income Markets revenue was $13.8 billion down 13% from the prior year driven by lower revenues in Fixed Income primarily from credit-related and rates products as well as the impact of business simplification. Equity Markets revenue was $4.9 billion up 1% as higher prime services revenue was partially offset by lower equity derivatives revenue. Securities Services revenue was $4.4 billion, up 6% from the prior year, primarily driven by higher net interest income on increased deposits and higher fees and commissions. Credit Adjustments & Other revenue was a loss of $272 million driven by net CVA losses partially offset by gains, net of hedges, related to FVA/DVA. The prior year was a loss of $2.1 billion (including the FVA implementation loss of $1.5 billion and DVA losses of $452 million).

Noninterest expense was $23.3 billion, up 7% compared to the prior year as a result of higher legal expense and investment in controls. This was partially offset by lower performance-based compensation expense as well as the impact of business simplification, including the sale or liquidation of a significant part of the physical commodities business. The compensation expense to net revenue ratio was 30%.

Return on equity was 10% on $61.0 billion of average allocated capital.

2013 compared with 2012
Net income was $8.9 billion, up 2% compared with the prior year.

Net revenue was $34.8 billion, flat compared with the prior year. Net revenue in 2013 included a $1.5 billion loss as a result of implementing a FVA framework for OTC derivatives and structured notes. The FVA framework incorporates the impact of funding into the Firm's valuation estimates for OTC derivatives and structured notes and reflects an industry migration towards incorporating the market cost of unsecured funding in the valuation of such instruments. The loss recorded in 2013 was a one-time adjustment arising on implementation of the new FVA framework.

Net revenue in 2013 also included a $452 million loss from DVA on structured notes and derivative liabilities, compared with a loss of $930 million in the prior year. Excluding the impact of FVA and DVA, net revenue was $36.7 billion and net income was $10.1 billion, compared with $35.7 billion and $9.2 billion, respectively in the prior year.

Banking revenue was $12.2 billion, compared with $11.4 billion in the prior year. Investment banking fees were $6.3 billion, up 10% from the prior year, driven by higher equity underwriting fees of $1.5 billion (up 46%) and record debt underwriting fees of $3.5 billion (up 8%), partially offset by lower advisory fees of $1.3 billion (down 12%). Equity underwriting results were driven by higher industry-wide issuance and an increase in share of fees compared with the prior year, according to Dealogic. Industry-wide loan syndication volumes and fees increased as the low-rate environment continued to fuel refinancing activity. The Firm also ranked #1 in industry-wide fee shares across high grade, high yield and loan products. Advisory fees were lower compared with the prior year as industry-wide completed M&A industry-wide fee levels declined 13%. The Firm maintained its #2 ranking and improved share for both announced and completed volumes during the year.

Treasury Services revenue was $4.2 billion, down 2% compared with the prior year, primarily reflecting lower trade finance spreads, partially offset by higher net interest income on higher deposit balances. Lending revenue was $1.7 billion, up from $1.4 billion, in the prior year reflecting net interest income on retained loans, fees on lending-related commitments, and gains on securities received from restructured loans.

Markets and Investor Services revenue was $22.6 billion compared to $23.4 billion in the prior year. Combined Fixed Income and Equity Markets revenue was $20.6 billion, up from $20.1 billion the prior year. Fixed Income Markets revenue was $15.8 billion slightly higher reflecting consistently strong client revenue and lower losses from the synthetic credit portfolio, which was partially offset by lower rates-related revenue given an uncertain rate outlook and low spread environment. Equities Markets revenue was

$4.8 billion up 8% compared with the prior year driven by higher revenue in derivatives and cash equities products and Prime Services primarily on higher balances. Securities Services revenue was $4.1 billion compared with $4.0 billion in the prior year on higher custody and fund services revenue primarily driven by higher assets under custody of $20.5 trillion. Credit Adjustments & Other was a loss of $2.1 billion predominantly driven by FVA (effective 2013) and DVA.

The provision for credit losses was a benefit of $232 million, compared with a benefit of $479 million in the prior year. The 2013 benefit reflected lower recoveries as compared with 2012 as the prior year benefited from the restructuring of certain nonperforming loans. Net recoveries were $78 million, compared with $284 million in the prior year reflecting a continued favorable credit environment with stable credit quality trends. Nonperforming loans were down 57% from the prior year.

Noninterest expense was $21.7 billion slightly down compared with the prior year, driven by lower compensation expense, offset by higher noncompensation expense related to higher litigation expense as compared with the prior year. The compensation ratio, excluding the impact of DVA and FVA (effective 2013), was 30% and 32% for 2013 and 2012, respectively.

Return on equity was 15% on $56.5 billion of average allocated capital and 17% excluding FVA (effective 2013) and DVA.

Trade finance loans (period-end)	**25,713**	30,752	35,783

(a) Market risk-related revenue is defined as the change in value of: principal transactions revenue; trading-related net interest income; brokerage commissions, underwriting fees or other revenue; and revenue from syndicated lending facilities that the Firm intends to distribute; gains and losses from DVA and FVA are excluded. Market risk-related revenue – trading loss days represent the number of days for which the CIB posted losses under this measure. The loss days determined under this measure differ from the loss days that are determined based on the disclosure of market risk-related gains and losses for the Firm in the VaR back-testing discussion on pages 134–135.

(b) Consists of mutual funds, unit investment trusts, currencies, annuities, insurance contracts, options and other contracts.

(c) Client deposits and other third party liabilities pertain to the Treasury Services and Securities Services businesses, and include deposits, as well as deposits that are swept to on-balance sheet liabilities (e.g., commercial paper, federal funds purchased and securities loaned or sold under repurchase agreements) as part of their client cash management program.

Note: As discussed on pages 79–80, effective with the fourth quarter of 2014 the Firm changed its methodology for allocating the cost of preferred stock to its reportable business segments. Prior periods have been revised to conform with the current period presentation.

(a) Includes revenue from investment banking products and commercial card transactions.

(b) Total net revenue included tax-equivalent adjustments from income tax credits related to equity investments in designated community development entities that provide loans to qualified businesses in low-income communities, as well as tax-exempt income from municipal bond activity of $462 million, $407 million and $381 million for the years ended December 31, 2014, 2013 and 2012, respectively.

2014 compared with 2013

Net income was $2.6 billion, flat compared with the prior year, reflecting lower net revenue and higher noninterest expense, predominantly offset by a lower provision for credit losses.

Net revenue was $6.9 billion, a decrease of $210 million, or 3%, compared with the prior year. Net interest income was $4.5 billion, a decrease of $261 million, or 5%, reflecting yield compression, the absence of proceeds received in the prior year from a lending-related workout, and lower purchase discounts recognized on loan repayments, partially offset by higher loan balances. Noninterest revenue was $2.3 billion, up $51 million, or 2%, reflecting higher investment banking revenue largely offset by business simplification and lower lending fees.

Noninterest expense was $2.7 billion, an increase of $85 million, or 3%, from the prior year, largely reflecting higher investments in controls.

2013 compared with 2012

Net income was $2.6 billion, a decrease of $51 million, or 2%, from the prior year, driven by an increase in noninterest expense and the provision for credit losses, partially offset by an increase in net revenue.

Net revenue was a record $7.1 billion, an increase of $180 million, or 3%, from the prior year. Net interest income was $4.8 billion, up by $165 million, or 4%, driven by higher loan balances and proceeds from a lending-related workout, partially offset by lower purchase discounts recognized on loan repayments. Noninterest revenue was $2.3 billion, flat compared with the prior year.

Noninterest expense was $2.6 billion, an increase of $221 million, or 9%, from the prior year, reflecting higher product- and headcount-related expense.

CB revenue comprises the following:

Lending includes a variety of financing alternatives, which are predominantly secured by receivables, inventory, equipment, real estate or other assets. Products include term loans, revolving lines of credit, bridge financing, asset-based structures, leases, commercial card products and standby letters of credit.

Treasury services includes revenue from a broad range of products and services that enable CB clients to manage payments and receipts, as well as invest and manage funds.

Investment banking includes revenue from a range of products that provide CB clients with sophisticated capital-raising alternatives, as well as balance sheet and risk management tools through advisory, equity underwriting, and loan syndications. Revenue from Fixed income and Equity market products used by CB clients is also included. Investment banking revenue, gross, represents total revenue related to investment banking products sold to CB clients.

Other product revenue primarily includes tax-equivalent adjustments generated from Community Development Banking activities and certain income derived from principal transactions.

CB is divided into four primary client segments: Middle Market Banking, Corporate Client Banking, Commercial Term Lending, and Real Estate Banking.

Middle Market Banking covers corporate, municipal and nonprofit clients, with annual revenue generally ranging between $20 million and $500 million.

Corporate Client Banking covers clients with annual revenue generally ranging between $500 million and $2 billion and focuses on clients that have broader investment banking needs.

Commercial Term Lending primarily provides term financing to real estate investors/owners for multifamily properties as well as office, retail and industrial properties.

Real Estate Banking provides full-service banking to investors and developers of institutional-grade real estate investment properties.

Other primarily includes lending and investment activities within the Community Development Banking and Chase Capital businesses.

(a) An allowance for loan losses of $45 million, $81 million and $107 million was held against nonaccrual loans retained at December 31, 2014, 2013 and 2012, respectively.

(b) Loans held-for-sale and loans at fair value were excluded when calculating the net charge-off/(recovery) rate.

ASSET MANAGEMENT

Asset Management, with client assets of $2.4 trillion, is a global leader in investment and wealth management. AM clients include institutions, high-net-worth individuals and retail investors in every major market throughout the world. AM offers investment management across all major asset classes including equities, fixed income, alternatives and money market funds. AM also offers multi-asset investment management, providing solutions for a broad range of clients' investment needs. For Global Wealth Management clients, AM also provides retirement products and services, brokerage and banking services including trusts and estates, loans, mortgages and deposits. The majority of AM's client assets are in actively managed portfolios.

Note: As discussed on pages 79–80, effective with the fourth quarter of 2014 the Firm changed its methodology for allocating the cost of preferred stock to its reportable business segments. Prior periods have been revised to conform with the current period presentation.

2014 compared with 2013

Net income was $2.2 billion, an increase of $70 million, or 3%, from the prior year, reflecting higher net revenue and lower provision for credit losses, predominantly offset by higher noninterest expense.

Net revenue was $12.0 billion, an increase of $623 million, or 5%, from the prior year. Noninterest revenue was $9.6 billion, up $559 million, or 6%, from the prior year, due to net client inflows and the effect of higher market levels, partially offset by lower valuations of seed capital investments. Net interest income was $2.4 billion, up $64 million, or 3%, from the prior year, due to higher loan and deposit balances, largely offset by spread compression.

Revenue from Global Investment Management was $6.3 billion, up 6% due to net client inflows and the effect of higher market levels, partially offset by lower valuations of seed capital investments. Revenue from Global Wealth Management was $5.7 billion, up 5% from the prior year due to higher net interest income from loan and deposit balances and net client inflows, partially offset by spread compression and lower brokerage revenue.

Noninterest expense was $8.5 billion, an increase of $522 million, or 7%, from the prior year, as the business continues to invest in both infrastructure and controls.

2013 compared with 2012

Net income was $2.1 billion, an increase of $341 million, or 20%, from the prior year, reflecting higher net revenue, largely offset by higher noninterest expense.

Net revenue was $11.4 billion, an increase of $1.4 billion, or 14%, from the prior year. Noninterest revenue was $9.0 billion, up $1.2 billion, or 15%, from the prior year, due to net client inflows, the effect of higher market levels and higher performance fees. Net interest income was $2.4 billion, up $213 million, or 10%, from the prior year, due to higher loan and deposit balances, partially offset by narrower loan and deposit spreads.

Revenue from Global Investment Management was $6.0 billion, up 16% due to net client inflows, the effect of higher market levels and higher performance fees. Revenue from Global Wealth Management was $5.5 billion, up 12% from the prior year due to higher net interest income from loan and deposit balances and higher brokerage revenue.

Noninterest expense was $8.0 billion, an increase of $912 million, or 13%, from the prior year, primarily due to higher headcount-related expense driven by continued front office expansion efforts, higher performance-based compensation and costs related to the control agenda.

AM's lines of business comprise the following:

Global Investment Management provides comprehensive global investment services, including asset management, pension analytics, asset-liability management and active risk-budgeting strategies.

Global Wealth Management offers investment advice and wealth management, including investment management, capital markets and risk management, tax and estate planning, banking, lending and specialty-wealth advisory services.

AM's client segments comprise the following:

Private Banking clients include high- and ultra-high-net-worth individuals, families, money managers, business owners and small corporations worldwide.

Institutional clients include both corporate and public institutions, endowments, foundations, nonprofit organizations and governments worldwide.

Retail clients include financial intermediaries and individual investors.

J.P. Morgan Asset Management has two high-level measures of its overall fund performance.

- **Percentage of mutual fund assets under management in funds rated 4- or 5-star:** Mutual fund rating services rank funds based on their risk-adjusted performance over various periods. A 5-star rating is the best rating and represents the top 10% of industry-wide ranked funds. A 4-star rating represents the next 22.5% of industry-wide ranked funds. A 3-star rating represents the next 35% of industry-wide ranked funds. A 2-star rating represents the next 22.5% of industry-wide ranked funds. A 1-star rating is the worst rating and represents the bottom 10% of industry-wide ranked funds. The "overall Morningstar rating" is derived from a weighted average of the performance figures associated with a fund's three-, five- and ten-year (if applicable) Morningstar Rating metrics. For U.S. domiciled funds, separate star ratings are given at the individual share class level. The Nomura "star rating" is based on three-year risk-adjusted performance only. Funds with fewer than three years of history are not rated and hence excluded from this analysis. All ratings, the assigned peer categories and the asset values used to derive this analysis are sourced from these fund rating providers as mentioned in footnote (a). The data providers re-denominate the asset values into USD. This % of AUM is based on star ratings at the share class level for U.S. domiciled funds, and at a "primary share class" level to represent the star rating of all other funds except for Japan where Nomura provides ratings at the fund level. The "primary share class", as defined by Morningstar, denotes the share class recommended as being the best proxy for the portfolio and in most cases will be the most retail version (based upon annual management charge, minimum investment, currency and other factors). Past performance is not indicative of future results.
- **Percentage of mutual fund assets under management in funds ranked in the 1st or 2nd quartile (one, three and five years):** All quartile rankings, the assigned peer categories and the asset values used to derive this analysis are sourced from the fund ranking providers mentioned in footnote (b). Quartile rankings are done on the net-of-fee absolute return of each fund. The data providers re-denominate the asset values into USD. This % of AUM is based on fund performance and associated peer rankings at the share class level for U.S. domiciled funds, at a "primary share class" level to represent the quartile ranking of Luxembourg, U.K. and Hong Kong funds and at the fund level for all other funds. The "primary share class", as defined by Morningstar, denotes the share class recommended as being the best proxy for the portfolio and in most cases will be the most retail version (based upon annual management charge, minimum investment, currency and other factors). Where peer group rankings given for a fund are in more than one "primary share class" territory both rankings are included to reflect local market competitiveness (applies to "Offshore Territories" and "HK SFC Authorized" funds only). Past performance is not indicative of future results.

(a) Represents the "overall star rating" derived from Morningstar for the U.S., the U.K., Luxembourg, Hong Kong and Taiwan domiciled funds; and Nomura 'star rating' for Japan domiciled funds. Includes only retail open ended mutual funds that have a rating. Excludes money market funds, Undiscovered Managers Fund, and Brazil and India domiciled funds.

(b) Quartile ranking sourced from: Lipper for the U.S. and Taiwan domiciled funds; Morningstar for the U.K., Luxembourg and Hong Kong domiciled funds; Nomura for Japan domiciled funds and FundDoctor for South Korea domiciled funds. Includes only retail open ended mutual funds that are ranked by the aforementioned sources. Excludes money market funds, Undiscovered Managers Fund, and Brazil and India domiciled funds.

(c) Included $22.1 billion, $18.9 billion and $10.9 billion of prime mortgage loans reported in the Consumer, excluding credit card, loan portfolio at December 31, 2014, 2013 and 2012, respectively. For the same periods, excluded $2.7 billion, $3.7 billion and $6.7 billion, respectively, of prime mortgage loans reported in the CIO portfolio within the Corporate segment.

Client assets

2014 compared with 2013

Client assets were $2.4 trillion, an increase of $44 billion, or 2%, compared with the prior year. Excluding the sale of Retirement Plan Services, client assets were up 8% compared with the prior year. Assets under management were $1.7 trillion, an increase of $146 billion, or 9%, from the prior year, due to net inflows to long-term products and the effect of higher market levels.

2013 compared with 2012

Client assets were $2.3 trillion at December 31, 2013, an increase of $248 billion, or 12%, compared with the prior year. Assets under management were $1.6 trillion, an increase of $172 billion, or 12%, from the prior year, due to net inflows to long-term products and the effect of higher market levels. Custody, brokerage, administration and deposit balances were $745 billion, up $76 billion, or 11%, from the prior year, due to the effect of higher market levels and custody inflows, partially offset by brokerage outflows.

(a) Regional revenue is based on the domicile of the client.

The Corporate segment comprises Private Equity, Treasury and Chief Investment Office ("CIO") and Other Corporate, which includes corporate staff units and expense that is centrally managed. Treasury and CIO are predominantly responsible for measuring, monitoring, reporting and managing the Firm's liquidity, funding and structural interest rate and foreign exchange risks, as well as executing the Firm's capital plan. The major Other Corporate units include Real Estate, Enterprise Technology, Legal, Compliance, Finance, Human Resources, Internal Audit, Risk Management, Oversight & Control, Corporate Responsibility and various Other Corporate groups. Other centrally managed expense includes the Firm's occupancy and pension-related expenses that are subject to allocation to the businesses.

Note: As discussed on pages 79–80, effective with the fourth quarter of 2014 the Firm changed its methodology for allocating the cost of preferred stock to its reportable business segments. Prior periods have been revised to conform with the current period presentation.

(a) Included tax-equivalent adjustments, predominantly due to tax-exempt income from municipal bond investments of $730 million, $480 million and $443 million for the years ended December 31, 2014, 2013 and 2012, respectively.

(b) Included legal expense of $821 million, $10.2 billion and $3.7 billion for the years ended December 31, 2014, 2013 and 2012, respectively.

2014 compared with 2013

Net income was $864 million, compared with a net loss of $6.8 billion in the prior year.

Private Equity reported net income of $400 million, compared with net income of $285 million in the prior year, primarily due to higher net gains on sales, largely offset by higher noninterest expense related to goodwill impairment.

Treasury and CIO reported a net loss of $1.2 billion, compared with a net loss of $1.5 billion in the prior year. Net revenue was a loss of $1.3 billion, compared with a loss of $2.1 billion in the prior year. Current year net interest income was a loss of $1.7 billion compared with a loss of $2.7 billion in the prior year, primarily reflecting higher yields on investment securities. Securities gains were $71 million, compared to $659 million in the prior year, reflecting lower repositioning activity of the investment securities portfolio in the current period.

Other Corporate reported net income of $1.6 billion, compared with a net loss of $5.6 billion in the prior year. Current year noninterest revenue was $353 million compared with $1.8 billion in the prior year. Prior year noninterest revenue included gains of $1.3 billion and $493 million on the sales of Visa shares and One Chase Manhattan Plaza, respectively. The current year included $821 million of legal expense, compared with $10.2 billion, which included reserves for litigation and regulatory proceedings, in the prior year.

2013 compared with 2012

Net loss was $6.8 billion, compared with a net loss of $2.6 billion in the prior year.

Private Equity reported net income of $285 million, compared with net income of $319 million in the prior year. Net revenue was of $589 million, compared with $645 million in the prior year.

Treasury and CIO reported a net loss of $1.5 billion, compared with a net loss of $2.7 billion in the prior year. Net revenue was a loss of $2.1 billion, compared with a loss of $4.1 billion in the prior year. Net revenue in 2013 included $659 million of net securities gains from sales of available-for-sale investment securities, compared with securities gains of $2.0 billion; and $888 million of pretax extinguishment gains related to the redemption of trust preferred securities in the prior year. The extinguishment gains were related to adjustments applied to the cost basis of the trust preferred securities during the period they were in a qualified hedge accounting relationship. The prior year loss also reflected $5.8 billion of losses incurred by CIO from the synthetic credit portfolio for the six months ended June 30, 2012, and $449 million of losses from the retained index credit derivative positions for the three

months ended September 30, 2012. Net interest income in 2013 was a loss of $2.7 billion compared with a loss of $1.7 billion in the prior year, primarily due to low interest rates and limited reinvestment opportunities. Net interest income improved in the fourth quarter of 2013 due to higher interest rates and better reinvestment opportunities.

Other Corporate reported a net loss of $5.6 billion, compared with a net loss of $221 million in the prior year. Noninterest revenue in 2013 was $1.8 billion, down 2% compared with the prior year. In 2013, noninterest revenue included gains of $1.3 billion and $493 million on the sales of Visa shares and One Chase Manhattan Plaza, respectively. Noninterest revenue in the prior year included a $1.1 billion benefit for the Washington Mutual bankruptcy settlement and a $665 million gain from the recovery on a Bear Stearns-related subordinated loan. Noninterest expense of $9.7 billion was up $5.9 billion compared with the prior year. Included in 2013 noninterest expense was $10.2 billion of legal expense, including reserves for litigation and regulatory proceedings, compared with $3.7 billion of expense for additional litigation reserves, largely for mortgage-related matters, in the prior year.

Treasury and CIO overview

Treasury and CIO are predominantly responsible for measuring, monitoring, reporting and managing the Firm's liquidity, funding and structural interest rate and foreign exchange risks, as well as executing the Firm's capital plan. The risks managed by Treasury and CIO arise from the activities undertaken by the Firm's four major reportable business segments to serve their respective client bases, which generate both on- and off-balance sheet assets and liabilities.

Treasury and CIO achieve the Firm's asset-liability management objectives generally by investing in high-quality securities that are managed for the longer-term as part of the Firm's investment securities portfolio. Treasury and CIO also use derivatives to meet the Firm's asset-liability management objectives. For further information on derivatives, see Note 6. The investment securities portfolio primarily consists of U.S. and non-U.S. government securities, agency and nonagency mortgage-backed securities, other asset-backed securities, corporate debt securities and obligations of U.S. states and municipalities. At December 31, 2014, the investment securities portfolio was $343.1 billion, and the average credit rating of the securities comprising the portfolio was AA+ (based upon external ratings where available and where not available, based primarily upon internal ratings that correspond to ratings as defined by S&P and Moody's). See Note 12 for further information on the details of the Firm's investment securities portfolio.

For further information on liquidity and funding risk, see Liquidity Risk Management on pages 156–160. For information on interest rate, foreign exchange and other risks, Treasury and CIO Value-at-risk ("VaR") and the Firm's structural interest rate-sensitive revenue at risk, see Market Risk Management on pages 131–136.

Mortgage loans (average)	**3,308**	5,145	10,241
Mortgage loans (period-end)	**2,834**	3,779	7,037

(a) Period-end investment securities included held-to-maturity securities of $49.3 billion and $24.0 billion at December 31, 2014, and 2013, respectively. Held-to-maturity securities as of December 31, 2012, were not material.

Private Equity portfolio

Selected income statement and balance sheet data

Year ended December 31, (in millions)	2014	2013	2012
Private equity gains/(losses)			
Realized gains	**$ 1,164**	$ (170)	$ 17
Unrealized gains/(losses)[a]	**43**	734	639
Total direct investments	**1,207**	564	656
Third-party fund investments	**34**	137	134
Total private equity gains/(losses)[b]	**$ 1,241**	$ 701	$ 790

(a) Includes reversals of unrealized gains and losses that were recognized in prior periods and have now been realized.
(b) Included in principal transactions revenue in the Consolidated statements of income.

Private equity portfolio information[a]

December 31, (in millions)	2014	2013	2012
Publicly held securities			
Carrying value	**$ 878**	$ 1,035	$ 578
Cost	**583**	672	350
Quoted public value	**893**	1,077	578
Privately held direct securities			
Carrying value	**4,555**	5,065	5,379
Cost	**5,275**	6,022	6,584
Third-party fund investments[b]			
Carrying value	**433**	1,768	2,117
Cost	**423**	1,797	1,963
Total private equity portfolio			
Carrying value	**$ 5,866**	$ 7,868	$ 8,074
Cost	**6,281**	8,491	8,897

(a) For more information on the Firm's methodologies regarding the valuation of the Private Equity portfolio, see Note 3. For information on the sale of a portion of the Private Equity business in January 2015, see Note 2.
(b) Unfunded commitments to third-party private equity funds were $147 million, $215 million and $370 million at December 31, 2014, 2013 and 2012, respectively.

2014 compared with 2013

The carrying value of the private equity portfolio at December 31, 2014 was $5.9 billion, down from $7.9 billion at December 31, 2013. The decrease in the portfolio was predominantly driven by sales of investments, partially offset by unrealized gains.

2013 compared with 2012

The carrying value of the private equity portfolio at December 31, 2013 was $7.9 billion, down from $8.1 billion at December 31, 2012. The decrease in the portfolio was predominantly driven by sales of investments, partially offset by new investments and unrealized gains.

ENTERPRISE-WIDE RISK MANAGEMENT

Risk is an inherent part of JPMorgan Chase's business activities. When the Firm extends a consumer or wholesale loan, advises customers on their investment decisions, makes markets in securities, or conducts any number of other services or activities, the Firm takes on some degree of risk. The Firm's overall objective in managing risk is to protect the safety and soundness of the Firm, avoid excessive risk taking, and manage and balance risk in a manner that serves the interest of our clients, customers and shareholders.

The Firm's approach to risk management covers a broad spectrum of risk areas, such as credit, market, liquidity, model, structural interest rate, principal, country, operational, fiduciary and reputation risk.

The Firm believes that effective risk management requires:

- Acceptance of responsibility, including identification and escalation of risk issues, by all individuals within the Firm;
- Ownership of risk management within each line of business and corporate functions; and
- Firmwide structures for risk governance.

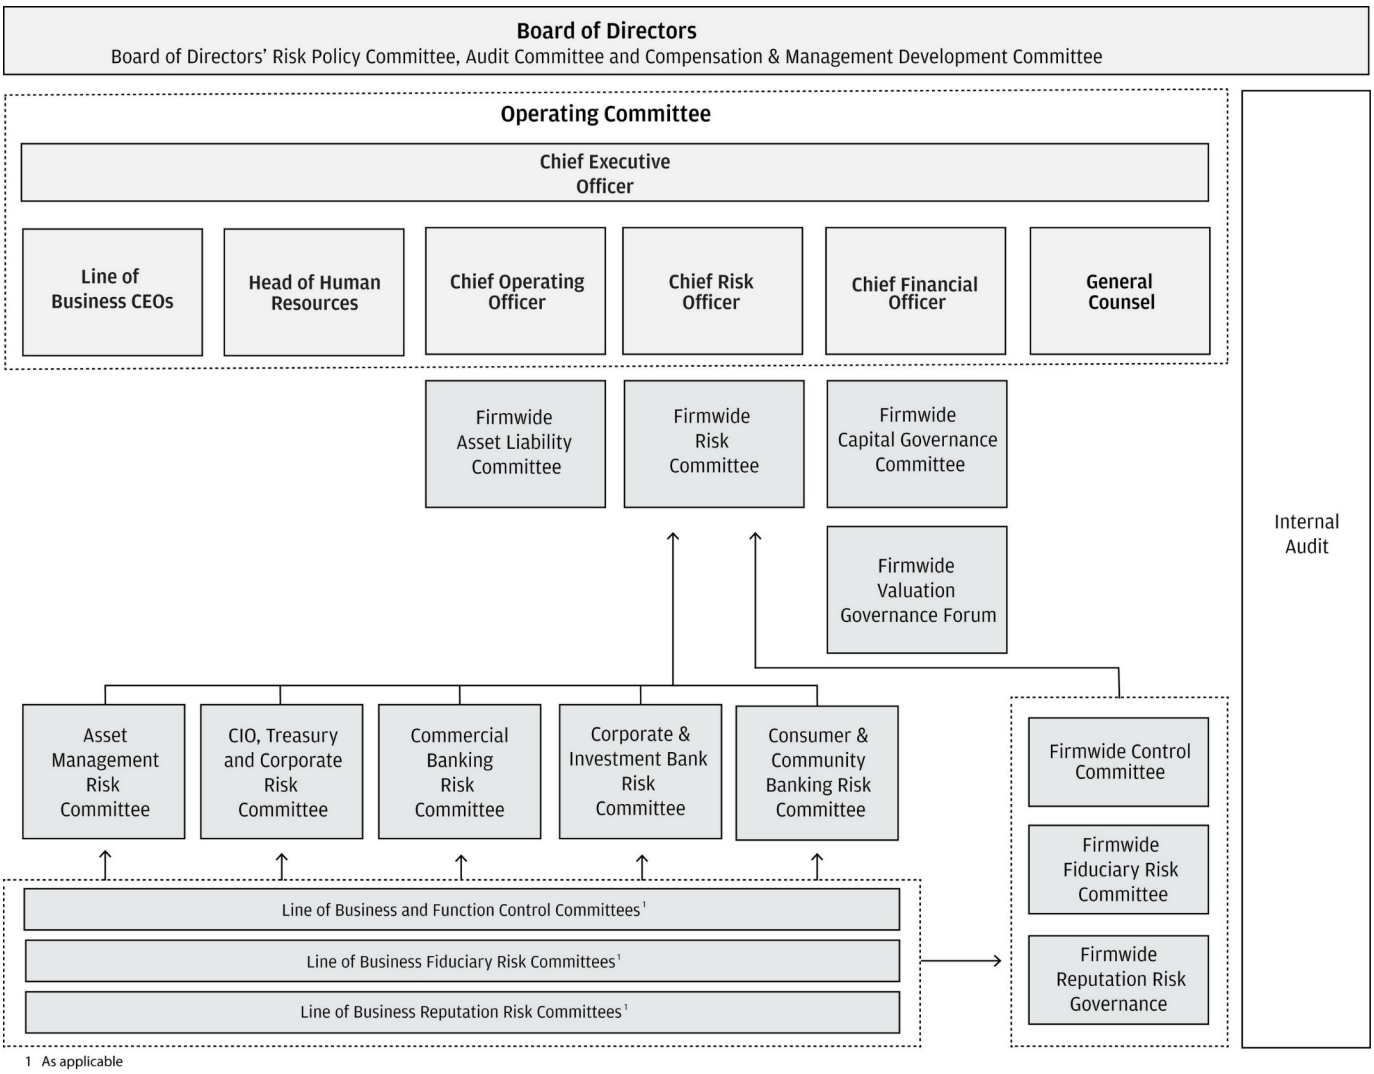
Firmwide Risk Management is overseen and managed on an enterprise-wide basis. The Firm's Chief Executive Officer ("CEO"), Chief Financial Officer ("CFO"), Chief Risk Officer ("CRO") and Chief Operating Officer ("COO") develop and set the risk management framework and governance structure for the Firm, which is intended to provide comprehensive controls and ongoing management of the major risks inherent in the Firm's business activities. The Firm's risk management framework is intended to create a culture of transparency, awareness and personal responsibility through reporting, collaboration, discussion, escalation and sharing of information. The CEO, CFO, CRO and COO are ultimately responsible and accountable to the Firm's Board of Directors.

The Firm's risk culture strives for continual improvement through ongoing employee training and development, as well as talent retention. The Firm also approaches its incentive compensation arrangements through an integrated risk, compensation and financial management framework to encourage a culture of risk awareness and personal accountability.

The following sections outline the key risks that are inherent in the Firm's business activities.

Risk	Definition	Key risk management metrics	Page references
Capital risk	The risk the Firm has an insufficient level and composition of capital to support the Firm's business activities and associated risks during normal economic environments and stressed conditions.	Risk-based capital ratios, Supplementary Leverage ratio	146-155
Compliance risk	The risk of fines or sanctions or of financial damage or loss due to the failure to comply with laws, rules, and regulations.	Not Applicable	144
Country risk	The risk that a sovereign event or action alters the value or terms of contractual obligations of obligors, counterparties and issuers or adversely affects markets related to a particular country.	Default exposure at 0% recovery, Stress	137-138
Credit risk	The risk of loss arising from the default of a customer, client or counterparty.	Total exposure; industry, geographic and customer concentrations; risk ratings; delinquencies; loss experience; stress	110-130
Fiduciary risk	The risk of a failure to exercise the applicable high standard of care, to act in the best interests of clients or to treat clients fairly, as required under applicable law or regulation.	Not Applicable	145
Legal risk	The risk of loss or imposition of damages, fines, penalties or other liability arising from failure to comply with a contractual obligation or to comply with laws or regulations to which the Firm is subject.	Not Applicable	144
Liquidity risk	The risk that the Firm will not have the appropriate amount, composition and tenor of funding and liquidity in support of its assets, and that the Firm will be unable to meet its contractual and contingent obligations through normal economic cycles and market stress events.	LCR; Stress	156-160
Market risk	The risk of loss arising from potential adverse changes in the value of the Firm's assets and liabilities resulting from changes in market variables such as interest rates, foreign exchange rates, equity prices, commodity prices, implied volatilities or credit spreads.	VaR, Stress, Sensitivities	131-136
Model risk	The risk of the potential for adverse consequences from decisions based on incorrect or misused model outputs and reports.	Model Status, Model Tier	139
Non-USD FX risk	The risk arising from capital investments, forecasted expense and revenue, investment securities portfolio or issuing debt in denominations other than the U.S. dollar.	FX Net Open Position ("NOP")	203, 211-213
Operational risk	The risk of loss resulting from inadequate or failed processes or systems or due to external events that are neither market nor credit-related.	Firm-specific loss experience; industry loss experience; business environment and internal control factors ("BEICF")	140-143
Principal risk	The risk of an adverse change in the value of privately-held financial assets and instruments, typically representing an ownership or junior capital position. These positions have unique risks due to their illiquidity or for which there is less observable market or valuation data.	Carrying Value, Stress	140
Reputation risk	The risk that an action, transaction, investment or event will reduce the trust that clients, shareholders, employees or the broader public has in the Firm's integrity or competence.	Not Applicable	145
Structural interest rate risk	The risk resulting from the Firm's traditional banking activities (both on- and off-balance sheet positions) arising from the extension of loans and credit facilities, taking deposits and issuing debt (collectively referred to as "non-trading activities"), and also the impact from the CIO investment securities portfolio and other related CIO, Treasury activities.	Earnings-at-risk	136

Risk organization



The LOBs are responsible for managing the risks inherent in their respective business activities. The Risk organization operates independently from the revenue-generating businesses, providing a credible challenge to them. The CRO is the head of the Risk organization and is responsible for the overall direction of Risk oversight. The CRO is supported by individuals and organizations that align to lines of business and corporate functions, as well as others that align to specific risk types.

The Firm's Risk Management Organization and other Firmwide functions with risk-related responsibilities (i.e., Regulatory Capital Management Office ("RCMO"), Firmwide Oversight and Control Group, Valuation Control Group ("VCG"), Legal and Compliance) provide independent oversight of the monitoring, evaluation and escalation of risk.

Risk governance

The independent stature of the Risk organization is supported by a governance structure that provides for escalation of risk issues up to senior management and the Board of Directors.

The chart below illustrates the governance structure and certain senior management level committees and forums that are primarily responsible for key risk-related functions. There are additional committees and forums not represented in the chart that are also responsible for management and oversight of risk.

The Board of Directors provides oversight of risk principally through the Board of Directors' Risk Policy Committee ("DRPC"), Audit Committee and, with respect to compensation, Compensation & Management Development Committee. Each committee of the Board oversees reputation risk issues within its scope of responsibility.

The Directors' Risk Policy Committee approves and periodically reviews the primary risk management policies of the Firm's global operations and oversees the operation of the Firm's global risk management framework. The committee's responsibilities include oversight of management's exercise of its responsibility to assess and manage: (i) credit risk, market risk, liquidity risk, model risk, structural interest rate risk, principal risk and country risk; (ii) the governance frameworks or policies for operational, fiduciary, reputational risks and the New Business Initiative Approval ("NBIA") process; and (iii) capital and liquidity planning and analysis. The DRPC reviews the firmwide value-at-risk and market stress tolerances, as well as any other parameter tolerances established by management in accordance with the Firm's Risk Appetite Policy. It reviews reports of significant issues identified by risk management officers, including reports describing the Firm's credit risk profile, and information about concentrations and country risks. The Firm's CRO, LOB CROs, LOB CEOs, heads of risk for Country Risk, Market Risk, Structural Interest Rate Risk, Liquidity Risk, Principal Risk, Wholesale Credit Risk, Consumer Credit Risk, Model Risk, Risk Management Policy, Reputation Risk Governance, Fiduciary Risk Governance, and Operational Risk Governance (all referred to as Firmwide Risk Executives) meet with and provide updates to the DRPC. Additionally, breaches in risk appetite tolerances, liquidity issues that may have a material adverse impact on the Firm and other significant matters as determined by the CRO or Firmwide functions with risk responsibility are escalated to the DRPC.

The Audit Committee has primary responsibility for assisting the Board in its oversight of the system of controls designed to reasonably assure the quality and integrity of the Firm's financial statements and that are relied upon to provide reasonable assurance of the Firm's management of operational risk. The Audit Committee also assists the Board in its oversight of legal and compliance risk. Internal Audit, an independent function within the Firm that provides independent and objective assessments of the control environment, reports directly to the Audit Committee and administratively to the CEO. Internal Audit conducts independent reviews to evaluate the Firm's internal control structure and compliance with applicable regulatory requirements and is responsible for providing the Audit Committee, senior management and regulators with an independent assessment of the Firm's ability to manage and control risk.

The Compensation & Management Development Committee assists the Board in its oversight of the Firm's compensation programs and reviews and approves the Firm's overall compensation philosophy and practices. The Committee reviews the Firm's compensation practices as they relate to risk and risk management in light of the Firm's objectives, including its safety and soundness and the avoidance of practices that encourage excessive risk taking. The Committee reviews and approves the terms of compensation award programs, including recovery provisions, vesting periods, and restrictive covenants, taking into account regulatory requirements. The Committee also reviews and approves the Firm's overall incentive compensation pools and reviews those of each of the Firm's lines of business and the Corporate segment. The Committee reviews the goals relevant to compensation for the Firm's Operating Committee, reviews Operating Committee members' performance against such goals, and approves their compensation awards. The Committee recommends to the full Board's independent directors, for ratification, the CEO's compensation. In addition, the Committee periodically reviews the Firm's management development and succession planning, as well as the Firm's diversity programs.

Among the Firm's senior management level committees that are primarily responsible for key risk-related functions are:

The Firmwide Risk Committee ("FRC") is the Firm's highest management-level Risk Committee. It provides oversight of the risks inherent in the Firm's businesses, including credit risk, market risk, liquidity risk, model risk, structural interest rate risk, principal risk and country risk. It also provides oversight of the governance frameworks for operational, fiduciary and reputational risks. The Committee is co-chaired by the Firm's CEO and CRO. Members of the committee include the Firm's COO, the Firm's CFO, LOB CEOs, LOB CROs, General Counsel, and other senior managers from risk and control functions. This committee serves as an escalation point for risk topics and issues raised by its members, the Line of Business Risk Committees, Firmwide Control Committee, Firmwide Fiduciary Risk Committee, Reputation Risk committees and regional Risk Committees. The committee escalates significant issues to the Board of Directors, as appropriate.

The Firmwide Control Committee ("FCC") is a forum to review and discuss firmwide operational risk, metrics and management, including existing and emerging issues, and execution against the operational risk management framework. The committee is co-chaired by the Firm's Chief Control Officer and the head of Firmwide Operational Risk Governance/Model Risk and Development. It serves as an escalation point for the line of business, function and regional Control Committees and escalates significant issues to the Firmwide Risk Committee, as appropriate.

The Firmwide Fiduciary Risk Committee ("FFRC") is a forum for risk matters related to the Firm's fiduciary activities and oversees the firmwide fiduciary risk governance framework, which supports the consistent identification and escalation of fiduciary risk matters by the relevant lines of business or corporate functions responsible for managing fiduciary activities. The committee escalates significant issues to the Firmwide Risk Committee and any other committee considered appropriate.

The Firmwide Reputation Risk Governance group seeks to promote consistent management of reputational risk across the Firm. Its objectives are to increase visibility of reputation risk governance; promote and maintain a globally consistent governance model for reputation risk across lines of business; promote early self-identification of potential reputation risks to the Firm; and provide thought leadership on cross-line of business reputation risk issues. Each line of business has a separate reputation risk governance structure which includes, in most cases, one or more dedicated reputation risk committees.

Line of business, corporate function, and regional risk and control committees:
Risk committees oversee the inherent risks in the respective line of business, function or region, including the review, assessment and decision making relating to specific risks, risk strategy, policy and controls. These committees escalate issues to the Firmwide Risk Committee, as appropriate.

Control committees oversee the operational risks and control environment of the respective line of business, function or region. These committees escalate operational risk issues to their respective line of business, function or regional Risk committee and also escalate significant risk issues (and/or risk issues with potential firmwide impact) to the Firmwide Control Committee.

The Asset-Liability Committee ("ALCO"), chaired by the Corporate Treasurer under the direction of the COO, monitors the Firm's overall balance sheet, liquidity risk and interest rate risk. ALCO is responsible for reviewing and approving the Firm's funds transfer pricing policy (through which lines of business "transfer" interest rate and foreign exchange risk to Treasury). ALCO is responsible for reviewing the Firm's Liquidity Risk Management and

Oversight Policy and contingency funding plan. ALCO also reviews the Firm's overall structural interest rate risk position, funding requirements and strategy, and the Firm's securitization programs (and any required liquidity support by the Firm of such programs).

The Capital Governance Committee, chaired by the Head of Regulatory Capital Management Office (under the direction of the Firm's CFO) is responsible for reviewing the Firm's Capital Management Policy and the principles underlying capital issuance and distribution alternatives. The Committee is also responsible for governing the capital adequacy assessment process, including overall design, assumptions and risk streams and ensuring that capital stress test programs are designed to adequately capture the idiosyncratic risks across the Firm's businesses.

Other corporate functions and forums with risk management-related responsibilities include:

The Firmwide Oversight and Control Group is comprised of dedicated control officers within each of the lines of business and corporate functional areas, as well as a central oversight team. The group is charged with enhancing the Firm's controls by looking within and across the lines of business and corporate functional areas to identify and control issues. The group enables the Firm to detect control problems more quickly, escalate issues promptly and get the right people involved to understand common themes and interdependencies among the various parts of the Firm. The group works closely with the Firm's other control-related functions, including Compliance, Legal, Internal Audit and Risk Management, to effectively remediate identified control issues across all affected areas of the Firm. As a result, the group facilitates the effective execution of the Firm's control framework and helps support operational risk management across the Firm.

The Firmwide Valuation Governance Forum ("VGF") is composed of senior finance and risk executives and is responsible for overseeing the management of risks arising from valuation activities conducted across the Firm. The VGF is chaired by the firmwide head of the Valuation Control function (under the direction of the Firm's CFO), and also includes sub-forums for the CIB, Consumer & Community Banking, Commercial Banking, Asset Management and certain corporate functions, including Treasury and CIO.

In addition to the committees, forums and groups listed above, the Firm has other management committees and forums at the LOB and regional levels, where risk-related topics are discussed and escalated as necessary. The membership of these committees is composed of senior management of the Firm including representation from the business and various control functions. The committees meet regularly to discuss a broad range of topics.

The JPMorgan Chase Bank N.A. Board of Directors is responsible for the oversight of management on behalf of JPMorgan Chase Bank N.A. The JPMorgan Chase Bank N.A. Board accomplishes this function acting directly and through the principal standing committees of the Firm's Board of Directors. Risk oversight on behalf of JPMorgan Chase Bank N.A. is primarily the responsibility of the Firm's DRPC, Audit Committee and, with respect to compensation-related matters, the Compensation & Management Development Committee.

Risk appetite

The Firm's overall risk appetite is established by management taking into consideration the Firm's capital and liquidity positions, earnings power, and diversified business model. The risk appetite framework is a tool to measure the capacity to take risk and is expressed in loss tolerance parameters at the Firm and/or LOB levels, including net income loss tolerances, liquidity limits and market limits. Performance against these parameters informs management's strategic decisions and is reported to the DRPC.

The Firm-level risk appetite parameters are set and approved by the Firm's CEO, CFO, CRO and COO. LOB-level risk appetite parameters are set by the LOB CEO, CFO, and CRO and are approved by the Firm's functional heads as noted above. Firmwide LOB diversification allows the sum of the LOBs' loss tolerances to be greater than the Firmwide loss tolerance.

Risk identification for large exposures

The Firm has certain potential low-probability but plausible and material, idiosyncratic risks not well captured by its other existing risk analysis and reporting for credit, market, and other risks. These idiosyncratic risks may arise in a number of forms, e.g. changes in legislation, an unusual combination of market events, or specific counterparty events. These identified risks are grouped under the term Risk Identification for Large Exposures ("RIFLEs"). The identified and monitored RIFLEs allow the Firm to monitor earnings vulnerability that is not adequately covered by its other standard risk measurements.

CREDIT RISK MANAGEMENT

Credit risk is the risk of loss arising from the default of a customer, client or counterparty. The Firm provides credit to a variety of customers, ranging from large corporate and institutional clients to individual consumers and small businesses. In its consumer businesses, the Firm is exposed to credit risk primarily through its residential real estate, credit card, auto, business banking and student lending businesses. Originated mortgage loans are retained in the mortgage portfolio, or securitized or sold to U.S. government agencies and U.S. government-sponsored enterprises; other types of consumer loans are typically retained on the balance sheet. In its wholesale businesses, the Firm is exposed to credit risk through its underwriting, lending and derivatives activities with and for clients and counterparties, as well as through its operating services activities, such as cash management and clearing activities. A portion of the loans originated or acquired by the Firm's wholesale businesses are generally retained on the balance sheet; the Firm's syndicated loan business distributes a significant percentage of originations into the market and is an important component of portfolio management.

Credit risk organization

Credit risk management is overseen by the Firm's CRO. The Firm's credit risk management governance consists of the following activities:

- Establishing a comprehensive credit risk policy framework
- Monitoring and managing credit risk across all portfolio segments, including transaction and line approval
- Assigning and managing credit authorities in connection with the approval of all credit exposure
- Managing criticized exposures and delinquent loans
- Determining the allowance for credit losses and ensuring appropriate credit risk-based capital management

Risk identification and measurement

The Credit Risk Management function identifies, measures, limits, manages and monitors credit risk across our businesses. To measure credit risk, the Firm employs several methodologies for estimating the likelihood of obligor or counterparty default. Methodologies for measuring credit risk vary depending on several factors, including type of asset (e.g., consumer versus wholesale), risk measurement parameters (e.g., delinquency status and borrower's credit score versus wholesale risk-rating) and risk management and collection processes (e.g., retail collection center versus centrally managed workout groups). Credit risk measurement is based on the probability of default of an obligor or counterparty, the loss severity given a default event and the exposure at default.

Based on these factors and related market-based inputs, the Firm estimates credit losses for its exposures. Probable credit losses inherent in the consumer and wholesale loan portfolios are reflected in the allowance for loan losses, and probable credit losses inherent in lending-related commitments are reflected in the allowance for lending-related commitments. These losses are estimated using statistical analyses and other factors as described in Note 15. In addition, potential and unexpected credit losses are reflected in the allocation of credit risk capital and represent the potential volatility of actual losses relative to the established allowances for loan losses and lending-related commitments. The analyses for these losses include stress testing (considering alternative economic scenarios) as described in the Stress testing section below.

The methodologies used to estimate credit losses depend on the characteristics of the credit exposure, as described below.

Scored exposure

The scored portfolio is generally held in CCB and predominantly includes residential real estate loans, credit card loans, certain auto and business banking loans, and student loans. For the scored portfolio, credit loss estimates are based on statistical analysis of credit losses over discrete periods of time and are estimated using portfolio modeling, credit scoring, and decision-support tools, which consider loan-level factors such as delinquency status, credit scores, collateral values, and other risk factors. Credit loss analyses also consider, as appropriate, uncertainties and other factors, including those related to current macroeconomic and political conditions, the quality of underwriting standards, and other internal and external factors. The factors and analysis are updated on a quarterly basis or more frequently as market conditions dictate.

Risk-rated exposure

Risk-rated portfolios are generally held in CIB, CB and AM, but also include certain business banking and auto dealer loans held in CCB that are risk-rated because they have characteristics similar to commercial loans. For the risk-rated portfolio, credit loss estimates are based on estimates of the probability of default ("PD") and loss severity given a default. The estimation process begins with risk-ratings that are assigned to each loan facility to differentiate risk within the portfolio. These risk ratings are reviewed regularly by Credit Risk management and revised as needed to reflect the borrower's current financial position, risk profile and related collateral. The probability of default is the likelihood that a loan will default and not be fully repaid by the borrower. The loss given default ("LGD") is the estimated loss on the loan that would be realized upon the default of the borrower and takes into consideration collateral and structural support for each credit facility. The probability of default is estimated for each borrower, and a loss given default is estimated for each credit facility. The calculations and assumptions are based on historic experience and management judgment and are reviewed regularly.

Stress testing
Stress testing is important in measuring and managing credit risk in the Firm's credit portfolio. The process assesses the potential impact of alternative economic and business scenarios on estimated credit losses for the Firm. Economic scenarios, and the parameters underlying those scenarios, are defined centrally, are articulated in terms of macroeconomic factors, and applied across the businesses. The stress test results may indicate credit migration, changes in delinquency trends and potential losses in the credit portfolio. In addition to the periodic stress testing processes, management also considers additional stresses outside these scenarios, as necessary. The Firm uses stress testing to inform decisions on setting risk appetite both at a Firm and LOB level, as well as to assess the impact of stress on industry concentrations.

Risk monitoring and management
The Firm has developed policies and practices that are designed to preserve the independence and integrity of the approval and decision-making process of extending credit to ensure credit risks are assessed accurately, approved properly, monitored regularly and managed actively at both the transaction and portfolio levels. The policy framework establishes credit approval authorities, concentration limits, risk-rating methodologies, portfolio review parameters and guidelines for management of distressed exposures. In addition, certain models, assumptions and inputs used in evaluating and monitoring credit risk are independently validated by groups that are separate from the line of businesses.

For consumer credit risk, delinquency and other trends, including any concentrations at the portfolio level, are monitored, as certain of these trends can be modified through changes in underwriting policies and portfolio guidelines. Consumer Risk Management evaluates delinquency and other trends against business expectations, current and forecasted economic conditions, and industry benchmarks. Historical and forecasted trends are incorporated into the modeling of estimated consumer credit losses and are part of the monitoring of the credit risk profile of the portfolio. Under the Firm's model risk policy, new significant risk management models, as well as major changes to such models, are required to be reviewed and approved by the Model Review Group prior to implementation into the operating environment. Internal Audit also periodically tests the internal controls around the modeling process including the integrity of the data utilized. For a discussion of the Model Review Group, see page 139. For further discussion of consumer loans, see Note 14.

Wholesale credit risk is monitored regularly at an aggregate portfolio, industry and individual client and counterparty level with established concentration limits that are reviewed and revised as deemed appropriate by management, typically on an annual basis. Industry and counterparty limits, as measured in terms of exposure and economic credit risk capital, are subject to stress-based loss constraints.

Management of the Firm's wholesale credit risk exposure is accomplished through a number of means, including:

- Loan underwriting and credit approval process
- Loan syndications and participations
- Loan sales and securitizations
- Credit derivatives
- Master netting agreements
- Collateral and other risk-reduction techniques

In addition to Risk Management, Internal Audit performs periodic exams, as well as continuous review, where appropriate, of the Firm's consumer and wholesale portfolios. For risk-rated portfolios, a credit review group within Internal Audit is responsible for:

- Independently assessing and validating the changing risk grades assigned to exposures; and
- Evaluating the effectiveness of business units' risk-ratings, including the accuracy and consistency of risk grades, the timeliness of risk grade changes and the justification of risk grades in credit memoranda

Risk reporting
To enable monitoring of credit risk and effective decision-making, aggregate credit exposure, credit quality forecasts, concentration levels and risk profile changes are reported regularly to senior Credit Risk Management. Detailed portfolio reporting of industry, customer, product and geographic concentrations occurs monthly, and the appropriateness of the allowance for credit losses is reviewed by senior management at least on a quarterly basis. Through the risk reporting and governance structure, credit risk trends and limit exceptions are provided regularly to, and discussed with, senior management and the Board of Directors as appropriate.

CREDIT PORTFOLIO

2014 Credit Risk Overview

In 2014, the consumer credit environment continued to improve and the wholesale credit environment remained favorable. Over the course of the year, the Firm continued to actively manage its underperforming and nonaccrual loans and reduce such exposures through loan restructurings, loan sales and workouts. The Firm saw decreased downgrade, default and charge-off activity and improved consumer delinquency trends. The Firm increased its overall lending activity in both wholesale and consumer businesses. The combination of these factors resulted in an improvement in the credit quality of the portfolio compared with 2013 and contributed to the Firm's reduction in the allowance for credit losses. For further discussion of the consumer credit environment and consumer loans, see Consumer Credit Portfolio on pages 113–119 and Note 14. For further discussion of wholesale credit environment and wholesale loans, see Wholesale Credit Portfolio on pages 120–127 and Note 14.

In the following tables, reported loans include loans retained (i.e., held-for-investment); loans held-for-sale (which are carried at the lower of cost or fair value, with valuation changes recorded in noninterest revenue); and certain loans accounted for at fair value. In addition, the Firm records certain loans accounted for at fair value in trading assets. For further information regarding these loans, see Note 3 and Note 4. For additional information on the Firm's loans and derivative receivables, including the Firm's accounting policies, see Note 14 and Note 6.

For further information regarding the credit risk inherent in the Firm's investment securities portfolio, see Note 12.

(a) Represents the net notional amount of protection purchased and sold through credit derivatives used to manage both performing and nonperforming wholesale credit exposures; these derivatives do not qualify for hedge accounting under U.S. GAAP. For additional information, see Credit derivatives on page 127 and Note 6.

(b) Excludes PCI loans. The Firm is recognizing interest income on each pool of PCI loans as they are all performing.

(c) At December 31, 2014 and 2013, nonperforming assets excluded: (1) mortgage loans insured by U.S. government agencies of $7.8 billion and $8.4 billion, respectively, that are 90 or more days past due; (2) student loans insured by U.S. government agencies under the FFELP of $367 million and $428 million, respectively, that are 90 or more days past due; and (3) real estate owned ("REO") insured by U.S. government agencies of $462 million and $2.0 billion, respectively. These amounts have been excluded based upon the government guarantee. In addition, the Firm's policy is generally to exempt credit card loans from being placed on nonaccrual status as permitted by regulatory guidance issued by the Federal Financial Institutions Examination Council ("FFIEC").

(d) At December 31, 2014 and 2013, total nonaccrual loans represented 0.94% and 1.16%, respectively, of total loans.

CONSUMER CREDIT PORTFOLIO

The Firm's consumer portfolio consists primarily of residential real estate loans, credit card loans, auto loans, business banking loans, and student loans. The Firm's focus is on serving the prime segment of the consumer credit market. For further information on consumer loans, see Note 14.

The credit performance of the consumer portfolio continues to benefit from the improvement in the economy and home prices. Both early-stage delinquencies (30–89 days delinquent) and late-stage delinquencies (150+ days delinquent) for residential real estate, excluding government guaranteed loans, declined from December 31, 2013. Although late-stage delinquencies declined, they remain elevated due to loss-mitigation activities and to elongated foreclosure processing timelines. Losses related to these loans continue to be recognized in accordance with the Firm's standard charge-off practices, but some delinquent loans that would otherwise have been foreclosed upon remain in the mortgage and home equity loan portfolios. The Credit Card 30+ day delinquency rate remains near historic lows.

The following table presents consumer credit-related information with respect to the credit portfolio held by CCB, prime mortgage and home equity loans held by AM, and prime mortgage loans held by Corporate. For further information about the Firm's nonaccrual and charge-off accounting policies, see Note 14.

Consumer credit portfolio

As of or for the year ended December 31, (in millions, except ratios)	Credit exposure		Nonaccrual loans[f][g]		Net charge-offs/ (recoveries)[h]		Average annual net charge-off/(recovery) rate[h][i]	
	2014	2013	**2014**	2013	**2014**	2013	**2014**	2013

(a) At December 31, 2014 and 2013, excluded operating lease-related assets of $6.7 billion and $5.5 billion, respectively.

(b) Credit card and home equity lending-related commitments represent the total available lines of credit for these products. The Firm has not experienced, and does not anticipate, that all available lines of credit would be used at the same time. For credit card and home equity commitments (if certain conditions are met), the Firm can reduce or cancel these lines of credit by providing the borrower notice or, in some cases as permitted by law, without notice.

(c) Receivables from customers represent margin loans to retail brokerage customers, and are included in accrued interest and accounts receivable on the Consolidated balance sheets.

(d) Includes accrued interest and fees net of an allowance for the uncollectible portion of accrued interest and fee income.
(e) Predominantly represents prime mortgage loans held-for-sale.
(f) At December 31, 2014 and 2013, nonaccrual loans excluded: (1) mortgage loans insured by U.S. government agencies of $7.8 billion and $8.4 billion, respectively, that are 90 or more days past due; and (2) student loans insured by U.S. government agencies under the FFELP of $367 million and $428 million, respectively, that are 90 or more days past due. These amounts have been excluded from nonaccrual loans based upon the government guarantee. In addition, the Firm's policy is generally to exempt credit card loans from being placed on nonaccrual status as permitted by regulatory guidance.
(g) Excludes PCI loans. The Firm is recognizing interest income on each pool of PCI loans as they are all performing.
(h) Net charge-offs and net charge-off rates excluded $533 million and $53 million of write-offs of prime mortgages in the PCI portfolio for the years ended December 31, 2014 and 2013. These write-offs decreased the allowance for loan losses for PCI loans. See Allowance for Credit Losses on pages 128–130 for further details.
(i) Average consumer loans held-for-sale were $917 million and $209 million, respectively, for the years ended December 31, 2014 and 2013. These amounts were excluded when calculating net charge-off rates.

Consumer, excluding credit card

Portfolio analysis

Consumer loan balances increased during the year ended December 31, 2014, due to prime mortgage, business banking and auto loan originations, partially offset by paydowns and the charge-off or liquidation of delinquent loans. Credit performance has improved across most portfolios but delinquent residential real estate loans and home equity charge-offs remain elevated compared with pre-recessionary levels.

In the following discussion of loan and lending-related categories, PCI loans are excluded from individual loan product discussions and are addressed separately below. For further information about the Firm's consumer portfolio, including information about delinquencies, loan modifications and other credit quality indicators, see Note 14.

Home equity: The home equity portfolio declined from December 31, 2013 primarily reflecting loan paydowns and charge-offs. Early-stage delinquencies showed improvement from December 31, 2013. Late-stage delinquencies continue to be elevated as improvement in the number of loans becoming severely delinquent was offset by a higher number of loans remaining in late-stage delinquency due to higher average carrying values on these delinquent loans, reflecting improving collateral values. Senior lien nonaccrual loans were flat compared with the prior year while junior lien nonaccrual loans decreased in 2014. Net charge-offs for both senior and junior lien home equity loans declined when compared with the prior year as a result of improvement in home prices and delinquencies.

Approximately 15% of the Firm's home equity portfolio consists of home equity loans ("HELOANs") and the remainder consists of home equity lines of credit ("HELOCs"). HELOANs are generally fixed-rate, closed-end, amortizing loans, with terms ranging from 3–30 years. Approximately half of the HELOANs are senior liens and the remainder are junior liens. In general, HELOCs originated by the Firm are revolving loans for a 10-year period, after which time the HELOC recasts into a loan with a 20-year amortization period. At the time of origination, the borrower typically selects one of two minimum payment options that will generally remain in effect during the revolving period: a monthly payment of 1% of the outstanding balance, or interest-only payments based on a variable index (typically Prime). HELOCs originated by Washington Mutual were generally revolving loans for a 10-year period, after which time the HELOC converts to an interest-only loan with a balloon payment at the end of the loan's term.

The unpaid principal balance of non-PCI HELOCs outstanding was $47 billion at December 31, 2014. Of the $47 billion, approximately $29 billion have recently recast or are scheduled to recast from interest-only to fully amortizing payments, with $3 billion having recast in 2014; $6 billion, $7 billion, and $6 billion are scheduled to recast in 2015, 2016, and 2017, respectively; and $7 billion is scheduled to recast after 2017. However, of the total $26 billion still remaining to recast, $18 billion are expected to actually recast; and the remaining $8 billion represents loans to borrowers who are expected either to pre-pay or charge-off prior to recast. In the third quarter of 2014, the Firm refined its approach for estimating the number of HELOCs expected to voluntarily pre-pay prior to recast. Based on the refined methodology, the number of loans expected to pre-pay declined, resulting in an increase in the number of loans expected to recast. The Firm has considered this payment recast risk in its allowance for loan losses based upon the estimated amount of payment shock (i.e., the excess of the fully-amortizing payment over the interest-only payment in effect prior to recast) expected to occur at the payment recast date, along with the corresponding estimated probability of default and loss severity assumptions. Certain factors, such as future developments in both unemployment rates and home prices, could have a significant impact on the performance of these loans.

The Firm manages the risk of HELOCs during their revolving period by closing or reducing the undrawn line to the extent permitted by law when borrowers are exhibiting a material deterioration in their credit risk profile. The Firm will continue to evaluate both the near-term and longer-term repricing and recast risks inherent in its HELOC portfolio to ensure that changes in the Firm's estimate of incurred losses are appropriately considered in the allowance for loan losses and that the Firm's account management practices are appropriate given the portfolio's risk profile.

High-risk seconds are loans where the borrower has a first mortgage loan that is either delinquent or has been modified. Such loans are considered to pose a higher risk of default than junior lien loans for which the senior lien is neither delinquent nor modified. At December 31, 2014, the Firm estimated that its home equity portfolio contained approximately $1.8 billion of current high-risk seconds, compared with $2.3 billion at December 31, 2013. The Firm estimates the balance of its total exposure to high-risk seconds on a quarterly basis using internal data and loan

level credit bureau data (which typically provides the delinquency status of the senior lien). The estimated balance of these high-risk seconds may vary from quarter to quarter for reasons such as the movement of related senior liens into and out of the 30+ day delinquency bucket.

Current high-risk seconds

December 31, (in billions)	2014	2013
Junior liens subordinate to:		
Modified current senior lien	**$ 0.7**	$ 0.9
Senior lien 30 – 89 days delinquent	**0.5**	0.6
Senior lien 90 days or more delinquent[(a)]	**0.6**	0.8
Total current high-risk seconds	**$ 1.8**	$ 2.3

(a) Junior liens subordinate to senior liens that are 90 days or more past due are classified as nonaccrual loans. At December 31, 2014 and 2013, excluded approximately $50 million and approximately $100 million, respectively, of junior liens that are performing but not current, which were placed on nonaccrual in accordance with the regulatory guidance.

Of the estimated $1.8 billion of current high-risk seconds at December 31, 2014, the Firm owns approximately 10% and services approximately 25% of the related senior lien loans to the same borrowers. The performance of the Firm's junior lien loans is generally consistent regardless of whether the Firm owns, services or does not own or service the senior lien. The increased probability of default associated with these higher-risk junior lien loans was considered in estimating the allowance for loan losses.

Mortgage: Prime mortgages, including option adjustable-rate mortgages ("ARMs") and loans held-for-sale, increased from December 31, 2013 due to higher retained originations partially offset by paydowns, the run-off of option ARM loans and the charge-off or liquidation of delinquent loans. Excluding loans insured by U.S. government agencies, both early-stage and late-stage delinquencies showed improvement from December 31, 2013. Nonaccrual loans decreased from the prior year but remain elevated primarily due to loss mitigation activities and elongated foreclosure processing timelines. Net charge-offs remain low, reflecting continued improvement in home prices and delinquencies.

At December 31, 2014 and 2013, the Firm's prime mortgage portfolio included $12.4 billion and $14.3 billion, respectively, of mortgage loans insured and/or guaranteed by U.S. government agencies, of which $9.7 billion and $9.6 billion, respectively, were 30 days or more past due (of these past due loans, $7.8 billion and $8.4 billion, respectively, were 90 days or more past due). The Firm has entered into a settlement regarding loans insured under federal mortgage insurance programs overseen by the FHA, HUD, and VA; the Firm will continue to monitor exposure on future claim payments for government insured loans, but any financial impact related to exposure on future claims is not expected to be significant and was considered in estimating the allowance for loan losses. For further discussion of the settlement, see Note 31.

At December 31, 2014 and 2013, the Firm's prime mortgage portfolio included $16.3 billion and $15.6 billion, respectively, of interest-only loans, which represented 15% and 18%, respectively, of the prime mortgage portfolio. These loans have an interest-only payment period generally followed by an adjustable-rate or fixed-rate fully amortizing payment period to maturity and are typically originated as higher-balance loans to higher-income borrowers. To date, losses on this portfolio generally have been consistent with the broader prime mortgage portfolio and the Firm's expectations. The Firm continues to monitor the risks associated with these loans.

Subprime mortgages continued to decrease due to portfolio runoff. Early-stage and late-stage delinquencies have improved from December 31, 2013, but remain at elevated levels. Net charge-offs continued to improve as a result of improvement in home prices and delinquencies.

Auto: Auto loans increased from December 31, 2013 as new originations outpaced paydowns and payoffs. Nonaccrual loans improved compared with December 31, 2013. Net charge-offs for the year ended December 31, 2014 increased compared with the prior year, reflecting higher average loss per default as national used car valuations declined from historically strong levels. The auto loan portfolio reflects a high concentration of prime-quality credits.

Business banking: Business banking loans increased from December 31, 2013 due to an increase in loan originations. Nonaccrual loans improved compared with December 31, 2013. Net charge-offs for the year ended December 31, 2014 decreased from the prior year.

Student and other: Student and other loans decreased from December 31, 2013 due primarily to the run-off of the student loan portfolio. Student nonaccrual loans increased from December 31, 2013 due to a modification program began in May 2014 that extended the deferment period for up to 24 months for certain student loans, which resulted in extending the maturity of these loans at their original contractual interest rates.

Purchased credit-impaired loans: PCI loans acquired in the Washington Mutual transaction decreased as the portfolio continues to run off.

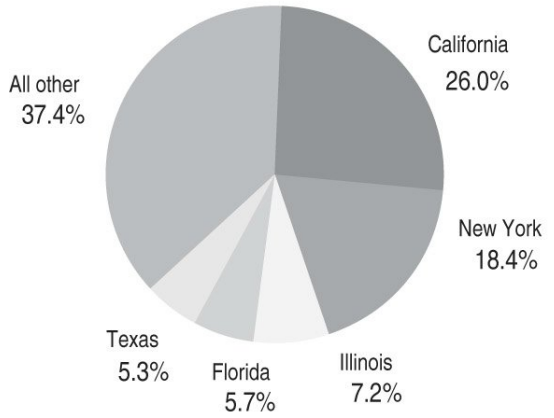
As of December 31, 2014, approximately 16% of the option ARM PCI loans were delinquent and approximately 57% of the portfolio has been modified into fixed-rate, fully amortizing loans. Substantially all of the remaining loans are making amortizing payments, although such payments are not necessarily fully amortizing. This latter group of loans is subject to the risk of payment shock due to future payment recast. Default rates generally increase on option ARM loans when payment recast results in a payment increase. The expected increase in default rates is considered in the Firm's quarterly impairment assessment.

The following table provides a summary of lifetime principal loss estimates included in either the nonaccretable difference or the allowance for loan losses.

Summary of lifetime principal loss estimates

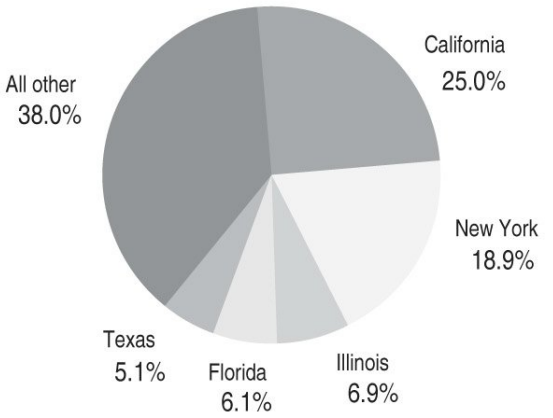
December 31, (in billions)	Lifetime loss estimates[a]		LTD liquidation losses[b]	
	2014	2013	**2014**	2013
Home equity	**$ 14.6**	$ 14.7	**$ 12.4**	$ 12.1
Prime mortgage	**3.8**	3.8	**3.5**	3.3
Subprime mortgage	**3.3**	3.3	**2.8**	2.6
Option ARMs	**9.9**	10.2	**9.3**	8.8
Total	**$ 31.6**	$ 32.0	**$ 28.0**	$ 26.8

(a) Includes the original nonaccretable difference established in purchase accounting of $30.5 billion for principal losses plus additional principal losses recognized subsequent to acquisition through the provision and allowance for loan losses. The remaining nonaccretable difference for principal losses was $2.3 billion and $3.8 billion at December 31, 2014 and 2013, respectively.



(b) Life-to-date ("LTD") liquidation losses represent both realization of loss upon loan resolution and any principal forgiven upon modification.

Lifetime principal loss estimates declined from December 31, 2013, to December 31, 2014, reflecting improvement in home prices and delinquencies. The decline in lifetime principal loss estimates during the year ended December 31, 2014, resulted in a $300 million reduction of the PCI allowance for loan losses related to option ARM loans. In addition, for the year ended December 31, 2014, PCI write-offs of $533 million were recorded against the prime mortgage allowance for loan losses. For further information on the Firm's PCI loans, including write-offs, see Note 14.



Geographic composition of residential real estate loans

At December 31, 2014, $94.3 billion, or 63% of total retained residential real estate loan portfolio, excluding mortgage loans insured by U.S. government agencies and PCI loans, were concentrated in California, New York, Illinois, Florida and Texas, compared with $85.9 billion, or 62%, at December 31, 2013. California had the greatest concentration of these loans with 26% at December 31, 2014, compared with 25% at December 31, 2013. The unpaid principal balance of PCI loans concentrated in these five states represented 74% of total PCI loans at both December 31, 2014 and December 31, 2013. For further information on the geographic composition of the Firm's residential real estate loans, see Note 14.

Top 5 States - Residential Real Estate
(at December 31, 2014)

Top 5 States - Residential Real Estate
(at December 31, 2013)

Current estimated LTVs of residential real estate loans

The current estimated average loan-to-value ("LTV") ratio for residential real estate loans retained, excluding mortgage loans insured by U.S. government agencies and PCI loans, was 71% at December 31, 2014, compared with 75% at December 31, 2013.

Although home prices continue to recover, the decline in home prices since 2007 has had a significant impact on the collateral values underlying the Firm's residential real estate loan portfolio. In general, the delinquency rate for loans with high LTV ratios is greater than the delinquency rate for loans in which the borrower has greater equity in the collateral. While a large portion of the loans with current estimated LTV ratios greater than 100% continue to pay and are current, the continued willingness and ability of these borrowers to pay remains a risk.

The following table presents the current estimated LTV ratios for PCI loans, as well as the ratios of the carrying value of the underlying loans to the current estimated collateral value. Because such loans were initially measured at fair value, the ratios of the carrying value to the current estimated collateral value will be lower than the current estimated LTV ratios, which are based on the unpaid principal balances. The estimated collateral values used to calculate these ratios do not represent actual appraised loan-level collateral values; as such, the resulting ratios are necessarily imprecise and should therefore be viewed as estimates.

LTV ratios and ratios of carrying values to current estimated collateral values – PCI loans

	2014				2013			
December 31, (in millions, except ratios)	Unpaid principal balance	Current estimated LTV ratio[a]	Net carrying value[c]	Ratio of net carrying value to current estimated collateral value[c]	Unpaid principal balance	Current estimated LTV ratio[a]	Net carrying value[c]	Ratio of net carrying value to current estimated collateral value[c]
Home equity	**$ 17,740**	**83%** [b]	**$ 15,337**	**72%**	$ 19,830	90% [b]	$ 17,169	78%
Prime mortgage	**10,249**	**76**	**9,027**	**67**	11,876	83	10,312	72
Subprime mortgage	**4,652**	**82**	**3,493**	**62**	5,471	91	3,995	66
Option ARMs	**16,496**	**74**	**15,514**	**70**	19,223	82	17,421	74

(a) Represents the aggregate unpaid principal balance of loans divided by the estimated current property value. Current property values are estimated at least quarterly based on home valuation models that utilize nationally recognized home price index valuation estimates; such models incorporate actual data to the extent available and forecasted data where actual data is not available.

(b) Represents current estimated combined LTV for junior home equity liens, which considers all available lien positions, as well as unused lines, related to the property. All other products are presented without consideration of subordinate liens on the property.

(c) Net carrying value includes the effect of fair value adjustments that were applied to the consumer PCI portfolio at the date of acquisition and is also net of the allowance for loan losses at December 31, 2014 and 2013 of $1.2 billion and $1.7 billion for prime mortgage, $194 million and $494 million for option ARMs, respectively, and $1.8 billion for home equity and $180 million for subprime mortgage for both periods.

The current estimated average LTV ratios were 77% and 88% for California and Florida PCI loans, respectively, at December 31, 2014, compared with 85% and 103%, respectively, at December 31, 2013. Average LTV ratios have declined consistent with recent improvements in home prices. Although home prices have improved, home prices in most areas of California and Florida are still lower than at the peak of the housing market; this continues to negatively contribute to current estimated average LTV ratios and the ratio of net carrying value to current estimated collateral value for loans in the PCI portfolio. Of the total PCI portfolio, 15% had a current estimated LTV ratio greater than 100%, and 3% had a current LTV ratio of greater than 125% at December 31, 2014, compared with 26% and 7%, respectively, at December 31, 2013.

While the current estimated collateral value is greater than the net carrying value of PCI loans, the ultimate performance of this portfolio is highly dependent on borrowers' behavior and ongoing ability and willingness to continue to make payments on homes with negative equity, as well as on the cost of alternative housing.

For further information on current estimated LTVs of residential real estate loans, see Note 14.

Loan modification activities – residential real estate loans

The performance of modified loans generally differs by product type due to differences in both the credit quality and the types of modifications provided. Performance metrics for the residential real estate portfolio, excluding PCI loans, that have been modified and seasoned more than six months show weighted-average redefault rates of 20% for senior lien home equity, 22% for junior lien home equity, 16% for prime mortgages including option ARMs, and 29% for subprime mortgages. The cumulative performance metrics for the PCI residential real estate portfolio modified and seasoned more than six months show weighted average redefault rates of 20% for home equity, 17% for prime mortgages, 15% for option ARMs and 32% for subprime mortgages. The favorable performance of the PCI option ARM modifications is the result of a targeted proactive program which fixed the borrower's payment to the amount at the point of modification. The cumulative redefault rates reflect the performance of modifications completed under both the Home Affordable Modification Program ("HAMP") and the Firm's proprietary modification programs (primarily the Firm's modification program that was modeled after HAMP) from October 1, 2009, through December 31, 2014.

Certain loans that were modified under HAMP and the Firm's proprietary modification programs have interest rate reset provisions ("step-rate modifications"). Interest rates on these loans will generally increase beginning in 2014 by 1% per year until the rate reaches a specified cap, typically at a prevailing market interest rate for a fixed-rate loan as of the modification date. The carrying value of non-PCI loans modified in step-rate modifications was $5 billion at December 31, 2014, with $1 billion scheduled to experience the initial interest rate increase in each of 2015 and 2016. The unpaid principal balance of PCI loans modified in step-rate modifications was $10 billion at December 31, 2014, with $2 billion and $3 billion scheduled to experience the initial interest rate increase in 2015 and 2016, respectively. The impact of these potential interest rate increases is considered in the Firm's allowance for loan losses. The Firm will continue to monitor this risk exposure to ensure that it is appropriately considered in the Firm's allowance for loan losses.

The following table presents information as of December 31, 2014 and 2013, relating to modified retained residential real estate loans for which concessions have been granted to borrowers experiencing financial difficulty. Modifications of PCI loans continue to be accounted for and reported as PCI loans, and the impact of the modification is incorporated into the Firm's quarterly assessment of estimated future cash flows. Modifications of consumer loans other than PCI loans are generally accounted for and reported as troubled debt restructurings ("TDRs"). For further information on modifications for the years ended December 31, 2014 and 2013, see Note 14.

Modified residential real estate loans

	2014		2013	
December 31, (in millions)	On-balance sheet loans	Nonaccrual on-balance sheet loans[d]	On-balance sheet loans	Nonaccrual on-balance sheet loans[d]
Modified residential real estate loans, excluding PCI loans[a][b]				
Home equity – senior lien	**$ 1,101**	**$ 628**	$ 1,146	$ 641
Home equity – junior lien	**1,304**	**632**	1,319	666
Prime mortgage, including option ARMs	**6,145**	**1,559**	7,004	1,737
Subprime mortgage	**2,878**	**931**	3,698	1,127
Total modified residential real estate loans, excluding PCI loans	**$ 11,428**	**$ 3,750**	$ 13,167	$ 4,171
Modified PCI loans[c]				
Home equity	**$ 2,580**	**NA**	$ 2,619	NA
Prime mortgage	**6,309**	**NA**	6,977	NA
Subprime mortgage	**3,647**	**NA**	4,168	NA
Option ARMs	**11,711**	**NA**	13,131	NA
Total modified PCI loans	**$ 24,247**	**NA**	$ 26,895	NA

(a) Amounts represent the carrying value of modified residential real estate loans.
(b) At December 31, 2014 and 2013, $4.9 billion and $7.6 billion, respectively, of loans modified subsequent to repurchase from Ginnie Mae in accordance with the standards of the appropriate government agency (i.e., FHA, VA, RHS) are not included in the table above. When such loans perform subsequent to modification in accordance with Ginnie Mae guidelines, they are generally sold back into Ginnie Mae loan pools. Modified loans that do not re-perform become subject to foreclosure. For additional information about sales of loans in securitization transactions with Ginnie Mae, see Note 16.
(c) Amounts represent the unpaid principal balance of modified PCI loans.
(d) As of December 31, 2014 and 2013, nonaccrual loans included $2.9 billion and $3.0 billion, respectively, of TDRs for which the borrowers were less than 90 days past due. For additional information about loans modified in a TDR that are on nonaccrual status, see Note 14.

Nonperforming assets

The following table presents information as of December 31, 2014 and 2013, about consumer, excluding credit card, nonperforming assets.

Nonperforming assets[a]

December 31, (in millions)	2014	2013
Nonaccrual loans[b]		
Residential real estate	**$ 5,845**	$ 6,864
Other consumer	**664**	632
Total nonaccrual loans	**6,509**	7,496
Assets acquired in loan satisfactions		
Real estate owned	**437**	614
Other	**36**	41
Total assets acquired in loan satisfactions	**473**	655
Total nonperforming assets	**$ 6,982**	$ 8,151

(a) At December 31, 2014 and 2013, nonperforming assets excluded: (1) mortgage loans insured by U.S. government agencies of $7.8 billion and $8.4 billion, respectively, that are 90 or more days past due; (2) student loans insured by U.S. government agencies under the FFELP of $367 million and $428 million, respectively, that are 90 or more days past due; and (3) real estate owned insured by U.S. government agencies of $462 million and $2.0 billion, respectively. These amounts have been excluded based upon the government guarantee.
(b) Excludes PCI loans that were acquired as part of the Washington Mutual transaction, which are accounted for on a pool basis. Since each pool is accounted for as a single asset with a single composite interest rate and an aggregate expectation of cash flows, the past-due status of the pools, or that of individual loans within the pools, is not meaningful. Because the Firm is recognizing interest income on each pool of loans, they are all considered to be performing.

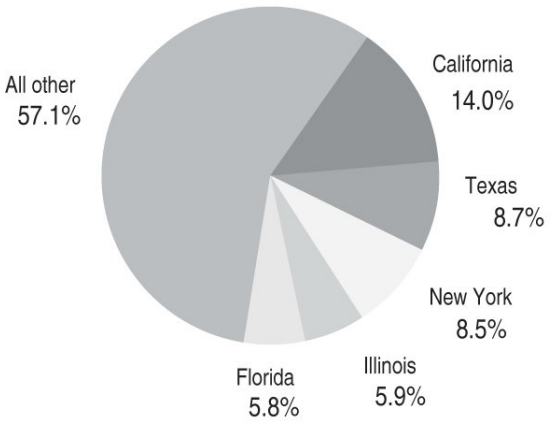
Nonaccrual loans in the residential real estate portfolio totaled $5.8 billion and $6.9 billion at December 31, 2014 and December 31, 2013, respectively, of which 32% and 34%, respectively, were greater than 150 days past due. In the aggregate, the unpaid principal balance of residential real estate loans greater than 150 days past due was charged down by approximately 50% to the estimated net realizable value of the collateral at both December 31, 2014 and 2013. The elongated foreclosure processing timelines are expected to continue to result in elevated levels of nonaccrual loans in the residential real estate portfolios.

Active and suspended foreclosure: For information on loans that were in the process of active or suspended foreclosure, see Note 14.

Nonaccrual loans: The following table presents changes in the consumer, excluding credit card, nonaccrual loans for the years ended December 31, 2014 and 2013.

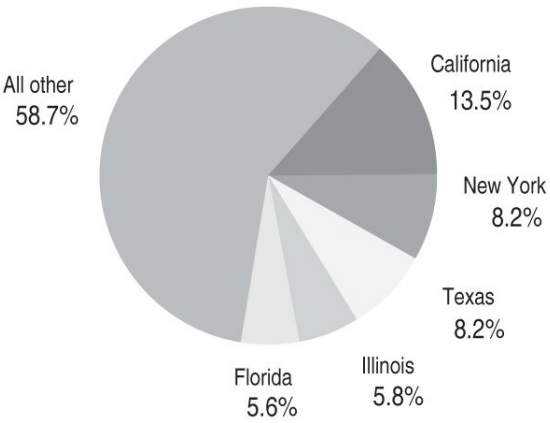
Nonaccrual loans

Year ended December 31, (in millions)	2014	2013
Beginning balance	**$ 7,496**	$ 9,174
Additions	**4,905**	6,618
Reductions:		
Principal payments and other[a]	**1,859**	1,559
Charge-offs	**1,306**	1,869
Returned to performing status	**2,083**	3,793
Foreclosures and other liquidations	**644**	1,075
Total reductions	**5,892**	8,296
Net additions/(reductions)	**(987)**	(1,678)
Ending balance	**$ 6,509**	$ 7,496



(a) Other reductions includes loan sales.

Credit Card



Total credit card loans increased from December 31, 2013 due to higher new account originations and increased credit card sales volume. The 30+ day delinquency rate decreased to 1.44% at December 31, 2014, from 1.67% at December 31, 2013. For the years ended December 31, 2014 and 2013, the net charge-off rates were 2.75% and 3.14%, respectively. Charge-offs have improved compared with a year ago as a result of improvement in delinquent loans. The credit card portfolio continues to reflect a well-seasoned, largely rewards-based portfolio that has good U.S. geographic diversification.

Loans outstanding in the top five states of California, Texas, New York, Illinois and Florida consisted of $54.9 billion in receivables, or 43% of the retained loan portfolio, at December 31, 2014, compared with $52.7 billion, or 41%, at December 31, 2013. The greatest geographic concentration of credit card retained loans is in California, which represented 14% and 13% of total retained loans at December 31, 2014 and 2013, respectively. For further information on the geographic composition of the Firm's credit card loans, see Note 14.

Top 5 States Credit Card - Retained
(at December 31, 2014)

Top 5 States Credit Card - Retained
(at December 31, 2013)

Modifications of credit card loans

At December 31, 2014 and 2013, the Firm had $2.0 billion and $3.1 billion, respectively, of credit card loans outstanding that have been modified in TDRs. These balances included both credit card loans with modified payment terms and credit card loans that reverted back to their pre-modification payment terms because the cardholder did not comply with the modified payment terms. The decrease in modified credit card loans outstanding from December 31, 2013, was attributable to a reduction in new modifications as well as ongoing payments and charge-offs on previously modified credit card loans.

Consistent with the Firm's policy, all credit card loans typically remain on accrual status until charged-off. However, the Firm establishes an allowance, which is offset against loans and charged to interest income, for the estimated uncollectible portion of accrued interest and fee income.

For additional information about loan modification programs to borrowers, see Note 14.

WHOLESALE CREDIT PORTFOLIO

The Firm's wholesale businesses are exposed to credit risk through underwriting, lending and trading activities with and for clients and counterparties, as well as through various operating services such as cash management and clearing activities. A portion of the loans originated or acquired by the Firm's wholesale businesses is generally retained on the balance sheet. The Firm distributes a significant percentage of the loans it originates into the market as part of its syndicated loan business and to manage portfolio concentrations and credit risk.

The wholesale credit environment remained favorable throughout 2014 driving an increase in client activity. Growth in loans retained was driven primarily by activity in Commercial Banking, while growth in lending-related commitments reflected increased activity in both the Corporate & Investment Bank and Commercial Banking. Discipline in underwriting across all areas of lending continues to remain a key point of focus, consistent with evolving market conditions and the Firm's risk management activities. The wholesale portfolio is actively managed, in part by conducting ongoing, in-depth reviews of client credit quality and transaction structure, inclusive of collateral where applicable; and of industry, product and client concentrations. During the year, wholesale criticized assets decreased from 2013, including a reduction in nonaccrual loans by 40%.

Wholesale credit portfolio

December 31,	Credit exposure		Nonperforming[d]	
(in millions)	**2014**	2013	**2014**	2013
Loans retained	**$324,502**	$308,263	**$ 599**	$ 821
Loans held-for-sale	**3,801**	11,290	**4**	26
Loans at fair value	**2,611**	2,011	**21**	197
Loans – reported	**330,914**	321,564	**624**	1,044
Derivative receivables	**78,975**	65,759	**275**	415
Receivables from customers and other[a]	**28,972**	26,744	**–**	–
Total wholesale credit-related assets	**438,861**	414,067	**899**	1,459
Lending-related commitments[b]	**472,056**	446,232	**103**	206
Total wholesale credit exposure	**$910,917**	$860,299	**$ 1,002**	$ 1,665
Credit Portfolio Management derivatives notional, net[c]	**$ (26,703)**	$ (27,996)	**$ –**	$ (5)
Liquid securities and other cash collateral held against derivatives	**(19,604)**	(14,435)	**NA**	NA

(a) Receivables from customers and other include $28.8 billion and $26.5 billion of margin loans at December 31, 2014 and 2013, respectively, to prime and retail brokerage customers; these are classified in accrued interest and accounts receivable on the Consolidated balance sheets.

(b) Includes unused advised lines of credit of $105.2 billion and $102.0 billion as of December 31, 2014 and 2013, respectively. An advised line of credit is a revolving credit line which specifies the maximum amount the Firm may make available to an obligor, on a nonbinding basis. The borrower receives written or oral advice of this facility. The Firm may cancel this facility at any time by providing the borrower notice or, in some cases, without notice as permitted by law.

(c) Represents the net notional amount of protection purchased and sold through credit derivatives used to manage both performing and nonperforming wholesale credit exposures; these derivatives do not qualify for hedge accounting under U.S. GAAP. For additional information, see Credit derivatives on page 127, and Note 6.

(d) Excludes assets acquired in loan satisfactions.

The following tables present the maturity and ratings profiles of the wholesale credit portfolio as of December 31, 2014 and 2013. The ratings scale is based on the Firm's internal risk ratings, which generally correspond to the ratings as defined by S&P and Moody's.

Wholesale credit exposure – maturity and ratings profile

December 31, 2014	Maturity profile[e]				Ratings profile

Total exposure – net of liquid securities and other cash collateral held against derivatives				$ 845,864			$ 845,864	
Credit Portfolio Management derivatives net notional by reference entity ratings profile[b][c][d]	$ (1,149)	$ (19,516)	$ (7,331)	$ (27,996)	$ (24,649)	$ (3,347)	$ (27,996)	88%

(a) Represents loans held-for-sale, primarily related to syndicated loans and loans transferred from the retained portfolio, and loans at fair value.
(b) These derivatives do not quality for hedge accounting under U.S. GAAP.
(c) The notional amounts are presented on a net basis by underlying reference entity and the ratings profile shown is based on the ratings of the reference entity on which protection has been purchased.
(d) Predominantly all of the credit derivatives entered into by the Firm where it has purchased protection, including Credit Portfolio Management derivatives, are executed with investment grade counterparties.
(e) The maturity profile of retained loans, lending-related commitments and derivative receivables is based on remaining contractual maturity. Derivative contracts that are in a receivable position at December 31, 2014, may become a payable prior to maturity based on their cash flow profile or changes in market conditions.
(f) The prior period amounts have been revised to conform with the current period presentation.

Wholesale credit exposure – selected industry exposures

The Firm focuses on the management and diversification of its industry exposures, paying particular attention to industries with actual or potential credit concerns. Exposures deemed criticized align with the U.S. banking regulators' definition of criticized exposures, which consist of the special mention, substandard and doubtful categories. The total criticized component of the portfolio, excluding loans held-for-sale and loans at fair value, decreased by 16% to $10.2 billion at December 31, 2014, from $12.2 billion at December 31, 2013.

Below are summaries of the top 25 industry exposures as of December 31, 2014 and 2013. For additional information on industry concentrations, see Note 5.

As of or for the year ended **December 31, 2014** (in millions)	Credit exposure[d]	Investment-grade	Noninvestment-grade			Selected metrics

(a) The industry rankings presented in the table as of December 31, 2013, are based on the industry rankings of the corresponding exposures at December 31, 2014, not actual rankings of such exposures at December 31, 2013.

(b) In addition to the credit risk exposure to states and municipal governments (both U.S. and non-U.S.) at December 31, 2014 and 2013, noted above, the Firm held: $10.6 billion and $7.9 billion, respectively, of trading securities; $30.1 billion and $29.5 billion, respectively, of AFS securities; and $10.2 billion and $920 million, respectively, of HTM securities, issued by U.S. state and municipal governments. For further information, see Note 3 and Note 12.

(c) All other includes: individuals, private education and civic organizations; SPEs; and holding companies, representing approximately 68%, 21% and 5%, respectively, at December 31, 2014, and 64%, 22% and 5%, respectively, at December 31, 2013.

(d) Credit exposure is net of risk participations and excludes the benefit of "Credit Portfolio Management derivatives net notional" held against derivative receivables or loans and "Liquid securities and other cash collateral held against derivative receivables".

(e) Represents the net notional amounts of protection purchased and sold through credit derivatives used to manage the credit exposures; these derivatives do not qualify for hedge accounting under U.S. GAAP. The all other category includes purchased credit protection on certain credit indices.

(f) The prior period amounts have been revised to conform with the current period presentation.

Presented below is a discussion of several industries to which the Firm has significant exposure and/or present actual or potential credit concerns. The Firm is actively monitoring these exposures. For additional information, refer to the tables on the previous pages.

- **Real Estate:** Exposure to this industry increased by $20.3 billion or 23%, in 2014 to $107.4 billion. The increase was largely driven by growth in multifamily exposure in the CB. The credit quality of this industry improved as the investment-grade portion of the exposures to this industry increased to 75% in 2014 from 72% in 2013. The ratio of nonaccrual retained loans to total retained loans decreased to 0.32% at December 31, 2014 from 0.50% at December 31, 2013. For further information on commercial real estate loans, see Note 14.
- **Oil & Gas:** Exposure to this industry increased by $1.4 billion in 2014 to $48.3 billion, of which $15.6 billion was drawn at year-end. The portfolio largely consisted of exposure in North America, and was concentrated in the Exploration and Production subsector. The Oil & Gas portfolio was comprised of 69% investment-grade exposure, and was approximately 5% of the Firm's total wholesale credit exposure as of December 31, 2014.

Loans

In the normal course of its wholesale business, the Firm provides loans to a variety of customers, ranging from large corporate and institutional clients to high-net-worth individuals. For further discussion on loans, including information on credit quality indicators, see Note 14.

The Firm actively manages its wholesale credit exposure. One way of managing credit risk is through secondary market sales of loans and lending-related commitments. During the years ended December 31, 2014 and 2013, the Firm sold $22.8 billion and $16.3 billion, respectively, of loans and lending-related commitments.

The following table presents the change in the nonaccrual loan portfolio for the years ended December 31, 2014 and 2013.

Wholesale nonaccrual loan activity

Year ended December 31, (in millions)	2014	2013
Beginning balance	**$ 1,044**	$ 1,717
Additions	**882**	1,293
Reductions:		
Paydowns and other	**756**	1,075
Gross charge-offs	**148**	241
Returned to performing status	**303**	279
Sales	**95**	371
Total reductions	**1,302**	1,966
Net reductions	**(420)**	(673)
Ending balance	**$ 624**	$ 1,044

The following table presents net charge-offs, which are defined as gross charge-offs less recoveries, for the years ended December 31, 2014 and 2013. The amounts in the table below do not include gains or losses from sales of nonaccrual loans.

Wholesale net charge-offs

Year ended December 31, (in millions, except ratios)	2014	2013
Loans – reported		
Average loans retained	**$ 316,060**	$ 307,340
Gross charge-offs	**151**	241
Gross recoveries	**(139)**	(225)
Net charge-offs	**12**	16
Net charge-off rate	**–%**	0.01%

Receivables from customers

Receivables from customers primarily represent margin loans to prime and retail brokerage clients that are collateralized through a pledge of assets maintained in clients' brokerage accounts that are subject to daily minimum collateral requirements. In the event that the collateral value decreases, a maintenance margin call is made to the client to provide additional collateral into the account. If additional collateral is not provided by the client, the client's position may be liquidated by the Firm to meet the minimum collateral requirements.

Lending-related commitments

The Firm uses lending-related financial instruments, such as commitments (including revolving credit facilities) and guarantees, to meet the financing needs of its customers. The contractual amounts of these financial instruments represent the maximum possible credit risk should the counterparties draw down on these commitments or the Firm fulfills its obligations under these guarantees, and the counterparties subsequently fail to perform according to the terms of these contracts.

In the Firm's view, the total contractual amount of these wholesale lending-related commitments is not representative of the Firm's actual future credit exposure or funding requirements. In determining the amount of credit risk exposure the Firm has to wholesale lending-related commitments, which is used as the basis for allocating credit risk capital to these commitments, the Firm has established a "loan-equivalent" amount for each commitment; this amount represents the portion of the unused commitment or other contingent exposure that is expected, based on average portfolio historical experience, to become drawn upon in an event of a default by an obligor. The loan-equivalent amount of the Firm's lending-related commitments was $229.6 billion and $218.9 billion as of December 31, 2014 and 2013, respectively.

Clearing services

The Firm provides clearing services for clients entering into securities and derivative transactions. Through the provision of these services the Firm is exposed to the risk of non-performance by its clients and may be required to share in losses incurred by central counterparties ("CCPs"). Where possible, the Firm seeks to mitigate its credit risk to its clients through the collection of adequate margin at inception and throughout the life of the transactions and can also cease provision of clearing services if clients do not adhere to their obligations under the clearing agreement. For further discussion of Clearing services, see Note 29.

Derivative contracts

In the normal course of business, the Firm uses derivative instruments predominantly for market-making activities. Derivatives enable customers to manage exposures to fluctuations in interest rates, currencies and other markets. The Firm also uses derivative instruments to manage its own credit exposure. The nature of the counterparty and the settlement mechanism of the derivative affect the credit risk to which the Firm is exposed. For OTC derivatives the Firm is exposed to the credit risk of the derivative counterparty. For exchange-traded derivatives ("ETD") such as futures and options, and "cleared" over-the-counter ("OTC-cleared") derivatives, the Firm is generally exposed to the credit risk of the relevant CCP. Where possible, the Firm seeks to mitigate its credit risk exposures arising from derivative transactions through the use of legally enforceable master netting arrangements and collateral agreements. For further discussion of derivative contracts, counterparties and settlement types, see Note 6.

The following table summarizes the net derivative receivables for the periods presented.

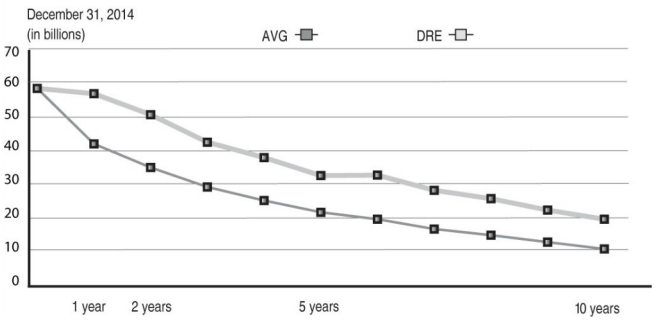
Derivative receivables

December 31, (in millions)	2014	2013
Interest rate	$ 33,725	$ 25,782
Credit derivatives	1,838	1,516
Foreign exchange	21,253	16,790
Equity	8,177	12,227
Commodity	13,982	9,444
Total, net of cash collateral	78,975	65,759
Liquid securities and other cash collateral held against derivative receivables	(19,604)	(14,435)
Total, net of all collateral	$ 59,371	$ 51,324

Derivative receivables reported on the Consolidated balance sheets were $79.0 billion and $65.8 billion at December 31, 2014 and 2013, respectively. These amounts represent the fair value of the derivative contracts, after giving effect to legally enforceable master netting agreements and cash collateral held by the Firm. However, in management's view, the appropriate measure of current credit risk should also take into consideration additional liquid securities (primarily U.S. government and agency securities and other G7 government bonds) and other cash collateral held by the Firm aggregating $19.6 billion and $14.4 billion at December 31, 2014 and 2013, respectively, that may be used as security when the fair value of the client's exposure is in the Firm's favor.

In addition to the collateral described in the preceding paragraph, the Firm also holds additional collateral (primarily: cash; G7 government securities; other liquid government-agency and guaranteed securities; and corporate debt and equity securities) delivered by clients at the initiation of transactions, as well as collateral related to contracts that have a non-daily call frequency and collateral that the Firm has agreed to return but has not yet settled as of the reporting date. Although this collateral does not reduce the balances and is not included in the table above, it is available as security against potential exposure that could arise should the fair value of the client's derivative transactions move in the Firm's favor. As of December 31, 2014 and 2013, the Firm held $48.6 billion and $50.8 billion, respectively, of this additional collateral. The prior period amount has been revised to conform with the current period presentation. The derivative receivables fair value, net of all collateral, also does not include other credit enhancements, such as letters of credit. For additional information on the Firm's use of collateral agreements, see Note 6.

While useful as a current view of credit exposure, the net fair value of the derivative receivables does not capture the potential future variability of that credit exposure. To capture the potential future variability of credit exposure, the Firm calculates, on a client-by-client basis, three measures of potential derivatives-related credit loss: Peak, Derivative Risk Equivalent ("DRE"), and Average exposure ("AVG"). These measures all incorporate netting and collateral benefits, where applicable.



Peak exposure to a counterparty is an extreme measure of exposure calculated at a 97.5% confidence level. DRE exposure is a measure that expresses the risk of derivative exposure on a basis intended to be equivalent to the risk of loan exposures. The measurement is done by equating the unexpected loss in a derivative counterparty exposure (which takes into consideration both the loss volatility and the credit rating of the counterparty) with the unexpected loss in a loan exposure (which takes into consideration only the credit rating of the counterparty). DRE is a less extreme measure of potential credit loss than Peak and is the primary measure used by the Firm for credit approval of derivative transactions.

Finally, AVG is a measure of the expected fair value of the Firm's derivative receivables at future time periods, including the benefit of collateral. AVG exposure over the total life of the derivative contract is used as the primary metric for pricing purposes and is used to calculate credit capital and the CVA, as further described below. The three year AVG exposure was $37.5 billion and $35.4 billion at December 31, 2014 and 2013, respectively, compared with derivative receivables, net of all collateral, of $59.4 billion and $51.3 billion at December 31, 2014 and 2013, respectively.

The fair value of the Firm's derivative receivables incorporates an adjustment, the CVA, to reflect the credit quality of counterparties. The CVA is based on the Firm's AVG to a counterparty and the counterparty's credit spread in the credit derivatives market. The primary components of changes in CVA are credit spreads, new deal activity or unwinds, and changes in the underlying market environment. The Firm believes that active risk management is essential to controlling the dynamic credit risk in the derivatives portfolio. In addition, the Firm's risk management process takes into consideration the potential impact of wrong-way risk, which is broadly defined as the potential for increased correlation between the Firm's exposure to a counterparty (AVG) and the counterparty's credit quality. Many factors may influence the nature and magnitude of these correlations over time. To the extent that these correlations are identified, the Firm may adjust the CVA associated with that counterparty's AVG. The Firm risk manages exposure to changes in CVA by entering into credit derivative transactions, as well as interest rate, foreign exchange, equity and commodity derivative transactions.

The accompanying graph shows exposure profiles to the Firm's current derivatives portfolio over the next 10 years as calculated by the DRE and AVG metrics. The two measures generally show that exposure will decline after the first year, if no new trades are added to the portfolio.

Exposure profile of derivatives measures

The following table summarizes the ratings profile by derivative counterparty of the Firm's derivative receivables, including credit derivatives, net of other liquid securities collateral, for the dates indicated. The ratings scale is based on the Firm's internal ratings, which generally correspond to the ratings as defined by S&P and Moody's.

Ratings profile of derivative receivables

Rating equivalent	**2014**		2013[a]	
December 31, (in millions, except ratios)	Exposure net of all collateral	% of exposure net of all collateral	Exposure net of all collateral	% of exposure net of all collateral
AAA/Aaa to AA-/Aa3	**$ 19,202**	**32%**	$ 12,953	25%
A+/A1 to A-/A3	**13,940**	**24**	12,930	25
BBB+/Baa1 to BBB-/Baa3	**19,008**	**32**	15,220	30
BB+/Ba1 to B-/B3	**6,384**	**11**	6,806	13
CCC+/Caa1 and below	**837**	**1**	3,415	7
Total	**$ 59,371**	**100%**	$ 51,324	100%

(a) The prior period amounts have been revised to conform with the current period presentation.

As previously noted, the Firm uses collateral agreements to mitigate counterparty credit risk. The percentage of the Firm's derivatives transactions subject to collateral agreements – excluding foreign exchange spot trades, which are not typically covered by collateral agreements due to their short maturity – was 88% as of December 31, 2014, largely unchanged compared with 86% as of December 31, 2013.

Credit derivatives

The Firm uses credit derivatives for two primary purposes: first, in its capacity as a market-maker; and second, as an end-user, to manage the Firm's own credit risk associated with various exposures. For a detailed description of credit derivatives, see Credit derivatives in Note 6.

Credit portfolio management activities

Included in the Firm's end-user activities are credit derivatives used to mitigate the credit risk associated with traditional lending activities (loans and unfunded commitments) and derivatives counterparty exposure in the Firm's wholesale businesses (collectively, "credit portfolio management" activities). Information on credit portfolio management activities is provided in the table below. For further information on derivatives used in credit portfolio management activities, see Credit derivatives in Note 6.

The Firm also uses credit derivatives as an end-user to manage other exposures, including credit risk arising from certain securities held in the Firm's market-making businesses. These credit derivatives are not included in credit portfolio management activities; for further information on these credit derivatives as well as credit derivatives used in the Firm's capacity as a market maker in credit derivatives, see Credit derivatives in Note 6.

Credit derivatives used in credit portfolio management activities

	Notional amount of protection purchased and sold [a]	
December 31, (in millions)	**2014**	2013
Credit derivatives used to manage:		
Loans and lending-related commitments	**$ 2,047**	$ 2,764
Derivative receivables	**24,656**	25,328
Total net protection purchased	**26,703**	28,092
Total net protection sold	**–**	96
Credit portfolio management derivatives notional, net	**$ 26,703**	$ 27,996

(a) Amounts are presented net, considering the Firm's net protection purchased or sold with respect to each underlying reference entity or index.

The credit derivatives used in credit portfolio management activities do not qualify for hedge accounting under U.S. GAAP; these derivatives are reported at fair value, with gains and losses recognized in principal transactions revenue. In contrast, the loans and lending-related commitments being risk-managed are accounted for on an accrual basis. This asymmetry in accounting treatment, between loans and lending-related commitments and the credit derivatives used in credit portfolio management activities, causes earnings volatility that is not representative, in the Firm's view, of the true changes in value of the Firm's overall credit exposure.

The effectiveness of the Firm's credit default swap ("CDS") protection as a hedge of the Firm's exposures may vary depending on a number of factors, including the named reference entity (i.e., the Firm may experience losses on specific exposures that are different than the named reference entities in the purchased CDS); the contractual terms of the CDS (which may have a defined credit event that does not align with an actual loss realized by the Firm); and the maturity of the Firm's CDS protection (which in some cases may be shorter than the Firm's exposures). However, the Firm generally seeks to purchase credit protection with a maturity date that is the same or similar to the maturity date of the exposure for which the protection was purchased, and remaining differences in maturity are actively monitored and managed by the Firm.

ALLOWANCE FOR CREDIT LOSSES

JPMorgan Chase's allowance for loan losses covers both the consumer (primarily scored) portfolio and wholesale (risk-rated) portfolio. The allowance represents management's estimate of probable credit losses inherent in the Firm's loan portfolio. Management also determines an allowance for wholesale and certain consumer lending-related commitments.

The allowance for loan losses includes an asset-specific component, a formula-based component, and a component related to PCI loans. For a further discussion of the components of the allowance for credit losses and related management judgments, see Critical Accounting Estimates Used by the Firm on pages 161–165 and Note 15.

At least quarterly, the allowance for credit losses is reviewed by the Chief Risk Officer, the Chief Financial Officer and the Controller of the Firm, and discussed with the DRPC and Audit Committees of the Board of Directors of the Firm. As of December 31, 2014, JPMorgan Chase deemed the allowance for credit losses to be appropriate and sufficient to absorb probable credit losses inherent in the portfolio.

The allowance for credit losses was $14.8 billion at December 31, 2014, a decrease of $2.2 billion from $17.0 billion at December 31, 2013.

The consumer, excluding credit card, allowance for loan losses reflected a reduction from December 31, 2013, primarily due to the continued improvement in home prices and delinquencies in the residential real estate portfolio and the run-off of the student loan portfolio. For additional information about delinquencies and nonaccrual loans in the consumer, excluding credit card, loan portfolio, see Consumer Credit Portfolio on pages 113–119 and Note 14.

The credit card allowance for loan losses reflected a reduction from December 31, 2013, primarily related to a decrease in the asset-specific allowance resulting from increased granularity of the impairment estimates and lower balances related to credit card loans modified in TDRs. For additional information about delinquencies in the credit card loan portfolio, see Consumer Credit Portfolio on pages 113–119 and Note 14.

The wholesale allowance for credit losses decreased from December 31, 2013, reflecting a continued favorable credit environment as evidenced by low charge-off rates, and declining nonaccrual balances and other portfolio activity.

Summary of changes in the allowance for credit losses

Year ended December 31, (in millions, except ratios)	2014 Consumer, excluding credit card	2014 Credit card	2014 Wholesale	2014 Total	2013 Consumer, excluding credit card	2013 Credit card	2013 Wholesale	2013 Total

Allowance for loan losses to retained nonaccrual loans excluding credit card	**58**	**NM**	**617**	**106**	57	NM	489	100
Net charge-off rates	**0.55%**	**2.75%**	**–%**	**0.70%**	0.82%	3.14%	0.01%	0.87%

Note: In the table above, the financial measures which exclude the impact of PCI loans are non-GAAP financial measures. For additional information, see Explanation and Reconciliation of the Firm's Use of Non-GAAP Financial Measures on pages 77–78.

(a) Write-offs of PCI loans are recorded against the allowance for loan losses when actual losses for a pool exceed estimated losses that were recorded as purchase accounting adjustments at the time of acquisition. A write-off of a PCI loan is recognized when the underlying loan is removed from a pool (e.g., upon liquidation). During the fourth quarter of 2014, the Firm recorded a $291 million adjustment to reduce the PCI allowance and the recorded investment in the Firm's PCI loan portfolio, primarily reflecting the cumulative effect of interest forgiveness modifications. This adjustment had no impact to the Firm's Consolidated statements of income.

(b) Includes risk-rated loans that have been placed on nonaccrual status and loans that have been modified in a TDR.

(c) The allowance for lending-related commitments is reported in other liabilities on the Consolidated balance sheets.

(d) The Firm's policy is generally to exempt credit card loans from being placed on nonaccrual status as permitted by regulatory guidance.

Provision for credit losses

For the year ended December 31, 2014, the provision for credit losses was $3.1 billion, compared with $225 million for the year ended December 31, 2013.

The increase in consumer, excluding credit card, provision for credit losses for the year ended December 31, 2014 reflected a $904 million reduction in the allowance for loan losses, as noted above in the Allowance for Credit Losses discussion, which was lower than the $3.8 billion reduction in the prior year. The lower allowance reduction was partially offset by lower net charge-offs in 2014.

The increase in credit card provision for credit losses for the year ended December 31, 2014 reflected a $350 million reduction in the allowance for loan losses, as noted above in the Allowance for Credit Losses discussion, which was lower than the $1.7 billion reduction in the prior year. The lower allowance reduction was partially offset by lower net charge-offs in 2014.

The wholesale provision for credit losses for the year ended December 31, 2014 reflected a continued favorable credit environment as evidenced by low charge-off rates, and declining nonaccrual balances and other portfolio activity.

For further information on the provision for credit losses, see the Consolidated Results of Operations on pages 68–71.

Year ended December 31,	Provision for loan losses			Provision for lending-related commitments			Total provision for credit losses		
(in millions)	**2014**	2013	2012	**2014**	2013	2012	**2014**	2013	2012

Market risk is the potential for adverse changes in the value of the Firm's assets and liabilities resulting from changes in market variables such as interest rates, foreign exchange rates, equity prices, commodity prices, implied volatilities or credit spreads.

Market risk management

Market Risk is an independent risk management function that identifies and monitors market risks throughout the Firm and defines market risk policies and procedures. The Market Risk function reports to the Firm's CRO.

Market Risk seeks to control risk, facilitate efficient risk/return decisions, reduce volatility in operating performance and provide transparency into the Firm's market risk profile for senior management, the Board of Directors and regulators. Market Risk is responsible for the following functions:

- Establishment of a market risk policy framework
- Independent measurement, monitoring and control of line of business and firmwide market risk
- Definition, approval and monitoring of limits
- Performance of stress testing and qualitative risk assessments

Risk identification and classification

Each line of business is responsible for the management of the market risks within its units. The independent risk management group responsible for overseeing each line of business is charged with ensuring that all material market risks are appropriately identified, measured, monitored and managed in accordance with the risk policy framework set out by Market Risk.

Risk measurement

Tools used to measure risk

Because no single measure can reflect all aspects of market risk, the Firm uses various metrics, both statistical and nonstatistical, including:

- VaR
- Economic-value stress testing
- Nonstatistical risk measures
- Loss advisories
- Profit and loss drawdowns
- Earnings-at-risk

Risk monitoring and control

Market risk is controlled primarily through a series of limits set in the context of the market environment and business strategy. In setting limits, the Firm takes into consideration factors such as market volatility, product liquidity and accommodation of client business and management experience. The Firm maintains different levels of limits. Corporate level limits include VaR and stress limits. Similarly, line of business limits include VaR and stress limits and may be supplemented by loss advisories, nonstatistical measurements and profit and loss drawdowns. Limits may also be set within the lines of business, as well at the portfolio or legal entity level.

Limits are set by Market Risk and are regularly reviewed and updated as appropriate, with any changes approved by lines of business management and Market Risk. Senior management, including the Firm's CEO and CRO, are responsible for reviewing and approving certain of these risk limits on an ongoing basis. All limits that have not been reviewed within specified time periods by Market Risk are escalated to senior management. The lines of business are responsible for adhering to established limits against which exposures are monitored and reported.

Limit breaches are required to be reported in a timely manner by Risk Management to limit approvers, Market Risk and senior management. In the event of a breach, Market Risk consults with Firm senior management and lines of business senior management to determine the appropriate course of action required to return to compliance, which may include a reduction in risk in order to remedy the breach. Certain Firm or line of business-level limits that have been breached for three business days or longer, or by more than 30%, are escalated to senior management and the Firmwide Risk Committee.

The following table summarizes by LOB the predominant business activities that give rise to market risk, and the market risk management tools utilized to manage those risks; CB is not presented in the table below as it does not give rise to significant market risk.

Risk identification and classification for business activities

LOB	Predominant business activities and related market risks	Positions included in Risk Management VaR	Positions included in other risk measures *(Not included in Risk Management VaR)*
CIB	• Makes markets and services clients across fixed income, foreign exchange, equities and commodities • Market risk arising from a potential decline in net income as a result of changes in market prices; e.g. rates and credit spreads	• Market risk[(a)] related to: • Trading assets/liabilities - debt and equity instruments, and derivatives, including hedges of the retained loan portfolio and CVA • Certain securities purchased under resale agreements and securities borrowed • Certain securities loaned or sold under repurchase agreements • Structured notes • Derivative CVA	• Principal investing activities • Retained loan portfolio • Deposits • DVA and FVA on derivatives and structured notes
CCB	• Originates and services mortgage loans • Complex, non-linear interest rate and basis risk • Non-linear risk arises primarily from prepayment options embedded in mortgages and changes in the probability of newly originated mortgage commitments actually closing • Basis risk results from differences in the relative movements of the rate indices underlying mortgage exposure and other interest rates	*Mortgage Banking* • Mortgage pipeline loans, classified as derivatives • Warehouse loans, classified as trading assets - debt instruments • MSRs • Hedges of the MSRs and loans, classified as derivatives • Interest-only securities, classified as trading assets and related hedges classified as derivatives	• Retained loan portfolio • Deposits
Corporate	• Manages the Firm's liquidity, funding, structural interest rate and foreign exchange risks arising from activities undertaken by the Firm's four major reportable business segments	*Treasury and CIO* • Primarily derivative positions measured at fair value through earnings, classified as derivatives	• Private equity and other related investments • Investment securities portfolio and related hedges • Deposits • Long-term debt and related hedges
AM	• Market risk arising from the Firm's initial capital investments in products, such as mutual funds, managed by AM	• Initial seed capital investments and related hedges classified as derivatives	• Capital invested alongside third-party investors, typically in privately distributed collective vehicles managed by AM (i.e., co-Investments) • Retained loan portfolio • Deposits

(a) Market risk for derivatives is generally measured after consideration of DVA and FVA on those positions; market risk for structured notes is generally measured without consideration to such adjustments.

Value-at-risk

JPMorgan Chase utilizes VaR, a statistical risk measure, to estimate the potential loss from adverse market moves in a normal market environment. The Firm has a single overarching VaR model framework used for calculating Risk Management VaR and Regulatory VaR.

The framework is employed across the Firm using historical simulation based on data for the previous 12 months. The framework's approach assumes that historical changes in market values are representative of the distribution of potential outcomes in the immediate future. The Firm believes the use of Risk Management VaR provides a stable measure of VaR that closely aligns to the day-to-day risk management decisions made by the lines of business and provides necessary/appropriate information to respond to risk events on a daily basis.

Risk Management VaR is calculated assuming a one-day holding period and an expected tail-loss methodology which approximates a 95% confidence level. This means that, assuming current changes in market values are consistent with the historical changes used in the simulation, the Firm would expect to incur VaR "band breaks," defined as losses greater than that predicted by VaR estimates, not more than five times every 100 trading days. The number of VaR band breaks observed can differ from the statistically expected number of band breaks if the current level of market volatility is materially different from the level of market volatility during the twelve months of historical data used in the VaR calculation.

Underlying the overall VaR model framework are individual VaR models that simulate historical market returns for individual products and/or risk factors. To capture material market risks as part of the Firm's risk management framework, comprehensive VaR model calculations are performed daily for businesses whose activities give rise to market risk. These VaR models are granular and incorporate numerous risk factors and inputs to simulate daily changes in market values over the historical period; inputs are selected based on the risk profile of each portfolio as sensitivities and historical time series used to generate daily market values may be different across product types or risk management systems. The VaR model results across all portfolios are aggregated at the Firm level.

Data sources used in VaR models may be the same as those used for financial statement valuations. However, in cases where market prices are not observable, or where proxies are used in VaR historical time series, the sources may differ. In addition, the daily market data used in VaR models may be different than the independent third-party data collected for VCG price testing in their monthly valuation process (see Valuation process in Note 3 for further information on the Firm's valuation process). VaR model calculations require daily data and a consistent source for valuation and therefore it is not practical to use the data collected in the VCG monthly valuation process.

VaR provides a consistent framework to measure risk profiles and levels of diversification across product types and is used for aggregating risks across businesses and monitoring limits. These VaR results are reported to senior management, the Board of Directors and regulators.

Since VaR is based on historical data, it is an imperfect measure of market risk exposure and potential losses, and it is not used to estimate the impact of stressed market conditions or to manage any impact from potential stress events. In addition, based on their reliance on available historical data, limited time horizons, and other factors, VaR measures are inherently limited in their ability to measure certain risks and to predict losses, particularly those associated with market illiquidity and sudden or severe shifts in market conditions. The Firm therefore considers other measures in addition to VaR, such as stress testing, to capture and manage its market risk positions.

In addition, for certain products, specific risk parameters are not captured in VaR due to the lack of inherent liquidity and availability of appropriate historical data. The Firm uses proxies to estimate the VaR for these and other products when daily time series are not available. It is likely that using an actual price-based time series for these products, if available, would affect the VaR results presented.

The Firm uses alternative methods to capture and measure those risk parameters that are not otherwise captured in VaR, including economic-value stress testing and nonstatistical measures as described further below.

The Firm's VaR model calculations are periodically evaluated and enhanced in response to changes in the composition of the Firm's portfolios, changes in market conditions, improvements in the Firm's modeling techniques and other factors. Such changes will also affect historical comparisons of VaR results. Model changes go through a review and approval process by the Model Review Group prior to implementation into the operating environment. For further information, see Model risk on page 139.

Separately, the Firm calculates a daily aggregated VaR in accordance with regulatory rules ("Regulatory VaR"), which is used to derive the Firm's regulatory VaR-based capital requirements under Basel III. This Regulatory VaR model framework currently assumes a ten business-day holding period and an expected tail loss methodology which approximates a 99% confidence level. Regulatory VaR is applied to "covered" positions as defined by Basel III, which may be different than the positions included in the Firm's Risk Management VaR. For example, credit derivative hedges of accrual loans are included in the Firm's Risk Management VaR, while Regulatory VaR excludes these credit derivative hedges. In addition, in contrast to the Firm's Risk Management VaR, Regulatory VaR currently excludes the diversification benefit for certain VaR models.

For additional information on Regulatory VaR and the other components of market risk regulatory capital (e.g. VaR-based measure, stressed VaR-based measure and the respective backtesting) for the Firm, see JPMorgan Chase's Basel III Pillar 3 Regulatory Capital Disclosures reports, which are available on the Firm's website (http://investor.shareholder.com/jpmorganchase/basel.cfm).

The table below shows the results of the Firm's Risk Management VaR measure using a 95% confidence level.

Total VaR

As of or for the year ended December 31,	2014			2013			At December 31,	
(in millions)	Avg.	Min	Max	Avg.	Min	Max	**2014**	2013
CIB trading VaR by risk type								
Fixed income	**$ 34**	**$ 23**	**$ 45**	$ 43	$ 23	$ 62	**$ 34**	$ 36
Foreign exchange	**8**	**4**	**25**	7	5	11	**8**	9
Equities	**15**	**10**	**23**	13	9	21	**22**	14
Commodities and other	**8**	**5**	**14**	14	11	18	**6**	13
Diversification benefit to CIB trading VaR	**(30)** [a]	**NM** [b]	**NM** [b]	(34) [a]	NM [b]	NM [b]	**(32)** [a]	(36) [a]
CIB trading VaR	**35**	**24**	**49**	43	21	66	**38**	36
Credit portfolio VaR	**13**	**8**	**18**	13	10	18	**16**	11
Diversification benefit to CIB VaR	**(8)** [a]	**NM** [b]	**NM** [b]	(9) [a]	NM [b]	NM [b]	**(9)** [a]	(5) [a]
CIB VaR	**40**	**29**	**56**	47	25	74	**45**	42
Mortgage Banking VaR	**7**	**2**	**28**	12	4	24	**3**	5
Treasury and CIO VaR [c]	**4**	**3**	**6**	6	3	14	**4**	4
Asset Management VaR	**3**	**2**	**4**	4	2	5	**2**	3
Diversification benefit to other VaR	**(4)** [a]	**NM** [b]	**NM** [b]	(8) [a]	NM [b]	NM [b]	**(3)** [a]	(5) [a]
Other VaR	**10**	**5**	**27**	14	6	28	**6**	7
Diversification benefit to CIB and other VaR	**(7)** [a]	**NM** [b]	**NM** [b]	(9) [a]	NM [b]	NM [b]	**(5)** [a]	(5) [a]
Total VaR	**$ 43**	**$ 30**	**$ 70**	$ 52	$ 29	$ 87	**$ 46**	$ 44

(a) Average portfolio VaR and period-end portfolio VaR were less than the sum of the VaR of the components described above, which is due to portfolio diversification. The diversification effect reflects the fact that risks are not perfectly correlated.
(b) Designated as not meaningful ("NM"), because the minimum and maximum may occur on different days for distinct risk components, and hence it is not meaningful to compute a portfolio-diversification effect.
(c) The Treasury and CIO VaR includes Treasury VaR as of the third quarter of 2013.

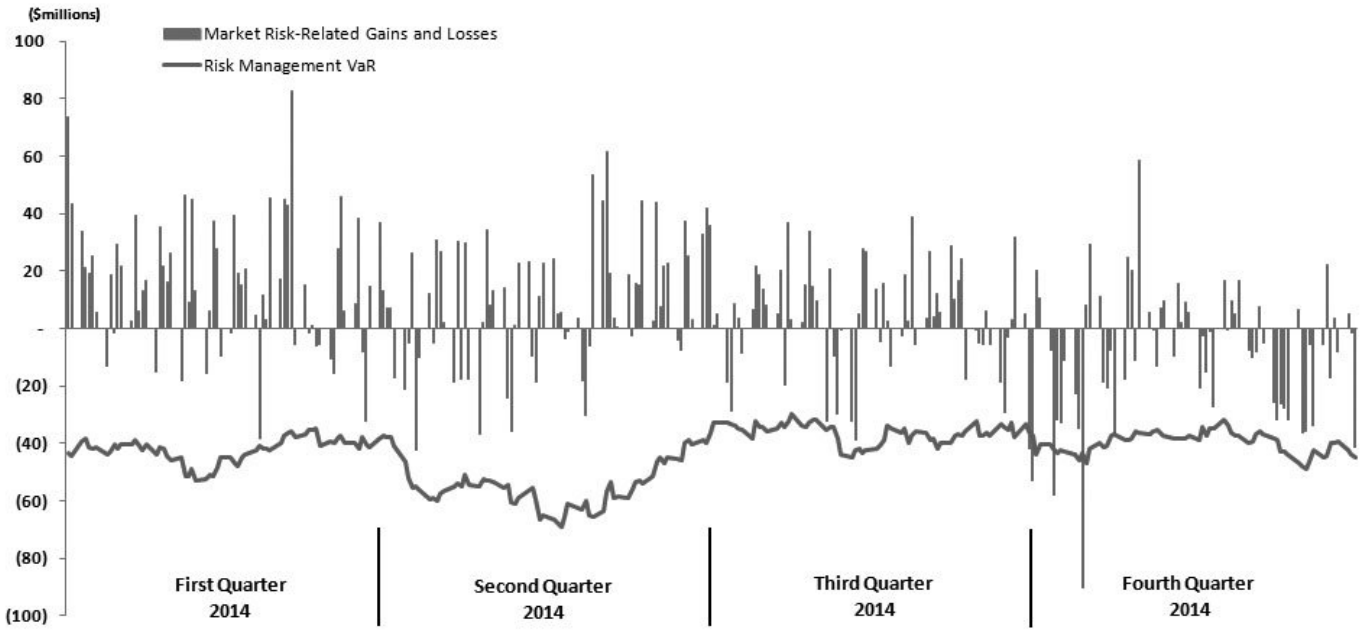
As presented in the table above, average Total VaR and average CIB VaR decreased during 2014, compared with 2013. The decrease in Total VaR was primarily due to risk reduction in CIB and Mortgage Banking as well as lower volatility in the historical one-year look-back period during 2014 versus 2013.

Average CIB trading VaR decreased during 2014 primarily due to lower VaR in Fixed Income (driven by unwinding of risk and redemptions in the synthetic credit portfolio, and lower volatility in the historical one-year look-back period) and to reduced risk positions in commodities.

Average Mortgage Banking VaR decreased during 2014 as a result of reduced exposures due to lower loan originations.

Average Treasury and CIO VaR decreased during 2014, compared with 2013. The decrease predominantly reflected the unwind and roll-off of certain marked to market positions, and lower market volatility in the historical one-year look-back period.

The Firm's average Total VaR diversification benefit was $7 million or 16% of the sum for 2014, compared with $9 million or 17% of the sum for 2013. In general, over the course of the year, VaR exposure can vary significantly as positions change, market volatility fluctuates and diversification benefits change.



VaR back-testing

The Firm evaluates the effectiveness of its VaR methodology by back-testing, which compares the daily Risk Management VaR results with the daily gains and losses recognized on market-risk related revenue.

The Firm's definition of market risk-related gains and losses is consistent with the definition used by the banking regulators under Basel III. Under this definition market risk-related gains and losses are defined as: profits and losses on the Firm's Risk Management positions, excluding fees, commissions, certain valuation adjustments (e.g., liquidity and DVA), net interest income, and gains and losses arising from intraday trading.

The following chart compares the daily market risk-related gains and losses on the Firm's Risk Management positions for the year ended December 31, 2014. As the chart presents market risk-related gains and losses related to those positions included in the Firm's Risk Management VaR, the results in the table below differ from the results of backtesting disclosed in the Market Risk section of the Firm's Basel III Pillar 3 Regulatory Capital Disclosures reports, which are based on Regulatory VaR applied to covered positions. The chart shows that for the year ended December 31, 2014, the Firm observed five VaR band breaks and posted gains on 157 of the 260 days in this period.

Daily Market Risk-Related Gains and Losses vs. Risk Management VaR (1-day, 95% Confidence level)
Year ended December 31, 2014

Other risk measures

Economic-value stress testing

Along with VaR, stress testing is an important tool in measuring and controlling risk. While VaR reflects the risk of loss due to adverse changes in markets using recent historical market behavior as an indicator of losses, stress testing is intended to capture the Firm's exposure to unlikely but plausible events in abnormal markets. The Firm runs weekly stress tests on market-related risks across the lines of business using multiple scenarios that assume significant changes in risk factors such as credit spreads, equity prices, interest rates, currency rates or commodity prices. The framework uses a grid-based approach, which calculates multiple magnitudes of stress for both market rallies and market sell-offs for each risk factor. Stress-test results, trends and explanations based on current market risk positions are reported to the Firm's senior management and to the lines of business to allow them to better understand the sensitivity of positions to certain defined events and to enable them to manage their risks with more transparency.

Stress scenarios are defined and reviewed by Market Risk, and significant changes are reviewed by the relevant Risk Committees. While most of the scenarios estimate losses based on significant market moves, such as an equity market collapse or credit crisis, the Firm also develops scenarios to quantify risk arising from specific portfolios or concentrations of risks, which attempt to capture certain idiosyncratic market movements. Scenarios may be redefined on an ongoing basis to reflect current market conditions. Ad hoc scenarios are run in response to specific market events or concerns. The Firm's stress testing framework is utilized in calculating results under scenarios mandated by the Federal Reserve's CCAR and ICAAP ("Internal Capital Adequacy Assessment Process") processes.

Nonstatistical risk measures

Nonstatistical risk measures include sensitivities to variables used to value positions, such as credit spread sensitivities, interest rate basis point values and market values. These measures provide granular information on the Firm's market risk exposure. They are aggregated by line-of-business and by risk type, and are used for tactical control and monitoring limits.

Loss advisories and profit and loss drawdowns

Loss advisories and profit and loss drawdowns are tools used to highlight trading losses above certain levels of risk tolerance. Profit and loss drawdowns are defined as the decline in net profit and loss since the year-to-date peak revenue level.

Earnings-at-risk

The VaR and stress-test measures described above illustrate the total economic sensitivity of the Firm's Consolidated balance sheets to changes in market variables. The effect of interest rate exposure on the Firm's reported net income is also important as interest rate risk represents one of the Firm's significant market risks. Interest rate risk arises not only from trading activities but also from the Firm's traditional banking activities, which include extension of loans and credit facilities, taking deposits and issuing debt. The Firm evaluates its structural interest rate risk exposure through earnings-at-risk, which measures the extent to which changes in interest rates will affect the Firm's core net interest income (see page 78 for further discussion of core net interest income) and interest rate-sensitive fees. Earnings-at-risk excludes the impact of trading activities and MSR, as these sensitivities are captured under VaR.

The CIO, Treasury and Corporate ("CTC") Risk Committee establishes the Firm's structural interest rate risk policies and market risk limits, which are subject to approval by the Risk Policy Committee of the Firm's Board of Directors. CIO, working in partnership with the lines of business, calculates the Firm's structural interest rate risk profile and reviews it with senior management including the CTC Risk Committee and the Firm's ALCO. In addition, oversight of structural interest rate risk is managed through a dedicated risk function reporting to the CTC CRO. This risk function is responsible for providing independent oversight and governance around assumptions; and establishing and monitoring limits for structural interest rate risk.

Structural interest rate risk can occur due to a variety of factors, including:

- Differences in the timing among the maturity or repricing of assets, liabilities and off-balance sheet instruments.
- Differences in the amounts of assets, liabilities and off-balance sheet instruments that are repricing at the same time.
- Differences in the amounts by which short-term and long-term market interest rates change (for example, changes in the slope of the yield curve).
- The impact of changes in the maturity of various assets, liabilities or off-balance sheet instruments as interest rates change.

The Firm manages interest rate exposure related to its assets and liabilities on a consolidated, corporate-wide basis. Business units transfer their interest rate risk to Treasury through a transfer-pricing system, which takes into account the elements of interest rate exposure that can be risk-managed in financial markets. These elements include asset and liability balances and contractual rates of interest, contractual principal payment schedules, expected prepayment experience, interest rate reset dates and maturities, rate indices used for repricing, and any interest rate ceilings or floors for adjustable rate products. All transfer-pricing assumptions are dynamically reviewed.

The Firm manages structural interest rate risk generally through its investment securities portfolio and related derivatives.

The Firm conducts simulations of changes in structural interest rate-sensitive revenue under a variety of interest rate scenarios. Earnings-at-risk scenarios estimate the potential change in this revenue, and the corresponding impact to the Firm's pretax core net interest income, over the following 12 months, utilizing multiple assumptions as described below. These scenarios highlight exposures to changes in interest rates, pricing sensitivities on deposits, optionality and changes in product mix. The scenarios include forecasted balance sheet changes, as well as prepayment and reinvestment behavior. Mortgage prepayment assumptions are based on current interest rates compared with underlying contractual rates, the time since origination, and other factors which are updated periodically based on historical experience.

JPMorgan Chase's 12-month pretax core net interest income sensitivity profiles.
(Excludes the impact of trading activities and MSRs)

	Instantaneous change in rates			
(in millions)	+200 bps	+100 bps	-100 bps	-200 bps
December 31, 2014	**$ 4,667**	**$ 2,864**	**NM** [(a)]	**NM** [(a)]

(a) Downward 100- and 200-basis-points parallel shocks result in a federal funds target rate of zero and negative three- and six-month U.S. Treasury rates. The earnings-at-risk results of such a low-probability scenario are not meaningful.

The Firm's benefit to rising rates is largely a result of reinvesting at higher yields and assets re-pricing at a faster pace than deposits.

Additionally, another interest rate scenario used by the Firm — involving a steeper yield curve with long-term rates rising by 100 basis points and short-term rates staying at current levels — results in a 12-month pretax core net interest income benefit of $566 million. The increase in core net interest income under this scenario reflects the Firm reinvesting at the higher long-term rates, with funding costs remaining unchanged.

COUNTRY RISK MANAGEMENT

Country risk is the risk that a sovereign event or action alters the value or terms of contractual obligations of obligors, counterparties and issuers or adversely affects markets related to a particular country. The Firm has a comprehensive country risk management framework for assessing country risks, determining risk tolerance, and measuring and monitoring direct country exposures in the Firm. The Country Risk Management group is responsible for developing guidelines and policies for managing country risk in both emerging and developed countries. The Country Risk Management group actively monitors the various portfolios giving rise to country risk to ensure the Firm's country risk exposures are diversified and that exposure levels are appropriate given the Firm's strategy and risk tolerance relative to a country.

Country risk organization

The Country Risk Management group is an independent risk management function which works in close partnership with other risk functions to identify and monitor country risk within the Firm. The Firmwide Risk Executive for Country Risk reports to the Firm's CRO.

Country Risk Management is responsible for the following functions:

- Developing guidelines and policies consistent with a comprehensive country risk framework
- Assigning sovereign ratings and assessing country risks
- Measuring and monitoring country risk exposure and stress across the Firm
- Managing country limits and reporting trends and limit breaches to senior management
- Developing surveillance tools for early identification of potential country risk concerns
- Providing country risk scenario analysis

Country risk identification and measurement

The Firm is exposed to country risk through its lending, investing, and market-making activities, whether cross-border or locally funded. Country exposure includes activity with both government and private-sector entities in a country. Under the Firm's internal country risk management approach, country exposure is reported based on the country where the majority of the assets of the obligor, counterparty, issuer or guarantor are located or where the majority of its revenue is derived, which may be different than the domicile (legal residence) or country of incorporation of the obligor, counterparty, issuer or guarantor. Country exposures are generally measured by considering the Firm's risk to an immediate default of the counterparty or obligor, with zero recovery. Assumptions are sometimes required in determining the measurement and allocation of country exposure, particularly in the case of certain tranched credit derivatives. Different measurement approaches or assumptions would affect the amount of reported country exposure.

Under the Firm's internal country risk measurement framework:

- Lending exposures are measured at the total committed amount (funded and unfunded), net of the allowance for credit losses and cash and marketable securities collateral received.
- Securities financing exposures are measured at their receivable balance, net of collateral received.
- Debt and equity securities are measured at the fair value of all positions, including both long and short positions.
- Counterparty exposure on derivative receivables is measured at the derivative's fair value, net of the fair value of the related collateral. Counterparty exposure on derivatives can change significantly because of market movements.
- Credit derivatives protection purchased and sold is reported based on the underlying reference entity and is measured at the notional amount of protection purchased or sold, net of the fair value of the recognized derivative receivable or payable. Credit derivatives protection purchased and sold in the Firm's market-making activities is measured on a net basis, as such activities often result in selling and purchasing protection related to the same underlying reference entity; this reflects the manner in which the Firm manages these exposures.

The Firm also has indirect exposures to country risk (for example, related to the collateral received on securities financing receivables or related to client clearing activities). These indirect exposures are managed in the normal course of business through the Firm's credit, market, and operational risk governance, rather than through Country Risk Management.

The Firm's internal country risk reporting differs from the reporting provided under the Federal Financial Institutions Examination Council ("FFIEC") bank regulatory requirements as there are significant differences in reporting methodology. For further information on the FFIEC's reporting methodology, see Cross-border outstandings on page 325.

Country risk stress testing

The country risk stress framework aims to identify potential losses arising from a country crisis by capturing the impact of large asset price movements in a country based on market shocks combined with counterparty specific assumptions. Country Risk Management periodically defines and runs ad hoc stress scenarios for individual countries in response to specific market events and sector performance concerns.

Country risk monitoring and control

The Country Risk Management Group establishes guidelines for sovereign ratings reviews and limit management. Country stress and nominal exposures are measured under a comprehensive country limit framework. Country ratings and limits activity are actively monitored and reported on a regular basis. Country limit requirements are reviewed and approved by senior management as often as necessary, but at least annually. In addition, the Country Risk Management group uses surveillance tools for early identification of potential country risk concerns, such as signaling models and ratings indicators.

Country risk reporting

The following table presents the Firm's top 20 exposures by country (excluding the U.S.) as of December 31, 2014. The selection of countries is based solely on the Firm's largest total exposures by country, based on the Firm's internal country risk management approach, and does not represent the Firm's view of any actual or potentially adverse credit conditions. Country exposures may fluctuate from period-to-period due to normal client activity and market flows.

Top 20 country exposures

	December 31, 2014			
(in billions)	Lending[a]	Trading and investing[b][c]	Other[d]	Total exposure
United Kingdom	$ 25.8	$ 31.1	$ 1.4	$ 58.3
Germany	23.5	21.6	0.2	45.3
Netherlands	6.1	19.2	2.1	27.4
France	11.4	15.2	0.2	26.8
China	10.8	7.0	0.5	18.3
Japan	11.5	5.5	0.4	17.4
Australia	6.4	10.8	–	17.2
Canada	12.4	4.2	0.3	16.9
Switzerland	9.3	1.7	2.3	13.3
India	5.8	6.2	0.6	12.6
Brazil	6.3	6.3	–	12.6
Korea	5.1	5.2	0.1	10.4
Spain	3.4	3.5	–	6.9
Hong Kong	1.7	4.1	1.0	6.8
Italy	2.4	3.4	0.2	6.0
Belgium	3.1	2.6	0.1	5.8
Taiwan	2.2	3.5	–	5.7
Singapore	3.1	1.9	0.5	5.5
Mexico	2.5	3.0	–	5.5
Luxembourg	3.5	0.3	1.1	4.9

(a) Lending includes loans and accrued interest receivable, net of collateral and the allowance for loan losses, deposits with banks, acceptances, other monetary assets, issued letters of credit net of participations, and undrawn commitments to extend credit. Excludes intra-day and operating exposures, such as from settlement and clearing activities.
(b) Includes market-making inventory, securities held in AFS accounts, counterparty exposure on derivative and securities financings net of collateral and hedging.
(c) Includes single-name and index and tranched credit derivatives for which one or more of the underlying reference entities is in a country listed in the above table.
(d) Includes capital invested in local entities and physical commodity inventory.

The Firm's country exposure to Russia was $4.2 billion at December 31, 2014. The Firm is closely monitoring events in the region, and assessing the impact of falling oil prices, a weakening currency, ongoing sanctions and potential countermeasures such as capital controls. The Firm is also focused on possible contagion effects, via trade, financial or political channels.

Model risk

Model risk is the potential for adverse consequences from decisions based on incorrect or misused model outputs and reports.

The Firm uses models, for many purposes, but primarily for the measurement, monitoring and management of risk positions. Valuation models are employed by the Firm to value certain financial instruments that cannot otherwise be valued using quoted prices. These valuation models may also be employed as inputs to risk management models, including VaR and economic stress models. The Firm also makes use of models for a number of other purposes, including the calculation of regulatory capital requirements and estimating the allowance for credit losses.

Models are owned by various functions within the Firm based on the specific purposes of such models. For example, VaR models and certain regulatory capital models are owned by the line of business-aligned risk management functions. Owners of models are responsible for the development, implementation and testing of their models, as well as referral of models to the Model Risk function (within the Model Risk and Development unit) for review and approval. Once models have been approved, model owners are responsible for the maintenance of a robust operating environment and must monitor and evaluate the performance of the models on an ongoing basis. Model owners may seek to enhance models in response to changes in the portfolios and for changes in product and market developments, as well as to capture improvements in available modeling techniques and systems capabilities.

The Model Risk review and governance functions are independent of the model owners and they review and approve a wide range of models, including risk management, valuation and regulatory capital models used by the Firm. The Model Risk review and governance functions are part of the Firm's Model Risk and Development unit, and the Firmwide Model Risk and Development Executive reports to the Firm's CRO.

Models are tiered based on an internal standard according to their complexity, the exposure associated with the model and the Firm's reliance on the model. This tiering is subject to the approval of the Model Risk function. A model review conducted by the Model Risk function considers the model's suitability for the specific uses to which it will be put. The factors considered in reviewing a model include whether the model accurately reflects the characteristics of the product and its significant risks, the selection and reliability of model inputs, consistency with models for similar products, the appropriateness of any model-related adjustments, and sensitivity to input parameters and assumptions that cannot be observed from the market. When reviewing a model, the Model Risk function analyzes and challenges the model methodology and the reasonableness of model assumptions and may perform or require additional testing, including back-testing of model outcomes. Model reviews are approved by the appropriate level of management within the Model Risk function based on the relevant tier of the model.

Under the Firm's model risk policy, new models, as well as material changes to existing models, are reviewed and approved by the Model Risk function prior to implementation in the operating environment.

In the event that the Model Risk function does not approve a model, the model owner is required to remediate the model within a time period agreed upon with the Model Risk function. The model owner is also required to resubmit the model for review to the Model Risk function and to take appropriate actions to mitigate the model risk if it is to be used in the interim. These actions will depend on the model and may include, for example, limitation of trading activity. The Firm may also implement other appropriate risk measurement tools to augment the model that is subject to remediation. In certain circumstances, exceptions to the Firm's model risk policy may be granted by the head of the Model Risk function to allow a model to be used prior to review or approval.

For a summary of valuations based on models, see Critical Accounting Estimates Used by the Firm and Note 3.

PRINCIPAL RISK MANAGEMENT

Principal investments are predominantly privately-held financial assets and instruments, typically representing an ownership or junior capital position, that have unique risks due to their illiquidity or for which there is less observable market or valuation data. Such investing activities are typically intended to be held over extended investment periods and, accordingly, the Firm has no expectation for short-term gain with respect to these investments. Principal investments cover multiple asset classes and are made either in stand-alone investing businesses or as part of a broader business platform. Asset classes include tax-oriented investments including affordable housing and alternative energy investments, private equity, and mezzanine/junior debt investments.

The Firm's principal investments are managed under various lines of business and are captured within the respective LOB's financial results. The Firm's approach to managing principal risk is consistent with the Firm's general risk governance structure. A Firmwide risk policy framework exists for all principal investing activities. All investments are approved by investment committees that include executives who are independent from the investing businesses. The Firm's independent control functions are responsible for reviewing the appropriateness of the carrying value of principal investments in accordance with relevant policies. Targeted levels for total and annual investments are established in order to manage the overall size of the portfolios. Industry, geographic, and position level concentration limits are in place intended to ensure diversification of the portfolios. The Firm also conducts stress testing on these portfolios using specific scenarios that estimate losses based on significant market moves and/or other risk events.

The Firm has taken steps to reduce its exposure to principal investments, selling portions of Corporate's One Equity Partners private equity portfolio and the CIB's Global Special Opportunities Group equity and mezzanine financing portfolio.

Operational risk is the risk of loss resulting from inadequate or failed processes or systems or due to external events that are neither market nor credit-related. Operational risk is inherent in the Firm's activities and can manifest itself in various ways, including fraudulent acts, business interruptions, inappropriate behavior of employees, failure to comply with applicable laws and regulations or failure of vendors to perform in accordance with their arrangements. These events could result in financial losses, litigation and regulatory fines, as well as other damage to the Firm. The goal is to keep operational risk at appropriate levels, in light of the Firm's financial strength, the characteristics of its businesses, the markets in which it operates, and the competitive and regulatory environment to which it is subject.

Overview

To monitor and control operational risk, the Firm maintains an overall Operational Risk Management Framework ("ORMF") which comprises governance oversight, risk assessment, capital measurement, and reporting and monitoring. The ORMF is intended to enable the Firm to function with a sound and well-controlled operational environment.

Risk Management is responsible for prescribing the ORMF to the lines of business and corporate functions and to provide independent oversight of its implementation. In 2014, Operational Risk Officers ("OROs") were appointed across each line of business and corporate function to provide this independent oversight.

The lines of business and corporate functions are responsible for implementing the ORMF. The Firmwide Oversight and Control Group, comprised of dedicated control officers within each of the lines of business and corporate functional areas, as well as a central oversight team, is responsible for day to day review and monitoring of ORMF execution.

Operational risk management framework

The components of the Operational Risk Management Framework are:

Oversight and governance

Control committees oversee the operational risks and control environment of the respective line of business, function or region. These committees escalate operational risk issues to their respective line of business, function or regional Risk committee and also escalate significant risk issues (and/or risk issues with potential Firmwide impact) to the Firmwide Control Committee ("FCC"). The FCC provides a monthly forum for reviewing and discussing Firmwide operational risk metrics and management, including existing and emerging issues, and reviews execution against the ORMF. It escalates significant issues to the Firmwide Risk Committee, as appropriate. For additional information on the Firmwide Control Committee, see Risk Governance on pages 106–109.

Risk self-assessment

In order to evaluate and monitor operational risk, the lines of business and functions utilize the Firm's standard risk and control self-assessment ("RCSA") process and supporting architecture. The RCSA process requires management to identify material inherent operational risks, assess the design and operating effectiveness of relevant controls in place to mitigate such risks, and evaluate residual risk. Action plans are developed for control issues that are identified, and businesses are held accountable for tracking and resolving issues on a timely basis. Commencing in 2015, Risk Management will perform sample independent challenge of the RCSA program.

Risk reporting and monitoring

Operational risk management and control reports provide information, including actual operational loss levels, self-assessment results and the status of issue resolution to the lines of business and senior management. The purpose of these reports is to enable management to maintain operational risk at appropriate levels within each line of business, to escalate issues and to provide consistent data aggregation across the Firm's businesses and functions.

The Firm has a process for capturing, tracking and monitoring operational risk events. The Firm analyzes errors and losses and identifies trends. Such analysis enables identification of the causes associated with risk events faced by the lines of business.

Capital measurement

Operational risk capital is measured primarily using a statistical model based on the Loss Distribution Approach ("LDA"). The operational risk capital model uses actual losses (internal and external to the Firm), an inventory of material forward-looking potential loss scenarios and adjustments to reflect changes in the quality of the control environment in determining Firmwide operational risk capital. This methodology is designed to comply with the Advanced Measurement rules under the Basel framework.

The Firm's capital methodology incorporates four required elements of the Advanced Measurement Approach ("AMA"):

- Internal losses,
- External losses,
- Scenario analysis, and
- Business environment and internal control factors ("BEICF").

The primary component of the operational risk capital estimate is the result of a statistical model, the LDA, which simulates the frequency and severity of future operational risk losses based on historical data. The LDA model is used to estimate an aggregate operational loss over a one-year time horizon, at a 99.9% confidence level. The LDA model incorporates actual operational losses in the quarter following the period in which those losses were realized,

and the calculation generally continues to reflect such losses even after the issues or business activities giving rise to the losses have been remediated or reduced.

The LDA is supplemented by both management's view of plausible tail risk, which is captured as part of the Scenario Analysis process, and evaluation of key LOB internal control metrics (BEICF). The Firm may further supplement such analysis to incorporate management judgment and feedback from its bank regulators. For information related to operational risk RWA, see Regulatory capital on pages 146–153.

Audit alignment
Internal Audit utilizes a risk-based program of audit coverage to provide an independent assessment of the design and effectiveness of key controls over the Firm's operations, regulatory compliance and reporting. This includes reviewing the operational risk framework, the effectiveness of the RCSA process, and the loss data-collection and reporting activities.

Insurance
One of the ways operational loss is mitigated is through insurance maintained by the Firm. The Firm purchases insurance to be in compliance with local laws and regulations (e.g., workers compensation), as well as to serve other needs (e.g., property loss and public liability). Insurance may also be required by third parties with whom the Firm does business. The insurance purchased is reviewed and approved by senior management.

Cybersecurity
The Firm devotes significant resources to maintain and regularly update its systems and processes that are designed to protect the security of the Firm's computer systems, software, networks and other technology assets against attempts by unauthorized parties to obtain access to confidential information, destroy data, disrupt or degrade service, sabotage systems or cause other damage. In 2014, the Firm spent more than $250 million, and had approximately 1,000 people focused on cybersecurity efforts, and these efforts are expected to grow significantly over the coming years.

Third parties with which the Firm does business or that facilitate the Firm's business activities (e.g., vendors, exchanges, clearing houses, central depositories, and financial intermediaries) could also be sources of cybersecurity risk to the Firm, including with respect to breakdowns or failures of their systems, misconduct by the employees of such parties, or cyberattacks which could affect their ability to deliver a product or service to the Firm or result in lost or compromised information of the Firm or its clients. In addition, customers with which or whom the Firm does business can also be sources of cybersecurity risk to the Firm, particularly when their activities and systems are beyond the Firm's own security and control systems. Customers will generally be responsible for losses incurred due to their own failure to maintain the security of their own systems and processes.

The Firm and several other U.S. financial institutions have experienced significant distributed denial-of-service attacks from technically sophisticated and well-resourced unauthorized parties which are intended to disrupt online banking services. The Firm and its clients are also regularly targeted by unauthorized parties using malicious code and viruses.

On September 10, 2014, the Firm disclosed that a cyberattack against the Firm had occurred. On October 2, 2014, the Firm updated that information and disclosed that, while user contact information (name, address, phone number and email address) and internal JPMorgan Chase information relating to such users had been compromised, there had been no evidence that account information for such affected customers -- account numbers, passwords, user IDs, dates of birth or Social Security numbers -- was compromised during the attack. The Firm continues to vigilantly monitor the situation. In addition, as of the October 2, 2014 announcement, as well as of the date of this Annual Report, the Firm has not seen any unusual customer fraud related to this incident. The Firm is cooperating with government agencies in connection with their investigation of the incident. The Firm also notified its customers that they were not liable for unauthorized transactions in their accounts attributable to this attack that they promptly alerted the Firm about.

The Firm has established, and continues to establish, defenses on an ongoing basis to mitigate this and other possible future attacks. The cyberattacks experienced to date have not resulted in any material disruption to the Firm's operations or had a material adverse effect on the Firm's results of operations. The Board of Directors and the Audit Committee are regularly apprised regarding the cybersecurity policies and practices of the Firm as well as the Firm's efforts regarding this attack and other significant cybersecurity events.

Cybersecurity attacks, like the one experienced by the Firm, highlight the need for continued and increased cooperation among businesses and the government, and the Firm continues to work with the appropriate government and law enforcement agencies and other businesses, including the Firm's third-party service providers, to continue to enhance defenses and improve resiliency to cybersecurity threats.

Business and Technology Resiliency
JPMorgan Chase's global resiliency and crisis management program is intended to ensure that the Firm has the ability to recover its critical business functions and supporting assets (i.e., staff, technology and facilities) in the event of a business interruption, and to remain in compliance with global laws and regulations as they relate to resiliency risk. The program includes corporate governance, awareness and training, as well as strategic and tactical initiatives aimed to ensure that risks are properly identified, assessed, and managed.

The Firm has established comprehensive tracking and reporting of resiliency plans in order to proactively anticipate and manage various potential disruptive circumstances such as severe weather, technology and communications outages, flooding, mass transit shutdowns and terrorist threats, among others. The resiliency measures utilized by the Firm include backup infrastructure for data centers, a geographically distributed workforce, dedicated recovery facilities, providing technological capabilities to support remote work capacity for displaced staff and accommodation of employees at alternate locations. JPMorgan Chase continues to coordinate its global resiliency program across the Firm and mitigate business continuity risks by reviewing and testing recovery procedures. The strength and proficiency of the Firm's global resiliency program has played an integral role in maintaining the Firm's business operations during and quickly after various events in 2014 that have resulted in business interruptions, such as severe winter weather in the U.S., tropical storms in the Philippines, and geopolitical events in Brazil and Hong Kong.

LEGAL RISK MANAGEMENT

Legal risk is the risk of loss or imposition of damages, fines, penalties or other liability arising from failure to comply with a contractual obligation or to comply with laws or regulations to which the Firm is subject.

Overview
In addition to providing legal services and advice to the Firm, and communicating and helping the lines business adjust to the legal and regulatory changes they face, including the heightened scrutiny and expectations of the Firm's regulators, the global Legal function is responsible for working with the businesses and corporate functions to fully understand and assess their adherence to laws and regulations, as well as potential exposures on key litigation and transactional matters. In particular, Legal assists Oversight & Control, Risk, Finance, Compliance and Internal Audit in their efforts to ensure compliance with all applicable laws and regulations and the Firm's corporate standards for doing business. The Firm's lawyers also advise the Firm on potential legal exposures on key litigation and transactional matters, and perform a significant defense and advocacy role by defending the Firm against claims and potential claims and, when needed, pursuing claims against others.

Governance and Oversight
The Firm's General Counsel reports to the CEO and is a member of the Operating Committee, the Firmwide Risk Committee and the Firmwide Control Committee. The General Counsel's leadership team includes a General Counsel for each line of business, the heads of the Litigation and Corporate & Regulatory practices, as well as the Firm's Corporate Secretary. Each region (e.g., Latin America, Asia Pacific) has a General Counsel who is responsible for managing legal risk across all lines of business and functions in the region.

Legal works with various committees (including new business initiative and reputation risk committees) and the Firm's businesses to protect the Firm's reputation beyond any particular legal requirements. In addition, the Firm's Conflicts Office examines the Firm's wholesale transactions that may have the potential to create conflicts of interest for the Firm.

COMPLIANCE RISK MANAGEMENT

Compliance risk is the risk fines or sanctions or of financial damage or loss due to the failure to comply with laws, rules, and regulations.

Overview
Global Compliance Risk Management's ("Compliance") role is to identify, measure, monitor, and report on and provide oversight regarding compliance risks arising from business operations, and provide guidance on how the Firm can mitigate these risks.

While each line of business is accountable for managing its compliance risk, the Firm's Compliance teams work closely with the Operating Committee and senior management to provide independent review and oversight of the lines of business operations, with a focus on compliance with applicable global, regional and local laws and regulations. In recent years, the Firm has experienced heightened scrutiny by its regulators of its compliance with regulations, and with respect to its controls and operational processes. The Firm expects such regulatory scrutiny will continue.

Governance and Oversight
Compliance operates independent of the lines of business, and is led by the Chief Compliance Officer ("CCO") who reports directly to the Firm's COO. The Firm maintains oversight and coordination in its Compliance Risk Management practices globally through ongoing dialog and reporting between the lines of business, Regional Chief Compliance Officers and the CCO regarding significant compliance and regulatory management matters, as well as implementation of the Compliance program across the lines of business and Regions.

The Firm has in place a Code of Conduct (the "Code"), and each employee is given annual training in respect of the Code and is required annually to affirm his or her compliance with the Code. The Code sets forth the Firm's core principles and fundamental values, including that no employee should ever sacrifice integrity - or give the impression that he or she has - even if one thinks it would help the Firm's business. The Code requires prompt reporting of any known or suspected violation of the Code, any internal Firm policy, or any law or regulation applicable to the Firm's business. It also requires the reporting of any illegal conduct, or conduct that violates the underlying principles of the Code, by any of the Firm's customers, suppliers, contract workers, business partners, or agents. Specified employees are specially trained and designated as "code specialists" who act as a resource to employees on Code of Conduct matters. In addition, concerns may be reported anonymously and the Firm prohibits retaliation against employees for the good faith reporting of any actual or suspected violations of the Code.

FIDUCIARY RISK MANAGEMENT

Fiduciary risk is the risk of a failure to exercise the applicable high standard of care, to act in the best interests of clients or to treat clients fairly, as required under applicable law or regulation.

Depending on the fiduciary activity and capacity in which the Firm is acting, federal and state statutes and regulations, and common law require the Firm to adhere to specific duties in which the Firm must always place the client's interests above its own.

Fiduciary risk governance
Fiduciary Risk Management is the responsibility of the relevant LOB risk and/or other governance committees. Senior business, legal, risk and compliance managers, who have particular responsibility for fiduciary matters, work with the relevant LOB risk committees with the goal of ensuring that businesses providing investment, trusts and estates, or other fiduciary products or services that give rise to fiduciary duties to clients perform at the appropriate standard relative to their fiduciary relationship with a client. Each LOB and its respective risk and/or other governance committees are responsible for the oversight and management of the fiduciary risks in their businesses. Of particular focus are the policies and practices that address a business's responsibilities to a client, including performance and service requirements and expectations; client suitability determinations; and disclosure obligations and communications. In this way, the relevant LOB risk and/or other governance committees provide oversight of the Firm's efforts to monitor, measure and control the performance and delivery of the products or services to clients that may give rise to such fiduciary duties, as well as the Firm's fiduciary responsibilities with respect to the Firm's employee benefit plans.

The Firmwide Fiduciary Risk Committee ("FFRC") is a forum for risk matters related to the Firm's fiduciary activities and oversees the firmwide fiduciary risk governance framework. It supports the consistent identification and escalation of fiduciary risk matters by the relevant lines of business or corporate functions responsible for managing fiduciary activities. The committee escalates significant issues to the Firmwide Risk Committee and any other committee considered appropriate.

REPUTATION RISK MANAGEMENT

Reputation risk is the risk that an action, transaction, investment or event will reduce the trust that clients, shareholders, employees or the broader public has in the Firm's integrity or competence. Maintaining the Firm's reputation is the responsibility of each individual employee of the Firm. The Firm's Reputation Risk policy explicitly vests each employee with the responsibility to consider the reputation of the Firm when engaging in any activity. Since the types of events that could harm the Firm's reputation are so varied across the Firm's lines of business, each line of business has a separate reputation risk governance infrastructure in place, which comprises three key elements: clear, documented escalation criteria appropriate to the business footprint; a designated primary discussion forum – in most cases, one or more dedicated reputation risk committees; and a list of designated contacts. Line of business reputation risk governance is overseen by a Firmwide Reputation Risk Governance function, which provides oversight of the governance infrastructure and process to support the consistent identification, escalation, management and reporting of reputation risk issues firmwide.

CAPITAL MANAGEMENT

A strong capital position is essential to the Firm's business strategy and competitive position. The Firm's capital strategy focuses on long-term stability, which enables the Firm to build and invest in market-leading businesses, even in a highly stressed environment. Prior to making any decisions on future business activities, senior management considers the implications on the Firm's capital. In addition to considering the Firm's earnings outlook, senior management evaluates all sources and uses of capital with a view to preserving the Firm's capital strength. Maintaining a strong balance sheet to manage through economic volatility is considered a strategic imperative by the Firm's Board of Directors, CEO and Operating Committee. The Firm's balance sheet philosophy focuses on risk-adjusted returns, strong capital and reserves, and robust liquidity.

The Firm's capital management objectives are to hold capital sufficient to:

- Cover all material risks underlying the Firm's business activities;
- Maintain "well-capitalized" status under regulatory requirements;
- Maintain debt ratings that enable the Firm to optimize its funding mix and liquidity sources while minimizing costs;
- Retain flexibility to take advantage of future investment opportunities;
- Maintain sufficient capital in order to continue to build and invest in its businesses through the cycle and in stressed environments; and
- Distribute excess capital to shareholders while balancing other stated objectives.

These objectives are achieved through ongoing monitoring of the Firm's capital position, regular stress testing, and a capital governance framework. Capital management is intended to be flexible in order to react to a range of potential events. JPMorgan Chase has firmwide and LOB processes for ongoing monitoring and active management of its capital position.

Capital strategy and governance

The Firm's CEO, in conjunction with the Board and its subcommittees, establish principles and guidelines for capital planning, capital issuance, usage and distributions, and establish capital targets for the level and composition of capital in both business-as-usual and highly stressed environments.

The Firm's senior management recognizes the importance of a capital management function that supports strategic decision-making. The Firm has established the Capital Governance Committee and the Regulatory Capital Management Office ("RCMO") as key components in support of this objective. The Capital Governance Committee is responsible for reviewing the Firm's Capital Management Policy and the principles underlying capital issuance and distribution alternatives. The Committee is also responsible for governing the capital adequacy assessment process, including overall design, assumptions and risk streams, and ensuring that capital stress test programs are designed to adequately capture the idiosyncratic risks across the Firm's businesses. RCMO, which reports to the Firm's CFO, is responsible for reviewing, approving and monitoring the implementation of the Firm's capital policies and strategies, as well as its capital adequacy assessment process. The DRPC assesses the Firm's capital adequacy process and its components. This review determines the effectiveness of the capital adequacy process, the appropriateness of the risk tolerance levels, and the strength of the control infrastructure. For additional discussion on the DRPC, see Enterprise-wide Risk Management on pages 105–109.

Capital disciplines

In its capital management, the Firm uses three primary disciplines, which are further described below:

- *Regulatory capital*
- *Economic capital*
- *Line of business equity*

Regulatory capital

The Federal Reserve establishes capital requirements, including well-capitalized standards, for the consolidated financial holding company. The Office of the Comptroller of the Currency ("OCC") establishes similar capital requirements and standards for the Firm's national banks, including JPMorgan Chase Bank, N.A. and Chase Bank USA, N.A.

The U.S. capital requirements follow the Capital Accord of the Basel Committee, as amended from time to time. Prior to January 1, 2014, the Firm and its banking subsidiaries were subject to the capital requirements of Basel I and Basel 2.5. Effective January 1, 2014, the Firm became subject to Basel III (which incorporates Basel 2.5).

Basel III overview

Basel III, for U.S. bank holding companies and banks, revises, among other things, the definition of capital and introduces a new common equity Tier 1 capital ("CET1 capital") requirement; presents two comprehensive methodologies for calculating risk-weighted assets ("RWA"), a general (Standardized) approach, which replaces Basel I RWA ("Basel III Standardized") and an advanced approach, which replaces Basel II RWA ("Basel III Advanced"); and sets out minimum capital ratios and overall capital adequacy standards. Certain of the requirements of Basel III are subject to phase-in periods that began January 1, 2014 and continue through the end of 2018 ("Transitional period") as described below. Both Basel III Standardized and Basel III Advanced became effective commencing January 1, 2014 for large and internationally active U.S. bank holding companies and banks, including the Firm and its insured depository institution ("IDI") subsidiaries.

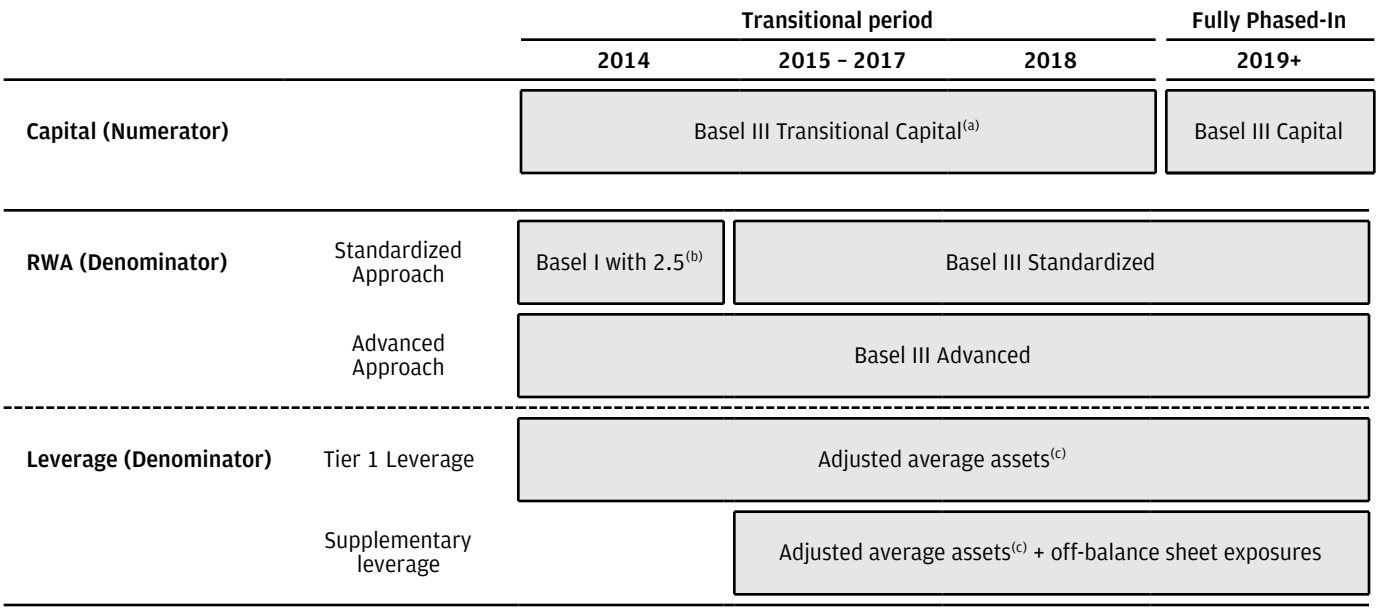
Prior to the implementation of Basel III Advanced, the Firm was required to complete a qualification period ("parallel run") during which it needed to demonstrate that it met the requirements of the rule to the satisfaction of its U.S. banking regulators. On February 21, 2014, the Federal Reserve and the OCC informed the Firm and its national bank subsidiaries that they had satisfactorily completed the parallel run requirements and were approved to calculate capital under Basel III Advanced, in addition to Basel III Standardized, as of April 1, 2014. In conjunction with its exit from the parallel run, the capital adequacy of the Firm and its national bank subsidiaries is evaluated against the Basel III approach (Standardized or Advanced) which results, for each quarter beginning with the second quarter of 2014, in the lower ratio (the "Collins Floor"), as required by the Collins Amendment of the Dodd-Frank Act.

Definition of capital

Basel III revises Basel I and II by narrowing the definition of capital and increasing the capital requirements for specific exposures. Under Basel III, CET1 capital predominantly includes common stockholders' equity (including capital for AOCI related to debt and equity securities classified as AFS as well as for defined benefit pension and other post-retirement employee benefit ("OPEB") plans), less certain deductions for goodwill, MSRs and deferred tax assets that arise from net operating loss ("NOL") and tax credit carryforwards. Tier 1 capital is predominantly comprised of CET1 capital as well as perpetual preferred stock. Tier 2 capital includes long-term debt qualifying as Tier 2 and qualifying allowance for credit losses. Total capital is Tier 1 capital plus Tier 2 capital. The revisions to CET1 capital, Tier 1 capital and Tier 2 capital are subject to phase-in periods that began January 1, 2014, and continue through the end of 2018, and during that period, CET1 capital, Tier 1 capital and Tier 2 capital represent Basel III Transitional capital.

Risk-weighted assets

Basel III establishes two comprehensive methodologies for calculating RWA (a Standardized approach and an Advanced approach) which include capital requirements for credit risk, market risk, and in the case of Basel III Advanced, also operational risk. Key differences in the calculation of credit risk RWA between the Standardized and Advanced approaches are that for Basel III Advanced, credit risk RWA is based on risk-sensitive approaches which largely rely on the use of internal credit models and parameters, whereas for Basel III Standardized, credit risk RWA is generally based on supervisory risk-weightings which vary primarily by counterparty type and asset class. Market risk RWA is calculated on a generally consistent basis between Basel III Standardized and Basel III Advanced, both of which incorporate the requirements set forth in Basel 2.5. In addition to the RWA calculated under these methodologies, the Firm may supplement such amounts to incorporate management judgment and feedback from its bank regulators.



Supplementary leverage ratio ("SLR")

Basel III also includes a requirement for Advanced Approach banking organizations, including the Firm, to calculate a SLR. The SLR, a non-GAAP financial measure, is defined as Tier 1 capital under Basel III divided by the Firm's total leverage exposure. Total leverage exposure is calculated by taking the Firm's total average on-balance sheet assets, less amounts permitted to be deducted for Tier 1 capital, and adding certain off-balance sheet exposures, such as undrawn commitments and derivatives potential future exposure.

On September 3, 2014, the U.S. banking regulators adopted a final rule for the calculation of the SLR. The U.S. final rule requires public disclosure of the SLR beginning with the first quarter of 2015, and also requires U.S. bank holding companies, including the Firm, to have a minimum SLR of at least 5% and IDI subsidiaries, including JPMorgan Chase Bank, N.A. and Chase Bank USA, N.A., to have a minimum SLR of at least 6%, both beginning January 1, 2018.

Capital ratios

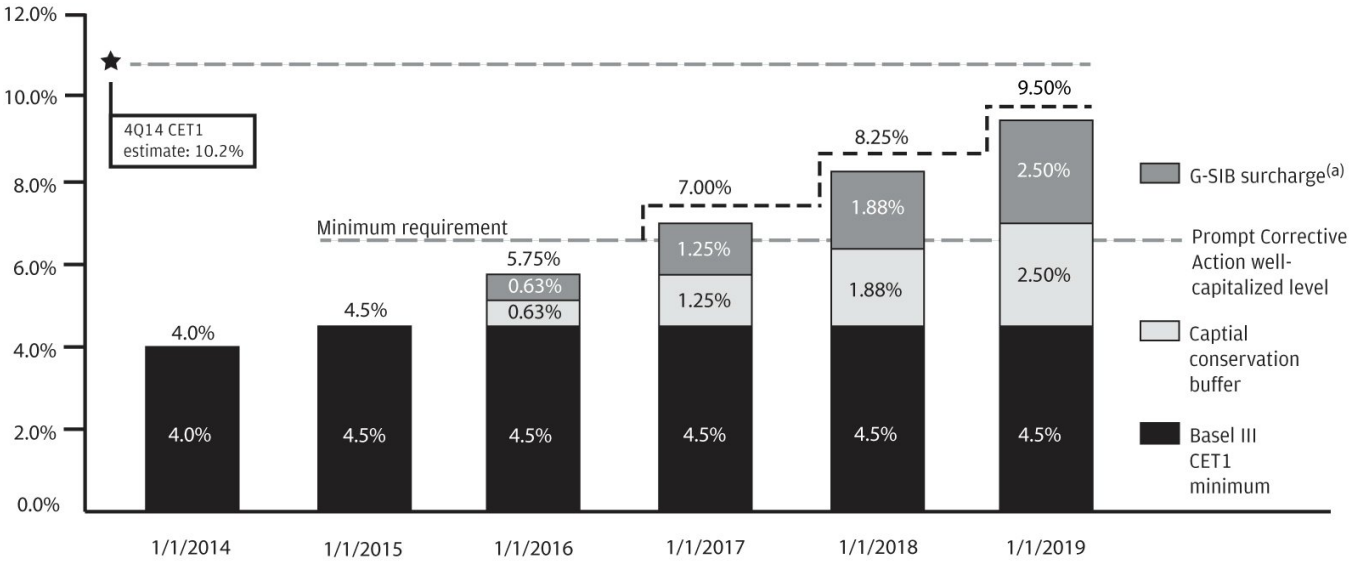
The basis to calculate the Firm's capital ratios (both risk-based and leverage) under Basel III during the transitional period and when fully phased-in are shown in the table below.

(a) Trust preferred securities ("TruPS") are being phased out from inclusion in Basel III capital commencing January 1, 2014, continuing through the end of 2021.
(b) Defined as Basel III Standardized Transitional for 2014. Beginning January 1, 2015, Basel III Standardized RWA is calculated under the Basel III definition of the Standardized Approach.
(c) Adjusted average assets, for purposes of calculating the leverage ratio and SLR, includes total quarterly average assets adjusted for unrealized gains/(losses) on securities, less deductions for disallowed goodwill and other intangible assets, investments in certain subsidiaries, and the total adjusted carrying value of nonfinancial equity investments that are subject to deductions from Tier 1 capital.

Risk-based capital regulatory minimums

The Basel III rules include minimum capital ratio requirements that are also subject to phase-in periods through January 1, 2019.

In addition to the regulatory minimum capital requirements, certain banking organizations, including the Firm, will be required to hold an additional 2.5% of CET1 capital to serve as a "capital conservation buffer." The capital conservation buffer is intended to be used to absorb potential losses in times of financial or economic stress; if not maintained, the Firm could be limited in the amount of capital that may be distributed, including dividends and common equity repurchases. The capital conservation buffer will be phased-in beginning January 1, 2016.



Moreover, G-SIBs will be required to maintain, in addition to the capital conservation buffer, further amounts of capital ranging from 1% to 2.5% across all tiers of regulatory capital. In November 2014, based upon data as of December 31, 2013, the Financial Stability Board ("FSB") indicated that certain G-SIBs, including the Firm, would be required to hold the additional 2.5% of capital; the requirement will be phased-in beginning January 1, 2016.

The Basel Committee has stated that G-SIBs could in the future be required to hold 3.5% or more of additional capital if their relative systemic importance were to increase. Currently, no G-SIB is required to hold more than the additional 2.5% of capital.

Consequently, based upon the final rules currently in effect, the minimum Basel III CET1 capital ratio requirement for the Firm is expected to be 9.5%, comprised of the minimum ratio of 4.5% plus the 2.5% capital conservation buffer and the 2.5% G-SIB requirement both beginning January 1, 2019.

Basel III also establishes a minimum 6.5% CET1 standard for the definition of "well capitalized" under the Prompt Corrective Action ("PCA") requirements of the FDIC Improvement Act ("FDICIA"). The CET1 standard is effective beginning with the first quarter of 2015.

The following chart presents the Basel III minimum CET1 capital ratio during the transitional periods and on a fully phased-in basis under the Basel III rules currently in effect. It is the Firm's current expectation that its Basel III CET1 ratio will exceed the regulatory minimums, both during the transition period and upon full implementation in 2019 and thereafter.

(a) G-SIB surcharge presented does not reflect the December 9, 2014, U.S. NPR.

On December 9, 2014, the Federal Reserve issued a Notice of Proposed Rulemaking ("NPR") that would establish a new capital surcharge across all tiers of regulatory capital for G-SIBs in the U.S., including the Firm. The Firm estimates its fully phased-in G-SIB surcharge (based upon data as of December 31, 2013) would be 4.5% under the NPR, compared to a fully phased-in G-SIB surcharge of 2.5% as estimated under the Basel III rules currently in effect.

Basel III Advanced Fully Phased-In

Based on the U.S. capital rules currently in effect, Basel III capital rules will become fully phased-in on January 1, 2019, at which point the Firm will continue to calculate its capital ratios under both the Basel III Standardized and Advanced Approaches, and the Firm will continue to have its capital adequacy evaluated against the approach that results in the lower ratio. While the Firm has recently imposed Basel III Standardized Fully Phased-In RWA limits on the lines of business in adapting its capital framework, the Firm currently expects to manage each of the businesses (including line of business equity allocations), as well as the corporate functions, primarily on a Basel III Advanced Fully Phased-In basis.

The Firm's capital, RWA and capital ratios that are presented under Basel III Advanced Fully Phased-In (and CET1 under Basel I as of December 31, 2013), are non-GAAP financial measures. However, such measures are used by bank regulators, investors and analysts to assess the Firm's capital position and to compare the Firm's capital to that of other financial services companies.

The Firm's estimates of its Basel III Advanced Fully Phased-In capital, RWA and capital ratios and of the Firm's, JPMorgan Chase Bank, N.A.'s, and Chase Bank USA, N.A.'s SLRs reflect management's current understanding of the U.S. Basel III rules based on the current published rules and on the application of such rules to the Firm's businesses as currently conducted. The actual impact on the Firm's capital ratios and SLR as of the effective date of the rules may differ from the Firm's current estimates depending on changes the Firm may make to its businesses in the future, further implementation guidance from the regulators, and regulatory approval of certain of the Firm's internal risk models (or, alternatively, regulatory disapproval of the Firm's internal risk models that have previously been conditionally approved).

The following table presents the estimated Basel III Advanced Fully Phased-In Capital ratios for JPMorgan Chase at December 31, 2014. Also included in the table are the regulatory minimum ratios currently expected to be in effect beginning January 1, 2019.

	Basel III Advanced Fully Phased-In		
	December 31, 2014	Fully phased-in minimum capital ratios[a]	Fully phased-in well-capitalized ratios[b]
Risk-based capital ratios:			
CET1 capital	**10.2%**	9.5%	6.5%
Tier 1 capital	**11.4**	11.0	8.0
Total capital	**12.8**	13.0	10.0
Leverage ratio:			
Tier 1	**7.5**	4.0	5.0
SLR	**5.6**	3.0	5.0

(a) Represents the minimum capital ratios applicable to the Firm under fully phased-in Basel III rules currently in effect.
(b) Represents the minimum Basel III Fully Phased-In capital ratios applicable to the Firm under the PCA requirements of FDICIA.

A reconciliation of total stockholders' equity to Basel III Advanced Fully Phased-In CET1 capital, Tier 1 capital and Total qualifying capital is presented in the table below.

Risk-based capital components and assets

	Basel III Advanced Fully Phased-In
(in millions)	December 31, 2014
Total stockholders' equity	**$ 232,065**
Less: Preferred stock	**20,063**
Common stockholders' equity	**212,002**
Less:	
Goodwill[(a)]	**44,925**
Other intangible assets[(a)]	**1,062**
Other CET1 capital adjustments	**1,163**
CET1 capital	**164,852**
Preferred stock	**20,063**
Less:	
Other Tier 1 adjustments	**5**
Total Tier 1 capital	**184,910**
Long-term debt and other instruments qualifying as Tier 2 capital	**17,504**
Qualifying allowance for credit losses	**4,266**
Other	**(86)**
Total Tier 2 capital	**21,684**
Total capital	**$ 206,594**
Credit risk RWA	**$ 1,040,087**
Market risk RWA	**179,200**
Operational risk RWA	**400,000**
Total RWA	**$ 1,619,287**
SLR leverage exposure	**$ 3,320,404**

(a) Goodwill and other intangible assets are net of any associated deferred tax liabilities.

Capital rollforward

The following table presents the changes in CET1 capital, Tier 1 capital and Tier 2 capital for the year ended December 31, 2014. Under Basel I CET1 represents Tier 1 common capital.

Year ended December 31, (in millions)	2014
Basel I CET1 capital at December 31, 2013	**$ 148,887**
Effect of rule changes[(a)]	**2,315**
Basel III Advanced Fully Phased-In CET1 capital at December 31, 2013	**151,202**
Net income applicable to common equity	**20,637**
Dividends declared on common stock	**(6,078)**
Net purchases of treasury stock	**(3,009)**
Changes in additional paid-in capital	**(558)**
Changes related to AOCI	**1,327**
Adjustment related to FVA/DVA	**580**
Other	**751**
Increase in CET1 capital	**13,650**
Basel III Advanced Fully Phased-In CET1 capital at December 31, 2014	**$ 164,852**
Basel I Tier 1 capital at December 31, 2013	**$ 165,663**
Effect of rule changes[(b)]	**(3,295)**
Basel III Advanced Fully Phased-In Tier 1 capital at December 31, 2013	**162,368**
Change in CET1 capital	**13,650**
Net issuance of noncumulative perpetual preferred stock	**8,905**
Other	**(13)**
Increase in Tier 1 capital	**22,542**
Basel III Advanced Fully Phased-In Tier 1 capital at December 31, 2014	**$ 184,910**
Basel I Tier 2 capital at December 31, 2013	**$ 33,623**
Effect of rule changes[(c)]	**(11,644)**
Basel III Advanced Fully Phased-In Tier 2 capital at December 31, 2013	**21,979**
Change in long-term debt and other instruments qualifying as Tier 2	**809**
Change in allowance for credit losses	**(1,063)**
Other	**(41)**
Decrease in Tier 2 capital	**(295)**
Basel III Advanced Fully Phased-In Tier 2 capital at December 31, 2014	**$ 21,684**
Basel III Advanced Fully Phased-In Total capital at December 31, 2014	**$ 206,594**

(a) Predominantly represents: (1) the addition of certain exposures, which were deducted from capital under Basel I, that are risk-weighted under Basel III; (2) adjustments related to AOCI for AFS securities and defined benefit pension and OPEB plans; and (3) a deduction for deferred tax assets related to NOL carryforwards.

(b) Predominantly represents the exclusion of TruPS from Tier 1 capital under Basel III.

(c) Predominantly represents a change in the calculation of qualifying allowance for credit losses under Basel III.

RWA rollforward

The following table presents changes in the components of RWA under Basel III Advanced Fully Phased-In for the year ended December 31, 2014. The amounts in the rollforward categories are estimates, based on the predominant driver of the change.

	Year ended December 31, (in millions)			
(in billions)	Credit risk RWA	Market risk RWA	Operational risk RWA	Total RWA
Basel I RWA at December 31, 2013	$1,223	$ 165	NA	$1,388
Effect of rule changes[a]	(168)	(4)	375	203
Basel III Advanced Fully Phased-In RWA at December 31, 2013	1,055	161	375	1,591
Model & data changes[b]	56	36	25	117
Portfolio runoff[c]	(22)	(22)	–	(44)
Movement in portfolio levels[d]	(49)	4	–	(45)
Changes in RWA	(15)	18	25	28
Basel III Advanced Fully Phased-In RWA at December 31, 2014	**$1,040**	**$ 179**	**$ 400**	**$1,619**

(a) Effect of rule changes refers to movements in levels of RWA as a result of changing to calculating RWA under the Basel III Advanced Fully Phased-In rules. See Risk-weighted assets on page 147 for additional information on the calculation of RWA under Basel III.

(b) Model & data changes refer to movements in levels of RWA as a result of revised methodologies and/or treatment per regulatory guidance (exclusive of rule changes).

(c) Portfolio runoff for credit risk RWA reflects lower loan balances in Mortgage Banking and reduced risk from position rolloffs in legacy portfolios, and for market risk RWA reflects reduced risk from position rolloffs in legacy portfolios.

(d) Movement in portfolio levels for credit risk RWA refers to changes in book size, composition, credit quality, and market movements; and for market risk RWA, refers to changes in position and market movements.

Basel III Transitional

Basel III Transitional capital requirements became effective on January 1, 2014, and will become fully phased-in on January 1, 2019. The following table presents a reconciliation of the Firm's Basel III Advanced Transitional capital and RWA to the Firm's estimated Basel III Advanced Fully Phased-In capital and RWA as of December 31, 2014.

December 31, 2014 (in millions)		
Basel III Advanced Transitional CET1 capital	**$**	**164,764**
AOCI phase-in[a]		**2,249**
CET1 capital deduction phased-in[b]		**(1,212)**
Intangibles deduction phase-in[c]		**(850)**
Other adjustments to CET1 capital[d]		**(99)**
Basel III Advanced Fully Phased-In CET1 capital	**$**	**164,852**
Basel III Advanced Transitional Additional Tier 1 capital	**$**	**21,868**
Non-qualifying instruments phase-out		**(2,670)**
Tier 1 capital deduction phased-out[b]		**1,212**
Other adjustments to Tier 1 capital[d]		**(352)**
Basel III Advanced Fully Phased-In Additional Tier 1 capital	**$**	**20,058**
Basel III Advanced Fully Phased-In Tier 1 capital	**$**	**184,910**
Basel III Advanced Transitional Tier 2 capital	**$**	**24,390**
Non-qualifying instruments phase-out		**(2,670)**
Other adjustments to Tier 2 capital[e]		**(36)**
Basel III Advanced Fully Phased-In Tier 2 capital	**$**	**21,684**
Basel III Advanced Fully Phased-In Total capital	**$**	**206,594**
Basel III Advanced Transitional RWA	**$**	**1,608,240**
Adjustment related to change in risk-weighting[f]		**11,047**
Basel III Advanced Fully Phased-In RWA	**$**	**1,619,287**

(a) Includes the remaining balance of AOCI related to AFS debt securities and defined benefit pension and OPEB plans that will qualify as Basel III CET1 capital upon full phase-in.

(b) Predominantly includes regulatory adjustments related to changes in FVA/DVA, as well as CET1 deductions for defined benefit pension plan assets and DTA related to net operating loss carryforwards.

(c) Relates to intangible assets, other than goodwill and MSRs, that are required to be deducted from CET1 capital upon full phase-in.

(d) Includes minority interest and the Firm's investments in its own CET1 capital instruments.

(e) Includes the Firm's investments in its own Tier 2 capital instruments and unrealized gains on AFS equity securities.

(f) Primarily relates to the risk-weighting of items not subject to capital deduction thresholds including MSRs.

The following table presents the regulatory capital ratios as of December 31 2014, under Basel III Standardized Transitional and Basel III Advanced Transitional. Also included in the table are the regulatory minimum ratios in effect as of December 31, 2014.

	December 31, 2014				
	Basel III Standardized Transitional	Basel III Advanced Transitional	Minimum capital ratios[b]	Well-capitalized ratios[c]	
Risk-based capital ratios[a]:					
CET1 capital	**11.2%**	**10.2%**	4.0%	NA	[d]
Tier 1 capital	**12.7**	**11.6**	5.5	6.0%	
Total capital	**15.0**	**13.1**	8.0	10.0	
Leverage ratio:					
Tier 1 leverage	**7.6**	**7.6**	4.0	5.0	

(a) For each of the risk-based capital ratios the lower of the Standardized Transitional or Advanced Transitional ratio represents the Collins Floor.
(b) Represents the minimum capital ratios for 2014 currently applicable to the Firm under Basel III.
(c) Represents the minimum capital ratios for 2014 currently applicable to the Firm under the PCA requirements of the FDICIA.
(d) The CET1 capital ratio became a relevant measure of capital under the prompt corrective action requirements on January 1, 2015.

At December 31, 2014, JPMorgan Chase maintained Basel III Standardized Transitional and Basel III Advanced Transitional capital ratios in excess of the well-capitalized standards established by the Federal Reserve.

Additional information regarding the Firm's capital ratios and the U.S. federal regulatory capital standards to which the Firm is subject is presented in Note 28. For further information on the Firm's Basel III measures, see the Firm's consolidated Pillar 3 Regulatory Capital Disclosures reports, which are available on the Firm's website (http://investor.shareholder.com/jpmorganchase/basel.cfm).

Supplementary leverage ratio

The Firm estimates that if the U.S. SLR final rule were in effect at December 31, 2014, the Firm's SLR would have been approximately 5.6% and JPMorgan Chase Bank, N.A.'s and Chase Bank USA, N.A.'s SLRs would have been approximately 5.9% and 8.1%, respectively, at that date.

Comprehensive Capital Analysis and Review ("CCAR")

The Federal Reserve requires large bank holding companies, including the Firm, to submit a capital plan on an annual basis. The Federal Reserve uses the CCAR and Dodd-Frank Act stress test processes to ensure that large bank holding companies have sufficient capital during periods of economic and financial stress, and have robust, forward-looking capital assessment and planning processes in place that address each BHC's unique risks to enable them to have the ability to absorb losses under certain stress scenarios. Through the CCAR, the Federal Reserve evaluates each BHC's capital adequacy and internal capital adequacy assessment processes, as well as its plans to make capital distributions, such as dividend payments or stock repurchases.

On March 26, 2014, the Federal Reserve informed the Firm that it did not object, on either a quantitative or qualitative basis, to the Firm's 2014 capital plan. For information on actions taken by the Firm's Board of Directors following the 2014 CCAR results, see Capital actions on page 154.

On January 5, 2015, the Firm submitted its 2015 capital plan to the Federal Reserve under the Federal Reserve's 2015 CCAR process. The Firm expects to receive the Federal Reserve's final response to its plan no later than March 31, 2015.

The Firm's CCAR process is integrated into and employs the same methodologies utilized in the Firm's Internal Capital Adequacy Assessment Process ("ICAAP") process, as discussed below.

Internal Capital Adequacy Assessment Process

Semiannually, the Firm completes the ICAAP, which provides management with a view of the impact of severe and unexpected events on earnings, balance sheet positions, reserves and capital. The Firm's ICAAP integrates stress testing protocols with capital planning.

The process assesses the potential impact of alternative economic and business scenarios on the Firm's earnings and capital. Economic scenarios, and the parameters underlying those scenarios, are defined centrally and applied uniformly across the businesses. These scenarios are articulated in terms of macroeconomic factors, which are key drivers of business results; global market shocks, which generate short-term but severe trading losses; and idiosyncratic operational risk events. The scenarios are intended to capture and stress key vulnerabilities and idiosyncratic risks facing the Firm. However, when defining a broad range of scenarios, realized events can always be worse. Accordingly, management considers additional stresses outside these scenarios, as necessary. ICAAP results are reviewed by management and the Board of Directors.

Minimum Total Loss Absorbing Capacity ("TLAC")

In November 2014, the FSB, in consultation with the Basel Committee on Banking Supervision, issued a consultative document proposing that, in order for G-SIBs to have sufficient loss absorbing and recapitalization capacity to support an orderly resolution, they would be required to have outstanding a sufficient amount and type of debt and capital instruments. This amount and type of debt and capital instruments (or "total loss absorbing capacity" or TLAC) is intended to effectively absorb losses, as necessary, upon a failure of a G-SIB, without imposing such losses on taxpayers of the relevant jurisdiction or causing severe systemic disruptions, and thereby ensuring the continuity of the G-SIBs critical functions. The document identifies specific criteria that must be met for instruments to be considered eligible under TLAC and sets out minimum requirements that include existing Basel III minimum capital requirements, excluding capital buffers. The FSB's proposed range for a common minimum TLAC requirement is 16-20% of the financial institution's RWA and at least twice its Basel III Tier 1 leverage ratio. The Firm estimated that it has approximately 15% minimum TLAC as a percentage of

Basel III Advanced Fully Phased-in RWA, excluding capital buffers currently in effect, at year end 2014 based on its understanding of how the FSB proposal may be implemented in the United States. The FSB is expected to revise its proposal following a period of public consultation and findings from a quantitative impact study and market survey to be conducted in the first quarter of 2015. The final proposal is expected to be submitted to the G-20 in advance of the G-20 Summit scheduled for fourth quarter of 2015. U.S. banking regulators are expected to issue an NPR that would outline TLAC requirements specific to U.S. banks.

Regulatory capital outlook

The Firm expects to continue to accrete capital in the near term and believes its current capital levels enable it to retain market access, continue its strategy to invest in and grow its businesses and maintain flexibility to distribute excess capital. The Firm intends to balance return of capital to shareholders with achieving higher capital ratios over time. Additionally, the Firm expects the capital ratio calculated under the Basel III Standardized Fully Phased-In Approach to become its binding constraint by the end of 2015, or slightly thereafter. As a result, the Firm expects to reach Basel III Advanced and Standardized Fully Phased-In CET1 ratios of approximately 11% by the end of 2015 and is targeting reaching a Basel III CET1 ratio of approximately 12% by the end of 2018.

The Firm's capital targets take into consideration the current U.S. Basel III requirements and contemplate the requirements under the U.S. G-SIB proposal issued on December 9, 2014 and therefore, assume a 4.5% G-SIB capital surcharge. These targets are subject to revision in the future as a result of changes that may be introduced by banking regulators to the required minimum ratios to which the Firm is subject. In particular, if the Firm's G-SIB capital surcharge is determined to be lower than 4.5%, the capital targets would be adjusted accordingly. The Firm intends to manage its capital so that it achieves the required capital levels and composition in line with or in advance of the required timetables of current and proposed rules.

Economic risk capital

Economic risk capital is another of the disciplines the Firm uses to assess the capital required to support its businesses. Economic risk capital is a measure of the capital needed to cover JPMorgan Chase's business activities in the event of unexpected losses. The Firm measures economic risk capital using internal risk-assessment methodologies and models based primarily on four risk factors: credit, market, operational and private equity risk and considers factors, assumptions and inputs that differ from those required to be used for regulatory capital requirements. Accordingly, economic risk capital provides a complementary measure to regulatory capital. As economic risk capital is a separate component of the capital framework for Advanced Approach banking organizations under Basel III, the Firm continues to enhance its economic risk capital framework.

Line of business equity

The Firm's framework for allocating capital to its business segments is based on the following objectives:

- Integrate firmwide and line of business capital management activities;
- Measure performance consistently across all lines of business; and
- Provide comparability with peer firms for each of the lines of business

Equity for a line of business represents the amount the Firm believes the business would require if it were operating independently, considering capital levels for similarly rated peers, regulatory capital requirements (as estimated under Basel III Advanced Fully Phased-In) and economic risk measures. Capital is also allocated to each line of business for, among other things, goodwill and other intangibles associated with acquisitions effected by the line of business. ROE is measured and internal targets for expected returns are established as key measures of a business segment's performance.

Line of business equity	Yearly average		
Year ended December 31, (in billions)	**2014**	2013	2012
Consumer & Community Banking	**$ 51.0**	$ 46.0	$ 43.0
Corporate & Investment Bank	**61.0**	56.5	47.5
Commercial Banking	**14.0**	13.5	9.5
Asset Management	**9.0**	9.0	7.0
Corporate	**72.4**	71.4	77.4
Total common stockholders' equity	**$ 207.4**	$ 196.4	$ 184.4

Effective January 1, 2013, the Firm refined the capital allocation framework to align it with the revised line of business structure that became effective in the fourth quarter of 2012. The change in equity levels for the lines of businesses was largely driven by the evolving regulatory requirements and higher capital targets the Firm had established under the Basel III Advanced Approach.

On at least an annual basis, the Firm assesses the level of capital required for each line of business as well as the assumptions and methodologies used to allocate capital to its lines of business and updates the equity allocations to its lines of business as refinements are implemented.

Line of business equity	January 1,	December 31,	
(in billions)	**2015[a]**	2014	2013
Consumer & Community Banking	**$ 51.0**	$ 51.0	$ 46.0
Corporate & Investment Bank	**62.0**	61.0	56.5
Commercial Banking	**14.0**	14.0	13.5
Asset Management	**9.0**	9.0	9.0
Corporate	**76.0**	77.0	75.0
Total common stockholders' equity	**$ 212.0**	$ 212.0	$ 200.0

(a) Reflects refined capital allocations effective January 1, 2015.

Capital actions

Dividends

The Firm's common stock dividend policy reflects JPMorgan Chase's earnings outlook, desired dividend payout ratio, capital objectives, and alternative investment opportunities.

The Firm's current expectation is to continue to target a payout ratio of approximately 30% of normalized earnings over time. Following the Federal Reserve's non-objection to the Firm's 2014 capital plan, the Board of Directors increased the quarterly common stock dividend on May 20, 2014, from $0.38 to $0.40 per share, effective beginning with the dividend paid on July 31, 2014, to stockholders of record on July 3, 2014.

For information regarding dividend restrictions, see Note 22 and Note 27.

The following table shows the common dividend payout ratio based on reported net income.

Year ended December 31,	**2014**	2013	2012
Common dividend payout ratio	**29%**	33%	23%

Preferred stock

During the year ended December 31, 2014, the Firm issued $8.9 billion of noncumulative preferred stock. Preferred stock dividends declared were $1.1 billion for the year ended December 31, 2014. Assuming all preferred stock issuances were outstanding for the entire year and quarterly dividends were declared on such issuances, preferred stock dividends would have been $1.3 billion for the year ended December 31, 2014. For additional information on the Firm's preferred stock, see Note 22.

Redemption of outstanding trust preferred securities

On May 8, 2013, the Firm redeemed approximately $5.0 billion, or 100% of the liquidation amount, of the following eight series of trust preferred securities: JPMorgan Chase Capital X, XI, XII, XIV, XVI, XIX, XXIV, and BANK ONE Capital VI. For a further discussion of trust preferred securities, see Note 21.

Common equity

On March 13, 2012, the Board of Directors authorized a $15.0 billion common equity (i.e., common stock and warrants) repurchase program. As of December 31, 2014, $3.8 billion (on a trade-date basis) of authorized repurchase capacity remained under the program. The amount of equity that may be repurchased by the Firm is also subject to the amount that is set forth in the Firm's annual capital plan submitted to the Federal Reserve as part of the CCAR process. In conjunction with the Federal Reserve's release of its 2014 CCAR results, the Firm's Board of Directors has authorized the Firm to repurchase $6.5 billion of common equity between April 1, 2014, and March 31, 2015. As of December 31, 2014, $2.1 billion (on a trade-date basis) of such repurchase capacity remains. This authorization includes shares repurchased to offset issuances under the Firm's equity-based compensation plans.

The following table sets forth the Firm's repurchases of common equity for the years ended December 31, 2014, 2013 and 2012, on a trade-date basis. There were no warrants repurchased during the years ended December 31, 2014, and 2013.

Year ended December 31, (in millions)	**2014**	2013	2012
Total number of shares of common stock repurchased	**83.4**	96.1	30.9
Aggregate purchase price of common stock repurchases	**$ 4,834**	$ 4,789	$ 1,329
Total number of warrants repurchased	**–**	–	18.5
Aggregate purchase price of warrant repurchases	**$ –**	$ –	$ 238

The Firm may, from time to time, enter into written trading plans under Rule 10b5-1 of the Securities Exchange Act of 1934 to facilitate repurchases in accordance with the common equity repurchase program. A Rule 10b5-1 repurchase plan allows the Firm to repurchase its equity during periods when it would not otherwise be repurchasing common equity – for example, during internal trading "blackout periods." All purchases under a Rule 10b5-1 plan must be made according to a predefined plan established when the Firm is not aware of material nonpublic information.

The authorization to repurchase common equity will be utilized at management's discretion, and the timing of purchases and the exact amount of common equity that may be repurchased is subject to various factors, including market conditions; legal and regulatory considerations affecting the amount and timing of repurchase activity; the Firm's capital position (taking into account goodwill and intangibles); internal capital generation; and alternative investment opportunities. The repurchase program does not include specific price targets or timetables; may be executed through open market purchases or privately negotiated transactions, or utilizing Rule 10b5-1 programs; and may be suspended at any time.

For additional information regarding repurchases of the Firm's equity securities, see Part II, Item 5: Market for registrant's common equity, related stockholder matters and issuer purchases of equity securities on pages 18–19.

Broker-dealer regulatory capital

JPMorgan Chase's principal U.S. broker-dealer subsidiaries are J.P. Morgan Securities LLC ("JPMorgan Securities") and J.P. Morgan Clearing Corp. ("JPMorgan Clearing"). JPMorgan Clearing is a subsidiary of JPMorgan Securities and provides clearing and settlement services. JPMorgan Securities and JPMorgan Clearing are each subject to Rule 15c3-1 under the Securities Exchange Act of 1934 (the "Net Capital Rule"). JPMorgan Securities and JPMorgan Clearing are also each registered as futures commission merchants and subject to Rule 1.17 of the Commodity Futures Trading Commission ("CFTC").

JPMorgan Securities and JPMorgan Clearing have elected to compute their minimum net capital requirements in accordance with the "Alternative Net Capital Requirements" of the Net Capital Rule. At December 31, 2014, JPMorgan Securities' net capital, as defined by the Net Capital Rule, was $12.8 billion, exceeding the minimum requirement by $10.6 billion, and JPMorgan Clearing's net capital was $7.5 billion, exceeding the minimum requirement by $5.6 billion.

In addition to its minimum net capital requirement, JPMorgan Securities is required to hold tentative net capital in excess of $1.0 billion and is also required to notify the Securities and Exchange Commission ("SEC") in the event that tentative net capital is less than $5.0 billion, in accordance with the market and credit risk standards of Appendix E of the Net Capital Rule. As of December 31, 2014, JPMorgan Securities had tentative net capital in excess of the minimum and notification requirements.

J.P. Morgan Securities plc is a wholly owned subsidiary of JPMorgan Chase Bank, N.A. and is the Firm's principal operating subsidiary in the U.K. It has authority to engage in banking, investment banking and broker-dealer activities. J.P. Morgan Securities plc is jointly regulated by the U.K. Prudential Regulation Authority ("PRA") and Financial Conduct Authority ("FCA"). Commencing January 1, 2014, J.P. Morgan Securities plc became subject to the U.K. Basel III capital rules.

At December 31, 2014, J.P. Morgan Securities plc had estimated total capital of $30.1 billion; its estimated CET1 capital ratio was 10.7% and its estimated Total capital ratio was 14.1%. Both ratios exceeded the minimum transitional standards (4.0% and 8.0% for the CET1 ratio and Total capital ratio, respectively) as established by the Capital Requirements Directive and Regulation (the European Union ("EU") implementation of Basel III) as well as additional minimum requirements specified by the Prudential Regulatory Authority as Individual Capital Guidance and PRA Buffer requirements.

LIQUIDITY RISK MANAGEMENT

Liquidity risk is the risk that the Firm will be unable to meet its contractual and contingent obligations. Liquidity risk management is intended to ensure that the Firm has the appropriate amount, composition and tenor of funding and liquidity in support of its assets.

Liquidity Risk Oversight

The Firm has an independent liquidity risk oversight function whose primary objective is to provide assessment, measurement, monitoring, and control of liquidity risk across the Firm. Liquidity risk oversight is managed through a dedicated firmwide Liquidity Risk Oversight group reporting into the CIO, Treasury, and Corporate ("CTC") Chief Risk Officer ("CRO"). The CTC CRO has responsibility for firmwide Liquidity Risk Oversight and reports to the Firm's CRO. Liquidity Risk Oversight's responsibilities include but are not limited to:

- Establishing and monitoring limits, indicators, and thresholds, including liquidity appetite tolerances;
- Defining and monitoring internal Firmwide and legal entity stress tests and regulatory defined stress testing;
- Reporting and monitoring liquidity positions, balance sheet variances and funding activities;
- Conducting ad hoc analysis to identify potential emerging liquidity risks.

Risk Governance and Measurement

Specific committees responsible for liquidity governance include firmwide ALCO as well as lines of business and regional ALCOs, and the CTC Risk Committee. For further discussion of the risk and risk-related committees, see Enterprise-wide Risk Management on pages 105–109.

Internal Stress testing

Liquidity stress tests are intended to ensure sufficient liquidity for the Firm under a variety of adverse scenarios. Results of stress tests are therefore considered in the formulation of the Firm's funding plan and assessment of its liquidity position. Liquidity outflow assumptions are modeled across a range of time horizons and contemplate both market and idiosyncratic stress. Standard stress tests are performed on a regular basis and ad hoc stress tests are performed in response to specific market events or concerns. In addition, stress scenarios are produced for the parent holding company and the Firm's major subsidiaries.

Liquidity stress tests assume all of the Firm's contractual obligations are met and then take into consideration varying levels of access to unsecured and secured funding markets. Additionally, assumptions with respect to potential non-contractual and contingent outflows are contemplated.

Liquidity Management

Treasury is responsible for liquidity management. The primary objectives of effective liquidity management are to ensure that the Firm's core businesses are able to operate in support of client needs, meet contractual and contingent obligations through normal economic cycles as well as during stress events, ensure funding mix optimization, and availability of liquidity sources. The Firm manages liquidity and funding using a centralized, global approach in order to optimize liquidity sources and uses.

In the context of the Firm's liquidity management, Treasury is responsible for:

- Analyzing and understanding the liquidity characteristics of the Firm, lines of business and legal entities' assets and liabilities, taking into account legal, regulatory, and operational restrictions;
- Defining and monitoring firmwide and legal entity liquidity strategies, policies, guidelines, and contingency funding plans;
- Managing liquidity within approved liquidity risk appetite tolerances and limits;
- Setting transfer pricing in accordance with underlying liquidity characteristics of balance sheet assets and liabilities as well as certain off-balance sheet items.

Contingency funding plan

The Firm's contingency funding plan ("CFP"), which is reviewed by ALCO and approved by the DRPC, is a compilation of procedures and action plans for managing liquidity through stress events. The CFP incorporates the limits and indicators set by the Liquidity Risk Oversight group. These limits and indicators are reviewed regularly to identify the emergence of risks or vulnerabilities in the Firm's liquidity position. The CFP identifies the alternative contingent liquidity resources available to the Firm in a stress event.

Parent holding company and subsidiary funding

The parent holding company acts as a source of funding to its subsidiaries. The Firm's liquidity management is intended to maintain liquidity at the parent holding company, in addition to funding and liquidity raised at the subsidiary operating level, at levels sufficient to fund the operations of the parent holding company and its subsidiaries for an extended period of time in a stress environment where access to normal funding sources is disrupted. The parent holding company currently holds more than 18 months of pre-funding assuming no access to wholesale funding markets.

LCR and NSFR

In December 2010, the Basel Committee introduced two new measures of liquidity risk: the liquidity coverage ratio ("LCR"), which is intended to measure the amount of "high-quality liquid assets" ("HQLA") held by the Firm in relation to estimated net cash outflows within a 30-day period during an acute stress event; and the net stable funding ratio ("NSFR") which is intended to measure the "available" amount of stable funding relative to the "required" amount of stable funding over a one-year horizon. The standards require that the LCR be no lower than 100% and the NSFR be greater than 100%.

On September 3, 2014, the U.S. banking regulators approved the final LCR rule ("U.S. LCR"), which became effective on January 1, 2015. Under the final rules, the LCR is required to be 80% at January 1, 2015, increasing by 10% each year until reaching 100% at January 1, 2017. At December 31, 2014, the Firm was compliant with the fully phased-in U.S. LCR based on its current understanding of the final rule. The Firm's LCR may fluctuate from period-to-period due to normal flows from client activity.

On October 31, 2014, the Basel Committee issued the final standard for the NSFR which will become a minimum standard by January 1, 2018. At December 31, 2014, the Firm was compliant with the NSFR based on its current understanding of the final Basel rule. The U.S. Banking Regulators are expected to issue a proposal on the NSFR that would outline requirements specific to U.S. banks.

HQLA

HQLA is the estimated amount of assets that qualify for inclusion in the U.S. LCR. HQLA primarily consists of cash and certain unencumbered high quality liquid assets as defined in the rule.

As of December 31, 2014, HQLA was estimated to be approximately $600 billion, as determined under the U.S. LCR final rule, compared with $522 billion as of December 31, 2013, which was calculated using the Basel Committee's definition of HQLA. The increase in HQLA was due to higher cash balances largely driven by higher deposit balances, partially offset by the impact of the application of the U.S. LCR rule which excludes certain types of securities that are permitted under the Basel Rules. HQLA may fluctuate from period-to-period primarily due to normal flows from client activity.

The following table presents the estimated HQLA included in the U.S. LCR broken out by HQLA-eligible cash and HQLA-eligible securities as of December 31, 2014.

(in billions)	December 31, 2014
HQLA	
Eligible cash[(a)]	$ 454
Eligible securities[(b)]	146
Total HQLA	$ 600

(a) Predominantly cash on deposit at central banks.
(b) Predominantly includes U.S. agency mortgage-backed securities, U.S. Treasuries, and sovereign bonds.

In addition to HQLA, as of December 31, 2014, the Firm has approximately $321 billion of unencumbered marketable securities, such as equity securities and fixed income debt securities, available to raise liquidity, if required. Furthermore, the Firm maintains borrowing capacity at various Federal Home Loan Banks ("FHLBs"), the Federal Reserve Bank discount window and various other central banks as a result of collateral pledged by the Firm to such banks. Although available, the Firm does not view the borrowing capacity at the Federal Reserve Bank discount window and the various other central banks as a primary source of liquidity. As of December 31, 2014, the Firm's remaining borrowing capacity at various FHLBs and the Federal Reserve Bank discount window was approximately $143 billion. This borrowing capacity excludes the benefit of securities included above in HQLA or other unencumbered securities held at the Federal Reserve Bank discount window for which the Firm has not drawn liquidity.

Funding

Sources of funds

Management believes that the Firm's unsecured and secured funding capacity is sufficient to meet its on- and off-balance sheet obligations.

The Firm funds its global balance sheet through diverse sources of funding including a stable deposit franchise as well as secured and unsecured funding in the capital markets. The Firm's loan portfolio (aggregating approximately $757.3 billion at December 31, 2014), is funded with a portion of the Firm's deposits (aggregating approximately $1,363.4 billion at December 31, 2014) and through securitizations and, with respect to a portion of the Firm's real estate-related loans, with secured borrowings from the FHLBs. Deposits in excess of the amount utilized to fund loans are primarily invested in the Firm's investment securities portfolio or deployed in cash or other short-term liquid investments based on their interest rate and liquidity risk characteristics. Capital markets secured financing assets and trading assets are primarily funded by the Firm's capital markets secured financing liabilities, trading liabilities and a portion of the Firm's long-term debt and stockholders' equity.

In addition to funding capital markets assets, proceeds from the Firm's debt and equity issuances are used to fund certain loans, and other financial and non-financial assets, or may be invested in the Firm's investment securities portfolio. See the discussion below for additional disclosures relating to Deposits, Short-term funding, and Long-term funding and issuance.

Deposits

A key strength of the Firm is its diversified deposit franchise, through each of its lines of business, which provides a stable source of funding and limits reliance on the wholesale funding markets. As of December 31, 2014, the Firm's loans-to-deposits ratio was 56%, compared with 57% at December 31, 2013.

As of December 31, 2014, total deposits for the Firm were $1,363.4 billion, compared with $1,287.8 billion at December 31, 2013 (58% of total liabilities at both December 31, 2014 and 2013). The increase was due to growth in both wholesale and consumer deposits. For further information, see Balance Sheet Analysis on pages 72–73.

The Firm typically experiences higher customer deposit inflows at period-ends. Therefore, the Firm believes average deposit balances are more representative of deposit trends. The table below summarizes, by line of business, the period-end and average deposit balances as of and for the years ended December 31, 2014 and 2013.

Deposits			Year ended December 31,	
As of or for the period ended December 31,			Average	
(in millions)	**2014**	2013	**2014**	2013
Consumer & Community Banking	**$ 502,520**	$ 464,412	**$ 486,919**	$ 453,304
Corporate & Investment Bank	**468,423**	446,237	**417,517**	384,289
Commercial Banking	**213,682**	206,127	**190,425**	184,409
Asset Management	**155,247**	146,183	**150,121**	139,707
Corporate	**23,555**	24,806	**19,319**	27,433
Total Firm	**$ 1,363,427**	$ 1,287,765	**$ 1,264,301**	$ 1,189,142

A significant portion of the Firm's deposits are consumer deposits (37% and 36% at December 31, 2014 and 2013, respectively), which are considered particularly stable as they are less sensitive to interest rate changes or market volatility. Additionally, the majority of the Firm's institutional deposits are also considered to be stable sources of funding since they are generated from customers that maintain operating service relationships with the Firm. For further discussions of deposit and liability balance trends, see the discussion of the results for the Firm's business segments and the Balance Sheet Analysis on pages 79–104 and pages 72–73, respectively.

The following table summarizes short-term and long-term funding, excluding deposits, as of December 31, 2014 and 2013, and average balances for the years ended December 31, 2014 and 2013. For additional information, see the Balance Sheet Analysis on pages 72–73 and Note 21.

Sources of funds (excluding deposits)				
As of or for the year ended December 31,			Average	
(in millions)	**2014**	2013	**2014**	2013
Commercial paper:				
Wholesale funding	**$ 24,052**	$ 17,249	**$ 19,442**	$ 17,785

Total long-term unsecured funding	**$ 207,469**	$ 199,380	**$ 204,571**	$ 202,312
Credit card securitization	**$ 31,239**	$ 26,580	**$ 28,935**	$ 27,834
Other securitizations[e]	**2,008**	3,253	**2,734**	3,501
FHLB advances	**64,994**	61,876	**60,667**	55,487
Other long-term secured funding[f]	**4,373**	6,633	**5,031**	6,284
Total long-term secured funding	**$ 102,614**	$ 98,342	**$ 97,367**	$ 93,106
Preferred stock[g]	**$ 20,063**	$ 11,158	**17,018**	$ 10,960
Common stockholders' equity[g]	**$ 212,002**	$ 200,020	**207,400**	$ 196,409

(a) Included in beneficial interests issued by consolidated variable interest entities on the Firm's Consolidated balance sheets.
(b) Excludes federal funds purchased.
(c) Excluded long-term structured repurchase agreements of $2.7 billion and $4.6 billion as of December 31, 2014 and 2013, respectively, and average balance of $4.2 billion for the years ended December 31, 2014 and 2013.

(d) Excluded long-term securities loaned of $483 million as of December 31, 2013, and average balance of $24 million and $414 million for the years ended December 31, 2014 and 2013, respectively. There were no long-term securities loaned as of December 31, 2014.
(e) Other securitizations includes securitizations of residential mortgages and student loans. The Firm's wholesale businesses also securitize loans for client-driven transactions; those client-driven loan securitizations are not considered to be a source of funding for the Firm and are not included in the table.
(f) Includes long-term structured notes which are secured.
(g) For additional information on preferred stock and common stockholders' equity see Capital Management on pages 146–155, Consolidated statements of changes in stockholders' equity, Note 22 and Note 23.

Short-term funding

A significant portion of the Firm's total commercial paper liabilities, approximately 64% as of December 31, 2014, were not sourced from wholesale funding markets, but were originated from deposits that customers choose to sweep into commercial paper liabilities as a cash management program offered to customers of the Firm.

The Firm's sources of short-term secured funding primarily consist of securities loaned or sold under agreements to repurchase. Securities loaned or sold under agreements to repurchase are secured predominantly by high-quality securities collateral, including government-issued debt, agency debt and agency MBS, and constitute a significant portion of the federal funds purchased and securities loaned or sold under purchase agreements. The amounts of securities loaned or sold under agreements to repurchase at December 31, 2014, increased predominantly due to a change in the mix of the Firm's funding sources. The decrease in average balances for the year ended December 31, 2014, compared with December 31, 2013, was predominantly due to less secured financing of the Firm's investment securities portfolio, and a change in the mix of the Firm's funding sources. The balances associated with securities loaned or sold under agreements to repurchase fluctuate over time due to customers' investment and financing activities; the Firm's demand for financing; the ongoing management of the mix of the Firm's liabilities, including its secured and unsecured financing (for both the investment securities and market-making portfolios); and other market and portfolio factors.

Long-term funding and issuance

Long-term funding provides additional sources of stable funding and liquidity for the Firm. The Firm's long-term funding plan is driven by expected client activity, liquidity considerations, and regulatory requirements. Long-term funding objectives include maintaining diversification, maximizing market access and optimizing funding costs, as well as maintaining a certain level of pre-funding at the parent holding company. The Firm evaluates various funding markets, tenors and currencies in creating its optimal long-term funding plan.

The significant majority of the Firm's long-term unsecured funding is issued by the parent holding company to provide maximum flexibility in support of both bank and nonbank subsidiary funding. The following table summarizes long-term unsecured issuance and maturities or redemptions for the years ended December 31, 2014 and 2013. For additional information, see Note 21.

Long-term unsecured funding

Year ended December 31, (in millions)	2014	2013
Issuance		
Senior notes issued in the U.S. market	**$ 16,373**	$ 19,835
Senior notes issued in non-U.S. markets	**11,221**	8,843
Total senior notes	**27,594**	28,678
Subordinated debt	**4,979**	3,232
Structured notes	**19,806**	16,979
Total long-term unsecured funding – issuance	**$ 52,379**	$ 48,889
Maturities/redemptions		
Total senior notes	**$ 21,169**	$ 18,418
Trust preferred securities	**–**	5,052
Subordinated debt	**4,487**	2,418
Structured notes	**18,554**	17,785
Total long-term unsecured funding – maturities/redemptions	**$ 44,210**	$ 43,673

In addition, from January 1, 2015, through February 24, 2015, the Firm issued $10.1 billion of senior notes.

The Firm raises secured long-term funding through securitization of consumer credit card loans and advances from the FHLBs. It may also in the future raise long-term funding through securitization of residential mortgages, auto loans and student loans, which will increase funding and investor diversity.

The following table summarizes the securitization issuance and FHLB advances and their respective maturities or redemption for the years ended December 31, 2014 and 2013.

Long-term secured funding

Year ended December 31,	Issuance		Maturities/Redemptions	
(in millions)	2014	2013	2014	2013
Credit card securitization	**$ 8,350**	$ 8,434	**$ 3,774**	$ 11,853
Other securitizations[a]	**–**	–	**309**	427
FHLB advances	**15,200**	23,650	**12,079**	3,815
Other long-term secured funding	**$ 802**	$ 751	**$ 3,076**	$ 159
Total long-term secured funding	**$ 24,352**	$ 32,835	**$ 19,238**	$ 16,254

(a) Other securitizations includes securitizations of residential mortgages and student loans.

The Firm's wholesale businesses also securitize loans for client-driven transactions; those client-driven loan securitizations are not considered to be a source of funding for the Firm and are not included in the table above. For further description of the client-driven loan securitizations, see Note 16.

Credit ratings

The cost and availability of financing are influenced by credit ratings. Reductions in these ratings could have an adverse effect on the Firm's access to liquidity sources, increase the cost of funds, trigger additional collateral or funding requirements and decrease the number of investors and counterparties willing to lend to the Firm. Additionally, the Firm's funding requirements for VIEs and other third party commitments may be adversely affected by a decline in credit ratings. For additional information on the impact of a credit ratings downgrade on the funding requirements for VIEs, and on derivatives and collateral agreements, see Special-purpose entities on page 74, and Credit risk, liquidity risk and credit-related contingent features in Note 6.

The credit ratings of the parent holding company and the Firm's principal bank and nonbank subsidiaries as of December 31, 2014, were as follows.

	JPMorgan Chase & Co.			JPMorgan Chase Bank, N.A. Chase Bank USA, N.A.			J.P. Morgan Securities LLC		
December 31, 2014	Long-term issuer	Short-term issuer	Outlook	Long-term issuer	Short-term issuer	Outlook	Long-term issuer	Short-term issuer	Outlook
Moody's Investor Services	A3	P-2	Stable	Aa3	P-1	Stable	Aa3	P-1	Stable
Standard & Poor's	A	A-1	Negative	A+	A-1	Stable	A+	A-1	Stable
Fitch Ratings	A+	F1	Stable	A+	F1	Stable	A+	F1	Stable

Downgrades of the Firm's long-term ratings by one or two notches could result in a downgrade of the Firm's short-term ratings. If this were to occur, the Firm believes its cost of funds could increase and access to certain funding markets could be reduced as noted above. The nature and magnitude of the impact of ratings downgrades depends on numerous contractual and behavioral factors (which the Firm believes are incorporated in its liquidity risk and stress testing metrics). The Firm believes it maintains sufficient liquidity to withstand a potential decrease in funding capacity due to ratings downgrades.

JPMorgan Chase's unsecured debt does not contain requirements that would call for an acceleration of payments, maturities or changes in the structure of the existing debt, provide any limitations on future borrowings or require additional collateral, based on unfavorable changes in the Firm's credit ratings, financial ratios, earnings, or stock price.

Critical factors in maintaining high credit ratings include a stable and diverse earnings stream, strong capital ratios, strong credit quality and risk management controls, diverse funding sources, and disciplined liquidity monitoring procedures. Rating agencies continue to evaluate economic and geopolitical trends, regulatory developments, rating uplift assumptions surrounding government support, future profitability, risk management practices, and litigation matters, as well as their broader ratings methodologies. Changes in any of these factors could lead to changes in the Firm's credit ratings.

On September 18, 2014, S&P revised its ratings methodology for hybrid capital securities issued by financial institutions, and on September 29, 2014, the ratings of the Firm's hybrid capital securities (including trust preferred securities and preferred stock) were lowered by 1 notch from BBB to BBB-, reflecting the new methodology. Furthermore, S&P has announced a Request for Comment on a proposed change to rating criteria related to additional loss absorbing capacity. In addition, Moody's and Fitch are in the process of reviewing their ratings methodologies: Moody's has announced a Request for Comment on the revision to its Bank Rating Methodology and Fitch has announced a review of the ratings differential that it applies between bank holding companies and their bank subsidiaries.

Although the Firm closely monitors and endeavors to manage, to the extent it is able, factors influencing its credit ratings, there is no assurance that its credit ratings will not be changed in the future.

JPMorgan Chase's accounting policies and use of estimates are integral to understanding its reported results. The Firm's most complex accounting estimates require management's judgment to ascertain the appropriate carrying value of assets and liabilities. The Firm has established policies and control procedures intended to ensure that estimation methods, including any judgments made as part of such methods, are well-controlled, independently reviewed and applied consistently from period to period. The methods used and judgments made reflect, among other factors, the nature of the assets or liabilities and the related business and risk management strategies, which may vary across the Firm's businesses and portfolios. In addition, the policies and procedures are intended to ensure that the process for changing methodologies occurs in an appropriate manner. The Firm believes its estimates for determining the carrying value of its assets and liabilities are appropriate. The following is a brief description of the Firm's critical accounting estimates involving significant judgments.

Allowance for credit losses

JPMorgan Chase's allowance for credit losses covers the retained consumer and wholesale loan portfolios, as well as the Firm's consumer and wholesale lending-related commitments. The allowance for loan losses is intended to adjust the carrying value of the Firm's loan assets to reflect probable credit losses inherent in the loan portfolio as of the balance sheet date. Similarly, the allowance for lending-related commitments is established to cover probable credit losses inherent in the lending-related commitments portfolio as of the balance sheet date.

The allowance for loan losses includes an asset-specific component, a formula-based component, and a component related to PCI loans. The determination of each of these components involves significant judgment on a number of matters, as discussed below. For further discussion of the methodologies used in establishing the Firm's allowance for credit losses, see Note 15.

Asset-specific component

The asset-specific allowance for loan losses for each of the Firm's portfolio segments is generally measured as the difference between the recorded investment in the impaired loan and the present value of the cash flows expected to be collected, discounted at the loan's original effective interest rate. Estimating the timing and amounts of future cash flows is highly judgmental as these cash flow projections rely upon estimates such as redefault rates, loss severities, the amounts and timing of prepayments and other factors that are reflective of current and expected future market conditions. These estimates are, in turn, dependent on factors such as the level of future home prices, the duration of current overall economic conditions, and other macroeconomic and portfolio-specific factors. All of these estimates and assumptions require significant management judgment and certain assumptions are highly subjective.

Formula-based component - Consumer loans and lending-related commitments, excluding PCI loans

The formula-based allowance for credit losses for the consumer portfolio, including credit card, is calculated by applying statistical credit loss factors to outstanding principal balances over an estimated loss emergence period to arrive at an estimate of incurred credit losses in the portfolio. The loss emergence period represents the time period between the date at which the loss is estimated to have been incurred and the ultimate realization of that loss (through a charge-off). Estimated loss emergence periods may vary by product and may change over time; management applies judgment in estimating loss emergence periods, using available credit information and trends. In addition, management applies judgment to the statistical loss estimates for each loan portfolio category, using delinquency trends and other risk characteristics to estimate the total incurred credit losses in the portfolio. Management uses additional statistical methods and considers portfolio and collateral valuation trends to review the appropriateness of the primary statistical loss estimate.

The statistical calculation is then adjusted to take into consideration model imprecision, external factors and current economic events that have occurred but that are not yet reflected in the factors used to derive the statistical calculation; these adjustments are accomplished in part by analyzing the historical loss experience for each major product segment. However, it is difficult to predict whether historical loss experience is indicative of future loss levels. Management applies judgment in making this adjustment, taking into account uncertainties associated with current macroeconomic and political conditions, quality of underwriting standards, borrower behavior, the potential impact of payment recasts within the HELOC portfolio, and other relevant internal and external factors affecting the credit quality of the portfolio. In certain instances, the interrelationships between these factors create further uncertainties. For example, the performance of a HELOC that experiences a payment recast may be affected by both the quality of underwriting standards applied in originating the loan and the general economic conditions in effect at the time of the payment recast. For junior lien products, management considers the delinquency and/or modification status of any senior liens in determining the adjustment. The application of different inputs into the statistical calculation, and the assumptions used by management to adjust the statistical calculation, are subject to management judgment, and emphasizing one input or assumption over another, or considering other inputs or assumptions, could affect the estimate of the allowance for loan losses for the consumer credit portfolio.

Overall, the allowance for credit losses for the consumer portfolio, including credit card, is sensitive to changes in the economic environment (e.g., unemployment rates), delinquency rates, the realizable value of collateral (e.g.,

housing prices), FICO scores, borrower behavior and other risk factors. While all of these factors are important determinants of overall allowance levels, changes in the various factors may not occur at the same time or at the same rate, or changes may be directionally inconsistent such that improvement in one factor may offset deterioration in the other. In addition, changes in these factors would not necessarily be consistent across all geographies or product types. Finally, it is difficult to predict the extent to which changes in these factors would ultimately affect the frequency of losses, the severity of losses or both.

PCI loans

In connection with the Washington Mutual transaction, JPMorgan Chase acquired certain PCI loans, which are accounted for as described in Note 14. The allowance for loan losses for the PCI portfolio is based on quarterly estimates of the amount of principal and interest cash flows expected to be collected over the estimated remaining lives of the loans.

These cash flow projections are based on estimates regarding default rates (including redefault rates on modified loans), loss severities, the amounts and timing of prepayments and other factors that are reflective of current and expected future market conditions. These estimates are dependent on assumptions regarding the level of future home price declines, and the duration of current overall economic conditions, among other factors. These estimates and assumptions require significant management judgment and certain assumptions are highly subjective.

Formula-based component - Wholesale loans and lending-related commitments

The Firm's methodology for determining the allowance for loan losses and the allowance for lending-related commitments requires the early identification of credits that are deteriorating. The formula-based component of the allowance calculation for wholesale loans and lending-related components is the product of an estimated PD and estimated LGD. These factors are determined based on the credit quality and specific attributes of the Firm's loans and lending-related commitments to each obligor.

The Firm uses a risk rating system to determine the credit quality of its wholesale loans and lending-related commitments. In assessing the risk rating of a particular loan or lending-related commitment, among the factors considered are the obligor's debt capacity and financial flexibility, the level of the obligor's earnings, the amount and sources for repayment, the level and nature of contingencies, management strength, and the industry and geography in which the obligor operates. These factors are based on an evaluation of historical and current information and involve subjective assessment and interpretation. Emphasizing one factor over another or considering additional factors could affect the risk rating assigned by the Firm to that loan.

PD estimates are based on observable external through-the-cycle data, using credit rating agency default statistics. A LGD estimate is assigned to each loan or lending-related commitment. The estimate represents the amount of economic loss if the obligor were to default. The type of obligor, quality of collateral, and the seniority of the Firm's loans in the obligor's capital structure affect LGD. LGD estimates are based on the Firm's history of actual credit losses over more than one credit cycle. Changes to the time period used for PD and LGD estimates (for example, point-in-time loss versus longer views of the credit cycle) could also affect the allowance for credit losses.

The Firm applies judgment in estimating PD and LGD used in calculating the allowances. Wherever possible, the Firm uses independent, verifiable data or the Firm's own historical loss experience in its models for estimating the allowances, but differences in loan characteristics between the Firm's specific loan portfolio and those reflected in external and Firm-specific historical data could affect loss estimates. Estimates of PD and LGD are subject to periodic refinement based on any changes to underlying external and Firm-specific historical data. The use of different inputs would change the amount of the allowance for credit losses determined appropriate by the Firm.

Management also applies its judgment to adjust the modeled loss estimates, taking into consideration model imprecision, external factors and economic events that have occurred but are not yet reflected in the loss factors. Historical experience of both LGD and PD are considered when estimating these adjustments. Factors related to concentrated and deteriorating industries also are incorporated where relevant. These estimates are based on management's view of uncertainties that relate to current macroeconomic and political conditions, quality of underwriting standards and other relevant internal and external factors affecting the credit quality of the current portfolio.

Allowance for credit losses sensitivity

As noted above, the Firm's allowance for credit losses is sensitive to numerous factors, depending on the portfolio. Changes in economic conditions or in the Firm's assumptions could affect its estimate of probable credit losses inherent in the portfolio at the balance sheet date. For example, changes in the inputs below would have the following effects on the Firm's modeled loss estimates as of December 31, 2014, without consideration of any offsetting or correlated effects of other inputs in the Firm's allowance for loan losses:

- For PCI loans, a combined 5% decline in housing prices and a 1% increase in unemployment from current levels could imply an increase to modeled credit loss estimates of approximately $1.2 billion.
- For the residential real estate portfolio, excluding PCI loans, a combined 5% decline in housing prices and a 1% increase in unemployment from current levels could

imply an increase to modeled annual loss estimates of approximately $100 million.
- A 50 basis point deterioration in forecasted credit card loss rates could imply an increase to modeled annualized credit card loan loss estimates of approximately $600 million.
- A one-notch downgrade in the Firm's internal risk ratings for its entire wholesale loan portfolio could imply an increase in the Firm's modeled loss estimates of approximately $1.8 billion.
- A 100 basis point increase in estimated loss given default for the Firm's entire wholesale loan portfolio could imply an increase in the Firm's modeled loss estimates of approximately $140 million.

The purpose of these sensitivity analyses is to provide an indication of the isolated impacts of hypothetical alternative assumptions on modeled loss estimates. The changes in the inputs presented above are not intended to imply management's expectation of future deterioration of those risk factors. In addition, these analyses are not intended to estimate changes in the overall allowance for loan losses, which would also be influenced by the judgment management applies to the modeled loss estimates to reflect the uncertainty and imprecision of these modeled loss estimates based on then current circumstances and conditions.

It is difficult to estimate how potential changes in specific factors might affect the overall allowance for credit losses because management considers a variety of factors and inputs in estimating the allowance for credit losses. Changes in these factors and inputs may not occur at the same rate and may not be consistent across all geographies or product types, and changes in factors may be directionally inconsistent, such that improvement in one factor may offset deterioration in other factors. In addition, it is difficult to predict how changes in specific economic conditions or assumptions could affect borrower behavior or other factors considered by management in estimating the allowance for credit losses. Given the process the Firm follows and the judgments made in evaluating the risk factors related to its loans and credit card loss estimates, management believes that its current estimate of the allowance for credit loss is appropriate.

Fair value of financial instruments, MSRs and commodities inventory

JPMorgan Chase carries a portion of its assets and liabilities at fair value. The majority of such assets and liabilities are measured at fair value on a recurring basis. Certain assets and liabilities are measured at fair value on a nonrecurring basis, including certain mortgage, home equity and other loans, where the carrying value is based on the fair value of the underlying collateral.

Assets measured at fair value

The following table includes the Firm's assets measured at fair value and the portion of such assets that are classified within level 3 of the valuation hierarchy. For further information, see Note 3.

December 31, 2014 (in billions, except ratio data)	Total assets at fair value	Total level 3 assets
Trading debt and equity instruments	$ 320.0	$ 22.5
Derivative receivables	79.0	12.6
Trading assets	399.0	35.1
AFS securities	298.8	1.0
Loans	2.6	2.5
MSRs	7.4	7.4
Private equity investments[(a)]	5.7	2.5
Other	36.2	2.4
Total assets measured at fair value on a recurring basis	749.7	50.9
Total assets measured at fair value on a nonrecurring basis	4.5	3.2
Total assets measured at fair value	$ 754.2	$ 54.1
Total Firm assets	$ 2,573.1	
Level 3 assets as a percentage of total Firm assets		2.1%
Level 3 assets as a percentage of total Firm assets at fair value		7.2%

(a) Private equity instruments represent investments within the Corporate line of business.

Valuation

Details of the Firm's processes for determining fair value are set out in Note 3. Estimating fair value requires the application of judgment. The type and level of judgment required is largely dependent on the amount of observable market information available to the Firm. For instruments valued using internally developed models that use significant unobservable inputs and are therefore classified within level 3 of the valuation hierarchy, judgments used to estimate fair value are more significant than those required when estimating the fair value of instruments classified within levels 1 and 2.

In arriving at an estimate of fair value for an instrument within level 3, management must first determine the appropriate model to use. Second, the lack of observability of certain significant inputs requires management to assess all relevant empirical data in deriving valuation inputs — including, for example, transaction details, yield curves, interest rates, prepayment rates, default rates, volatilities, correlations, equity or debt prices, valuations of comparable instruments, foreign exchange rates and credit curves. For further discussion of the valuation of level 3 instruments, including unobservable inputs used, see Note 3.

For instruments classified in levels 2 and 3, management judgment must be applied to assess the appropriate level of valuation adjustments to reflect counterparty credit quality, the Firm's credit-worthiness, market funding rates, liquidity considerations, unobservable parameters, and for portfolios that meet specified criteria, the size of the net open risk

position. The judgments made are typically affected by the type of product and its specific contractual terms, and the level of liquidity for the product or within the market as a whole. For further discussion of valuation adjustments applied by the Firm see Note 3.

Imprecision in estimating unobservable market inputs or other factors can affect the amount of gain or loss recorded for a particular position. Furthermore, while the Firm believes its valuation methods are appropriate and consistent with those of other market participants, the methods and assumptions used reflect management judgment and may vary across the Firm's businesses and portfolios.

The Firm uses various methodologies and assumptions in the determination of fair value. The use of methodologies or assumptions different than those used by the Firm could result in a different estimate of fair value at the reporting date. For a detailed discussion of the Firm's valuation process and hierarchy, and its determination of fair value for individual financial instruments, see Note 3.

Goodwill impairment

Under U.S. GAAP, goodwill must be allocated to reporting units and tested for impairment at least annually. The Firm's process and methodology used to conduct goodwill impairment testing is described in Note 17.

Management applies significant judgment when estimating the fair value of its reporting units. Estimates of fair value are dependent upon estimates of (a) the future earnings potential of the Firm's reporting units, including the estimated effects of regulatory and legislative changes, such as the Dodd-Frank Act, (b) long-term growth rates and (c) the relevant cost of equity. Imprecision in estimating these factors can affect the estimated fair value of the reporting units.

During 2014, the Firm recognized an impairment of the Private Equity business' goodwill totaling $276 million. Remaining goodwill of $101 million at December 31, 2014 associated with the Private Equity business was disposed of as part of the Private Equity sale completed in January 2015. For further information on the Private Equity sale, see Note 2.

Based upon the updated valuations for all of its reporting units, the Firm concluded that the goodwill allocated to its other reporting units was not impaired at December 31, 2014. The fair values of these reporting units exceeded their carrying values. Except for the Firm's mortgage banking business, the excess fair value as a percentage of carrying value ranged from approximately 20-210% for the other reporting units and did not indicate a significant risk of goodwill impairment based on current projections and valuations. The fair value of the Firm's Mortgage Banking business exceeded its carrying value by less than 5% and accordingly, the associated goodwill of approximately $2 billion remains at an elevated risk for goodwill impairment.

The projections for all of the Firm's reporting units are consistent with the short-term assumptions discussed in the Business outlook on pages 66–67, and in the longer term, incorporate a set of macroeconomic assumptions and the Firm's best estimates of long-term growth and returns of its businesses. Where possible, the Firm uses third-party and peer data to benchmark its assumptions and estimates.

Deterioration in economic market conditions, increased estimates of the effects of recent regulatory or legislative changes, or additional regulatory or legislative changes may result in declines in projected business performance beyond management's current expectations. For example, in the Firm's Mortgage Banking business, such declines could result from increases in primary mortgage interest rates, lower mortgage origination volume, higher costs to resolve foreclosure-related matters or from deterioration in economic conditions, including decreases in home prices that result in increased credit losses. Declines in business performance, increases in equity capital requirements, or increases in the estimated cost of equity, could cause the estimated fair values of the Firm's reporting units or their associated goodwill to decline in the future, which could result in a material impairment charge to earnings in a future period related to some portion of the associated goodwill.

For additional information on goodwill, see Note 17.

Income taxes

JPMorgan Chase is subject to the income tax laws of the various jurisdictions in which it operates, including U.S. federal, state and local and non-U.S. jurisdictions. These laws are often complex and may be subject to different interpretations. To determine the financial statement impact of accounting for income taxes, including the provision for income tax expense and unrecognized tax benefits, JPMorgan Chase must make assumptions and judgments about how to interpret and apply these complex tax laws to numerous transactions and business events, as well as make judgments regarding the timing of when certain items may affect taxable income in the U.S. and non-U.S. tax jurisdictions.

JPMorgan Chase's interpretations of tax laws around the world are subject to review and examination by the various taxing authorities in the jurisdictions where the Firm operates, and disputes may occur regarding its view on a tax position. These disputes over interpretations with the various taxing authorities may be settled by audit, administrative appeals or adjudication in the court systems of the tax jurisdictions in which the Firm operates. JPMorgan Chase regularly reviews whether it may be assessed additional income taxes as a result of the resolution of these matters, and the Firm records additional reserves as appropriate. In addition, the Firm may revise its estimate of income taxes due to changes in income tax laws, legal interpretations and tax planning strategies. It is possible that revisions in the Firm's estimate of income

taxes may materially affect the Firm's results of operations in any reporting period.

The Firm's provision for income taxes is composed of current and deferred taxes. Deferred taxes arise from differences between assets and liabilities measured for financial reporting versus income tax return purposes. Deferred tax assets are recognized if, in management's judgment, their realizability is determined to be more likely than not. The Firm has also recognized deferred tax assets in connection with certain NOLs. The Firm performs regular reviews to ascertain whether deferred tax assets are realizable. These reviews include management's estimates and assumptions regarding future taxable income, which also incorporates various tax planning strategies, including strategies that may be available to utilize NOLs before they expire. In connection with these reviews, if it is determined that a deferred tax asset is not realizable, a valuation allowance is established. The valuation allowance may be reversed in a subsequent reporting period if the Firm determines that, based on revised estimates of future taxable income or changes in tax planning strategies, it is more likely than not that all or part of the deferred tax asset will become realizable. As of December 31, 2014, management has determined it is more likely than not that the Firm will realize its deferred tax assets, net of the existing valuation allowance.

JPMorgan Chase does not record U.S. federal income taxes on the undistributed earnings of certain non-U.S. subsidiaries, to the extent that such earnings have been reinvested abroad for an indefinite period of time. Changes to the income tax rates applicable to these non-U.S. subsidiaries may have a material impact on the effective tax rate in a future period if such changes were to occur.

The Firm adjusts its unrecognized tax benefits as necessary when additional information becomes available. Uncertain tax positions that meet the more-likely-than-not recognition threshold are measured to determine the amount of benefit to recognize. An uncertain tax position is measured at the largest amount of benefit that management believes is more likely than not to be realized upon settlement. It is possible that the reassessment of JPMorgan Chase's unrecognized tax benefits may have a material impact on its effective tax rate in the period in which the reassessment occurs.

For additional information on income taxes, see Note 26.

Litigation reserves

For a description of the significant estimates and judgments associated with establishing litigation reserves, see Note 31.

ACCOUNTING AND REPORTING DEVELOPMENTS

Amendments to the consolidation analysis
In February 2015, the Financial Accounting Standards Board ("FASB") issued guidance regarding consolidation of legal entities such as limited partnerships, limited liability corporations, and securitization structures. The guidance eliminates the deferral issued by the FASB in February 2010 of the accounting guidance for VIEs for certain investment funds, including mutual funds, private equity funds and hedge funds. In addition, the guidance amends the evaluation of fees paid to a decision maker or a service provider, and exempts certain money market funds from consolidation. The guidance will be effective in the first quarter of 2016 with early adoption permitted. The Firm is currently evaluating the potential impact on the Consolidated Financial Statements.

Reclassification of residential real estate collateralized consumer mortgage loans upon foreclosure and classification of certain government-guaranteed mortgage loans upon foreclosure
In January 2014, the FASB issued guidance which clarified the timing of when a creditor is considered to have taken physical possession of residential real estate collateral for a consumer mortgage loan, resulting in the reclassification of the loan receivable to real estate owned. The final standard also requires disclosure of outstanding foreclosed residential real estate and the amount of the recorded investment in residential real estate mortgage loans in the process of foreclosure. In August 2014, the FASB issued separate guidance clarifying the classification and measurement of certain foreclosed government-guaranteed mortgage loans. Under the final standard, certain foreclosed government-insured mortgage loan amounts were reclassified on the balance sheet as a receivable from the guarantor at the guaranteed amount. The Firm early adopted both of these new standards in the third quarter of 2014 with a cumulative-effect adjustment as of January 1, 2014; the adoption of these standards (and related reclassification adjustment) had no material impact on the Firm's Consolidated Financial Statements.

Measuring the financial assets and financial liabilities of a consolidated collateralized financing entity
In August 2014, the FASB issued guidance to address diversity in the accounting for differences in the measurement of the fair values of financial assets and liabilities of consolidated financing VIEs. The new guidance provides an alternative for consolidated financing VIEs to elect: (1) to measure their financial assets and liabilities separately under existing U.S. GAAP for fair value measurement with any differences in such fair values reflected in earnings; or (2) to measure both their financial assets and liabilities using the more observable of the fair value of the financial assets or the fair value of the financial liabilities. The guidance will become effective in the first quarter of 2016, with early adoption permitted. The adoption of this guidance is not expected to have a material impact on the Firm's Consolidated Financial Statements.

Repurchase agreements and similar transactions
In June 2014, the FASB issued guidance that amends the accounting for certain secured financing transactions, and requires enhanced disclosures with respect to transactions recognized as sales in which exposure to the derecognized asset is retained through a separate agreement with the counterparty. In addition, the guidance requires enhanced disclosures with respect to the types and quality of financial assets pledged in secured financing transactions. The guidance will become effective in the first quarter of 2015, except for the disclosures regarding the types and quality of financial assets pledged, which will become effective in the second quarter of 2015. The adoption of this guidance is not expected to have a material impact on the Firm's Consolidated Financial Statements.

Revenue recognition – revenue from contracts with customers
In May 2014, the FASB issued revenue recognition guidance that is intended to create greater consistency with respect to how and when revenue from contracts with customers is shown in the statements of income. The guidance requires that revenue from contracts with customers be recognized upon delivery of a good or service based on the amount of consideration expected to be received, and requires additional disclosures about revenue. The guidance will be effective in the first quarter of 2017 and early adoption is prohibited. The Firm is currently evaluating the potential impact on the Consolidated Financial Statements.

Reporting discontinued operations and disclosures of disposals of components of an entity
In April 2014, the FASB issued guidance regarding the reporting of discontinued operations. The guidance changes the criteria for determining whether a disposition qualifies for discontinued operations presentation. It also requires enhanced disclosures about discontinued operations and significant dispositions that do not qualify to be presented as discontinued operations. The guidance will become effective in the first quarter of 2015. The adoption of this guidance is not expected to have a material impact on the Firm's Consolidated Financial Statements.

Investments in qualified affordable housing projects
In January 2014, the FASB issued guidance regarding the accounting for investments in affordable housing projects that qualify for the low-income housing tax credit. The guidance replaces the effective yield method and allows companies to make an accounting policy election to amortize the initial cost of its investments in proportion to the tax credits and other benefits received if certain criteria are met, and to present the amortization as a component of income tax expense. The guidance will become effective in the first quarter of 2015 and is required to be applied retrospectively, such that the Firm's results of operations for prior periods will be revised to reflect the guidance.

The Firm intends to adopt the guidance for all qualifying investments. The adoption of this guidance is estimated to reduce retained earnings by approximately $230 million. The Firm expects that reported other income and income tax expense will each increase as a result of presenting the amortization of the initial cost of its investments as component of income tax expense. The amount of this increase in each period depends on the size and characteristics of the Firm's portfolio of affordable housing investments; the estimated increase for 2014 is approximately $900 million. The effect of this guidance on the Firm's net income is not expected to be material.

NONEXCHANGE-TRADED COMMODITY DERIVATIVE CONTRACTS AT FAIR VALUE

In the normal course of business, JPMorgan Chase trades nonexchange-traded commodity derivative contracts. To determine the fair value of these contracts, the Firm uses various fair value estimation techniques, primarily based on internal models with significant observable market parameters. The Firm's nonexchange-traded commodity derivative contracts are primarily energy-related.

The following table summarizes the changes in fair value for nonexchange-traded commodity derivative contracts for the year ended December 31, 2014.

Year ended December 31, 2014 (in millions)	Asset position	Liability position
Net fair value of contracts outstanding at January 1, 2014	$ 8,128	$ 9,929
Effect of legally enforceable master netting agreements	15,082	15,318
Gross fair value of contracts outstanding at January 1, 2014	23,210	25,247
Contracts realized or otherwise settled	(14,451)	(15,557)
Fair value of new contracts	13,954	15,664
Changes in fair values attributable to changes in valuation techniques and assumptions	–	–
Other changes in fair value	1,440	1,783
Gross fair value of contracts outstanding at December 31, 2014	24,153	27,137
Effect of legally enforceable master netting agreements	(14,327)	(13,211)
Net fair value of contracts outstanding at December 31, 2014	$ 9,826	$ 13,926

The following table indicates the maturities of nonexchange-traded commodity derivative contracts at December 31, 2014.

December 31, 2014 (in millions)	Asset position	Liability position
Maturity less than 1 year	$ 15,635	$ 16,376
Maturity 1–3 years	6,561	8,459
Maturity 4–5 years	1,230	1,790
Maturity in excess of 5 years	727	512
Gross fair value of contracts outstanding at December 31, 2014	24,153	27,137
Effect of legally enforceable master netting agreements	(14,327)	(13,211)
Net fair value of contracts outstanding at December 31, 2014	$ 9,826	$ 13,926

FORWARD-LOOKING STATEMENTS

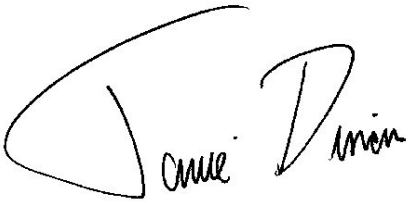
From time to time, the Firm has made and will make forward-looking statements. These statements can be identified by the fact that they do not relate strictly to historical or current facts. Forward-looking statements often use words such as "anticipate," "target," "expect," "estimate," "intend," "plan," "goal," "believe," or other words of similar meaning. Forward-looking statements provide JPMorgan Chase's current expectations or forecasts of future events, circumstances, results or aspirations. JPMorgan Chase's disclosures in this Annual Report contain forward-looking statements within the meaning of the Private Securities Litigation Reform Act of 1995. The Firm also may make forward-looking statements in its other documents filed or furnished with the Securities and Exchange Commission. In addition, the Firm's senior management may make forward-looking statements orally to investors, analysts, representatives of the media and others.

All forward-looking statements are, by their nature, subject to risks and uncertainties, many of which are beyond the Firm's control. JPMorgan Chase's actual future results may differ materially from those set forth in its forward-looking statements. While there is no assurance that any list of risks and uncertainties or risk factors is complete, below are certain factors which could cause actual results to differ from those in the forward-looking statements:

- Local, regional and international business, economic and political conditions and geopolitical events;
- Changes in laws and regulatory requirements;
- Changes in trade, monetary and fiscal policies and laws;
- Securities and capital markets behavior, including changes in market liquidity and volatility;
- Changes in investor sentiment or consumer spending or savings behavior;
- Ability of the Firm to manage effectively its capital and liquidity, including approval of its capital plans by banking regulators;
- Changes in credit ratings assigned to the Firm or its subsidiaries;
- Damage to the Firm's reputation;
- Ability of the Firm to deal effectively with an economic slowdown or other economic or market disruption;
- Technology changes instituted by the Firm, its counterparties or competitors;
- The success of the Firm's business simplification initiatives and the effectiveness of its control agenda;
- Ability of the Firm to develop new products and services, and the extent to which products or services previously sold by the Firm (including but not limited to mortgages and asset-backed securities) require the Firm to incur liabilities or absorb losses not contemplated at their initiation or origination;
- Ability of the Firm to address enhanced regulatory requirements affecting its consumer businesses;
- Acceptance of the Firm's new and existing products and services by the marketplace and the ability of the Firm to increase market share;
- Ability of the Firm to attract and retain qualified employees;
- Ability of the Firm to control expense;
- Competitive pressures;
- Changes in the credit quality of the Firm's customers and counterparties;
- Adequacy of the Firm's risk management framework, disclosure controls and procedures and internal control over financial reporting;
- Adverse judicial or regulatory proceedings;
- Changes in applicable accounting policies;
- Ability of the Firm to determine accurate values of certain assets and liabilities;
- Occurrence of natural or man-made disasters or calamities or conflicts;
- Ability of the Firm to maintain the security of its financial, accounting, technology, data processing and other operating systems and facilities;
- The other risks and uncertainties detailed in Part I, Item 1A: Risk Factors in the Firm's Annual Report on Form 10-K for the year ended December 31, 2014.

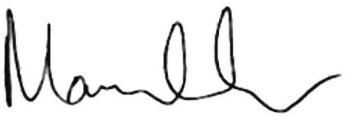
Any forward-looking statements made by or on behalf of the Firm speak only as of the date they are made, and JPMorgan Chase does not undertake to update forward-looking statements to reflect the impact of circumstances or events that arise after the date the forward-looking statements were made. The reader should, however, consult any further disclosures of a forward-looking nature the Firm may make in any subsequent Annual Reports on Form 10-K, Quarterly Reports on Form 10-Q, or Current Reports on Form 8-K.

Management's report on internal control over financial reporting



Management of JPMorgan Chase & Co. ("JPMorgan Chase" or the "Firm") is responsible for establishing and maintaining adequate internal control over financial reporting. Internal control over financial reporting is a process designed by, or under the supervision of, the Firm's principal executive and principal financial officers, or persons performing similar functions, and effected by JPMorgan Chase's Board of Directors, management and other personnel, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with accounting principles generally accepted in the United States of America.

JPMorgan Chase's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records, that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the Firm's assets; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the Firm are being made only in accordance with authorizations of JPMorgan Chase's management and directors; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use or disposition of the Firm's assets that could have a material effect on the financial statements.



Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate. Management has completed an assessment of the effectiveness of the Firm's internal control over financial reporting as of December 31, 2014. In making the assessment, management used the framework in "Internal Control - Integrated Framework (2013)" promulgated by the Committee of Sponsoring Organizations of the Treadway Commission, commonly referred to as the "COSO" criteria.

Based upon the assessment performed, management concluded that as of December 31, 2014, JPMorgan Chase's internal control over financial reporting was effective based upon the COSO 2013 criteria. Additionally, based upon management's assessment, the Firm determined that there were no material weaknesses in its internal control over financial reporting as of December 31, 2014.

The effectiveness of the Firm's internal control over financial reporting as of December 31, 2014, has been audited by PricewaterhouseCoopers LLP, an independent registered public accounting firm, as stated in their report which appears herein.

James Dimon
Chairman and Chief Executive Officer

Marianne Lake
Executive Vice President and Chief Financial Officer

February 24, 2015

To the Board of Directors and Stockholders of JPMorgan Chase & Co.:

In our opinion, the accompanying consolidated balance sheets and the related consolidated statements of income, comprehensive income, changes in stockholders' equity and cash flows present fairly, in all material respects, the financial position of JPMorgan Chase & Co. and its subsidiaries (the "Firm") at December 31, 2014 and 2013 and the results of their operations and their cash flows for each of the three years in the period ended December 31, 2014 in conformity with accounting principles generally accepted in the United States of America. Also in our opinion, the Firm maintained, in all material respects, effective internal control over financial reporting as of December 31, 2014 based on criteria established in *Internal Control - Integrated Framework (2013)* issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). The Firm's management is responsible for these financial statements, for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting, included in the accompanying "Management's report on internal control over financial reporting". Our responsibility is to express opinions on these financial statements and on the Firm's internal control over financial reporting based on our integrated audits. We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audits to obtain reasonable assurance about whether the financial statements are free of material misstatement and whether effective internal control over financial reporting was maintained in all material respects. Our audits of the financial statements included examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, and evaluating the overall financial statement presentation. Our audit of internal control over financial reporting included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. Our audits also included performing such other procedures as we considered necessary in the circumstances. We believe that our audits provide a reasonable basis for our opinions.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (i) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (ii) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (iii) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

Commitments and contingencies (see Notes 29, 30 and 31)		
Stockholders' equity		
Preferred stock ($1 par value; authorized 200,000,000 shares: issued **2,006,250** and 1,115,750 shares)	**20,063**	11,158
Common stock ($1 par value; authorized 9,000,000,000 shares; issued **4,104,933,895** shares)	**4,105**	4,105
Additional paid-in capital	**93,270**	93,828
Retained earnings	**130,315**	115,756
Accumulated other comprehensive income	**2,189**	1,199
Shares held in RSU trust, at cost (**472,953** and 476,642 shares)	**(21)**	(21)
Treasury stock, at cost (**390,144,630** and 348,825,583 shares)	**(17,856)**	(14,847)
Total stockholders' equity	**232,065**	211,178
Total liabilities and stockholders' equity	**$ 2,573,126**	$ 2,415,689

(a) The following table presents information on assets and liabilities related to VIEs that are consolidated by the Firm at December 31, 2014 and 2013. The difference between total VIE assets and liabilities represents the Firm's interests in those entities, which were eliminated in consolidation.

December 31, (in millions)	2014	2013
Assets		
Trading assets	**$ 9,090**	$ 6,366
Loans	**68,880**	70,072
All other assets	**1,815**	2,168
Total assets	**$ 79,785**	$ 78,606
Liabilities		
Beneficial interests issued by consolidated variable interest entities	**$ 52,362**	$ 49,617
All other liabilities	**949**	1,061
Total liabilities	**$ 53,311**	$ 50,678

The assets of the consolidated VIEs are used to settle the liabilities of those entities. The holders of the beneficial interests do not have recourse to the general credit of JPMorgan Chase. At December 31, 2014 and 2013, the Firm provided limited program-wide credit enhancement of $2.0 billion and $2.6 billion, respectively, related to its Firm-administered multi-seller conduits, which are eliminated in consolidation. For further discussion, see Note 16.

The Notes to Consolidated Financial Statements are an integral part of these statements.

Consolidated statements of changes in stockholders' equity

Year ended December 31, (in millions, except per share data)	2014	2013	2012

The Notes to Consolidated Financial Statements are an integral part of these statements.

Note 1 – Basis of presentation

JPMorgan Chase & Co. ("JPMorgan Chase" or the "Firm"), a financial holding company incorporated under Delaware law in 1968, is a leading global financial services firm and one of the largest banking institutions in the United States of America ("U.S."), with operations worldwide. The Firm is a leader in investment banking, financial services for consumers and small business, commercial banking, financial transaction processing and asset management. For a discussion of the Firm's business segments, see Note 33.

The accounting and financial reporting policies of JPMorgan Chase and its subsidiaries conform to accounting principles generally accepted in the U.S. ("U.S. GAAP"). Additionally, where applicable, the policies conform to the accounting and reporting guidelines prescribed by regulatory authorities.

Certain amounts reported in prior periods have been reclassified to conform with the current presentation.

Consolidation

The Consolidated Financial Statements include the accounts of JPMorgan Chase and other entities in which the Firm has a controlling financial interest. All material intercompany balances and transactions have been eliminated.

Assets held for clients in an agency or fiduciary capacity by the Firm are not assets of JPMorgan Chase and are not included on the Consolidated balance sheets.

The Firm determines whether it has a controlling financial interest in an entity by first evaluating whether the entity is a voting interest entity or a variable interest entity ("VIE").

Voting Interest Entities

Voting interest entities are entities that have sufficient equity and provide the equity investors voting rights that enable them to make significant decisions relating to the entity's operations. For these types of entities, the Firm's determination of whether it has a controlling interest is primarily based on the amount of voting equity interests held. Entities in which the Firm has a controlling financial interest, through ownership of the majority of the entities' voting equity interests, or through other contractual rights that give the Firm control, are consolidated by the Firm.

Investments in companies in which the Firm has significant influence over operating and financing decisions (but does not own a majority of the voting equity interests) are accounted for (i) in accordance with the equity method of accounting (which requires the Firm to recognize its proportionate share of the entity's net earnings), or (ii) at fair value if the fair value option was elected. These investments are generally included in other assets, with income or loss included in other income.

Certain Firm-sponsored asset management funds are structured as limited partnerships or limited liability companies. For many of these entities, the Firm is the general partner or managing member, but the non-affiliated partners or members have the ability to remove the Firm as the general partner or managing member without cause (i.e., kick-out rights), based on a simple majority vote, or the non-affiliated partners or members have rights to participate in important decisions. Accordingly, the Firm does not consolidate these funds. In the limited cases where the nonaffiliated partners or members do not have substantive kick-out or participating rights, the Firm consolidates the funds.

The Firm's investment companies have investments in both publicly-held and privately-held entities, including investments in buyouts, growth equity and venture opportunities. These investments are accounted for under investment company guidelines and accordingly, irrespective of the percentage of equity ownership interests held, are carried on the Consolidated balance sheets at fair value, and are recorded in other assets.

Variable Interest Entities

VIEs are entities that, by design, either (1) lack sufficient equity to permit the entity to finance its activities without additional subordinated financial support from other parties, or (2) have equity investors that do not have the ability to make significant decisions relating to the entity's operations through voting rights, or do not have the obligation to absorb the expected losses, or do not have the right to receive the residual returns of the entity.

The most common type of VIE is a special purpose entity ("SPE"). SPEs are commonly used in securitization transactions in order to isolate certain assets and distribute the cash flows from those assets to investors. The basic SPE structure involves a company selling assets to the SPE; the SPE funds the purchase of those assets by issuing securities to investors. The legal documents that govern the transaction specify how the cash earned on the assets must be allocated to the SPE's investors and other parties that have rights to those cash flows. SPEs are generally structured to insulate investors from claims on the SPE's assets by creditors of other entities, including the creditors of the seller of the assets.

The primary beneficiary of a VIE (i.e., the party that has a controlling financial interest) is required to consolidate the assets and liabilities of the VIE. The primary beneficiary is the party that has both (1) the power to direct the activities of the VIE that most significantly impact the VIE's economic performance; and (2) through its interests in the VIE, the obligation to absorb losses or the right to receive benefits from the VIE that could potentially be significant to the VIE.

To assess whether the Firm has the power to direct the activities of a VIE that most significantly impact the VIE's economic performance, the Firm considers all the facts and circumstances, including its role in establishing the VIE and its ongoing rights and responsibilities. This assessment includes, first, identifying the activities that most significantly impact the VIE's economic performance; and second, identifying which party, if any, has power over those activities. In general, the parties that make the most

significant decisions affecting the VIE (such as asset managers, collateral managers, servicers, or owners of call options or liquidation rights over the VIE's assets) or have the right to unilaterally remove those decision-makers are deemed to have the power to direct the activities of a VIE.

To assess whether the Firm has the obligation to absorb losses of the VIE or the right to receive benefits from the VIE that could potentially be significant to the VIE, the Firm considers all of its economic interests, including debt and equity investments, servicing fees, and derivative or other arrangements deemed to be variable interests in the VIE. This assessment requires that the Firm apply judgment in determining whether these interests, in the aggregate, are considered potentially significant to the VIE. Factors considered in assessing significance include: the design of the VIE, including its capitalization structure; subordination of interests; payment priority; relative share of interests held across various classes within the VIE's capital structure; and the reasons why the interests are held by the Firm.

The Firm performs on-going reassessments of: (1) whether entities previously evaluated under the majority voting-interest framework have become VIEs, based on certain events, and therefore subject to the VIE consolidation framework; and (2) whether changes in the facts and circumstances regarding the Firm's involvement with a VIE cause the Firm's consolidation conclusion to change.

In February 2010, the Financial Accounting Standards Board ("FASB") issued an amendment which deferred the requirements of the accounting guidance for VIEs for certain investment funds, including mutual funds, private equity funds and hedge funds. For the funds to which the deferral applies, the Firm continues to apply other existing authoritative accounting guidance to determine whether such funds should be consolidated.

Use of estimates in the preparation of consolidated financial statements

The preparation of the Consolidated Financial Statements requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities, revenue and expense, and disclosures of contingent assets and liabilities. Actual results could be different from these estimates.

Foreign currency translation

JPMorgan Chase revalues assets, liabilities, revenue and expense denominated in non-U.S. currencies into U.S. dollars using applicable exchange rates.

Gains and losses relating to translating functional currency financial statements for U.S. reporting are included in other comprehensive income/(loss) ("OCI") within stockholders' equity. Gains and losses relating to nonfunctional currency transactions, including non-U.S. operations where the functional currency is the U.S. dollar, are reported in the Consolidated statements of income.

Offsetting assets and liabilities

U.S. GAAP permits entities to present derivative receivables and derivative payables with the same counterparty and the related cash collateral receivables and payables on a net basis on the balance sheet when a legally enforceable master netting agreement exists. U.S. GAAP also permits securities sold and purchased under repurchase agreements to be presented net when specified conditions are met, including the existence of a legally enforceable master netting agreement. The Firm has elected to net such balances when the specified conditions are met.

The Firm uses master netting agreements to mitigate counterparty credit risk in certain transactions, including derivatives transactions, repurchase and reverse repurchase agreements, and securities borrowed and loaned agreements. A master netting agreement is a single contract with a counterparty that permits multiple transactions governed by that contract to be terminated and settled through a single payment in a single currency in the event of a default (e.g., bankruptcy, failure to make a required payment or securities transfer or deliver collateral or margin when due after expiration of any grace period). Upon the exercise of termination rights by the non-defaulting party (i) all transactions are terminated, (ii) all transactions are valued and the positive value or "in the money" transactions are netted against the negative value or "out of the money" transactions and (iii) the only remaining payment obligation is of one of the parties to pay the netted termination amount. Upon exercise of repurchase agreement and securities loaned default rights (i) all securities loan transactions are terminated and accelerated, (ii) all values of securities or cash held or to be delivered are calculated, and all such sums are netted against each other and (iii) the only remaining payment obligation is of one of the parties to pay the netted termination amount.

Typical master netting agreements for these types of transactions also often contain a collateral/margin agreement that provides for a security interest in, or title transfer of, securities or cash collateral/margin to the party that has the right to demand margin (the "demanding party"). The collateral/margin agreement typically requires a party to transfer collateral/margin to the demanding party with a value equal to the amount of the margin deficit on a net basis across all transactions governed by the master netting agreement, less any threshold. The collateral/margin agreement grants to the demanding party, upon default by the counterparty, the right to set-off any amounts payable by the counterparty against any posted collateral or the cash equivalent of any posted collateral/margin. It also grants to the demanding party the right to liquidate collateral/margin and to apply the proceeds to an amount payable by the counterparty.

For further discussion of the Firm's derivative instruments, see Note 6. For further discussion of the Firm's repurchase and reverse repurchase agreements, and securities borrowing and lending agreements, see Note 13.

Statements of cash flows

For JPMorgan Chase's Consolidated statements of cash flows, cash is defined as those amounts included in cash and due from banks.

Significant accounting policies

The following table identifies JPMorgan Chase's other significant accounting policies and the Note and page where a detailed description of each policy can be found.

Note 2 – Business changes and developments

Subsequent events

As part of the Firm's business simplification agenda, the sale of a portion of the Private Equity Business ("Private Equity sale") was completed on January 9, 2015. Concurrent with the sale, a new independent management company was formed by the former One Equity Partners ("OEP") investment professionals. The new management company will provide investment management services to the acquirer of the investments sold in the Private Equity sale and for the portion of private equity investments retained by the Firm. Upon closing, this transaction did not have a material impact on the Firm's Consolidated balance sheets or its results of operations.

Note 3 – Fair value measurement

JPMorgan Chase carries a portion of its assets and liabilities at fair value. These assets and liabilities are predominantly carried at fair value on a recurring basis (i.e., assets and liabilities that are measured and reported at fair value on the Firm's Consolidated balance sheets). Certain assets (e.g., certain mortgage, home equity and other loans where the carrying value is based on the fair value of the underlying collateral), liabilities and unfunded lending-related commitments are measured at fair value on a nonrecurring basis; that is, they are not measured at fair value on an ongoing basis but are subject to fair value adjustments only in certain circumstances (for example, when there is evidence of impairment).

Fair value is defined as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. Fair value is based on quoted market prices, where available. If listed prices or quotes are not available, fair value is based on models that consider relevant transaction characteristics (such as maturity) and use as inputs observable or unobservable market parameters, including but not limited to yield curves, interest rates, volatilities, equity or debt prices, foreign exchange rates and credit curves. Valuation adjustments may be made to ensure that financial instruments are recorded at fair value, as described below.

The level of precision in estimating unobservable market inputs or other factors can affect the amount of gain or loss recorded for a particular position. Furthermore, while the Firm believes its valuation methods are appropriate and consistent with those of other market participants, the methods and assumptions used reflect management judgment and may vary across the Firm's businesses and portfolios.

The Firm uses various methodologies and assumptions in the determination of fair value. The use of different methodologies or assumptions to those used by the Firm could result in a different estimate of fair value at the reporting date.

Valuation process

Risk-taking functions are responsible for providing fair value estimates for assets and liabilities carried on the Consolidated balance sheets at fair value. The Firm's valuation control function, which is part of the Firm's Finance function and independent of the risk-taking functions, is responsible for verifying these estimates and determining any fair value adjustments that may be required to ensure that the Firm's positions are recorded at fair value. In addition, the Firm has a firmwide Valuation Governance Forum ("VGF") comprised of senior finance and risk executives to oversee the management of risks arising from valuation activities conducted across the Firm. The VGF is chaired by the Firmwide head of the valuation control function, and also includes sub-forums for the Corporate & Investment Bank ("CIB"), Mortgage Banking, (part of Consumer & Community Banking) and certain corporate functions including Treasury and Chief Investment Office ("CIO").

The valuation control function verifies fair value estimates provided by the risk-taking functions by leveraging independently derived prices, valuation inputs and other market data, where available. Where independent prices or inputs are not available, additional review is performed by the valuation control function to ensure the reasonableness of the estimates, and may include: evaluating the limited market activity including client unwinds; benchmarking of valuation inputs to those for similar instruments; decomposing the valuation of structured instruments into individual components; comparing expected to actual cash flows; reviewing profit and loss trends; and reviewing trends in collateral valuation. In addition there are additional levels of management review for more significant or complex positions.

The valuation control function determines any valuation adjustments that may be required to the estimates provided by the risk-taking functions. No adjustments are applied to the quoted market price for instruments classified within level 1 of the fair value hierarchy (see below for further information on the fair value hierarchy). For other positions, judgment is required to assess the need for valuation adjustments to appropriately reflect liquidity considerations, unobservable parameters, and, for certain portfolios that meet specified criteria, the size of the net open risk position. The determination of such adjustments follows a consistent framework across the Firm:

- Liquidity valuation adjustments are considered where an observable external price or valuation parameter exists but is of lower reliability, potentially due to lower market activity. Liquidity valuation adjustments are applied and determined based on current market conditions. Factors that may be considered in determining the liquidity adjustment include analysis of: (1) the estimated bid-offer spread for the instrument being traded; (2) alternative pricing points for similar instruments in active markets; and (3) the range of reasonable values that the price or parameter could take.
- The Firm manages certain portfolios of financial instruments on the basis of net open risk exposure and, as permitted by U.S. GAAP, has elected to estimate the fair value of such portfolios on the basis of a transfer of the entire net open risk position in an orderly transaction. Where this is the case, valuation adjustments may be necessary to reflect the cost of exiting a larger-than-normal market-size net open risk position. Where applied, such adjustments are based on factors that a relevant market participant would consider in the transfer of the net open risk position including the size of the adverse market move that is likely to occur during the period required to reduce the net open risk position to a normal market-size.

- Unobservable parameter valuation adjustments may be made when positions are valued using prices or input parameters to valuation models that are unobservable due to a lack of market activity or because they cannot be implied from observable market data. Such prices or parameters must be estimated and are, therefore, subject to management judgment. Unobservable parameter valuation adjustments are applied to reflect the uncertainty inherent in the resulting valuation estimate.

Where appropriate, the Firm also applies adjustments to its estimates of fair value in order to appropriately reflect counterparty credit quality, the Firm's own creditworthiness and the impact of funding, applying a consistent framework across the Firm. For more information on such adjustments see Credit and funding adjustments on pages 196–197 of this Note.

Valuation model review and approval

If prices or quotes are not available for an instrument or a similar instrument, fair value is generally determined using valuation models that consider relevant transaction data such as maturity and use as inputs market-based or independently sourced parameters. Where this is the case the price verification process described above is applied to the inputs to those models.

The Model Risk function is independent of the model owners and reviews and approves a wide range of models, including risk management, valuation and certain regulatory capital models used by the Firm. The Model Risk function is part of the Firm's Model Risk and Development unit, and the Firmwide Model Risk and Development Executive reports to the Firm's CRO. When reviewing a model, the Model Risk function analyzes and challenges the model methodology and the reasonableness of model assumptions and may perform or require additional testing, including back-testing of model outcomes.

New significant valuation models, as well as material changes to existing valuation models, are reviewed and approved prior to implementation except where specified conditions are met. The Model Risk function performs an annual firmwide model risk assessment where developments in the product or market are considered in determining whether valuation models which have already been reviewed need to be reviewed and approved again.

Valuation hierarchy

A three-level valuation hierarchy has been established under U.S. GAAP for disclosure of fair value measurements. The valuation hierarchy is based on the transparency of inputs to the valuation of an asset or liability as of the measurement date. The three levels are defined as follows.

- Level 1 – inputs to the valuation methodology are quoted prices (unadjusted) for identical assets or liabilities in active markets.
- Level 2 – inputs to the valuation methodology include quoted prices for similar assets and liabilities in active markets, and inputs that are observable for the asset or liability, either directly or indirectly, for substantially the full term of the financial instrument.
- Level 3 – one or more inputs to the valuation methodology are unobservable and significant to the fair value measurement.

A financial instrument's categorization within the valuation hierarchy is based on the lowest level of input that is significant to the fair value measurement.

The following table describes the valuation methodologies used by the Firm to measure its more significant products/ instruments at fair value, including the general classification of such instruments pursuant to the valuation hierarchy.

Product/instrument	Valuation methodology	Classifications in the valuation hierarchy
Securities financing agreements	Valuations are based on discounted cash flows, which consider: • Derivative features. For further information refer to the discussion of derivatives below. • Market rates for the respective maturity • Collateral	Level 2
Loans and lending-related commitments - wholesale		
Trading portfolio	Where observable market data is available, valuations are based on: • Observed market prices (circumstances are infrequent) • Relevant broker quotes • Observed market prices for similar instruments Where observable market data is unavailable or limited, valuations are based on discounted cash flows, which consider the following: • Yield • Lifetime credit losses • Loss severity • Prepayment speed • Servicing costs	Level 2 or 3
Loans held for investment and associated lending-related commitments	Valuations are based on discounted cash flows, which consider: • Credit spreads, derived from the cost of credit default swaps ("CDS"); or benchmark credit curves developed by the Firm, by industry and credit rating, and which take into account the difference in loss severity rates between bonds and loans • Prepayment speed Lending-related commitments are valued similar to loans and reflect the portion of an unused commitment expected, based on the Firm's average portfolio historical experience, to become funded prior to an obligor default For information regarding the valuation of loans measured at collateral value, see Note 14.	Predominantly level 3
Loans - consumer		
Held for investment consumer loans, excluding credit card	Valuations are based on discounted cash flows, which consider: • Discount rates (derived from primary origination rates and market activity) • Expected lifetime credit losses (considering expected and current default rates for existing portfolios, collateral prices, and economic environment expectations (e.g., unemployment rates)) • Estimated prepayments • Servicing costs • Market liquidity For information regarding the valuation of loans measured at collateral value, see Note 14.	Predominantly level 3
Held for investment credit card receivables	Valuations are based on discounted cash flows, which consider: • Projected interest income and late fee revenue, servicing and credit costs, and loan repayment rates • Estimated life of receivables (based on projected loan payment rates) • Discount rate - based on cost of funding and expected return on receivables • Credit costs - allowance for loan losses is considered a reasonable proxy for the credit cost based on the short-term nature of credit card receivables	Level 3
Trading loans - Conforming residential mortgage loans expected to be sold	Fair value is based upon observable prices for mortgage-backed securities with similar collateral and incorporates adjustments to these prices to account for differences between the securities and the value of the underlying loans, which include credit characteristics, portfolio composition, and liquidity.	Predominantly level 2

Product/instrument	Valuation methodology, inputs and assumptions	Classifications in the valuation hierarchy
Securities	Quoted market prices are used where available.	Level 1
	In the absence of quoted market prices, securities are valued based on: • Observable market prices for similar securities • Relevant broker quotes • Discounted cash flows In addition, the following inputs to discounted cash flows are used for the following products: *Mortgage- and asset-backed securities specific inputs:* • Collateral characteristics • Deal-specific payment and loss allocations • Current market assumptions related to yield, prepayment speed, conditional default rates and loss severity *Collateralized loan obligations ("CLOs"), specific inputs:* • Collateral characteristics • Deal-specific payment and loss allocations • Expected prepayment speed, conditional default rates, loss severity • Credit spreads • Credit rating data	Level 2 or 3
Physical commodities	Valued using observable market prices or data	Predominantly Level 1 and 2
Derivatives	Exchange-traded derivatives that are actively traded and valued using the exchange price, and over-the-counter contracts where quoted prices are available in an active market.	Level 1
	Derivatives that are valued using models such as the Black-Scholes option pricing model, simulation models, or a combination of models, that use observable or unobservable valuation inputs (e.g., plain vanilla options and interest rate and credit default swaps). Inputs include: • Contractual terms including the period to maturity • Readily observable parameters including interest rates and volatility • Credit quality of the counterparty and of the Firm • Market funding levels • Correlation levels In addition, the following specific inputs are used for the following derivatives that are valued based on models with significant unobservable inputs: *Structured credit derivatives specific inputs include:* • CDS spreads and recovery rates • Credit correlation between the underlying debt instruments (levels are modeled on a transaction basis and calibrated to liquid benchmark tranche indices) • Actual transactions, where available, are used to regularly recalibrate unobservable parameters *Certain long-dated equity option specific inputs include:* • Long-dated equity volatilities *Certain interest rate and foreign exchange ("FX") exotic options specific inputs include:* • Interest rate correlation • Interest rate spread volatility • Foreign exchange correlation • Correlation between interest rates and foreign exchange rates • Parameters describing the evolution of underlying interest rates *Certain commodity derivatives specific inputs include:* • Commodity volatility • Forward commodity price Additionally, adjustments are made to reflect counterparty credit quality (credit valuation adjustments or "CVA"), the Firm's own creditworthiness (debit valuation adjustments or "DVA"), and funding valuation adjustment ("FVA") to incorporate the impact of funding. See pages 196–197 of this Note.	Level 2 or 3

Product/instrument	Valuation methodology, inputs and assumptions	Classification in the valuation hierarchy
Mortgage servicing rights ("MSRs")	See Mortgage servicing rights in Note 17.	Level 3
Private equity direct investments	*Private equity direct investments* Fair value is estimated using all available information and considering the range of potential inputs, including: • Transaction prices • Trading multiples of comparable public companies • Operating performance of the underlying portfolio company • Additional available inputs relevant to the investment • Adjustments as required, since comparable public companies are not identical to the company being valued, and for company-specific issues and lack of liquidity	Level 2 or 3
	Public investments held in the Private Equity portfolio • Valued using observable market prices less adjustments for relevant restrictions, where applicable	Level 1 or 2
Fund investments (i.e., mutual/collective investment funds, private equity funds, hedge funds, and real estate funds)	Net asset value ("NAV") • NAV is validated by sufficient level of observable activity (i.e., purchases and sales)	Level 1
	• Adjustments to the NAV as required, for restrictions on redemption (e.g., lock up periods or withdrawal limitations) or where observable activity is limited	Level 2 or 3
Beneficial interests issued by consolidated VIEs	Valued using observable market information, where available In the absence of observable market information, valuations are based on the fair value of the underlying assets held by the VIE	Level 2 or 3
Long-term debt, not carried at fair value	Valuations are based on discounted cash flows, which consider: • Market rates for respective maturity • The Firm's own creditworthiness (DVA). See pages 196-197 of this Note.	Predominantly level 2
Structured notes (included in deposits, other borrowed funds and long-term debt)	• Valuations are based on discounted cash flow analyses that consider the embedded derivative and the terms and payment structure of the note. • The embedded derivative features are considered using models such as the Black-Scholes option pricing model, simulation models, or a combination of models that use observable or unobservable valuation inputs, depending on the embedded derivative. The specific inputs used vary according to the nature of the embedded derivative features, as described in the discussion above regarding derivative valuation. Adjustments are then made to this base valuation to reflect the Firm's own creditworthiness (DVA) and to incorporate the impact of funding (FVA). See pages 196–197 of this Note.	Level 2 or 3

The following table presents the asset and liabilities reported at fair value as of December 31, 2014 and 2013, by major product category and fair value hierarchy.

Assets and liabilities measured at fair value on a recurring basis

	Fair value hierarchy				
December 31, 2014 (in millions)	Level 1	Level 2	Level 3	Derivative netting adjustments	Total fair value

Total liabilities measured at fair value on a recurring basis	$ 62,424	$ 1,200,452	$ 33,958	$ (1,102,835)	$ 193,999

(a) At December 31, 2014 and 2013, included total U.S. government-sponsored enterprise obligations of $84.1 billion and $91.5 billion, respectively, which were predominantly mortgage-related.

(b) At December 31, 2014 and 2013, included within trading loans were $17.0 billion and $14.8 billion, respectively, of residential first-lien mortgages, and $5.8 billion and $2.1 billion, respectively, of commercial first-lien mortgages. Residential mortgage loans include conforming mortgage loans originated with the intent to sell to U.S. government agencies of $7.7 billion and $6.0 billion, respectively, and reverse mortgages of $3.4 billion and $3.6 billion, respectively.

(c) Physical commodities inventories are generally accounted for at the lower of cost or market. "Market" is a term defined in U.S. GAAP as not exceeding fair value less costs to sell ("transaction costs"). Transaction costs for the Firm's physical commodities inventories are either not applicable or immaterial to the value of the inventory. Therefore, market approximates fair value for the Firm's physical commodities inventories. When fair value hedging has been applied (or when market is below cost), the carrying value of physical commodities approximates fair value, because under fair value hedge accounting, the cost basis is adjusted for changes in fair value. For a further discussion of the Firm's hedge accounting relationships, see Note 6. To provide consistent fair value disclosure information, all physical commodities inventories have been included in each period presented.

(d) Balances reflect the reduction of securities owned (long positions) by the amount of identical securities sold but not yet purchased (short positions).

(e) As permitted under U.S. GAAP, the Firm has elected to net derivative receivables and derivative payables and the related cash collateral received and paid when a legally enforceable master netting agreement exists. For purposes of the tables above, the Firm does not reduce derivative receivables and derivative payables balances for this netting adjustment, either within or across the levels of the fair value hierarchy, as such netting is not relevant to a presentation based on the transparency of inputs to the valuation of an asset or liability. Therefore, the balances reported in the fair value hierarchy table are gross of any counterparty netting adjustments. However, if the Firm were to net such balances within level 3, the reduction in the level 3 derivative receivables and payables balances would be $2.5 billion and $7.6 billion at December 31, 2014 and 2013, respectively; this is exclusive of the netting benefit associated with cash collateral, which would further reduce the level 3 balances.

(f) Private equity instruments represent investments within the Corporate line of business. The cost basis of the private equity investment portfolio totaled $6.0 billion and $8.0 billion at December 31, 2014 and 2013, respectively.

(g) Includes investments in hedge funds, private equity funds, real estate and other funds that do not have readily determinable fair values. The Firm uses net asset value per share when measuring the fair value of these investments. At December 31, 2014 and 2013, the fair values of these investments were $1.8 billion and $3.2 billion, respectively, of which $337 million and $899 million, respectively were classified in level 2, and $1.4 billion and $2.3 billion, respectively, in level 3.

Transfers between levels for instruments carried at fair value on a recurring basis

For the year ended December 31, 2014 and 2013, there were no significant transfers between levels 1 and 2.

During the year ended December 31, 2014, transfers from level 3 to level 2 included the following:

- $4.3 billion and $4.4 billion of gross equity derivative receivables and payables, respectively, due to increased observability of certain equity option valuation inputs;
- $2.7 billion of trading loans, $2.6 billion of margin loans, $2.3 billion of private equity investments, $2.0 billion of corporate debt, and $1.3 billion of long-term debt, based on increased liquidity and price transparency.

Transfers from level 2 into level 3 included $1.1 billion of other borrowed funds, $1.1 billion of trading loans and $1.0 billion of long-term debt, based on a decrease in observability of valuation inputs and price transparency.

During the year ended December 31, 2013, transfers from level 3 to level 2 included certain highly rated CLOs, including $27.4 billion held in the Firm's available-for-sale ("AFS") securities portfolio and $1.4 billion held in the trading portfolio, based on increased liquidity and price transparency; and $1.3 billion of long-term debt, largely driven by an increase in observability of certain equity structured notes. Transfers from level 2 to level 3 included $1.4 billion of corporate debt securities in the trading portfolio largely driven by a decrease in observability for certain credit instruments.

For the year ended December 31, 2012, $113.9 billion of settled U.S. government agency mortgage-backed securities were transferred from level 1 to level 2. While the U.S. government agency mortgage-backed securities market remained highly liquid and transparent, the transfer reflected greater market price differentiation between settled securities based on certain underlying loan specific factors. There were no significant transfers from level 2 to level 1 for the year ended December 31, 2012.

For the year ended December 31, 2012, there were no significant transfers from level 2 into level 3. For the year ended December 31, 2012, transfers from level 3 into level 2 included $1.2 billion of derivative payables based on increased observability of certain structured equity derivatives; and $1.8 billion of long-term debt due to increased observability of certain equity structured notes.

All transfers are assumed to occur at the beginning of the quarterly reporting period in which they occur.

Level 3 valuations

The Firm has established well-documented processes for determining fair value, including for instruments where fair value is estimated using significant unobservable inputs (level 3). For further information on the Firm's valuation process and a detailed discussion of the determination of fair value for individual financial instruments, see pages 181–184 of this Note.

Estimating fair value requires the application of judgment. The type and level of judgment required is largely dependent on the amount of observable market information available to the Firm. For instruments valued using internally developed models that use significant unobservable inputs and are therefore classified within level 3 of the fair value hierarchy, judgments used to estimate fair value are more significant than those required when estimating the fair value of instruments classified within levels 1 and 2.

In arriving at an estimate of fair value for an instrument within level 3, management must first determine the appropriate model to use. Second, due to the lack of observability of significant inputs, management must assess all relevant empirical data in deriving valuation inputs including, but not limited to, transaction details, yield curves, interest rates, prepayment speed, default rates, volatilities, correlations, equity or debt prices, valuations of comparable instruments, foreign exchange rates and credit curves.

The following table presents the Firm's primary level 3 financial instruments, the valuation techniques used to measure the fair value of those financial instruments, the significant unobservable inputs, the range of values for those inputs and, for certain instruments, the weighted averages of such inputs. While the determination to classify an instrument within level 3 is based on the significance of the unobservable inputs to the overall fair value measurement, level 3 financial instruments typically include observable components (that is, components that are actively quoted and can be validated to external sources) in addition to the unobservable components. The level 1 and/or level 2 inputs are not included in the table. In addition, the Firm manages the risk of the observable components of level 3 financial instruments using securities and derivative positions that are classified within levels 1 or 2 of the fair value hierarchy.

The range of values presented in the table is representative of the highest and lowest level input used to value the significant groups of instruments within a product/instrument classification. Where provided, the weighted averages of the input values presented in the table are calculated based on the fair value of the instruments that the input is being used to value.

In the Firm's view, the input range and the weighted average value do not reflect the degree of input uncertainty or an assessment of the reasonableness of the Firm's estimates and assumptions. Rather, they reflect the characteristics of the various instruments held by the Firm and the relative distribution of instruments within the range of characteristics. For example, two option contracts may have similar levels of market risk exposure and valuation uncertainty, but may have significantly different implied volatility levels because the option contracts have different underlyings, tenors, or strike prices. The input range and weighted average values will therefore vary from period-to-period and parameter to parameter based on the characteristics of the instruments held by the Firm at each balance sheet date.

For the Firm's derivatives and structured notes positions classified within level 3, the equity and interest rate correlation inputs used in estimating fair value were concentrated at the upper end of the range presented, while the credit correlation inputs were distributed across the range presented and the foreign exchange correlation inputs were concentrated at the lower end of the range presented. In addition, the interest rate volatility inputs used in estimating fair value were concentrated at the upper end of the range presented and the foreign exchange correlation inputs were concentrated at the lower end of the range presented. The equity volatility is concentrated in the lower half end of the range. The forward commodity prices used in estimating the fair value of commodity derivatives were concentrated within the lower end of the range presented.

Level 3 inputs[a]

December 31, 2014 (in millions, except for ratios and basis points)

Product/Instrument	Fair value	Principal valuation technique	Unobservable inputs	Range of input values	Weighted average
Residential mortgage-backed securities and loans	$ 8,917	Discounted cash flows	Yield	1% - 25%	5%
			Prepayment speed	0% - 18%	6%
			Conditional default rate	0% - 100%	22%

(a) The categories presented in the table have been aggregated based upon the product type, which may differ from their classification on the Consolidated balance sheets.

(b) The unobservable inputs and associated input ranges for approximately $491 million of credit derivative receivables and $433 million of credit derivative payables with underlying commercial mortgage risk have been included in the inputs and ranges provided for commercial mortgage-backed securities and loans.

(c) The unobservable inputs and associated input ranges for approximately $795 million of credit derivative receivables and $715 million of credit derivative payables with underlying asset-backed securities risk have been included in the inputs and ranges provided for corporate debt securities, obligations of U.S. states and municipalities and other.

(d) Long-term debt, other borrowed funds and deposits include structured notes issued by the Firm that are predominantly financial instruments containing embedded derivatives. The estimation of the fair value of structured notes is predominantly based on the derivative features embedded within the instruments. The significant unobservable inputs are broadly consistent with those presented for derivative receivables.

(e) The range has not been disclosed due to the wide range of possible values given the diverse nature of the underlying investments.

Changes in and ranges of unobservable inputs
The following discussion provides a description of the impact on a fair value measurement of a change in each unobservable input in isolation, and the interrelationship between unobservable inputs, where relevant and significant. The impact of changes in inputs may not be independent as a change in one unobservable input may give rise to a change in another unobservable input; where relationships exist between two unobservable inputs, those relationships are discussed below. Relationships may also exist between observable and unobservable inputs (for example, as observable interest rates rise, unobservable prepayment rates decline); such relationships have not been included in the discussion below. In addition, for each of the individual relationships described below, the inverse relationship would also generally apply.

In addition, the following discussion provides a description of attributes of the underlying instruments and external market factors that affect the range of inputs used in the valuation of the Firm's positions.

Yield – The yield of an asset is the interest rate used to discount future cash flows in a discounted cash flow calculation. An increase in the yield, in isolation, would result in a decrease in a fair value measurement.

Credit spread – The credit spread is the amount of additional annualized return over the market interest rate that a market participant would demand for taking exposure to the credit risk of an instrument. The credit spread for an instrument forms part of the discount rate used in a discounted cash flow calculation. Generally, an increase in the credit spread would result in a decrease in a fair value measurement.

The yield and the credit spread of a particular mortgage-backed security primarily reflect the risk inherent in the instrument. The yield is also impacted by the absolute level of the coupon paid by the instrument (which may not correspond directly to the level of inherent risk). Therefore, the range of yield and credit spreads reflects the range of risk inherent in various instruments owned by the Firm. The risk inherent in mortgage-backed securities is driven by the subordination of the security being valued and the characteristics of the underlying mortgages within the collateralized pool, including borrower FICO scores, loan-to-value ratios for residential mortgages and the nature of the property and/or any tenants for commercial mortgages. For corporate debt securities, obligations of U.S. states and municipalities and other similar instruments, credit spreads reflect the credit quality of the obligor and the tenor of the obligation.

Prepayment speed – The prepayment speed is a measure of the voluntary unscheduled principal repayments of a prepayable obligation in a collateralized pool. Prepayment speeds generally decline as borrower delinquencies rise. An increase in prepayment speeds, in isolation, would result in a decrease in a fair value measurement of assets valued at a premium to par and an increase in a fair value measurement of assets valued at a discount to par.

Prepayment speeds may vary from collateral pool to collateral pool, and are driven by the type and location of the underlying borrower, the remaining tenor of the obligation as well as the level and type (e.g., fixed or floating) of interest rate being paid by the borrower. Typically collateral pools with higher borrower credit quality have a higher prepayment rate than those with lower borrower credit quality, all other factors being equal.

Conditional default rate – The conditional default rate is a measure of the reduction in the outstanding collateral balance underlying a collateralized obligation as a result of defaults. While there is typically no direct relationship between conditional default rates and prepayment speeds, collateralized obligations for which the underlying collateral has high prepayment speeds will tend to have lower conditional default rates. An increase in conditional default rates would generally be accompanied by an increase in loss severity and an increase in credit spreads. An increase in the conditional default rate, in isolation, would result in a decrease in a fair value measurement. Conditional default rates reflect the quality of the collateral underlying a securitization and the structure of the securitization itself. Based on the types of securities owned in the Firm's market-making portfolios, conditional default rates are most typically at the lower end of the range presented.

Loss severity – The loss severity (the inverse concept is the recovery rate) is the expected amount of future realized losses resulting from the ultimate liquidation of a particular loan, expressed as the net amount of loss relative to the outstanding loan balance. An increase in loss severity is generally accompanied by an increase in conditional default rates. An increase in the loss severity, in isolation, would result in a decrease in a fair value measurement.

The loss severity applied in valuing a mortgage-backed security investment depends on a host of factors relating to the underlying mortgages. This includes the loan-to-value ratio, the nature of the lender's lien on the property and various other instrument-specific factors.

Correlation – Correlation is a measure of the relationship between the movements of two variables (e.g., how the change in one variable influences the change in the other). Correlation is a pricing input for a derivative product where the payoff is driven by one or more underlying risks. Correlation inputs are related to the type of derivative (e.g., interest rate, credit, equity and foreign exchange) due to the nature of the underlying risks. When parameters are positively correlated, an increase in one parameter will result in an increase in the other parameter. When parameters are negatively correlated, an increase in one parameter will result in a decrease in the other parameter. An increase in correlation can result in an increase or a decrease in a fair value measurement. Given a short correlation position, an increase in correlation, in isolation, would generally result in a decrease in a fair value measurement. The range of correlation inputs between risks within the same asset class are generally narrower than those between underlying risks across asset classes. In addition, the ranges of credit correlation inputs tend to be narrower than those affecting other asset classes.

The level of correlation used in the valuation of derivatives with multiple underlying risks depends on a number of factors including the nature of those risks. For example, the correlation between two credit risk exposures would be different than that between two interest rate risk exposures. Similarly, the tenor of the transaction may also impact the correlation input as the relationship between the underlying risks may be different over different time periods. Furthermore, correlation levels are very much dependent on market conditions and could have a relatively wide range of levels within or across asset classes over time, particularly in volatile market conditions.

Volatility – Volatility is a measure of the variability in possible returns for an instrument, parameter or market index given how much the particular instrument, parameter or index changes in value over time. Volatility is a pricing input for options, including equity options, commodity options, and interest rate options. Generally, the higher the volatility of the underlying, the riskier the instrument. Given a long position in an option, an increase in volatility, in isolation, would generally result in an increase in a fair value measurement.

The level of volatility used in the valuation of a particular option-based derivative depends on a number of factors, including the nature of the risk underlying the option (e.g., the volatility of a particular equity security may be significantly different from that of a particular commodity index), the tenor of the derivative as well as the strike price of the option.

EBITDA multiple – EBITDA multiples refer to the input (often derived from the value of a comparable company) that is multiplied by the historic and/or expected earnings before interest, taxes, depreciation and amortization ("EBITDA") of a company in order to estimate the company's value. An increase in the EBITDA multiple, in isolation, net of adjustments, would result in an increase in a fair value measurement.

Net asset value – Net asset value is the total value of a fund's assets less liabilities. An increase in net asset value would result in an increase in a fair value measurement.

Changes in level 3 recurring fair value measurements

The following tables include a rollforward of the Consolidated balance sheets amounts (including changes in fair value) for financial instruments classified by the Firm within level 3 of the fair value hierarchy for the years ended December 31, 2014, 2013 and 2012. When a determination is made to classify a financial instrument within level 3, the determination is based on the significance of the unobservable parameters to the overall fair value measurement. However, level 3 financial instruments typically include, in addition to the unobservable or level 3 components, observable components (that is, components that are actively quoted and can be validated to external sources); accordingly, the gains and losses in the table below include changes in fair value due in part to observable factors that are part of the valuation methodology. Also, the Firm risk-manages the observable components of level 3 financial instruments using securities and derivative positions that are classified within level 1 or 2 of the fair value hierarchy; as these level 1 and level 2 risk management instruments are not included below, the gains or losses in the following tables do not reflect the effect of the Firm's risk management activities related to such level 3 instruments.

(a) All level 3 derivatives are presented on a net basis, irrespective of underlying counterparty.
(b) Level 3 liabilities as a percentage of total Firm liabilities accounted for at fair value (including liabilities measured at fair value on a nonrecurring basis) were 15%, 18% and 18% at December 31, 2014, 2013 and 2012, respectively.
(c) Predominantly reported in principal transactions revenue, except for changes in fair value for CCB mortgage loans, lending-related commitments originated with the intent to sell, and mortgage loan purchase commitments, which are reported in mortgage fees and related income.

(d) Realized gains/(losses) on AFS securities, as well as other-than-temporary impairment losses that are recorded in earnings, are reported in securities gains. Unrealized gains/(losses) are reported in Other Comprehensive Income ("OCI"). Realized gains/(losses) and foreign exchange remeasurement adjustments recorded in income on AFS securities were $(43) million, $17 million, and $145 million for the years ended December 31, 2014, 2013 and 2012, respectively. Unrealized gains/(losses) recorded on AFS securities in OCI were $(16) million, $13 million and $45 million for the years ended December 31, 2014, 2013 and 2012, respectively.
(e) Changes in fair value for CCB mortgage servicing rights are reported in mortgage fees and related income.
(f) Predominantly reported in other income.
(g) Loan originations are included in purchases.
(h) All transfers into and/or out of level 3 are assumed to occur at the beginning of the quarterly reporting period in which they occur.
(i) The prior period amounts have been revised. The revision had no impact on the Firm's Consolidated balance sheets or its results of operations.

Level 3 analysis

Consolidated balance sheets changes

Level 3 assets (including assets measured at fair value on a nonrecurring basis) were 2.1% of total Firm assets at December 31, 2014. The following describes significant changes to level 3 assets since December 31, 2013, for those items measured at fair value on a recurring basis. For further information on changes impacting items measured at fair value on a nonrecurring basis, see Assets and liabilities measured at fair value on a nonrecurring basis on page 197.

For the year ended December 31, 2014

Level 3 assets were $50.9 billion at December 31, 2014, reflecting a decrease of $18.4 billion from December 31, 2013, due to the following:

- $6.0 billion decrease in gross derivative receivables due to a $4.5 billion decrease in equity derivative receivables due to expirations and a transfer from level 3 into level 2 as a result of an increase in observability of certain equity option valuation inputs; and a $1.2 billion decrease in interest rate derivatives due to market movements;
- $4.7 billion decrease in trading assets - debt and equity instruments is largely due to a decrease of $2.9 billion in corporate debt securities. The decrease in corporate debt securities is driven by transfers from level 3 to level 2 as a result of an increase in observability of certain valuation inputs, as well as net sales and maturities;
- $4.0 billion decrease in private equity investments predominantly driven by $2.0 billion in sales and $2.3 billion of transfers into level 2 based on an increase in observability and price transparency;
- $2.2 billion decrease in MSRs. For further discussion of the change, refer to Note 17.

Gains and losses

The following describes significant components of total realized/unrealized gains/(losses) for instruments measured at fair value on a recurring basis for the years ended December 31, 2014, 2013 and 2012. For further information on these instruments, see Changes in level 3 recurring fair value measurements rollforward tables on pages 191–195.

2014

- $1.8 billion of losses on MSRs. For further discussion of the change, refer to Note 17;
- $1.1 billion of net gains on trading assets - debt and equity instruments, largely driven by market movements and client-driven financing transactions.

2013

- $2.9 billion of net gains on derivatives, largely driven by $2.5 billion of gains on equity derivatives, primarily related to client-driven market-making activity and a rise in equity markets; and $1.4 billion of gains, predominantly on interest rate lock and mortgage loan purchase commitments; partially offset by $1.7 billion of losses on credit derivatives from the impact of tightening reference entity credit spreads;
- $2.2 billion of net gains on trading assets - debt and equity instruments, largely driven by market making and credit spread tightening in nonagency mortgage-backed securities and trading loans, and the impact of market movements on client-driven financing transactions;
- $1.6 billion of net gains on MSRs. For further discussion of the change, refer to Note 17.

2012

- $1.3 billion of net gains on trading assets - debt and equity instruments, largely driven by tightening of credit spreads and fluctuation in foreign exchange rates;
- $1.1 billion of net gains on derivatives, driven by $6.9 billion of net gains predominantly on interest rate lock commitments due to increased volumes and lower interest rates, partially offset by $4.5 billion of net losses on credit derivatives largely as a result of tightening of reference entity credit spreads.

Credit and funding adjustments

When determining the fair value of an instrument, it may be necessary to record adjustments to the Firm's estimates of fair value in order to reflect counterparty credit quality, the Firm's own creditworthiness, and the impact of funding:

- Credit valuation adjustments ("CVA") are taken to reflect the credit quality of a counterparty in the valuation of derivatives. CVA are necessary when the market price (or parameter) is not indicative of the credit quality of the counterparty. As few classes of derivative contracts are listed on an exchange, derivative positions are predominantly valued using models that use as their basis observable market parameters. An adjustment therefore may be necessary to reflect the credit quality of each derivative counterparty to arrive at fair value.

  The Firm estimates derivatives CVA using a scenario analysis to estimate the expected credit exposure across all of the Firm's positions with each counterparty, and then estimates losses as a result of a counterparty credit event. The key inputs to this methodology are (i) the expected positive exposure to each counterparty based on a simulation that assumes the current population of existing derivatives with each counterparty remains unchanged and considers contractual factors designed to mitigate the Firm's credit exposure, such as collateral and legal rights of offset; (ii) the probability of a default event occurring for each counterparty, as derived from observed or estimated CDS spreads; and (iii) estimated recovery rates implied by CDS, adjusted to consider the differences in recovery rates as a derivative creditor relative to those reflected in CDS spreads, which generally reflect senior unsecured creditor risk. As such, the Firm estimates derivatives CVA relative to the relevant benchmark interest rate.

- DVA is taken to reflect the credit quality of the Firm in the valuation of liabilities measured at fair value. The DVA calculation methodology is generally consistent with the CVA methodology described above and incorporates JPMorgan Chase's credit spread as observed through the CDS market to estimate the probability of default and loss given default as a result of a systemic event affecting the Firm. Structured notes DVA is estimated using the current fair value of the structured note as the exposure amount, and is otherwise consistent with the derivative DVA methodology.

- The Firm incorporates the impact of funding in its valuation estimates where there is evidence that a market participant in the principal market would incorporate it in a transfer of the instrument. As a result, the fair value of collateralized derivatives is estimated by discounting expected future cash flows at the relevant overnight indexed swap ("OIS") rate given the underlying collateral agreement with the counterparty. Effective in 2013, the Firm implemented a FVA framework to incorporate the impact of funding into its valuation estimates for uncollateralized (including partially collateralized) over-the-counter ("OTC") derivatives and structured notes. The Firm's FVA framework leverages its existing CVA and DVA calculation methodologies, and considers the fact that the Firm's own credit risk is a significant component of funding costs. The key inputs are: (i) the expected funding requirements arising from the Firm's positions with each counterparty and collateral arrangements; (ii) for assets, the estimated market funding cost in the principal market; and (iii) for liabilities, the hypothetical market funding cost for a transfer to a market participant with a similar credit standing as the Firm.

Upon the implementation of the FVA framework in 2013, the Firm recorded a one time $1.5 billion loss in principal transactions revenue that was recorded in the CIB. While the FVA framework applies to both assets and liabilities, the loss on implementation largely related to uncollateralized derivative receivables given that the impact of the Firm's own credit risk, which is a significant component of funding costs, was already incorporated in the valuation of liabilities through the application of DVA.

The following table provides the credit and funding adjustments, excluding the effect of any associated hedging activities, reflected within the Consolidated balance sheets as of the dates indicated.

December 31, (in millions)	**2014**	2013
Derivative receivables balance[(a)]	**$ 78,975**	$ 65,759
Derivative payables balance[(a)]	**71,116**	57,314
Derivatives CVA[(b)]	**(2,674)**	(2,352)
Derivatives DVA and FVA[(b)(c)]	**(380)**	(322)
Structured notes balance [(a)(d)]	**53,772**	48,808
Structured notes DVA and FVA[(b)(e)]	**1,152**	952

(a) Balances are presented net of applicable CVA and DVA/FVA.
(b) Positive CVA and DVA/FVA represent amounts that increased receivable balances or decreased payable balances; negative CVA and DVA/FVA represent amounts that decreased receivable balances or increased payable balances.
(c) At December 31, 2014 and 2013, included derivatives DVA of $714 million and $715 million, respectively.
(d) Structured notes are predominantly financial instruments containing embedded derivatives that are measured at fair value based on the Firm's election under the fair value option. At December 31, 2014 and 2013, included $943 million and $1.1 billion, respectively, of financial instruments with no embedded derivative for which the fair value option has also been elected. For further information on these elections, see Note 4.
(e) At December 31, 2014 and 2013, included structured notes DVA of $1.4 billion and $1.4 billion, respectively.

The following table provides the impact of credit and funding adjustments on Principal transactions revenue in the respective periods, excluding the effect of any associated hedging activities.

Year ended December 31, (in millions)	2014	2013	2012
Credit adjustments:			
Derivatives CVA	**$ (322)**	$ 1,886	$ 2,698
Derivatives DVA and FVA[(a)]	**(58)**	(1,152)	(590)
Structured notes DVA and FVA[(b)]	**200**	(760)	(340)

(a) Included derivatives DVA of $(1) million, $(115) million and $(590) million for the years ended December 31, 2014, 2013 and 2012, respectively.

(b) Included structured notes DVA of $20 million, $(337) million and $(340) million for the years ended December 31, 2014, 2013 and 2012, respectively.

Assets and liabilities measured at fair value on a nonrecurring basis

At December 31, 2014 and 2013, assets measured at fair value on a nonrecurring basis were $4.5 billion and $6.2 billion, respectively, comprised predominantly of loans that had fair value adjustments for the year ended December 31, 2014. At December 31, 2014, $1.3 billion and $3.2 billion of these assets were classified in levels 2 and 3 of the fair value hierarchy, respectively. At December 31, 2013, $339 million and $5.8 billion of these assets were classified in levels 2 and 3 of the fair value hierarchy, respectively. Liabilities measured at fair value on a nonrecurring basis were not significant at December 31, 2014 and 2013. For the years ended December 31, 2014, 2013 and 2012, there were no significant transfers between levels 1, 2 and 3.

Of the $3.2 billion of the level 3 assets measured at fair value on a nonrecurring basis as of December 31, 2014:

- $1.6 billion related to consumer loans that were reclassified to held-for-sale during the fourth quarter of 2014 subject to a lower of cost or fair value adjustment. These loans were classified as level 3, as they are valued based on the Firm's internal valuation methodology;
- $809 million related to residential real estate loans carried at the net realizable value of the underlying collateral (i.e., collateral-dependent loans and other loans charged off in accordance with regulatory guidance). These amounts are classified as level 3, as they are valued using a broker's price opinion and discounted based upon the Firm's experience with actual liquidation values. These discounts to the broker price opinions ranged from 8% to 66%, with a weighted average of 26%.

The total change in the recorded value of assets and liabilities for which a fair value adjustment has been included in the Consolidated statements of income for the years ended December 31, 2014, 2013 and 2012, related to financial instruments held at those dates were losses of $992 million, $789 million and $1.6 billion, respectively; these reductions were predominantly associated with loans.

For further information about the measurement of impaired collateral-dependent loans, and other loans where the carrying value is based on the fair value of the underlying collateral (e.g., residential mortgage loans charged off in accordance with regulatory guidance), see Note 14.

Additional disclosures about the fair value of financial instruments that are not carried on the Consolidated balance sheets at fair value

U.S. GAAP requires disclosure of the estimated fair value of certain financial instruments, and the methods and significant assumptions used to estimate their fair value. Financial instruments within the scope of these disclosure requirements are included in the following table. However, certain financial instruments and all nonfinancial instruments are excluded from the scope of these disclosure requirements. Accordingly, the fair value disclosures provided in the following table include only a partial estimate of the fair value of JPMorgan Chase's assets and liabilities. For example, the Firm has developed long-term relationships with its customers through its deposit base and credit card accounts, commonly referred to as core deposit intangibles and credit card relationships. In the opinion of management, these items, in the aggregate, add significant value to JPMorgan Chase, but their fair value is not disclosed in this Note.

Financial instruments for which carrying value approximates fair value

Certain financial instruments that are not carried at fair value on the Consolidated balance sheets are carried at amounts that approximate fair value, due to their short-term nature and generally negligible credit risk. These instruments include cash and due from banks; deposits with banks; federal funds sold; securities purchased under resale agreements and securities borrowed with short-dated maturities; short-term receivables and accrued interest receivable; commercial paper; federal funds purchased; securities loaned and sold under repurchase agreements with short-dated maturities; other borrowed funds; accounts payable; and accrued liabilities. In addition, U.S. GAAP requires that the fair value of deposit liabilities with no stated maturity (i.e., demand, savings and certain money market deposits) be equal to their carrying value; recognition of the inherent funding value of these instruments is not permitted.

The following table presents by fair value hierarchy classification the carrying values and estimated fair values at December 31, 2014 and 2013, of financial assets and liabilities, excluding financial instruments which are carried at fair value on a recurring basis. For additional information regarding the financial instruments within the scope of this disclosure, and the methods and significant assumptions used to estimate their fair value, see pages 181–184 of this Note.

	December 31, 2014					December 31, 2013				
		Estimated fair value hierarchy					Estimated fair value hierarchy			
(in billions)	Carrying value	Level 1	Level 2	Level 3	Total estimated fair value	Carrying value	Level 1	Level 2	Level 3	Total estimated fair value

Federal funds purchased and securities loaned or sold under repurchase agreements	**189.1**	**–**	**189.1**	**–**	**189.1**	175.7	–	175.7	–	175.7
Commercial paper	**66.3**	**–**	**66.3**	**–**	**66.3**	57.8	–	57.8	–	57.8
Other borrowed funds	**15.5**		**15.5**	**–**	**15.5**	14.7	–	14.7	–	14.7
Accounts payable and other liabilities	**176.7**	**–**	**173.7**	**2.8**	**176.5**	160.2	–	158.2	1.8	160.0
Beneficial interests issued by consolidated VIEs	**50.2**	**–**	**48.2**	**2.0**	**50.2**	47.6	–	44.3	3.2	47.5
Long-term debt and junior subordinated deferrable interest debentures[d]	**246.6**	**–**	**251.6**	**3.8**	**255.4**	239.0	–	240.8	6.0	246.8

(a) Carrying value includes unamortized discount or premium.

(b) Fair value is typically estimated using a discounted cash flow model that incorporates the characteristics of the underlying loans (including principal, contractual interest rate and contractual fees) and other key inputs, including expected lifetime credit losses, interest rates, prepayment rates, and primary origination or secondary market spreads. For certain loans, the fair value is measured based on the value of the underlying collateral. The difference between the estimated fair value and carrying value of a financial asset or liability is the result of the different methodologies used to determine fair value as compared with carrying value. For example, credit losses are estimated for a financial asset's remaining life in a fair value calculation but are estimated for a loss emergence period in the allowance for loan loss calculation; future loan income (interest and fees) is incorporated in a fair value calculation but is generally not considered in the allowance for loan losses. For a further discussion of the Firm's methodologies for estimating the fair value of loans and lending-related commitments, see Valuation hierarchy on pages 181–184.

(c) Current period amounts have been updated to include certain nonmarketable equity securities. Prior period amounts have been revised to conform to the current presentation.

(d) Carrying value includes unamortized original issue discount and other valuation adjustments.

The majority of the Firm's lending-related commitments are not carried at fair value on a recurring basis on the Consolidated balance sheets, nor are they actively traded. The carrying value and estimated fair value of the Firm's wholesale lending-related commitments were as follows for the periods indicated.

	December 31, 2014					December 31, 2013				
		Estimated fair value hierarchy					Estimated fair value hierarchy			
(in billions)	Carrying value[a]	Level 1	Level 2	Level 3	Total estimated fair value	Carrying value[a]	Level 1	Level 2	Level 3	Total estimated fair value
Wholesale lending-related commitments	**$ 0.6**	**$ –**	**$ –**	**$ 1.6**	**$ 1.6**	$ 0.7	$ –	$ –	$ 1.0	$ 1.0

(a) Represents the allowance for wholesale lending-related commitments. Excludes the current carrying values of the guarantee liability and the offsetting asset, each of which are recognized at fair value at the inception of guarantees.

The Firm does not estimate the fair value of consumer lending-related commitments. In many cases, the Firm can reduce or cancel these commitments by providing the borrower notice or, in some cases as permitted by law, without notice. For a further discussion of the valuation of lending-related commitments, see page 182 of this Note.

Trading assets and liabilities

Trading assets include debt and equity instruments owned by JPMorgan Chase ("long" positions) that are held for client market-making and client-driven activities, as well as for certain risk management activities, certain loans managed on a fair value basis and for which the Firm has elected the fair value option, and physical commodities inventories that are generally accounted for at the lower of cost or market (market approximates fair value). Trading liabilities include debt and equity instruments that the Firm has sold to other parties but does not own ("short" positions). The Firm is obligated to purchase instruments at a future date to cover the short positions. Included in trading assets and trading liabilities are the reported receivables (unrealized gains) and payables (unrealized losses) related to derivatives. Trading assets and liabilities are carried at fair value on the Consolidated balance sheets. Balances reflect the reduction of securities owned (long positions) by the amount of identical securities sold but not yet purchased (short positions).

Trading assets and liabilities – average balances

Average trading assets and liabilities were as follows for the periods indicated.

Year ended December 31, (in millions)	2014	2013	2012
Trading assets – debt and equity instruments	**$ 327,259**	$ 340,449	$ 349,337
Trading assets – derivative receivables	**67,123**	72,629	85,744
Trading liabilities – debt and equity instruments[a]	**84,707**	77,706	69,001
Trading liabilities – derivative payables	**54,758**	64,553	76,162

(a) Primarily represent securities sold, not yet purchased.

Note 4 – Fair value option

The fair value option provides an option to elect fair value as an alternative measurement for selected financial assets, financial liabilities, unrecognized firm commitments, and written loan commitments not previously carried at fair value.

The Firm has elected to measure certain instruments at fair value in order to:

- Mitigate income statement volatility caused by the differences in the measurement basis of elected instruments (for example, certain instruments elected were previously accounted for on an accrual basis) while the associated risk management arrangements are accounted for on a fair value basis;
- Eliminate the complexities of applying certain accounting models (e.g., hedge accounting or bifurcation accounting for hybrid instruments); and/or
- Better reflect those instruments that are managed on a fair value basis.

The Firm has elected to measure the following instruments at fair value:

- Loans purchased or originated as part of securitization warehousing activity, subject to bifurcation accounting, or managed on a fair value basis.
- Securities financing arrangements with an embedded derivative and/or a maturity of greater than one year.
- Owned beneficial interests in securitized financial assets that contain embedded credit derivatives, which would otherwise be required to be separately accounted for as a derivative instrument.
- Certain investments that receive tax credits and other equity investments acquired as part of the Washington Mutual transaction.
- Structured notes issued as part of CIB's client-driven activities. (Structured notes are predominantly financial instruments that contain embedded derivatives.)
- Long-term beneficial interests issued by CIB's consolidated securitization trusts where the underlying assets are carried at fair value.

Changes in fair value under the fair value option election

The following table presents the changes in fair value included in the Consolidated statements of income for the years ended December 31, 2014, 2013 and 2012, for items for which the fair value option was elected. The profit and loss information presented below only includes the financial instruments that were elected to be measured at fair value; related risk management instruments, which are required to be measured at fair value, are not included in the table.

	2014			2013			2012

Other borrowed funds[(a)]	**(891)**	**–**	**(891)**	(399)	–	(399)	494	–	494
Trading liabilities	**(17)**	**–**	**(17)**	(46)	–	(46)	(41)	–	(41)
Beneficial interests issued by consolidated VIEs	**(233)**	**–**	**(233)**	(278)	–	(278)	(166)	–	(166)
Other liabilities	**(27)**	**–**	**(27)**	–	2	2	–	–	–
Long-term debt:									
Changes in instrument-specific credit risk[(a)]	**101**	**–**	**101**	(271)	–	(271)	(835)	–	(835)
Other changes in fair value[(b)]	**(615)**	**–**	**(615)**	1,280	–	1,280	(1,025)	–	(1,025)

(a) Total changes in instrument-specific credit risk (DVA) related to structured notes were $20 million, $(337) million and $(340) million for the years ended December 31, 2014, 2013 and 2012, respectively. These totals include such changes for structured notes classified within deposits and other borrowed funds, as well as long-term debt.

(b) Structured notes are predominantly financial instruments containing embedded derivatives. Where present, the embedded derivative is the primary driver of risk. Although the risk associated with the structured notes is actively managed, the gains/(losses) reported in this table do not include the income statement impact of the risk management instruments used to manage such risk.

(c) Reported in mortgage fees and related income.

(d) Reported in other income.

Determination of instrument-specific credit risk for items for which a fair value election was made

The following describes how the gains and losses included in earnings that are attributable to changes in instrument-specific credit risk, were determined.

- Loans and lending-related commitments: For floating-rate instruments, all changes in value are attributed to instrument-specific credit risk. For fixed-rate instruments, an allocation of the changes in value for the period is made between those changes in value that are interest rate-related and changes in value that are credit-related. Allocations are generally based on an analysis of borrower-specific credit spread and recovery information, where available, or benchmarking to similar entities or industries.
- Long-term debt: Changes in value attributable to instrument-specific credit risk were derived principally from observable changes in the Firm's credit spread.
- Resale and repurchase agreements, securities borrowed agreements and securities lending agreements: Generally, for these types of agreements, there is a requirement that collateral be maintained with a market value equal to or in excess of the principal amount loaned; as a result, there would be no adjustment or an immaterial adjustment for instrument-specific credit risk related to these agreements.

Difference between aggregate fair value and aggregate remaining contractual principal balance outstanding

The following table reflects the difference between the aggregate fair value and the aggregate remaining contractual principal balance outstanding as of December 31, 2014 and 2013, for loans, long-term debt and long-term beneficial interests for which the fair value option has been elected.

	2014			2013		
December 31, (in millions)	Contractual principal outstanding	Fair value	Fair value over/ (under) contractual principal outstanding	Contractual principal outstanding	Fair value	Fair value over/ (under) contractual principal outstanding
Loans[a]						
Nonaccrual loans						
Loans reported as trading assets	**$ 3,847**	**$ 905**	**$ (2,942)**	$ 5,156	$ 1,491	$ (3,665)
Loans	**7**	**7**	**—**	209	154	(55)
Subtotal	**3,854**	**912**	**(2,942)**	5,365	1,645	(3,720)
All other performing loans						
Loans reported as trading assets	**37,608**	**35,462**	**(2,146)**	33,069	29,295	(3,774)
Loans	**2,397**	**2,389**	**(8)**	1,618	1,563	(55)
Total loans	**$ 43,859**	**$ 38,763**	**$ (5,096)**	$ 40,052	$ 32,503	$ (7,549)
Long-term debt						
Principal-protected debt	**$ 14,660** [c]	**$ 15,484**	**$ 824**	$ 15,797 [c]	$ 15,909	$ 112
Nonprincipal-protected debt[b]	**NA**	**14,742**	**NA**	NA	12,969	NA
Total long-term debt	**NA**	**$ 30,226**	**NA**	NA	$ 28,878	NA
Long-term beneficial interests						
Nonprincipal-protected debt[b]	**NA**	**$ 2,162**	**NA**	NA	$ 1,996	NA
Total long-term beneficial interests	**NA**	**$ 2,162**	**NA**	NA	$ 1,996	NA

(a) There were no performing loans that were ninety days or more past due as of December 31, 2014 and 2013, respectively.
(b) Remaining contractual principal is not applicable to nonprincipal-protected notes. Unlike principal-protected structured notes, for which the Firm is obligated to return a stated amount of principal at the maturity of the note, nonprincipal-protected structured notes do not obligate the Firm to return a stated amount of principal at maturity, but to return an amount based on the performance of an underlying variable or derivative feature embedded in the note. However, investors are exposed to the credit risk of the Firm as issuer for both nonprincipal-protected and principal protected notes.
(c) Where the Firm issues principal-protected zero-coupon or discount notes, the balance reflected as the remaining contractual principal is the final principal payment at maturity.

At December 31, 2014 and 2013, the contractual amount of letters of credit for which the fair value option was elected was $4.5 billion and $4.5 billion, respectively, with a corresponding fair value of $(147) million and $(99) million, respectively. For further information regarding off-balance sheet lending-related financial instruments, see Note 29.

Structured note products by balance sheet classification and risk component

The table below presents the fair value of the structured notes issued by the Firm, by balance sheet classification and the primary risk to which the structured notes' embedded derivative relates.

	December 31, 2014				December 31, 2013			
(in millions)	Long-term debt	Other borrowed funds	Deposits	Total	Long-term debt	Other borrowed funds	Deposits	Total

Note 5 – Credit risk concentrations

Concentrations of credit risk arise when a number of customers are engaged in similar business activities or activities in the same geographic region, or when they have similar economic features that would cause their ability to meet contractual obligations to be similarly affected by changes in economic conditions.

JPMorgan Chase regularly monitors various segments of its credit portfolios to assess potential concentration risks and to obtain collateral when deemed necessary. Senior management is significantly involved in the credit approval and review process, and risk levels are adjusted as needed to reflect the Firm's risk appetite.

In the Firm's consumer portfolio, concentrations are evaluated primarily by product and by U.S. geographic region, with a key focus on trends and concentrations at the portfolio level, where potential risk concentrations can be remedied through changes in underwriting policies and portfolio guidelines. In the wholesale portfolio, risk concentrations are evaluated primarily by industry and monitored regularly on both an aggregate portfolio level and on an individual customer basis. The Firm's wholesale exposure is managed through loan syndications and participations, loan sales, securitizations, credit derivatives, master netting agreements, and collateral and other risk-reduction techniques. For additional information on loans, see Note 14.

The Firm does not believe that its exposure to any particular loan product (e.g., option adjustable rate mortgages ("ARMs")), industry segment (e.g., commercial real estate) or its exposure to residential real estate loans with high loan-to-value ratios results in a significant concentration of credit risk. Terms of loan products and collateral coverage are included in the Firm's assessment when extending credit and establishing its allowance for loan losses.

The table below presents both on-balance sheet and off-balance sheet consumer and wholesale-related credit exposure by the Firm's three credit portfolio segments as of December 31, 2014 and 2013.

	2014				2013

(a) For more information on exposures to SPEs included within All other, see Note 16.
(b) Primarily consists of margin loans to prime brokerage customers that are generally over-collateralized through a pledge of assets maintained in clients' brokerage accounts and are subject to daily minimum collateral requirements. As a result of the Firm's credit risk mitigation practices, the Firm did not hold any reserves for credit impairment on these receivables.
(c) For further information regarding on-balance sheet credit concentrations by major product and/or geography, see Note 6 and Note 14. For information regarding concentrations of off-balance sheet lending-related financial instruments by major product, see Note 29.
(d) Represents lending-related financial instruments.

Note 6 – Derivative instruments

Derivative instruments enable end-users to modify or mitigate exposure to credit or market risks. Counterparties to a derivative contract seek to obtain risks and rewards similar to those that could be obtained from purchasing or selling a related cash instrument without having to exchange upfront the full purchase or sales price. JPMorgan Chase makes markets in derivatives for customers and also uses derivatives to hedge or manage its own risk exposures. Predominantly all of the Firm's derivatives are entered into for market-making or risk management purposes.

Market-making derivatives
The majority of the Firm's derivatives are entered into for market-making purposes. Customers use derivatives to mitigate or modify interest rate, credit, foreign exchange, equity and commodity risks. The Firm actively manages the risks from its exposure to these derivatives by entering into other derivative transactions or by purchasing or selling other financial instruments that partially or fully offset the exposure from client derivatives. The Firm also seeks to earn a spread between the client derivatives and offsetting positions, and from the remaining open risk positions.

Risk management derivatives
The Firm manages its market risk exposures using various derivative instruments.

Interest rate contracts are used to minimize fluctuations in earnings that are caused by changes in interest rates. Fixed-rate assets and liabilities appreciate or depreciate in market value as interest rates change. Similarly, interest income and expense increases or decreases as a result of variable-rate assets and liabilities resetting to current market rates, and as a result of the repayment and subsequent origination or issuance of fixed-rate assets and liabilities at current market rates. Gains or losses on the derivative instruments that are related to such assets and liabilities are expected to substantially offset this variability in earnings. The Firm generally uses interest rate swaps, forwards and futures to manage the impact of interest rate fluctuations on earnings.

Foreign currency forward contracts are used to manage the foreign exchange risk associated with certain foreign currency-denominated (i.e., non-U.S. dollar) assets and liabilities and forecasted transactions, as well as the Firm's net investments in certain non-U.S. subsidiaries or branches whose functional currencies are not the U.S. dollar. As a result of fluctuations in foreign currencies, the U.S. dollar-equivalent values of the foreign currency-denominated assets and liabilities or forecasted revenue or expense increase or decrease. Gains or losses on the derivative instruments related to these foreign currency-denominated assets or liabilities, or forecasted transactions, are expected to substantially offset this variability.

Commodities contracts are used to manage the price risk of certain commodities inventories. Gains or losses on these derivative instruments are expected to substantially offset the depreciation or appreciation of the related inventory.

Credit derivatives are used to manage the counterparty credit risk associated with loans and lending-related commitments. Credit derivatives compensate the purchaser when the entity referenced in the contract experiences a credit event, such as bankruptcy or a failure to pay an obligation when due. Credit derivatives primarily consist of credit default swaps. For a further discussion of credit derivatives, see the discussion in the Credit derivatives section on pages 213–215 of this Note.

For more information about risk management derivatives, see the risk management derivatives gains and losses table on page 213 of this Note, and the hedge accounting gains and losses tables on pages 211–213 of this Note.

Derivative counterparties and settlement types
The Firm enters into OTC derivatives, which are negotiated and settled bilaterally with the derivative counterparty. The Firm also enters into, as principal, certain exchange-traded derivatives ("ETD") such as futures and options, and "cleared" over-the-counter ("OTC-cleared") derivative contracts with central counterparties ("CCPs"). ETD contracts are generally standardized contracts traded on an exchange and cleared by the CCP, which is the counterparty from the inception of the transactions. OTC-cleared derivatives are traded on a bilateral basis and then novated to the CCP for clearing.

Derivative Clearing Services
The Firm provides clearing services for clients where the Firm acts as a clearing member with respect to certain derivative exchanges and clearinghouses. The Firm does not reflect the clients' derivative contracts in its Consolidated Financial Statements. For further information on the Firm's clearing services, see Note 29.

Accounting for derivatives
All free-standing derivatives that the Firm executes for its own account are required to be recorded on the Consolidated balance sheets at fair value.

As permitted under U.S. GAAP, the Firm nets derivative assets and liabilities, and the related cash collateral receivables and payables, when a legally enforceable master netting agreement exists between the Firm and the derivative counterparty. For further discussion of the offsetting of assets and liabilities, see Note 1. The accounting for changes in value of a derivative depends on whether or not the transaction has been designated and qualifies for hedge accounting. Derivatives that are not designated as hedges are reported and measured at fair value through earnings. The tabular disclosures on pages 207–213 of this Note provide additional information on the amount of, and reporting for, derivative assets, liabilities, gains and losses. For further discussion of derivatives embedded in structured notes, see Notes 3 and 4.

Derivatives designated as hedges

The Firm applies hedge accounting to certain derivatives executed for risk management purposes – generally interest rate, foreign exchange and commodity derivatives. However, JPMorgan Chase does not seek to apply hedge accounting to all of the derivatives involved in the Firm's risk management activities. For example, the Firm does not apply hedge accounting to purchased credit default swaps used to manage the credit risk of loans and lending-related commitments, because of the difficulties in qualifying such contracts as hedges. For the same reason, the Firm does not apply hedge accounting to certain interest rate and commodity derivatives used for risk management purposes.

To qualify for hedge accounting, a derivative must be highly effective at reducing the risk associated with the exposure being hedged. In addition, for a derivative to be designated as a hedge, the risk management objective and strategy must be documented. Hedge documentation must identify the derivative hedging instrument, the asset or liability or forecasted transaction and type of risk to be hedged, and how the effectiveness of the derivative is assessed prospectively and retrospectively. To assess effectiveness, the Firm uses statistical methods such as regression analysis, as well as nonstatistical methods including dollar-value comparisons of the change in the fair value of the derivative to the change in the fair value or cash flows of the hedged item. The extent to which a derivative has been, and is expected to continue to be, effective at offsetting changes in the fair value or cash flows of the hedged item must be assessed and documented at least quarterly. Any hedge ineffectiveness (i.e., the amount by which the gain or loss on the designated derivative instrument does not exactly offset the change in the hedged item attributable to the hedged risk) must be reported in current-period earnings. If it is determined that a derivative is not highly effective at hedging the designated exposure, hedge accounting is discontinued.

There are three types of hedge accounting designations: fair value hedges, cash flow hedges and net investment hedges. JPMorgan Chase uses fair value hedges primarily to hedge fixed-rate long-term debt, AFS securities and certain commodities inventories. For qualifying fair value hedges, the changes in the fair value of the derivative, and in the value of the hedged item for the risk being hedged, are recognized in earnings. If the hedge relationship is terminated, then the adjustment to the hedged item continues to be reported as part of the basis of the hedged item and for interest-bearing instruments is amortized to earnings as a yield adjustment. Derivative amounts affecting earnings are recognized consistent with the classification of the hedged item – primarily net interest income and principal transactions revenue.

JPMorgan Chase uses cash flow hedges primarily to hedge the exposure to variability in forecasted cash flows from floating-rate assets and liabilities and foreign currency–denominated revenue and expense. For qualifying cash flow hedges, the effective portion of the change in the fair value of the derivative is recorded in OCI and recognized in the Consolidated statements of income when the hedged cash flows affect earnings. Derivative amounts affecting earnings are recognized consistent with the classification of the hedged item – primarily interest income, interest expense, noninterest revenue and compensation expense. The ineffective portions of cash flow hedges are immediately recognized in earnings. If the hedge relationship is terminated, then the value of the derivative recorded in accumulated other comprehensive income/(loss) ("AOCI") is recognized in earnings when the cash flows that were hedged affect earnings. For hedge relationships that are discontinued because a forecasted transaction is not expected to occur according to the original hedge forecast, any related derivative values recorded in AOCI are immediately recognized in earnings.

JPMorgan Chase uses foreign currency hedges to protect the value of the Firm's net investments in certain non-U.S. subsidiaries or branches whose functional currencies are not the U.S. dollar. For foreign currency qualifying net investment hedges, changes in the fair value of the derivatives are recorded in the translation adjustments account within AOCI.

The following table outlines the Firm's primary uses of derivatives and the related hedge accounting designation or disclosure category.

Type of Derivative	Use of Derivative	Designation and disclosure	Affected segment or unit	Page reference
Manage specifically identified risk exposures in qualifying hedge accounting relationships:				
◦ Interest rate	Hedge fixed rate assets and liabilities	Fair value hedge	Corporate	211
◦ Interest rate	Hedge floating rate assets and liabilities	Cash flow hedge	Corporate	212
◦ Foreign exchange	Hedge foreign currency-denominated assets and liabilities	Fair value hedge	Corporate	211
◦ Foreign exchange	Hedge forecasted revenue and expense	Cash flow hedge	Corporate	212
◦ Foreign exchange	Hedge the value of the Firm's investments in non-U.S. subsidiaries	Net investment hedge	Corporate	213
◦ Commodity	Hedge commodity inventory	Fair value hedge	CIB	211
Manage specifically identified risk exposures not designated in qualifying hedge accounting relationships:				
◦ Interest rate	Manage the risk of the mortgage pipeline, warehouse loans and MSRs	Specified risk management	CCB	213
◦ Credit	Manage the credit risk of wholesale lending exposures	Specified risk management	CIB	213
◦ Commodity	Manage the risk of certain commodities-related contracts and investments	Specified risk management	CIB	213
◦Interest rate and foreign exchange	Manage the risk of certain other specified assets and liabilities	Specified risk management	Corporate	213
Market-making derivatives and other activities:				
• Various	Market-making and related risk management	Market-making and other	CIB	213
• Various	Other derivatives[(a)]	Market-making and other	CIB, Corporate	213

(a) Other derivatives included the synthetic credit portfolio. The synthetic credit portfolio was a portfolio of index credit derivatives, including short and long positions, that was originally held by CIO. On July 2, 2012, CIO transferred the synthetic credit portfolio, other than a portion that aggregated to a notional amount of approximately $12 billion, to CIB; these retained positions were effectively closed out during the third quarter of 2012. CIB effectively sold the positions that had been transferred to it by the end of 2014. The results of the synthetic credit portfolio, including the portion transferred to CIB, have been included in the gains and losses on derivatives related to market-making activities and other derivatives category discussed on page 213 of this Note.

Notional amount of derivative contracts

The following table summarizes the notional amount of derivative contracts outstanding as of December 31, 2014 and 2013.

	Notional amounts[c]	
December 31, (in billions)	**2014**	2013
Interest rate contracts		
Swaps	**$ 29,734**	$ 35,221
Futures and forwards[a]	**10,189**	11,238
Written options[a]	**3,903**	4,059
Purchased options	**4,259**	4,187
Total interest rate contracts	**48,085**	54,705
Credit derivatives[a][b]	**4,249**	5,331
Foreign exchange contracts		
Cross-currency swaps	**3,346**	3,488
Spot, futures and forwards	**4,669**	3,773
Written options	**790**	659
Purchased options	**780**	652
Total foreign exchange contracts	**9,585**	8,572
Equity contracts		
Swaps[a]	**206**	187
Futures and forwards[a]	**50**	50
Written options	**432**	425
Purchased options	**375**	380
Total equity contracts	**1,063**	1,042
Commodity contracts		
Swaps	**126**	124
Spot, futures and forwards	**193**	234
Written options	**181**	202
Purchased options	**180**	203
Total commodity contracts	**680**	763
Total derivative notional amounts	**$ 63,662**	$ 70,413

(a) The prior period amounts have been revised. This revision had no impact on the Firm's Consolidated balance sheets or its results of operations.

(b) For more information on volumes and types of credit derivative contracts, see the Credit derivatives discussion on pages 213–215 of this Note.

(c) Represents the sum of gross long and gross short third-party notional derivative contracts.

While the notional amounts disclosed above give an indication of the volume of the Firm's derivatives activity, the notional amounts significantly exceed, in the Firm's view, the possible losses that could arise from such transactions. For most derivative transactions, the notional amount is not exchanged; it is used simply as a reference to calculate payments.

Impact of derivatives on the Consolidated balance sheets

The following table summarizes information on derivative receivables and payables (before and after netting adjustments) that are reflected on the Firm's Consolidated balance sheets as of December 31, 2014 and 2013, by accounting designation (e.g., whether the derivatives were designated in qualifying hedge accounting relationships or not) and contract type.

Total fair value of trading assets and liabilities	$ 1,174,224	$ 6,243	$ 1,180,467	$ 65,759	$ 1,154,200	$ 5,949	$ 1,160,149	$ 57,314

(a) Balances exclude structured notes for which the fair value option has been elected. See Note 4 for further information.

(b) As permitted under U.S. GAAP, the Firm has elected to net derivative receivables and derivative payables and the related cash collateral receivables and payables when a legally enforceable master netting agreement exists.

The following table presents, as of December 31, 2014 and 2013, the gross and net derivative receivables by contract and settlement type. Derivative receivables have been netted on the Consolidated balance sheets against derivative payables and cash collateral payables to the same counterparty with respect to derivative contracts for which the Firm has obtained an appropriate legal opinion with respect to the master netting agreement. Where such a legal opinion has not been either sought or obtained, the receivables are not eligible under U.S. GAAP for netting on the Consolidated balance sheets, and are shown separately in the table below.

	2014			2013		
December 31, (in millions)	Gross derivative receivables	Amounts netted on the Consolidated balance sheets	Net derivative receivables	Gross derivative receivables	Amounts netted on the Consolidated balance sheets	Net derivative receivables

Total derivative payables recognized on the Consolidated balance sheets	**$ 1,315,076**		**$ 71,116**	$ 1,160,149		$ 57,314

(a) Exchange-traded derivative balances that relate to futures contracts are settled daily.
(b) Included cash collateral netted of $64.2 billion and $52.1 billion related to OTC and OTC-cleared derivatives at December 31, 2014, and 2013, respectively.

In addition to the cash collateral received and transferred that is presented on a net basis with net derivative receivables and payables, the Firm receives and transfers additional collateral (financial instruments and cash). These amounts mitigate counterparty credit risk associated with the Firm's derivative instruments but are not eligible for net presentation, because (a) the collateral is comprised of non-cash financial instruments (generally U.S. government and agency securities and other G7 government bonds), (b) the amount of collateral held or transferred exceeds the fair value exposure, at the individual counterparty level, as of the date presented, or (c) the collateral relates to derivative receivables or payables where an appropriate legal opinion has not been either sought or obtained.

The following tables present information regarding certain financial instrument collateral received and transferred as of December 31, 2014 and 2013, that is not eligible for net presentation under U.S. GAAP. The collateral included in these tables relates only to the derivative instruments for which appropriate legal opinions have been obtained; excluded are (i) additional collateral that exceeds the fair value exposure and (ii) all collateral related to derivative instruments where an appropriate legal opinion has not been either sought or obtained.

Derivative receivable collateral

	2014			2013		
December 31, (in millions)	Net derivative receivables	Collateral not nettable on the Consolidated balance sheets	Net exposure	Net derivative receivables	Collateral not nettable on the Consolidated balance sheets	Net exposure
Derivative receivables with appropriate legal opinions	**$ 58,258**	**$ (16,194)** [a]	**$ 42,064**	$ 50,025	$ (12,414) [a]	$ 37,611

Derivative payable collateral[b]

	2014			2013		
December 31, (in millions)	Net derivative payables	Collateral not nettable on the Consolidated balance sheets	Net amount[c]	Net derivative payables	Collateral not nettable on the Consolidated balance sheets	Net amount[c]
Derivative payables with appropriate legal opinions	**$ 52,046**	**$ (10,505)** [a]	**$ 41,541**	$ 41,617	$ (6,873) [a]	$ 34,744

(a) Represents liquid security collateral as well as cash collateral held at third party custodians. For some counterparties, the collateral amounts of financial instruments may exceed the derivative receivables and derivative payables balances. Where this is the case, the total amount reported is limited to the net derivative receivables and net derivative payables balances with that counterparty.
(b) Derivative payable collateral relates only to OTC and OTC-cleared derivative instruments. Amounts exclude collateral transferred related to exchange-traded derivative instruments.
(c) Net amount represents exposure of counterparties to the Firm.

Liquidity risk and credit-related contingent features

In addition to the specific market risks introduced by each derivative contract type, derivatives expose JPMorgan Chase to credit risk – the risk that derivative counterparties may fail to meet their payment obligations under the derivative contracts and the collateral, if any, held by the Firm proves to be of insufficient value to cover the payment obligation. It is the policy of JPMorgan Chase to actively pursue, where possible, the use of legally enforceable master netting arrangements and collateral agreements to mitigate derivative counterparty credit risk. The amount of derivative receivables reported on the Consolidated balance sheets is the fair value of the derivative contracts after giving effect to legally enforceable master netting agreements and cash collateral held by the Firm.

While derivative receivables expose the Firm to credit risk, derivative payables expose the Firm to liquidity risk, as the derivative contracts typically require the Firm to post cash or securities collateral with counterparties as the fair value of the contracts moves in the counterparties' favor or upon specified downgrades in the Firm's and its subsidiaries' respective credit ratings. Certain derivative contracts also provide for termination of the contract, generally upon a downgrade of either the Firm or the counterparty, at the fair value of the derivative contracts. The following table shows the aggregate fair value of net derivative payables related to OTC and OTC-cleared derivatives that contain contingent collateral or termination features that may be triggered upon a ratings downgrade, and the associated collateral the Firm has posted in the normal course of business, at December 31, 2014 and 2013.

OTC and OTC-cleared derivative payables containing downgrade triggers

December 31, (in millions)	2014	2013
Aggregate fair value of net derivative payables	**$ 32,303**	$ 24,631
Collateral posted	**27,585**	20,346

The following table shows the impact of a single-notch and two-notch downgrade of the long-term issuer ratings of JPMorgan Chase & Co. and its subsidiaries, predominantly JPMorgan Chase Bank, National Association ("JPMorgan Chase Bank, N.A."), at December 31, 2014 and 2013, related to OTC and OTC-cleared derivative contracts with contingent collateral or termination features that may be triggered upon a ratings downgrade. Derivatives contracts generally require additional collateral to be posted or terminations to be triggered when the predefined threshold rating is breached. A downgrade by a single rating agency that does not result in a rating lower than a preexisting corresponding rating provided by another major rating agency will generally not result in additional collateral, except in certain instances in which additional initial margin may be required upon a ratings downgrade, or termination payment requirements. The liquidity impact in the table is calculated based upon a downgrade below the lowest current rating of the rating agencies referred to in the derivative contract.

Liquidity impact of downgrade triggers on OTC and OTC-cleared derivatives

December 31, (in millions)	2014 Single-notch downgrade	2014 Two-notch downgrade	2013 Single-notch downgrade	2013 Two-notch downgrade
Amount of additional collateral to be posted upon downgrade[a]	**$ 1,046**	**$ 3,331**	$ 952	$ 3,244
Amount required to settle contracts with termination triggers upon downgrade[b]	**366**	**1,388**	540	876

(a) Includes the additional collateral to be posted for initial margin.
(b) Amounts represent fair value of derivative payables, and do not reflect collateral posted.

Impact of derivatives on the Consolidated statements of income

The following tables provide information related to gains and losses recorded on derivatives based on their hedge accounting designation or purpose.

Fair value hedge gains and losses

The following tables present derivative instruments, by contract type, used in fair value hedge accounting relationships, as well as pretax gains/(losses) recorded on such derivatives and the related hedged items for the years ended December 31, 2014, 2013 and 2012, respectively. The Firm includes gains/(losses) on the hedging derivative and the related hedged item in the same line item in the Consolidated statements of income.

	Gains/(losses) recorded in income			Income statement impact due to:	
Year ended December 31, 2014 (in millions)	Derivatives	Hedged items	Total income statement impact	Hedge ineffectiveness[d]	Excluded components[e]
Contract type					
Interest rate[a]	**$ 2,106**	**$ (801)**	**$ 1,305**	**$ 131**	**$ 1,174**
Foreign exchange[b]	**8,279**	**(8,532)**	**(253)**	**–**	**(253)**
Commodity[c]	**49**	**145**	**194**	**42**	**152**
Total	**$ 10,434**	**$ (9,188)**	**$ 1,246**	**$ 173**	**$ 1,073**

	Gains/(losses) recorded in income			Income statement impact due to:	
Year ended December 31, 2013 (in millions)	Derivatives	Hedged items	Total income statement impact	Hedge ineffectiveness[d]	Excluded components[e]
Contract type					
Interest rate[a]	$ (3,469)	$ 4,851	$ 1,382	$ (132)	$ 1,514
Foreign exchange[b]	(1,096)	864	(232)	–	(232)
Commodity[c]	485	(1,304)	(819)	38	(857)
Total	$ (4,080)	$ 4,411	$ 331	$ (94)	$ 425

	Gains/(losses) recorded in income			Income statement impact due to:	
Year ended December 31, 2012 (in millions)	Derivatives	Hedged items	Total income statement impact	Hedge ineffectiveness[d]	Excluded components[e]
Contract type					
Interest rate[a]	$ (1,238)	$ 1,879	$ 641	$ (28)	$ 669
Foreign exchange[b]	(3,027)	2,925	(102)	–	(102)
Commodity[c]	(2,530)	1,131	(1,399)	107	(1,506)
Total	$ (6,795)	$ 5,935	$ (860)	$ 79	$ (939)

(a) Primarily consists of hedges of the benchmark (e.g., London Interbank Offered Rate ("LIBOR")) interest rate risk of fixed-rate long-term debt and AFS securities. Gains and losses were recorded in net interest income. The current presentation excludes accrued interest.
(b) Primarily consists of hedges of the foreign currency risk of long-term debt and AFS securities for changes in spot foreign currency rates. Gains and losses related to the derivatives and the hedged items, due to changes in foreign currency rates, were recorded in principal transactions revenue and net interest income.
(c) Consists of overall fair value hedges of physical commodities inventories that are generally carried at the lower of cost or market (market approximates fair value). Gains and losses were recorded in principal transactions revenue.
(d) Hedge ineffectiveness is the amount by which the gain or loss on the designated derivative instrument does not exactly offset the gain or loss on the hedged item attributable to the hedged risk.
(e) The assessment of hedge effectiveness excludes certain components of the changes in fair values of the derivatives and hedged items such as forward points on foreign exchange forward contracts and time values.

Cash flow hedge gains and losses

The following tables present derivative instruments, by contract type, used in cash flow hedge accounting relationships, and the pretax gains/(losses) recorded on such derivatives, for the years ended December 31, 2014, 2013 and 2012, respectively. The Firm includes the gain/(loss) on the hedging derivative and the change in cash flows on the hedged item in the same line item in the Consolidated statements of income.

	Gains/(losses) recorded in income and other comprehensive income/(loss)[c]			
Year ended December 31, 2014 (in millions)	Derivatives – effective portion reclassified from AOCI to income	Hedge ineffectiveness recorded directly in income[d]	Total income statement impact	Derivatives – effective portion recorded in OCI	Total change in OCI for period
Contract type					
Interest rate[a]	**$ (54)**	**$ –**	**$ (54)**	**$ 189**	**$ 243**
Foreign exchange[b]	**78**	**–**	**78**	**(91)**	**(169)**
Total	**$ 24**	**$ –**	**$ 24**	**$ 98**	**$ 74**

	Gains/(losses) recorded in income and other comprehensive income/(loss)[c]			
Year ended December 31, 2013 (in millions)	Derivatives – effective portion reclassified from AOCI to income	Hedge ineffectiveness recorded directly in income[d]	Total income statement impact	Derivatives – effective portion recorded in OCI	Total change in OCI for period
Contract type					
Interest rate[a]	$ (108)	$ –	$ (108)	$ (565)	$ (457)
Foreign exchange[b]	7	–	7	40	33
Total	$ (101)	$ –	$ (101)	$ (525)	$ (424)

	Gains/(losses) recorded in income and other comprehensive income/(loss)[c]			
Year ended December 31, 2012 (in millions)	Derivatives – effective portion reclassified from AOCI to income	Hedge ineffectiveness recorded directly in income[d]	Total income statement impact	Derivatives – effective portion recorded in OCI	Total change in OCI for period
Contract type					
Interest rate[a]	$ (3)	$ 5	$ 2	$ 13	$ 16
Foreign exchange[b]	31	–	31	128	97
Total	$ 28	$ 5	$ 33	$ 141	$ 113

(a) Primarily consists of benchmark interest rate hedges of LIBOR-indexed floating-rate assets and floating-rate liabilities. Gains and losses were recorded in net interest income.

(b) Primarily consists of hedges of the foreign currency risk of non-U.S. dollar-denominated revenue and expense. The income statement classification of gains and losses follows the hedged item – primarily noninterest revenue and compensation expense.

(c) The Firm did not experience any forecasted transactions that failed to occur for the years ended December 31, 2014, 2013 or 2012.

(d) Hedge ineffectiveness is the amount by which the cumulative gain or loss on the designated derivative instrument exceeds the present value of the cumulative expected change in cash flows on the hedged item attributable to the hedged risk.

Over the next 12 months, the Firm expects that $33 million (after-tax) of net losses recorded in AOCI at December 31, 2014, related to cash flow hedges will be recognized in income. The maximum length of time over which forecasted transactions are hedged is 9 years, and such transactions primarily relate to core lending and borrowing activities.

Net investment hedge gains and losses

The following table presents hedging instruments, by contract type, that were used in net investment hedge accounting relationships, and the pretax gains/(losses) recorded on such instruments for the years ended December 31, 2014, 2013 and 2012.

	Gains/(losses) recorded in income and other comprehensive income/(loss)					
	2014		2013		2012	
Year ended December 31, (in millions)	Excluded components recorded directly in income[a]	Effective portion recorded in OCI	Excluded components recorded directly in income[a]	Effective portion recorded in OCI	Excluded components recorded directly in income[a]	Effective portion recorded in OCI
Foreign exchange derivatives	**$(448)**	**$1,698**	$(383)	$773	$(306)	$(82)

(a) Certain components of hedging derivatives are permitted to be excluded from the assessment of hedge effectiveness, such as forward points on foreign exchange forward contracts. Amounts related to excluded components are recorded in current-period income. The Firm measures the ineffectiveness of net investment hedge accounting relationships based on changes in spot foreign currency rates, and therefore there was no significant ineffectiveness for net investment hedge accounting relationships during 2014, 2013 and 2012.

Gains and losses on derivatives used for specified risk management purposes

The following table presents pretax gains/(losses) recorded on a limited number of derivatives, not designated in hedge accounting relationships, that are used to manage risks associated with certain specified assets and liabilities, including certain risks arising from the mortgage pipeline, warehouse loans, MSRs, wholesale lending exposures, AFS securities, foreign currency-denominated liabilities, and commodities-related contracts and investments.

	Derivatives gains/(losses) recorded in income		
Year ended December 31, (in millions)	**2014**	2013	2012
Contract type			
Interest rate[a]	**$ 2,308**	$ 617	$ 5,353
Credit[b]	**(58)**	(142)	(175)
Foreign exchange[c]	**(7)**	1	47
Commodity[d]	**156**	178	94
Total	**$ 2,399**	$ 654	$ 5,319

(a) Primarily represents interest rate derivatives used to hedge the interest rate risk inherent in the mortgage pipeline, warehouse loans and MSRs, as well as written commitments to originate warehouse loans. Gains and losses were recorded predominantly in mortgage fees and related income.

(b) Relates to credit derivatives used to mitigate credit risk associated with lending exposures in the Firm's wholesale businesses. These derivatives do not include credit derivatives used to mitigate counterparty credit risk arising from derivative receivables, which is included in gains and losses on derivatives related to market-making activities and other derivatives. Gains and losses were recorded in principal transactions revenue.

(c) Primarily relates to hedges of the foreign exchange risk of specified foreign currency-denominated assets and liabilities. Gains and losses were recorded in principal transactions revenue.

(d) Primarily relates to commodity derivatives used to mitigate energy price risk associated with energy-related contracts and investments. Gains and losses were recorded in principal transactions revenue.

Gains and losses on derivatives related to market-making activities and other derivatives

The Firm makes markets in derivatives in order to meet the needs of customers and uses derivatives to manage certain risks associated with net open risk positions from the Firm's market-making activities, including the counterparty credit risk arising from derivative receivables. All derivatives not included in the hedge accounting or specified risk management categories above are included in this category. Gains and losses on these derivatives are primarily recorded in principal transactions revenue. See Note 7 for information on principal transactions revenue.

Credit derivatives

Credit derivatives are financial instruments whose value is derived from the credit risk associated with the debt of a third-party issuer (the reference entity) and which allow one party (the protection purchaser) to transfer that risk to another party (the protection seller). Credit derivatives expose the protection purchaser to the creditworthiness of the protection seller, as the protection seller is required to make payments under the contract when the reference entity experiences a credit event, such as a bankruptcy, a failure to pay its obligation or a restructuring. The seller of credit protection receives a premium for providing protection but has the risk that the underlying instrument referenced in the contract will be subject to a credit event.

The Firm is both a purchaser and seller of protection in the credit derivatives market and uses these derivatives for two primary purposes. First, in its capacity as a market-maker, the Firm actively manages a portfolio of credit derivatives by purchasing and selling credit protection, predominantly on corporate debt obligations, to meet the needs of customers. Second, as an end-user, the Firm uses credit derivatives to manage credit risk associated with lending exposures (loans and unfunded commitments) and derivatives counterparty exposures in the Firm's wholesale businesses, and to manage the credit risk arising from certain financial instruments in the Firm's market-making businesses. Following is a summary of various types of credit derivatives.

Credit default swaps

Credit derivatives may reference the credit of either a single reference entity ("single-name") or a broad-based index. The Firm purchases and sells protection on both single-name and index-reference obligations. Single-name CDS and index CDS contracts are typically OTC-cleared derivative contracts. Single-name CDS are used to manage the default risk of a single reference entity, while index CDS contracts are used to manage the credit risk associated with the broader credit markets or credit market segments. Like the S&P 500 and other market indices, a CDS index comprises a portfolio of CDS across many reference entities. New series of CDS indices are periodically established with a new underlying portfolio of reference entities to reflect changes in the credit markets. If one of the reference entities in the index experiences a credit event, then the reference entity that defaulted is removed from the index. CDS can also be referenced against specific portfolios of reference names or against customized exposure levels based on specific client demands: for example, to provide protection against the first $1 million of realized credit losses in a $10 million portfolio of exposure. Such structures are commonly known as tranche CDS.

For both single-name CDS contracts and index CDS contracts, upon the occurrence of a credit event, under the terms of a CDS contract neither party to the CDS contract has recourse to the reference entity. The protection purchaser has recourse to the protection seller for the difference between the face value of the CDS contract and the fair value of the reference obligation at settlement of the credit derivative contract, also known as the recovery value. The protection purchaser does not need to hold the debt instrument of the underlying reference entity in order to receive amounts due under the CDS contract when a credit event occurs.

Credit-related notes

A credit-related note is a funded credit derivative where the issuer of the credit-related note purchases from the note investor credit protection on a reference entity or an index. Under the contract, the investor pays the issuer the par value of the note at the inception of the transaction, and in return, the issuer pays periodic payments to the investor, based on the credit risk of the referenced entity. The issuer also repays the investor the par value of the note at maturity unless the reference entity experiences a specified credit event (or one of the entities that makes up a reference index). If a credit event occurs, the issuer is not obligated to repay the par value of the note, but rather, the issuer pays the investor the difference between the par value of the note and the fair value of the defaulted reference obligation at the time of settlement. Neither party to the credit-related note has recourse to the defaulting reference entity. For a further discussion of credit-related notes, see Note 16.

The following tables present a summary of the notional amounts of credit derivatives and credit-related notes the Firm sold and purchased as of December 31, 2014 and 2013. Upon a credit event, the Firm as a seller of protection would typically pay out only a percentage of the full notional amount of net protection sold, as the amount actually required to be paid on the contracts takes into account the recovery value of the reference obligation at the time of settlement. The Firm manages the credit risk on contracts to sell protection by purchasing protection with identical or similar underlying reference entities. Other purchased protection referenced in the following tables includes credit derivatives bought on related, but not identical, reference positions (including indices, portfolio coverage and other reference points) as well as protection purchased through credit-related notes.

The Firm does not use notional amounts of credit derivatives as the primary measure of risk management for such derivatives, because the notional amount does not take into account the probability of the occurrence of a credit event, the recovery value of the reference obligation, or related cash instruments and economic hedges, each of which reduces, in the Firm's view, the risks associated with such derivatives.

Total credit derivatives and credit-related notes

	Maximum payout/Notional amount			
December 31, 2014 (in millions)	Protection sold	Protection purchased with identical underlyings[c]	Net protection (sold)/ purchased[d]	Other protection purchased[e]
Credit derivatives				
Credit default swaps	**$ (2,056,982)**	**$ 2,078,096**	**$ 21,114**	**$ 18,631**
Other credit derivatives[a]	**(43,281)**	**32,048**	**(11,233)**	**19,475**
Total credit derivatives	**(2,100,263)**	**2,110,144**	**9,881**	**38,106**
Credit-related notes	**(40)**	**–**	**(40)**	**3,704**
Total	**$ (2,100,303)**	**$ 2,110,144**	**$ 9,841**	**$ 41,810**

	Maximum payout/Notional amount			
December 31, 2013 (in millions)	Protection sold	Protection purchased with identical underlyings[c]	Net protection (sold)/ purchased[d]	Other protection purchased[e]
Credit derivatives				
Credit default swaps	$ (2,601,581)	$ 2,610,198	$ 8,617	$ 8,722
Other credit derivatives[a]	(44,137) [b]	45,921	1,784	20,480 [b]
Total credit derivatives	(2,645,718)	2,656,119	10,401	29,202
Credit-related notes	(130)	–	(130)	2,720
Total	$ (2,645,848)	$ 2,656,119	$ 10,271	$ 31,922

(a) Other credit derivatives predominantly consists of credit swap options.
(b) The prior period amounts have been revised. This revision had no impact on the Firm's Consolidated balance sheets or its results of operations.
(c) Represents the total notional amount of protection purchased where the underlying reference instrument is identical to the reference instrument on protection sold; the notional amount of protection purchased for each individual identical underlying reference instrument may be greater or lower than the notional amount of protection sold.
(d) Does not take into account the fair value of the reference obligation at the time of settlement, which would generally reduce the amount the seller of protection pays to the buyer of protection in determining settlement value.
(e) Represents protection purchased by the Firm on referenced instruments (single-name, portfolio or index) where the Firm has not sold any protection on the identical reference instrument.

The following tables summarize the notional amounts by the ratings and maturity profile, and the total fair value, of credit derivatives as of December 31, 2014 and 2013, where JPMorgan Chase is the seller of protection. The maturity profile is based on the remaining contractual maturity of the credit derivative contracts. The ratings profile is based on the rating of the reference entity on which the credit derivative contract is based. The ratings and maturity profile of credit derivatives and credit-related notes where JPMorgan Chase is the purchaser of protection are comparable to the profile reflected below.

Protection sold – credit derivatives and credit-related notes ratings[a]/maturity profile

December 31, 2014 (in millions)	<1 year	1–5 years	>5 years	Total notional amount	Fair value of receivables[c]	Fair value of payables[c]	Net fair value
Risk rating of reference entity							
Investment-grade	$ (323,398)	$ (1,118,293)	$ (79,486)	$ (1,521,177)	$ 25,767	$ (6,314)	$ 19,453
Noninvestment-grade	(157,281)	(396,798)	(25,047)	(579,126)	20,677	(22,455)	(1,778)
Total	$ (480,679)	$ (1,515,091)	$ (104,533)	$ (2,100,303)	$ 46,444	$ (28,769)	$ 17,675

December 31, 2013 (in millions)	<1 year	1–5 years	>5 years	Total notional amount	Fair value of receivables[c]	Fair value of payables[c]	Net fair value
Risk rating of reference entity							
Investment-grade	$ (368,712) [b]	$ (1,469,773) [b]	$ (93,209) [b]	$ (1,931,694) [b]	$ 31,730 [b]	$ (5,664) [b]	$ 26,066 [b]
Noninvestment-grade	(140,540)	(544,671)	(28,943)	(714,154)	27,426	(16,674)	10,752
Total	$ (509,252)	$ (2,014,444)	$ (122,152)	$ (2,645,848)	$ 59,156	$ (22,338)	$ 36,818

(a) The ratings scale is primarily based on external credit ratings defined by S&P and Moody's.
(b) The prior period amounts have been revised. This revision had no impact on the Firm's Consolidated balance sheets or its results of operations.
(c) Amounts are shown on a gross basis, before the benefit of legally enforceable master netting agreements and cash collateral received by the Firm.

Note 7 – Noninterest revenue

Investment banking fees

This revenue category includes equity and debt underwriting and advisory fees. Underwriting fees are recognized as revenue when the Firm has rendered all services to the issuer and is entitled to collect the fee from the issuer, as long as there are no other contingencies associated with the fee. Underwriting fees are net of syndicate expense; the Firm recognizes credit arrangement and syndication fees as revenue after satisfying certain retention, timing and yield criteria. Advisory fees are recognized as revenue when the related services have been performed and the fee has been earned.

The following table presents the components of investment banking fees.

Year ended December 31, (in millions)	2014	2013	2012
Underwriting			
Equity	**$ 1,571**	$ 1,499	$ 1,026
Debt	**3,340**	3,537	3,290
Total underwriting	**4,911**	5,036	4,316
Advisory	**1,631**	1,318	1,492
Total investment banking fees	**$ 6,542**	$ 6,354	$ 5,808

Principal transactions

Principal transactions revenue consists of realized and unrealized gains and losses on derivatives and other instruments (including those accounted for under the fair value option) used in client-driven market-making activities and on private equity investments. In connection with its client-driven market-making activities, the Firm transacts in debt and equity instruments, derivatives and commodities (including physical commodities inventories and financial instruments that reference commodities).

Principal transactions revenue also includes realized and unrealized gains and losses related to hedge accounting and specified risk-management activities, including: (a) certain derivatives designated in qualifying hedge accounting relationships (primarily fair value hedges of commodity and foreign exchange risk), (b) certain derivatives used for specific risk management purposes, primarily to mitigate credit risk, foreign exchange risk and commodity risk, and (c) other derivatives, including the synthetic credit portfolio. For further information on the income statement classification of gains and losses from derivatives activities, see Note 6.

In the financial commodity markets, the Firm transacts in OTC derivatives (e.g., swaps, forwards, options) and exchange-traded derivatives that reference a wide range of underlying commodities. In the physical commodity markets, the Firm primarily purchases and sells precious and base metals and may hold other commodities inventories under financing and other arrangements with clients. Prior to the 2014 sale of certain parts of its physical commodity business, the Firm also engaged in the purchase, sale, transport and storage of power, gas, liquefied natural gas, coal, crude oil and refined products.

Physical commodities inventories are generally carried at the lower of cost or market (market approximates fair value) subject to any applicable fair value hedge accounting adjustments, with realized gains and losses and unrealized losses recorded in principal transactions revenue.

The following table presents all realized and unrealized gains and losses recorded in principal transactions revenue. This table excludes interest income and interest expense on trading assets and liabilities, which are an integral part of the overall performance of the Firm's client-driven market-making activities. See Note 8 for further information on interest income and interest expense. Trading revenue is presented primarily by instrument type. The Firm's client-driven market-making businesses generally utilize a variety of instrument types in connection with their market-making and related risk-management activities; accordingly, the trading revenue presented in the table below is not representative of the total revenue of any individual line of business.

Year ended December 31, (in millions)	2014	2013	2012
Trading revenue by instrument type [a]			
Interest rate[b]	**$ 1,362**	$ 284	$ 4,002
Credit[c]	**1,880**	2,654	(4,975)
Foreign exchange	**1,556**	1,801	918
Equity	**2,563**	2,517	2,455
Commodity[d]	**1,663**	2,083	2,365
Total trading revenue[e]	**9,024**	9,339	4,765
Private equity gains[f]	**1,507**	802	771
Principal transactions	**$ 10,531**	$ 10,141	$ 5,536

(a) Prior to the second quarter of 2014, trading revenue was presented by major underlying type of risk exposure, generally determined based upon the business primarily responsible for managing that risk exposure. Prior period amounts have been revised to conform with the current period presentation. This revision had no impact on the Firm's Consolidated balance sheets or results of operations.

(b) Includes a pretax gain of $665 million for the year ended December 31, 2012, reflecting the recovery on a Bear Stearns-related subordinated loan.

(c) Includes $5.8 billion of losses incurred by CIO from the synthetic credit portfolio for the six months ended June 30, 2012, and $449 million of losses incurred by CIO from the retained index credit derivative positions for the three months ended September 30, 2012; and losses incurred by CIB from the synthetic credit portfolio.

(d) Commodity derivatives are frequently used to manage the Firm's risk exposure to its physical commodities inventories. For gains/(losses) related to commodity fair value hedges, see Note 6.

(e) During 2013, the Firm implemented a FVA framework in order to incorporate the impact of funding into its valuation estimates for OTC derivatives and structured notes. As a result, the Firm recorded a $1.5 billion loss in principal transactions revenue in 2013, reported in the CIB. This reflected an industry migration towards incorporating the cost of unsecured funding in the valuation of such instruments.

(f) Includes revenue on private equity investments held in the Private Equity business within Corporate, as well as those held in other business segments.

Lending- and deposit-related fees
This revenue category includes fees from loan commitments, standby letters of credit, financial guarantees, deposit-related fees in lieu of compensating balances, cash management-related activities or transactions, deposit accounts and other loan-servicing activities. These fees are recognized over the period in which the related service is provided.

Asset management, administration and commissions
This revenue category includes fees from investment management and related services, custody, brokerage services, insurance premiums and commissions, and other products. These fees are recognized over the period in which the related service is provided. Performance-based fees, which are earned based on exceeding certain benchmarks or other performance targets, are accrued and recognized at the end of the performance period in which the target is met. The Firm has contractual arrangements with third parties to provide certain services in connection with its asset management activities. Amounts paid to third-party service providers are predominantly expensed, such that asset management fees are recorded gross of payments made to third parties.

The following table presents components of asset management, administration and commissions.

Year ended December 31, (in millions)	2014	2013	2012
Asset management fees			
Investment management fees[a]	**$ 9,169**	$ 8,044	$ 6,744
All other asset management fees[b]	**477**	505	357
Total asset management fees	**9,646**	8,549	7,101
Total administration fees[c]	**2,179**	2,101	2,135
Commissions and other fees			
Brokerage commissions	**2,270**	2,321	2,331
All other commissions and fees	**1,836**	2,135	2,301
Total commissions and fees	**4,106**	4,456	4,632
Total asset management, administration and commissions	**$ 15,931**	$ 15,106	$ 13,868

(a) Represents fees earned from managing assets on behalf of Firm clients, including investors in Firm-sponsored funds and owners of separately managed investment accounts.
(b) Represents fees for services that are ancillary to investment management services, such as commissions earned on the sales or distribution of mutual funds to clients.
(c) Predominantly includes fees for custody, securities lending, funds services and securities clearance.

Mortgage fees and related income
This revenue category primarily reflects CCB's Mortgage Production and Mortgage Servicing revenue, including fees and income derived from mortgages originated with the intent to sell; mortgage sales and servicing including losses related to the repurchase of previously sold loans; the impact of risk-management activities associated with the mortgage pipeline, warehouse loans and MSRs; and revenue related to any residual interests held from mortgage securitizations. This revenue category also includes gains and losses on sales and lower of cost or fair value adjustments for mortgage loans held-for-sale, as well as changes in fair value for mortgage loans originated with the intent to sell and measured at fair value under the fair value option. Changes in the fair value of CCB MSRs are reported in mortgage fees and related income. Net interest income from mortgage loans is recorded in interest income. For a further discussion of MSRs, see Note 17.

Card income
This revenue category includes interchange income from credit and debit cards and net fees earned from processing credit card transactions for merchants. Card income is recognized as earned. Cost related to rewards programs is recorded when the rewards are earned by the customer and presented as a reduction to interchange income. Annual fees and direct loan origination costs are deferred and recognized on a straight-line basis over a 12-month period.

Credit card revenue sharing agreements
The Firm has contractual agreements with numerous co-brand partners and affinity organizations (collectively, "partners"), which grant the Firm exclusive rights to market to the customers or members of such partners. These partners endorse the credit card programs and provide their customer and member lists to the Firm, and they may also conduct marketing activities and provide awards under the various credit card programs. The terms of these agreements generally range from three to ten years.

The Firm typically makes incentive payments to the partners based on new account originations, charge volumes and the cost of the partners' marketing activities and awards. Payments based on new account originations are accounted for as direct loan origination costs. Payments to partners based on sales volumes are deducted from interchange income as the related revenue is earned. Payments based on marketing efforts undertaken by the partners are expensed by the Firm as incurred and reported as noninterest expense.

Other income
Included in other income is operating lease income of $1.7 billion, $1.5 billion and $1.3 billion for the years ended December 31, 2014, 2013 and 2012, respectively. Additionally, included in other income for the year ended December 31, 2013, is a net pretax gain of approximately $1.3 billion, from the sale of Visa B Shares.

Note 8 – Interest income and Interest expense

Interest income and interest expense are recorded in the Consolidated statements of income and classified based on the nature of the underlying asset or liability. Interest income and interest expense includes the current-period interest accruals for financial instruments measured at fair value, except for financial instruments containing embedded derivatives that would be separately accounted for in accordance with U.S. GAAP absent the fair value option election; for those instruments, all changes in fair value, including any interest elements, are reported in principal transactions revenue. For financial instruments that are not measured at fair value, the related interest is included within interest income or interest expense, as applicable.

Details of interest income and interest expense were as follows.

Year ended December 31, (in millions)	2014	2013	2012
Interest income			
Loans	**$ 32,218**	$ 33,489	$ 35,832
Taxable securities	**7,617**	6,916	7,231
Non-taxable securities[a]	**1,423**	896	708
Total securities	**9,040**	7,812	7,939
Trading assets[b]	**7,312**	8,099	8,929
Federal funds sold and securities purchased under resale agreements	**1,642**	1,940	2,442
Securities borrowed [c]	**(501)**	(127)	(3)
Deposits with banks	**1,157**	918	555
Other assets[d]	**663**	538	259
Total interest income[b]	**51,531**	52,669	55,953
Interest expense			
Interest-bearing deposits	**1,633**	2,067	2,655
Short-term and other liabilities[b][e]	**1,450**	1,798	1,678
Long-term debt	**4,409**	5,007	6,062
Beneficial interests issued by consolidated VIEs	**405**	478	648
Total interest expense[b]	**7,897**	9,350	11,043
Net interest income	**43,634**	43,319	44,910
Provision for credit losses	**3,139**	225	3,385
Net interest income after provision for credit losses	**$ 40,495**	$ 43,094	$ 41,525

(a) Represents securities which are tax exempt for U.S. Federal Income Tax purposes.
(b) Prior period amounts have been reclassified to conform with the current period presentation.
(c) Negative interest income for the years ended December 31, 2014, 2013 and 2012, is a result of increased client-driven demand for certain securities combined with the impact of low interest rates; the offset of this matched book activity is reflected as lower net interest expense reported within short-term and other liabilities.
(d) Largely margin loans.
(e) Includes brokerage customer payables.

Note 9 – Pension and other postretirement employee benefit plans

The Firm's defined benefit pension plans and its other postretirement employee benefit ("OPEB") plans are accounted for in accordance with U.S. GAAP for retirement benefits.

Defined benefit pension plans

The Firm has a qualified noncontributory U.S. defined benefit pension plan that provides benefits to substantially all U.S. employees. The U.S. plan employs a cash balance formula in the form of pay and interest credits to determine the benefits to be provided at retirement, based on years of service and eligible compensation (generally base pay capped at $100,000 annually; effective January 1, 2015, in addition to base pay, eligible compensation will include certain other types of variable incentive compensation capped at $100,000 annually). Employees begin to accrue plan benefits after completing one year of service, and benefits generally vest after three years of service. The Firm also offers benefits through defined benefit pension plans to qualifying employees in certain non-U.S. locations based on factors such as eligible compensation, age and/or years of service.

It is the Firm's policy to fund the pension plans in amounts sufficient to meet the requirements under applicable laws. The Firm does not anticipate at this time any contribution to the U.S. defined benefit pension plan in 2015. The 2015 contributions to the non-U.S. defined benefit pension plans are expected to be $47 million of which $31 million are contractually required.

JPMorgan Chase also has a number of defined benefit pension plans that are not subject to Title IV of the Employee Retirement Income Security Act. The most significant of these plans is the Excess Retirement Plan, pursuant to which certain employees previously earned pay credits on compensation amounts above the maximum stipulated by law under a qualified plan; no further pay credits are allocated under this plan. The Excess Retirement Plan had an unfunded projected benefit obligation ("PBO") in the amount of $257 million and $245 million, at December 31, 2014 and 2013, respectively.

Defined contribution plans

JPMorgan Chase currently provides two qualified defined contribution plans in the U.S. and other similar arrangements in certain non-U.S. locations, all of which are administered in accordance with applicable local laws and regulations. The most significant of these plans is The JPMorgan Chase 401(k) Savings Plan (the "401(k) Savings Plan"), which covers substantially all U.S. employees. Employees can contribute to the 401(k) Savings Plan on a pretax and/or Roth 401(k) after-tax basis. The JPMorgan Chase Common Stock Fund, which is an investment option under the 401(k) Savings Plan, is a nonleveraged employee stock ownership plan.

The Firm matches eligible employee contributions up to 5% of eligible compensation (generally base pay; effective January 1, 2015, in addition to base pay, eligible compensation will include certain other types of variable incentive compensation) on an annual basis. Employees begin to receive matching contributions after completing a one-year-of-service requirement. Employees with total annual cash compensation of $250,000 or more are not eligible for matching contributions. Matching contributions vest after three years of service for employees hired on or after May 1, 2009. The 401(k) Savings Plan also permits discretionary profit-sharing contributions by participating companies for certain employees, subject to a specified vesting schedule.

OPEB plans

JPMorgan Chase offers postretirement medical and life insurance benefits to certain retirees and postretirement medical benefits to qualifying U.S. employees. These benefits vary with the length of service and the date of hire and provide for limits on the Firm's share of covered medical benefits. The medical and life insurance benefits are both contributory. Postretirement medical benefits also are offered to qualifying United Kingdom ("U.K.") employees.

JPMorgan Chase's U.S. OPEB obligation is funded with corporate-owned life insurance ("COLI") purchased on the lives of eligible employees and retirees. While the Firm owns the COLI policies, COLI proceeds (death benefits, withdrawals and other distributions) may be used only to reimburse the Firm for its net postretirement benefit claim payments and related administrative expense. The U.K. OPEB plan is unfunded.

The following table presents the changes in benefit obligations, plan assets and funded status amounts reported on the Consolidated balance sheets for the Firm's U.S. and non-U.S. defined benefit pension and OPEB plans.

As of or for the year ended December 31,	Defined benefit pension plans					
	U.S.		Non-U.S.		OPEB plans[d]

Accumulated benefit obligation, end of year	**$ (12,375)**	$(10,685)	**$ (3,615)**	$ (3,406)	**NA**	NA

(a) Represents plans with an aggregate overfunded balance of $3.9 billion and $5.1 billion at December 31, 2014 and 2013, respectively, and plans with an aggregate underfunded balance of $708 million and $540 million at December 31, 2014 and 2013, respectively.

(b) At December 31, 2014 and 2013, approximately $336 million and $429 million, respectively, of U.S. plan assets included participation rights under participating annuity contracts.

(c) At December 31, 2014 and 2013, defined benefit pension plan amounts not measured at fair value included $106 million and $96 million, respectively, of accrued receivables, and $257 million and $104 million, respectively, of accrued liabilities, for U.S. plans.

(d) Includes an unfunded accumulated postretirement benefit obligation of $37 million and $34 million at December 31, 2014 and 2013, respectively, for the U.K. plan.

Gains and losses

For the Firm's defined benefit pension plans, fair value is used to determine the expected return on plan assets. Amortization of net gains and losses is included in annual net periodic benefit cost if, as of the beginning of the year, the net gain or loss exceeds 10% of the greater of the PBO or the fair value of the plan assets. Any excess is amortized over the average future service period of defined benefit pension plan participants, which for the U.S. defined benefit pension plan is currently seven years. In addition, prior service costs are amortized over the average remaining service period of active employees expected to receive benefits under the plan when the prior service cost is first recognized. The average remaining amortization period for current prior service costs is five years.

For the Firm's OPEB plans, a calculated value that recognizes changes in fair value over a five-year period is used to determine the expected return on plan assets. This value is referred to as the market related value of assets. Amortization of net gains and losses, adjusted for gains and losses not yet recognized, is included in annual net periodic benefit cost if, as of the beginning of the year, the net gain or loss exceeds 10% of the greater of the accumulated postretirement benefit obligation or the market related value of assets. Any excess net gain or loss is amortized over the average expected lifetime of retired participants, which is currently twelve years; however, prior service costs resulting from plan changes are amortized over the average years of service remaining to full eligibility age, which is currently two years.

The following table presents pretax pension and OPEB amounts recorded in AOCI.

	Defined benefit pension plans					
December 31,	U.S.		Non-U.S.		OPEB plans

Plan assumptions

JPMorgan Chase's expected long-term rate of return for U.S. defined benefit pension and OPEB plan assets is a blended average of the investment advisor's projected long-term (10 years or more) returns for the various asset classes, weighted by the asset allocation. Returns on asset classes are developed using a forward-looking approach and are not strictly based on historical returns. Equity returns are generally developed as the sum of inflation, expected real earnings growth and expected long-term dividend yield. Bond returns are generally developed as the sum of inflation, real bond yield and risk spread (as appropriate), adjusted for the expected effect on returns from changing yields. Other asset-class returns are derived from their relationship to the equity and bond markets. Consideration is also given to current market conditions and the short-term portfolio mix of each plan.

For the U.K. defined benefit pension plans, which represent the most significant of the non-U.S. defined benefit pension plans, procedures similar to those in the U.S. are used to develop the expected long-term rate of return on plan assets, taking into consideration local market conditions and the specific allocation of plan assets. The expected long-term rate of return on U.K. plan assets is an average of projected long-term returns for each asset class. The return on equities has been selected by reference to the yield on long-term U.K. government bonds plus an equity risk premium above the risk-free rate. The expected return on "AA" rated long-term corporate bonds is based on an implied yield for similar bonds.

The discount rate used in determining the benefit obligation under the U.S. defined benefit pension and OPEB plans was selected by reference to the yields on portfolios of bonds with maturity dates and coupons that closely match each of the plan's projected cash flows; such portfolios are derived from a broad-based universe of high-quality corporate bonds as of the measurement date. In years in which these hypothetical bond portfolios generate excess cash, such excess is assumed to be reinvested at the one-year forward rates implied by the Citigroup Pension Discount Curve published as of the measurement date. The discount rate for the U.K. defined benefit pension plan represents a rate of appropriate duration from the analysis of yield curves provided by our actuaries.

In 2014, the Society of Actuaries ("SOA") completed a comprehensive review of mortality experience of uninsured private retirement plans in the U.S. In October 2014, the SOA published new mortality tables and a new mortality improvement scale that reflects improved life expectancies and an expectation that this trend will continue. The Firm has adopted the SOA's tables and projection scale, resulting in an estimated increase in PBO of $533 million.

At December 31, 2014, the Firm decreased the discount rates used to determine its benefit obligations for the U.S. defined benefit pension and OPEB plans in light of current market interest rates, which will result in an increase in expense of approximately $139 million for 2015. The 2015 expected long-term rate of return on U.S. defined benefit pension plan assets and U.S. OPEB plan assets are 6.50% and 6.00%, respectively. For 2015, the initial health care benefit obligation trend assumption has been set at 6.00%, and the ultimate health care trend assumption and the year to reach the ultimate rate remains at 5.00% and 2017, respectively, unchanged from 2014. As of December 31, 2014, the interest crediting rate assumption and the assumed rate of compensation increase remained at 5.00% and 3.50%, respectively.

The following tables present the weighted-average annualized actuarial assumptions for the projected and accumulated postretirement benefit obligations, and the components of net periodic benefit costs, for the Firm's significant U.S. and non-U.S. defined benefit pension and OPEB plans, as of and for the periods indicated.

Ultimate	**5.00**	5.00	5.00	**–**	–	–
Year when rate will reach ultimate	**2017**	2017	2017	**–**	–	–

The following table presents the effect of a one-percentage-point change in the assumed health care cost trend rate on JPMorgan Chase's accumulated postretirement benefit obligation. As of December 31, 2014, there was no material effect on total service and interest cost.

Year ended December 31, 2014 (in millions)	1-Percentage point increase	1-Percentage point decrease
Effect on accumulated postretirement benefit obligation	$ 9	$ (8)

JPMorgan Chase's U.S. defined benefit pension and OPEB plan expense is sensitive to the expected long-term rate of return on plan assets and the discount rate. With all other assumptions held constant, a 25-basis point decline in the expected long-term rate of return on U.S. plan assets would result in an aggregate increase of approximately $40 million in 2015 U.S. defined benefit pension and OPEB plan expense. A 25-basis point decline in the discount rate for the U.S. plans would result in an increase in 2015 U.S. defined benefit pension and OPEB plan expense of approximately an aggregate $36 million and an increase in the related benefit obligations of approximately an aggregate $333 million. A 25-basis point decrease in the interest crediting rate for the U.S. defined benefit pension plan would result in a decrease in 2015 U.S. defined benefit pension expense of approximately $36 million and a decrease in the related PBO of approximately $148 million. A 25-basis point decline in the discount rates for the non-U.S. plans would result in an increase in the 2015 non-U.S. defined benefit pension plan expense of approximately $19 million.

Investment strategy and asset allocation

The Firm's U.S. defined benefit pension plan assets are held in trust and are invested in a well-diversified portfolio of equity and fixed income securities, cash and cash equivalents, and alternative investments (e.g., hedge funds, private equity, real estate and real assets). Non-U.S. defined benefit pension plan assets are held in various trusts and are also invested in well-diversified portfolios of equity, fixed income and other securities. Assets of the Firm's COLI policies, which are used to partially fund the U.S. OPEB plan, are held in separate accounts of an insurance company and are allocated to investments intended to replicate equity and fixed income indices.

The investment policy for the Firm's U.S. defined benefit pension plan assets is to optimize the risk-return relationship as appropriate to the needs and goals of the plan using a global portfolio of various asset classes diversified by market segment, economic sector, and issuer. Assets are managed by a combination of internal and external investment managers. Periodically the Firm performs a comprehensive analysis on the U.S. defined benefit pension plan asset allocations, incorporating projected asset and liability data, which focuses on the short- and long-term impact of the asset allocation on cumulative pension expense, economic cost, present value of contributions and funded status. As the U.S. defined benefit pension plan is overfunded, the investment strategy for this plan was adjusted in 2013 to provide for greater liquidity. Currently, approved asset allocation ranges are: U.S. equity 0% to 45%, international equity 0% to 40%, debt securities 0% to 80%, hedge funds 0% to 5%, real estate 0% to 10%, real assets 0% to 10% and private equity 0% to 20%. Asset allocations are not managed to a specific target but seek to shift asset class allocations within these stated ranges. Investment strategies incorporate the economic outlook and the anticipated implications of the macroeconomic environment on the various asset classes while maintaining an appropriate level of liquidity for the plan. The Firm regularly reviews the asset allocations and asset managers, as well as other factors that impact the portfolio, which is rebalanced when deemed necessary.

For the U.K. defined benefit pension plans, which represent the most significant of the non-U.S. defined benefit pension plans, the assets are invested to maximize returns subject to an appropriate level of risk relative to the plans' liabilities. In order to reduce the volatility in returns relative to the plans' liability profiles, the U.K. defined benefit pension plans' largest asset allocations are to debt securities of appropriate durations. Other assets, mainly equity securities, are then invested for capital appreciation, to provide long-term investment growth. Similar to the U.S. defined benefit pension plan, asset allocations and asset managers for the U.K. plans are reviewed regularly and the portfolio is rebalanced when deemed necessary.

Investments held by the Plans include financial instruments which are exposed to various risks such as interest rate, market and credit risks. Exposure to a concentration of credit risk is mitigated by the broad diversification of both U.S. and non-U.S. investment instruments. Additionally, the investments in each of the common/collective trust funds and registered investment companies are further diversified into various financial instruments. As of December 31, 2014, assets held by the Firm's U.S. and non-U.S. defined benefit pension and OPEB plans do not include JPMorgan Chase common stock, except through indirect exposures through investments in third-party stock-index funds. The plans hold investments in funds that are sponsored or managed by affiliates of JPMorgan Chase in the amount of $3.7 billion and $2.9 billion for U.S. plans and $1.4 billion and $242 million for non-U.S. plans, as of December 31, 2014 and 2013, respectively.

The following table presents the weighted-average asset allocation of the fair values of total plan assets at December 31 for the years indicated, as well as the respective approved range/target allocation by asset category, for the Firm's U.S. and non-U.S. defined benefit pension and OPEB plans.

	Defined benefit pension plans								
	U.S.			Non-U.S.			OPEB plans[c]		
	Target	% of plan assets		Target	% of plan assets		Target	% of plan assets	
December 31,	Allocation	**2014**	2013	Allocation	**2014**	2013	Allocation	**2014**	2013
Asset category									
Debt securities[a]	0-80%	**31%**	25%	62%	**61%**	63%	30-70%	**50%**	50%
Equity securities	0-85	**46**	48	37	**38**	36	30-70	**50**	50

(a) At December 31, 2014 and 2013, common/collective trust funds primarily included a mix of short-term investment funds, domestic and international equity investments (including index) and real estate funds.
(b) Unfunded commitments to purchase limited partnership investments for the plans were $1.2 billion and $1.6 billion for 2014 and 2013, respectively.
(c) Real assets include investments in productive assets such as agriculture, energy rights, mining and timber properties and exclude raw land to be developed for real estate purposes.
(d) Corporate debt securities include debt securities of U.S. and non-U.S. corporations.
(e) Other consists of money markets, exchange-traded funds and participating and non-participating annuity contracts. Money markets and exchange-traded funds are primarily classified within level 1 of the fair value hierarchy given they are valued using market observable prices. Participating and non-participating annuity contracts are classified within level 3 of the fair value hierarchy due to lack of market mechanisms for transferring each policy and surrender restrictions.
(f) At December 31, 2014 and 2013, the fair value of investments valued at NAV were $2.1 billion and $2.7 billion, respectively, which were classified within the valuation hierarchy as follows: $500 million and $100 million in level 1, $1.6 billion and $1.9 billion in level 2, zero and $700 million in level 3.
(g) At December 31, 2014 and 2013, excluded U.S. defined benefit pension plan receivables for investments sold and dividends and interest receivables of $106 million and $96 million, respectively.
(h) At December 31, 2014 and 2013, excluded $241 million and $102 million, respectively, of U.S. defined benefit pension plan payables for investments purchased; and $16 million and $2 million, respectively, of other liabilities.
(i) There were no assets or liabilities classified as level 3 for the non-U.S. defined benefit pension plans as of December 31, 2014 and 2013.

The Firm's U.S. OPEB plan was partially funded with COLI policies of $1.9 billion and $1.7 billion at December 31, 2014 and 2013, respectively, which were classified in level 3 of the valuation hierarchy.

Note 10 – Employee stock-based incentives

Employee stock-based awards

In 2014, 2013 and 2012, JPMorgan Chase granted long-term stock-based awards to certain employees under its Long-Term Incentive Plan, which was last amended in May 2011 ("LTIP"). Under the terms of the LTIP, as of December 31, 2014, 266 million shares of common stock were available for issuance through May 2015. The LTIP is the only active plan under which the Firm is currently granting stock-based incentive awards. In the following discussion, the LTIP, plus prior Firm plans and plans assumed as the result of acquisitions, are referred to collectively as the "LTI Plans," and such plans constitute the Firm's stock-based incentive plans.

Restricted stock units ("RSUs") are awarded at no cost to the recipient upon their grant. Generally, RSUs are granted annually and vest at a rate of 50% after two years and 50% after three years and are converted into shares of common stock as of the vesting date. In addition, RSUs typically include full-career eligibility provisions, which allow employees to continue to vest upon voluntary termination, subject to post-employment and other restrictions based on age or service-related requirements. All RSUs awards are subject to forfeiture until vested and contain clawback provisions that may result in cancellation under certain specified circumstances. RSUs entitle the recipient to receive cash payments equivalent to any dividends paid on the underlying common stock during the period the RSUs are outstanding and, as such, are considered participating securities as discussed in Note 24.

Under the LTI Plans, stock options and stock appreciation rights ("SARs") have generally been granted with an exercise price equal to the fair value of JPMorgan Chase's common stock on the grant date. The Firm periodically grants employee stock options to individual employees. There were no material grants of stock options or SARs in 2014. Grants of SARs in 2013 and 2012 become exercisable ratably over five years (i.e., 20% per year) and contain clawback provisions similar to RSUs. The 2013 and 2012 grants of SARs contain full-career eligibility provisions. SARs generally expire ten years after the grant date.

The Firm separately recognizes compensation expense for each tranche of each award as if it were a separate award with its own vesting date. Generally, for each tranche granted, compensation expense is recognized on a straight-line basis from the grant date until the vesting date of the respective tranche, provided that the employees will not become full-career eligible during the vesting period. For awards with full-career eligibility provisions and awards granted with no future substantive service requirement, the Firm accrues the estimated value of awards expected to be awarded to employees as of the grant date without giving consideration to the impact of post-employment restrictions. For each tranche granted to employees who will become full-career eligible during the vesting period, compensation expense is recognized on a straight-line basis from the grant date until the earlier of the employee's full-career eligibility date or the vesting date of the respective tranche.

The Firm's policy for issuing shares upon settlement of employee stock-based incentive awards is to issue either new shares of common stock or treasury shares. During 2014, 2013 and 2012, the Firm settled all of its employee stock-based awards by issuing treasury shares.

In January 2008, the Firm awarded to its Chairman and Chief Executive Officer up to 2 million SARs. The terms of this award are distinct from, and more restrictive than, other equity grants regularly awarded by the Firm. On July 15, 2014, the Compensation Committee and Board of Directors determined that all requirements for the vesting of the 2 million SAR awards had been met and thus, the awards became exercisable. The SARs, which will expire in January 2018, have an exercise price of $39.83 (the price of JPMorgan Chase common stock on the date of grant). The expense related to this award was dependent on changes in fair value of the SARs through July 15, 2014 (the date when the vested number of SARs were determined), and the cumulative expense was recognized ratably over the service period, which was initially assumed to be five years but, effective in the first quarter of 2013, had been extended to six and one-half years. The Firm recognized $3 million, $14 million and $5 million in compensation expense in 2014, 2013 and 2012, respectively, for this award.

RSUs, employee stock options and SARs activity

Compensation expense for RSUs is measured based on the number of shares granted multiplied by the stock price at the grant date, and for employee stock options and SARs, is measured at the grant date using the Black-Scholes valuation model. Compensation expense for these awards is recognized in net income as described previously. The following table summarizes JPMorgan Chase's RSUs, employee stock options and SARs activity for 2014.

	RSUs		Options/SARs			
Year ended December 31, 2014 (in thousands, except weighted-average data, and where otherwise stated)	Number of shares	Weighted-average grant date fair value	Number of awards	Weighted-average exercise price	Weighted-average remaining contractual life (in years)	Aggregate intrinsic value
Outstanding, January 1	**121,241**	**$ 41.47**	**87,075**	**$ 44.24**		
Granted	**37,817**	**57.88**	**101**	**59.18**		
Exercised or vested	**(54,265)**	**40.67**	**(24,950)**	**36.59**		
Forfeited	**(4,225)**	**47.32**	**(2,059)**	**41.90**		
Canceled	**NA**	**NA**	**(972)**	**200.86**		
Outstanding, December 31	**100,568**	**$ 47.81**	**59,195**	**$ 45.00**	**5.2**	**$ 1,313,939**
Exercisable, December 31	**NA**	**NA**	**37,171**	**46.46**	**4.3**	**862,374**

The total fair value of RSUs that vested during the years ended December 31, 2014, 2013 and 2012, was $3.2 billion, $2.9 billion and $2.8 billion, respectively. There were no material grants of stock options or SARs in 2014. The weighted-average grant date per share fair value of stock options and SARs granted during the years ended December 31, 2013 and 2012, was $9.58 and $8.89, respectively. The total intrinsic value of options exercised during the years ended December 31, 2014, 2013 and 2012, was $539 million, $507 million and $283 million, respectively.

Compensation expense

The Firm recognized the following noncash compensation expense related to its various employee stock-based incentive plans in its Consolidated statements of income.

Year ended December 31, (in millions)	**2014**	2013	2012
Cost of prior grants of RSUs and SARs that are amortized over their applicable vesting periods	**$ 1,371**	$ 1,440	$ 1,810
Accrual of estimated costs of stock-based awards to be granted in future periods including those to full-career eligible employees	**819**	779	735
Total noncash compensation expense related to employee stock-based incentive plans	**$ 2,190**	$ 2,219	$ 2,545

At December 31, 2014, approximately $758 million (pretax) of compensation cost related to unvested awards had not yet been charged to net income. That cost is expected to be amortized into compensation expense over a weighted-average period of 1.0 year. The Firm does not capitalize any compensation cost related to share-based compensation awards to employees.

Cash flows and tax benefits

Income tax benefits related to stock-based incentive arrangements recognized in the Firm's Consolidated statements of income for the years ended December 31, 2014, 2013 and 2012, were $854 million, $865 million and $1.0 billion, respectively.

The following table sets forth the cash received from the exercise of stock options under all stock-based incentive arrangements, and the actual income tax benefit realized related to tax deductions from the exercise of the stock options.

Year ended December 31, (in millions)	**2014**	2013	2012
Cash received for options exercised	**$ 63**	$ 166	$ 333
Tax benefit realized[(a)]	**104**	42	53

(a) The tax benefit realized from dividends or dividend equivalents paid on equity-classified share-based payment awards that are charged to retained earnings are recorded as an increase to additional paid-in capital and included in the pool of excess tax benefits available to absorb tax deficiencies on share-based payment awards.

Valuation assumptions

The following table presents the assumptions used to value employee stock options and SARs granted during the years ended December 31, 2013 and 2012, under the Black-Scholes valuation model. There were no material grants of stock options or SARs for the year ended December 31, 2014.

Year ended December 31,	2013	2012
Weighted-average annualized valuation assumptions		
Risk-free interest rate	1.18%	1.19%
Expected dividend yield	2.66	3.15
Expected common stock price volatility	28	35
Expected life (in years)	6.6	6.6

The expected dividend yield is determined using forward-looking assumptions. The expected volatility assumption is derived from the implied volatility of JPMorgan Chase's stock options. The expected life assumption is an estimate of the length of time that an employee might hold an option or SAR before it is exercised or canceled, and the assumption is based on the Firm's historical experience.

Note 11 – Noninterest expense

The following table presents the components of noninterest expense.

Year ended December 31, (in millions)	2014	2013	2012
Compensation expense	$ 30,160	$ 30,810	$ 30,585
Noncompensation expense:			
Occupancy	3,909	3,693	3,925
Technology, communications and equipment	5,804	5,425	5,224
Professional and outside services	7,705	7,641	7,429
Marketing	2,550	2,500	2,577
Other[(a)(b)]	11,146	20,398	14,989
Total noncompensation expense	31,114	39,657	34,144
Total noninterest expense	$ 61,274	$ 70,467	$ 64,729

(a) Included firmwide legal expense of $2.9 billion, $11.1 billion and $5.0 billion and for the years ended December 31, 2014, 2013 and 2012, respectively.

(b) Included FDIC-related expense of $1.0 billion, $1.5 billion and $1.7 billion for the years ended December 31, 2014, 2013 and 2012, respectively.

Note 12 – Securities

Securities are classified as trading, AFS or held-to-maturity ("HTM"). Securities classified as trading assets are discussed in Note 3. Predominantly all of the Firm's AFS and HTM investment securities (the "investment securities portfolio") are held by CIO in connection with its asset-liability management objectives. At December 31, 2014, the average credit rating of the debt securities comprising the investment securities portfolio was AA+ (based upon external ratings where available, and where not available, based primarily upon internal ratings which correspond to ratings as defined by S&P and Moody's). AFS securities are carried at fair value on the Consolidated balance sheets. Unrealized gains and losses, after any applicable hedge accounting adjustments, are reported as net increases or decreases to accumulated other comprehensive income/(loss). The specific identification method is used to determine realized gains and losses on AFS securities, which are included in securities gains/(losses) on the Consolidated statements of income. HTM debt securities, which management has the intent and ability to hold until maturity, are carried at amortized cost on the Consolidated balance sheets. For both AFS and HTM debt securities, purchase discounts or premiums are generally amortized into interest income over the contractual life of the security.

During the first quarter of 2014, the Firm transferred U.S. government agency mortgage-backed securities and obligations of U.S. states and municipalities with a fair value of $19.3 billion from AFS to HTM. These securities were transferred at fair value, and the transfer was a non-cash transaction. AOCI included net pretax unrealized losses of $9 million on the securities at the date of transfer. The transfer reflected the Firm's intent to hold the securities to maturity in order to reduce the impact of price volatility on AOCI and certain capital measures under Basel III.

Other-than-temporary impairment

AFS debt and equity securities and HTM debt securities in unrealized loss positions are analyzed as part of the Firm's ongoing assessment of other-than-temporary impairment ("OTTI"). For most types of debt securities, the Firm considers a decline in fair value to be other-than-temporary when the Firm does not expect to recover the entire amortized cost basis of the security. For beneficial interests in securitizations that are rated below "AA" at their acquisition, or that can be contractually prepaid or otherwise settled in such a way that the Firm would not recover substantially all of its recorded investment, the Firm considers an OTTI to have occurred when there is an adverse change in expected cash flows. For AFS equity securities, the Firm considers a decline in fair value to be other-than-temporary if it is probable that the Firm will not recover its cost basis.

Potential OTTI is considered using a variety of factors, including the length of time and extent to which the market value has been less than cost; adverse conditions specifically related to the industry, geographic area or financial condition of the issuer or underlying collateral of a security; payment structure of the security; changes to the rating of the security by a rating agency; the volatility of the fair value changes; and the Firm's intent and ability to hold the security until recovery.

For AFS debt securities, the Firm recognizes OTTI losses in earnings if the Firm has the intent to sell the debt security, or if it is more likely than not that the Firm will be required to sell the debt security before recovery of its amortized cost basis. In these circumstances the impairment loss is equal to the full difference between the amortized cost basis and the fair value of the securities. For debt securities in an unrealized loss position that the Firm has the intent and ability to hold, the expected cash flows to be received from the securities are evaluated to determine if a credit loss exists. In the event of a credit loss, only the amount of impairment associated with the credit loss is recognized in income. Amounts relating to factors other than credit losses are recorded in OCI.

The Firm's cash flow evaluations take into account the factors noted above and expectations of relevant market and economic data as of the end of the reporting period. For securities issued in a securitization, the Firm estimates cash flows considering underlying loan-level data and structural features of the securitization, such as subordination, excess spread, overcollateralization or other forms of credit enhancement, and compares the losses projected for the underlying collateral ("pool losses") against the level of credit enhancement in the securitization structure to determine whether these features are sufficient to absorb the pool losses, or whether a credit loss exists. The Firm also performs other analyses to support its cash flow projections, such as first-loss analyses or stress scenarios.

For equity securities, OTTI losses are recognized in earnings if the Firm intends to sell the security. In other cases the Firm considers the relevant factors noted above, as well as the Firm's intent and ability to retain its investment for a period of time sufficient to allow for any anticipated recovery in market value, and whether evidence exists to support a realizable value equal to or greater than the cost basis. Any impairment loss on an equity security is equal to the full difference between the cost basis and the fair value of the security.

Realized gains and losses

The following table presents realized gains and losses and credit losses that were recognized in income from AFS securities.

Year ended December 31, (in millions)	**2014**	2013	2012
Realized gains	**$ 314**	$1,302	$2,610
Realized losses	**(233)**	(614)	(457)
Net realized gains	**81**	688	2,153
OTTI losses			
Credit-related	**(2)**	(1)	(28)
Securities the Firm intends to sell[a]	**(2)**	(20)	(15)
Total OTTI losses recognized in income	**(4)**	(21)	(43)
Net securities gains	**$ 77**	$ 667	$2,110

(a) Excludes realized losses on securities sold of $3 million, $12 million and $24 million for the years ended December 31, 2014, 2013 and 2012, respectively that had been previously reported as an OTTI loss due to the intention to sell the securities.

The amortized costs and estimated fair values of the investment securities portfolio were as follows for the dates indicated.

	2014				2013

Held-to-maturity securities	20,745	317	–	–	20,745	317
Total securities with gross unrealized losses	$ 101,248	$ 2,755	$ 3,319	$ 178	$ 104,567	$ 2,933

Other-than-temporary impairment

The following table presents OTTI losses that are included in the securities gains and losses table above.

Year ended December 31, (in millions)	2014	2013	2012
Debt securities the Firm does not intend to sell that have credit losses			
Total OTTI[a]	**$ (2)**	$ (1)	$ (113)
Losses recorded in/ (reclassified from) AOCI	**—**	—	85
Total credit losses recognized in income	**(2)**	(1)	(28)
Securities the Firm intends to sell[b]	**(2)**	(20)	(15)
Total OTTI losses recognized in income	**$ (4)**	$ (21)	$ (43)

(a) For initial OTTI, represents the excess of the amortized cost over the fair value of AFS debt securities. For subsequent impairments of the same security, represents additional declines in fair value subsequent to previously recorded OTTI, if applicable.

(b) Excludes realized losses on securities sold of $3 million, $12 million and $24 million for the years ended December 31, 2014, 2013 and 2012, respectively that had been previously reported as an OTTI loss due to the intention to sell the securities.

Changes in the credit loss component of credit-impaired debt securities

The following table presents a rollforward for the years ended December 31, 2014, 2013 and 2012, of the credit loss component of OTTI losses that have been recognized in income, related to AFS debt securities that the Firm does not intend to sell.

Year ended December 31, (in millions)	2014	2013	2012
Balance, beginning of period	**$ 1**	$ 522	$ 708
Additions:			
Newly credit-impaired securities	**2**	1	21
Losses reclassified from other comprehensive income on previously credit-impaired securities	**—**	—	7
Reductions:			
Sales and redemptions of credit-impaired securities	**—**	(522)	(214)
Balance, end of period	**$ 3**	$ 1	$ 522

Gross unrealized losses

Gross unrealized losses have generally decreased since December 31, 2013. Though losses on securities that have been in an unrealized loss position for 12 months or more have increased, the increase is not material. The Firm has recognized the unrealized losses on securities it intends to sell. As of December 31, 2014, the Firm does not intend to sell any securities with a loss position in AOCI, and it is not likely that the Firm will be required to sell these securities before recovery of their amortized cost basis. Except for the securities reported in the table above, for which credit losses have been recognized in income, the Firm believes that the securities with an unrealized loss in AOCI are not other-than-temporarily impaired as of December 31, 2014.

Contractual maturities and yields

The following table presents the amortized cost and estimated fair value at December 31, 2014, of JPMorgan Chase's investment securities portfolio by contractual maturity.

By remaining maturity December 31, 2014 (in millions)	Due in one year or less	Due after one year through five years	Due after five years through 10 years	Due after 10 years[c]	Total
Available-for-sale debt securities					
Mortgage-backed securities[a]					
Amortized cost	$ 996	$ 14,132	$ 5,768	$ 112,702	$ 133,598
Fair value	1,003	14,467	5,974	115,878	137,322
Average yield[b]	2.65%	1.85%	3.12%	2.93%	2.82%
U.S. Treasury and government agencies[a]					
Amortized cost	$ 2,209	$ –	$ 10,284	$ 1,110	$ 13,603
Fair value	2,215	–	10,275	1,155	13,645
Average yield[b]	0.80%	–%	0.62%	0.35%	0.63%
Obligations of U.S. states and municipalities					
Amortized cost	$ 65	$ 498	$ 1,432	$ 25,846	$ 27,841
Fair value	66	515	1,508	27,979	30,068
Average yield[b]	2.13%	4.00%	4.93%	6.78%	6.63%
Certificates of deposit

Fair value	–	2,254	17,541	23,014	42,809
Average yield[b]	–%	1.66%	1.75%	1.73%	1.73%
Total available-for-sale debt securities					
Amortized cost	$ 21,711	$ 40,816	$ 60,666	$ 165,273	$ 288,466
Fair value	21,767	41,751	61,906	170,798	296,222
Average yield[b]	2.74%	2.06%	1.58%	3.32%	2.73%
Available-for-sale equity securities					
Amortized cost	$ –	$ –	$ –	$ 2,513	$ 2,513
Fair value	–	–	–	2,530	2,530
Average yield[b]	–%	–%	–%	0.25%	0.25%
Total available-for-sale securities					
Amortized cost	$ 21,711	$ 40,816	$ 60,666	$ 167,786	$ 290,979
Fair value	21,767	41,751	61,906	173,328	298,752
Average yield[b]	2.74%	2.06%	1.58%	3.28%	2.71%
Total held-to-maturity securities					
Amortized cost	$ –	$ 54	$ 487	$ 48,711	$ 49,252
Fair value	–	54	512	50,588	51,154
Average yield[b]	–%	4.33%	4.81%	3.98%	3.98%

(a) U.S. government-sponsored enterprises were the only issuers whose securities exceeded 10% of JPMorgan Chase's total stockholders' equity at December 31, 2014.

(b) Average yield is computed using the effective yield of each security owned at the end of the period, weighted based on the amortized cost of each security. The effective yield considers the contractual coupon, amortization of premiums and accretion of discounts, and the effect of related hedging derivatives. Taxable-equivalent amounts are used where applicable. The effective yield excludes unscheduled principal prepayments; and accordingly, actual maturities of securities may differ from their contractual or expected maturities as certain securities may be prepaid.

(c) Includes securities with no stated maturity. Substantially all of the Firm's residential mortgage-backed securities and collateralized mortgage obligations are due in 10 years or more, based on contractual maturity. The estimated duration, which reflects anticipated future prepayments, is approximately five years for agency residential mortgage-backed securities, three years for agency residential collateralized mortgage obligations and four years for nonagency residential collateralized mortgage obligations.

Note 13 – Securities financing activities

JPMorgan Chase enters into resale agreements, repurchase agreements, securities borrowed transactions and securities loaned transactions (collectively, "securities financing agreements") primarily to finance the Firm's inventory positions, acquire securities to cover short positions, accommodate customers' financing needs, and settle other securities obligations.

Securities financing agreements are treated as collateralized financings on the Firm's Consolidated balance sheets. Resale and repurchase agreements are generally carried at the amounts at which the securities will be subsequently sold or repurchased. Securities borrowed and securities loaned transactions are generally carried at the amount of cash collateral advanced or received. Where appropriate under applicable accounting guidance, resale and repurchase agreements with the same counterparty are reported on a net basis. For further discussion of the offsetting of assets and liabilities, see Note 1. Fees received and paid in connection with securities financing agreements are recorded in interest income and interest expense on the Consolidated statements of income.

The Firm has elected the fair value option for certain securities financing agreements. For further information regarding the fair value option, see Note 4. The securities financing agreements for which the fair value option has been elected are reported within securities purchased under resale agreements; securities loaned or sold under repurchase agreements; and securities borrowed on the Consolidated balance sheets. Generally, for agreements carried at fair value, current-period interest accruals are recorded within interest income and interest expense, with changes in fair value reported in principal transactions revenue. However, for financial instruments containing embedded derivatives that would be separately accounted for in accordance with accounting guidance for hybrid instruments, all changes in fair value, including any interest elements, are reported in principal transactions revenue.

The following table presents as of December 31, 2014 and 2013, the gross and net securities purchased under resale agreements and securities borrowed. Securities purchased under resale agreements have been presented on the Consolidated balance sheets net of securities sold under repurchase agreements where the Firm has obtained an appropriate legal opinion with respect to the master netting agreement, and where the other relevant criteria have been met. Where such a legal opinion has not been either sought or obtained, the securities purchased under resale agreements are not eligible for netting and are shown separately in the table below. Securities borrowed are presented on a gross basis on the Consolidated balance sheets.

	2014				2013			
December 31, (in millions)	Gross asset balance	Amounts netted on the Consolidated balance sheets	Net asset balance		Gross asset balance	Amounts netted on the Consolidated balance sheets	Net asset balance	
Securities purchased under resale agreements								
Securities purchased under resale agreements with an appropriate legal opinion	**$ 341,989**	**$ (142,719)**	**$ 199,270**		$ 354,814	$ (115,408)	$ 239,406	
Securities purchased under resale agreements where an appropriate legal opinion has not been either sought or obtained	**15,751**		**15,751**		8,279		8,279	
Total securities purchased under resale agreements	**$ 357,740**	**$ (142,719)**	**$ 215,021**	(a)	$ 363,093	$ (115,408)	$ 247,685	(a)
Securities borrowed	**$ 110,435**	**N/A**	**$ 110,435**	(b)(c)	$ 111,465	N/A	$ 111,465	(b)(c)

(a) At December 31, 2014 and 2013, included securities purchased under resale agreements of $28.6 billion and $25.1 billion, respectively, accounted for at fair value.

(b) At December 31, 2014 and 2013, included securities borrowed of $992 million and $3.7 billion, respectively, accounted for at fair value.

(c) Included $28.0 billion and $26.9 billion at December 31, 2014 and 2013, respectively, of securities borrowed where an appropriate legal opinion has not been either sought or obtained with respect to the master netting agreement.

The following table presents information as of December 31, 2014 and 2013, regarding the securities purchased under resale agreements and securities borrowed for which an appropriate legal opinion has been obtained with respect to the master netting agreement. The below table excludes information related to resale agreements and securities borrowed where such a legal opinion has not been either sought or obtained.

	2014				2013			
		Amounts not nettable on the Consolidated balance sheets[a]				Amounts not nettable on the Consolidated balance sheets[a]		
December 31, (in millions)	Net asset balance	Financial instruments[b]	Cash collateral	Net exposure	Net asset balance	Financial instruments[b]	Cash collateral	Net exposure
Securities purchased under resale agreements with an appropriate legal opinion	**$ 199,270**	**$ (196,136)**	**$ (232)**	**$ 2,902**	$ 239,406	$ (234,495)	$ (98)	$ 4,813
Securities borrowed	**$ 82,464**	**$ (80,267)**	**$ –**	**$ 2,197**	$ 84,531	$ (81,127)	$ –	$ 3,404

(a) For some counterparties, the sum of the financial instruments and cash collateral not nettable on the Consolidated balance sheets may exceed the net asset balance. Where this is the case the total amounts reported in these two columns are limited to the balance of the net reverse repurchase agreement or securities borrowed asset with that counterparty. As a result a net exposure amount is reported even though the Firm, on an aggregate basis for its securities purchased under resale agreements and securities borrowed, has received securities collateral with a total fair value that is greater than the funds provided to counterparties.

(b) Includes financial instrument collateral received, repurchase liabilities and securities loaned liabilities with an appropriate legal opinion with respect to the master netting agreement; these amounts are not presented net on the Consolidated balance sheets because other U.S. GAAP netting criteria are not met.

The following table presents as of December 31, 2014 and 2013, the gross and net securities sold under repurchase agreements and securities loaned. Securities sold under repurchase agreements have been presented on the Consolidated balance sheets net of securities purchased under resale agreements where the Firm has obtained an appropriate legal opinion with respect to the master netting agreement, and where the other relevant criteria have been met. Where such a legal opinion has not been either sought or obtained, the securities sold under repurchase agreements are not eligible for netting and are shown separately in the table below. Securities loaned are presented on a gross basis on the Consolidated balance sheets.

	2014				2013			
December 31, (in millions)	Gross liability balance	Amounts netted on the Consolidated balance sheets	Net liability balance		Gross liability balance	Amounts netted on the Consolidated balance sheets	Net liability balance	
Securities sold under repurchase agreements								
Securities sold under repurchase agreements with an appropriate legal opinion	**$ 289,619**	**$ (142,719)**	**$ 146,900**		$ 257,630 [f]	$ (115,408)	$ 142,222	[f]
Securities sold under repurchase agreements where an appropriate legal opinion has not been either sought or obtained[a]	**22,906**		**22,906**		18,143 [f]		18,143	[f]
Total securities sold under repurchase agreements	**$ 312,525**	**$ (142,719)**	**$ 169,806**	[c]	$ 275,773	$ (115,408)	$ 160,365	[c]
Securities loaned[b]	**$ 25,927**	**N/A**	**$ 25,927**	[d][e]	$ 25,769	N/A	$ 25,769	[d][e]

(a) Includes repurchase agreements that are not subject to a master netting agreement but do provide rights to collateral.

(b) Included securities-for-securities borrow vs. pledge transactions of $4.1 billion and $5.8 billion at December 31, 2014 and 2013, respectively, when acting as lender and as presented within other liabilities in the Consolidated balance sheets.

(c) At December 31, 2014 and 2013, included securities sold under repurchase agreements of $3.0 billion and $4.9 billion, respectively, accounted for at fair value.

(d) At December 31, 2013, included securities loaned of $483 million accounted for at fair value; there were no securities loaned accounted for at fair value at December 31, 2014.

(e) Included $537 million and $397 million at December 31, 2014 and 2013, respectively, of securities loaned where an appropriate legal opinion has not been either sought or obtained with respect to the master netting agreement.

(f) The prior period amounts have been revised with a corresponding impact in the table below. This revision had no impact on the Firm's Consolidated balance sheets or its results of operations.

The following table presents information as of December 31, 2014 and 2013, regarding the securities sold under repurchase agreements and securities loaned for which an appropriate legal opinion has been obtained with respect to the master netting agreement. The below table excludes information related to repurchase agreements and securities loaned where such a legal opinion has not been either sought or obtained.

	2014				2013			
		Amounts not nettable on the Consolidated balance sheets[a]				Amounts not nettable on the Consolidated balance sheets[a]		
December 31, (in millions)	Net liability balance	Financial instruments[b]	Cash collateral	Net amount[c]	Net liability balance	Financial instruments[b]	Cash collateral	Net amount[c]
Securities sold under repurchase agreements with an appropriate legal opinion	**$ 146,900**	**$ (143,985)**	**$ (363)**	**$ 2,552**	$ 142,222 [d]	$ (139,051) [d]	$ (450)	$ 2,721
Securities loaned	**$ 25,390**	**$ (25,040)**	**$ —**	**$ 350**	$ 25,372	$ (25,125)	$ —	$ 247

(a) For some counterparties the sum of the financial instruments and cash collateral not nettable on the Consolidated balance sheets may exceed the net liability balance. Where this is the case the total amounts reported in these two columns are limited to the balance of the net repurchase agreement or securities loaned liability with that counterparty.

(b) Includes financial instrument collateral transferred, reverse repurchase assets and securities borrowed assets with an appropriate legal opinion with respect to the master netting agreement; these amounts are not presented net on the Consolidated balance sheets because other U.S. GAAP netting criteria are not met.

(c) Net amount represents exposure of counterparties to the Firm.

(d) The prior period amounts have been revised with a corresponding impact in the table above. This revision had no impact on the Firm's Consolidated balance sheets or its results of operations.

JPMorgan Chase's policy is to take possession, where possible, of securities purchased under resale agreements and of securities borrowed. The Firm monitors the value of the underlying securities (primarily G7 government securities, U.S. agency securities and agency MBS, and equities) that it has received from its counterparties and either requests additional collateral or returns a portion of the collateral when appropriate in light of the market value of the underlying securities. Margin levels are established initially based upon the counterparty and type of collateral and monitored on an ongoing basis to protect against declines in collateral value in the event of default. JPMorgan Chase typically enters into master netting agreements and other collateral arrangements with its resale agreement and securities borrowed counterparties, which provide for the right to liquidate the purchased or borrowed securities in the event of a customer default. As a result of the Firm's credit risk mitigation practices with respect to resale and securities borrowed agreements as described above, the Firm did not hold any reserves for credit impairment with respect to these agreements as of December 31, 2014 and 2013.

For further information regarding assets pledged and collateral received in securities financing agreements, see Note 30.

Transfers not qualifying for sale accounting

In addition, at December 31, 2014 and 2013, the Firm held $13.8 billion and $14.6 billion, respectively, of financial assets for which the rights have been transferred to third parties; however, the transfers did not qualify as a sale in accordance with U.S. GAAP. These transfers have been recognized as collateralized financing transactions. The transferred assets are recorded in trading assets, other assets and loans, and the corresponding liabilities are predominantly recorded in other borrowed funds on the Consolidated balance sheets.

Note 14 – Loans

Loan accounting framework

The accounting for a loan depends on management's strategy for the loan, and on whether the loan was credit-impaired at the date of acquisition. The Firm accounts for loans based on the following categories:

- Originated or purchased loans held-for-investment (i.e., "retained"), other than purchased credit-impaired ("PCI") loans
- Loans held-for-sale
- Loans at fair value
- PCI loans held-for-investment

The following provides a detailed accounting discussion of these loan categories:

Loans held-for-investment (other than PCI loans)

Originated or purchased loans held-for-investment, other than PCI loans, are measured at the principal amount outstanding, net of the following: allowance for loan losses; net charge-offs; interest applied to principal (for loans accounted for on the cost recovery method); unamortized discounts and premiums; and net deferred loan fees or costs. Credit card loans also include billed finance charges and fees net of an allowance for uncollectible amounts.

Interest income

Interest income on performing loans held-for-investment, other than PCI loans, is accrued and recognized as interest income at the contractual rate of interest. Purchase price discounts or premiums, as well as net deferred loan fees or costs, are amortized into interest income over the life of the loan to produce a level rate of return.

Nonaccrual loans

Nonaccrual loans are those on which the accrual of interest has been suspended. Loans (other than credit card loans and certain consumer loans insured by U.S. government agencies) are placed on nonaccrual status and considered nonperforming when full payment of principal and interest is in doubt, or when principal and interest has been in default for a period of 90 days or more, unless the loan is both well-secured and in the process of collection. A loan is determined to be past due when the minimum payment is not received from the borrower by the contractually specified due date or for certain loans (e.g., residential real estate loans), when a monthly payment is due and unpaid for 30 days or more. Finally, collateral-dependent loans are typically maintained on nonaccrual status.

On the date a loan is placed on nonaccrual status, all interest accrued but not collected is reversed against interest income. In addition, the amortization of deferred amounts is suspended. Interest income on nonaccrual loans may be recognized as cash interest payments are received (i.e., on a cash basis) if the recorded loan balance is deemed fully collectible; however, if there is doubt regarding the ultimate collectibility of the recorded loan balance, all interest cash receipts are applied to reduce the carrying value of the loan (the cost recovery method). For consumer loans, application of this policy typically results in the Firm recognizing interest income on nonaccrual consumer loans on a cash basis.

A loan may be returned to accrual status when repayment is reasonably assured and there has been demonstrated performance under the terms of the loan or, if applicable, the terms of the restructured loan.

As permitted by regulatory guidance, credit card loans are generally exempt from being placed on nonaccrual status; accordingly, interest and fees related to credit card loans continue to accrue until the loan is charged off or paid in full. However, the Firm separately establishes an allowance for the estimated uncollectible portion of accrued interest and fee income on credit card loans. The allowance is established with a charge to interest income and is reported as an offset to loans.

Allowance for loan losses

The allowance for loan losses represents the estimated probable credit losses inherent in the held-for-investment loan portfolio at the balance sheet date. Changes in the allowance for loan losses are recorded in the provision for credit losses on the Firm's Consolidated statements of income. See Note 15 for further information on the Firm's accounting policies for the allowance for loan losses.

Charge-offs

Consumer loans, other than risk-rated business banking, risk-rated auto and PCI loans, are generally charged off or charged down to the net realizable value of the underlying collateral (i.e., fair value less costs to sell), with an offset to the allowance for loan losses, upon reaching specified stages of delinquency in accordance with standards established by the Federal Financial Institutions Examination Council ("FFIEC"). Residential real estate loans, non-modified credit card loans and scored business banking loans are generally charged off at 180 days past due. In the second quarter of 2013, the Firm revised its policy to charge-off modified credit card loans that do not comply with their modified payment terms at 120 days past due rather than 180 days past due. Auto and student loans are charged off no later than 120 days past due.

Certain consumer loans will be charged off earlier than the FFIEC charge-off standards in certain circumstances as follows:

- A charge-off is recognized when a loan is modified in a TDR if the loan is determined to be collateral-dependent. A loan is considered to be collateral-dependent when repayment of the loan is expected to be provided solely by the underlying collateral, rather than by cash flows from the borrower's operations, income or other resources.
- Loans to borrowers who have experienced an event (e.g., bankruptcy) that suggests a loss is either known or highly certain are subject to accelerated charge-off standards. Residential real estate and auto loans are charged off when the loan becomes 60 days past due, or sooner if the loan is determined to be collateral-dependent. Credit card and scored business banking loans are charged off within 60 days of receiving notification of the bankruptcy filing or other event. Student loans are generally charged off when the loan becomes 60 days past due after receiving notification of a bankruptcy.
- Auto loans are written down to net realizable value upon repossession of the automobile and after a redemption period (i.e., the period during which a borrower may cure the loan) has passed.

Other than in certain limited circumstances, the Firm typically does not recognize charge-offs on government-guaranteed loans.

Wholesale loans, risk-rated business banking loans and risk-rated auto loans are charged off when it is highly certain that a loss has been realized, including situations where a loan is determined to be both impaired and collateral-dependent. The determination of whether to recognize a charge-off includes many factors, including the prioritization of the Firm's claim in bankruptcy, expectations of the workout/restructuring of the loan and valuation of the borrower's equity or the loan collateral.

When a loan is charged down to the estimated net realizable value, the determination of the fair value of the collateral depends on the type of collateral (e.g., securities, real estate). In cases where the collateral is in the form of liquid securities, the fair value is based on quoted market prices or broker quotes. For illiquid securities or other financial assets, the fair value of the collateral is estimated using a discounted cash flow model.

For residential real estate loans, collateral values are based upon external valuation sources. When it becomes likely that a borrower is either unable or unwilling to pay, the Firm obtains a broker's price opinion of the home based on an exterior-only valuation ("exterior opinions"), which is then updated at least every six months thereafter. As soon as practicable after the Firm receives the property in satisfaction of a debt (e.g., by taking legal title or physical possession), generally, either through foreclosure or upon the execution of a deed in lieu of foreclosure transaction with the borrower, the Firm obtains an appraisal based on an inspection that includes the interior of the home ("interior appraisals"). Exterior opinions and interior appraisals are discounted based upon the Firm's experience with actual liquidation values as compared to the estimated values provided by exterior opinions and interior appraisals, considering state- and product-specific factors.

For commercial real estate loans, collateral values are generally based on appraisals from internal and external valuation sources. Collateral values are typically updated every six to twelve months, either by obtaining a new appraisal or by performing an internal analysis, in accordance with the Firm's policies. The Firm also considers both borrower- and market-specific factors, which may result in obtaining appraisal updates or broker price opinions at more frequent intervals.

Loans held-for-sale

Held-for-sale loans are measured at the lower of cost or fair value, with valuation changes recorded in noninterest revenue. For consumer loans, the valuation is performed on a portfolio basis. For wholesale loans, the valuation is performed on an individual loan basis.

Interest income on loans held-for-sale is accrued and recognized based on the contractual rate of interest.

Loan origination fees or costs and purchase price discounts or premiums are deferred in a contra loan account until the related loan is sold. The deferred fees and discounts or premiums are an adjustment to the basis of the loan and therefore are included in the periodic determination of the lower of cost or fair value adjustments and/or the gain or loss recognized at the time of sale.

Held-for-sale loans are subject to the nonaccrual policies described above.

Because held-for-sale loans are recognized at the lower of cost or fair value, the Firm's allowance for loan losses and charge-off policies do not apply to these loans.

Loans at fair value

Loans used in a market-making strategy or risk managed on a fair value basis are measured at fair value, with changes in fair value recorded in noninterest revenue.

For these loans, the earned current contractual interest payment is recognized in interest income. Changes in fair value are recognized in noninterest revenue. Loan origination fees are recognized upfront in noninterest revenue. Loan origination costs are recognized in the associated expense category as incurred.

Because these loans are recognized at fair value, the Firm's nonaccrual, allowance for loan losses, and charge-off policies do not apply to these loans.

See Note 4 for further information on the Firm's elections of fair value accounting under the fair value option. See Note 3 and Note 4 for further information on loans carried at fair value and classified as trading assets.

PCI loans

PCI loans held-for-investment are initially measured at fair value. PCI loans have evidence of credit deterioration since the loan's origination date and therefore it is probable, at acquisition, that all contractually required payments will not be collected. Because PCI loans are initially measured at fair value, which includes an estimate of future credit losses, no allowance for loan losses related to PCI loans is recorded at the acquisition date. See page 251 of this Note for information on accounting for PCI loans subsequent to their acquisition.

Loan classification changes

Loans in the held-for-investment portfolio that management decides to sell are transferred to the held-for-sale portfolio at the lower of cost or fair value on the date of transfer. Credit-related losses are charged against the allowance for loan losses; non-credit related losses such as those due to changes in interest rates or foreign currency exchange rates are recognized in noninterest revenue.

In the event that management decides to retain a loan in the held-for-sale portfolio, the loan is transferred to the held-for-investment portfolio at the lower of cost or fair value on the date of transfer. These loans are subsequently assessed for impairment based on the Firm's allowance methodology. For a further discussion of the methodologies used in establishing the Firm's allowance for loan losses, see Note 15.

Loan modifications

The Firm seeks to modify certain loans in conjunction with its loss-mitigation activities. Through the modification, JPMorgan Chase grants one or more concessions to a borrower who is experiencing financial difficulty in order to minimize the Firm's economic loss, avoid foreclosure or repossession of the collateral, and to ultimately maximize payments received by the Firm from the borrower. The concessions granted vary by program and by borrower-specific characteristics, and may include interest rate reductions, term extensions, payment deferrals, principal forgiveness, or the acceptance of equity or other assets in lieu of payments.

Such modifications are accounted for and reported as troubled debt restructurings ("TDRs"). A loan that has been modified in a TDR is generally considered to be impaired until it matures, is repaid, or is otherwise liquidated, regardless of whether the borrower performs under the modified terms. In certain limited cases, the effective interest rate applicable to the modified loan is at or above the current market rate at the time of the restructuring. In such circumstances, and assuming that the loan subsequently performs under its modified terms and the Firm expects to collect all contractual principal and interest cash flows, the loan is disclosed as impaired and as a TDR only during the year of the modification; in subsequent years, the loan is not disclosed as an impaired loan or as a TDR so long as repayment of the restructured loan under its modified terms is reasonably assured.

Loans, except for credit card loans, modified in a TDR are generally placed on nonaccrual status, although in many cases such loans were already on nonaccrual status prior to modification. These loans may be returned to performing status (the accrual of interest is resumed) if the following criteria are met: (a) the borrower has performed under the modified terms for a minimum of six months and/or six payments, and (b) the Firm has an expectation that repayment of the modified loan is reasonably assured based on, for example, the borrower's debt capacity and level of future earnings, collateral values, loan-to-value ("LTV") ratios, and other current market considerations. In certain limited and well-defined circumstances in which the loan is current at the modification date, such loans are not placed on nonaccrual status at the time of modification.

Because loans modified in TDRs are considered to be impaired, these loans are measured for impairment using the Firm's established asset-specific allowance methodology, which considers the expected re-default rates for the modified loans. A loan modified in a TDR remains subject to the asset-specific allowance methodology throughout its remaining life, regardless of whether the loan is performing and has been returned to accrual status and/or the loan has been removed from the impaired loans disclosures (i.e., loans restructured at market rates). For further discussion of the methodology used to estimate the Firm's asset-specific allowance, see Note 15.

Foreclosed property

The Firm acquires property from borrowers through loan restructurings, workouts, and foreclosures. Property acquired may include real property (e.g., residential real estate, land, and buildings) and commercial and personal property (e.g., automobiles, aircraft, railcars, and ships).

The Firm recognizes foreclosed property upon receiving assets in satisfaction of a loan (e.g., by taking legal title or physical possession). For loans collateralized by real property, the Firm generally recognizes the asset received at foreclosure sale or upon the execution of a deed in lieu of foreclosure transaction with the borrower. Foreclosed assets are reported in other assets on the Consolidated balance sheets and initially recognized at fair value less costs to sell. Each quarter the fair value of the acquired property is reviewed and adjusted, if necessary, to the lower of cost or fair value. Subsequent adjustments to fair value are charged/credited to noninterest revenue. Operating expense, such as real estate taxes and maintenance, are charged to other expense.

Loan portfolio

The Firm's loan portfolio is divided into three portfolio segments, which are the same segments used by the Firm to determine the allowance for loan losses: Consumer, excluding credit card; Credit card; and Wholesale. Within each portfolio segment, the Firm monitors and assesses the credit risk in the following classes of loans, based on the risk characteristics of each loan class:

Consumer, excluding credit card[a]	Credit card	Wholesale[c]
Residential real estate – excluding PCI • Home equity – senior lien • Home equity – junior lien • Prime mortgage, including option ARMs • Subprime mortgage Other consumer loans • Auto[b] • Business banking[b] • Student and other Residential real estate – PCI • Home equity • Prime mortgage • Subprime mortgage • Option ARMs	• Credit card loans	• Commercial and industrial • Real estate • Financial institutions • Government agencies • Other[d]

(a) Includes loans held in CCB, prime mortgage and home equity loans held in AM and prime mortgage loans held in Corporate.
(b) Includes certain business banking and auto dealer risk-rated loans that apply the wholesale methodology for determining the allowance for loan losses; these loans are managed by CCB, and therefore, for consistency in presentation, are included with the other consumer loan classes.
(c) Includes loans held in CIB, CB, AM and Corporate. Excludes prime mortgage and home equity loans held in AM and prime mortgage loans held in Corporate. Classes are internally defined and may not align with regulatory definitions.
(d) Other primarily includes loans to SPEs and loans to private banking clients. See Note 1 for additional information on SPEs.

The following tables summarize the Firm's loan balances by portfolio segment.

December 31, 2014 (in millions)	Consumer, excluding credit card	Credit card[a]	Wholesale	Total	
Retained	**$ 294,979**	**$ 128,027**	**$ 324,502**	**$ 747,508**	[b]
Held-for-sale	**395**	**3,021**	**3,801**	**7,217**	
At fair value	**–**	**–**	**2,611**	**2,611**	
Total	**$ 295,374**	**$ 131,048**	**$ 330,914**	**$ 757,336**	

December 31, 2013 (in millions)	Consumer, excluding credit card	Credit card[a]	Wholesale	Total	
Retained	$ 288,449	$ 127,465	$ 308,263	$ 724,177	[b]
Held-for-sale	614	326	11,290	12,230	
At fair value	–	–	2,011	2,011	
Total	$ 289,063	$ 127,791	$ 321,564	$ 738,418	

(a) Includes billed finance charges and fees net of an allowance for uncollectible amounts.

(b) Loans (other than PCI loans and those for which the fair value option has been elected) are presented net of unearned income, unamortized discounts and premiums, and net deferred loan costs of $1.3 billion and $1.9 billion at December 31, 2014 and 2013, respectively.

The following tables provide information about the carrying value of retained loans purchased, sold and reclassified to held-for-sale during the periods indicated. These tables exclude loans recorded at fair value. The Firm manages its exposure to credit risk on an ongoing basis. Selling loans is one way that the Firm reduces its credit exposures.

	2014				
Year ended December 31, (in millions)	Consumer, excluding credit card	Credit card	Wholesale	Total	
Purchases	**$ 7,434**	**$ –**	**$ 885**	**$ 8,319**	[a][b]
Sales	**6,655**	**291**	**7,381**	**14,327**	
Retained loans reclassified to held-for-sale	**1,190**	**3,039**	**581**	**4,810**	

	2013				
Year ended December 31, (in millions)	Consumer, excluding credit card	Credit card	Wholesale	Total	
Purchases	$ 7,616	$ 328	$ 697	$ 8,641	[a][b]
Sales	4,845	–	4,232	9,077	
Retained loans reclassified to held-for-sale	1,261	309	5,641	7,211	

	2012				
Year ended December 31, (in millions)	Consumer, excluding credit card	Credit card	Wholesale	Total	
Purchases	$ 6,601	$ –	$ 827	$ 7,428	[a][b]
Sales	1,852	–	3,423	5,275	
Retained loans reclassified to held-for-sale	–	1,043	504	1,547	

(a) Purchases predominantly represent the Firm's voluntary repurchase of certain delinquent loans from loan pools as permitted by Ginnie Mae guidelines. The Firm typically elects to repurchase these delinquent loans as it continues to service them and/or manage the foreclosure process in accordance with applicable requirements of Ginnie Mae, the Federal Housing Administration ("FHA"), Rural Housing Services ("RHS") and/or the U.S. Department of Veterans Affairs ("VA").

(b) Excluded retained loans purchased from correspondents that were originated in accordance with the Firm's underwriting standards. Such purchases were $15.1 billion, $5.7 billion and $1.4 billion for the years ended December 31, 2014, 2013 and 2012, respectively.

The following table provides information about gains and losses, including lower of cost or fair value adjustments, on loan sales by portfolio segment.

Year ended December 31, (in millions)	**2014**	2013	2012
Net gains/(losses) on sales of loans (including lower of cost or fair value adjustments)[a]			
Consumer, excluding credit card	**$ 341**	$ 313	$ 122
Credit card	**(241)**	3	(9)
Wholesale	**101**	(76)	180
Total net gains/(losses) on sales of loans (including lower of cost or fair value adjustments)	**$ 201**	$ 240	$ 293

(a) Excludes sales related to loans accounted for at fair value.

Consumer, excluding credit card, loan portfolio

Consumer loans, excluding credit card loans, consist primarily of residential mortgages, home equity loans and lines of credit, auto loans, business banking loans, and student and other loans, with a focus on serving the prime consumer credit market. The portfolio also includes home equity loans secured by junior liens, prime mortgage loans with an interest-only payment period, and certain payment-option loans originated by Washington Mutual that may result in negative amortization.

The table below provides information about retained consumer loans, excluding credit card, by class.

December 31, (in millions)	2014	2013
Residential real estate – excluding PCI		
Home equity:		
Senior lien	**$ 16,367**	$ 17,113
Junior lien	**36,375**	40,750
Mortgages:		
Prime, including option ARMs	**104,921**	87,162
Subprime	**5,056**	7,104
Other consumer loans		
Auto	**54,536**	52,757
Business banking	**20,058**	18,951
Student and other	**10,970**	11,557
Residential real estate – PCI		
Home equity	**17,095**	18,927
Prime mortgage	**10,220**	12,038
Subprime mortgage	**3,673**	4,175
Option ARMs	**15,708**	17,915
Total retained loans	**$ 294,979**	$ 288,449

Delinquency rates are a primary credit quality indicator for consumer loans. Loans that are more than 30 days past due provide an early warning of borrowers who may be experiencing financial difficulties and/or who may be unable or unwilling to repay the loan. As the loan continues to age, it becomes more clear that the borrower is likely either unable or unwilling to pay. In the case of residential real estate loans, late-stage delinquencies (greater than 150 days past due) are a strong indicator of loans that will ultimately result in a foreclosure or similar liquidation transaction. In addition to delinquency rates, other credit quality indicators for consumer loans vary based on the class of loan, as follows:

- For residential real estate loans, including both non-PCI and PCI portfolios, the current estimated LTV ratio, or the combined LTV ratio in the case of junior lien loans, is an indicator of the potential loss severity in the event of default. Additionally, LTV or combined LTV can provide insight into a borrower's continued willingness to pay, as the delinquency rate of high-LTV loans tends to be greater than that for loans where the borrower has equity in the collateral. The geographic distribution of the loan collateral also provides insight as to the credit quality of the portfolio, as factors such as the regional economy, home price changes and specific events such as natural disasters, will affect credit quality. The borrower's current or "refreshed" FICO score is a secondary credit-quality indicator for certain loans, as FICO scores are an indication of the borrower's credit payment history. Thus, a loan to a borrower with a low FICO score (660 or below) is considered to be of higher risk than a loan to a borrower with a high FICO score. Further, a loan to a borrower with a high LTV ratio and a low FICO score is at greater risk of default than a loan to a borrower that has both a high LTV ratio and a high FICO score.
- For scored auto, scored business banking and student loans, geographic distribution is an indicator of the credit performance of the portfolio. Similar to residential real estate loans, geographic distribution provides insights into the portfolio performance based on regional economic activity and events.
- Risk-rated business banking and auto loans are similar to wholesale loans in that the primary credit quality indicators are the risk rating that is assigned to the loan and whether the loans are considered to be criticized and/or nonaccrual. Risk ratings are reviewed on a regular and ongoing basis by Credit Risk Management and are adjusted as necessary for updated information about borrowers' ability to fulfill their obligations. For further information about risk-rated wholesale loan credit quality indicators, see page 255 of this Note.

Residential real estate – excluding PCI loans

The following table provides information by class for residential real estate – excluding retained PCI loans in the consumer, excluding credit card, portfolio segment.

The following factors should be considered in analyzing certain credit statistics applicable to the Firm's residential real estate – excluding PCI loans portfolio: (i) junior lien home equity loans may be fully charged off when the loan becomes 180 days past due, and the value of the collateral does not support the repayment of the loan, resulting in relatively high charge-off rates for this product class; and (ii) the lengthening of loss-mitigation timelines may result in higher delinquency rates for loans carried at the net realizable value of the collateral that remain on the Firm's Consolidated balance sheets.

Residential real estate – excluding PCI loans

Ohio	**1,150**	1,298	**778**	907	**615**	466	**112**	161	**2,655**	2,832
All other[h]	**3,345**	3,544	**8,261**	9,370	**34,149**	30,343	**1,964**	2,736	**47,719**	45,993
Total retained loans	**$ 16,367**	$ 17,113	**$ 36,375**	$ 40,750	**$ 104,921**	$ 87,162	**$ 5,056**	$ 7,104	**$ 162,719**	$ 152,129

(a) Individual delinquency classifications include mortgage loans insured by U.S. government agencies as follows: current included $2.6 billion and $4.7 billion; 30–149 days past due included $3.5 billion and $2.4 billion; and 150 or more days past due included $6.0 billion and $6.6 billion at December 31, 2014 and 2013, respectively.

(b) At December 31, 2014 and 2013, Prime, including option ARMs loans excluded mortgage loans insured by U.S. government agencies of $9.5 billion and $9.0 billion, respectively. These amounts have been excluded from nonaccrual loans based upon the government guarantee.

(c) These balances, which are 90 days or more past due but insured by U.S. government agencies, are excluded from nonaccrual loans. In predominantly all cases, 100% of the principal balance of the loans is insured and interest is guaranteed at a specified reimbursement rate subject to meeting agreed-upon servicing guidelines. These amounts have been excluded from nonaccrual loans based upon the government guarantee. At December 31, 2014 and 2013, these balances included $4.2 billion and $4.7 billion, respectively, of loans that are no longer accruing interest because interest has been curtailed by the U.S. government agencies although, in predominantly all cases, 100% of the principal is still insured. For the remaining balance, interest is being accrued at the guaranteed reimbursement rate.

(d) Represents the aggregate unpaid principal balance of loans divided by the estimated current property value. Current property values are estimated, at a minimum, quarterly, based on home valuation models using nationally recognized home price index valuation estimates incorporating actual data to the extent available and forecasted data where actual data is not available. These property values do not represent actual appraised loan level collateral values; as such, the resulting ratios are necessarily imprecise and should be viewed as estimates.

(e) Junior lien represents combined LTV, which considers all available lien positions, as well as unused lines, related to the property. All other products are presented without consideration of subordinate liens on the property.

(f) Refreshed FICO scores represent each borrower's most recent credit score, which is obtained by the Firm on at least a quarterly basis.

(g) The prior period prime, including option ARMs have been revised. This revision had no impact on the Firm's Consolidated balance sheets or its results of operations.

(h) At December 31, 2014 and 2013, included mortgage loans insured by U.S. government agencies of $12.1 billion and $13.7 billion, respectively.

The following tables represent the Firm's delinquency statistics for junior lien home equity loans and lines as of December 31, 2014 and 2013.

December 31, 2014 (in millions, except ratios)	Delinquencies				
	30–89 days past due	90–149 days past due	150+ days past due	Total loans	Total 30+ day delinquency rate
HELOCs:[a]					
Within the revolving period[b]	**$ 233**	**$ 69**	**$ 141**	**$ 25,252**	**1.75%**
Beyond the revolving period	**108**	**37**	**107**	**7,979**	**3.16**
HELOANs	**66**	**20**	**19**	**3,144**	**3.34**
Total	**$ 407**	**$ 126**	**$ 267**	**$ 36,375**	**2.20%**

December 31, 2013 (in millions, except ratios)	Delinquencies				
	30–89 days past due	90–149 days past due	150+ days past due	Total loans	Total 30+ day delinquency rate
HELOCs:[a]					
Within the revolving period[b]	$ 341	$ 104	$ 162	$ 31,848	1.91%
Beyond the revolving period	84	21	46	4,980	3.03
HELOANs	86	26	16	3,922	3.26
Total	$ 511	$ 151	$ 224	$ 40,750	2.17%

(a) These HELOCs are predominantly revolving loans for a 10-year period, after which time the HELOC converts to a loan with a 20-year amortization period, but also include HELOCs originated by Washington Mutual that require interest-only payments beyond the revolving period.

(b) The Firm manages the risk of HELOCs during their revolving period by closing or reducing the undrawn line to the extent permitted by law when borrowers are experiencing financial difficulty or when the collateral does not support the loan amount.

Home equity lines of credit ("HELOCs") beyond the revolving period and home equity loans ("HELOANs") have higher delinquency rates than do HELOCs within the revolving period. That is primarily because the fully-amortizing payment that is generally required for those products is higher than the minimum payment options available for HELOCs within the revolving period. The higher delinquency rates associated with amortizing HELOCs and HELOANs are factored into the loss estimates produced by the Firm's delinquency roll-rate methodology, which estimates defaults based on the current delinquency status of a portfolio.

Impaired loans

The table below sets forth information about the Firm's residential real estate impaired loans, excluding PCI loans. These loans are considered to be impaired as they have been modified in a TDR. All impaired loans are evaluated for an asset-specific allowance as described in Note 15.

December 31, (in millions)	Home equity				Mortgages				Total residential real estate – excluding PCI	
	Senior lien		Junior lien		Prime, including option ARMs		Subprime			
	2014	2013	**2014**	2013	**2014**	2013	**2014**	2013	**2014**	2013
Impaired loans										
With an allowance	**$ 552**	$ 567	**$ 722**	$ 727	**$ 4,949**	$ 5,871	**$ 2,239**	$ 2,989	**$ 8,462**	$ 10,154
Without an allowance[a]	**549**	579	**582**	592	**1,196**	1,133	**639**	709	**2,966**	3,013
Total impaired loans[b][c]	**$ 1,101**	$ 1,146	**$ 1,304**	$ 1,319	**$ 6,145**	$ 7,004	**$ 2,878**	$ 3,698	**$ 11,428**	$ 13,167
Allowance for loan losses related to impaired loans	**$ 84**	$ 94	**$ 147**	$ 162	**$ 127**	$ 144	**$ 64**	$ 94	**$ 422**	$ 494
Unpaid principal balance of impaired loans[d]	**1,451**	1,515	**2,603**	2,625	**7,813**	8,990	**4,200**	5,461	**16,067**	18,591
Impaired loans on nonaccrual status[e]	**628**	641	**632**	666	**1,559**	1,737	**931**	1,127	**3,750**	4,171

(a) Represents collateral-dependent residential mortgage loans that are charged off to the fair value of the underlying collateral less cost to sell. The Firm reports, in accordance with regulatory guidance, residential real estate loans that have been discharged under Chapter 7 bankruptcy and not reaffirmed by the borrower ("Chapter 7 loans") as collateral-dependent nonaccrual TDRs, regardless of their delinquency status. At December 31, 2014, Chapter 7 residential real estate loans included approximately 19% of senior lien home equity, 12% of junior lien home equity, 25% of prime mortgages, including option ARMs, and 18% of subprime mortgages that were 30 days or more past due.

(b) At December 31, 2014 and 2013, $4.9 billion and $7.6 billion, respectively, of loans modified subsequent to repurchase from Government National Mortgage Association ("Ginnie Mae") in accordance with the standards of the appropriate government agency (i.e., FHA, VA, RHS) are not included in the table above. When such loans perform subsequent to modification in accordance with Ginnie Mae guidelines, they are generally sold back into Ginnie Mae loan pools. Modified loans that do not re-perform become subject to foreclosure.

(c) Predominantly all residential real estate impaired loans, excluding PCI loans, are in the U.S.

(d) Represents the contractual amount of principal owed at December 31, 2014 and 2013. The unpaid principal balance differs from the impaired loan balances due to various factors, including charge-offs, net deferred loan fees or costs; and unamortized discounts or premiums on purchased loans.

(e) As of December 31, 2014 and 2013, nonaccrual loans included $2.9 billion and $3.0 billion, respectively, of TDRs for which the borrowers were less than 90 days past due. For additional information about loans modified in a TDR that are on nonaccrual status refer to the Loan accounting framework on pages 238–240 of this Note.

The following table presents average impaired loans and the related interest income reported by the Firm.

Year ended December 31, (in millions)	Average impaired loans			Interest income on impaired loans[a]			Interest income on impaired loans on a cash basis[a]		
	2014	2013	2012	**2014**	2013	2012	**2014**	2013	2012
Home equity									
Senior lien	**$ 1,122**	$ 1,151	$ 610	**$ 55**	$ 59	$ 27	**$ 37**	$ 40	$ 12
Junior lien	**1,313**	1,297	848	**82**	82	42	**53**	55	16
Mortgages									
Prime, including option ARMs	**6,730**	7,214	5,989	**262**	280	238	**54**	59	28
Subprime	**3,444**	3,798	3,494	**182**	200	183	**51**	55	31
Total residential real estate – excluding PCI	**$ 12,609**	$ 13,460	$ 10,941	**$ 581**	$ 621	$ 490	**$ 195**	$ 209	$ 87

(a) Generally, interest income on loans modified in TDRs is recognized on a cash basis until such time as the borrower has made a minimum of six payments under the new terms.

Loan modifications

The Firm is required to provide borrower relief under the terms of certain Consent Orders and settlements entered into by the Firm related to its mortgage servicing, originations and residential mortgage-backed securities activities. This borrower relief includes reductions of principal and forbearance.

Modifications of residential real estate loans, excluding PCI loans, are generally accounted for and reported as TDRs. There were no additional commitments to lend to borrowers whose residential real estate loans, excluding PCI loans, have been modified in TDRs.

The following table presents new TDRs reported by the Firm.

Year ended December 31, (in millions)	**2014**	2013	2012
Home equity:			
Senior lien	**$ 110**	$ 210	$ 835
Junior lien	**211**	388	711
Mortgages:			
Prime, including option ARMs	**287**	770	2,918
Subprime	**124**	319	1,043
Total residential real estate – excluding PCI	**$ 732**	$ 1,687	$ 5,507

Nature and extent of modifications

Making Home Affordable ("MHA"), as well as the Firm's proprietary modification programs, generally provide various concessions to financially troubled borrowers including, but not limited to, interest rate reductions, term or payment extensions and deferral of principal and/or interest payments that would otherwise have been required under the terms of the original agreement.

The following table provides information about how residential real estate loans, excluding PCI loans, were modified under the Firm's loss mitigation programs during the periods presented. This table excludes Chapter 7 loans where the sole concession granted is the discharge of debt.

	Home equity						Mortgages								
	Senior lien			Junior lien			Prime, including option ARMs			Subprime			Total residential real estate - excluding PCI		
Year ended Dec. 31,	**2014**	2013	2012	**2014**	2013	2012	**2014**	2013	2012	**2014**	2013	2012	**2014**	2013	2012
Number of loans approved for a trial modification	**939**	1,719	1,695	**626**	884	918	**1,052**	2,846	3,895	**2,056**	4,233	4,841	**4,673**	9,682	11,349
Number of loans permanently modified	**1,171**	1,765	4,385	**2,813**	5,040	7,430	**2,507**	4,356	9,043	**3,141**	5,364	9,964	**9,632**	16,525	30,822
Concession granted:[a]															
Interest rate reduction	**53%**	70%	83%	**84%**	88%	88%	**43%**	73%	74%	**47%**	72%	69%	**58%**	77%	77%
Term or payment extension	**67**	76	47	**83**	80	76	**51**	73	57	**53**	56	41	**63**	70	55
Principal and/or interest deferred	**16**	12	6	**23**	24	17	**19**	30	16	**12**	13	7	**18**	21	12
Principal forgiveness	**36**	38	11	**22**	32	23	**51**	38	29	**53**	48	42	**41**	39	29
Other[b]	**–**	–	–	**–**	–	–	**10**	23	29	**10**	14	8	**6**	11	11

(a) Represents concessions granted in permanent modifications as a percentage of the number of loans permanently modified. The sum of the percentages exceeds 100% because predominantly all of the modifications include more than one type of concession. A significant portion of trial modifications include interest rate reductions and/or term or payment extensions.

(b) Represents variable interest rate to fixed interest rate modifications.

Financial effects of modifications and redefaults

The following table provides information about the financial effects of the various concessions granted in modifications of residential real estate loans, excluding PCI, under the Firm's loss mitigation programs and about redefaults of certain loans modified in TDRs for the periods presented. Because the specific types and amounts of concessions offered to borrowers frequently change between the trial modification and the permanent modification, the following table presents only the financial effects of permanent modifications. This table also excludes Chapter 7 loans where the sole concession granted is the discharge of debt.

Year ended December 31, (in millions, except weighted-average data and number of loans)	Home equity						Mortgages								
	Senior lien			Junior lien			Prime, including option ARMs			Subprime			Total residential real estate – excluding PCI		
	2014	2013	2012	**2014**	2013	2012	**2014**	2013	2012	**2014**	2013	2012	**2014**	2013	2012
Weighted-average interest rate of loans with interest rate reductions – before TDR	**6.38%**	6.35%	7.20%	**4.81%**	5.05%	5.45%	**4.82%**	5.28%	6.14%	**7.16%**	7.33%	7.73%	**5.61%**	5.88%	6.57%

Balance of loans that redefaulted within one year of permanent modification[(a)]	**$ 19**	$ 26	$ 30	**$ 10**	$ 20	$ 46	**$ 121**	$ 164	$ 255	**$ 93**	$ 106	$ 156	**$ 243**	$ 316	$ 487

(a) Represents loans permanently modified in TDRs that experienced a payment default in the periods presented, and for which the payment default occurred within one year of the modification. The dollar amounts presented represent the balance of such loans at the end of the reporting period in which such loans defaulted. For residential real estate loans modified in TDRs, payment default is deemed to occur when the loan becomes two contractual payments past due. In the event that a modified loan redefaults, it is probable that the loan will ultimately be liquidated through foreclosure or another similar type of liquidation transaction. Redefaults of loans modified within the last 12 months may not be representative of ultimate redefault levels.

At December 31, 2014, the weighted-average estimated remaining lives of residential real estate loans, excluding PCI loans, permanently modified in TDRs were 6 years for senior lien home equity, 8 years for junior lien home equity, 9 years for prime mortgages, including option ARMs, and 8 years for subprime mortgage. The estimated remaining lives of these loans reflect estimated prepayments, both voluntary and involuntary (i.e., foreclosures and other forced liquidations).

Active and suspended foreclosure

At December 31, 2014 and 2013, the Firm had non-PCI residential real estate loans, excluding those insured by U.S. government agencies, with a carrying value of $1.5 billion and $2.1 billion, respectively, that were not included in REO, but were in the process of active or suspended foreclosure.

Other consumer loans

The table below provides information for other consumer retained loan classes, including auto, business banking and student loans.

December 31, (in millions, except ratios)	Auto		Business banking		Student and other		Total other consumer	
	2014	2013	**2014**	2013	**2014**	2013	**2014**	2013

Total retained loans	**$54,536**	$52,757	**$20,058**	$ 18,951	**$10,970**	$ 11,557	**$ 85,564**	$ 83,265
Loans by risk ratings[c]								
Noncriticized	**$ 9,822**	$ 9,968	**$14,619**	$ 13,622	**NA**	NA	**$ 24,441**	$ 23,590
Criticized performing	**35**	54	**708**	711	**NA**	NA	**743**	765
Criticized nonaccrual	**–**	38	**213**	316	**NA**	NA	**213**	354

(a) Individual delinquency classifications included loans insured by U.S. government agencies under the Federal Family Education Loan Program ("FFELP") as follows: current included $4.3 billion and $4.9 billion; 30-119 days past due included $364 million and $387 million; and 120 or more days past due included $290 million and $350 million at December 31, 2014 and 2013, respectively.

(b) These amounts represent student loans, which are insured by U.S. government agencies under the FFELP. These amounts were accruing as reimbursement of insured amounts is proceeding normally.

(c) For risk-rated business banking and auto loans, the primary credit quality indicator is the risk rating of the loan, including whether the loans are considered to be criticized and/or nonaccrual.

(d) December 31, 2014 and 2013, excluded loans 30 days or more past due and still accruing, which are insured by U.S. government agencies under the FFELP, of $654 million and $737 million, respectively. These amounts were excluded as reimbursement of insured amounts is proceeding normally.

Other consumer impaired loans and loan modifications

The table below sets forth information about the Firm's other consumer impaired loans, including risk-rated business banking and auto loans that have been placed on nonaccrual status, and loans that have been modified in TDRs.

December 31, (in millions)	2014	2013
Impaired loans		
With an allowance	**$ 557**	$ 571
Without an allowance[a]	**35**	47
Total impaired loans[b][c]	**$ 592**	$ 618
Allowance for loan losses related to impaired loans	**$ 117**	$ 107
Unpaid principal balance of impaired loans[d]	**719**	788
Impaired loans on nonaccrual status	**456**	441

(a) When discounted cash flows, collateral value or market price equals or exceeds the recorded investment in the loan, the loan does not require an allowance. This typically occurs when the impaired loans have been partially charged off and/or there have been interest payments received and applied to the loan balance.
(b) Predominantly all other consumer impaired loans are in the U.S.
(c) Other consumer average impaired loans were $599 million, $648 million and $733 million for the years ended December 31, 2014, 2013 and 2012, respectively. The related interest income on impaired loans, including those on a cash basis, was not material for the years ended December 31, 2014, 2013 and 2012.
(d) Represents the contractual amount of principal owed at December 31, 2014 and 2013. The unpaid principal balance differs from the impaired loan balances due to various factors, including charge-offs; interest payments received and applied to the principal balance; net deferred loan fees or costs; and unamortized discounts or premiums on purchased loans.

Loan modifications

The following table provides information about the Firm's other consumer loans modified in TDRs. All of these TDRs are reported as impaired loans in the tables above.

December 31, (in millions)	2014	2013
Loans modified in troubled debt restructurings[a][b]	**$ 442**	$ 378
TDRs on nonaccrual status	**306**	201

(a) The impact of these modifications was not material to the Firm for the years ended December 31, 2014 and 2013.
(b) Additional commitments to lend to borrowers whose loans have been modified in TDRs as of December 31, 2014 and 2013 were immaterial.

Other consumer new TDRs were $291 million, $156 million, and $249 million for the years ended December 31, 2014, 2013 and 2012, respectively.

Financial effects of modifications and redefaults

For auto loans, TDRs typically occur in connection with the bankruptcy of the borrower. In these cases, the loan is modified with a revised repayment plan that typically incorporates interest rate reductions and, to a lesser extent, principal forgiveness.

For business banking loans, concessions are dependent on individual borrower circumstances and can be of a short-term nature for borrowers who need temporary relief or longer term for borrowers experiencing more fundamental financial difficulties. Concessions are predominantly term or payment extensions, but also may include interest rate reductions.

The balance of business banking loans modified in TDRs that experienced a payment default, and for which the payment default occurred within one year of the modification, was $25 million, $43 million and $42 million, during the years ended December 31, 2014, 2013 and 2012, respectively. The balance of auto loans modified in TDRs that experienced a payment default, and for which the payment default occurred within one year of the modification, was $43 million, $54 million, and $46 million, during the years ended December 31, 2014, 2013, and 2012, respectively. A payment default is deemed to occur as follows: (1) for scored auto and business banking loans, when the loan is two payments past due; and (2) for risk-rated business banking loans and auto loans, when the borrower has not made a loan payment by its scheduled due date after giving effect to the contractual grace period, if any.

In May 2014 the Firm began extending the deferment period for up to 24 months for certain student loans, which resulted in extending the maturity of the loans at their original contractual interest rates. These modified loans are considered TDRs and placed on nonaccrual status.

Purchased credit-impaired loans

PCI loans are initially recorded at fair value at acquisition. PCI loans acquired in the same fiscal quarter may be aggregated into one or more pools, provided that the loans have common risk characteristics. A pool is then accounted for as a single asset with a single composite interest rate and an aggregate expectation of cash flows. With respect to the Washington Mutual transaction, all of the consumer PCI loans were aggregated into pools of loans with common risk characteristics.

On a quarterly basis, the Firm estimates the total cash flows (both principal and interest) expected to be collected over the remaining life of each pool. These estimates incorporate assumptions regarding default rates, loss severities, the amounts and timing of prepayments and other factors that reflect then-current market conditions. Probable decreases in expected cash flows (i.e., increased credit losses) trigger the recognition of impairment, which is then measured as the present value of the expected principal loss plus any related foregone interest cash flows, discounted at the pool's effective interest rate. Impairments are recognized through the provision for credit losses and an increase in the allowance for loan losses. Probable and significant increases in expected cash flows (e.g., decreased credit losses, the net benefit of modifications) would first reverse any previously recorded allowance for loan losses with any remaining increases recognized prospectively as a yield adjustment over the remaining estimated lives of the underlying loans. The impacts of (i) prepayments, (ii) changes in variable interest rates, and (iii) any other changes in the timing of expected cash flows are recognized prospectively as adjustments to interest income.

The Firm continues to modify certain PCI loans. The impact of these modifications is incorporated into the Firm's quarterly assessment of whether a probable and significant change in expected cash flows has occurred, and the loans continue to be accounted for and reported as PCI loans. In evaluating the effect of modifications on expected cash flows, the Firm incorporates the effect of any foregone interest and also considers the potential for redefault. The Firm develops product-specific probability of default estimates, which are used to compute expected credit losses. In developing these probabilities of default, the Firm considers the relationship between the credit quality characteristics of the underlying loans and certain assumptions about home prices and unemployment based upon industry-wide data. The Firm also considers its own historical loss experience to-date based on actual redefaulted modified PCI loans.

The excess of cash flows expected to be collected over the carrying value of the underlying loans is referred to as the accretable yield. This amount is not reported on the Firm's Consolidated balance sheets but is accreted into interest income at a level rate of return over the remaining estimated lives of the underlying pools of loans.

If the timing and/or amounts of expected cash flows on PCI loans were determined not to be reasonably estimable, no interest would be accreted and the loans would be reported as nonaccrual loans; however, since the timing and amounts of expected cash flows for the Firm's PCI consumer loans are reasonably estimable, interest is being accreted and the loans are being reported as performing loans.

The liquidation of PCI loans, which may include sales of loans, receipt of payment in full by the borrower, or foreclosure, results in removal of the loans from the underlying PCI pool. When the amount of the liquidation proceeds (e.g., cash, real estate), if any, is less than the unpaid principal balance of the loan, the difference is first applied against the PCI pool's nonaccretable difference for principal losses (i.e., the lifetime credit loss estimate established as a purchase accounting adjustment at the acquisition date). When the nonaccretable difference for a particular loan pool has been fully depleted, any excess of the unpaid principal balance of the loan over the liquidation proceeds is written off against the PCI pool's allowance for loan losses. Beginning in the fourth quarter of 2014, write-offs of PCI loans also include other adjustments, primarily related to interest forgiveness modifications. Because the Firm's PCI loans are accounted for at a pool level, the Firm does not recognize charge-offs of PCI loans when they reach specified stages of delinquency (i.e., unlike non-PCI consumer loans, these loans are not charged off based on FFIEC standards).

The PCI portfolio affects the Firm's results of operations primarily through: (i) contribution to net interest margin; (ii) expense related to defaults and servicing resulting from the liquidation of the loans; and (iii) any provision for loan losses. The PCI loans acquired in the Washington Mutual transaction were funded based on the interest rate characteristics of the loans. For example, variable-rate loans were funded with variable-rate liabilities and fixed-rate loans were funded with fixed-rate liabilities with a similar maturity profile. A net spread will be earned on the declining balance of the portfolio, which is estimated as of December 31, 2014, to have a remaining weighted-average life of 8 years.

Residential real estate – PCI loans

The table below sets forth information about the Firm's consumer, excluding credit card, PCI loans.

December 31, (in millions, except ratios)	Home equity		Prime mortgage		Subprime mortgage		Option ARMs		Total PCI	
	2014	2013	**2014**	2013	**2014**	2013	**2014**	2013	**2014**	2013

(a) Carrying value includes the effect of fair value adjustments that were applied to the consumer PCI portfolio at the date of acquisition.

(b) Management concluded as part of the Firm's regular assessment of the PCI loan pools that it was probable that higher expected credit losses would result in a decrease in expected cash flows. As a result, an allowance for loan losses for impairment of these pools has been recognized.

(c) Represents the aggregate unpaid principal balance of loans divided by the estimated current property value. Current property values are estimated, at a minimum, quarterly, based on home valuation models using nationally recognized home price index valuation estimates incorporating actual data to the extent available and forecasted data where actual data is not available. These property values do not represent actual appraised loan level collateral values; as such, the resulting ratios are necessarily imprecise and should be viewed as estimates. Current estimated combined LTV for junior lien home equity loans considers all available lien positions, as well as unused lines, related to the property.

(d) Refreshed FICO scores represent each borrower's most recent credit score, which is obtained by the Firm on at least a quarterly basis.

Approximately 20% of the PCI home equity portfolio are senior lien loans; the remaining balance are junior lien HELOANs or HELOCs. The following tables set forth delinquency statistics for PCI junior lien home equity loans and lines of credit based on unpaid principal balance as of December 31, 2014 and 2013.

December 31, 2014 (in millions, except ratios)	Delinquencies			Total loans	Total 30+ day delinquency rate
	30–89 days past due	90–149 days past due	150+ days past due		
HELOCs:[a]					
Within the revolving period[b]	**$ 155**	**$ 50**	**$ 371**	**$ 8,972**	**6.42%**
Beyond the revolving period[c]	**76**	**24**	**166**	**4,143**	**6.42**
HELOANs	**20**	**7**	**38**	**736**	**8.83**
Total	**$ 251**	**$ 81**	**$ 575**	**$ 13,851**	**6.55%**

December 31, 2013 (in millions, except ratios)	Delinquencies			Total loans	Total 30+ day delinquency rate
	30–89 days past due	90–149 days past due	150+ days past due		
HELOCs:[a]					
Within the revolving period[b]	$ 243	$ 88	$ 526	$ 12,670	6.76%
Beyond the revolving period[c]	54	21	82	2,336	6.72
HELOANs	24	11	39	908	8.15
Total	$ 321	$ 120	$ 647	$ 15,914	6.84%

(a) In general, these HELOCs are revolving loans for a 10-year period, after which time the HELOC converts to an interest-only loan with a balloon payment at the end of the loan's term.
(b) Substantially all undrawn HELOCs within the revolving period have been closed.
(c) Includes loans modified into fixed-rate amortizing loans.

The table below sets forth the accretable yield activity for the Firm's PCI consumer loans for the years ended December 31, 2014, 2013 and 2012, and represents the Firm's estimate of gross interest income expected to be earned over the remaining life of the PCI loan portfolios. The table excludes the cost to fund the PCI portfolios, and therefore the accretable yield does not represent net interest income expected to be earned on these portfolios.

Year ended December 31, (in millions, except ratios)	Total PCI		
	2014	2013	2012
Beginning balance	**$ 16,167**	$ 18,457	$ 19,072
Accretion into interest income	**(1,934)**	(2,201)	(2,491)
Changes in interest rates on variable-rate loans	**(174)**	(287)	(449)
Other changes in expected cash flows[a]	**533**	198	2,325
Balance at December 31	**$ 14,592**	$ 16,167	$ 18,457
Accretable yield percentage	**4.19%**	4.31%	4.38%

(a) Other changes in expected cash flows may vary from period to period as the Firm continues to refine its cash flow model and periodically updates model assumptions. For the year ended December 31, 2014, other changes in expected cash flows were driven by changes in prepayment assumptions. For the year ended December 31, 2013, other changes in expected cash flows were due to refining the expected interest cash flows on HELOCs with balloon payments, partially offset by changes in prepayment assumptions. For the year ended December 31, 2012, other changes in expected cash flows were principally driven by the impact of modifications, but also related to changes in prepayment assumptions.

The factors that most significantly affect estimates of gross cash flows expected to be collected, and accordingly the accretable yield balance, include: (i) changes in the benchmark interest rate indices for variable-rate products such as option ARM and home equity loans; and (ii) changes in prepayment assumptions.

Since the date of acquisition, the decrease in the accretable yield percentage has been primarily related to a decrease in interest rates on variable-rate loans and, to a lesser extent, extended loan liquidation periods. Certain events, such as extended or shortened loan liquidation periods, affect the timing of expected cash flows and the accretable yield percentage, but not the amount of cash expected to be received (i.e., the accretable yield balance). While extended loan liquidation periods reduce the accretable yield percentage (because the same accretable yield balance is recognized against a higher-than-expected loan balance over a longer-than-expected period of time), shortened loan liquidation periods would have the opposite effect.

Active and suspended foreclosure

At December 31, 2014 and 2013, the Firm had PCI residential real estate loans with an unpaid principal balance of $3.2 billion and $4.8 billion, respectively, that were not included in REO, but were in the process of active or suspended foreclosure.

Credit card loan portfolio

The credit card portfolio segment includes credit card loans originated and purchased by the Firm. Delinquency rates are the primary credit quality indicator for credit card loans as they provide an early warning that borrowers may be experiencing difficulties (30 days past due); information on those borrowers that have been delinquent for a longer period of time (90 days past due) is also considered. In addition to delinquency rates, the geographic distribution of the loans provides insight as to the credit quality of the portfolio based on the regional economy.

While the borrower's credit score is another general indicator of credit quality, the Firm does not view credit scores as a primary indicator of credit quality because the borrower's credit score tends to be a lagging indicator. However, the distribution of such scores provides a general indicator of credit quality trends within the portfolio. Refreshed FICO score information, which is obtained at least quarterly, for a statistically significant random sample of the credit card portfolio is indicated in the table below; FICO is considered to be the industry benchmark for credit scores.

The Firm generally originates new card accounts to prime consumer borrowers. However, certain cardholders' FICO scores may decrease over time, depending on the performance of the cardholder and changes in credit score technology.

The table below sets forth information about the Firm's credit card loans.

As of or for the year ended December 31, (in millions, except ratios)	2014	2013
Net charge-offs	**$ 3,429**	$ 3,879
% of net charge-offs to retained loans	**2.75%**	3.14%
Loan delinquency		
Current and less than 30 days past due and still accruing	**$ 126,189**	$ 125,335

Equal to or greater than 660	**85.7%**	85.1%
Less than 660	**14.3**	14.9

Credit card impaired loans and loan modifications

The table below sets forth information about the Firm's impaired credit card loans. All of these loans are considered to be impaired as they have been modified in TDRs.

December 31, (in millions)	2014	2013
Impaired credit card loans with an allowance[a][b]		
Credit card loans with modified payment terms[c]	**$ 1,775**	$ 2,746
Modified credit card loans that have reverted to pre-modification payment terms[d]	**254**	369
Total impaired credit card loans[e]	**$ 2,029**	$ 3,115
Allowance for loan losses related to impaired credit card loans	**$ 500**	$ 971

(a) The carrying value and the unpaid principal balance are the same for credit card impaired loans.
(b) There were no impaired loans without an allowance.
(c) Represents credit card loans outstanding to borrowers enrolled in a credit card modification program as of the date presented.
(d) Represents credit card loans that were modified in TDRs but that have subsequently reverted back to the loans' pre-modification payment terms. At December 31, 2014 and 2013, $159 million and $226 million, respectively, of loans have reverted back to the pre-modification payment terms of the loans due to noncompliance with the terms of the modified loans. The remaining $95 million and $143 million at December 31, 2014 and 2013, respectively, of these loans are to borrowers who have successfully completed a short-term modification program. The Firm continues to report these loans as TDRs since the borrowers' credit lines remain closed.
(e) Predominantly all impaired credit card loans are in the U.S.

The following table presents average balances of impaired credit card loans and interest income recognized on those loans.

Year ended December 31, (in millions)	2014	2013	2012
Average impaired credit card loans	**$ 2,503**	$ 3,882	$ 5,893
Interest income on impaired credit card loans	**123**	198	308

Loan modifications

JPMorgan Chase may offer one of a number of loan modification programs to credit card borrowers who are experiencing financial difficulty. Most of the credit card loans have been modified under long-term programs for borrowers who are experiencing financial difficulties. Modifications under long-term programs involve placing the customer on a fixed payment plan, generally for 60 months. The Firm may also offer short-term programs for borrowers who may be in need of temporary relief; however, none are currently being offered. Modifications under all short- and long-term programs typically include reducing the interest rate on the credit card. Substantially all modifications are considered to be TDRs.

If the cardholder does not comply with the modified payment terms, then the credit card loan agreement reverts back to its pre-modification payment terms. Assuming that the cardholder does not begin to perform in accordance with those payment terms, the loan continues to age and will ultimately be charged-off in accordance with the Firm's standard charge-off policy. In addition, if a borrower successfully completes a short-term modification program, then the loan reverts back to its pre-modification payment terms. However, in most cases, the Firm does not reinstate the borrower's line of credit.

New enrollments in these loan modification programs for the years ended December 31, 2014, 2013 and 2012, were $807 million, $1.2 billion and $1.7 billion, respectively.

Financial effects of modifications and redefaults

The following table provides information about the financial effects of the concessions granted on credit card loans modified in TDRs and redefaults for the periods presented.

Year ended December 31, (in millions, except weighted-average data)	2014	2013	2012
Weighted-average interest rate of loans – before TDR	**14.96%**	15.37%	15.67%
Weighted-average interest rate of loans – after TDR	**4.40**	4.38	5.19
Loans that redefaulted within one year of modification[a]	**$ 119**	$ 167	$ 309

(a) Represents loans modified in TDRs that experienced a payment default in the periods presented, and for which the payment default occurred within one year of the modification. The amounts presented represent the balance of such loans as of the end of the quarter in which they defaulted.

For credit card loans modified in TDRs, payment default is deemed to have occurred when the loans become two payments past due. A substantial portion of these loans is expected to be charged-off in accordance with the Firm's standard charge-off policy. Based on historical experience, the estimated weighted-average default rate for credit card loans modified was expected to be 27.91%, 30.72% and 38.23% as of December 31, 2014, 2013 and 2012, respectively.

Wholesale loan portfolio

Wholesale loans include loans made to a variety of customers, ranging from large corporate and institutional clients to high-net-worth individuals.

The primary credit quality indicator for wholesale loans is the risk rating assigned each loan. Risk ratings are used to identify the credit quality of loans and differentiate risk within the portfolio. Risk ratings on loans consider the probability of default ("PD") and the loss given default ("LGD"). The PD is the likelihood that a loan will default and not be fully repaid by the borrower. The LGD is the estimated loss on the loan that would be realized upon the default of the borrower and takes into consideration collateral and structural support for each credit facility.

Management considers several factors to determine an appropriate risk rating, including the obligor's debt capacity and financial flexibility, the level of the obligor's earnings, the amount and sources for repayment, the level and nature of contingencies, management strength, and the industry and geography in which the obligor operates. The Firm's definition of criticized aligns with the banking regulatory definition of criticized exposures, which consist of special mention, substandard and doubtful categories. Risk ratings generally represent ratings profiles similar to those defined

by S&P and Moody's. Investment-grade ratings range from "AAA/Aaa" to "BBB-/Baa3." Noninvestment-grade ratings are classified as noncriticized ("BB+/Ba1 and B-/B3") and criticized ("CCC+"/"Caa1 and below"), and the criticized portion is further subdivided into performing and nonaccrual loans, representing management's assessment of the collectibility of principal and interest. Criticized loans have a higher probability of default than noncriticized loans.

Risk ratings are reviewed on a regular and ongoing basis by Credit Risk Management and are adjusted as necessary for updated information affecting the obligor's ability to fulfill its obligations.

As noted above, the risk rating of a loan considers the industry in which the obligor conducts its operations. As part of the overall credit risk management framework, the Firm focuses on the management and diversification of its industry and client exposures, with particular attention paid to industries with actual or potential credit concern. See Note 5 for further detail on industry concentrations.

The table below provides information by class of receivable for the retained loans in the Wholesale portfolio segment.

As of or for the year ended December 31, (in millions, except ratios)	Commercial and industrial		Real estate		Financial institutions		Government agencies		Other[d]		Total retained loans

Total retained loans	**$109,625**	$103,846	**$79,113**	$ 69,151	**$34,530**	$33,683	**$8,696**	$10,462	**$92,538**	$91,121	**$324,502**	$308,263

(a) The U.S. and non-U.S. distribution is determined based predominantly on the domicile of the borrower.
(b) The credit quality of wholesale loans is assessed primarily through ongoing review and monitoring of an obligor's ability to meet contractual obligations rather than relying on the past due status, which is generally a lagging indicator of credit quality. For a discussion of more significant risk factors, see pages 255–256 of this Note.
(c) Represents loans that are considered well-collateralized and therefore still accruing interest.
(d) Other primarily includes loans to SPEs and loans to private banking clients. See Note 1 for additional information on SPEs.

The following table presents additional information on the real estate class of loans within the Wholesale portfolio segment for the periods indicated. The real estate class primarily consists of secured commercial loans mainly to borrowers for multi-family and commercial lessor properties. Multifamily lending specifically finances apartment buildings. Commercial lessors receive financing specifically for real estate leased to retail, office and industrial tenants. Commercial construction and development loans represent financing for the construction of apartments, office and professional buildings and malls. Other real estate loans include lodging, real estate investment trusts ("REITs"), single-family, homebuilders and other real estate.

December 31, (in millions, except ratios)	Multifamily		Commercial lessors		Commercial construction and development		Other		Total real estate loans

Wholesale impaired loans and loan modifications

Wholesale impaired loans are comprised of loans that have been placed on nonaccrual status and/or that have been modified in a TDR. All impaired loans are evaluated for an asset-specific allowance as described in Note 15.

The table below sets forth information about the Firm's wholesale impaired loans.

December 31, (in millions)	Commercial and industrial		Real estate		Financial institutions		Government agencies		Other		Total retained loans	
	2014	2013	**2014**	2013	**2014**	2013	**2014**	2013	**2014**	2013	**2014**	2013
Impaired loans												
With an allowance	**$ 174**	$ 236	**$ 193**	$ 258	**$ 15**	$ 17	**$ –**	$ 1	**$ 89**	$ 85	**$ 471**	$ 597
Without an allowance[a]	**24**	58	**87**	109	**3**	8	**–**	–	**52**	73	**166**	248

Allowance for loan losses related to impaired loans	**$ 34**	$ 75	**$ 36**	$ 63	**$ 4**	$ 16	**$ –**	$ –	**$ 13**	$ 27	**$ 87**	$ 181
Unpaid principal balance of impaired loans[b]	**266**	448	**345**	454	**22**	24	**–**	1	**202**	241	**835**	1,168

(a) When the discounted cash flows, collateral value or market price equals or exceeds the recorded investment in the loan, the loan does not require an allowance. This typically occurs when the impaired loans have been partially charged-off and/or there have been interest payments received and applied to the loan balance.
(b) Represents the contractual amount of principal owed at December 31, 2014 and 2013. The unpaid principal balance differs from the impaired loan balances due to various factors, including charge-offs; interest payments received and applied to the carrying value; net deferred loan fees or costs; and unamortized discount or premiums on purchased loans.
(c) Based upon the domicile of the borrower, predominantly all wholesale impaired loans are in the U.S.

The following table presents the Firm's average impaired loans for the years ended 2014, 2013 and 2012.

Year ended December 31, (in millions)	**2014**	2013	2012
Commercial and industrial	**$ 243**	$ 412	$ 873
Real estate	**297**	484	784
Financial institutions	**20**	17	17
Government agencies	**–**	–	9
Other	**155**	211	277
Total[a]	**$ 715**	$ 1,124	$ 1,960

(a) The related interest income on accruing impaired loans and interest income recognized on a cash basis were not material for the years ended December 31, 2014, 2013 and 2012.

Certain loan modifications are considered to be TDRs as they provide various concessions to borrowers who are experiencing financial difficulty. All TDRs are reported as impaired loans in the tables above. TDRs were not material as of December 31, 2014 and 2013.

Note 15 – Allowance for credit losses

JPMorgan Chase's allowance for loan losses covers the consumer, including credit card, portfolio segments (primarily scored); and wholesale (risk-rated) portfolio, and represents management's estimate of probable credit losses inherent in the Firm's loan portfolio. The allowance for loan losses includes an asset-specific component, a formula-based component and a component related to PCI loans, as described below. Management also estimates an allowance for wholesale and consumer lending-related commitments using methodologies similar to those used to estimate the allowance on the underlying loans. During 2014, the Firm did not make any significant changes to the methodologies or policies used to determine its allowance for credit losses; such policies are described in the following paragraphs.

The asset-specific component of the allowance relates to loans considered to be impaired, which includes loans that have been modified in TDRs as well as risk-rated loans that have been placed on nonaccrual status. To determine the asset-specific component of the allowance, larger loans are evaluated individually, while smaller loans are evaluated as pools using historical loss experience for the respective class of assets. Scored loans (i.e., consumer loans) are pooled by product type, while risk-rated loans (primarily wholesale loans) are segmented by risk rating.

The Firm generally measures the asset-specific allowance as the difference between the recorded investment in the loan and the present value of the cash flows expected to be collected, discounted at the loan's original effective interest rate. Subsequent changes in impairment are reported as an adjustment to the provision for loan losses. In certain cases, the asset-specific allowance is determined using an observable market price, and the allowance is measured as the difference between the recorded investment in the loan and the loan's fair value. Impaired collateral-dependent loans are charged down to the fair value of collateral less costs to sell and therefore may not be subject to an asset-specific reserve as are other impaired loans. See Note 14 for more information about charge-offs and collateral-dependent loans.

The asset-specific component of the allowance for impaired loans that have been modified in TDRs incorporates the effects of foregone interest, if any, in the present value calculation and also incorporates the effect of the modification on the loan's expected cash flows, which considers the potential for redefault. For residential real estate loans modified in TDRs, the Firm develops product-specific probability of default estimates, which are applied at a loan level to compute expected losses. In developing these probabilities of default, the Firm considers the relationship between the credit quality characteristics of the underlying loans and certain assumptions about home prices and unemployment, based upon industry-wide data. The Firm also considers its own historical loss experience to date based on actual redefaulted modified loans. For credit card loans modified in TDRs, expected losses incorporate projected redefaults based on the Firm's historical experience by type of modification program. For wholesale loans modified in TDRs, expected losses incorporate redefaults based on management's expectation of the borrower's ability to repay under the modified terms.

The formula-based component is based on a statistical calculation to provide for incurred credit losses in performing risk-rated loans and all consumer loans, except for any loans restructured in TDRs and PCI loans. See Note 14 for more information on PCI loans.

For scored loans, the statistical calculation is performed on pools of loans with similar risk characteristics (e.g., product type) and generally computed by applying loss factors to outstanding principal balances over an estimated loss emergence period. The loss emergence period represents the time period between the date at which the loss is estimated to have been incurred and the ultimate realization of that loss (through a charge-off). Estimated loss emergence periods may vary by product and may change over time; management applies judgment in estimating loss emergence periods, using available credit information and trends.

Loss factors are statistically derived and sensitive to changes in delinquency status, credit scores, collateral values and other risk factors. The Firm uses a number of different forecasting models to estimate both the PD and the loss severity, including delinquency roll rate models and credit loss severity models. In developing PD and loss severity assumptions, the Firm also considers known and anticipated changes in the economic environment, including changes in home prices, unemployment rates and other risk indicators.

A nationally recognized home price index measure is used to estimate both the PD and the loss severity on residential real estate loans at the metropolitan statistical areas ("MSA") level. Loss severity estimates are regularly validated by comparison to actual losses recognized on defaulted loans, market-specific real estate appraisals and property sales activity. The economic impact of potential modifications of residential real estate loans is not included in the statistical calculation because of the uncertainty regarding the type and results of such modifications.

For risk-rated loans, the statistical calculation is the product of an estimated PD and an estimated LGD. These factors are differentiated by risk rating and expected maturity. In assessing the risk rating of a particular loan, among the factors considered are the obligor's debt capacity and financial flexibility, the level of the obligor's earnings, the amount and sources for repayment, the level and nature of contingencies, management strength, and the industry and geography in which the obligor operates. These factors are based on an evaluation of historical and current information, and involve subjective assessment and interpretation. Emphasizing one factor over another or considering additional factors could impact the risk rating assigned by the Firm to that loan. PD estimates are based on observable external through-the-cycle data, using credit-rating agency default statistics. LGD estimates are based on the Firm's history of actual credit losses over more than one credit cycle. Estimates of PD and LGD are subject to periodic refinement based on changes to underlying external and Firm-specific historical data.

Management applies judgment within an established framework to adjust the results of applying the statistical calculation described above. The determination of the appropriate adjustment is based on management's view of loss events that have occurred but that are not yet reflected in the loss factors and that relate to current macroeconomic and political conditions, the quality of underwriting standards and other relevant internal and external factors affecting the credit quality of the portfolio. For the scored loan portfolios, adjustments to the statistical calculation are made in part by analyzing the historical loss experience for each major product segment. Factors related to unemployment, home prices, borrower behavior and lien position, the estimated effects of the mortgage foreclosure-related settlement with federal and state officials and uncertainties regarding the ultimate success of loan modifications are incorporated into the calculation, as appropriate. For junior lien products, management considers the delinquency and/or modification status of any senior liens in determining the adjustment. In addition, for the risk-rated portfolios, any adjustments made to the statistical calculation take into consideration model imprecision, deteriorating conditions within an industry, product or portfolio type, geographic location, credit concentration, and current economic events that have occurred but that are not yet reflected in the factors used to derive the statistical calculation.

Management establishes an asset-specific allowance for lending-related commitments that are considered impaired and computes a formula-based allowance for performing consumer and wholesale lending-related commitments. These are computed using a methodology similar to that used for the wholesale loan portfolio, modified for expected maturities and probabilities of drawdown.

Determining the appropriateness of the allowance is complex and requires judgment by management about the effect of matters that are inherently uncertain. Subsequent evaluations of the loan portfolio, in light of the factors then prevailing, may result in significant changes in the allowances for loan losses and lending-related commitments in future periods. At least quarterly, the allowance for credit losses is reviewed by the Chief Risk Officer, the Chief Financial Officer and the Controller of the Firm and discussed with the Risk Policy and Audit Committees of the Board of Directors of the Firm. As of December 31, 2014, JPMorgan Chase deemed the allowance for credit losses to be appropriate (i.e., sufficient to absorb probable credit losses inherent in the portfolio).

Allowance for credit losses and loans and lending-related commitments by impairment methodology

The table below summarizes information about the allowance for loan losses, loans by impairment methodology, the allowance for lending-related commitments and lending-related commitments by impairment methodology.

	2014			
Year ended December 31, (in millions)	Consumer, excluding credit card	Credit card	Wholesale	Total

Total lending-related commitments	$ 58,153	$ 525,963	$ 472,056	$ 1,056,172

(a) Write-offs of PCI loans are recorded against the allowance for loan losses when actual losses for a pool exceed estimated losses that were recorded as purchase accounting adjustments at the time of acquisition. A write-off of a PCI loan is recognized when the underlying loan is removed from a pool (e.g., upon liquidation). During the fourth quarter of 2014, the Firm recorded a $291 million adjustment to reduce the PCI allowance and the recorded investment in the Firm's PCI loan portfolio, primarily reflecting the cumulative effect of interest forgiveness modifications. This adjustment had no impact to the Firm's Consolidated statements of income.

(b) Includes risk-rated loans that have been placed on nonaccrual status and loans that have been modified in a TDR.

(c) The asset-specific credit card allowance for loan losses is related to loans that have been modified in a TDR; such allowance is calculated based on the loans' original contractual interest rates and does not consider any incremental penalty rates.

Note 16 – Variable interest entities

For a further description of JPMorgan Chase's accounting policies regarding consolidation of VIEs, see Note 1.

The following table summarizes the most significant types of Firm-sponsored VIEs by business segment. The Firm considers a "sponsored" VIE to include any entity where: (1) JPMorgan Chase is the principal beneficiary of the structure; (2) the VIE is used by JPMorgan Chase to securitize Firm assets; (3) the VIE issues financial instruments with the JPMorgan Chase name; or (4) the entity is a JPMorgan Chase–administered asset-backed commercial paper conduit.

Line-of-Business	*Transaction Type*	*Activity*	*Annual Report page references*
CCB	Credit card securitization trusts	Securitization of both originated and purchased credit card receivables	262
	Mortgage securitization trusts	Securitization of originated and purchased residential mortgages	263-265
	Other securitization trusts	Securitization of originated student loans	263-265
CIB	Mortgage and other securitization trusts	Securitization of both originated and purchased residential and commercial mortgages, automobile and student loans	263-265
	Multi-seller conduits	Assist clients in accessing the financial markets in a cost-efficient manner and structures transactions to meet investor needs	265-267
	Investor intermediation activities:		
	Municipal bond vehicles		265-266
	Credit-related note and asset swap vehicles		267

The Firm's other business segments are also involved with VIEs, but to a lesser extent, as follows:

- Asset Management: Sponsors and manages certain funds that are deemed VIEs. As asset manager of the funds, AM earns a fee based on assets managed; the fee varies with each fund's investment objective and is competitively priced. For fund entities that qualify as VIEs, AM's interests are, in certain cases, considered to be significant variable interests that result in consolidation of the financial results of these entities.
- Commercial Banking: CB makes investments in and provides lending to community development entities that may meet the definition of a VIE. In addition, CB provides financing and lending-related services to certain client-sponsored VIEs. In general, CB does not control the activities of these entities and does not consolidate these entities.
- Corporate: The Private Equity business, within Corporate, may be involved with entities that are deemed VIEs. However, the Firm's private equity business is subject to specialized investment company accounting, which does not require the consolidation of investments, including VIEs.

The Firm also invests in and provides financing and other services to VIEs sponsored by third parties, as described on page 268 of this Note.

Significant Firm-sponsored variable interest entities

Credit card securitizations

The Card business securitizes originated and purchased credit card loans, primarily through the Chase Issuance Trust (the "Trust"). The Firm's continuing involvement in credit card securitizations includes servicing the receivables, retaining an undivided seller's interest in the receivables, retaining certain senior and subordinated securities and maintaining escrow accounts.

The Firm is considered to be the primary beneficiary of these Firm-sponsored credit card securitization trusts based on the Firm's ability to direct the activities of these VIEs through its servicing responsibilities and other duties, including making decisions as to the receivables that are transferred into those trusts and as to any related modifications and workouts. Additionally, the nature and extent of the Firm's other continuing involvement with the trusts, as indicated above, obligates the Firm to absorb losses and gives the Firm the right to receive certain benefits from these VIEs that could potentially be significant.

The underlying securitized credit card receivables and other assets of the securitization trusts are available only for payment of the beneficial interests issued by the securitization trusts; they are not available to pay the Firm's other obligations or the claims of the Firm's other creditors.

The agreements with the credit card securitization trusts require the Firm to maintain a minimum undivided interest in the credit card trusts (which is generally 4%). As of December 31, 2014 and 2013, the Firm held undivided interests in Firm-sponsored credit card securitization trusts of $10.9 billion and $14.3 billion, respectively. The Firm maintained an average undivided interest in principal receivables owned by those trusts of approximately 22% and 30% for the years ended December 31, 2014 and 2013, respectively. The Firm also retained $40 million and $130 million of senior securities and $5.3 billion and $5.5 billion of subordinated securities in certain of its credit card securitization trusts as of December 31, 2014 and 2013, respectively. The Firm's undivided interests in the credit card trusts and securities retained are eliminated in consolidation.

Firm-sponsored mortgage and other securitization trusts
The Firm securitizes (or has securitized) originated and purchased residential mortgages, commercial mortgages and other consumer loans (including automobile and student loans) primarily in its CCB and CIB businesses. Depending on the particular transaction, as well as the line of business involved, the Firm may act as the servicer of the loans and/or retain certain beneficial interests in the securitization trusts.

The following table presents the total unpaid principal amount of assets held in Firm-sponsored private-label securitization entities, including those in which the Firm has continuing involvement, and those that are consolidated by the Firm. Continuing involvement includes servicing the loans; holding senior interests or subordinated interests; recourse or guarantee arrangements; and derivative transactions. In certain instances, the Firm's only continuing involvement is servicing the loans. See Securitization activity on page 269 of this Note for further information regarding the Firm's cash flows with and interests retained in nonconsolidated VIEs, and pages 269–270 of this Note for information on the Firm's loan sales to U.S. government agencies.

	Principal amount outstanding			JPMorgan Chase interest in securitized assets in nonconsolidated VIEs[c][d][e]

Commercial and other[b]	130.4	–	98.0	0.5	3.5	4.0
Total	$ 271.7	$ 4.5	$ 216.4	$ 1.1	$ 3.8	$ 4.9

(a) Excludes U.S. government agency securitizations. See pages 269–270 of this Note for information on the Firm's loan sales to U.S. government agencies.
(b) Consists of securities backed by commercial loans (predominantly real estate) and non-mortgage-related consumer receivables purchased from third parties. The Firm generally does not retain a residual interest in its sponsored commercial mortgage securitization transactions.
(c) The table above excludes the following: retained servicing (see Note 17 for a discussion of MSRs); securities retained from loan sales to U.S. government agencies; interest rate and foreign exchange derivatives primarily used to manage interest rate and foreign exchange risks of securitization entities (See Note 6 for further information on derivatives); senior and subordinated securities of $136 million and $34 million, respectively, at December 31, 2014, and $151 million and $30 million, respectively, at December 31, 2013, which the Firm purchased in connection with CIB's secondary market-making activities.
(d) Includes interests held in re-securitization transactions.
(e) As of December 31, 2014 and 2013, 77% and 69%, respectively, of the Firm's retained securitization interests, which are carried at fair value, were risk-rated "A" or better, on an S&P-equivalent basis. The retained interests in prime residential mortgages consisted of $1.1 billion and $551 million of investment-grade and $185 million and $260 million of noninvestment-grade retained interests at December 31, 2014 and 2013, respectively. The retained interests in commercial and other securitizations trusts consisted of $3.7 billion and $3.9 billion of investment-grade and $194 million and $80 million of noninvestment-grade retained interests at December 31, 2014 and 2013, respectively.

Residential mortgage

The Firm securitizes residential mortgage loans originated by CCB, as well as residential mortgage loans purchased from third parties by either CCB or CIB. CCB generally retains servicing for all residential mortgage loans originated or purchased by CCB, and for certain mortgage loans purchased by CIB. For securitizations serviced by CCB, the Firm has the power to direct the significant activities of the VIE because it is responsible for decisions related to loan modifications and workouts. CCB may also retain an interest upon securitization.

In addition, CIB engages in underwriting and trading activities involving securities issued by Firm-sponsored securitization trusts. As a result, CIB at times retains senior and/or subordinated interests (including residual interests) in residential mortgage securitizations upon securitization, and/or reacquires positions in the secondary market in the normal course of business. In certain instances, as a result of the positions retained or reacquired by CIB or held by CCB, when considered together with the servicing arrangements entered into by CCB, the Firm is deemed to be the primary beneficiary of certain securitization trusts. See the table on page 268 of this Note for more information on consolidated residential mortgage securitizations.

The Firm does not consolidate a residential mortgage securitization (Firm-sponsored or third-party-sponsored) when it is not the servicer (and therefore does not have the power to direct the most significant activities of the trust) or does not hold a beneficial interest in the trust that could potentially be significant to the trust. At December 31, 2014 and 2013, the Firm did not consolidate the assets of certain Firm-sponsored residential mortgage securitization VIEs, in which the Firm had continuing involvement, primarily due to the fact that the Firm did not hold an interest in these trusts that could potentially be significant to the trusts. See the table on page 268 of this Note for more information on the consolidated residential mortgage securitizations, and the table on the previous page of this Note for further information on interests held in nonconsolidated residential mortgage securitizations.

Commercial mortgages and other consumer securitizations

CIB originates and securitizes commercial mortgage loans, and engages in underwriting and trading activities involving the securities issued by securitization trusts. CIB may retain unsold senior and/or subordinated interests in commercial mortgage securitizations at the time of securitization but, generally, the Firm does not service commercial loan securitizations. For commercial mortgage securitizations the power to direct the significant activities of the VIE generally is held by the servicer or investors in a specified class of securities ("controlling class"). See the table on page 268 of this Note for more information on the consolidated commercial mortgage securitizations, and the table on the previous page of this Note for further information on interests held in nonconsolidated securitizations.

The Firm retains servicing responsibilities for certain student loan securitizations. The Firm has the power to direct the activities of these VIEs through these servicing responsibilities. See the table on page 268 of this Note for more information on the consolidated student loan securitizations, and the table on the previous page of this Note for further information on interests held in nonconsolidated securitizations.

Re-securitizations

The Firm engages in certain re-securitization transactions in which debt securities are transferred to a VIE in exchange for new beneficial interests. These transfers occur in connection with both agency (Fannie Mae, Freddie Mac and Ginnie Mae) and nonagency (private-label) sponsored VIEs, which may be backed by either residential or commercial mortgages. The Firm's consolidation analysis is largely dependent on the Firm's role and interest in the re-securitization trusts. During the years ended December 31, 2014, 2013 and 2012, the Firm transferred $22.7 billion, $25.3 billion and $10.0 billion, respectively, of securities to agency VIEs, and $1.1 billion, $55 million and $286 million, respectively, of securities to private-label VIEs.

Most re-securitizations with which the Firm is involved are client-driven transactions in which a specific client or group of clients is seeking a specific return or risk profile. For these transactions, the Firm has concluded that the decision-making power of the entity is shared between the Firm and its clients, considering the joint effort and decisions in establishing the re-securitization trust and its assets, as well as the significant economic interest the client holds in the re-securitization trust; therefore the Firm does not consolidate the re-securitization VIE.

In more limited circumstances, the Firm creates a re-securitization trust independently and not in conjunction with specific clients. In these circumstances, the Firm is deemed to have the unilateral ability to direct the most significant activities of the re-securitization trust because of the decisions made during the establishment and design of the trust; therefore, the Firm consolidates the re-securitization VIE if the Firm holds an interest that could potentially be significant.

Additionally, the Firm may invest in beneficial interests of third-party securitizations and generally purchases these interests in the secondary market. In these circumstances, the Firm does not have the unilateral ability to direct the most significant activities of the re-securitization trust, either because it was not involved in the initial design of the trust, or the Firm is involved with an independent third-party sponsor and demonstrates shared power over the creation of the trust; therefore, the Firm does not consolidate the re-securitization VIE.

As of December 31, 2014 and 2013, the Firm did not consolidate any agency re-securitizations. As of December 31, 2014 and 2013, the Firm consolidated assets of $77 million and $86 million, respectively, and liabilities of $21 million and $23 million, respectively, of

private-label re-securitizations. See the table on page 268 of this Note for more information on the consolidated re-securitization transactions.

As of December 31, 2014 and 2013, total assets (including the notional amount of interest-only securities) of nonconsolidated Firm-sponsored private-label re-securitization entities in which the Firm has continuing involvement were $2.9 billion and $2.8 billion, respectively. At December 31, 2014 and 2013, the Firm held approximately $2.4 billion and $1.3 billion, respectively, of interests in nonconsolidated agency re-securitization entities, and $36 million and $6 million, respectively, of senior and subordinated interests in nonconsolidated private-label re-securitization entities. See the table on page 263 of this Note for further information on interests held in nonconsolidated securitizations.

Multi-seller conduits

Multi-seller conduit entities are separate bankruptcy remote entities that purchase interests in, and make loans secured by, pools of receivables and other financial assets pursuant to agreements with customers of the Firm. The conduits fund their purchases and loans through the issuance of highly rated commercial paper. The primary source of repayment of the commercial paper is the cash flows from the pools of assets. In most instances, the assets are structured with deal-specific credit enhancements provided to the conduits by the customers (i.e., sellers) or other third parties. Deal-specific credit enhancements are generally structured to cover a multiple of historical losses expected on the pool of assets, and are typically in the form of overcollateralization provided by the seller. The deal-specific credit enhancements mitigate the Firm's potential losses on its agreements with the conduits.

To ensure timely repayment of the commercial paper, and to provide the conduits with funding to purchase interests in or make loans secured by pools of receivables in the event that the conduits do not obtain funding in the commercial paper market, each asset pool financed by the conduits has a minimum 100% deal-specific liquidity facility associated with it provided by JPMorgan Chase Bank, N.A. JPMorgan Chase Bank, N.A. also provides the multi-seller conduit vehicles with uncommitted program-wide liquidity facilities and program-wide credit enhancement in the form of standby letters of credit. The amount of program-wide credit enhancement required is based upon commercial paper issuance and approximates 10% of the outstanding balance.

The Firm consolidates its Firm-administered multi-seller conduits, as the Firm has both the power to direct the significant activities of the conduits and a potentially significant economic interest in the conduits. As administrative agent and in its role in structuring transactions, the Firm makes decisions regarding asset types and credit quality, and manages the commercial paper funding needs of the conduits. The Firm's interests that could potentially be significant to the VIEs include the fees received as administrative agent and liquidity and program-wide credit enhancement provider, as well as the potential exposure created by the liquidity and credit enhancement facilities provided to the conduits. See page 268 of this Note for further information on consolidated VIE assets and liabilities.

In the normal course of business, JPMorgan Chase makes markets in and invests in commercial paper issued by the Firm-administered multi-seller conduits. The Firm held $5.7 billion and $4.1 billion of the commercial paper issued by the Firm-administered multi-seller conduits at December 31, 2014 and 2013, respectively. The Firm's investments reflect the Firm's funding needs and capacity and were not driven by market illiquidity. The Firm is not obligated under any agreement to purchase the commercial paper issued by the Firm-administered multi-seller conduits.

Deal-specific liquidity facilities, program-wide liquidity and credit enhancement provided by the Firm have been eliminated in consolidation. The Firm or the Firm-administered multi-seller conduits provide lending-related commitments to certain clients of the Firm-administered multi-seller conduits. The unfunded portion of these commitments was $9.9 billion and $9.1 billion at December 31, 2014 and 2013, respectively, and are reported as off-balance sheet lending-related commitments. For more information on off-balance sheet lending-related commitments, see Note 29.

VIEs associated with investor intermediation activities

As a financial intermediary, the Firm creates certain types of VIEs and also structures transactions with these VIEs, typically using derivatives, to meet investor needs. The Firm may also provide liquidity and other support. The risks inherent in the derivative instruments or liquidity commitments are managed similarly to other credit, market or liquidity risks to which the Firm is exposed. The principal types of VIEs for which the Firm is engaged in on behalf of clients are municipal bond vehicles, credit-related note vehicles and asset swap vehicles.

Municipal bond vehicles

The Firm has created a series of trusts that provide short-term investors with qualifying tax-exempt investments, and that allow investors in tax-exempt securities to finance their investments at short-term tax-exempt rates. In a typical transaction, the vehicle purchases fixed-rate longer-term highly rated municipal bonds and funds the purchase by issuing two types of securities: (1) puttable floating-rate certificates and (2) inverse floating-rate residual interests ("residual interests"). The maturity of each of the puttable floating-rate certificates and the residual interests is equal to the life of the vehicle, while the maturity of the underlying municipal bonds is typically longer. Holders of the puttable floating-rate certificates may "put," or tender, the certificates if the remarketing agent cannot successfully remarket the floating-rate certificates to another investor. A liquidity facility conditionally obligates the liquidity provider to fund the purchase of the tendered floating-rate certificates. Upon termination of the vehicle, proceeds from

the sale of the underlying municipal bonds would first repay any funded liquidity facility or outstanding floating-rate certificates and the remaining amount, if any, would be paid to the residual interests. If the proceeds from the sale of the underlying municipal bonds are not sufficient to repay the liquidity facility, in certain transactions the liquidity provider has recourse to the residual interest holders for reimbursement. Certain residual interest holders may be required to post collateral with the Firm, as liquidity provider, to support such reimbursement obligations should the market value of the municipal bonds decline.

JPMorgan Chase Bank, N.A. often serves as the sole liquidity provider, and J.P. Morgan Securities LLC serves as remarketing agent, of the puttable floating-rate certificates. The liquidity provider's obligation to perform is conditional and is limited by certain termination events, which include bankruptcy or failure to pay by the municipal bond issuer or credit enhancement provider, an event of taxability on the municipal bonds or the immediate downgrade of the municipal bond to below investment grade. In addition, the Firm's exposure as liquidity provider is further limited by the high credit quality of the underlying municipal bonds, the excess collateralization in the vehicle, or in certain transactions, the reimbursement agreements with the residual interest holders.

The long-term credit ratings of the puttable floating rate certificates are directly related to the credit ratings of the underlying municipal bonds, the credit rating of any insurer of the underlying municipal bond, and the Firm's short-term credit rating as liquidity provider. A downgrade in any of these ratings would affect the rating of the puttable floating-rate certificates and could cause demand for these certificates by investors to decline or disappear. However, a downgrade of JPMorgan Chase Bank, N.A.'s short-term rating does not affect the Firm's obligation under the liquidity facility.

As remarketing agent, the Firm may hold puttable floating-rate certificates of the municipal bond vehicles. At December 31, 2014 and 2013, the Firm held $55 million and $262 million, respectively, of these certificates on its Consolidated balance sheets. The largest amount held by the Firm at any end of day during 2014 was $250 million, or 3.0%, of the municipal bond vehicles' aggregate outstanding puttable floating-rate certificates. The Firm did not have and continues not to have any intent to protect any residual interest holder from potential losses on any of the municipal bond holdings.

The Firm consolidates municipal bond vehicles if it owns the residual interest. The residual interest generally allows the owner to make decisions that significantly impact the economic performance of the municipal bond vehicle, primarily by directing the sale of the municipal bonds owned by the vehicle. In addition, the residual interest owners have the right to receive benefits and bear losses that could potentially be significant to the municipal bond vehicle. The Firm does not consolidate municipal bond vehicles if it does not own the residual interests, since the Firm does not have the power to make decisions that significantly impact the economic performance of the municipal bond vehicle. See page 268 of this Note for further information on consolidated municipal bond vehicles.

The Firm's exposure to nonconsolidated municipal bond VIEs at December 31, 2014 and 2013, including the ratings profile of the VIEs' assets, was as follows.

December 31, (in billions)	Fair value of assets held by VIEs	Liquidity facilities	Excess/(deficit)[a]	Maximum exposure
Nonconsolidated municipal bond vehicles				
2014	**$ 11.5**	**$ 6.3**	**$ 5.2**	**$ 6.3**
2013	11.8	6.9	4.9	6.9

	Ratings profile of VIE assets[b]						
	Investment-grade				Noninvestment-grade		
December 31, (in billions, except where otherwise noted)	AAA to AAA-	AA+ to AA-	A+ to A-	BBB+ to BBB-	BB+ and below	Fair value of assets held by VIEs	Wt. avg. expected life of assets (years)
2014	**$ 2.7**	**$ 8.4**	**$ 0.4**	**$ –**	**$ –**	**$ 11.5**	**4.9**
2013	2.7	8.9	0.2	–	–	$ 11.8	7.2

(a) Represents the excess/(deficit) of the fair values of municipal bond assets available to repay the liquidity facilities, if drawn.
(b) The ratings scale is presented on an S&P-equivalent basis.

Credit-related note and asset swap vehicles

Credit-related note vehicles

The Firm structures transactions with credit-related note vehicles in which the VIE purchases highly rated assets (generally investment-grade), such as government bonds, corporate bonds or asset-backed securities, and enters into a credit derivative contract with the Firm to obtain exposure to a referenced credit which the VIE otherwise does not hold. The VIE then issues credit-linked notes ("CLNs") to transfer the risk of the referenced credit to the VIE's investors. Clients and investors often prefer using a CLN vehicle since they may be of the view that the CLNs issued by the VIE is of a higher credit quality than equivalent notes issued directly by JPMorgan Chase. The Firm divides its credit-related note structures broadly into two types: static and managed. In a static credit-related note structure, the CLNs and associated credit derivative contract either reference a single credit (e.g., a multi-national corporation), or all or part of a fixed portfolio of credits. In a managed credit-related note structure, the CLNs and associated credit derivative generally reference all or part of an actively managed portfolio of credits.

The Firm's involvement with CLN vehicles is generally limited to being a derivative counterparty and it does not act as a portfolio manager for managed CLN VIEs. The Firm does not provide any additional contractual financial support to the VIE over and above its contractual obligations as derivative counterparty, but may also make a market in the CLNs issued by such VIEs, although it is under no obligation to do so. The Firm has not historically provided any financial support to the CLN vehicles over and above its contractual obligations. As a derivative counterparty the assets held by the VIE serve as collateral for any derivatives receivables. As such the collateral represents the maximum exposure the Firm has to these vehicles, which was $5.9 billion and $8.7 billion as of December 31, 2014 and 2013, respectively. The Firm's maximum exposure arises through the derivatives executed with the VIEs; the exposure varies over time with changes in the fair value of the derivatives. The Firm relies on the collateral held by the VIEs to pay any amounts due under the derivatives; the vehicles are structured at inception so that the par value of the collateral is expected to be sufficient to pay amounts due under the derivative contracts

Since each CLN is established to the specifications of the investors, the investors have the power over the activities of that VIE that most significantly affect the performance of the CLN. The Firm consolidates credit-related note entities only in limited circumstances where it holds positions in these entities that provided the Firm with control over the entity. The Firm consolidated credit-related note vehicles with collateral fair values of $163 million and $311 million, at December 31, 2014 and 2013, respectively. These consolidated VIEs included some that were structured by the Firm where the Firm provides the credit derivative, and some that have been structured by third parties where the Firm is not the credit derivative provider.

The Firm reports derivatives with unconsolidated CLN vehicles as well as any CLNs that it holds as market-maker on its Consolidated balance sheets at fair value with changes in fair value reported in principal transactions revenue. The Firm's exposure to non-consolidated CLN VIEs as of December 31, 2014 and 2013 was not material.

Asset swap vehicles

The Firm structures transactions with asset swap vehicles on behalf of investors. In such transactions, the VIE purchases a specific asset or assets (substantially all of which are investment-grade) and then enters into a derivative with the Firm in order to tailor the interest rate or foreign exchange currency risk, or both, according to investors' requirements. Investors typically invest in the notes issued by such VIEs in order to obtain exposure to the credit risk of the specific assets, as well as exposure to foreign exchange and interest rate risk that is tailored to their specific needs.

The Firm's involvement with asset swap vehicles is generally limited to being an interest rate or foreign exchange derivative counterparty. The Firm does not provide any additional contractual financial support to the VIE over and above its contractual obligations as derivative counterparty, but may also make a market in the notes issued by such VIEs, although it is under no obligation to do so. The Firm has not historically provided any financial support to asset swap vehicles over and above its contractual obligations. As a derivative counterparty the assets held by the VIE serve as collateral for any derivatives receivables. As such the collateral represents the maximum exposure the Firm has to these vehicles, which was $5.7 billion and $7.7 billion as of December 31, 2014 and 2013, respectively. The Firm's maximum exposure arises through the derivatives executed with the VIEs; the exposure varies over time with changes in the fair value of the derivatives. The Firm relies on the collateral held by the VIEs to pay any amounts due under the derivatives; the vehicles are structured at inception so that the par value of the collateral is expected to be sufficient to pay amounts due under the derivative contracts

Since each asset swap vehicle is established to the specifications of the investors, the investors have the power over the activities of that VIE that most significantly affect the performance of the entity. Accordingly, the Firm does not generally consolidate these asset swap vehicles and did not consolidate any asset swap vehicles at December 31, 2014 and 2013.

The Firm reports derivatives with unconsolidated asset swap vehicles that it holds as market-maker on its Consolidated balance sheets at fair value with changes in fair value reported in principal transactions revenue. The Firm's exposure to non-consolidated asset swap VIEs as of December 31, 2014 and 2013 was not material.

VIEs sponsored by third parties

The Firm enters into transactions with VIEs structured by other parties. These include, for example, acting as a derivative counterparty, liquidity provider, investor, underwriter, placement agent, trustee or custodian. These transactions are conducted at arm's-length, and individual credit decisions are based on the analysis of the specific VIE, taking into consideration the quality of the underlying assets. Where the Firm does not have the power to direct the activities of the VIE that most significantly impact the VIE's economic performance, or a variable interest that could potentially be significant, the Firm records and reports these positions on its Consolidated balance sheets similarly to the way it would record and report positions in respect of any other third-party transaction.

Consolidated VIE assets and liabilities

The following table presents information on assets and liabilities related to VIEs consolidated by the Firm as of December 31, 2014 and 2013.

	Assets				Liabilities		
December 31, 2014 (in billions)[a]	Trading assets	Loans	Other[c]	Total assets[d]	Beneficial interests in VIE assets[e]	Other[f]	Total liabilities
VIE program type							
Firm-sponsored credit card trusts	**$ –**	**$ 48.3**	**$ 0.7**	**$ 49.0**	**$ 31.2**	**$ –**	**$ 31.2**
Firm-administered multi-seller conduits	**–**	**17.7**	**0.1**	**17.8**	**12.0**	**–**	**12.0**
Municipal bond vehicles	**5.3**	**–**	**–**	**5.3**	**4.9**	**–**	**4.9**
Mortgage securitization entities[b]	**3.3**	**0.7**	**–**	**4.0**	**2.1**	**0.8**	**2.9**
Student loan securitization entities	**0.2**	**2.2**	**–**	**2.4**	**2.1**	**–**	**2.1**
Other	**0.3**	**–**	**1.0**	**1.3**	**0.1**	**0.1**	**0.2**
Total	**$ 9.1**	**$ 68.9**	**$ 1.8**	**$ 79.8**	**$ 52.4**	**$ 0.9**	**$ 53.3**

	Assets				Liabilities		
December 31, 2013 (in billions)[a]	Trading assets	Loans	Other[c]	Total assets[d]	Beneficial interests in VIE assets[e]	Other[f]	Total liabilities
VIE program type							
Firm-sponsored credit card trusts	$ –	$ 46.9	$ 1.1	$ 48.0	$ 26.6	$ –	$ 26.6
Firm-administered multi-seller conduits	–	19.0	0.1	19.1	14.9	–	14.9
Municipal bond vehicles	3.4	–	–	3.4	2.9	–	2.9
Mortgage securitization entities[b]	2.3	1.7	–	4.0	2.9	0.9	3.8
Student loan securitization entities	–	2.4	0.1	2.5	2.2	–	2.2
Other	0.7	0.1	0.9	1.7	0.1	0.2	0.3
Total	$ 6.4	$ 70.1	$ 2.2	$ 78.7	$ 49.6	$ 1.1	$ 50.7

(a) Excludes intercompany transactions, which were eliminated in consolidation.
(b) Includes residential and commercial mortgage securitizations as well as re-securitizations.
(c) Includes assets classified as cash, derivative receivables, AFS securities, and other assets within the Consolidated balance sheets.
(d) The assets of the consolidated VIEs included in the program types above are used to settle the liabilities of those entities. The difference between total assets and total liabilities recognized for consolidated VIEs represents the Firm's interest in the consolidated VIEs for each program type.
(e) The interest-bearing beneficial interest liabilities issued by consolidated VIEs are classified in the line item on the Consolidated balance sheets titled, "Beneficial interests issued by consolidated variable interest entities." The holders of these beneficial interests do not have recourse to the general credit of JPMorgan Chase. Included in beneficial interests in VIE assets are long-term beneficial interests of $35.4 billion and $31.8 billion at December 31, 2014 and 2013, respectively. The maturities of the long-term beneficial interests as of December 31, 2014, were as follows: $10.9 billion under one year, $19.0 billion between one and five years, and $5.5 billion over five years, all respectively.
(f) Includes liabilities classified as accounts payable and other liabilities in the Consolidated balance sheets.

Loan securitizations

The Firm has securitized and sold a variety of loans, including residential mortgage, credit card, automobile, student and commercial (primarily related to real estate) loans, as well as debt securities. The primary purposes of these securitization transactions were to satisfy investor demand and to generate liquidity for the Firm.

For loan securitizations in which the Firm is not required to consolidate the trust, the Firm records the transfer of the loan receivable to the trust as a sale when the accounting criteria for a sale are met. Those criteria are: (1) the transferred financial assets are legally isolated from the Firm's creditors; (2) the transferee or beneficial interest holder can pledge or exchange the transferred financial assets; and (3) the Firm does not maintain effective control over the transferred financial assets (e.g., the Firm cannot repurchase the transferred assets before their maturity and it does not have the ability to unilaterally cause the holder to return the transferred assets).

For loan securitizations accounted for as a sale, the Firm recognizes a gain or loss based on the difference between the value of proceeds received (including cash, beneficial interests, or servicing assets received) and the carrying value of the assets sold. Gains and losses on securitizations are reported in noninterest revenue.

Securitization activity

The following table provides information related to the Firm's securitization activities for the years ended December 31, 2014, 2013 and 2012, related to assets held in JPMorgan Chase-sponsored securitization entities that were not consolidated by the Firm, and where sale accounting was achieved based on the accounting rules in effect at the time of the securitization.

	2014		2013		2012	
Year ended December 31, (in millions, except rates)[a]	Residential mortgage[d][e]	Commercial and other[e][f]	Residential mortgage[d][e]	Commercial and other[e][f]	Residential mortgage[d][e]	Commercial and other[e][f]
Principal securitized	**$ 2,558**	**$ 11,911**	$ 1,404	$ 11,318	$ –	$ 5,421
All cash flows during the period:						
Proceeds from new securitizations[b]	**$ 2,569**	**$ 12,079**	$ 1,410	$ 11,507	$ –	$ 5,705
Servicing fees collected	**557**	**4**	576	5	662	4
Purchases of previously transferred financial assets (or the underlying collateral)[c]	**121**	**–**	294	–	222	–
Cash flows received on interests	**179**	**578**	156	325	185	163

(a) Excludes re-securitization transactions.

(b) Proceeds from residential mortgage securitizations were received in the form of securities. During 2014, $2.4 billion of residential mortgage securitizations were received as securities and classified in level 2, and $185 million were in level 3 of the fair value hierarchy. During 2013, $1.4 billion of residential mortgage securitizations were received as securities and classified in level 2 of the fair value hierarchy. Proceeds from commercial mortgage securitizations were received as securities and cash. During 2014, $11.4 billion of proceeds from commercial mortgage securitizations were received as securities and classified in level 2, and $130 million of proceeds were classified as level 3 of the fair value hierarchy; and $568 million of proceeds from commercial mortgage securitizations were received as cash. During 2013, $11.3 billion of commercial mortgage securitizations were classified in level 2 of the fair value hierarchy, and $207 million of proceeds from commercial mortgage securitizations were received as cash. During 2012, $5.7 billion of commercial mortgage securitizations were classified in level 2 of the fair value hierarchy.

(c) Includes cash paid by the Firm to reacquire assets from off-balance sheet, nonconsolidated entities – for example, loan repurchases due to representation and warranties and servicer clean-up calls.

(d) Includes prime, Alt-A, subprime, and option ARMs. Excludes certain loan securitization transactions entered into with Ginnie Mae, Fannie Mae and Freddie Mac.

(e) Key assumptions used to measure residential mortgage retained interests originated during the year included weighted-average life (in years) of 5.9 and 3.9 for the years ended December 31, 2014 and 2013, respectively, and weighted-average discount rate of 3.4% and 2.5% for the years ended December 31, 2014 and 2013, respectively. There were no residential mortgage securitizations during 2012. Key assumptions used to measure commercial and other retained interests originated during the year included weighted-average life (in years) of 6.5, 8.3 and 8.8 for the years ended December 31, 2014, 2013, and 2012, respectively, and weighted-average discount rate of 4.8%, 3.2% and 3.6% for the years ended December 31, 2014, 2013 and 2012, respectively.

(f) Includes commercial and student loan securitizations.

Loans and excess MSRs sold to the GSEs, loans in securitization transactions pursuant to Ginnie Mae guidelines, and other third-party-sponsored securitization entities

In addition to the amounts reported in the securitization activity tables above, the Firm, in the normal course of business, sells originated and purchased mortgage loans and certain originated excess MSRs on a nonrecourse basis, predominantly to Fannie Mae and Freddie Mac (the "GSEs"). These loans and excess MSRs are sold primarily for the purpose of securitization by the GSEs, who provide certain guarantee provisions (e.g., credit enhancement of the loans). The Firm also sells loans into securitization transactions pursuant to Ginnie Mae guidelines; these loans are typically insured or guaranteed by another U.S. government agency. The Firm does not consolidate the securitization vehicles underlying these transactions as it is not the primary beneficiary. For a limited number of loan sales, the Firm is obligated to share a portion of the credit risk associated with the sold loans with the purchaser. See Note 29 for additional information about the Firm's loan sales- and securitization-related indemnifications.

See Note 17 for additional information about the impact of the Firm's sale of certain excess mortgage servicing rights.

The following table summarizes the activities related to loans sold to the GSEs, loans in securitization transactions pursuant to Ginnie Mae guidelines, and other third-party-sponsored securitization entities.

Year ended December 31, (in millions)	**2014**	2013	2012
Carrying value of loans sold[a]	**$ 55,802**	$ 166,028	$ 179,008
Proceeds received from loan sales as cash	**$ 260**	$ 782	$ 195
Proceeds from loans sales as securities[b]	**55,117**	163,373	176,592
Total proceeds received from loan sales[c]	**$ 55,377**	$ 164,155	$ 176,787
Gains on loan sales[d]	**$ 316**	$ 302	$ 141

(a) Predominantly to the GSEs and in securitization transactions pursuant to Ginnie Mae guidelines.
(b) Predominantly includes securities from the GSEs and Ginnie Mae that are generally sold shortly after receipt.
(c) Excludes the value of MSRs retained upon the sale of loans. Gains on loans sales include the value of MSRs.
(d) The carrying value of the loans accounted for at fair value approximated the proceeds received upon loan sale.

Options to repurchase delinquent loans

In addition to the Firm's obligation to repurchase certain loans due to material breaches of representations and warranties as discussed in Note 29, the Firm also has the option to repurchase delinquent loans that it services for Ginnie Mae loan pools, as well as for other U.S. government agencies under certain arrangements. The Firm typically elects to repurchase delinquent loans from Ginnie Mae loan pools as it continues to service them and/or manage the foreclosure process in accordance with the applicable requirements, and such loans continue to be insured or guaranteed. When the Firm's repurchase option becomes exercisable, such loans must be reported on the Consolidated balance sheets as a loan with a corresponding liability. As of December 31, 2014 and 2013, the Firm had recorded on its Consolidated balance sheets $12.4 billion and $14.3 billion, respectively, of loans that either had been repurchased or for which the Firm had an option to repurchase. Predominantly all of these amounts relate to loans that have been repurchased from Ginnie Mae loan pools. Additionally, real estate owned resulting from voluntary repurchases of loans was $464 million and $2.0 billion as of December 31, 2014 and 2013, respectively. Substantially all of these loans and real estate owned are insured or guaranteed by U.S. government agencies. For additional information, refer to Note 14.

Loan delinquencies and liquidation losses

The table below includes information about components of nonconsolidated securitized financial assets, in which the Firm has continuing involvement, and delinquencies as of December 31, 2014 and 2013.

	Securitized assets		90 days past due		Liquidation losses	
As of or for the year ended December 31, (in millions)	**2014**	2013	**2014**	2013	**2014**	2013
Securitized loans[a]						
Residential mortgage:						
Prime/ Alt-A & Option ARMs	**$ 78,294**	$ 90,381	**$ 11,363**	$ 14,882	**$ 2,166**	$ 4,688
Subprime mortgage	**25,659**	28,008	**6,473**	7,726	**1,931**	2,420
Commercial and other	**94,438**	98,018	**1,522**	2,350	**1,267**	1,003
Total loans securitized[b]	**$ 198,391**	$ 216,407	**$ 19,358**	$ 24,958	**$ 5,364**	$ 8,111

(a) Total assets held in securitization-related SPEs were $254.3 billion and $271.7 billion, respectively, at December 31, 2014 and 2013. The $198.4 billion and $216.4 billion, respectively, of loans securitized at December 31, 2014 and 2013, excludes: $52.2 billion and $50.8 billion, respectively, of securitized loans in which the Firm has no continuing involvement, and $3.7 billion and $4.5 billion, respectively, of loan securitizations consolidated on the Firm's Consolidated balance sheets at December 31, 2014 and 2013.
(b) Includes securitized loans that were previously recorded at fair value and classified as trading assets.

Note 17 – Goodwill and other intangible assets

Goodwill

Goodwill is recorded upon completion of a business combination as the difference between the purchase price and the fair value of the net assets acquired. Subsequent to initial recognition, goodwill is not amortized but is tested for impairment during the fourth quarter of each fiscal year, or more often if events or circumstances, such as adverse changes in the business climate, indicate there may be impairment.

The goodwill associated with each business combination is allocated to the related reporting units, which are determined based on how the Firm's businesses are managed and how they are reviewed by the Firm's Operating Committee. The following table presents goodwill attributed to the business segments.

December 31, (in millions)	**2014**	2013	2012
Consumer & Community Banking	**$ 30,941**	$ 30,985	$ 31,048
Corporate & Investment Bank	**6,780**	6,888	6,895
Commercial Banking	**2,861**	2,862	2,863
Asset Management	**6,964**	6,969	6,992
Corporate[(a)]	**101**	377	377
Total goodwill	**$ 47,647**	$ 48,081	$ 48,175

(a) The remaining $101 million of Private Equity goodwill was disposed of as part of the Private Equity sale completed in January 2015. For further information on the Private Equity sale, see Note 2.

The following table presents changes in the carrying amount of goodwill.

Year ended December 31, (in millions)	**2014**	2013	2012
Balance at beginning of period	**$ 48,081**	$ 48,175	$ 48,188
Changes during the period from:			
Business combinations	**43**	64	43
Dispositions	**(80)**	(5)	(4)
Other[(a)]	**(397)**	(153)	(52)
Balance at December 31,	**$ 47,647**	$ 48,081	$ 48,175

(a) Includes foreign currency translation adjustments, other tax-related adjustments, and, during 2014, goodwill impairment associated with the Firm's Private Equity business of $276 million.

Impairment testing

During 2014, the Firm recognized impairments of the Private Equity business' goodwill totaling $276 million. The Firm's remaining goodwill was not impaired at December 31, 2014. Further, the Firm's goodwill was not impaired at December 31, 2013 nor was any goodwill written off due to impairment during 2013 or 2012.

The goodwill impairment test is performed in two steps. In the first step, the current fair value of each reporting unit is compared with its carrying value, including goodwill. If the fair value is in excess of the carrying value (including goodwill), then the reporting unit's goodwill is considered not to be impaired. If the fair value is less than the carrying value (including goodwill), then a second step is performed. In the second step, the implied current fair value of the reporting unit's goodwill is determined by comparing the fair value of the reporting unit (as determined in step one) to the fair value of the net assets of the reporting unit, as if the reporting unit were being acquired in a business combination. The resulting implied current fair value of goodwill is then compared with the carrying value of the reporting unit's goodwill. If the carrying value of the goodwill exceeds its implied current fair value, then an impairment charge is recognized for the excess. If the carrying value of goodwill is less than its implied current fair value, then no goodwill impairment is recognized.

The Firm uses the reporting units' allocated equity plus goodwill capital as a proxy for the carrying amounts of equity for the reporting units in the goodwill impairment testing. Reporting unit equity is determined on a similar basis as the allocation of equity to the Firm's lines of business, which takes into consideration the capital the business segment would require if it were operating independently, incorporating sufficient capital to address regulatory capital requirements (including Basel III), economic risk measures and capital levels for similarly rated peers. Proposed line of business equity levels are incorporated into the Firm's annual budget process, which is reviewed by the Firm's Board of Directors. Allocated equity is further reviewed on a periodic basis and updated as needed.

The primary method the Firm uses to estimate the fair value of its reporting units is the income approach. The models project cash flows for the forecast period and use the perpetuity growth method to calculate terminal values. These cash flows and terminal values are then discounted using an appropriate discount rate. Projections of cash flows are based on the reporting units' earnings forecasts, which include the estimated effects of regulatory and legislative changes (including, but not limited to the Dodd-Frank Wall Street Reform and Consumer Protection Act (the "Dodd-Frank Act")), and which are reviewed with the senior management of the Firm. The discount rate used for each reporting unit represents an estimate of the cost of equity for that reporting unit and is determined considering the Firm's overall estimated cost of equity (estimated using the Capital Asset Pricing Model), as adjusted for the risk characteristics specific to each reporting unit (for example, for higher levels of risk or uncertainty associated with the business or management's forecasts and assumptions). To assess the reasonableness of the discount rates used for each reporting unit management compares the discount rate to the estimated cost of equity for publicly traded institutions with similar businesses and risk characteristics. In addition, the weighted average cost of equity (aggregating the various reporting units) is compared with the Firms' overall estimated cost of equity to ensure reasonableness.

The valuations derived from the discounted cash flow models are then compared with market-based trading and transaction multiples for relevant competitors. Trading and transaction comparables are used as general indicators to assess the general reasonableness of the estimated fair

values, although precise conclusions generally cannot be drawn due to the differences that naturally exist between the Firm's businesses and competitor institutions. Management also takes into consideration a comparison between the aggregate fair value of the Firm's reporting units and JPMorgan Chase's market capitalization. In evaluating this comparison, management considers several factors, including (a) a control premium that would exist in a market transaction, (b) factors related to the level of execution risk that would exist at the firmwide level that do not exist at the reporting unit level and (c) short-term market volatility and other factors that do not directly affect the value of individual reporting units.

Deterioration in economic market conditions, increased estimates of the effects of regulatory or legislative changes, or additional regulatory or legislative changes may result in declines in projected business performance beyond management's current expectations. For example, in the Firm's Mortgage Banking business, such declines could result from increases in primary mortgage interest rates, lower mortgage origination volume, higher costs to resolve foreclosure-related matters or from deterioration in economic conditions, including decreases in home prices that result in increased credit losses. Declines in business performance, increases in equity capital requirements, or increases in the estimated cost of equity, could cause the estimated fair values of the Firm's reporting units or their associated goodwill to decline in the future, which could result in a material impairment charge to earnings in a future period related to some portion of the associated goodwill.

Mortgage servicing rights

Mortgage servicing rights represent the fair value of expected future cash flows for performing servicing activities for others. The fair value considers estimated future servicing fees and ancillary revenue, offset by estimated costs to service the loans, and generally declines over time as net servicing cash flows are received, effectively amortizing the MSR asset against contractual servicing and ancillary fee income. MSRs are either purchased from third parties or recognized upon sale or securitization of mortgage loans if servicing is retained.

As permitted by U.S. GAAP, the Firm has elected to account for its MSRs at fair value. The Firm treats its MSRs as a single class of servicing assets based on the availability of market inputs used to measure the fair value of its MSR asset and its treatment of MSRs as one aggregate pool for risk management purposes. The Firm estimates the fair value of MSRs using an option-adjusted spread ("OAS") model, which projects MSR cash flows over multiple interest rate scenarios in conjunction with the Firm's prepayment model, and then discounts these cash flows at risk-adjusted rates. The model considers portfolio characteristics, contractually specified servicing fees, prepayment assumptions, delinquency rates, costs to service, late charges and other ancillary revenue, and other economic factors. The Firm compares fair value estimates and assumptions to observable market data where available, and also considers recent market activity and actual portfolio experience.

The fair value of MSRs is sensitive to changes in interest rates, including their effect on prepayment speeds. MSRs typically decrease in value when interest rates decline because declining interest rates tend to increase prepayments and therefore reduce the expected life of the net servicing cash flows that comprise the MSR asset. Conversely, securities (e.g., mortgage-backed securities), principal-only certificates and certain derivatives (i.e., those for which the Firm receives fixed-rate interest payments) increase in value when interest rates decline. JPMorgan Chase uses combinations of derivatives and securities to manage changes in the fair value of MSRs. The intent is to offset any interest-rate related changes in the fair value of MSRs with changes in the fair value of the related risk management instruments.

The following table summarizes MSR activity for the years ended December 31, 2014, 2013 and 2012.

As of or for the year ended December 31, (in millions, except where otherwise noted)	2014	2013	2012
Fair value at beginning of period	**$ 9,614**	$ 7,614	$ 7,223
MSR activity:			
Originations of MSRs	**757**	2,214	2,376
Purchase of MSRs	**11**	1	457
Disposition of MSRs[a]	**(209)**	(725)	(579)
Net additions	**559**	1,490	2,254
Changes due to collection/realization of expected cash flows[b]	**(911)**	(1,102)	(1,228)
Changes in valuation due to inputs and assumptions:			
Changes due to market interest rates and other[c]	**(1,608)**	2,122	(589)
Changes in valuation due to other inputs and assumptions:			
Projected cash flows (e.g., cost to service)[d]	**133**	109	(452)
Discount rates	**(459)** [h]	(78)	(98)
Prepayment model changes and other[e]	**108**	(541)	504
Total changes in valuation due to other inputs and assumptions	**(218)**	(510)	(46)
Total changes in valuation due to inputs and assumptions[b]	**$ (1,826)**	$ 1,612	$ (635)
Fair value at December 31,[f]	**$ 7,436**	$ 9,614	$ 7,614
Change in unrealized gains/(losses) included in income related to MSRs held at December 31,	**$ (1,826)**	$ 1,612	$ (635)
Contractual service fees, late fees and other ancillary fees included in income	**$ 2,884**	$ 3,309	$ 3,783
Third-party mortgage loans serviced at December 31, (in billions)	**$ 756**	$ 822	$ 867
Servicer advances, net of an allowance for uncollectible amounts, at December 31, (in billions)[g]	**$ 8.5**	$ 9.6	$ 10.9

(a) Predominantly represents excess mortgage servicing rights transferred to agency-sponsored trusts in exchange for stripped mortgage backed securities ("SMBS"). In each transaction, a portion of the SMBS was acquired by third parties at the transaction date; the Firm acquired and has retained the remaining balance of those SMBS as trading securities. Also includes sales of MSRs in 2013 and 2012.

(b) Included changes related to commercial real estate of $(7) million, $(5) million and $(8) million for the years ended December 31, 2014, 2013 and 2012, respectively.

(c) Represents both the impact of changes in estimated future prepayments due to changes in market interest rates, and the difference between actual and expected prepayments.

(d) For the year ended December 31, 2013, the increase was driven by the inclusion in the MSR valuation model of servicing fees receivable on certain delinquent loans.

(e) Represents changes in prepayments other than those attributable to changes in market interest rates. For the year ended December 31, 2013, the decrease was driven by changes in the inputs and assumptions used to derive prepayment speeds, primarily increases in home prices.

(f) Included $11 million, $18 million and $23 million related to commercial real estate at December 31, 2014, 2013, and 2012, respectively.

(g) Represents amounts the Firm pays as the servicer (e.g., scheduled principal and interest to a trust, taxes and insurance), which will generally be reimbursed within a short period of time after the advance from future cash flows from the trust or the underlying loans. The Firm's credit risk associated with these advances is minimal because reimbursement of the advances is typically senior to all cash payments to investors. In addition, the Firm maintains the right to stop payment to investors if the collateral is insufficient to cover the advance. However, certain of these servicer advances may not be recoverable if they were not made in accordance with applicable rules and agreements.

(h) For the year ending December 31, 2014, the decrease was primarily related to higher capital allocated to the Mortgage Servicing business, which, in turn, resulted in an increase in the option adjusted spread ("OAS"). The resulting OAS assumption continues to be consistent with capital and return requirements that the Firm believes a market participant would consider, taking into account factors such as the current operating risk environment and regulatory and economic capital requirements.

The following table presents the components of mortgage fees and related income (including the impact of MSR risk management activities) for the years ended December 31, 2014, 2013 and 2012.

Year ended December 31, (in millions)	2014	2013	2012
CCB mortgage fees and related income			
Net production revenue:			
Production revenue	**$ 732**	$ 2,673	$ 5,783
Repurchase (losses)/benefits	**458**	331	(272)
Net production revenue	**1,190**	3,004	5,511
Net mortgage servicing revenue			
Operating revenue:			
Loan servicing revenue	**3,303**	3,552	3,772
Changes in MSR asset fair value due to collection/realization of expected cash flows	**(905)**	(1,094)	(1,222)
Total operating revenue	**2,398**	2,458	2,550
Risk management:			
Changes in MSR asset fair value due to market interest rates and other[(a)]	**(1,606)**	2,119	(587)
Other changes in MSR asset fair value due to other inputs and assumptions in model[(b)]	**(218)**	(511)	(46)
Change in derivative fair value and other	**1,796**	(1,875)	1,252
Total risk management	**(28)**	(267)	619
Total CCB net mortgage servicing revenue	**2,370**	2,191	3,169
All other	**3**	10	7
Mortgage fees and related income	**$ 3,563**	$ 5,205	$ 8,687

(a) Represents both the impact of changes in estimated future prepayments due to changes in market interest rates, and the difference between actual and expected prepayments.

(b) Represents the aggregate impact of changes in model inputs and assumptions such as projected cash flows (e.g., cost to service), discount rates and changes in prepayments other than those attributable to changes in market interest rates (e.g., changes in prepayments due to changes in home prices). For the year ended December 31, 2013, the decrease was driven by changes in the inputs and assumptions used to derive prepayment speeds, primarily increases in home prices.

The table below outlines the key economic assumptions used to determine the fair value of the Firm's MSRs at December 31, 2014 and 2013, and outlines the sensitivities of those fair values to immediate adverse changes in those assumptions, as defined below.

December 31, (in millions, except rates)	2014	2013
Weighted-average prepayment speed assumption ("CPR")	9.80%	8.07%
Impact on fair value of 10% adverse change	$ (337)	$ (362)
Impact on fair value of 20% adverse change	(652)	(705)
Weighted-average option adjusted spread	9.43%	7.77%
Impact on fair value of 100 basis points adverse change	$ (300)	$ (389)
Impact on fair value of 200 basis points adverse change	(578)	(750)

CPR: Constant prepayment rate.

The sensitivity analysis in the preceding table is hypothetical and should be used with caution. Changes in fair value based on variation in assumptions generally cannot be easily extrapolated, because the relationship of the change in the assumptions to the change in fair value are often highly interrelated and may not be linear. In this table, the effect that a change in a particular assumption may have on the fair value is calculated without changing any other assumption. In reality, changes in one factor may result in changes in another, which would either magnify or counteract the impact of the initial change.

Other intangible assets

Other intangible assets are recorded at their fair value upon completion of a business combination or certain other transactions, and generally represent the value of customer relationships or arrangements. Subsequently, the Firm's intangible assets with finite lives, including core deposit intangibles, purchased credit card relationships, and other intangible assets, are amortized over their useful lives in a manner that best reflects the economic benefits of the intangible asset. The $426 million decrease in other intangible assets during 2014 was predominantly due to $380 million in amortization.

The components of credit card relationships, core deposits and other intangible assets were as follows.

December 31, (in millions)	2014 Gross amount[a]	2014 Accumulated amortization[a]	2014 Net carrying value	2013 Gross amount	2013 Accumulated amortization	2013 Net carrying value
Purchased credit card relationships	**$ 200**	**$ 166**	**$ 34**	$ 3,540	$ 3,409	$ 131
Other credit card-related intangibles	**497**	**378**	**$ 119**	542	369	$ 173
Core deposit intangibles	**814**	**757**	**$ 57**	4,133	3,974	$ 159
Other intangibles[b]	**1,880**	**898**	**$ 982**	2,374	1,219	$ 1,155
Total other intangible assets	**$ 3,391**	**$ 2,199**	**$ 1,192**	**$ 10,589**	**$ 8,971**	**$ 1,618**

(a) The decrease in the gross amount and accumulated amortization from December 31, 2013, was due to the removal of fully amortized assets, predominantly related to intangible assets acquired in the 2004 merger with Bank One Corporation ("Bank One").
(b) Includes intangible assets of approximately $600 million consisting primarily of asset management advisory contracts, which were determined to have an indefinite life and are not amortized.

Amortization expense

The following table presents amortization expense related to credit card relationships, core deposits and other intangible assets.

Year ended December 31, (in millions)	2014	2013	2012
Purchased credit card relationships	**$ 97**	$ 195	$ 309
Other credit card-related intangibles	**51**	58	265
Core deposit intangibles	**102**	196	239
Other intangibles	**130**	188	144
Total amortization expense[a]	**$ 380**	$ 637	$ 957

(a) The decline in amortization expense during 2014 predominantly related to intangible assets acquired in the 2004 merger with Bank One, most of which became fully amortized during the second quarter of 2014.

Future amortization expense

The following table presents estimated future amortization expense related to credit card relationships, core deposits and other intangible assets at December 31, 2014.

Year ended December 31, (in millions)	Purchased credit card relationships	Other credit card-related intangibles	Core deposit intangibles	Other intangibles	**Total**
2015	$ 13	$ 38	$ 26	$ 89	$ 166
2016	6	33	14	73	126
2017	5	28	7	70	110
2018	3	20	5	50	78
2019	2	–	3	37	42

Impairment testing

The Firm's intangible assets are tested for impairment annually or more often if events or changes in circumstances indicate that the asset might be impaired.

The impairment test for a finite-lived intangible asset compares the undiscounted cash flows associated with the use or disposition of the intangible asset to its carrying value. If the sum of the undiscounted cash flows exceeds its carrying value, then no impairment charge is recorded. If the sum of the undiscounted cash flows is less than its carrying value, then an impairment charge is recognized in amortization expense to the extent the carrying amount of the asset exceeds its fair value.

The impairment test for indefinite-lived intangible assets compares the fair value of the intangible asset to its carrying amount. If the carrying value exceeds the fair value, then an impairment charge is recognized in amortization expense for the difference.

Note 18 – Premises and equipment

Premises and equipment, including leasehold improvements, are carried at cost less accumulated depreciation and amortization. JPMorgan Chase computes depreciation using the straight-line method over the estimated useful life of an asset. For leasehold improvements, the Firm uses the straight-line method computed over the lesser of the remaining term of the leased facility or the estimated useful life of the leased asset.

JPMorgan Chase capitalizes certain costs associated with the acquisition or development of internal-use software. Once the software is ready for its intended use, these costs are amortized on a straight-line basis over the software's expected useful life and reviewed for impairment on an ongoing basis.

Note 19 – Deposits

At December 31, 2014 and 2013, noninterest-bearing and interest-bearing deposits were as follows.

December 31, (in millions)	2014	2013
U.S. offices		
Noninterest-bearing	**$ 437,558**	$ 389,863
Interest-bearing		
Demand[a]	**90,319**	84,631
Savings[b]	**466,730**	450,405
Time (included **$7,501** and $5,995 at fair value)[c]	**86,301**	91,356
Total interest-bearing deposits	**643,350**	626,392
Total deposits in U.S. offices	**1,080,908**	1,016,255
Non-U.S. offices		
Noninterest-bearing	**19,078**	17,611
Interest-bearing		
Demand	**217,011**	214,391
Savings	**2,673**	1,083
Time (included **$1,306** and $629 at fair value)[c]	**43,757**	38,425
Total interest-bearing deposits	**263,441**	253,899
Total deposits in non-U.S. offices	**282,519**	271,510
Total deposits	**$ 1,363,427**	$ 1,287,765

(a) Includes Negotiable Order of Withdrawal ("NOW") accounts, and certain trust accounts.
(b) Includes Money Market Deposit Accounts ("MMDAs").
(c) Includes structured notes classified as deposits for which the fair value option has been elected. For further discussion, see Note 4.

At December 31, 2014 and 2013, time deposits in denominations of $100,000 or more were as follows.

December 31, (in millions)	2014	2013
U.S. offices	**$ 71,630**	$ 74,804
Non-U.S. offices	**43,743**	38,412
Total	**$115,373**	$113,216

At December 31, 2014, the maturities of interest-bearing time deposits were as follows.

December 31, 2014 (in millions)	U.S.	Non-U.S.	**Total**
2015	$ 70,929	$ 43,031	$ 113,960
2016	6,511	424	6,935
2017	1,480	61	1,541
2018	1,750	75	1,825
2019	1,423	166	1,589
After 5 years	4,208	–	4,208
Total	$ 86,301	$ 43,757	$ 130,058

Note 20 – Accounts payable and other liabilities

Accounts payable and other liabilities consist of payables to customers; payables to brokers, dealers and clearing organizations; payables from security purchases that did not settle; income taxes payables; accrued expense, including interest-bearing liabilities; and all other liabilities, including litigation reserves and obligations to return securities received as collateral.

The following table details the components of accounts payable and other liabilities.

December 31, (in millions)	2014	2013
Brokerage payables[a]	**$ 134,467**	$ 116,391
Accounts payable and other liabilities[b]	**72,487**	78,100
Total	**$ 206,954**	$ 194,491

(a) Includes payables to customers, brokers, dealers and clearing organizations, and payables from security purchases that did not settle.
(b) Includes $36 million and $25 million accounted for at fair value at December 31, 2014 and 2013, respectively.

Note 21 – Long-term debt

JPMorgan Chase issues long-term debt denominated in various currencies, although predominantly U.S. dollars, with both fixed and variable interest rates. Included in senior and subordinated debt below are various equity-linked or other indexed instruments, which the Firm has elected to measure at fair value. Changes in fair value are recorded in principal transactions revenue in the Consolidated statements of income. The following table is a summary of long-term debt carrying values (including unamortized original issue discount, valuation adjustments and fair value adjustments, where applicable) by remaining contractual maturity as of December 31, 2014.

By remaining maturity at December 31,		2014				2013
(in millions, except rates)		Under 1 year	1-5 years	After 5 years	**Total**	Total
Parent company						
Senior debt:	Fixed rate	**$ 13,214**	**$ 46,275**	**$ 49,300**	**$ 108,789**	$ 101,074

	Interest rates[a]	**–%**	**–%**	**0.73-8.75%**	**0.73-8.75%**	0.74-8.75%
	Subtotal	**$ –**	**$ –**	**$ 5,496**	**$ 5,496**	$ 5,445
Total long-term debt[b][c][d]		**$ 38,382**	**$ 155,490**	**$ 82,964**	**$ 276,836** [f][g]	$ 267,889
Long-term beneficial interests:						
	Fixed rate	**$ 4,650**	**$ 7,924**	**$ 1,398**	**$ 13,972**	$ 10,958
	Variable rate	**6,230**	**11,079**	**4,128**	**21,437**	20,872
	Interest rates	**0.18-1.36%**	**0.20-5.23%**	**0.05-15.93%**	**0.05-15.93%**	0.04-15.93%
Total long-term beneficial interests[e]		**$ 10,880**	**$ 19,003**	**$ 5,526**	**$ 35,409**	$ 31,830

(a) The interest rates shown are the range of contractual rates in effect at year-end, including non-U.S. dollar fixed- and variable-rate issuances, which excludes the effects of the associated derivative instruments used in hedge accounting relationships, if applicable. The use of these derivative instruments modifies the Firm's exposure to the contractual interest rates disclosed in the table above. Including the effects of the hedge accounting derivatives, the range of modified rates in effect at December 31, 2014, for total long-term debt was (0.10)% to 8.55%, versus the contractual range of 0.11% to 8.75% presented in the table above. The interest rate ranges shown exclude structured notes accounted for at fair value.

(b) Included long-term debt of $69.2 billion and $68.4 billion secured by assets totaling $156.7 billion and $131.3 billion at December 31, 2014 and 2013, respectively. The amount of long-term debt secured by assets does not include amounts related to hybrid instruments.

(c) Included $30.2 billion and $28.9 billion of long-term debt accounted for at fair value at December 31, 2014 and 2013, respectively.

(d) Included $2.9 billion and $2.7 billion of outstanding zero-coupon notes at December 31, 2014 and 2013, respectively. The aggregate principal amount of these notes at their respective maturities is $7.5 billion and $4.5 billion, respectively.

(e) Included on the Consolidated balance sheets in beneficial interests issued by consolidated VIEs. Also included $2.2 billion and $2.0 billion of outstanding structured notes accounted for at fair value at December 31, 2014 and 2013, respectively. Excluded short-term commercial paper and other short-term beneficial interests of $17.0 billion and $17.8 billion at December 31, 2014 and 2013, respectively.

(f) At December 31, 2014, long-term debt in the aggregate of $23.5 billion was redeemable at the option of JPMorgan Chase, in whole or in part, prior to maturity, based on the terms specified in the respective notes.

(g) The aggregate carrying values of debt that matures in each of the five years subsequent to 2014 is $38.4 billion in 2015, $50.0 billion in 2016, $42.0 billion in 2017, $35.3 billion in 2018 and $28.2 billion in 2019.

The weighted-average contractual interest rates for total long-term debt excluding structured notes accounted for at fair value were 2.43% and 2.56% as of December 31, 2014 and 2013, respectively. In order to modify exposure to interest rate and currency exchange rate movements, JPMorgan Chase utilizes derivative instruments, primarily interest rate and cross-currency interest rate swaps, in conjunction with some of its debt issues. The use of these instruments modifies the Firm's interest expense on the associated debt. The modified weighted-average interest rates for total long-term debt, including the effects of related derivative instruments, were 1.50% and 1.54% as of December 31, 2014 and 2013, respectively.

The Parent Company has guaranteed certain long-term debt of its subsidiaries, including both long-term debt and structured notes sold as part of the Firm's market-making activities. These guarantees rank on parity with all of the Firm's other unsecured and unsubordinated indebtedness. Guaranteed liabilities were $352 million and $478 million at December 31, 2014 and 2013, respectively.

The Firm's unsecured debt does not contain requirements that would call for an acceleration of payments, maturities or changes in the structure of the existing debt, provide any limitations on future borrowings or require additional collateral, based on unfavorable changes in the Firm's credit ratings, financial ratios, earnings or stock price.

Junior subordinated deferrable interest debentures held by trusts that issued guaranteed capital debt securities

On May 8, 2013, the Firm redeemed approximately $5.0 billion, or 100% of the liquidation amount, of the following eight series of guaranteed capital debt securities ("trust preferred securities"): JPMorgan Chase Capital X, XI, XII, XIV, XVI, XIX and XXIV, and BANK ONE Capital VI. Other income for the year ended December 31, 2013, reflected a modest loss related to the redemption of trust preferred securities. On July 12, 2012, the Firm redeemed $9.0 billion, or 100% of the liquidation amount, of the following nine series of trust preferred securities: JPMorgan Chase Capital XV, XVII, XVIII, XX, XXII, XXV, XXVI, XXVII and XXVIII. Other income for the year ended December 31, 2012, reflected $888 million of pretax extinguishment gains related to adjustments applied to the cost basis of the redeemed trust preferred securities during the period they were in a qualified hedge accounting relationship.

At December 31, 2014, the Firm had outstanding nine wholly owned Delaware statutory business trusts ("issuer trusts") that had issued guaranteed capital debt securities.

The junior subordinated deferrable interest debentures issued by the Firm to the issuer trusts, totaling $5.5 billion and $5.4 billion at December 31, 2014 and 2013, respectively, were reflected on the Firm's Consolidated balance sheets in long-term debt, and in the table on the preceding page under the caption "Junior subordinated debt" (i.e., trust preferred securities). The Firm also records the common capital securities issued by the issuer trusts in other assets in its Consolidated balance sheets at December 31, 2014 and 2013. Beginning in 2014, the debentures issued to the issuer trusts by the Firm, less the common capital securities of the issuer trusts, began being phased out from inclusion as Tier 1 capital under Basel III. As of December 31, 2014, $2.7 billion of these debentures qualified as Tier 1 capital, while $2.7 billion qualified as Tier 2 capital. As of December 31, 2013, under Basel I, the entire balance of these debentures qualified as Tier 1 capital.

The following is a summary of the outstanding trust preferred securities, including unamortized original issue discount, issued by each trust, and the junior subordinated deferrable interest debenture issued to each trust, as of December 31, 2014.

December 31, 2014 (in millions)	Amount of trust preferred securities issued by trust[a]	Principal amount of debenture issued to trust[b]	Issue date	Stated maturity of trust preferred securities and debentures	Earliest redemption date	Interest rate of trust preferred securities and debentures	Interest payment/ distribution dates
Bank One Capital III	$ 474	$ 726	2000	2030	Any time	8.75%	Semiannually
Chase Capital II	482	498	1997	2027	Any time	LIBOR + 0.50%	Quarterly
Chase Capital III	296	305	1997	2027	Any time	LIBOR + 0.55%	Quarterly
Chase Capital VI	242	249	1998	2028	Any time	LIBOR + 0.625%	Quarterly
First Chicago NBD Capital I	249	257	1997	2027	Any time	LIBOR + 0.55%	Quarterly
JPMorgan Chase Capital XIII	466	480	2004	2034	Any time	LIBOR + 0.95%	Quarterly
JPMorgan Chase Capital XXI	836	838	2007	2037	Any time	LIBOR + 0.95%	Quarterly
JPMorgan Chase Capital XXIII	643	643	2007	2047	Any time	LIBOR + 1.00%	Quarterly
JPMorgan Chase Capital XXIX	1,500	1,500	2010	2040	2015	6.70%	Quarterly
Total	$ 5,188	$ 5,496					

(a) Represents the amount of trust preferred securities issued to the public by each trust, including unamortized original-issue discount.

(b) Represents the principal amount of JPMorgan Chase debentures issued to each trust, including unamortized original-issue discount. The principal amount of debentures issued to the trusts includes the impact of hedging and purchase accounting fair value adjustments that were recorded on the Firm's Consolidated Financial Statements.

Note 22 – Preferred stock

At December 31, 2014 and 2013, JPMorgan Chase was authorized to issue 200 million shares of preferred stock, in one or more series, with a par value of $1.00 per share.

In the event of a liquidation or dissolution of the Firm, JPMorgan Chase's preferred stock then outstanding takes precedence over the Firm's common stock for the payment of dividends and the distribution of assets.

The following is a summary of JPMorgan Chase's non-cumulative preferred stock outstanding as of December 31, 2014 and 2013.

	Shares at December 31, (represented by depositary shares)[a]		Carrying value (in millions) at December 31,			Contractual rate in effect at December 31,		Date at which dividend rate becomes

Total preferred stock	**2,006,250**	1,115,750	**$ 20,063**	$ 11,158					

(a) Represented by depositary shares.

Each series of preferred stock has a liquidation value and redemption price per share of $10,000, plus any accrued but unpaid dividends.

Dividends on fixed-rate preferred stock are payable quarterly. Dividends on fixed-to-floating rate preferred stock are payable semiannually while at a fixed rate, and will become payable quarterly after converting to a floating rate.

On September 1, 2013, the Firm redeemed all of the outstanding shares of its 8.625% Non-Cumulative Preferred Stock, Series J at their stated redemption value.

Redemption rights

Each series of the Firm's preferred stock may be redeemed on any dividend payment date on or after the earliest redemption date for that series. All outstanding preferred stock series except Series I may also be redeemed following a capital treatment event, as described in the terms of each series. Any redemption of the Firm's preferred stock is subject to non-objection from the Federal Reserve.

Subsequent events

Issuance of preferred stock

On February 12, 2015, the Firm issued $1.4 billion of noncumulative preferred stock.

Note 23 – Common stock

At December 31, 2014 and 2013, JPMorgan Chase was authorized to issue 9.0 billion shares of common stock with a par value of $1 per share.

Common shares issued (newly issued or distributed from treasury) by JPMorgan Chase during the years ended December 31, 2014, 2013 and 2012 were as follows.

Year ended December 31, (in millions)	**2014**	2013	2012
Total issued – balance at January 1 and December 31	**4,104.9**	4,104.9	4,104.9
Treasury – balance at January 1	**(348.8)**	(300.9)	(332.2)
Purchase of treasury stock	**(82.3)**	(96.1)	(33.5)
Share repurchases related to employee stock-based awards[a]	**–**	–	(0.2)
Issued from treasury:			
Employee benefits and compensation plans	**39.8**	47.1	63.7
Employee stock purchase plans	**1.2**	1.1	1.3
Total issued from treasury	**41.0**	48.2	65.0
Total treasury – balance at December 31	**(390.1)**	(348.8)	(300.9)
Outstanding	**3,714.8**	3,756.1	3,804.0

(a) Participants in the Firm's stock-based incentive plans may have shares withheld to cover income taxes.

At each of December 31, 2014, 2013, and 2012, respectively, the Firm had 59.8 million warrants outstanding to purchase shares of common stock (the "Warrants"). The Warrants are currently traded on the New York Stock Exchange, and they are exercisable, in whole or in part, at any time and from time to time until October 28, 2018. The original warrant exercise price was $42.42 per share. The number of shares issuable upon the exercise of each warrant and the warrant exercise price is subject to adjustment upon the occurrence of certain events, including, but not limited to, the extent regular quarterly cash dividends exceed $0.38 per share. As a result of the increase in the Firm's quarterly common stock dividend to $0.40 per share commencing with the second quarter of 2014, the exercise price of the Warrants was adjusted each subsequent quarter, and was $42.391 as of December 31, 2014. There has been no change in the number of shares issuable upon exercise.

On March 13, 2012, the Board of Directors authorized a $15.0 billion common equity (i.e., common stock and warrants) repurchase program. As of December 31, 2014, $3.8 billion (on a trade-date basis) of authorized repurchase capacity remained under the program. The amount of equity that may be repurchased by the Firm is also subject to the amount that is set forth in the Firm's annual capital plan that is submitted to the Federal Reserve as part of the Comprehensive Capital Analysis and Review ("CCAR") process.

The following table sets forth the Firm's repurchases of common equity for the years ended December 31, 2014, 2013 and 2012, on a trade-date basis. There were no warrants repurchased during the years ended December 31, 2014, and 2013.

Year ended December 31, (in millions)	**2014**	2013	2012
Total number of shares of common stock repurchased	**83.4**	96.1	30.9
Aggregate purchase price of common stock repurchases	**$ 4,834**	$ 4,789	$ 1,329
Total number of Warrants repurchased	**–**	–	18.5
Aggregate purchase price of Warrant repurchases	**$ –**	$ –	$ 238

The Firm may, from time to time, enter into written trading plans under Rule 10b5-1 of the Securities Exchange Act of 1934 to facilitate repurchases in accordance with the common equity repurchase program. A Rule 10b5-1 repurchase plan allows the Firm to repurchase its equity during periods when it would not otherwise be repurchasing common equity – for example, during internal trading "blackout periods." All purchases under a Rule 10b5-1 plan must be made according to a predefined plan established when the Firm is not aware of material nonpublic information. For additional information regarding repurchases of the Firm's equity securities, see Part II, Item 5: Market for registrant's common equity, related stockholder matters and issuer purchases of equity securities, on pages 18–19.

As of December 31, 2014, approximately 240 million unissued shares of common stock were reserved for issuance under various employee incentive, compensation, option and stock purchase plans, director compensation plans, and the Warrants, as discussed above.

Note 24 – Earnings per share

Earnings per share ("EPS") is calculated under the two-class method under which all earnings (distributed and undistributed) are allocated to each class of common stock and participating securities based on their respective rights to receive dividends. JPMorgan Chase grants restricted stock and RSUs to certain employees under its stock-based compensation programs, which entitle recipients to receive nonforfeitable dividends during the vesting period on a basis equivalent to the dividends paid to holders of common stock; these unvested awards meet the definition of participating securities. Options issued under employee benefit plans that have an antidilutive effect are excluded from the computation of diluted EPS.

The following table presents the calculation of basic and diluted EPS for the years ended December 31, 2014, 2013 and 2012.

Year ended December 31, (in millions, except per share amounts)	**2014**	2013	2012
Basic earnings per share			
Net income	**$ 21,762**	$ 17,923	$ 21,284
Less: Preferred stock dividends	**1,125**	805	653
Net income applicable to common equity	**20,637**	17,118	20,631
Less: Dividends and undistributed earnings allocated to participating securities	**544**	525	754
Net income applicable to common stockholders	**$ 20,093**	$ 16,593	$ 19,877
Total weighted-average basic shares outstanding	**3,763.5**	3,782.4	3,809.4
Net income per share	**$ 5.34**	$ 4.39	$ 5.22
Diluted earnings per share			
Net income applicable to common stockholders	**$ 20,093**	$ 16,593	$ 19,877
Total weighted-average basic shares outstanding	**3,763.5**	3,782.4	3,809.4
Add: Employee stock options, SARs and warrants[(a)]	**34.0**	32.5	12.8
Total weighted-average diluted shares outstanding[(b)]	**3,797.5**	3,814.9	3,822.2
Net income per share	**$ 5.29**	$ 4.35	$ 5.20

(a) Excluded from the computation of diluted EPS (due to the antidilutive effect) were certain options issued under employee benefit plans and the Warrants. The aggregate number of shares issuable upon the exercise of such options and Warrants was 1 million, 6 million and 148 million for the years ended December 31, 2014, 2013 and 2012, respectively.

(b) Participating securities were included in the calculation of diluted EPS using the two-class method, as this computation was more dilutive than the calculation using the treasury stock method.

Note 25 – Accumulated other comprehensive income/(loss)

AOCI includes the after-tax change in unrealized gains and losses on investment securities, foreign currency translation adjustments (including the impact of related derivatives), cash flow hedging activities, and net loss and prior service costs/(credit) related to the Firm's defined benefit pension and OPEB plans.

Year ended December 31, (in millions)	Unrealized gains/(losses) on investment securities[a]	Translation adjustments, net of hedges	Cash flow hedges	Defined benefit pension and OPEB plans	Accumulated other comprehensive income/(loss)
Balance at December 31, 2011	$ 3,565 [b]	$ (26)	$ 51	$ (2,646)	$ 944
Net change	3,303	(69)	69	(145)	3,158
Balance at December 31, 2012	$ 6,868 [b]	$ (95)	$ 120	$ (2,791)	$ 4,102
Net change	(4,070)	(41)	(259)	1,467	(2,903)
Balance at December 31, 2013	$ 2,798 [b]	$ (136)	$ (139)	$ (1,324)	$ 1,199
Net change	**1,975**	**(11)**	**44**	**(1,018)**	**990**
Balance at December 31, 2014	**$ 4,773 [b]**	**$ (147)**	**$ (95)**	**$ (2,342)**	**$ 2,189**

(a) Represents the after-tax difference between the fair value and amortized cost of securities accounted for as AFS including, as of the date of transfer during the first quarter of 2014, $9 million of net unrealized losses related to AFS securities that were transferred to HTM. Subsequent to transfer, includes any net unamortized unrealized gains and losses related to the transferred securities.

(b) At December 31, 2011, included after-tax non-credit related unrealized losses of $56 million on debt securities for which credit losses have been recognized in income. There were no such losses for the other periods presented.

The following table presents the before- and after-tax changes in the components of other comprehensive income/(loss).

	2014			2013			2012		
Year ended December 31, (in millions)	Pretax	Tax effect	After-tax	Pretax	Tax effect	After-tax	Pretax	Tax effect	After-tax
Unrealized gains/(losses) on investment securities:

(a) The pretax amount is reported in securities gains in the Consolidated statements of income.

(b) Reclassifications of pretax realized gains/(losses) on translation adjustments and related hedges are reported in other income/expense in the Consolidated statements of income. The amounts were not material for the periods presented.

(c) The pretax amount is reported in the same line as the hedged items, which are predominantly recorded in net interest income in the Consolidated statements of income.

(d) The pretax amount is reported in compensation expense in the Consolidated statements of income.

Note 26 – Income taxes

JPMorgan Chase and its eligible subsidiaries file a consolidated U.S. federal income tax return. JPMorgan Chase uses the asset and liability method to provide income taxes on all transactions recorded in the Consolidated Financial Statements. This method requires that income taxes reflect the expected future tax consequences of temporary differences between the carrying amounts of assets or liabilities for book and tax purposes. Accordingly, a deferred tax asset or liability for each temporary difference is determined based on the tax rates that the Firm expects to be in effect when the underlying items of income and expense are realized. JPMorgan Chase's expense for income taxes includes the current and deferred portions of that expense. A valuation allowance is established to reduce deferred tax assets to the amount the Firm expects to realize.

Due to the inherent complexities arising from the nature of the Firm's businesses, and from conducting business and being taxed in a substantial number of jurisdictions, significant judgments and estimates are required to be made. Agreement of tax liabilities between JPMorgan Chase and the many tax jurisdictions in which the Firm files tax returns may not be finalized for several years. Thus, the Firm's final tax-related assets and liabilities may ultimately be different from those currently reported.

A reconciliation of the applicable statutory U.S. income tax rate to the effective tax rate for each of the years ended December 31, 2014, 2013 and 2012, is presented in the following table.

Effective tax rate

Year ended December 31,	**2014**	2013	2012
Statutory U.S. federal tax rate	**35.0%**	35.0%	35.0%
Increase/(decrease) in tax rate resulting from:			
U.S. state and local income taxes, net of U.S. federal income tax benefit	**2.7**	2.2	1.6
Tax-exempt income	**(3.1)**	(3.1)	(2.9)
Non-U.S. subsidiary earnings[a]	**(2.0)**	(4.9)	(2.4)
Business tax credits	**(5.4)**	(5.4)	(4.2)
Nondeductible legal expense	**2.4**	8.0	(0.2)
Other, net	**(2.6)**	(1.0)	(0.5)
Effective tax rate	**27.0%**	30.8%	26.4%

(a) Predominantly includes earnings of U.K. subsidiaries that are deemed to be reinvested indefinitely.

The components of income tax expense/(benefit) included in the Consolidated statements of income were as follows for each of the years ended December 31, 2014, 2013, and 2012.

Income tax expense/(benefit)

Year ended December 31, (in millions)	**2014**	2013	2012
Current income tax expense/(benefit)			
U.S. federal	**$ 1,610**	$ (1,316)	$ 3,225
Non-U.S.	**1,353**	1,308	1,782
U.S. state and local	**857**	(4)	1,496
Total current income tax expense/ (benefit)	**3,820**	(12)	6,503
Deferred income tax expense/(benefit)			
U.S. federal	**3,738**	7,080	2,238
Non-U.S.	**71**	10	(327)
U.S. state and local	**401**	913	(781)
Total deferred income tax expense/ (benefit)	**4,210**	8,003	1,130
Total income tax expense	**$ 8,030**	$ 7,991	$ 7,633

Total income tax expense includes $451 million, $531 million and $200 million of tax benefits recorded in 2014, 2013, and 2012, respectively, as a result of tax audit resolutions. In 2013, the relationship between current and deferred income tax expense was largely driven by the reversal of significant deferred tax assets as well as prior-year tax adjustments and audit resolutions.

The preceding table does not reflect the tax effect of certain items that are recorded each period directly in stockholders' equity and certain tax benefits associated with the Firm's employee stock-based compensation plans. The tax effect of all items recorded directly to stockholders' equity resulted in a decrease of $140 million in 2014, an increase of $2.1 billion in 2013, and a decrease of $1.9 billion in 2012.

U.S. federal income taxes have not been provided on the undistributed earnings of certain non-U.S. subsidiaries, to the extent that such earnings have been reinvested abroad for an indefinite period of time. Based on JPMorgan Chase's ongoing review of the business requirements and capital needs of its non-U.S. subsidiaries, combined with the formation of specific strategies and steps taken to fulfill these requirements and needs, the Firm has determined that the undistributed earnings of certain of its subsidiaries would be indefinitely reinvested to fund current and future growth of the related businesses. As management does not intend to use the earnings of these subsidiaries as a source of funding for its U.S. operations, such earnings will not be distributed to the U.S. in the foreseeable future. For 2014, pretax earnings of $2.6 billion were generated and will be indefinitely reinvested in these subsidiaries. At December 31, 2014, the cumulative amount of undistributed pretax earnings in these subsidiaries were $31.1 billion. If the Firm were to record a deferred tax liability associated with these undistributed earnings, the amount would be $7.0 billion at December 31, 2014.

These undistributed earnings are related to subsidiaries located predominantly in the U.K. where the 2014 statutory tax rate was 21.5%.

Tax expense applicable to securities gains and losses for the years 2014, 2013 and 2012 was $30 million, $261 million, and $822 million, respectively.

Deferred income tax expense/(benefit) results from differences between assets and liabilities measured for financial reporting purposes versus income tax return purposes. Deferred tax assets are recognized if, in management's judgment, their realizability is determined to be more likely than not. If a deferred tax asset is determined to be unrealizable, a valuation allowance is established. The significant components of deferred tax assets and liabilities are reflected in the following table as of December 31, 2014 and 2013.

Deferred taxes

December 31, (in millions)	2014	2013
Deferred tax assets		
Allowance for loan losses	**$ 5,756**	$ 6,593
Employee benefits	**3,378**	4,468
Accrued expenses and other	**8,637**	9,179
Non-U.S. operations	**5,106**	5,493
Tax attribute carryforwards	**570**	748
Gross deferred tax assets	**23,447**	26,481
Valuation allowance	**(820)**	(724)
Deferred tax assets, net of valuation allowance	**$ 22,627**	$ 25,757
Deferred tax liabilities		
Depreciation and amortization	**$ 3,073**	$ 3,196
Mortgage servicing rights, net of hedges	**5,533**	5,882
Leasing transactions	**2,495**	2,352
Non-U.S. operations	**4,444**	4,705
Other, net	**4,891**	3,459
Gross deferred tax liabilities	**20,436**	19,594
Net deferred tax assets	**$ 2,191**	$ 6,163

JPMorgan Chase has recorded deferred tax assets of $570 million at December 31, 2014, in connection with U.S. federal net operating loss ("NOL") carryforwards. At December 31, 2014, total U.S. federal NOL carryforwards were approximately $1.6 billion. If not utilized, the U.S. federal NOL carryforwards will expire between 2025 and 2034.

The valuation allowance at December 31, 2014, was due to losses associated with non-U.S. subsidiaries.

At December 31, 2014, 2013 and 2012, JPMorgan Chase's unrecognized tax benefits, excluding related interest expense and penalties, were $4.9 billion, $5.5 billion and $7.2 billion, respectively, of which $3.5 billion, $3.7 billion and $4.2 billion, respectively, if recognized, would reduce the annual effective tax rate. Included in the amount of unrecognized tax benefits are certain items that would not affect the effective tax rate if they were recognized in the Consolidated statements of income. These unrecognized items include the tax effect of certain temporary differences, the portion of gross state and local unrecognized tax benefits that would be offset by the benefit from associated U.S. federal income tax deductions, and the portion of gross non-U.S. unrecognized tax benefits that would have offsets in other jurisdictions. JPMorgan Chase is presently under audit by a number of taxing authorities, most notably by the Internal Revenue Service, New York State and City, and the State of California as summarized in the Tax examination status table below. Based upon the status of all of the tax examinations currently in process, it is reasonably possible that over the next 12 months the resolution of these examinations could result in a reduction in the gross balance of unrecognized tax benefits in the range of $0 to approximately $2 billion. Upon settlement of an audit, the gross unrecognized tax benefits would decline either because of tax payments or the recognition of tax benefits.

The following table presents a reconciliation of the beginning and ending amount of unrecognized tax benefits for the years ended December 31, 2014, 2013 and 2012.

Unrecognized tax benefits

Year ended December 31, (in millions)	2014	2013	2012
Balance at January 1,	**$ 5,535**	$ 7,158	$ 7,189
Increases based on tax positions related to the current period	**810**	542	680
Increases based on tax positions related to prior periods	**477**	88	234
Decreases based on tax positions related to prior periods	**(1,902)**	(2,200)	(853)
Decreases related to settlements with taxing authorities	**(9)**	(53)	(50)
Decreases related to a lapse of applicable statute of limitations	**–**	–	(42)
Balance at December 31,	**$ 4,911**	$ 5,535	$ 7,158

After-tax interest expense/(benefit) and penalties related to income tax liabilities recognized in income tax expense were $17 million, $(184) million and $147 million in 2014, 2013 and 2012, respectively.

At both December 31, 2014 and 2013, in addition to the liability for unrecognized tax benefits, the Firm had accrued $1.2 billion for income tax-related interest and penalties.

JPMorgan Chase is continually under examination by the Internal Revenue Service, by taxing authorities throughout the world, and by many states throughout the U.S. The following table summarizes the status of significant income tax examinations of JPMorgan Chase and its consolidated subsidiaries as of December 31, 2014.

Tax examination status

December 31, 2014	Periods under examination	Status
JPMorgan Chase – U.S.	2003 - 2005	Field examination completed; at Appellate level
JPMorgan Chase – U.S.	2006 - 2010	Field examination
JPMorgan Chase – U.K.	2006 – 2012	Field examination of certain select entities
JPMorgan Chase – New York State and City	2005 – 2007	Field examination
JPMorgan Chase – California	2006 – 2010	Field examination

The following table presents the U.S. and non-U.S. components of income before income tax expense for the years ended December 31, 2014, 2013 and 2012.

Income before income tax expense - U.S. and non-U.S.

Year ended December 31, (in millions)	**2014**	2013	2012
U.S.	**$ 22,515**	$ 17,229	$ 24,895
Non-U.S.[(a)]	**7,277**	8,685	4,022
Income before income tax expense	**$ 29,792**	$ 25,914	$ 28,917

(a) For purposes of this table, non-U.S. income is defined as income generated from operations located outside the U.S.

Note 27 – Restrictions on cash and intercompany funds transfers

The business of JPMorgan Chase Bank, National Association ("JPMorgan Chase Bank, N.A.") is subject to examination and regulation by the OCC. The Bank is a member of the U.S. Federal Reserve System, and its deposits in the U.S. are insured by the FDIC.

The Federal Reserve requires depository institutions to maintain cash reserves with a Federal Reserve Bank. The average amount of reserve balances deposited by the Firm's bank subsidiaries with various Federal Reserve Banks was approximately $10.6 billion and $5.3 billion in 2014 and 2013, respectively.

Restrictions imposed by U.S. federal law prohibit JPMorgan Chase and certain of its affiliates from borrowing from banking subsidiaries unless the loans are secured in specified amounts. Such secured loans to the Firm or to other affiliates are generally limited to 10% of the banking subsidiary's total capital, as determined by the risk-based capital guidelines; the aggregate amount of all such loans is limited to 20% of the banking subsidiary's total capital.

The principal sources of JPMorgan Chase's income (on a parent company-only basis) are dividends and interest from JPMorgan Chase Bank, N.A., and the other banking and nonbanking subsidiaries of JPMorgan Chase. In addition to dividend restrictions set forth in statutes and regulations, the Federal Reserve, the Office of the Comptroller of the Currency ("OCC") and the FDIC have authority under the Financial Institutions Supervisory Act to prohibit or to limit the payment of dividends by the banking organizations they supervise, including JPMorgan Chase and its subsidiaries that are banks or bank holding companies, if, in the banking regulator's opinion, payment of a dividend would constitute an unsafe or unsound practice in light of the financial condition of the banking organization.

At January 1, 2015, JPMorgan Chase's banking subsidiaries could pay, in the aggregate, approximately $31 billion in dividends to their respective bank holding companies without the prior approval of their relevant banking regulators. The capacity to pay dividends in 2015 will be supplemented by the banking subsidiaries' earnings during the year.

In compliance with rules and regulations established by U.S. and non-U.S. regulators, as of December 31, 2014 and 2013, cash in the amount of $16.8 billion and $17.2 billion, respectively, and securities with a fair value of $10.1 billion and $1.5 billion, respectively, were segregated in special bank accounts for the benefit of securities and futures brokerage customers. In addition, as of December 31, 2014 and 2013, the Firm had other restricted cash of $3.3 billion and $3.9 billion, respectively, primarily representing cash reserves held at non-U.S. central banks and held for other general purposes.

Note 28 – Regulatory capital

The Federal Reserve establishes capital requirements, including well-capitalized standards, for the consolidated financial holding company. The OCC establishes similar capital requirements and standards for the Firm's national banks, including JPMorgan Chase Bank, N.A. and Chase Bank USA, N.A.

Basel III rules under the transitional Standardized and Advanced Approaches ("Basel III Standardized Transitional" and "Basel III Advanced Transitional," respectively) became effective on January 1, 2014; December 31, 2013 data is based on Basel I rules. Basel III establishes two comprehensive methodologies for calculating RWA (a Standardized approach and an Advanced approach) which include capital requirements for credit risk, market risk, and in the case of Basel III Advanced, also operational risk. Key differences in the calculation of credit risk RWA between the Standardized and Advanced approaches are that for Basel III Advanced, credit risk RWA is based on risk-sensitive approaches which largely rely on the use of internal credit models and parameters, whereas for Basel III Standardized, credit risk RWA is generally based on supervisory risk-weightings which vary primarily by counterparty type and asset class. Market risk RWA is calculated mostly consistent across Basel III Standardized and Basel III Advanced, both of which incorporate the requirements set forth in Basel 2.5. For 2014, Basel III Standardized Transitional requires the Firm to calculate its capital ratios using the Basel III definition of capital divided by the Basel I definition of RWA, inclusive of Basel 2.5 for market risk.

Beginning in 2014, there are three categories of risk-based capital under the Basel III Transitional rules: Common Equity Tier 1 capital ("CET1 capital"), as well as Tier 1 capital and Tier 2 capital. CET1 capital predominantly includes common stockholders' equity (including capital for AOCI related to debt and equity securities classified as AFS as well as for defined benefit pension and OPEB plans), less certain deductions for goodwill, MSRs and deferred tax assets that arise from NOL and tax credit carryforwards. Tier 1 capital is predominantly comprised of CET1 capital as well as perpetual preferred stock. Tier 2 capital includes long-term debt qualifying as Tier 2 and qualifying allowance for credit losses. Total capital is Tier 1 capital plus Tier 2 capital.

On February 21, 2014, the Federal Reserve and the OCC informed the Firm and its national bank subsidiaries that they had satisfactorily completed the parallel run requirements and were approved to calculate capital under Basel III Advanced, in addition to Basel III Standardized, as of April 1, 2014. In conjunction with its exit from the parallel run, the capital adequacy of the Firm and its national bank subsidiaries is evaluated against the Basel III approach (Standardized or Advanced) which results, for each quarter beginning with the second quarter of 2014, in the lower ratio (the "Collins Floor"), as required by the Collins Amendment of the Dodd-Frank Act.

The following tables present the regulatory capital, assets and risk-based capital ratios for JPMorgan Chase and its significant national bank subsidiaries under both Basel III Standardized Transitional and Basel III Advanced Transitional at December 31, 2014, and under Basel I at December 31, 2013.

	JPMorgan Chase & Co.[d]		
	Basel III Standardized Transitional	Basel III Advanced Transitional	Basel I
(in millions, except ratios)	Dec 31, 2014	Dec 31, 2014	Dec 31, 2013

	Chase Bank USA, N.A.[d]		
	Basel III Standardized Transitional	Basel III Advanced Transitional	Basel I
(in millions, except ratios)	Dec 31, 2014	Dec 31, 2014	Dec 31, 2013
Regulatory capital			
CET1 capital	**$ 14,556**	**$ 14,556**	NA
Tier 1 capital[a]	**14,556**	**14,556**	$ 12,956
Total capital	**20,517**	**19,206**	16,389
Assets			
Risk-weighted	**103,468**	**157,565**	100,990
Adjusted average[b]	**128,111**	**128,111**	109,731
Capital ratios[c]			
CET1	**14.1%**	**9.2%**	NA
Tier 1[a]	**14.1**	**9.2**	12.8%
Total	**19.8**	**12.2**	16.2
Tier 1 leverage	**11.4**	**11.4**	11.8

(a) At December 31, 2014, trust preferred securities included in Basel III Tier 1 capital were $2.7 billion and $300 million for JPMorgan Chase and JPMorgan Chase Bank, N.A., respectively. At December 31, 2014, Chase Bank USA, N.A. had no trust preferred securities.

(b) Adjusted average assets, for purposes of calculating the leverage ratio, includes total quarterly average assets adjusted for unrealized gains/(losses) on securities, less deductions for disallowed goodwill and other intangible assets, investments in certain subsidiaries, and the total adjusted carrying value of nonfinancial equity investments that are subject to deductions from Tier 1 capital.

(c) For each of the risk-based capital ratios the lower of the Standardized Transitional or Advanced Transitional ratio represents the Collins Floor.

(d) Asset and capital amounts for JPMorgan Chase's banking subsidiaries reflect intercompany transactions; whereas the respective amounts for JPMorgan Chase reflect the elimination of intercompany transactions.

Note: Rating agencies allow measures of capital to be adjusted upward for deferred tax liabilities, which have resulted from both non-taxable business combinations and from tax-deductible goodwill. The Firm had deferred tax liabilities resulting from non-taxable business combinations totaling $130 million and $192 million at December 31, 2014, and December 31, 2013, respectively; and deferred tax liabilities resulting from tax-deductible goodwill of $2.7 billion and $2.8 billion at December 31, 2014, and December 31, 2013, respectively.

Under the risk-based capital guidelines of the Federal Reserve, JPMorgan Chase is required to maintain minimum ratios of Tier 1 and Total capital to risk-weighted assets, as well as minimum leverage ratios (which are defined as Tier 1 capital divided by adjusted quarterly average assets). Failure to meet these minimum requirements could cause the Federal Reserve to take action. Bank subsidiaries also are subject to these capital requirements by their respective primary regulators. The following table presents the minimum ratios to which the Firm and its national bank subsidiaries are subject as of December 31, 2014.

	Minimum capital ratios[a]	Well-capitalized ratios[a]
Capital ratios		
CET1	4.0%	NA
Tier 1	5.5	6.0%
Total	8.0	10.0
Tier 1 leverage	4.0	5.0 [b]

(a) As defined by the regulations issued by the Federal Reserve, OCC and FDIC. The CET1 capital ratio became a relevant measure of capital under the prompt corrective action requirements on January 1, 2015.

(b) Represents requirements for bank subsidiaries pursuant to regulations issued under the FDIC Improvement Act. There is no Tier 1 leverage component in the definition of a well-capitalized bank holding company.

As of December 31, 2014, and 2013, JPMorgan Chase and all of its banking subsidiaries were well-capitalized and met all capital requirements to which each was subject.

Note 29 – Off-balance sheet lending-related financial instruments, guarantees, and other commitments

JPMorgan Chase provides lending-related financial instruments (e.g., commitments and guarantees) to meet the financing needs of its customers. The contractual amount of these financial instruments represents the maximum possible credit risk to the Firm should the counterparty draw upon the commitment or the Firm be required to fulfill its obligation under the guarantee, and should the counterparty subsequently fail to perform according to the terms of the contract. Most of these commitments and guarantees expire without being drawn or a default occurring. As a result, the total contractual amount of these instruments is not, in the Firm's view, representative of its actual future credit exposure or funding requirements.

To provide for probable credit losses inherent in consumer (excluding credit card) and wholesale lending commitments, an allowance for credit losses on lending-related commitments is maintained. See Note 15 for further discussion regarding the allowance for credit losses on lending-related commitments. The following table summarizes the contractual amounts and carrying values of off-balance sheet lending-related financial instruments, guarantees and other commitments at December 31, 2014 and 2013. The amounts in the table below for credit card and home equity lending-related commitments represent the total available credit for these products. The Firm has not experienced, and does not anticipate, that all available lines of credit for these products will be utilized at the same time. The Firm can reduce or cancel credit card lines of credit by providing the borrower notice or, in some cases as permitted by law, without notice. The Firm may reduce or close home equity lines of credit when there are significant decreases in the value of the underlying property, or when there has been a demonstrable decline in the creditworthiness of the borrower. Also, the Firm typically closes credit card lines when the borrower is 60 days or more past due.

Off-balance sheet lending-related financial instruments, guarantees and other commitments

By remaining maturity at December 31, (in millions)	Contractual amount						Carrying value[i]	
	2014					2013	2014	2013
	Expires in 1 year or less	Expires after 1 year through 3 years	Expires after 3 years through 5 years	Expires after 5 years	Total	Total

(a) Includes certain commitments to purchase loans from correspondents.
(b) Predominantly all consumer lending-related commitments are in the U.S.
(c) At December 31, 2014 and 2013, reflects the contractual amount net of risk participations totaling $243 million and $476 million, respectively, for other unfunded commitments to extend credit; $13.0 billion and $14.8 billion, respectively, for standby letters of credit and other financial guarantees; and $469 million and $622 million, respectively, for other letters of credit. In regulatory filings with the Federal Reserve these commitments are shown gross of risk participations.
(d) At December 31, 2014 and 2013, included credit enhancements and bond and commercial paper liquidity commitments to U.S. states and municipalities, hospitals and other non-profit entities of $14.8 billion and $18.9 billion, respectively, within other unfunded commitments to extend credit; and $13.3 billion and $17.2 billion, respectively, within standby letters of credit and other financial guarantees. Other unfunded commitments to extend credit also include liquidity facilities to nonconsolidated municipal bond VIEs; see Note 16.
(e) At December 31, 2014 and 2013, included unissued standby letters of credit commitments of $45.6 billion and $42.8 billion, respectively.
(f) At December 31, 2014 and 2013, the U.S. portion of the contractual amount of total wholesale lending-related commitments was 65% and 68%, respectively.
(g) At December 31, 2014 and 2013, collateral held by the Firm in support of securities lending indemnification agreements was $177.1 billion and $176.4 billion, respectively. Securities lending collateral comprises primarily cash and securities issued by governments that are members of the Organisation for Economic Co-operation and Development ("OECD") and U.S. government agencies.
(h) At December 31, 2014 and 2013, included unfunded commitments of $147 million and $215 million, respectively, to third-party private equity funds; and $961 million and $1.9 billion, respectively, to other equity investments. These commitments included $150 million and $184 million, respectively, related to investments that are generally fair valued at net asset value as discussed in Note 3. In addition, at both December 31, 2014 and 2013, included letters of credit hedged by derivative transactions and managed on a market risk basis of $4.5 billion.
(i) For lending-related products, the carrying value represents the allowance for lending-related commitments and the guarantee liability; for derivative-related products, the carrying value represents the fair value.

Other unfunded commitments to extend credit
Other unfunded commitments to extend credit generally comprise commitments for working capital and general corporate purposes, extensions of credit to support commercial paper facilities and bond financings in the event that those obligations cannot be remarketed to new investors, as well as committed liquidity facilities to clearing organizations.

Also included in other unfunded commitments to extend credit are commitments to noninvestment-grade counterparties in connection with leveraged finance activities, which were $23.7 billion and $18.3 billion at December 31, 2014 and 2013, respectively. For further information, see Note 3 and Note 4.

The Firm acts as a settlement and custody bank in the U.S. tri-party repurchase transaction market. In its role as settlement and custody bank, the Firm is exposed to the intra-day credit risk of its cash borrower clients, usually broker-dealers. This exposure is secured by collateral and typically extinguished by the end of the day. During 2014, the Firm extended secured clearance advance facilities to its clients (i.e. cash borrowers); these facilities contractually limit the Firm's intra-day credit risk to the facility amount and must be repaid by the end of the day. Through these facilities, the Firm has reduced its intra-day credit risk substantially; the average daily tri-party repo balance was $253 billion during the year ended December 31, 2013, and as of December 31, 2014, the secured clearance advance facility maximum outstanding commitment amount was $12.6 billion.

Guarantees
U.S. GAAP requires that a guarantor recognize, at the inception of a guarantee, a liability in an amount equal to the fair value of the obligation undertaken in issuing the guarantee. U.S. GAAP defines a guarantee as a contract that contingently requires the guarantor to pay a guaranteed party based upon: (a) changes in an underlying asset, liability or equity security of the guaranteed party; or (b) a third party's failure to perform under a specified agreement. The Firm considers the following off-balance sheet lending-related arrangements to be guarantees under U.S. GAAP: standby letters of credit and financial guarantees, securities lending indemnifications, certain indemnification agreements included within third-party contractual arrangements and certain derivative contracts.

As required by U.S. GAAP, the Firm initially records guarantees at the inception date fair value of the obligation assumed (e.g., the amount of consideration received or the net present value of the premium receivable). For certain types of guarantees, the Firm records this fair value amount in other liabilities with an offsetting entry recorded in cash (for premiums received), or other assets (for premiums receivable). Any premium receivable recorded in other assets is reduced as cash is received under the contract, and the fair value of the liability recorded at inception is amortized into income as lending and deposit-related fees over the life of the guarantee contract. For indemnifications provided in sales agreements, a portion of the sale proceeds is allocated to the guarantee, which adjusts the gain or loss that would otherwise result from the transaction. For these indemnifications, the initial liability is amortized to income as the Firm's risk is reduced (i.e., over time or when the indemnification expires). Any contingent liability that exists as a result of issuing the guarantee or indemnification is recognized when it becomes probable and reasonably estimable. The contingent portion of the liability is not recognized if the estimated amount is less than the carrying amount of the liability recognized at inception (adjusted for any amortization). The recorded amounts of the liabilities related to guarantees and indemnifications at December 31, 2014 and 2013, excluding the allowance for credit losses on lending-related commitments, are discussed below.

Standby letters of credit and other financial guarantees
Standby letters of credit ("SBLC") and other financial guarantees are conditional lending commitments issued by the Firm to guarantee the performance of a customer to a third party under certain arrangements, such as commercial paper facilities, bond financings, acquisition financings, trade and similar transactions. The carrying values of standby and other letters of credit were $789 million and $945 million at December 31, 2014 and 2013, respectively, which were classified in accounts payable and other liabilities on the Consolidated balance sheets; these carrying values included $235 million and $265 million, respectively, for the allowance for lending-related commitments, and $554 million and $680 million, respectively, for the guarantee liability and corresponding asset.

The following table summarizes the types of facilities under which standby letters of credit and other letters of credit arrangements are outstanding by the ratings profiles of the Firm's customers, as of December 31, 2014 and 2013.

Standby letters of credit, other financial guarantees and other letters of credit

December 31, (in millions)	2014		2013	
	Standby letters of credit and other financial guarantees	Other letters of credit	Standby letters of credit and other financial guarantees	Other letters of credit
Investment-grade[a]	**$ 66,856**	**$ 3,476**	$ 69,109	$ 3,939
Noninvestment-grade[a]	**23,018**	**855**	23,614	1,081
Total contractual amount	**$ 89,874**	**$ 4,331**	$ 92,723	$ 5,020
Allowance for lending-related commitments	**$ 234**	**$ 1**	$ 263	$ 2
Commitments with collateral	**39,726**	**1,509**	40,410	1,473

(a) The ratings scale is based on the Firm's internal ratings, which generally correspond to ratings as defined by S&P and Moody's.

Advised lines of credit

An advised line of credit is a revolving credit line which specifies the maximum amount the Firm may make available to an obligor, on a nonbinding basis. The borrower receives written or oral advice of this facility. The Firm may cancel this facility at any time by providing the borrower notice or, in some cases, without notice as permitted by law.

Securities lending indemnifications

Through the Firm's securities lending program, customers' securities, via custodial and non-custodial arrangements, may be lent to third parties. As part of this program, the Firm provides an indemnification in the lending agreements which protects the lender against the failure of the borrower to return the lent securities. To minimize its liability under these indemnification agreements, the Firm obtains cash or other highly liquid collateral with a market value exceeding 100% of the value of the securities on loan from the borrower. Collateral is marked to market daily to help assure that collateralization is adequate. Additional collateral is called from the borrower if a shortfall exists, or collateral may be released to the borrower in the event of overcollateralization. If a borrower defaults, the Firm would use the collateral held to purchase replacement securities in the market or to credit the lending customer with the cash equivalent thereof.

Derivatives qualifying as guarantees

In addition to the contracts described above, the Firm transacts certain derivative contracts that have the characteristics of a guarantee under U.S. GAAP. These contracts include written put options that require the Firm to purchase assets upon exercise by the option holder at a specified price by a specified date in the future. The Firm may enter into written put option contracts in order to meet client needs, or for other trading purposes. The terms of written put options are typically five years or less. Derivatives deemed to be guarantees also include contracts such as stable value derivatives that require the Firm to make a payment of the difference between the market value and the book value of a counterparty's reference portfolio of assets in the event that market value is less than book value and certain other conditions have been met. Stable value derivatives, commonly referred to as "stable value wraps", are transacted in order to allow investors to realize investment returns with less volatility than an unprotected portfolio and are typically longer-term or may have no stated maturity, but allow the Firm to terminate the contract under certain conditions.

Derivatives deemed to be guarantees are recorded on the Consolidated balance sheets at fair value in trading assets and trading liabilities. The total notional value of the derivatives that the Firm deems to be guarantees was $53.6 billion and $56.3 billion at December 31, 2014 and 2013, respectively. The notional amount generally represents the Firm's maximum exposure to derivatives qualifying as guarantees. However, exposure to certain stable value contracts is contractually limited to a substantially lower percentage of the notional amount; the notional amount on these stable value contracts was $27.5 billion and $27.0 billion at December 31, 2014 and 2013, respectively, and the maximum exposure to loss was $2.9 billion and $2.8 billion at both December 31, 2014 and 2013. The fair values of the contracts reflect the probability of whether the Firm will be required to perform under the contract. The fair value of derivatives that the Firm deems to be guarantees were derivative payables of $102 million and $109 million and derivative receivables of $22 million and $37 million at December 31, 2014 and 2013, respectively. The Firm reduces exposures to these contracts by entering into offsetting transactions, or by entering into contracts that hedge the market risk related to the derivative guarantees.

In addition to derivative contracts that meet the characteristics of a guarantee, the Firm is both a purchaser and seller of credit protection in the credit derivatives market. For a further discussion of credit derivatives, see Note 6.

Unsettled reverse repurchase and securities borrowing agreements

In the normal course of business, the Firm enters into reverse repurchase agreements and securities borrowing agreements that settle at a future date. At settlement, these commitments require that the Firm advance cash to and accept securities from the counterparty. These agreements generally do not meet the definition of a derivative, and

therefore, are not recorded on the Consolidated balance sheets until settlement date. The unsettled reverse repurchase agreements and securities borrowing agreements predominantly consist of agreements with regular-way settlement periods.

Loan sales- and securitization-related indemnifications

Mortgage repurchase liability

In connection with the Firm's mortgage loan sale and securitization activities with the GSEs, as described in Note 16, the Firm has made representations and warranties that the loans sold meet certain requirements. The Firm has been, and may be, required to repurchase loans and/or indemnify the GSEs (e.g., with "make-whole" payments to reimburse the GSEs for their realized losses on liquidated loans). To the extent that repurchase demands that are received relate to loans that the Firm purchased from third parties that remain viable, the Firm typically will have the right to seek a recovery of related repurchase losses from the third party. Generally, the maximum amount of future payments the Firm would be required to make for breaches of these representations and warranties would be equal to the unpaid principal balance of such loans that are deemed to have defects that were sold to purchasers (including securitization-related SPEs) plus, in certain circumstances, accrued interest on such loans and certain expense.

The following table summarizes the change in the mortgage repurchase liability for each of the periods presented.

Summary of changes in mortgage repurchase liability[a]

Year ended December 31, (in millions)	**2014**	2013	2012
Repurchase liability at beginning of period	**$ 681**	$ 2,811	$ 3,557
Net realized gains/(losses)[b]	**53**	(1,561)	(1,158)
Reclassification to litigation reserve	**—**	(179)	—
(Benefit)/provision for repurchase[c]	**(459)**	(390)	412
Repurchase liability at end of period	**$ 275**	$ 681	$ 2,811

(a) On October 25, 2013, the Firm announced that it had reached a $1.1 billion agreement with the FHFA to resolve, other than certain limited types of exposures, outstanding and future mortgage repurchase demands associated with loans sold to the GSEs from 2000 to 2008.

(b) Presented net of third-party recoveries and included principal losses and accrued interest on repurchased loans, "make-whole" settlements, settlements with claimants, and certain related expense. Make-whole settlements were $11 million, $414 million and $524 million, for the years ended December 31, 2014, 2013 and 2012, respectively.

(c) Included a provision related to new loan sales of $4 million, $20 million and $112 million, for the years ended December 31, 2014, 2013 and 2012, respectively.

Private label securitizations

The liability related to repurchase demands associated with private label securitizations is separately evaluated by the Firm in establishing its litigation reserves.

On November 15, 2013, the Firm announced that it had reached a $4.5 billion agreement with 21 major institutional investors to make a binding offer to the trustees of 330 residential mortgage-backed securities trusts issued by J.P.Morgan, Chase, and Bear Stearns ("RMBS Trust Settlement") to resolve all representation and warranty claims, as well as all servicing claims, on all trusts issued by J.P. Morgan, Chase, and Bear Stearns between 2005 and 2008. The seven trustees (or separate and successor trustees) for this group of 330 trusts have accepted the RMBS Trust Settlement for 319 trusts in whole or in part and excluded from the settlement 16 trusts in whole or in part. The trustees' acceptance is subject to a judicial approval proceeding initiated by the trustees, which is pending in New York state court.

In addition, from 2005 to 2008, Washington Mutual made certain loan level representations and warranties in connection with approximately $165 billion of residential mortgage loans that were originally sold or deposited into private-label securitizations by Washington Mutual. Of the $165 billion, approximately $78 billion has been repaid. In addition, approximately $49 billion of the principal amount of such loans has liquidated with an average loss severity of 59%. Accordingly, the remaining outstanding principal balance of these loans as of December 31, 2014, was approximately $38 billion, of which $8 billion was 60 days or more past due. The Firm believes that any repurchase obligations related to these loans remain with the FDIC receivership.

For additional information regarding litigation, see Note 31.

Loans sold with recourse

The Firm provides servicing for mortgages and certain commercial lending products on both a recourse and nonrecourse basis. In nonrecourse servicing, the principal credit risk to the Firm is the cost of temporary servicing advances of funds (i.e., normal servicing advances). In recourse servicing, the servicer agrees to share credit risk with the owner of the mortgage loans, such as Fannie Mae or Freddie Mac or a private investor, insurer or guarantor. Losses on recourse servicing predominantly occur when foreclosure sales proceeds of the property underlying a defaulted loan are less than the sum of the outstanding principal balance, plus accrued interest on the loan and the cost of holding and disposing of the underlying property. The Firm's securitizations are predominantly nonrecourse, thereby effectively transferring the risk of future credit losses to the purchaser of the mortgage-backed securities issued by the trust. At December 31, 2014 and 2013, the unpaid principal balance of loans sold with recourse totaled $6.1 billion and $7.7 billion, respectively. The carrying value of the related liability that the Firm has recorded, which is representative of the Firm's view of the likelihood it

will have to perform under its recourse obligations, was $102 million and $131 million at December 31, 2014 and 2013, respectively.

Other off-balance sheet arrangements

Indemnification agreements – general
In connection with issuing securities to investors, the Firm may enter into contractual arrangements with third parties that require the Firm to make a payment to them in the event of a change in tax law or an adverse interpretation of tax law. In certain cases, the contract also may include a termination clause, which would allow the Firm to settle the contract at its fair value in lieu of making a payment under the indemnification clause. The Firm may also enter into indemnification clauses in connection with the licensing of software to clients ("software licensees") or when it sells a business or assets to a third party ("third-party purchasers"), pursuant to which it indemnifies software licensees for claims of liability or damages that may occur subsequent to the licensing of the software, or third-party purchasers for losses they may incur due to actions taken by the Firm prior to the sale of the business or assets. It is difficult to estimate the Firm's maximum exposure under these indemnification arrangements, since this would require an assessment of future changes in tax law and future claims that may be made against the Firm that have not yet occurred. However, based on historical experience, management expects the risk of loss to be remote.

Credit card charge-backs
Chase Paymentech Solutions, Card's merchant services business and a subsidiary of JPMorgan Chase Bank, N.A., is a global leader in payment processing and merchant acquiring.

Under the rules of Visa USA, Inc., and MasterCard International, JPMorgan Chase Bank, N.A., is primarily liable for the amount of each processed credit card sales transaction that is the subject of a dispute between a cardmember and a merchant. If a dispute is resolved in the cardmember's favor, Chase Paymentech will (through the cardmember's issuing bank) credit or refund the amount to the cardmember and will charge back the transaction to the merchant. If Chase Paymentech is unable to collect the amount from the merchant, Chase Paymentech will bear the loss for the amount credited or refunded to the cardmember. Chase Paymentech mitigates this risk by withholding future settlements, retaining cash reserve accounts or by obtaining other security. However, in the unlikely event that: (1) a merchant ceases operations and is unable to deliver products, services or a refund; (2) Chase Paymentech does not have sufficient collateral from the merchant to provide customer refunds; and (3) Chase Paymentech does not have sufficient financial resources to provide customer refunds, JPMorgan Chase Bank, N.A., would recognize the loss.

Chase Paymentech incurred aggregate losses of $10 million, $14 million, and $16 million on $847.9 billion, $750.1 billion, and $655.2 billion of aggregate volume processed for the years ended December 31, 2014, 2013 and 2012, respectively. Incurred losses from merchant charge-backs are charged to other expense, with the offset recorded in a valuation allowance against accrued interest and accounts receivable on the Consolidated balance sheets. The carrying value of the valuation allowance was $4 million and $5 million at December 31, 2014 and 2013, respectively, which the Firm believes, based on historical experience and the collateral held by Chase Paymentech of $174 million and $208 million at December 31, 2014 and 2013, respectively, is representative of the payment or performance risk to the Firm related to charge-backs.

Clearing Services - Client Credit Risk
The Firm provides clearing services for clients entering into securities purchases and sales and derivative transactions, with central counterparties ("CCPs"), including exchange-traded derivatives ("ETDs") such as futures and options, as well as OTC-cleared derivative contracts. As a clearing member, the Firm stands behind the performance of its clients, collects cash and securities collateral (margin) as well as any settlement amounts due from or to clients, and remits them to the relevant CCP or client in whole or part. There are two types of margin. Variation margin is posted on a daily basis based on the value of clients' derivative contracts. Initial margin is posted at inception of a derivative contract, generally on the basis of the potential changes in the variation margin requirement for the contract.

As clearing member, the Firm is exposed to the risk of non-performance by its clients, but is not liable to clients for the performance of the CCPs. Where possible, the Firm seeks to mitigate its risk to the client through the collection of appropriate amounts of margin at inception and throughout the life of the transactions. The Firm can also cease provision of clearing services if clients do not adhere to their obligations under the clearing agreement. In the event of non-performance by a client, the Firm would close out the client's positions and access available margin. The CCP would utilize any margin it holds to make itself whole, with any remaining shortfalls required to be paid by the Firm as clearing member.

The Firm reflects its exposure to non-performance risk of the client through the recognition of margin payables or receivables to clients and CCPs, but does not reflect the clients' underlying securities or derivative contracts in its Consolidated Financial Statements.

It is difficult to estimate the Firm's maximum possible exposure through its role as clearing member, as this would require an assessment of transactions that clients may execute in the future. However, based upon historical experience, and the credit risk mitigants available to the Firm, management believes it is unlikely that the Firm will

have to make any material payments under these arrangements and the risk of loss is expected to be remote.

For information on the derivatives that the Firm executes for its own account and records in its Consolidated Financial Statements, see Note 6.

Exchange & Clearing House Memberships
Through the provision of clearing services, the Firm is a member of several securities and derivative exchanges and clearinghouses, both in the U.S. and other countries. Membership in some of these organizations requires the Firm to pay a pro rata share of the losses incurred by the organization as a result of the default of another member. Such obligations vary with different organizations. These obligations may be limited to members who dealt with the defaulting member or to the amount (or a multiple of the amount) of the Firm's contribution to the guarantee fund maintained by a clearing house or exchange as part of the resources available to cover any losses in the event of a member default. Alternatively, these obligations may be a full pro-rata share of the residual losses after applying the guarantee fund. Additionally, certain clearinghouses require the Firm as a member to pay a pro rata share of losses resulting from the clearinghouse's investment of guarantee fund contributions and initial margin, unrelated to and independent of the default of another member. Generally a payment would only be required should such losses exceed the resources of the clearing house or exchange that are contractually required to absorb the losses in the first instance. It is difficult to estimate the Firm's maximum possible exposure under these membership agreements, since this would require an assessment of future claims that may be made against the Firm that have not yet occurred. However, based on historical experience, management expects the risk of loss to be remote.

Guarantees of subsidiaries
In the normal course of business, JPMorgan Chase & Co. ("Parent Company") may provide counterparties with guarantees of certain of the trading and other obligations of its subsidiaries on a contract-by-contract basis, as negotiated with the Firm's counterparties. The obligations of the subsidiaries are included on the Firm's Consolidated balance sheets or are reflected as off-balance sheet commitments; therefore, the Parent Company has not recognized a separate liability for these guarantees. The Firm believes that the occurrence of any event that would trigger payments by the Parent Company under these guarantees is remote.

The Parent Company has guaranteed certain debt of its subsidiaries, including both long-term debt and structured notes sold as part of the Firm's market-making activities. These guarantees are not included in the table on page 288 of this Note. For additional information, see Note 21.

Note 30 – Commitments, pledged assets and collateral

Lease commitments

At December 31, 2014, JPMorgan Chase and its subsidiaries were obligated under a number of noncancelable operating leases for premises and equipment used primarily for banking purposes, and for energy-related tolling service agreements. Certain leases contain renewal options or escalation clauses providing for increased rental payments based on maintenance, utility and tax increases, or they require the Firm to perform restoration work on leased premises. No lease agreement imposes restrictions on the Firm's ability to pay dividends, engage in debt or equity financing transactions or enter into further lease agreements.

The following table presents required future minimum rental payments under operating leases with noncancelable lease terms that expire after December 31, 2014.

Year ended December 31, (in millions)	
2015	$ 1,722
2016	1,682
2017	1,534
2018	1,281
2019	1,121
After 2019	5,101
Total minimum payments required[a]	12,441
Less: Sublease rentals under noncancelable subleases	(2,238)
Net minimum payment required	$ 10,203

(a) Lease restoration obligations are accrued in accordance with U.S. GAAP, and are not reported as a required minimum lease payment.

Total rental expense was as follows.

Year ended December 31, (in millions)	**2014**	2013	2012
Gross rental expense	**$ 2,255**	$ 2,187	$ 2,212
Sublease rental income	**(383)**	(341)	(288)
Net rental expense	**$ 1,872**	$ 1,846	$ 1,924

Pledged assets

Financial assets are pledged to maintain potential borrowing capacity with central banks and for other purposes, including to secure borrowings and public deposits, and to collateralize repurchase and other securities financing agreements. Certain of these pledged assets may be sold or repledged by the secured parties and are identified as financial instruments owned (pledged to various parties) on the Consolidated balance sheets. At December 31, 2014 and 2013, the Firm had pledged assets of $324.5 billion and $251.3 billion, respectively, at Federal Reserve Banks and FHLBs. In addition, as of December 31, 2014 and 2013, the Firm had pledged to third parties $60.1 billion and $68.4 billion, respectively, of financial instruments it owns that may not be sold or repledged by such secured parties. Total assets pledged do not include assets of consolidated VIEs; these assets are used to settle the liabilities of those entities. See Note 16 for additional information on assets and liabilities of consolidated VIEs. For additional information on the Firm's securities financing activities and long-term debt, see Note 13 and Note 21, respectively. The significant components of the Firm's pledged assets were as follows.

December 31, (in billions)	**2014**	2013
Securities	**$ 118.7**	$ 68.1
Loans	**248.2**	230.3
Trading assets and other	**169.0**	163.3
Total assets pledged	**$ 535.9**	$ 461.7

Collateral

At December 31, 2014 and 2013, the Firm had accepted assets as collateral that it could sell or repledge, deliver or otherwise use with a fair value of approximately $761.7 billion and $725.0 billion, respectively. This collateral was generally obtained under resale agreements, securities borrowing agreements, customer margin loans and derivative agreements. Of the collateral received, approximately $596.8 billion and $520.1 billion, respectively, were sold or repledged, generally as collateral under repurchase agreements, securities lending agreements or to cover short sales and to collateralize deposits and derivative agreements.

Certain prior period amounts for both collateral, as well as pledged assets (including the corresponding pledged assets parenthetical disclosure for trading assets on the Consolidated balance sheets) have been revised to conform with the current period presentation.

Note 31 – Litigation

Contingencies

As of December 31, 2014, the Firm and its subsidiaries are defendants or putative defendants in numerous legal proceedings, including private, civil litigations and regulatory/government investigations. The litigations range from individual actions involving a single plaintiff to class action lawsuits with potentially millions of class members. Investigations involve both formal and informal proceedings, by both governmental agencies and self-regulatory organizations. These legal proceedings are at varying stages of adjudication, arbitration or investigation, and involve each of the Firm's lines of business and geographies and a wide variety of claims (including common law tort and contract claims and statutory antitrust, securities and consumer protection claims), some of which present novel legal theories.

The Firm believes the estimate of the aggregate range of reasonably possible losses, in excess of reserves established, for its legal proceedings is from $0 to approximately $5.8 billion at December 31, 2014. This estimated aggregate range of reasonably possible losses is based upon currently available information for those proceedings in which the Firm is involved, taking into account the Firm's best estimate of such losses for those cases for which such estimate can be made. For certain cases, the Firm does not believe that an estimate can currently be made. The Firm's estimate involves significant judgment, given the varying stages of the proceedings (including the fact that many are currently in preliminary stages), the existence in many such proceedings of multiple defendants (including the Firm) whose share of liability has yet to be determined, the numerous yet-unresolved issues in many of the proceedings (including issues regarding class certification and the scope of many of the claims) and the attendant uncertainty of the various potential outcomes of such proceedings, particularly proceedings that could result from government investigations. Accordingly, the Firm's estimate will change from time to time, and actual losses may vary.

Set forth below are descriptions of the Firm's material legal proceedings.

Auto Dealer Regulatory Matter. The Firm is engaged in discussions with the U.S. Department of Justice ("DOJ") about potential statistical disparities in markups charged to different races and ethnicities by automobile dealers on loans originated by those dealers and purchased by the Firm.

CIO Litigation. The Firm has been sued in a consolidated shareholder putative class action, a consolidated putative class action brought under the Employee Retirement Income Security Act ("ERISA") and seven shareholder derivative actions brought in Delaware state court and in New York federal and state courts relating to 2012 losses in the synthetic credit portfolio managed by the Firm's Chief Investment Office ("CIO"). Four of the shareholder derivative actions have been dismissed, and plaintiffs in three of those actions have appealed those dismissals. Motions to dismiss have also been filed in two other shareholder derivative actions.

Credit Default Swaps Investigations and Litigation. In July 2013, the European Commission (the "EC") filed a Statement of Objections against the Firm (including various subsidiaries) and other industry members in connection with its ongoing investigation into the credit default swaps ("CDS") marketplace. The EC asserts that between 2006 and 2009, a number of investment banks acted collectively through the International Swaps and Derivatives Association ("ISDA") and Markit Group Limited ("Markit") to foreclose exchanges from the potential market for exchange-traded credit derivatives. The Firm submitted a response to the Statement of Objections in January 2014, and the EC held a hearing in May 2014. DOJ also has an ongoing investigation into the CDS marketplace, which was initiated in July 2009.

Separately, the Firm and other industry members are defendants in a consolidated putative class action filed in the United States District Court for the Southern District of New York on behalf of purchasers and sellers of CDS. The complaint refers to the ongoing investigations by the EC and DOJ into the CDS market, and alleges that the defendant investment banks and dealers, including the Firm, as well as Markit and/or ISDA, collectively prevented new entrants into the market for exchange-traded CDS products. Defendants moved to dismiss this action, and in September 2014, the Court granted defendants' motion in part, dismissing claims for damages based on transactions effected before the Autumn of 2008, as well as certain other claims.

Foreign Exchange Investigations and Litigation. In November 2014, JPMorgan Chase Bank, N.A. reached separate settlements with the U.K. Financial Conduct Authority ("FCA"), the U.S. Commodity Futures Trading Commission ("CFTC") and the U.S. Office of the Comptroller of the Currency ("OCC") to resolve the agencies' respective civil enforcement claims relating to the Bank's foreign exchange ("FX") trading business (collectively, the "Settlement Agreements"). Under the Settlement Agreements, JPMorgan Chase Bank, N.A. agreed to take certain remedial measures and paid penalties of £222 million to the FCA, $310 million to the CFTC and $350 million to the OCC.

In December 2014, the Hong Kong Monetary Authority ("HKMA") announced the conclusion of its FX-related investigation regarding JPMorgan Chase Bank, N.A. and several other banks. The HKMA required the banks, including JPMorgan Chase Bank, N.A., to take certain remedial measures.

Other FX-related regulatory investigations of the Firm are ongoing, including a criminal investigation by DOJ. These investigations are focused on the Firm's spot FX trading and sales activities as well as controls applicable to those activities. The Firm continues to cooperate with these investigations. The Firm is also engaged in discussions regarding potential resolution with DOJ.

Since November 2013, a number of class actions have been filed in the United States District Court for the Southern District of New York against a number of foreign exchange dealers, including the Firm, for alleged violations of federal and state antitrust laws and unjust enrichment based on an alleged conspiracy to manipulate foreign exchange rates reported on the WM/Reuters service. In March 2014, plaintiffs filed a consolidated amended U.S. class action complaint; two other class actions were brought by non-U.S.-based plaintiffs. The Court denied defendants' motion to dismiss the U.S. class action and granted the motion to dismiss the two non-U.S. class actions. In January 2015, the Firm settled the U.S. class action, and this settlement is subject to court approval.

General Motors Litigation. JPMorgan Chase Bank, N.A. participated in, and was the Administrative Agent on behalf of a syndicate of lenders on, a $1.5 billion syndicated Term Loan facility ("Term Loan") for General Motors Corporation ("GM"). In July 2009, in connection with the GM bankruptcy proceedings, the Official Committee of Unsecured Creditors of Motors Liquidation Company ("Creditors Committee") filed a lawsuit against JPMorgan Chase Bank, N.A., in its individual capacity and as Administrative Agent for other lenders on the Term Loan, seeking to hold the underlying lien invalid. In March 2013, the Bankruptcy Court granted JPMorgan Chase Bank, N.A.'s motion for summary judgment and dismissed the Creditors Committee's complaint on the grounds that JPMorgan Chase Bank, N.A. did not authorize the filing of the UCC-3 termination statement at issue. The Creditors Committee appealed the Bankruptcy Court's dismissal of its claim to the United States Court of Appeals for the Second Circuit. In January 2015, the Court of Appeals reversed the Bankruptcy Court's dismissal of the Creditors Committee's claim and remanded the case to the Bankruptcy Court with instructions to enter partial summary judgment for the Creditors Committee as to the termination statement. JPMorgan Chase Bank, N.A. has filed a petition requesting that the full Court of Appeals rehear the case en banc. In the event that the request for rehearing is denied, continued proceedings in the Bankruptcy Court are anticipated with respect to, among other things, additional defenses asserted by JPMorgan Chase Bank, N.A. and the value of additional collateral on the Term Loan, which was not the subject of the termination statement.

Interchange Litigation. A group of merchants and retail associations filed a series of class action complaints alleging that Visa and MasterCard, as well as certain banks, conspired to set the price of credit and debit card interchange fees, enacted respective rules in violation of antitrust laws, and engaged in tying/bundling and exclusive dealing. The parties have entered into an agreement to settle the cases for a cash payment of $6.1 billion to the class plaintiffs (of which the Firm's share is approximately 20%) and an amount equal to ten basis points of credit card interchange for a period of eight months to be measured from a date within 60 days of the end of the opt-out period. The agreement also provides for modifications to each credit card network's rules, including those that prohibit surcharging credit card transactions. In December 2013, the Court issued a decision granting final approval of the settlement. A number of merchants have appealed. Certain merchants that opted out of the class settlement have filed actions against Visa and MasterCard, as well as against the Firm and other banks. Defendants' motion to dismiss the actions was denied in July 2014.

Investment Management Litigation. The Firm is defending two pending cases that allege that investment portfolios managed by J.P. Morgan Investment Management ("JPMIM") were inappropriately invested in securities backed by residential real estate collateral. Plaintiffs Assured Guaranty (U.K.) and Ambac Assurance UK Limited claim that JPMIM is liable for losses of more than $1 billion in market value of these securities. Discovery is proceeding.

Lehman Brothers Bankruptcy Proceedings. In May 2010, Lehman Brothers Holdings Inc. ("LBHI") and its Official Committee of Unsecured Creditors (the "Committee") filed a complaint (and later an amended complaint) against JPMorgan Chase Bank, N.A. in the United States Bankruptcy Court for the Southern District of New York that asserts both federal bankruptcy law and state common law claims, and seeks, among other relief, to recover $7.9 billion in collateral that was transferred to JPMorgan Chase Bank, N.A. in the weeks preceding LBHI's bankruptcy. The amended complaint also seeks unspecified damages on the grounds that JPMorgan Chase Bank, N.A.'s collateral requests hastened LBHI's bankruptcy. The Court dismissed the counts of the amended complaint that sought to void the allegedly constructively fraudulent and preferential transfers made to the Firm during the months of August and September 2008. The Firm has filed counterclaims against LBHI alleging that LBHI fraudulently induced the Firm to make large extensions of credit against inappropriate collateral in connection with the Firm's role as the clearing bank for Lehman Brothers Inc. ("LBI"), LBHI's broker-dealer subsidiary. These extensions of credit left the Firm with more than $25 billion in claims against the estate of LBI. The case has been transferred from the Bankruptcy Court to the District Court, and the Firm has moved for summary judgment seeking the dismissal of all of LBHI's claims. LBHI has also moved for summary judgment on certain of its claims and seeking the dismissal of the Firm's counterclaims.

In the Bankruptcy Court proceedings, LBHI and several of its subsidiaries that had been Chapter 11 debtors have filed a separate complaint and objection to derivatives claims asserted by the Firm alleging that the amount of the derivatives claims had been overstated and challenging certain set-offs taken by JPMorgan Chase entities to recover on the claims. The Firm responded to this separate complaint and objection in February 2013. LBHI and the Committee have also filed an objection to the claims asserted by JPMorgan Chase Bank, N.A. against LBHI with respect to clearing advances made to LBI, principally on the grounds that the Firm had not conducted the sale of the securities collateral held for its claims in a commercially reasonable manner. Discovery regarding both objections is

ongoing. In January 2015, LBHI filed additional objections relating to a variety of claims that the Firm had filed in the Bankruptcy Court proceedings. The bankruptcy claims and other claims of the Firm against Lehman entities have been paid in full, subject to potential adjustment depending on the outcome of the objections filed by LBHI and the Committee.

LIBOR and Other Benchmark Rate Investigations and Litigation. JPMorgan Chase has received subpoenas and requests for documents and, in some cases, interviews, from federal and state agencies and entities, including DOJ, the CFTC, the Securities and Exchange Commission (the "SEC") and various state attorneys general, as well as the EC, the FCA, the Canadian Competition Bureau, the Swiss Competition Commission and other regulatory authorities and banking associations around the world relating primarily to the process by which interest rates were submitted to the British Bankers Association ("BBA") in connection with the setting of the BBA's London Interbank Offered Rate ("LIBOR") for various currencies, principally in 2007 and 2008. Some of the inquiries also relate to similar processes by which information on rates is submitted to the European Banking Federation ("EBF") in connection with the setting of the EBF's Euro Interbank Offered Rates ("EURIBOR") and to the Japanese Bankers' Association for the setting of Tokyo Interbank Offered Rates ("TIBOR") as well as to other processes for the setting of other reference rates in various parts of the world during similar time periods. The Firm is responding to and continuing to cooperate with these inquiries. In December 2013, JPMorgan Chase reached a settlement with the EC regarding its Japanese Yen LIBOR investigation and agreed to pay a fine of €80 million. In January 2014, the Canadian Competition Bureau announced that it has discontinued its investigation related to Yen LIBOR. In May 2014, the EC issued a Statement of Objections outlining its case against the Firm (and others) as to EURIBOR, to which the Firm has filed a response. In October 2014, JPMorgan Chase reached a settlement with the EC regarding the EC's Swiss franc LIBOR investigation and agreed to pay a fine of €72 million. In January 2015, the FCA informed JPMorgan Chase that it has discontinued its investigation of the Firm concerning LIBOR and EURIBOR.

In addition, the Firm has been named as a defendant along with other banks in a series of individual and class actions filed in various United States District Courts, in which plaintiffs make varying allegations that in various periods, starting in 2000 or later, defendants either individually or collectively manipulated the U.S. dollar LIBOR, Yen LIBOR, Swiss franc LIBOR, Euroyen TIBOR and/or EURIBOR rates by submitting rates that were artificially low or high. Plaintiffs allege that they transacted in loans, derivatives or other financial instruments whose values are affected by changes in U.S. dollar LIBOR, Yen LIBOR, Swiss franc LIBOR, Euroyen TIBOR or EURIBOR and assert a variety of claims including antitrust claims seeking treble damages.

The U.S. dollar LIBOR-related putative class actions were consolidated for pre-trial purposes in the United States District Court for the Southern District of New York. The Court stayed all related cases while motions to dismiss the three lead class actions were pending. In March 2013, the Court granted in part and denied in part the defendants' motions to dismiss the claims in the three lead class actions, including dismissal with prejudice of the antitrust claims. In relation to the Firm, the Court has permitted certain claims under the Commodity Exchange Act and common law claims to proceed. In September 2013, class plaintiffs in two of the three lead class actions filed amended complaints, which defendants moved to dismiss. Plaintiffs in the third class action appealed the dismissal of the antitrust claims and the United States Court of Appeals for the Second Circuit dismissed the appeal for lack of jurisdiction. In January 2015, the United States Supreme Court reversed the decision of the Court of Appeals, holding that plaintiffs have the jurisdictional right to appeal and remanding the case to the Court of Appeals for further proceedings. In February 2015, the District Court entered a judgment on certain other plaintiffs' antitrust claims so that those plaintiffs could also participate in the appeal. Motions to dismiss are pending in the remaining previously stayed individual actions and class actions.

The Firm is one of the defendants in a putative class action alleging manipulation of Euroyen TIBOR and Yen LIBOR which was filed in the United States District Court for the Southern District of New York on behalf of plaintiffs who purchased or sold exchange-traded Euroyen futures and options contracts. In March 2014, the Court granted in part and denied in part the defendants' motions to dismiss, including dismissal of plaintiff's antitrust and unjust enrichment claims.

The Firm is one of the defendants in a putative class action filed in the United States District Court for the Southern District of New York relating to the interest rate benchmark EURIBOR. The case is currently stayed.

The Firm is also one of the defendants in a number of putative class actions alleging that defendant banks and ICAP conspired to manipulate the U.S. dollar ISDAFIX rates. Plaintiffs primarily assert claims under the federal antitrust laws and Commodities Exchange Act. In December 2014, defendants filed a motion to dismiss.

Madoff Litigation. Various subsidiaries of the Firm, including J.P. Morgan Securities plc, have been named as defendants in lawsuits filed in Bankruptcy Court in New York arising out of the liquidation proceedings of Fairfield Sentry Limited and Fairfield Sigma Limited, so-called Madoff feeder funds. These actions seek to recover payments made by the funds to defendants totaling approximately $155 million. All but two of these actions have been dismissed.

In addition, a putative class action was brought by investors in certain feeder funds against JPMorgan Chase in the United States District Court for the Southern District of New York, as was a motion by separate potential class plaintiffs to add claims against the Firm and certain subsidiaries to an already pending putative class action in the same court. The allegations in these complaints largely track those

previously raised by the court-appointed trustee for Bernard L. Madoff Investment Securities LLC. The District Court dismissed these complaints and the United States Court of Appeals for the Second Circuit affirmed the District Court's decision. Plaintiffs have petitioned the United States Supreme Court for a writ of certiorari.

The Firm is a defendant in five other Madoff-related individual investor actions pending in New York state court. The allegations in all of these actions are essentially identical, and involve claims against the Firm for, among other things, aiding and abetting breach of fiduciary duty, conversion and unjust enrichment. In August 2014, the Court dismissed all claims against the Firm. Plaintiffs have filed a notice of appeal.

A putative class action has been filed in the United States District Court for the District of New Jersey by investors who were net winners (i.e., Madoff customers who had taken more money out of their accounts than had been invested) in Madoff's Ponzi scheme and were not included in the previous class action settlement. These plaintiffs allege violations of the federal securities law, federal and state racketeering statutes and multiple common law and statutory claims including breach of trust, aiding and abetting embezzlement, unjust enrichment, conversion and commercial bad faith. A similar action has been filed in the United States District Court for the Middle District of Florida, although it is not styled as a class action, and includes a claim pursuant to a Florida statute. The Firm has moved to transfer these cases to the United States District Court for the Southern District of New York.

Three shareholder derivative actions have also been filed in New York federal and state court against the Firm, as nominal defendant, and certain of its current and former Board members, alleging breach of fiduciary duty in connection with the Firm's relationship with Bernard Madoff and the alleged failure to maintain effective internal controls to detect fraudulent transactions. The actions seek declaratory relief and damages. In July 2014, the federal court granted defendants' motions to dismiss two of the actions. One plaintiff chose not to appeal and the other filed a motion for reconsideration which was denied in November 2014. The latter plaintiff has filed an appeal. In the remaining state court action, a hearing on defendants' motion to dismiss was held in October 2014, and the court reserved decision.

MF Global. J.P. Morgan Securities LLC has been named as one of several defendants in a number of putative class actions filed by purchasers of MF Global's publicly traded securities asserting violations of federal securities laws and alleging that the offering documents contained materially false and misleading statements and omissions regarding MF Global. These actions have been settled, subject to final approval by the court. The Firm also has responded to inquiries from the CFTC relating to the Firm's banking and other business relationships with MF Global, including as a depository for MF Global's customer segregated accounts.

Mortgage-Backed Securities and Repurchase Litigation and Related Regulatory Investigations. JPMorgan Chase and affiliates (together, "JPMC"), Bear Stearns and affiliates (together, "Bear Stearns") and certain Washington Mutual affiliates (together, "Washington Mutual") have been named as defendants in a number of cases in their various roles in offerings of mortgage-backed securities ("MBS"). These cases include class action suits on behalf of MBS purchasers, actions by individual MBS purchasers and actions by monoline insurance companies that guaranteed payments of principal and interest for particular tranches of MBS offerings. Following the settlements referred to under "Repurchase Litigation" and "Government Enforcement Investigations and Litigation" below, there are currently pending and tolled investor and monoline insurer claims involving MBS with an original principal balance of approximately $41 billion, of which $38 billion involves JPMC, Bear Stearns or Washington Mutual as issuer and $3 billion involves JPMC, Bear Stearns or Washington Mutual solely as underwriter. The Firm and certain of its current and former officers and Board members have also been sued in shareholder derivative actions relating to the Firm's MBS activities, and trustees have asserted or have threatened to assert claims that loans in securitization trusts should be repurchased.

Issuer Litigation – Class Actions. Two class actions remain pending against JPMC and Bear Stearns as MBS issuers in the United States District Court for the Southern District of New York. In the action concerning JPMC, plaintiffs' motion for class certification has been granted with respect to liability but denied without prejudice as to damages. In the action concerning Bear Stearns, the parties have reached a settlement in principle, which is subject to court approval. The Firm is also defending a class action brought against Bear Stearns in the United States District Court for the District of Massachusetts, in which the court's decision on defendants' motion to dismiss is pending.

Issuer Litigation – Individual Purchaser Actions. In addition to class actions, the Firm is defending individual actions brought against JPMC, Bear Stearns and Washington Mutual as MBS issuers (and, in some cases, also as underwriters of their own MBS offerings). These actions are pending in federal and state courts across the U.S. and are in various stages of litigation.

Monoline Insurer Litigation. The Firm is defending two pending actions relating to the same monoline insurer's guarantees of principal and interest on certain classes of 11 different Bear Stearns MBS offerings. These actions are pending in state court in New York and are in various stages of litigation.

Underwriter Actions. In actions against the Firm solely as an underwriter of other issuers' MBS offerings, the Firm has contractual rights to indemnification from the issuers. However, those indemnity rights may prove effectively unenforceable in various situations, such as where the issuers are now defunct. There are currently actions of this type pending against the Firm in federal and state courts in

various stages of litigation. One such class action has been settled, subject to final approval by the court.

Repurchase Litigation. The Firm is defending a number of actions brought by trustees, securities administrators or master servicers of various MBS trusts and others on behalf of purchasers of securities issued by those trusts. These cases generally allege breaches of various representations and warranties regarding securitized loans and seek repurchase of those loans or equivalent monetary relief, as well as indemnification of attorneys' fees and costs and other remedies. Deutsche Bank National Trust Company, acting as trustee for various MBS trusts, has filed such a suit against JPMorgan Chase Bank, N.A. and the Federal Deposit Insurance Corporation (the "FDIC") in connection with a significant number of MBS issued by Washington Mutual; that case is described in the Washington Mutual Litigations section below. Other repurchase actions, each specific to one or more MBS transactions issued by JPMC and/or Bear Stearns, are in various stages of litigation.

In addition, the Firm and a group of 21 institutional MBS investors made a binding offer to the trustees of MBS issued by JPMC and Bear Stearns providing for the payment of $4.5 billion and the implementation of certain servicing changes by JPMC, to resolve all repurchase and servicing claims that have been asserted or could have been asserted with respect to the 330 MBS trusts issued between 2005 and 2008. The offer does not resolve claims relating to Washington Mutual MBS. The seven trustees (or separate and successor trustees) for this group of 330 trusts has accepted the settlement for 319 trusts in whole or in part and excluded from the settlement 16 trusts in whole or in part. The trustees' acceptance is subject to a judicial approval proceeding initiated by the trustees and pending in New York state court. Certain investors in some of the trusts for which the settlement has been accepted have intervened in the judicial approval proceeding, challenging the trustees' acceptance of the settlement.

Additional actions have been filed against third-party trustees that relate to loan repurchase and servicing claims involving trusts that the Firm sponsored.

Derivative Actions. Shareholder derivative actions relating to the Firm's MBS activities have been filed against the Firm, as nominal defendant, and certain of its current and former officers and members of its Board of Directors, in New York state court and California federal court. Two of the New York actions have been dismissed and one is on appeal. A consolidated action in California federal court has been dismissed without prejudice for lack of personal jurisdiction and plaintiffs are pursuing discovery.

Government Enforcement Investigations and Litigation. The Firm is responding to an ongoing investigation being conducted by the Criminal Division of the United States Attorney's Office for the Eastern District of California relating to MBS offerings securitized and sold by the Firm and its subsidiaries. The Firm has also received subpoenas and informal requests for information from state authorities concerning the issuance and underwriting of MBS-related matters. The Firm continues to respond to these MBS-related regulatory inquiries.

In addition, the Firm continues to cooperate with investigations by DOJ, including the U.S. Attorney's Office for the District of Connecticut, the SEC Division of Enforcement and the Office of the Special Inspector General for the Troubled Asset Relief Program, all of which relate to, among other matters, communications with counterparties in connection with certain secondary market trading in residential and commercial MBS.

The Firm has entered into agreements with a number of entities that purchased MBS that toll applicable limitations periods with respect to their claims, and has settled, and in the future may settle, tolled claims. There is no assurance that the Firm will not be named as a defendant in additional MBS-related litigation.

Mortgage-Related Investigations and Litigation. The Attorney General of Massachusetts filed an action against the Firm, other servicers and a mortgage recording company, asserting claims for various alleged wrongdoings relating to mortgage assignments and use of the industry's electronic mortgage registry. In January 2015, the Firm entered into a settlement resolving this action.

The Firm entered into a settlement resolving a putative class action lawsuit relating to its filing of affidavits or other documents in connection with mortgage foreclosure proceedings, and the court granted final approval of the settlement in January 2015.

One shareholder derivative action has been filed in New York Supreme Court against the Firm's Board of Directors alleging that the Board failed to exercise adequate oversight as to wrongful conduct by the Firm regarding mortgage servicing. In December 2014, the court granted defendants' motion to dismiss the complaint.

The Civil Division of the United States Attorney's Office for the Southern District of New York is conducting an investigation concerning the Firm's compliance with the Fair Housing Act ("FHA") and Equal Credit Opportunity Act ("ECOA") in connection with its mortgage lending practices. In addition, three municipalities and a school district have commenced litigation against the Firm alleging violations of an unfair competition law and of the FHA and ECOA and seeking statutory damages for the unfair competition claim, and, for the FHA and ECOA claims, damages in the form of lost tax revenue and increased municipal costs associated with foreclosed properties. The court denied a motion to dismiss in one of the municipal actions, the school district action was dismissed with prejudice, another municipal action was recently served, and motions to dismiss are pending in the remaining actions.

JPMorgan Chase Bank, N.A. is responding to inquiries by the Executive Office of the U.S. Bankruptcy Trustee and various regional U.S. Bankruptcy Trustees relating to mortgage payment change notices and escrow statements in bankruptcy proceedings.

Municipal Derivatives Litigation. Several civil actions were commenced in New York and Alabama courts against the Firm relating to certain Jefferson County, Alabama (the "County") warrant underwritings and swap transactions. The claims in the civil actions generally alleged that the Firm made payments to certain third parties in exchange for being chosen to underwrite more than $3 billion in warrants issued by the County and to act as the counterparty for certain swaps executed by the County. The County filed for bankruptcy in November 2011. In June 2013, the County filed a Chapter 9 Plan of Adjustment, as amended (the "Plan of Adjustment"), which provided that all the above-described actions against the Firm would be released and dismissed with prejudice. In November 2013, the Bankruptcy Court confirmed the Plan of Adjustment, and in December 2013, certain sewer rate payers filed an appeal challenging the confirmation of the Plan of Adjustment. All conditions to the Plan of Adjustment's effectiveness, including the dismissal of the actions against the Firm, were satisfied or waived and the transactions contemplated by the Plan of Adjustment occurred in December 2013. Accordingly, all the above-described actions against the Firm have been dismissed pursuant to the terms of the Plan of Adjustment. The appeal of the Bankruptcy Court's order confirming the Plan of Adjustment remains pending.

Parmalat. In 2003, following the bankruptcy of the Parmalat group of companies ("Parmalat"), criminal prosecutors in Italy investigated the activities of Parmalat, its directors and the financial institutions that had dealings with them following the collapse of the company. In March 2012, the criminal prosecutor served a notice indicating an intention to pursue criminal proceedings against four former employees of the Firm (but not against the Firm) on charges of conspiracy to cause Parmalat's insolvency by underwriting bonds and continuing derivatives trading when Parmalat's balance sheet was false. A preliminary hearing, in which the judge will determine whether to recommend that the matter go to a full trial, is ongoing. The final hearings have been scheduled for March 2015.

In addition, the administrator of Parmalat commenced five civil actions against JPMorgan Chase entities including: two claw-back actions; a claim relating to bonds issued by Parmalat in which it is alleged that JPMorgan Chase kept Parmalat "artificially" afloat and delayed the declaration of insolvency; and similar allegations in two claims relating to derivatives transactions.

Petters Bankruptcy and Related Matters. JPMorgan Chase and certain of its affiliates, including One Equity Partners ("OEP"), have been named as defendants in several actions filed in connection with the receivership and bankruptcy proceedings pertaining to Thomas J. Petters and certain affiliated entities (collectively, "Petters") and the Polaroid Corporation. The principal actions against JPMorgan Chase and its affiliates have been brought by a court-appointed receiver for Petters and the trustees in bankruptcy proceedings for three Petters entities. These actions generally seek to avoid certain putative transfers in connection with (i) the 2005 acquisition by Petters of Polaroid, which at the time was majority-owned by OEP; (ii) two credit facilities that JPMorgan Chase and other financial institutions entered into with Polaroid; and (iii) a credit line and investment accounts held by Petters. The actions collectively seek recovery of approximately $450 million. Defendants have moved to dismiss the complaints in the actions filed by the Petters bankruptcy trustees.

Power Matters. The United States Attorney's Office for the Southern District of New York is investigating matters relating to the bidding activities that were the subject of the July 2013 settlement between J.P. Morgan Ventures Energy Corp. and the Federal Energy Regulatory Commission. The Firm is responding to and cooperating with the investigation.

Referral Hiring Practices Investigations. Various regulators are investigating, among other things, the Firm's compliance with the Foreign Corrupt Practices Act and other laws with respect to the Firm's hiring practices related to candidates referred by clients, potential clients and government officials, and its engagement of consultants in the Asia Pacific region. The Firm is responding to and continuing to cooperate with these investigations.

Sworn Documents, Debt Sales and Collection Litigation Practices. The Firm has been responding to formal and informal inquiries from various state and federal regulators regarding practices involving credit card collections litigation (including with respect to sworn documents), the sale of consumer credit card debt and securities backed by credit card receivables.

Separately, the Consumer Financial Protection Bureau and multiple state Attorneys General are conducting investigations into the Firm's collection and sale of consumer credit card debt. The California and Mississippi Attorneys General have filed separate civil actions against JPMorgan Chase & Co., Chase Bank USA, N.A. and Chase BankCard Services, Inc. alleging violations of law relating to debt collection practices.

Washington Mutual Litigations. Proceedings related to Washington Mutual's failure are pending before the United States District Court for the District of Columbia and include a lawsuit brought by Deutsche Bank National Trust Company, initially against the FDIC and amended to include JPMorgan Chase Bank, N.A. as a defendant, asserting an estimated $6 billion to $10 billion in damages based upon alleged breach of various mortgage securitization agreements and alleged violation of certain representations and warranties given by certain Washington Mutual affiliates in connection with those securitization agreements. The case includes assertions that JPMorgan Chase Bank, N.A. may have assumed liabilities for the alleged breaches of representations and warranties in the mortgage securitization agreements. The Firm and the FDIC have filed opposing motions, each seeking a ruling that the liabilities at issue are borne by the other.

Certain holders of Washington Mutual Bank debt filed an action against JPMorgan Chase which alleged that by

acquiring substantially all of the assets of Washington Mutual Bank from the FDIC, JPMorgan Chase Bank, N.A. caused Washington Mutual Bank to default on its bond obligations. JPMorgan Chase and the FDIC moved to dismiss this action and the District Court dismissed the case except as to the plaintiffs' claim that JPMorgan Chase tortiously interfered with the plaintiffs' bond contracts with Washington Mutual Bank prior to its closure. Discovery is ongoing.

JPMorgan Chase has also filed a complaint in the United States District Court for the District of Columbia against the FDIC in its capacity as receiver for Washington Mutual Bank and in its corporate capacity asserting multiple claims for indemnification under the terms of the Purchase & Assumption Agreement between JPMorgan Chase and the FDIC relating to JPMorgan Chase's purchase of most of the assets and certain liabilities of Washington Mutual Bank.

* * *

In addition to the various legal proceedings discussed above, JPMorgan Chase and its subsidiaries are named as defendants or are otherwise involved in a substantial number of other legal proceedings. The Firm believes it has meritorious defenses to the claims asserted against it in its currently outstanding legal proceedings and it intends to defend itself vigorously in all such matters. Additional legal proceedings may be initiated from time to time in the future.

The Firm has established reserves for several hundred of its currently outstanding legal proceedings. In accordance with the provisions of U.S. GAAP for contingencies, the Firm accrues for a litigation-related liability when it is probable that such a liability has been incurred and the amount of the loss can be reasonably estimated. The Firm evaluates its outstanding legal proceedings each quarter to assess its litigation reserves, and makes adjustments in such reserves, upwards or downward, as appropriate, based on management's best judgment after consultation with counsel. During the years ended December 31, 2014, 2013 and 2012, the Firm incurred $2.9 billion, $11.1 billion and $5.0 billion, respectively, of legal expense. There is no assurance that the Firm's litigation reserves will not need to be adjusted in the future.

In view of the inherent difficulty of predicting the outcome of legal proceedings, particularly where the claimants seek very large or indeterminate damages, or where the matters present novel legal theories, involve a large number of parties or are in early stages of discovery, the Firm cannot state with confidence what will be the eventual outcomes of the currently pending matters, the timing of their ultimate resolution or the eventual losses, fines, penalties or impact related to those matters. JPMorgan Chase believes, based upon its current knowledge, after consultation with counsel and after taking into account its current litigation reserves, that the legal proceedings currently pending against it should not have a material adverse effect on the Firm's consolidated financial condition. The Firm notes, however, that in light of the uncertainties involved in such proceedings, there is no assurance the ultimate resolution of these matters will not significantly exceed the reserves it has currently accrued; as a result, the outcome of a particular matter may be material to JPMorgan Chase's operating results for a particular period, depending on, among other factors, the size of the loss or liability imposed and the level of JPMorgan Chase's income for that period.

Note 32 – International operations

The following table presents income statement-related and balance sheet-related information for JPMorgan Chase by major international geographic area. The Firm defines international activities for purposes of this footnote presentation as business transactions that involve clients residing outside of the U.S., and the information presented below is based predominantly on the domicile of the client, the location from which the client relationship is managed, or the location of the trading desk. However, many of the Firm's U.S. operations serve international businesses.

As the Firm's operations are highly integrated, estimates and subjective assumptions have been made to apportion revenue and expense between U.S. and international operations. These estimates and assumptions are consistent with the allocations used for the Firm's segment reporting as set forth in Note 33.

The Firm's long-lived assets for the periods presented are not considered by management to be significant in relation to total assets. The majority of the Firm's long-lived assets are located in the U.S.

(a) Substantially reflects the U.S.
(b) Revenue is composed of net interest income and noninterest revenue.
(c) Expense is composed of noninterest expense and the provision for credit losses.
(d) Total assets for the U.K. were approximately $434 billion, $451 billion, and $498 billion at December 31, 2014, 2013 and 2012, respectively.

Note 33 – Business segments

The Firm is managed on a line of business basis. There are four major reportable business segments – Consumer & Community Banking, Corporate & Investment Bank, Commercial Banking and Asset Management. In addition, there is a Corporate segment. The business segments are determined based on the products and services provided, or the type of customer served, and they reflect the manner in which financial information is currently evaluated by management. Results of these lines of business are presented on a managed basis. For a definition of managed basis, see Explanation and Reconciliation of the Firm's use of non-GAAP financial measures, on pages 77–78. For a further discussion concerning JPMorgan Chase's business segments, see Business Segment Results on pages 79–80.

The following is a description of each of the Firm's business segments, and the products and services they provide to their respective client bases.

Consumer & Community Banking
Consumer & Community Banking ("CCB") serves consumers and businesses through personal service at bank branches and through ATMs, online, mobile and telephone banking. CCB is organized into Consumer & Business Banking, Mortgage Banking (including Mortgage Production, Mortgage Servicing and Real Estate Portfolios) and Card, Merchant Services & Auto ("Card"). Consumer & Business Banking offers deposit and investment products and services to consumers, and lending, deposit, and cash management and payment solutions to small businesses. Mortgage Banking includes mortgage origination and servicing activities, as well as portfolios comprised of residential mortgages and home equity loans, including the PCI portfolio acquired in the Washington Mutual transaction. Card issues credit cards to consumers and small businesses, provides payment services to corporate and public sector clients through its commercial card products, offers payment processing services to merchants, and provides auto and student loan services.

Corporate & Investment Bank
The Corporate & Investment Bank ("CIB"), comprised of Banking and Markets & Investor Services, offers a broad suite of investment banking, market-making, prime brokerage, and treasury and securities products and services to a global client base of corporations, investors, financial institutions, government and municipal entities. Within Banking, the CIB offers a full range of investment banking products and services in all major capital markets, including advising on corporate strategy and structure, capital-raising in equity and debt markets, as well as loan origination and syndication. Also included in Banking is Treasury Services, which includes transaction services, comprised primarily of cash management and liquidity solutions, and trade finance products. The Markets & Investor Services segment of the CIB is a global market-maker in cash securities and derivative instruments, and also offers sophisticated risk management solutions, prime brokerage, and research. Markets & Investor Services also includes the Securities Services business, a leading global custodian which includes custody, fund accounting and administration, and securities lending products sold principally to asset managers, insurance companies and public and private investment funds.

Commercial Banking
Commercial Banking ("CB") delivers extensive industry knowledge, local expertise and dedicated service to U.S. and multinational clients, including corporations, municipalities, financial institutions and non-profit entities with annual revenue generally ranging from $20 million to $2 billion. CB provides financing to real estate investors and owners. Partnering with the Firm's other businesses, CB provides comprehensive financial solutions, including lending, treasury services, investment banking and asset management to meet its clients' domestic and international financial needs.

Asset Management
Asset Management ("AM"), with client assets of $2.4 trillion, is a global leader in investment and wealth management. AM clients include institutions, high-net-worth individuals and retail investors in every major market throughout the world. AM offers investment management across all major asset classes including equities, fixed income, alternatives and money market funds. AM also offers multi-asset investment management, providing solutions for a broad range of clients' investment needs. For Global Wealth Management clients, AM also provides retirement products and services, brokerage and banking services including trusts and estates, loans, mortgages and deposits. The majority of AM's client assets are in actively managed portfolios.

Corporate
The Corporate segment comprises Private Equity, Treasury and Chief Investment Office ("CIO"), and Other Corporate, which includes corporate staff units and expense that is centrally managed. Treasury and CIO are predominantly responsible for measuring, monitoring, reporting and managing the Firm's liquidity, funding and structural interest rate and foreign exchange risks, as well as executing the Firm's capital plan. The major Other Corporate units include Real Estate, Enterprise Technology, Legal, Compliance, Finance, Human Resources, Internal Audit, Risk Management, Oversight & Control, Corporate Responsibility and various Other Corporate groups. Other centrally managed expense includes the Firm's occupancy and pension-related expense that are subject to allocation to the businesses.

Segment results

The following tables provide a summary of the Firm's segment results as of or for the years ended December 31, 2014, 2013 and 2012 on a managed basis. Total net revenue (noninterest revenue and net interest income) for each of the segments is presented on a fully taxable-equivalent ("FTE") basis. Accordingly, revenue from investments that receive tax credits and tax-exempt securities is presented in the managed results on a basis comparable to taxable investments and securities. This non-GAAP financial measure allows management to assess the comparability of revenue arising from both taxable and tax-exempt sources. The corresponding income tax impact related to tax-exempt items is recorded within income tax expense/(benefit).

Business segment capital allocation changes

Effective January 1, 2013, the Firm refined the capital allocation framework to align it with the revised line of business structure that became effective in the fourth quarter of 2012. The change in equity levels for the lines of businesses was largely driven by the evolving regulatory requirements and higher capital targets the Firm had established under the Basel III Advanced Approach.

(a) Segment managed results reflect revenue on a FTE basis with the corresponding income tax impact recorded within income tax expense/(benefit). These adjustments are eliminated in reconciling items to arrive at the Firm's reported U.S. GAAP results.

On at least an annual basis, the Firm assesses the level of capital required for each line of business as well as the assumptions and methodologies used to allocate capital to its lines of business and updates equity allocations to its lines of business as refinements are implemented.

Preferred stock dividend allocation reporting change
As part of its funds transfer pricing process, the Firm allocates substantially all of the cost of its outstanding preferred stock to its reportable business segments, while retaining the balance of the cost in Corporate. Prior to the fourth quarter of 2014, this cost was allocated to the Firm's reportable business segments as interest expense, with an offset recorded as interest income in Corporate. Effective with the fourth quarter of 2014, this cost is no longer included in interest income and interest expense in the segments, but rather is now included in net income applicable to common equity to be consistent with the presentation of firmwide results. As a result of this reporting change, net interest income and net income in the reportable business segments increases; however, there was no impact to the segments' return on common equity ("ROE"). The Firm's net interest income, net income, Consolidated balance sheets and consolidated results of operations were not impacted by this reporting change, as preferred stock dividends have been and continue to be distributed from retained earnings and, accordingly, were never reported as a component of the Firm's consolidated net interest income or net income. Prior period segment amounts have been revised to conform with the current period presentation.

(a) Share prices shown for JPMorgan Chase's common stock are from the New York Stock Exchange. JPMorgan Chase's common stock is also listed and traded on the London Stock Exchange and the Tokyo Stock Exchange.

(b) TBVPS and ROTCE are non-GAAP financial measures. TBVPS represents the Firm's tangible common equity divided by common shares at period-end. ROTCE measures the Firm's annualized earnings as a percentage of tangible common equity. For further discussion of these measures, see Explanation and Reconciliation of the Firm's Use of Non-GAAP Financial Measures on pages 77–78.

(c) HQLA represents the Firm's estimate of the amount of assets that qualify for inclusion in the liquidity coverage ratio under the final U.S. rule ("U.S. LCR") as of December 31, 2014, and under the Basel III liquidity coverage ratio ("Basel III LCR") for prior periods. For additional information, see HQLA on page 157.

(d) Basel III Transitional rules became effective on January 1, 2014; December 31, 2013 data is based on Basel I rules. As of December 31, 2014, September 30, 2014, and June 30, 2014, the ratios presented are calculated under the Basel III Advanced Transitional Approach. As of March 31, 2014, the ratios presented are calculated under the Basel III Standardized Transitional Approach. CET1 capital under Basel III replaced Tier 1 common capital under Basel I. Prior to Basel III becoming effective on January 1, 2014, Tier 1 common capital under Basel I was a non-GAAP financial measure. See Regulatory capital on pages 146–153 for additional information on Basel III and non-GAAP financial measures of regulatory capital.

(e) Included held-to-maturity securities of $49.3 billion, $48.8 billion, $47.8 billion, $47.3 billion, $24.0 billion and $4.5 billion at December 31, 2014, September 30, 2014, June 30, 2014, March 31, 2014, December 31, 2013 and September 30, 2013, respectively. Held-to-maturity balances for the other periods were not material.

(f) Included unsecured long-term debt of $207.5 billion, $204.7 billion, $205.6 billion, $206.1 billion, $199.4 billion, $199.2 billion, $199.1 billion and $206.1 billion, respectively, for the periods presented.

(g) Excludes the impact of residential real estate PCI loans. For further discussion, see Allowance for credit losses on pages 128–130.

Active foreclosures: Loans referred to foreclosure where formal foreclosure proceedings are ongoing. Includes both judicial and non-judicial states.

Active online customers: Users of all internet browsers and mobile platforms who have logged in within the past 90 days.

Active mobile customers: Users of all mobile platforms, which include: SMS, mobile smartphone and tablet, who have logged in within the past 90 days.

Allowance for loan losses to total loans: Represents period-end allowance for loan losses divided by retained loans.

Alternative assets - The following types of assets constitute alternative investments - hedge funds, currency, real estate, private equity and other investment funds designed to focus on nontraditional strategies.

Assets under management: Represent assets actively managed by AM on behalf of its Private Banking, Institutional and Retail clients. Includes "Committed capital not Called," on which AM earns fees.

Beneficial interests issued by consolidated VIEs: Represents the interest of third-party holders of debt, equity securities, or other obligations, issued by VIEs that JPMorgan Chase consolidates.

Benefit obligation: Refers to the projected benefit obligation for pension plans and the accumulated postretirement benefit obligation for OPEB plans.

Central counterparty ("CCP"): A CCP is a clearing house that interposes itself between counterparties to contracts traded in one or more financial markets, becoming the buyer to every seller and the seller to every buyer and thereby ensuring the future performance of open contracts. A CCP becomes counterparty to trades with market participants through novation, an open offer system, or another legally binding arrangement.

Chase Liquid℠ cards: Refers to a prepaid, reloadable card product.

Client advisors: Investment product specialists, including private client advisors, financial advisors, financial advisor associates, senior financial advisors, independent financial advisors and financial advisor associate trainees, who advise clients on investment options, including annuities, mutual funds, stock trading services, etc., sold by the Firm or by third-party vendors through retail branches, Chase Private Client locations and other channels.

Client assets: Represent assets under management as well as custody, brokerage, administration and deposit accounts.

Client deposits and other third party liabilities: Deposits, as well as deposits that are swept to on-balance sheet liabilities (e.g., commercial paper, federal funds purchased and securities loaned or sold under repurchase agreements) as part of client cash management programs.

Client investment managed accounts: Assets actively managed by Chase Wealth Management on behalf of clients. The percentage of managed accounts is calculated by dividing managed account assets by total client investment assets.

Credit cycle: A period of time over which credit quality improves, deteriorates and then improves again (or vice versa). The duration of a credit cycle can vary from a couple of years to several years.

Credit derivatives: Financial instruments whose value is derived from the credit risk associated with the debt of a third party issuer (the reference entity) which allow one party (the protection purchaser) to transfer that risk to another party (the protection seller). Upon the occurrence of a credit event by the reference entity, which may include, among other events, the bankruptcy or failure to pay its obligations, or certain restructurings of the debt of the reference entity, neither party has recourse to the reference entity. The protection purchaser has recourse to the protection seller for the difference between the face value of the CDS contract and the fair value at the time of settling the credit derivative contract. The determination as to whether a credit event has occurred is generally made by the relevant International Swaps and Derivatives Association ("ISDA") Determinations Committee.

CUSIP number: A CUSIP (i.e., Committee on Uniform Securities Identification Procedures) number consists of nine characters (including letters and numbers) that uniquely identify a company or issuer and the type of security and is assigned by the American Bankers Association and operated by Standard & Poor's. This system facilitates the clearing and settlement process of securities. A similar system is used to identify non-U.S. securities (CUSIP International Numbering System).

Deposit margin/deposit spread: Represents net interest income expressed as a percentage of average deposits.

Distributed denial-of-service attack: The use of a large number of remote computer systems to electronically send a high volume of traffic to a target website to create a service outage at the target. This is a form of cyberattack.

Exchange-traded derivatives: Derivative contracts that are executed on an exchange and settled via a central clearing house.

FICO score: A measure of consumer credit risk provided by credit bureaus, typically produced from statistical models by Fair Isaac Corporation utilizing data collected by the credit bureaus.

Forward points: Represents the interest rate differential between two currencies, which is either added to or subtracted from the current exchange rate (i.e., "spot rate") to determine the forward exchange rate.

Group of Seven ("G7") nations: Countries in the G7 are Canada, France, Germany, Italy, Japan, the U.K. and the U.S.

G7 government bonds: Bonds issued by the government of one of the G7 nations.

Headcount-related expense: Includes salary and benefits (excluding performance-based incentives), and other noncompensation costs related to employees.

Home equity - senior lien: Represents loans and commitments where JPMorgan Chase holds the first security interest on the property.

Home equity - junior lien: Represents loans and commitments where JPMorgan Chase holds a security interest that is subordinate in rank to other liens.

Impaired loan: Impaired loans are loans measured at amortized cost, for which it is probable that the Firm will be unable to collect all amounts due, including principal and interest, according to the contractual terms of the agreement. Impaired loans include the following:

- All wholesale nonaccrual loans
- All TDRs (both wholesale and consumer), including ones that have returned to accrual status

Interchange income: A fee paid to a credit card issuer in the clearing and settlement of a sales or cash advance transaction.

Investment-grade: An indication of credit quality based on JPMorgan Chase's internal risk assessment system. "Investment grade" generally represents a risk profile similar to a rating of a "BBB-"/"Baa3" or better, as defined by independent rating agencies.

LLC: Limited Liability Company.

Loan-to-value ("LTV") ratio: For residential real estate loans, the relationship, expressed as a percentage, between the principal amount of a loan and the appraised value of the collateral (i.e., residential real estate) securing the loan.

Origination date LTV ratio

The LTV ratio at the origination date of the loan. Origination date LTV ratios are calculated based on the actual appraised values of collateral (i.e., loan-level data) at the origination date.

Current estimated LTV ratio

An estimate of the LTV as of a certain date. The current estimated LTV ratios are calculated using estimated collateral values derived from a nationally recognized home price index measured at the metropolitan statistical area ("MSA") level. These MSA-level home price indices comprise actual data to the extent available and forecasted data where actual data is not available. As a result, the estimated collateral values used to calculate these ratios do not represent actual appraised loan-level collateral values; as such, the resulting LTV ratios are necessarily imprecise and should therefore be viewed as estimates.

Combined LTV ratio

The LTV ratio considering all available lien positions, as well as unused lines, related to the property. Combined LTV ratios are used for junior lien home equity products.

Managed basis: A non-GAAP presentation of financial results that includes reclassifications to present revenue on a fully taxable-equivalent basis. Management uses this non-GAAP financial measure at the segment level, because it believes this provides information to enable investors to understand the underlying operational performance and trends of the particular business segment and facilitates a comparison of the business segment with the performance of competitors.

Master netting agreement: An agreement between two counterparties who have multiple contracts with each other that provides for the net settlement of all contracts, as well as cash collateral, through a single payment, in a single currency, in the event of default on or termination of any one contract.

Mortgage origination channels:

Retail - Borrowers who buy or refinance a home through direct contact with a mortgage banker employed by the Firm using a branch office, the Internet or by phone. Borrowers are frequently referred to a mortgage banker by a banker in a Chase branch, real estate brokers, home builders or other third parties.

Correspondent - Banks, thrifts, other mortgage banks and other financial institutions that sell closed loans to the Firm.

Mortgage product types:

Alt-A

Alt-A loans are generally higher in credit quality than subprime loans but have characteristics that would disqualify the borrower from a traditional prime loan. Alt-A lending characteristics may include one or more of the following: (i) limited documentation; (ii) a high combined loan-to-value ("CLTV") ratio; (iii) loans secured by non-owner occupied properties; or (iv) a debt-to-income ratio above normal limits. A substantial proportion of the Firm's Alt-A loans are those where a borrower does not provide complete documentation of his or her assets or the amount or source of his or her income.

Option ARMs

The option ARM real estate loan product is an adjustable-rate mortgage loan that provides the borrower with the option each month to make a fully amortizing, interest-only or minimum payment. The minimum payment on an option ARM loan is based on the interest rate charged during the introductory period. This introductory rate is usually significantly below the fully indexed rate. The fully indexed rate is calculated using an index rate plus a margin. Once the introductory period ends, the contractual interest rate charged on the loan increases to the fully indexed rate and adjusts monthly to reflect movements in the index. The minimum payment is typically insufficient to cover interest accrued in the prior month, and any unpaid interest is deferred and added to the principal balance of the loan. Option ARM loans are subject to payment recast, which converts the loan to a variable-rate fully amortizing loan upon meeting specified loan balance and anniversary date triggers.

Prime

Prime mortgage loans are made to borrowers with good credit records and a monthly income at least three to four times greater than their monthly housing expense (mortgage payments plus taxes and other debt payments). These borrowers provide full documentation and generally have reliable payment histories.

Subprime

Subprime loans are loans to customers with one or more high risk characteristics, including but not limited to: (i) unreliable or poor payment histories; (ii) a high LTV ratio of greater than 80% (without borrower-paid mortgage insurance); (iii) a high debt-to-income ratio; (iv) an occupancy type for the loan is other than the borrower's primary residence; or (v) a history of delinquencies or late payments on the loan.

Multi-asset: Any fund or account that allocates assets under management to more than one asset class.

N/A: Data is not applicable or available for the period presented.

Net charge-off/(recovery) rate: Represents net charge-offs/(recoveries) (annualized) divided by average retained loans for the reporting period.

Net production revenue: Includes net gains or losses on originations and sales of mortgage loans, other production-related fees and losses related to the repurchase of previously-sold loans.

Net mortgage servicing revenue includes the following components:

Operating revenue predominantly represents the return on Mortgage Servicing's MSR asset and includes:

- Actual gross income earned from servicing third-party mortgage loans, such as contractually specified servicing fees and ancillary income; and
- The change in the fair value of the MSR asset due to the collection or realization of expected cash flows.

Risk management represents the components of Mortgage Servicing's MSR asset that are subject to ongoing risk management activities, together with derivatives and other instruments used in those risk management activities.

Net yield on interest-earning assets: The average rate for interest-earning assets less the average rate paid for all sources of funds.

NM: Not meaningful.

Nonaccrual loans: Loans for which interest income is not recognized on an accrual basis. Loans (other than credit card loans and certain consumer loans insured by U.S. government agencies) are placed on nonaccrual status when full payment of principal and interest is not expected or when principal and interest has been in default for a period of 90 days or more unless the loan is both well-secured and in the process of collection. Collateral-dependent loans are typically maintained on nonaccrual status.

Nonperforming assets: Nonperforming assets include nonaccrual loans, nonperforming derivatives and certain assets acquired in loan satisfaction, predominantly real estate owned and other commercial and personal property.

Over-the-counter ("OTC") derivatives: Derivative contracts that are negotiated, executed and settled bilaterally between two derivative counterparties, where one or both counterparties is a derivatives dealer.

Over-the-counter cleared ("OTC-cleared") derivatives: Derivative contracts that are negotiated and executed bilaterally, but subsequently settled via a central clearing house, such that each derivative counterparty is only exposed to the default of that clearing house.

Overhead ratio: Noninterest expense as a percentage of total net revenue.

Participating securities: Represents unvested stock-based compensation awards containing nonforfeitable rights to dividends or dividend equivalents (collectively, "dividends"), which are included in the earnings per share calculation using the two-class method. JPMorgan Chase grants restricted stock and RSUs to certain employees under its

stock-based compensation programs, which entitle the recipients to receive nonforfeitable dividends during the vesting period on a basis equivalent to the dividends paid to holders of common stock. These unvested awards meet the definition of participating securities. Under the two-class method, all earnings (distributed and undistributed) are allocated to each class of common stock and participating securities, based on their respective rights to receive dividends.

Personal bankers: Retail branch office personnel who acquire, retain and expand new and existing customer relationships by assessing customer needs and recommending and selling appropriate banking products and services.

Portfolio activity: Describes changes to the risk profile of existing lending-related exposures and their impact on the allowance for credit losses from changes in customer profiles and inputs used to estimate the allowances.

Pre-provision profit/(loss): Represents total net revenue less noninterest expense. The Firm believes that this financial measure is useful in assessing the ability of a lending institution to generate income in excess of its provision for credit losses.

Pretax margin: Represents income before income tax expense divided by total net revenue, which is, in management's view, a comprehensive measure of pretax performance derived by measuring earnings after all costs are taken into consideration. It is one basis upon which management evaluates the performance of AM against the performance of their respective competitors.

Principal transactions revenue: Principal transactions revenue includes realized and unrealized gains and losses recorded on derivatives, other financial instruments, private equity investments, and physical commodities used in market making and client-driven activities. In addition, Principal transactions revenue also includes certain realized and unrealized gains and losses related to hedge accounting and specified risk management activities including: (a) certain derivatives designated in qualifying hedge accounting relationships (primarily fair value hedges of commodity and foreign exchange risk), (b) certain derivatives used for specified risk management purposes, primarily to mitigate credit risk, foreign exchange risk and commodity risk, and (c) other derivatives.

Purchased credit-impaired ("PCI") loans: Represents loans that were acquired in the Washington Mutual transaction and deemed to be credit-impaired on the acquisition date in accordance with the guidance of the Financial Accounting Standards Board ("FASB"). The guidance allows purchasers to aggregate credit-impaired loans acquired in the same fiscal quarter into one or more pools, provided that the loans have common risk characteristics (e.g., product type, LTV ratios, FICO scores, past due status, geographic location). A pool is then accounted for as a single asset with a single composite interest rate and an aggregate expectation of cash flows.

Real assets: Real assets include investments in productive assets such as agriculture, energy rights, mining and timber properties and exclude raw land to be developed for real estate purposes.

Real estate investment trust ("REIT"): A special purpose investment vehicle that provides investors with the ability to participate directly in the ownership or financing of real-estate related assets by pooling their capital to purchase and manage income property (i.e., equity REIT) and/or mortgage loans (i.e., mortgage REIT). REITs can be publicly- or privately-held and they also qualify for certain favorable tax considerations.

Receivables from customers: Primarily represents margin loans to prime and retail brokerage customers which are included in accrued interest and accounts receivable on the Consolidated balance sheets.

Reported basis: Financial statements prepared under U.S. GAAP, which excludes the impact of taxable-equivalent adjustments.

Retained loans: Loans that are held-for-investment (i.e. excludes loans held-for-sale and loans at fair value).

Revenue wallet: Proportion of fee revenues based on estimates of investment banking fees generated across the industry (i.e. the revenue wallet) from investment banking transactions in M&A, equity and debt underwriting, and loan syndications. Source: Dealogic, a third party provider of investment banking competitive analysis and volume-based league tables for the above noted industry products.

Risk-weighted assets ("RWA"): Risk-weighted assets consist of on- and off-balance sheet assets that are assigned to one of several broad risk categories and weighted by factors representing their risk and potential for default. On-balance sheet assets are risk-weighted based on the perceived credit risk associated with the obligor or counterparty, the nature of any collateral, and the guarantor, if any. Off-balance sheet assets such as lending-related commitments, guarantees, derivatives and other applicable off-balance sheet positions are risk-weighted by multiplying the contractual amount by the appropriate credit conversion factor to determine the on-balance sheet credit equivalent amount, which is then risk-weighted based on the same factors used for on-balance sheet assets. Risk-weighted assets also incorporate a measure for market risk related to applicable trading assets-debt and equity instruments, and foreign exchange and commodity derivatives. The resulting risk-weighted values for each of the risk categories are then aggregated to determine total risk-weighted assets.

Sales specialists: Retail branch office and field personnel, including relationship managers and loan officers, who specialize in marketing and sales of various business

banking products (i.e., business loans, letters of credit, deposit accounts, Chase Paymentech, etc.) and mortgage products to existing and new clients.

Seed capital: Initial JPMorgan capital invested in products, such as mutual funds, with the intention of ensuring the fund is of sufficient size to represent a viable offering to clients, enabling pricing of its shares, and allowing the manager to develop a track record. After these goals are achieved, the intent is to remove the Firm's capital from the investment.

Short sale: A short sale is a sale of real estate in which proceeds from selling the underlying property are less than the amount owed the Firm under the terms of the related mortgage and the related lien is released upon receipt of such proceeds.

Structured notes: Structured notes are predominantly financial instruments containing embedded derivatives. Where present, the embedded derivative is the primary driver of risk.

Suspended foreclosures: Loans referred to foreclosure where formal foreclosure proceedings have started but are currently on hold, which could be due to bankruptcy or loss mitigation. Includes both judicial and non-judicial states.

Taxable-equivalent basis: In presenting managed results, the total net revenue for each of the business segments and the Firm is presented on a tax-equivalent basis. Accordingly, revenue from investments that receive tax credits and tax-exempt securities is presented in the managed results on a basis comparable to taxable investments and securities; the corresponding income tax impact related to tax-exempt items is recorded within income tax expense.

Trade-date and settlement-date: For financial instruments, the trade-date is the date that an order to purchase, sell or otherwise acquire an instrument is executed in the market. The trade-date may differ from the settlement-date, which is the date on which the actual transfer of a financial instrument between two parties is executed. The amount of time that passes between the trade-date and the settlement-date differs depending on the financial instrument. For repurchases under the common equity repurchase program, except where the trade-date is specified, the amounts disclosed are presented on a settlement-date basis. In the Capital Management section on pages 146–155, and where otherwise specified, repurchases under the common equity repurchase program are presented on a trade-date basis because the trade-date is used to calculate the Firm's regulatory capital.

Troubled debt restructuring ("TDR"): A TDR is deemed to occur when the Firm modifies the original terms of a loan agreement by granting a concession to a borrower that is experiencing financial difficulty.

Unaudited: Financial statements and information that have not been subjected to auditing procedures sufficient to permit an independent certified public accountant to express an opinion.

U.S. GAAP: Accounting principles generally accepted in the U.S.

U.S. government-sponsored enterprise obligations: Obligations of agencies originally established or chartered by the U.S. government to serve public purposes as specified by the U.S. Congress; these obligations are not explicitly guaranteed as to the timely payment of principal and interest by the full faith and credit of the U.S. government.

U.S. Treasury: U.S. Department of the Treasury.

Value-at-risk ("VaR"): A measure of the dollar amount of potential loss from adverse market moves in an ordinary market environment.

Warehouse loans: Consist of prime mortgages originated with the intent to sell that are accounted for at fair value and classified as trading assets.

Washington Mutual transaction: On September 25, 2008, JPMorgan Chase acquired certain of the assets of the banking operations of Washington Mutual Bank ("Washington Mutual") from the FDIC.

FIRM OVERVIEW

Marianne Lake, Chief Financial Officer

February 24, 2015

JPMorgan Chase & Co.

Strong fundamentals and track record of adapting

JPMorgan Chase overview

1 Building exceptional client franchises

- Four leading client franchises – together delivering significant value
- Client focus and long-term approach – consistently investing and innovating

2 Operating with fortress principles

- Strong foundation – capital, liquidity, balance sheet, risk discipline
- Simplification and de-risking
- Commitment to controls and culture

3 Maximizing long-term shareholder value

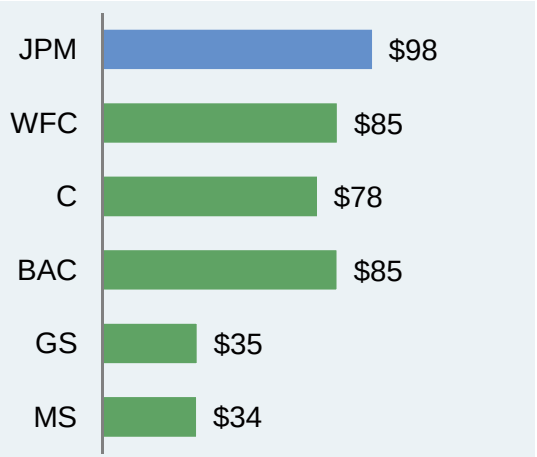
- Delivering significant operating leverage – while investing through-the-cycle
- Delivering strong capital returns – while adapting capital and liquidity frameworks

4 Leading to

~15%	~12%	55%+/-	55-75%
ROTCE	*CET1 ratio*	*Overhead ratio*	*Net payout ratio*

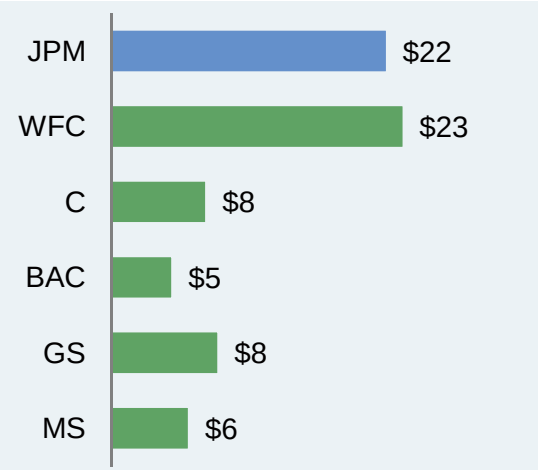
2014 results – strong underlying financial performance

JPMorgan Chase overview



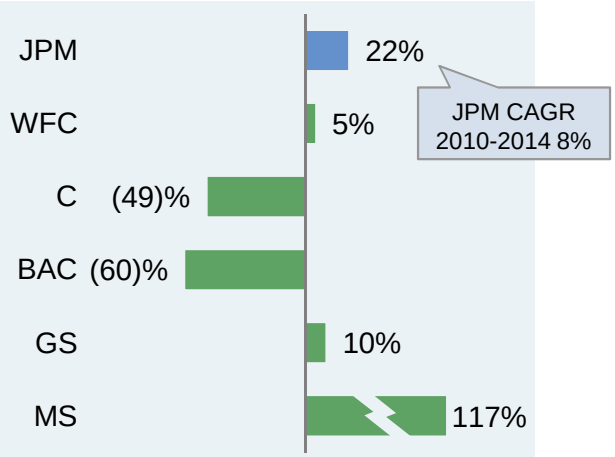
Revenue[1]	$98B	■ Diversification driving stable revenue, despite low rates, mortgage volatility and challenging markets
Adjusted expense[2]	$58B 60%	■ Adjusted expense down by $640mm in 2014 YoY ■ Adjusted overhead ratio[1] of 58-60% over the last 4 years
Net income	$22B $5.29	■ Record net income and EPS despite revenue headwinds and elevated legal expense
CET1[3] Capital return	10.2% $10B	■ Increased CET1 by 70 bps in 2014 while returning $10B net to shareholders ■ Increased CET1 by >300 bps since 2010 while returning $35B net to shareholders
ROTCE[4]	13%	■ 2010-2012 ROTCE of 15% – 2013 at 11% but 15% adjusted

[1] See note 1 on slide 48
[2] See note 2 on slide 48
[3] Advanced Fully Phased-In basis; see note 4 on slide 48
[4] See note 3 on slide 48

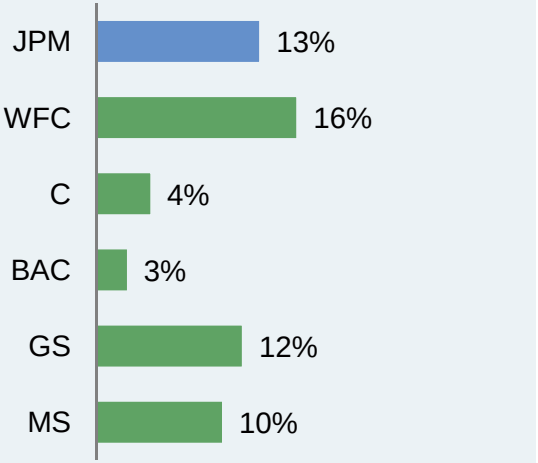


JPM continues to be a leader

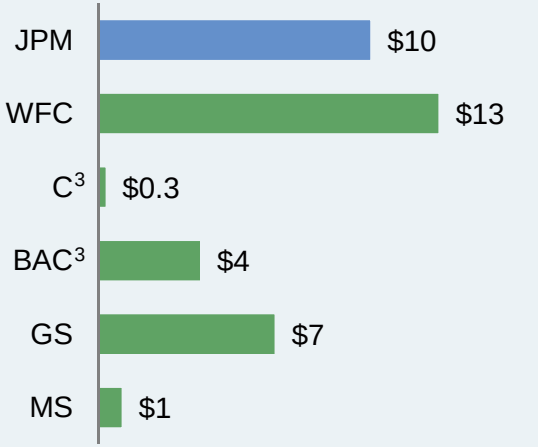
JPMorgan Chase overview



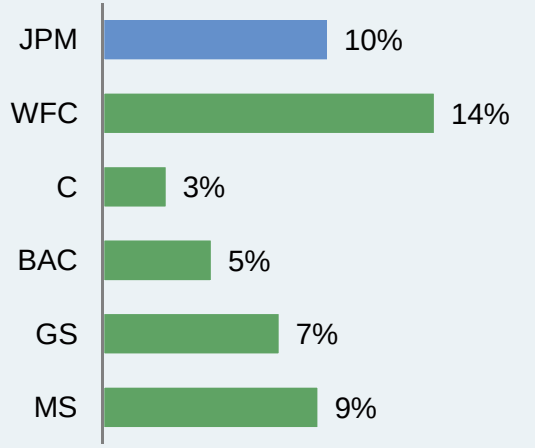
FY2014 Managed revenue[1] ($B)



FY2014 Net income ($B)



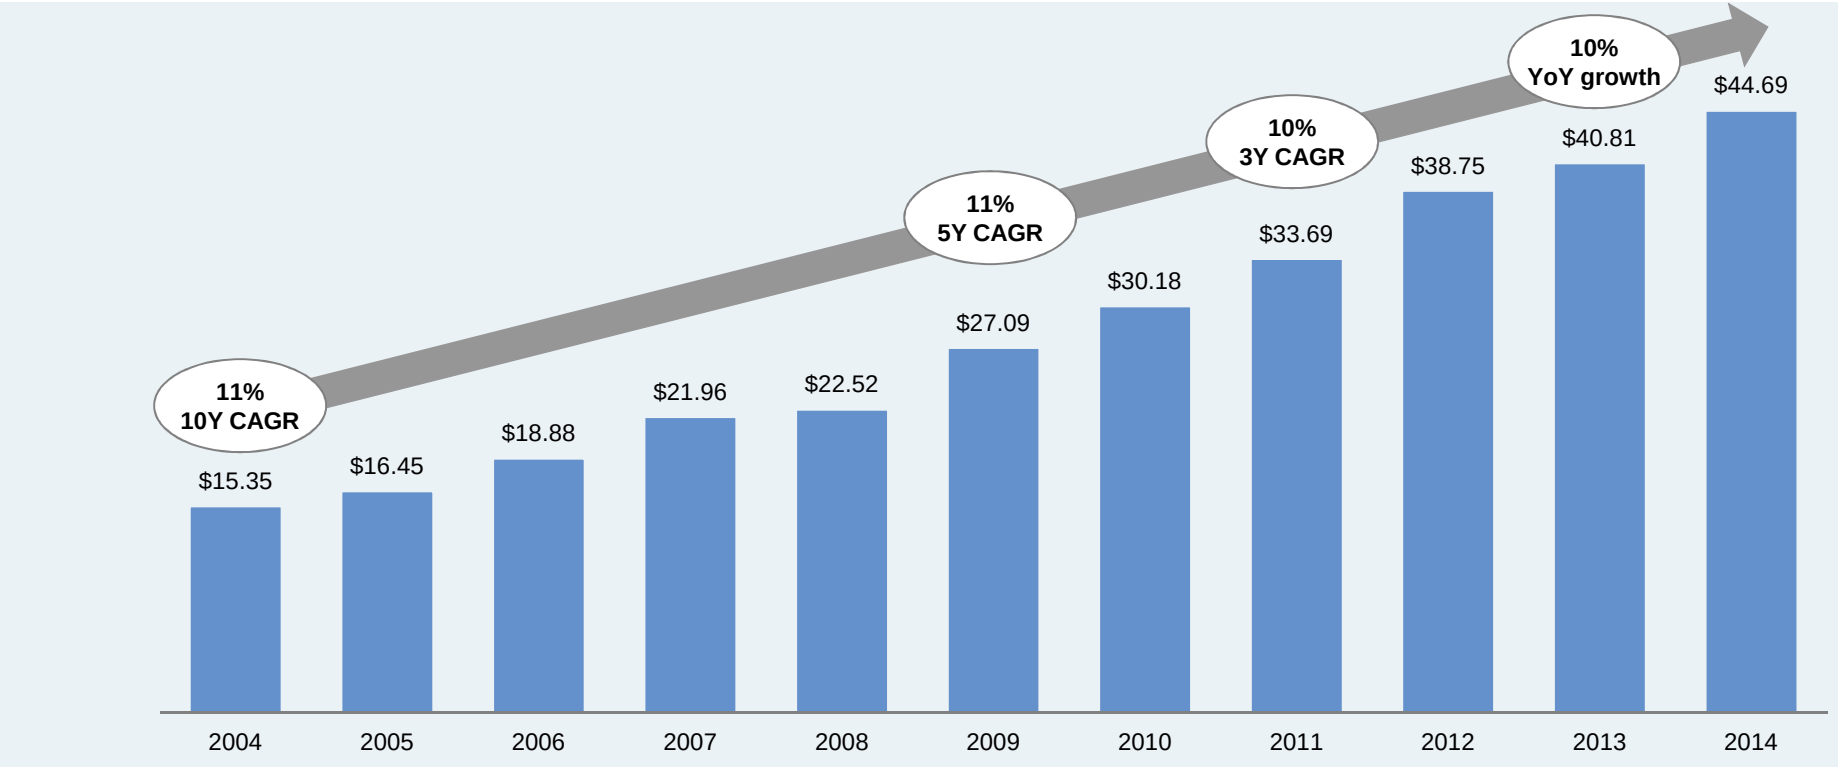
FY2014 EPS YoY growth



FY2014 ROTCE[2]

FY2014 net capital distribution ($B)

FY2014 TBVPS[2] YoY growth



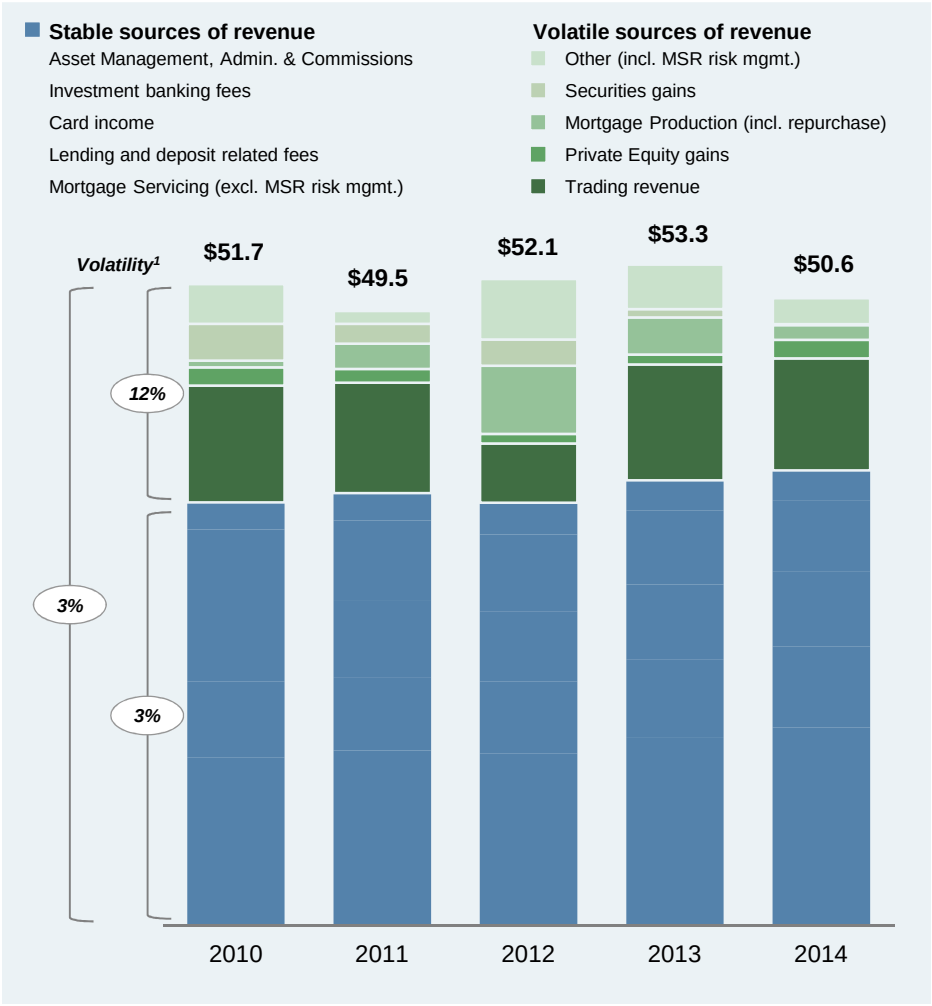
[1] See note 1 in slide 48. For GS and MS, reflects revenue on a reported basis
[2] See note 3 in slide 48
[3] Reflects net capital distribution for the last twelve months (i.e., 4Q13-3Q14)

Sustained tangible book value growth

JPMorgan Chase overview

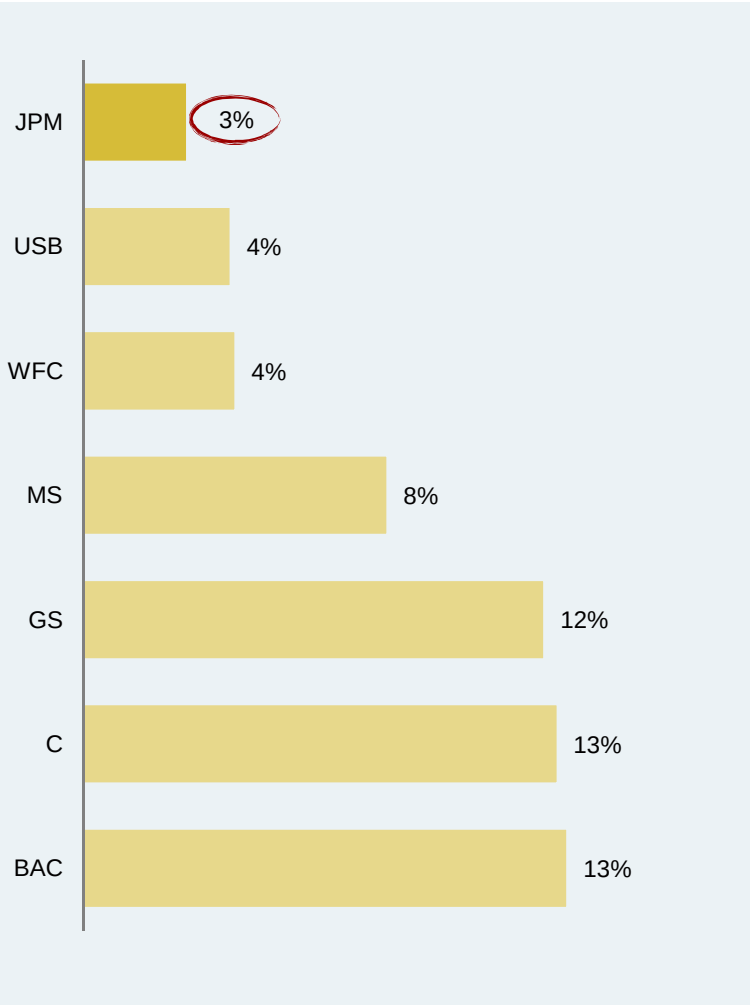
Tangible book value per share (TBVPS)[1]

	2004	2005	2006	2007	2008	2009	2010	2011	2012	2013	2014
Total capital return[2] ($B)	$1	$6	$5	$9	($12)	($6)	$1	$11	$4	$9	$10
CET1 ratio	N/A	N/A	N/A	5.0%	4.7%	6.4%	7.0%	7.9%	8.7%	9.5%	10.2%
Payout ratio[3]	32%	74%	34%	62%	N/M[4]	N/M[4]	7%	60%	22%	54%	47%



2010 to 2014, JPM's profits were ~$97B, despite ~$22B in after-tax legal expense and ~$13B of regulatory and control costs
And we added ~$59B[5] to capital after net return to shareholders of ~$35B

[1] See note 3 on slide 48
[2] Net of employee issuance
[3] Total net capital return payout ratio
[4] Negative net payout ratio
[5] Represents growth in EOP tangible common equity; see note 3 on slide 48



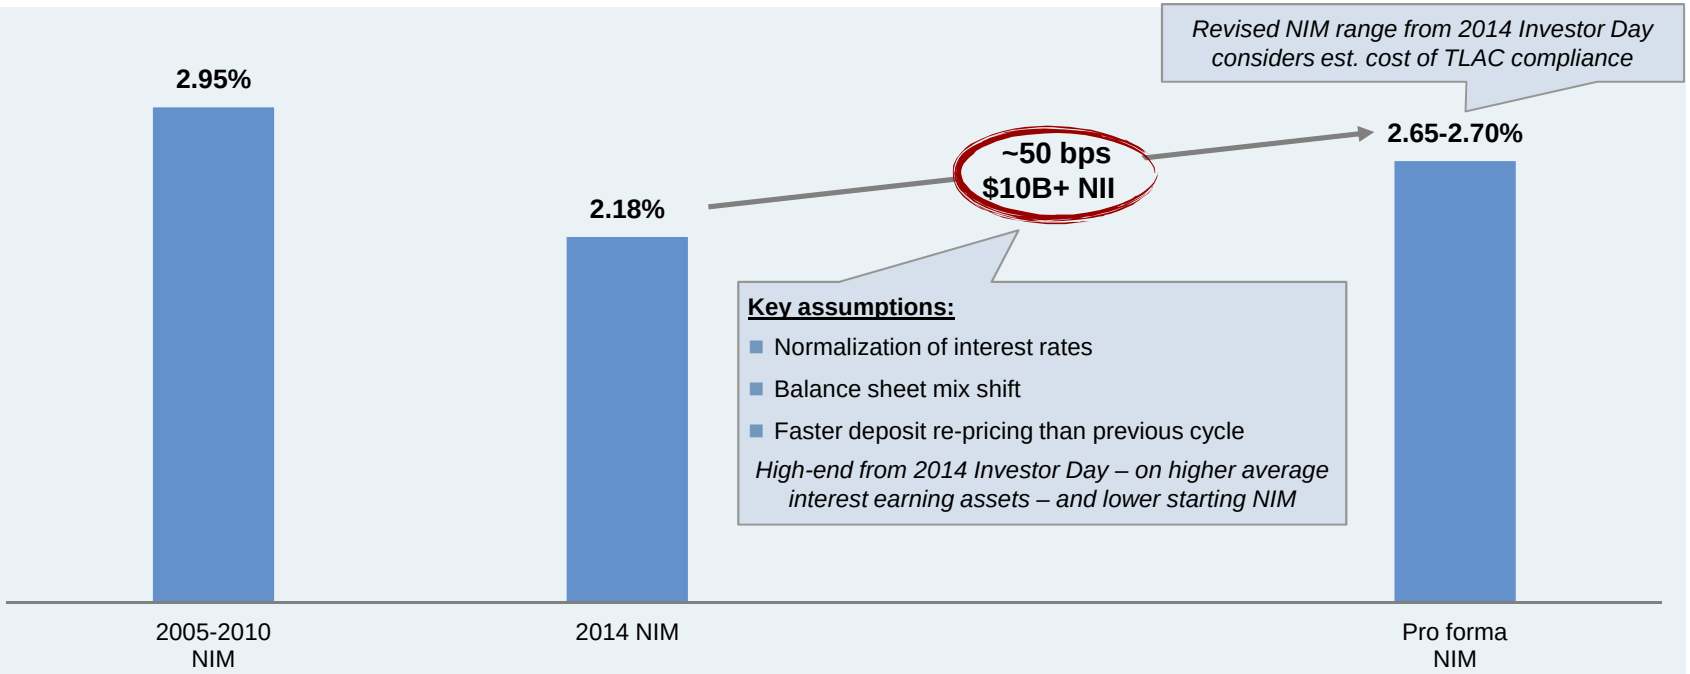
NIR – stability driven by diversification of businesses

JPMorgan Chase overview

Noninterest revenue (NIR) ($B)

Peer NIR volatility[1]

JPM has the least volatile NIR among peers driven by diversification of our businesses
>2/3 of NIR is driven by businesses with stable revenue



Note: NIR presented on a Reported basis

[1] Standard deviation divided by average over 2010-2014 period

NII – well positioned for rising rates

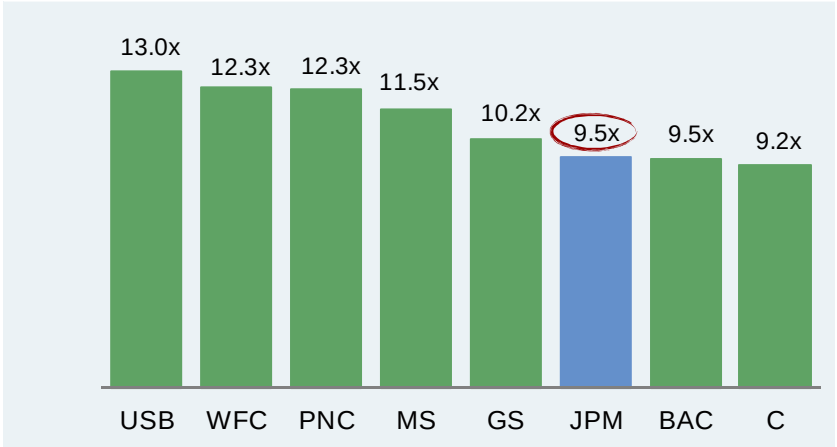
JPMorgan Chase overview

Firm NIM simulation

EaR and AOCI

- The Firm is positioned to benefit from rising rates
  - EaR of $2.9B for a 100 bps parallel shift[1]
    - Long-end rates only contribute $0.6B – the most meaningful driver is front-end rates
- It will take time to fully recapture the expected NII benefit – the pace of Fed tightening is uncertain
- Potential upfront negative impact to AOCI of ~50 bps of capital on stylized rate shock scenario[2]

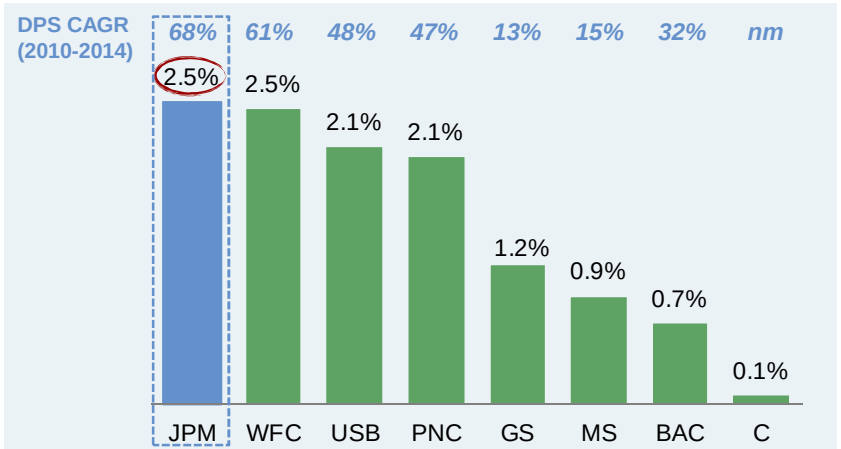
Note: Managed basis; refer to note 1 on slide 48



[1] As of December 31, 2014. Reflects sensitivity profile of 12-month pretax NII of the Firm's non-market-based business activities

[2] For the AFS portfolio; instantaneous rate shock reflects ~+200 bps long-end and ~+375 bps front-end on fully phased-in Basel III capital. Tax effected at an incremental tax rate of 38%

Peer valuation – discount versus peers



JPMorgan Chase overview

2016 P/E Multiple

	USB	WFC	PNC	MS	GS	JPM	BAC	C
Pre-crisis[1]	11.9x	12.8x	12.8x	9.2x	10.9x	11.6x	10.5x	11.0x

2014 Dividend yield[2]

	JPM	WFC	USB	PNC	GS	MS	BAC	C
2016 yield	3.2%	2.9%	2.5%	2.4%	1.4%	1.9%	2.3%	1.1%

P/TBVPS vs. ROTCE regression – premium/(discount) over time

	Before Crisis[3]	During Crisis[3]	After Crisis[3]	Current[4]
JPM	10%	23%	(17%)	(18%)
GS	(2%)	(12%)	(7%)	(4%)
BAC	(9%)	(16%)	14%	(4%)
WFC	14%	16%	(3%)	5%
USB	0%	9%	5%	3%
C	(3%)	nm	(3%)	10%
PNC	13%	6%	(0%)	(14%)
MS	(14%)	(23%)	2%	9%

Note: For footnoted information, refer to slide 49

Our businesses generate significant benefits from each other

JPMorgan Chase overview

~$15B revenue synergies	+	~$3B cost synergies	=	**$18B gross $6-7B net income**

Benefits of universal banking model go beyond measured synergies

- Scale and platform enable a portfolio approach for clients – profitability attained through a broad product set and cross-border capabilities
  - Premier Investment Banking platform and international footprint leveraged by CB and AM
  - Robust cross-sell of Treasury Services and Investor Services products
  - Rich referral network between CIB, CB and AM (~2,500 referrals between CIB and AM and 360+ U.S. Private Bank clients from CB referrals over the last 3 years)
- Diversification of businesses allows for significant investments through-the-cycle
- Extensive branch network plays a critical role as a key sales channel utilized by CB and AM
- Depth of product expertise, specialized industry knowledge and access to integrated coverage teams
- Expense synergies from shared corporate infrastructure (e.g., Finance, Risk, shared technology and operations, cybersecurity) and scale benefits enabling us to service clients more efficiently
- Fortress balance sheet provides strategic leverage (e.g., lending growth)
- Ability to attract and develop top talent

Customers, clients and employees choose JPMorgan Chase because of the breadth and quality of the franchise and our two iconic brands

Implications of separation scenario – Chase and J.P. Morgan

JPMorgan Chase overview

	Comments	Conclusion
Revenue and expense	■ While most revenue synergies should remain – modest portion would be lost ■ The ability to invest through-the-cycle and leadership positions could erode ■ Each company would remain at scale – but would need to invest to rebuild ancillary businesses – critical infrastructure – and duplicate Corporate functions – which would impact margins	■ Small negative ■ Negative – not quantified ■ Meaningfully negative
Capital	■ Amount of excess capital available to shareholders would be more modest than implied by G-SIB scores alone – given CCAR would be the binding constraint for Consumer	■ ~$15B+/-
Valuation	■ Valuation range more modest than research has implied ■ Upside driven by multiple expansion	■ Value of synergies lost would be greater than capital freed up
Execution risk	■ Managing transition to standalone organizations ■ Separating and rebuilding systems, technology, controls and risk management processes ■ Retaining management and top talent ■ Protecting client franchise and market leadership position	■ Increased uncertainty

Delivering on our commitments is the highest certainty path to multiple expansion and long-term shareholder value

Agenda

1 Building exceptional client franchises

- Four exceptional client franchises – leaders in their own right
- Build our businesses for the long-term – consistently innovating
- Focus on client experience and lifetime relationships
- Complete platform and diversified operating model – drives client engagement, synergies and stable returns
- Experienced management team with deep talent

2 Operating with fortress principles

3 Maximizing long-term shareholder value

1 Consistently innovating

Building exceptional client franchises

CCB

End-to-End Platform

- Strategic partnership with Visa
- Fully integrated platform enables customized network rules and pricing that other acquirers cannot replicate
- Targeted offers platform

Digital Wallets

- ChasePay: Proprietary platform had successful pilot and is now ready for broader launch in 2015
- Apple Pay: Participant in Apple wallet

Self-Service Channels

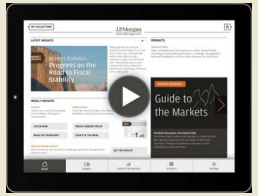
- New mobile app with customized details & more intuitive navigation
- Chase QuickPay and QuickDeposit improve customer experience
- #1 mobile banking functionality[1]

Physical Footprint

- Next generation ATMs with large screens, user friendly interface, and increased functionality
- Cash recyclers simplify branch activities and improve productivity

CIB

- End-to-end global wholesale FX platform – including merged capabilities with ChaseNet technology
- Creation of JPM Execution Services
  - #2 rank in all FX E-commerce multi-dealer platforms
- Mobile trading order technology with automated messaging and live research – further enabling clients to operate 24/7
  - Support FX execution for institutional clients via the iPhone, Android and iPad
  - Profit and Loss Magazine Digital FX award for best mobile platform in 2014



CB

- Innovative approach to client coverage – leveraging CIB's premier industry vertical expertise
- Launched JPMorgan ACCESS® Next Generation
  - Designed by clients to deliver increased functionality, greater efficiency and a better client experience – online, host-to-host & mobile
  - Ranked the #1 cash management portal by Greenwich Associates 2014
  - Migrated 12,000 clients ACCESS over last 2 years

2014 Cash Management Services Benchmark
J.P. Morgan ACCESS®
No.1
GREENWICH ASSOCIATES

AM

- Continue to launch innovative solutions within and across asset classes – 2009-14 GIM multi-asset solutions AUM CAGR of 31%
- Enhanced GWM digital and client experience
  - Introduced digital relationship planning tool in the U.S.
  - Launched Service Knowledge Center to improve client service team response time
- Launched J.P. Morgan Mobile Insights app
  - Star Award & Best of the Best Award in 2014
  - 20 countries, 10 languages, 40,000 users

[1] Based on Forrester Research, U.S. Mobile Banking Functionality Rankings as of May 2014

Agenda

1. Building exceptional client franchises

2. **Operating with fortress principles**

- Strong capital and liquidity position
- Simplification and de-risking
  - Our balance sheet is less complex and of higher quality
  - Demonstrated strong risk discipline through-the-cycle
  - Executed on significant business simplification agenda – simplification continues to be a focus
- Commitment to controls and culture
  - Enhanced control infrastructure and governance – significant investments
  - Culture and conduct – recommit to our business principles

3. Maximizing long-term shareholder value

4 Leading to

~15%	~12%	55%+/-	55-75%
ROTCE	*CET1 ratio*	*Overhead ratio*	*Net payout ratio*

2 Strong capital and liquidity position

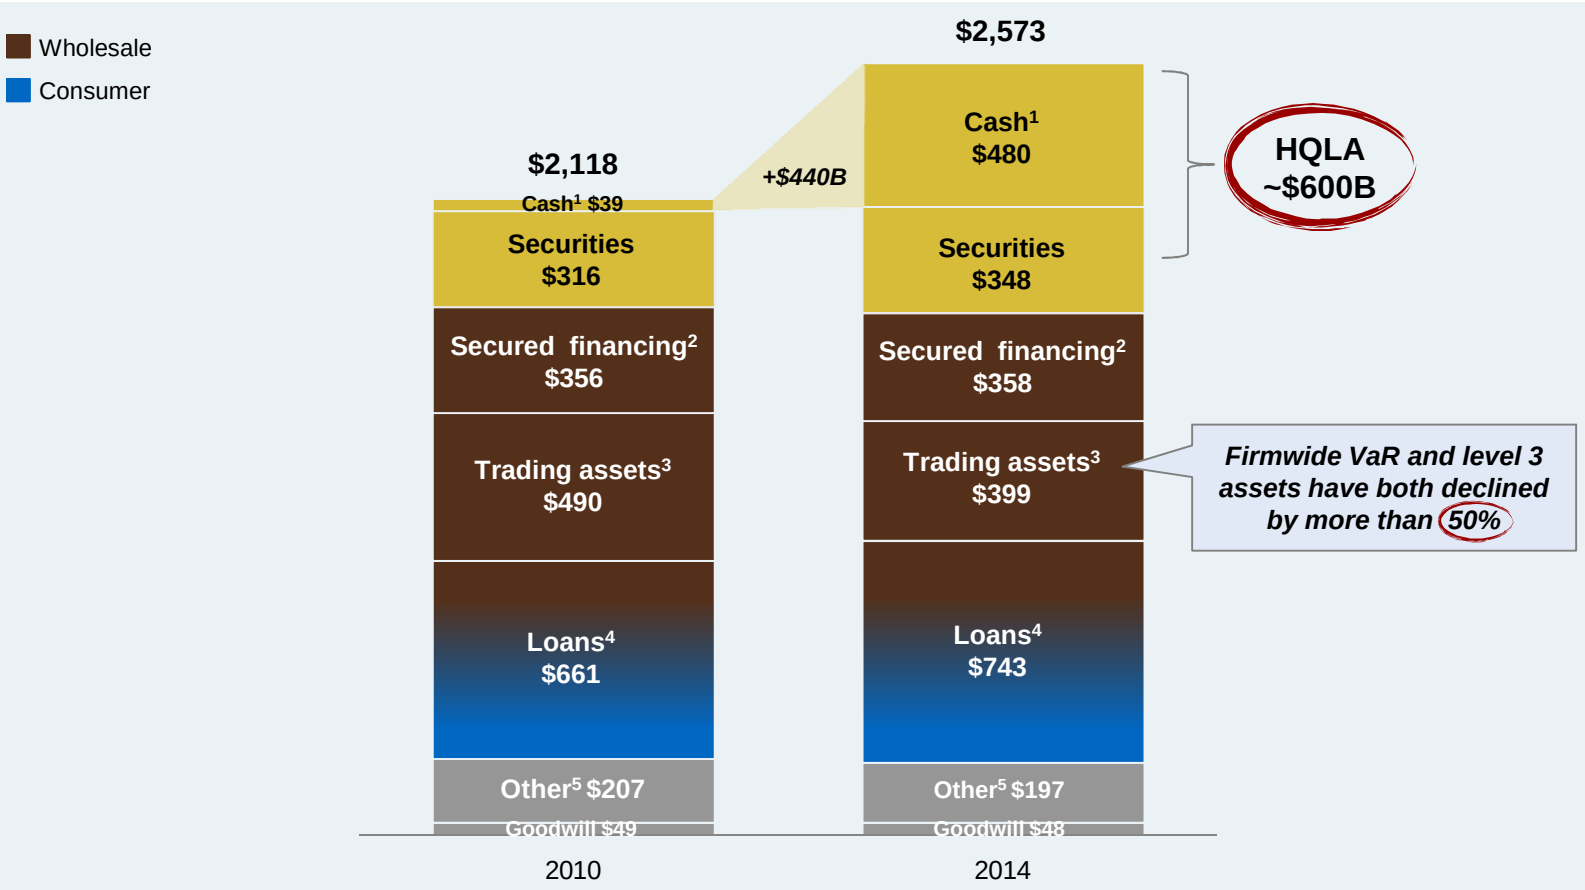
Operating with fortress principles

Capital and liquidity position

		Since 2010…	Estimated 4Q14
Capital	Common Equity Tier 1 (CET1) ratio[1]	>300 bps	10.2%
	Bank Supplementary Leverage Ratio (SLR)[2]	>100 bps	5.9%
	Firm SLR[2]		5.6%
	Tier 1 capital ratio[2]	>400 bps	11.4%
Liquidity	Firm Liquidity Coverage Ratio (LCR)	~2x	>100%[3]
	Bank LCR		>100%[3]
	JPM internal stress		>100%[4]
	Net Stable Funding Ratio (NSFR)		>100%[5]
	Total Loss Absorbing Capacity (TLAC)		~15%[6]

Calibration range of 16-20% under Financial Stability Board proposal

Key takeaways



- Management has met all of its capital and liquidity commitments
- JPM holds an appropriate amount of liquidity

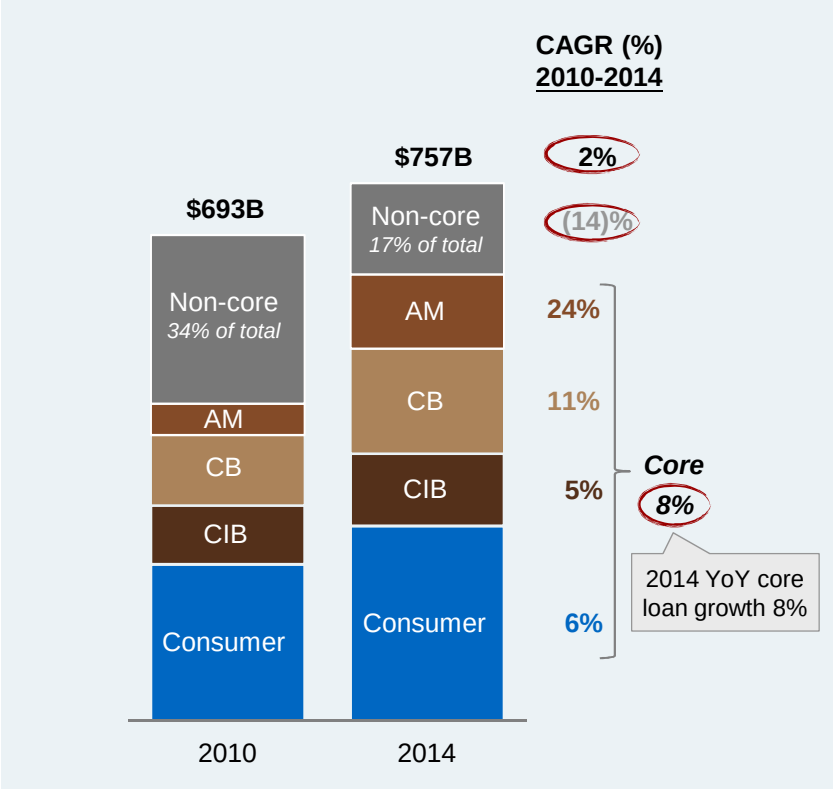
Note: For footnoted information, refer to slide 53

2 Fortress balance sheet – assets

Operating with fortress principles

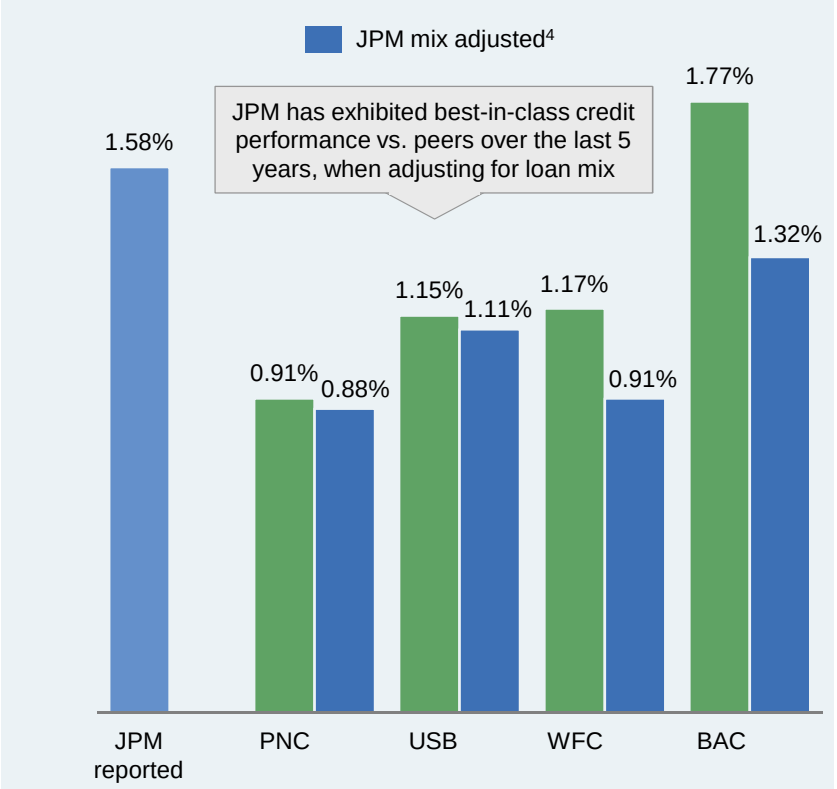
EOP assets ($B)

	2010	2014
Deposits	$930	$1,363



Our balance sheet has grown – but it is less complex

Note: For footnoted information, refer to slide 54



2 Loan portfolio and performance

Operating with fortress principles

EOP loans

Peer NCO rate comparison (avg. 2010-2014)

Consumer

	2010	2014
Avg. FICO score[1]	719	733
Avg. LTV[2]	81%	63%

Wholesale

	2010	2014
Investment grade %[3]	66%	74%
Criticized %[3]	6.4%	1.5%

Firmwide

	2010	2014
Firm NCO rate, excl. PCI loans	3.81%	0.70%

Expect core loan growth of 10%+/- in 2015; expect NCOs to remain low at $4B+ in 2015

Source: Company reports

[1] Consumer businesses, excluding Student, sub-prime, option ARM and PCI portfolios

[2] Residential Real Estate, excluding sub-prime, option ARM and PCI portfolios

[3] Represents investment grade as a percentage of total Wholesale loans and criticized as a percentage of total Wholesale retained loans

[4] "JPM mix adjusted" is calculated by applying JPM NCO rates to peer mix for Card versus all other portfolios

2 Executed significant business simplification agenda

Operating with fortress principles

Business simplification initiatives

- ✓ Completed the spin-out of One Equity Partners and closed on the sale of a portion of our PE portfolio
- ✓ Exited physical commodities business
- ✓ Sold Global Special Opportunities Group (GSOG) portfolio
- ✓ Exit in process of majority of Broker Dealer Services (BDS) business
- ✓ Terminated transaction services for ~500 Foreign Correspondent Banking clients
- ✓ Ceased originating student loans
- ✓ Announced exit of Sears Canada and several smaller non-core card partnerships
- ✓ Announced exit of International Commercial Card
- ✓ Sold interest in Carlson Wagonlit Travel agency
- ✓ Sold Retirement Plan Services unit
- ✓ Exited prepaid card (EFS) and Order to Pay (OTP) businesses
- ✓ Sold health savings account business

Incremental financial impact[1]

	2015	2016 and beyond
Revenue	$1.6B ↓	$0.7B ↓
Expense	$1.6B ↓	$0.6B ↓

[1] Does not include the impact of the One Equity Partners and Private Equity portfolio sales

Other meaningful business actions

- ✓ Simplified Mortgage Banking products from 37 to 18 products as of 2014, with a target of further reducing to 15
- ✓ Rationalized Global Investment Management products: reduced U.S. funds # by net 6%, Asia funds net 4% and Europe funds net 2% in 2014
- ✓ De-risking through client selection – discontinuing certain businesses with select clients:
  - ✓ Exited ~8K clients in Business Banking and Commercial Banking
  - ✓ Exited ~5,500 foreign Politically Exposed Persons relationships
- ✓ Sold significant portion of CIB's trade finance EXIM/ECA portfolio

2 Recommitting to our business principles and reinforcing our culture

Operating with fortress principles

Business Principles

EXCEPTIONAL CLIENT SERVICE	OPERATIONAL EXCELLENCE	A COMMITMENT TO INTEGRITY, FAIRNESS AND RESPONSIBILITY	A GREAT TEAM AND WINNING CULTURE

- In 2014 – rearticulated our business principles and issued the "How We Do Business Report"
  - Sponsored by the Board and Operating Committee – delivered by firmwide management – reinforced at all levels

Building Upon How We Do Business

- **Every business and function – across all geographies – is in the process of implementing a Culture and Conduct program**
  - Assessment of culture and key conduct risks
  - Themes and gaps against what we expect of ourselves will translate into action plans
- **Further strengthened the connection between controls and our compensation and performance management framework**
  - Risk and control issues carefully considered throughout the Firm's performance evaluation and incentive compensation processes
  - Formal reviews and firmwide expectations designed to incentivize appropriate behaviors
  - Clawback policy and review in place for current, departing and former employees

Doing First Class Business in a First Class Way is at the center of everything we do

Agenda

1. Building exceptional client franchises

2. Operating with fortress principles

3. **Maximizing long-term shareholder value**

a) Delivering significant operating leverage – while investing through-the-cycle
- Consistently self-funded growth and investments
- Identified additional expense opportunities – targeting meaningful efficiency improvements

b) Delivering strong capital returns – while adapting capital and liquidity frameworks
- New capital and incentive framework reflects multiple constraints – including G-SIB
- Balancing compliance with capacity for capital distributions
