The Asset-Liability Committee, chaired by the Corporate Treasurer, monitors the Firm's overall interest rate risk and liquidity risk. ALCO is responsible for reviewing and approving the Firm's liquidity policy and contingency funding plan. ALCO also reviews the Firm's funds transfer pricing policy (through which lines of business "transfer" interest rate and foreign exchange risk to Treasury), nontrading interest rate-sensitive revenue-at-risk, overall interest rate position, funding requirements and strategy, and the Firm's securitization programs (and any required liquidity support by the Firm of such programs).

The Firmwide Risk Committee is co-chaired by the Firm's CEO and CRO or Deputy CRO. *The Risk Governance Committee* is chaired by the Firm's CRO and Deputy CRO. These committees meet monthly to review cross-line of business issues such as risk appetite, certain business activity and aggregate risk measures, risk policy, risk methodology regulatory capital and other regulatory issues, as referred by line of business risk committees. The Risk Governance Committee is also responsible for ensuring that line of business and firmwide risk reporting and compliance with risk appetite levels are monitored, in conjunction with the Firm's capital assessment process. Each line of business risk committee meets at least on a monthly basis and is co-chaired by the line of business CRO and CEO or equivalent. Each line of business risk committee is also attended by individuals from outside the line of business. It is the responsibility of committee members of the line of business risk committees to escalate line of business risk topics to the Firmwide Risk Committee as appropriate.

In addition to the above, there is the Investment Committee, chaired by the Firm's Chief Financial Officer that meets on an as needed basis and oversees global merger and acquisition activities undertaken by JPMorgan Chase for its own account that fall outside the scope of the Firm's private equity and other principal finance activities.

Risk monitoring and control

The Firm's ability to properly identify, measure, monitor and report risk is critical to both its soundness and profitability.

- Risk identification: The Firm's exposure to risk through its daily business dealings, including lending and capital markets activities and operational services, is identified and aggregated through the Firm's risk management infrastructure. There are nine major risk types identified in the business activities of the Firm: liquidity risk, credit risk, market risk, interest rate risk, country risk, private equity risk, operational risk, legal and fiduciary risk, and reputation risk.
- Risk measurement: The Firm measures risk using a variety of methodologies, including calculating probable loss, unexpected loss and value-at-risk, and by conducting stress tests and making comparisons to external benchmarks. Measurement models and related assumptions are subject to internal model review, empirical validation and benchmarking with the goal of ensuring that the Firm's risk estimates are reasonable and reflective of the risk of the underlying positions.
- Risk monitoring/control: The Firm's risk management policies and procedures incorporate risk mitigation strategies and include approval limits by customer, product, industry, country and business. These limits are monitored on a daily, weekly and monthly basis, as appropriate.
- Risk reporting: The Firm reports risk exposures on both a line of business and a consolidated basis. This information is reported to management on a daily, weekly and monthly basis, as appropriate.

Model risk

The Firm uses risk management models, including Value-at-Risk ("VaR") and stress models, for the measurement, monitoring and management of risk positions. Valuation models are employed by the Firm to value certain financial instruments which cannot otherwise be valued using quoted prices. These valuation models may also be employed as inputs to risk management models, for example in VaR and economic stress models. The Firm also makes use of models for a number of other purposes, including the calculation of regulatory capital requirements and estimating the allowance for credit losses.

Models are owned by various functions within the Firm based on the specific purposes of such models. For example, VaR models and certain regulatory capital models are owned by the line-of-business aligned risk management functions. Owners of the models are responsible for the development, implementation and testing of models, as well as referral of models to the Model Risk function (within the Model Risk and Development unit) for review and approval. Once models have been approved, the model owners maintain a robust operating environment and monitor and evaluate the performance of models on an ongoing basis. Model owners enhance models in response to changes in

the portfolios and for changes in product and market developments, as well as improvements in available modeling techniques and systems capabilities, and submit such enhancements to the Model Risk function for review.

The Model Risk function comprises the Model Review Group and the Model Governance Group and reports to the Model Risk and Development unit, which in turn reports to the Chief Risk Officer. The Model Risk function is independent of the model owners and reviews and approves a wide range of models, including risk management, valuation and certain regulatory capital models used by the Firm.

Models are tiered based on an internal standard according to their complexity, the exposure associated with the model and the Firm's reliance on the model. This tiering is subject to the approval of the Model Risk function. The model reviews conducted by the Model Risk function consider a number of factors about the model's suitability for valuation or risk management of a particular product, or other purposes. The factors considered include the assigned model tier, whether the model accurately reflects the characteristics of the instruments and its significant risks, the selection and reliability of model inputs, consistency with models for similar products, the appropriateness of any model-related adjustments, and sensitivity to input parameters and assumptions that cannot be observed from the market. When reviewing a model, the Model Risk function analyzes and challenges the model methodology and the reasonableness of model assumptions and may perform or require additional testing, including back-testing of model outcomes. Model reviews are approved by the appropriate level of management within the Model Risk function based on the relevant tier of the model.

Under the Firm's model risk policy, new significant models, as well as material changes to existing models, are reviewed and approved by the Model Risk function prior to implementation into the operating environment. The Model Risk function performs an annual Firmwide model risk assessment where developments in the product or market are considered in determining whether models need to be reviewed and approved again.

In the event that the Model Risk function does not approve a significant model, escalation to senior management is required and the model owner is required to remediate the model within a time period as agreed upon with the Model Risk function. The model owner is also required to resubmit the model for review to the Model Risk function and to take appropriate actions to mitigate the model risk in the interim. The actions taken will depend on the model that is disapproved and may include, for example, limitation of trading activity. The Firm may also implement other appropriate risk measurement tools in place to augment the model that is subject to remediation.

Exceptions to the Firm's model risk policy may be granted by the Model Risk function to allow a significant model to be used prior to review or approval. Such exceptions have been applied in limited circumstances, and where this is the case, compensating controls similar to those described above have been put in place.

For a summary of valuations based on models, see Critical Accounting Estimates Used by the Firm on pages 180–181 and Note 3 on pages 196–214 of this Annual Report.

Liquidity risk management is intended to ensure that the Firm has the appropriate amount, composition and tenor of funding and liquidity in support of its assets. The primary objectives of effective liquidity management are to ensure that the Firm's core businesses are able to operate in support of client needs and meet contractual and contingent obligations through normal economic cycles as well as during market stress and maintain debt ratings that enable the Firm to optimize its funding mix and liquidity sources while minimizing costs.

The Firm manages liquidity and funding using a centralized, global approach in order to actively manage liquidity for the Firm as a whole, monitor exposures and identify constraints on the transfer of liquidity within the Firm, and maintain the appropriate amount of surplus liquidity as part of the Firm's overall balance sheet management strategy.

In the context of the Firm's liquidity management, Treasury is responsible for:

- Measuring, managing, monitoring and reporting the Firm's current and projected liquidity sources and uses;
- Understanding the liquidity characteristics of the Firm's assets and liabilities;
- Defining and monitoring Firmwide and legal entity liquidity strategies, policies, guidelines, and contingency funding plans;
- Liquidity stress testing under a variety of adverse scenarios
- Managing funding mix and deployment of excess short-term cash;
- Defining and implementing funds transfer pricing ("FTP") across all lines of business and regions; and
- Defining and addressing the impact of regulatory changes on funding and liquidity.

The Firm has a liquidity risk governance framework to review, approve and monitor the implementation of liquidity risk policies and funding and capital strategies at the Firmwide, regional and line of business levels.

Specific risk committees responsible for liquidity risk governance include ALCO as well as lines of business and regional asset and liability management committees. For further discussion of the risk committees, see Risk Management on pages 123–126 of this Annual Report.

Management considers the Firm's liquidity position to be strong as of December 31, 2012, and believes that the Firm's unsecured and secured funding capacity is sufficient to meet its on- and off-balance sheet obligations.

LCR and NSFR

In December 2010, the Basel Committee introduced two new measures of liquidity risk: the liquidity coverage ratio ("LCR") which is intended to measure the amount of "high-quality liquid assets" held by the Firm during an acute stress, in relation to the estimated net cash outflows within the 30-day period; and the net stable funding ratio ("NSFR") which is intended to measure the "available" amount of stable funding relative to the "required" amount of stable funding over a 1-year horizon. The standards require that the LCR be no lower than 100% and the NSFR be greater than 100%.

In January 2013, the Basel Committee introduced certain amendments to the formulation of the LCR, and a revised timetable to phase-in the standard. The LCR will continue to become effective on January 1, 2015, but the minimum requirement will begin at 60%, increasing in equal annual stages to reach 100% on January 1, 2019. The Firm is currently targeting to attain a 100% LCR, based on its current understanding of the requirements, by the end of 2013. The NSFR is scheduled to become effective in 2018.

Funding

The Firm funds its global balance sheet through diverse sources of funding, including a stable deposit franchise as well as secured and unsecured funding in the capital markets. Access to funding markets is executed regionally through hubs in New York, London, Hong Kong and other locations which enables the Firm to observe and respond effectively to local market dynamics and client needs. The Firm manages and monitors its use of wholesale funding markets to maximize market access, optimize funding cost and ensure diversification of its funding profile across geographic regions, tenors, currencies, product types and counterparties, using key metrics including short-term unsecured funding as a percentage of total liabilities, and in relation to high-quality assets, and counterparty concentration.

Sources of funds

A key strength of the Firm is its diversified deposit franchise, through each of its lines of business, which provides a stable source of funding and limits reliance on the wholesale funding markets. As of December 31, 2012, the Firm's deposits-to-loans ratio was 163%, compared with 156% at December 31, 2011.

As of December 31, 2012, total deposits for the Firm were $1,193.6 billion, compared with $1,127.8 billion at December 31, 2011 (55% and 54% of total liabilities at December 31, 2012 and 2011, respectively). The increase in deposits was predominantly due to growth in retail and wholesale deposits. For further information, see Balance Sheet Analysis on pages 106–108 of this Annual Report.

The Firm typically experiences higher customer deposit inflows at period-ends. Therefore, average deposit balances are more representative of deposit trends. The table below summarizes, by line of business, average deposits for the year ended December 31, 2012 and 2011, respectively.

Deposits	December 31,		Year ended December 31, Average	
(in millions)	2012	2011	2012	2011
Consumer & Community Banking	$ 438,484	$ 397,825	$ 413,911	$ 382,678
Corporate & Investment Bank	385,560	362,384	353,048	317,213
Commercial Banking	198,383	196,366	181,805	157,899
Asset Management	144,579	127,464	129,208	106,421
Corporate/ Private Equity	26,587	43,767	27,911	47,779
Total Firm	$1,193,593	$1,127,806	$1,105,883	$1,011,990

A significant portion of the Firm's deposits are retail deposits (37% and 35% at December 31, 2012 and 2011, respectively), which are considered particularly stable as they are less sensitive to interest rate changes or market volatility. Additionally, the majority of the Firm's institutional deposits are also considered to be stable sources of funding since they are generated from customers that maintain operating service relationships with the Firm. For further discussions of deposit balance trends, see the discussion of the results for the Firm's business segments and the Balance Sheet Analysis on pages 80–104 and 106–108, respectively, of this Annual Report.

Short-term funding

Short-term unsecured funding sources include federal funds and Eurodollars purchased; certificates of deposit; time deposits; commercial paper; and other borrowed funds that generally have maturities of one year or less.

The Firm's reliance on short-term unsecured funding sources is limited. A significant portion of the total commercial paper liabilities, approximately 72% as of December 31, 2012, as shown in the table below, were originated from deposits that customers choose to sweep into commercial paper liabilities as a cash management program offered by CIB and are not sourced from wholesale funding markets.

The Firm's sources of short-term secured funding primarily consist of securities loaned or sold under agreements to repurchase. Securities loaned or sold under agreements to repurchase generally mature between one day and three months, are secured predominantly by high-quality securities collateral, including government-issued debt, agency debt and agency MBS, and constitute a significant portion of the federal funds purchased and securities loaned or sold under purchase agreements. The increase in the balance at December 31, 2012, compared with the balance at December 31, 2011 was predominantly because of higher secured financing of the Firm's assets. The balances associated with securities loaned or sold under agreements to repurchase fluctuate over time due to customers' investment and financing activities; the Firm's demand for financing; the ongoing management of the mix of the Firm's liabilities, including its secured and unsecured financing (for both the investment and market-making portfolios); and other market and portfolio factors.

At December 31, 2012, the balance of total unsecured and secured other borrowed funds increased, compared with the balance at December 31, 2011. The increase was primarily driven by an increase in term federal funds purchased and in CIB structured notes. The average balance for the year ended December 31, 2012, decreased from the prior year, predominantly driven by maturities of short-term unsecured bank notes and other unsecured borrowings, and other secured short-term borrowings.

For additional information, see the Balance Sheet Analysis on pages 106–108 and Note 13 on page 249 of this Annual Report. The following table summarizes by source select short-term unsecured and secured funding as of December 31, 2012 and 2011, and average balances for the year ended December 31, 2012 and 2011, respectively.

Select Short-term funding	December 31,		Year ended December 31, Average	
(in millions)	2012	December 31, 2011	2012	2011
Commercial paper:				
Wholesale funding	$ 15,589	$ 4,245	$ 14,302	$ 6,119
Client cash management	39,778	47,386	36,478	36,534
Total commercial paper	$ 55,367	$ 51,631	$ 50,780	$ 42,653
Other borrowed funds	$ 26,636	$ 21,908	$ 24,174	$ 30,943
Securities loaned or sold under agreements to repurchase:				
Securities sold under agreements to repurchase	$ 212,278	$ 191,649	$ 219,625	$ 228,514
Securities loaned	23,125	14,214	20,763	19,438
Total securities loaned or sold under agreements to repurchase[a][b][c]	$ 235,403	$ 205,863	$ 240,388	$ 247,952

(a) Excludes federal funds purchased.
(b) Excludes long-term structured repurchase agreements of $3.3 billion and $6.1 billion as of December 31, 2012 and 2011, respectively, and average balance of $7.0 billion and $4.6 billion for the years ended December 31, 2012 and 2011, respectively.
(c) Excludes long-term securities loaned of $457 million as of December 31, 2012, and average balance of $113 million for the year ended December 31, 2012. There were no long-term securities loaned as of December 31, 2011.

Long-term funding and issuance

Long-term funding provides additional sources of stable funding and liquidity for the Firm. The majority of the Firm's long-term unsecured funding is issued by the parent holding company to provide maximum flexibility in support of both bank and nonbank subsidiary funding.

The following table summarizes long-term unsecured issuance and maturities or redemption for the years ended December 31, 2012 and 2011, respectively. For additional information, see Note 21 on pages 297–299 of this Annual Report.

Long-term unsecured funding

Year ended December 31, (in millions)	2012	2011
Issuance		
Senior notes issued in the U.S. market	$ 15,695	$ 29,043
Senior notes issued in non-U.S. markets	8,341	5,173
Total senior notes	24,036	34,216
Trust preferred securities	–	–
Subordinated debt	–	–
Structured notes	15,525	14,761
Total long-term unsecured funding – issuance	$ 39,561	$ 48,977
Maturities/redemptions		
Total senior notes	$ 40,484	$ 36,773
Trust preferred securities	9,482	101
Subordinated debt	1,045	2,912
Structured notes	20,183	18,692
Total long-term unsecured funding – maturities/redemptions	$ 71,194	$ 58,478

Following the Federal Reserve's announcement on June 7, 2012, of proposed rules which will implement the phase-out of Tier 1 capital treatment for trust preferred securities, the Firm announced on June 11, 2012, that it would redeem approximately $9.0 billion of trust preferred securities pursuant to redemption provisions relating to the occurrence of a "Capital Treatment Event" (as defined in the documents governing those securities). The redemption was completed on July 12, 2012.

The Firm raises secured long-term funding through securitization of consumer credit card loans, residential mortgages, auto loans and student loans, as well as through advances from the FHLBs, all of which increase funding and investor diversity.

The following table summarizes the securitization issuance and FHLB advances and their respective maturities or redemption for the years ended December 31, 2012 and 2011.

Long-term secured funding

Year ended December 31,	Issuance		Maturities/Redemptions	
(in millions)	2012	2011	2012	2011
Credit card securitization	$ 10,800	$ 1,775	$ 13,187	$ 13,556
Other securitizations[a]	–	–	487	478
FHLB advances	35,350	4,000	11,124	9,155
Total long-term secured funding	$ 46,150	$ 5,775	$ 24,798	$ 23,189

(a) Other securitizations includes securitizations of residential mortgages, auto loans and student loans.

The Firm's wholesale businesses also securitize loans for client-driven transactions; those client-driven loan securitizations are not considered to be a source of funding for the Firm and are not included in the table above. For further description of the client-driven loan securitizations, see Note 16 on pages 280–291 of this Annual Report.

Parent holding company and subsidiary funding

The parent holding company acts as an important source of funding to its subsidiaries. The Firm's liquidity management is therefore intended to ensure that liquidity at the parent holding company is maintained at levels sufficient to fund the operations of the parent holding company and its subsidiaries and affiliates for an extended period of time in a stress environment where access to normal funding sources is disrupted.

To effectively monitor the adequacy of liquidity and funding at the parent holding company, the Firm uses three primary measures:

- Number of months of pre-funding: The Firm targets pre-funding of the parent holding company to ensure that both contractual and non-contractual obligations can be met for at least 18 months assuming no access to wholesale funding markets. However, due to conservative liquidity management actions taken by the Firm, the current pre-funding of such obligations is greater than target.
- Excess cash: Excess cash is managed to ensure that daily cash requirements can be met in both normal and stressed environments. Excess cash generated by parent holding company issuance activity is placed on deposit with or as advances to both bank and nonbank subsidiaries or held as liquid collateral purchased through reverse repurchase agreements.
- Stress testing: The Firm conducts regular stress testing for the parent holding company and major bank subsidiaries as well as the Firm's principal U.S. and U.K. broker-dealer subsidiaries to ensure sufficient liquidity for the Firm in a stressed environment. The Firm's

liquidity management takes into consideration its subsidiaries' ability to generate replacement funding in the event the parent holding company requires repayment of the aforementioned deposits and advances. For further information, see the Stress testing discussion below.

Global Liquidity Reserve

The Global Liquidity Reserve includes cash on deposit at central banks, and cash proceeds reasonably expected to be received in secured financings of unencumbered high-quality securities (such as sovereign debt, government-guaranteed corporate debt, U.S. government agency debt, and agency MBS) that are available to the Firm on a consolidated basis. The liquidity amount estimated to be realized from secured financings is based on management's current judgment and assessment of the Firm's ability to quickly raise funds from secured financings.

The Global Liquidity Reserve also includes the Firm's borrowing capacity at various FHLBs, the Federal Reserve Bank discount window and various other central banks as a result of collateral pledged by the Firm to such banks. Although considered as a source of available liquidity, the Firm does not view borrowing capacity at the Federal Reserve Bank discount window and various other central banks as a primary source of funding.

As of December 31, 2012, the Global Liquidity Reserve was estimated to be approximately $491 billion, compared with approximately $379 billion at December 31, 2011. The Global Liquidity Reserve fluctuates due to changes in deposits, the Firm's purchase and investment activities and general market conditions.

In addition to the Global Liquidity Reserve, the Firm has significant amounts of marketable securities such as corporate debt and equity securities available to raise liquidity, if required.

Stress testing

Liquidity stress tests are intended to ensure sufficient liquidity for the Firm under a variety of adverse scenarios. Results of stress tests are therefore considered in the formulation of the Firm's funding plan and assessment of its liquidity position. Liquidity outflow assumptions are modeled across a range of time horizons and varying degrees of market and idiosyncratic stress. Standard stress tests are performed on a regular basis and ad hoc stress tests are performed as required. Stress scenarios are produced for the parent holding company and the Firm's major bank subsidiaries as well as the Firm's principal U.S. and U.K. broker-dealer subsidiaries. In addition, separate regional liquidity stress testing is performed.

Liquidity stress tests assume all of the Firm's contractual obligations are met and also take into consideration varying levels of access to unsecured and secured funding markets. Additionally, assumptions with respect to potential non-contractual and contingent outflows include, but are not limited to, the following:

- Deposits
  - For bank deposits that have no contractual maturity, the range of potential outflows reflect the type and size of deposit account, and the nature and extent of the Firm's relationship with the depositor.
- Secured funding
  - Range of haircuts on collateral based on security type and counterparty.
- Derivatives
  - Margin calls by exchanges or clearing houses;
  - Collateral calls associated with ratings downgrade triggers and variation margin;
  - Outflows of excess client collateral;
  - Novation of derivative trades.
- Unfunded commitments
  - Potential facility drawdowns reflecting the type of commitment and counterparty.

Contingency funding plan

The Firm's contingency funding plan ("CFP"), which is reviewed and approved by ALCO, provides a documented framework for managing both temporary and longer-term unexpected adverse liquidity situations. It sets out a list of indicators and metrics that are reviewed on a daily basis to identify the emergence of increased risks or vulnerabilities in the Firm's liquidity position. The CFP identifies alternative contingent liquidity resources that can be accessed under adverse liquidity circumstances.

Credit ratings

The cost and availability of financing are influenced by credit ratings. Reductions in these ratings could have an adverse effect on the Firm's access to liquidity sources, increase the cost of funds, trigger additional collateral or funding requirements and decrease the number of investors and counterparties willing to lend to the Firm. Additionally, the Firm's funding requirements for VIEs and other third-party commitments may be adversely affected by a decline in credit ratings. For additional information on the impact of a credit ratings downgrade on the funding requirements for VIEs, and on derivatives and collateral agreements, see Special-purpose entities on page 109, and Credit risk, liquidity risk and credit-related contingent features in Note 5 on pages 224–225, of this Annual Report.

Critical factors in maintaining high credit ratings include a stable and diverse earnings stream, strong capital ratios, strong credit quality and risk management controls, diverse funding sources, and disciplined liquidity monitoring procedures.

The credit ratings of the parent holding company and certain of the Firm's significant operating subsidiaries as of December 31, 2012, were as follows.

	JPMorgan Chase & Co.			JPMorgan Chase Bank, N.A. Chase Bank USA, N.A.			J.P. Morgan Securities LLC		
December 31, 2012	Long-term issuer	Short-term issuer	Outlook	Long-term issuer	Short-term issuer	Outlook	Long-term issuer	Short-term issuer	Outlook
Moody's Investor Services	A2	P-1	Negative	Aa3	P-1	Stable	A1	P-1	Stable
Standard & Poor's	A	A-1	Negative	A+	A-1	Negative	A+	A-1	Negative
Fitch Ratings	A+	F1	Stable	A+	F1	Stable	A+	F1	Stable

On June 21, 2012, Moody's downgraded the long-term ratings of the Firm and affirmed all its short-term ratings. The outlook for the parent holding company was left on negative reflecting Moody's view that government support for U.S. bank holding company creditors is becoming less certain and less predictable. Such ratings actions concluded Moody's review of 17 banks and securities firms with global capital markets operations, including the Firm, as a result of which all of these institutions were downgraded by various degrees.

Following the disclosure by the Firm, on May 10, 2012, of losses from the synthetic credit portfolio held by CIO, Fitch downgraded the Firm and placed all parent and subsidiary long-term ratings on Ratings Watch Negative. At that time, S&P also revised its outlook on the ratings of the Firm from Stable to Negative. Subsequently, on October 10, 2012, Fitch revised the outlook to Stable and affirmed the Firm's ratings.

The above-mentioned rating actions did not have a material adverse impact on the Firm's cost of funds and its ability to fund itself. Further downgrades of the Firm's long-term ratings by one notch or two notches could result in a downgrade of the Firm's short-term ratings. If this were to occur, the Firm believes its cost of funds could increase and access to certain funding markets could be reduced. The nature and magnitude of the impact of further ratings downgrades depends on numerous contractual and behavioral factors (which the Firm believes are incorporated in the Firm's liquidity risk and stress testing metrics). The Firm believes it maintains sufficient liquidity to withstand any potential decrease in funding capacity due to further ratings downgrades.

JPMorgan Chase's unsecured debt does not contain requirements that would call for an acceleration of payments, maturities or changes in the structure of the existing debt, provide any limitations on future borrowings or require additional collateral, based on unfavorable changes in the Firm's credit ratings, financial ratios, earnings, or stock price.

Rating agencies continue to evaluate various ratings factors, such as regulatory reforms, rating uplift assumptions surrounding government support, and economic uncertainty and sovereign creditworthiness, and their potential impact on ratings of financial institutions. Although the Firm closely monitors and endeavors to manage factors influencing its credit ratings, there is no assurance that its credit ratings will not be changed in the future.

Cash flows

For the years ended December 31, 2012, 2011 and 2010, cash and due from banks decreased $5.9 billion, and increased by $32.0 billion and $1.4 billion, respectively. The following discussion highlights the major activities and transactions that affected JPMorgan Chase's cash flows during 2012, 2011 and 2010, respectively.

Cash flows from operating activities

JPMorgan Chase's operating assets and liabilities support the Firm's capital markets and lending activities, including the origination or purchase of loans initially designated as held-for-sale. Operating assets and liabilities can vary significantly in the normal course of business due to the amount and timing of cash flows, which are affected by client-driven and risk management activities, and market conditions. Management believes cash flows from operations, available cash balances and the Firm's ability to generate cash through short- and long-term borrowings are sufficient to fund the Firm's operating liquidity needs.

For the year ended December 31, 2012, net cash provided by operating activities was $25.1 billion. This resulted from a decrease in securities borrowed reflecting a shift in the deployment of excess cash to resale agreements, as well as lower client activity in CIB, and lower trading assets - derivative receivables, primarily related to the decline in the U.S. dollar and tightening of credit spreads. Partially offsetting these cash inflows was a decrease in accounts payable and other liabilities predominantly due to lower CIB client balances, and an increase in trading assets - debt and equity instruments driven by client-driven market-making activity in CIB. Net cash generated from operating activities was higher than net income largely as a result of adjustments for noncash items such as depreciation and amortization, provision for credit losses, and stock-based compensation. Cash used to acquire loans was higher than cash proceeds received from sales and paydowns of such loans originated and purchased with an initial intent to sell, and also reflected a lower level of activity over the prior-year period.

For the year ended December 31, 2011, net cash provided by operating activities was $95.9 billion. This resulted from a net decrease in trading assets and liabilities – debt and equity instruments, driven by client-driven market-making activity in CIB; an increase in accounts payable and other liabilities predominantly due to higher CIB client balances, and a decrease in accrued interest and accounts receivables, primarily in CIB, driven by a large reduction in customer margin receivables due to changes in client activity. Partially offsetting these cash proceeds was an increase in securities borrowed, predominantly in Corporate due to higher excess cash positions at year-end. Net cash generated from operating activities was higher than net income largely as a result of adjustments for noncash items such as the provision for credit losses, depreciation and amortization, and stock-based compensation. Additionally, cash provided by proceeds from sales and paydowns of loans originated or purchased with an initial intent to sell was higher than cash used to acquire such loans, and also reflected a higher level of activity over the prior-year period.

For the year ended December 31, 2010, net cash used by operating activities was $3.8 billion, mainly driven by an increase primarily in trading assets – debt and equity instruments; principally due to improved market activity primarily in equity securities, foreign debt and physical commodities, partially offset by an increase in trading liabilities due to higher levels of positions taken to facilitate customer-driven activity. Net cash was provided by net income and from adjustments for non-cash items such as the provision for credit losses, depreciation and amortization and stock-based compensation. Additionally, proceeds from sales and paydowns of loans originated or purchased with an initial intent to sell were higher than cash used to acquire such loans.

Cash flows from investing activities

The Firm's investing activities predominantly include loans originated to be held for investment, the AFS securities portfolio and other short-term interest-earning assets. For the year ended December 31, 2012, net cash of $119.8 billion was used in investing activities. This resulted from an increase in securities purchased under resale agreements due to deployment of the Firm's excess cash by Treasury; higher deposits with banks reflecting placements of the Firm's excess cash with various central banks, primarily Federal Reserve Banks; and higher levels of wholesale loans, primarily in CB and AM, driven by higher wholesale activity across most of the Firm's regions and businesses. Partially offsetting these cash outflows were a decline in consumer, excluding credit card, loans predominantly due to mortgage-related paydowns and portfolio run-off, and a decline in credit card loans due to higher repayment rates; and proceeds from maturities and sales of AFS securities, which were higher than the cash used to acquire new AFS securities.

For the year ended December 31, 2011, net cash of $170.8 billion was used in investing activities. This resulted from a significant increase in deposits with banks reflecting the placement of funds with various central banks, including Federal Reserve Banks, predominantly resulting from the overall growth in wholesale client deposits; an increase in loans reflecting continued growth in client activity across all of the Firm's wholesale businesses and regions; net purchases of AFS securities, largely due to repositioning of the portfolio in Corporate in response to changes in the market environment; and an increase in securities purchased under resale agreements, predominantly in Corporate due to higher excess cash positions at year-end. Partially offsetting these cash outflows were a decline in consumer, excluding credit card, loan balances due to paydowns and portfolio run-off, and in credit card loans, due to higher repayment rates, run-off of the Washington Mutual portfolio and the Firm's sale of the Kohl's portfolio.

For the year ended December 31, 2010, net cash of $54.0 billion was provided by investing activities. This resulted from a decrease in deposits with banks largely due to a decline in deposits placed with the Federal Reserve Bank and lower interbank lending as market stress eased since the end of 2009; net proceeds from sales and maturities of AFS securities used in the Firm's interest rate risk management activities in Corporate; and a net decrease in the credit card loan portfolio, driven by the expected runoff of the Washington Mutual portfolio, a decline in lower-yielding promotional credit card balances, continued runoff of loan balances in the consumer, excluding credit card portfolio, primarily related to residential real estate, and repayments and loan sales in the wholesale portfolio, primarily in CIB and CB; the decrease was partially offset by higher originations across the wholesale and consumer businesses. Partially offsetting these cash proceeds was an increase in securities purchased under resale agreements, predominantly due to higher financing volume in CIB; and cash used for business acquisitions, primarily RBS Sempra.

Cash flows from financing activities

The Firm's financing activities predominantly include taking customer deposits, and issuing long-term debt as well as preferred and common stock. For the year ended December 31, 2012, net cash provided by financing activities was $87.7 billion. This was driven by proceeds from long-term borrowings and a higher level of securitized credit cards; an increase in deposits due to growth in both consumer and wholesale deposits (for additional information, see Balance Sheet Analysis on pages 106–108 of this Annual Report); an increase in federal funds purchased and securities loaned or sold under repurchase agreements due to higher secured financings of the Firm's assets; an increase in commercial paper issuance in the wholesale funding markets to meet short-term funding needs, partially offset by a decline in the volume of client deposits and other third-party liability balances related to CIB's liquidity management product; an increase in other borrowed funds due to higher secured and unsecured short-term borrowings to meet short-term funding needs; and proceeds from the issuance of preferred stock. Partially offsetting these cash inflows were redemptions and maturities of long-term borrowings, including TruPS, and securitized credit cards; and payments of cash dividends on common and preferred stock and repurchases of common stock and warrants.

For the year ended December 31, 2011, net cash provided by financing activities was $107.7 billion. This was largely driven by a significant increase in deposits, predominantly due to an overall growth in wholesale client balances and, to a lesser extent, consumer deposit balances. The increase in wholesale client balances, particularly in CIB and CB, was primarily driven by lower returns on other available alternative investments and low interest rates during 2011, and in AM, driven by growth in the number of clients and level of deposits. In addition, there was an increase in commercial paper due to growth in the volume of liability balances in sweep accounts related to CIB's cash management program. Cash was used to reduce securities sold under repurchase agreements, predominantly in CIB, reflecting the lower funding requirements of the Firm based on lower trading inventory levels, and change in the mix of funding sources; for net repayments of long-term borrowings, including a decrease in long-term debt, predominantly due to net redemptions and maturities, as well as a decline in long-term beneficial interests issued by consolidated VIEs due to maturities of Firm-sponsored credit card securitization transactions; to reduce other borrowed funds, predominantly driven by maturities of short-term secured borrowings, unsecured bank notes and short-term FHLB advances; and for repurchases of common stock and warrants, and payments of cash dividends on common and preferred stock.

In 2010, net cash used in financing activities was $49.2 billion. This resulted from net repayments of long-term borrowings as new issuances were more than offset by payments primarily reflecting a decline in beneficial interests issued by consolidated VIEs due to maturities related to Firm-sponsored credit card securitization trusts; a decline in deposits associated with wholesale funding activities due to the Firm's lower funding needs; lower deposit levels in CIB, offset partially by net inflows from existing customers and new business in AM, CB and CCB; a decline in commercial paper and other borrowed funds due to lower funding requirements; payments of cash dividends; and repurchases of common stock. Cash was generated as a result of an increase in securities sold under repurchase agreements largely as a result of an increase in activity levels in CIB partially offset by a decrease in Corporate reflecting repositioning activities.

CREDIT RISK MANAGEMENT

Credit risk is the risk of loss from obligor or counterparty default. The Firm provides credit to a variety of customers, ranging from large corporate and institutional clients to individual consumers and small businesses. In its consumer businesses, the Firm is exposed to credit risk through its real estate, credit card, auto, business banking and student lending businesses, with a primary focus of serving the prime segment of the consumer market. Originated mortgage loans are retained in the mortgage portfolio, or securitized or sold to U.S. government agencies and U.S. government-sponsored enterprises; other types of consumer loans are typically retained on balance sheet. In its wholesale businesses, the Firm is exposed to credit risk through its underwriting, lending and derivatives activities with and for clients and counterparties, as well as through its operating services activities, such as cash management and clearing activities. Loans originated or acquired by the Firm's wholesale businesses are generally retained on the balance sheet. The Firm's syndicated loan business, distributes a significant percentage of originations into the market and is an important component of portfolio management.

Credit risk organization

Credit risk management is overseen by the Chief Risk Officer and implemented within the lines of business. The Firm's credit risk management governance consists of the following functions:

- Establishing a comprehensive credit risk policy framework
- Monitoring and managing credit risk across all portfolio segments, including transaction and line approval
- Assigning and managing credit authorities in connection with the approval of all credit exposure
- Managing criticized exposures and delinquent loans
- Determining the allowance for credit losses and ensuring appropriate credit risk-based capital management

Risk identification and measurement

The Firm is exposed to credit risk through its lending, capital markets activities and operating services businesses. Credit Risk Management works in partnership with the business segments in identifying and aggregating exposures across all lines of business. To measure credit risk, the Firm employs several methodologies for estimating the likelihood of obligor or counterparty default. Methodologies for measuring credit risk vary depending on several factors, including type of asset (e.g., consumer versus wholesale), risk measurement parameters (e.g., delinquency status and borrower's credit score versus wholesale risk-rating) and risk management and collection processes (e.g., retail collection center versus centrally managed workout groups). Credit risk measurement is based on the amount of exposure should the obligor or the counterparty default, the probability of default and the loss severity given a default event.

Based on these factors and related market-based inputs, the Firm estimates probable and unexpected credit losses for the consumer and wholesale portfolios. Probable credit losses inherent in the Firm's loan portfolio and related commitments are reflected in the allowance for credit losses. These losses are estimated using statistical analyses and other factors as described in Note 15 on pages 276–279 of this Annual Report. However, probable losses are not the sole indicators of risk. Unexpected losses are reflected in the allocation of credit risk capital and represent the potential volatility of actual losses relative to the amount of probable losses inherent in the portfolio. The methodologies used to measure probable and unexpected credit losses depends on the characteristics of the credit exposure, as described below.

Scored exposure

The scored portfolio is generally held in CCB and includes residential real estate loans, credit card loans, certain auto and business banking loans, and student loans. For the scored portfolio, probable and unexpected credit losses are based on statistical analysis of credit losses over discrete periods of time. Probable credit losses inherent in the portfolio are estimated using portfolio modeling, credit scoring, and decision-support tools, which consider loan-level factors such as delinquency status, credit scores, collateral values, and other risk factors. Estimated probable and unexpected credit losses also consider uncertainties and other factors, including those related to current macroeconomic and political conditions, the quality of underwriting standards, and other internal and external factors. The factors and analysis are updated on a quarterly basis or more frequently as market conditions dictate.

Risk-rated exposure

Risk-rated portfolios are generally held in CIB, CB and AM, but also include certain business banking and auto dealer loans held in CCB that are risk-rated because they have characteristics similar to commercial loans. For the risk-rated portfolio, probable and unexpected credit losses are based on estimates of the probability of default and loss severity given a default. The estimation process begins with risk-ratings that are assigned to each loan facility to differentiate risk within the portfolio. These risk-ratings are reviewed on an ongoing basis by Credit Risk management and revised as needed to reflect the borrower's current financial position, risk profile and related collateral. The probability of default is the likelihood that a loan will default and not be fully repaid by the borrower. The probability of default is estimated for each borrower, and a loss given default is estimated considering the collateral and structural support for each credit facility. The calculations and assumptions are based on management

information systems and methodologies that are under continual review.

Stress testing

Stress testing is important in measuring and managing credit risk in the Firm's credit portfolio. The process assesses the potential impact of alternative economic and business scenarios on estimated credit losses for the Firm. Economic scenarios, and the parameters underlying those scenarios, are defined centrally and applied consistently across the businesses. These scenarios are articulated in terms of macroeconomic factors, which may lead to credit migration, changes in delinquency trends and potential losses in the credit portfolio. In addition to the periodic stress testing processes, management also considers additional stresses outside these scenarios, as necessary.

Risk monitoring and management

The Firm has developed policies and practices that are designed to preserve the independence and integrity of the approval and decision-making process of extending credit and to ensure credit risks are assessed accurately, approved properly, monitored regularly and managed actively at both the transaction and portfolio levels. The policy framework establishes credit approval authorities, concentration limits, risk-rating methodologies, portfolio review parameters and guidelines for management of distressed exposures. In addition, certain models, assumptions and inputs used in evaluating and monitoring credit risk are independently validated by groups that are separate from the line of businesses.

For consumer credit risk, delinquency and other trends, including any concentrations at the portfolio level, are monitored for potential problems, as certain of these trends can be improved through changes in underwriting policies and portfolio guidelines. Consumer Risk Management evaluates delinquency and other trends against business expectations, current and forecasted economic conditions, and industry benchmarks. Loss mitigation strategies are being employed for all residential real estate portfolios. These strategies include interest rate reductions, term or payment extensions, principal and interest deferral and other actions intended to minimize economic loss and avoid foreclosure. Historical and forecasted trends are incorporated into the modeling of estimated consumer credit losses and are part of the monitoring of the credit risk profile of the portfolio. Under the Firm's model risk policy, new significant risk management models, as well as major changes to such models, are required to be reviewed and approved by the Model Review Group prior to implementation into the operating environment. Internal Audit also periodically tests the internal controls around the modeling process including the integrity of the data utilized. For further discussion of consumer loans, see Note 14 on pages 250–275 of this Annual Report.

Wholesale credit risk is monitored regularly at an aggregate portfolio, industry and individual counterparty basis with established concentration limits that are reviewed and revised, as deemed appropriate by management, typically on an annual basis. Industry and counterparty limits, as measured in terms of exposure and economic credit risk capital, are subject to stress-based loss constraints.

Management of the Firm's wholesale credit risk exposure is accomplished through a number of means including:

- Loan underwriting and credit approval process
- Loan syndications and participations
- Loan sales and securitizations
- Credit derivatives
- Use of master netting agreements
- Collateral and other risk-reduction techniques

In addition to Risk Management, Internal Audit performs periodic exams, as well as continuous review, where appropriate, of the Firm's consumer and wholesale portfolios. For risk-rated portfolios, a credit review group within Internal Audit is responsible for:

- Independently assessing and validating the changing risk grades assigned to exposures; and
- Evaluating the effectiveness of business units' risk-ratings, including the accuracy and consistency of risk grades, the timeliness of risk grade changes and the justification of risk grades in credit memoranda

Risk reporting

To enable monitoring of credit risk and effective decision-making, aggregate credit exposure, credit quality forecasts, concentration levels and risk profile changes are reported regularly to senior Credit Risk Management. Detailed portfolio reporting of industry, customer, product and geographic concentrations occurs monthly, and the appropriateness of the allowance for credit losses is reviewed by senior management at least on a quarterly basis. Through the risk reporting and governance structure, credit risk trends and limit exceptions are provided regularly to, and discussed with, senior management and the Board of Directors. For further discussion of Risk monitoring and control, see page 125 of this Annual Report.

CREDIT PORTFOLIO

2012 Credit Risk Overview

The credit environment in 2012 continued to improve, but concerns persisted around the European financial crisis and the U.S. fiscal situation. Over the course of the year, the Firm continued to actively manage its underperforming and nonaccrual loans and reduce such exposures through repayments, loan sales and workouts. The Firm saw decreased downgrade, default and charge-off activity and improved consumer delinquency trends. The Firm did see a minimal increase in delinquencies in the fourth quarter as a result of Superstorm Sandy but currently does not anticipate losses to be material. At the same time, the Firm increased its overall lending activity driven by the wholesale businesses. The combination of these factors resulted in an improvement in the credit quality of the portfolio compared with 2011 and contributed to the Firm's reduction in the allowance for credit losses. The current year included the effect of regulatory guidance implemented during 2012 which resulted in the Firm reporting an additional $3.0 billion of nonaccrual loans at December 31, 2012 (see page 146 in this Annual Report for further information). Excluding the impact of the reporting changes noted above, nonperforming loans would have decreased from 2011.

The credit performance of the consumer portfolio across the entire product spectrum has improved, with lower levels of delinquent loans and charge-offs. Weak overall economic conditions continued to have a negative impact on the number of real estate loans charged off, while continued weak housing prices have resulted in an elevated severity of loss recognized on these defaulted loans. The Firm has taken proactive steps to assist homeowners most in need of financial assistance throughout the economic downturn. For further discussion of the consumer credit environment and consumer loans, see Consumer Credit Portfolio on pages 138–149 and Note 14 on pages 250–275 of this Annual Report.

The wholesale credit environment remained favorable throughout 2012. The rise in commercial client activity resulted in an increase in credit exposure across most businesses, regions and products. Underwriting guidelines across all areas of lending continue to remain a key point of focus, consistent with evolving market conditions and the Firm's risk management activities. The wholesale portfolio continues to be actively managed, in part by conducting ongoing, in-depth reviews of credit quality and of industry, product and client concentrations. During the year, wholesale criticized assets, nonperforming assets and charge-offs decreased from the higher levels experienced in 2011, including a reduction in nonaccrual loans by 40%. As a result, the ratio of nonaccrual loans to total loans, the net charge-off rate and the allowance for loan loss coverage ratio all declined. For further discussion of wholesale loans, see Note 14 on pages 250–275 of this Annual Report.

The following table presents JPMorgan Chase's credit portfolio as of December 31, 2012 and 2011. Total credit exposure was $1.9 trillion at December 31, 2012, an increase of $51.1 billion from December 31, 2011, primarily reflecting an increase in the wholesale portfolio of $70.9 billion, partially offset by a decrease in the consumer portfolio of $19.8 billion. For further information on the changes in the credit portfolio, see Consumer Credit Portfolio on pages 138–149, and Wholesale Credit Portfolio on pages 150–159, of this Annual Report.

In the following table, reported loans include loans retained (i.e., held-for-investment); loans held-for-sale (which are carried at the lower of cost or fair value, with valuation changes recorded in noninterest revenue); and certain loans accounted for at fair value. The Firm also records certain loans accounted for at fair value in trading assets. For further information regarding these loans see Note 3 on pages 196–214 of this Annual Report. For additional information on the Firm's loans and derivative receivables, including the Firm's accounting policies, see Note 14 and Note 6 on pages 250–275 and 218–227, respectively, of this Annual Report.

Net charge-offs[g]	**$ 9,063**	$ 12,237
Average retained loans		
Loans – reported	**717,035**	688,181
Loans – reported, excluding residential real estate PCI loans	**654,454**	619,227
Net charge-off rates[g]		
Loans – reported	**1.26%**	1.78%
Loans – reported, excluding PCI	**1.38**	1.98

(a) Represents the net notional amount of protection purchased and sold through credit derivatives used to manage both performing and nonperforming wholesale credit exposures; these derivatives do not qualify for hedge accounting under U.S. GAAP. Excludes the synthetic credit portfolio. For additional information, see Credit derivatives on pages 158–159 and Note 6 on pages 218–227 of this Annual Report.

(b) Nonperforming includes nonaccrual loans, nonperforming derivatives, commitments that are risk rated as nonaccrual, real estate owned and other commercial and personal property.

(c) At December 31, 2012 and 2011, nonperforming assets excluded: (1) mortgage loans insured by U.S. government agencies of $10.6 billion and $11.5 billion, respectively, that are 90 or more days past due; (2) real estate owned insured by U.S. government agencies of $1.6 billion and $954 million, respectively; and (3) student loans insured by U.S. government agencies under the FFELP of $525 million and $551 million, respectively, that are 90 or more days past due. These amounts were excluded from nonaccrual loans as reimbursement of insured amounts is proceeding normally. In addition, the Firm's policy is generally to exempt credit card loans from being placed on nonaccrual status as permitted by regulatory guidance issued by the Federal Financial Institutions Examination Council ("FFIEC").

(d) Excludes PCI loans. Because the Firm is recognizing interest income on each pool of PCI loans, they are all considered to be performing.

(e) At December 31, 2012 and 2011, total nonaccrual loans represented 1.46% and 1.38%, respectively, of total loans. At December 31, 2012, included $1.8 billion of Chapter 7 loans and $1.2 billion of performing junior liens that are subordinate to senior liens that are 90 days or more past due. For more information, see Consumer Credit Portfolio on pages 138–149 of this Annual Report.

(f) Prior to the first quarter of 2012, reported amounts had only included defaulted derivatives; effective in the first quarter of 2012, reported amounts in all periods include both defaulted derivatives as well as derivatives that have been risk rated as nonperforming.

(g) Net charge-offs and net charge-off rates for the year ended December 31, 2012, included $800 million of charge-offs of Chapter 7 loans. See Consumer Credit Portfolio on pages 138–149 of this Annual Report for further details.

CONSUMER CREDIT PORTFOLIO

JPMorgan Chase's consumer portfolio consists primarily of residential real estate loans, credit card loans, auto loans, business banking loans, and student loans. The Firm's primary focus is on serving the prime segment of the consumer credit market. For further information on consumer loans, see Note 14 on pages 250–275 of this Annual Report.

A substantial portion of the consumer loans acquired in the Washington Mutual transaction were identified as PCI based on an analysis of high-risk characteristics, including product type, loan-to-value ("LTV") ratios, FICO risk scores and delinquency status. These PCI loans are accounted for on a pool basis, and the pools are considered to be performing. For further information on PCI loans see Note 14 on pages 250–275 of this Annual Report.

The credit performance of the consumer portfolio improved as the economy continued to slowly expand during 2012, resulting in a reduction in estimated credit losses, particularly in the residential real estate and credit card portfolios. However, high unemployment relative to the historical norm and weak housing prices continue to negatively impact the number of residential real estate loans being charged off and the severity of loss recognized on these loans. Early-stage residential real estate delinquencies (30–89 days delinquent), excluding government guaranteed loans, declined during the first half of the year, but increased during the second half of the year primarily due to seasonal impacts and the effect of Superstorm Sandy. Late-stage delinquencies (150+ days delinquent) continued to decline, but remain elevated. The elevated level of the late-stage delinquent loans is due, in part, to loss mitigation activities currently being undertaken and to elongated foreclosure processing timelines. Losses related to these loans continue to be recognized in accordance with the Firm's standard charge-off practices, but some delinquent loans that would otherwise have been foreclosed upon remain in the mortgage and home equity loan portfolios. In addition to these elevated levels of delinquencies, high unemployment and weak housing prices, uncertainties regarding the ultimate success of loan modifications, and the risk attributes of certain loans within the portfolio (e.g., loans with high LTV ratios, junior lien loans that are subordinate to a delinquent or modified senior lien) continue to contribute to uncertainty regarding overall residential real estate portfolio performance and have been considered in estimating the allowance for loan losses.

The following table presents consumer credit-related information held by CCB as well as residential real estate loans reported in the Asset Management and the Corporate/Private Equity segments for the dates indicated. For further information about the Firm's nonaccrual and charge-off accounting policies, see Note 14 on pages 250–275 of this Annual Report.

Consumer credit portfolio

As of or for the year ended December 31, (in millions, except ratios)	Credit exposure		Nonaccrual loans[f][g][h]		Net charge-offs[i]		Average annual net charge-off rate[i][j]

Memo: Total consumer credit portfolio, excluding PCI	$ 954,163	$ 968,181	$ 9,175	$ 7,412	$ 9,241	$ 11,797	2.55%	3.15%

(a) At December 31, 2012 and 2011, excluded operating lease-related assets of $4.7 billion and $4.4 billion, respectively.

(b) Charge-offs are not recorded on PCI loans until actual losses exceed estimated losses that were recorded as purchase accounting adjustments at the time of acquisition. To date, no charge-offs have been recorded for these loans.

(c) Credit card and home equity lending-related commitments represent the total available lines of credit for these products. The Firm has not experienced, and does not anticipate, that all available lines of credit would be used at the same time. For credit card and home equity commitments (if certain conditions are met), the Firm can reduce or cancel these lines of credit by providing the borrower notice or, in some cases, without notice as permitted by law.

(d) Receivables from customers primarily represent margin loans to retail brokerage customers, which are included in accrued interest and accounts receivable on the Consolidated Balance Sheets.

(e) Includes accrued interest and fees net of an allowance for the uncollectible portion of accrued interest and fee income.

(f) At December 31, 2012 and 2011, nonaccrual loans excluded: (1) mortgage loans insured by U.S. government agencies of $10.6 billion and $11.5 billion, respectively, that are 90 or more days past due; and (2) student loans insured by U.S. government agencies under the FFELP of $525 million and $551 million, respectively, that are 90 or more days past due. These amounts were excluded from nonaccrual loans as reimbursement of insured amounts is proceeding normally. In addition, the Firm's policy is generally to exempt credit card loans from being placed on nonaccrual status as permitted by regulatory guidance.

(g) Excludes PCI loans. Because the Firm is recognizing interest income on each pool of PCI loans, they are all considered to be performing.
(h) At December 31, 2012, included $1.8 billion of Chapter 7 loans as well as $1.2 billion of performing junior liens that are subordinate to senior liens that are 90 days or more past due. See Consumer Credit Portfolio on pages 138–149 of this Annual Report for further details.
(i) Charge-offs and net charge-off rates for the year ended December 31, 2012, included net charge-offs of Chapter 7 loans of $91 million for senior lien home equity, $539 million for junior lien home equity, $47 million for prime mortgage, including option ARMs, $70 million for subprime mortgage and $53 million for auto loans. Net charge-off rates for the for the year ended December 31, 2012, excluding these net charge-offs would have been 0.90%, 3.03%, 0.58%, 4.65% and 0.28% for the senior lien home equity, junior lien home equity, prime mortgage, including option ARMs, subprime mortgages and auto loans, respectively. See Consumer Credit Portfolio on pages 138–149 of this Annual Report for further details.
(j) Average consumer loans held-for-sale were $433 million and $924 million, respectively, for the years ended December 31, 2012 and 2011. These amounts were excluded when calculating net charge-off rates.

Consumer, excluding credit card

At December 31, 2012, the Firm reported, in accordance with regulatory guidance, $1.7 billion of residential real estate and auto loans that have been discharged under Chapter 7 bankruptcy and not reaffirmed by the borrower ("Chapter 7 loans") as collateral-dependent nonaccrual troubled debt restructurings ("TDRs"), regardless of their delinquency status. Pursuant to that guidance, these Chapter 7 loans were charged off to the net realizable value of the collateral, resulting in $800 million of charge-offs for the year ended December 31, 2012. The Firm expects to recover a significant amount of these losses over time as principal payments are received. Prior to September 30, 2012, the Firm's policy was to charge down to net realizable value loans to borrowers who had filed for bankruptcy when such loans became 60 days past due, and report such loans as nonaccrual at that time. However, the Firm did not previously report loans discharged under Chapter 7 bankruptcy as TDRs unless otherwise modified under one of the Firm's loss mitigation programs. Prior periods have not been restated for this policy change.

Based upon regulatory guidance, the Firm also began reporting performing junior liens that are subordinate to senior liens that are 90 days or more past due as nonaccrual loans in the first quarter of 2012. The prior year was also not restated for this policy change. The classification of certain of these higher-risk junior lien loans as nonaccrual did not have an impact on the allowance for loan losses as the Firm had previously considered the risk characteristics of this portfolio in estimating its allowance for loan losses. This regulatory policy change had a minimal impact on the Firm's net interest income during the year ended December 31, 2012, because predominantly all of the reclassified junior lien loans are currently making payments, and it is the Firm's policy to recognize these cash interest payments received as interest income.

For more information regarding the impact of these changes to nonaccrual loans and net charge-offs, see the Nonaccrual loans section on page 146 of this Annual Report and the Consumer Credit Portfolio table on page 139 of this Annual Report.

Portfolio analysis

Consumer loan balances declined during the year ended December 31, 2012, due to paydowns and charge-offs. Credit performance has improved across most portfolios but residential real estate charge-offs and delinquent loans remain above normal levels.

The following discussion relates to the specific loan and lending-related categories. PCI loans are generally excluded from individual loan product discussions and are addressed separately below. For further information about the Firm's consumer portfolio, including information about delinquencies, loan modifications and other credit quality indicators, see Note 14 on pages 250–275 of this Annual Report.

Home equity: Home equity loans at December 31, 2012, were $67.4 billion, compared with $77.8 billion at December 31, 2011. The decrease in this portfolio primarily reflected loan paydowns and charge-offs. Early-stage delinquencies showed improvement from December 31, 2011, for both senior and junior lien home equity loans, while net charge-offs for the year ended December 31, 2012, which include Chapter 7 loan charge-offs, decreased from the prior year. Senior lien and junior lien nonaccrual loans increased $890 million in 2012 due to the inclusion of Chapter 7 loans. Junior lien nonaccrual loans also increased from December 31, 2011, due to the addition of $1.2 billion of performing junior liens that are subordinate to senior liens that are 90 days or more past due based upon regulatory guidance issued during the first quarter of 2012.

Approximately 20% of the Firm's home equity portfolio consists of home equity loans ("HELOANs") and the remainder consists of home equity lines of credit ("HELOCs"). HELOANs are generally fixed-rate, closed-end, amortizing loans, with terms ranging from 3–30 years. Approximately half of the HELOANs are senior liens and the remainder are junior liens. In general, HELOCs originated by the Firm are revolving loans for a 10-year period, after which time the HELOC recasts into a loan with a 20-year amortization period. At the time of origination, the borrower typically selects one of two minimum payment options that will generally remain in effect during the revolving period: a monthly payment of 1% of the outstanding balance, or interest-only payments based on a variable index (typically Prime). HELOCs originated by Washington Mutual were generally revolving loans for a 10-year period, after which time the HELOC converts to an interest-only loan with a balloon payment at the end of the loan's term. Predominantly all HELOCs in the PCI portfolio beyond the revolving period have been modified into fixed-rate amortizing loans.

The Firm manages the risk of HELOCs during their revolving period by closing or reducing the undrawn line to the extent permitted by law when borrowers are experiencing financial

difficulty or when the collateral does not support the loan amount. The majority of the HELOCs contain terms that do not require a fully-amortizing payment until 2015 or later. Certain factors, such as future developments in both unemployment and home prices, could have a significant impact on the performance of these loans. The Firm will continue to evaluate both the near-term and longer-term repricing and recast risks inherent in its HELOC portfolio to ensure that changes in the Firm's estimate of incurred losses are appropriately considered in the allowance for credit losses and the Firm's account management practices are appropriate given the portfolio's risk profile.

At December 31, 2012, the Firm estimated that its home equity portfolio contained approximately $3.1 billion of current junior lien loans where the borrower has a first mortgage loan that is either delinquent or has been modified ("high-risk seconds"), compared with $3.7 billion at December 31, 2011. Such loans are considered to pose a higher risk of default than that of junior lien loans for which the senior lien is neither delinquent nor modified. The Firm estimates the balance of its total exposure to high-risk seconds on a quarterly basis using internal data, loan level credit bureau data, which typically provides the delinquency status of the senior lien, as well as information from a database maintained by one of the bank regulatory agencies. The estimated balance of these high-risk seconds may vary from quarter to quarter for reasons such as the movement of related senior liens into and out of the 30+ day delinquency bucket.

Current high risk junior liens

(in billions)	December 31, 2012	
Junior liens subordinate to:		
Modified current senior lien	$ 1.1	
Senior lien 30 – 89 days delinquent	0.9	
Senior lien 90 days or more delinquent	1.1	(a)
Total current high risk junior liens	$ 3.1	

(a) Junior liens subordinate to senior liens that are 90 days or more past due are classified as nonaccrual loans. Excludes approximately $100 million of junior liens that are performing but not current, which were placed on nonaccrual in accordance with the regulatory guidance.

Of the estimated $3.1 billion of high-risk junior liens at December 31, 2012, the Firm owns approximately 5% and services approximately 30% of the related senior lien loans to the same borrowers. The performance of the Firm's junior lien loans is generally consistent regardless of whether the Firm owns, services or does not own or service the senior lien. The increased probability of default associated with these higher-risk junior lien loans was considered in estimating the allowance for loan losses.

Mortgage: Mortgage loans at December 31, 2012, including prime, subprime and loans held-for-sale, were $84.5 billion, compared with $85.9 billion at December 31, 2011. Balances declined due to paydowns and the charge-off or liquidation of delinquent loans, partially offset by new prime mortgage originations. Net charge-offs decreased from the prior year as a result of improvement in delinquencies, but remained elevated.

Prime mortgages, including option adjustable-rate mortgages ("ARMs"), were $76.3 billion at December 31, 2012, compared with $76.2 billion at December 31, 2011. These loans were largely unchanged as increases related to prime mortgage originations and government insured loans that the Firm repurchased were largely offset by charge-off or liquidation of delinquent loans and paydowns of option ARM loans. Excluding loans insured by U.S. government agencies, both early-stage and late-stage delinquencies showed improvement during the year ended December 31, 2012, but early-stage delinquent loans increased during the second half of the year due primarily to seasonal factors and the impact of Superstorm Sandy. Nonaccrual loans decreased from the prior year (notwithstanding the inclusion of Chapter 7 loans), but remained elevated as a result of ongoing foreclosure processing delays. Net charge-offs declined year-over-year but remained elevated.

Option ARM loans, which are included in the prime mortgage portfolio, were $6.5 billion and $7.4 billion and represented 9% and 10% of the prime mortgage portfolio at December 31, 2012 and 2011, respectively. The decrease in option ARM loans resulted from portfolio run-off. As of December 31, 2012, approximately 6% of option ARM borrowers were delinquent, 2% were making interest-only or negatively amortizing payments, and 92% were making amortizing payments (such payments are not necessarily fully amortizing). Approximately 84% of borrowers within the portfolio are subject to risk of payment shock due to future payment recast, as only a limited number of these loans have been modified. The cumulative amount of unpaid interest added to the unpaid principal balance due to negative amortization of option ARMs was not material at either December 31, 2012, or 2011. The Firm estimates the following balances of option ARM loans will undergo a payment recast that results in a payment increase: $523 million in 2013, $709 million in 2014 and $724 million in 2015. Default rates generally increase when payment recast results in a payment increase. However, as the Firm's option ARM loans, other than those held in the PCI portfolio, are primarily loans with lower LTV ratios and higher borrower FICO scores, it is possible that many of these borrowers will be able to refinance into a lower rate product, which would reduce this payment recast risk. Accordingly, the Firm expects substantially lower losses on this portfolio when compared with the PCI option ARM portfolio. To date, losses realized on option ARM loans that have undergone payment recast have been immaterial and consistent with the Firm's expectations. The option ARM portfolio was acquired by the Firm as part of the Washington Mutual transaction.

Subprime mortgages at December 31, 2012, were $8.3 billion, compared with $9.7 billion at December 31, 2011. The decrease was due to portfolio run-off and the charge-off or liquidation of delinquent loans. Both early-stage and late-stage delinquencies have improved from December 31,

2011, but remain at elevated levels. Early-stage delinquencies increased during the second half of the year due primarily to seasonal factors and the impact of Superstorm Sandy. Nonaccrual loans increased due to the inclusion of Chapter 7 loans, while net charge-offs declined.

Auto: Auto loans at December 31, 2012, were $49.9 billion, compared with $47.4 billion at December 31, 2011. Loan balances increased due to new originations, partially offset by paydowns and payoffs. Delinquent loans increased compared with December 31, 2011; nonaccrual loans increased due to the inclusion of Chapter 7 loans. Net charge-offs also increased for the year ended December 31, 2012, compared with the prior year as a result of charge-offs of the Chapter 7 loans. Excluding the net charge-offs of the Chapter 7 loans, net charge-offs remained low as a result of favorable trends in both loss frequency and loss severity, mainly due to enhanced underwriting standards and a strong used car market. The auto loan portfolio reflected a high concentration of prime-quality credits.

Business banking: Business banking loans at December 31, 2012, were $18.9 billion, compared with $17.7 billion at December 31, 2011. The increase was due to growth in new loan origination volumes. These loans primarily include loans that are collateralized, often with personal loan guarantees, and may also include Small Business Administration guarantees. Delinquent loans and nonaccrual loans showed improvement from December 31, 2011. Net charge-offs declined for the year ended December 31, 2012, compared with the same period in the prior year.

Student and other: Student and other loans at December 31, 2012, were $12.2 billion, compared with $14.1 billion at December 31, 2011. The decrease was primarily due to paydowns and charge-offs of student loans. Other loans primarily include other secured and unsecured consumer loans. Nonaccrual loans were flat compared with December 31, 2011 while charge-offs decreased for the year ended December 31, 2012, compared with the prior year.

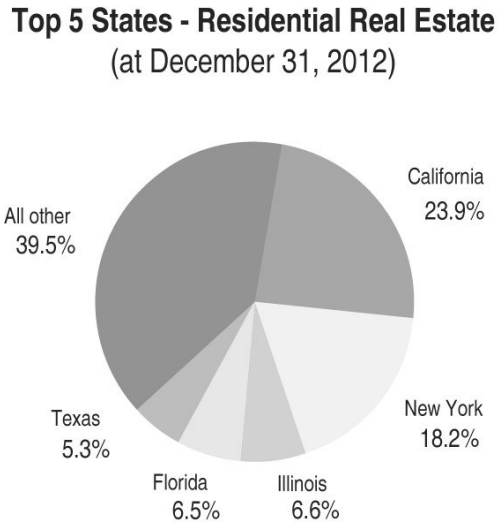
Purchased credit-impaired loans: PCI loans at December 31, 2012, were $59.7 billion, compared with $65.5 billion at December 31, 2011. This portfolio represents loans acquired in the Washington Mutual transaction, which were recorded at fair value at the time of acquisition.

During the year ended December 31, 2012, no additional impairment or reserve release was recognized in connection with the Firm's review of the PCI portfolios' expected cash flows. At both December 31, 2012 and 2011, the allowance for loan losses for the home equity, prime mortgage, option ARM and subprime mortgage PCI portfolios was $1.9 billion, $1.9 billion, $1.5 billion and $380 million, respectively.

As of December 31, 2012, approximately 27% of the option ARM PCI loans were delinquent and 48% had been modified into fixed-rate, fully amortizing loans. Substantially all of the remaining loans are making amortizing payments, although such payments are not necessarily fully amortizing; in addition, substantially all of these loans are subject to the risk of payment shock due to future payment recast. Default rates generally increase on option ARM loans when payment recast results in a payment increase. The expected increase in default rates is considered in the Firm's quarterly estimates of expected cash flows for the PCI portfolio. The cumulative amount of unpaid interest added to the unpaid principal balance of the option ARM PCI pool was $879 million and $1.1 billion at December 31, 2012, and December 31, 2011, respectively. The Firm estimates the following balances of option ARM PCI loans will undergo a payment recast that results in a payment increase: $283 million in 2013, $449 million in 2014 and $778 million in 2015.

The following table provides a summary of lifetime principal loss estimates included in both the nonaccretable difference and the allowance for loan losses. Lifetime principal loss estimates were relatively unchanged from December 31, 2011, to December 31, 2012. Principal charge-offs will not be recorded on these pools until the nonaccretable difference has been fully depleted.

Summary of lifetime principal loss estimates



December 31, (in billions)	Lifetime loss estimates[a]		LTD liquidation losses[b]	
	2012	2011	2012	2011
Home equity	$ 14.9	$ 14.9	$ 11.5	$ 10.4
Prime mortgage	4.2	4.6	2.9	2.3
Subprime mortgage	3.6	3.8	2.2	1.7
Option ARMs	11.3	11.5	8.0	6.6
Total	$ 34.0	$ 34.8	$ 24.6	$ 21.0

(a) Includes the original nonaccretable difference established in purchase accounting of $30.5 billion for principal losses only plus additional principal losses recognized subsequent to acquisition through the provision and allowance for loan losses. The remaining nonaccretable difference for principal losses only was $5.8 billion and $9.4 billion at December 31, 2012 and 2011, respectively.

(b) Life-to-date ("LTD") liquidation losses represent realization of loss upon loan resolution.

Geographic composition of residential real estate loans

At both December 31, 2012 and 2011, California had the greatest concentration of residential real estate loans with 24% of the total retained residential real estate loan portfolio, excluding mortgage loans insured by U.S. government agencies and PCI loans. Of the total retained residential real estate loan portfolio, excluding mortgage loans insured by U.S. government agencies and PCI loans, $74.1 billion, or 54%, were concentrated in California, New York, Arizona, Florida and Michigan at December 31, 2012, compared with $79.5 billion, or 54%, at December 31, 2011. The unpaid principal balance of PCI loans concentrated in these five states represented 72% of total PCI loans at both December 31, 2012 and 2011.

Current estimated LTVs of residential real estate loans

The current estimated average LTV ratio for residential real estate loans retained, excluding mortgage loans insured by U.S. government agencies and PCI loans, was 81% at December 31, 2012, compared with 83% at December 31, 2011. Excluding mortgage loans insured by U.S. government agencies and PCI loans, 20% of the retained portfolio had a current estimated LTV ratio greater than 100%, and 8% of the retained portfolio had a current estimated LTV ratio greater than 125% at December 31, 2012, compared with 24% and 10%, respectively, at December 31, 2011. The decline in home prices since 2007 has had a significant impact on the collateral values underlying the Firm's residential real estate loan portfolio. In general, the delinquency rate for loans with high LTV ratios is greater than the delinquency rate for loans in which the borrower has equity in the collateral. While a large portion of the loans with current estimated LTV ratios greater than 100% continue to pay and are current, the continued willingness and ability of these borrowers to pay remains a risk.

The following table for PCI loans presents the current estimated LTV ratios, as well as the ratios of the carrying value of the underlying loans to the current estimated collateral value. Because such loans were initially measured at fair value, the ratios of the carrying value to the current estimated collateral value will be lower than the current estimated LTV ratios, which are based on the unpaid principal balances. The estimated collateral values used to calculate these ratios do not represent actual appraised loan-level collateral values; as such, the resulting ratios are necessarily imprecise and should therefore be viewed as estimates.

LTV ratios and ratios of carrying values to current estimated collateral values – PCI loans

	2012				2011			
December 31, (in millions, except ratios)	Unpaid principal balance	Current estimated LTV ratio[a]	Net carrying value[c]	Ratio of net carrying value to current estimated collateral value[c]	Unpaid principal balance	Current estimated LTV ratio[a]	Net carrying value[c]	Ratio of net carrying value to current estimated collateral value[c]
Home equity	$ 22,343	111% [b]	$ 19,063	95%	$ 25,064	117% [b]	$ 20,789	97%
Prime mortgage	13,884	104	11,745	88	16,060	110	13,251	91
Subprime mortgage	6,326	107	4,246	72	7,229	115	4,596	73
Option ARMs	22,591	101	18,972	85	26,139	109	21,199	89

(a) Represents the aggregate unpaid principal balance of loans divided by the estimated current property value. Current property values are estimated at least quarterly based on home valuation models that utilize nationally recognized home price index valuation estimates; such models incorporate actual data to the extent available and forecasted data where actual data is not available.

(b) Represents current estimated combined LTV for junior home equity liens, which considers all available lien positions related to the property. All other products are presented without consideration of subordinate liens on the property.

(c) Net carrying value includes the effect of fair value adjustments that were applied to the consumer PCI portfolio at the date of acquisition and is also net of the allowance for loan losses of $1.9 billion for home equity, $1.9 billion for prime mortgage, $1.5 billion for option ARMs, and $380 million for subprime mortgage at both December 31, 2012 and 2011.

The current estimated average LTV ratios were 110% and 125% for California and Florida PCI loans, respectively, at December 31, 2012, compared with 117% and 140%, respectively, at December 31, 2011. Pressure on housing prices in California and Florida have contributed negatively to both the current estimated average LTV ratio and the ratio of net carrying value to current estimated collateral value for loans in the PCI portfolio. Of the PCI portfolio, 55% had a current estimated LTV ratio greater than 100%, and 24% had a current LTV ratio of greater than 125% at December 31, 2012, compared with 62% and 31%, respectively, at December 31, 2011.

While the current estimated collateral value is greater than the net carrying value of PCI loans, the ultimate performance of this portfolio is highly dependent on borrowers' behavior and ongoing ability and willingness to continue to make payments on homes with negative equity, as well as on the cost of alternative housing. For further information on the geographic composition and current estimated LTVs of residential real estate – non-PCI and PCI loans, see Note 14 on pages 250–275 of this Annual Report.

Loan modification activities – residential real estate loans

For both the Firm's on-balance sheet loans and loans serviced for others, more than 1.4 million mortgage modifications have been offered to borrowers and approximately 622,000 have been approved since the beginning of 2009. Of these, approximately 610,000 have achieved permanent modification as of December 31, 2012. Of the remaining modifications offered, 16% are in a trial period or still being reviewed for a modification, while 84% have dropped out of the modification program or otherwise were deemed not eligible for final modification.

The Firm is participating in the U.S. Treasury's Making Home Affordable ("MHA") programs and is continuing to offer its other loss-mitigation programs to financially distressed borrowers who do not qualify for the U.S. Treasury's programs. The MHA programs include the Home Affordable Modification Program ("HAMP") and the Second Lien Modification Program ("2MP"). The Firm's other loss-mitigation programs for troubled borrowers who do not qualify for HAMP include the traditional modification programs offered by the GSEs and other governmental agencies, as well as the Firm's proprietary modification programs, which include concessions similar to those offered under HAMP and 2MP but with expanded eligibility criteria. In addition, the Firm has offered specific targeted modification programs to higher risk borrowers, many of whom were current on their mortgages prior to modification. For further information about how loans are modified, see Note 14, Loan modifications, on pages 260–262 of this Annual Report.

Loan modifications under HAMP and under one of the Firm's proprietary modification programs, which are largely modeled after HAMP, require at least three payments to be made under the new terms during a trial modification period, and must be successfully re-underwritten with income verification before the loan can be permanently modified. In the case of specific targeted modification programs, re-underwriting the loan or a trial modification period is generally not required, unless the targeted loan is delinquent at the time of modification. When the Firm modifies home equity lines of credit, future lending commitments related to the modified loans are canceled as part of the terms of the modification.

The primary indicator used by management to monitor the success of the modification programs is the rate at which the modified loans redefault. Modification redefault rates are affected by a number of factors, including the type of loan modified, the borrower's overall ability and willingness to repay the modified loan and macroeconomic factors. Reduction in payment size for a borrower has shown to be the most significant driver in improving redefault rates.

The performance of modified loans generally differs by product type and also on whether the underlying loan is in the PCI portfolio, due both to differences in credit quality and in the types of modifications provided. Performance metrics for modifications to the residential real estate portfolio, excluding PCI loans, that have been seasoned more than six months show weighted average redefault rates of 25% for senior lien home equity, 20% for junior lien home equity, 14% for prime mortgages including option ARMs, and 24% for subprime mortgages. The cumulative performance metrics for modifications to the PCI residential real estate portfolio seasoned more than six months show weighted average redefault rates of 22% for home equity, 16% for prime mortgages, 13% for option ARMs and 28% for subprime mortgages. The favorable performance of the option ARM modifications is the result of a targeted proactive program which fixes the borrower's payment at the current level. The cumulative redefault rates reflect the performance of modifications completed under both HAMP and the Firm's proprietary modification programs from October 1, 2009, through December 31, 2012.

The following table presents information as of December 31, 2012 and 2011, relating to modified on-balance sheet residential real estate loans for which concessions have been granted to borrowers experiencing financial difficulty. Modifications of PCI loans continue to be accounted for and reported as PCI loans, and the impact of the modification is incorporated into the Firm's quarterly assessment of estimated future cash flows. Modifications of consumer loans other than PCI loans are generally accounted for and reported as TDRs. For further information on TDRs for the years ended December 31, 2012 and 2011, see Note 14 on pages 250–275 of this Annual Report.

Modified residential real estate loans

	2012		2011	
December 31, (in millions)	On-balance sheet loans	Nonaccrual on-balance sheet loans[e]	On-balance sheet loans	Nonaccrual on-balance sheet loans[e]
Modified residential real estate loans, excluding PCI loans[a][b][c]				
Home equity – senior lien	**$ 1,092**	**$ 607**	$ 335	$ 77
Home equity – junior lien	**1,223**	**599**	657	159
Prime mortgage, including option ARMs	**7,118**	**1,888**	4,877	922
Subprime mortgage	**3,812**	**1,308**	3,219	832
Total modified residential real estate loans, excluding PCI loans	**$ 13,245**	**$ 4,402**	$ 9,088	$ 1,990
Modified PCI loans[d]				
Home equity	**$ 2,302**	**NA**	$ 1,044	NA
Prime mortgage	**7,228**	**NA**	5,418	NA
Subprime mortgage	**4,430**	**NA**	3,982	NA
Option ARMs	**14,031**	**NA**	13,568	NA
Total modified PCI loans	**$ 27,991**	**NA**	$ 24,012	NA

(a) Amounts represent the carrying value of modified residential real estate loans.

(b) At December 31, 2012 and 2011, $7.5 billion and $4.3 billion, respectively, of loans permanently modified subsequent to repurchase from Ginnie Mae in accordance with the standards of the appropriate government agency (i.e., FHA, VA, RHS) are not included in the table above. When such loans perform subsequent to modification in accordance with Ginnie Mae guidelines, they are generally sold back into Ginnie Mae loan pools. Modified loans that do not re-perform become subject to foreclosure. For additional information about sales of loans in securitization transactions with Ginnie Mae, see Note 16 on pages 280–291 of this Annual Report.

(c) At December 31, 2012, included $1.6 billion of Chapter 7 loans, consisting of $450 million of senior lien home equity loans, $448 million of junior lien home equity loans, $465 million of prime, including option ARMs, and $245 million of subprime mortgages. Certain of these loans were previously reported as nonaccrual loans (e.g. based upon the delinquency status of the loan). See Consumer Credit Portfolio on pages 138–149 of this Annual Report for further details.

(d) Amounts represent the unpaid principal balance of modified PCI loans.

(e) As of December 31, 2012 and 2011, nonaccrual loans included $2.9 billion and $886 million, respectively, of TDRs for which the borrowers were less than 90 days past due. For additional information about loans modified in a TDR that are on nonaccrual status, see Note 14 on pages 250–275 of this Annual Report.

Nonperforming assets

The following table presents information as of December 31, 2012 and 2011, about consumer, excluding credit card, nonperforming assets.

Nonperforming assets[a]		
December 31, (in millions)	2012	2011
Nonaccrual loans[b]		
Home equity – senior lien	$ 931	$ 495
Home equity – junior lien	2,277	792
Prime mortgage, including option ARMs	3,445	3,462
Subprime mortgage	1,807	1,781
Auto	163	118
Business banking	481	694
Student and other	70	69
Total nonaccrual loans	9,174	7,411
Assets acquired in loan satisfactions		
Real estate owned	647	802
Other	37	44
Total assets acquired in loan satisfactions	684	846
Total nonperforming assets	$ 9,858	$ 8,257

(a) At December 31, 2012 and 2011, nonperforming assets excluded: (1) mortgage loans insured by U.S. government agencies of $10.6 billion and $11.5 billion, respectively, that are 90 or more days past due; (2) real estate owned insured by U.S. government agencies of $1.6 billion and $954 million, respectively; and (3) student loans insured by U.S. government agencies under the FFELP of $525 million and $551 million, respectively, that are 90 or more days past due. These amounts were excluded as reimbursement of insured amounts is proceeding normally.

(b) Excludes PCI loans that were acquired as part of the Washington Mutual transaction, which are accounted for on a pool basis. Since each pool is accounted for as a single asset with a single composite interest rate and an aggregate expectation of cash flows, the past-due status of the pools, or that of individual loans within the pools, is not meaningful. Because the Firm is recognizing interest income on each pool of loans, they are all considered to be performing.

Nonaccrual loans: Total consumer, excluding credit card, nonaccrual loans were $9.2 billion at December 31, 2012, compared with $7.4 billion at December 31, 2011.

Excluding the combined impacts of the Chapter 7 loans and the performing junior lien home equity loans discussed below, total consumer, excluding credit card, nonaccrual loans would have been $6.2 billion at December 31, 2012, compared with $7.4 billion at December 31, 2011. In addition to the combined impacts of the Chapter 7 loans and the performing junior lien home equity loans, elongated foreclosure processing timelines continue to result in elevated levels of nonaccrual loans in the residential real estate portfolios.

Nonaccrual loans in the residential real estate portfolio totaled $8.5 billion at December 31, 2012, of which 42% were greater than 150 days past due, compared with nonaccrual residential real estate loans of $6.5 billion at December 31, 2011, of which 69% were greater than 150 days past due. In the aggregate, the unpaid principal balance of residential real estate loans greater than 150 days past due was charged down by approximately 52% and 50% to estimated net realizable value of the collateral at December 31, 2012 and 2011, respectively.

At December 31, 2012, consumer, excluding credit card, nonaccrual loans included $1.8 billion of Chapter 7 loans, consisting of $450 million of senior lien home equity, $440 million of junior lien home equity, $500 million of prime mortgage, including option ARMs, $357 million of subprime mortgages and $51 million of auto loans. Because the Chapter 7 loans are accounted for as collateral-dependent loans and reported at the net realizable value of the collateral, these loans did not require an additional allowance for loan losses. Certain of these individual loans had previously been reported as performing TDRs (e.g., those loans that had been previously modified under one of the Firm's loss mitigation programs and that subsequently made at least six payments under the modified payment terms).

At December 31, 2012, nonaccrual loans in the residential real estate portfolio also included $1.2 billion of performing junior lien home equity loans that are subordinate to senior liens that are 90 days or more past due. For more information on the change in reporting of these junior liens, see the home equity portfolio analysis discussion on pages 140–141 of this Annual Report.

Modified loans have contributed to an elevated level of nonaccrual loans, since the Firm's policy requires modified loans that are on nonaccrual status to remain on nonaccrual status until payment is reasonably assured and the borrower has made a minimum of six payments under the modified terms. At December 31, 2012 and 2011, modified residential real estate loans of $4.4 billion and $2.0 billion, respectively, were classified as nonaccrual loans.

Real estate owned ("REO"): REO assets are managed for prompt sale and disposition at the best possible economic value. REO assets are those individual properties where the Firm receives the property in satisfaction of a debt (e.g., by taking legal title or physical possession). The Firm generally recognizes REO assets at the completion of the foreclosure process or upon execution of a deed in lieu of foreclosure transaction with the borrower. REO assets, excluding those insured by U.S. government agencies, decreased by $155 million from $802 million at December 31, 2011, to $647 million at December 31, 2012.

Mortgage servicing-related matters

The financial crisis resulted in unprecedented levels of delinquencies and defaults of 1-4 family residential real estate loans. Such loans required varying degrees of loss mitigation activities. It is the Firm's goal that foreclosure in these situations be a last resort, and accordingly, the Firm has made, and continues to make, significant efforts to help borrowers stay in their homes. Since the third quarter of 2010, the Firm has prevented two foreclosures for every foreclosure completed; foreclosure-prevention methods include loan modification, short sales and other means.

The Firm has a well-defined foreclosure prevention process when a borrower fails to pay on his or her loan. The Firm attempts to contact the borrower multiple times and in various ways in an effort to pursue home retention or other

options other than foreclosure. In addition, if the Firm is unable to contact a borrower, the Firm completes various reviews of the borrower's facts and circumstances before a foreclosure sale is completed. The delinquency period for the average borrower at the time of foreclosure over the last year has been approximately 25 months.

The high volume of delinquent and defaulted mortgages experienced by the Firm has placed a significant amount of stress on the Firm's servicing operations. The Firm has entered into a global settlement with certain federal and state agencies and Consent Orders with its banking regulators with respect to various mortgage servicing, loss mitigation and foreclosure process-related matters as further discussed below. The GSEs also impose compensatory fees on its mortgage servicers, including the Firm, if such servicers are unable to comply with the foreclosure timetables mandated by the GSEs. The Firm has incurred, and is continuing to incur, compensatory fees, which are reported in default servicing expense. To address its underlying mortgage servicing, loss mitigation and foreclosure process issues, the Firm has made, and is continuing to make, significant changes to its mortgage operations, which will enable it to comply with the Consent Orders and the global settlement and enhance its ability to comply with the foreclosure timetables mandated by the GSEs.

Global settlement with federal and state agencies: On February 9, 2012, the Firm announced that it had agreed to a settlement in principle (the "global settlement") with a number of federal and state government agencies, including the U.S. Department of Justice, the U.S. Department of Housing and Urban Development, the Consumer Financial Protection Bureau and the State Attorneys General, relating to the servicing and origination of mortgages. The global settlement, which became effective on April 5, 2012, required the Firm to, among other things: (i) make cash payments of approximately $1.1 billion, a portion of which will be set aside for payments to borrowers ("Cash Settlement Payment"); (ii) provide approximately $500 million of refinancing relief to certain "underwater" borrowers whose loans are owned and serviced by the Firm ("Refi Program"); and (iii) provide approximately $3.7 billion of additional relief for certain borrowers, including reductions of principal on first and second liens, payments to assist with short sales, deficiency balance waivers on past foreclosures and short sales, and forbearance assistance for unemployed homeowners ("Consumer Relief Program"). The Cash Settlement Payment was made on April 13, 2012.

The purpose of the Refi Program was to allow eligible borrowers who were current on their Firm-owned mortgage loans to refinance those loans and take advantage of the current low interest rate environment. Borrowers who were eligible for the Refi Program were those who were unable to refinance their mortgage loans under standard refinancing programs because they had no equity or, in many cases, negative equity in their homes. Initial interest rates on loans refinanced under the Refi Program were lower than the borrowers' interest rates prior to the refinancings and were capped at the greater of 100 basis points over Freddie Mac's then-current Primary Mortgage Market Survey Rate or 5.25%. Under the Refi Program, the interest rate on each refinanced loan could have been reduced either for the remaining life of the loan or for five years. The Firm reduced the interest rates on loans that it refinanced under the Refi Program for the remaining lives of those loans. In substance, these refinancings were more similar to loan modifications than traditional refinancings. All refinancings required under the Refi Program were completed as of December 31, 2012.

The first and second lien loan modifications provided for in the Consumer Relief Program will typically involve principal reductions for borrowers who have negative equity in their homes and who are experiencing financial difficulty. These loan modifications are primarily expected to be executed under the terms of either MHA (e.g., HAMP, 2MP) or one of the Firm's proprietary modification programs. The Firm began to provide relief to borrowers under the Consumer Relief Program in the first quarter of 2012.

If the Firm does not meet certain targets set forth in the global settlement agreement for providing either refinancings under the Refi Program or other borrower relief under the Consumer Relief Program within certain prescribed time periods, the Firm must instead make additional cash payments. In general, 75% of the targets must be met within two years of the date of the global settlement and 100% must be achieved within three years of that date. The Firm filed its first quarterly report concerning its compliance with the global settlement with the Office of Mortgage Settlement Oversight in November 2012. The report included information regarding the refinancings completed under the Refi Program and relief provided to borrowers under the Consumer Relief Program, as well as credits earned by the Firm under the global settlement as a result of such actions. The Firm expects to substantially complete its obligations under the Consumer Relief Program in the first half of 2013.

The global settlement also requires the Firm to adhere to certain enhanced mortgage servicing standards. The servicing standards include, among other items, the following enhancements to the Firm's servicing of loans: a pre-foreclosure notice to all borrowers, which will include account information, holder status, and loss mitigation steps taken; enhancements to payment application and collections processes; strengthening procedures for filings in bankruptcy proceedings; deploying specific restrictions on the "dual track" of foreclosure and loss mitigation; standardizing the process for appeal of loss mitigation denials; and implementing certain restrictions on fees, including the waiver of certain fees while a borrower's loss mitigation application is being evaluated. The Firm has made significant progress in implementing the prescribed servicing standards.

The global settlement releases the Firm from certain further claims by the participating government entities related to servicing activities, including foreclosures and loss mitigation activities; certain origination activities; and certain bankruptcy-related activities. Not included in the global settlement are any claims arising out of securitization activities, including representations made to investors with respect to mortgage-backed securities; criminal claims; and repurchase demands from the GSEs, among other items.

The Firm has accounted for all refinancings performed under the Refi Program and expects to account for all first and second lien loans modified under the Consumer Relief Program as TDRs. The expected impact of the Consumer Relief Program has been considered in the Firm's allowance for loan losses. For additional information, see Allowance for Credit Losses on pages 159–162 of this Annual Report.

On February 9, 2012, the Firm also entered into agreements with the Federal Reserve and the OCC for the payment of civil money penalties related to conduct that was the subject of consent orders entered into with the banking regulators in April 2011, as discussed further below. The Firm's payment obligations under those agreements will be deemed satisfied by the Firm's payments and provisions of relief under the global settlement.

For further information on the global settlement, see Critical Accounting Estimates Used by the Firm on pages 178–182, Note 2 on pages 195–196 and Note 14 on pages 250–275 of this Annual Report.

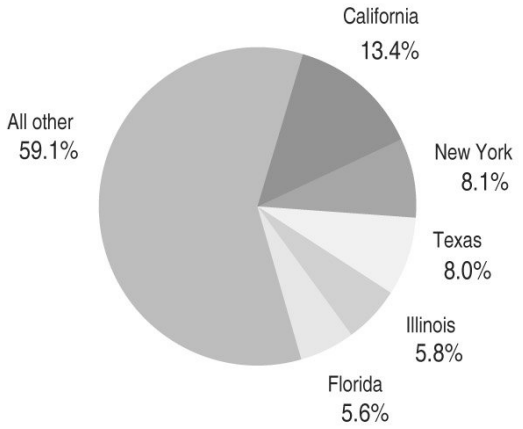
Consent Orders: During the second quarter of 2011, the Firm entered into Consent Orders ("Orders") with banking regulators relating to its residential mortgage servicing, foreclosure and loss-mitigation activities. In the Orders, the regulators have mandated significant changes to the Firm's servicing and default business and outlined requirements to implement these changes. The Firm submitted comprehensive action plans to the regulators, which set forth the steps necessary to ensure the Firm's residential mortgage servicing, foreclosure and loss-mitigation activities are conducted in accordance with the requirements of the Orders. The plans were approved and the Firm has implemented a number of corrective actions and made significant progress with respect to the following:

- Established an independent Compliance Committee which meets regularly and monitors progress against the Orders.
- Launched a new Customer Assistance Specialist organization for borrowers to facilitate the single point of contact initiative and ensure effective coordination and communication related to foreclosure, loss-mitigation and loan modification.
- Enhanced its approach to oversight over third-party vendors for foreclosure or other related functions.
- Standardized the processes for maintaining appropriate controls and oversight of the Firm's activities with respect to the Mortgage Electronic Registration system ("MERS") and compliance with MERSCORP's membership rules, terms and conditions.
- Strengthened its compliance program so as to ensure mortgage-servicing and foreclosure operations, including loss-mitigation and loan modification, comply with all applicable legal requirements.
- Enhanced management information systems for loan modification, loss-mitigation and foreclosure activities.
- Developed a comprehensive assessment of risks in servicing operations including, but not limited to, operational, transaction, legal and reputational risks.
- Made technological enhancements to automate and streamline processes for the Firm's document management, training, skills assessment and payment processing initiatives.
- Deployed an internal validation process to monitor progress under the comprehensive action plans.

In addition, pursuant to the Orders, the Firm is required to enhance oversight of its mortgage servicing activities, including oversight by compliance, management and audit personnel and, accordingly, has made and continues to make changes in its organization structure, control oversight and customer service practices.

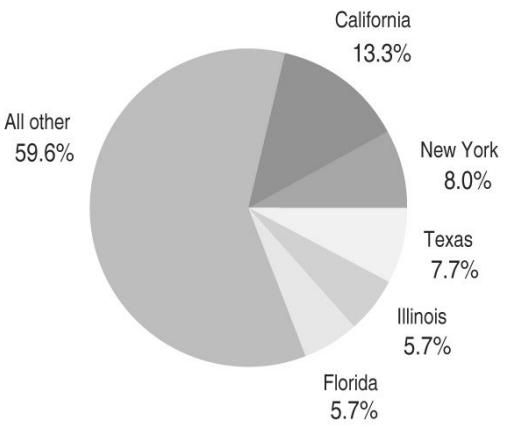
Pursuant to the Orders, the Firm had retained an independent consultant to conduct a review of its residential foreclosure actions during the period from January 1, 2009, through December 31, 2010 (including foreclosure actions brought in respect of loans being serviced), and to remediate any errors or deficiencies identified by the independent consultant.

On January 7, 2013, the Firm announced that it and a number of other financial institutions entered into a settlement agreement with the OCC and the Federal Reserve providing for the termination of such Independent Foreclosure Review programs. As a result of this settlement, the independent consultant will no longer be conducting a look-back review of residential foreclosure actions. The Firm will make a cash payment of $753 million into a settlement fund for distribution to qualified borrowers. The Firm has also committed an additional $1.2 billion to foreclosure prevention actions, which will be fulfilled through credits given to the Firm for modifications, short sales and other specified types of borrower relief. Foreclosure prevention actions that earn credit under the Independent Foreclosure Review settlement are in addition to actions taken by the Firm to earn credit under the Consumer Relief Program of the global settlement. The estimated impact of the foreclosure prevention actions required under the Independent Foreclosure Review settlement have been considered in the Firm's allowance for loan losses. The Firm recognized a pretax charge of approximately $700 million in the fourth quarter of 2012 related to the Independent Foreclosure Review settlement.



Credit Card

Total credit card loans were $128.0 billion at December 31, 2012, a decrease of $4.3 billion from December 31, 2011. The decrease in outstanding loans was primarily due to higher repayment rates.



For the retained credit card portfolio, the 30+ day delinquency rate decreased to 2.10% at December 31, 2012, from 2.81% at December 31, 2011. For the years ended December 31, 2012 and 2011, the net charge-off rates were 3.95% and 5.44% respectively. Charge-offs have improved as a result of lower delinquent loans. The credit card portfolio continues to reflect a well-seasoned, largely rewards-based portfolio that has good U.S. geographic diversification. The greatest geographic concentration of credit card retained loans is in California, which represented 13% of total retained loans at both December 31, 2012 and 2011. Loan concentration for the top five states of California, New York, Texas, Florida and Illinois consisted of $52.3 billion in receivables, or 41% of the retained loan portfolio, at December 31, 2012, compared with $53.6 billion, or 40%, at December 31, 2011.

Top 5 States Credit Card - Retained
(at December 31, 2011)

Modifications of credit card loans

At December 31, 2012 and 2011, the Firm had $4.8 billion and $7.2 billion, respectively, of credit card loans outstanding that have been modified in TDRs. These balances included both credit card loans with modified payment terms and credit card loans that reverted back to their pre-modification payment terms because the cardholder did not comply with the modified payment terms. The decrease in modified credit card loans outstanding from December 31, 2011, was attributable to a reduction in new modifications as well as ongoing payments and charge-offs on previously modified credit card loans. In the second quarter of 2012, the Firm revised its policy for recognizing charge-offs on restructured loans that do not comply with their modified payment terms. Commencing June 30, 2012 these loans are now charged-off when they are 120 days past due rather than 180 days past due.

Consistent with the Firm's policy, all credit card loans typically remain on accrual status until charged-off. However, the Firm establishes an allowance, which is offset against loans and charged to interest income, for the estimated uncollectible portion of accrued interest and fee income.

For additional information about loan modification programs to borrowers, see Note 14 on pages 250–275 of this Annual Report.

WHOLESALE CREDIT PORTFOLIO

As of December 31, 2012, wholesale exposure (CIB, CB and AM) increased by $70.9 billion from December 31, 2011, primarily driven by increases of $52.1 billion in lending-related commitments and $30.2 billion in loans due to increased client activity across most regions and most businesses. The increase in loans was due to growth in CB and AM. These increases were partially offset by a $17.5 billion decrease in derivative receivables, primarily related to the decline in the U.S. dollar, and tightening of credit spreads; these changes resulted in reductions to interest rate, credit derivative, and foreign exchange balances.

Wholesale credit portfolio

December 31,	Credit exposure		Nonperforming[c][d]	
(in millions)	**2012**	2011	**2012**	2011

(a) Receivables from customers and other primarily includes margin loans to prime and retail brokerage customers; these are classified in accrued interest and accounts receivable on the Consolidated Balance Sheets.
(b) Represents the net notional amount of protection purchased and sold through credit derivatives used to manage both performing and nonperforming wholesale credit exposures; these derivatives do not qualify for hedge accounting under U.S. GAAP. Excludes the synthetic credit portfolio. For additional information, see Credit derivatives on pages 158–159, and Note 6 on pages 218–227 of this Annual Report.
(c) Excludes assets acquired in loan satisfactions.
(d) Prior to the first quarter of 2012, reported amounts had only included defaulted derivatives; effective in the first quarter of 2012, reported amounts in all periods include both defaulted derivatives as well as derivatives that have been risk rated as nonperforming.

The following table presents summaries of the maturity and ratings profiles of the wholesale credit portfolio as of December 31, 2012 and 2011. The ratings scale is based on the Firm's internal risk ratings, which generally correspond to the ratings as defined by S&P and Moody's.

Wholesale credit exposure – maturity and ratings profile

	Maturity profile[e]				Ratings profile			
December 31, 2012 (in millions, except ratios)	Due in 1 year or less	Due after 1 year through 5 years	Due after 5 years	Total	Investment-grade AAA/Aaa to BBB-/Baa3	Noninvestment-grade BB+/Ba1 & below	Total	Total % of IG

Receivables from customers and other				17,461			17,461	
Total exposure – net of liquid securities and other cash collateral held against derivatives				$ 753,886			$ 753,886	
Credit Portfolio Management derivatives net notional by counterparty ratings profile[b][c]	$ (2,034)	$ (16,450)	$ (7,756)	$ (26,240)	$ (26,300)	$ 60	$ (26,240)	100%
Credit Portfolio Management derivatives net notional by reference entity ratings profile[b][d]					$ (22,159)	$ (4,081)	$ (26,240)	84%

(a) Represents loans held-for-sale primarily related to syndicated loans and loans transferred from the retained portfolio, and loans at fair value.
(b) These derivatives do not quality for hedge accounting under U.S. GAAP. Excludes the synthetic credit portfolio.
(c) The notional amounts are presented on a net basis by each derivative counterparty and the ratings profile shown is based on the ratings of those counterparties. The counterparties to these positions are predominately investment-grade banks and finance companies.
(d) The notional amounts are presented on a net basis by underlying reference entity and the ratings profile shown is based on the ratings of the reference entity on which protection has been purchased.
(e) The maturity profiles of retained loans and lending-related commitments are based on the remaining contractual maturity. The maturity profiles of derivative receivables are based on the maturity profile of average exposure. For further discussion of average exposure, see Derivative receivables on pages 156–159 of this Annual Report.

Wholesale credit exposure – selected industry exposures

The Firm focuses on the management and diversification of its industry exposures, with particular attention paid to industries with actual or potential credit concerns. As of September 30, 2012, the Firm revised its definition of the criticized component of the wholesale portfolio to align with the banking regulators' definition of criticized exposures, which consist of the special mention, substandard and doubtful categories. Prior periods have been reclassified to conform with the current presentation. The reclassification resulted in an increase in the level of reported criticized exposure by $4.5 billion as of December 31, 2011, which did not result in material changes to the Firm's underlying risk ratings or the amount of nonaccrual loans. Accordingly, this reclassification did not result in material changes to the Firm's allowance for credit losses or additional provision for credit losses. Furthermore, this change had no effect on reported net interest income with respect to the affected loans. The total criticized component of the portfolio, excluding loans held-for-sale and loans at fair value, decreased by 23% to $15.6 billion at December 31, 2012, from $20.3 billion at December 31, 2011, primarily due to repayments.

Below are summaries of the top 25 industry exposures as of December 31, 2012 and 2011. For additional information on industry concentrations, see Note 5 on page 217 of this Annual Report.

As of or for the year ended December 31, 2012 (in millions)	Credit exposure[c]	Investment-grade	Noninvestment-grade[d][f]			Selected metrics

(a) The industry rankings presented in the table as of December 31, 2011, are based on the industry rankings of the corresponding exposures at December 31, 2012, not actual rankings of such exposures at December 31, 2011.

(b) In addition to the credit risk exposure to states and municipal governments (both U.S. and non-U.S.) at December 31, 2012 and 2011, noted above, the Firm held $18.2 billion and $16.7 billion, respectively, of trading securities and $21.7 billion and $16.5 billion, respectively, of AFS securities issued by U.S. state and municipal governments. For further information, see Note 3 and Note 12 on pages 196–214 and 244–248, respectively, of this Annual Report.

(c) Credit exposure is net of risk participations and excludes the benefit of "Credit Portfolio Management derivatives net notional" held against derivative receivables or loans and "Liquid securities and other cash collateral held against derivative receivables".

(d) As of December 31, 2012, exposures deemed criticized correspond to special mention, substandard and doubtful categories as defined by bank regulatory agencies. Prior periods have been reclassified to conform with the current presentation.

(e) Represents the net notional amounts of protection purchased and sold through credit derivatives used to manage the credit exposures; these derivatives do not qualify for hedge accounting under U.S. GAAP. The all other category includes purchased credit protection on certain credit indices. Credit Portfolio Management derivatives excludes the synthetic credit portfolio.

(f) Prior to the first quarter of 2012, reported amounts had only included defaulted derivatives; effective in the first quarter of 2012, reported amounts in all periods include both defaulted derivatives as well as derivatives that have been risk rated as nonperforming.

Presented below is a discussion of several industries to which the Firm has significant exposure, as well as industries the Firm continues to monitor because of actual or potential credit concerns. For additional information, refer to the tables on the previous pages.

- **Real estate:** Exposure to this industry increased by $8.6 billion or 13%, in 2012 to $76.2 billion. The increase was primarily driven by CB. The credit quality of this industry improved as the investment-grade portion of the exposures to this industry increased by 22% from 2011, while the criticized portion declined by 32% from 2011, primarily as a result of repayments and loan sales. The ratio of nonaccrual retained loans to total retained loans decreased to 0.86% at December 31, 2012 from 1.62% at December 31, 2011 in line with the decrease in real estate criticized exposure. For further information on commercial real estate loans, see Note 14 on pages 250–275 of this Annual Report.
- **Banks and finance companies:** Exposure to this industry increased by $1.9 billion or 3%, and criticized exposure decreased by 0.7%, compared with 2011. At December 31, 2012, 76% of the portfolio is rated investment-grade.
- **State and municipal governments:** Exposure to this industry decreased by $109 million in 2012 to $41.8 billion. Lending-related commitments comprise approximately 69% of the exposure to this sector, generally in the form of bond and commercial paper liquidity and standby letter of credit commitments. The credit quality of the portfolio remains high as 97% of the portfolio was rated investment-grade, which was unchanged from 2011. Criticized exposure was less than 0.40% of this industry's exposure. The non-U.S. portion of this industry was less than 4% of the total. The Firm continues to actively monitor and manage this exposure in light of the challenging environment faced by state and municipal governments. For further discussion of commitments for bond liquidity and standby letters of credit, see Note 29 on pages 308–315 of this Annual Report.
- **All other:** All other at December 31, 2012 (excluding loans held-for-sale and loans at fair value), included $195.6 billion of credit exposure. Concentrations of exposures include: (1) Individuals, Private Education & Civic Organizations, which were 57% of this category and (2) SPEs which were 28% of this category. Each of these categories has high credit quality, and approximately 90% of each of these categories were rated investment-grade. SPEs provide secured financing (generally backed by receivables, loans or bonds with a diverse group of obligors); the lending in this category was all secured and well-structured. For further discussion of SPEs, see Note 1 on pages 193–194 and Note 16 on pages 280–291 of this Annual Report. The remaining exposure within this category is well-diversified, with no category being more than 7% of its total.

The following tables present the geographic distribution of wholesale credit exposure including nonperforming assets and past due loans as of December 31, 2012 and 2011. The geographic distribution of the wholesale portfolio is determined based predominantly on the domicile (legal residence) of the borrower. For further information on Country Risk Management, see pages 170–173 of this Annual Report.

(a) At December 31, 2012 and 2011, the Firm held an allowance for loan losses of $310 million and $496 million, respectively, related to nonaccrual retained loans resulting in allowance coverage ratios of 22% and 21%, respectively. Wholesale nonaccrual loans represented 0.49% and 0.91% of total wholesale loans at December 31, 2012 and 2011, respectively.

(b) Prior to the first quarter of 2012, reported amounts had only included defaulted derivatives; effective in the first quarter of 2012, reported amounts in all periods include both defaulted derivatives as well as derivatives that have been risk rated as nonperforming.

Loans

In the normal course of its wholesale business, the Firm provides loans to a variety of customers, ranging from large corporate and institutional clients to high-net-worth individuals. For further discussion on loans, including information on credit quality indicators, see Note 14 on pages 250–275 of this Annual Report.

The Firm actively manages wholesale credit exposure. One way of managing credit risk is through sales of loans and lending-related commitments. During 2012 and 2011, the Firm sold $8.4 billion and $5.2 billion, respectively, of loans and commitments. These sale activities are not related to the Firm's securitization activities. For further discussion of securitization activity, see Liquidity Risk Management and Note 16 on pages 127–133 and 280–291 respectively, of this Annual Report.

The following table presents the change in the nonaccrual loan portfolio for the years ended December 31, 2012 and 2011. Nonaccrual wholesale loans decreased by $1.0 billion from December 31, 2011, primarily reflecting paydowns.

Wholesale nonaccrual loan activity

Year ended December 31, (in millions)	2012	2011
Beginning balance	$ 2,581	$ 6,006
Additions	1,748	2,519
Reductions:		
Paydowns and other	1,784	2,841
Gross charge-offs	335	907
Returned to performing status	240	807
Sales	425	1,389
Total reductions	2,784	5,944
Net additions/(reductions)	(1,036)	(3,425)
Ending balance	$ 1,545	$ 2,581

The following table presents net charge-offs/recoveries, which are defined as gross charge-offs less recoveries, for the years ended December 31, 2012 and 2011. The amounts in the table below do not include gains or losses from sales of nonaccrual loans.

Wholesale net charge-offs/recoveries

Year ended December 31, (in millions, except ratios)	2012	2011
Loans – reported		
Average loans retained	$ 291,980	$ 245,111
Gross charge-Offs	346	916
Gross recoveries	(524)	(476)
Net charge-offs/(recoveries)	(178)	440
Net charge-off/(recovery) rate	(0.06)%	0.18%

Receivables from customers

Receivables from customers primarily represent margin loans to prime and retail brokerage clients that are collateralized through a pledge of assets maintained in clients' brokerage accounts that are subject to daily minimum collateral requirements. In the event that the collateral value decreases, a maintenance margin call is made to the client to provide additional collateral into the account. If additional collateral is not provided by the client, the client's position may be liquidated by the Firm to meet the minimum collateral requirements.

Lending-related commitments

JPMorgan Chase uses lending-related financial instruments, such as commitments and guarantees, to meet the financing needs of its customers. The contractual amounts of these financial instruments represent the maximum possible credit risk should the counterparties draw down on these commitments or the Firm fulfills its obligations under these guarantees, and the counterparties subsequently fails to perform according to the terms of these contracts.

In the Firm's view, the total contractual amount of these wholesale lending-related commitments is not representative of the Firm's actual credit risk exposure or funding requirements. In determining the amount of credit risk exposure the Firm has to wholesale lending-related commitments, which is used as the basis for allocating credit risk capital to these commitments, the Firm has established a "loan-equivalent" amount for each commitment; this amount represents the portion of the unused commitment or other contingent exposure that is expected, based on average portfolio historical experience, to become drawn upon in an event of a default by an obligor. The loan-equivalent amount of the Firm's lending-related commitments was $223.7 billion and $206.5 billion as of December 31, 2012 and 2011, respectively.

Derivative contracts

In the normal course of business, the Firm uses derivative instruments predominantly for market-making activities. Derivatives enable customers to manage exposures to fluctuations in interest rates, currencies and other markets. The Firm also uses derivative instruments to manage its own credit exposure. For further discussion of derivative contracts, see Note 5 and Note 6 on page 217 and pages 218–227, respectively, of this Annual Report.

The following table summarizes the net derivative receivables for the periods presented.

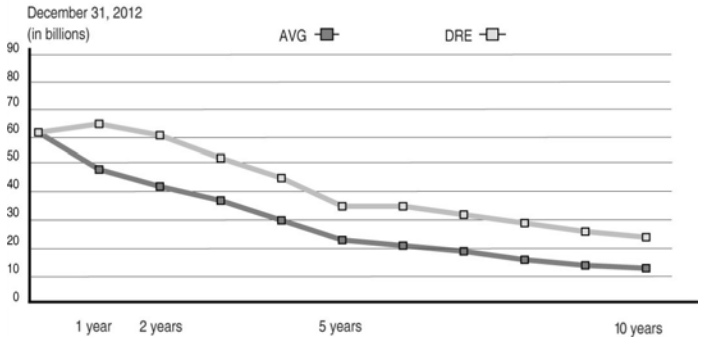
Derivative receivables

	Derivative receivables	
December 31, (in millions)	2012	2011
Interest rate	$ 39,205	$ 46,369
Credit derivatives	1,735	6,684
Foreign exchange	14,142	17,890
Equity	9,266	6,793
Commodity	10,635	14,741
Total, net of cash collateral	74,983	92,477
Liquid securities and other cash collateral held against derivative receivables	(13,658)	(21,807)
Total, net of all collateral	$ 61,325	$ 70,670

Derivative receivables reported on the Consolidated Balance Sheets were $75.0 billion and $92.5 billion at December 31, 2012 and 2011, respectively. These amounts represent the fair value of the derivative contracts after giving effect to legally enforceable master netting agreements, cash collateral held by the Firm and the CVA. However, in management's view, the appropriate measure of current credit risk should also take into consideration additional liquid securities (primarily U.S. government and agency securities and other G7 government bonds) and other cash collateral held by the Firm of $13.7 billion and $21.8 billion at December 31, 2012 and 2011, respectively, that may be used as security when the fair value of the client's exposure is in the Firm's favor, as shown in the table above.

In addition to the collateral described in the preceding paragraph, the Firm also holds additional collateral (including cash, U.S. government and agency securities, and other G7 government bonds) delivered by clients at the initiation of transactions, as well as collateral related to contracts that have a non-daily call frequency and collateral that the Firm has agreed to return but has not yet settled as of the reporting date. Though this collateral does not reduce the balances and is not included in the table above, it is available as security against potential exposure that could arise should the fair value of the client's derivative transactions move in the Firm's favor. As of December 31, 2012 and 2011, the Firm held $22.6 billion and $17.6 billion, respectively, of this additional collateral. The derivative receivables, net of all collateral, also does not include other credit enhancements, such as letters of credit. For additional information on the Firm's use of collateral agreements, see Note 6 on pages 218–227 of this Annual Report.

While useful as a current view of credit exposure, the net fair value of the derivative receivables does not capture the potential future variability of that credit exposure. To capture the potential future variability of credit exposure, the Firm calculates, on a client-by-client basis, three measures of potential derivatives-related credit loss: Peak, Derivative Risk Equivalent ("DRE"), and Average exposure ("AVG"). These measures all incorporate netting and collateral benefits, where applicable.



Peak exposure to a counterparty is an extreme measure of exposure calculated at a 97.5% confidence level. DRE exposure is a measure that expresses the risk of derivative exposure on a basis intended to be equivalent to the risk of loan exposures. The measurement is done by equating the unexpected loss in a derivative counterparty exposure (which takes into consideration both the loss volatility and the credit rating of the counterparty) with the unexpected loss in a loan exposure (which takes into consideration only the credit rating of the counterparty). DRE is a less extreme measure of potential credit loss than Peak and is the primary measure used by the Firm for credit approval of derivative transactions.

Finally, AVG is a measure of the expected fair value of the Firm's derivative receivables at future time periods, including the benefit of collateral. AVG exposure over the total life of the derivative contract is used as the primary metric for pricing purposes and is used to calculate credit capital and the CVA, as further described below. The three year AVG exposure was $42.3 billion and $53.6 billion at December 31, 2012 and 2011, respectively, compared with derivative receivables, net of all collateral, of $61.3 billion and $70.7 billion at December 31, 2012 and 2011, respectively.

The fair value of the Firm's derivative receivables incorporates an adjustment, the CVA, to reflect the credit quality of counterparties. The CVA is based on the Firm's AVG to a counterparty and the counterparty's credit spread in the credit derivatives market. The primary components of changes in CVA are credit spreads, new deal activity or unwinds, and changes in the underlying market environment. The Firm believes that active risk management is essential to controlling the dynamic credit risk in the derivatives portfolio. In addition, the Firm's risk management process takes into consideration the potential impact of wrong-way risk, which is broadly defined as the potential for increased correlation between the Firm's exposure to a counterparty (AVG) and the counterparty's credit quality. Many factors may influence the nature and magnitude of these correlations over time. To the extent that these correlations are identified, the Firm may adjust the CVA associated with that counterparty's AVG. The Firm risk manages exposure to changes in CVA by entering into credit derivative transactions, as well as interest rate, foreign exchange, equity and commodity derivative transactions.

The accompanying graph shows exposure profiles to derivatives over the next 10 years as calculated by the DRE and AVG metrics. The two measures generally show that exposure will decline after the first year, if no new trades are added to the portfolio.

Exposure profile of derivatives measures

The following table summarizes the ratings profile by derivative counterparty of the Firm's derivative receivables, including credit derivatives, net of other liquid securities collateral, for the dates indicated.

Ratings profile of derivative receivables

Rating equivalent	2012		2011	
December 31, (in millions, except ratios)	Exposure net of all collateral	% of exposure net of all collateral	Exposure net of all collateral	% of exposure net of all collateral
AAA/Aaa to AA-/Aa3	**$ 20,040**	**33%**	$ 25,100	35%
A+/A1 to A-/A3	**12,169**	**20**	22,942	32
BBB+/Baa1 to BBB-/Baa3	**18,197**	**29**	9,595	14
BB+/Ba1 to B-/B3	**9,636**	**16**	10,545	15
CCC+/Caa1 and below	**1,283**	**2**	2,488	4
Total	**$ 61,325**	**100%**	$ 70,670	100%

As noted above, the Firm uses collateral agreements to mitigate counterparty credit risk. The percentage of the Firm's derivatives transactions subject to collateral agreements – excluding foreign exchange spot trades, which are not typically covered by collateral agreements due to their short maturity – was 88% as of December 31, 2012, unchanged compared with December 31, 2011.

Credit derivatives

Credit derivatives are financial instruments whose value is derived from the credit risk associated with the debt of a third party issuer (the reference entity) and which allow one party (the protection purchaser) to transfer that risk to another party (the protection seller) when the reference entity suffers a credit event. If no credit event has occurred, the protection seller makes no payments to the protection purchaser.

For a more detailed description of credit derivatives, see Credit derivatives in Note 6 on pages 218–227 of this Annual Report.

The Firm uses credit derivatives for two primary purposes: first, in its capacity as a market-maker; and second, as an end-user, to manage the Firm's own credit risk associated with various exposures.

Included in end-user activities are credit derivatives used to mitigate the credit risk associated with traditional lending activities (loans and unfunded commitments) and derivatives counterparty exposure in the Firm's wholesale businesses ("Credit Portfolio Management" activities). Information on Credit Portfolio Management activities is provided in the table below.

In addition, the Firm uses credit derivatives as an end-user to manage other exposures, including credit risk arising from certain AFS securities and from certain securities held in the Firm's market making businesses. These credit derivatives, as well as the synthetic credit portfolio, are not included in Credit Portfolio Management activities; for further information on these credit derivatives as well as credit derivatives used in the Firm's capacity as a market maker in credit derivatives, see Credit derivatives in Note 6 on pages 226–227 of this Annual Report.

Credit Portfolio Management activities

Credit Portfolio Management derivatives

December 31, (in millions)	Notional amount of protection purchased and sold [a] 2012	2011
Credit derivatives used to manage:		
Loans and lending-related commitments	$ 2,166	$ 3,488
Derivative receivables	25,347	22,883
Total net protection purchased	27,513	26,371
Total net protection sold	66	131
Credit Portfolio Management derivatives net notional	$ 27,447	$ 26,240

(a) Amounts are presented net, considering the Firm's net protection purchased or sold with respect to each underlying reference entity or index.

The credit derivatives used in Credit Portfolio Management activities do not qualify for hedge accounting under U.S. GAAP; these derivatives are reported at fair value, with gains and losses recognized in principal transactions revenue. In contrast, the loans and lending-related commitments being risk-managed are accounted for on an accrual basis. This asymmetry in accounting treatment, between loans and lending-related commitments and the credit derivatives used in credit portfolio management activities, causes earnings volatility that is not representative, in the Firm's view, of the true changes in value of the Firm's overall credit exposure. In addition, the effectiveness of the Firm's credit default swap ("CDS") protection as a hedge of the Firm's exposures may vary depending on a number of factors, including the maturity of the Firm's CDS protection (which in some cases may be shorter than the Firm's exposures), the named reference entity (i.e., the Firm may experience losses on specific exposures that are different than the named reference entities in the purchased CDS), and the contractual terms of the CDS (which may have a defined credit event that does not align with an actual loss realized by the Firm).

The fair value related to the Firm's credit derivatives used for managing credit exposure, as well as the fair value related to the CVA (which reflects the credit quality of derivatives counterparty exposure), are included in the gains and losses realized on credit derivatives disclosed in the table below. These results can vary from period to period due to market conditions that affect specific positions in the portfolio.

Net gains and losses on credit portfolio hedges

Year ended December 31, (in millions)	2012	2011	2010
Hedges of loans and lending-related commitments	$ (163)	$ (32)	$ (279)
CVA and hedges of CVA	127	(769)	(403)
Net gains/(losses)	$ (36)	$ (801)	$ (682)

COMMUNITY REINVESTMENT ACT EXPOSURE

The Community Reinvestment Act ("CRA") encourages banks to meet the credit needs of borrowers in all segments of their communities, including neighborhoods with low or moderate incomes. The Firm is a national leader in community development by providing loans, investments and community development services in communities across the United States.

At December 31, 2012 and 2011, the Firm's CRA loan portfolio was approximately $16 billion and $15 billion, respectively. At December 31, 2012 and 2011, 62% and 63%, respectively, of the CRA portfolio were residential mortgage loans; 18% and 17%, respectively, were business banking loans; 13% and 14%, respectively, were commercial real estate loans; and 7% and 6%, respectively, were other loans. CRA nonaccrual loans were 4% and 6%, respectively, of the Firm's total nonaccrual loans. For the years ended December 31, 2012 and 2011, net charge-offs in the CRA portfolio were 3% of the Firm's net charge-offs in both years.

ALLOWANCE FOR CREDIT LOSSES

JPMorgan Chase's allowance for loan losses covers the consumer, including credit card, portfolio segments (primarily scored); and wholesale (risk-rated) portfolio. The allowance represents management's estimate of probable credit losses inherent in the Firm's loan portfolio. Management also determines an allowance for wholesale and certain consumer, excluding credit card, lending-related commitments.

The allowance for loan losses includes an asset-specific component, a formula-based component, and a component related to PCI loans. The asset-specific component and the PCI loan component are generally based on an estimate of cash flows expected to be collected from specifically identified impaired or PCI loans. The formula-based component is based on a statistical calculation to provide for probable principal losses inherent in the remaining loan portfolios. Within the formula-based component, management applies judgment within an established framework to adjust the results of applying its statistical loss calculation. The determination of the appropriate adjustment is based on management's view of uncertainties that have occurred but are not yet reflected in the statistical calculation and that relate to current macroeconomic and political conditions, the quality of underwriting standards, and other relevant internal and external factors affecting

the credit quality of the portfolio. For a further discussion of the components of the allowance for credit losses, see Critical Accounting Estimates Used by the Firm on pages 178–182 and Note 15 on pages 276–279 of this Annual Report.

At least quarterly, the allowance for credit losses is reviewed by the Chief Risk Officer, the Chief Financial Officer and the Controller of the Firm, and discussed with the Risk Policy and Audit Committees of the Board of Directors of the Firm. As of December 31, 2012, JPMorgan Chase deemed the allowance for credit losses to be appropriate (i.e., sufficient to absorb probable credit losses inherent in the portfolio).

The allowance for credit losses was $22.6 billion at December 31, 2012, a decrease of $5.7 billion from $28.3 billion at December 31, 2011.

The consumer, excluding credit card, allowance for loan losses decreased $4.0 billion from December 31, 2011, predominantly due to a reduction in the allowance for the non-PCI residential real estate portfolio, reflecting the continuing trend of improving delinquencies and nonaccrual loans (excluding the impact of Chapter 7 loans and junior liens that are subordinate to senior liens that are 90 days or more past due, which have been included in nonaccrual loans beginning in 2012), which resulted in a lower level of estimated losses based on the Firm's base statistical loss calculation. The allowance also included a $488 million reduction attributable to a refinement of the loss estimates associated with the Firm's compliance with its obligations under the global settlement, which reflected changes in implementation strategies adopted in the second quarter of 2012. The adjustment to the base statistical loss calculation that underlies the formula-based component of the allowance for credit losses for the consumer, excluding credit card, portfolio segment has declined over the past two years, predominantly because specific risks covered by this adjustment were subsequently incorporated into either the base statistical loss calculation or asset-specific reserves during that same time period.

The credit card allowance for loan losses decreased by $1.5 billion since December 31, 2011, due to reductions in both the asset-specific allowance and the formula-based allowance. The reduction in the asset-specific allowance, which relates to loans restructured in TDRs, largely reflects the changing profile of the TDR portfolio. The volume of new TDRs, which have higher loss rates due to expected redefaults, continues to decrease, and the loss rate on existing TDRs is also decreasing over time as previously restructured loans season and continue to perform. In addition, effective June 30, 2012, the Firm changed its policy for recognizing charge-offs on restructured loans that do not comply with their modified payment terms based upon guidance received from the banking regulators; this policy change resulted in an acceleration of charge-offs against the asset-specific allowance. For the year ended December 31, 2012, the reduction in the formula-based allowance was primarily driven by the continuing trend of improving delinquencies and bankruptcies (which resulted in a lower level of estimated losses based on the Firm's statistical loss calculation) and by lower levels of credit card outstandings. The adjustment to the base statistical loss calculation that underlies the formula-based component of the allowance for credit losses for the credit card portfolio segment has increased somewhat over the past two years, primarily to consider current macroeconomic conditions (including relatively high unemployment rates).

The wholesale allowance for loan losses decreased by $173 million since December 31, 2011. The decrease was driven by recoveries, the restructuring of certain nonperforming loans and other portfolio activity, as well as continued improvements in the wholesale credit environment as evidenced by lower charge-offs, non-accrual assets and downgrade activity. The resulting decrease has been partially offset by an increase in the adjustment to the base statistical loss calculation in order to reflect inherent credit losses that have not been captured by current credit metrics and greater levels of uncertainty, due to the low level of criticized assets and limited downgrade activity in the portfolio.

For additional information about the credit quality of the Firm's loan portfolios, see Consumer Credit Portfolio on pages 138–149, Wholesale Credit Portfolio on pages 150–159, and Note 14 on pages 250–275 of this Annual Report.

The allowance for lending-related commitments for both the consumer, excluding credit card, and wholesale portfolios, which is reported in other liabilities, was $668 million and $673 million at December 31, 2012 and 2011, respectively.

The credit ratios in the following table are based on retained loan balances, which exclude loans held-for-sale and loans accounted for at fair value.

Summary of changes in the allowance for credit losses

Year ended December 31, (in millions, except ratios)	2012 Consumer, excluding credit card	2012 Credit card	2012 Wholesale	2012 Total	2011 Consumer, excluding credit card	2011 Credit card	2011 Wholesale	2011 Total

(a) Includes risk-rated loans that have been placed on nonaccrual status and loans that have been modified in a TDR.
(b) The Firm's policy is generally to exempt credit card loans from being placed on nonaccrual status as permitted by regulatory guidance.
(c) Charge-offs are not recorded on PCI loans until actual losses exceed estimated losses recorded as purchase accounting adjustments at the time of acquisition.
(d) Net charge-offs and net charge-off rates for the year ended December 31, 2012, included $800 million of charge-offs of Chapter 7 loans. See Consumer Credit Portfolio on pages 138–149 of this Annual Report for further details.

Provision for credit losses

For the year ended December 31, 2012, the provision for credit losses was $3.4 billion, down by 55% from 2011.

The consumer, excluding credit card, provision for credit losses was $302 million in 2012, compared with $4.7 billion in 2011, reflecting reductions in the allowance for loan losses due primarily to lower estimated losses in the non-PCI residential real estate portfolio as delinquency trends improved. These reductions were partially offset by the impact of charge-offs of Chapter 7 loans.

The credit card provision for credit losses was $3.4 billion in 2012, compared with $2.9 billion in 2011, reflecting a smaller current year reduction in the allowance for loan losses compared with the prior year, partially offset by lower net charge-offs in 2012.

In 2012 the wholesale provision for credit losses was a benefit of $361 million, compared with a benefit of $23 million in 2011. The current year period provision reflected recoveries, the restructuring of certain nonperforming loans, current credit trends and other portfolio activity. For further information on the provision for credit losses, see the Consolidated Results of Operations on pages 72–75 of this Annual Report.

Year ended December 31,	Provision for loan losses			Provision for lending-related commitments			Total provision for credit losses		
(in millions)	**2012**	2011	2010	**2012**	2011	2010	**2012**	2011	2010

Market risk is the exposure to an adverse change in the market value of portfolios and financial instruments caused by a change in their market prices.

Market risk management
Market Risk is an independent risk management function that works in close partnership with the lines of business, including Corporate/Private Equity, to identify and monitor market risks throughout the Firm and to define market risk policies and procedures. The market risk function reports to the Firm's Chief Risk Officer.

Market Risk seeks to control risk, facilitate efficient risk/return decisions, reduce volatility in operating performance and provide transparency into the Firm's market risk profile for senior management, the Board of Directors and regulators. Market Risk is responsible for the following functions:

- Establishment of a market risk policy framework
- Independent measurement, monitoring and control of line of business and firmwide market risk
- Definition, approval and monitoring of limits
- Performance of stress testing and qualitative risk assessments

Risk identification and classification
Each line of business is responsible for the management of the market risks within its units. The independent risk management group responsible for overseeing each line of business ensures that all material market risks are appropriately identified, measured, monitored and managed in accordance with the risk policy framework set out by Market Risk. The Firm's market risks arise primarily from the activities in CIB, Mortgage Production and Mortgage Servicing in CCB, and CIO in Corporate/Private Equity.

CIB makes markets in products across fixed income, foreign exchange, equities and commodities markets. This activity gives rise to market risk and may lead to a potential decline in net income as a result of changes in market prices and rates. In addition, CIB's credit portfolio exposes the Firm to market risks related to credit valuation adjustments ("CVA"), hedges of CVA and the fair value of hedges of the retained loan portfolio. Additional market risk positions result from debit valuation adjustments ("DVA") taken on structured notes and derivative liabilities to reflect the credit quality of the Firm; DVA is not included in VaR.

The Firm's Mortgage Production and Mortgage Servicing businesses includes the Firm's mortgage pipeline and warehouse loans, MSRs and all related hedges. These activities give rise to complex, non-linear interest rate risks, as well as basis risk. Non-linear risk arises primarily from prepayment options embedded in mortgages and changes in the probability of newly originated mortgage commitments actually closing. Basis risk results from differences in the relative movements of the rate indices underlying mortgage exposure and other interest rates.

Corporate/Private Equity comprises Private Equity, Treasury and CIO. Treasury and CIO are predominantly responsible for measuring, monitoring, reporting and managing the Firm's liquidity, funding, capital and structural interest rate and foreign exchange risks. The risks managed by Treasury and CIO arise from the activities undertaken by the Firm's four major reportable business segments to serve their respective client bases, which generate both on- and off-balance sheet assets and liabilities.

Risk measurement

Tools used to measure risk
Because no single measure can reflect all aspects of market risk, the Firm uses various metrics, both statistical and nonstatistical, including:

- Value-at-risk ("VaR")
- Economic-value stress testing
- Nonstatistical risk measures
- Loss advisories
- Profit and loss drawdowns
- Risk identification for large exposures ("RIFLEs")
- Nontrading interest rate-sensitive revenue-at-risk stress testing

Value-at-risk
JPMorgan Chase utilizes VaR, a statistical risk measure, to estimate the potential loss from adverse market moves in a normal market environment.

The Firm has one overarching VaR model framework used for risk management purposes across the Firm, which utilizes historical simulation based on data for the previous 12 months. The framework's approach assumes that historical changes in market values are representative of the distribution of potential outcomes in the immediate future. VaR is calculated assuming a one-day holding period and an expected tail-loss methodology, which approximates a 95% confidence level. This means that, assuming current changes in market values are consistent with the historical changes used in the simulation, the Firm would expect to incur losses greater than that predicted by VaR estimates five times in every 100 trading days.

Underlying the overall VaR model framework are individual VaR models that simulate historical market returns for individual products and/or risk factors. To capture material market risks as part of the Firm's risk management framework, comprehensive VaR model calculations are performed daily for businesses whose activities give rise to market risk. These VaR models are granular and incorporate numerous risk factors and inputs to simulate daily changes

in market values over the historical period; inputs are selected based on the risk profile of each portfolio as sensitivities and historical time series used to generate daily market values may be different for different products or risk management systems. The VaR model results across all portfolios are aggregated at the Firm level.

Data sources used in VaR models may be the same as those used for financial statement valuations. However in cases where market prices are not observable, or where proxies are used in VaR historical time series, the sources may differ. In addition, the daily market data used in VaR models may be different than the independent third party data collected for VCG price testing in their monthly valuation process (see pages 196–200 of this Annual Report for further information on the Firm's valuation process.) VaR model calculations require a more timely (i.e., daily) data and consistent source for valuation and therefore it is not practical to use the monthly valuation process.

VaR provides a consistent framework to measure risk profiles and levels of diversification across product types and is used for aggregating risks across businesses and monitoring limits. These VaR results are reported to senior management, the Board of Directors and regulators.

The Firm uses VaR as a statistical risk management tool for assessing risk under normal market conditions consistent with the day-to-day risk decisions made by the lines of business. VaR is not used to estimate the impact of stressed market conditions or to manage any impact from potential stress events. The Firm uses economic-value stress testing and other techniques to capture and manage market risk arising under stressed scenarios, as described further below.

Because VaR is based on historical data, it is an imperfect measure of market risk exposure and potential losses. For example, differences between current and historical market price volatility may result in fewer or greater VaR exceptions than the number indicated by the historical simulation. The VaR measurement also does not provide an estimate of the extent to which losses may exceed VaR results. In addition, based on their reliance on available historical data, limited time horizons, and other factors, VaR measures are inherently limited in their ability to measure certain risks and to predict losses, particularly those associated with market illiquidity and sudden or severe shifts in market conditions. As VaR cannot be used to determine future losses in the Firm's market risk positions, the Firm considers other metrics in addition to VaR to monitor and manage its market risk positions.

Separately, the Firm calculates a daily aggregated VaR in accordance with regulatory rules, which is used to derive the Firm's regulatory VaR based capital requirements. This regulatory VaR model framework currently assumes a ten business day holding period and an expected tail loss methodology, which approximates a 99% confidence level. Regulatory VaR is applied to positions as defined by the banking regulators' Basel I "Market Risk Rule", which are different than positions included in the Firm's internal risk management VaR. Certain positions are not included in the Firm's internal risk management VaR, while the Firm's internal risk management VaR includes some positions, such as CVA and its related credit hedges that are not included in Regulatory VaR. For further information, see Capital Management on pages 116–122 of this Annual Report. Effective in the first quarter of 2013, the Firm will implement regulatory VaR for positions as defined by the U.S. banking regulators' Basel 2.5 "Market Risk Rule".

The table below shows the results of the Firm's VaR measure using a 95% confidence level.

Total VaR

As of or for the year ended December 31,	2012			2011			At December 31,	
(in millions)	Avg.	Min	Max	Avg.	Min	Max	2012	2011

Total VaR	$ 152	$ 93	$ 254	$ 101	$ 67	$ 147	$ 98	$ 113

(a) On July 2, 2012, CIO transferred its synthetic credit portfolio, other than a portion aggregating approximately $12 billion notional, to CIB; CIO's retained portfolio was effectively closed out during the three months ended September 30, 2012. During the third quarter of 2012, the Firm applied a new VaR model to calculate VaR for both the portion of the synthetic credit portfolio held by CIB, as well as the portion that was retained by CIO, and which was effectively closed out at September 30, 2012. For the three months ended December 31, 2012, this new VaR model resulted in a reduction to average fixed income VaR of $11 million, average CIB trading and credit portfolio VaR of $8 million, and average total VaR of $7 million.

(b) Average portfolio VaR and period-end portfolio VaR were less than the sum of the VaR of the components described above, which is due to portfolio diversification. The diversification effect reflects the fact that the risks were not perfectly correlated.

(c) Designated as not meaningful ("NM"), because the minimum and maximum may occur on different days for different risk components, and hence it is not meaningful to compute a portfolio-diversification effect.

(d) Reference is made to CIO synthetic credit portfolio on pages 69–70 of this Annual Report regarding the Firm's restatement of its 2012 first quarter financial statements. The CIO VaR amount has not been recalculated for the first quarter to reflect the restatement. The 2012 full-year VaR does not include recalculated amounts for the first quarter of 2012.

(e) Effective in the fourth quarter of 2012, CIB's VaR includes the VaR of former reportable business segments, Investment Bank and Treasury & Securities Services ("TSS"), which were combined to form the CIB business segment as a result of the reorganization of the Firm's business segments. TSS VaR was not material and was previously classified within Other VaR. Prior period VaR disclosures were not revised as a result of the business segment reorganization.

VaR measurement

CIB trading VaR includes substantially all market-making and client-driven activities as well as certain risk management activities in CIB. This includes the credit spread sensitivities to CVA and syndicated lending facilities that the Firm intends to distribute. For certain products, specific risk parameters are not captured in VaR. Reasons include the lack of inherent illiquidity and availability of appropriate historical data or suitable proxies. The Firm uses proxies to estimate the VaR for these and other products when daily time series are not available. It is likely that using an actual price-based time series for these products, if available, would affect the VaR results presented. While the overall impact to VaR is not material, the Firm uses alternative methods to capture and measure these risk parameters not otherwise captured in VaR, including economic-value stress testing, nonstatistical measures and risk identification for large exposures as described further below.

Credit portfolio VaR includes the derivative CVA, hedges of the CVA and hedges of the retained portfolio, which are reported in principal transactions revenue. Credit portfolio VaR does not include the retained loan portfolio, which is not reported at fair value.

Other VaR includes certain positions employed as part of the Firm's risk management function within the CIO and in the Mortgage Production and Mortgage Servicing businesses. CIO VaR includes positions, primarily in debt securities and derivatives, which are measured at fair value through earnings. Mortgage Production and Mortgage Servicing VaR includes the Firm's mortgage pipeline and warehouse loans, MSRs and all related hedges.

As noted above, CIB, Credit portfolio and other VaR does not include the retained loan portfolio, which is not reported at fair value; however, it does include hedges of those positions, which are reported at fair value. It also does not include DVA on structured notes and derivative liabilities to reflect the credit quality of the Firm; principal investments; certain foreign exchange positions used for net investment hedging of foreign currency operations; and longer-term securities investments managed by CIO that are primarily classified as available for sale. These positions are managed through the Firm's nontrading interest rate-sensitive revenue-at-risk and other cash flow-monitoring processes, rather than by using a VaR measure. Principal investing activities (including mezzanine financing, tax oriented investments, etc.) and private equity positions are managed using stress and scenario analyses and are not included in VaR. See the DVA sensitivity table on page 167 of this

Annual Report for further details. For a discussion of Corporate/Private Equity, see pages 102–104 of this Annual Report.

The Firm's VaR model calculations are continuously evaluated and enhanced in response to changes in the composition of the Firm's portfolios, changes in market conditions, improvements in the Firm's modeling techniques and other factors. Such changes will also affect historical comparisons of VaR results. Model changes go through a review and approval process by the Model Review Group prior to implementation into the operating environment. For further information, see Model risk on pages 125–126 of this Annual Report.

During the third quarter of 2012, the Firm applied a new VaR model to calculate VaR for the synthetic credit portfolio. (This model change went through the Firm's review and approval process by the Model Review Group prior to implementation of this model into the operating environment. For further information, see the Model risk on pages 125–126 of this Annual Report.)

For the six months ended December 31, 2012, this new VaR model resulted in a reduction to average fixed income VaR of $19 million, average total CIB trading and credit portfolio VaR of $18 million, average CIO VaR of $9 million, and average total VaR of $22 million. Prior period VaR results have not been recalculated using the new model. The new model uses data that references actual underlying indices, rather than being constructed through single name and index basis, which the Firm believes is a more direct representation of the risks that were in the portfolio. As a result, the Firm believes the new model, which was applied to both the portion of the synthetic credit portfolio held by CIB, as well as the portion that was retained by CIO, during the last six months of 2012 more appropriately captured the risks of the portfolio.

2012 and 2011 VaR results

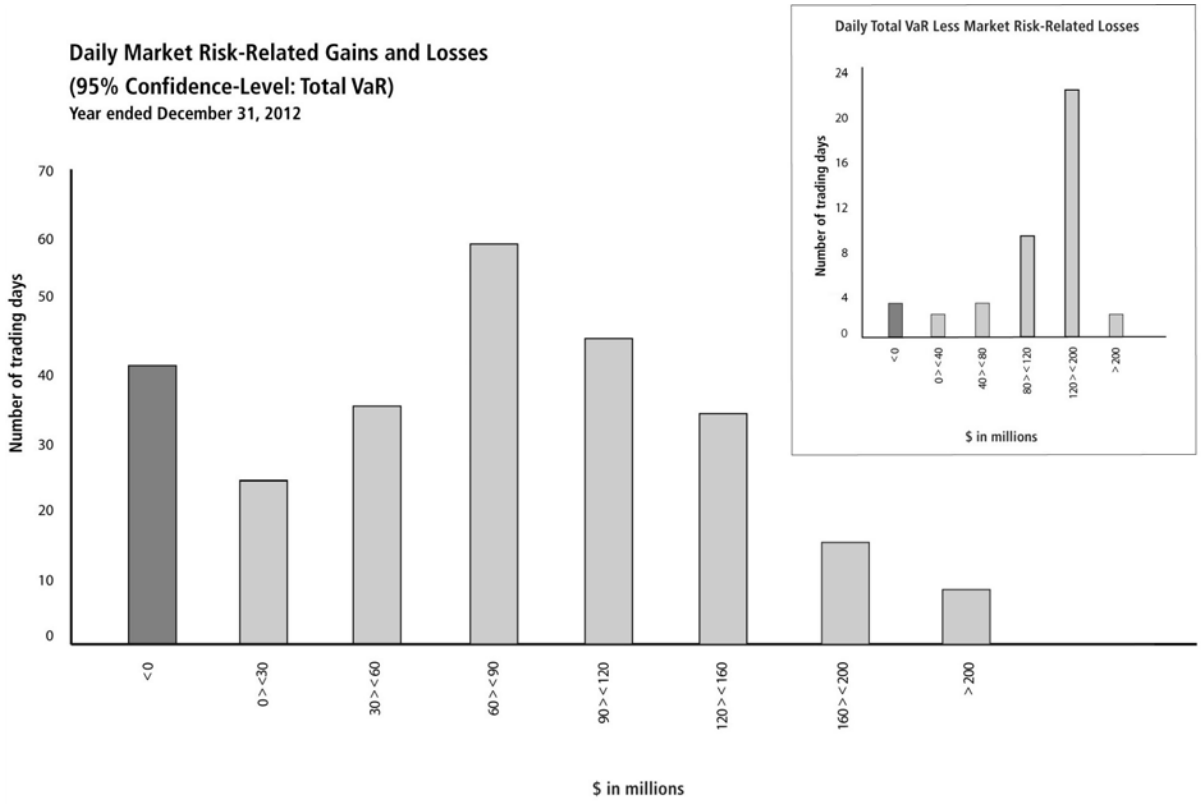
As presented in the table above, average Total VaR was $152 million for 2012, compared with $101 million for 2011. The increase was primarily driven by the synthetic credit portfolio, partially offset by a decrease in market volatility in the fourth quarter of 2012.

Average total CIB trading and Credit portfolio VaR for the 2012 was $96 million compared with $76 million for 2011. The increase was driven primarily by the addition of the synthetic credit portfolio in CIB on July 2, 2012.

Average CIO VaR for 2012 was $92 million compared with $57 million in 2011, predominantly reflecting the increased risk in the synthetic credit portfolio, during the first quarter of 2012. On July 2, 2012, CIO transferred its synthetic credit portfolio, other than a portion aggregating approximately $12 billion notional, to CIB; CIO's retained portfolio was effectively closed out during the three months ended September 30, 2012.

Average Mortgage Production and Mortgage Servicing VaR was $17 million for 2012 compared with $30 million for 2011. These decreases were primarily driven by changes in the risk profile of the MSR Portfolio.

The Firm's average CIB and other VaR diversification benefit was $45 million or 23% of the sum for 2012, compared with $45 million or 31% of the sum for 2011. In general, over the course of the year, VaR exposure can vary significantly as positions change, market volatility fluctuates and diversification benefits change.



VaR back-testing

The Firm conducts daily back-testing of VaR against its market risk-related revenue.

The following histogram illustrates the daily market risk-related gains and losses for CIB, CIO and Mortgage Production and Mortgage Servicing positions in CCB for the year ended December 31, 2012. This market risk-related revenue is defined as the change in value of: principal transactions revenue for CIB and CIO (excludes Private Equity gains/(losses) and unrealized and realized gains/(losses) from AFS securities and other investments held for the longer term); trading related net interest income for CIB, CIO and Mortgage Production and Mortgage Servicing in CCB; CIB brokerage commissions, underwriting fees or other revenue; revenue from syndicated lending facilities that the Firm intends to distribute; and mortgage fees and related income for the Firm's mortgage pipeline and warehouse loans, MSRs, and all related hedges. Daily firmwide market risk-related revenue excludes gains and losses from DVA.

The chart shows that for year ended December 31, 2012, the Firm posted market risk related gains on 220 of the 261 days in this period, with gains on eight days exceeding $200 million. The chart includes year to date losses incurred in the synthetic credit portfolio. CIB and Credit Portfolio posted market risk-related gains on 254 days in the period.

The inset graph looks at those days on which the Firm experienced losses and depicts the amount by which VaR exceeded the actual loss on each of those days. Of the losses that were sustained on the 41 days of the 261 days in the trading period, the Firm sustained losses that exceeded the VaR measure on three of those days. These losses in excess of the VaR all occurred in the second quarter of 2012 and were due to the adverse effect of market movements on risk positions in the synthetic credit portfolio held by CIO. During the year ended December 31, 2012, CIB and Credit Portfolio experienced seven loss days; none of the losses on those days exceeded their respective VaR measures.

Other risk measures

Debit valuation adjustment sensitivity

The following table provides information about the gross sensitivity of DVA to a one-basis-point increase in JPMorgan Chase's credit spreads. This sensitivity represents the impact from a one-basis-point parallel shift in JPMorgan Chase's entire credit curve. However, the sensitivity at a single point in time multiplied by the change in credit spread at a single maturity point may not be representative of the actual DVA gain or loss realized within a period. The actual results reflect the movement in credit spreads across various maturities, which typically do not move in a parallel fashion, and is the product of a constantly changing exposure profile, among other factors.

Debit valuation adjustment sensitivity

(in millions)	One basis-point increase in JPMorgan Chase's credit spread
December 31, 2012	**$ 34**
December 31, 2011	35

Economic-value stress testing

Along with VaR, stress testing is important in measuring and controlling risk. While VaR reflects the risk of loss due to adverse changes in markets using recent historical market behavior as an indicator of losses, stress testing captures the Firm's exposure to unlikely but plausible events in abnormal markets. The Firm runs weekly stress tests on market-related risks across the lines of business using multiple scenarios that assume significant changes in risk factors such as credit spreads, equity prices, interest rates, currency rates or commodity prices. The framework uses a grid-based approach, which calculates multiple magnitudes of stress for both market rallies and market sell-offs for

each risk factor. Stress-test results, trends and explanations based on current market risk positions are reported to the Firm's senior management and to the lines of business to allow them to better understand the sensitivity of positions to certain defined events and manage their risks with more transparency.

Stress scenarios are defined and reviewed by Market Risk, and significant changes are reviewed by the relevant Risk Committees, (For further details see Risk Governance, on pages 123–125 of this Annual Report). While most of these scenarios estimate losses based on significant market moves, such as an equity market collapse or credit crisis, the Firm also develops scenarios to quantify risk coming from specific portfolios or concentrations of risks, which attempt to capture certain idiosyncratic market movements. Scenarios may be redefined on an ongoing basis to reflect current market conditions. Ad hoc scenarios are run in response to specific market events or concerns. Furthermore, the Firm's stress testing framework is utilized in calculating results under scenarios mandated by the Federal Reserve's Comprehensive Capital Analysis and Review ("CCAR") and ICAAP ("Internal Capital Adequacy Assessment Process") processes.

Nonstatistical risk measures
Nonstatistical risk measures include sensitivities to variables used to value positions, such as credit spread sensitivities, interest rate basis point values and market values. These measures provide granular information on the Firm's market risk exposure. They are aggregated by line-of-business and by risk type, and are used for tactical control and monitoring limits.

Loss advisories and profit and loss drawdowns
Loss advisories and profit and loss drawdowns are tools used to highlight trading losses above certain levels of risk tolerance. Profit and loss drawdowns are defined as the decline in net profit and loss since the year-to-date peak revenue level.

Risk identification for large exposures
Individuals who manage risk positions are responsible for identifying potential losses that could arise from specific, unusual events, such as a potential change in tax legislation, or a particular combination of unusual market moves. This information allows the Firm to monitor further earnings vulnerability not adequately covered by standard risk measures.

Nontrading interest rate-sensitive revenue-at-risk (i.e., "earnings-at-risk")
The VaR and stress-test measures described above illustrate the total economic sensitivity of the Firm's Consolidated Balance Sheets to changes in market variables. The effect of interest rate exposure on reported net income is also important. Interest rate risk represents one of the Firm's significant market risk exposures. This risk arises not only from trading activities but also from the Firm's traditional banking activities which include extension of loans and credit facilities, taking deposits and issuing debt (i.e., asset/liability management positions, accrual loans within CIB and CIO, and off-balance sheet positions). ALCO establishes the Firm's interest rate risk policies and sets risk guidelines. Treasury, working in partnership with the lines of business, calculates the Firm's interest rate risk profile weekly and reviews it with senior management.

Interest rate risk for nontrading activities can occur due to a variety of factors, including:

- Differences in the timing among the maturity or repricing of assets, liabilities and off-balance sheet instruments. For example, if liabilities reprice more quickly than assets and funding interest rates are declining, net interest income will increase initially.
- Differences in the amounts of assets, liabilities and off-balance sheet instruments that are repricing at the same time. For example, if more deposit liabilities are repricing than assets when general interest rates are declining, net interest income will increase initially.
- Differences in the amounts by which short-term and long-term market interest rates change (for example, changes in the slope of the yield curve) because the Firm has the ability to lend at long-term fixed rates and borrow at variable or short-term fixed rates. Based on these scenarios, the Firm's net interest income would be affected negatively by a sudden and unanticipated increase in short-term rates paid on its liabilities (e.g., deposits) without a corresponding increase in long-term rates received on its assets (e.g., loans). Conversely, higher long-term rates received on assets generally are beneficial to net interest income, particularly when the increase is not accompanied by rising short-term rates paid on liabilities.
- The impact of changes in the maturity of various assets, liabilities or off-balance sheet instruments as interest rates change. For example, if more borrowers than forecasted pay down higher-rate loan balances when general interest rates are declining, net interest income may decrease initially.

The Firm manages interest rate exposure related to its assets and liabilities on a consolidated, corporate-wide basis. Business units transfer their interest rate risk to Treasury through a transfer-pricing system, which takes into account the elements of interest rate exposure that can be risk-managed in financial markets. These elements include asset and liability balances and contractual rates of interest, contractual principal payment schedules, expected prepayment experience, interest rate reset dates and maturities, rate indices used for repricing, and any interest rate ceilings or floors for adjustable rate products. All transfer-pricing assumptions are dynamically reviewed.

The Firm manages this interest rate risk generally through its investment securities portfolio and related derivatives. The Firm evaluates its nontrading interest rate risk

exposure through the stress testing of earnings-at-risk, which measures the extent to which changes in interest rates will affect the Firm's core net interest income (see page 77 of this Annual Report for further discussion of core net interest income) and interest rate-sensitive fees ("nontrading interest rate-sensitive revenue"). Earnings-at-risk excludes the impact of trading activities and MSRs, as these sensitivities are captured under VaR.

The Firm conducts simulations of changes in nontrading interest rate-sensitive revenue under a variety of interest rate scenarios. Earnings-at-risk tests measure the potential change in this revenue, and the corresponding impact to the Firm's pretax net interest income, over the following 12 months. These tests highlight exposures to various interest rate-sensitive factors, such as the rates themselves (e.g., the prime lending rate), pricing strategies on deposits, optionality and changes in product mix. The tests include forecasted balance sheet changes, such as asset sales and securitizations, as well as prepayment and reinvestment behavior. Mortgage prepayment assumptions are based on current interest rates compared with underlying contractual rates, the time since origination, and other factors which are updated periodically based on historical experience and forward market expectations. The amount and pricing assumptions of deposits that have no stated maturity are based on historical performance, the competitive environment, customer behavior, and product mix.

Immediate changes in interest rates present a limited view of risk, and so a number of alternative scenarios are also reviewed. These scenarios include the implied forward curve, nonparallel rate shifts and severe interest rate shocks on selected key rates. These scenarios are intended to provide a comprehensive view of JPMorgan Chase's earnings-at-risk over a wide range of outcomes.

JPMorgan Chase's 12-month pretax net interest income sensitivity profiles.

	Immediate change in rates			
December 31, (in millions)	+200bp	+100bp	-100bp	-200bp
2012	**$ 3,886**	**$ 2,145**	**NM** [(a)]	**NM** [(a)]
2011	4,046	2,326	NM [(a)]	NM [(a)]

(a) Downward 100- and 200-basis-point parallel shocks result in a federal funds target rate of zero and negative three- and six-month treasury rates. The earnings-at-risk results of such a low-probability scenario are not meaningful.

The change in earnings-at-risk from December 31, 2011, resulted from investment portfolio repositioning, partially offset by higher expected deposit balances. The Firm's risk to rising rates was largely the result of widening deposit margins, which are currently compressed due to very low short-term interest rates, and ALM investment portfolio positioning.

Additionally, another interest rate scenario used by the Firm — involving a steeper yield curve with long-term rates rising by 100 basis points and short-term rates staying at current levels — results in a 12-month pretax net interest income benefit of $778 million. The increase in net interest income under this scenario is due to reinvestment of maturing assets at the higher long-term rates, with funding costs remaining unchanged.

Risk monitoring and control

Limits

Market risk is controlled primarily through a series of limits set in the context of the market environment and business strategy. In setting limits, the Firm takes into consideration factors such as market volatility, product liquidity and accommodation of client business and management experience. The Firm maintains different levels of limits. Corporate level limits include VaR and stress limits. Similarly, line of business limits include VaR and stress limits and may be supplemented by loss advisories, nonstatistical measurements and profit and loss drawdowns. Limits may also be allocated within the lines of business, as well at the portfolio level.

Limits are established by Market Risk in agreement with the lines of business. Limits are reviewed regularly by Market Risk and updated as appropriate, with any changes approved by lines of business management and Market Risk. Senior management, including the Firm's Chief Executive Officer and Chief Risk Officer, are responsible for reviewing and approving certain of these risk limits on an ongoing basis. All limits that have not been reviewed within specified time periods by Market Risk are escalated to senior management. The lines of business are responsible for adhering to established limits against which exposures are monitored and reported.

Limit breaches are required to be reported in a timely manner by Risk Management to limit approvers, Market Risk and senior management. Market Risk consults with Firm senior management and lines of business senior management to determine the appropriate course of action required to return to compliance, which may include a reduction in risk in order to remedy the excess. Any Firm or line of business-level limits that are in excess for three business days or longer, or that are over limit by more than 30%, are escalated to senior management and the Firmwide Risk Committee.

COUNTRY RISK MANAGEMENT

Country risk is the risk that a sovereign event or action alters the value or terms of contractual obligations of obligors, counterparties and issuers related to a country. The Firm has a comprehensive country risk management framework for assessing country risks, determining risk tolerance, and measuring and monitoring direct country exposures in the Firm's wholesale lines of business, including CIO. The Country Risk Management group is responsible for developing guidelines and policy for managing country risk in both emerging and developed countries. The Country Risk Management group actively monitors the wholesale portfolio, including CIO, to ensure the Firm's country risk exposures are diversified and that exposure levels are appropriate given the Firm's strategy and risk tolerance relative to a country.

Country risk organization

The Country Risk Management group is an independent risk management function which works in close partnership with other risk functions and across the wholesale lines of business, including CIO. The Country Risk Management governance consists of the following functions:

- Developing guidelines and policies consistent with a comprehensive country risk framework
- Assigning sovereign ratings and assessing country risks
- Measuring and monitoring country risk exposure across the Firm
- Managing country limits and reporting utilization to senior management
- Developing surveillance tools for early identification of potential country risk concerns
- Providing country risk scenario analysis

Country risk identification and measurement

The Firm is exposed to country risk through its wholesale lending, investing, and market-making activities, whether cross-border or locally funded. Country exposure includes activity with both government and private-sector entities in a country. Under the Firm's internal country risk management approach, country exposure is reported based on the country where the majority of the assets of the obligor, counterparty, issuer or guarantor are located or where the majority of its revenue is derived, which may be different than the domicile (legal residence) of the obligor, counterparty, issuer or guarantor. Country exposures are generally measured by considering the Firm's risk to an immediate default of the counterparty or obligor, with zero recovery.

- Lending exposures are measured at the total committed amount (funded and unfunded), net of the allowance for credit losses and cash and marketable securities collateral received
- AFS securities are measured at par value
- Securities financing exposures are measured at their receivable balance, net of collateral received
- Debt and equity securities in market-making and investing activities are measured at the fair value of all positions, including both long and short positions
- Counterparty exposure on derivative receivables, including credit derivative receivables, is measured at the derivative's fair value, net of the fair value of the related collateral
- Credit derivatives protection purchased and sold are reported based on the underlying reference entity and is measured at the notional amount of protection purchased or sold, net of the fair value of the recognized derivative receivable or payable. Credit derivatives protection purchased and sold in the Firm's market-making activities are presented on a net basis, as such activities often result in selling and purchasing protection related to the same underlying reference entity, and which reflects the manner in which the Firm manages these exposures

In addition, the Firm also has indirect exposures to country risk (for example, related to the collateral received on securities financing receivables or related to client clearing activities). These indirect exposures are managed in the normal course of business through the Firm's credit, market, and operational risk governance, rather than through the country risk governance.

The Firm's internal country risk reporting differs from the reporting provided under FFIEC bank regulatory requirements. There are significant reporting differences in reporting methodology, including with respect to the treatment of collateral received and the benefit of credit derivative protection. For further information on the FFIEC's reporting methodology, see Cross-border outstandings on page 347 of the 2012 Form 10-K.

Country risk monitoring and control

The Country Risk Management Group establishes guidelines for sovereign ratings reviews and limit management. In addition, the Country Risk Management group uses surveillance tools for early identification of potential country risk concerns, such as signaling models and ratings indicators. The limit framework includes a risk-tier approach and stress testing procedures for assessing the potential risk of loss associated with a significant sovereign crisis. Country ratings and limits activity are actively monitored and reported on a regular basis. Country limit requirements are reviewed and approved by senior management as often as necessary, but at least annually. For further information on market-risk stress testing the Firm performs in the normal course of business, see Market Risk Management on pages 163–169 of this Annual Report. For further information on credit loss estimates, see Critical Accounting Estimates – Allowance for credit losses on pages 178–180 of this Annual Report.

Country risk reporting

The following table presents the Firm's top 20 exposures by country (excluding the U.S.). The selection of countries is based solely on the Firm's largest total exposures by country, based on the Firm's internal country risk management approach, and does not represent its view of any actual or potentially adverse credit conditions.

Top 20 country exposures

December 31, 2012 (in billions)	Lending[a]	Trading and investing[b][c]	Other[d]	Total exposure
United Kingdom	$ 23.3	$ 52.6	$ 2.6	$ 78.5
Germany	24.4	36.3	–	60.7
France	14.7	30.3	–	45.0
Netherlands	5.0	29.8	3.0	37.8
Switzerland	24.4	1.5	2.1	28.0
Australia	7.1	16.2	–	23.3
Canada	12.8	5.8	0.6	19.2
Brazil	5.9	13.0	–	18.9
India	7.3	7.9	0.7	15.9
Korea	6.5	7.8	0.6	14.9
China	8.0	3.9	1.3	13.2
Japan	3.7	7.7	–	11.4
Mexico	2.8	6.8	–	9.6
Italy	2.8	4.7	–	7.5
Singapore	3.8	1.8	1.2	6.8
Russia	4.6	1.9	–	6.5
Hong Kong	3.4	2.8	–	6.2
Sweden	3.5	1.9	0.5	5.9
Malaysia	1.5	3.6	0.7	5.8
Spain	3.1	1.6	–	4.7

(a) Lending includes loans and accrued interest receivable, net of the allowance for loan losses, deposits with banks, acceptances, other monetary assets, issued letters of credit net of participations, and undrawn commitments to extend credit. Excludes intra-day and operating exposures, such as from settlement and clearing activities.
(b) Includes market-making inventory, securities held in AFS accounts and hedging.
(c) Includes single-name and index and tranched credit derivatives for which one or more of the underlying reference entities is in a country listed in the above table.
(d) Includes capital invested in local entities and physical commodity inventory.

Selected European exposure

Several European countries, including Spain, Italy, Ireland, Portugal and Greece, have been subject to continued credit deterioration due to weaknesses in their economic and fiscal situations. The Firm is closely monitoring its exposures in these countries and believes its exposure to these five countries is modest relative to the Firm's aggregate exposures. The Firm continues to conduct business and support client activity in these countries and, therefore, the Firm's aggregate net exposures and sector distribution may vary over time. In addition, the net exposures may be affected by changes in market conditions, including the effects of interest rates and credit spreads on market valuations.

The following table presents the Firm's direct exposure to the five countries listed below at December 31, 2012, as measured under the Firm's internal country risk management approach. For individual exposures, corporate clients represent approximately 78% of the Firm's non-sovereign exposure in these five countries, and substantially all of the remaining 22% of the non-sovereign exposure is to the banking sector.

December 31, 2012 (in billions)	Lending net of Allowance[a]	AFS securities[b]	Trading[c]	Derivative collateral[d]	Portfolio hedging[e]	Total exposure
Spain						
Sovereign	$ –	$ 0.5	$ (0.4)	$ –	$ (0.1)	$ –
Non-sovereign	3.1	–	5.2	(3.3)	(0.3)	4.7

Greece						
Sovereign	$ –	$ –	$ 0.1	$ –	$ –	$ 0.1
Non-sovereign	0.1	–	0.7	(0.9)	–	(0.1)
Total Greece exposure	$ 0.1	$ –	$ 0.8	$ (0.9)	$ –	$ –
Total exposure	$ 7.0	$ 0.8	$ 19.9	$ (7.5)	$ (6.4)	$ 13.8

(a) Lending includes loans and accrued interest receivable, deposits with banks, acceptances, other monetary assets, issued letters of credit net of participations, and undrawn commitments to extend credit. Excludes intra-day and operating exposures, such as from settlement and clearing activities. Amounts are presented net of the allowance for credit losses of $116 million (Spain), $79 million (Italy), $9 million (Ireland), $15 million (Portugal), and $12 million (Greece) specifically attributable to these countries. Includes $2.4 billion of unfunded lending exposure at December 31, 2012. These exposures consist typically of committed, but unused corporate credit agreements, with market-based lending terms and covenants.

(b) The fair value of AFS securities was approximately $0.7 billion at December 31, 2012. The table above reflects AFS securities measured at par value.

(c) Primarily includes: $19.9 billion of counterparty exposure on derivative and securities financings, $3.7 billion of issuer exposure on debt and equity securities held in trading, $(3.6) billion of net protection from credit derivatives, including $(4.1) billion related to the synthetic credit portfolio managed by CIB. Securities financings of approximately $17.9 billion were collateralized with approximately $20.2 billion of cash and marketable securities as of December 31, 2012.

(d) Includes cash and marketable securities pledged to the Firm, of which approximately 97% of the collateral was cash at December 31, 2012.

(e) Reflects net protection purchased through the Firm's credit portfolio management activities, which are managed separately from its market-making activities. Predominantly includes single-name CDS and also includes index credit derivatives and short bond positions. It does not include the synthetic credit portfolio.

Effect of credit derivatives on selected European exposures

Country exposures in the Selected European exposure table above have been reduced by purchasing protection through single name, index, and tranched credit derivatives. The following table presents the effect of purchased and sold credit derivatives on the trading and portfolio hedging activities in the Selected European exposure table.

December 31, 2012	Trading			Portfolio hedging		
(in billions)	Purchased	Sold	Net	Purchased	Sold	Net
Spain	$ (121.2)	$ 120.2	$ (1.0)	$ (1.2)	$ 0.9	$ (0.3)
Italy	(157.9)	156.5	(1.4)	(11.0)	5.9	(5.1)
Ireland	(7.1)	7.2	0.1	(1.0)	0.7	(0.3)
Portugal	(43.2)	42.2	(1.0)	(0.5)	0.1	(0.4)
Greece	(11.7)	11.4	(0.3)	–	–	–
Total	$ (341.1)	$ 337.5	$ (3.6)	$ (13.7)	$ 7.6	$ (6.1)

Under the Firm's internal country risk management approach, generally credit derivatives are reported based on the country where the majority of the assets of the reference entity are located. Exposures are measured assuming that all of the reference entities in a particular country default simultaneously with zero recovery. For example, single-name and index credit derivatives are measured at the notional amount, net of the fair value of the derivative receivable or payable. Exposures for index credit derivatives, which may include several underlying reference entities, are determined by evaluating the relevant country for each of the reference entities underlying the named index, and allocating the applicable amount of the notional and fair value of the index credit derivative to each of the relevant countries. Tranched credit derivatives are measured at the modeled change in value of the derivative assuming the simultaneous default of all underlying reference entities in a specific country; this approach considers the tranched nature of the derivative (i.e., that some tranches are subordinate to others) and the Firm's own position in the structure.

The total line in the table above represents the simple sum of the individual countries. Changes in the Firm's methodology or assumptions would produce different results.

The credit derivatives reflected in the "Trading" column include those from the Firm's market-making activities as well as $(4.1) billion of net purchased protection in the synthetic credit portfolio managed by CIB beginning in July 2012. Based on scheduled maturities and risk reduction actions being taken in the synthetic credit portfolio, the amount of protection provided by the synthetic credit portfolio relative to the five named countries is likely to be substantially reduced over time.

The credit derivatives reflected in the "Portfolio hedging" column are used in the Firm's Credit Portfolio Management activities, which are intended to mitigate the credit risk associated with traditional lending activities and derivative counterparty exposure. These credit derivatives include both purchased and sold protection, where the sold protection is generally used to close out purchased protection when appropriate under the Firm's risk mitigation strategies. In its Credit Portfolio Management activities, the Firm generally seeks to purchase credit protection with a maturity date that is the same or similar to the maturity date of the exposures for which the protection was purchased. However, there are instances where the purchased protection has a shorter maturity date than the maturity date of the exposure for which the protection was purchased. These exposures are actively monitored and managed by the Firm. The effectiveness of the Firm's CDS protection as a hedge of the Firm's exposures may vary depending upon a number of factors, including the contractual terms of the CDS. For further information about credit derivatives see Credit derivatives on pages 158–159, and Note 6 on pages 218–227 of this Annual Report.

The Firm's net presentation of purchased and sold credit derivatives reflects the manner in which this exposure is managed, and reflects, in the Firm's view, the substantial mitigation of market and counterparty credit risk in its credit derivative activities. Market risk is substantially mitigated because market-making activities, and to a lesser extent, hedging activities, often result in selling and purchasing protection related to the same underlying reference entity. For example, in each of the five countries as of December 31, 2012, the protection sold by the Firm was more than 92% offset by protection purchased on the identical reference entity.

In addition, counterparty credit risk has been substantially mitigated by the master netting and collateral agreements in place for these credit derivatives. As of December 31, 2012, 99% of the purchased protection presented in the table above is purchased under contracts that require posting of cash collateral; 92% is purchased from investment-grade counterparties domiciled outside of the selected European countries; and 69% of the protection purchased offsets protection sold on the identical reference entity, with the identical counterparty subject to a master netting agreement.

PRINCIPAL RISK MANAGEMENT

Principal investments are predominantly privately-held assets and instruments typically representing an ownership or junior capital position, that have unique risks due to their illiquidity and junior capital status, as well as lack of observable valuation data. Such investing activities, including mezzanine financing, tax-oriented investments and private equity positions, are typically intended to be held over extended investment periods and, accordingly, the Firm has no expectation for short-term gain with respect to these investments. All investments are approved by investment committees that include executives who are not part of the investing businesses. An independent valuation function is responsible for reviewing the appropriateness of the carrying values of principal investments, including private equity, in accordance with relevant accounting, valuation and risk policies.

The Firm's approach to managing principal risk is consistent with the Firm's general risk governance structure. Targeted levels for total and annual investments are established in order to manage the overall size of the portfolios. Industry and geographic concentration limits are in place and intended to ensure diversification of the portfolios. The Firm also conducts stress testing on these portfolios using specific scenarios that estimate losses based on significant market moves.

The Firm's merchant banking business is managed in Corporate/Private Equity (for detailed information, see Private Equity portfolio on page 104 of this Annual Report); other lines of business may also conduct some principal investing activities, including private equity positions, which are captured within their respective financial results.

Operational risk is the risk of loss resulting from inadequate or failed processes or systems, human factors or external events.

Overview

Operational risk is inherent in each of the Firm's businesses and support activities. Operational risk can manifest itself in various ways, including errors, fraudulent acts, business interruptions, inappropriate behavior of employees, or vendors that do not perform in accordance with their arrangements. These events could result in financial losses, including litigation and regulatory fines, as well as other damage to the Firm, including reputational harm. To monitor and control operational risk, the Firm maintains an overall framework that includes strong oversight and governance, comprehensive policies, consistent practices across the lines of business, and enterprise risk management tools intended to provide a sound and well-controlled operational environment.

The framework clarifies:

- Ownership of the risk by the businesses and functional areas
- Monitoring and validation by business control officers
- Oversight by independent risk management
- Governance through business risk & control committees
- Independent review by Internal Audit

The goal is to keep operational risk at appropriate levels, in light of the Firm's financial strength, the characteristics of its businesses, the markets in which it operates, and the competitive and regulatory environment to which it is subject.

In order to strengthen focus on the Firm's control environment and drive consistent practices across businesses and functional areas, the Firm established a new Firmwide Oversight and Control Group during 2012. This group is dedicated to enhancing the Firm's control framework, and to looking within and across the lines of business and the Corporate functions (including CIO) to identify and remediate control issues. The Firmwide Oversight and Control Group will work closely with all control disciplines - partnering with compliance, risk, audit and other functions - in order to provide a cohesive and centralized view of control functions and control issues. Among other things, Oversight and Control will enable the Firm to detect problems and escalate issues quickly, get the right people involved to understand the common themes and interdependencies among various business and control issues, and effectively remediate these issues across all affected areas of the Firm. As a result, the group will facilitate an effective control framework and operational risk management across the Firm.

The Operational risk management framework

The Firm's approach to operational risk management is intended to identify potential issues and mitigate losses by supplementing traditional control-based approaches to operational risk with risk measures, tools and disciplines that are risk-specific, consistently applied and utilized firmwide. Key themes are transparency of information, escalation of key issues and accountability for issue resolution.

In addition to the standard Basel risk event categories, the Firm has developed the operational risk categorization taxonomy below for purposes of identification, monitoring, reporting and analysis:

- Fraud risk
- Improper market practices
- Improper client management
- Processing error
- Financial reporting error
- Information risk
- Technology risk (including cybersecurity risk)
- Third-party risk
- Disruption & safety risk
- Employee risk
- Risk management error (including model risk)

Key components of the Operational Risk Management Framework include:

Control assessment

In order to evaluate the effectiveness of the control environment in mitigating operational risk, the businesses utilize the Firm's standard self-assessment process and supporting architecture. The goal of the self-assessment process is for each business to identify the key operational risks specific to its environment and assess the degree to which it maintains appropriate controls. Action plans are developed for control issues that are identified, and businesses are held accountable for tracking and resolving issues on a timely basis.

Risk monitoring

The Firm has a process for monitoring operational risk event data, which permits analysis of errors and losses as well as trends. Such analysis, performed both at a line of business level and by risk-event type, enables identification of the causes associated with risk events faced by the businesses. Where available, the internal data can be supplemented with external data for comparative analysis with industry patterns.

Risk reporting and analysis

Operational risk management reports provide information, including actual operational loss levels, self-assessment results and the status of issue resolution to the lines of business and senior management. The purpose of these reports is to enable management to maintain operational risk at appropriate levels within each line of business, to escalate issues and to provide consistent data aggregation across the Firm's businesses and support areas.

Risk measurement

Operational risk is measured using a statistical model based on the loss distribution approach. The operational risk

capital model uses actual losses, a comprehensive inventory of forward looking potential loss scenarios with adjustments to reflect changes in the quality of the control environment in determining Firmwide operational risk capital. This methodology is designed to comply with the advanced measurement rules under the Basel II Framework.

Operational risk management system

The Firm's operational risk framework is supported by Phoenix, an internally designed operational risk system, which integrates the individual components of the operational risk management framework into a unified, web-based tool. Phoenix enhances the capture, reporting and analysis of operational risk data by enabling risk identification, measurement, monitoring, reporting and analysis to be done in an integrated manner across the Firm.

Audit alignment

Internal Audit utilizes a risk-based program of audit coverage to provide an independent assessment of the design and effectiveness of key controls over the Firm's operations, regulatory compliance and reporting. This includes reviewing the operational risk framework, the effectiveness of the business self-assessment process, and the loss data-collection and reporting activities.

Insurance

One of the ways operational loss is mitigated is through insurance maintained by the Firm. The Firm purchases insurance to be in compliance with local laws and regulations, as well as to serve other needs. Insurance may also be required by third parties with whom the Firm does business. The insurance purchased is reviewed and approved by senior management.

Cybersecurity

The Firm devotes significant resources to maintain and regularly update its systems and processes that are designed to protect the security of the Firm's computer systems, software, networks and other technology assets against attempts by third parties to obtain unauthorized access to confidential information, destroy data, disrupt or degrade service, sabotage systems or cause other damage. The Firm and several other U.S. financial institutions continue to experience significant distributed denial-of-service attacks from technically sophisticated and well-resourced third parties which are intended to disrupt consumer online banking services. The Firm has also experienced other attempts to breach the security of the Firm's systems and data. These cyberattacks have not, to date, resulted in any material disruption of the Firm's operations, material harm to the Firm's customers, and have not had a material adverse effect on the Firm's results of operations.

Business resiliency

JPMorgan Chase's global resiliency and crisis management program is intended to ensure that the Firm has the ability to recover its critical business functions and supporting assets (i.e., staff, technology and facilities) in the event of a business interruption, and to remain in compliance with global laws and regulations as they relate to resiliency risk. The program includes corporate governance, awareness and training, as well as strategic and tactical initiatives to ensure that risks are properly identified, assessed, and managed.

The Firm's Global Resiliency team has established comprehensive and qualitative tracking and reporting of resiliency plans in order to proactively anticipate and manage various potential disruptive circumstances such as severe weather, technology and communications outages, flooding, mass transit shutdowns and terrorist threats, among others. The resiliency measures utilized by the Firm include backup infrastructure for data centers, a geographically distributed workforce, dedicated recovery facilities, ensuring technological capabilities to support remote work capacity for displaced staff and accommodation of employees at alternate locations. JPMorgan Chase continues to coordinate its global resiliency program across the Firm and mitigate business continuity risks by reviewing and testing recovery procedures. The strength and proficiency of the Firm's global resiliency program has played an integral role in maintaining the Firm's business operations during and quickly after various events that have resulted in business interruptions, such as Superstorm Sandy and Hurricane Isaac in the U.S., monsoon rains in the Philippines, tsunamis in Asia, and earthquakes in Latin America.

The Firm's success depends not only on its prudent management of the liquidity, credit, market, principal, and operational risks that are part of its business risk, but equally on the maintenance among its many constituents – customers and clients, investors, regulators, as well as the general public – of a reputation for business practices of the highest quality. Attention to reputation has always been a key aspect of the Firm's practices, and maintenance of the Firm's reputation is the responsibility of each individual employee at the Firm. JPMorgan Chase bolsters this individual responsibility in many ways, including through the Firm's Code of Conduct (the "Code"), which is based on the Firm's fundamental belief that no one should ever sacrifice integrity – or give the impression that he or she has – even if one thinks it would help the Firm's business. The Code requires prompt reporting of any known or suspected violation of the Code, any internal Firm policy, or any law or regulation applicable to the Firm's business. It also requires the reporting of any illegal conduct, or conduct that violates the underlying principles of the Code, by any of the Firm's customers, suppliers, contract workers, business partners or agents. Concerns may be reported anonymously and the Firm prohibits retaliation against employees for the good faith reporting of any actual or suspected violations of the Code.

In addition to training of employees with regard to the principles and requirements of the Code, and requiring annual affirmation by each employee of compliance with the Code, the Firm has established policies and procedures, and has in place various oversight functions, intended to promote the Firm's culture of "doing the right thing." These include a Conflicts Office which examines wholesale transactions with the potential to create conflicts of interest for the Firm and a Reputation Risk Office that reviews transactions or activities that may give rise to reputation risk for the Firm. Each line of business also has a risk committee which includes in its mandate the oversight of reputational risks in its business that may produce significant losses or reputational damage to the Firm.

Fiduciary Risk Management

Fiduciary Risk Management is part of the relevant line-of-business risk committees. Senior business, legal and compliance management, who have particular responsibility for fiduciary issues, work with the relevant businesses' risk committees with the goal of ensuring that the businesses providing investment or risk management products or services that give rise to fiduciary duties to clients perform at the appropriate standard relative to their fiduciary relationship with a client. Of particular focus are the policies and practices that address a business' responsibilities to a client, including performance and service requirements and expectations; client suitability determinations; and disclosure obligations and communications. In this way, the relevant line-of-business risk committees provide oversight of the Firm's efforts to monitor, measure and control the performance and risks that may arise in the delivery of products or services to clients that give rise to such fiduciary duties, as well as those stemming from any of the Firm's fiduciary responsibilities under the Firm's various employee benefit plans.

CRITICAL ACCOUNTING ESTIMATES USED BY THE FIRM

JPMorgan Chase's accounting policies and use of estimates are integral to understanding its reported results. The Firm's most complex accounting estimates require management's judgment to ascertain the value of assets and liabilities. The Firm has established detailed policies and control procedures intended to ensure that valuation methods, including any judgments made as part of such methods, are well-controlled, independently reviewed and applied consistently from period to period. In addition, the policies and procedures are intended to ensure that the process for changing methodologies occurs in an appropriate manner. The Firm believes its estimates for determining the value of its assets and liabilities are appropriate. The following is a brief description of the Firm's critical accounting estimates involving significant valuation judgments.

Allowance for credit losses

JPMorgan Chase's allowance for credit losses covers the retained consumer and wholesale loan portfolios, as well as the Firm's consumer and wholesale lending-related commitments. The allowance for loan losses is intended to adjust the value of the Firm's loan assets to reflect probable credit losses inherent in the loan portfolio as of the balance sheet date. Similarly, the allowance for lending-related commitments is established to cover probable credit losses inherent in the lending-related commitments portfolio as of the balance sheet date.

The allowance for loan losses includes an asset-specific component, a formula-based component and a component related to PCI loans. The asset-specific allowance for loan losses for each of the Firm's portfolio segments is generally measured as the difference between the recorded investment in the impaired loan and the present value of the cash flows expected to be collected, discounted at the loan's original effective interest rate. Estimating the timing and amounts of future cash flows is highly judgmental as these cash flow projections further rely upon estimates such as redefault rates, loss severities, the amounts and timing of prepayments and other factors that are reflective of current and expected future market conditions. These estimates are, in turn, dependent on factors such as the level of future home prices, the duration of current weak overall economic conditions, and other macroeconomic and portfolio-specific factors. All of these estimates and assumptions require significant management judgment and certain assumptions are highly subjective.

For further discussion of the methodologies used in establishing the Firm's allowance for credit losses, see Allowance for Credit Losses on pages 159–162 and Note 15 on pages 276–279 of this Annual Report.

The determination of the formula-based allowance for credit losses also involves significant judgment on a number of matters, as discussed below.

Consumer loans and lending-related commitments, excluding PCI loans

The formula-based allowance for credit losses for the consumer portfolio, including credit card, is calculated by applying statistical expected loss factors to outstanding principal balances over an estimated loss emergence period to arrive at an estimate of losses in the portfolio. The loss emergence period represents the time period between the date at which the loss is estimated to have been incurred and the ultimate realization of that loss (through a charge-off). Estimated loss emergence periods may vary by product and may change over time; management applies judgment in estimating loss emergence periods, using available credit information and trends. In addition, management applies judgment to the statistical loss estimates for each loan portfolio category, using delinquency trends and other risk characteristics to estimate probable credit losses inherent in the portfolio. Management uses additional statistical methods and considers portfolio and collateral valuation trends to review the appropriateness of the primary statistical loss estimate.

The statistical calculation is then adjusted to take into consideration model imprecision, external factors and current economic events that have occurred but that are not yet reflected in the factors used to derive the statistical calculation; these adjustments are accomplished in part by analyzing the historical loss experience for each major product segment. In the current economic environment, it is difficult to predict whether historical loss experience is indicative of future loss levels. Management applies judgment in making this adjustment, taking into account uncertainties associated with current macroeconomic and political conditions, quality of underwriting standards, borrower behavior, the estimated effects of the mortgage foreclosure-related settlement with federal and state officials, uncertainties regarding the ultimate success of loan modifications, the potential impact of payment recasts within the HELOC portfolio, and other relevant internal and external factors affecting the credit quality of the portfolio. In certain instances, the interrelationships between these factors create further uncertainties. For example, the performance of a HELOC that experiences a payment recast may be affected by both the quality of underwriting standards applied in originating the loan and the general economic conditions in effect at the time of the payment recast. For junior lien products, management considers the delinquency and/or modification status of any senior liens in determining the adjustment. The application of different inputs into the statistical calculation, and the assumptions used by management to adjust the statistical calculation, are subject to management judgment, and emphasizing one input or assumption over another, or considering other

inputs or assumptions, could affect the estimate of the allowance for loan losses for the consumer credit portfolio.

Overall, the allowance for credit losses for the consumer portfolio, including credit card, is sensitive to changes in the economic environment, delinquency status, the realizable value of collateral, FICO scores, borrower behavior and other risk factors. Significant judgment is required to estimate the duration of current weak overall economic conditions, as well as the impact on housing prices and the labor market. The allowance for credit losses is highly sensitive to both home prices and unemployment rates, and in the current market it is difficult to estimate how potential changes in one or both of these factors might affect the allowance for credit losses. For example, while both factors are important determinants of overall allowance levels, changes in one factor or the other may not occur at the same rate, or changes may be directionally inconsistent such that improvement in one factor may offset deterioration in the other. In addition, changes in these factors would not necessarily be consistent across all geographies or product types. Finally, it is difficult to predict the extent to which changes in both or either of these factors would ultimately affect the frequency of losses, the severity of losses or both.

PCI loans

In connection with the Washington Mutual transaction, JPMorgan Chase acquired certain PCI loans, which are accounted for as described in Note 14 on pages 250–275 of this Annual Report. The allowance for loan losses for the PCI portfolio is based on quarterly estimates of the amount of principal and interest cash flows expected to be collected over the estimated remaining lives of the loans.

These cash flow projections are based on estimates regarding default rates, loss severities, the amounts and timing of prepayments and other factors that are reflective of current and expected future market conditions. These estimates are dependent on assumptions regarding the level of future home price declines, and the duration of current weak overall economic conditions, among other factors. These estimates and assumptions require significant management judgment and certain assumptions are highly subjective.

Wholesale loans and lending-related commitments

The Firm's methodology for determining the allowance for loan losses and the allowance for lending-related commitments requires the early identification of credits that are deteriorating. The Firm uses a risk-rating system to determine the credit quality of its wholesale loans. Wholesale loans are reviewed for information affecting the obligor's ability to fulfill its obligations. In assessing the risk rating of a particular loan, among the factors considered are the obligor's debt capacity and financial flexibility, the level of the obligor's earnings, the amount and sources for repayment, the level and nature of contingencies, management strength, and the industry and geography in which the obligor operates. These factors are based on an evaluation of historical and current information and involve subjective assessment and interpretation. Emphasizing one factor over another or considering additional factors could affect the risk rating assigned by the Firm to that loan.

The Firm applies its judgment to establish loss factors used in calculating the allowances. Wherever possible, the Firm uses independent, verifiable data or the Firm's own historical loss experience in its models for estimating the allowances. Many factors can affect estimates of loss, including volatility of loss given default, probability of default and rating migrations. Consideration is given as to the particular source of external data used as well as the time period to which loss data relates (for example, point-in-time loss estimates and estimates that reflect longer views of the credit cycle). Finally, differences in loan characteristics between the Firm's specific loan portfolio and those reflected in the external data could also affect loss estimates. The application of different inputs would change the amount of the allowance for credit losses determined appropriate by the Firm.

Management also applies its judgment to adjust the loss factors derived, taking into consideration model imprecision, external factors and economic events that have occurred but are not yet reflected in the loss factors. Historical experience of both loss given default and probability of default are considered when estimating these adjustments. Factors related to concentrated and deteriorating industries also are incorporated where relevant. These estimates are based on management's view of uncertainties that relate to current macroeconomic and political conditions, quality of underwriting standards and other relevant internal and external factors affecting the credit quality of the current portfolio.

Allowance for credit losses sensitivity

As noted above, the Firm's allowance for credit losses is sensitive to numerous factors, depending on the portfolio. Changes in economic conditions or in the Firm's assumptions could affect the Firm's estimate of probable credit losses inherent in the portfolio at the balance sheet date. For example, deterioration in the following inputs would have the following effects on the Firm's modeled loss estimates as of December 31, 2012, without consideration of any offsetting or correlated effects of other inputs in the Firm's allowance for loan losses:

- A 5% decline in housing prices from current levels, accompanied by an assumed corresponding change in the unemployment rate, for the residential real estate portfolio, excluding PCI loans, could result in an increase to modeled annual loss estimates of approximately $200 million.
- A 5% decline in housing prices from current levels, accompanied by an assumed corresponding change in the unemployment rate, could result in an increase in credit loss estimates for PCI loans of approximately $600 million.

- A 50 basis point deterioration in forecasted credit card loss rates could imply an increase to modeled annualized credit card loan loss estimates of approximately $800 million.
- A one-notch downgrade in the Firm's internal risk ratings for its entire wholesale loan portfolio could imply an increase in the Firm's modeled loss estimates of approximately $2.1 billion.

The purpose of these sensitivity analyses is to provide an indication of the isolated impacts of hypothetical alternative assumptions on modeled loss estimates. The changes in the inputs presented above are not intended to imply management's expectation of future deterioration of those risk factors.

These analyses are not intended to estimate changes in the overall allowance for loan losses, which would also be influenced by the judgment management applies to the modeled loss estimates to reflect the uncertainty and imprecision of these modeled loss estimates based on then current circumstances and conditions.

It is difficult to estimate how potential changes in specific factors might affect the allowance for credit losses because management considers a variety of factors and inputs in estimating the allowance for credit losses. Changes in these factors and inputs may not occur at the same rate and may not be consistent across all geographies or product types, and changes in factors may be directionally inconsistent, such that improvement in one factor may offset deterioration in other factors. In addition, it is difficult to predict how changes in specific economic conditions or assumptions could affect borrower behavior or other factors considered by management in estimating the allowance for credit losses. Given the process the Firm follows in evaluating the risk factors related to its loans, including risk ratings, home price assumptions, and credit card loss estimates, management believes that its current estimate of the allowance for credit loss is appropriate.

Fair value of financial instruments, MSRs and commodities inventory

JPMorgan Chase carries a portion of its assets and liabilities at fair value. The majority of such assets and liabilities are measured at fair value on a recurring basis. Certain assets and liabilities are measured at fair value on a nonrecurring basis, including certain mortgage, home equity and other loans, where the carrying value is based on the fair value of the underlying collateral.

Assets measured at fair value

The following table includes the Firm's assets measured at fair value and the portion of such assets that are classified within level 3 of the valuation hierarchy. For further information, see Note 3 on pages 196–214 of this Annual Report.

December 31, 2012 (in billions, except ratio data)	Total assets at fair value	Total level 3 assets
Trading debt and equity instruments	$ 375.0	$ 25.6
Derivative receivables	75.0	23.3
Trading assets	450.0	48.9
AFS securities	371.1	28.9
Loans	2.6	2.3
MSRs	7.6	7.6
Private equity investments	7.8	7.2
Other	43.1	4.2
Total assets measured at fair value on a recurring basis	882.2	99.1
Total assets measured at fair value on a nonrecurring basis	5.1	4.4
Total assets measured at fair value	$ 887.3	$ 103.5 [(a)]
Total Firm assets	$ 2,359.1	
Level 3 assets as a percentage of total Firm assets		4.4%
Level 3 assets as a percentage of total Firm assets at fair value		11.7%

Valuation

Fair value is defined as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. The Firm has an established and well-documented process for determining fair value, for further details see Note 3 on pages 196–214 of this Annual Report. Fair value is based on quoted market prices, where available. If listed prices or quotes are not available for an instrument or a similar instrument, fair value is generally based on models that consider relevant transaction characteristics (such as maturity) and use as inputs market-based or independently sourced parameters.

Estimating fair value requires the application of judgment. The type and level of judgment required is largely dependent on the amount of observable market information available to the Firm. For instruments valued using internally developed models that use significant unobservable inputs and are therefore classified within level 3 of the valuation hierarchy, judgments used to estimate fair value are more significant than those required when estimating the fair value of instruments classified within levels 1 and 2.

In arriving at an estimate of fair value for an instrument within level 3, management must first determine the appropriate model to use. Second, due to the lack of observability of significant inputs, management must assess all relevant empirical data in deriving valuation inputs — including, for example, transaction details, yield curves, interest rates, prepayment rates, default rates, volatilities, correlations, equity or debt prices, valuations of comparable instruments, foreign exchange rates and credit

curves. Finally, management judgment must be applied to assess the appropriate level of valuation adjustments to reflect counterparty credit quality, the Firm's credit-worthiness, liquidity considerations, unobservable parameters, and for certain portfolios that meet specified criteria, the size of the net open risk position. The judgments made are typically affected by the type of product and its specific contractual terms, and the level of liquidity for the product or within the market as a whole. For further discussion of the valuation of level 3 instruments, including unobservable inputs used, see Note 3 on pages 196–214 of this Annual Report.

Imprecision in estimating unobservable market inputs or other factors can affect the amount of gain or loss recorded for a particular position. Furthermore, while the Firm believes its valuation methods are appropriate and consistent with those of other market participants, the methods and assumptions used reflect management judgment and may vary across the Firm's businesses and portfolios.

The Firm uses various methodologies and assumptions in the determination of fair value. The use of different methodologies or assumptions to those used by the Firm could result in a different estimate of fair value at the reporting date. For a detailed discussion of the Firm's valuation process and hierarchy, and its determination of fair value for individual financial instruments, see Note 3 on pages 196–214 of this Annual Report.

Goodwill impairment

Under U.S. GAAP, goodwill must be allocated to reporting units and tested for impairment at least annually. The Firm's process and methodology used to conduct goodwill impairment testing is described in Note 17 on pages 291–295 of this Annual Report.

Management applies significant judgment when estimating the fair value of its reporting units. Estimates of fair value are dependent upon estimates of (a) the future earnings potential of the Firm's reporting units, including the estimated effects of regulatory and legislative changes, such as the Dodd-Frank Act, the CARD Act, and limitations on non-sufficient funds and overdraft fees and (b) the relevant cost of equity and long-term growth rates. Imprecision in estimating these factors can affect the estimated fair value of the reporting units.

Based upon the updated valuations for all of its reporting units, the Firm concluded that goodwill allocated to its reporting units was not impaired at December 31, 2012, nor was any goodwill written off during 2012. The fair values of almost all of the Firm's reporting units exceeded their carrying values by substantial amounts (excess fair value as a percent of carrying value ranged from approximately 30% to 180%) and did not indicate a significant risk of goodwill impairment based on current projections and valuations.

However, the fair value of the Firm's mortgage lending business exceeded its carrying value by less than 10% and the associated goodwill remains at an elevated risk for goodwill impairment due to its exposure to U.S. consumer credit risk and the effects of regulatory and legislative changes. The assumptions used in the valuation of this business include (a) estimates of future cash flows for the business (which are dependent on portfolio outstanding balances, net interest margin, operating expense, credit losses and the amount of capital necessary given the risk of business activities), and (b) the cost of equity used to discount those cash flows to a present value. Each of these factors requires significant judgment and the assumptions used are based on management's best estimate and most current projections, derived from the Firm's business forecasting process reviewed with senior management.

The projections for all of the Firm's reporting units are consistent with the short-term assumptions discussed in the Business Outlook on pages 68–69 of this Annual Report, and, in the longer term, incorporate a set of macroeconomic assumptions and the Firm's best estimates of long-term growth and returns of its businesses. Where possible, the Firm uses third-party and peer data to benchmark its assumptions and estimates.

Deterioration in economic market conditions, increased estimates of the effects of recent regulatory or legislative changes, or additional regulatory or legislative changes may result in declines in projected business performance beyond management's current expectations. For example, in the Firm's mortgage lending business, such declines could result from increases in costs to resolve foreclosure-related matters or from deterioration in economic conditions that result in increased credit losses, including decreases in home prices beyond management's current expectations. In addition, the earnings or estimated cost of equity of the Firm's capital markets businesses could also be affected by regulatory or legislative changes. Declines in business performance, increases in equity capital requirements, or increases in the estimated cost of equity, could cause the estimated fair values of the Firm's reporting units or their associated goodwill to decline, which could result in a material impairment charge to earnings in a future period related to some portion of the associated goodwill.

For additional information on goodwill, see Note 17 on pages 291–295 of this Annual Report.

Income taxes

JPMorgan Chase is subject to the income tax laws of the various jurisdictions in which it operates, including U.S. federal, state and local and non-U.S. jurisdictions. These laws are often complex and may be subject to different interpretations. To determine the financial statement impact of accounting for income taxes, including the provision for income tax expense and unrecognized tax benefits, JPMorgan Chase must make assumptions and judgments about how to interpret and apply these complex tax laws to numerous transactions and business events, as well as make judgments regarding the timing of when certain items may affect taxable income in the U.S. and non-U.S. tax jurisdictions.

JPMorgan Chase's interpretations of tax laws around the world are subject to review and examination by the various taxing authorities in the jurisdictions where the Firm operates, and disputes may occur regarding its view on a tax position. These disputes over interpretations with the various taxing authorities may be settled by audit, administrative appeals or adjudication in the court systems of the tax jurisdictions in which the Firm operates. JPMorgan Chase regularly reviews whether it may be assessed additional income taxes as a result of the resolution of these matters, and the Firm records additional reserves as appropriate. In addition, the Firm may revise its estimate of income taxes due to changes in income tax laws, legal interpretations and tax planning strategies. It is possible that revisions in the Firm's estimate of income taxes may materially affect the Firm's results of operations in any reporting period.

The Firm's provision for income taxes is composed of current and deferred taxes. Deferred taxes arise from differences between assets and liabilities measured for financial reporting versus income tax return purposes. Deferred tax assets are recognized if, in management's judgment, their realizability is determined to be more likely than not. The Firm has also recognized deferred tax assets in connection with certain net operating losses. The Firm performs regular reviews to ascertain whether deferred tax assets are realizable. These reviews include management's estimates and assumptions regarding future taxable income, which also incorporates various tax planning strategies, including strategies that may be available to utilize net operating losses before they expire. In connection with these reviews, if it is determined that a deferred tax asset is not realizable, a valuation allowance is established. The valuation allowance may be reversed in a subsequent reporting period if the Firm determines that, based on revised estimates of future taxable income or changes in tax planning strategies, it is more likely than not that all or part of the deferred tax asset will become realizable. As of December 31, 2012, management has determined it is more likely than not that the Firm will realize its deferred tax assets, net of the existing valuation allowance.

JPMorgan Chase does not provide U.S. federal income taxes on the undistributed earnings of certain non-U.S. subsidiaries, to the extent that such earnings have been reinvested abroad for an indefinite period of time. Changes to the income tax rates applicable to these non-U.S. subsidiaries may have a material impact on the effective tax rate in a future period if such changes were to occur.

The Firm adjusts its unrecognized tax benefits as necessary when additional information becomes available. Uncertain tax positions that meet the more-likely-than-not recognition threshold are measured to determine the amount of benefit to recognize. An uncertain tax position is measured at the largest amount of benefit that management believes is more likely than not to be realized upon settlement. It is possible that the reassessment of JPMorgan Chase's unrecognized tax benefits may have a material impact on its effective tax rate in the period in which the reassessment occurs.

For additional information on income taxes, see Note 26 on pages 303–305 of this Annual Report.

Litigation reserves

For a description of the significant estimates and judgments associated with establishing litigation reserves, see Note 31 on pages 316–325 of this Annual Report.

Fair value measurement and disclosures
In May 2011, the Financial Accounting Standards Board ("FASB") issued guidance that amends the requirements for fair value measurement and disclosure. The guidance changes and clarifies certain existing requirements related to portfolios of financial instruments and valuation adjustments, requires additional disclosures for fair value measurements categorized in level 3 of the fair value hierarchy (including disclosure of the range of inputs used in certain valuations), and requires additional disclosures for certain financial instruments that are not carried at fair value. The guidance was effective in the first quarter of 2012, and the Firm adopted the new guidance, effective January 1, 2012. The application of this guidance did not have a material effect on the Firm's Consolidated Balance Sheets or results of operations.

Accounting for repurchase and similar agreements
In April 2011, the FASB issued guidance that amends the criteria used to assess whether repurchase and similar agreements should be accounted for as financings or sales (purchases) with forward agreements to repurchase (resell). Specifically, the guidance eliminates circumstances in which the lack of adequate collateral maintenance requirements could result in a repurchase agreement being accounted for as a sale. The guidance was effective for new transactions or existing transactions that were modified beginning January 1, 2012. The Firm has accounted for its repurchase and similar agreements as secured financings, and therefore, the application of this guidance did not have an impact on the Firm's Consolidated Balance Sheets or results of operations.

Presentation of other comprehensive income
In June 2011, the FASB issued guidance that modifies the presentation of other comprehensive income in the Consolidated Financial Statements. The guidance requires that items of net income, items of other comprehensive income, and total comprehensive income be presented in one continuous statement or in two separate but consecutive statements. The guidance was effective in the first quarter of 2012, and the Firm adopted the new guidance by electing the two-statement approach, effective January 1, 2012. The application of this guidance only affected the presentation of the Consolidated Financial Statements and had no impact on the Firm's Consolidated Balance Sheets or results of operations.

In February 2013, the FASB issued guidance that requires enhanced disclosures of any reclassifications out of accumulated other comprehensive income. The guidance is effective in the first quarter of 2013. The application of this guidance will impact disclosures and will have no impact on the Firm's Consolidated Balance Sheets or results of operations.

Balance sheet netting
In December 2011, the FASB issued guidance that requires enhanced disclosures about certain financial assets and liabilities that are subject to enforceable master netting agreements or similar agreements, or that have otherwise been offset on the balance sheet under certain specific conditions that permit net presentation. In January 2013, the FASB clarified that the scope of this guidance is limited to derivatives, repurchase and reverse repurchase agreements, and securities borrowing and lending transactions. The guidance will become effective in the first quarter of 2013. The application of this guidance will only affect the disclosure of these instruments and will have no impact on the Firm's Consolidated Balance Sheets or results of operations.

NONEXCHANGE TRADED COMMODITY DERIVATIVE CONTRACTS AT FAIR VALUE

In the normal course of business, JPMorgan Chase trades nonexchange-traded commodity derivative contracts. To determine the fair value of these contracts, the Firm uses various fair value estimation techniques, primarily based on internal models with significant observable market parameters. The Firm's nonexchange-traded commodity derivative contracts are primarily energy-related.

The following table summarizes the changes in fair value for nonexchange-traded commodity derivative contracts for the year ended December 31, 2012.

Year ended December 31, 2012 (in millions)	Asset position	Liability position
Net fair value of contracts outstanding at January 1, 2012	$ 13,122	$ 13,517
Effect of legally enforceable master netting agreements	33,495	35,695
Gross fair value of contracts outstanding at January 1, 2012	46,617	49,212
Contracts realized or otherwise settled	(23,889)	(26,321)
Fair value of new contracts	19,357	21,502
Changes in fair values attributable to changes in valuation techniques and assumptions	–	–
Other changes in fair value	(4,934)	(3,072)
Gross fair value of contracts outstanding at December 31, 2012	37,151	41,321
Effect of legally enforceable master netting agreements	(28,856)	(30,505)
Net fair value of contracts outstanding at December 31, 2012	$ 8,295	$ 10,816

The following table indicates the maturities of nonexchange-traded commodity derivative contracts at December 31, 2012.

December 31, 2012 (in millions)	Asset position	Liability position
Maturity less than 1 year	$ 21,878	$ 23,129
Maturity 1–3 years	12,029	12,424
Maturity 4–5 years	1,947	2,155
Maturity in excess of 5 years	1,297	3,613
Gross fair value of contracts outstanding at December 31, 2012	37,151	41,321
Effect of legally enforceable master netting agreements	(28,856)	(30,505)
Net fair value of contracts outstanding at December 31, 2012	$ 8,295	$ 10,816

FORWARD-LOOKING STATEMENTS

From time to time, the Firm has made and will make forward-looking statements. These statements can be identified by the fact that they do not relate strictly to historical or current facts. Forward-looking statements often use words such as "anticipate," "target," "expect," "estimate," "intend," "plan," "goal," "believe," or other words of similar meaning. Forward-looking statements provide JPMorgan Chase's current expectations or forecasts of future events, circumstances, results or aspirations. JPMorgan Chase's disclosures in this Annual Report contain forward-looking statements within the meaning of the Private Securities Litigation Reform Act of 1995. The Firm also may make forward-looking statements in its other documents filed or furnished with the Securities and Exchange Commission. In addition, the Firm's senior management may make forward-looking statements orally to analysts, investors, representatives of the media and others.

All forward-looking statements are, by their nature, subject to risks and uncertainties, many of which are beyond the Firm's control. JPMorgan Chase's actual future results may differ materially from those set forth in its forward-looking statements. While there is no assurance that any list of risks and uncertainties or risk factors is complete, below are certain factors which could cause actual results to differ from those in the forward-looking statements:

- Local, regional and international business, economic and political conditions and geopolitical events;
- Changes in laws and regulatory requirements, including as a result of recent financial services legislation;
- Changes in trade, monetary and fiscal policies and laws;
- Securities and capital markets behavior, including changes in market liquidity and volatility;
- Changes in investor sentiment or consumer spending or savings behavior;
- Ability of the Firm to manage effectively its capital and liquidity, including approval of its capital plans by banking regulators;
- Changes in credit ratings assigned to the Firm or its subsidiaries;
- Damage to the Firm's reputation;
- Ability of the Firm to deal effectively with an economic slowdown or other economic or market disruption;
- Technology changes instituted by the Firm, its counterparties or competitors;
- Mergers and acquisitions, including the Firm's ability to integrate acquisitions;
- Ability of the Firm to develop new products and services, and the extent to which products or services previously sold by the Firm (including but not limited to mortgages and asset-backed securities) require the Firm to incur liabilities or absorb losses not contemplated at their initiation or origination;
- Ability of the Firm to address enhanced bank regulatory and other governmental agency requirements affecting its mortgage business;
- Ability of the Firm to implement successfully the actions required under the various Consent Orders entered into with its banking regulators;
- Acceptance of the Firm's new and existing products and services by the marketplace and the ability of the Firm to increase market share;
- Ability of the Firm to attract and retain employees;
- Ability of the Firm to control expense;
- Competitive pressures;
- Changes in the credit quality of the Firm's customers and counterparties;
- Adequacy of the Firm's risk management framework, disclosure controls and procedures and internal control over financial reporting, and the effectiveness of such controls and procedures in preventing control lapses or deficiencies;
- Efficacy of the models used by the Firm in valuing, measuring, monitoring and managing positions and risk;
- Adverse judicial or regulatory proceedings;
- Changes in applicable accounting policies;
- Ability of the Firm to determine accurate values of certain assets and liabilities;
- Occurrence of natural or man-made disasters or calamities or conflicts, including any effect of any such disasters, calamities or conflicts on the Firm's power generation facilities and the Firm's other commodity-related activities;
- Ability of the Firm to maintain the security of its financial, accounting, technology, data processing and other operating systems and facilities;
- The other risks and uncertainties detailed in Part I, Item 1A: Risk Factors in the Firm's Annual Report on Form 10-K for the year ended December 31, 2012.

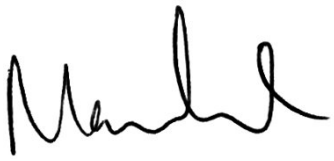
Any forward-looking statements made by or on behalf of the Firm speak only as of the date they are made, and JPMorgan Chase does not undertake to update forward-looking statements to reflect the impact of circumstances or events that arise after the date the forward-looking statements were made. The reader should, however, consult any further disclosures of a forward-looking nature the Firm may make in any subsequent Annual Reports on Form 10-K, Quarterly Reports on Form 10-Q, or Current Reports on Form 8-K.

Management's report on internal control over financial reporting

Management of JPMorgan Chase & Co. ("JPMorgan Chase" or the "Firm") is responsible for establishing and maintaining adequate internal control over financial reporting. Internal control over financial reporting is a process designed by, or under the supervision of, the Firm's principal executive and principal financial officers, or persons performing similar functions, and effected by JPMorgan Chase's Board of Directors, management and other personnel, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with accounting principles generally accepted in the United States of America.

JPMorgan Chase's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records, that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the Firm's assets; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the Firm are being made only in accordance with authorizations of JPMorgan Chase's management and directors; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use or disposition of the Firm's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.



Management has completed an assessment of the effectiveness of the Firm's internal control over financial reporting as of December 31, 2012. In making the assessment, management used the framework in "Internal Control - Integrated Framework" promulgated by the Committee of Sponsoring Organizations of the Treadway Commission, commonly referred to as the "COSO" criteria.

Based upon the assessment performed, management concluded that as of December 31, 2012, JPMorgan Chase's internal control over financial reporting was effective based upon the COSO criteria. Additionally, based upon management's assessment, the Firm determined that there were no material weaknesses in its internal control over financial reporting as of December 31, 2012.

The effectiveness of the Firm's internal control over financial reporting as of December 31, 2012, has been audited by PricewaterhouseCoopers LLP, an independent registered public accounting firm, as stated in their report which appears herein.

James Dimon
Chairman and Chief Executive Officer

Marianne Lake
Executive Vice President and Chief Financial Officer

February 28, 2013

To the Board of Directors and Stockholders of JPMorgan Chase & Co.:

In our opinion, the accompanying consolidated balance sheets and the related consolidated statements of income, comprehensive income, changes in stockholders' equity and cash flows present fairly, in all material respects, the financial position of JPMorgan Chase & Co. and its subsidiaries (the "Firm") at December 31, 2012 and 2011, and the results of their operations and their cash flows for each of the three years in the period ended December 31, 2012 in conformity with accounting principles generally accepted in the United States of America. Also in our opinion, the Firm maintained, in all material respects, effective internal control over financial reporting as of December 31, 2012, based on criteria established in *Internal Control - Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). The Firm's management is responsible for these financial statements, for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting, included in the accompanying "Management's report on internal control over financial reporting". Our responsibility is to express opinions on these financial statements and on the Firm's internal control over financial reporting based on our integrated audits. We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audits to obtain reasonable assurance about whether the financial statements are free of material misstatement and whether effective internal control over financial reporting was maintained in all material respects. Our audits of the financial statements included examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, and evaluating the overall financial statement presentation. Our audit of internal control over financial reporting included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. Our audits also included performing such other procedures as we considered necessary in the circumstances. We believe that our audits provide a reasonable basis for our opinions.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (i) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (ii) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (iii) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

PricewaterhouseCoopers LLP

Accounts payable and other liabilities (included $36 and $51 at fair value)	195,240	202,895
Beneficial interests issued by consolidated variable interest entities (included $1,170 and $1,250 at fair value)	63,191	65,977
Long-term debt (included $30,788 and $34,720 at fair value)	249,024	256,775
Total liabilities[a]	2,155,072	2,082,219
Commitments and contingencies (see Notes 29, 30 and 31 of this Annual Report)		
Stockholders' equity		
Preferred stock ($1 par value; authorized 200,000,000 shares: issued 905,750 and 780,000 shares)	9,058	7,800
Common stock ($1 par value; authorized 9,000,000,000 shares; issued 4,104,933,895 shares)	4,105	4,105
Capital surplus	94,604	95,602
Retained earnings	104,223	88,315
Accumulated other comprehensive income/(loss)	4,102	944
Shares held in RSU Trust, at cost (479,126 and 852,906 shares)	(21)	(38)
Treasury stock, at cost (300,981,690 and 332,243,180 shares)	(12,002)	(13,155)
Total stockholders' equity	204,069	183,573
Total liabilities and stockholders' equity	$ 2,359,141	$ 2,265,792

(a) The following table presents information on assets and liabilities related to VIEs that are consolidated by the Firm at December 31, 2012 and 2011. The difference between total VIE assets and liabilities represents the Firm's interests in those entities, which were eliminated in consolidation.

December 31, (in millions)	2012	2011
Assets		
Trading assets	$ 11,966	$ 12,079
Loans	82,723	86,754
All other assets	2,090	2,638
Total assets	$ 96,779	$ 101,471
Liabilities		
Beneficial interests issued by consolidated variable interest entities	$ 63,191	$ 65,977
All other liabilities	1,244	1,487
Total liabilities	$ 64,435	$ 67,464

The assets of the consolidated VIEs are used to settle the liabilities of those entities. The holders of the beneficial interests do not have recourse to the general credit of JPMorgan Chase. At both December 31, 2012 and 2011, the Firm provided limited program-wide credit enhancement of $3.1 billion related to its Firm-administered multi-seller conduits, which are eliminated in consolidation. For further discussion, see Note 16 on pages 280–291 of this Annual Report.

Cash and due from banks at the end of the period	$ 53,723	$ 59,602	$ 27,567
Cash interest paid	$ 11,161	$ 13,725	$ 12,404
Cash income taxes paid, net	2,050	8,153	9,747

The Notes to Consolidated Financial Statements are an integral part of these statements.

Note 1 – Basis of presentation

JPMorgan Chase & Co. ("JPMorgan Chase" or the "Firm"), a financial holding company incorporated under Delaware law in 1968, is a leading global financial services firm and one of the largest banking institutions in the United States of America ("U.S."), with operations worldwide. The Firm is a leader in investment banking, financial services for consumers and small business, commercial banking, financial transaction processing, asset management and private equity. For a discussion of the Firm's business segments, see Note 33 on pages 326–329 of this Annual Report.

The accounting and financial reporting policies of JPMorgan Chase and its subsidiaries conform to accounting principles generally accepted in the U.S. ("U.S. GAAP"). Additionally, where applicable, the policies conform to the accounting and reporting guidelines prescribed by regulatory authorities.

Certain amounts reported in prior periods have been reclassified to conform with the current presentation.

Consolidation

The Consolidated Financial Statements include the accounts of JPMorgan Chase and other entities in which the Firm has a controlling financial interest. All material intercompany balances and transactions have been eliminated. The Firm determines whether it has a controlling financial interest in an entity by first evaluating whether the entity is a voting interest entity or a variable interest entity ("VIE").

Voting Interest Entities

Voting interest entities are entities that have sufficient equity and provide the equity investors voting rights that enable them to make significant decisions relating to the entity's operations. For these types of entities, the Firm's determination of whether it has a controlling interest is primarily based on the amount of voting equity interests held. Entities in which the Firm has a controlling financial interest, through ownership of the majority of the entities' voting equity interests, or through other contractual rights that give the Firm control, are consolidated by the Firm.

Investments in companies in which the Firm has significant influence over operating and financing decisions (but does not own a majority of the voting equity interests) are accounted for (i) in accordance with the equity method of accounting (which requires the Firm to recognize its proportionate share of the entity's net earnings), or (ii) at fair value if the fair value option was elected at the inception of the Firm's investment. These investments are generally included in other assets, with income or loss included in other income.

Certain Firm-sponsored asset management funds are structured as limited partnerships or limited liability companies. For many of these entities, the Firm is the general partner or managing member, but the non-affiliated partners or members have the ability to remove the Firm as the general partner or managing member without cause (i.e., kick-out rights), based on a simple majority vote, or the non-affiliated partners or members have rights to participate in important decisions. Accordingly, the Firm does not consolidate these funds. In the limited cases where the nonaffiliated partners or members do not have substantive kick-out or participating rights, the Firm consolidates the funds.

The Firm's investment companies make investments in both publicly-held and privately-held entities, including investments in buyouts, growth equity and venture opportunities. These investments are accounted for under investment company guidelines and accordingly, irrespective of the percentage of equity ownership interests held, are carried on the Consolidated Balance Sheets at fair value, and are recorded in other assets.

Variable Interest Entities

VIEs are entities that, by design, either (1) lack sufficient equity to permit the entity to finance its activities without additional subordinated financial support from other parties, or (2) have equity investors that do not have the ability to make significant decisions relating to the entity's operations through voting rights, or do not have the obligation to absorb the expected losses, or do not have the right to receive the residual returns of the entity.

The most common type of VIE is a special purpose entity ("SPE"). SPEs are commonly used in securitization transactions in order to isolate certain assets and distribute the cash flows from those assets to investors. The basic SPE structure involves a company selling assets to the SPE; the SPE funds the purchase of those assets by issuing securities to investors. The legal documents that govern the transaction specify how the cash earned on the assets must be allocated to the SPE's investors and other parties that have rights to those cash flows. SPEs are generally structured to insulate investors from claims on the SPE's assets by creditors of other entities, including the creditors of the seller of the assets.

The primary beneficiary of a VIE (i.e., the party that has a controlling financial interest) is required to consolidate the assets and liabilities of the VIE. The primary beneficiary is the party that has both (1) the power to direct the activities of the VIE that most significantly impact the VIE's economic performance; and (2) through its interests in the VIE, the obligation to absorb losses or the right to receive benefits from the VIE that could potentially be significant to the VIE.

To assess whether the Firm has the power to direct the activities of a VIE that most significantly impact the VIE's economic performance, the Firm considers all the facts and circumstances, including its role in establishing the VIE and its ongoing rights and responsibilities. This assessment includes, first, identifying the activities that most significantly impact the VIE's economic performance; and second, identifying which party, if any, has power over those activities. In general, the parties that make the most significant decisions affecting the VIE (such as asset managers, collateral managers, servicers, or owners of call options or liquidation rights over the VIE's assets) or have the right to unilaterally remove those decision-makers are deemed to have the power to direct the activities of a VIE.

To assess whether the Firm has the obligation to absorb losses of the VIE or the right to receive benefits from the VIE that could potentially be significant to the VIE, the Firm considers all of its economic interests, including debt and equity investments, servicing fees, and derivative or other arrangements deemed to be variable interests in the VIE. This assessment requires that the Firm apply judgment in determining whether these interests, in the aggregate, are considered potentially significant to the VIE. Factors considered in assessing significance include: the design of the VIE, including its capitalization structure; subordination of interests; payment priority; relative share of interests held across various classes within the VIE's capital structure; and the reasons why the interests are held by the Firm.

The Firm performs on-going reassessments of: (1) whether entities previously evaluated under the majority voting-interest framework have become VIEs, based on certain events, and therefore subject to the VIE consolidation framework; and (2) whether changes in the facts and circumstances regarding the Firm's involvement with a VIE cause the Firm's consolidation conclusion to change.

In January 2010, the Financial Accounting Standards Board ("FASB") issued an amendment which deferred the requirements of the accounting guidance for VIEs for certain investment funds, including mutual funds, private equity funds and hedge funds. For the funds to which the deferral applies, the Firm continues to apply other existing authoritative accounting guidance to determine whether such funds should be consolidated.

Assets held for clients in an agency or fiduciary capacity by the Firm are not assets of JPMorgan Chase and are not included on the Consolidated Balance Sheets.

Use of estimates in the preparation of consolidated financial statements

The preparation of the Consolidated Financial Statements requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities, revenue and expense, and disclosures of contingent assets and liabilities. Actual results could be different from these estimates.

Foreign currency translation

JPMorgan Chase revalues assets, liabilities, revenue and expense denominated in non-U.S. currencies into U.S. dollars using applicable exchange rates.

Gains and losses relating to translating functional currency financial statements for U.S. reporting are included in other comprehensive income/(loss) ("OCI") within stockholders' equity. Gains and losses relating to nonfunctional currency transactions, including non-U.S. operations where the functional currency is the U.S. dollar, are reported in the Consolidated Statements of Income.

Statements of cash flows

For JPMorgan Chase's Consolidated Statements of Cash Flows, cash is defined as those amounts included in cash and due from banks.

Significant accounting policies

The following table identifies JPMorgan Chase's other significant accounting policies and the Note and page where a detailed description of each policy can be found.

Note 2 – Business changes and developments

Changes in common stock dividend

On March 18, 2011, the Board of Directors raised the Firm's quarterly common stock dividend from $0.05 to $0.25 per share, effective with the dividend paid on April 30, 2011, to shareholders of record on April 6, 2011. On March 13, 2012, the Board of Directors increased the Firm's quarterly common stock dividend from $0.25 to $0.30 per share, effective with the dividend paid on April 30, 2012, to shareholders of record on April 5, 2012.

Other business events

RBS Sempra transaction

On July 1, 2010, JPMorgan Chase completed the acquisition of RBS Sempra Commodities' global oil, global metals and European power and gas businesses. The Firm acquired approximately $1.7 billion of net assets which included $3.3 billion of debt which was immediately repaid. This acquisition almost doubled the number of clients the Firm's commodities business can serve and has enabled the Firm to offer clients more products in more regions of the world.

Purchase of remaining interest in J.P. Morgan Cazenove

On January 4, 2010, JPMorgan Chase purchased the remaining interest in J.P. Morgan Cazenove, an investment banking business partnership formed in 2005, which resulted in an adjustment to the Firm's capital surplus of approximately $1.3 billion.

Global settlement on servicing and origination of mortgages

On February 9, 2012, the Firm announced that it had agreed to a settlement in principle (the "global settlement") with a number of federal and state government agencies, including the U.S. Department of Justice ("DOJ"), the U.S. Department of Housing and Urban Development, the Consumer Financial Protection Bureau and the State Attorneys General, relating to the servicing and origination of mortgages. The global settlement, which became effective on April 5, 2012, required the Firm to, among other things: (i) make cash payments of approximately $1.1 billion, a portion of which will be set aside for payments to borrowers ("Cash Settlement Payment"); (ii) provide approximately $500 million of refinancing relief to certain "underwater" borrowers whose loans are owned and serviced by the Firm ("Refi Program"); and (iii) provide approximately $3.7 billion of additional relief for certain borrowers, including reductions of principal on first and second liens, payments to assist with short sales, deficiency balance waivers on past foreclosures and short sales, and forbearance assistance for unemployed homeowners ("Consumer Relief Program"). The Cash Settlement Payment was made on April 13, 2012.

As the Firm provides relief to borrowers under the Refi and Consumer Relief Programs, the Firm receives credits that reduce its remaining obligation under these programs. If the Firm does not meet certain targets set forth in the global settlement agreement for providing either refinancings under the Refi Program or other borrower relief under the Consumer Relief Program within certain prescribed time periods, the Firm must instead make additional cash payments. In general, 75% of the targets must be met within two years of the date of the global settlement and 100% must be achieved within three years of that date. The Firm filed its first quarterly report concerning its compliance with the global settlement with the Office of Mortgage Settlement Oversight in November 2012. The report included information regarding refinancings completed under the Refi Program and relief provided to borrowers under the Consumer Relief Program, as well as credits earned by the Firm under the global settlement as a result of such actions.

The global settlement releases the Firm from certain further claims by the participating government entities related to servicing activities, including foreclosures and loss mitigation activities; certain origination activities; and certain bankruptcy-related activities. Not included in the global settlement are any claims arising out of securitization activities, including representations made to investors with respect to mortgage-backed securities; criminal claims; and repurchase demands from U.S. government-sponsored entities ("GSEs"), among other items.

Also on February 9, 2012, the Firm entered into agreements with the Board of Governors of the Federal Reserve System ("Federal Reserve") and the Office of the Comptroller of the Currency ("OCC") for the payment of civil money penalties related to conduct that was the subject of consent orders entered into with the banking regulators in April 2011. The Firm's payment obligations under those agreements will be deemed satisfied by the Firm's payments and provisions of relief under the global settlement.

For further information on this global settlement, see Loans in Note 14 on pages 250–275 of this Annual Report.

Washington Mutual, Inc. bankruptcy plan confirmation

On February 17, 2012, a bankruptcy court confirmed the joint plan containing the global settlement agreement resolving numerous disputes among Washington Mutual, Inc. ("WMI"), JPMorgan Chase and the Federal Deposit Insurance Corporation ("FDIC") as well as significant creditor groups (the "WaMu Global Settlement"). The WaMu Global Settlement was finalized on March 19, 2012, pursuant to the execution of a definitive agreement and court approval, and the Firm recognized additional assets, including certain pension-related assets, as well as tax refunds, resulting in a pretax gain of $1.1 billion for the three months ended March 31, 2012. For additional information related to the WaMu Global Settlement see Washington Mutual Litigations in Note 31 on page 324 of this Annual Report.

Superstorm Sandy
On October 29, 2012, the mid-Atlantic and Northeast regions of the U.S. were affected by Superstorm Sandy, which caused major flooding and wind damage and resulted in major disruptions to individuals and businesses and significant damage to homes and communities in the affected regions. Superstorm Sandy did not have a material impact on the 2012 financial results of the Firm.

Subsequent events

Mortgage foreclosure settlement agreement with the Office of the Comptroller of the Currency and the Board of Governors of the Federal Reserve System
On January 7, 2013, the Firm announced that it and a number of other financial institutions entered into a settlement agreement with the Office of the Comptroller of the Currency and the Board of Governors of the Federal Reserve System providing for the termination of the independent foreclosure review programs (the "Independent Foreclosure Review"). Under this settlement, the Firm will make a cash payment of $753 million into a settlement fund for distribution to qualified borrowers. The Firm has also committed an additional $1.2 billion to foreclosure prevention actions, which will be fulfilled through credits given to the Firm for modifications, short sales and other specified types of borrower relief. Foreclosure prevention actions that earn credit under the Independent Foreclosure Review settlement are in addition to actions taken by the Firm to earn credit under the global settlement entered into by the Firm with state and federal agencies. The estimated impact of the foreclosure prevention actions required under the Independent Foreclosure Review settlement have been considered in the Firm's allowance for loan losses. The Firm recognized a pretax charge of approximately $700 million in the fourth quarter of 2012 related to the Independent Foreclosure Review settlement.

Note 3 – Fair value measurement

JPMorgan Chase carries a portion of its assets and liabilities at fair value. These assets and liabilities are predominantly carried at fair value on a recurring basis (i.e., assets and liabilities that are measured and reported at fair value on the Firm's Consolidated Balance Sheets). Certain assets (e.g. certain mortgage, home equity and other loans, where the carrying value is based on the fair value of the underlying collateral), liabilities and unfunded lending-related commitments are measured at fair value on a nonrecurring basis; that is, they are not measured at fair value on an ongoing basis but are subject to fair value adjustments only in certain circumstances (for example, when there is evidence of impairment).

Fair value is defined as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. Fair value is based on quoted market prices, where available. If listed prices or quotes are not available, fair value is based on models that consider relevant transaction characteristics (such as maturity) and use as inputs observable or unobservable market parameters, including but not limited to yield curves, interest rates, volatilities, equity or debt prices, foreign exchange rates and credit curves. Valuation adjustments may be made to ensure that financial instruments are recorded at fair value, as described below.

Imprecision in estimating unobservable market inputs or other factors can affect the amount of gain or loss recorded for a particular position. Furthermore, while the Firm believes its valuation methods are appropriate and consistent with those of other market participants, the methods and assumptions used reflect management judgment and may vary across the Firm's businesses and portfolios.

The Firm uses various methodologies and assumptions in the determination of fair value. The use of different methodologies or assumptions to those used by the Firm could result in a different estimate of fair value at the reporting date.

Valuation process
Risk-taking functions are responsible for providing fair value estimates for assets and liabilities carried on the Consolidated Balance Sheets at fair value. The Firm's valuation control function, which is part of the Firm's Finance function and independent of the risk-taking functions, is responsible for verifying these estimates and determining any fair value adjustments that may be required to ensure that the Firm's positions are recorded at fair value. In addition, the Firm has a firm-wide Valuation Governance Forum ("VGF") comprising senior finance and risk executives to oversee the management of risks arising from valuation activities conducted across the Firm. The VGF is chaired by the firm-wide head of the valuation control function, and also includes sub-forums for the CIB, MB, and certain corporate functions including Treasury and CIO.

The valuation control function verifies fair value estimates leveraging independently derived prices, valuation inputs and other market data, where available. Where independent prices or inputs are not available, additional review is performed by the valuation control function to ensure the reasonableness of estimates that cannot be verified to external independent data, and may include: evaluating the limited market activity including client unwinds; benchmarking of valuation inputs to those for similar instruments; decomposing the valuation of structured instruments into individual components; comparing expected to actual cash flows; reviewing profit and loss trends; and reviewing trends in collateral valuation. In addition there are additional levels of management review for more significant or complex positions.

The valuation control function determines any valuation adjustments that may be required to the estimates provided by the risk-taking functions. No adjustments are applied to the quoted market price for instruments classified within

level 1 of the fair value hierarchy (see below for further information on the fair value hierarchy). For other positions, judgment is required to assess the need for valuation adjustments to appropriately reflect liquidity considerations, unobservable parameters, and, for certain portfolios that meet specified criteria, the size of the net open risk position. The determination of such adjustments follows a consistent framework across the Firm:

- Liquidity valuation adjustments are considered when the Firm may not be able to observe a recent market price for a financial instrument that trades in an inactive (or less active) market. The Firm estimates the amount of uncertainty in the initial fair value estimate based on the degree of liquidity in the market. Factors considered in determining the liquidity adjustment include: (1) the amount of time since the last relevant pricing point; (2) whether there was an actual trade or relevant external quote or alternatively pricing points for similar instruments in active markets; and (3) the volatility of the principal risk component of the financial instrument. For certain portfolios of financial instruments that the Firm manages on the basis of net open risk exposure, valuation adjustments are necessary to reflect the cost of exiting a larger-than-normal market-size net open risk position. Where applied, such adjustments are based on factors including the size of the adverse market move that is likely to occur during the period required to reduce the net open risk position to a normal market-size.
- Unobservable parameter valuation adjustments may be made when positions are valued using internally developed models that incorporate unobservable parameters – that is, parameters that must be estimated and are, therefore, subject to management judgment. Unobservable parameter valuation adjustments are applied to reflect the uncertainty inherent in the valuation estimate provided by the model.

Where appropriate, the Firm also applies adjustments to its estimates of fair value in order to appropriately reflect counterparty credit quality and the Firm's own creditworthiness, applying a consistent framework across the Firm. For more information on such adjustments see Credit adjustments on page 212 of this Note

Valuation model review and approval

If prices or quotes are not available for an instrument or a similar instrument, fair value is generally determined using valuation models that consider relevant transaction data such as maturity and use as inputs market-based or independently sourced parameters. Where this is the case the price verification process described above is applied to the inputs to those models.

The Firm's Model Risk function within the Firm's Model Risk and Development Group, which in turn reports to the Chief Risk Officer, reviews and approves valuation models used by the Firm. Model reviews consider a number of factors about the model's suitability for valuation of a particular product including whether it accurately reflects the characteristics and significant risks of a particular instrument; the selection and reliability of model inputs; consistency with models for similar products; the appropriateness of any model-related adjustments; and sensitivity to input parameters and assumptions that cannot be observed from the market. When reviewing a model, the Model Risk function analyzes and challenges the model methodology and the reasonableness of model assumptions and may perform or require additional testing, including back-testing of model outcomes.

New significant valuation models, as well as material changes to existing models, are reviewed and approved prior to implementation except where specified conditions are met. The Model Risk function performs an annual Firmwide model risk assessment where developments in the product or market are considered in determining whether valuation models which have already been reviewed need to be reviewed and approved again.

Valuation Hierarchy

A three-level valuation hierarchy has been established under U.S. GAAP for disclosure of fair value measurements. The valuation hierarchy is based on the transparency of inputs to the valuation of an asset or liability as of the measurement date. The three levels are defined as follows.

- Level 1 – inputs to the valuation methodology are quoted prices (unadjusted) for identical assets or liabilities in active markets.
- Level 2 – inputs to the valuation methodology include quoted prices for similar assets and liabilities in active markets, and inputs that are observable for the asset or liability, either directly or indirectly, for substantially the full term of the financial instrument.
- Level 3 – one or more inputs to the valuation methodology are unobservable and significant to the fair value measurement.

A financial instrument's categorization within the valuation hierarchy is based on the lowest level of input that is significant to the fair value measurement.

The following table describes the valuation methodologies used by the Firm to measure its more significant products/ instruments at fair value, including the general classification of such instruments pursuant to the valuation hierarchy.

Product/instrument	Valuation methodology, inputs and assumptions	Classifications in the valuation hierarchy
Securities financing agreements	Valuations are based on discounted cash flows, which consider: • Derivative features. For further information refer to discussion on derivatives below. • Market rates for the respective maturity • Collateral	Level 2
Loans and lending-related commitments - wholesale		
Trading portfolio	Where observable market data is available, valuations are based on: • Observed market prices (circumstances are limited) • Relevant broker quotes • Observed market prices for similar instruments Where observable market data is unavailable or limited, valuations are based on discounted cash flows, which consider the following: • Yield • Lifetime credit losses • Loss severity • Prepayment speed • Servicing costs	Level 2 or 3
Loans held for investment and associated lending related commitments	Valuations are based on discounted cash flows, which consider: • Credit spreads, derived from the cost of CDS; or benchmark credit curves developed by the Firm, by industry and credit rating, and which take into account the difference in loss severity rates between bonds and loans • Prepayment speed Lending related commitments are valued similar to loans and reflect the portion of an unused commitment expected, based on the Firm's average portfolio historical experience, to become funded prior to an obligor default For information regarding the valuation of loans measured at collateral value, see Note 14 on pages 250-275 of this Annual Report.	Predominantly level 3
Loans - consumer		
Held for investment consumer loans, excluding credit card	Valuations are based on discounted cash flows, which consider: • Discount rates (derived from primary origination rates and market activity) • Expected lifetime credit losses (considering expected and current default rates for existing portfolios, collateral prices, and economic environment expectations (i.e., unemployment rates)) • Estimated prepayments • Servicing costs • Market liquidity For information regarding the valuation of loans measured at collateral value, see Note 14 on pages 250-275 of this Annual Report.	Predominantly level 3
Credit card receivables	Valuations are based on discounted cash flows, which consider: • Projected interest income and late fee revenue, funding, servicing and credit costs, and loan repayment rates • Estimated life of receivables (based on projected loan payment rates) • Discount rate - based on expected return on receivables • Credit costs - allowance for loan losses is considered a reasonable proxy for the credit cost based on the short- term nature of credit card receivables	Level 3
Conforming residential mortgage loans expected to be sold	Fair value is based upon observable prices for mortgage-backed securities with similar collateral and incorporates adjustments to these prices to account for differences between the securities and the value of the underlying loans, which include credit characteristics, portfolio composition, and liquidity.	Predominantly level 2

Product/instrument	Valuation methodology, inputs and assumptions	Classifications in the valuation hierarchy
Securities	Quoted market prices are used where available.	Level 1
	In the absence of quoted market prices, securities are valued based on:	Level 2 or 3
	• Observable market prices for similar securities	
	• Relevant broker quotes	
	• Discounted cash flows	
	In addition, the following inputs to discounted cash flows are used for the following products:	
	Mortgage- and asset-backed securities specific inputs:	
	• Collateral characteristics	
	• Deal-specific payment and loss allocations	
	• Current market assumptions related to yield, prepayment speed, conditional default rates and loss severity	
	Collateralized loan obligations ("CLOs"), specific inputs:	
	• Collateral characteristics	
	• Deal-specific payment and loss allocations	
	• Expected prepayment speed, conditional default rates, loss severity	
	• Credit spreads	
	• Credit rating data	
Physical commodities	Valued using observable market prices or data	Level 1 or 2
Derivatives	Exchange-traded derivatives that are actively traded and valued using the exchange price, and over-the-counter contracts where quoted prices are available in an active market.	Level 1
	Derivatives valued using models such as the Black-Scholes option pricing model, simulation models, or a combination of models, that use observable or unobservable valuation inputs (e.g. plain vanilla options and interest rate and credit default swaps). Inputs include:	Level 2 or 3
	• Contractual terms including the period to maturity	
	• Readily observable parameters including interest rates and volatility	
	• Credit quality of the counterparty and of the Firm	
	• Correlation levels	
	In addition, the following specific inputs are used for the following derivatives that are valued based on models with significant unobservable inputs:	
	Structured credit derivatives specific inputs include:	
	• CDS spreads and recovery rates	
	• Credit correlation between the underlying debt instruments (levels are modeled on a transaction basis and calibrated to liquid benchmark tranche indices)	
	• Actual transactions, where available, are used to regularly recalibrate unobservable parameters	
	Certain long-dated equity option specific inputs include:	
	• Long-dated equity volatilities	
	Certain interest rate and FX exotic options specific inputs include:	
	• Interest rate correlation	
	• Interest rate spread volatility	
	• Foreign exchange correlation	
	• Correlation between interest rates and foreign exchange rates	
	• Parameters describing the evolution of underlying interest rates	
	Certain commodity derivatives specific inputs include:	
	• Commodity volatility	
	Adjustments to reflect counterparty credit quality (credit valuation adjustments or "CVA"), and the Firms own creditworthiness (debit valuation adjustments or "DVA"), see page 212 of this Note.	

Product/instrument	Valuation methodology, inputs and assumptions	Classification in the valuation hierarchy
Mortgage servicing rights ("MSRs")	See Mortgage servicing rights in Note 17 on pages 292-294 of this Annual Report.	Level 3
Private equity direct investments	*Private equity direct investments* Fair value is estimated using all available information and considering the range of potential inputs, including: • Transaction prices • Trading multiples of comparable public companies • Operating performance of the underlying portfolio company • Additional available inputs relevant to the investment • Adjustments as required, since comparable public companies are not identical to the company being valued, and for company-specific issues and lack of liquidity	Level 3
	Public investments held in the Private Equity portfolio • Valued using observable market prices less adjustments for relevant restrictions, where applicable	Level 1 or 2
Fund investments (i.e., mutual/collective investment funds, private equity funds, hedge funds, and real estate funds)	Net asset value ("NAV") • NAV is validated by sufficient level of observable activity (i.e., purchases and sales) • Adjustments to the NAV as required, for restrictions on redemption (e.g., lock up periods or withdrawal limitations) or where observable activity is limited	Level 1 Level 2 or 3
Beneficial interests issued by consolidated VIE	Valued using observable market information, where available In the absence of observable market information, valuations are based on the fair value of the underlying assets held by the VIE	Level 2 or 3
Long-term debt, not carried at fair value	Valuations are based on discounted cash flows, which consider: • Market rates for respective maturity • The Firm's own creditworthiness (DVA), see page 212 of this Note	Predominantly level 2
Structured notes (included in deposits, other borrowed funds and long-term debt)	Valuations are based on discounted cash flows, which consider: • The Firm's own creditworthiness (DVA), see page 212 of this Note • Consideration of derivative features. For further information refer to discussion on derivatives above	Level 2 or 3

The following table presents the asset and liabilities measured at fair value as of December 31, 2012 and 2011 by major product category and fair value hierarchy.

Assets and liabilities measured at fair value on a recurring basis

	Fair value hierarchy				
December 31, 2012 (in millions)	Level 1	Level 2	Level 3	Netting	Total fair value
Federal funds sold and securities purchased under resale agreements	$ –	$ 24,258	$ –	$ –	$ 24,258

(a) At December 31, 2012 and 2011, included total U.S. government-sponsored enterprise obligations of $119.4 billion and $122.4 billion respectively, which were predominantly mortgage-related.

(b) At December 31, 2012 and 2011, included within trading loans were $26.4 billion and $20.1 billion, respectively, of residential first-lien mortgages, and $2.2 billion and $2.0 billion, respectively, of commercial first-lien mortgages. Residential mortgage loans include conforming mortgage loans originated with the intent to sell to U.S. government agencies of $17.4 billion and $11.0 billion, respectively, and reverse mortgages of $4.0 billion and $4.0 billion, respectively.

(c) Physical commodities inventories are generally accounted for at the lower of cost or market. "Market" is a term defined in U.S. GAAP as an amount not exceeding fair value less costs to sell ("transaction costs"). Transaction costs for the Firm's physical commodities inventories are either not applicable or immaterial to the value of the inventory.

Therefore, market approximates fair value for the Firm's physical commodities inventories. When fair value hedging has been applied (or when market is below cost), the carrying value of physical commodities approximates fair value, because under fair value hedge accounting, the cost basis is adjusted for changes in fair value. For a further discussion of the Firm's hedge accounting relationships, see Note 6 on pages 218–227 of this Annual Report. To provide consistent fair value disclosure information, all physical commodities inventories have been included in each period presented.

(d) Balances reflect the reduction of securities owned (long positions) by the amount of securities sold but not yet purchased (short positions) when the long and short positions have identical Committee on Uniform Security Identification Procedures numbers ("CUSIPs").

(e) As permitted under U.S. GAAP, the Firm has elected to net derivative receivables and derivative payables and the related cash collateral received and paid when a legally enforceable master netting agreement exists. For purposes of the tables above, the Firm does not reduce derivative receivables and derivative payables balances for this netting adjustment, either within or across the levels of the fair value hierarchy, as such netting is not relevant to a presentation based on the transparency of inputs to the valuation of an asset or liability. Therefore, the balances reported in the fair value hierarchy table are gross of any counterparty netting adjustments. However, if the Firm were to net such balances within level 3, the reduction in the level 3 derivative receivable and payable balances would be $8.4 billion and $11.7 billion at December 31, 2012 and 2011, respectively; this is exclusive of the netting benefit associated with cash collateral, which would further reduce the level 3 balances.

(f) Private equity instruments represent investments within the Corporate/Private Equity segment. The cost basis of the private equity investment portfolio totaled $8.4 billion and $9.5 billion at December 31, 2012 and 2011, respectively.

(g) Includes investments in hedge funds, private equity funds, real estate and other funds that do not have readily determinable fair values. The Firm uses net asset value per share when measuring the fair value of these investments. At December 31, 2012 and 2011, the fair value of these investments were $4.9 billion and $5.5 billion, respectively, of which $1.1 billion and $1.2 billion, respectively, in level 2, and $3.8 billion and $4.3 billion, respectively, in level 3.

Transfers between levels for instruments carried at fair value on a recurring basis

For the year ended December 31, 2012, $113.9 billion of settled U.S. government agency mortgage-backed securities were transferred from level 1 to level 2. While the U.S. government agency mortgage-backed securities market remains highly liquid and transparent, the transfer reflects greater market price differentiation between settled securities based on certain underlying loan specific factors. There were no significant transfers from level 2 to level 1 for the year ended December 31, 2012, and no significant transfers between level 1 and level 2 for the year ended December 31, 2011.

For the years ended December 31, 2012 and 2011, there were no significant transfers from level 2 into level 3. For the year ended December 31, 2012, transfers from level 3 into level 2 included $1.2 billion of derivative payables based on increased observability of certain structured equity derivatives; and $1.8 billion of long-term debt due to a decrease in valuation uncertainty of certain equity structured notes. For the year ended December 31, 2011, transfers from level 3 into level 2 included $2.6 billion of long-term debt due to a decrease in valuation uncertainty of certain structured notes.

All transfers are assumed to occur at the beginning of the reporting period.

During 2012 the liquidity for certain collateralized loan obligations increased and price transparency improved. Accordingly, the Firm incorporated a revised valuation model into its valuation process for CLOs to better calibrate to market data where available. The Firm began to verify fair value estimates from this model to independent sources during the fourth quarter of 2012. Although market liquidity and price transparency have improved, CLO market prices were not yet considered materially observable and therefore CLOs remained in level 3 as of December 31, 2012. The change in the valuation process did not have a significant impact on the fair value of the Firm's CLO positions.

Level 3 valuations

The Firm has established well-documented processes for determining fair value, including for instruments where fair value is estimated using significant unobservable inputs (level 3). For further information on the Firm's valuation process and a detailed discussion of the determination of fair value for individual financial instruments, see pages 196–200 of this Note.

Estimating fair value requires the application of judgment. The type and level of judgment required is largely dependent on the amount of observable market information available to the Firm. For instruments valued using internally developed models that use significant unobservable inputs and are therefore classified within level 3 of the fair value hierarchy, judgments used to estimate fair value are more significant than those required when estimating the fair value of instruments classified within levels 1 and 2.

In arriving at an estimate of fair value for an instrument within level 3, management must first determine the appropriate model to use. Second, due to the lack of observability of significant inputs, management must assess all relevant empirical data in deriving valuation inputs — including, but not limited to, transaction details, yield curves, interest rates, prepayment speed, default rates, volatilities, correlations, equity or debt prices, valuations of comparable instruments, foreign exchange rates and credit curves. Finally, management judgment must be applied to assess the appropriate level of valuation adjustments to reflect counterparty credit quality, the Firm's creditworthiness, constraints on liquidity and unobservable parameters, where relevant. The judgments made are typically affected by the type of product and its specific contractual terms, and the level of liquidity for the product or within the market as a whole.

The following table presents the Firm's primary level 3 financial instruments, the valuation techniques used to measure the fair value of those financial instruments, the significant unobservable inputs, the range of values for those inputs and the weighted averages of such inputs. While the determination to classify an instrument within level 3 is based on the significance of the unobservable inputs to the overall fair value measurement, level 3 financial instruments typically include observable components (that is, components that are actively quoted and can be validated to external sources) in addition to the unobservable components. The level 1 and/or level 2 inputs are not included in the table. In addition, the Firm manages the risk of the observable components of level 3 financial instruments using securities and derivative positions that are classified within levels 1 or 2 of the fair value hierarchy.

The range of values presented in the table is representative of the highest and lowest level input used to value the significant groups of instruments within a product/instrument classification. The input range does not reflect the level of input uncertainty, instead it is driven by the different underlying characteristics of the various instruments within the classification. For example, two option contracts may have similar levels of market risk exposure and valuation uncertainty, but may have significantly different implied volatility levels because the option contracts have different underlyings, tenors , or strike prices.

Where provided, the weighted averages of the input values presented in the table are calculated based on the fair value of the instruments that the input is being used to value. In the Firm's view, the input range and the weighted average value do not reflect the degree of input uncertainty or an assessment of the reasonableness of the Firm's estimates and assumptions. Rather, they reflect the characteristics of the various instruments held by the Firm and the relative distribution of instruments within the range of characteristics. The input range and weighted average values will therefore vary from period to period and parameter to parameter based on the characteristics of the instruments held by the Firm at each balance sheet date.

Level 3 inputs[a]

December 31, 2012 (in millions, except for ratios and basis points)

Product/Instrument	Fair value	Principal valuation technique	Unobservable inputs	Range of input values	Weighted average
Residential mortgage-backed securities and loans	$ 9,836	Discounted cash flows	Yield	4 % - 20%	7%
			Prepayment speed	0 % - 40%	6%
			Conditional default rate	0 % - 100%	10%
			Loss severity	0 % - 95%	15%
Commercial mortgage-backed securities and loans[b]	1,724	Discounted cash flows	Yield	2 % - 32%	6%
			Conditional default rate	0 % - 8%	0%
			Loss severity	0 % - 40%	35%
Corporate debt securities, obligations of U.S. states and municipalities, and other[c]	19,563	Discounted cash flows	Credit spread	130 bps - 250 bps	153 bps
			Yield	0 % - 30%	9%
		Market comparables	Price	25 - 125	87
Net interest rate derivatives	3,322	Option pricing	Interest rate correlation	(75)% - 100%	
			Interest rate spread volatility	0 % - 60%	
Net credit derivatives[b]	1,873	Discounted cash flows	Credit correlation	27 % - 90%	
Net foreign exchange derivatives	(1,750)	Option pricing	Foreign exchange correlation	(75)% - 45%	
Net equity derivatives	(1,806)	Option pricing	Equity volatility	5 % - 45%	
Net commodity derivatives	254	Option pricing	Commodity volatility	24 % - 47%	
Collateralized loan obligations[d]	29,972	Discounted cash flows	Credit spread	130 bps - 600 bps	163 bps
			Prepayment speed	15 % - 20%	19%
			Conditional default rate	2%	2%
			Loss severity	40%	40%
Mortgage servicing rights ("MSRs")	7,614	Discounted cash flows	Refer to Note 17 on pages 291–295 of this Annual Report.		
Private equity direct investments	5,231	Market comparables	EBITDA multiple	2.7x - 14.6x	8.3x
			Liquidity adjustment	0 % - 30%	10%
Private equity fund investments	1,950	Net asset value	Net asset value[f]		
Long-term debt, other borrowed funds, and deposits[e]	12,078	Option pricing	Interest rate correlation	(75)% - 100%	
			Foreign exchange correlation	(75)% - 45%	
			Equity correlation	(40)% - 85%	
		Discounted cash flows	Credit correlation	27 % - 84%	

(a) The categories presented in the table have been aggregated based upon the product type, which may differ from their classification on the Consolidated Balance Sheet.
(b) The unobservable inputs and associated input ranges for approximately $1.3 billion of credit derivative receivables and $1.2 billion of credit derivative payables with underlying mortgage risk have been included in the inputs and ranges provided for commercial mortgage-backed securities and loans.
(c) Approximately 16% of instruments in this category include price as an unobservable input. This balance includes certain securities and illiquid trading loans, which are generally valued using comparable prices and/or yields for similar instruments.
(d) CLOs are securities backed by corporate loans. At December 31, 2012, $27.9 billion of CLOs were held in the available-for-sale ("AFS") securities portfolio and $2.1 billion were included in asset-backed securities held in the trading portfolio. Substantially all of the securities are rated "AAA", "AA" and "A". The reported range of credit spreads increased from the third quarter to the fourth quarter of 2012, while the reported ranges of other unobservable parameters decreased. This was primarily due to the Firm incorporating a revised valuation model for CLOs, which uses a different combination of valuation parameters as compared with the old model. The change did not have a significant impact on the fair value of the Firm's CLO positions.
(e) Long-term debt, other borrowed funds, and deposits include structured notes issued by the Firm that are financial instruments containing embedded derivatives. The estimation of the fair value of structured notes is predominantly based on the derivative features embedded within the instruments. The significant unobservable inputs are broadly consistent with those presented for derivative receivables.
(f) The range has not been disclosed due to the wide range of possible values given the diverse nature of the underlying investments.

Changes in and ranges of unobservable inputs

The following discussion provides a description of the impact on a fair value measurement of a change in each unobservable input in isolation, and the interrelationship between unobservable inputs, where relevant and significant. The impact of changes in inputs may not be independent as a change in one unobservable input may give rise to a change in another unobservable input, and where relationships exist between two unobservable inputs, those relationships are discussed below. Relationships may also exist between observable and unobservable inputs (for example, as observable interest rates rise, unobservable prepayment rates decline). Such relationships have not been included in the discussion below. In addition, for each of the individual relationships described below, the inverse relationship would also generally apply.

In addition, the following discussion provides a description of attributes of the underlying instruments and external market factors that affect the range of inputs used in the valuation of the Firm's positions.

Discount rates and spreads

Yield – The yield of an asset is the interest rate used to discount future cash flows in a discounted cash flow calculation. An increase in the yield, in isolation, would result in a decrease in a fair value measurement.

Credit spread – The credit spread is the amount of additional annualized return over the market interest rate that a market participant would demand for taking exposure to the credit risk of an instrument. The credit spread for an instrument forms part of the discount rate used in a discounted cash flow calculation. Generally, an increase in the credit spread would result in a decrease in a fair value measurement.

The yield and the credit spread of a particular mortgage-backed security or CLO primarily reflect the risk inherent in the instrument. The yield is also impacted by the absolute level of the coupon paid by the instrument (which may not correspond directly to the level of inherent risk). Therefore, the range of yield and credit spreads reflects the range of risk inherent in various instruments owned by the Firm. The risk inherent in mortgage-backed securities is driven by the subordination of the security being valued and the characteristics of the underlying mortgages within the collateralized pool, including borrower FICO scores, loan to value ratios for residential mortgages and the nature of the property and/or any tenants for commercial mortgages. For CLOs, credit spread reflects the market's implied risk premium based on several factors including the subordination of the investment, the credit quality of underlying borrowers, the specific terms of the loans within the CLO structure, as well as the supply and demand of the instrument. For corporate debt securities, obligations of U.S. states and municipalities and other similar instruments, credit spreads reflect the credit quality of the obligor and the tenor of the obligation.

Performance rates of underlying collateral in collateralized obligations (e.g., MBS, CLOs, etc.)

Prepayment speed – The prepayment speed is a measure of the voluntary unscheduled principal repayments of a prepayable obligation in a collateralized pool. Prepayment speeds generally decline as borrower delinquencies rise. An increase in prepayment speeds, in isolation, would result in a decrease in a fair value measurement of assets valued at a premium to par and an increase in a fair value measurement of assets valued at a discount to par.

Prepayment speeds may vary from collateral pool-to-collateral pool, and are driven by the type and location of the underlying borrower, the remaining tenor of the obligation as well as the level and type (e.g., fixed or floating) of interest rate being paid by the borrower. Typically collateral pools with higher borrower credit quality have a higher prepayment rate than those with lower borrower credit quality, all other factors being equal.

Conditional default rate – The conditional default rate is a measure of the reduction in the outstanding collateral balance underlying a collateralized obligation as a result of defaults. While there is typically no direct relationship between conditional default rates and prepayment speeds, collateralized obligations for which the underlying collateral have high prepayment speeds will tend to have lower conditional default rates. An increase in conditional default rates would generally be accompanied by an increase in loss severity and an increase in credit spreads. An increase in the conditional default rate, in isolation, would result in a decrease in a fair value measurement. Conditional default rates reflect the quality of the collateral underlying a securitization and the structure of the securitization itself. Based on the types of securities owned in the Firm's market-making portfolios, conditional default rates are most typically at the lower end of the range presented.

Loss severity – The loss severity (the inverse concept is the recovery rate) is the expected amount of future realized losses resulting from the ultimate liquidation of a particular loan, expressed as the net amount of loss relative to the outstanding loan balance. An increase in loss severity is generally accompanied by an increase in conditional default rates. An increase in the loss severity, in isolation, would result in a decrease in a fair value measurement.

The loss severity applied in valuing a mortgage-backed security or a CLO investment depends on a host of factors relating to the underlying obligations (i.e., mortgages or loans). For mortgages, this includes the loan-to-value ratio, the nature of the lender's charge over the property and various other instrument-specific factors. For CLO investments, loss severity is driven by the characteristics of the underlying loans including the seniority of the loans and the type and amount of any security provided by the obligor.

Correlation – Correlation is a measure of the relationship between the movements of two variables (e.g., how the change in one variable influences the change in the other). Correlation is a pricing input for a derivative product where the payoff is driven by one or more underlying risks. Correlation inputs are related to the type of derivative (e.g., interest rate, credit, equity and foreign exchange) due to the nature of the underlying risks. When parameters are positively correlated, an increase in one parameter will result in an increase in the other parameter. When parameters are negatively correlated, an increase in one parameter will result in a decrease in the other parameter. An increase in correlation can result in an increase or a decrease in a fair value measurement. Given a short correlation position, an increase in correlation, in isolation, would generally result in a decrease in a fair value measurement. Correlation inputs between risks within the same asset class are generally narrower than those between underlying risks across asset classes. In addition the ranges of credit correlation inputs tend to be narrower than those affecting other asset classes.

The level of correlation used in the valuation of derivatives with multiple underlying risks depends on a number of factors including the nature of those risks. For example, the correlation between two credit risk exposures would be different than that between two interest rate risk exposures. Similarly, the tenor of the transaction may also impact the correlation input as the relationship between the underlying risks may be different over different time periods. Furthermore, correlation levels are very much dependent on market conditions and could have a relatively wide range of levels within or across asset classes over time, particularly in volatile market conditions.

For the Firm's derivatives and structured notes positions classified within level 3, the equity, foreign exchange and interest rate correlation inputs used in estimating fair value were concentrated at the upper end of the range presented, while the credit correlation inputs were distributed across the range presented.

Volatility – Volatility is a measure of the variability in possible returns for an instrument, parameter or market index given how much the particular instrument, parameter or index changes in value over time. Volatility is a pricing input for options, including equity options, commodity options, and interest rate options. Generally, the higher the volatility of the underlying, the riskier the instrument. Given a long position in an option, an increase in volatility, in isolation, would generally result in an increase in a fair value measurement.

The level of volatility used in the valuation of a particular option-based derivative depends on a number of factors, including the nature of the risk underlying the option (e.g., the volatility of a particular equity security may be significantly different from that of a particular commodity index), the tenor of the derivative as well as the strike price of the option.

For the Firm's derivatives and structured notes positions classified within level 3, the equity and interest rate volatility inputs used in estimating fair value were concentrated at the upper end of the range presented, while commodities volatilities were concentrated at the lower end of the range.

EBITDA multiple – EBITDA multiples refer to the input (often derived from the value of a comparable company) that is multiplied by the historic and/or expected earnings before interest, taxes, depreciation and amortization ("EBITDA") of a company in order to estimate the company's value. An increase in the EBITDA multiple, in isolation, net of adjustments, would result in an increase in a fair value measurement.

Net asset value – Net asset value is the total value of a fund's assets less liabilities. An increase in net asset value would result in an increase in a fair value measurement.

Changes in level 3 recurring fair value measurements

The following tables include a rollforward of the Consolidated Balance Sheet amounts (including changes in fair value) for financial instruments classified by the Firm within level 3 of the fair value hierarchy for the years ended December 31, 2012, 2011 and 2010. When a determination is made to classify a financial instrument within level 3, the determination is based on the significance of the unobservable parameters to the overall fair value measurement. However, level 3 financial instruments typically include, in addition to the unobservable or level 3 components, observable components (that is, components that are actively quoted and can be validated to external sources); accordingly, the gains and losses in the table below include changes in fair value due in part to observable factors that are part of the valuation methodology. Also, the Firm risk-manages the observable components of level 3 financial instruments using securities and derivative positions that are classified within level 1 or 2 of the fair value hierarchy; as these level 1 and level 2 risk management instruments are not included below, the gains or losses in the following tables do not reflect the effect of the Firm's risk management activities related to such level 3 instruments.

Year ended December 31, 2012 (in millions)	Fair value at January 1, 2012	Total realized/ unrealized gains/ (losses)	Purchases[g]	Sales	Settlements	Transfers into and/or out of level 3[h]	Fair value at Dec. 31, 2012	Change in unrealized gains/ (losses) related to financial instruments held at Dec. 31, 2012

(a) All level 3 derivatives are presented on a net basis, irrespective of underlying counterparty.
(b) Level 3 liabilities as a percentage of total Firm liabilities accounted for at fair value (including liabilities measured at fair value on a nonrecurring basis) were 19%, 22% and 23% at December 31, 2012, 2011 and 2010, respectively.
(c) Predominantly reported in principal transactions revenue, except for changes in fair value for Consumer & Community Banking ("CCB") mortgage loans and lending-related commitments originated with the intent to sell, which are reported in mortgage fees and related income.
(d) Realized gains/(losses) on AFS securities, as well as other-than-temporary impairment losses that are recorded in earnings, are reported in securities gains. Unrealized gains/(losses) are reported in OCI. Realized gains/(losses) and foreign exchange remeasurement adjustments recorded in income on AFS securities were $145 million, $(240) million, and $(66) million for the years ended December 31, 2012, 2011 and 2010, respectively. Unrealized gains/(losses) recorded on AFS securities in OCI were $45 million, $145 million and $(129) million for the years ended December 31, 2012, 2011 and 2010, respectively.
(e) Changes in fair value for CCB mortgage servicing rights are reported in mortgage fees and related income.
(f) Largely reported in other income.
(g) Loan originations are included in purchases.
(h) All transfers into and/or out of level 3 are assumed to occur at the beginning of the reporting period.

Level 3 analysis

Consolidated Balance Sheets changes

Level 3 assets (including assets measured at fair value on a nonrecurring basis) were 4.4% of total Firm assets at December 31, 2012. The following describes significant changes to level 3 assets since December 31, 2011, for those items measured at fair value on a recurring basis. For further information on changes impacting items measured at fair value on a nonrecurring basis, see Assets and liabilities measured at fair value on a nonrecurring basis on page 212 of this Annual Report.

For the year ended December 31, 2012

Level 3 assets were $99.1 billion at December 31, 2012, reflecting a decrease of $14.3 billion from December 31, 2011, due to the following:

- $11.8 billion decrease in gross derivative receivables, predominantly driven by a $10.6 billion decrease from the impact of tightening reference entity credit spreads and risk reductions of credit derivatives and $1.6 billion decrease due to fluctuation in foreign exchange rates;
- $7.3 billion decrease in trading assets – debt and equity instruments, predominantly driven by sales and settlements of ABS, trading loans, and corporate debt securities.

The decreases above are partially offset by:

- $3.1 billion increase in asset-backed AFS securities, predominantly driven by purchases of CLOs.

Gains and Losses

The following describes significant components of total realized/unrealized gains/(losses) for instruments measured at fair value on a recurring basis for the years ended 2012, 2011 and 2010. For further information on these instruments, see Changes in level 3 recurring fair value measurements rollforward tables on pages 207–210 of this Annual Report.

2012

- $1.3 billion of net gains on trading assets - debt and equity instruments, largely driven by tightening of credit spreads and fluctuation in foreign exchange rates; and
- $1.1 billion of net gains on derivatives, driven by $6.9 billion of net gains predominantly on interest rate lock commitments due to increased volumes and lower interest rates, partially offset by $4.5 billion of net losses on credit derivatives largely as a result of tightening of reference entity credit spreads.

2011

- $7.1 billion of losses on MSRs. For further discussion of the change, refer to Note 17 on pages 291–295 of this Annual Report; and
- $6.1 billion of net gains on derivatives, related to declining interest rates and widening of reference entity credit spreads, partially offset by losses due to fluctuation in foreign exchange rates.

2010

- $2.3 billion of losses on MSRs; For further discussion of the change, refer to Note 17 on pages 291–295 of this Annual Report; and
- $1.0 billion gain in private equity largely driven by gains on investments in the portfolio.

Credit adjustments

When determining the fair value of an instrument, it may be necessary to record adjustments to the Firm's estimates of fair value in order to reflect the counterparty credit quality and Firm's own creditworthiness:

- Credit valuation adjustments ("CVA") are taken to reflect the credit quality of a counterparty in the valuation of derivatives. CVA adjustments are necessary when the market price (or parameter) is not indicative of the credit quality of the counterparty. As few classes of derivative contracts are listed on an exchange, derivative positions are predominantly valued using models that use as their basis observable market parameters. An adjustment is necessary to reflect the credit quality of each derivative counterparty to arrive at fair value. The adjustment also takes into account contractual factors designed to reduce the Firm's credit exposure to each counterparty, such as collateral and legal rights of offset.
- Debit valuation adjustments ("DVA") are taken to reflect the credit quality of the Firm in the valuation of liabilities measured at fair value. The methodology to determine the adjustment is generally consistent with CVA and incorporates JPMorgan Chase's credit spread as observed through the credit default swap ("CDS") market.

The following table provides the credit adjustments, excluding the effect of any hedging activity, reflected within the Consolidated Balance Sheets as of the dates indicated.

December 31, (in millions)	2012	2011
Derivative receivables balance (net of derivatives CVA)	$ 74,983	$ 92,477
Derivatives CVA[(a)]	(4,238)	(6,936)
Derivative payables balance (net of derivatives DVA)	70,656	74,977
Derivatives DVA	(830)	(1,420)
Structured notes balance (net of structured notes DVA)[(b)(c)]	48,112	49,229
Structured notes DVA	(1,712)	(2,052)

(a) Derivatives CVA, gross of hedges, includes results managed by the credit portfolio and other lines of business within the Corporate & Investment Bank ("CIB").
(b) Structured notes are recorded within long-term debt, other borrowed funds or deposits on the Consolidated Balance Sheets, depending upon the tenor and legal form of the note.
(c) Structured notes are measured at fair value based on the Firm's election under the fair value option. For further information on these elections, see Note 4 on pages 214–216 of this Annual Report.

The following table provides the impact of credit adjustments on earnings in the respective periods, excluding the effect of any hedging activity.

Year ended December 31, (in millions)	2012	2011	2010
Credit adjustments:			
Derivative CVA[(a)]	$ 2,698	$ (2,574)	$ (665)
Derivative DVA	(590)	538	41
Structured notes DVA[(b)]	(340)	899	468

(a) Derivatives CVA, gross of hedges, includes results managed by the credit portfolio and other lines of business within the CIB.
(b) Structured notes are measured at fair value based on the Firm's election under the fair value option. For further information on these elections, see Note 4 on pages 214–216 of this Annual Report.

Assets and liabilities measured at fair value on a nonrecurring basis

At December 31, 2012 and 2011, assets measured at fair value on a nonrecurring basis were $5.1 billion and $5.3 billion, respectively, comprised predominantly of loans. At December 31, 2012, $667 million and $4.4 billion of these assets were classified in levels 2 and 3 of the fair value hierarchy, respectively. At December 31, 2011, $369 million and $4.9 billion of these assets were classified in levels 2 and 3 of the fair value hierarchy, respectively. Liabilities measured at fair value on a nonrecurring basis were not significant at December 31, 2012 and 2011. For the years ended December 31, 2012 and 2011, there were no significant transfers between levels 1, 2, and 3.

Of the $5.1 billion of assets measured at fair value on a nonrecurring basis, $4.0 billion related to residential real estate loans at the net realizable value of the underlying collateral (i.e., collateral dependent loans). These amounts are classified as level 3, as they are valued using a broker's price opinion and discounted based upon the Firm's experience with actual liquidation values. These discounts to the broker price opinions ranged from 22% to 66%, with a weighted average of 29%.

The total change in the value of assets and liabilities for which a fair value adjustment has been included in the Consolidated Statements of Income for the years ended December 31, 2012, 2011 and 2010, related to financial instruments held at those dates were losses of $1.6 billion, $2.2 billion and $3.6 billion, respectively; these losses were predominantly associated with loans. The changes reported for the year ended December 31, 2012, included the impact of charge-offs recognized on residential real estate loans discharged under Chapter 7 bankruptcy, as described in Note 14 on page 259 of this Annual Report.

For further information about the measurement of impaired collateral-dependent loans, and other loans where the carrying value is based on the fair value of the underlying collateral (e.g., residential mortgage loans charged off in accordance with regulatory guidance), see Note 14 on pages 250–275 of this Annual Report.

Additional disclosures about the fair value of financial instruments that are not carried on the Consolidated Balance Sheets at fair value

U.S. GAAP requires disclosure of the estimated fair value of certain financial instruments, and the methods and significant assumptions used to estimate their fair value. Financial instruments within the scope of these disclosure requirements are included in the following table. However, certain financial instruments and all nonfinancial instruments are excluded from the scope of these disclosure requirements. Accordingly, the fair value disclosures provided in the following table include only a partial estimate of the fair value of JPMorgan Chase's assets and liabilities. For example, the Firm has developed long-term relationships with its customers through its deposit base and credit card accounts, commonly referred to as core deposit intangibles and credit card relationships. In the opinion of management, these items, in the aggregate, add significant value to JPMorgan Chase, but their fair value is not disclosed in this Note.

Financial instruments for which carrying value approximates fair value

Certain financial instruments that are not carried at fair value on the Consolidated Balance Sheets are carried at amounts that approximate fair value, due to their short-term nature and generally negligible credit risk. These instruments include cash and due from banks; deposits with banks; federal funds sold; securities purchased under resale agreements and securities borrowed with short-dated maturities; short-term receivables and accrued interest receivable; commercial paper; federal funds purchased; securities loaned and sold under repurchase agreements with short-dated maturities; other borrowed funds; accounts payable; and accrued liabilities. In addition, U.S. GAAP requires that the fair value for deposit liabilities with no stated maturity (i.e., demand, savings and certain money market deposits) be equal to their carrying value; recognition of the inherent funding value of these instruments is not permitted.

The following table presents the carrying values and estimated fair values at December 31, 2012 and 2011, of financial assets and liabilities that are not carried on the Firm's Consolidated Balance Sheets at fair value (i.e. excluding financial instruments which are carried at fair value on a recurring basis. At December 31, 2012, information is provided on their classification within the fair value hierarchy. For additional information regarding the financial instruments within the scope of this disclosure, and the methods and significant assumptions used to estimate their fair value, see pages 196–200 of this Note.

	2012					2011	
		Estimated fair value hierarchy					
December 31, (in billions)	Carrying value	Level 1	Level 2	Level 3	Total estimated fair value	Carrying value	Estimated fair value
Financial assets							
Cash and due from banks	$ 53.7	$ 53.7	$ —	$ —	$ 53.7	$ 59.6	$ 59.6
Deposits with banks	121.8	114.1	7.7	—	121.8	85.3	85.3
Accrued interest and accounts receivable	60.9	—	60.3	0.6	60.9	61.5	61.5
Federal funds sold and securities purchased under resale agreements	272.0	—	272.0	—	272.0	213.1	213.1
Securities borrowed	108.8	—	108.8	—	108.8	127.2	127.2
Loans, net of allowance for loan losses[(a)]	709.3	—	26.4	685.4	711.8	694.0	693.7
Other	49.7	—	42.7	7.4	50.1	49.8	50.3
Financial liabilities							
Deposits	$ 1,187.9	$ —	$ 1,187.2	$ 1.2	$ 1,188.4	$ 1,122.9	$ 1,123.4
Federal funds purchased and securities loaned or sold under repurchase agreements	235.7	—	235.7	—	235.7	206.7	206.7
Commercial paper	55.4	—	55.4	—	55.4	51.6	51.6
Other borrowed funds	15.0	—	15.0	—	15.0	12.3	12.3
Accounts payable and other liabilities	156.5	—	153.8	2.5	156.3	166.9	166.8
Beneficial interests issued by consolidated VIEs	62.0	—	57.7	4.4	62.1	64.7	64.9
Long-term debt and junior subordinated deferrable interest debentures	218.2	—	220.0	5.4	225.4	222.1	219.5

(a) Fair value is typically estimated using a discounted cash flow model that incorporates the characteristics of the underlying loans (including principal, contractual interest rate and contractual fees) and other key inputs, including expected lifetime credit losses, interest rates, prepayment rates, and primary origination or secondary market spreads. For certain loans, the fair value is measured based on the value of the underlying collateral. The difference between the estimated fair value and carrying value of a financial asset or liability is the result of the different methodologies used to determine fair value as compared with carrying value. For example, credit losses are estimated for a financial asset's remaining life in a fair value calculation but are estimated for a loss emergence period in the allowance for loan loss calculation; future loan income (interest and fees) is incorporated in a fair value calculation but is generally not considered in the allowance for loan losses. For a further discussion of the Firm's methodologies for estimating the fair value of loans and lending-related commitments, see page 198 of this Note.

The majority of the Firm's lending-related commitments are not carried at fair value on a recurring basis on the Consolidated Balance Sheets, nor are they actively traded. The carrying value and estimated fair value of the Firm's wholesale lending-related commitments were as follows for the periods indicated.

	2012					2011	
		Estimated fair value hierarchy					
December 31, (in billions)	Carrying value[a]	Level 1	Level 2	Level 3	Total estimated fair value	Carrying value[a]	Estimated fair value
Wholesale lending-related commitments	$ 0.7	$ –	$ –	$ 1.9	$ 1.9	$ 0.7	$ 3.4

(a) Represents the allowance for wholesale lending-related commitments. Excludes the current carrying values of the guarantee liability and the offsetting asset, each of which are recognized at fair value at the inception of guarantees.

The Firm does not estimate the fair value of consumer lending-related commitments. In many cases, the Firm can reduce or cancel these commitments by providing the borrower notice or, in some cases, without notice as permitted by law. For a further discussion of the valuation of lending-related commitments, see page 198 of this Note.

Trading assets and liabilities

Trading assets include debt and equity instruments owned by JPMorgan Chase ("long" positions) that are held for client market-making and client-driven activities, as well as for certain risk management activities, certain loans managed on a fair value basis and for which the Firm has elected the fair value option, and physical commodities inventories that are generally accounted for at the lower of cost or market (market approximates fair value). Trading liabilities include debt and equity instruments that the Firm has sold to other parties but does not own ("short" positions). The Firm is obligated to purchase instruments at a future date to cover the short positions. Included in trading assets and trading liabilities are the reported receivables (unrealized gains) and payables (unrealized losses) related to derivatives. Trading assets and liabilities are carried at fair value on the Consolidated Balance Sheets. Balances reflect the reduction of securities owned (long positions) by the amount of securities sold but not yet purchased (short positions) when the long and short positions have identical Committee on Uniform Security Identification Procedures numbers ("CUSIPs").

Trading assets and liabilities – average balances

Average trading assets and liabilities were as follows for the periods indicated.

Year ended December 31, (in millions)	2012	2011	2010
Trading assets – debt and equity instruments[a]	$ 349,337	$ 393,890	$ 354,441
Trading assets – derivative receivables	85,744	90,003	84,676
Trading liabilities – debt and equity instruments[a][b]	69,001	81,916	78,159
Trading liabilities – derivative payables	76,162	71,539	65,714

(a) Balances reflect the reduction of securities owned (long positions) by the amount of securities sold, but not yet purchased (short positions) when the long and short positions have identical CUSIP numbers.
(b) Primarily represent securities sold, not yet purchased.

Note 4 – Fair value option

The fair value option provides an option to elect fair value as an alternative measurement for selected financial assets, financial liabilities, unrecognized firm commitments, and written loan commitments not previously carried at fair value.

Elections

Elections were made by the Firm to:

- Mitigate income statement volatility caused by the differences in the measurement basis of elected instruments (for example, certain instruments elected were previously accounted for on an accrual basis) while the associated risk management arrangements are accounted for on a fair value basis;
- Eliminate the complexities of applying certain accounting models (e.g., hedge accounting or bifurcation accounting for hybrid instruments); and/or
- Better reflect those instruments that are managed on a fair value basis.

Elections include the following:

- Loans purchased or originated as part of securitization warehousing activity, subject to bifurcation accounting, or managed on a fair value basis.
- Securities financing arrangements with an embedded derivative and/or a maturity of greater than one year.

- Owned beneficial interests in securitized financial assets that contain embedded credit derivatives, which would otherwise be required to be separately accounted for as a derivative instrument.
- Certain investments that receive tax credits and other equity investments acquired as part of the Washington Mutual transaction.
- Structured notes issued as part of CIB's client-driven activities. (Structured notes are financial instruments that contain embedded derivatives.)
- Long-term beneficial interests issued by CIB's consolidated securitization trusts where the underlying assets are carried at fair value.

Changes in fair value under the fair value option election

The following table presents the changes in fair value included in the Consolidated Statements of Income for the years ended December 31, 2012, 2011 and 2010, for items for which the fair value option was elected. The profit and loss information presented below only includes the financial instruments that were elected to be measured at fair value; related risk management instruments, which are required to be measured at fair value, are not included in the table.

	2012			2011			2010		
December 31, (in millions)	Principal transactions	Other income	Total changes in fair value recorded	Principal transactions	Other income	Total changes in fair value recorded	Principal transactions	Other income	Total changes in fair value recorded
Federal funds sold and securities purchased under resale agreements	$ 161	$ –	$ 161	$ 270	$ –	$ 270	$ 173	$ –	$ 173
Securities borrowed	10	–	10	(61)	–	(61)	31	–	31

Federal funds purchased and securities loaned or sold under repurchase agreements	(25)	–	(25)	(4)	–	(4)	(29)	–	(29)
Other borrowed funds[a]	494	–	494	2,986	–	2,986	123	–	123
Trading liabilities	(41)	–	(41)	(57)	–	(57)	(23)	–	(23)
Beneficial interests issued by consolidated VIEs	(166)	–	(166)	(83)	–	(83)	(12)	–	(12)
Other liabilities	–	–	–	(3)	(5) (d)	(8)	(9)	8 (d)	(1)
Long-term debt:									
Changes in instrument-specific credit risk[a]	(835)	–	(835)	927	–	927	400	–	400
Other changes in fair value[b]	(1,025)	–	(1,025)	322	–	322	1,297	–	1,297

(a) Total changes in instrument-specific credit risk related to structured notes were $(340) million, $899 million, and $468 million for the years ended December 31, 2012, 2011 and 2010, respectively. These totals include adjustments for structured notes classified within deposits and other borrowed funds, as well as long-term debt.

(b) Structured notes are debt instruments with embedded derivatives that are tailored to meet a client's need. The embedded derivative is the primary driver of risk. Although the risk associated with the structured notes is actively managed, the gains/(losses) reported in this table do not include the income statement impact of such risk management instruments.

(c) Reported in mortgage fees and related income.

(d) Reported in other income.

Determination of instrument-specific credit risk for items for which a fair value election was made

The following describes how the gains and losses included in earnings during 2012, 2011 and 2010, which were attributable to changes in instrument-specific credit risk, were determined.

- Loans and lending-related commitments: For floating-rate instruments, all changes in value are attributed to instrument-specific credit risk. For fixed-rate instruments, an allocation of the changes in value for the period is made between those changes in value that are interest rate-related and changes in value that are credit-related. Allocations are generally based on an analysis of borrower-specific credit spread and recovery information, where available, or benchmarking to similar entities or industries.
- Long-term debt: Changes in value attributable to instrument-specific credit risk were derived principally from observable changes in the Firm's credit spread.
- Resale and repurchase agreements, securities borrowed agreements and securities lending agreements: Generally, for these types of agreements, there is a requirement that collateral be maintained with a market value equal to or in excess of the principal amount loaned; as a result, there would be no adjustment or an immaterial adjustment for instrument-specific credit risk related to these agreements.

Difference between aggregate fair value and aggregate remaining contractual principal balance outstanding

The following table reflects the difference between the aggregate fair value and the aggregate remaining contractual principal balance outstanding as of December 31, 2012 and 2011, for loans, long-term debt and long-term beneficial interests for which the fair value option has been elected.

	2012			2011		
December 31, (in millions)	Contractual principal outstanding	Fair value	Fair value over/ (under) contractual principal outstanding	Contractual principal outstanding	Fair value	Fair value over/ (under) contractual principal outstanding
Loans[a]						
Nonaccrual loans						
Loans reported as trading assets	**$ 4,217**	**$ 960**	**$ (3,257)**	$ 4,875	$ 1,141	$ (3,734)
Loans	**116**	**64**	**(52)**	820	56	(764)
Subtotal	**4,333**	**1,024**	**(3,309)**	5,695	1,197	(4,498)
All other performing loans						
Loans reported as trading assets	**44,084**	**40,581**	**(3,503)**	37,481	32,657	(4,824)
Loans	**2,211**	**2,099**	**(112)**	2,136	1,601	(535)
Total loans	**$ 50,628**	**$ 43,704**	**$ (6,924)**	$ 45,312	$ 35,455	$ (9,857)
Long-term debt						
Principal-protected debt	**$ 16,541** [c]	**$ 16,391**	**$ (150)**	$ 19,417 [c]	$ 19,890	$ 473
Nonprincipal-protected debt[b]	**NA**	**14,397**	**NA**	NA	14,830	NA
Total long-term debt	**NA**	**$ 30,788**	**NA**	NA	$ 34,720	NA
Long-term beneficial interests						
Nonprincipal-protected debt[b]	**NA**	**$ 1,170**	**NA**	NA	$ 1,250	NA
Total long-term beneficial interests	**NA**	**$ 1,170**	**NA**	NA	$ 1,250	NA

(a) There were no performing loans which were ninety days or more past due as of December 31, 2012 and 2011, respectively.
(b) Remaining contractual principal is not applicable to nonprincipal-protected notes. Unlike principal-protected structured notes, for which the Firm is obligated to return a stated amount of principal at the maturity of the note, nonprincipal-protected structured notes do not obligate the Firm to return a stated amount of principal at maturity, but to return an amount based on the performance of an underlying variable or derivative feature embedded in the note.
(c) Where the Firm issues principal-protected zero-coupon or discount notes, the balance reflected as the remaining contractual principal is the final principal payment at maturity.

At December 31, 2012 and 2011, the contractual amount of letters of credit for which the fair value option was elected was $4.5 billion and $3.9 billion, respectively, with a corresponding fair value of $(75) million and $(5) million, respectively. For further information regarding off-balance sheet lending-related financial instruments, see Note 29 on pages 308–315 of this Annual Report.

Note 5 – Credit risk concentrations

Concentrations of credit risk arise when a number of customers are engaged in similar business activities or activities in the same geographic region, or when they have similar economic features that would cause their ability to meet contractual obligations to be similarly affected by changes in economic conditions.

JPMorgan Chase regularly monitors various segments of its credit portfolio to assess potential concentration risks and to obtain collateral when deemed necessary. Senior management is significantly involved in the credit approval and review process, and risk levels are adjusted as needed to reflect the Firm's risk appetite.

In the Firm's consumer portfolio, concentrations are evaluated primarily by product and by U.S. geographic region, with a key focus on trends and concentrations at the portfolio level, where potential risk concentrations can be remedied through changes in underwriting policies and portfolio guidelines. In the wholesale portfolio, risk concentrations are evaluated primarily by industry and monitored regularly on both an aggregate portfolio level and on an individual customer basis. Management of the Firm's wholesale exposure is accomplished through loan syndications and participations, loan sales, securitizations, credit derivatives, use of master netting agreements, and collateral and other risk-reduction techniques.

The Firm does not believe that its exposure to any particular loan product (e.g., option adjustable rate mortgages ("ARMs")), industry segment (e.g., commercial real estate) or its exposure to residential real estate loans with high loan-to-value ratios results in a significant concentration of credit risk. Terms of loan products and collateral coverage are included in the Firm's assessment when extending credit and establishing its allowance for loan losses.

Customer receivables representing primarily margin loans to prime and retail brokerage clients of $23.8 billion and $17.6 billion at December 31, 2012 and 2011, respectively, are included in the table below. These margin loans are generally over-collateralized through a pledge of assets maintained in clients' brokerage accounts and are subject to daily minimum collateral requirements. In the event that the collateral value decreases, a maintenance margin call is made to the client to provide additional collateral into the account. If additional collateral is not provided by the client, the client's positions may be liquidated by the Firm to meet the minimum collateral requirements. As a result of the Firm's credit risk mitigation practices, the Firm does not hold any reserves for credit impairment on these receivables as of December 31, 2012 and 2011.

The table below presents both on-balance sheet and off-balance sheet consumer and wholesale-related credit exposure by the Firm's three credit portfolio segments as of December 31, 2012 and 2011.

	2012				2011

(a) As of December 31, 2012 and 2011, credit exposure for total consumer, excluding credit card, includes receivables from customers of $113 million and $100 million, respectively.
(b) For more information on exposures to SPEs included within All other see Note 16 on pages 280–291 of this Annual Report.
(c) Represents lending-related financial instruments.
(d) For further information regarding on-balance sheet credit concentrations by major product and/or geography, see Notes 6, 14 and 15 on pages 218–227, 250–275 and 276–279, respectively, of this Annual Report. For information regarding concentrations of off-balance sheet lending-related financial instruments by major product, see Note 29 on pages 308–315 of this Annual Report.

Note 6 – Derivative instruments

Derivative instruments enable end-users to modify or mitigate exposure to credit or market risks. Counterparties to a derivative contract seek to obtain risks and rewards similar to those that could be obtained from purchasing or selling a related cash instrument without having to exchange upfront the full purchase or sales price. JPMorgan Chase makes markets in derivatives for customers and also uses derivatives to hedge or manage its own risk exposures. Predominantly all of the Firm's derivatives are entered into for market-making or risk management purposes.

Market-making derivatives

The majority of the Firm's derivatives are entered into for market-making purposes. Customers use derivatives to mitigate or modify interest rate, credit, foreign exchange, equity and commodity risks. The Firm actively manages the risks from its exposure to these derivatives by entering into other derivative transactions or by purchasing or selling other financial instruments that partially or fully offset the exposure from client derivatives. The Firm also seeks to earn a spread between the client derivatives and offsetting positions, and from the remaining open risk positions.

Risk management derivatives

The Firm manages its market risk exposures using various derivative instruments.

Interest rate contracts are used to minimize fluctuations in earnings that are caused by changes in interest rates. Fixed-rate assets and liabilities appreciate or depreciate in market value as interest rates change. Similarly, interest income and expense increases or decreases as a result of variable-rate assets and liabilities resetting to current market rates, and as a result of the repayment and subsequent origination or issuance of fixed-rate assets and liabilities at current market rates. Gains or losses on the derivative instruments that are related to such assets and liabilities are expected to substantially offset this variability in earnings. The Firm generally uses interest rate swaps, forwards and futures to manage the impact of interest rate fluctuations on earnings.

Foreign currency forward contracts are used to manage the foreign exchange risk associated with certain foreign currency–denominated (i.e., non-U.S. dollar) assets and liabilities and forecasted transactions, as well as the Firm's net investments in certain non-U.S. subsidiaries or branches whose functional currencies are not the U.S. dollar. As a result of fluctuations in foreign currencies, the U.S. dollar–equivalent values of the foreign currency–denominated assets and liabilities or forecasted revenue or expense increase or decrease. Gains or losses on the derivative instruments related to these foreign currency–denominated assets or liabilities, or forecasted transactions, are expected to substantially offset this variability.

Commodities contracts are used to manage the price risk of certain commodities inventories. Gains or losses on these derivative instruments are expected to substantially offset the depreciation or appreciation of the related inventory.

Also in the commodities portfolio, electricity and natural gas futures and forwards contracts are used to manage price risk associated with energy-related tolling and load-serving contracts and investments.

The Firm uses credit derivatives to manage the counterparty credit risk associated with loans and lending-related commitments. Credit derivatives compensate the purchaser when the entity referenced in the contract experiences a credit event, such as bankruptcy or a failure to pay an obligation when due. Credit derivatives primarily consist of credit default swaps. For a further discussion of credit derivatives, see the discussion in the Credit derivatives section on pages 226–227 of this Note.

For more information about risk management derivatives, see the risk management derivatives gains and losses table on page 224 of this Note, and the hedge accounting gains and losses tables on pages 222–224 of this Note.

Accounting for derivatives

All free-standing derivatives are required to be recorded on the Consolidated Balance Sheets at fair value. As permitted under U.S. GAAP, the Firm nets derivative assets and liabilities, and the related cash collateral receivables and payables, when a legally enforceable master netting agreement exists between the Firm and the derivative counterparty. The accounting for changes in value of a derivative depends on whether or not the transaction has been designated and qualifies for hedge accounting. Derivatives that are not designated as hedges are reported and measured at fair value through earnings. The tabular disclosures on pages 220–227 of this Note provide additional information on the amount of, and reporting for, derivative assets, liabilities, gains and losses. For further discussion of derivatives embedded in structured notes, see Notes 3 and 4 on pages 196–214 and 214–216, respectively, of this Annual Report.

Derivatives designated as hedges

The Firm applies hedge accounting to certain derivatives executed for risk management purposes – generally interest rate, foreign exchange and commodity derivatives. However, JPMorgan Chase does not seek to apply hedge accounting to all of the derivatives involved in the Firm's risk management activities. For example, the Firm does not apply hedge accounting to purchased credit default swaps used to manage the credit risk of loans and lending-related commitments, because of the difficulties in qualifying such contracts as hedges. For the same reason, the Firm does not apply hedge accounting to certain interest rate and commodity derivatives used for risk management purposes.

To qualify for hedge accounting, a derivative must be highly effective at reducing the risk associated with the exposure being hedged. In addition, for a derivative to be designated as a hedge, the risk management objective and strategy must be documented. Hedge documentation must identify the derivative hedging instrument, the asset or liability or forecasted transaction and type of risk to be hedged, and how the effectiveness of the derivative is assessed

prospectively and retrospectively. To assess effectiveness, the Firm uses statistical methods such as regression analysis, as well as nonstatistical methods including dollar-value comparisons of the change in the fair value of the derivative to the change in the fair value or cash flows of the hedged item. The extent to which a derivative has been, and is expected to continue to be, effective at offsetting changes in the fair value or cash flows of the hedged item must be assessed and documented at least quarterly. Any hedge ineffectiveness (i.e., the amount by which the gain or loss on the designated derivative instrument does not exactly offset the change in the hedged item attributable to the hedged risk) must be reported in current-period earnings. If it is determined that a derivative is not highly effective at hedging the designated exposure, hedge accounting is discontinued.

There are three types of hedge accounting designations: fair value hedges, cash flow hedges and net investment hedges. JPMorgan Chase uses fair value hedges primarily to hedge fixed-rate long-term debt, AFS securities and certain commodities inventories. For qualifying fair value hedges, the changes in the fair value of the derivative, and in the value of the hedged item for the risk being hedged, are recognized in earnings. If the hedge relationship is terminated, then the adjustment to the hedged item continues to be reported as part of the basis of the hedged item and for interest-bearing instruments is amortized to earnings as a yield adjustment. Derivative amounts affecting earnings are recognized consistent with the classification of the hedged item – primarily net interest income and principal transactions revenue.

JPMorgan Chase uses cash flow hedges primarily to hedge the exposure to variability in forecasted cash flows from floating-rate assets and liabilities and foreign currency–denominated revenue and expense. For qualifying cash flow hedges, the effective portion of the change in the fair value of the derivative is recorded in OCI and recognized in the Consolidated Statements of Income when the hedged cash flows affect earnings. Derivative amounts affecting earnings are recognized consistent with the classification of the hedged item – primarily interest income, interest expense, noninterest revenue and compensation expense. The ineffective portions of cash flow hedges are immediately recognized in earnings. If the hedge relationship is terminated, then the value of the derivative recorded in accumulated other comprehensive income/(loss) ("AOCI") is recognized in earnings when the cash flows that were hedged affect earnings. For hedge relationships that are discontinued because a forecasted transaction is not expected to occur according to the original hedge forecast, any related derivative values recorded in AOCI are immediately recognized in earnings.

JPMorgan Chase uses foreign currency hedges to protect the value of the Firm's net investments in certain non-U.S. subsidiaries or branches whose functional currencies are not the U.S. dollar. For foreign currency qualifying net investment hedges, changes in the fair value of the derivatives are recorded in the translation adjustments account within AOCI.

The following table outlines the Firm's primary uses of derivatives and the related hedge accounting designation or disclosure category.

Type of Derivative	Use of Derivative	Designation and disclosure	Affected segment or unit	Page reference
Manage specifically identified risk exposures in qualifying hedge accounting relationships:				
◦ Interest rate	Hedge fixed rate assets and liabilities	Fair value hedge	Corporate/PE	222
◦ Interest rate	Hedge floating rate assets and liabilities	Cash flow hedge	Corporate/PE	223
◦ Foreign exchange	Hedge foreign currency-denominated assets and liabilities	Fair value hedge	Corporate/PE	222
◦ Foreign exchange	Hedge forecasted revenue and expense	Cash flow hedge	Corporate/PE	223
◦ Foreign exchange	Hedge the value of the Firm's investments in non-U.S. subsidiaries	Net investment hedge	Corporate/PE	224
◦ Commodity	Hedge commodity inventory	Fair value hedge	CIB	222
Manage specifically identified risk exposures not designated in qualifying hedge accounting relationships:				
◦ Interest rate	Manage the risk of the mortgage pipeline, warehouse loans and MSRs	Specified risk management	CCB	224
◦ Credit	Manage the credit risk of wholesale lending exposures	Specified risk management	CIB	224
◦ Credit[(a)]	Manage the credit risk of certain AFS securities	Specified risk management	Corporate/PE	224
◦ Commodity	Manage the risk of certain commodities-related contracts and investments	Specified risk management	CIB	224
◦ Interest rate and foreign exchange	Manage the risk of certain other specified assets and liabilities	Specified risk management	Corporate/PE	224
Market-making derivatives and other activities:				
• Various	Market-making and related risk management	Market-making and other	CIB	224
• Various	Other derivatives, including the synthetic credit portfolio	Market-making and other	CIB, Corporate/PE	224

(a) Includes a limited number of single-name credit derivatives used to mitigate the credit risk arising from specified AFS securities.

Notional amount of derivative contracts

The following table summarizes the notional amount of derivative contracts outstanding as of December 31, 2012 and 2011.

	Notional amounts[b]	
December 31, (in billions)	**2012**	2011
Interest rate contracts		
Swaps	**$ 33,183**	$ 38,704
Futures and forwards	**11,824**	7,888
Written options	**3,866**	3,842
Purchased options	**3,911**	4,026
Total interest rate contracts	**52,784**	54,460
Credit derivatives[a]	**5,981**	5,774
Foreign exchange contracts		
Cross-currency swaps	**3,355**	2,931
Spot, futures and forwards	**4,033**	4,512
Written options	**651**	674
Purchased options	**661**	670
Total foreign exchange contracts	**8,700**	8,787
Equity contracts		
Swaps	**163**	119
Futures and forwards	**49**	38
Written options	**442**	460
Purchased options	**403**	405
Total equity contracts	**1,057**	1,022
Commodity contracts		
Swaps	**313**	341
Spot, futures and forwards	**190**	188
Written options	**265**	310
Purchased options	**260**	274
Total commodity contracts	**1,028**	1,113
Total derivative notional amounts	**$ 69,550**	$ 71,156

(a) Primarily consists of credit default swaps. For more information on volumes and types of credit derivative contracts, see the Credit derivatives discussion on pages 226–227 of this Note.

(b) Represents the sum of gross long and gross short third-party notional derivative contracts.

While the notional amounts disclosed above give an indication of the volume of the Firm's derivatives activity, the notional amounts significantly exceed, in the Firm's view, the possible losses that could arise from such transactions. For most derivative transactions, the notional amount is not exchanged; it is used simply as a reference to calculate payments.

Synthetic credit portfolio

The synthetic credit portfolio is a portfolio of index credit derivatives, including short and long positions, that was held by CIO. On July 2, 2012, CIO transferred the synthetic credit portfolio, other than a portion that aggregated to a notional amount of approximately $12 billion, to CIB. The positions making up the portion of the synthetic credit portfolio retained by CIO on July 2, 2012, were effectively closed out during the third quarter of 2012. The results of the synthetic credit portfolio, including the portion transferred to CIB, have been included in the gains and losses on derivatives related to market-making activities and other derivatives category discussed on page 224 of this Note.

Impact of derivatives on the Consolidated Balance Sheets

The following table summarizes information on derivative receivables and payables (before and after netting adjustments) that are reflected on the Firm's Consolidated Balance Sheets as of December 31, 2012 and 2011, by accounting designation (e.g., whether the derivatives were designated in qualifying hedge accounting relationships or not) and contract type.

Free-standing derivative receivables and payables[a]

	Gross derivative receivables				Gross derivative payables			
December 31, 2012 (in millions)	Not designated as hedges	Designated as hedges	Total derivative receivables	Net derivative receivables[c]	Not designated as hedges	Designated as hedges	Total derivative payables	Net derivative payables[c]
Trading assets and liabilities								
Interest rate	**$ 1,323,184**	**$ 6,064**	**$ 1,329,248**	**$ 39,205**	**$ 1,284,494**	**$ 3,120**	**$ 1,287,614**	**$ 24,906**
Credit	**100,310**	**–**	**100,310**	**1,735**	**100,027**	**–**	**100,027**	**2,504**
Foreign exchange[b]	**146,682**	**1,577**	**148,259**	**14,142**	**159,509**	**2,133**	**161,642**	**18,601**
Equity	**40,938**	**–**	**40,938**	**9,266**	**42,810**	**–**	**42,810**	**11,819**
Commodity	**43,039**	**586**	**43,625**	**10,635**	**46,821**	**644**	**47,465**	**12,826**
Total fair value of trading assets and liabilities	**$ 1,654,153**	**$ 8,227**	**$ 1,662,380**	**$ 74,983**	**$ 1,633,661**	**$ 5,897**	**$ 1,639,558**	**$ 70,656**

	Gross derivative receivables				Gross derivative payables			
December 31, 2011 (in millions)	Not designated as hedges	Designated as hedges	Total derivative receivables	Net derivative receivables[c]	Not designated as hedges	Designated as hedges	Total derivative payables	Net derivative payables[c]
Trading assets and liabilities								
Interest rate	$ 1,433,900	$ 7,621	$ 1,441,521	$ 46,369	$ 1,397,625	$ 2,192	$ 1,399,817	$ 28,010
Credit	169,650	–	169,650	6,684	165,121	–	165,121	5,610
Foreign exchange[b]	163,497	4,666	168,163	17,890	165,353	655	166,008	17,435
Equity	47,736	–	47,736	6,793	46,366	–	46,366	9,655
Commodity	53,894	3,535	57,429	14,741	58,836	1,108	59,944	14,267
Total fair value of trading assets and liabilities	$ 1,868,677	$ 15,822	$ 1,884,499	$ 92,477	$ 1,833,301	$ 3,955	$ 1,837,256	$ 74,977

(a) Balances exclude structured notes for which the fair value option has been elected. See Note 4 on pages 214–216 of this Annual Report for further information.

(b) Excludes $11 million of foreign currency-denominated debt designated as a net investment hedge at December 31, 2011. Foreign currency-denominated debt was not designated as a hedging instrument at December 31, 2012.

(c) As permitted under U.S. GAAP, the Firm has elected to net derivative receivables and derivative payables and the related cash collateral receivables and payables when a legally enforceable master netting agreement exists.

Impact of derivatives on the Consolidated Statements of Income

The following tables provide information related to gains and losses recorded on derivatives based on their hedge accounting designation or purpose.

Fair value hedge gains and losses

The following tables present derivative instruments, by contract type, used in fair value hedge accounting relationships, as well as pretax gains/(losses) recorded on such derivatives and the related hedged items for the years ended December 31, 2012, 2011 and 2010, respectively. The Firm includes gains/(losses) on the hedging derivative and the related hedged item in the same line item in the Consolidated Statements of Income.

	Gains/(losses) recorded in income			Income statement impact due to:	
Year ended December 31, 2012 (in millions)	Derivatives	Hedged items	Total income statement impact	Hedge ineffectiveness[e]	Excluded components[f]
Contract type					
Interest rate[a]	**$ (1,238)**	**$ 1,879**	**$ 641**	**$ (28)**	**$ 669**
Foreign exchange[b]	**(3,027)** [d]	**2,925**	**(102)**	**–**	**(102)**
Commodity[c]	**(2,530)**	**1,131**	**(1,399)**	**107**	**(1,506)**
Total	**$ (6,795)**	**$ 5,935**	**$ (860)**	**$ 79**	**$ (939)**

	Gains/(losses) recorded in income			Income statement impact due to:	
Year ended December 31, 2011 (in millions)	Derivatives	Hedged items	Total income statement impact	Hedge ineffectiveness[e]	Excluded components[f]
Contract type					
Interest rate[a]	$ 532	$ 33	$ 565	$ 104	$ 461
Foreign exchange[b]	5,684 [d]	(3,761)	1,923	–	1,923
Commodity[c]	1,784	(2,880)	(1,096)	(10)	(1,086)
Total	$ 8,000	$ (6,608)	$ 1,392	$ 94	$ 1,298

	Gains/(losses) recorded in income			Income statement impact due to:	
Year ended December 31, 2010 (in millions)	Derivatives	Hedged items	Total income statement impact	Hedge ineffectiveness[e]	Excluded components[f]
Contract type					
Interest rate[a]	$ 1,102	$ (376)	$ 726	$ 175	$ 551
Foreign exchange[b]	1,357 [d]	(1,812)	(455)	–	(455)
Commodity[c]	(1,354)	1,882	528	–	528
Total	$ 1,105	$ (306)	$ 799	$ 175	$ 624

(a) Primarily consists of hedges of the benchmark (e.g., London Interbank Offered Rate ("LIBOR")) interest rate risk of fixed-rate long-term debt and AFS securities. Gains and losses were recorded in net interest income. The current presentation excludes accrued interest. Prior period amounts have been revised to conform with the current presentation.

(b) Primarily consists of hedges of the foreign currency risk of long-term debt and AFS securities for changes in spot foreign currency rates. Gains and losses related to the derivatives and the hedged items, due to changes in foreign currency rates, were recorded in principal transactions revenue and net interest income.

(c) Consists of overall fair value hedges of physical commodities inventories that are generally carried at the lower of cost or market (market approximates fair value). Gains and losses were recorded in principal transactions revenue.

(d) Included $(3.1) billion, $4.9 billion and $278 million for the years ended December 31, 2012, 2011 and 2010, respectively, of revenue related to certain foreign exchange trading derivatives designated as fair value hedging instruments.

(e) Hedge ineffectiveness is the amount by which the gain or loss on the designated derivative instrument does not exactly offset the gain or loss on the hedged item attributable to the hedged risk.

(f) The assessment of hedge effectiveness excludes certain components of the changes in fair values of the derivatives and hedged items such as forward points on foreign exchange forward contracts and time values.

Cash flow hedge gains and losses

The following tables present derivative instruments, by contract type, used in cash flow hedge accounting relationships, and the pretax gains/(losses) recorded on such derivatives, for the years ended December 31, 2012, 2011 and 2010, respectively. The Firm includes the gain/(loss) on the hedging derivative and the change in cash flows on the hedged item in the same line item in the Consolidated Statements of Income.

	Gains/(losses) recorded in income and other comprehensive income/(loss)[c]				
Year ended December 31, 2012 (in millions)	Derivatives – effective portion reclassified from AOCI to income	Hedge ineffectiveness recorded directly in income[d]	Total income statement impact	Derivatives – effective portion recorded in OCI	Total change in OCI for period
Contract type					
Interest rate[a]	**$ (3)**	**$ 5**	**$ 2**	**$ 13**	**$ 16**
Foreign exchange[b]	**31**	**–**	**31**	**128**	**97**
Total	**$ 28**	**$ 5**	**$ 33**	**$ 141**	**$ 113**

	Gains/(losses) recorded in income and other comprehensive income/(loss)[c]				
Year ended December 31, 2011 (in millions)	Derivatives – effective portion reclassified from AOCI to income	Hedge ineffectiveness recorded directly in income[d]	Total income statement impact	Derivatives – effective portion recorded in OCI	Total change in OCI for period
Contract type					
Interest rate[a]	$ 310	$ 19	$ 329	$ 107	$ (203)
Foreign exchange[b]	(9)	–	(9)	(57)	(48)
Total	$ 301	$ 19	$ 320	$ 50	$ (251)

	Gains/(losses) recorded in income and other comprehensive income/(loss)[c]				
Year ended December 31, 2010 (in millions)	Derivatives – effective portion reclassified from AOCI to income	Hedge ineffectiveness recorded directly in income[d]	Total income statement impact	Derivatives – effective portion recorded in OCI	Total change in OCI for period
Contract type					
Interest rate[a]	$ 288	$ 20	$ 308	$ 388	$ 100
Foreign exchange[b]	(82)	(3)	(85)	(141)	(59)
Total	$ 206	$ 17	$ 223	$ 247	$ 41

(a) Primarily consists of benchmark interest rate hedges of LIBOR-indexed floating-rate assets and floating-rate liabilities. Gains and losses were recorded in net interest income.

(b) Primarily consists of hedges of the foreign currency risk of non-U.S. dollar-denominated revenue and expense. The income statement classification of gains and losses follows the hedged item – primarily net interest income, noninterest revenue and compensation expense.

(c) The Firm did not experience any forecasted transactions that failed to occur for the years ended December 31, 2012 and 2011. In 2010, the Firm reclassified a $25 million loss from AOCI to earnings because the Firm determined that it was probable that forecasted interest payment cash flows related to certain wholesale deposits would not occur.

(d) Hedge ineffectiveness is the amount by which the cumulative gain or loss on the designated derivative instrument exceeds the present value of the cumulative expected change in cash flows on the hedged item attributable to the hedged risk.

Over the next 12 months, the Firm expects that $32 million (after-tax) of net losses recorded in AOCI at December 31, 2012, related to cash flow hedges will be recognized in income. The maximum length of time over which forecasted transactions are hedged is 8 years, and such transactions primarily relate to core lending and borrowing activities.

Net investment hedge gains and losses

The following tables present hedging instruments, by contract type, that were used in net investment hedge accounting relationships, and the pretax gains/(losses) recorded on such instruments for the years ended December 31, 2012, 2011 and 2010.

	Gains/(losses) recorded in income and other comprehensive income/(loss)					
	2012		2011		2010	
Year ended December 31, (in millions)	Excluded components recorded directly in income[a]	Effective portion recorded in OCI	Excluded components recorded directly in income[a]	Effective portion recorded in OCI	Excluded components recorded directly in income[a]	Effective portion recorded in OCI
Contract type						
Foreign exchange derivatives	**$ (306)**	**$ (82)**	$ (251)	$ 225	$ (139)	$ (30)
Foreign currency denominated debt	**–**	**–**	–	1	–	41
Total	**$ (306)**	**$ (82)**	$ (251)	$ 226	$ (139)	$ 11

(a) Certain components of hedging derivatives are permitted to be excluded from the assessment of hedge effectiveness, such as forward points on foreign exchange forward contracts. Amounts related to excluded components are recorded in current-period income. The Firm measures the ineffectiveness of net investment hedge accounting relationships based on changes in spot foreign currency rates, and therefore there was no ineffectiveness for net investment hedge accounting relationships during 2012, 2011 and 2010.

Gains and losses on derivatives used for specified risk management purposes

The following table presents pretax gains/(losses) recorded on a limited number of derivatives, not designated in hedge accounting relationships, that are used to manage risks associated with certain specified assets and liabilities, including certain risks arising from the mortgage pipeline, warehouse loans, MSRs, wholesale lending exposures, AFS securities, foreign currency-denominated liabilities, and commodities related contracts and investments.

	Derivatives gains/(losses) recorded in income		
Year ended December 31, (in millions)	**2012**	2011	2010
Contract type			
Interest rate[a]	**$ 5,353**	$ 8,084	$ 4,987
Credit[b]	**(175)**	(52)	(237)
Foreign exchange[c]	**47**	(157)	(64)
Commodity[d]	**94**	41	(48)
Total	**$ 5,319**	$ 7,916	$ 4,638

(a) Primarily relates to interest rate derivatives used to hedge the interest rate risks associated with the mortgage pipeline, warehouse loans and MSRs. Gains and losses were recorded predominantly in mortgage fees and related income.

(b) Relates to credit derivatives used to mitigate credit risk associated with lending exposures in the Firm's wholesale businesses, and single-name credit derivatives used to mitigate credit risk arising from certain AFS securities. These derivatives do not include the synthetic credit portfolio or credit derivatives used to mitigate counterparty credit risk arising from derivative receivables, both of which are included in gains and losses on derivatives related to market-making activities and other derivatives. Gains and losses were recorded in principal transactions revenue.

(c) Primarily relates to hedges of the foreign exchange risk of specified foreign currency-denominated liabilities. Gains and losses were recorded in principal transactions revenue and net interest income.

(d) Primarily relates to commodity derivatives used to mitigate energy price risk associated with energy-related contracts and investments. Gains and losses were recorded in principal transactions revenue.

Gains and losses on derivatives related to market-making activities and other derivatives

The Firm makes markets in derivatives in order to meet the needs of customers and uses derivatives to manage certain risks associated with net open risk positions from the Firm's market-making activities, including the counterparty credit risk arising from derivative receivables. These derivatives, as well as all other derivatives (including the synthetic credit portfolio) that are not included in the hedge accounting or specified risk management categories above, are included in this category. Gains and losses on these derivatives are recorded in principal transactions revenue. See Note 7 on pages 228–229 of this Annual Report for information on principal transactions revenue.

Credit risk, liquidity risk and credit-related contingent features

In addition to the specific market risks introduced by each derivative contract type, derivatives expose JPMorgan Chase to credit risk – the risk that derivative counterparties may fail to meet their payment obligations under the derivative contracts and the collateral, if any, held by the Firm proves to be of insufficient value to cover the payment obligation. It is the policy of JPMorgan Chase to actively pursue the use of legally enforceable master netting arrangements and collateral agreements to mitigate derivative counterparty credit risk. The amount of derivative receivables reported on the Consolidated Balance Sheets is the fair value of the derivative contracts after giving effect to legally enforceable master netting agreements and cash collateral held by the Firm.

While derivative receivables expose the Firm to credit risk, derivative payables expose the Firm to liquidity risk, as the derivative contracts typically require the Firm to post cash or securities collateral with counterparties as the fair value of the contracts moves in the counterparties' favor or upon specified downgrades in the Firm's and its subsidiaries' respective credit ratings. Certain derivative contracts also provide for termination of the contract, generally upon a downgrade of either the Firm or the counterparty, at the fair value of the derivative contracts. The following table shows the aggregate fair value of net derivative payables that contain contingent collateral or termination features that may be triggered upon a downgrade and the associated collateral the Firm has posted in the normal course of business at December 31, 2012 and 2011.

Derivative payables containing downgrade triggers

December 31, (in millions)	2012	2011
Aggregate fair value of net derivative payables[a]	$ 40,844	$ 39,316
Collateral posted[a]	34,414	31,473

(a) The current period presentation excludes contracts with downgrade triggers that were in a net receivable position. Prior period amounts have been revised to conform with the current presentation.

The following table shows the impact of a single-notch and two-notch ratings downgrade to JPMorgan Chase & Co. and its subsidiaries, predominantly JPMorgan Chase Bank, National Association ("JPMorgan Chase Bank, N.A."), at December 31, 2012 and 2011, related to derivative contracts with contingent collateral or termination features that may be triggered upon a ratings downgrade. Derivatives contracts generally require additional collateral to be posted or terminations to be triggered when the predefined threshold rating is breached. A downgrade by a single rating agency that does not result in a rating lower than a preexisting corresponding rating provided by another major rating agency will generally not result in additional collateral or termination payment requirements. The liquidity impact in the table is calculated based upon a downgrade below the lowest current rating provided by major rating agencies.

Liquidity impact of derivative downgrade triggers

	2012		2011	
December 31, (in millions)	Single-notch downgrade	Two-notch downgrade	Single-notch downgrade	Two-notch downgrade
Additional portion of net derivative payable to be posted as collateral upon downgrade	$ 1,012	$ 1,664	$ 1,460	$ 2,054
Amount required to settle contracts with termination triggers upon downgrade[a]	857	1,270	1,054	1,923

(a) Amounts represent fair value of derivative payables, and do not reflect collateral posted.

The following tables show the carrying value of derivative receivables and payables after netting adjustments, and adjustments for collateral held (including cash, U.S. government and agency securities and other G7 government bonds) and transferred as of December 31, 2012 and 2011.

Impact of netting adjustments on derivative receivables and payables

	Derivative receivables		Derivative payables	
December 31, (in millions)	2012	2011	2012	2011
Gross derivative fair value	$ 1,662,380	$ 1,884,499	$ 1,639,558	$ 1,837,256
Netting adjustment – offsetting receivables/payables[a]	(1,508,244)	(1,710,523)	(1,508,244)	(1,710,523)
Netting adjustment – cash collateral received/paid[a]	(79,153)	(81,499)	(60,658)	(51,756)
Carrying value on Consolidated Balance Sheets	$ 74,983	$ 92,477	$ 70,656	$ 74,977

Total derivative collateral

	Collateral held		Collateral transferred	
December 31, (in millions)	2012	2011	2012	2011
Netting adjustment for cash collateral[a]	$ 79,153	$ 81,499	$ 60,658	$ 51,756
Liquid securities and other cash collateral[b]	13,658	21,807	21,767	19,439
Additional liquid securities and cash collateral[c]	22,562	17,613	9,635	10,824
Total collateral for derivative transactions	$ 115,373	$ 120,919	$ 92,060	$ 82,019

(a) As permitted under U.S. GAAP, the Firm has elected to net derivative receivables and derivative payables and the related cash collateral received and paid when a legally enforceable master netting agreement exists.

(b) Represents cash collateral received and paid that is not subject to a legally enforceable master netting agreement, and liquid securities collateral held and transferred.

(c) Represents liquid securities and cash collateral held and transferred at the initiation of derivative transactions, which is available as security against potential exposure that could arise should the fair value of the transactions move, as well as collateral held and transferred related to contracts that have non-daily call frequency for collateral to be posted, and collateral that the Firm or a counterparty has agreed to return but has not yet settled as of the reporting date. These amounts were not netted against the derivative receivables and payables in the tables above, because, at an individual counterparty level, the collateral exceeded the fair value exposure at both December 31, 2012 and 2011.

Credit derivatives

Credit derivatives are financial instruments whose value is derived from the credit risk associated with the debt of a third-party issuer (the reference entity) and which allow one party (the protection purchaser) to transfer that risk to another party (the protection seller). Credit derivatives expose the protection purchaser to the creditworthiness of the protection seller, as the protection seller is required to make payments under the contract when the reference entity experiences a credit event, such as a bankruptcy, a failure to pay its obligation or a restructuring. The seller of credit protection receives a premium for providing protection but has the risk that the underlying instrument referenced in the contract will be subject to a credit event.

The Firm is both a purchaser and seller of protection in the credit derivatives market and uses these derivatives for two primary purposes. First, in its capacity as a market-maker, the Firm actively manages a portfolio of credit derivatives by purchasing and selling credit protection, predominantly on corporate debt obligations, to meet the needs of customers. Second, as an end-user, the Firm uses credit derivatives to manage credit risk associated with lending exposures (loans and unfunded commitments) and derivatives counterparty exposures in the Firm's wholesale businesses, and to manage the credit risk arising from certain AFS securities and from certain financial instruments in the Firm's market-making businesses. For more information on the synthetic credit portfolio, see the discussion on page 220 of this Note. Following is a summary of various types of credit derivatives.

Credit default swaps

Credit derivatives may reference the credit of either a single reference entity ("single-name") or a broad-based index. The Firm purchases and sells protection on both single-name and index-reference obligations. Single-name CDS and index CDS contracts are OTC derivative contracts. Single-name CDS are used to manage the default risk of a single reference entity, while index CDS contracts are used to manage the credit risk associated with the broader credit markets or credit market segments. Like the S&P 500 and other market indices, a CDS index comprises a portfolio of CDS across many reference entities. New series of CDS indices are periodically established with a new underlying portfolio of reference entities to reflect changes in the credit markets. If one of the reference entities in the index experiences a credit event, then the reference entity that defaulted is removed from the index. CDS can also be referenced against specific portfolios of reference names or against customized exposure levels based on specific client demands: for example, to provide protection against the first $1 million of realized credit losses in a $10 million portfolio of exposure. Such structures are commonly known as tranche CDS.

For both single-name CDS contracts and index CDS contracts, upon the occurrence of a credit event, under the terms of a CDS contract neither party to the CDS contract has recourse to the reference entity. The protection purchaser has recourse to the protection seller for the difference between the face value of the CDS contract and the fair value of the reference obligation at the time of settling the credit derivative contract, also known as the recovery value. The protection purchaser does not need to hold the debt instrument of the underlying reference entity in order to receive amounts due under the CDS contract when a credit event occurs.

Credit-related notes

A credit-related note is a funded credit derivative where the issuer of the credit-related note purchases from the note investor credit protection on a referenced entity. Under the contract, the investor pays the issuer the par value of the note at the inception of the transaction, and in return, the issuer pays periodic payments to the investor, based on the credit risk of the referenced entity. The issuer also repays the investor the par value of the note at maturity unless the reference entity experiences a specified credit event. If a credit event occurs, the issuer is not obligated to repay the par value of the note, but rather, the issuer pays the investor the difference between the par value of the note and the fair value of the defaulted reference obligation at the time of settlement. Neither party to the credit-related note has recourse to the defaulting reference entity. For a further discussion of credit-related notes, see Note 16 on pages 280–291 of this Annual Report.

The following tables present a summary of the notional amounts of credit derivatives and credit-related notes the Firm sold and purchased as of December 31, 2012 and 2011. Upon a credit event, the Firm as a seller of protection would typically pay out only a percentage of the full notional amount of net protection sold, as the amount actually required to be paid on the contracts takes into account the recovery value of the reference obligation at the time of settlement. The Firm manages the credit risk on contracts to sell protection by purchasing protection with identical or similar underlying reference entities. Other purchased protection referenced in the following tables includes credit derivatives bought on related, but not identical, reference positions (including indices, portfolio coverage and other reference points) as well as protection purchased through credit-related notes.

The Firm does not use notional amounts of credit derivatives as the primary measure of risk management for such derivatives, because the notional amount does not take into account the probability of the occurrence of a credit event, the recovery value of the reference obligation, or related cash instruments and economic hedges, each of which reduces, in the Firm's view, the risks associated with such derivatives.

Total credit derivatives and credit-related notes

	Maximum payout/Notional amount			
December 31, 2012 (in millions)	Protection sold	Protection purchased with identical underlyings[b]	Net protection (sold)/purchased[c]	Other protection purchased[d]
Credit derivatives				
Credit default swaps	**$ (2,954,705)**	**$ 2,879,105**	**$ (75,600)**	**$ 42,460**
Other credit derivatives[a]	**(66,244)**	**5,649**	**(60,595)**	**33,174**
Total credit derivatives	**(3,020,949)**	**2,884,754**	**(136,195)**	**75,634**
Credit-related notes	**(233)**	**–**	**(233)**	**3,255**
Total	**$ (3,021,182)**	**$ 2,884,754**	**$ (136,428)**	**$ 78,889**

	Maximum payout/Notional amount			
December 31, 2011 (in millions)	Protection sold	Protection purchased with identical underlyings[b]	Net protection (sold)/purchased[c]	Other protection purchased[d]
Credit derivatives				
Credit default swaps	$ (2,839,492)	$ 2,798,207	$ (41,285)	$ 29,139
Other credit derivatives[a]	(79,711)	4,954	(74,757)	22,292
Total credit derivatives	(2,919,203)	2,803,161	(116,042)	51,431
Credit-related notes	(742)	–	(742)	3,944
Total	$ (2,919,945)	$ 2,803,161	$ (116,784)	$ 55,375

(a) Primarily consists of total return swaps and CDS options.
(b) Represents the total notional amount of protection purchased where the underlying reference instrument is identical to the reference instrument on protection sold; the notional amount of protection purchased for each individual identical underlying reference instrument may be greater or lower than the notional amount of protection sold.
(c) Does not take into account the fair value of the reference obligation at the time of settlement, which would generally reduce the amount the seller of protection pays to the buyer of protection in determining settlement value.
(d) Represents protection purchased by the Firm on referenced instruments (single-name, portfolio or index) where the Firm has not sold any protection on the identical reference instrument.

The following tables summarize the notional and fair value amounts of credit derivatives and credit-related notes as of December 31, 2012 and 2011, where JPMorgan Chase is the seller of protection. The maturity profile is based on the remaining contractual maturity of the credit derivative contracts. The ratings profile is based on the rating of the reference entity on which the credit derivative contract is based. The ratings and maturity profile of credit derivatives and credit-related notes where JPMorgan Chase is the purchaser of protection are comparable to the profile reflected below.

Protection sold – credit derivatives and credit-related notes ratings[a]/maturity profile

December 31, 2012 (in millions)	<1 year	1–5 years	>5 years	Total notional amount	Fair value of receivables[b]	Fair value of payables[b]	Net fair value
Risk rating of reference entity

Noninvestment-grade	**(214,949)**	**(722,115)**	**(66,725)**	**(1,003,789)**	**22,355**	**(36,815)**	**(14,460)**
Total	**$ (624,697)**	**$ (2,105,759)**	**$ (290,726)**	**$ (3,021,182)**	**$ 39,045**	**$ (59,208)**	**$ (20,163)**

December 31, 2011 (in millions)	<1 year	1–5 years	>5 years	Total notional amount	Fair value of receivables[b]	Fair value of payables[b]	Net fair value
Risk rating of reference entity							
Investment-grade	$ (352,215)	$ (1,262,143)	$ (345,996)	$ (1,960,354)	$ 7,809	$ (57,697)	$ (49,888)
Noninvestment-grade	(241,823)	(589,954)	(127,814)	(959,591)	13,212	(85,304)	(72,092)
Total	$ (594,038)	$ (1,852,097)	$ (473,810)	$ (2,919,945)	$ 21,021	$ (143,001)	$ (121,980)

(a) The ratings scale is based on the Firm's internal ratings, which generally correspond to ratings as defined by S&P and Moody's.
(b) Amounts are shown on a gross basis, before the benefit of legally enforceable master netting agreements and cash collateral received by the Firm.

Note 7 – Noninterest revenue

Investment banking fees

This revenue category includes advisory and equity and debt underwriting fees. Underwriting fees are recognized as revenue when the Firm has rendered all services to the issuer and is entitled to collect the fee from the issuer, as long as there are no other contingencies associated with the fee. Underwriting fees are net of syndicate expense; the Firm recognizes credit arrangement and syndication fees as revenue after satisfying certain retention, timing and yield criteria. Advisory fees are recognized as revenue when the related services have been performed and the fee has been earned.

The following table presents the components of investment banking fees.

Year ended December 31, (in millions)	2012	2011	2010
Underwriting			
Equity	**$ 1,026**	$ 1,181	$ 1,589
Debt	**3,290**	2,934	3,172
Total underwriting	**4,316**	4,115	4,761
Advisory	**1,492**	1,796	1,429
Total investment banking fees	**$ 5,808**	$ 5,911	$ 6,190

Principal transactions

Principal transactions revenue includes realized and unrealized gains and losses recorded on derivatives, other financial instruments, private equity investments, and physical commodities used in market-making and client-driven activities.

In addition, principal transactions revenue also includes certain realized and unrealized gains and losses related to hedge accounting and specified risk management activities disclosed separately in Note 6, including: (a) certain derivatives designated in qualifying hedge accounting relationships (primarily fair value hedges of commodity and foreign exchange risk), (b) certain derivatives used for specific risk management purposes, primarily to mitigate credit risk, foreign exchange risk and commodity risk but as to which qualifying hedge accounting is not applied, and (c) certain derivatives related to market-making activities and other. See Note 6 on pages 218–227 of this Annual Report for information on the income statement classification of gains and losses on derivatives.

The following table presents principal transactions revenue by major underlying type of risk exposures. This table does not include other types of revenue, such as net interest income on trading assets, which are an integral part of the overall performance of the Firm's client-driven market-making activities.

Year ended December 31, (in millions)	2012	2011	2010
Trading revenue by risk exposure			
Interest rate[a]	**$ 3,922**	$ (873)	$ (199)
Credit[b]	**(5,460)**	3,393	4,543
Foreign exchange	**1,436**	1,154	1,896
Equity	**2,504**	2,401	2,275
Commodity[c]	**2,363**	2,823	889
Total trading revenue	**4,765**	8,898	9,404
Private equity gains/(losses)[d]	**771**	1,107	1,490
Principal transactions[e]	**$ 5,536**	$ 10,005	$ 10,894

(a) Includes a pretax gain of $665 million for the year ended December 31, 2012, reflecting the recovery on a Bear Stearns-related subordinated loan.

(b) Includes $5.8 billion of losses incurred by CIO from the synthetic credit portfolio for the six months ended June 30, 2012, and $449 million of losses incurred by CIO from the retained index credit derivative positions for the three months ended September 30, 2012; and losses incurred by CIB from the synthetic credit portfolio.

(c) Includes realized gains and losses and unrealized losses on physical commodities inventories that are generally carried at the lower of cost or market (market approximates fair value), subject to any applicable fair value hedge accounting adjustments, and gains and losses on commodity derivatives and other financial instruments that are carried at fair value through income. Commodity derivatives are frequently used to manage the Firm's risk exposure to its physical commodities inventories. Gains/(losses) related to commodity fair value hedges were $(1.4) billion, $(1.1) billion and $528 million for the years ended December 31, 2012, 2011 and 2010, respectively.

(d) Includes revenue on private equity investments held in the Private Equity business within Corporate/Private Equity, as well as those held in other business segments.

(e) Principal transactions revenue included DVA related to structured notes and derivative liabilities measured at fair value in CIB. DVA gains/(losses) were $(930) million, $1.4 billion, and $509 million for the years ended December 31, 2012, 2011 and 2010, respectively.

Lending- and deposit-related fees

This revenue category includes fees from loan commitments, standby letters of credit, financial guarantees, deposit-related fees in lieu of compensating balances, cash management-related activities or transactions, deposit accounts and other loan-servicing activities. These fees are recognized over the period in which the related service is provided.

Asset management, administration and commissions
This revenue category includes fees from investment management and related services, custody, brokerage services, insurance premiums and commissions, and other products. These fees are recognized over the period in which the related service is provided. Performance-based fees, which are earned based on exceeding certain benchmarks or other performance targets, are accrued and recognized at the end of the performance period in which the target is met.

The following table presents components of asset management, administration and commissions.

Year ended December 31, (in millions)	2012	2011	2010
Asset management			
Investment management fees	**$ 6,309**	$ 6,085	$ 5,632
All other asset management fees	**792**	605	496
Total asset management fees	**7,101**	6,690	6,128
Total administration fees[(a)]	**2,135**	2,171	2,023
Commission and other fees			
Brokerage commissions	**2,331**	2,753	2,804
All other commissions and fees	**2,301**	2,480	2,544
Total commissions and fees	**4,632**	5,233	5,348
Total asset management, administration and commissions	**$ 13,868**	$ 14,094	$ 13,499

(a) Includes fees for custody, securities lending, funds services and securities clearance.

Mortgage fees and related income
This revenue category primarily reflects CCB's Mortgage Production and Mortgage Servicing revenue, including: fees and income derived from mortgages originated with the intent to sell; mortgage sales and servicing including losses related to the repurchase of previously-sold loans; the impact of risk management activities associated with the mortgage pipeline, warehouse loans and MSRs; and revenue related to any residual interests held from mortgage securitizations. This revenue category also includes gains and losses on sales and lower of cost or fair value adjustments for mortgage loans held-for-sale, as well as changes in fair value for mortgage loans originated with the intent to sell and measured at fair value under the fair value option. Changes in the fair value of CCB mortgage servicing rights are reported in mortgage fees and related income. Net interest income from mortgage loans, and securities gains and losses on AFS securities used in mortgage-related risk management activities, are recorded in interest income and securities gains/(losses), respectively. For a further discussion of MSRs, see Note 17 on pages 291–295 of this Annual Report.

Card income
This revenue category includes interchange income from credit and debit cards and net fees earned from processing credit card transactions for merchants. Card income is recognized as earned. Annual fees and direct loan origination costs are deferred and recognized on a straight-line basis over a 12-month period. Expense related to rewards programs is recorded when the rewards are earned by the customer and netted against interchange income.

Credit card revenue sharing agreements
The Firm has contractual agreements with numerous affinity organizations and co-brand partners (collectively, "partners"), which grant the Firm exclusive rights to market to the members or customers of such partners. These partners endorse the credit card programs and provide their mailing lists to the Firm, and they may also conduct marketing activities and provide awards under the various credit card programs. The terms of these agreements generally range from three to 10 years.

The Firm typically makes incentive payments to the partners based on new account originations, charge volumes and the cost of the partners' marketing activities and awards. Payments based on new account originations are accounted for as direct loan origination costs. Payments to partners based on charge volumes are deducted from interchange income as the related revenue is earned. Payments based on marketing efforts undertaken by the partners are expensed by the Firm as incurred and reported as noninterest expense.

Other income
Included in other income is operating lease income of $1.3 billion, $1.2 billion and $971 million for the years ended December 31, 2012, 2011 and 2010, respectively.

Note 8 – Interest income and Interest expense

Interest income and interest expense is recorded in the Consolidated Statements of Income and classified based on the nature of the underlying asset or liability. Interest income and interest expense includes the current-period interest accruals for financial instruments measured at fair value, except for financial instruments containing embedded derivatives that would be separately accounted for in accordance with U.S. GAAP absent the fair value option election; for those instruments, all changes in fair value, including any interest elements, are reported in principal transactions revenue. For financial instruments that are not measured at fair value, the related interest is included within interest income or interest expense, as applicable.

Details of interest income and interest expense were as follows.

Year ended December 31, (in millions)	2012	2011	2010
Interest income			
Loans	**$ 35,832**	$ 37,098	$ 40,388
Securities	**7,939**	9,215	9,540
Trading assets	**9,039**	11,142	11,007
Federal funds sold and securities purchased under resale agreements	**2,442**	2,523	1,786
Securities borrowed	**(3)** [c]	110	175
Deposits with banks	**555**	599	345
Other assets[a]	**259**	606	541
Total interest income	**56,063**	61,293	63,782
Interest expense			
Interest-bearing deposits	**2,655**	3,855	3,424
Short-term and other liabilities[b]	**1,788**	2,873	2,364
Long-term debt	**6,062**	6,109	5,848
Beneficial interests issued by consolidated VIEs	**648**	767	1,145
Total interest expense	**11,153**	13,604	12,781
Net interest income	**44,910**	47,689	51,001
Provision for credit losses	**3,385**	7,574	16,639
Net interest income after provision for credit losses	**$ 41,525**	$ 40,115	$ 34,362

(a) Largely margin loans.
(b) Includes brokerage customer payables.
(c) Negative interest income for the year ended December 31, 2012, is a result of increased client-driven demand for certain securities combined with the impact of low interest rates; the offset of this matched book activity is reflected as lower net interest expense reported within short-term and other liabilities.

Note 9 – Pension and other postretirement employee benefit plans

The Firm's defined benefit pension plans and its other postretirement employee benefit ("OPEB") plans (collectively the "Plans") are accounted for in accordance with U.S. GAAP for retirement benefits.

Defined benefit pension plans

The Firm has a qualified noncontributory U.S. defined benefit pension plan that provides benefits to substantially all U.S. employees. The U.S. plan employs a cash balance formula in the form of pay and interest credits to determine the benefits to be provided at retirement, based on eligible compensation and years of service. Employees begin to accrue plan benefits after completing one year of service, and benefits generally vest after three years of service. The Firm also offers benefits through defined benefit pension plans to qualifying employees in certain non-U.S. locations based on factors such as eligible compensation, age and/or years of service.

It is the Firm's policy to fund the pension plans in amounts sufficient to meet the requirements under applicable laws. The Firm does not anticipate at this time any contribution to the U.S. defined benefit pension plan in 2013. The 2013 contributions to the non-U.S. defined benefit pension plans are expected to be $40 million of which $36 million are contractually required.

JPMorgan Chase also has a number of defined benefit pension plans that are not subject to Title IV of the Employee Retirement Income Security Act. The most significant of these plans is the Excess Retirement Plan, pursuant to which certain employees previously earned pay credits on compensation amounts above the maximum stipulated by law under a qualified plan; no further pay credits are allocated under this plan. The Excess Retirement Plan had an unfunded projected benefit obligation in the amount of $276 million and $272 million, at December 31, 2012 and 2011, respectively.

Effective March 19, 2012, pursuant to the WaMu Global Settlement, JPMorgan Chase Bank, N.A. became the sponsor of the WaMu Pension Plan. This plan's assets were merged with and into the JPMorgan Chase Retirement Plan effective as of December 31, 2012.

Defined contribution plans

JPMorgan Chase currently provides two qualified defined contribution plans in the U.S. and other similar arrangements in certain non-U.S. locations, all of which are administered in accordance with applicable local laws and regulations. The most significant of these plans is The JPMorgan Chase 401(k) Savings Plan (the "401(k) Savings Plan"), which covers substantially all U.S. employees. The 401(k) Savings Plan allows employees to make pretax and Roth 401(k) contributions to tax-deferred investment portfolios. The JPMorgan Chase Common Stock Fund, which is an investment option under the 401(k) Savings Plan, is a nonleveraged employee stock ownership plan.

The Firm matches eligible employee contributions up to 5% of benefits-eligible compensation (e.g., base pay) on an annual basis. Employees begin to receive matching contributions after completing a one-year-of-service requirement. Employees with total annual cash compensation of $250,000 or more are not eligible for matching contributions. Matching contributions vest after three years of service for employees hired on or after May 1, 2009. The 401(k) Savings Plan also permits discretionary profit-sharing contributions by participating companies for certain employees, subject to a specified vesting schedule.

OPEB plans

JPMorgan Chase offers postretirement medical and life insurance benefits to certain retirees and postretirement medical benefits to qualifying U.S. employees. These benefits vary with the length of service and the date of hire and provide for limits on the Firm's share of covered medical benefits. The medical and life insurance benefits are both contributory. Postretirement medical benefits also are offered to qualifying U.K. employees.

JPMorgan Chase's U.S. OPEB obligation is funded with corporate-owned life insurance ("COLI") purchased on the lives of eligible employees and retirees. While the Firm owns the COLI policies, COLI proceeds (death benefits, withdrawals and other distributions) may be used only to reimburse the Firm for its net postretirement benefit claim payments and related administrative expense. The U.K. OPEB plan is unfunded.

The following table presents the changes in benefit obligations, plan assets and funded status amounts reported on the Consolidated Balance Sheets for the Firm's U.S. and non-U.S. defined benefit pension and OPEB plans.

As of or for the year ended December 31,	Defined benefit pension plans

Fair value of plan assets, end of year	$ 13,012 [b)(c)]	$ 10,472 [b)(c)]	$ 3,330 [c]	$ 2,989 [c]	$ 1,563	$ 1,435
Funded/(unfunded) status[a]	$ 1,534	$ 1,429 [d]	$ 87	$ 160	$ 573	$ 436
Accumulated benefit obligation, end of year	$ (11,447)	$ (9,008)	$ (3,221)	$ (2,800)	NA	NA

(a) Represents overfunded plans with an aggregate balance of $2.8 billion and $2.6 billion at December 31, 2012 and 2011, respectively, and underfunded plans with an aggregate balance of $612 million and $621 million at December 31, 2012 and 2011, respectively.
(b) At December 31, 2012 and 2011, approximately $418 million and $426 million, respectively, of U.S. plan assets included participation rights under participating annuity contracts.
(c) At December 31, 2012 and 2011, defined benefit pension plan amounts not measured at fair value included $137 million and $50 million, respectively, of accrued receivables, and $310 million and $245 million, respectively, of accrued liabilities, for U.S. plans; and $47 million and $56 million, respectively, of accrued receivables, and $46 million and $69 million of accrued liabilities, respectively, for non-U.S. plans.
(d) Does not include any amounts attributable to the WaMu Pension Plan.
(e) Includes an unfunded accumulated postretirement benefit obligation of $31 million and $33 million at December 31, 2012 and 2011, respectively, for the U.K. plan.

Gains and losses

For the Firm's defined benefit pension plans, fair value is used to determine the expected return on plan assets. Amortization of net gains and losses is included in annual net periodic benefit cost if, as of the beginning of the year, the net gain or loss exceeds 10% of the greater of the projected benefit obligation or the fair value of the plan assets. Any excess is amortized over the average future service period of defined benefit pension plan participants, which for the U.S. defined benefit pension plan is currently nine years. In addition, prior service costs are amortized over the average remaining service period of active employees expected to receive benefits under the plan when the prior service cost is first recognized. The average remaining amortization period for current prior service costs is six years.

For the Firm's OPEB plans, a calculated value that recognizes changes in fair value over a five-year period is used to determine the expected return on plan assets. This value is referred to as the market related value of assets. Amortization of net gains and losses, adjusted for gains and losses not yet recognized, is included in annual net periodic benefit cost if, as of the beginning of the year, the net gain or loss exceeds 10% of the greater of the accumulated postretirement benefit obligation or the market related value of assets. Any excess is amortized over the average future service period, which is currently four years; however, prior service costs are amortized over the average years of service remaining to full eligibility age, which is currently three years.

The following table presents pretax pension and OPEB amounts recorded in AOCI.

December 31,	Defined benefit pension plans					
	U.S.		Non-U.S.		OPEB plans

Plan assumptions

JPMorgan Chase's expected long-term rate of return for U.S. defined benefit pension and OPEB plan assets is a blended average of the investment advisor's projected long-term (10 years or more) returns for the various asset classes, weighted by the asset allocation. Returns on asset classes are developed using a forward-looking approach and are not strictly based on historical returns. Equity returns are generally developed as the sum of inflation, expected real earnings growth and expected long-term dividend yield. Bond returns are generally developed as the sum of inflation, real bond yield and risk spread (as appropriate), adjusted for the expected effect on returns from changing yields. Other asset-class returns are derived from their relationship to the equity and bond markets. Consideration is also given to current market conditions and the short-term portfolio mix of each plan; as a result, in 2012 the Firm generally maintained the same expected return on assets as in the prior year.

For the U.K. defined benefit pension plans, which represent the most significant of the non-U.S. defined benefit pension plans, procedures similar to those in the U.S. are used to develop the expected long-term rate of return on plan assets, taking into consideration local market conditions and the specific allocation of plan assets. The expected long-term rate of return on U.K. plan assets is an average of projected long-term returns for each asset class. The return on equities has been selected by reference to the yield on long-term U.K. government bonds plus an equity risk premium above the risk-free rate. The expected return on "AA" rated long-term corporate bonds is based on an implied yield for similar bonds.

The discount rate used in determining the benefit obligation under the U.S. defined benefit pension and OPEB plans was selected by reference to the yields on portfolios of bonds with maturity dates and coupons that closely match each of the plan's projected cash flows; such portfolios are derived from a broad-based universe of high-quality corporate bonds as of the measurement date. In years in which these hypothetical bond portfolios generate excess cash, such excess is assumed to be reinvested at the one-year forward rates implied by the Citigroup Pension Discount Curve published as of the measurement date. The discount rate for the U.K. defined benefit pension plan represents a rate implied from the yield curve of the year-end iBoxx £ corporate "AA" 15-year-plus bond index.

The following tables present the weighted-average annualized actuarial assumptions for the projected and accumulated postretirement benefit obligations, and the components of net periodic benefit costs, for the Firm's significant U.S. and non-U.S. defined benefit pension and OPEB plans, as of and for the periods indicated.

Year when rate will reach ultimate	**2017**	2017	2014	**–**	–	–

The following table presents the effect of a one-percentage-point change in the assumed health care cost trend rate on JPMorgan Chase's total service and interest cost and accumulated postretirement benefit obligation.

Year ended December 31, 2012 (in millions)	1-Percentage point increase	1-Percentage point decrease
Effect on total service and interest cost	$ 1	$ (1)
Effect on accumulated postretirement benefit obligation	28	(25)

At December 31, 2012, the Firm decreased the discount rates used to determine its benefit obligations for the U.S. defined benefit pension and OPEB plans in light of current market interest rates, which will result in an increase in expense of approximately $48 million for 2013. The 2013 expected long-term rate of return on U.S. defined benefit pension plan assets and U.S. OPEB plan assets are 7.50% and 6.25%, respectively, unchanged from 2012. For 2013, the initial health care benefit obligation trend assumption has been set at 7.00%, and the ultimate health care trend assumption and the year to reach the ultimate rate remains at 5.00% and 2017, respectively, unchanged from 2012. As of December 31, 2012, the interest crediting rate assumption and the assumed rate of compensation increase remained at 5.00% and 4.00%, respectively.

JPMorgan Chase's U.S. defined benefit pension and OPEB plan expense is sensitive to the expected long-term rate of return on plan assets and the discount rate. With all other assumptions held constant, a 25-basis point decline in the expected long-term rate of return on U.S. plan assets would result in an increase of approximately an aggregate $35 million in 2013 U.S. defined benefit pension and OPEB plan expense. A 25-basis point decline in the discount rate for the U.S. plans would result in an increase in 2013 U.S. defined benefit pension and OPEB plan expense of approximately an aggregate $19 million and an increase in the related benefit obligations of approximately an aggregate $272 million. A 25-basis point decrease in the interest crediting rate for the U.S. defined benefit pension plan would result in a decrease in 2013 U.S. defined benefit pension expense of approximately $25 million and a decrease in the related projected benefit obligations of approximately $116 million. A 25-basis point decline in the discount rates for the non-U.S. plans would result in an increase in the 2013 non-U.S. defined benefit pension plan expense of approximately $14 million.

Investment strategy and asset allocation

The Firm's U.S. defined benefit pension plan assets are held in trust and are invested in a well-diversified portfolio of equity and fixed income securities, real estate, cash and cash equivalents, and alternative investments (e.g., hedge funds, private equity, real estate and real assets). Non-U.S. defined benefit pension plan assets are held in various trusts and are also invested in well-diversified portfolios of equity, fixed income and other securities. Assets of the Firm's COLI policies, which are used to partially fund the U.S. OPEB plan, are held in separate accounts with an insurance company and are invested in equity and fixed income index funds.

The investment policy for the Firm's U.S. defined benefit pension plan assets is to optimize the risk-return relationship as appropriate to the needs and goals using a global portfolio of various asset classes diversified by market segment, economic sector, and issuer. Assets are managed by a combination of internal and external investment managers. Periodically the Firm performs a comprehensive analysis on the U.S. defined benefit pension plan asset allocations, incorporating projected asset and liability data, which focuses on the short- and long-term impact of the asset allocation on cumulative pension expense, economic cost, present value of contributions and funded status. Currently, approved asset allocation ranges are: U.S. equity 15% to 35%, international equity 15% to 25%, debt securities 10% to 30%, hedge funds 10% to 30%, and real estate, real assets and private equity 5% to 20%. Asset allocations are not managed to a specific target but seek to shift asset class allocations within these stated ranges. Investment strategies incorporate the economic outlook and the anticipated implications of the macroeconomic environment on the various asset classes while maintaining an appropriate level of liquidity for the plan. The Firm regularly reviews the asset allocations and

asset managers, as well as other factors that impact the portfolio, which is rebalanced when deemed necessary.

For the U.K. defined benefit pension plans, which represent the most significant of the non-U.S. defined benefit pension plans, the assets are invested to maximize returns subject to an appropriate level of risk relative to the plans' liabilities. In order to reduce the volatility in returns relative to the plans' liability profiles, the U.K. defined benefit pension plans' largest asset allocations are to debt securities of appropriate durations. Other assets, mainly equity securities, are then invested for capital appreciation, to provide long-term investment growth. Similar to the U.S. defined benefit pension plan, asset allocations and asset managers for the U.K. plans are reviewed regularly and the portfolio is rebalanced when deemed necessary.

Investments held by the Plans include financial instruments which are exposed to various risks such as interest rate, market and credit risks. Exposure to a concentration of credit risk is mitigated by the broad diversification of both U.S. and non-U.S. investment instruments. Additionally, the investments in each of the common/collective trust funds and registered investment companies are further diversified into various financial instruments. As of December 31, 2012, assets held by the Firm's U.S. and non-U.S. defined benefit pension and OPEB plans do not include JPMorgan Chase common stock, except in connection with investments in third-party stock-index funds. The plans hold investments in funds that are sponsored or managed by affiliates of JPMorgan Chase in the amount of $1.8 billion and $1.6 billion for U.S. plans and $220 million and $194 million for non-U.S. plans, as of December 31, 2012 and 2011, respectively.

The following table presents the weighted-average asset allocation of the fair values of total plan assets at December 31 for the years indicated, as well as the respective approved range/target allocation by asset category, for the Firm's U.S. and non-U.S. defined benefit pension and OPEB plans.

	Defined benefit pension plans								
	U.S.			Non-U.S.			OPEB plans[c]		
	Target	% of plan assets		Target	% of plan assets		Target	% of plan assets	
December 31,	Allocation	**2012**	2011	Allocation	**2012**	2011	Allocation	**2012**	2011
Asset category									
Debt securities[a]	10-30%	**20%**	20%	70%	**72%**	74%	50%	**50%**	50%
Equity securities	25-60	**41**	39	29	**27**	25	50	**50**	50

(a) At December 31, 2012 and 2011, common/collective trust funds primarily included a mix of short-term investment funds, domestic and international equity investments (including index) and real estate funds.
(b) Unfunded commitments to purchase limited partnership investments for the plans were $1.4 billion and $1.2 billion for 2012 and 2011, respectively.
(c) Real assets include investments in productive assets such as agriculture, energy rights, mining and timber properties and exclude raw land to be developed for real estate purposes.
(d) Corporate debt securities include debt securities of U.S. and non-U.S. corporations.
(e) Other consists of exchange-traded funds and participating and non-participating annuity contracts. Exchange-traded funds are primarily classified within level 1 of the fair value hierarchy given they are valued using market observable prices. Participating and non-participating annuity contracts are classified within level 3 of the fair value hierarchy due to lack of market mechanisms for transferring each policy and surrender restrictions.
(f) At December 31, 2012 and 2011, the fair value of investments valued at NAV were $4.4 billion and $3.9 billion, respectively, which were classified within the valuation hierarchy as follows: $0.4 billion and $0.4 billion in level 1, $2.5 billion and $2.1 billion in level 2 and $1.5 billion and $1.4 billion in level 3.
(g) At December 31, 2012 and 2011, excluded U.S. defined benefit pension plan receivables for investments sold and dividends and interest receivables of $137 million and $50 million, respectively; and excluded non-U.S. defined benefit pension plan receivables for investments sold and dividends and interest receivables of $47 million and $56 million, respectively.
(h) At December 31, 2012 and 2011, excluded $306 million and $241 million, respectively, of U.S. defined benefit pension plan payables for investments purchased; and $4 million and $4 million, respectively, of other liabilities; and excluded non-U.S. defined benefit pension plan payables for investments purchased of $46 million and $69 million, respectively.

The Firm's OPEB plan was partially funded with COLI policies of $1.6 billion and $1.4 billion, at December 31, 2012 and 2011, respectively, which were classified in level 3 of the valuation hierarchy.

Note 10 – Employee stock-based incentives

Employee stock-based awards

In 2012, 2011 and 2010, JPMorgan Chase granted long-term stock-based awards to certain key employees under the 2005 Long-Term Incentive Plan, which was last amended in May 2011 ("LTIP"). Under the terms of the LTIP, as of December 31, 2012, 283 million shares of common stock are available for issuance through May 2015. The LTIP is the only active plan under which the Firm is currently granting stock-based incentive awards. In the following discussion, the LTIP, plus prior Firm plans and plans assumed as the result of acquisitions, are referred to collectively as the "LTI Plans," and such plans constitute the Firm's stock-based incentive plans.

Restricted stock units ("RSUs") are awarded at no cost to the recipient upon their grant. RSUs are generally granted annually and generally vest at a rate of 50% after two years and 50% after three years and convert into shares of common stock at the vesting date. In addition, RSUs typically include full-career eligibility provisions, which allow employees to continue to vest upon voluntary termination, subject to post-employment and other restrictions based on age or service-related requirements. All of these awards are subject to forfeiture until vested and contain clawback provisions that may result in cancellation prior to vesting under certain specified circumstances. RSUs entitle the recipient to receive cash payments equivalent to any dividends paid on the underlying common stock during the period the RSUs are outstanding and, as such, are considered participating securities as discussed in Note 24 on page 301 of this Annual Report.

Under the LTI Plans, stock options and stock appreciation rights ("SARs") have generally been granted with an exercise price equal to the fair value of JPMorgan Chase's common stock on the grant date. The Firm typically awards SARs to certain key employees once per year; the Firm also periodically grants employee stock options and SARs to individual employees. The 2012, 2011 and 2010 grants of SARs to key employees vest ratably over five years (i.e., 20% per year) and contain clawback provisions similar to RSUs. The 2012, 2011 and 2010 grants of SARs contain full-career eligibility provisions. SARs generally expire ten years after the grant date.

The Firm separately recognizes compensation expense for each tranche of each award as if it were a separate award with its own vesting date. Generally, for each tranche granted, compensation expense is recognized on a straight-line basis from the grant date until the vesting date of the respective tranche, provided that the employees will not become full-career eligible during the vesting period. For awards with full-career eligibility provisions and awards granted with no future substantive service requirement, the Firm accrues the estimated value of awards expected to be awarded to employees as of the grant date without giving consideration to the impact of post-employment restrictions. For each tranche granted to employees who will become full-career eligible during the vesting period, compensation expense is recognized on a straight-line basis from the grant date until the earlier of the employee's full-career eligibility date or the vesting date of the respective tranche.

The Firm's policy for issuing shares upon settlement of employee stock-based incentive awards is to issue either new shares of common stock or treasury shares. During 2012, 2011 and 2010, the Firm settled all of its employee stock-based awards by issuing treasury shares.

In January 2008, the Firm awarded to its Chairman and Chief Executive Officer up to 2 million SARs. The terms of this award are distinct from, and more restrictive than, other equity grants regularly awarded by the Firm. Effective January 2013, the Compensation Committee and Board of Directors determined that, while all the requirements for vesting of these awards have been met, vesting should be deferred for a period of up to 18 months (i.e., up to July 22, 2014), to enable the Firm to make progress against the Firm's strategic priorities and performance goals, including remediation relating to the CIO matter. The SARs, which have a 10-year term, will become exercisable no earlier than July 22, 2014, and have an exercise price of $39.83 (the price of JPMorgan Chase common stock on the date of grant). Vesting will be subject to a Board determination taking into consideration the extent of such progress and such other factors as it deems relevant. The expense related to this award is dependent on changes in fair value of the SARs through the date at which the award is finalized, and the cumulative expense is recognized ratably over the service period, which was initially assumed to be five years but, effective in the first quarter of 2013, has been extended to six and one-half years. The Firm recognized $5 million, $(4) million and $4 million in compensation expense in 2012, 2011 and 2010, respectively, for this award.

RSUs, employee stock options and SARs activity

Compensation expense for RSUs is measured based on the number of shares granted multiplied by the stock price at the grant date, and for employee stock options and SARs, is measured at the grant date using the Black-Scholes valuation model. Compensation expense for these awards is recognized in net income as described previously. The following table summarizes JPMorgan Chase's RSUs, employee stock options and SARs activity for 2012.

	RSUs		Options/SARs			
Year ended December 31, 2012 (in thousands, except weighted-average data, and where otherwise stated)	Number of shares	Weighted-average grant date fair value	Number of awards	Weighted-average exercise price	Weighted-average remaining contractual life (in years)	Aggregate intrinsic value
Outstanding, January 1	166,631	$ 37.65	155,761	$ 40.58		
Granted	59,646	35.73	14,738	35.70		
Exercised or vested	(79,062)	30.91	(18,675)	26.45		
Forfeited	(5,209)	40.22	(3,888)	38.07		
Canceled	NA	NA	(32,030)	40.10		
Outstanding, December 31	142,006	$ 40.49	115,906	$ 42.44	5.5	$ 721,059
Exercisable, December 31	NA	NA	70,576	45.87	4.2	420,713

The total fair value of RSUs that vested during the years ended December 31, 2012, 2011 and 2010, was $2.8 billion, $5.4 billion and $2.3 billion, respectively. The weighted-average grant date per share fair value of stock options and SARs granted during the years ended December 31, 2012, 2011 and 2010, was $8.89, $13.04 and $12.27, respectively. The total intrinsic value of options exercised during the years ended December 31, 2012, 2011 and 2010, was $283 million, $191 million and $154 million, respectively.

Compensation expense

The Firm recognized the following noncash compensation expense related to its various employee stock-based incentive plans in its Consolidated Statements of Income.

Year ended December 31, (in millions)	2012	2011	2010
Cost of prior grants of RSUs and SARs that are amortized over their applicable vesting periods	**$ 1,810**	$ 1,986	$ 2,479
Accrual of estimated costs of RSUs and SARs to be granted in future periods including those to full-career eligible employees	**735**	689	772
Total noncash compensation expense related to employee stock-based incentive plans	**$ 2,545**	$ 2,675	$ 3,251

At December 31, 2012, approximately $909 million (pretax) of compensation cost related to unvested awards had not yet been charged to net income. That cost is expected to be amortized into compensation expense over a weighted-average period of 0.9 years. The Firm does not capitalize any compensation cost related to share-based compensation awards to employees.

Cash flows and tax benefits

Income tax benefits related to stock-based incentive arrangements recognized in the Firm's Consolidated Statements of Income for the years ended December 31, 2012, 2011 and 2010, were $1.0 billion, $1.0 billion and $1.3 billion, respectively.

The following table sets forth the cash received from the exercise of stock options under all stock-based incentive arrangements, and the actual income tax benefit realized related to tax deductions from the exercise of the stock options.

Year ended December 31, (in millions)	2012	2011	2010
Cash received for options exercised	**$ 333**	$ 354	$ 205
Tax benefit realized[(a)]	**53**	31	14

(a) The tax benefit realized from dividends or dividend equivalents paid on equity-classified share-based payment awards that are charged to retained earnings are recorded as an increase to additional paid-in capital and included in the pool of excess tax benefits available to absorb tax deficiencies on share-based payment awards.

Valuation assumptions

The following table presents the assumptions used to value employee stock options and SARs granted during the years ended December 31, 2012, 2011 and 2010, under the Black-Scholes valuation model.

Year ended December 31,	2012	2011	2010
Weighted-average annualized valuation assumptions			
Risk-free interest rate	**1.19%**	2.58%	3.89%
Expected dividend yield[a]	**3.15**	2.20	3.13
Expected common stock price volatility	**35**	34	37
Expected life (in years)	**6.6**	6.5	6.4

(a) In 2012 and 2011, the expected dividend yield was determined using forward-looking assumptions. In 2010 the expected dividend yield was determined using historical dividend yields.

The expected volatility assumption is derived from the implied volatility of JPMorgan Chase's stock options. The expected life assumption is an estimate of the length of time that an employee might hold an option or SAR before it is exercised or canceled, and the assumption is based on the Firm's historical experience.

Note 11 – Noninterest expense

The following table presents the components of noninterest expense.

Year ended December 31, (in millions)	2012	2011	2010
Compensation expense[a]	**$ 30,585**	$ 29,037	$ 28,124
Noncompensation expense:			
Occupancy expense	**3,925**	3,895	3,681
Technology, communications and equipment expense	**5,224**	4,947	4,684
Professional and outside services	**7,429**	7,482	6,767
Marketing	**2,577**	3,143	2,446
Other expense[b][c]	**14,032**	13,559	14,558
Amortization of intangibles	**957**	848	936
Total noncompensation expense	**34,144**	33,874	33,072
Total noninterest expense	**$ 64,729**	$ 62,911	$ 61,196

(a) Expense for 2010 includes a payroll tax expense related to the United Kingdom ("U.K.") Bank Payroll Tax on certain compensation awarded from December 9, 2009, to April 5, 2010, to relevant banking employees.

(b) Included litigation expense of $5.0 billion, $4.9 billion and $7.4 billion for the years ended December 31, 2012, 2011 and 2010, respectively.

(c) Included FDIC-related expense of $1.7 billion, $1.5 billion and $899 million for the years ended December 31, 2012, 2011 and 2010, respectively.

Note 12 – Securities

Securities are primarily classified as AFS or trading. Securities classified as trading assets are discussed in Note 3 on pages 196–214 of this Annual Report. Predominantly all of the AFS securities portfolio is held by CIO in connection with its asset-liability management objectives. At December 31, 2012, the average credit rating of the debt securities comprising the AFS portfolio was AA+ (based upon external ratings where available, and where not available, based primarily upon internal ratings which correspond to ratings as defined by S&P and Moody's). AFS securities are carried at fair value on the Consolidated Balance Sheets. Unrealized gains and losses, after any applicable hedge accounting adjustments, are reported as net increases or decreases to accumulated other comprehensive income/(loss). The specific identification method is used to determine realized gains and losses on AFS securities, which are included in securities gains/(losses) on the Consolidated Statements of Income.

Other-than-temporary impairment

AFS debt and equity securities in unrealized loss positions are analyzed as part of the Firm's ongoing assessment of other-than-temporary impairment ("OTTI"). For most types of debt securities, the Firm considers a decline in fair value to be other-than-temporary when the Firm does not expect to recover the entire amortized cost basis of the security. For beneficial interests in securitizations that are rated below "AA" at their acquisition, or that can be contractually prepaid or otherwise settled in such a way that the Firm would not recover substantially all of its recorded investment, the Firm considers an OTTI to have occurred when there is an adverse change in expected cash flows. For AFS equity securities, the Firm considers a decline in fair value to be other-than-temporary if it is probable that the Firm will not recover its amortized cost basis.

Potential OTTI is considered using a variety of factors, including the length of time and extent to which the market value has been less than cost; adverse conditions specifically related to the industry, geographic area or financial condition of the issuer or underlying collateral of a security; payment structure of the security; changes to the rating of the security by a rating agency; the volatility of the fair value changes; and the Firm's intent and ability to hold the security until recovery.

For debt securities, the Firm recognizes OTTI losses in earnings if the Firm has the intent to sell the debt security, or if it is more likely than not that the Firm will be required to sell the debt security before recovery of its amortized cost basis. In these circumstances the impairment loss is equal to the full difference between the amortized cost basis and the fair value of the securities. When the Firm has the intent and ability to hold AFS debt securities in an unrealized loss position, it evaluates the expected cash flows to be received and determines if a credit loss exists. In the event of a credit loss, only the amount of impairment associated with the credit loss is recognized in income. Amounts relating to factors other than credit losses are recorded in OCI.

The Firm's cash flow evaluations take into account the factors noted above and expectations of relevant market and economic data as of the end of the reporting period. For securities issued in a securitization, the Firm estimates cash flows considering underlying loan-level data and structural features of the securitization, such as subordination, excess spread, overcollateralization or other forms of credit enhancement, and compares the losses projected for the underlying collateral ("pool losses") against the level of credit enhancement in the securitization structure to determine whether these features are sufficient to absorb the pool losses, or whether a credit loss exists. The Firm also performs other analyses to support its cash flow projections, such as first-loss analyses or stress scenarios.

For equity securities, OTTI losses are recognized in earnings if the Firm intends to sell the security. In other cases the Firm considers the relevant factors noted above, as well as the Firm's intent and ability to retain its investment for a period of time sufficient to allow for any anticipated recovery in market value, and whether evidence exists to support a realizable value equal to or greater than the carrying value. Any impairment loss on an equity security is equal to the full difference between the amortized cost basis and the fair value of the security.

Realized gains and losses

The following table presents realized gains and losses and credit losses that were recognized in income from AFS securities.

Year ended December 31, (in millions)	2012	2011	2010
Realized gains	$ 2,610	$ 1,811	$ 3,382
Realized losses	(457)	(142)	(317)
Net realized gains[a]	2,153	1,669	3,065
OTTI losses			
Credit-related[b]	(28)	(76)	(100)
Securities the Firm intends to sell[c]	(15) [d]	–	–
Total OTTI losses recognized in income	(43)	(76)	(100)
Net securities gains	$ 2,110	$ 1,593	$ 2,965

(a) Proceeds from securities sold were within approximately 4% of amortized cost in 2012 and 2011, and within approximately 3% of amortized cost in 2010.

(b) Includes other-than-temporary impairment losses recognized in income on certain prime mortgage-backed securities and obligations of U.S. states and municipalities for the year ended December 31, 2012; certain prime mortgage-backed securities for the year ended December 31, 2011; and certain prime mortgage-backed securities and obligations of U.S. states and municipalities for the year ended December 31, 2010.

(c) Represents the excess of the amortized cost over the fair value of certain non-U.S. corporate debt, and non-U.S. government debt securities the Firm intends to sell.

(d) Excludes realized losses of $24 million on sales of non-U.S. corporate debt, non-U.S. government debt and certain asset-backed securities that had been previously reported as an OTTI loss due to the intention to sell the securities during the year ended December 31, 2012.

The amortized costs and estimated fair values of AFS and held-to-maturity ("HTM") securities were as follows for the dates indicated.

	2012				2011

Total held-to-maturity securities	**$ 7**	**$ 1**	**$ –**	**$ 8**	$ 12	$ 1	$ –	$ 13

(a) Includes total U.S. government-sponsored enterprise obligations with fair values of $84.0 billion and $89.3 billion at December 31, 2012 and 2011, respectively, which were predominantly mortgage-related.
(b) Consists primarily of bank debt including sovereign government-guaranteed bank debt.
(c) Includes a total of $91 million (pretax) of unrealized losses related to prime mortgage-backed securities for which credit losses have been recognized in income at December 31, 2011. These unrealized losses are not credit-related and remain reported in AOCI. There were no such losses at December 31, 2012.

Securities impairment

The following tables present the fair value and gross unrealized losses for AFS securities by aging category at December 31, 2012 and 2011.

	Securities with gross unrealized losses					
	Less than 12 months		12 months or more

Other-than-temporary impairment

The following table presents OTTI losses that are included in the securities gains and losses table above.

Year ended December 31, (in millions)	2012	2011	2010
Debt securities the Firm does not intend to sell that have credit losses			
Total OTTI[a]	**$ (113)**	$ (27)	$ (94)
Losses recorded in/ (reclassified from) AOCI	**85**	(49)	(6)
Total credit losses recognized in income[b]	**(28)** [d]	(76) [f]	(100) [g]
Securities the Firm intends to sell[c]	**(15)** [e]	–	–
Total OTTI losses recognized in income	**$ (43)**	$ (76)	$ (100)

(a) For initial OTTI, represents the excess of the amortized cost over the fair value of AFS debt securities. For subsequent impairments of the same security, represents additional declines in fair value subsequent to previously recorded OTTI, if applicable.

(b) Subsequent credit losses may be recorded on securities without a corresponding further decline in fair value if there has been a decline in expected cash flows.

(c) Represents the excess of the amortized cost over the fair value of certain non-U.S. corporate debt, and non-U.S. government debt securities the Firm intends to sell.

(d) Represents the credit loss component on certain prime mortgage-backed securities and obligations of U.S. states and municipalities for the year ended December 31, 2012, that the Firm does not intend to sell. At December 31, 2012, there were no unrealized losses remaining in AOCI on securities for which credit losses were recognized in income during 2012.

(e) Excludes realized losses of $24 million on sales of non-U.S. corporate debt, non-U.S. government debt and certain asset-backed securities that had been previously reported as an OTTI loss due to the intention to sell the securities during the year ended December 31, 2012.

(f) Represents the credit loss component on certain prime mortgage-backed securities for the year ended December 31, 2011, that the Firm did not intend to sell.

(g) Represents the credit loss component on certain prime mortgage-backed securities and obligations of U.S. states and municipalities for the year ended December 31, 2010 that the Firm did not intend to sell.

Changes in the credit loss component of credit-impaired debt securities

The following table presents a rollforward for the years ended December 31, 2012, 2011 and 2010, of the credit loss component of OTTI losses that have been recognized in income, related to debt securities that the Firm does not intend to sell.

Year ended December 31, (in millions)	2012	2011	2010
Balance, beginning of period	**$ 708**	$ 632	$ 578
Additions:			
Newly credit-impaired securities	**21**	4	–
Increase in losses on previously credit-impaired securities	**–**	–	94
Losses reclassified from other comprehensive income on previously credit-impaired securities	**7**	72	6
Reductions:			
Sales of credit-impaired securities	**(214)**	–	(31)
Impact of new accounting guidance related to VIEs	**–**	–	(15)
Balance, end of period	**$ 522**	$ 708	$ 632

Gross unrealized losses

Gross unrealized losses have generally decreased since December 31, 2011, including those that have been in an unrealized loss position for 12 months or more. Except for certain securities that the Firm intends to sell for which the unrealized losses have been recognized in income, as of December 31, 2012, the Firm does not intend to sell the securities with a loss position in AOCI, and it is not likely that the Firm will be required to sell these securities before recovery of their amortized cost basis. Except for the securities reported in the table above for which credit losses have been recognized in income, the Firm believes that the securities with an unrealized loss in AOCI are not other-than-temporarily impaired as of December 31, 2012.

Contractual maturities and yields

The following table presents the amortized cost and estimated fair value at December 31, 2012, of JPMorgan Chase's AFS and HTM securities by contractual maturity.

By remaining maturity December 31, 2012 (in millions)	Due in one year or less	Due after one year through five years	Due after five years through 10 years	Due after 10 years[c]	Total
Available-for-sale debt securities

Amortized cost	$ –	$ –	$ –	$ 2,750	$ 2,750
Fair value	–	–	–	2,771	2,771
Average yield[b]	–%	–%	–%	0.36%	0.36%
Total available-for-sale securities					
Amortized cost	$ 34,987	$ 62,287	$ 62,089	$ 200,529	$ 359,892
Fair value	35,033	63,400	63,646	209,066	371,145
Average yield[b]	1.57%	2.17%	1.94%	3.25%	2.67%
Total held-to-maturity securities					
Amortized cost	$ –	$ 6	$ 1	$ –	$ 7
Fair value	–	7	1	–	8
Average yield[b]	–%	6.85%	6.64%	–%	6.83%

(a) U.S. government agencies and U.S. government-sponsored enterprises were the only issuers whose securities exceeded 10% of JPMorgan Chase's total stockholders' equity at December 31, 2012.

(b) Average yield is computed using the effective yield of each security owned at the end of the period, weighted based on the amortized cost of each security. The effective yield considers the contractual coupon, amortization of premiums and accretion of discounts, and the effect of related hedging derivatives. Taxable-equivalent amounts are used where applicable. The effective yield excludes unscheduled principal prepayments; and accordingly, actual maturities of securities may differ from their contractual or expected maturities as certain securities may be prepaid.

(c) Includes securities with no stated maturity. Substantially all of the Firm's residential mortgage-backed securities and collateralized mortgage obligations are due in 10 years or more, based on contractual maturity. The estimated duration, which reflects anticipated future prepayments based on a consensus of dealers in the market, is approximately three years for agency residential mortgage-backed securities, two years for agency residential collateralized mortgage obligations and four years for nonagency residential collateralized mortgage obligations.

Note 13 – Securities financing activities

JPMorgan Chase enters into resale agreements, repurchase agreements, securities borrowed transactions and securities loaned transactions (collectively, "securities financing agreements") primarily to finance the Firm's inventory positions, acquire securities to cover short positions, accommodate customers' financing needs, and settle other securities obligations.

Securities financing agreements are treated as collateralized financings on the Firm's Consolidated Balance Sheets. Resale and repurchase agreements are generally carried at the amounts at which the securities will be subsequently sold or repurchased, plus accrued interest. Securities borrowed and securities loaned transactions are generally carried at the amount of cash collateral advanced or received. Where appropriate under applicable accounting guidance, resale and repurchase agreements with the same counterparty are reported on a net basis. Fees received and paid in connection with securities financing agreements are recorded in interest income and interest expense, respectively.

The Firm has elected the fair value option for certain securities financing agreements. For further information regarding the fair value option, see Note 4 on pages 214–216 of this Annual Report. The securities financing agreements for which the fair value option has been elected are reported within securities purchased under resale agreements; securities loaned or sold under repurchase agreements; and securities borrowed on the Consolidated Balance Sheets. Generally, for agreements carried at fair value, current-period interest accruals are recorded within interest income and interest expense, with changes in fair value reported in principal transactions revenue. However, for financial instruments containing embedded derivatives that would be separately accounted for in accordance with accounting guidance for hybrid instruments, all changes in fair value, including any interest elements, are reported in principal transactions revenue.

The following table details the Firm's securities financing agreements, all of which are accounted for as collateralized financings during the periods presented.

December 31, (in millions)	2012	2011
Securities purchased under resale agreements[a]	$ 295,413	$ 235,000
Securities borrowed[b]	119,017	142,462
Securities sold under repurchase agreements[c]	$ 215,560	$ 197,789
Securities loaned[d]	23,582	14,214

(a) At December 31, 2012 and 2011, included resale agreements of $24.3 billion and $22.2 billion, respectively, accounted for at fair value.
(b) At December 31, 2012 and 2011, included securities borrowed of $10.2 billion and $15.3 billion, respectively, accounted for at fair value.
(c) At December 31, 2012 and 2011, included repurchase agreements of $3.9 billion and $6.8 billion, respectively, accounted for at fair value.
(d) At December 31, 2012, included securities loaned of $457 million accounted for at fair value. There were no securities loaned accounted for at fair value at December 31, 2011.

The amounts reported in the table above were reduced by $96.9 billion and $115.7 billion at December 31, 2012 and 2011, respectively, as a result of agreements in effect that meet the specified conditions for net presentation under applicable accounting guidance.

JPMorgan Chase's policy is to take possession, where possible, of securities purchased under resale agreements and of securities borrowed. The Firm monitors the value of the underlying securities (primarily G7 government securities, U.S. agency securities and agency MBS, and equities) that it has received from its counterparties and either requests additional collateral or returns a portion of the collateral when appropriate in light of the market value of the underlying securities. Margin levels are established initially based upon the counterparty and type of collateral and monitored on an ongoing basis to protect against declines in collateral value in the event of default. JPMorgan Chase typically enters into master netting agreements and other collateral arrangements with its resale agreement and securities borrowed counterparties, which provide for the right to liquidate the purchased or borrowed securities in the event of a customer default. As a result of the Firm's credit risk mitigation practices with respect to resale and securities borrowed agreements as described above, the Firm did not hold any reserves for credit impairment with respect to these agreements as of December 31, 2012 and 2011.

For further information regarding assets pledged and collateral received in securities financing agreements, see Note 30 on pages 315–316 of this Annual Report.

Note 14 – Loans

Loan accounting framework

The accounting for a loan depends on management's strategy for the loan, and on whether the loan was credit-impaired at the date of acquisition. The Firm accounts for loans based on the following categories:

- Originated or purchased loans held-for-investment (i.e., "retained"), other than purchased credit-impaired ("PCI") loans
- Loans held-for-sale
- Loans at fair value
- PCI loans held-for-investment

The following provides a detailed accounting discussion of these loan categories:

Loans held-for-investment (other than PCI loans)

Originated or purchased loans held-for-investment, other than PCI loans, are measured at the principal amount outstanding, net of the following: allowance for loan losses; net charge-offs; interest applied to principal (for loans accounted for on the cost recovery method); unamortized discounts and premiums; and net deferred loan fees or costs.

Interest income

Interest income on performing loans held-for-investment, other than PCI loans, is accrued and recognized as interest income at the contractual rate of interest. Purchase price discounts or premiums, as well as net deferred loan fees or costs, are amortized into interest income over the life of the loan to produce a level rate of return.

Nonaccrual loans

Nonaccrual loans are those on which the accrual of interest has been suspended. Loans (other than credit card loans and certain consumer loans insured by U.S. government agencies) are placed on nonaccrual status and considered nonperforming when full payment of principal and interest is in doubt, which for consumer loans, excluding credit card, is generally determined when principal or interest is 90 days or more past due and collateral, if any, is insufficient to cover principal and interest. A loan is determined to be past due when the minimum payment is not received from the borrower by the contractually specified due date or for certain loans (e.g., residential real estate loans), when a monthly payment is due and unpaid for 30 days or more. Consumer, excluding credit card, loans that are less than 90 days past due may be placed on nonaccrual status when there is evidence that full payment of principal and interest is in doubt (e.g., performing junior liens that are subordinate to nonperforming senior liens). Finally, collateral-dependent loans are typically maintained on nonaccrual status.

On the date a loan is placed on nonaccrual status, all interest accrued but not collected is reversed against interest income. In addition, the amortization of deferred amounts is suspended. Interest income on nonaccrual loans may be recognized as cash interest payments are received (i.e., on a cash basis) if the recorded loan balance is deemed fully collectible; however, if there is doubt regarding the ultimate collectibility of the recorded loan balance, all interest cash receipts are applied to reduce the carrying value of the loan (the cost recovery method). For consumer loans, application of this policy typically results in the Firm recognizing interest income on nonaccrual consumer loans on a cash basis.

A loan may be returned to accrual status when repayment is reasonably assured and there has been demonstrated performance under the terms of the loan or, if applicable, the terms of the restructured loan.

As permitted by regulatory guidance, credit card loans are generally exempt from being placed on nonaccrual status; accordingly, interest and fees related to credit card loans continue to accrue until the loan is charged off or paid in full. However, the Firm separately establishes an allowance for the estimated uncollectible portion of accrued interest and fee income on credit card loans. The allowance is established with a charge to interest income and is reported as an offset to loans.

Allowance for loan losses

The allowance for loan losses represents the estimated probable losses on held-for-investment loans. Changes in the allowance for loan losses are recorded in the provision for credit losses on the Firm's Consolidated Statements of Income. See Note 15 on pages 276–279 of this Annual Report for further information on the Firm's accounting polices for the allowance for loan losses.

Charge-offs

Consumer loans, other than risk-rated business banking, risk-rated auto and PCI loans, are generally charged off or charged down to the net realizable value of the underlying collateral (i.e., fair value less costs to sell), with an offset to the allowance for loan losses, upon reaching specified stages of delinquency in accordance with standards established by the Federal Financial Institutions Examination Council ("FFIEC"). Residential real estate loans, non-modified credit card loans and scored business banking loans are generally charged off at 180 days past due. In the second quarter of 2012, the Firm revised its policy to charge-off modified credit card loans that do not comply with their modified payment terms at 120 days past due rather than 180 days past due. Auto and student loans are charged off no later than 120 days past due.

Certain consumer loans will be charged off earlier than the FFIEC charge-off standards in certain circumstances as follows:

- A charge-off is recognized when a loan is modified in a TDR if the loan is determined to be collateral-dependent. A loan is considered to be collateral-dependent when repayment of the loan is expected to be provided solely by the underlying collateral, rather than by cash flows from the borrower's operations, income or other resources.
- Loans to borrowers who have experienced an event (e.g., bankruptcy) that suggests a loss is either known or highly certain are subject to accelerated charge-off standards. Residential real estate and auto loans are charged off when the loan becomes 60 days past due, or sooner if the loan is determined to be collateral-dependent. Credit card and scored business banking loans are charged off within 60 days of receiving notification of the bankruptcy filing or other event. Student loans are generally charged off when the loan becomes 60 days past due after receiving notification of a bankruptcy.
- Auto loans are written down to net realizable value upon repossession of the automobile and after a redemption period (i.e., the period during which a borrower may cure the loan) has passed.

Other than in certain limited circumstances, the Firm typically does not recognize charge-offs on government-guaranteed loans.

Wholesale loans, risk-rated business banking loans and risk-rated auto loans are charged off when it is highly certain that a loss has been realized, including situations where a loan is determined to be both impaired and collateral-dependent. The determination of whether to recognize a charge-off includes many factors, including the prioritization of the Firm's claim in bankruptcy, expectations of the workout/restructuring of the loan and valuation of the borrower's equity or the loan collateral.

When a loan is charged down to the estimated net realizable value, the determination of the fair value of the collateral depends on the type of collateral (e.g., securities, real estate). In cases where the collateral is in the form of liquid securities, the fair value is based on quoted market prices or broker quotes. For illiquid securities or other financial assets, the fair value of the collateral is estimated using a discounted cash flow model.

For residential real estate loans, collateral values are based upon external valuation sources. When it becomes likely that a borrower is either unable or unwilling to pay, the Firm obtains a broker's price opinion of the home based on an exterior-only valuation ("exterior opinions"), which is then updated at least every six months thereafter. As soon as practicable after the Firm receives the property in satisfaction of a debt (e.g., by taking legal title or physical possession), generally, either through foreclosure or upon the execution of a deed in lieu of foreclosure transaction with the borrower, the Firm obtains an appraisal based on an inspection that includes the interior of the home ("interior appraisals"). Exterior opinions and interior appraisals are discounted based upon the Firm's experience with actual liquidation values as compared to the estimated values provided by exterior opinions and interior appraisals, considering state- and product-specific factors.

For commercial real estate loans, collateral values are generally based on appraisals from internal and external valuation sources. Collateral values are typically updated every six to twelve months, either by obtaining a new appraisal or by performing an internal analysis, in accordance with the Firm's policies. The Firm also considers both borrower- and market-specific factors, which may result in obtaining appraisal updates or broker price opinions at more frequent intervals.

Loans held-for-sale

Held-for-sale loans are measured at the lower of cost or fair value, with valuation changes recorded in noninterest revenue. For consumer loans, the valuation is performed on a portfolio basis. For wholesale loans, the valuation is performed on an individual loan basis.

Interest income on loans held-for-sale is accrued and recognized based on the contractual rate of interest.

Loan origination fees or costs and purchase price discounts or premiums are deferred in a contra loan account until the related loan is sold. The deferred fees and discounts or premiums are an adjustment to the basis of the loan and therefore are included in the periodic determination of the lower of cost or fair value adjustments and/or the gain or losses recognized at the time of sale.

Held-for-sale loans are subject to the nonaccrual policies described above.

Because held-for-sale loans are recognized at the lower of cost or fair value, the Firm's allowance for loan losses and charge-off policies do not apply to these loans.

Loans at fair value

Loans used in a market-making strategy or risk managed on a fair value basis are measured at fair value, with changes in fair value recorded in noninterest revenue.

For these loans, the earned current contractual interest payment is recognized in interest income. Changes in fair value are recognized in noninterest revenue. Loan origination fees are recognized upfront in noninterest revenue. Loan origination costs are recognized in the associated expense category as incurred.

Because these loans are recognized at fair value, the Firm's nonaccrual, allowance for loan losses, and charge-off policies do not apply to these loans.

See Note 4 on pages 214–216 of this Annual Report for further information on the Firm's elections of fair value accounting under the fair value option. See Note 3 and Note 4 on pages 196–214 and 214–216 of this Annual Report for further information on loans carried at fair value and classified as trading assets.

PCI loans

PCI loans held-for-investment are initially measured at fair value. PCI loans have evidence of credit deterioration since the loan's origination date and therefore it is probable, at acquisition, that all contractually required payments will not be collected. Because PCI loans are initially measured at fair value, which includes an estimate of future credit losses, no allowance for loan losses related to PCI loans is recorded at the acquisition date. See page 266 of this Note for information on accounting for PCI loans subsequent to their acquisition.

Loan classification changes

Loans in the held-for-investment portfolio that management decides to sell are transferred to the held-for-sale portfolio at the lower of cost or fair value on the date of transfer. Credit-related losses are charged against the allowance for loan losses; losses due to changes in interest rates or foreign currency exchange rates are recognized in noninterest revenue.

In the event that management decides to retain a loan in the held-for-sale portfolio, the loan is transferred to the held-for-investment portfolio at the lower of cost or fair value on the date of transfer. These loans are subsequently assessed for impairment based on the Firm's allowance methodology. For a further discussion of the methodologies used in establishing the Firm's allowance for loan losses, see Note 15 on pages 276–279 of this Annual Report.

Loan modifications

The Firm seeks to modify certain loans in conjunction with its loss-mitigation activities. Through the modification, JPMorgan Chase grants one or more concessions to a borrower who is experiencing financial difficulty in order to minimize the Firm's economic loss, avoid foreclosure or repossession of the collateral, and to ultimately maximize payments received by the Firm from the borrower. The concessions granted vary by program and by borrower-specific characteristics, and may include interest rate reductions, term extensions, payment deferrals, principal forgiveness, or the acceptance of equity or other assets in lieu of payments.

Such modifications are accounted for and reported as troubled debt restructurings ("TDRs"). A loan that has been modified in a TDR is generally considered to be impaired until it matures, is repaid, or is otherwise liquidated, regardless of whether the borrower performs under the modified terms. In certain limited cases, the effective interest rate applicable to the modified loan is at or above the current market rate at the time of the restructuring. In such circumstances, and assuming that the loan subsequently performs under its modified terms and the Firm expects to collect all contractual principal and interest cash flows, the loan is disclosed as impaired and as a TDR only during the year of the modification; in subsequent years, the loan is not disclosed as an impaired loan or as a TDR so long as repayment of the restructured loan under its modified terms is reasonably assured.

Loans, except for credit card loans, modified in a TDR are generally placed on nonaccrual status, although in many cases such loans were already on nonaccrual status prior to modification. These loans may be returned to performing status (the accrual of interest is resumed) if the following criteria are met: (a) the borrower has performed under the modified terms for a minimum of six months and/or six payments, and (b) the Firm has an expectation that repayment of the modified loan is reasonably assured based on, for example, the borrower's debt capacity and level of future earnings, collateral values, LTV ratios, and other current market considerations. In certain limited and well-defined circumstances in which the loan is current at the modification date, such loans are not placed on nonaccrual status at the time of modification.

Because loans modified in TDRs are considered to be impaired, these loans are measured for impairment using the Firm's established asset-specific allowance methodology, which considers the expected re-default rates for the modified loans. A loan modified in a TDR remains subject to the asset-specific allowance methodology throughout its remaining life, regardless of whether the loan is performing and has been returned to accrual status. For further discussion of the methodology used to estimate the Firm's asset-specific allowance, see Note 15 on pages 276–279 of this Annual Report.

Foreclosed property

The Firm acquires property from borrowers through loan restructurings, workouts, and foreclosures. Property acquired may include real property (e.g., residential real estate, land, buildings, and fixtures) and commercial and personal property (e.g., aircraft, railcars, and ships).

The Firm recognizes foreclosed property upon receiving assets in satisfaction of a debt (e.g., by taking legal title or physical possession). For loans collateralized by real property, the Firm generally recognizes the asset received at foreclosure sale or upon the execution of a deed in lieu of foreclosure transaction with the borrower. Foreclosed assets are reported in other assets on the Consolidated Balance Sheets and initially recognized at fair value less costs to sell. Each quarter the fair value of the acquired property is reviewed and adjusted, if necessary, to the lower of cost or fair value. Subsequent adjustments to fair value are charged/credited to noninterest revenue. Operating expense, such as real estate taxes and maintenance, are charged to other expense.

Loan portfolio

The Firm's loan portfolio is divided into three portfolio segments, which are the same segments used by the Firm to determine the allowance for loan losses: Consumer, excluding credit card; Credit card; and Wholesale. Within each portfolio segment, the Firm monitors and assesses the credit risk in the following classes of loans, based on the risk characteristics of each loan class:

Consumer, excluding credit card[a]	Credit card	Wholesale[c]
Residential real estate – excluding PCI • Home equity – senior lien • Home equity – junior lien • Prime mortgage, including option ARMs • Subprime mortgage Other consumer loans • Auto[b] • Business banking[b] • Student and other Residential real estate – PCI • Home equity • Prime mortgage • Subprime mortgage • Option ARMs	• Credit card loans	• Commercial and industrial • Real estate • Financial institutions • Government agencies • Other

(a) Includes loans reported in CCB and residential real estate loans reported in the AM business segment and in Corporate/Private Equity.
(b) Includes certain business banking and auto dealer risk-rated loans that apply the wholesale methodology for determining the allowance for loan losses; these loans are managed by CCB, and therefore, for consistency in presentation, are included with the other consumer loan classes.
(c) Includes loans reported in CIB, CB and AM business segments and in Corporate/Private Equity.

The following tables summarize the Firm's loan balances by portfolio segment.

December 31, 2012 (in millions)	Consumer, excluding credit card	Credit card[a]	Wholesale	Total
Retained	$ 292,620	$ 127,993	$ 306,222	$ 726,835 [b]
Held-for-sale	–	–	4,406	4,406
At fair value	–	–	2,555	2,555
Total	$ 292,620	$ 127,993	$ 313,183	$ 733,796

December 31, 2011 (in millions)	Consumer, excluding credit card	Credit card[a]	Wholesale	Total
Retained	$ 308,427	$ 132,175	$ 278,395	$ 718,997 [b]
Held-for-sale	–	102	2,524	2,626
At fair value	–	–	2,097	2,097
Total	$ 308,427	$ 132,277	$ 283,016	$ 723,720

(a) Includes billed finance charges and fees net of an allowance for uncollectible amounts.
(b) Loans (other than PCI loans and those for which the fair value option has been elected) are presented net of unearned income, unamortized discounts and premiums, and net deferred loan costs of $2.5 billion and $2.7 billion at December 31, 2012 and 2011, respectively.

The following table provides information about the carrying value of retained loans purchased, sold and reclassified to held-for-sale during the periods indicated. These tables exclude loans recorded at fair value. On an ongoing basis, the Firm manages its exposure to credit risk. Selling loans is one way that the Firm reduces its credit exposures.

	2012				2011			
Years ended December 31, (in millions)	Consumer, excluding credit card	Credit card	Wholesale	Total	Consumer, excluding credit card	Credit card	Wholesale	Total
Purchases	$ 6,601	$ –	$ 827	$ 7,428	$ 7,525	$ –	$ 906	$ 8,431
Sales	1,852	–	3,423	5,275	1,384	–	3,289	4,673
Retained loans reclassified to held-for-sale	–	1,043	504	1,547	–	2,006	538	2,544

The following table provides information about gains/(losses) on loan sales by portfolio segment.

Year ended December 31, (in millions)	2012	2011	2010
Net gains/(losses) on sales of loans (including lower of cost or fair value adjustments)[a]			
Consumer, excluding credit card	$ 122	$ 131	$ 265
Credit card	(9)	(24)	(16)
Wholesale	180	121	215
Total net gains/(losses) on sales of loans (including lower of cost or fair value adjustments)[a]	$ 293	$ 228	$ 464

(a) Excludes sales related to loans accounted for at fair value.

Consumer, excluding credit card, loan portfolio

Consumer loans, excluding credit card loans, consist primarily of residential mortgages, home equity loans and lines of credit, auto loans, business banking loans, and student and other loans, with a primary focus on serving the prime consumer credit market. The portfolio also includes home equity loans secured by junior liens and mortgage loans with interest-only payment options to predominantly prime borrowers, as well as certain payment-option loans originated by Washington Mutual that may result in negative amortization.

The table below provides information about retained consumer loans, excluding credit card, by class.

December 31, (in millions)	2012	2011
Residential real estate – excluding PCI		
Home equity:		
Senior lien	**$ 19,385**	$ 21,765
Junior lien	**48,000**	56,035
Mortgages:		
Prime, including option ARMs	**76,256**	76,196
Subprime	**8,255**	9,664
Other consumer loans		
Auto	**49,913**	47,426
Business banking	**18,883**	17,652
Student and other	**12,191**	14,143
Residential real estate – PCI		
Home equity	**20,971**	22,697
Prime mortgage	**13,674**	15,180
Subprime mortgage	**4,626**	4,976
Option ARMs	**20,466**	22,693
Total retained loans	**$ 292,620**	$ 308,427

Delinquency rates are a primary credit quality indicator for consumer loans. Loans that are more than 30 days past due provide an early warning of borrowers who may be experiencing financial difficulties and/or who may be unable or unwilling to repay the loan. As the loan continues to age, it becomes more clear that the borrower is likely either unable or unwilling to pay. In the case of residential real estate loans, late-stage delinquencies (greater than 150 days past due) are a strong indicator of loans that will ultimately result in a foreclosure or similar liquidation transaction. In addition to delinquency rates, other credit quality indicators for consumer loans vary based on the class of loan, as follows:

- For residential real estate loans, including both non-PCI and PCI portfolios, the current estimated LTV ratio, or the combined LTV ratio in the case of junior lien loans, is an indicator of the potential loss severity in the event of default. Additionally, LTV or combined LTV can provide insight into a borrower's continued willingness to pay, as the delinquency rate of high-LTV loans tends to be greater than that for loans where the borrower has equity in the collateral. The geographic distribution of the loan collateral also provides insight as to the credit quality of the portfolio, as factors such as the regional economy, home price changes and specific events such as natural disasters, will affect credit quality. The borrower's current or "refreshed" FICO score is a secondary credit-quality indicator for certain loans, as FICO scores are an indication of the borrower's credit payment history. Thus, a loan to a borrower with a low FICO score (660 or below) is considered to be of higher risk than a loan to a borrower with a high FICO score. Further, a loan to a borrower with a high LTV ratio and a low FICO score is at greater risk of default than a loan to a borrower that has both a high LTV ratio and a high FICO score.
- For scored auto, scored business banking and student loans, geographic distribution is an indicator of the credit performance of the portfolio. Similar to residential real estate loans, geographic distribution provides insights into the portfolio performance based on regional economic activity and events.
- Risk-rated business banking and auto loans are similar to wholesale loans in that the primary credit quality indicators are the risk rating that is assigned to the loan and whether the loans are considered to be criticized and/or nonaccrual. Risk ratings are reviewed on a regular and ongoing basis by Credit and Risk Management and are adjusted as necessary for updated information about borrowers' ability to fulfill their obligations. For further information about risk-rated wholesale loan credit quality indicators, see page 271 of this Note.

Residential real estate – excluding PCI loans

The following table provides information by class for residential real estate – excluding retained PCI loans in the consumer, excluding credit card, portfolio segment.

The following factors should be considered in analyzing certain credit statistics applicable to the Firm's residential real estate – excluding PCI loans portfolio: (i) junior lien home equity loans may be fully charged off when the loan becomes 180 days past due, and the value of the collateral does not support the repayment of the loan, resulting in relatively high charge-off rates for this product class; and (ii) the lengthening of loss-mitigation timelines may result in higher delinquency rates for loans carried at the net realizable value of the collateral that remain on the Firm's Consolidated Balance Sheets.

Total retained loans	$ 19,385	$ 21,765	$ 48,000	$ 56,035

(a) Individual delinquency classifications included mortgage loans insured by U.S. government agencies as follows: current includes $3.8 billion and $3.0 billion; 30–149 days past due includes $2.3 billion and $2.3 billion; and 150 or more days past due includes $9.5 billion and $10.3 billion at December 31, 2012 and 2011, respectively.

(b) These balances, which are 90 days or more past due but insured by U.S. government agencies, are excluded from nonaccrual loans. In predominately all cases, 100% of the principal balance of the loans is insured and interest is guaranteed at a specified reimbursement rate subject to meeting agreed-upon servicing guidelines. These amounts are excluded from nonaccrual loans because reimbursement of insured and guaranteed amounts is proceeding normally. At December 31, 2012 and 2011, these balances included $6.8 billion and $7.0 billion, respectively, of loans that are no longer accruing interest because interest has been curtailed by the U.S. government agencies although, in predominantly all cases, 100% of the principal is still insured. For the remaining balance, interest is being accrued at the guaranteed reimbursement rate.

(c) At December 31, 2012, included $1.7 billion of loans recorded in accordance with regulatory guidance requiring loans discharged under Chapter 7 bankruptcy and not reaffirmed by the borrower to be reported as nonaccrual loans, regardless of their delinquency status. This $1.7 billion consisted of $450 million, $440 million, $500 million, and $357 million for home equity - senior lien, home equity - junior lien, prime mortgage, including option ARMs, and subprime mortgages, respectively. Certain of these loans have previously been reported as performing TDRs (e.g., loans that were previously modified under one of the Firm's loss mitigation programs and that have made at least six payments under the modified payment terms).

(d) Represents the aggregate unpaid principal balance of loans divided by the estimated current property value. Current property values are estimated, at a minimum, quarterly, based on home valuation models using nationally recognized home price index valuation estimates incorporating actual data to the extent available and forecasted data where actual data is not available. These property values do not represent actual appraised loan level collateral values; as such, the resulting ratios are necessarily imprecise and should be viewed as estimates.

(e) Junior lien represents combined LTV, which considers all available lien positions related to the property. All other products are presented without consideration of subordinate liens on the property.

(f) Refreshed FICO scores represent each borrower's most recent credit score, which is obtained by the Firm on at least a quarterly basis.

(g) At both December 31, 2012 and 2011, included mortgage loans insured by U.S. government agencies of $15.6 billion.

(h) Includes $1.2 billion of performing junior liens at December 31, 2012, that are subordinate to senior liens that are 90 days or more past due; such junior liens are now being reported as nonaccrual loans based upon regulatory guidance issued in the first quarter of 2012. Of the total, $1.1 billion were current at December 31, 2012. Prior periods have not been restated.

(i) At December 31, 2012 and 2011, excluded mortgage loans insured by U.S. government agencies of $11.8 billion and $12.6 billion, respectively. These amounts were excluded as reimbursement of insured amounts is proceeding normally.

866	909	**203**	246	**3,148**	3,599	
29,924	30,165	**3,188**	3,738	**48,256**	51,676	
$ 76,256	$ 76,196	**$ 8,255**	$ 9,664	**$ 151,896**	$ 163,660	

The following tables represent the Firm's delinquency statistics for junior lien home equity loans as of December 31, 2012 and 2011.

December 31, 2012 (in millions, except ratios)	Delinquencies			Total loans	Total 30+ day delinquency rate
	30–89 days past due	90–149 days past due	150+ days past due		
HELOCs:[a]					
Within the revolving period[b]	**$ 514**	**$ 196**	**$ 185**	**$ 40,794**	**2.19%**
Beyond the revolving period	**48**	**19**	**27**	**2,127**	**4.42**
HELOANs	**125**	**58**	**23**	**5,079**	**4.06**
Total	**$ 687**	**$ 273**	**$ 235**	**$ 48,000**	**2.49%**

December 31, 2011 (in millions, except ratios)	Delinquencies			Total loans	Total 30+ day delinquency rate
	30–89 days past due	90–149 days past due	150+ days past due		
HELOCs:[a]					
Within the revolving period[b]	$ 606	$ 314	$ 173	$ 47,760	2.29%
Beyond the revolving period	45	19	15	1,636	4.83
HELOANs	188	100	42	6,639	4.97
Total	$ 839	$ 433	$ 230	$ 56,035	2.68%

(a) These HELOCs are predominantly revolving loans for a 10-year period, after which time the HELOC converts to a loan with a 20-year amortization period, but also include HELOCs originated by Washington Mutual that require interest-only payments beyond the revolving period.

(b) The Firm manages the risk of HELOCs during their revolving period by closing or reducing the undrawn line to the extent permitted by law when borrowers are experiencing financial difficulty or when the collateral does not support the loan amount.

Home equity lines of credit ("HELOCs") within the required amortization period and home equity loans ("HELOANs") have higher delinquency rates than do HELOCs within the revolving period. That is primarily because the fully-amortizing payment required for those products is higher than the minimum payment options available for HELOCs within the revolving period. The higher delinquency rates associated with amortizing HELOCs and HELOANs are factored into the loss estimates produced by the Firm's delinquency roll-rate methodology, which estimates defaults based on the current delinquency status of a portfolio.

Impaired loans

At December 31, 2012, the Firm reported, in accordance with regulatory guidance, $1.6 billion of residential real estate loans that have been discharged under Chapter 7 bankruptcy and not reaffirmed by the borrower ("Chapter 7 loans") as collateral-dependent nonaccrual TDRs, regardless of their delinquency status. Pursuant to that guidance, these Chapter 7 loans were charged off to the net realizable value of the collateral, resulting in $747 million of charge-offs for the year ended December 31, 2012. Prior periods were not restated for this policy change. Prior to September 30, 2012, the Firm's policy was to charge down to net realizable value, and also to place on nonaccrual status, loans to borrowers who had filed for bankruptcy when such loans became 60 days past due; however, the Firm did not previously report Chapter 7 loans as TDRs unless otherwise modified under one of the Firm's loss mitigation programs.

The table below sets forth information about the Firm's residential real estate impaired loans, excluding PCI loans. These loans are considered to be impaired as they have been modified in a TDR. All impaired loans are evaluated for an asset-specific allowance as described in Note 15 on pages 276–279 of this Annual Report.

	Home equity				Mortgages				Total residential real estate – excluding PCI

Impaired loans on nonaccrual status[f]	**607**	77	**599**	159	**1,888**	922	**1,308**	832	**4,402**	1,990

(a) Represents collateral-dependent residential mortgage loans, including Chapter 7 loans, that are charged off to the fair value of the underlying collateral less cost to sell.

(b) At December 31, 2012 and 2011, $7.5 billion and $4.3 billion, respectively, of loans permanently modified subsequent to repurchase from Government National Mortgage Association ("Ginnie Mae") in accordance with the standards of the appropriate government agency (i.e., Federal Housing Administration ("FHA"), U.S. Department of Veterans Affairs ("VA"), Rural Housing Services ("RHS")) are not included in the table above. When such loans perform subsequent to modification in accordance with Ginnie Mae guidelines, they are generally sold back into Ginnie Mae loan pools. Modified loans that do not re-perform become subject to foreclosure.

(c) At December 31, 2012, included $1.6 billion of Chapter 7 loans, consisting of $450 million of senior lien home equity loans, $448 million of junior lien home equity loans, $465 million of prime including option ARMs, and $245 million of subprime mortgages. Certain of these loans were previously reported as nonaccrual loans (e.g., based upon the delinquency status of the loan).

(d) Represents the contractual amount of principal owed at December 31, 2012 and 2011. The unpaid principal balance differs from the impaired loan balances due to various factors, including charge-offs, net deferred loan fees or costs, and unamortized discounts or premiums on purchased loans.

(e) At December 31, 2012, included $2.7 billion of Chapter 7 loans, consisting of $596 million of senior lien home equity loans, $990 million of junior lien home equity loans, $713 million of prime, including option ARMs, and $379 million of subprime mortgages.

(f) As of December 31, 2012 and 2011, nonaccrual loans included $2.9 billion and $886 million, respectively, of TDRs for which the borrowers were less than 90 days past due. For additional information about loans modified in a TDR that are on nonaccrual status refer to the Loan accounting framework on pages 250–252 of this Note.

The following table presents average impaired loans and the related interest income reported by the Firm.

	Average impaired loans			Interest income on impaired loans[a]			Interest income on impaired loans on a cash basis[a]		
Year ended December 31, (in millions)	**2012**	2011	2010	**2012**	2011	2010	**2012**	2011	2010
Home equity									
Senior lien	**$ 610**	$ 287	$ 207	**$ 27**	$ 10	$ 15	**$ 12**	$ 1	$ 1
Junior lien	**848**	521	266	**42**	18	10	**16**	2	1
Mortgages									
Prime, including option ARMs	**5,989**	3,859	1,530	**238**	147	70	**28**	14	14
Subprime	**3,494**	3,083	2,539	**183**	148	121	**31**	16	19
Total residential real estate – excluding PCI	**$ 10,941**	$ 7,750	$ 4,542	**$ 490**	$ 323	$ 216	**$ 87**	$ 33	$ 35

(a) Generally, interest income on loans modified in TDRs is recognized on a cash basis until such time as the borrower has made a minimum of six payments under the new terms.

Loan modifications

The global settlement, which became effective on April 5, 2012, required the Firm to, among other things, provide approximately $500 million of refinancing relief to certain "underwater" borrowers under the Refi Program and approximately $3.7 billion of additional relief to certain borrowers under the Consumer Relief Program, including reductions of principal on first and second liens.

The purpose of the Refi Program was to allow eligible borrowers who were current on their mortgage loans to refinance their existing loans; such borrowers were otherwise unable to do so because they had no equity or, in many cases, negative equity in their homes. Under the Refi Program, the interest rate on each refinanced loan could have been reduced either for the remaining life of the loan or for five years. The Firm reduced the interest rates on loans that it refinanced under the Refi Program for the remaining lives of those loans. The refinancings generally did not result in term extensions and accordingly, in that regard, were more similar to loan modifications than to traditional refinancings.

The Firm continues to modify first and second lien loans under the Consumer Relief Program. These loan modifications are primarily expected to be executed under the terms of either the U.S. Treasury's Making Home Affordable ("MHA") programs (e.g., the Home Affordable Modification Program ("HAMP"), the Second Lien Modification Program ("2MP")) or one of the Firm's proprietary modification programs. For further information on the global settlement, see Global settlement on servicing and origination of mortgages in Note 2 on page 195 of this Annual Report.

Modifications of residential real estate loans, excluding PCI loans, are generally accounted for and reported as TDRs. There were no additional commitments to lend to borrowers whose residential real estate loans, excluding PCI loans, have been modified in TDRs.

TDR activity rollforward

The following table reconciles the beginning and ending balances of residential real estate loans, excluding PCI loans, modified in TDRs for the periods presented.

Year ended December 31, (in millions)	Home equity				Mortgages				Total residential real estate – excluding PCI	
	Senior lien		Junior lien		Prime, including option ARMs		Subprime			
	2012	2011	**2012**	2011	**2012**	2011	**2012**	2011	**2012**	2011
Beginning balance of TDRs	**$ 335**	$ 226	**$ 657**	$ 283	**$ 4,877**	$ 2,084	**$ 3,219**	$ 2,751	**$ 9,088**	$ 5,344

Ending balance of TDRs	**$ 1,092**	$ 335	**$ 1,223**	$ 657	**$ 7,118**	$ 4,877	**$ 3,812**	$ 3,219	**$ 13,245**	$ 9,088
Permanent modifications[a]	**$ 1,058**	$ 285	**$ 1,218**	$ 634	**$ 6,834**	$ 4,601	**$ 3,661**	$ 3,029	**$ 12,771**	$ 8,549
Trial modifications	**$ 34**	$ 50	**$ 5**	$ 23	**$ 284**	$ 276	**$ 151**	$ 190	**$ 474**	$ 539

(a) For the year ended December 31, 2012, included $1.6 billion of Chapter 7 loans consisting of $450 million of senior lien home equity loans, $448 million of junior lien home equity loans, $465 million of prime, including option ARMs, and $245 million of subprime mortgages. Certain of these loans were previously reported as nonaccrual loans (e.g., based upon the delinquency status of the loan).

(b) Includes charge-offs on unsuccessful trial modifications.

Nature and extent of modifications

MHA, as well as the Firm's proprietary modification programs, generally provide various concessions to financially troubled borrowers including, but not limited to, interest rate reductions, term or payment extensions and deferral of principal and/or interest payments that would otherwise have been required under the terms of the original agreement.

The following table provides information about how residential real estate loans, excluding PCI loans, were modified under the Firm's loss mitigation programs during the periods presented. This table excludes Chapter 7 loans where the sole concession granted is the discharge of debt. At December 31, 2012, there were approximately 37,300 of such Chapter 7 loans, consisting of approximately 9,000 senior lien home equity loans, 20,700 junior lien home equity loans, 3,800 prime mortgage, including option ARMs, and 3,800 subprime mortgages.

	Home equity				Mortgages				Total residential real estate - excluding PCI	
	Senior lien		Junior lien		Prime, including option ARMs		Subprime			
Year ended December 31,	**2012**	2011	**2012**	2011	**2012**	2011	**2012**	2011	**2012**	2011
Number of loans approved for a trial modification, but not permanently modified	**410**	654	**528**	778	**1,101**	898	**1,168**	1,730	**3,207**	4,060
Number of loans permanently modified	**4,385**	1,006	**7,430**	9,142	**9,043**	9,579	**9,964**	4,972	**30,822**	24,699
Concession granted:[(a)]										
Interest rate reduction	**81%**	76%	**89%**	95%	**75%**	54%	**70%**	79%	**77%**	75%
Term or payment extension	**49**	86	**76**	81	**61**	71	**45**	74	**57**	76
Principal and/or interest deferred	**8**	12	**19**	22	**21**	18	**12**	19	**16**	19

Other[(b)]	**3**	27	**5**	7	**31**	68	**8**	26	**13**	35

(a) As a percentage of the number of loans modified. The sum of the percentages exceeds 100% because predominantly all of the modifications include more than one type of concession.

(b) Represents variable interest rate to fixed interest rate modifications.

Financial effects of modifications and redefaults

The following table provides information about the financial effects of the various concessions granted in modifications of residential real estate loans, excluding PCI, under the Firm's loss mitigation programs and about redefaults of certain loans modified in TDRs for the periods presented. This table excludes Chapter 7 loans where the sole concession granted is the discharge of debt.

Year ended December 31, (in millions, except weighted-average data and number of loans)	Home equity				Mortgages				Total residential real estate – excluding PCI	
	Senior lien		Junior lien		Prime, including option ARMs		Subprime			
	2012	2011	**2012**	2011	**2012**	2011	**2012**	2011	**2012**	2011

Principal forgiven	**23**	1	**58**	62	**318**	24	**371**	55	**770**	142
Number of loans that redefaulted within one year of permanent modification[a]	**374**	201	**1,436**	1,170	**920**	1,041	**1,426**	1,742	**4,156**	4,154
Balance of loans that redefaulted within one year of permanent modification[a]	**$ 30**	$ 17	**$ 46**	$ 47	**$ 255**	$ 319	**$ 156**	$ 245	**$ 487**	$ 628

(a) Represents loans permanently modified in TDRs that experienced a payment default in the period presented, and for which the payment default occurred within one year of the modification. The dollar amounts presented represent the balance of such loans at the end of the reporting period in which such loans defaulted. For residential real estate loans modified in TDRs, payment default is deemed to occur when the loan becomes two contractual payments past due. In the event that a modified loan redefaults, it is probable that the loan will ultimately be liquidated through foreclosure or another similar type of liquidation transaction. Redefaults of loans modified within the last 12 months may not be representative of ultimate redefault levels.

Approximately 85% of the trial modifications approved on or after July 1, 2010 (the approximate date on which substantial revisions were made to the HAMP program), that are seasoned more than six months have been successfully converted to permanent modifications.

The primary performance indicator for TDRs is the rate at which permanently modified loans redefault. At December 31, 2012, the cumulative redefault rates of residential real estate loans that have been modified under the Firm's loss mitigation programs, excluding PCI loans, based upon permanent modifications that were completed after October 1, 2009, and that are seasoned more than six months, are 25% for senior lien home equity, 20% for junior lien home equity, 14% for prime mortgages including option ARMs, and 24% for subprime mortgages.

Default rates of Chapter 7 loans vary significantly based on the delinquency status of the loan and overall economic conditions at the time of discharge. Default rates for Chapter 7 residential real estate loans that were less than 60 days past due at the time of discharge have ranged between approximately 10% and 40% in recent years based on the economic conditions at the time of discharge. At December 31, 2012, Chapter 7 residential real estate loans included approximately 19% of senior lien home equity, 12% of junior lien home equity, 45% of prime mortgages, including option ARMs, and 32% of subprime mortgages that were 30 days or more past due.

At December 31, 2012, the weighted-average estimated remaining lives of residential real estate loans, excluding PCI loans, permanently modified in TDRs were 6 years for senior lien home equity, 7 years for junior lien home equity, 10 years for prime mortgage, including option ARMs and 8 years for subprime mortgage. The estimated remaining lives of these loans reflect estimated prepayments, both voluntary and involuntary (i.e., foreclosures and other forced liquidations).

Other consumer loans

The table below provides information for other consumer retained loan classes, including auto, business banking and student loans.

December 31, (in millions, except ratios)	Auto		Business banking		Student and other		Total other consumer

Total retained loans	$49,913	$47,426	$18,883	$ 17,652	$12,191	$ 14,143	$ 80,987	$ 79,221
Loans by risk ratings[c]								
Noncriticized	$ 8,882	$ 6,775	$13,336	$ 11,749	NA	NA	$ 22,218	$ 18,524
Criticized performing	130	166	713	817	NA	NA	843	983
Criticized nonaccrual	4	3	386	524	NA	NA	390	527

(a) Individual delinquency classifications included loans insured by U.S. government agencies under the Federal Family Education Loan Program ("FFELP") as follows: current includes $5.4 billion and $7.0 billion; 30-119 days past due includes $466 million and $542 million; and 120 or more days past due includes $428 million and $447 million at December 31, 2012 and 2011, respectively.

(b) These amounts represent student loans, which are insured by U.S. government agencies under the FFELP. These amounts were accruing as reimbursement of insured amounts is proceeding normally.

(c) For risk-rated business banking and auto loans, the primary credit quality indicator is the risk rating of the loan, including whether the loans are considered to be criticized and/or nonaccrual.

(d) At December 31, 2012, included $51 million of Chapter 7 auto loans.

(e) December 31, 2012 and 2011, excluded loans 30 days or more past due and still accruing, which are insured by U.S. government agencies under the FFELP, of $894 million and $989 million, respectively. These amounts were excluded as reimbursement of insured amounts is proceeding normally.

Other consumer impaired loans and loan modifications

The table below sets forth information about the Firm's other consumer impaired loans, including risk-rated business banking and auto loans that have been placed on nonaccrual status, and loans that have been modified in TDRs.

December 31, (in millions)	Auto		Business banking		Total other consumer[e]	
	2012	2011	**2012**	2011	**2012**	2011
Impaired loans						
With an allowance	**$ 78**	$ 88	**$ 543**	$ 713	**$ 621**	$ 801
Without an allowance[a]	**72**	3	**—**	—	**72**	3
Total impaired loans[b]	**$ 150**	$ 91	**$ 543**	$ 713	**$ 693**	$ 804
Allowance for loan losses related to impaired loans	**$ 12**	$ 12	**$ 126**	$ 225	**$ 138**	$ 237
Unpaid principal balance of impaired loans[c][d]	**259**	126	**624**	822	**883**	948
Impaired loans on nonaccrual status[b]	**109**	41	**394**	551	**503**	592

(a) When discounted cash flows, collateral value or market price equals or exceeds the recorded investment in the loan, the loan does not require an allowance. This typically occurs when the impaired loans have been partially charged off and/or there have been interest payments received and applied to the loan balance.
(b) At December 31, 2012, included $72 million of Chapter 7 auto loans. Certain of these loans were previously reported as nonaccrual loans (e.g., based upon the delinquency status of the loan).
(c) At December 31, 2012, included $146 million of Chapter 7 auto loans.
(d) Represents the contractual amount of principal owed at December 31, 2012 and 2011. The unpaid principal balance differs from the impaired loan balances due to various factors, including charge-offs; interest payments received and applied to the principal balance; net deferred loan fees or costs; and unamortized discounts or premiums on purchased loans.
(e) There were no impaired student and other loans at December 31, 2012 and 2011.

The following table presents average impaired loans for the periods presented.

Year ended December 31, (in millions)	Average impaired loans[b]		
	2012	2011	2010
Auto	**$ 111**	$ 92	$ 120
Business banking	**622**	760	682
Total other consumer[a]	**$ 733**	$ 852	$ 802

(a) There were no impaired student and other loans for the years ended 2012, 2011 and 2010.
(b) The related interest income on impaired loans, including those on a cash basis, was not material for the years ended 2012, 2011 and 2010.

Loan modifications

The following table provides information about the Firm's other consumer loans modified in TDRs. All of these TDRs are reported as impaired loans in the tables above.

December 31, (in millions)	Auto		Business banking		Total other consumer[d]	
	2012	2011	**2012**	2011	**2012**	2011
Loans modified in troubled debt restructurings[a][b][c]	**$ 150**	$ 88	**$ 352**	$ 415	**$ 502**	$ 503
TDRs on nonaccrual status	**109**	38	**203**	253	**312**	291

(a) These modifications generally provided interest rate concessions to the borrower or deferral of principal repayments.
(b) Additional commitments to lend to borrowers whose loans have been modified in TDRs as of December 31, 2012 and 2011, were immaterial.
(c) At December 31, 2012, included $72 million of Chapter 7 auto loans. Certain of these loans were previously reported as nonaccrual loans (e.g., based upon the delinquency status of the loan).
(d) There were no student and other loans modified in TDRs at December 31, 2012 and 2011.

TDR activity rollforward

The following table reconciles the beginning and ending balances of other consumer loans modified in TDRs for the periods presented.

Year ended December 31, (in millions)	Auto		Business banking		Total other consumer	
	2012	2011	**2012**	2011	**2012**	2011
Beginning balance of TDRs	**$ 88**	$ 91	**$ 415**	$ 395	**$ 503**	$ 486
New TDRs[a]	**145**	54	**104**	195	**249**	249
Charge-offs post-modification	**(9)**	(5)	**(9)**	(11)	**(18)**	(16)
Foreclosures and other liquidations	**–**	–	**(1)**	(3)	**(1)**	(3)
Principal payments and other	**(74)**	(52)	**(157)**	(161)	**(231)**	(213)
Ending balance of TDRs	**$ 150**	$ 88	**$ 352**	$ 415	**$ 502**	$ 503

(a) At December 31, 2012, included $72 million of Chapter 7 auto loans. Certain of these loans were previously reported as nonaccrual loans (e.g., based upon the delinquency status of the loan).

Financial effects of modifications and redefaults

For auto loans, TDRs typically occur in connection with the bankruptcy of the borrower. In these cases, the loan is modified with a revised repayment plan that typically incorporates interest rate reductions and, to a lesser extent, principal forgiveness. Beginning September 30, 2012, Chapter 7 auto loans are also considered TDRs.

For business banking loans, concessions are dependent on individual borrower circumstances and can be of a short-term nature for borrowers who need temporary relief or longer term for borrowers experiencing more fundamental financial difficulties. Concessions are predominantly term or payment extensions, but also may include interest rate reductions.

The balance of business banking loans modified in TDRs that experienced a payment default, and for which the payment default occurred within one year of the modification, was $42 million and $80 million, during the years ended December 31, 2012 and 2011, respectively. The balance of auto loans modified in TDRs that experienced a payment default, and for which the payment default occurred within one year of the modification, was $46 million during the year ended December 31, 2012. The corresponding amount for the year ended December 31, 2011 was insignificant. A payment default is deemed to occur as follows: (1) for scored auto and business banking loans, when the loan is two payments past due; and (2) for risk-rated business banking loans and auto loans, when the borrower has not made a loan payment by its scheduled due date after giving effect to the contractual grace period, if any.

The following table provides information about the financial effects of the various concessions granted in modifications of other consumer loans for the periods presented.

	Auto		Business banking	
Year ended December 31,	**2012**	2011	**2012**	2011
Weighted-average interest rate of loans with interest rate reductions – before TDR	**12.64%**	12.45%	**7.33%**	7.55%
Weighted-average interest rate of loans with interest rate reductions – after TDR	**4.83**	5.70	**5.49**	5.52
Weighted-average remaining contractual term (in years) of loans with term or payment extensions – before TDR	**NM**	NM	**1.4**	1.4
Weighted-average remaining contractual term (in years) of loans with term or payment extensions – after TDR	**NM**	NM	**2.4**	2.6

Purchased credit-impaired loans

PCI loans are initially recorded at fair value at acquisition; PCI loans acquired in the same fiscal quarter may be aggregated into one or more pools, provided that the loans have common risk characteristics. A pool is then accounted for as a single asset with a single composite interest rate and an aggregate expectation of cash flows. With respect to the Washington Mutual transaction, all of the consumer loans were aggregated into pools of loans with common risk characteristics.

On a quarterly basis, the Firm estimates the total cash flows (both principal and interest) expected to be collected over the remaining life of each pool. These estimates incorporate assumptions regarding default rates, loss severities, the amounts and timing of prepayments and other factors that reflect then-current market conditions. Probable decreases in expected cash flows (i.e., increased credit losses) trigger the recognition of impairment, which is then measured as the present value of the expected principal loss plus any related foregone interest cash flows, discounted at the pool's effective interest rate. Impairments are recognized through the provision for credit losses and an increase in the allowance for loan losses. Probable and significant increases in expected cash flows (e.g., decreased credit losses, the net benefit of modifications) would first reverse any previously recorded allowance for loan losses with any remaining increases recognized prospectively as a yield adjustment over the remaining estimated lives of the underlying loans. The impacts of (i) prepayments, (ii) changes in variable interest rates, and (iii) any other changes in the timing of expected cash flows are recognized prospectively as adjustments to interest income. Disposals of loans — which may include sales of loans, receipt of payments in full by the borrower, or foreclosure — result in removal of the loans from the PCI portfolio.

The Firm continues to modify certain PCI loans. The impact of these modifications is incorporated into the Firm's quarterly assessment of whether a probable and significant change in expected cash flows has occurred, and the loans continue to be accounted for and reported as PCI loans. In evaluating the effect of modifications on expected cash flows, the Firm incorporates the effect of any foregone interest and also considers the potential for redefault. The Firm develops product-specific probability of default estimates, which are used to compute expected credit losses. In developing these probabilities of default, the Firm considers the relationship between the credit quality characteristics of the underlying loans and certain assumptions about home prices and unemployment based upon industry-wide data. The Firm also considers its own historical loss experience to date based on actual redefaulted PCI modified loans.

The excess of cash flows expected to be collected over the carrying value of the underlying loans is referred to as the accretable yield. This amount is not reported on the Firm's Consolidated Balance Sheets but is accreted into interest income at a level rate of return over the remaining estimated lives of the underlying pools of loans.

If the timing and/or amounts of expected cash flows on PCI loans were determined not to be reasonably estimable, no interest would be accreted and the loans would be reported as nonaccrual loans; however, since the timing and amounts of expected cash flows for the Firm's PCI consumer loans are reasonably estimable, interest is being accreted and the loans are being reported as performing loans.

Charge-offs are not recorded on PCI loans until actual losses exceed the estimated losses that were recorded as purchase accounting adjustments at acquisition date. Actual losses in excess of the purchase accounting adjustment are charged off against the PCI allowance for credit losses. To date, no charge-offs have been recorded for these consumer loans.

The PCI portfolio affects the Firm's results of operations primarily through: (i) contribution to net interest margin; (ii) expense related to defaults and servicing resulting from the liquidation of the loans; and (iii) any provision for loan losses. The PCI loans acquired in the Washington Mutual transaction were funded based on the interest rate characteristics of the loans. For example, variable-rate loans were funded with variable-rate liabilities and fixed-rate loans were funded with fixed-rate liabilities with a similar maturity profile. A net spread will be earned on the declining balance of the portfolio, which is estimated as of December 31, 2012, to have a remaining weighted-average life of 8 years.

Residential real estate – PCI loans

The table below sets forth information about the Firm's consumer, excluding credit card, PCI loans.

December 31, (in millions, except ratios)	Home equity		Prime mortgage		Subprime mortgage		Option ARMs		Total PCI	
	2012	2011	**2012**	2011	**2012**	2011	**2012**	2011	**2012**	2011

All other	**2,699**	3,054	**2,250**	2,572	**2,106**	2,347	**4,067**	4,624	**11,122**	12,597
Total unpaid principal balance	**$22,343**	$25,064	**$13,884**	$16,060	**$ 6,326**	$ 7,229	**$22,591**	$26,139	**$65,144**	$74,492

(a) Carrying value includes the effect of fair value adjustments that were applied to the consumer PCI portfolio at the date of acquisition.

(b) Management concluded as part of the Firm's regular assessment of the PCI loan pools that it was probable that higher expected credit losses would result in a decrease in expected cash flows. As a result, an allowance for loan losses for impairment of these pools has been recognized.

(c) Represents the aggregate unpaid principal balance of loans divided by the estimated current property value. Current property values are estimated, at a minimum, quarterly, based on home valuation models using nationally recognized home price index valuation estimates incorporating actual data to the extent available and forecasted data where actual data is not available. These property values do not represent actual appraised loan level collateral values; as such, the resulting ratios are necessarily imprecise and should be viewed as estimates. Current estimated combined LTV for junior lien home equity loans considers all available lien positions related to the property.

(d) Refreshed FICO scores, which the Firm obtains at least quarterly, represent each borrower's most recent credit score.

Approximately 21% of the PCI home equity portfolio are senior lien loans; the remaining balance are junior lien HELOANs or HELOCs. The following tables set forth delinquency statistics for PCI junior lien home equity loans based on unpaid principal balance as of December 31, 2012 and 2011.

December 31, 2012 (in millions, except ratios)	Delinquencies			Total loans	Total 30+ day delinquency rate
	30–89 days past due	90–149 days past due	150+ days past due		
HELOCs:[a]					
Within the revolving period[b]	**$ 361**	**$ 175**	**$ 591**	**$ 15,915**	**7.08%**
Beyond the revolving period[c]	**30**	**13**	**20**	**666**	**9.46**
HELOANs	**37**	**18**	**44**	**1,085**	**9.12**
Total	**$ 428**	**$ 206**	**$ 655**	**$ 17,666**	**7.30%**

December 31, 2011 (in millions, except ratios)	Delinquencies			Total loans	Total 30+ day delinquency rate
	30–89 days past due	90–149 days past due	150+ days past due		
HELOCs:[a]					
Within the revolving period[b]	$ 500	$ 296	$ 543	$ 18,246	7.34%
Beyond the revolving period[c]	16	11	5	400	8.00
HELOANs	53	29	44	1,327	9.50
Total	$ 569	$ 336	$ 592	$ 19,973	7.50%

(a) In general, these HELOCs are revolving loans for a 10-year period, after which time the HELOC converts to an interest-only loan with a balloon payment at the end of the loan's term.
(b) Substantially all undrawn HELOCs within the revolving period have been closed.
(c) Predominantly all of these loans have been modified into fixed-rate amortizing loans.

The table below sets forth the accretable yield activity for the Firm's PCI consumer loans for the years ended December 31, 2012, 2011 and 2010, and represents the Firm's estimate of gross interest income expected to be earned over the remaining life of the PCI loan portfolios. The table excludes the cost to fund the PCI portfolios, and therefore the accretable yield does not represent net interest income expected to be earned on these portfolios.

Year ended December 31, (in millions, except ratios)	Total PCI		
	2012	2011	2010
Beginning balance	**$ 19,072**	$ 19,097	$ 25,544
Accretion into interest income	**(2,491)**	(2,767)	(3,232)
Changes in interest rates on variable-rate loans	**(449)**	(573)	(819)
Other changes in expected cash flows[a]	**2,325**	3,315	(2,396)
Balance at December 31	**$ 18,457**	$ 19,072	$ 19,097
Accretable yield percentage	**4.38%**	4.33%	4.35%

(a) Other changes in expected cash flows may vary from period to period as the Firm continues to refine its cash flow model and periodically updates model assumptions. For the years ended December 31, 2012 and 2011, other changes in expected cash flows were principally driven by the impact of modifications, but also related to changes in prepayment assumptions. For the year ended December 31, 2010, other changes in expected cash flows were principally driven by changes in prepayment assumptions, as well as reclassification to the nonaccretable difference. Changes to prepayment assumptions change the expected remaining life of the portfolio, which drives changes in expected future interest cash collections. Such changes do not have a significant impact on the accretable yield percentage.

The factors that most significantly affect estimates of gross cash flows expected to be collected, and accordingly the accretable yield balance, include: (i) changes in the benchmark interest rate indices for variable-rate products such as option ARM and home equity loans; and (ii) changes in prepayment assumptions.

From the date of acquisition through 2011, the decrease in the accretable yield percentage has been primarily related to a decrease in interest rates on variable-rate loans and, to a lesser extent, extended loan liquidation periods. More recently, however, the Firm has observed loan liquidation periods start to shorten, thus increasing the accretable yield percentage. Certain events, such as extended or shortened loan liquidation periods, affect the timing of expected cash flows and the accretable yield percentage, but not the amount of cash expected to be received (i.e., the accretable yield balance). While extended loan liquidation periods reduce the accretable yield percentage (because the same accretable yield balance is recognized against a higher-than-expected loan balance over a longer-than-expected period of time), shortened loan liquidation periods would have the opposite effect.

Credit card loan portfolio

The Credit card portfolio segment includes credit card loans originated and purchased by the Firm. Delinquency rates are the primary credit quality indicator for credit card loans as they provide an early warning that borrowers may be experiencing difficulties (30 days past due), as well as information on those borrowers that have been delinquent for a longer period of time (90 days past due). In addition to delinquency rates, the geographic distribution of the loans provides insight as to the credit quality of the portfolio based on the regional economy.

While the borrower's credit score is another general indicator of credit quality, because the borrower's credit score tends to be a lagging indicator, the Firm does not view credit scores as a primary indicator of credit quality. However, the distribution of such scores provides a general indicator of credit quality trends within the portfolio. Refreshed FICO score information for a statistically significant random sample of the credit card portfolio is indicated in the table below; FICO is considered to be the industry benchmark for credit scores.

The Firm generally originates new card accounts to prime consumer borrowers. However, certain cardholders' FICO scores may decrease over time, depending on the performance of the cardholder and changes in credit score technology.

The table below sets forth information about the Firm's credit card loans.

As of or for the year ended December 31, (in millions, except ratios)	2012	2011
Net charge-offs	$ 4,944	$ 6,925
% of net charge-offs to retained loans	3.95%	5.44%
Loan delinquency		
Current and less than 30 days past due and still accruing	$ 125,309	$ 128,464
30–89 days past due and still accruing	1,381	1,808
90 or more days past due and still accruing	1,302	1,902
Nonaccrual loans	1	1
Total retained credit card loans	$ 127,993	$ 132,175
Loan delinquency ratios		
% of 30+ days past due to total retained loans	2.10%	2.81%
% of 90+ days past due to total retained loans	1.02	1.44
Credit card loans by geographic region		
California	$ 17,115	$ 17,598
New York	10,379	10,594
Texas	10,209	10,239
Illinois	7,399	7,548
Florida	7,231	7,583
New Jersey	5,503	5,604
Ohio	4,956	5,202
Pennsylvania	4,549	4,779
Michigan	3,745	3,994
Virginia	3,193	3,298
All other	53,714	55,736
Total retained credit card loans	$ 127,993	$ 132,175
Percentage of portfolio based on carrying value with estimated refreshed FICO scores[(a)]		
Equal to or greater than 660	84.1%	81.4%
Less than 660	15.9	18.6

(a) Refreshed FICO scores are estimated based on a statistically significant random sample of credit card accounts in the credit card portfolio for the periods shown. The Firm obtains refreshed FICO scores at least quarterly.

Credit card impaired loans and loan modifications

The table below sets forth information about the Firm's impaired credit card loans. All of these loans are considered to be impaired as they have been modified in TDRs.

December 31, (in millions)	2012	2011
Impaired credit card loans with an allowance[a][b]		
Credit card loans with modified payment terms[c]	$ 4,189	$ 6,075
Modified credit card loans that have reverted to pre-modification payment terms[d]	573	1,139
Total impaired credit card loans	$ 4,762	$ 7,214
Allowance for loan losses related to impaired credit card loans	$ 1,681	$ 2,727

(a) The carrying value and the unpaid principal balance are the same for credit card impaired loans.
(b) There were no impaired loans without an allowance.
(c) Represents credit card loans outstanding to borrowers enrolled in a credit card modification program as of the date presented.
(d) Represents credit card loans that were modified in TDRs but that have subsequently reverted back to the loans' pre-modification payment terms. At December 31, 2012 and 2011, $341 million and $762 million, respectively, of loans have reverted back to the pre-modification payment terms of the loans due to noncompliance with the terms of the modified loans. The remaining $232 million and $377 million at December 31, 2012 and 2011, respectively, of these loans are to borrowers who have successfully completed a short-term modification program. The Firm continues to report these loans as TDRs since the borrowers' credit lines remain closed.

The following table presents average balances of impaired credit card loans and interest income recognized on those loans.

Year ended December 31, (in millions)	2012	2011	2010
Average impaired credit card loans	$ 5,893	$ 8,499	$10,730
Interest income on impaired credit card loans	308	463	605

Loan modifications

JPMorgan Chase may offer one of a number of loan modification programs to credit card borrowers who are experiencing financial difficulty. The Firm has short-term programs for borrowers who may be in need of temporary relief, and long-term programs for borrowers who are experiencing more fundamental financial difficulties. Most of the credit card loans have been modified under long-term programs. Modifications under long-term programs involve placing the customer on a fixed payment plan, generally for 60 months. Modifications under all short- and long-term programs typically include reducing the interest rate on the credit card. Certain borrowers enrolled in a short-term modification program may be given the option to re-enroll in a long-term program. Substantially all modifications are considered to be TDRs. If the cardholder does not comply with the modified payment terms, then the credit card loan agreement reverts back to its pre-modification payment terms. Assuming that the cardholder does not begin to perform in accordance with those payment terms, the loan continues to age and will ultimately be charged-off in accordance with the Firm's standard charge-off policy. In addition, if a borrower successfully completes a short-term modification program, then the loan reverts back to its pre-modification payment terms. However, in most cases, the Firm does not reinstate the borrower's line of credit.

The following table provides information regarding the nature and extent of modifications of credit card loans for the periods presented.

Year ended December 31,	New enrollments	
(in millions)	2012	2011
Short-term programs	$ 47	$ 167
Long-term programs	1,607	2,523
Total new enrollments	$ 1,654	$ 2,690

Financial effects of modifications and redefaults

The following table provides information about the financial effects of the concessions granted on credit card loans modified in TDRs and redefaults for the period presented.

Year ended December 31, (in millions, except weighted-average data)	2012	2011
Weighted-average interest rate of loans – before TDR	15.67%	16.05%
Weighted-average interest rate of loans – after TDR	5.19	5.28
Loans that redefaulted within one year of modification[a]	$ 309	$ 687

(a) Represents loans modified in TDRs that experienced a payment default in the period presented, and for which the payment default occurred within one year of the modification. The amounts presented represent the balance of such loans as of the end of the quarter in which they defaulted.

For credit card loans modified in TDRs, payment default is deemed to have occurred when the loans become two payments past due. A substantial portion of these loans is expected to be charged-off in accordance with the Firm's standard charge-off policy. Based on historical experience, the estimated weighted-average expected default rate for modified credit card loans was 38.23% at December 31, 2012, and 35.47% at December 31, 2011.

Wholesale loan portfolio

Wholesale loans include loans made to a variety of customers, ranging from large corporate and institutional clients to high-net-worth individuals.

The primary credit quality indicator for wholesale loans is the risk rating assigned each loan. Risk ratings are used to identify the credit quality of loans and differentiate risk within the portfolio. Risk ratings on loans consider the probability of default ("PD") and the loss given default ("LGD"). PD is the likelihood that a loan will not be repaid at default. The LGD is the estimated loss on the loan that would be realized upon the default of the borrower and takes into consideration collateral and structural support for each credit facility.

Management considers several factors to determine an appropriate risk rating, including the obligor's debt capacity and financial flexibility, the level of the obligor's earnings, the amount and sources for repayment, the level and nature of contingencies, management strength, and the industry and geography in which the obligor operates. As of September 30, 2012, the Firm revised its definition of the criticized component of the wholesale portfolio to align with the banking regulators' definition of criticized exposures, which consists of the special mention, substandard and doubtful categories. Prior periods have been reclassified to conform with the current presentation. Risk ratings generally represent ratings profiles similar to those defined by S&P and Moody's. Investment grade ratings range from "AAA/Aaa" to "BBB-/Baa3." Noninvestment grade ratings are classified as noncriticized ("BB+/Ba1 and B-/B3") and criticized ("CCC+"/"Caa1 and below"), and the criticized portion is further subdivided into performing and nonaccrual loans, representing management's assessment of the collectibility of principal and interest. Criticized loans have a higher probability of default than noncriticized loans.

Risk ratings are reviewed on a regular and ongoing basis by Credit Risk Management and are adjusted as necessary for updated information affecting the obligor's ability to fulfill its obligations.

As noted above, the risk rating of a loan considers the industry in which the obligor conducts its operations. As part of the overall credit risk management framework, the Firm focuses on the management and diversification of its industry and client exposures, with particular attention paid to industries with actual or potential credit concern. See Note 5 on page 217 in this Annual Report for further detail on industry concentrations.

The table below provides information by class of receivable for the retained loans in the Wholesale portfolio segment.

As of or for the year ended December 31, (in millions, except ratios)	Commercial and industrial		Real estate	
	2012	2011	2012	2011
Loans by risk ratings				
Investment grade	$ 61,870	$ 52,379	$ 41,796	$ 33,920
Noninvestment grade:				
Noncriticized	44,651	37,870	14,567	14,394
Criticized performing	2,636	3,077	3,857	5,484
Criticized nonaccrual	708	889	520	886
Total noninvestment grade	47,995	41,836	18,944	20,764
Total retained loans	$ 109,865	$ 94,215	$ 60,740	$ 54,684
% of total criticized to total retained loans	3.04 %	4.21%	7.21%	11.65%
% of nonaccrual loans to total retained loans	0.64	0.94	0.86	1.62
Loans by geographic distribution[a]				
Total non-U.S.	$ 35,494	$ 30,813	$ 1,533	$ 1,497
Total U.S.	74,371	63,402	59,207	53,187
Total retained loans	$ 109,865	$ 94,215	$ 60,740	$ 54,684
Net charge-offs/(recoveries)	$ (212)	$ 124	$ 54	$ 256
% of net charge-offs/(recoveries) to end-of-period retained loans	(0.19)%	0.13%	0.09%	0.47%
Loan delinquency[b]				
Current and less than 30 days past due and still accruing	$ 109,019	$ 93,060	$ 59,829	$ 53,387
30–89 days past due and still accruing	119	266	322	327
90 or more days past due and still accruing[c]	19	—	69	84
Criticized nonaccrual	708	889	520	886
Total retained loans	$ 109,865	$ 94,215	$ 60,740	$ 54,684

(a) The U.S. and non-U.S. distribution is determined based predominantly on the domicile of the borrower.
(b) The credit quality of wholesale loans is assessed primarily through ongoing review and monitoring of an obligor's ability to meet contractual obligations rather than relying on the past due status, which is generally a lagging indicator of credit quality. For a discussion of more significant risk factors, see page 271 of this Note.
(c) Represents loans that are considered well-collateralized and therefore still accruing interest.
(d) Other primarily includes loans to SPEs and loans to private banking clients. See Note 1 on pages 193–194 of this Annual Report for additional information on SPEs.

The following table presents additional information on the real estate class of loans within the Wholesale portfolio segment for the periods indicated. The real estate class primarily consists of secured commercial loans mainly to borrowers for multi-family and commercial lessor properties. Multifamily lending specifically finances apartment buildings. Commercial lessors receive financing specifically for real estate leased to retail, office and industrial tenants. Commercial construction and development loans represent financing for the construction of apartments, office and professional buildings and malls. Other real estate loans include lodging, real estate investment trusts ("REITs"), single-family, homebuilders and other real estate.

December 31, (in millions, except ratios)	Multifamily		Commercial lessors

Wholesale impaired loans and loan modifications

Wholesale impaired loans are comprised of loans that have been placed on nonaccrual status and/or that have been modified in a TDR. All impaired loans are evaluated for an asset-specific allowance as described in Note 15 on pages 276–279 of this Annual Report.

The table below sets forth information about the Firm's wholesale impaired loans.

December 31, (in millions)	Commercial and industrial		Real estate		Financial institutions		Government agencies		Other		Total retained loans	
	2012	2011	**2012**	2011	**2012**	2011	**2012**	2011	**2012**	2011	**2012**	2011
Impaired loans												
With an allowance	**$ 588**	$ 828	**$ 375**	$ 621	**$ 6**	$ 21	**$ –**	$ 16	**$ 122**	$ 473	**$ 1,091**	$ 1,959
Without an allowance[a]	**173**	177	**133**	292	**2**	18	**–**	–	**76**	103	**384**	590
Total impaired loans	**$ 761**	$ 1,005	**$ 508**	$ 913	**$ 8**	$ 39	**$ –**	$ 16	**$ 198**	$ 576	**$ 1,475**	$ 2,549
Allowance for loan losses related to impaired loans	**$ 205**	$ 276	**$ 82**	$ 148	**$ 2**	$ 5	**$ –**	$ 10	**$ 30**	$ 77	**$ 319**	$ 516
Unpaid principal balance of impaired loans[b]	**957**	1,705	**626**	1,124	**22**	63	**–**	17	**318**	1,008	**1,923**	3,917

(a) When the discounted cash flows, collateral value or market price equals or exceeds the recorded investment in the loan, then the loan does not require an allowance. This typically occurs when the impaired loans have been partially charged-off and/or there have been interest payments received and applied to the loan balance.

(b) Represents the contractual amount of principal owed at December 31, 2012 and 2011. The unpaid principal balance differs from the impaired loan balances due to various factors, including charge-offs; interest payments received and applied to the carrying value; net deferred loan fees or costs; and unamortized discount or premiums on purchased loans.

The following table presents the Firm's average impaired loans for the years ended 2012, 2011 and 2010.

Year ended December 31, (in millions)	**2012**	2011	2010
Commercial and industrial	**$ 873**	$ 1,309	$ 1,655
Real estate	**784**	1,813	3,101
Financial institutions	**17**	84	304
Government agencies	**9**	20	5
Other	**277**	634	884
Total[a]	**$ 1,960**	$ 3,860	$ 5,949

(a) The related interest income on accruing impaired loans and interest income recognized on a cash basis were not material for the years ended December 31, 2012, 2011 and 2010.

Loan modifications

Certain loan modifications are considered to be TDRs as they provide various concessions to borrowers who are experiencing financial difficulty. All TDRs are reported as impaired loans in the tables above.

The following table provides information about the Firm's wholesale loans that have been modified in TDRs, including a reconciliation of the beginning and ending balances of such loans and information regarding the nature and extent of modifications during the periods presented.

Years ended December 31, (in millions)	Commercial and industrial		Real estate		Other[b]		Total	
	2012	2011	**2012**	2011	**2012**	2011	**2012**	2011
Beginning balance of TDRs	**$ 531**	$ 212	**$ 176**	$ 907	**$ 43**	$ 24	**$ 750**	$ 1,143
New TDRs	**162**	$ 665	**43**	113	**73**	32	**278**	810
Increases to existing TDRs	**183**	96	**–**	16	**–**	–	**183**	112
Charge-offs post-modification	**(27)**	(30)	**(2)**	(146)	**(7)**	–	**(36)**	(176)
Sales and other[a]	**(274)**	(412)	**(118)**	(714)	**(87)**	(13)	**(479)**	(1,139)
Ending balance of TDRs	**$ 575**	$ 531	**$ 99**	$ 176	**$ 22**	$ 43	**$ 696**	$ 750
TDRs on nonaccrual status	**$ 522**	$ 415	**$ 92**	$ 128	**$ 22**	$ 35	**$ 636**	$ 578
Additional commitments to lend to borrowers whose loans have been modified in TDRs	**44**	147	**–**	–	**2**	–	**46**	147

(a) Sales and other are largely sales and paydowns, but also includes performing loans restructured at market rates that were removed from the reported TDR balance of $44 million and $152 million during the years ended December 31, 2012 and 2011, respectively.

(b) Includes loans to Financial institutions, Government agencies and Other.

Financial effects of modifications and redefaults

Loans modified as TDRs are typically term or payment extensions and, to a lesser extent, deferrals of principal and/or interest on commercial and industrial and real estate loans. For the years ended December 31, 2012 and 2011, the average term extension granted on loans with term or payment extensions was 1.1 years and 3.3 years, respectively. The weighted-average remaining term for all loans modified during these periods was 3.6 years and 4.5 years, respectively. Wholesale TDR loans that redefaulted within one year of the modification were $56 million and $96 million during the years ended December 31, 2012 and 2011, respectively. A payment default is deemed to occur when the borrower has not made a loan payment by its scheduled due date after giving effect to any contractual grace period.

Note 15 – Allowance for credit losses

JPMorgan Chase's allowance for loan losses covers the consumer, including credit card, portfolio segments (primarily scored); and wholesale (risk-rated) portfolio, and represents management's estimate of probable credit losses inherent in the Firm's loan portfolio. The allowance for loan losses includes an asset-specific component, a formula-based component and a component related to PCI loans, as described below. Management also estimates an allowance for wholesale and consumer lending-related commitments using methodologies similar to those used to estimate the allowance on the underlying loans. During 2012, the Firm did not make any significant changes to the methodologies or policies used to determine its allowance for credit losses; such policies are described in the following paragraphs.

The asset-specific component of the allowance relates to loans considered to be impaired, which includes loans that have been modified in TDRs as well as risk-rated loans that have been placed on nonaccrual status. To determine the asset-specific component of the allowance, larger loans are evaluated individually, while smaller loans are evaluated as pools using historical loss experience for the respective class of assets. Scored loans (i.e., consumer loans) are pooled by product type, while risk-rated loans (primarily wholesale loans) are segmented by risk rating.

The Firm generally measures the asset-specific allowance as the difference between the recorded investment in the loan and the present value of the cash flows expected to be collected, discounted at the loan's original effective interest rate. Subsequent changes in impairment are reported as an adjustment to the provision for loan losses. In certain cases, the asset-specific allowance is determined using an observable market price, and the allowance is measured as the difference between the recorded investment in the loan and the loan's fair value. Impaired collateral-dependent loans are charged down to the fair value of collateral less costs to sell and therefore may not be subject to an asset-specific reserve as for other impaired loans. See Note 14 on pages 250–275 of this Annual Report for more information about charge-offs and collateral-dependent loans.

The asset-specific component of the allowance for impaired loans that have been modified in TDRs incorporates the effects of foregone interest, if any, in the present value calculation and also incorporates the effect of the modification on the loan's expected cash flows, which considers the potential for redefault. For residential real estate loans modified in TDRs, the Firm develops product-specific probability of default estimates, which are applied at a loan level to compute expected losses. In developing these probabilities of default, the Firm considers the relationship between the credit quality characteristics of the underlying loans and certain assumptions about home prices and unemployment, based upon industry-wide data. The Firm also considers its own historical loss experience to date based on actual redefaulted modified loans. For credit card loans modified in TDRs, expected losses incorporate projected redefaults based on the Firm's historical experience by type of modification program. For wholesale loans modified in TDRs, expected losses incorporate redefaults based on management's expectation of the borrower's ability to repay under the modified terms.

The formula-based component is based on a statistical calculation to provide for probable principal losses inherent in performing risk-rated loans and all consumer loans, except for any loans restructured in TDRs and PCI loans. See Note 14 on pages 250–275 of this Annual Report for more information on PCI loans.

For scored loans, the statistical calculation is performed on pools of loans with similar risk characteristics (e.g., product type) and generally computed by applying expected loss factors to outstanding principal balances over an estimated loss emergence period. The loss emergence period represents the time period between the date at which the loss is estimated to have been incurred and the ultimate realization of that loss (through a charge-off). Estimated loss emergence periods may vary by product and may change over time; management applies judgment in estimating loss emergence periods, using available credit information and trends.

Loss factors are statistically derived and sensitive to changes in delinquency status, credit scores, collateral values and other risk factors. The Firm uses a number of different forecasting models to estimate both the PD and the loss severity, including delinquency roll rate models and credit loss severity models. In developing PD and loss severity assumptions, the Firm also considers known and anticipated changes in the economic environment, including changes in home prices, unemployment rates and other risk indicators.

A nationally recognized home price index measure is used to estimate both the PD and the loss severity on residential real estate loans at the metropolitan statistical areas ("MSA") level. Loss severity estimates are regularly validated by comparison to actual losses recognized on defaulted loans, market-specific real estate appraisals and property sales activity. The economic impact of potential modifications of residential real estate loans is not included in the statistical calculation because of the uncertainty regarding the type and results of such modifications.

For risk-rated loans, the statistical calculation is the product of an estimated PD and an estimated LGD. These factors are differentiated by risk rating and expected maturity. In assessing the risk rating of a particular loan, among the factors considered are the obligor's debt capacity and financial flexibility, the level of the obligor's earnings, the amount and sources for repayment, the level and nature of contingencies, management strength, and the industry and geography in which the obligor operates. These factors are based on an evaluation of historical and current information, and involve subjective assessment and interpretation. Emphasizing one factor over another or considering additional factors could impact the risk rating assigned by the Firm to that loan. PD estimates are based on observable external through-the-cycle data, using credit-rating agency default statistics. LGD estimates are based on the Firm's history of actual credit losses over more than one credit cycle.

Management applies judgment within an established framework to adjust the results of applying the statistical calculation described above. The determination of the appropriate adjustment is based on management's view of uncertainties that have occurred but that are not yet reflected in the loss factors and that relate to current macroeconomic and political conditions, the quality of underwriting standards and other relevant internal and external factors affecting the credit quality of the portfolio. For the scored loan portfolios, adjustments to the statistical calculation are accomplished in part by analyzing the historical loss experience for each major product segment. Factors related to unemployment, home prices, borrower behavior and lien position, the estimated effects of the mortgage foreclosure-related settlement with federal and state officials and uncertainties regarding the ultimate success of loan modifications are incorporated into the calculation, as appropriate. For junior lien products, management considers the delinquency and/or modification status of any senior liens in determining the adjustment. In addition, for the risk-rated portfolios, any adjustments made to the statistical calculation also consider concentrated and deteriorating industries.

Management establishes an asset-specific allowance for lending-related commitments that are considered impaired and computes a formula-based allowance for performing consumer and wholesale lending-related commitments. These are computed using a methodology similar to that used for the wholesale loan portfolio, modified for expected maturities and probabilities of drawdown.

Determining the appropriateness of the allowance is complex and requires judgment by management about the effect of matters that are inherently uncertain. Subsequent evaluations of the loan portfolio, in light of the factors then prevailing, may result in significant changes in the allowances for loan losses and lending-related commitments in future periods.

At least quarterly, the allowance for credit losses is reviewed by the Chief Risk Officer, the Chief Financial Officer and the Controller of the Firm and discussed with the Risk Policy and Audit Committees of the Board of Directors of the Firm. As of December 31, 2012, JPMorgan Chase deemed the allowance for credit losses to be appropriate (i.e., sufficient to absorb probable credit losses that are inherent in the portfolio).

Allowance for credit losses and loans and lending-related commitments by impairment methodology

The table below summarizes information about the allowance for loan losses, loans by impairment methodology, the allowance for lending-related commitments and lending-related commitments by impairment methodology.

	2012			
Year ended December 31, (in millions)	Consumer, excluding credit card	Credit card	Wholesale	Total

(a) Effective January 1, 2010, the Firm adopted accounting guidance related to VIEs. Upon adoption of the guidance, the Firm consolidated its Firm-sponsored credit card securitization trusts, its Firm-administered multi-seller conduits and certain other consumer loan securitization entities, primarily mortgage-related. As a result, $7.4 billion, $14 million and $127 million, respectively, of allowance for loan losses were recorded on-balance sheet with the consolidation of these entities. For further discussion, see Note 16 on pages 280–291 of this Annual Report.

(b) Includes risk-rated loans that have been placed on nonaccrual status and loans that have been modified in a TDR.

(c) Consumer, excluding credit card, charge-offs for the year ended December 31, 2012, included $747 million of charge-offs for Chapter 7 residential real estate loans and $53 million of charge-offs for Chapter 7 auto loans.

(d) The asset-specific credit card allowance for loan losses is related to loans that have been modified in a TDR; such allowance is calculated based on the loans' original contractual interest rates and does not consider any incremental penalty rates.

	$ 62,307	$ 530,616	$ 382,739	$ 975,662	$ 65,403	$ 547,227	$ 346,079	$ 958,709

Note 16 – Variable interest entities

For a further description of JPMorgan Chase's accounting policies regarding consolidation of VIEs, see Note 1 on pages 193–194 of this Annual Report.

The following table summarizes the most significant types of Firm-sponsored VIEs by business segment. The Firm considers a "sponsored" VIE to include any entity where: (1) JPMorgan Chase is the principal beneficiary of the structure; (2) the VIE is used by JPMorgan Chase to securitize Firm assets; (3) the VIE issues financial instruments with the JPMorgan Chase name; or (4) the entity is a JPMorgan Chase–administered asset-backed commercial paper conduit.

Line-of-Business	*Transaction Type*	*Activity*	*Annual Report page reference*
CCB	Credit card securitization trusts	Securitization of both originated and purchased credit card receivables	281
	Other securitization trusts	Securitization of originated automobile and student loans	281–283
	Mortgage securitization trusts	Securitization of originated and purchased residential mortgages	281–283
CIB	Mortgage and other securitization trusts	Securitization of both originated and purchased residential and commercial mortgages, automobile and student loans	281–283
	Multi-seller conduits	Assist clients in accessing the financial markets in a cost-efficient manner and structures transactions to meet investor needs	284–285
	Investor intermediation activities:		
	Municipal bond vehicles		285–286
	Credit-related note and asset swap vehicles		286–288

The Firm's other business segments are also involved with VIEs, but to a lesser extent, as follows:

- Asset Management: Sponsors and manages certain funds that are deemed VIEs. As asset manager of the funds, AM earns a fee based on assets managed; the fee varies with each fund's investment objective and is competitively priced. For fund entities that qualify as VIEs, AM's interests are, in certain cases, considered to be significant variable interests that result in consolidation of the financial results of these entities.
- Commercial Banking: CB makes investments in and provides lending to community development entities that may meet the definition of a VIE. In addition, CB provides financing and lending related services to certain client-sponsored VIEs. In general, CB does not control the activities of these entities and does not consolidate these entities.
- Corporate/Private Equity: Corporate uses VIEs to issue trust preferred securities. See Note 21 on pages 297–299 of this Annual Report for further information. The Private Equity business, within Corporate/Private Equity, may be involved with entities that are deemed VIEs. However, the Firm's private equity business is subject to specialized investment company accounting, which does not require the consolidation of investments, including VIEs.

The Firm also invests in and provides financing and other services to VIEs sponsored by third parties, as described on page 288 of this Note.

Significant Firm-sponsored variable interest entities

Credit card securitizations

The Card business securitizes originated and purchased credit card loans, primarily through the Chase Issuance Trust (the "Trust"). The Firm's continuing involvement in credit card securitizations includes servicing the receivables, retaining an undivided seller's interest in the receivables, retaining certain senior and subordinated securities and maintaining escrow accounts.

The Firm is considered to be the primary beneficiary of these Firm-sponsored credit card securitization trusts based on the Firm's ability to direct the activities of these VIEs through its servicing responsibilities and other duties, including making decisions as to the receivables that are transferred into those trusts and as to any related modifications and workouts. Additionally, the nature and extent of the Firm's other continuing involvement with the trusts, as indicated above, obligates the Firm to absorb losses and gives the Firm the right to receive certain benefits from these VIEs that could potentially be significant.

The underlying securitized credit card receivables and other assets of the securitization trusts are available only for payment of the beneficial interests issued by the securitization trusts; they are not available to pay the Firm's other obligations or the claims of the Firm's other creditors.

The agreements with the credit card securitization trusts require the Firm to maintain a minimum undivided interest in the credit card trusts (which generally ranges from 4% to 12%). As of December 31, 2012 and 2011, the Firm held undivided interests in Firm-sponsored credit card securitization trusts of $15.8 billion and $13.7 billion, respectively. The Firm maintained an average undivided interest in principal receivables owned by those trusts of approximately 28% and 22% for the years ended December 31, 2012 and 2011, respectively. The Firm also retained $362 million and $541 million of senior securities and $4.6 billion and $3.0 billion of subordinated securities in certain of its credit card securitization trusts as of December 31, 2012 and 2011, respectively. The Firm's undivided interests in the credit card trusts and securities retained are eliminated in consolidation.

Firm-sponsored mortgage and other securitization trusts

The Firm securitizes (or has securitized) originated and purchased residential mortgages, commercial mortgages and other consumer loans (including automobile and student loans) primarily in its CIB and CCB businesses. Depending on the particular transaction, as well as the respective business involved, the Firm may act as the servicer of the loans and/or retain certain beneficial interests in the securitization trusts.

The following table presents the total unpaid principal amount of assets held in Firm-sponsored private-label securitization entities, including those in which the Firm has continuing involvement, and those that are consolidated by the Firm. Continuing involvement includes servicing the loans, holding senior interests or subordinated interests, recourse or guarantee arrangements, and derivative transactions. In certain instances, the Firm's only continuing involvement is servicing the loans. See Securitization activity on page 289 of this Note for further information regarding the Firm's cash flows with and interests retained in nonconsolidated VIEs, and pages 289–290 of this Note for information on the Firm's loan sales to U.S. government agencies.

	Principal amount outstanding			JPMorgan Chase interest in securitized assets in nonconsolidated VIEs[d][e][f]		
December 31, 2012 [a] (in billions)	Total assets held by securitization VIEs	Assets held in consolidated securitization VIEs	Assets held in nonconsolidated securitization VIEs with continuing involvement	Trading assets	AFS securities	Total interests held by JPMorgan Chase

(a) Excludes U.S. government agency securitizations. See pages 289–290 of this Note for information on the Firm's loan sales to U.S. government agencies.
(b) Consists of securities backed by commercial loans (predominantly real estate) and non-mortgage-related consumer receivables purchased from third parties. The Firm generally does not retain a residual interest in its sponsored commercial mortgage securitization transactions.
(c) Prior period amounts have been revised to conform with the current presentation methodology.
(d) The table above excludes the following: retained servicing (see Note 17 on pages 291–295 of this Annual Report for a discussion of MSRs); securities retained from loans sales to U.S. government agencies; interest rate and foreign exchange derivatives primarily used to manage interest rate and foreign exchange risks of securitization entities (See Note 6 on pages 218–227 of this Annual Report for further information on derivatives); senior and subordinated securities of $131 million and $45 million, respectively, at December 31, 2012, and $110 million and $8 million, respectively, at December 31, 2011, which the Firm purchased in connection with CIB's secondary market-making activities.
(e) Includes interests held in re-securitization transactions.
(f) As of December 31, 2012 and 2011, 74% and 68%, respectively, of the Firm's retained securitization interests, which are carried at fair value, were risk-rated "A" or better, on an S&P-equivalent basis. The retained interests in prime residential mortgages consisted of $170 million and $136 million of investment-grade and $171 million and $427 million of noninvestment-grade retained interests at December 31, 2012 and 2011, respectively. The retained interests in commercial and other securitizations trusts consisted of $4.1 billion and $3.4 billion of investment-grade and $164 million and $283 million of noninvestment-grade retained interests at December 31, 2012 and 2011, respectively.

Residential mortgage

The Firm securitizes residential mortgage loans originated by CCB, as well as residential mortgage loans purchased from third parties by either CCB or CIB. CCB generally retains servicing for all residential mortgage loans originated or purchased by CCB, and for certain mortgage loans purchased by CIB. For securitizations serviced by CCB, the Firm has the power to direct the significant activities of the VIE because it is responsible for decisions related to loan modifications and workouts. CCB may also retain an interest upon securitization.

In addition, CIB engages in underwriting and trading activities involving securities issued by Firm-sponsored securitization trusts. As a result, CIB at times retains senior and/or subordinated interests (including residual interests) in residential mortgage securitizations upon securitization, and/or reacquires positions in the secondary market in the normal course of business. In certain instances, as a result of the positions retained or reacquired by CIB or held by CCB, when considered together with the servicing arrangements entered into by CCB, the Firm is deemed to be the primary beneficiary of certain securitization trusts. See the table on page 288 of this Note for more information on consolidated residential mortgage securitizations.

The Firm does not consolidate a residential mortgage securitization (Firm-sponsored or third-party-sponsored) when it is not the servicer (and therefore does not have the power to direct the most significant activities of the trust) or does not hold a beneficial interest in the trust that could potentially be significant to the trust. At December 31, 2012 and 2011, the Firm did not consolidate the assets of certain Firm-sponsored residential mortgage securitization VIEs, in which the Firm had continuing involvement, primarily due to the fact that the Firm did not hold an interest in these trusts that could potentially be significant to the trusts. See the table on page 288 of this Note for more information on the consolidated residential mortgage securitizations, and the table on the previous page of this Note for further information on interests held in nonconsolidated residential mortgage securitizations.

Commercial mortgages and other consumer securitizations

CIB originates and securitizes commercial mortgage loans, and engages in underwriting and trading activities involving the securities issued by securitization trusts. CIB may retain unsold senior and/or subordinated interests in commercial mortgage securitizations at the time of securitization but, generally, the Firm does not service commercial loan securitizations. For commercial mortgage securitizations the power to direct the significant activities of the VIE generally is held by the servicer or investors in a specified class of securities ("controlling class"). See the table on page 288 of this Note for more information on the consolidated commercial mortgage securitizations, and the table on the previous page of this Note for further information on interests held in nonconsolidated securitizations.

The Firm also securitizes automobile and student loans. The Firm retains servicing responsibilities for all originated and certain purchased student and automobile loans and has the power to direct the activities of these VIEs through these servicing responsibilities. See the table on page 288 of this Note for more information on the consolidated student loan securitizations, and the table on the previous page of this Note for further information on interests held in nonconsolidated securitizations.

Re-securitizations

The Firm engages in certain re-securitization transactions in which debt securities are transferred to a VIE in exchange for new beneficial interests. These transfers occur in connection with both agency (Fannie Mae, Freddie Mac and Ginnie Mae) and nonagency (private-label) sponsored VIEs, which may be backed by either residential or commercial mortgages. The Firm's consolidation analysis is largely dependent on the Firm's role and interest in the re-securitization trusts. During the years ended December 31, 2012, 2011 and 2010, the Firm transferred $10.0 billion, $24.9 billion and $33.9 billion, respectively, of securities to agency VIEs, and $286 million, $381 million and $1.3 billion, respectively, of securities to private-label VIEs.

Most re-securitizations with which the Firm is involved are client-driven transactions in which a specific client or group of clients are seeking a specific return or risk profile. For these transactions, the Firm has concluded that the decision-making power of the entity is shared between the Firm and its client(s), considering the joint effort and decisions in establishing the re-securitization trust and its assets, as well as the significant economic interest the client holds in the re-securitization trust; therefore the Firm does not consolidate the re-securitization VIE.

In more limited circumstances, the Firm creates a re-securitization trust independently and not in conjunction with specific clients. In these circumstances, the Firm is deemed to have the unilateral ability to direct the most significant activities of the re-securitization trust because of the decisions made during the establishment and design of the trust; therefore, the Firm consolidates the re-securitization VIE if the Firm holds an interest that could potentially be significant.

Additionally, the Firm may invest in beneficial interests of third-party securitizations and generally purchases these interests in the secondary market. In these circumstances, the Firm does not have the unilateral ability to direct the most significant activities of the re-securitization trust, either because it wasn't involved in the initial design of the trust, or the Firm is involved with an independent third party sponsor and demonstrates shared power over the creation of the trust; therefore, the Firm does not consolidate the re-securitization VIE.

As of December 31, 2012 and 2011, the Firm did not consolidate any agency re-securitizations. As of December 31, 2012 and 2011, the Firm consolidated $76 million and $348 million, respectively, of assets, and $5 million and $139 million, respectively, of liabilities of private-label re-securitizations. See the table on page 288 of this Note for more information on the consolidated re-securitization transactions.

As of December 31, 2012 and 2011, total assets (including the notional amount of interest-only securities) of nonconsolidated Firm-sponsored private-label re-securitization entities in which the Firm has continuing involvement were $4.6 billion and $3.3 billion, respectively. At December 31, 2012 and 2011, the Firm held approximately $2.0 billion and $3.6 billion, respectively, of interests in nonconsolidated agency re-securitization entities, and $61 million and $14 million, respectively, of senior and subordinated interests in nonconsolidated private-label re-securitization entities. See the table on page 282 of this Note for further information on interests held in nonconsolidated securitizations.

Multi-seller conduits

Multi-seller conduit entities are separate bankruptcy remote entities that purchase interests in, and make loans secured by, pools of receivables and other financial assets pursuant to agreements with customers of the Firm. The conduits fund their purchases and loans through the issuance of highly rated commercial paper. The primary source of repayment of the commercial paper is the cash flows from the pools of assets. In most instances, the assets are structured with deal-specific credit enhancements provided to the conduits by the customers (i.e., sellers) or other third parties. Deal-specific credit enhancements are generally structured to cover a multiple of historical losses expected on the pool of assets, and are typically in the form of overcollateralization provided by the seller. The deal-specific credit enhancements mitigate the Firm's potential losses on its agreements with the conduits.

To ensure timely repayment of the commercial paper, each asset pool financed by the conduits has a minimum 100% deal-specific liquidity facility associated with it provided by JPMorgan Chase Bank, N.A. JPMorgan Chase Bank, N.A. also provides the multi-seller conduit vehicles with uncommitted program-wide liquidity facilities and program-wide credit enhancement in the form of standby letters of credit. The amount of program-wide credit enhancement required is based upon commercial paper issuance and approximates 10% of the outstanding balance.

The Firm consolidates its Firm-administered multi-seller conduits, as the Firm has both the power to direct the significant activities of the conduits and a potentially significant economic interest in the conduits. As administrative agent and in its role in structuring transactions, the Firm makes decisions regarding asset types and credit quality, and manages the commercial paper funding needs of the conduits. The Firm's interests that could potentially be significant to the VIEs include the fees received as administrative agent and liquidity and program-wide credit enhancement provider, as well as the potential exposure created by the liquidity and credit enhancement facilities provided to the conduits. See page 288 of this Note for further information on consolidated VIE assets and liabilities.

In the normal course of business, JPMorgan Chase makes markets in and invests in commercial paper, including commercial paper issued by the Firm-administered multi-seller conduits. The Firm held $8.3 billion and $11.3 billion of the commercial paper issued by the Firm-administered multi-seller conduits at December 31, 2012 and 2011, respectively. The Firm's investments were not driven by market illiquidity and the Firm is not obligated under any agreement to purchase the commercial paper issued by the Firm-administered multi-seller conduits.

Deal-specific liquidity facilities, program-wide liquidity and credit enhancement provided by the Firm have been eliminated in consolidation. The Firm provides lending-related commitments to certain clients of the Firm-administered multi-seller conduits. The unfunded portion of these commitments was $10.8 billion at both December 31, 2012 and 2011, and are reported as off-balance sheet lending-related commitments. For more information on off-balance sheet lending-related commitments, see Note 29 on pages 308–315 of this Annual Report.

VIEs associated with investor intermediation activities

As a financial intermediary, the Firm creates certain types of VIEs and also structures transactions with these VIEs, typically using derivatives, to meet investor needs. The Firm may also provide liquidity and other support. The risks inherent in the derivative instruments or liquidity commitments are managed similarly to other credit, market or liquidity risks to which the Firm is exposed. The principal types of VIEs for which the Firm is engaged in on behalf of clients are municipal bond vehicles, credit-related note vehicles and asset swap vehicles.

Municipal bond vehicles

The Firm has created a series of trusts that provide short-term investors with qualifying tax-exempt investments, and that allow investors in tax-exempt securities to finance their investments at short-term tax-exempt rates. In a typical transaction, the vehicle purchases fixed-rate longer-term highly rated municipal bonds and funds the purchase by issuing two types of securities: (1) puttable floating-rate certificates and (2) inverse floating-rate residual interests ("residual interests"). The maturity of each of the puttable floating-rate certificates and the residual interests is equal to the life of the vehicle, while the maturity of the underlying municipal bonds is typically longer. Holders of the puttable floating-rate certificates may "put," or tender, the certificates if the remarketing agent cannot successfully remarket the floating-rate certificates to another investor. A liquidity facility conditionally obligates the liquidity provider to fund the purchase of the tendered floating-rate certificates. Upon termination of the vehicle, proceeds from the sale of the underlying municipal bonds would first repay any funded liquidity facility or outstanding floating-rate certificates and the remaining amount, if any, would be paid to the residual interests. If the proceeds from the sale of the underlying municipal bonds are not sufficient to repay the liquidity facility, in certain transactions the liquidity provider has recourse to the residual interest holders for reimbursement. Certain residual interest holders may be required to post collateral with the Firm, as liquidity provider, to support such reimbursement obligations should the market value of the municipal bonds decline.

JPMorgan Chase Bank, N.A. often serves as the sole liquidity provider, and J.P. Morgan Securities LLC serves as remarketing agent, of the puttable floating-rate certificates. The liquidity provider's obligation to perform is conditional and is limited by certain termination events, which include bankruptcy or failure to pay by the municipal bond issuer or credit enhancement provider, an event of taxability on the municipal bonds or the immediate downgrade of the municipal bond to below investment grade. In addition, the Firm's exposure as liquidity provider is further limited by the high credit quality of the underlying municipal bonds, the excess collateralization in the vehicle, or in certain transactions, the reimbursement agreements with the residual interest holders. However, a downgrade of JPMorgan Chase Bank, N.A.'s short-term rating does not affect the Firm's obligation under the liquidity facility.

The long-term credit ratings of the puttable floating rate certificates are directly related to the credit ratings of the underlying municipal bonds, the credit rating of any insurer of the underlying municipal bond, and the Firm's short-term credit rating as liquidity provider. A downgrade in any of these ratings would affect the rating of the puttable floating-rate certificates and could cause demand for these certificates by investors to decline or disappear.

As remarketing agent, the Firm may hold puttable floating-rate certificates of the municipal bond vehicles. At December 31, 2012 and 2011, the Firm held $893 million and $637 million, respectively, of these certificates on its Consolidated Balance Sheets. The largest amount held by the Firm at any time during 2012 was $1.8 billion, or 8%, of the municipal bond vehicles' aggregate outstanding puttable floating-rate certificates. The Firm did not have and continues not to have any intent to protect any residual interest holder from potential losses on any of the municipal bond holdings.

The Firm consolidates municipal bond vehicles if it owns the residual interest. The residual interest generally allows the owner to make decisions that significantly impact the economic performance of the municipal bond vehicle, primarily by directing the sale of the municipal bonds owned by the vehicle. In addition, the residual interest owners have the right to receive benefits and bear losses that could potentially be significant to the municipal bond vehicle. The Firm does not consolidate municipal bond vehicles if it does not own the residual interests, since the Firm does not have the power to make decisions that significantly impact the economic performance of the municipal bond vehicle. See page 288 of this Note for further information on consolidated municipal bond vehicles.

The Firm's exposure to nonconsolidated municipal bond VIEs at December 31, 2012 and 2011, including the ratings profile of the VIEs' assets, was as follows.

December 31, (in billions)	Fair value of assets held by VIEs	Liquidity facilities	Excess/(deficit)[a]	Maximum exposure
Nonconsolidated municipal bond vehicles				
2012	**$ 14.2**	**$ 8.0**	**$ 6.2**	**$ 8.0**
2011	13.5	7.9	5.6	7.9

	Ratings profile of VIE assets[b]						
	Investment-grade				Noninvestment-grade		
December 31, (in billions, except where otherwise noted)	AAA to AAA-	AA+ to AA-	A+ to A-	BBB+ to BBB-	BB+ and below	Fair value of assets held by VIEs	Wt. avg. expected life of assets (years)
2012	**$ 1.6**	**$ 11.8**	**$ 0.8**	**$ –**	**$ –**	**$ 14.2**	**5.9**
2011	1.5	11.2	0.7	–	0.1	13.5	6.6

(a) Represents the excess/(deficit) of the fair values of municipal bond assets available to repay the liquidity facilities, if drawn.
(b) The ratings scale is based on the Firm's internal risk ratings and is presented on an S&P-equivalent basis.

Credit-related note and asset swap vehicles

Credit-related note vehicles

The Firm structures transactions with credit-related note vehicles in which the VIE purchases highly rated assets, such as asset-backed securities, and enters into a credit derivative contract with the Firm to obtain exposure to a referenced credit which the VIE otherwise does not hold. The VIE then issues credit-linked notes ("CLNs") with maturities predominantly ranging from one to ten years in order to transfer the risk of the referenced credit to the VIE's investors. Clients and investors often prefer using a CLN vehicle since the CLNs issued by the VIE generally carry a higher credit rating than such notes would if issued directly by JPMorgan Chase. As a derivative counterparty in a credit-related note structure, the Firm has a senior claim on the collateral of the VIE and reports such derivatives on its Consolidated Balance Sheets at fair value. The collateral purchased by such VIEs is largely investment-grade, with a significant amount being rated "AAA." The Firm divides its credit-related note structures broadly into two types: static and managed.

In a static credit-related note structure, the CLNs and associated credit derivative contract either reference a single credit (e.g., a multi-national corporation), or all or part of a fixed portfolio of credits. In a managed credit-related note structure, the CLNs and associated credit derivative generally reference all or part of an actively managed portfolio of credits. An agreement exists between a portfolio manager and the VIE that gives the portfolio manager the ability to substitute each referenced credit in the portfolio for an alternative credit. The Firm does not act as portfolio manager; its involvement with the VIE is generally limited to being a derivative counterparty. As a net buyer of credit protection, in both static and managed credit-related note structures, the Firm pays a premium to the VIE in return for the receipt of a payment (up to the notional of the derivative) if one or more of the credits within the portfolio defaults, or if the losses resulting from the default of reference credits exceed specified levels. The Firm does not provide any additional contractual financial support to the VIE. In addition, the Firm has not historically provided any financial support to the CLN vehicles over and above its contractual obligations. Since each CLN is established to the specifications of the investors, the investors have the power over the activities of that VIE that most significantly affect the performance of the CLN. Furthermore, the Firm does not generally have a variable interest that could potentially be significant. Accordingly, the Firm does not generally consolidate these credit-related note entities. As a derivative counterparty, the Firm has a senior claim on the collateral of the VIE and reports such derivatives on its Consolidated Balance Sheets at fair value. Substantially all of the assets purchased by such VIEs are investment-grade.

Asset swap vehicles

The Firm structures and executes transactions with asset swap vehicles on behalf of investors. In such transactions, the VIE purchases a specific asset or assets and then enters into a derivative with the Firm in order to tailor the interest rate or foreign exchange currency risk, or both, according to investors' requirements. Generally, the assets are held by the VIE to maturity, and the tenor of the derivatives would match the maturity of the assets. Investors typically invest in the notes issued by such VIEs in order to obtain exposure to the credit risk of the specific assets, as well as exposure to foreign exchange and interest rate risk that is tailored to their specific needs. The derivative transaction between the Firm and the VIE may include currency swaps to hedge assets held by the VIE denominated in foreign currency into the investors' local currency or interest rate swaps to hedge the interest rate risk of assets held by the VIE; to add additional interest rate exposure into the VIE in order to increase the return on the issued notes; or to convert an interest-bearing asset into a zero-coupon bond.

The Firm's exposure to asset swap vehicles is generally limited to its rights and obligations under the interest rate and/or foreign exchange derivative contracts. The Firm historically has not provided any financial support to the asset swap vehicles over and above its contractual obligations. The Firm does not generally consolidate these asset swap vehicles, since the Firm does not have the power to direct the significant activities of these entities and does not have a variable interest that could potentially be significant. As a derivative counterparty, the Firm has a senior claim on the collateral of the VIE and reports such derivatives on its Consolidated Balance Sheets at fair value. Substantially all of the assets purchased by such VIEs are investment-grade.

Exposure to nonconsolidated credit-related note and asset swap VIEs at December 31, 2012 and 2011, was as follows.

December 31, 2012 (in billions)	**Net derivative receivables**	**Total exposure**	**Par value of collateral held by VIEs[a]**
Credit-related notes			
Static structure	**$ 0.5**	**$ 0.5**	**$ 7.3**
Managed structure	**0.6**	**0.6**	**5.6**
Total credit-related notes	**1.1**	**1.1**	**12.9**
Asset swaps	**0.4**	**0.4**	**7.9**
Total	**$ 1.5**	**$ 1.5**	**$ 20.8**

December 31, 2011 (in billions)	Net derivative receivables	Total exposure	Par value of collateral held by VIEs[a]
Credit-related notes			
Static structure	$ 1.0	$ 1.0	$ 9.1
Managed structure	2.7	2.7	7.7
Total credit-related notes	3.7	3.7	16.8
Asset swaps	0.6	0.6	8.6
Total	$ 4.3	$ 4.3	$ 25.4

(a) The Firm's maximum exposure arises through the derivatives executed with the VIEs; the exposure varies over time with changes in the fair value of the derivatives. The Firm relies on the collateral held by the VIEs to pay any amounts due under the derivatives; the vehicles are structured at inception so that the par value of the collateral is expected to be sufficient to pay amounts due under the derivative contracts.

The Firm consolidated Firm-sponsored and third-party credit-related note vehicles with collateral fair values of $483 million and $231 million, at December 31, 2012 and 2011, respectively. The Firm consolidated these vehicles, because it held positions in these entities that provided the Firm with control of certain vehicles. The Firm did not consolidate any asset swap vehicles at December 31, 2012 and 2011.

VIEs sponsored by third parties

VIE used in FRBNY transaction

In conjunction with the Bear Stearns merger in June 2008, the Federal Reserve Bank of New York ("FRBNY") took control, through an LLC formed for this purpose, of a portfolio of $30.0 billion in assets, based on the value of the portfolio as of March 14, 2008. The assets of the LLC were funded by a $28.85 billion term loan from the FRBNY and a $1.15 billion subordinated loan from JPMorgan Chase. The JPMorgan Chase loan was subordinated to the FRBNY loan and bore the first $1.15 billion of any losses of the portfolio. Any remaining assets in the portfolio after repayment of the FRBNY loan, repayment of the JPMorgan Chase loan and the expense of the LLC was for the account of the FRBNY. The extent to which the FRBNY and JPMorgan Chase loans were repaid depended on the value of the assets in the portfolio and the liquidation strategy directed by the FRBNY. The Firm did not consolidate the LLC, as it did not have the power to direct the activities of the VIE that most significantly impact the VIE's economic performance. In June 2012, the FRBNY loan was repaid in full and in November 2012, the JPMorgan Chase loan was repaid in full. During the year ended December 31, 2012, JPMorgan Chase recognized a pretax gain of $665 million reflecting the recovery on the $1.15 billion subordinated loan plus contractual interest.

Consolidated VIE assets and liabilities

The following table presents information on assets and liabilities related to VIEs consolidated by the Firm as of December 31, 2012 and 2011.

	Assets				Liabilities		
December 31, 2012 (in billions)[a]	Trading assets – debt and equity instruments	Loans	Other[d]	Total assets[e]	Beneficial interests in VIE assets[f]	Other[g]	Total liabilities
VIE program type							
Firm-sponsored credit card trusts	**$ –**	**$ 51.9**	**$ 0.8**	**$ 52.7**	**$ 30.1**	**$ –**	**$ 30.1**
Firm-administered multi-seller conduits	**–**	**25.4**	**0.1**	**25.5**	**17.2**	**–**	**17.2**
Municipal bond vehicles	**9.8**	**–**	**0.1**	**9.9**	**11.0**	**–**	**11.0**
Mortgage securitization entities[b]	**1.4**	**2.0**	**–**	**3.4**	**2.3**	**1.1**	**3.4**
Other[c]	**0.8**	**3.4**	**1.1**	**5.3**	**2.6**	**0.1**	**2.7**
Total	**$ 12.0**	**$ 82.7**	**$ 2.1**	**$ 96.8**	**$ 63.2**	**$ 1.2**	**$ 64.4**

	Assets				Liabilities		
December 31, 2011 (in billions)[a]	Trading assets – debt and equity instruments	Loans	Other[d]	Total assets[e]	Beneficial interests in VIE assets[f]	Other[g]	Total liabilities
VIE program type							
Firm-sponsored credit card trusts	$ –	$ 50.7	$ 0.8	$ 51.5	$ 32.5	$ –	$ 32.5
Firm-administered multi-seller conduits	–	29.7	0.2	29.9	18.7	–	18.7
Municipal bond vehicles	9.2	–	0.1	9.3	9.2	–	9.2
Mortgage securitization entities[b]	1.4	2.3	–	3.7	2.3	1.3	3.6
Other[c]	1.5	4.1	1.5	7.1	3.3	0.2	3.5
Total	$ 12.1	$ 86.8	$ 2.6	$ 101.5	$ 66.0	$ 1.5	$ 67.5

(a) Excludes intercompany transactions which were eliminated in consolidation.
(b) Includes residential and commercial mortgage securitizations as well as re-securitizations.
(c) Primarily comprises student loan securitization entities. The Firm consolidated $3.3 billion and $4.1 billion of student loan securitization entities as of December 31, 2012 and 2011, respectively.
(d) Includes assets classified as cash, derivative receivables, AFS securities, and other assets within the Consolidated Balance Sheets.
(e) The assets of the consolidated VIEs included in the program types above are used to settle the liabilities of those entities. The difference between total assets and total liabilities recognized for consolidated VIEs represents the Firm's interest in the consolidated VIEs for each program type.
(f) The interest-bearing beneficial interest liabilities issued by consolidated VIEs are classified in the line item on the Consolidated Balance Sheets titled, "Beneficial interests issued by consolidated variable interest entities." The holders of these beneficial interests do not have recourse to the general credit of JPMorgan Chase. Included in beneficial interests in VIE assets are long-term beneficial interests of $35.0 billion and $39.7 billion at December 31, 2012 and 2011, respectively. The maturities of the long-term beneficial interests as of December 31, 2012, were as follows: $11.9 billion under one year, $16.0 billion between one and five years, and $7.1 billion over five years, all respectively.
(g) Includes liabilities classified as accounts payable and other liabilities in the Consolidated Balance Sheets.

Supplemental information on loan securitizations

The Firm securitizes and sells a variety of loans, including residential mortgage, credit card, automobile, student and commercial (primarily related to real estate) loans, as well as debt securities. The primary purposes of these securitization transactions are to satisfy investor demand and to generate liquidity for the Firm.

For loan securitizations in which the Firm is not required to consolidate the trust, the Firm records the transfer of the loan receivable to the trust as a sale when the accounting criteria for a sale are met. Those criteria are: (1) the transferred financial assets are legally isolated from the Firm's creditors; (2) the transferee or beneficial interest holder can pledge or exchange the transferred financial assets; and (3) the Firm does not maintain effective control over the transferred financial assets (e.g., the Firm cannot repurchase the transferred assets before their maturity and it does not have the ability to unilaterally cause the holder to return the transferred assets).

For loan securitizations accounted for as a sale, the Firm recognizes a gain or loss based on the difference between the value of proceeds received (including cash, beneficial interests, or servicing assets received) and the carrying value of the assets sold. Gains and losses on securitizations are reported in noninterest revenue.

Securitization activity

The following tables provide information related to the Firm's securitization activities for the years ended December 31, 2012, 2011 and 2010, related to assets held in JPMorgan Chase-sponsored securitization entities that were not consolidated by the Firm, and where sale accounting was achieved based on the accounting rules in effect at the time of the securitization.

	2012		2011		2010	
Year ended December 31, (in millions, except rates)[a]	Residential mortgage[d][e]	Commercial and other[f][g]	Residential mortgage[d][e]	Commercial and other[f][g]	Residential mortgage[d][e]	Commercial and other[f][g]
Principal securitized	$ –	$ 5,421	$ –	$ 5,961	$ 35	$ 2,237
All cash flows during the period:						
Proceeds from new securitizations[b]	$ –	$ 5,705	$ –	$ 6,142	$ 36	$ 2,369
Servicing fees collected	662	4	755	4	968	4
Purchases of previously transferred financial assets (or the underlying collateral)[c]	222	–	772	–	321	–
Cash flows received on interests	185	163	235	178	319	143

(a) Excludes re-securitization transactions.
(b) Proceeds from commercial mortgage securitizations were received in the form of securities. During 2012, $5.7 billion of commercial mortgage securitizations were classified in level 2 of the fair value hierarchy. During 2011, $4.0 billion and $2.1 billion of commercial mortgage securitizations were classified in levels 2 and 3 of the fair value hierarchy, respectively. During 2010, $2.2 billion and $172 million of residential and commercial mortgage securitizations were classified in levels 2 and 3 of the fair value hierarchy, respectively.
(c) Includes cash paid by the Firm to reacquire assets from off-balance sheet, nonconsolidated entities – for example, loan repurchases due to representation and warranties and servicer clean-up calls
(d) Includes prime, Alt-A, subprime, and option ARMs. Excludes sales for which the Firm did not securitize the loan (including loans sold to Ginnie Mae, Fannie Mae and Freddie Mac).
(e) There were no residential mortgage securitizations during 2012 and 2011.
(f) Includes commercial and student loan securitizations.
(g) Key assumptions used to measure retained interests originated during the year included weighted-average life (in years) of 8.8, 1.7 and 7.1 for the years ended December 31, 2012, 2011, and 2010, respectively, and weighted-average discount rate of 3.6%, 3.5% and 7.7% for the years ended December 31, 2012, 2011, and 2010, respectively.

Loans and excess mortgage servicing rights sold to agencies and other third-party-sponsored securitization entities

In addition to the amounts reported in the securitization activity tables above, the Firm, in the normal course of business, sells originated and purchased mortgage loans and certain originated excess mortgage servicing rights on a nonrecourse basis, predominantly to Ginnie Mae, Fannie Mae and Freddie Mac (the "Agencies"). These loans and excess mortgage servicing rights are sold primarily for the purpose of securitization by the Agencies, which also provide credit enhancement of the loans and excess mortgage servicing rights through certain guarantee provisions. The Firm does not consolidate these securitization vehicles as it is not the primary beneficiary. For a limited number of loan sales, the Firm is obligated to share a portion of the credit risk associated with the sold loans with the purchaser. See Note 29 on pages 308–315 of this Annual Report for additional information about the Firm's loan sales- and securitization-related indemnifications. See Note 17 on pages 291–295 of this Annual Report for additional information about the impact of the Firm's sale of certain excess mortgage servicing rights.

The following table summarizes the activities related to loans sold to U.S. government-sponsored agencies and third-party-sponsored securitization entities.

Year ended December 31, (in millions)	2012	2011	2010
Carrying value of loans sold[a]	$ 180,097	$ 150,632	$ 156,615
Proceeds received from loan sales as cash	$ 1,270	$ 2,864	$ 3,887
Proceeds from loan sales as securities[b]	176,592	145,340	149,786
Total proceeds received from loan sales[c]	$ 177,862	$ 148,204	$ 153,673
Gains on loan sales[d]	141	133	212

(a) Predominantly to U.S. government agencies.
(b) Predominantly includes securities from U.S. government agencies that are generally sold shortly after receipt.
(c) Excludes the value of MSRs retained upon the sale of loans. Gains on loan sales include the value of MSRs.
(d) The carrying value of the loans accounted for at fair value approximated the proceeds received upon loan sale.

Options to repurchase delinquent loans

In addition to the Firm's obligation to repurchase certain loans due to material breaches of representations and warranties as discussed in Note 29 on pages 308–315 of this Annual Report, the Firm also has the option to repurchase delinquent loans that it services for Ginnie Mae loan pools, as well as for other U.S. government agencies under certain arrangements. The Firm typically elects to repurchase delinquent loans from Ginnie Mae loan pools as it continues to service them and/or manage the foreclosure process in accordance with the applicable requirements, and such loans continue to be insured or guaranteed. When the Firm's repurchase option becomes exercisable, such loans must be reported on the Consolidated Balance Sheets as a loan with a corresponding liability. As of December 31, 2012 and 2011, the Firm had recorded on its Consolidated Balance Sheets $15.6 billion and $15.7 billion, respectively, of loans that either had been repurchased or for which the Firm had an option to repurchase. Predominately all of these amounts relate to loans that have been repurchased from Ginnie Mae loan pools. Additionally, real estate owned resulting from voluntary repurchases of loans was $1.6 billion and $1.0 billion as of December 31, 2012 and 2011, respectively. Substantially all of these loans and real estate owned are insured or guaranteed by U.S. government agencies and reimbursement is proceeding normally. For additional information, refer to Note 14 on pages 250–275 of this Annual Report.

JPMorgan Chase's interest in securitized assets held at fair value

The following table outlines the key economic assumptions used to determine the fair value, as of December 31, 2012 and 2011, of certain of the Firm's retained interests in nonconsolidated VIEs (other than MSRs), that are valued using modeling techniques. The table also outlines the sensitivities of those fair values to immediate 10% and 20% adverse changes in assumptions used to determine fair value. For a discussion of MSRs, see Note 17 on pages 291–295 of this Annual Report.

	Commercial and other	
December 31, (in millions, except rates and where otherwise noted)[a]	2012	2011[d]
JPMorgan Chase interests in securitized assets[b]	$ 1,488	$ 1,585
Weighted-average life (in years)	6.1	1.0
Weighted-average discount rate[c]	4.1%	59.1%
Impact of 10% adverse change	$ (34)	$ (45)
Impact of 20% adverse change	(65)	(76)

(a) The Firm's interests in prime mortgage securitizations were $341 million and $555 million, as of December 31, 2012 and 2011, respectively. These include retained interests in Alt-A loans and re-securitization transactions. The Firm's interests in subprime mortgage securitizations were $68 million and $31 million, as of December 31, 2012 and 2011, respectively. Additionally, the Firm had interests in option ARM mortgage securitizations of $23 million at December 31, 2011.
(b) Includes certain investments acquired in the secondary market but predominantly held for investment purposes.
(c) Incorporates the Firm's weighted-average loss assumption.
(d) The prior period has been reclassified to conform with the current presentation.

The sensitivity analysis in the preceding table is hypothetical. Changes in fair value based on a 10% or 20% variation in assumptions generally cannot be extrapolated easily, because the relationship of the change in the assumptions to the change in fair value may not be linear. Also, in the table, the effect that a change in a particular assumption may have on the fair value is calculated without changing any other assumption. In reality, changes in one factor may result in changes in another, which might counteract or magnify the sensitivities. The above sensitivities also do not reflect risk management practices the Firm may undertake to mitigate such risks.

Loan delinquencies and liquidation losses

The table below includes information about components of nonconsolidated securitized financial assets, in which the Firm has continuing involvement, and delinquencies as of December 31, 2012 and 2011.

	Securitized assets		90 days past due		Liquidation losses	
As of or for the year ended December 31, (in millions)	**2012**	2011	**2012**	2011	**2012**	2011
Securitized loans[a]						
Residential mortgage:						
Prime mortgage[b]	**$ 80,572**	$ 101,004	**$ 16,270**	$ 24,285	**$ 6,850**	$ 5,650
Subprime mortgage	**31,264**	35,755	**10,570**	14,293	**3,013**	3,086
Option ARMs	**26,095**	31,075	**6,595**	9,999	**2,268**	1,907
Commercial and other	**81,834**	93,336	**4,077**	4,836	**1,265**	1,101
Total loans securitized[c]	**$ 219,765**	$ 261,170	**$ 37,512**	$ 53,413	**$ 13,396**	$ 11,744

(a) Total assets held in securitization-related SPEs were $295.8 billion and $340.0 billion, respectively, at December 31, 2012 and 2011. The $219.8 billion and $261.2 billion, respectively, of loans securitized at December 31, 2012 and 2011, excludes: $72.0 billion and $74.4 billion, respectively, of securitized loans in which the Firm has no continuing involvement, and $4.0 billion and $4.4 billion, respectively, of loan securitizations consolidated on the Firm's Consolidated Balance Sheets at December 31, 2012 and 2011.
(b) Includes Alt-A loans.
(c) Includes securitized loans that were previously recorded at fair value and classified as trading assets.

Note 17 – Goodwill and other intangible assets

Goodwill and other intangible assets consist of the following.

December 31, (in millions)	**2012**	2011	2010
Goodwill	**$ 48,175**	$ 48,188	$ 48,854
Mortgage servicing rights	**7,614**	7,223	13,649
Other intangible assets:			
Purchased credit card relationships	**$ 295**	$ 602	$ 897
Other credit card-related intangibles	**229**	488	593
Core deposit intangibles	**355**	594	879
Other intangibles	**1,356**	1,523	1,670
Total other intangible assets	**$ 2,235**	$ 3,207	$ 4,039

Goodwill

Goodwill is recorded upon completion of a business combination as the difference between the purchase price and the fair value of the net assets acquired. Subsequent to initial recognition, goodwill is not amortized but is tested for impairment during the fourth quarter of each fiscal year, or more often if events or circumstances, such as adverse changes in the business climate, indicate there may be impairment.

The goodwill associated with each business combination is allocated to the related reporting units, which are determined based on how the Firm's businesses are managed and how they are reviewed by the Firm's Operating Committee. The following table presents goodwill attributed to the business segments.

December 31, (in millions)	**2012**	2011	2010
Consumer & Community Banking	**$ 31,048**	$ 30,996	$ 31,018
Corporate & Investment Bank	**6,895**	6,944	6,958
Commercial Banking	**2,863**	2,864	2,866
Asset Management	**6,992**	7,007	7,635
Corporate/Private Equity	**377**	377	377
Total goodwill	**$ 48,175**	$ 48,188	$ 48,854

The following table presents changes in the carrying amount of goodwill.

Year ended December 31, (in millions)	**2012**	2011	2010
Balance at beginning of period[a]	**$ 48,188**	$ 48,854	$ 48,357
Changes during the period from:			
Business combinations	**43**	97	556
Dispositions	**(4)**	(685)	(19)
Other[b]	**(52)**	(78)	(40)
Balance at December 31,[a]	**$ 48,175**	$ 48,188	$ 48,854

(a) Reflects gross goodwill balances as the Firm has not recognized any impairment losses to date.
(b) Includes foreign currency translation adjustments and other tax-related adjustments.

The net reduction in goodwill from 2010 to 2011 was predominantly due to AM's sale of its investment in an asset manager.

Impairment testing

Goodwill was not impaired at December 31, 2012 or 2011, nor was any goodwill written off due to impairment during 2012, 2011 or 2010.

The goodwill impairment test is performed in two steps. In the first step, the current fair value of each reporting unit is compared with its carrying value, including goodwill. If the fair value is in excess of the carrying value (including goodwill), then the reporting unit's goodwill is considered not to be impaired. If the fair value is less than the carrying value (including goodwill), then a second step is performed. In the second step, the implied current fair value of the reporting unit's goodwill is determined by comparing the fair value of the reporting unit (as determined in step one) to the fair value of the net assets of the reporting unit, as if the reporting unit were being acquired in a business combination. The resulting implied current fair value of goodwill is then compared with the carrying value of the reporting unit's goodwill. If the carrying value of the goodwill exceeds its implied current fair value, then an impairment charge is recognized for the excess. If the

carrying value of goodwill is less than its implied current fair value, then no goodwill impairment is recognized.

The Firm uses the reporting units' allocated equity plus goodwill capital as a proxy for the carrying amounts of equity for the reporting units in the goodwill impairment testing. Reporting unit equity is determined on a similar basis as the allocation of equity to the Firm's lines of business, which takes into consideration the capital the business segment would require if it were operating independently, incorporating sufficient capital to address regulatory capital requirements (including Basel III), economic risk measures and capital levels for similarly rated peers. Proposed line of business equity levels are incorporated into the Firm's annual budget process, which is reviewed by the Firm's Board of Directors. Allocated equity is further reviewed on a periodic basis and updated as needed.

The primary method the Firm uses to estimate the fair value of its reporting units is the income approach. The models project cash flows for the forecast period and use the perpetuity growth method to calculate terminal values. These cash flows and terminal values are then discounted using an appropriate discount rate. Projections of cash flows are based on the reporting units' earnings forecasts, which include the estimated effects of regulatory and legislative changes (including, but not limited to the Dodd-Frank Wall Street Reform and Consumer Protection Act (the "Dodd-Frank Act"), the CARD Act, and limitations on non-sufficient funds and overdraft fees), and which are reviewed with the Operating Committee of the Firm. The discount rate used for each reporting unit represents an estimate of the cost of equity for that reporting unit and is determined considering the Firm's overall estimated cost of equity (estimated using the Capital Asset Pricing Model), as adjusted for the risk characteristics specific to each reporting unit (for example, for higher levels of risk or uncertainty associated with the business or management's forecasts and assumptions). To assess the reasonableness of the discount rates used for each reporting unit management compares the discount rate to the estimated cost of equity for publicly traded institutions with similar businesses and risk characteristics. In addition, the weighted average cost of equity (aggregating the various reporting units) is compared with the Firms' overall estimated cost of equity to ensure reasonableness.

The valuations derived from the discounted cash flow models are then compared with market-based trading and transaction multiples for relevant competitors. Trading and transaction comparables are used as general indicators to assess the general reasonableness of the estimated fair values, although precise conclusions generally cannot be drawn due to the differences that naturally exist between the Firm's businesses and competitor institutions. Management also takes into consideration a comparison between the aggregate fair value of the Firm's reporting units and JPMorgan Chase's market capitalization. In evaluating this comparison, management considers several factors, including (a) a control premium that would exist in a market transaction, (b) factors related to the level of execution risk that would exist at the firmwide level that do not exist at the reporting unit level and (c) short-term market volatility and other factors that do not directly affect the value of individual reporting units.

While no impairment of goodwill was recognized, the Firm's mortgage lending business in CCB remain at an elevated risk of goodwill impairment due to its exposure to U.S. consumer credit risk and the effects of economic, regulatory and legislative changes. The valuation of this business is particularly dependent upon economic conditions (including new unemployment claims and home prices), regulatory and legislative changes (for example, those related to residential mortgage servicing, foreclosure and loss mitigation activities), and the amount of equity capital required. In addition, the earnings or estimated cost of equity of the Firm's capital markets businesses could also be affected by regulatory or legislative changes. The assumptions used in the discounted cash flow valuation models were determined using management's best estimates. The cost of equity reflected the related risks and uncertainties, and was evaluated in comparison to relevant market peers. Deterioration in these assumptions could cause the estimated fair values of these reporting units and their associated goodwill to decline, which may result in a material impairment charge to earnings in a future period related to some portion of the associated goodwill.

Mortgage servicing rights

Mortgage servicing rights represent the fair value of expected future cash flows for performing servicing activities for others. The fair value considers estimated future servicing fees and ancillary revenue, offset by estimated costs to service the loans, and generally declines over time as net servicing cash flows are received, effectively amortizing the MSR asset against contractual servicing and ancillary fee income. MSRs are either purchased from third parties or recognized upon sale or securitization of mortgage loans if servicing is retained.

As permitted by U.S. GAAP, the Firm elected to account for its MSRs at fair value. The Firm treats its MSRs as a single class of servicing assets based on the availability of market inputs used to measure the fair value of its MSR asset and its treatment of MSRs as one aggregate pool for risk management purposes. The Firm estimates the fair value of MSRs using an option-adjusted spread ("OAS") model, which projects MSR cash flows over multiple interest rate scenarios in conjunction with the Firm's prepayment model, and then discounts these cash flows at risk-adjusted rates. The model considers portfolio characteristics, contractually specified servicing fees, prepayment assumptions, delinquency rates, costs to service, late charges and other ancillary revenue, and other economic factors. The Firm compares fair value estimates and assumptions to observable market data where available, and also considers recent market activity and actual portfolio experience.

The fair value of MSRs is sensitive to changes in interest rates, including their effect on prepayment speeds. MSRs typically decrease in value when interest rates decline because declining interest rates tend to increase prepayments and therefore reduce the expected life of the net servicing cash flows that comprise the MSR asset. Conversely, securities (e.g., mortgage-backed securities), principal-only certificates and certain derivatives (i.e., those for which the Firm receives fixed-rate interest payments) increase in value when interest rates decline. JPMorgan Chase uses combinations of derivatives and securities to manage changes in the fair value of MSRs. The intent is to offset any interest-rate related changes in the fair value of MSRs with changes in the fair value of the related risk management instruments.

The following table summarizes MSR activity for the years ended December 31, 2012, 2011 and 2010.

As of or for the year ended December 31, (in millions, except where otherwise noted)	2012	2011	2010
Fair value at beginning of period	$ 7,223	$ 13,649	$ 15,531
MSR activity			
Originations of MSRs	2,376	2,570	3,153
Purchase of MSRs	457	33	26
Disposition of MSRs	(579) [e]	–	(407)
Changes due to modeled amortization	(1,228)	(1,910)	(2,386)
Net additions and amortization	1,026	693	386
Changes due to market interest rates	(589)	(5,392)	(2,224)
Other changes in valuation due to inputs and assumptions[a]	(46)	(1,727)	(44)
Total change in fair value of MSRs[b]	(635)	(7,119)	(2,268)
Fair value at December 31[c]	$ 7,614	$ 7,223	$ 13,649
Change in unrealized gains/ (losses) included in income related to MSRs held at December 31	$ (635)	$ (7,119)	$ (2,268)
Contractual service fees, late fees and other ancillary fees included in income	$ 3,783	$ 3,977	$ 4,484
Third-party mortgage loans serviced at December 31 (in billions)	$ 867	$ 910	$ 976
Servicer advances at December 31 (in billions)[d]	$ 10.9	$ 11.1	$ 9.9

(a) Represents the aggregate impact of changes in model inputs and assumptions such as costs to service, home prices, mortgage spreads, ancillary income, and assumptions used to derive prepayment speeds, as well as changes to the valuation models themselves.

(b) Includes changes related to commercial real estate of $(8) million, $(9) million and $(1) million for the years ended December 31, 2012, 2011 and 2010, respectively.

(c) Includes $23 million, $31 million and $40 million related to commercial real estate at December 31, 2012, 2011 and 2010, respectively.

(d) Represents amounts the Firm pays as the servicer (e.g., scheduled principal and interest to a trust, taxes and insurance), which will generally be reimbursed within a short period of time after the advance from future cash flows from the trust or the underlying loans. The Firm's credit risk associated with these advances is minimal because reimbursement of the advances is senior to all cash payments to investors. In addition, the Firm maintains the right to stop payment to investors if the collateral is insufficient to cover the advance.

(e) Includes excess mortgage servicing rights transferred to an agency-sponsored trust in exchange for stripped mortgage backed securities ("SMBS"). A portion of the SMBS was acquired by third parties at the transaction date; the Firm acquired and has retained the remaining balance of those SMBS as trading assets.

During the year ended December 31, 2011, the fair value of the MSR decreased by $6.4 billion. This decrease was predominately due to a decline in market interest rates, which resulted in a loss in fair value of $5.4 billion. These losses were offset by gains of $5.6 billion on derivatives used to hedge the MSR asset; these derivatives are recognized on the Consolidated Balance Sheets separately from the MSR asset. Also contributing to the decline in fair value of the MSR asset was a $1.7 billion decrease related to revised cost to service and ancillary income assumptions incorporated in the MSR valuation. The increased cost to service assumptions reflect the estimated impact of higher servicing costs to enhance servicing processes, particularly loan modification and foreclosure procedures, including costs to comply with Consent Orders entered into with banking regulators. The increase in the cost to service assumption contemplates significant and prolonged increases in staffing levels in the core and default servicing functions. The decreased ancillary income assumption is similarly related to a reassessment of business practices in consideration of the Consent Orders and the existing industry-wide regulatory environment, which is broadly affecting market participants.

Also in the fourth quarter of 2011, the Firm revised its OAS assumption and updated its proprietary prepayment model; these changes had generally offsetting effects. The Firm's OAS assumption is based upon capital and return requirements that the Firm believes a market participant would consider, taking into account factors such as the pending Basel III capital rules. Consequently, the OAS assumption for the Firm's portfolio increased by approximately 400 basis points and decreased the fair value of the MSR asset by approximately $1.2 billion.

Since 2009, the Firm has continued to refine its proprietary prepayment model based on a number of market-related factors, including a downward trend in home prices, a general tightening of credit underwriting standards and the associated impact on refinancing activity. In the fourth quarter of 2011, the Firm further enhanced its proprietary prepayment model to incorporate: (i) the impact of the Home Affordable Refinance Program ("HARP") 2.0, and (ii) assumptions that will limit modeled refinancings due to the combined influences of relatively strict underwriting standards and reduced levels of expected home price appreciation. In the aggregate, these refinements increased the fair value of the MSR asset by approximately $1.2 billion.

The decrease in the fair value of the MSR results in a lower asset value that will amortize in future periods against contractual and ancillary fee income received in future periods. While there is expected to be higher levels of noninterest expense associated with higher servicing costs

in those future periods, there will also be less MSR amortization, which will have the effect of increasing mortgage fees and related income. The amortization of the MSR is reflected in the tables above under "Changes due to modeled amortization."

The following table presents the components of mortgage fees and related income (including the impact of MSR risk management activities) for the years ended December 31, 2012, 2011 and 2010.

Year ended December 31, (in millions)	2012	2011	2010
Mortgage fees and related income			
Net production revenue:			
Production revenue	**$5,783**	$ 3,395	$3,440
Repurchase losses	**(272)**	(1,347)	(2,912)
Net production revenue	**5,511**	2,048	528
Net mortgage servicing revenue			
Operating revenue:			
Loan servicing revenue	**3,772**	4,134	4,575
Changes in MSR asset fair value due to modeled amortization	**(1,222)**	(1,904)	(2,384)
Total operating revenue	**2,550**	2,230	2,191
Risk management:			
Changes in MSR asset fair value due to market interest rates	**(587)**	(5,390)	(2,224)
Other changes in MSR asset fair value due to inputs or assumptions in model[(a)]	**(46)**	(1,727)	(44)
Change in derivative fair value and other	**1,252**	5,553	3,404
Total risk management	**619**	(1,564)	1,136
Net mortgage servicing revenue	**3,169**	666	3,327
All other	**7**	7	15
Mortgage fees and related income	**$8,687**	$ 2,721	$3,870

(a) Represents the aggregate impact of changes in model inputs and assumptions such as costs to service, home prices, mortgage spreads, ancillary income, and assumptions used to derive prepayment speeds, as well as changes to the valuation models themselves.

The table below outlines the key economic assumptions used to determine the fair value of the Firm's MSRs at December 31, 2012 and 2011, and outlines the sensitivities of those fair values to immediate adverse changes in those assumptions, as defined below.

December 31, (in millions, except rates)	2012	2011
Weighted-average prepayment speed assumption ("CPR")	**13.04%**	18.07%
Impact on fair value of 10% adverse change	**$ (517)**	$ (585)
Impact on fair value of 20% adverse change	**(1,009)**	(1,118)
Weighted-average option adjusted spread	**7.61%**	7.83%
Impact on fair value of 100 basis points adverse change	**$ (306)**	$ (269)
Impact on fair value of 200 basis points adverse change	**(591)**	(518)

CPR: Constant prepayment rate.

The sensitivity analysis in the preceding table is hypothetical and should be used with caution. Changes in fair value based on variation in assumptions generally cannot be easily extrapolated, because the relationship of the change in the assumptions to the change in fair value are often highly inter-related and may not be linear. In this table, the effect that a change in a particular assumption may have on the fair value is calculated without changing any other assumption. In reality, changes in one factor may result in changes in another, which would either magnify or counteract the impact of the initial change.

Other intangible assets

Other intangible assets are recorded at their fair value upon completion of a business combination or certain other transactions, and generally represent the value of customer relationships or arrangements. Subsequently, the Firm's intangible assets with finite lives, including core deposit intangibles, purchased credit card relationships, and other intangible assets, are amortized over their useful lives in a manner that best reflects the economic benefits of the intangible asset. The $972 million decrease in other intangible assets during 2012 was due to $957 million in amortization, which included a $214 million impairment write-off of purchased credit card relationships and other credit card-related intangibles, as projected cash flows associated with a non-strategic credit card relationship within CCB had deteriorated.

The components of credit card relationships, core deposits and other intangible assets were as follows.

	2012			2011		
December 31, (in millions)	Gross amount[a]	Accumulated amortization[a]	Net carrying value	Gross amount	Accumulated amortization	Net carrying value
Purchased credit card relationships	**$ 3,775**	**$ 3,480**	**$ 295**	$ 3,826	$ 3,224	$ 602
Other credit card-related intangibles	**850**	**621**	**229**	844	356	488
Core deposit intangibles	**4,133**	**3,778**	**355**	4,133	3,539	594
Other intangibles[b]	**2,390**	**1,034**	**1,356**	2,467	944	1,523

(a) The decrease in the gross amount and accumulated amortization from December 31, 2011, was due to the removal of fully amortized assets.
(b) Includes intangible assets of approximately $600 million consisting primarily of asset management advisory contracts, which were determined to have an indefinite life and are not amortized.

Amortization expense

The following table presents amortization expense related to credit card relationships, core deposits and other intangible assets.

December 31, (in millions)	2012	2011	2010
Purchased credit card relationships	**$ 309**	$ 295	$ 355
Other credit card-related intangibles	**265**	106	111
Core deposit intangibles	**239**	285	328
Other intangibles	**144**	162	142
Total amortization expense	**$ 957**	$ 848	$ 936

Future amortization expense

The following table presents estimated future amortization expense related to credit card relationships, core deposits and other intangible assets at December 31, 2012.

Year ended December 31, (in millions)	Purchased credit card relationships	Other credit card-related intangibles	Core deposit intangibles	Other intangibles	**Total**
2013	$ 192	$ 57	$ 196	$ 132	$ 577
2014	91	49	102	116	358
2015	7	39	26	96	168
2016	4	34	14	89	141
2017	1	29	13	88	131

Impairment testing

The Firm's intangible assets are tested for impairment annually or more often if events or changes in circumstances indicate that the asset might be impaired.

The impairment test for a finite-lived intangible asset compares the undiscounted cash flows associated with the use or disposition of the intangible asset to its carrying value. If the sum of the undiscounted cash flows exceeds its carrying value, then no impairment charge is recorded. If the sum of the undiscounted cash flows is less than its carrying value, then an impairment charge is recognized in amortization expense to the extent the carrying amount of the asset exceeds its fair value.

The impairment test for indefinite-lived intangible assets compares the fair value of the intangible asset to its carrying amount. If the carrying value exceeds the fair value, then an impairment charge is recognized in amortization expense for the difference.

Note 18 – Premises and equipment

Premises and equipment, including leasehold improvements, are carried at cost less accumulated depreciation and amortization. JPMorgan Chase computes depreciation using the straight-line method over the estimated useful life of an asset. For leasehold improvements, the Firm uses the straight-line method computed over the lesser of the remaining term of the leased facility or the estimated useful life of the leased asset. JPMorgan Chase has recorded immaterial asset retirement obligations related to asbestos remediation in those cases where it has sufficient information to estimate the obligations' fair value.

JPMorgan Chase capitalizes certain costs associated with the acquisition or development of internal-use software. Once the software is ready for its intended use, these costs are amortized on a straight-line basis over the software's expected useful life and reviewed for impairment on an ongoing basis.

Note 19 – Deposits

At December 31, 2012 and 2011, noninterest-bearing and interest-bearing deposits were as follows.

December 31, (in millions)	2012	2011
U.S. offices		
Noninterest-bearing	**$ 380,320**	$ 346,670
Interest-bearing		
Demand[a]	**53,980**	47,075
Savings[b]	**407,710**	375,051
Time (included **$5,140** and $3,861 at fair value)[c]	**90,416**	82,738
Total interest-bearing deposits	**552,106**	504,864
Total deposits in U.S. offices	**932,426**	851,534
Non-U.S. offices		
Noninterest-bearing	**17,845**	18,790
Interest-bearing		
Demand	**195,395**	188,202
Savings	**1,004**	687
Time (included **$593** and $1,072 at fair value)[c]	**46,923**	68,593
Total interest-bearing deposits	**243,322**	257,482
Total deposits in non-U.S. offices	**261,167**	276,272
Total deposits	**$ 1,193,593**	$ 1,127,806

(a) Includes Negotiable Order of Withdrawal ("NOW") accounts, and certain trust accounts.
(b) Includes Money Market Deposit Accounts ("MMDAs").
(c) Includes structured notes classified as deposits for which the fair value option has been elected. For further discussion, see Note 4 on pages 214–216 of this Annual Report.

At December 31, 2012 and 2011, time deposits in denominations of $100,000 or more were as follows.

December 31, (in millions)	2012	2011
U.S. offices	**$ 70,008**	$ 57,802
Non-U.S. offices	**46,890**	60,066 [a]
Total	**$116,898**	$117,868

(a) The prior period balance has been revised.

At December 31, 2012, the maturities of interest-bearing time deposits were as follows.

December 31, 2012 (in millions)	U.S.	Non-U.S.	**Total**
2013	$ 74,469	$ 45,731	$ 120,200
2014	3,792	795	4,587
2015	3,374	34	3,408
2016	4,566	188	4,754
2017	1,195	110	1,305
After 5 years	3,020	65	3,085
Total	$ 90,416	$ 46,923	$ 137,339

Note 20 – Accounts payable and other liabilities

The following table details the components of accounts payable and other liabilities.

December 31, (in millions)	2012	2011
Brokerage payables[a]	**$ 108,398**	$ 121,353
Accounts payable and other liabilities[b]	**86,842**	81,542
Total	**$ 195,240**	$ 202,895

(a) Includes payables to customers, brokers, dealers and clearing organizations, and securities fails.
(b) Includes $36 million and $51 million accounted for at fair value at December 31, 2012 and 2011, respectively.

Note 21 – Long-term debt

JPMorgan Chase issues long-term debt denominated in various currencies, although predominantly U.S. dollars, with both fixed and variable interest rates. Included in senior and subordinated debt below are various equity-linked or other indexed instruments, which the Firm has elected to measure at fair value. Changes in fair value are recorded in principal transactions revenue in the Consolidated Statements of Income. The following table is a summary of long-term debt carrying values (including unamortized original issue discount, valuation adjustments and fair value adjustments, where applicable) by remaining contractual maturity as of December 31, 2012.

By remaining maturity at December 31,		2012					2011
(in millions, except rates)		Under 1 year	1-5 years	After 5 years	Total		Total
Parent company							
Senior debt:	Fixed rate[a]	$ 6,876	$ 47,101	$ 45,739	$ 99,716		$ 96,478
	Variable rate[b]	10,049	22,706	6,010	38,765		55,779
	Interest rates[c]	0.43-5.38%	0.35-7.00%	0.26-7.25%	0.26-7.25%		0.32-7.25%
Subordinated debt:	Fixed rate	$ 2,421	$ 8,259	$ 5,632	$ 16,312		$ 19,167
	Variable rate	–	3,431	9	3,440		1,954
	Interest rates[c]	5.25-5.75%	0.61-6.13%	3.88-8.53%	0.61-8.53%		1.09-8.53%
	Subtotal	$ 19,346	$ 81,497	$ 57,390	$ 158,233		$ 173,378
Subsidiaries							
FHLB advances:	Fixed rate	$ 1,510	$ 3,040	$ 162	$ 4,712		$ 4,738
	Variable rate	2,321	23,012	12,000	37,333		13,085
	Interest rates[c]	0.30-1.15%	0.30-2.04%	0.39-0.47%	0.30-2.04%		0.32-2.04%
Senior debt:	Fixed rate	$ 582	$ 2,397	$ 3,782	$ 6,761		$ 6,546
	Variable rate	7,577	11,390	2,640	21,607		28,257
	Interest rates[c]	0.33-2.10%	0.16-3.75%	1.00-7.28%	0.16-7.28%		0.13-14.21%
Subordinated debt:	Fixed rate	$ –	$ 5,651	$ 1,862	$ 7,513		$ 8,755
	Variable rate	–	2,466	–	2,466		1,150
	Interest rates[c]	–%	0.64-6.00%	4.38-8.25%	0.64-8.25%		0.87-8.25%
	Subtotal	$ 11,990	$ 47,956	$ 20,446	$ 80,392		$ 62,531
Junior subordinated debt:	Fixed rate	$ –	$ –	$ 7,131	$ 7,131		$ 15,784
	Variable rate	–	–	3,268	3,268		5,082
	Interest rates[c]	–%	–%	0.81-8.75%	0.81-8.75%		0.93-8.75%
	Subtotal	$ –	$ –	$ 10,399	$ 10,399		$ 20,866
Total long-term debt[d][e][f]		$ 31,336	$ 129,453	$ 88,235	$ 249,024	[h][i]	$ 256,775
Long-term beneficial interests:							
	Fixed rate	$ 1,629	$ 5,502	$ 3,262	$ 10,393		$ 6,261
	Variable rate	10,226	10,551	3,802	24,579		33,473
	Interest rates	0.27-5.40%	0.23-5.63%	0.32-13.91%	0.23-13.91%		0.02-11.00%
Total long-term beneficial interests[g]		$ 11,855	$ 16,053	$ 7,064	$ 34,972		$ 39,734

(a) Included $8.4 billion as of December 31, 2011, that was guaranteed by the FDIC under the Temporary Liquidity Guarantee ("TLG") Program. All long-term debt guaranteed under the TLG Program matured prior to December 31, 2012.
(b) Included $11.9 billion as of December 31, 2011 that was guaranteed by the FDIC under the TLG Program. All long-term debt guaranteed under the TLG Program matured prior to December 31, 2012.
(c) The interest rates shown are the range of contractual rates in effect at year-end, including non-U.S. dollar fixed- and variable-rate issuances, which excludes the effects of the associated derivative instruments used in hedge accounting relationships, if applicable. The use of these derivative instruments modifies the Firm's exposure to the contractual interest rates disclosed in the table above. Including the effects of the hedge accounting derivatives, the range of modified rates in effect at December 31, 2012, for total long-term debt was (0.76)% to 7.86%, versus the contractual range of 0.16% to 8.75% presented in the table above. The interest rate ranges shown exclude structured notes accounted for at fair value.
(d) Included long-term debt of $48.0 billion and $23.8 billion secured by assets totaling $112.8 billion and $89.4 billion at December 31, 2012 and 2011, respectively. The amount of long-term debt secured by assets does not include amounts related to hybrid instruments.
(e) Included $30.8 billion and $34.7 billion of outstanding structured notes accounted for at fair value at December 31, 2012 and 2011, respectively.
(f) Included $1.6 billion and $2.1 billion of outstanding zero-coupon notes at December 31, 2012 and 2011, respectively. The aggregate principal amount of these notes at their respective maturities was $3.0 billion and $5.0 billion, respectively.
(g) Included on the Consolidated Balance Sheets in beneficial interests issued by consolidated VIEs. Also included $1.2 billion and $1.3 billion of outstanding structured notes accounted for at fair value at December 31, 2012 and 2011, respectively. Excluded short-term commercial paper and other short-term beneficial interests of $28.2 billion and $26.2 billion at December 31, 2012 and 2011, respectively.
(h) At December 31, 2012, long-term debt in the aggregate of $22.1 billion was redeemable at the option of JPMorgan Chase, in whole or in part, prior to maturity, based on the terms specified in the respective notes.
(i) The aggregate carrying values of debt that matures in each of the five years subsequent to 2012 is $31.3 billion in 2013, $35.8 billion in 2014, $32.0 billion in 2015, $28.0 billion in 2016 and $33.6 billion in 2017.

The weighted-average contractual interest rates for total long-term debt excluding structured notes accounted for at fair value were 3.09% and 3.57% as of December 31, 2012 and 2011, respectively. In order to modify exposure to interest rate and currency exchange rate movements, JPMorgan Chase utilizes derivative instruments, primarily interest rate and cross-currency interest rate swaps, in conjunction with some of its debt issues. The use of these instruments modifies the Firm's interest expense on the associated debt. The modified weighted-average interest rates for total long-term debt, including the effects of related derivative instruments, were 2.33% and 2.67% as of December 31, 2012 and 2011, respectively.

The Parent Company has guaranteed certain long-term debt of its subsidiaries, including both long-term debt and structured notes sold as part of the Firm's market-making activities. These guarantees rank on parity with all of the Firm's other unsecured and unsubordinated indebtedness. Guaranteed liabilities were $1.7 billion and $3.0 billion at December 31, 2012 and 2011, respectively.

The Firm's unsecured debt does not contain requirements that would call for an acceleration of payments, maturities or changes in the structure of the existing debt, provide any limitations on future borrowings or require additional collateral, based on unfavorable changes in the Firm's credit ratings, financial ratios, earnings or stock price.

Junior subordinated deferrable interest debentures held by trusts that issued guaranteed capital debt securities
On July 12, 2012, JPMorgan Chase redeemed $9.0 billion, or 100% of the liquidation amount, of the following guaranteed capital debt securities ("trust preferred securities"): JPMorgan Chase Capital XV, JPMorgan Chase Capital XVII, JPMorgan Chase Capital XVIII, JPMorgan Chase Capital XX, JPMorgan Chase Capital XXII, JPMorgan Chase Capital XXV, JPMorgan Chase Capital XXVI, JPMorgan Chase Capital XXVII, and JPMorgan Chase Capital XXVIII. Other income for the year ended December 31, 2012, reflected $888 million of pretax extinguishment gains related to adjustments applied to the cost basis of the redeemed trust preferred securities during the period they were in a qualified hedge accounting relationship.

At December 31, 2012, the Firm had outstanding 17 wholly-owned Delaware statutory business trusts ("issuer trusts") that had issued guaranteed capital debt securities.

The junior subordinated deferrable interest debentures issued by the Firm to the issuer trusts, totaling $10.4 billion and $20.9 billion at December 31, 2012 and 2011, respectively, were reflected in the Firm's Consolidated Balance Sheets in long-term debt, and in the table on the preceding page under the caption "Junior subordinated debt" (i.e., trust preferred securities). The Firm also records the common capital securities issued by the issuer trusts in other assets in its Consolidated Balance Sheets at December 31, 2012 and 2011. The debentures issued to the issuer trusts by the Firm, less the common capital securities of the issuer trusts, qualified as Tier 1 capital as of December 31, 2012.

The following is a summary of the outstanding trust preferred securities, including unamortized original issue discount, issued by each trust, and the junior subordinated deferrable interest debenture issued to each trust, as of December 31, 2012.

December 31, 2012 (in millions)	Amount of trust preferred securities issued by trust[a]	Principal amount of debenture issued to trust[b]	Issue date	Stated maturity of trust preferred securities and debentures	Earliest redemption date	Interest rate of trust preferred securities and debentures	Interest payment/ distribution dates
Bank One Capital III	$474	$757	2000	2030	Any time	8.75%	Semiannually
Bank One Capital VI	100	105	2001	2031	Any time	7.20%	Quarterly
Chase Capital II	482	498	1997	2027	Any time	LIBOR + 0.50%	Quarterly
Chase Capital III	296	305	1997	2027	Any time	LIBOR + 0.55%	Quarterly
Chase Capital VI	241	249	1998	2028	Any time	LIBOR + 0.625%	Quarterly
First Chicago NBD Capital I	249	256	1997	2027	Any time	LIBOR + 0.55%	Quarterly
J.P. Morgan Chase Capital X	1,000	1,018	2002	2032	Any time	7.00%	Quarterly
J.P. Morgan Chase Capital XI	1,075	1,013	2003	2033	Any time	5.88%	Quarterly
J.P. Morgan Chase Capital XII	400	392	2003	2033	Any time	6.25%	Quarterly
JPMorgan Chase Capital XIII	465	480	2004	2034	2014	LIBOR + 0.95%	Quarterly
JPMorgan Chase Capital XIV	600	588	2004	2034	Any time	6.20%	Quarterly
JPMorgan Chase Capital XVI	500	494	2005	2035	Any time	6.35%	Quarterly
JPMorgan Chase Capital XIX	563	564	2006	2036	Any time	6.63%	Quarterly
JPMorgan Chase Capital XXI	836	837	2007	2037	Any time	LIBOR + 0.95%	Quarterly
JPMorgan Chase Capital XXIII	643	643	2007	2047	Any time	LIBOR + 1.00%	Quarterly
JPMorgan Chase Capital XXIV	700	700	2007	2047	Any time	6.88%	Quarterly
JPMorgan Chase Capital XXIX	1,500	1,500	2010	2040	2015	6.70%	Quarterly
Total	$10,124	$10,399					

(a) Represents the amount of trust preferred securities issued to the public by each trust, including unamortized original issue discount.

(b) Represents the principal amount of JPMorgan Chase debentures issued to each trust, including unamortized original-issue discount. The principal amount of debentures issued to the trusts includes the impact of hedging and purchase accounting fair value adjustments that were recorded on the Firm's Consolidated Financial Statements.

Note 22 – Preferred stock

At December 31, 2012 and 2011, JPMorgan Chase was authorized to issue 200 million shares of preferred stock, in one or more series, with a par value of $1 per share.

In the event of a liquidation or dissolution of the Firm, JPMorgan Chase's preferred stock then outstanding takes precedence over the Firm's common stock for the payment of dividends and the distribution of assets.

The following is a summary of JPMorgan Chase's preferred stock outstanding as of December 31, 2012 and 2011.

	Contractual rate in effect at December 31, 2012	Shares at December 31,[a]		Carrying value (in millions) at December 31,		Earliest redemption date	Share value and redemption price per share[b]
		2012	2011	**2012**	2011		
Fixed-to-Floating Rate Non-Cumulative Perpetual Preferred Stock, Series I	7.900%	**600,000**	600,000	**$ 6,000**	$ 6,000	4/30/2018	$ 10,000
8.625% Non-Cumulative Perpetual Preferred Stock, Series J	8.625%	**180,000**	180,000	**1,800**	1,800	9/1/2013	10,000
5.50% Non-Cumulative Perpetual Preferred Stock, Series O	5.500%	**125,750**	–	**1,258**	–	9/1/2017	10,000
Total preferred stock		**905,750**	780,000	**$ 9,058**	$ 7,800		

(a) Represented by depositary shares.
(b) The redemption price includes the amount shown in the table plus any accrued but unpaid dividends.

Dividends on the Fixed-to-Floating Rate Non-Cumulative Perpetual Preferred Stock, Series I shares are payable semiannually at a fixed annual dividend rate of 7.90% through April 2018, and then become payable quarterly at an annual dividend rate of three-month LIBOR plus 3.47%. Dividends on the 8.625% Non-Cumulative Preferred Stock, Series J and on the 5.50% Non-Cumulative Preferred Stock, Series O are payable quarterly. The 5.50% Non-Cumulative was issued in August 2012.

On August 20, 2010, the Firm redeemed all of the outstanding shares of its 6.15% Cumulative Preferred Stock, Series E; 5.72% Cumulative Preferred Stock, Series F; and 5.49% Cumulative Preferred Stock, Series G at their stated redemption value.

Redemption rights

Each series of the Firm's preferred stock may be redeemed on any dividend payment date on or after the earliest redemption date for that series. The Series O preferred stock may also be redeemed following a capital treatment event, as described in the terms of that series. Any redemption of the Firm's preferred stock is subject to non-objection from the Federal Reserve.

Note 23 – Common stock

At December 31, 2012 and 2011, JPMorgan Chase was authorized to issue 9.0 billion shares of common stock with a par value of $1 per share.

Common shares issued (newly issued or distributed from treasury) by JPMorgan Chase during the years ended December 31, 2012, 2011 and 2010 were as follows.

Year ended December 31, (in millions)	**2012**	2011	2010
Issued – balance at January 1	**4,104.9**	4,104.9	4,104.9
New open market issuances	**–**	–	–
Total issued – balance at December 31	**4,104.9**	4,104.9	4,104.9
Treasury – balance at January 1	**(332.2)**	(194.6)	(162.9)
Purchase of treasury stock	**(33.5)**	(226.9)	(77.9)
Share repurchases related to employee stock-based awards[a]	**(0.2)**	(0.1)	(0.1)
Issued from treasury:			
Employee benefits and compensation plans	**63.7**	88.3	45.3
Employee stock purchase plans	**1.3**	1.1	1.0
Total issued from treasury	**65.0**	89.4	46.3
Total treasury – balance at December 31	**(300.9)**	(332.2)	(194.6)
Outstanding	**3,804.0**	3,772.7	3,910.3

(a) Participants in the Firm's stock-based incentive plans may have shares withheld to cover income taxes.

Pursuant to the U.S. Treasury's Capital Purchase Program, the Firm issued to the U.S. Treasury a Warrant to purchase up to 88,401,697 shares of the Firm's common stock, at an exercise price of $42.42 per share, subject to certain antidilution and other adjustments. The U.S. Treasury exchanged the Warrant for 88,401,697 warrants, each of which was a warrant to purchase a share of the Firm's common stock at an exercise price of $42.42 per share and, on December 11, 2009, sold the warrants in a secondary public offering for $950 million. The warrants are exercisable, in whole or in part, at any time and from time to time until October 28, 2018. As part of its common equity repurchase program discussed below, during 2012 and 2011, the Firm repurchased 18,471,300 and 10,167,698 warrants, for $238 million and $122 million, respectively, which resulted in adjustments to capital surplus. The Firm did not repurchase any of the warrants during 2010. At December 31, 2012 and 2011, respectively, 59,762,699 and 78,233,999 warrants remained outstanding.

On March 18, 2011, the Board of Directors approved a $15.0 billion common equity (i.e., common stock and warrants) repurchase program, of which $8.95 billion was authorized for repurchase in 2011. On March 13, 2012, the Board of Directors authorized a $15.0 billion common equity repurchase program, of which up to $12.0 billion was approved for repurchase in 2012 and up to an additional $3.0 billion is approved for repurchases through the end of the first quarter of 2013. Following the voluntary cessation of its common equity repurchase program in May 2012, the Firm resubmitted its capital plan to the Federal Reserve under the 2012 CCAR process in August 2012. Pursuant to a non-objection received from the Federal Reserve on November 5, 2012, with respect to the resubmitted capital plan, the Firm is authorized to repurchase up to $3.0 billion of common equity in the first quarter of 2013.

During 2012, 2011 and 2010, the Firm repurchased (on a trade-date basis) 31 million, 229 million, and 78 million shares of common stock, for $1.3 billion, $8.8 billion and $3.0 billion, respectively. For additional information regarding repurchases of the Firm's equity securities, see Part II, Item 5: Market for registrant's common equity, related stockholder matters and issuer purchases of equity securities, on pages 22–23 of JPMorgan Chase's 2012 Form 10-K.

The Firm may, from time to time, enter into written trading plans under Rule 10b5-1 of the Securities Exchange Act of 1934 to facilitate repurchases in accordance with the repurchase program. A Rule 10b5-1 repurchase plan allows the Firm to repurchase its equity during periods when it would not otherwise be repurchasing common equity – for example, during internal trading "black-out periods." All purchases under a Rule 10b5-1 plan must be made according to a predefined plan established when the Firm is not aware of material nonpublic information.

As of December 31, 2012, approximately 325 million unissued shares of common stock were reserved for issuance under various employee incentive, compensation, option and stock purchase plans, director compensation plans, and the warrants sold by the U.S. Treasury as discussed above.

Note 24 – Earnings per share

Earnings per share ("EPS") is calculated under the two-class method under which all earnings (distributed and undistributed) are allocated to each class of common stock and participating securities based on their respective rights to receive dividends. JPMorgan Chase grants restricted stock and RSUs to certain employees under its stock-based compensation programs, which entitle recipients to receive nonforfeitable dividends during the vesting period on a basis equivalent to the dividends paid to holders of common stock; these unvested awards meet the definition of participating securities. Options issued under employee benefit plans that have an antidilutive effect are excluded from the computation of diluted EPS.

The following table presents the calculation of basic and diluted EPS for the years ended December 31, 2012, 2011 and 2010.

Year ended December 31, (in millions, except per share amounts)	2012	2011	2010
Basic earnings per share			
Net income	$ 21,284	$ 18,976	$ 17,370
Less: Preferred stock dividends	653	629	642
Net income applicable to common equity	20,631	18,347	16,728
Less: Dividends and undistributed earnings allocated to participating securities	754	779	964
Net income applicable to common stockholders	$ 19,877	$ 17,568	$ 15,764
Total weighted-average basic shares outstanding	3,809.4	3,900.4	3,956.3
Net income per share	$ 5.22	$ 4.50	$ 3.98
Diluted earnings per share			
Net income applicable to common stockholders	$ 19,877	$ 17,568	$ 15,764
Total weighted-average basic shares outstanding	3,809.4	3,900.4	3,956.3
Add: Employee stock options, SARs and warrants[(a)]	12.8	19.9	20.6
Total weighted-average diluted shares outstanding[(b)]	3,822.2	3,920.3	3,976.9
Net income per share	$ 5.20	$ 4.48	$ 3.96

(a) Excluded from the computation of diluted EPS (due to the antidilutive effect) were options issued under employee benefit plans and the warrants originally issued in 2008 under the U.S. Treasury's Capital Purchase Program to purchase shares of the Firm's common stock. The aggregate number of shares issuable upon the exercise of such options and warrants was 148 million, 133 million and 233 million for the full years ended December 31, 2012, 2011 and 2010 respectively.

(b) Participating securities were included in the calculation of diluted EPS using the two-class method, as this computation was more dilutive than the calculation using the treasury stock method.

Note 25 – Accumulated other comprehensive income/(loss)

AOCI includes the after-tax change in unrealized gains and losses on AFS securities, foreign currency translation adjustments (including the impact of related derivatives), cash flow hedging activities, and net loss and prior service costs/(credit) related to the Firm's defined benefit pension and OPEB plans.

Year ended December 31, (in millions)	Unrealized gains/ (losses) on AFS securities[b]	Translation adjustments, net of hedges	Cash flow hedges	Defined benefit pension and OPEB plans	Accumulated other comprehensive
Balance at December 31, 2009	$ 2,032	$ (16)	$ 181	$ (2,288)	$ (91)
Cumulative effect of changes in accounting principles[a]	(144)	–	–	–	(144)
Net change	610 [c]	269	25	332	1,236
Balance at December 31, 2010	$ 2,498 [d]	$ 253	$ 206	$ (1,956)	$ 1,001
Net change	1,067 [e]	(279)	(155)	(690)	(57)
Balance at December 31, 2011	$ 3,565 [d]	$ (26)	$ 51	$ (2,646)	$ 944
Net change	**3,303** [f]	**(69)**	**69**	**(145)**	**3,158**
Balance at December 31, 2012	**$ 6,868** [d]	**$ (95)**	**$ 120**	**$ (2,791)**	**$ 4,102**

(a) Reflects the effect of the adoption of accounting guidance related to the consolidation of VIEs and to embedded credit derivatives in beneficial interests in securitized financial assets. AOCI decreased by $129 million due to the adoption of the accounting guidance related to VIEs, as a result of the reversal of the fair value adjustments taken on retained AFS securities that were eliminated in consolidation; for further discussion see Note 16 on pages 280–291 of this Annual Report. AOCI decreased by $15 million due to the adoption of guidance related to credit derivatives embedded in certain of the Firm's AFS securities; for further discussion see Note 6 on pages 218–227 of this Annual Report.

(b) Represents the after-tax difference between the fair value and amortized cost of securities accounted for as AFS.

(c) The net change during 2010 was due primarily to the narrowing of spreads on commercial and non-agency MBS as well as on collateralized loan obligations; also reflects increased market value on pass-through MBS due to narrowing of spreads and other market factors.

(d) Included after-tax unrealized losses not related to credit on debt securities for which credit losses have been recognized in income of $(56) million and $(81) million at December 31, 2011 and 2010, respectively. There were no such losses at December 31, 2012.

(e) The net change for 2011 was due primarily to increased market value on agency MBS and municipal securities, partially offset by the widening of spreads on non-U.S. corporate debt and the realization of gains due to portfolio repositioning.

(f) The net change for 2012 was predominantly driven by increased market value on non-U.S. residential MBS, corporate debt securities and obligations of U.S. states and municipalities, partially offset by realized gains.

The following table presents the before- and after-tax changes in the components of other comprehensive income/(loss).

	2012			2011			2010		
Year ended December 31, (in millions)	Pretax	Tax effect	After-tax	Pretax	Tax effect	After-tax	Pretax	Tax effect	After-tax
Unrealized gains/(losses) on AFS securities:									
Net unrealized gains/(losses) arising during the period	**$ 7,521**	**$ (2,930)**	**$ 4,591**	$ 3,361	$ (1,322)	$ 2,039	$ 3,982	$ (1,540)	$ 2,442

Note 26 – Income taxes

JPMorgan Chase and its eligible subsidiaries file a consolidated U.S. federal income tax return. JPMorgan Chase uses the asset and liability method to provide income taxes on all transactions recorded in the Consolidated Financial Statements. This method requires that income taxes reflect the expected future tax consequences of temporary differences between the carrying amounts of assets or liabilities for book and tax purposes. Accordingly, a deferred tax asset or liability for each temporary difference is determined based on the tax rates that the Firm expects to be in effect when the underlying items of income and expense are realized. JPMorgan Chase's expense for income taxes includes the current and deferred portions of that expense. A valuation allowance is established to reduce deferred tax assets to the amount the Firm expects to realize.

Due to the inherent complexities arising from the nature of the Firm's businesses, and from conducting business and being taxed in a substantial number of jurisdictions, significant judgments and estimates are required to be made. Agreement of tax liabilities between JPMorgan Chase and the many tax jurisdictions in which the Firm files tax returns may not be finalized for several years. Thus, the Firm's final tax-related assets and liabilities may ultimately be different from those currently reported.

The components of income tax expense/(benefit) included in the Consolidated Statements of Income were as follows for each of the years ended December 31, 2012, 2011, and 2010.

Income tax expense/(benefit)

Year ended December 31, (in millions)	2012	2011	2010
Current income tax expense			
U.S. federal	**$ 3,225**	$ 3,719	$ 4,001
Non-U.S.	**1,782**	1,183	2,712
U.S. state and local	**1,496**	1,178	1,744
Total current income tax expense	**6,503**	6,080	8,457
Deferred income tax expense/(benefit)			
U.S. federal	**2,238**	2,109	(753)
Non-U.S.	**(327)**	102	169
U.S. state and local	**(781)**	(518)	(384)
Total deferred income tax expense/ (benefit)	**1,130**	1,693	(968)
Total income tax expense	**$ 7,633**	$ 7,773	$ 7,489

Total income tax expense includes $200 million, $76 million and $485 million of tax benefits recorded in 2012, 2011, and 2010, respectively, as a result of tax audit resolutions.

The preceding table does not reflect the tax effect of certain items that are recorded each period directly in stockholders' equity and certain tax benefits associated with the Firm's employee stock-based compensation plans. The tax effect of all items recorded directly to stockholders' equity resulted in a decrease of $1.9 billion in 2012, and increases of $927 million and $1.8 billion in 2011 and 2010, respectively.

U.S. federal income taxes have not been provided on the undistributed earnings of certain non-U.S. subsidiaries, to the extent that such earnings have been reinvested abroad for an indefinite period of time. During 2012, as part of JPMorgan Chase's ongoing review of the business requirements and capital needs of certain of its non-U.S. subsidiaries and their associated U.S. parent, the Firm determined that the undistributed earnings of certain of its subsidiaries would no longer be indefinitely reinvested. This determination resulted in the establishment of deferred tax liabilities and the recognition of an income tax expense of $80 million associated with prior years' undistributed earnings. Based on JPMorgan Chase's ongoing review of the business requirements and capital needs of its non-U.S. subsidiaries, combined with the formation of specific strategies and steps taken to fulfill these requirements and needs, the Firm has determined that the undistributed earnings of certain of its subsidiaries would be indefinitely reinvested to fund current and future growth of the related businesses. As management does not intend to use the earnings of these subsidiaries as a source of funding for its U.S. operations, such earnings will not be distributed to the U.S. in the foreseeable future. For 2012, pretax earnings of approximately $3.1 billion were generated and will be indefinitely reinvested in these subsidiaries. At December 31, 2012, the cumulative amount of undistributed pretax earnings in these subsidiaries approximated $25.1 billion. If the Firm were to record a deferred tax liability associated with these undistributed earnings, the amount would be approximately $5.7 billion at December 31, 2012.

Tax expense applicable to securities gains and losses for the years 2012, 2011 and 2010 was $822 million, $617 million, and $1.1 billion, respectively.

A reconciliation of the applicable statutory U.S. income tax rate to the effective tax rate for each of the years ended December 31, 2012, 2011 and 2010, is presented in the following table.

Effective tax rate

Year ended December 31,	2012	2011	2010
Statutory U.S. federal tax rate	35.0%	35.0%	35.0%
Increase/(decrease) in tax rate resulting from:			
U.S. state and local income taxes, net of U.S. federal income tax benefit	1.6	1.6	3.6
Tax-exempt income	(2.9)	(2.1)	(2.4)
Non-U.S. subsidiary earnings[a]	(2.4)	(2.3)	(2.2)
Business tax credits	(4.2)	(4.0)	(3.7)
Other, net	(0.7)	0.9	(0.2)
Effective tax rate	26.4%	29.1%	30.1%

(a) Includes earnings deemed to be reinvested indefinitely in non-U.S. subsidiaries.

Deferred income tax expense/(benefit) results from differences between assets and liabilities measured for financial reporting purposes versus income tax return purposes. Deferred tax assets are recognized if, in management's judgment, their realizability is determined to be more likely than not. If a deferred tax asset is determined to be unrealizable, a valuation allowance is established. The significant components of deferred tax assets and liabilities are reflected in the following table as of December 31, 2012 and 2011.

Deferred taxes

December 31, (in millions)	2012	2011
Deferred tax assets		
Allowance for loan losses	$ 8,712	$ 10,689
Employee benefits	4,308	4,570
Accrued expenses and other[a]	12,393	11,183
Non-U.S. operations	3,537	2,943
Tax attribute carryforwards	1,062	1,547
Gross deferred tax assets[a]	30,012	30,932
Valuation allowance	(689)	(1,303)
Deferred tax assets, net of valuation allowance[a]	$ 29,323	$ 29,629
Deferred tax liabilities		
Depreciation and amortization[a]	$ 2,563	$ 2,799
Mortgage servicing rights, net of hedges [a]	5,336	4,396
Leasing transactions[a]	2,242	2,348
Non-U.S. operations	3,582	2,790
Other, net[a]	4,340	2,520
Gross deferred tax liabilities[a]	18,063	14,853
Net deferred tax assets	$ 11,260	$ 14,776

(a) The prior period has been revised to conform with the current presentation.

JPMorgan Chase has recorded deferred tax assets of $1.1 billion at December 31, 2012, in connection with U.S. federal and state and local net operating loss carryforwards and foreign tax credit carryforwards. At December 31, 2012, the U.S. federal net operating loss carryforwards were approximately $1.5 billion; the state and local net operating loss carryforward was approximately $269 million; and the U.S. foreign tax credit carryforward was approximately $525 million. If not utilized, the U.S. federal net operating loss carryforwards and the state and local net operating loss carryforward will expire between 2027 and 2030; and the U.S. foreign tax credit carryforward will expire in 2022.

The valuation allowance at December 31, 2012, was due to losses associated with non-U.S. subsidiaries. During 2012, the valuation allowance decreased by $614 million largely related to the realization of state and local tax benefits.

At December 31, 2012, 2011 and 2010, JPMorgan Chase's unrecognized tax benefits, excluding related interest expense and penalties, were $7.2 billion, $7.2 billion and $7.8 billion, respectively, of which $4.2 billion, $4.0 billion and $3.8 billion, respectively, if recognized, would reduce the annual effective tax rate. Included in the amount of unrecognized tax benefits are certain items that would not affect the effective tax rate if they were recognized in the Consolidated Statements of Income. These unrecognized items include the tax effect of certain temporary differences, the portion of gross state and local unrecognized tax benefits that would be offset by the benefit from associated U.S. federal income tax deductions, and the portion of gross non-U.S. unrecognized tax benefits that would have offsets in other jurisdictions. As JPMorgan Chase is presently under audit by a number of taxing authorities, it is reasonably possible that significant changes in the gross balance of unrecognized tax benefits may occur within the next 12 months. JPMorgan Chase does not expect that any changes over the next 12 months in its gross balance of unrecognized tax benefits caused by such audits would result in a significant change in its annual effective tax rate.

The following table presents a reconciliation of the beginning and ending amount of unrecognized tax benefits for the years ended December 31, 2012, 2011 and 2010.

Unrecognized tax benefits

Year ended December 31, (in millions)	2012	2011	2010
Balance at January 1,	**$ 7,189**	$ 7,767	$ 6,608
Increases based on tax positions related to the current period	**680**	516	813
Decreases based on tax positions related to the current period	**–**	(110)	(24)
Increases based on tax positions related to prior periods	**234**	496	1,681
Decreases based on tax positions related to prior periods	**(853)**	(1,433)	(1,198)
Decreases related to settlements with taxing authorities	**(50)**	(16)	(74)
Decreases related to a lapse of applicable statute of limitations	**(42)**	(31)	(39)
Balance at December 31,	**$ 7,158**	$ 7,189	$ 7,767

After-tax interest expense/(benefit) and penalties related to income tax liabilities recognized in income tax expense were $147 million, $184 million and $(54) million in 2012, 2011 and 2010, respectively.

At December 31, 2012 and 2011, in addition to the liability for unrecognized tax benefits, the Firm had accrued $1.9 billion and $1.7 billion, respectively, for income tax-related interest and penalties.

JPMorgan Chase is continually under examination by the Internal Revenue Service, by taxing authorities throughout the world, and by many states throughout the U.S. The following table summarizes the status of significant income tax examinations of JPMorgan Chase and its consolidated subsidiaries as of December 31, 2012.

December 31, 2012	Periods under examination	Status
JPMorgan Chase – U.S.	2003 - 2005	Field examination completed, JPMorgan Chase intends to file refund claims
JPMorgan Chase – U.S.	2006 - 2010	Field examination
Bear Stearns – U.S.	2006 – 2008	Field examination
JPMorgan Chase – United Kingdom	2006 – 2010	Field examination
JPMorgan Chase – New York State and City	2005 – 2007	Field examination
JPMorgan Chase – California	2006 – 2008	Field examination

The following table presents the U.S. and non-U.S. components of income before income tax expense for the years ended December 31, 2012, 2011 and 2010.

Income before income tax expense - U.S. and non-U.S.

Year ended December 31, (in millions)	2012	2011	2010
U.S.	**$ 24,895**	$ 16,336	$ 16,568
Non-U.S.[(a)]	**4,022**	10,413	8,291
Income before income tax expense	**$ 28,917**	$ 26,749	$ 24,859

(a) For purposes of this table, non-U.S. income is defined as income generated from operations located outside the U.S.

Note 27 – Restrictions on cash and intercompany funds transfers

The business of JPMorgan Chase Bank, National Association ("JPMorgan Chase Bank, N.A.") is subject to examination and regulation by the Office of the Comptroller of the Currency ("OCC"). The Bank is a member of the U.S. Federal Reserve System, and its deposits in the U.S. are insured by the FDIC.

The Board of Governors of the Federal Reserve System (the "Federal Reserve") requires depository institutions to maintain cash reserves with a Federal Reserve Bank. The average amount of reserve balances deposited by the Firm's bank subsidiaries with various Federal Reserve Banks was approximately $5.6 billion and $4.4 billion in 2012 and 2011, respectively.

Restrictions imposed by U.S. federal law prohibit JPMorgan Chase and certain of its affiliates from borrowing from banking subsidiaries unless the loans are secured in specified amounts. Such secured loans to the Firm or to other affiliates are generally limited to 10% of the banking subsidiary's total capital, as determined by the risk-based capital guidelines; the aggregate amount of all such loans is limited to 20% of the banking subsidiary's total capital.

The principal sources of JPMorgan Chase's income (on a parent company-only basis) are dividends and interest from JPMorgan Chase Bank, N.A., and the other banking and nonbanking subsidiaries of JPMorgan Chase. In addition to dividend restrictions set forth in statutes and regulations, the Federal Reserve, the OCC and the FDIC have authority under the Financial Institutions Supervisory Act to prohibit or to limit the payment of dividends by the banking organizations they supervise, including JPMorgan Chase and its subsidiaries that are banks or bank holding companies, if, in the banking regulator's opinion, payment of a dividend would constitute an unsafe or unsound practice in light of the financial condition of the banking organization.

At January 1, 2013, JPMorgan Chase's banking subsidiaries could pay, in the aggregate, $18.4 billion in dividends to their respective bank holding companies without the prior approval of their relevant banking regulators. The capacity to pay dividends in 2013 will be supplemented by the banking subsidiaries' earnings during the year.

In compliance with rules and regulations established by U.S. and non-U.S. regulators, as of December 31, 2012 and 2011, cash in the amount of $25.1 billion and $25.4 billion, respectively, and securities with a fair value of $0.7 billion and $16.1 billion, respectively, were segregated in special bank accounts for the benefit of securities and futures brokerage customers. In addition, as of December 31, 2012 and 2011, the Firm had other restricted cash of $3.4 billion and $4.2 billion, respectively, primarily representing cash reserves held at non-U.S. central banks and held for other general purposes.

Note 28 – Regulatory capital

The Federal Reserve establishes capital requirements, including well-capitalized standards for the consolidated financial holding company. The OCC establishes similar capital requirements and standards for the Firm's national banks, including JPMorgan Chase Bank, N.A., and Chase Bank USA, N.A.

There are two categories of risk-based capital: Tier 1 capital and Tier 2 capital. Tier 1 capital consists of common stockholders' equity, perpetual preferred stock, noncontrolling interests in subsidiaries and trust preferred securities, less goodwill and certain other adjustments. Tier 2 capital consists of preferred stock not qualifying as Tier 1 capital, subordinated long-term debt and other instruments qualifying as Tier 2 capital, and the aggregate allowance for credit losses up to a certain percentage of risk-weighted assets. Total capital is Tier 1 capital plus Tier 2 capital. Risk-weighted assets ("RWA") consist of on- and off-balance sheet assets that are assigned to one of several broad risk categories and weighted by factors representing their risk and potential for default. On-balance sheet assets are risk-weighted based on the perceived credit risk associated with the obligor or counterparty, the nature of any collateral, and the guarantor, if any. Off-balance sheet assets, such as lending-related commitments, guarantees, and derivatives, are risk-weighted by multiplying the contractual amount by the appropriate credit conversion factor to determine the on-balance sheet credit-equivalent amount, which is then risk-weighted based on the same factors used for on-balance sheet assets. Risk-weighted assets also incorporate a measure for the market risk related to applicable trading assets-debt and equity instruments, and foreign exchange and commodity derivatives. The resulting risk-weighted values for each of the risk categories are then aggregated to determine total risk-weighted assets.

Under the risk-based capital guidelines of the Federal Reserve, JPMorgan Chase is required to maintain minimum ratios of Tier 1 and Total capital to risk-weighted assets, as well as minimum leverage ratios (which are defined as Tier 1 capital divided by adjusted quarterly average assets). Failure to meet these minimum requirements could cause the Federal Reserve to take action. Banking subsidiaries also are subject to these capital requirements by their respective primary regulators. As of December 31, 2012 and 2011, JPMorgan Chase and all of its banking subsidiaries were well-capitalized and met all capital requirements to which each was subject.

The following table presents the regulatory capital, assets and risk-based capital ratios for JPMorgan Chase and its significant banking subsidiaries at December 31, 2012 and 2011. These amounts are determined in accordance with regulations issued by the Federal Reserve and/or OCC. The following table reflects an adjustment to RWA to reflect regulatory guidance regarding a limited number of market risk models used for certain positions held by the Firm and JPMorgan Chase Bank, N.A. during the first half of 2012, including the synthetic credit portfolio. In the fourth quarter of 2012, the adjustment to RWA decreased substantially as a result of regulatory approval of certain market risk models and a reduction in related positions.

December 31,	JPMorgan Chase & Co.[d]		JPMorgan Chase Bank, N.A.[d]		Chase Bank USA, N.A.[d]		Well-capitalized ratios[e]	Minimum capital ratios[e]

Total	**15.3**	15.4	**13.4**	13.0	**12.7**	14.4	10.0	8.0
Tier 1 leverage	**7.1**	6.8	**6.2**	5.5	**9.3**	11.2	5.0[f]	3.0[g]

(a) JPMorgan Chase redeemed $9.0 billion of trust preferred securities effective July 12, 2012. At December 31, 2012, for JPMorgan Chase and JPMorgan Chase Bank, N.A., trust preferred securities were $10.2 billion and $600 million, respectively. If these securities were excluded from the calculation at December 31, 2012, Tier 1 capital would be $149.8 billion and $111.2 billion, respectively, and the Tier 1 capital ratio would be 11.8% and 10.2%, respectively. At December 31, 2012, Chase Bank USA, N.A. had no trust preferred securities.

(b) Includes off–balance sheet risk-weighted assets at December 31, 2012, of $304.5 billion, $297.1 billion and $16 million, and at December 31, 2011, of $301.1 billion, $291.0 billion and $38 million, for JPMorgan Chase, JPMorgan Chase Bank, N.A. and Chase Bank USA, N.A., respectively.

(c) Adjusted average assets, for purposes of calculating the leverage ratio, include total quarterly average assets adjusted for unrealized gains/(losses) on securities, less deductions for disallowed goodwill and other intangible assets, investments in certain subsidiaries, and the total adjusted carrying value of nonfinancial equity investments that are subject to deductions from Tier 1 capital.

(d) Asset and capital amounts for JPMorgan Chase's banking subsidiaries reflect intercompany transactions; whereas the respective amounts for JPMorgan Chase reflect the elimination of intercompany transactions.

(e) As defined by the regulations issued by the Federal Reserve, OCC and FDIC.

(f) Represents requirements for banking subsidiaries pursuant to regulations issued under the FDIC Improvement Act. There is no Tier 1 leverage component in the definition of a well-capitalized bank holding company.

(g) The minimum Tier 1 leverage ratio for bank holding companies and banks is 3% or 4%, depending on factors specified in regulations issued by the Federal Reserve and OCC.

Note: Rating agencies allow measures of capital to be adjusted upward for deferred tax liabilities, which have resulted from both nontaxable business combinations and from tax-deductible goodwill. The Firm had deferred tax liabilities resulting from nontaxable business combinations totaling $291 million and $414 million at December 31, 2012 and 2011, respectively; and deferred tax liabilities resulting from tax-deductible goodwill of $2.5 billion and $2.3 billion at December 31, 2012 and 2011, respectively.

A reconciliation of the Firm's Total stockholders' equity to Tier 1 capital and Total qualifying capital is presented in the table below.

December 31, (in millions)	2012	2011
Tier 1 capital		
Total stockholders' equity	**$ 204,069**	$ 183,573
Effect of certain items in accumulated other comprehensive income/(loss) excluded from Tier 1 capital	**(4,198)**	(970)
Qualifying hybrid securities and noncontrolling interests[a]	**10,608**	19,668
Less: Goodwill[b]	**45,663**	45,873

Tier 2 capital		
Long-term debt and other instruments qualifying as Tier 2	**18,061**	22,275
Qualifying allowance for credit losses	**15,995**	15,504
Adjustment for investments in certain subsidiaries and other	**(22)**	(75)
Total Tier 2 capital	**34,034**	37,704
Total qualifying capital	**$ 194,036**	$ 188,088

(a) Primarily includes trust preferred securities of certain business trusts.
(b) Goodwill and other intangible assets are net of any associated deferred tax liabilities.

Note 29 – Off-balance sheet lending-related financial instruments, guarantees, and other commitments

JPMorgan Chase provides lending-related financial instruments (e.g., commitments and guarantees) to meet the financing needs of its customers. The contractual amount of these financial instruments represents the maximum possible credit risk to the Firm should the counterparty draw upon the commitment or the Firm be required to fulfill its obligation under the guarantee, and should the counterparty subsequently fail to perform according to the terms of the contract. Most of these commitments and guarantees expire without being drawn or a default occurring. As a result, the total contractual amount of these instruments is not, in the Firm's view, representative of its actual future credit exposure or funding requirements.

To provide for the risk of loss inherent in consumer (excluding credit card) and wholesale contracts, an allowance for credit losses on lending-related commitments is maintained. See Note 15 on pages 276–279 of this Annual Report for further discussion regarding the allowance for credit losses on lending-related commitments. The following table summarizes the contractual amounts and carrying values of off-balance sheet lending-related financial instruments, guarantees and other commitments at December 31, 2012 and 2011. The amounts in the table below for credit card and home equity lending-related commitments represent the total available credit for these products. The Firm has not experienced, and does not anticipate, that all available lines of credit for these products will be utilized at the same time. The Firm can reduce or cancel credit card lines of credit by providing the borrower notice or, in some cases, without notice as permitted by law. The Firm may reduce or close home equity lines of credit when there are significant decreases in the value of the underlying property, or when there has been a demonstrable decline in the creditworthiness of the borrower. Also, the Firm typically closes credit card lines when the borrower is 60 days or more past due.

Other guarantees and commitments[g]	609	319	1,400	4,452	6,780	6,321	(75)	(5)

(a) At December 31, 2012 and 2011, reflects the contractual amount net of risk participations totaling $473 million and $1.1 billion, respectively, for other unfunded commitments to extend credit; $16.6 billion and $19.8 billion, respectively, for standby letters of credit and other financial guarantees; and $690 million and $974 million, respectively, for other letters of credit. In regulatory filings with the Federal Reserve these commitments are shown gross of risk participations.

(b) At December 31, 2012 and 2011, included credit enhancements and bond and commercial paper liquidity commitments to U.S. states and municipalities, hospitals and other non-profit entities of $44.5 billion and $48.6 billion, respectively. These commitments also include liquidity facilities to nonconsolidated municipal bond VIEs; for further information, see Note 16 on pages 280–291 of this Annual Report.

(c) At December 31, 2012 and 2011, included unissued standby letters of credit commitments of $44.4 billion and $44.1 billion, respectively.

(d) At December 31, 2012 and 2011, JPMorgan Chase held collateral relating to $42.7 billion and $41.5 billion, respectively, of standby letters of credit; and $1.1 billion and $1.3 billion, respectively, of other letters of credit.

(e) At December 31, 2012 and 2011, collateral held by the Firm in support of securities lending indemnification agreements was $165.1 billion and $186.3 billion, respectively. Securities lending collateral comprises primarily cash and securities issued by governments that are members of the Organisation for Economic Co-operation and Development ("OECD") and U.S. government agencies.

(f) At December 31, 2012 and 2011, the amount of commitments related to forward-starting reverse repurchase agreements and securities borrowing agreements were $13.2 billion and $14.4 billion, respectively. Commitments related to unsettled reverse repurchase agreements and securities borrowing agreements with regular-way settlement periods were $21.7 billion and $25.5 billion, at December 31, 2012 and 2011, respectively.

(g) At December 31, 2012 and 2011, included unfunded commitments of $370 million and $789 million, respectively, to third-party private equity funds; and $1.5 billion and $1.5 billion, respectively, to other equity investments. These commitments included $333 million and $820 million, respectively, related to investments that are generally fair valued at net asset value as discussed in Note 3 on pages 196–214 of this Annual Report. In addition, at December 31, 2012 and 2011, included letters of credit hedged by derivative transactions and managed on a market risk basis of $4.5 billion and $3.9 billion, respectively.

(h) For lending-related products, the carrying value represents the allowance for lending-related commitments and the guarantee liability; for derivative-related products, the carrying value represents the fair value.

Other unfunded commitments to extend credit

Other unfunded commitments to extend credit generally comprise commitments for working capital and general corporate purposes, extensions of credit to support commercial paper facilities and bond financings in the event that those obligations cannot be remarketed to new investors as well as committed liquidity facilities to clearing organizations.

Also included in other unfunded commitments to extend credit are commitments to noninvestment-grade counterparties in connection with leveraged and acquisition finance activities, which were $8.8 billion and $6.1 billion at December 31, 2012 and 2011, respectively. For further information, see Note 3 and Note 4 on pages 196–214 and 214–216 respectively, of this Annual Report.

In addition, the Firm acts as a clearing and custody bank in the U.S. tri-party repurchase transaction market. In its role as clearing and custody bank, the Firm is exposed to intra-day credit risk of the cash borrowers, usually broker-dealers; however, this exposure is secured by collateral and typically extinguished through the settlement process by the end of the day. For the three months ended December 31, 2012, the tri-party repurchase daily balances averaged $409 billion.

Guarantees

U.S. GAAP requires that a guarantor recognize, at the inception of a guarantee, a liability in an amount equal to the fair value of the obligation undertaken in issuing the guarantee. U.S. GAAP defines a guarantee as a contract that contingently requires the guarantor to pay a guaranteed party based upon: (a) changes in an underlying asset, liability or equity security of the guaranteed party; or (b) a third party's failure to perform under a specified agreement. The Firm considers the following off–balance sheet lending-related arrangements to be guarantees under U.S. GAAP: standby letters of credit and financial guarantees, securities lending indemnifications, certain indemnification agreements included within third-party contractual arrangements and certain derivative contracts.

As required by U.S. GAAP, the Firm initially records guarantees at the inception date fair value of the obligation assumed (e.g., the amount of consideration received or the net present value of the premium receivable). For certain types of guarantees, the Firm records this fair value amount in other liabilities with an offsetting entry recorded in cash (for premiums received), or other assets (for premiums receivable). Any premium receivable recorded in other assets is reduced as cash is received under the contract, and the fair value of the liability recorded at inception is amortized into income as lending and deposit-related fees over the life of the guarantee contract. For indemnifications provided in sales agreements, a portion of the sale proceeds is allocated to the guarantee, which adjusts the gain or loss that would otherwise result from the transaction. For these indemnifications, the initial liability is amortized to income as the Firm's risk is reduced (i.e., over time or when the indemnification expires). Any contingent liability that exists as a result of issuing the guarantee or indemnification is recognized when it becomes probable and reasonably estimable. The contingent portion of the liability is not recognized if the estimated amount is less than the carrying amount of the liability recognized at inception (adjusted for any amortization). The recorded amounts of the liabilities related to guarantees and indemnifications at December 31, 2012 and 2011, excluding the allowance for credit losses on lending-related commitments, are discussed below.

Standby letters of credit and other financial guarantees
Standby letters of credit ("SBLC") and other financial guarantees are conditional lending commitments issued by the Firm to guarantee the performance of a customer to a third party under certain arrangements, such as commercial paper facilities, bond financings, acquisition financings, trade and similar transactions. The carrying values of standby and other letters of credit were $649 million and $698 million at December 31, 2012 and 2011, respectively, which were classified in accounts payable and other liabilities on the Consolidated Balance Sheets; these carrying values included $284 million and $319 million, respectively, for the allowance for lending-related commitments, and $365 million and $379 million, respectively, for the guarantee liability and corresponding asset.

The following table summarizes the types of facilities under which standby letters of credit and other letters of credit arrangements are outstanding by the ratings profiles of the Firm's customers, as of December 31, 2012 and 2011.

Standby letters of credit, other financial guarantees and other letters of credit

	2012		2011	
December 31, (in millions)	Standby letters of credit and other financial guarantees	Other letters of credit	Standby letters of credit and other financial guarantees	Other letters of credit
Investment-grade[a]	$ 77,081	$ 3,998	$ 78,884	$ 4,105
Noninvestment-grade[a]	23,848	1,575	23,015	1,281
Total contractual amount	$ 100,929 [b]	$ 5,573	$ 101,899 [b]	$ 5,386
Allowance for lending-related commitments	$ 282	$ 2	$ 317	$ 2
Commitments with collateral	42,654	1,145	41,529	1,264

(a) The ratings scale is based on the Firm's internal ratings which generally correspond to ratings as defined by S&P and Moody's.
(b) At December 31, 2012 and 2011, included unissued standby letters of credit commitments of $44.4 billion and $44.1 billion, respectively.

Advised lines of credit
An advised line of credit is a revolving credit line which specifies the maximum amount the Firm may make available to an obligor, on a nonbinding basis. The borrower receives written or oral advice of this facility. The Firm may cancel this facility at any time by providing the borrower notice or, in some cases, without notice as permitted by law.

Securities lending indemnifications
Through the Firm's securities lending program, customers' securities, via custodial and non-custodial arrangements, may be lent to third parties. As part of this program, the Firm provides an indemnification in the lending agreements which protects the lender against the failure of the borrower to return the lent securities. To minimize its liability under these indemnification agreements, the Firm obtains cash or other highly liquid collateral with a market value exceeding 100% of the value of the securities on loan from the borrower. Collateral is marked to market daily to help assure that collateralization is adequate. Additional collateral is called from the borrower if a shortfall exists, or collateral may be released to the borrower in the event of overcollateralization. If a borrower defaults, the Firm would use the collateral held to purchase replacement securities in the market or to credit the lending customer with the cash equivalent thereof.

Derivatives qualifying as guarantees
In addition to the contracts described above, the Firm transacts certain derivative contracts that have the characteristics of a guarantee under U.S. GAAP. These contracts include written put options that require the Firm to purchase assets upon exercise by the option holder at a specified price by a specified date in the future. The Firm may enter into written put option contracts in order to meet client needs, or for other trading purposes. The terms of written put options are typically five years or less. Derivative guarantees also include contracts such as stable value derivatives that require the Firm to make a payment of the difference between the market value and the book value of a counterparty's reference portfolio of assets in the event that market value is less than book value and certain other conditions have been met. Stable value derivatives, commonly referred to as "stable value wraps", are transacted in order to allow investors to realize investment returns with less volatility than an unprotected portfolio and are typically longer-term or may have no stated maturity, but allow the Firm to terminate the contract under certain conditions.

Derivative guarantees are recorded on the Consolidated Balance Sheets at fair value in trading assets and trading liabilities. The total notional value of the derivatives that the Firm deems to be guarantees was $61.7 billion and $75.6 billion at December 31, 2012 and 2011, respectively. The notional amount generally represents the Firm's maximum exposure to derivatives qualifying as guarantees. However, exposure to certain stable value contracts is contractually limited to a substantially lower percentage of the notional amount; the notional amount on these stable value contracts was $26.5 billion and $26.1 billion and the maximum exposure to loss was $2.8 billion and $2.8 billion, at December 31, 2012 and 2011, respectively. The fair values of the contracts reflect the probability of whether the Firm will be required to perform under the contract. The fair value related to derivatives that the Firm deems to be guarantees were derivative payables of $122 million and $555 million and derivative receivables of $80 million and $98 million at December 31, 2012 and 2011, respectively. The Firm reduces exposures to these contracts by entering into offsetting transactions, or by entering into contracts that hedge the market risk related to the derivative guarantees. In addition to derivative contracts that meet the characteristics of a guarantee, the Firm is both a purchaser and seller of credit protection in the credit derivatives market. For a further discussion of credit derivatives, see Note 6 on pages 218–227 of this Annual Report.

Unsettled reverse repurchase and securities borrowing agreements

In the normal course of business, the Firm enters into reverse repurchase agreements and securities borrowing agreements that settle at a future date. At settlement, these commitments require that the Firm advance cash to and accept securities from the counterparty. These agreements generally do not meet the definition of a derivative, and therefore, are not recorded on the Consolidated Balance Sheets until settlement date. At December 31, 2012 and 2011, the amount of commitments related to forward starting reverse repurchase agreements and securities borrowing agreements were $13.2 billion and $14.4 billion, respectively. Commitments related to unsettled reverse repurchase agreements and securities borrowing agreements with regular way settlement periods were $21.7 billion and $25.5 billion at December 31, 2012 and 2011, respectively.

Loan sales- and securitization-related indemnifications

Mortgage repurchase liability

In connection with the Firm's loan sale and securitization activities with the GSEs and other loan sale and private-label securitization transactions, as described in Note 16 on pages 280–291 of this Annual Report, the Firm has made representations and warranties that the loans sold meet certain requirements. The Firm may be, and has been, required to repurchase loans and/or indemnify the GSEs and other investors for losses due to material breaches of these representations and warranties. Generally, the maximum amount of future payments the Firm would be required to make for breaches of these representations and warranties would be equal to the unpaid principal balance of such loans that are deemed to have defects that were sold to purchasers (including securitization-related SPEs) plus, in certain circumstances, accrued interest on such loans and certain expense.

Subsequent to the Firm's acquisition of certain assets and liabilities of Washington Mutual from the FDIC in September 2008, the Firm resolved and/or limited certain current and future repurchase demands for loans sold to the GSEs by Washington Mutual, although it remains the Firm's position that such obligations remain with the FDIC receivership. As of December 31, 2012, the Firm believes that it has no remaining exposure related to loans sold by Washington Mutual to the GSEs.

There have been generalized allegations, as well as specific demands, that the Firm repurchase loans sold or deposited into private-label securitizations (including claims from insurers that have guaranteed certain obligations of the securitization trusts). Although the Firm encourages parties to use the contractual repurchase process established in the governing agreements, these private-label repurchase claims have generally manifested themselves through threatened or pending litigation. Accordingly, the liability related to repurchase demands associated with all of the private-label securitizations is separately evaluated by the Firm in establishing its litigation reserves. For additional information regarding litigation, see Note 31 on pages 316–325 of this Annual Report.

To estimate the Firm's mortgage repurchase liability arising from breaches of representations and warranties, the Firm considers:

(i) the level of outstanding unresolved repurchase demands,

(ii) estimated probable future repurchase demands considering information about file requests, delinquent and liquidated loans, resolved and unresolved mortgage insurance rescission notices and the Firm's historical experience,

(iii) the potential ability of the Firm to cure the defects identified in the repurchase demands ("cure rate"),

(iv) the estimated severity of loss upon repurchase of the loan or collateral, make-whole settlement, or indemnification,

(v) the Firm's potential ability to recover its losses from third-party originators, and

(vi) the terms of agreements with certain mortgage insurers and other parties.

Based on these factors, the Firm has recognized a mortgage repurchase liability of $2.8 billion and $3.6 billion, as of December 31, 2012 and 2011, respectively, which is reported in accounts payable and other liabilities net of probable recoveries from third-party originators of $441 million and $577 million at December 31, 2012 and 2011, respectively. The Firm's mortgage repurchase liability is intended to cover losses associated with all loans previously sold in connection with loan sale and securitization transactions with the GSEs, regardless of when those losses occur or how they are ultimately resolved (e.g., repurchase, make-whole payment). The liability related to all repurchase demands associated with private-label securitizations is separately evaluated by the Firm in establishing its litigation reserves.

Substantially all of the estimates and assumptions underlying the Firm's established methodology for computing its recorded mortgage repurchase liability — including the amount of probable future demands from the GSEs (based on both historical experience and the Firm's expectations about the GSEs future behavior), the ability of the Firm to cure identified defects, the severity of loss upon repurchase or foreclosure, and recoveries from third parties — require application of a significant level of management judgment.

While the Firm uses the best information available to it in estimating its mortgage repurchase liability, the estimation process is inherently uncertain and imprecise and, accordingly, losses in excess of the amounts accrued as of December 31, 2012, are reasonably possible. The Firm believes the estimate of the range of reasonably possible losses, in excess of its established repurchase liability, is from $0 to approximately $0.9 billion at December 31, 2012. This estimated range of reasonably possible loss considers the Firm's GSE-related exposure based on an assumed peak to trough decline in home prices of 40%, which is an additional 10 percentage point decline in home prices beyond the Firm's current assumptions (which were derived from a nationally recognized home price index). Although the Firm does not consider a further decline in home prices of this magnitude likely to occur, such a decline could increase the levels of loan delinquencies, which may, in turn, increase the level of repurchase demands from the GSEs and potentially result in additional repurchases of loans at greater loss severities; each of these factors could affect the Firm's mortgage repurchase liability.

The following table summarizes the change in the mortgage repurchase liability for each of the periods presented.

Summary of changes in mortgage repurchase liability[a]

Year ended December 31, (in millions)	2012	2011	2010
Repurchase liability at beginning of period	$ 3,557	$ 3,285	$ 1,705
Realized losses[b]	(1,158)	(1,263)	(1,423)
Provision for repurchase losses[c]	412	1,535	3,003
Repurchase liability at end of period	$ 2,811	$ 3,557	$ 3,285

(a) All mortgage repurchase demands associated with private-label securitizations are separately evaluated by the Firm in establishing its litigation reserves.

(b) Includes principal losses and accrued interest on repurchased loans, "make-whole" settlements, settlements with claimants, and certain related expense. Make-whole settlements were $524 million, $640 million and $632 million, for the years ended December 31, 2012, 2011 and 2010, respectively.

(c) Includes $112 million, $52 million and $47 million of provision related to new loan sales for the years ended December 31, 2012, 2011 and 2010, respectively.

Loans sold with recourse

The Firm provides servicing for mortgages and certain commercial lending products on both a recourse and nonrecourse basis. In nonrecourse servicing, the principal credit risk to the Firm is the cost of temporary servicing advances of funds (i.e., normal servicing advances). In recourse servicing, the servicer agrees to share credit risk with the owner of the mortgage loans, such as Fannie Mae or Freddie Mac or a private investor, insurer or guarantor. Losses on recourse servicing predominantly occur when foreclosure sales proceeds of the property underlying a defaulted loan are less than the sum of the outstanding principal balance, plus accrued interest on the loan and the cost of holding and disposing of the underlying property. The Firm's securitizations are predominantly nonrecourse, thereby effectively transferring the risk of future credit losses to the purchaser of the mortgage-backed securities issued by the trust. At December 31, 2012 and 2011, the unpaid principal balance of loans sold with recourse totaled $9.3 billion and $10.4 billion, respectively. The carrying value of the related liability that the Firm has recorded, which is representative of the Firm's view of the likelihood it will have to perform under its recourse obligations, was $141 million and $148 million at December 31, 2012 and 2011, respectively.

Other off-balance sheet arrangements

Indemnification agreements – general

In connection with issuing securities to investors, the Firm may enter into contractual arrangements with third parties that require the Firm to make a payment to them in the event of a change in tax law or an adverse interpretation of tax law. In certain cases, the contract also may include a termination clause, which would allow the Firm to settle the contract at its fair value in lieu of making a payment under the indemnification clause. The Firm may also enter into indemnification clauses in connection with the licensing of software to clients ("software licensees") or when it sells a business or assets to a third party ("third-party purchasers"), pursuant to which it indemnifies software licensees for claims of liability or damages that may occur subsequent to the licensing of the software, or third-party purchasers for losses they may incur due to actions taken by the Firm prior to the sale of the business or assets. It is difficult to estimate the Firm's maximum exposure under these indemnification arrangements, since this would require an assessment of future changes in tax law and future claims that may be made against the Firm that have not yet occurred. However, based on historical experience, management expects the risk of loss to be remote.

Credit card charge-backs

Chase Paymentech Solutions, Card's merchant services business and a subsidiary of JPMorgan Chase Bank, N.A., is a global leader in payment processing and merchant acquiring.

Under the rules of Visa USA, Inc., and MasterCard International, JPMorgan Chase Bank, N.A., is liable primarily for the amount of each processed credit card sales transaction that is the subject of a dispute between a cardmember and a merchant. If a dispute is resolved in the cardmember's favor, Chase Paymentech will (through the cardmember's issuing bank) credit or refund the amount to the cardmember and will charge back the transaction to the merchant. If Chase Paymentech is unable to collect the amount from the merchant, Chase Paymentech will bear the loss for the amount credited or refunded to the cardmember. Chase Paymentech mitigates this risk by withholding future settlements, retaining cash reserve accounts or by obtaining other security. However, in the unlikely event that: (1) a merchant ceases operations and is unable to deliver products, services or a refund; (2) Chase Paymentech does not have sufficient collateral from the merchant to provide customer refunds; and (3) Chase Paymentech does not have sufficient financial resources to provide customer refunds, JPMorgan Chase Bank, N.A., would be liable for the amount of the transaction. For the year ended December 31, 2012, Chase Paymentech incurred aggregate credit losses of $16 million on $655.2 billion of aggregate volume processed, and at December 31, 2012, it held $203 million of collateral. For the year ended December 31, 2011, Chase Paymentech incurred aggregate credit losses of $13 million on $553.7 billion of aggregate volume processed, and at December 31, 2011, it held $204 million of collateral. For the year ended December 31, 2010, Chase Paymentech incurred aggregate credit losses of $12 million on $469.3 billion of aggregate volume processed, and at December 31, 2010, it held $189 million of collateral. The Firm believes that, based on historical experience and the collateral held by Chase Paymentech, the fair value of the Firm's charge back-related obligations, which are representative of the payment or performance risk to the Firm, is immaterial.

Exchange and clearinghouse guarantees

The Firm is a member of several securities and futures exchanges and clearinghouses, both in the U.S. and other countries. Membership in some of these organizations requires the Firm to pay a pro rata share of the losses incurred by the organization as a result of the default of another member. Such obligations vary with different organizations. These obligations may be limited to members who dealt with the defaulting member or to the amount (or a multiple of the amount) of the Firm's contribution to a member's guarantee fund, or, in a few cases, the obligation may be unlimited. It is difficult to estimate the Firm's maximum exposure under these membership agreements, since this would require an assessment of future claims that may be made against the Firm that have not yet occurred. However, based on historical experience, management expects the risk of loss to be remote.

The Firm clears transactions on behalf of its clients through various clearinghouses, and the Firm stands behind the performance of its clients on such trades. The Firm mitigates its exposure to loss in the event of a client default by requiring that clients provide appropriate amounts of margin at the inception and throughout the life of the transaction, and can cease the provision of clearing services

if clients do not adhere to their obligations under the clearing agreement. It is difficult to estimate the Firm's maximum exposure under such transactions, as this would require an assessment of transactions that clients may execute in the future. However, based upon historical experience, management believes it is unlikely that the Firm will have to make any material payments under these arrangements and the risk of loss is expected to be remote.

Guarantees of subsidiaries

In the normal course of business, JPMorgan Chase & Co. ("Parent Company") may provide counterparties with guarantees of certain of the trading and other obligations of its subsidiaries on a contract-by-contract basis, as negotiated with the Firm's counterparties. The obligations of the subsidiaries are included on the Firm's Consolidated Balance Sheets, or are reflected as off-balance sheet commitments; therefore, the Parent Company has not recognized a separate liability for these guarantees. The Firm believes that the occurrence of any event that would trigger payments by the Parent Company under these guarantees is remote.

The Parent Company has guaranteed certain debt of its subsidiaries, including both long-term debt and structured notes sold as part of the Firm's market-making activities. These guarantees are not included in the table on page 309 of this Note. For additional information, see Note 21 on pages 297–299 of this Annual Report.

Note 30 – Commitments, pledged assets and collateral

Lease commitments

At December 31, 2012, JPMorgan Chase and its subsidiaries were obligated under a number of noncancelable operating leases for premises and equipment used primarily for banking purposes, and for energy-related tolling service agreements. Certain leases contain renewal options or escalation clauses providing for increased rental payments based on maintenance, utility and tax increases, or they require the Firm to perform restoration work on leased premises. No lease agreement imposes restrictions on the Firm's ability to pay dividends, engage in debt or equity financing transactions or enter into further lease agreements.

The following table presents required future minimum rental payments under operating leases with noncancelable lease terms that expire after December 31, 2012.

Year ended December 31, (in millions)	
2013	$ 1,788
2014	1,711
2015	1,571
2016	1,431
2017	1,318
After 2017	6,536
Total minimum payments required[(a)]	14,355
Less: Sublease rentals under noncancelable subleases	(1,732)
Net minimum payment required	$ 12,623

(a) Lease restoration obligations are accrued in accordance with U.S. GAAP, and are not reported as a required minimum lease payment.

Total rental expense was as follows.

Year ended December 31, (in millions)	2012	2011	2010
Gross rental expense	**$ 2,212**	$ 2,228	$ 2,212
Sublease rental income	**(288)**	(403)	(545)
Net rental expense	**$ 1,924**	$ 1,825	$ 1,667

Pledged assets

At December 31, 2012, assets were pledged to collateralize repurchase and other securities financing agreements, maintain potential borrowing capacity with central banks and for other purposes, including to secure borrowings and public deposits. Certain of these pledged assets may be sold or repledged by the secured parties and are identified as financial instruments owned (pledged to various parties) on the Consolidated Balance Sheets. In addition, at December 31, 2012 and 2011, the Firm had pledged $291.7 billion and $270.3 billion, respectively, of financial instruments it owns that may not be sold or repledged by the secured parties. Total assets pledged do not include assets of consolidated VIEs; these assets are used to settle the liabilities of those entities. See Note 16 on pages 280–291 of this Annual Report for additional information on assets and liabilities of consolidated VIEs. For additional information on the Firm's securities financing activities and long-term debt, see Note 13 on page 249, and Note 21 on pages 297–299, respectively, of this Annual report. The significant components of the Firm's pledged assets were as follows.

December 31, (in billions)	2012	2011
Securities	**$ 110.1**	$ 134.8
Loans	**207.2**	198.6
Trading assets and other	**155.5**	122.8
Total assets pledged	**$ 472.8**	$ 456.2

Collateral

At December 31, 2012 and 2011, the Firm had accepted assets as collateral that it could sell or repledge, deliver or otherwise use with a fair value of approximately $825.7 billion and $742.1 billion, respectively. This collateral was generally obtained under resale agreements, securities borrowing agreements, customer margin loans and derivative agreements. Of the collateral received, approximately $546.8 billion and $515.8 billion, respectively, were sold or repledged, generally as collateral under repurchase agreements, securities lending agreements or to cover short sales and to collateralize deposits and derivative agreements.

Note 31 – Litigation

Contingencies

As of December 31, 2012, the Firm and its subsidiaries are defendants or putative defendants in numerous legal proceedings, including private, civil litigations and regulatory/government investigations. The litigations range from individual actions involving a single plaintiff to class action lawsuits with potentially millions of class members. Investigations involve both formal and informal proceedings, by both governmental agencies and self-regulatory organizations. These legal proceedings are at varying stages of adjudication, arbitration or investigation, and involve each of the Firm's lines of business and geographies and a wide variety of claims (including common law tort and contract claims and statutory antitrust, securities and consumer protection claims), some of which present novel legal theories.

The Firm believes the estimate of the aggregate range of reasonably possible losses, in excess of reserves established, for its legal proceedings is from $0 to approximately $6.1 billion at December 31, 2012. This estimated aggregate range of reasonably possible losses is based upon currently available information for those proceedings in which the Firm is involved, taking into account the Firm's best estimate of such losses for those cases for which such estimate can be made. For certain cases, the Firm does not believe that an estimate can currently be made. The Firm's estimate involves significant judgment, given the varying stages of the proceedings (including the fact that many are currently in preliminary stages), the existence in many such proceedings of multiple defendants (including the Firm) whose share of liability has yet to be determined, the numerous yet-unresolved issues in many of the proceedings (including issues regarding class certification and the scope of many of the claims) and the attendant uncertainty of the various potential outcomes of such proceedings. Accordingly, the Firm's estimate will change from time to time, and actual losses may be more or less than the current estimate.

Set forth below are descriptions of the Firm's material legal proceedings.

Auction-Rate Securities Investigations and Litigation. Beginning in March 2008, several regulatory authorities initiated investigations of a number of industry participants, including the Firm, concerning possible state and federal securities law violations in connection with the sale of auction-rate securities ("ARS"). The market for many such securities had frozen and a significant number of auctions for those securities began to fail in February 2008.

The Firm, on behalf of itself and affiliates, agreed to a settlement in principle with the New York Attorney General's Office which provided, among other things, that the Firm would offer to purchase at par certain ARS purchased from J.P. Morgan Securities LLC, Chase Investment Services Corp. and Bear, Stearns & Co. Inc. by individual investors, charities and small- to medium-sized businesses. The Firm also agreed to a substantively similar settlement in principle with the Office of Financial Regulation for the State of Florida and the North American Securities Administrators Association ("NASAA") Task Force, which agreed to recommend approval of the settlement to all remaining states, Puerto Rico and the U.S. Virgin Islands. The Firm has finalized the settlement agreements with the New York Attorney General's Office and the Office of Financial Regulation for the State of Florida. The settlement agreements provide for the payment of penalties totaling $25 million to all states and territories. To date, final consent agreements have been reached with all but three of NASAA's members.

The Firm also was named in two putative antitrust class actions. The actions allege that the Firm, along with numerous other financial institution defendants, colluded to maintain and stabilize the ARS market and then to withdraw their support for the ARS market. In January 2010, the District Court dismissed both actions. An appeal is pending in the United States Court of Appeals for the Second Circuit.

Bank Secrecy Act/Anti-Money Laundering. In January 2013, JPMorgan Chase & Co. entered into a Consent Order with the Board of Governors of the Federal Reserve System (the "Federal Reserve") and JPMorgan Chase Bank, N.A., JPMorgan Bank and Trust Company, N.A. and Chase Bank USA, N.A. entered into a Consent Order with the Office of the Comptroller of the Currency (the "OCC") relating principally to JPMorgan Chase & Co.'s and such banks' policies, procedures and controls relating to compliance with Bank Secrecy Act and Anti-Money Laundering requirements. The Firm neither admitted nor denied the regulatory agencies' findings in the orders.

Bear Stearns Hedge Fund Matters. The Bear Stearns Companies LLC (formerly The Bear Stearns Companies Inc.) ("Bear Stearns"), certain current or former subsidiaries of Bear Stearns, including Bear Stearns Asset Management, Inc. ("BSAM") and Bear, Stearns & Co. Inc., and certain individuals formerly employed by Bear Stearns are named defendants (collectively the "Bear Stearns defendants") in multiple civil actions and arbitrations relating to alleged

losses resulting from the failure of the Bear Stearns High Grade Structured Credit Strategies Master Fund, Ltd. (the "High Grade Fund") and the Bear Stearns High Grade Structured Credit Strategies Enhanced Leverage Master Fund, Ltd. (the "Enhanced Leverage Fund") (collectively the "Funds"). BSAM served as investment manager for both of the Funds, which were organized such that there were U.S. and Cayman Islands "feeder funds" that invested substantially all their assets, directly or indirectly, in the Funds. The Funds are in liquidation.

There are currently three civil actions pending in the United States District Court for the Southern District of New York relating to the Funds. One of these actions involves a derivative lawsuit brought on behalf of purchasers of partnership interests in the U.S. feeder fund to the Enhanced Leverage Fund, alleging that the Bear Stearns defendants mismanaged the Funds. This action seeks, among other things, unspecified compensatory damages based on alleged investor losses. The parties have reached an agreement to settle this derivative action, pursuant to which BSAM would pay a maximum of approximately $18 million. In April 2012, the District Court granted final approval of this settlement. In May 2012, objectors representing certain interests in the U.S. feeder fund filed a notice of appeal to the United States Court of Appeals for the Second Circuit from the District Court's final approval of the settlement. That appeal is currently pending.

The second pending action, brought by the Joint Voluntary Liquidators of the Cayman Islands feeder funds, makes allegations similar to those asserted in the derivative lawsuits related to the U.S. feeder funds. This action alleges net losses of approximately $700 million and seeks compensatory and punitive damages. The parties recently reached an agreement in principle to resolve the litigation contingent on the execution of a written settlement agreement. The third action was brought by Bank of America and Banc of America Securities LLC (together "BofA") alleging breach of contract, fraud and breach of fiduciary duty in connection with a $4 billion securitization in May 2007 known as a "CDO-squared," for which BSAM served as collateral manager. This securitization was composed of certain collateralized debt obligation holdings that were purchased by BofA from the Funds. BofA currently seeks damages up to approximately $540 million. Motions for summary judgment are pending.

Bear Stearns Shareholder Litigation and Related Matters. Various shareholders of Bear Stearns have commenced purported class actions against Bear Stearns and certain of its former officers and/or directors on behalf of all persons who purchased or otherwise acquired common stock of Bear Stearns between December 14, 2006, and March 14, 2008 (the "Class Period"). The actions alleged that the defendants issued materially false and misleading statements regarding Bear Stearns' business and financial results and that, as a result of those false statements, Bear Stearns' common stock traded at artificially inflated prices during the Class Period. In November 2012, the United States District Court for the Southern District of New York granted final approval of a $275 million settlement.

Bear Stearns, former members of Bear Stearns' Board of Directors and certain of Bear Stearns' former executive officers have also been named as defendants in a shareholder derivative and class action suit which is pending in the United States District Court for the Southern District of New York. Plaintiffs assert claims for breach of fiduciary duty, violations of federal securities laws, waste of corporate assets and gross mismanagement, unjust enrichment, abuse of control, and indemnification and contribution in connection with the losses sustained by Bear Stearns as a result of its purchases of subprime loans and certain repurchases of its own common stock. Certain individual defendants are also alleged to have sold their holdings of Bear Stearns common stock while in possession of material nonpublic information. Plaintiffs seek compensatory damages in an unspecified amount. The District Court dismissed the action in January 2011, and plaintiffs have appealed. The appeal has been withdrawn pursuant to a stipulation that gives plaintiffs until March 1, 2013 to reinstate.

CIO Investigations and Litigation. The Firm is responding to a consolidated shareholder class action, a consolidated class action brought under the Employee Retirement Income Security Act ("ERISA"), shareholder derivative actions, shareholder demands and government investigations relating to losses in the synthetic credit portfolio managed by the Firm's Chief Investment Office ("CIO"). The Firm has received requests for documents and information in connection with governmental inquiries and investigations by Congress, the OCC, the Federal Reserve, the U.S. Department of Justice (the "DOJ"), the Securities and Exchange Commission (the "SEC"), the Commodity Futures Trading Commission (the "CFTC"), the UK Financial Services Authority, the State of Massachusetts and other government agencies. The Firm is cooperating with these investigations.

Four putative class actions alleging violations of Sections 10 (b) and 20(a) of the Securities Exchange Act of 1934 and Rule 10b-5 thereunder were filed on behalf of purchasers of the Firm's common stock. The cases were consolidated, lead plaintiffs were appointed pursuant to the Private Securities Litigation Reform Act, and a consolidated amended complaint was filed in November 2012 that defines the putative class as purchasers of the Firm's common stock between February 24, 2010 and May 21, 2012. The consolidated amended complaint alleges that the Firm and certain current and former officers made false or misleading statements concerning CIO's role, the Firm's risk management practices and the Firm's financial results, as well as in connection with the disclosure of losses in the synthetic credit portfolio in 2012.

Separately, two putative class actions were filed on behalf of participants who held the Firm's common stock in the Firm's retirement plans. These actions assert claims under ERISA for alleged breaches of fiduciary duties by the Firm, certain affiliates and certain current and former directors

and officers in connection with the management of those plans. The complaints generally allege that defendants breached the duty of prudence by allowing investment in the Firm's common stock when they knew or should have known that such stock was unsuitable for the plans and that the Firm and certain current and former officers made false or misleading statements concerning the Firm's financial condition. These actions have been consolidated, and a consolidated amended complaint was filed in December 2012 which alleges a class period of December 20, 2011 to July 12, 2012. The consolidated amended complaint contains allegations similar to those in the original complaints, but now asserts claims only on behalf of participants in the Firm's 401(k) Savings Plan.

Four shareholder derivative actions have also been filed, purportedly on behalf of the Firm, against certain of the Firm's current and former directors and officers for alleged breaches of their fiduciary duties. These actions generally allege that defendants failed to exercise adequate oversight over CIO and to manage the risk of CIO's trading activities, which allegedly led to CIO's losses. Two of these four actions have been consolidated, and a consolidated amended complaint was filed in December 2012. An amended complaint in one of the other derivative actions was filed in January 2013.

The consolidated securities action, consolidated ERISA action and the consolidated shareholder derivative action are pending in the United States District Court for the Southern District of New York, while the two other derivative actions are pending in New York State court. In October 2012, defendants moved to dismiss one of the two shareholder derivative actions pending in New York State court on the ground that plaintiff failed to make a demand on the Firm's Board of Directors or adequately allege demand futility, as required by applicable Delaware law. Defendants have not yet responded to the complaints in any of the other actions.

In January 2013, JPMorgan Chase & Co. entered into a Consent Order with the Federal Reserve and JPMorgan Chase Bank, N.A. entered into a Consent Order with the OCC arising out of the Federal Reserve's and the OCC's reviews of the CIO, including the synthetic credit portfolio previously held by the CIO. The Consent Orders relate to risk management, model governance and other control functions related to CIO and certain other trading activities at the Firm. Many of the actions required by the Consent Orders have already been, or are in the process of being, implemented by the Firm.

City of Milan Litigation and Criminal Investigation. In January 2009, the City of Milan, Italy (the "City") issued civil proceedings against (among others) JPMorgan Chase Bank, N.A. and J.P. Morgan Securities plc (together, "JPMorgan Chase") in the District Court of Milan. The proceedings relate to (a) a bond issue by the City in June 2005 (the "Bond"), and (b) an associated swap transaction, which was subsequently restructured on a number of occasions between 2005 and 2007 (the "Swap"). The City seeks damages and/or other remedies against JPMorgan Chase (among others) on the grounds of alleged "fraudulent and deceitful acts" and alleged breach of advisory obligations in connection with the Swap and the Bond, together with related swap transactions with other counterparties. The Firm has entered into a settlement agreement with the City to resolve the City's civil proceedings.

In March 2010, a criminal judge directed four current and former JPMorgan Chase personnel and JPMorgan Chase Bank, N.A. (as well as other individuals and three other banks) to go forward to a full trial that started in May 2010. The verdict, rendered in December 2012, acquitted two of the JPMorgan Chase personnel and found the other two guilty of aggravated fraud with sanctions of prison sentences (that were automatically suspended under applicable law), fines and a ban from dealing with Italian public bodies for one year. In addition, JPMorgan Chase (along with other banks involved) was found liable for breaches of Italian administrative law, fined €1 million and was ordered to forfeit its profit from the transaction, which totaled €24.7 million. JPMorgan Chase and the individuals plan to appeal the verdict, and none of the sanctions will take effect until all appeal avenues have been exhausted.

Enron Litigation. JPMorgan Chase and certain of its officers and directors are involved in two lawsuits seeking damages arising out of the Firm's banking relationships with Enron Corp. and its subsidiaries ("Enron"). Motions to dismiss are pending in both of these lawsuits: an individual action by Enron investors and an action by an Enron counterparty. A number of actions and other proceedings against the Firm previously were resolved, including a class action lawsuit captioned Newby v. Enron Corp. and adversary proceedings brought by Enron's bankruptcy estate.

FERC Matters. The Federal Energy Regulatory Commission (the "FERC") is investigating the Firm's bidding practices in certain organized power markets. Additionally, in November 2012, the FERC issued an Order suspending a JPMorgan Chase energy subsidiary's market-based rate authority for six months commencing on April 1, 2013, based on its finding that statements concerning discovery obligations made in submissions related to the FERC investigation violated FERC rules regarding misleading information.

Interchange Litigation. A group of merchants and retail associations filed a series of putative class action complaints relating to interchange in several federal courts. The complaints allege, among other claims, that Visa and MasterCard, as well as certain other banks, conspired to set the price of credit and debit card interchange fees, enacted respective rules in violation of antitrust laws, and engaged in tying/bundling and exclusive dealing. All cases were consolidated in the United States District Court for the Eastern District of New York for pretrial proceedings.

In October 2012, Visa, Inc., its wholly-owned subsidiaries Visa U.S.A. Inc. and Visa International Service Association, MasterCard Incorporated, MasterCard International Incorporated and various United States financial institution defendants, including JPMorgan Chase & Co., JPMorgan

Chase Bank, N.A., Chase Bank USA, N.A., Chase Paymentech Solutions, LLC and certain predecessor institutions, entered into a settlement agreement (the "Settlement Agreement") to resolve the claims of the U.S. merchant and retail association plaintiffs (the "Class Plaintiffs") in the multi-district litigation. In November 2012, the Court entered an order preliminarily approving the Settlement Agreement, which provides for, among other things, a cash payment of $6.05 billion to the Class Plaintiffs (of which the Firm's share is approximately 20%), and an amount equal to ten basis points of credit card interchange for a period of eight months to be measured from a date within 60 days of the end of the opt-out period. The Settlement Agreement also provides for modifications to each credit card network's rules, including those that prohibit surcharging credit card transactions. The rule modifications became effective in January 2013. The Settlement Agreement is subject to final approval by the Court.

Investment Management Litigation. The Firm is defending three pending cases that allege that investment portfolios managed by J.P. Morgan Investment Management Inc. were inappropriately invested in securities backed by residential real estate collateral. Plaintiffs claim that JPMorgan Investment Management is liable for losses of more than $1 billion in market value of these securities. In the case filed by Assured Guaranty (U.K.) and the case filed by Ambac Assurance UK Limited in New York state court, discovery is proceeding on claims for breach of contract, breach of fiduciary duty and gross negligence. The third case, filed by CMMF LLP in New York state court, asserts claims under New York law for breach of fiduciary duty, negligence, breach of contract and negligent misrepresentation. Trial of the CMMF action was completed in February 2013, and the Court's decision is pending.

Lehman Brothers Bankruptcy Proceedings. In May 2010, Lehman Brothers Holdings Inc. ("LBHI") and its Official Committee of Unsecured Creditors (the "Committee") filed a complaint (and later an amended complaint) against JPMorgan Chase Bank, N.A. in the United States Bankruptcy Court for the Southern District of New York that asserts both federal bankruptcy law and state common law claims, and seeks, among other relief, to recover $8.6 billion in collateral that was transferred to JPMorgan Chase Bank, N.A. in the weeks preceding LBHI's bankruptcy. The amended complaint also seeks unspecified damages on the grounds that JPMorgan Chase Bank, N.A.'s collateral requests hastened LBHI's bankruptcy. The Firm moved to dismiss plaintiffs' amended complaint in its entirety, and also moved to transfer the litigation from the Bankruptcy Court to the United States District Court for the Southern District of New York. In April 2012, the Bankruptcy Court issued a decision granting in part and denying in part the Firm's motion to dismiss. The Court dismissed the counts of the amended complaint seeking avoidance of the allegedly constructively fraudulent and preferential transfers made to the Firm during the months of August and September 2008. The Court denied the Firm's motion to dismiss as to the other claims, including claims that allege intentional misconduct. In September 2012, the District Court denied the transfer motion without prejudice to its renewal in the future, but stated that any trial would likely have to be conducted before the District Court.

The Firm also filed counterclaims against LBHI alleging that LBHI fraudulently induced the Firm to make large clearing advances to Lehman against inappropriate collateral, which left the Firm with more than $25 billion in claims (the "Clearing Claims") against the estate of Lehman Brothers Inc. ("LBI"), LBHI's broker-dealer subsidiary. These claims have been paid in full, subject to the outcome of the litigation. Discovery is ongoing.

LBHI and the Committee have filed an objection to the deficiency claims asserted by JPMorgan Chase Bank, N.A. against LBHI with respect to the Clearing Claims, principally on the grounds that the Firm had not conducted the sale of the securities collateral held for such claims in a commercially reasonable manner. The Firm responded to LBHI's objection in November 2011. Discovery is ongoing.

LBHI and several of its subsidiaries that had been Chapter 11 debtors have filed a separate complaint and objection to derivatives claims asserted by the Firm alleging that the amount of the derivatives claims had been overstated and challenging certain set-offs taken by JPMorgan Chase entities to recover on the claims. The Firm has not yet responded to the amended derivatives complaint and objection, and discovery has not begun.

LIBOR Investigations and Litigation. JPMorgan Chase has received subpoenas and requests for documents and, in some cases, interviews, from federal and state agencies and entities, including the DOJ, CFTC, SEC, and various state attorneys general, as well as the European Commission, UK Financial Services Authority, Canadian Competition Bureau, Swiss Competition Commission and other regulatory authorities and banking associations around the world. The documents and information sought relate primarily to the process by which interest rates were submitted to the British Bankers Association ("BBA") in connection with the setting of the BBA's London Interbank Offered Rate ("LIBOR") for various currencies, principally in 2007 and 2008. Some of the inquiries also relate to similar processes by which information on rates is submitted to European Banking Federation ("EBF") in connection with the setting of the EBF's Euro Interbank Offered Rates ("EURIBOR") and to the Japanese Bankers' Association for the setting of Tokyo Interbank Offered Rates ("TIBOR") as well as to other processes for the setting of other reference rates in various parts of the world during similar time periods. The Firm is cooperating with these inquiries.

In addition, the Firm has been named as a defendant along with other banks in a series of individual and class actions filed in various United States District Courts in which plaintiffs make varying allegations that in various periods, starting in 2000 or later, defendants either individually or collectively manipulated the U.S. dollar LIBOR, Yen LIBOR and Euroyen TIBOR rates by submitting rates that were artificially low or high. Plaintiffs allege that they transacted

in loans, derivatives or other financial instruments whose values are impacted by changes in U.S. dollar LIBOR, Yen LIBOR, or Euroyen TIBOR and assert a variety of claims including antitrust claims seeking treble damages.

In 2011, a number of class actions were filed against LIBOR panel banks, including the Firm, asserting various federal and state law claims relating to the alleged manipulation of U.S. dollar LIBOR. These purported class actions were consolidated for pre-trial purposes in the United States District Court for the Southern District of New York before District Judge Buchwald, who appointed interim lead counsel for three proposed classes: (i) direct purchasers of U.S. dollar LIBOR-based financial instruments in the over-the-counter market; (ii) purchasers of U.S. dollar LIBOR-based financial instruments on an exchange; and (iii) purchasers of debt securities that pay an interest rate linked to U.S. dollar LIBOR. The defendants moved to dismiss all claims in these three putative class actions and three related individual actions pending before the Court. The Court has not yet ruled on the defendants' motions to dismiss.

Since April 2012, a number of additional U.S. dollar LIBOR putative class actions and individual actions have been filed in various courts. Defendants have moved to transfer each of these cases to the consolidated action pending in the Southern District of New York. To date, all but three of these actions have been transferred. The actions that have been transferred are stayed until the Court rules on the defendants' pending motions to dismiss.

The Firm also has been named as a defendant in a purported class action filed in the United States District Court for the Southern District of New York which seeks to bring claims on behalf of plaintiffs who purchased or sold exchange-traded Euroyen futures and options contracts. The plaintiff has been granted leave to file a Second Amended Complaint, and defendants will have 60 days after the filing of that amended pleading to respond.

Madoff Litigation. JPMorgan Chase & Co., JPMorgan Chase Bank, N.A., J.P. Morgan Securities LLC, and J.P. Morgan Securities plc have been named as defendants in a lawsuit brought by the trustee (the "Trustee") for the liquidation of Bernard L. Madoff Investment Securities LLC ("Madoff"). The Trustee has served an amended complaint in which he has asserted 28 causes of action against JPMorgan Chase, 20 of which seek to avoid certain transfers (direct or indirect) made to JPMorgan Chase that are alleged to have been preferential or fraudulent under the federal Bankruptcy Code and the New York Debtor and Creditor Law. The remaining causes of action involve claims for, among other things, aiding and abetting fraud, aiding and abetting breach of fiduciary duty, conversion, contribution and unjust enrichment in connection with Madoff's Ponzi scheme. The complaint asserts common law claims that purport to seek approximately $19 billion in damages, together with bankruptcy law claims to recover approximately $425 million in transfers that JPMorgan Chase allegedly received directly or indirectly from Bernard Madoff's brokerage firm. In October 2011, the United States District Court for the Southern District of New York granted JPMorgan Chase's motion to dismiss the common law claims asserted by the Trustee, and returned the remaining claims to the Bankruptcy Court for further proceedings. The Trustee appealed this decision and oral argument on the appeal was held in November 2012. The Firm is awaiting the Court's decision.

Separately, J.P. Morgan Trust Company (Cayman) Limited, JPMorgan (Suisse) SA, J.P. Morgan Securities plc, Bear Stearns Alternative Assets International Ltd., J.P. Morgan Clearing Corp., J.P. Morgan Bank Luxembourg SA, and J.P. Morgan Markets Limited (formerly Bear Stearns International Limited) have been named as defendants in lawsuits presently pending in Bankruptcy Court in New York arising out of the liquidation proceedings of Fairfield Sentry Limited and Fairfield Sigma Limited (together, "Fairfield"), so-called Madoff feeder funds. These actions are based on theories of mistake and restitution, among other theories, and seek to recover payments made to defendants by the funds totaling approximately $155 million. Pursuant to an agreement with the Trustee, the liquidators of Fairfield have voluntarily dismissed their action against J.P. Morgan Securities plc without prejudice to refiling. The other actions remain outstanding. In addition, a purported class action was brought by investors in certain feeder funds against JPMorgan Chase in the United States District Court for the Southern District of New York, as was a motion by separate potential class plaintiffs to add claims against JPMorgan Chase & Co., JPMorgan Chase Bank, N.A., J.P. Morgan Securities LLC and J.P. Morgan Securities plc to an already-pending purported class action in the same court. The allegations in these complaints largely track those raised by the Trustee. The Court dismissed these complaints and plaintiffs have appealed.

The Firm is a defendant in five other Madoff-related actions pending in New York state court and one purported class action in federal District Court in New York. The allegations in all of these actions are essentially identical, and involve claims against the Firm for, among other things, aiding and abetting breach of fiduciary duty, conversion and unjust enrichment. The Firm has moved to dismiss both the state and federal actions.

The Firm is also responding to various governmental inquiries concerning the Madoff matter.

MF Global. JPMorgan Chase & Co. was named as one of several defendants in a number of putative class action lawsuits brought by former customers of MF Global in federal District Courts in New York, Illinois and Montana. The lawsuits have been consolidated before the United States District Court for the Southern District of New York. The actions alleged, among other things, that the Firm aided and abetted MF Global's alleged misuse of customer money and breaches of fiduciary duty and was unjustly enriched by the transfer of certain customer segregated funds by MF Global. The Firm has entered into a tolling agreement with counsel for the customer class plaintiffs

and an individual plaintiff, pursuant to which the plaintiffs have agreed not to pursue any such claims against the Firm in these actions for so long as the tolling agreement remains in effect.

J.P. Morgan Securities LLC has been named as one of several defendants in a number of purported class actions filed by purchasers of MF Global's publicly traded securities, including the securities issued pursuant to MF Global's June 2010 secondary offering of common stock and February 2011 and August 2011 convertible note offerings. The actions have been consolidated before the United States District Court for the Southern District of New York. In August 2012, the lead plaintiffs filed an amended complaint which asserts violations of the Securities Act of 1933 against the underwriter defendants and alleges that the offering documents contained materially false and misleading statements and omissions regarding MF Global's financial position, internal controls and risk management, as such topics relate to its exposure to European sovereign debt. Defendants moved to dismiss in October 2012. Those motions remain pending.

In June 2012, the Securities Investor Protection Act ("SIPA") Trustee issued a Report of the Trustee's Investigation and Recommendations, and stated that he is considering potential claims against the Firm with respect to certain transfers identified in the Report. Discussions regarding possible resolution of potential SIPA Trustee claims and customer claims against the Firm are ongoing.

The Firm has responded to and continues to respond to inquiries from the CFTC, SEC, SIPA Trustee and Bankruptcy Trustee concerning MF Global.

Mortgage-Backed Securities and Repurchase Litigation and Mortgage-Related Regulatory Investigations. JPMorgan Chase and affiliates, Bear Stearns and affiliates and Washington Mutual affiliates have been named as defendants in a number of cases in their various roles as issuer, originator or underwriter in MBS offerings. These cases include purported class action suits, actions by individual purchasers of securities or by trustees for the benefit of purchasers of securities, an action by the New York State Attorney General and actions by monoline insurance companies that guaranteed payments of principal and interest for particular tranches of securities offerings. Although the allegations vary by lawsuit, these cases generally allege that the offering documents for securities issued by numerous securitization trusts contained material misrepresentations and omissions, including with regard to the underwriting standards pursuant to which the underlying mortgage loans were issued, or assert that various representations or warranties relating to the loans were breached at the time of origination. There are currently pending and tolled investor claims involving approximately $170 billion of such securities. In addition, and as described below, there are pending and threatened claims by monoline insurers and by and on behalf of trustees that involve some of these and other securitizations.

In the actions against the Firm as an MBS issuer (and, in some cases, also as an underwriter of its own MBS offerings), three purported class actions are pending against JPMorgan Chase and Bear Stearns, and/or certain of their affiliates and current and former employees, in the United States District Courts for the Eastern and Southern Districts of New York. Motions to dismiss have been largely denied in these cases, although in certain cases defendants have sought to appeal aspects of the decision, and they are in various stages of litigation. A settlement of a fourth purported class action that is pending in the United States District Court for the Western District of Washington against Washington Mutual affiliates, WaMu Asset Acceptance Corp. and WaMu Capital Corp. and certain former officers or directors of WaMu Asset Acceptance Corp., has received final court approval.

In addition to class actions, the Firm is also a defendant in individual actions brought against certain affiliates of JPMorgan Chase, Bear Stearns and Washington Mutual as issuers (and, in some cases, as underwriters) of MBS. These actions involve claims by or to benefit various institutional investors and governmental agencies. These actions are pending in federal and state courts across the United States and are in various stages of litigation.

In actions against the Firm solely as an underwriter of other issuers' MBS offerings, the Firm has contractual rights to indemnification from the issuers. However, those indemnity rights may prove effectively unenforceable where the issuers are now defunct, such as in pending cases where the Firm has been named involving affiliates of IndyMac Bancorp. A settlement of a purported class action involving Thornburg Mortgage MBS offerings that was pending against the Firm has received preliminary court approval. The Firm may also be contractually obligated to indemnify underwriters in certain deals it issued.

EMC Mortgage LLC (formerly EMC Mortgage Corporation) ("EMC"), an indirect subsidiary of JPMorgan Chase & Co., and certain other JPMorgan Chase entities currently are defendants in nine pending actions commenced by bond insurers that guaranteed payments of principal and interest on certain classes of 19 different MBS offerings. These actions are pending in federal and state courts in New York and are in various stages of litigation. Certain JPMorgan Chase entities, in their capacities as alleged successors in interest to Bear Stearns and EMC, have been named as defendants in a civil suit filed by the New York State Attorney General in New York state court in connection with Bear Stearns' due diligence and quality control practices relating to MBS.

The Firm or its affiliates are defendants in actions brought by trustees or master servicers of various MBS trusts and others on behalf of the purchasers of securities issued by those trusts. The first action was commenced by Deutsche Bank National Trust Company, acting as trustee for various

MBS trusts, against the Firm and the FDIC based on MBS issued by Washington Mutual Bank and its affiliates; that case is described in the Washington Mutual Litigations section below. The other actions are at various initial stages of litigation in the New York and Delaware state courts, including actions brought by MBS trustees, each specific to one or more MBS transactions, against EMC and/or JPMorgan Chase. These cases generally allege breaches of various representations and warranties regarding securitized loans and seek repurchase of those loans, as well as indemnification of attorneys' fees and costs and other remedies.

There is no assurance that the Firm will not be named as a defendant in additional MBS-related litigation, and the Firm has entered into agreements with a number of entities that purchased such securities that toll applicable limitations periods with respect to their claims. In addition, the Firm has received several demands by securitization trustees that threaten litigation, as well as demands by investors directing or threatening to direct trustees to investigate claims or bring litigation, based on purported obligations to repurchase loans out of securitization trusts and alleged servicing deficiencies. These include but are not limited to a demand from a law firm, as counsel to a group of purchasers of MBS that purport to have 25% or more of the voting rights in as many as 191 different trusts sponsored by the Firm or its affiliates with an original principal balance of more than $174 billion (excluding 52 trusts sponsored by Washington Mutual, with an original principal balance of more than $58 billion), made to various trustees to investigate potential repurchase and servicing claims. Further, there have been repurchase and servicing claims made in litigation against trustees not affiliated with the Firm, but involving trusts that the Firm sponsored.

In April 2012, the New York state court granted the Firm's motion to dismiss a shareholder complaint against the Firm and two affiliates, members of the boards of directors thereof and certain employees, asserting claims based on alleged wrongful actions and inactions relating to residential mortgage originations and securitizations. The plaintiff has appealed the order. A second shareholder complaint has been filed in New York state court against current and former members of the Firm's Board of Directors and the Firm, as nominal defendant, alleging that the Board allowed the Firm to engage in wrongful conduct regarding the sale of residential MBS and failed to implement adequate internal controls to prevent such wrongdoing.

In addition to the above-described litigation, the Firm has also received, and responded to, a number of subpoenas and informal requests for information from federal and state authorities concerning mortgage-related matters, including inquiries concerning a number of transactions involving the Firm and its affiliates' origination and purchase of whole loans, underwriting and issuance of MBS, treatment of early payment defaults, potential breaches of securitization representations and warranties, reserves and due diligence in connection with securitizations. In November 2012, the Firm settled with the SEC over its investigations of J.P. Morgan Securities LLC and J.P. Morgan Acceptance Corporation I relating to delinquency disclosures, and of Bear Stearns entities and J.P. Morgan Securities LLC relating to disclosures concerning settlements of claims against originators involving loans included in a number of Bear Stearns securitizations. Pursuant to the settlement, the named entities, without admitting or denying the SEC's allegations, consented to the entry of a final judgment ordering certain relief, including an injunction and the payment of approximately $296.9 million in disgorgement, penalties and interest. The United States District Court for the District of Columbia approved the settlement and entered the judgment in January 2013. The Firm continues to respond to other MBS-related regulatory inquiries.

Mortgage Foreclosure-Related Investigations and Litigation. The Attorneys General of Massachusetts and New York have separately filed lawsuits against the Firm, other servicers and a mortgage recording company asserting claims for various alleged wrongdoings relating to mortgage assignments and use of the industry's electronic mortgage registry. The court granted in part and denied in part the defendants' motion to dismiss the Massachusetts action and the Firm has moved to dismiss the New York action.

Six purported class action lawsuits were filed against the Firm relating to its mortgage foreclosure procedures. Two of the class actions have been dismissed with prejudice and one settled on an individual basis. Of the remaining active actions, two are in the discovery phase and a motion to dismiss is pending in the remaining action. Additionally, a purported class action brought against Bank of America involving an EMC loan has been dismissed.

Two shareholder derivative actions have been filed in New York Supreme Court against the Firm's Board of Directors alleging that the Board failed to exercise adequate oversight as to wrongful conduct by the Firm regarding mortgage servicing. These actions seek declaratory relief and damages. In July 2012, the Court granted defendants' motion to dismiss the complaint in the first-filed action and gave plaintiff 45 days in which to file an amended complaint. In October 2012, the Court entered a stipulated order consolidating the actions and staying all proceedings pending the plaintiffs' decision whether to file a consolidated complaint after the Firm completes its response to a demand submitted by one of the plaintiffs under Section 220 of the Delaware General Corporation Law.

The Civil Division of the United States Attorney's Office for the Southern District of New York is conducting an investigation concerning the Firm's compliance with the requirements of the Federal Housing Administration's Direct Endorsement Program. The Firm is cooperating in that investigation.

On January 7, 2013, the Firm announced that it and a number of other financial institutions entered into a

settlement agreement with the OCC and the Federal Reserve providing for the termination of the Independent Foreclosure Review programs that had been required under the Consent Orders with such banking regulators relating to each bank's residential mortgage servicing, foreclosure and loss-mitigation activities. Under this settlement, the Firm will make a cash payment of $753 million into a settlement fund for distribution to qualified borrowers. The Firm has also committed an additional $1.2 billion to foreclosure prevention actions under the settlement, which will be fulfilled through credits given to the Firm for modifications, short sales and other types of borrower relief.

Municipal Derivatives Investigations and Litigation. Purported class action lawsuits and individual actions have been filed against JPMorgan Chase and Bear Stearns, as well as numerous other providers and brokers, alleging antitrust violations in the market for financial instruments related to municipal bond offerings referred to collectively as "municipal derivatives." In July 2011, the Firm settled with federal and state governmental agencies to resolve their investigations into similar alleged conduct. The municipal derivatives actions were consolidated and/or coordinated in the United States District Court for the Southern District of New York. In December 2012, the District Court granted final approval of a settlement calling for payment of approximately $43 million. Certain class members opted out of the settlement, including 27 plaintiffs named in individual actions already pending against JPMorgan.

In addition, civil actions have been commenced against the Firm relating to certain Jefferson County, Alabama (the "County") warrant underwritings and swap transactions. In November 2009, J.P. Morgan Securities LLC settled with the SEC to resolve its investigation into those transactions. Following that settlement, the County filed an action against the Firm and several other defendants in Alabama state court. An action on behalf of a purported class of sewer rate payers has also been filed in Alabama state court. The suits allege that the Firm made payments to certain third parties in exchange for being chosen to underwrite more than $3 billion in warrants issued by the County and to act as the counterparty for certain swaps executed by the County. The complaints also allege that the Firm concealed these third-party payments and that, but for this concealment, the County would not have entered into the transactions. The Court denied the Firm's motions to dismiss the complaints in both proceedings. In November and December 2011, the County filed notices of bankruptcy with the trial court in each of the cases and with the Alabama Supreme Court stating that it was a Chapter 9 Debtor in the U.S. Bankruptcy Court for the Northern District of Alabama. Subsequently, the portion of the sewer rate payer action involving claims against the Firm was removed by certain defendants to the United States District Court for the Northern District of Alabama. In its order finding that removal of this action was proper, the District Court referred the action to the District's Bankruptcy Court, where the action remains pending. Limited discovery has taken place in the County's action and additional discovery may take place in 2013.

In September 2012, a group of purported creditors of the County initiated an adversary proceeding and filed a purported class action complaint alleging that certain warrants were issued unlawfully and were thus null and void and seeking $1.6 billion in damages from the Firm and other defendants involved in the Jefferson County financing transactions. The Firm, along with a number of other defendants, moved to dismiss the complaint in November 2012. Plaintiffs subsequently agreed to dismiss their tort claims seeking damages and are solely pursuing their claims relating to the validity of the warrants. The motion to dismiss these claims remains pending.

Two insurance companies that guaranteed the payment of principal and interest on warrants issued by the County have filed separate actions against the Firm in New York state court. Their complaints assert that the Firm fraudulently misled them into issuing insurance based upon substantially the same alleged conduct described above and other alleged non-disclosures. One insurer claims that it insured an aggregate principal amount of nearly $1.2 billion and seeks unspecified damages in excess of $400 million as well as unspecified punitive damages. The other insurer claims that it insured an aggregate principal amount of more than $378 million and seeks recovery of $4 million allegedly paid under the policies to date as well as any future payments and unspecified punitive damages. In December 2010, the court denied the Firm's motions to dismiss each of the complaints. The Firm has filed a cross-claim and a third party claim against the County for indemnity and contribution. The County moved to dismiss, which the court denied in August 2011. In consequence of its November 2011 bankruptcy filing, the County has asserted that these actions are stayed. In February 2012, one of the insurers filed a motion for a declaration that its action is not stayed as against the Firm or, in the alternative, for an order lifting the stay as against the Firm. The Firm and the County opposed the motion, which remains pending.

Option Adjustable Rate Mortgage Litigation. The Firm is defending one purported and three certified class actions, all pending in federal courts in California, which assert that several JPMorgan Chase entities violated the federal Truth in Lending Act and state unfair business practice statutes in failing to provide adequate disclosures in Option Adjustable Rate Mortgage ("ARM") loans regarding the resetting of introductory interest rates and that negative amortization was certain to occur if a borrower made the minimum monthly payment. With respect to the former Washington Mutual and Bear Stearns defendants who purchased Option ARM loans from third-party originators, plaintiffs allege that those entities aided and abetted the original lenders' alleged violations. Classes have been certified in three of the actions. In one of the certified class actions, the Firm has moved for decertification of the class and for summary

judgment. The Firm was unsuccessful in seeking permission to appeal the remaining class certification decisions.

Overdraft Fee/Debit Posting Order Litigation. JPMorgan Chase Bank, N.A. has been named as a defendant in several purported class actions relating to its practices in posting debit card transactions to customers' deposit accounts. Plaintiffs allege that the Firm improperly re-ordered debit card transactions from the highest amount to the lowest amount before processing these transactions in order to generate unwarranted overdraft fees. Plaintiffs contend that the Firm should have processed such transactions in the chronological order in which they were authorized. Plaintiffs seek the disgorgement of all overdraft fees paid to the Firm by plaintiffs since approximately 2003 as a result of the re-ordering of debit card transactions. The claims against the Firm have been consolidated with numerous complaints against other national banks in multi-District litigation pending in the United States District Court for the Southern District of Florida. The Firm reached an agreement to settle this matter in exchange for the Firm paying $110 million and agreeing to change certain overdraft fee practices. In December 2012, the Court granted final approval of the settlement.

Petters Bankruptcy and Related Matters. JPMorgan Chase and certain of its affiliates, including One Equity Partners ("OEP"), have been named as defendants in several actions filed in connection with the receivership and bankruptcy proceedings pertaining to Thomas J. Petters and certain affiliated entities (collectively, "Petters") and the Polaroid Corporation. The principal actions against JPMorgan Chase and its affiliates have been brought by a court-appointed receiver for Petters and the trustees in bankruptcy proceedings for three Petters entities. These actions generally seek to avoid, on fraudulent transfer and preference grounds, certain purported transfers in connection with (i) the 2005 acquisition by Petters of Polaroid, which at the time was majority-owned by OEP; (ii) two credit facilities that JPMorgan Chase and other financial institutions entered into with Polaroid; and (iii) a credit line and investment accounts held by Petters. The actions collectively seek recovery of approximately $450 million. Defendants have moved to dismiss the complaints in the actions filed by the Petters bankruptcy trustees and the parties have agreed to stay the action brought by the Receiver until after the Bankruptcy Court rules on the pending motions.

Securities Lending Litigation. JPMorgan Chase Bank, N.A. was named as a defendant in a putative class action asserting ERISA and other claims pending in the United States District Court for the Southern District of New York brought by participants in the Firm's securities lending business.

The action concerns investments of approximately $500 million in Lehman Brothers medium-term notes. The Court granted the Firm's motion to dismiss all claims in April 2012. The plaintiff filed a third amended complaint, and the Firm's motion to dismiss this complaint is pending. Discovery has been stayed until the Firm's motion to dismiss is decided.

Washington Mutual Litigations. Proceedings related to Washington Mutual's failure are pending before the United States District Court for the District of Columbia and include a lawsuit brought by Deutsche Bank National Trust Company, initially against the FDIC, asserting an estimated $6 billion to $10 billion in damages based upon alleged breach of various mortgage securitization agreements and alleged violation of certain representations and warranties given by certain Washington Mutual, Inc. ("WMI") subsidiaries in connection with those securitization agreements. The case includes assertions that JPMorgan Chase may have assumed liabilities for alleged breaches of representations and warranties in the mortgage securitization agreements. The District Court denied as premature motions by the Firm and the FDIC that sought a ruling on whether the FDIC retained liability for Deutsche Bank's claims. Discovery is underway.

In addition, JPMorgan Chase was sued in an action originally filed in state court in Texas (the "Texas Action") by certain holders of WMI common stock and debt of WMI and Washington Mutual Bank who seek unspecified damages alleging that JPMorgan Chase acquired substantially all of the assets of Washington Mutual Bank from the FDIC at a price that was allegedly too low. The Texas Action was transferred to the United States District Court for the District of Columbia, which ultimately granted JPMorgan Chase's and the FDIC's motions to dismiss the complaint, but the United States Court of Appeals for the District of Columbia Circuit reversed the District Court's dismissal and remanded the case for further proceedings. Plaintiffs, who sue now only as holders of Washington Mutual Bank debt following their voluntary dismissal of claims brought as holders of WMI common stock and debt, have filed an amended complaint alleging that JPMorgan Chase caused the closure of Washington Mutual Bank and damaged them by causing their bonds issued by Washington Mutual Bank, which had a total face value of $38 million, to lose substantially all of their value. JPMorgan Chase and the FDIC moved to dismiss this action and the District Court dismissed the case except as to the plaintiffs' claim that the Firm tortiously interfered with the plaintiffs' bond contracts with Washington Mutual Bank prior to its closure.

* * *

In addition to the various legal proceedings discussed above, JPMorgan Chase and its subsidiaries are named as defendants or are otherwise involved in a substantial number of other legal proceedings. The Firm believes it has meritorious defenses to the claims asserted against it in its currently outstanding legal proceedings and it intends to defend itself vigorously in all such matters. Additional legal proceedings may be initiated from time to time in the future.

The Firm has established reserves for several hundred of its currently outstanding legal proceedings. The Firm accrues for potential liability arising from such proceedings when it

is probable that such liability has been incurred and the amount of the loss can be reasonably estimated. The Firm evaluates its outstanding legal proceedings each quarter to assess its litigation reserves, and makes adjustments in such reserves, upwards or downwards, as appropriate, based on management's best judgment after consultation with counsel. During the years ended December 31, 2012, 2011 and 2010, the Firm incurred $5.0 billion, $4.9 billion and $7.4 billion, respectively, of litigation expense. There is no assurance that the Firm's litigation reserves will not need to be adjusted in the future.

In view of the inherent difficulty of predicting the outcome of legal proceedings, particularly where the claimants seek very large or indeterminate damages, or where the matters present novel legal theories, involve a large number of parties or are in early stages of discovery, the Firm cannot state with confidence what will be the eventual outcomes of the currently pending matters, the timing of their ultimate resolution or the eventual losses, fines, penalties or impact related to those matters. JPMorgan Chase believes, based upon its current knowledge, after consultation with counsel and after taking into account its current litigation reserves, that the legal proceedings currently pending against it should not have a material adverse effect on the Firm's consolidated financial condition. The Firm notes, however, that in light of the uncertainties involved in such proceedings, there is no assurance the ultimate resolution of these matters will not significantly exceed the reserves it has currently accrued; as a result, the outcome of a particular matter may be material to JPMorgan Chase's operating results for a particular period, depending on, among other factors, the size of the loss or liability imposed and the level of JPMorgan Chase's income for that period.

Note 32 – International operations

The following table presents income statement-related and balance sheet-related information for JPMorgan Chase by major international geographic area. The Firm defines international activities for purposes of this footnote presentation as business transactions that involve clients residing outside of the U.S., and the information presented below is based predominantly on the domicile of the client, the location from which the client relationship is managed, or the location of the trading desk. However, many of the Firm's U.S. operations serve international businesses.

As the Firm's operations are highly integrated, estimates and subjective assumptions have been made to apportion revenue and expense between U.S. and international operations. These estimates and assumptions are consistent with the allocations used for the Firm's segment reporting as set forth in Note 33 on pages 326–329 of this Annual Report.

The Firm's long-lived assets for the periods presented are not considered by management to be significant in relation to total assets. The majority of the Firm's long-lived assets are located in the United States.

As of or for the year ended December 31, (in millions)	Revenue[c]	Expense[d]	Income before income tax expense	Net income	Total assets

(a) Substantially reflects the U.S.
(b) The regional allocation of revenue, expense and net income for 2010 has been modified to conform with current allocation methodologies.
(c) Revenue is composed of net interest income and noninterest revenue.
(d) Expense is composed of noninterest expense and the provision for credit losses.
(e) Total assets for the U.K. were approximately $498 billion, $510 billion, and $419 billion at December 31, 2012, 2011 and 2010, respectively.

Note 33 – Business segments

The Firm is managed on a line of business basis. There are four major reportable business segments – Consumer & Community Banking, Corporate & Investment Bank, Commercial Banking and Asset Management. In addition, there is a Corporate/Private Equity segment. The business segments are determined based on the products and services provided, or the type of customer served, and they reflect the manner in which financial information is currently evaluated by management. Results of these lines of business are presented on a managed basis. For a definition of managed basis, see Explanation and Reconciliation of the Firm's use of non-GAAP financial measures, on pages 76–77 of this Annual Report. For a further discussion concerning JPMorgan Chase's business segments, see Business Segment Results on pages 78–79 of this Annual Report.

Business segment changes

Commencing with the fourth quarter of 2012, the Firm's business segments have been reorganized as follows: Retail Financial Services and Card Services & Auto ("Card") business segments were combined to form one business segment called Consumer & Community Banking ("CCB"), and Investment Bank and Treasury & Securities Services

business segments were combined to form one business segment called Corporate & Investment Bank ("CIB"). Commercial Banking ("CB") and Asset Management ("AM") were not affected by the aforementioned changes. A technology function supporting online and mobile banking was transferred from Corporate/Private Equity to the CCB business segment. This transfer did not materially affect the results of either the CCB business segment or Corporate/Private Equity.

The business segment information that follows has been revised to reflect the business reorganization retroactive to January 1, 2010.

The following is a description of each of the Firm's business segments, and the products and services they provide to their respective client bases.

Consumer & Community Banking
CCB serves consumers and businesses through personal service at bank branches and through ATMs, online, mobile and telephone banking. CCB is organized into Consumer & Business Banking, Mortgage Banking (including Mortgage Production, Mortgage Servicing and Real Estate Portfolios) and Card. Consumer & Business Banking offers deposit and investment products and services to consumers, and lending, deposit, and cash management and payment solutions to small businesses. Mortgage Banking includes mortgage origination and servicing activities, as well as portfolios comprised of residential mortgages and home equity loans, including the PCI portfolio acquired in the Washington Mutual transaction. Card issues credit cards to consumers and small businesses, provides payment services to corporate and public sector clients through its commercial card products, offers payment processing services to merchants, and provides auto and student loan services.

Corporate & Investment Bank
CIB offers a broad suite of investment banking, market-making, prime brokerage, and treasury and securities products and services to a global client base of corporations, investors, financial institutions, government and municipal entities. Within Banking, the CIB offers a full range of investment banking products and services in all major capital markets, including advising on corporate strategy and structure, capital-raising in equity and debt markets, as well as loan origination and syndication. Also included in Banking is Treasury Services, which includes transaction services, comprised primarily of cash management and liquidity solutions, and trade finance products. The Markets & Investor Services segment of the CIB is a global market-maker in cash securities and derivative instruments, and also offers sophisticated risk management solutions, prime brokerage, and research. Markets & Investor Services also includes the Securities Services business, a leading global custodian which holds, values, clears and services securities, cash and alternative investments for investors and broker-dealers, and manages depositary receipt programs globally.

Commercial Banking
CB delivers extensive industry knowledge, local expertise and dedicated service to U.S. and U.S. multinational clients, including corporations, municipalities, financial institutions and non-profit entities with annual revenue generally ranging from $20 million to $2 billion. CB provides financing to real estate investors and owners. Partnering with the Firm's other businesses, CB provides comprehensive financial solutions, including lending, treasury services, investment banking and asset management to meet its clients' domestic and international financial needs.

Asset Management
AM, with client assets of $2.1 trillion, is a global leader in investment and wealth management. AM clients include institutions, high-net-worth individuals and retail investors in every major market throughout the world. AM offers investment management across all major asset classes including equities, fixed income, alternatives and money market funds. AM also offers multi-asset investment management, providing solutions to a broad range of clients' investment needs. For individual investors, AM also provides retirement products and services, brokerage and banking services including trust and estate, loans, mortgages and deposits. The majority of AM's client assets are in actively managed portfolios.

Corporate/Private Equity
The Corporate/Private Equity segment comprises Private Equity, Treasury, Chief Investment Office ("CIO"), and Other Corporate, which includes corporate staff units and expense that is centrally managed. Treasury and CIO are predominantly responsible for measuring, monitoring, reporting and managing the Firm's liquidity, funding, capital and structural interest rate and foreign exchange risks. The corporate staff units include Central Technology and Operations, Internal Audit, Executive, Finance, Human Resources, Legal & Compliance, Global Real Estate, General Services, Operational Control, Risk Management, and Corporate Responsibility & Public Policy. Other centrally managed expense includes the Firm's occupancy and pension-related expense that are subject to allocation to the businesses.

Segment results

The following tables provide a summary of the Firm's segment results for 2012, 2011 and 2010 on a managed basis. Total net revenue (noninterest revenue and net interest income) for each of the segments is presented on a fully taxable-equivalent ("FTE") basis. Accordingly, revenue from investments that receive tax credits and tax-exempt securities is presented on a basis comparable to taxable investments and securities; this non-GAAP financial measure allows management to assess the comparability of revenue arising from both taxable and tax-exempt sources. The corresponding income tax impact related to tax-exempt items is recorded within income tax expense/(benefit).

Effective January 1, 2012, the Firm revised the capital allocated to each of its businesses, reflecting additional refinement of each segment's Basel III Tier 1 common capital requirements.

(a) Managed basis starts with the reported U.S. GAAP results and includes certain reclassifications as discussed below that do not have any impact on net income as reported by the lines of business or by the Firm as a whole.

(b) Segment managed results reflect revenue on a FTE basis with the corresponding income tax impact recorded within income tax expense/(benefit). These adjustments are eliminated in reconciling items to arrive at the Firm's reported U.S. GAAP results. FTE adjustments for the years ended December 31, 2012, 2011, and 2010, were as follows.

Year ended December 31, (in millions)	**2012**	2011	2010
Noninterest revenue	**$ 2,116**	$ 2,003	$ 1,745
Net interest income	**743**	530	403

(a) On March 13, 2012, the Firm's quarterly stock dividend was increased from $0.25 to $0.30 per share.

(b) Tangible book value per share and ROTCE are non-GAAP financial measures. Tangible book value per share represents the Firm's tangible common equity divided by period-end common shares. ROTCE measures the Firm's annualized earnings as a percentage of tangible common equity. For further discussion of these measures, see Explanation and Reconciliation of the Firm's Use of Non-GAAP Financial Measures on pages 76–77 of this Annual Report.

(c) Share prices shown for JPMorgan Chase's common stock are from the New York Stock Exchange. JPMorgan Chase's common stock is also listed and traded on the London Stock Exchange and the Tokyo Stock Exchange.

(d) Return on Basel I risk-weighted assets is the annualized earnings of the Firm divided by its average risk-weighted assets.

(e) Basel I Tier 1 common capital ratio ("Tier 1 common ratio") is Tier 1 common capital ("Tier 1 common") divided by risk-weighted assets. The Firm uses Tier 1 common capital along with the other capital measures to assess and monitor its capital position. For further discussion of the Tier 1 common ratio, see Regulatory capital on pages 117–120 of this Annual Report.

(f) Excludes the impact of residential real estate PCI loans. For further discussion, see Allowance for credit losses on pages 159–162 of this Annual Report.

Active mobile customers: Retail banking users of all mobile platforms who have been active in the past 90 days.

Allowance for loan losses to total loans: Represents period-end allowance for loan losses divided by retained loans.

Assets under management: Represent assets actively managed by AM on behalf of its Private Banking, Institutional and Retail clients. Includes "Committed capital not Called," on which AM earns fees. Excludes assets managed by American Century Companies, Inc., in which the Firm sold its ownership interest on August 31, 2011.

Assets under supervision: Represent assets under management as well as custody, brokerage, administration and deposit accounts.

Beneficial interests issued by consolidated VIEs: Represents the interest of third-party holders of debt, equity securities, or other obligations, issued by VIEs that JPMorgan Chase consolidates.

Benefit obligation: Refers to the projected benefit obligation for pension plans and the accumulated postretirement benefit obligation for OPEB plans.

Client advisors: Investment product specialists, including Private Client Advisors, Financial Advisors, Financial Advisor Associates, Senior Financial Advisors, Independent Financial Advisors and Financial Advisor Associate trainees, who advise clients on investment options, including annuities, mutual funds, stock trading services, etc., sold by the Firm or by third party vendors through retail branches, Chase Private Client branches and other channels.

Client investment managed accounts: Assets actively managed by Chase Wealth Management on behalf of clients. The percentage of managed accounts is calculated by dividing managed account assets by total client investment assets.

Contractual credit card charge-off: In accordance with the Federal Financial Institutions Examination Council policy, credit card loans are charged off at the earlier of: (i) the end of the month in which the account becomes 180 days past due or (ii) within 60 days from receiving notification about a specific event (e.g., bankruptcy of the borrower).

Credit derivatives: Financial instruments whose value is derived from the credit risk associated with the debt of a third party issuer (the reference entity) which allow one party (the protection purchaser) to transfer that risk to another party (the protection seller). Upon the occurrence of a credit event, which may include, among other events, the bankruptcy or failure to pay by, or certain restructurings of the debt of, the reference entity, neither party has recourse to the reference entity. The protection purchaser has recourse to the protection seller for the difference between the face value of the CDS contract and the fair value of the reference obligation at the time of settling the credit derivative contract. The determination as to whether a credit event has occurred is generally made by the relevant International Swaps and Derivatives Association ("ISDA") Determinations Committee, comprised of 10 sell-side and five buy-side ISDA member firms.

Credit cycle: A period of time over which credit quality improves, deteriorates and then improves again (or vice versa). The duration of a credit cycle can vary from a couple of years to several years.

CUSIP number: A CUSIP (i.e., Committee on Uniform Securities Identification Procedures) number consists of nine characters (including letters and numbers) that uniquely identify a company or issuer and the type of security and is assigned by the American Bankers Association and operated by Standard & Poor's. This system facilitates the clearing and settlement process of securities. A similar system is used to identify non-U.S. securities (CUSIP International Numbering System).

Deposit margin: Represents net interest income expressed as a percentage of average deposits.

FICO score: A measure of consumer credit risk provided by credit bureaus, typically produced from statistical models by Fair Isaac Corporation utilizing data collected by the credit bureaus.

Forward points: Represents the interest rate differential between two currencies, which is either added to or subtracted from the current exchange rate (i.e., "spot rate") to determine the forward exchange rate.

Group of Seven ("G7") nations: Countries in the G7 are Canada, France, Germany, Italy, Japan, the United Kingdom and the United States.

G7 government bonds: Bonds issued by the government of one of countries in the G7 nations.

Headcount-related expense: Includes salary and benefits (excluding performance-based incentives), and other noncompensation costs related to employees.

Home equity - senior lien: Represents loans where JP Morgan Chase holds the first security interest on the property.

Home equity - junior lien: Represents loans where JP Morgan Chase holds a security interest that is subordinate in rank to other liens.

Interchange income: A fee paid to a credit card issuer in the clearing and settlement of a sales or cash advance transaction.

Investment-grade: An indication of credit quality based on JPMorgan Chase's internal risk assessment system. "Investment grade" generally represents a risk profile similar to a rating of a "BBB-"/"Baa3" or better, as defined by independent rating agencies.

LLC: Limited Liability Company.

Loan-to-value ("LTV") ratio: For residential real estate loans, the relationship, expressed as a percentage, between the principal amount of a loan and the appraised value of the collateral (i.e., residential real estate) securing the loan.

Origination date LTV ratio

The LTV ratio at the origination date of the loan. Origination date LTV ratios are calculated based on the actual appraised values of collateral (i.e., loan-level data) at the origination date.

Current estimated LTV ratio

An estimate of the LTV as of a certain date. The current estimated LTV ratios are calculated using estimated collateral values derived from a nationally recognized home price index measured at the metropolitan statistical area ("MSA") level. These MSA-level home price indices comprise actual data to the extent available and forecasted data where actual data is not available. As a result, the estimated collateral values used to calculate these ratios do not represent actual appraised

loan-level collateral values; as such, the resulting LTV ratios are necessarily imprecise and should therefore be viewed as estimates.

Combined LTV ratio

The LTV ratio considering all lien positions related to the property. Combined LTV ratios are used for junior lien home equity products.

Managed basis: A non-GAAP presentation of financial results that includes reclassifications to present revenue on a fully taxable-equivalent basis. Management uses this non- GAAP financial measure at the segment level, because it believes this provides information to enable investors to understand the underlying operational performance and trends of the particular business segment and facilitates a comparison of the business segment with the performance of competitors.

Master netting agreement: An agreement between two counterparties who have multiple derivative contracts with each other that provides for the net settlement of all contracts, as well as cash collateral, through a single payment, in a single currency, in the event of default on or termination of any one contract.

Mortgage product types:

Alt-A

Alt-A loans are generally higher in credit quality than subprime loans but have characteristics that would disqualify the borrower from a traditional prime loan. Alt-A lending characteristics may include one or more of the following: (i) limited documentation; (ii) a high combined loan-to-value ("CLTV") ratio; (iii) loans secured by non-owner occupied properties; or (iv) a debt-to-income ratio above normal limits. A substantial proportion of the Firm's Alt-A loans are those where a borrower does not provide complete documentation of his or her assets or the amount or source of his or her income.

Option ARMs

The option ARM real estate loan product is an adjustable-rate mortgage loan that provides the borrower with the option each month to make a fully amortizing, interest-only or minimum payment. The minimum payment on an option ARM loan is based on the interest rate charged during the introductory period. This introductory rate is usually significantly below the fully indexed rate. The fully indexed rate is calculated using an index rate plus a margin. Once the introductory period ends, the contractual interest rate charged on the loan increases to the fully indexed rate and adjusts monthly to reflect movements in the index. The minimum payment is typically insufficient to cover interest accrued in the prior month, and any unpaid interest is deferred and added to the principal balance of the loan. Option ARM loans are subject to payment recast, which converts the loan to a variable-rate fully amortizing loan upon meeting specified loan balance and anniversary date triggers.

Prime

Prime mortgage loans are made to borrowers with good credit records and a monthly income at least three to four times greater than their monthly housing expense (mortgage payments plus taxes and other debt payments). These borrowers provide full documentation and generally have reliable payment histories.

Subprime

Subprime loans are loans to customers with one or more high risk characteristics, including but not limited to: (i) unreliable or poor payment histories; (ii) a high LTV ratio of greater than 80% (without borrower-paid mortgage insurance); (iii) a high debt-to-income ratio; (iv) an occupancy type for the loan is other than the borrower's primary residence; or (v) a history of delinquencies or late payments on the loan.

MSR risk management revenue: Includes changes in the fair value of the MSR asset due to market-based inputs, such as interest rates and volatility, as well as updates to assumptions used in the MSR valuation model; and derivative valuation adjustments and other, which represents changes in the fair value of derivative instruments used to offset the impact of changes in the market-based inputs to the MSR valuation model.

Multi-asset: Any fund or account that allocates assets under management to more than one asset class.

NA: Data is not applicable or available for the period presented.

Net charge-off rate: Represents net charge-offs (annualized) divided by average retained loans for the reporting period.

Net yield on interest-earning assets: The average rate for interest-earning assets less the average rate paid for all sources of funds.

NM: Not meaningful.

Overhead ratio: Noninterest expense as a percentage of total net revenue.

Participating securities: Represents unvested stock-based compensation awards containing nonforfeitable rights to dividends or dividend equivalents (collectively, "dividends"), which are included in the earnings per share calculation using the two-class method. JPMorgan Chase grants restricted stock and RSUs to certain employees under its stock-based compensation programs, which entitle the recipients to receive nonforfeitable dividends during the vesting period on a basis equivalent to the dividends paid to holders of common stock. These unvested awards meet the definition of participating securities. Under the two-class method, all earnings (distributed and undistributed) are allocated to each class of common stock and participating securities, based on their respective rights to receive dividends.

Personal bankers: Retail branch office personnel who acquire, retain and expand new and existing customer relationships by assessing customer needs and recommending and selling appropriate banking products and services.

Portfolio activity: Describes changes to the risk profile of existing lending-related exposures and their impact on the allowance for credit losses from changes in customer profiles and inputs used to estimate the allowances.

Pre-provision profit: Represents total net revenue less noninterest expense. The Firm believes that this financial measure is useful in assessing the ability of a lending institution to generate income in excess of its provision for credit losses.

Pretax margin: Represents income before income tax expense divided by total net revenue, which is, in management's view, a comprehensive measure of pretax performance derived by

measuring earnings after all costs are taken into consideration. It is one basis upon which management evaluates the performance of AM against the performance of their respective competitors.

Principal transactions revenue: Principal transactions revenue includes realized and unrealized gains and losses recorded on derivatives, other financial instruments, private equity investments, and physical commodities used in market making and client-driven activities. In addition, Principal transactions revenue also includes certain realized and unrealized gains and losses related to hedge accounting and specified risk management activities including: (a) certain derivatives designated in qualifying hedge accounting relationships (primarily fair value hedges of commodity and foreign exchange risk), (b) certain derivatives used for specified risk management purposes, primarily to mitigate credit risk, foreign exchange risk and commodity risk, and (c) other derivatives, including the synthetic credit portfolio.

Purchased credit-impaired ("PCI") loans: Represents loans that were acquired in the Washington Mutual transaction and deemed to be credit-impaired on the acquisition date in accordance with FASB guidance. The guidance allows purchasers to aggregate credit-impaired loans acquired in the same fiscal quarter into one or more pools, provided that the loans have common risk characteristics (e.g., product type, LTV ratios, FICO scores, past due status, geographic location). A pool is then accounted for as a single asset with a single composite interest rate and an aggregate expectation of cash flows.

Real assets: Real assets include investments in productive assets such as agriculture, energy rights, mining and timber properties and exclude raw land to be developed for real estate purposes.

Real estate investment trust ("REIT"): A special purpose investment vehicle that provides investors with the ability to participate directly in the ownership or financing of real-estate related assets by pooling their capital to purchase and manage income property (i.e., equity REIT) and/or mortgage loans (i.e., mortgage REIT). REITs can be publicly-or privately-held and they also qualify for certain favorable tax considerations.

Receivables from customers: Primarily represents margin loans to prime and retail brokerage customers which are included in accrued interest and accounts receivable on the Consolidated Balance Sheets for the wholesale lines of business.

Reported basis: Financial statements prepared under U.S. GAAP, which excludes the impact of taxable-equivalent adjustments.

Retained loans: Loans that are held-for-investment (i.e. excludes loans held-for-sale and loans at fair value).

Risk-weighted assets ("RWA"): Risk-weighted assets consist of on- and off-balance sheet assets that are assigned to one of several broad risk categories and weighted by factors representing their risk and potential for default. On-balance sheet assets are risk-weighted based on the estimated credit risk associated with the obligor or counterparty, the nature of any collateral, and the guarantor, if any. Off-balance sheet assets such as lending-related commitments, guarantees, derivatives and other applicable off-balance sheet positions are risk-weighted by multiplying the contractual amount by the appropriate credit conversion factor to determine the on-balance sheet credit equivalent amount, which is then risk-weighted based on the same factors used for on-balance sheet assets. Risk-weighted assets also incorporate a measure for market risk related to applicable trading assets-debt and equity instruments, and foreign exchange and commodity derivatives. The resulting risk-weighted values for each of the risk categories are then aggregated to determine total risk-weighted assets.

Sales specialists: Retail branch office and field personnel, including Business Bankers, Relationship Managers and Loan Officers, who specialize in marketing and sales of various business banking products (i.e., business loans, letters of credit, deposit accounts, Chase Paymentech, etc.) and mortgage products to existing and new clients.

Seed capital: Initial JPMorgan capital invested in products, such as mutual funds, with the intention of ensuring the fund is of sufficient size to represent a viable offering to clients, enabling pricing of its shares, and allowing the manager to develop a track record. After these goals are achieved, the intent is to remove the Firm's capital from the investment.

Short sale: A short sale is a sale of real estate in which proceeds from selling the underlying property are less than the amount owed the Firm under the terms of the related mortgage and the related lien is released upon receipt of such proceeds.

Taxable-equivalent basis: In presenting managed results, the total net revenue for each of the business segments and the Firm is presented on a tax-equivalent basis. Accordingly, revenue from investments that receive tax credits and tax-exempt securities is presented in the managed results on a basis comparable to taxable investments and securities; the corresponding income tax impact related to tax-exempt items is recorded within income tax expense.

Troubled debt restructuring ("TDR"): A TDR is deemed to occur when the Firm modifies the original terms of a loan agreement by granting a concession to a borrower that is experiencing financial difficulty.

Unaudited: Financial statements and information that have not been subjected to auditing procedures sufficient to permit an independent certified public accountant to express an opinion.

U.S. GAAP: Accounting principles generally accepted in the United States of America.

U.S. government-sponsored enterprise obligations: Obligations of agencies originally established or chartered by the U.S. government to serve public purposes as specified by the U.S. Congress; these obligations are not explicitly guaranteed as to the timely payment of principal and interest by the full faith and credit of the U.S. government.

U.S. Treasury: U.S. Department of the Treasury.

Value-at-risk ("VaR"): A measure of the dollar amount of potential loss from adverse market moves in an ordinary market environment.

Washington Mutual transaction: On September 25, 2008, JPMorgan Chase acquired certain of the assets of the banking operations of Washington Mutual Bank ("Washington Mutual") from the FDIC.

J.P. Morgan International Council

2013 Investor Day agenda

Presentation	Speaker	Start time
Opening remarks Firmwide Overview	Marianne Lake	8:30AM
Consumer & Community Banking	Gordon Smith	9:15AM
Break		10:45AM
Commercial Banking	Doug Petno	11:00AM
Asset Management	Mary Erdoes	11:30AM
Break		12:00PM
Lunch		12:15PM
Corporate & Investment Bank	Mike Cavanagh/Daniel Pinto	1:15PM
Closing remarks and Q&A	Jamie Dimon	2:35PM

FIRM OVERVIEW

Marianne Lake, Chief Financial Officer

February 26, 2013

JPMorgan Chase & Co.

Agenda

	Page
JPMorgan Chase overview	**1**
Expense and investments	11
Balance sheet	15
Appendix – Key investor topics	27
Appendix – Other	31

JPMorgan Chase's fundamentals are extremely strong

JPMorgan Chase overview

Excellent client franchises

- Best-in-class client franchises; focus on serving clients
- Strong leadership positions
- Experienced management team; deep bench of talent

Competitive advantages

- Strength of the platform provides competitive advantage
- Broad customer base; global reach; full platform
- $14B of cross-sell revenue and $3B of cost synergies
- Additional branding, funding benefits and earnings diversification

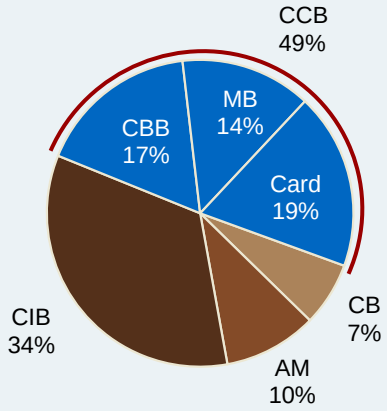
Strong returns and growth opportunities

- Delivered strong consistent returns
- Continuous investments support organic growth
- Continuous expense discipline

Capital and regulatory

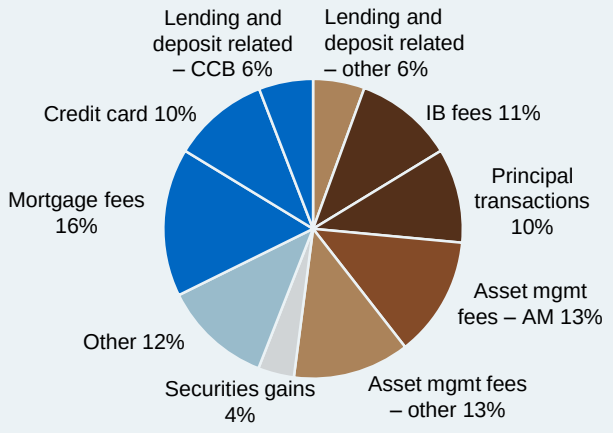
- Consistent focus on "fortress" operating model
- Committed to comply with broad set of regulatory changes
- Compliant with Basel III Tier I common[1] ratio of 9.5% and 100% LCR by end of 2013

[1] See note 3 on slide 41; will depend on interpretation of rules and decisions on usage of excess capital



Performance summary

JPMorgan Chase overview – Performance summary



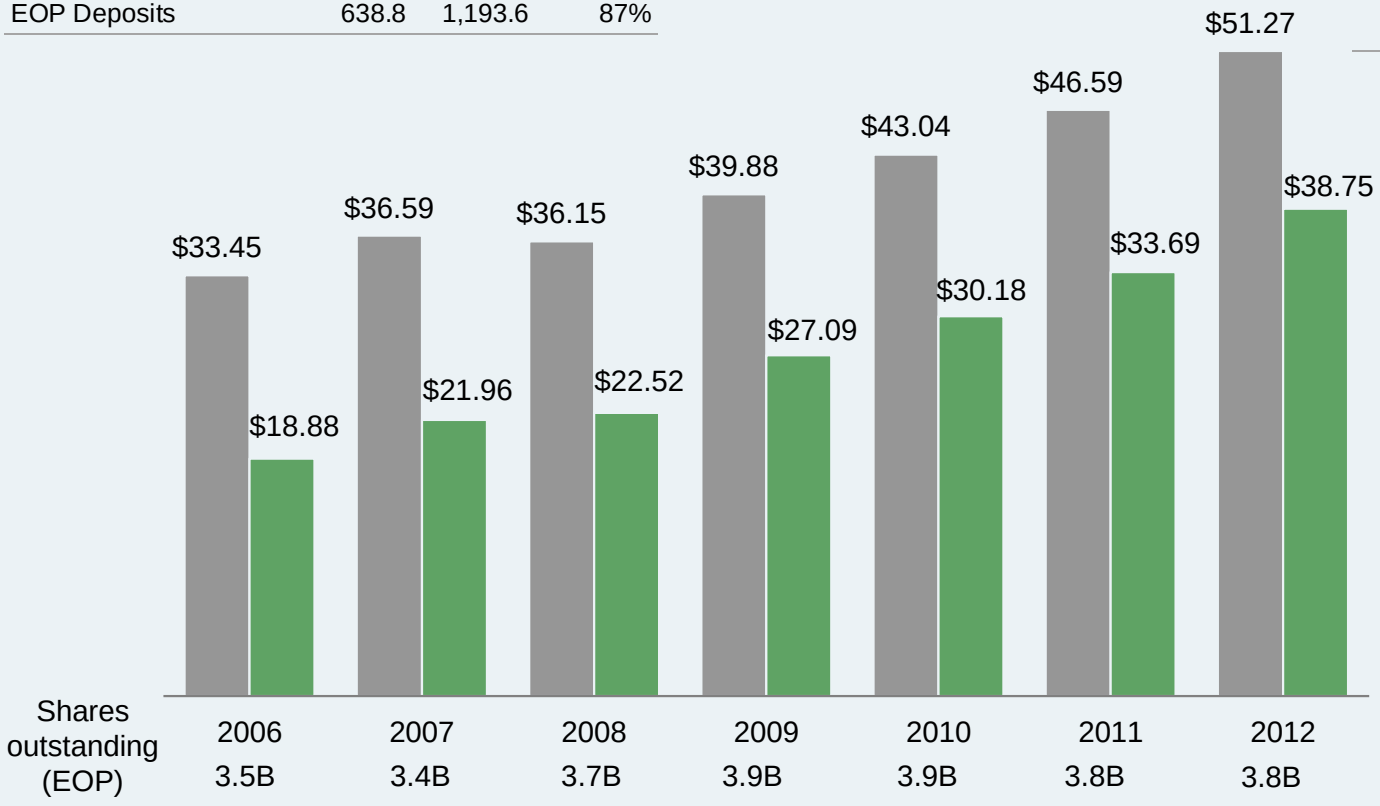
$mm, excluding EPS	FY2011	FY2012
Revenue (FTE)[1]	$99,767	$99,890
Credit Costs	7,574	3,385
Expense	62,911	64,729
Reported net income	$18,976	$21,284
Net income applicable to common stock	$17,568	$19,877
Reported EPS	$4.48	$5.20
ROTCE[2]	15%	15%
Return on Basel I RWA (excl. DVA)[3]	1.5	1.7
Basel I Tier 1 common ratio[4]	10.1	11.0
Basel III Tier 1 common ratio[4,5]	7.9	8.7

Impact of run-off and mitigants through 2014 would add ~+100bps[6]

Firmwide revenue – FY2012[1,7]

NIR represents 54% of revenue – FY2012 NIR mix[1]

Note: Totals may not sum due to rounding
[1] See note 1 on slide 41
[2] See note 2 on slide 41
[3] See note 4 on slide 41
[4] See note 3 on slide 41
[5] Estimated impact of final Basel 2.5 Rules and Basel III Advanced NPR reflected in 2012, but not 2011
[6] Includes the effect of bringing forward run-off and data/model enhancements
[7] Excludes Corp/PE 2012 loss of $1.2B from total revenue



Book value per share: Growing our fortress balance sheet

JPMorgan Chase overview – Performance summary

Key metrics since FY2006

($B)	2006	2012	%Δ
Tangible common equity	$65.4	$147.4	126%
Basel I Tier 1 common	7.3%	11.0%	3.7[1]
Loan loss reserve	$7.3	$21.9	$14.6[1]
Repurchase reserve[2]	0.0	2.8	2.8[1]
EOP Deposits	638.8	1,193.6	87%

Growth	YoY	5Y[3]	10Y[3]
BVPS	10%	7%	10%
TBVPS	15	12	9
EPS[4]	16	4	21

[1] Actual change
[2] Excludes legal reserves associated with mortgage-backed securities litigation
[3] CAGR
[4] Excl.DVA, growth YoY would be 25%; see note 6 of slide 41

Total shareholder returns

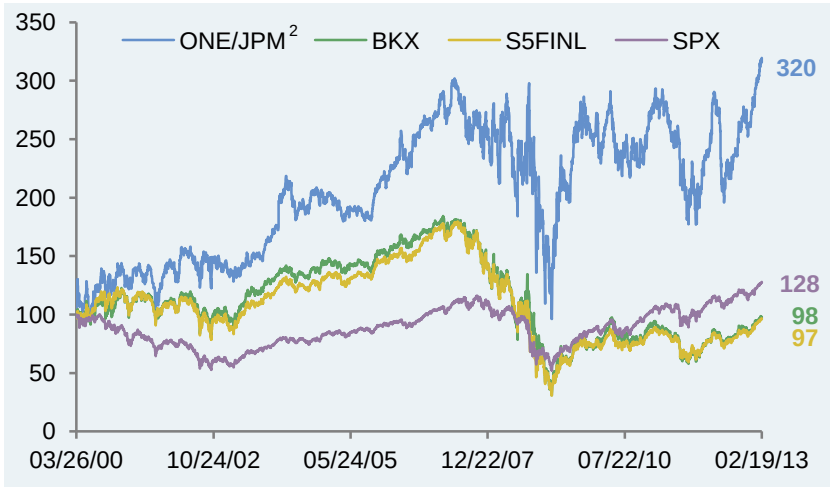
JPMorgan Chase overview – Returns

1 Annualized total return

Annualized total return	3/26/00-2/19/13
ONE/JPM[2]	9.4%
BKX	(0.1)
S5FINL	(0.3)
SPX	1.9

2 Annualized total return

Annualized total return	1/13/04-2/19/13
JPM	5.4%
BKX	(3.3)
S5FINL	(2.6)
SPX	5.6

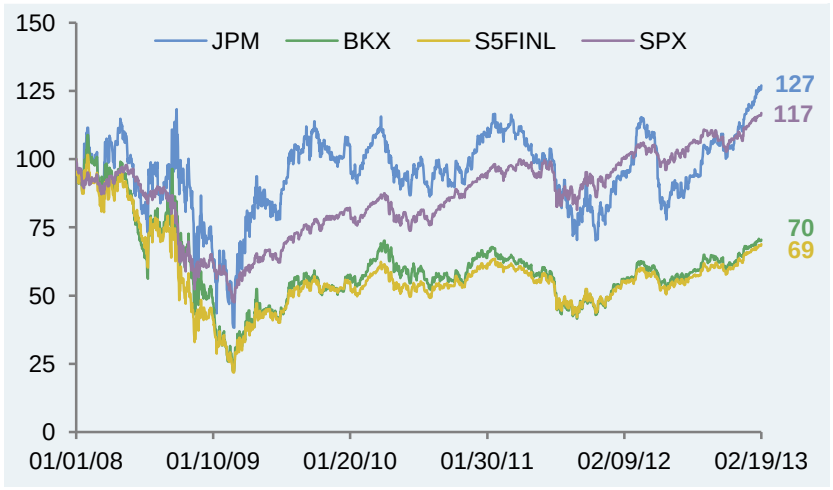


3 Annualized total return

Annualized total return	1/1/08-2/19/13
JPM	4.8%
BKX	(6.6)
S5FINL	(7.0)
SPX	3.1

4 Annualized total return

Annualized total return	1/1/12-2/19/13
JPM	46.5%
BKX	38.2
S5FINL	35.4
SPX	21.7



1 Annualized total shareholder returns – March 26, 2000[1]

2 Annualized total shareholder returns – January 13, 2004[1]

3 Annualized total shareholder returns – 5-year return

4 Annualized total shareholder returns – 1-year return

Source: Bloomberg

Note: Annualized total shareholder returns assume dividends are reinvested on pay-date

Note: "BKX" is the KBW Bank Index; "S5FINL" is the S&P 500 Financials Index; "SPX" is the S&P 500 Index

[1] March 26, 2000 represents the day before Jamie Dimon started as CEO of Bank One Corporation (ONE); January 13, 2004 represents the day before JPM agreed to acquire ONE

[2] Represents ONE's annualized total return until June 30, 2004 and is subsequently projected to mirror JPM's total return post merger completion on July 1, 2004

Building market leading franchises

JPMorgan Chase overview – Franchise leadership

Chase – CCB

"Acquiring and deepening relationships; focus on customer satisfaction"

- ~50% of U.S. households have a Chase relationship
- #1 customer satisfaction among large banks[1]
- #1 rated mobile app[2] ; #1 online financial services destination[3]
- #1 ATM network; #2 in branches; ~3x industry avg. deposit growth[4]
- #1 customer satisfaction of large banks for originations/servicing[5]
- #1 Small Business Administration lender[6] – 3rd straight year
- #2 in mortgage originations[7], up from #5 in 2006
- #1 in total U.S. payments volume[8]; #1 Global Visa issuer

JPMorgan – CIB

"Market share gains, client relationships, international expansion"

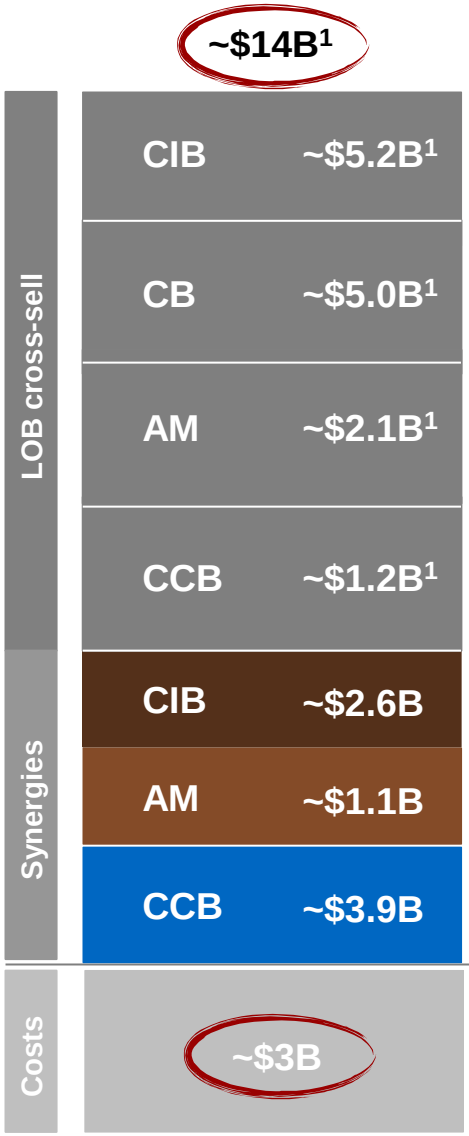
- ~80% of Fortune 500 companies are our clients
- CIB presence in 59 countries
- #1 in Global IB fees; #1 in Markets revenue share
- #1 in All American Fixed Income & Equity Research
- $1T+ of securities traded and settled daily
- $980T of USD payments in FY2012; $4T average daily
- #1 USD wire clearer with 20% share of Fed and CHIPS
- $356B in average client deposits and other third-party liabilities

Commercial Banking

"Deep relationships, efficiency, new markets expansion"

- 10 consecutive quarters of loan growth
- #1 U.S. multifamily lender since 2008[10]
- #1 large middle market syndicated lender[9]
- 89% customer satisfaction[11]

Asset Management



"Global reach, breadth of product and clients, investment performance"

- #2 U.S. active mutual fund rank (by flows)[12]
- #1 Private Bank for Ultra-High-Net Worth globally[13]; 10 consecutive years of Private Banking revenue growth
- 15 consecutive quarters of positive long-term flows; $2.1T in clients assets; 76% of fund AUM in top two quartiles (5-year)

[1] American Customer Satisfaction Index (ACSI), December 2012
[2] Keynote, November 2012
[3] Compete.com Rankings, December 2012
[4] FDIC data as of June 2012
[5] J.D. Power Survey; JPM ranked #4 for customer satisfaction in originations and #4 in servicing on an overall basis
[6] # of units, per SBA data
[7] Based on Inside Mortgage Finance
[8] Represents credit, debit and prepaid combined payments volume
[9] Thomson Reuters FY2012

[12] Strategic Insight 2012
[13] Euromoney 2012

Firmwide cross-sell and synergies

JPMorgan Chase overview – Franchise leadership

Select revenue cross-sell examples (2012 data)

- CB and CIB cross-sell: $4.0B
  - ~$2.4B: TS revenue reported in CB (>80% of CB clients use TS products)
  - ~$1.6B: gross IB revenue from CB clients (31% of NA IB revenue[2])
- AM and CIB cross-sell: ~$1.0B
  - AM is an important client of CIB's global custody and fund services
  - The Private Bank (PB) is a key distribution channel for CIB equity offerings
  - Referrals between CIB and PB result in incremental IB transactions/PB clients
- AM and CCB cross-sell: ~$0.6B – JPM IM products sold through branches (incl. CPC)
- AM and CB cross-sell: ~$0.5B – Sale of IM products to CB clients
- CB and CCB cross-sell: ~$0.2B – Paymentech revenue for CB clients; ~$0.2B – Global Commercial Card revenue for CB clients; ~55% of CB clients visit a branch quarterly
- CIB and CCB cross-sell: ~$0.2B – TS products sold through Business Banking clients

- ~$2.0B: Global Corporate Bank incremental revenue between 2009 and 2012
- ~$0.5B: Gross FX revenue generated by TSS clients

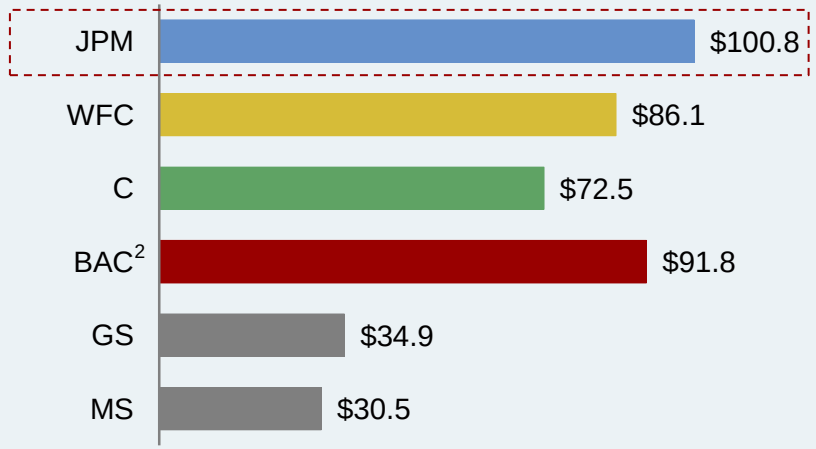
- ~$1.1B: IM products sold through the PB

- ~$1.5B: Credit Cards sold through branches
- ~$0.2B: Products sold to Card customers
- ~$0.1B: Bus. Banking referrals to Paymentech
- ~$2.2B: Mortgage originations though branches

- Primarily procurement, also includes technology, operations and other

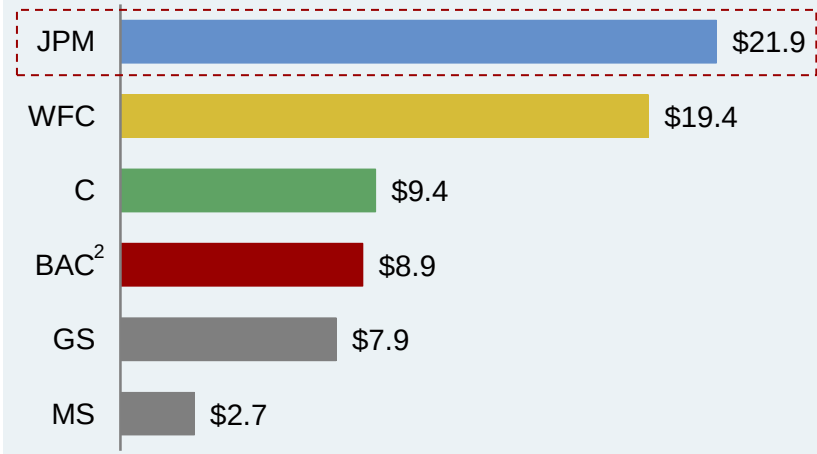
Other network benefits – branding, funding and earnings diversification

Note: Totals may not sum due to rounding



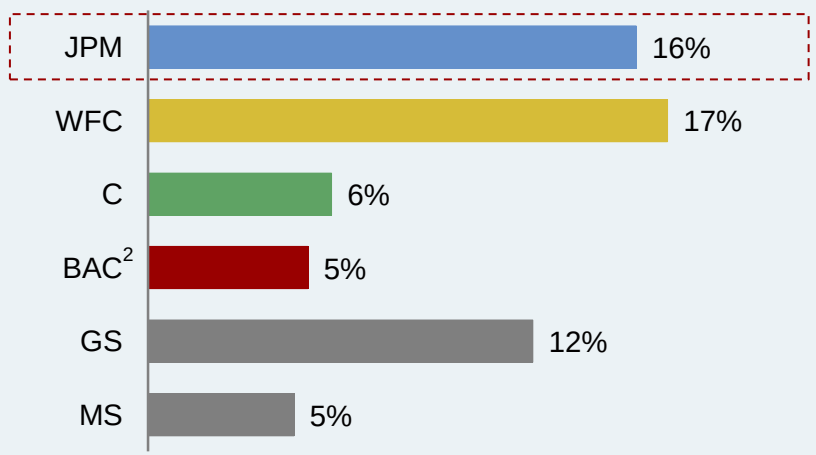
[1] Cross-sell revenue counted in both LOBs generating the revenue in partnership and therefore must be divided by 2 as they are totaled into the $14B

[2] Calculated based on gross domestic IB revenue for SLF, M&A, Equity Underwriting and Bond Underwriting

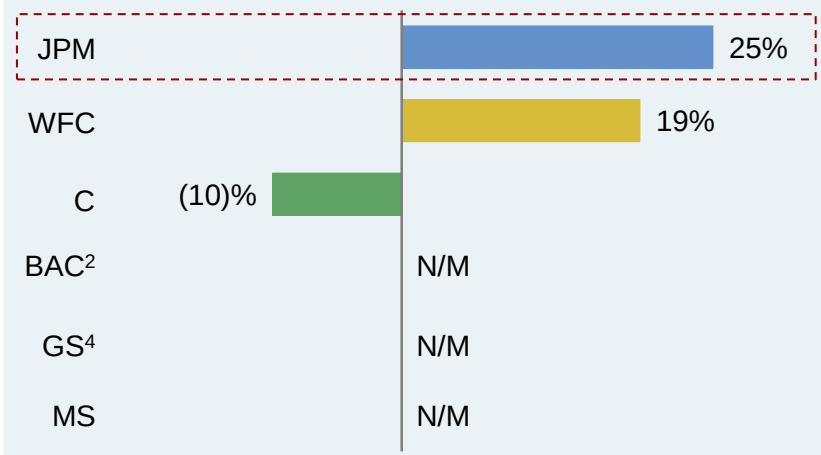


JPM continues to be a leader

JPMorgan Chase overview – Franchise leadership

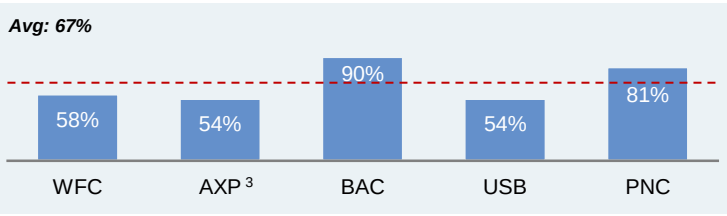


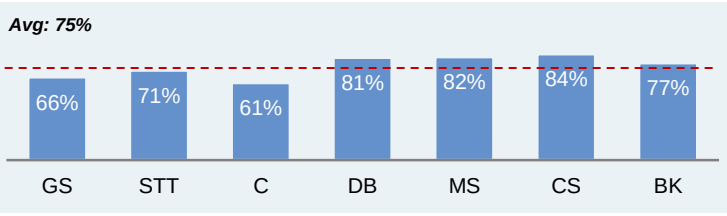
FY2012 Managed revenue[1] ($B)

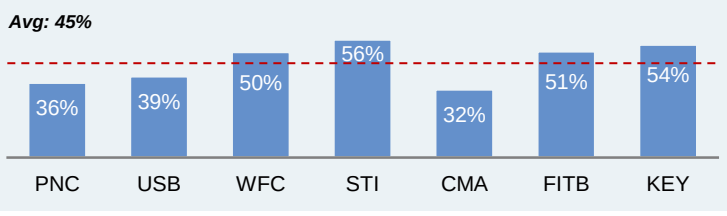


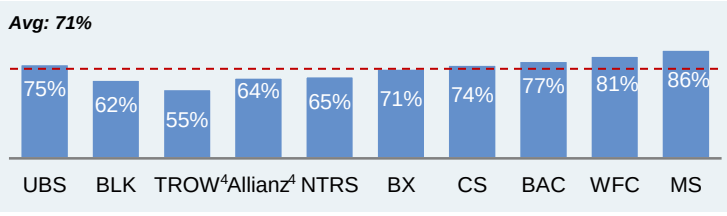
FY2012 Net income[1] ($B)

FY2012 ROTCE[1]









YoY EPS growth[1,3]

[1] All metrics are excluding DVA. All metrics adjust for DVA at a marginal tax rate of 38% for all peers; see note 4 on slide 41
[2] BAC adjusted for DVA and fair value option adjustment of ($7.6)B
[3] YoY growth from 2011 to 2012
[4] 290%

JPM efficiency versus best-in-class peers

JPMorgan Chase overview – Franchise leadership

	JPMorgan Chase	Best-in-class	
	JPM overhead ratio	Best-in-class peer[1] overhead ratios weighted by JPM revenue mix	Peer overhead ratios[1]
CCB	58%	56% WFC & AXP	
CIB	62%[2] (excl. DVA)	67% GS (excl. DVA) & STT	
CB	35%	37% Avg. of PNC & USB	
AM	71%	69% UBS WM & BLK	
Overhead ratio (excl. DVA)	64%[5]	65%[6]	

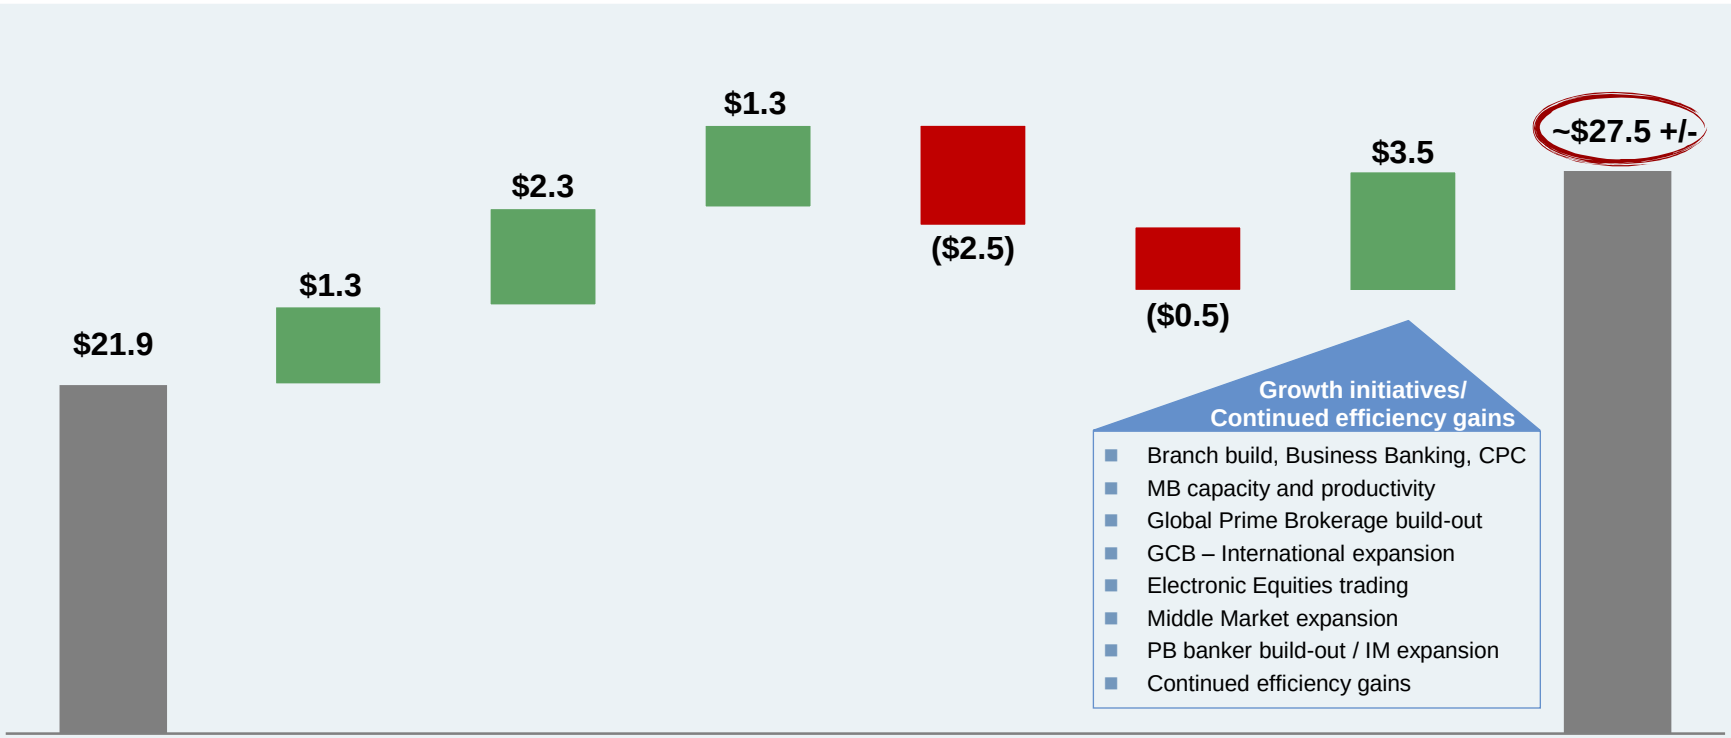
Note: JPM data presented on a managed basis; JPM and peer data represent full-year 2012 data, except where noted; All data for CIB and peer banking businesses is excl. DVA

[1] Peer data reflects JPM equivalent business segment results with the exception of Goldman Sachs, T. Rowe Price, Blackrock and Blackstone

[2] See note 6 on slide 41

[3] For American Express U.S. Card Services (USCS), estimated rewards expense is removed from expenses and netted against revenue, consistent with industry practice

[4] Allianz Asset Management and Northern Trust Personal Financial Services results as of 3Q12



[5] See note 4 on slide 41

[6] Best-in-class overhead ratio represents Wells Fargo Community Banking, American Express USCS, Goldman Sachs, State Street Investment Servicing, US Bancorp Wholesale Banking and CRE, PNC Corporate & Institutional Banking, UBS International Wealth Management and Wealth Management Americas and Blackrock weighted based on JPM's revenue mix

Earnings walk

JPMorgan Chase overview – Earnings power

Net income build simulation ($B)

Note: Figures tax effected at 38%, where applicable

[1] See note 4 on slide 41

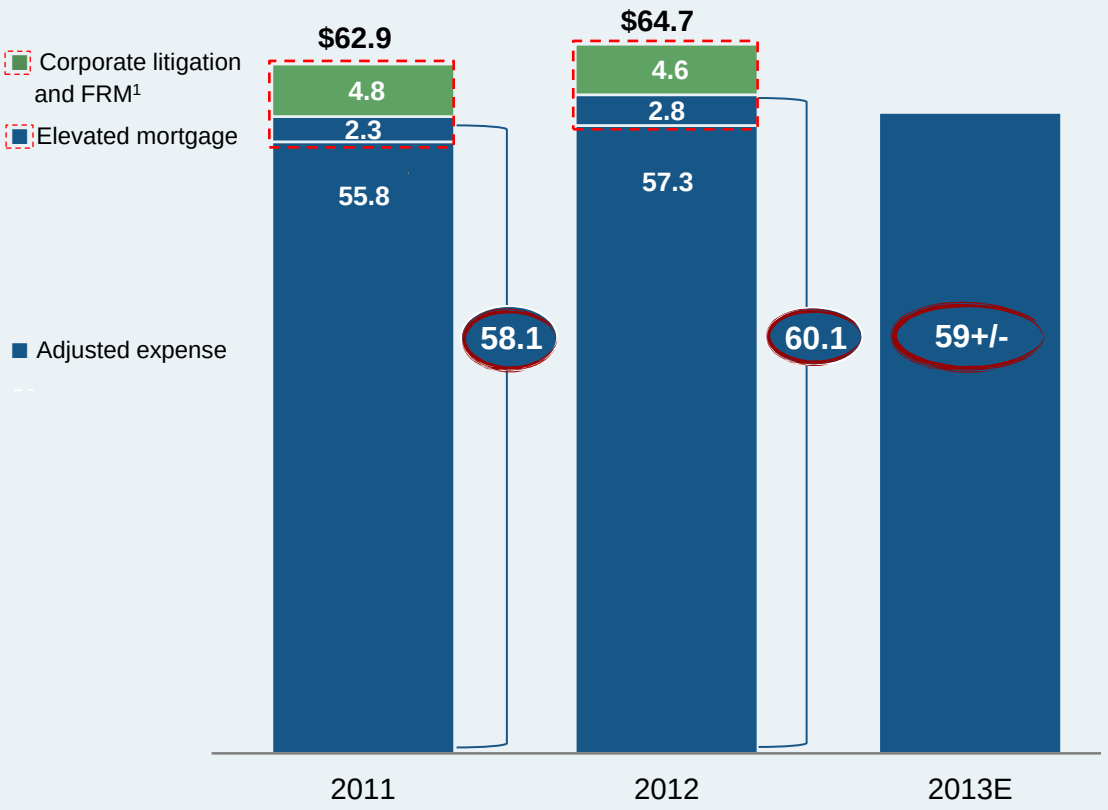
[2] Represents $2.2B (pretax) of significant revenue items including ($5.8)B of losses incurred by CIO from the synthetic credit portfolio for the six months ended June 30, 2012, and ($449)mm of losses incurred by CIO from the retained index credit derivative positions for the three months ended September 30, 2012; $1.5B CIO securities gains, $1.1B benefit from WaMu bankruptcy settlement (1Q12), $0.7B from full recovery of Bear Stearns related first loss note (FY2012) and $0.9B gains from TruPS redemption (3Q12)

[3] Represents total Corporate litigation expense in FY2012 ($3.7B pretax)

[4] Represents estimated 12 month NII benefit of $2.1B (pretax) from +100bp interest rate change

[5] Includes FY2012 loan loss releases ($3.5B after tax negative adjustment) and normalized net charge-offs ($1.0B after tax positive adjustment) based on through-the-cycle NCO rates

[6] Represents Mortgage Banking earnings target less 2012 Mortgage Banking reported earnings. Excludes REP credit costs



Agenda

Appendix – Key investor topics	27
Appendix – Other	31

Firmwide expense by category – An important focus area for us

Expense and investments

Firmwide expense ($B)

Adj. exp. incl. IB comp	**$58.1**	**$60.1**
IB comp	(8.9)	(8.5)
Adjusted exp.	**$49.2**	**$51.6**

- **Expense reduction of $1B +/-**
  - MB expense reduction
  - CIB cost synergies
  - Continued efficiency initiatives
  - Significant ongoing investment
  - Higher compliance costs self-funded by efficiencies
  - IB comp expected to remain relatively consistent
- Overall headcount will decrease by 4,000 +/-

[1] Foreclosure-related matters

Overview of select investments

Expense and investments

2012 expense and NI impact of cumulative spend from select investments ($mm, except where noted)

LOB	Investment	2012 Expense for aggregate investments[1]	Comments	Target annual net income
CCB	Branch builds	~$1,200	■ Portfolio of branches built since beginning of 2002, 150 in 2012 ■ Average branch contributes $1mm+ to pre-tax income when mature ■ 4-year +/- break-even and 8-year +/- payback for 2002-2012 portfolio	$600 +/-
	Business Banking	~120	■ 1,200 new RMs & business bankers hired since beginning of 2009 ■ Expansion market branches fully staffed and approaching core market productivity levels	600 +/-
	Chase Private Client	~115	■ Added 1,200 CPC locations since beginning of 2011 ■ 22K clients as of 2011; 100K+ clients as of 2012 ■ $11B net new money in 2012	600 +/-
	Retail loan officers	~50	■ Added nearly 1,600 loan officers since beginning of 2011 to grow retail capacity ■ Target net income reflects 2011 and 2012 hires	300 +/-
	Mortgage Express	~140	■ Improve productivity through origination platform investments ■ Investment started in 2011; system live effective Dec '12; fully deployed by 2014	100 +/-
CIB	Global Prime Brokerage build-out	~35	■ Build out int'l platform to facilitate clients' regional strategies ■ Successful launch of int'l platform in 2011; steady state 2014/15	175 +/-
	International expansion/ Global Corporate Bank	~275	■ Build out int'l platforms and branches to offer local product capabilities ■ ~400 new hires, include ~185 bankers hired since end 2009	600 +/-
	Equities electronic trading	~50	■ Focused on building best-in-class electronic trading capabilities ■ Grew low-touch equities revenue at 17% CAGR since 2010	100 +/-
CB	Middle Market expansion[2]	~125	■ Expand CB coverage into new markets ■ Positive return on investment in 2012; continue to add 250+ clients a year	400 +/-
AM	Private Bankers/ IM sales expansion IM business initiatives	~500	■ Hired ~500 PB client advisors and ~300 IM salespeople and investors since beginning of 2010 ■ Expansion investments were breakeven in 2012	600 +/-
		~$2,600	**2012 NI impact: ~$600mm**	**~$4,100**

Expect ~$3B of net income in 2016 run-rate

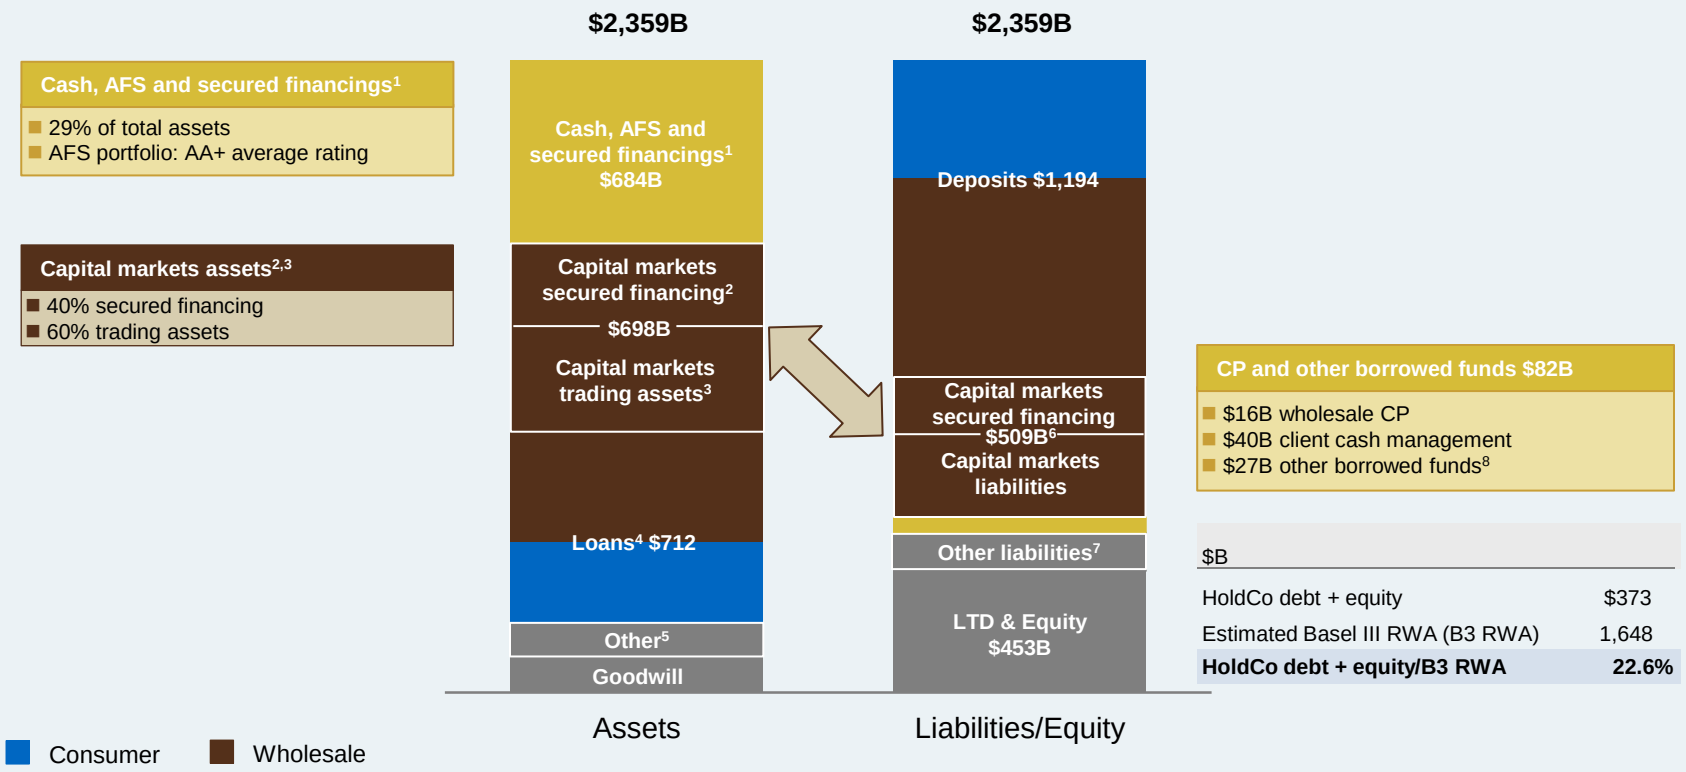
[1] Reflects expenses related to select investments with overhead ratios higher than business average
[2] Includes WaMu as well as out-of-footprint expansion markets

Building international leading franchises – Substantial progress

Investments

	CIB	CB	AM
International clients	■ 61% of CIB clients	■ 26% of our Middle Market clients have operations in foreign countries ■ 58% of Chase Middle Market clients are active globally[1] and expect international sales to increase in 5 years[2]	■ 27% of HNW and UHNW clients
International revenue[3]	■ 47%	■ 3%; up 74% from 2010	■ 34%
International expansion target	■ $175mm net income for Prime Brokerage ■ $600mm net income for GCB	■ ~$165mm 5-year international net income	■ ~$300mm/year of international AM net income growth
Other international metrics	■ 50% international loan growth since 2010 ■ 31% growth in international EFT volume since 2010 ■ Best IB in Latin America (Latin Finance, 2012) ■ European IB of the year (Financial News, 2011)	■ 45% international loan growth since 2010 ■ 118% international deposit growth since 2010 ■ Excellence Award for International Service in Middle Market Banking (Greenwich Associates, 2012)	■ 90% international loan growth since 2010 ■ 16% international deposit growth since 2010 ■ Best Private Bank for UHNW clients for Western Europe (Euromoney, 2012) ■ Asset Manager of the Year in Asia (Asian Investor, 2012)

[1] Includes FX
[2] Chase Middle Market Business Leaders Outlook survey, March 2012
[3] Represents international percentage of LOB revenue



Agenda

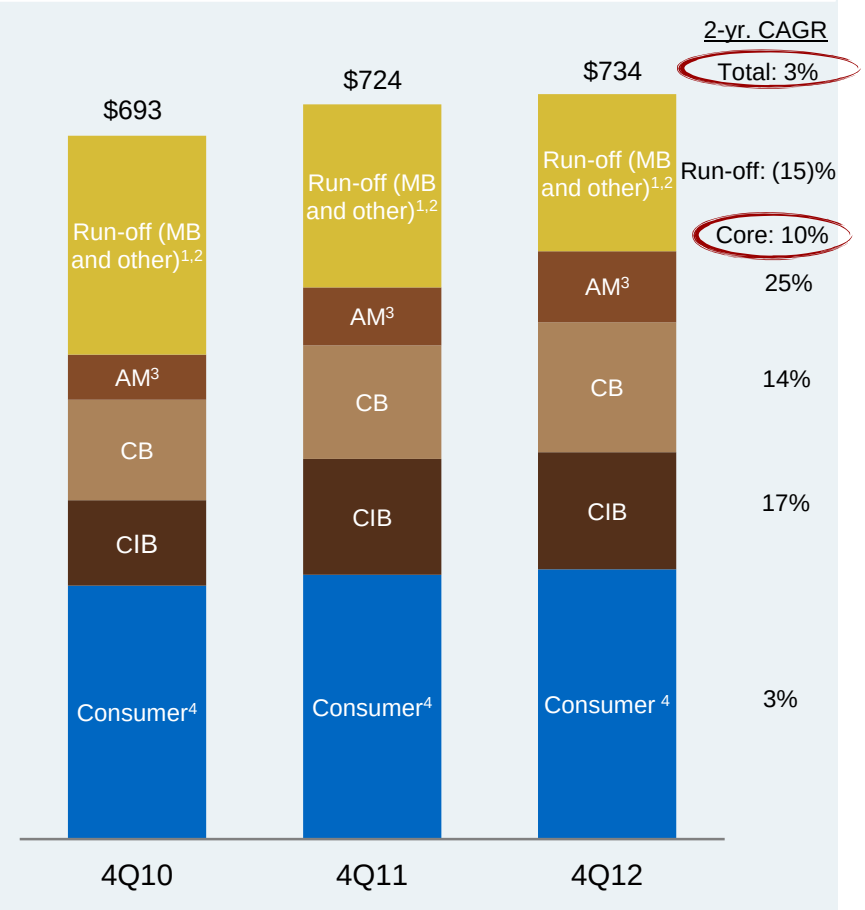
	Page
JPMorgan Chase overview	1
Expense and investments	11
Balance sheet	**15**
Appendix – Key investor topics	27
Appendix – Other	31

Fortress JPMorgan Chase balance sheet

Balance sheet – Fortress balance sheet

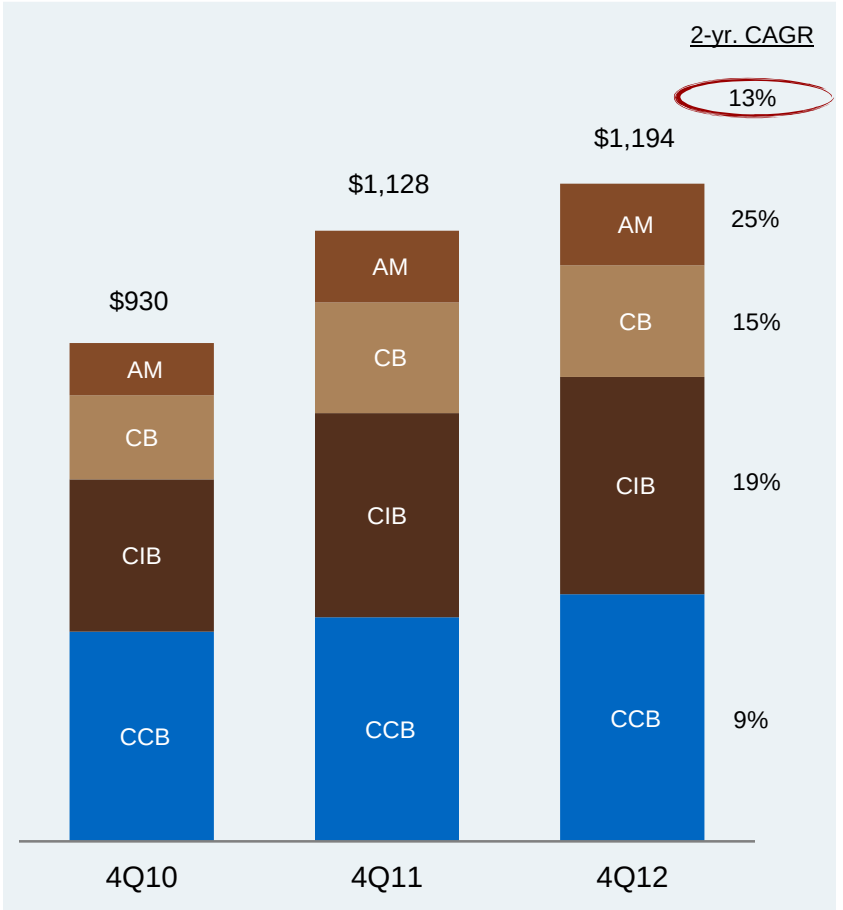
JPMorgan Chase balance sheet – December 31, 2012 ($B)

- ~$700B[1] high quality available assets
- 60% loan-to-deposit ratio
- HoldCo pre-funding[9]: 23 months
- Less than $40B wholesale ST unsecured debt[10]



Note: Totals may not sum due to rounding

[1] Includes cash and due from banks and deposits with banks (excluding CIB), AFS securities, Fed funds sold and securities purchased under resale agreements and securities borrowed (excluding CIB)
[2] Includes resales, securities borrowed and cash and due from banks from CIB
[3] Includes CIB trading assets and derivatives receivables
[4] Net of allowance for loan losses
[5] Includes other assets, other intangible assets, MSR, premises and equipment, accrued interest and accounts receivable and non-CIB trading assets
[6] Includes trading liabilities, Fed funds purchased and securities loaned or sold under repurchase agreements, VIEs, other borrowed funds and other liabilities all in CIB and derivatives payable
[7] Includes accounts payable and other liabilities, Fed funds purchased and securities loaned or sold under repurchase agreements and VIEs (excluding CIB)
[8] Portion already included in capital markets liabilities
[9] Number of months of pre-funding: The Firm targets pre-funding of the parent holding company to ensure that both contractual and non-contractual obligations can be met assuming no access to wholesale funding markets; minimum target pre-funding is 18 months
[10] Includes wholesale CP funding and a portion of other borrowed funds, which are unsecured



Loan and deposit growth

Balance sheet – NII and NIM drivers

Total EOP loans and core loans ($B)

EOP deposits by LOB[5] ($B)

Strong core loan and deposit growth helps support net interest income

Note: Totals may not sum due to rounding

[1] Other includes Card run-off portfolio, including certain legacy WaMu loans, legacy balance transfer programs and terminated partner portfolios (e.g. Kohl's), and CBB run-off portfolio, including discontinued products

[2] MB run-off portfolio includes WaMu purchased credit-impaired loans, discontinued products, and certain prime loans with estimated current LTVs greater than 80% as of January 2010

[3] AM loans include Wholesale loans originated by AM and Wholesale loans that are held in Corporate

[4] Consumer includes CBB, MB and Card, Merchant Services & Auto loans and prime mortgage loans held by AM and Corporate that are classified as Consumer loans (classification is consistent with SEC filings)

[5] Total deposits include $46B, $44B and $27B of deposits in the Corporate/Private Equity segment for 4Q10, 4Q11 and 4Q12, respectively

Firmwide NII drivers

Balance sheet – NII and NIM drivers

Commentary

- *Modest NIM compression,* largely driven by:
  - Consumer businesses
  - Limited reinvestment opportunities
  - Increased deployment into HQLA[2] for LCR compliance

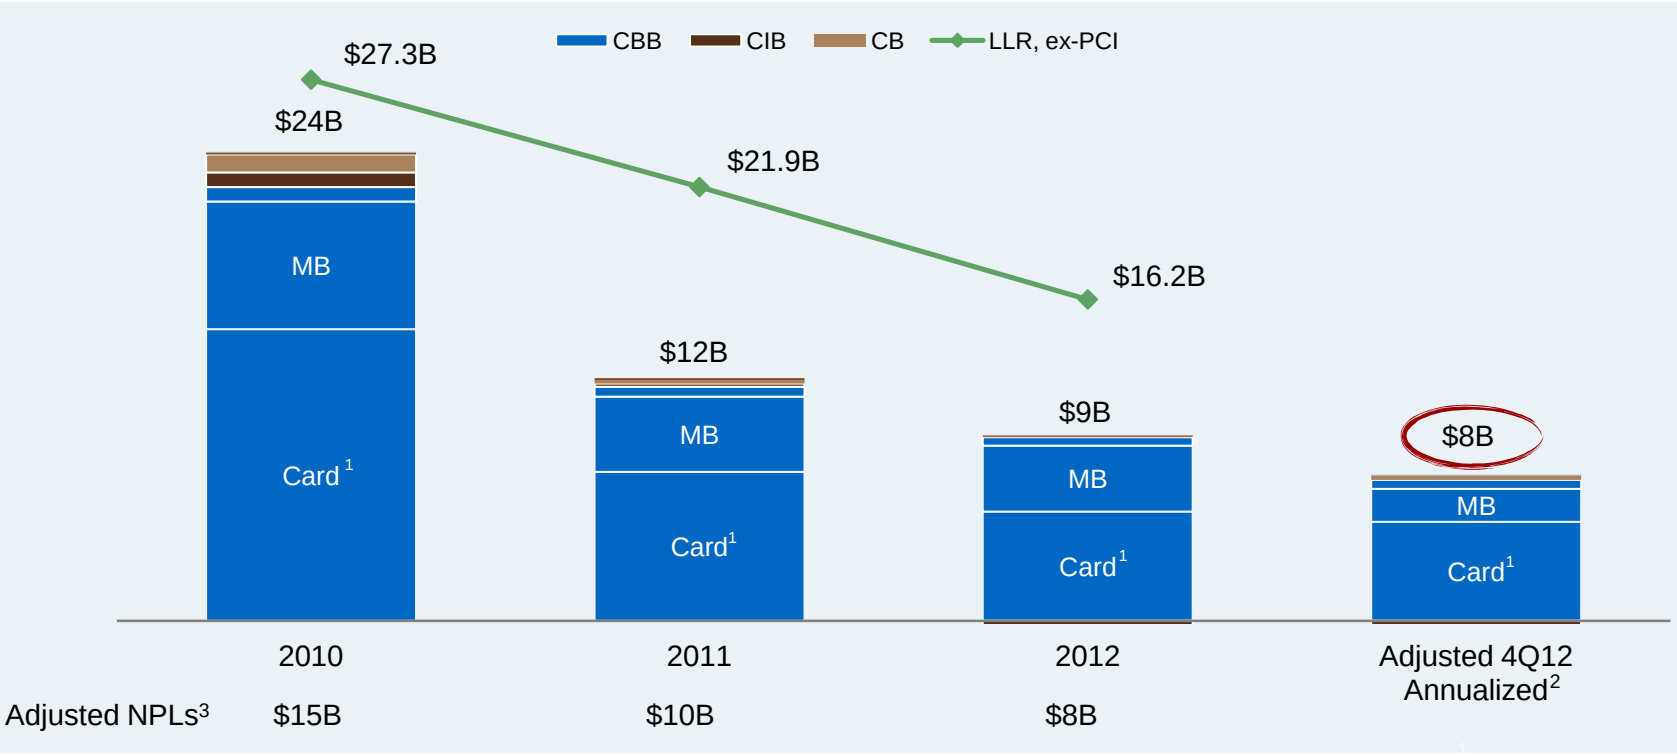
Guidance

~$(400)mm annual NI impact in CBB; ~$(600)mm annual NII impact in MB[1]

~$(300)mm +/- NI for 1Q13 for Treasury and CIO

Simulated core NIM

Simulated core NIM	
Rate environment	Forward curve
Trough/stabilization	1Q14
Cumulative impact[3]	**~(15)bps**
Annual NII (pretax, $B), assuming static balance sheet	~$2.0B
Growth in core average interest-earning assets required to offset rate compression[4]	~7%
2012 Growth in core average interest-earning assets	8%



NII expected to be generally flat, supported by growth of interest-earning assets

[1] In CBB, deposit spread compression will negatively impact annual net income by $400mm +/- in 2013. In MB, expect annual reduction in NII of $600mm +/- from run-off in Real Estate Portfolios in 2013; only partially related to NIM
[2] High Quality Liquid Assets (previously referred to as LAB)
[3] Reflects cumulative impact from 4Q12 through 1Q14
[4] Assumes simulated approximate reinvestment rates for securities and loans

Credit quality trends

Balance sheet – Credit quality

NCOs by line of business

Strong coverage and reserve position

- The Firm's net charge-offs and nonperforming loans are down 80%[4] and 40%[4], respectively, from peak levels
- Strong reserve coverage ratio

[1] Card, Merchant Services & Auto
[2] 4Q12 adjusted NCOs exclude CIB and CB recoveries
[3] 2012 NPLs are impacted by regulatory guidance issued in the first quarter of 2012 as a result of which the Firm began reporting performing junior liens that are subordinate to nonaccrual senior liens as nonaccrual loans and by regulatory guidance issued in the third quarter of 2012 requiring loans not reaffirmed by the borrower and discharged under Chapter 7 bankruptcy to be reported as nonaccrual loans. For reference, reported NPLs were $14,841mm, $9,993mm and $10,720mm for 2010, 2011 and 2012, respectively
[4] Based on peak levels of NCOs and NPLs in 3Q09

Normalized net charge-off estimates

Balance sheet – Credit quality

Through-the-cycle (TTC) net charge-off estimates

		2012 avg. loans ($B)	2012 NCOs ($B)	2012 NCO rate (%)	TTC NCO rate (%)
CCB	Prime mortgage[1]	$35.3	$0.40	1.14%	0.10%
	Home equity	72.7	2.39	3.28	0.50
	Credit card	125.5	4.94	3.95[2]	4.00
	Auto	48.4	0.19	0.39	1.00
	Business banking[3]	18.1	0.28	1.53	1.10
CIB	CIB excl. trade and conduits	47.9	(0.28)	(0.59)	1.00
	Trade and conduits	62.2	(0.01)	(0.01)	0.05
CB	CB	119.2	0.04	0.03	0.50
AM	Lending	62.1	0.06	0.10	0.15
	Mortgage[4]	16.4	0.01	0.08	0.05
			~$9B NCOs[5]		**~$7–8B NCOs**

[1] Real Estate Portfolios, excluding option ARMs and PCI
[2] Excludes loans held-for-sale
[3] CBB reported NCO was 2.27%, including Business banking and the impact of retail overdraft losses
[4] Includes $10B of mortgages originated in PB but held in CIO
[5] Adjusted 4Q12 NCOs of $8B

Common equity and performance targets

Balance sheet – Capital

Capital projections

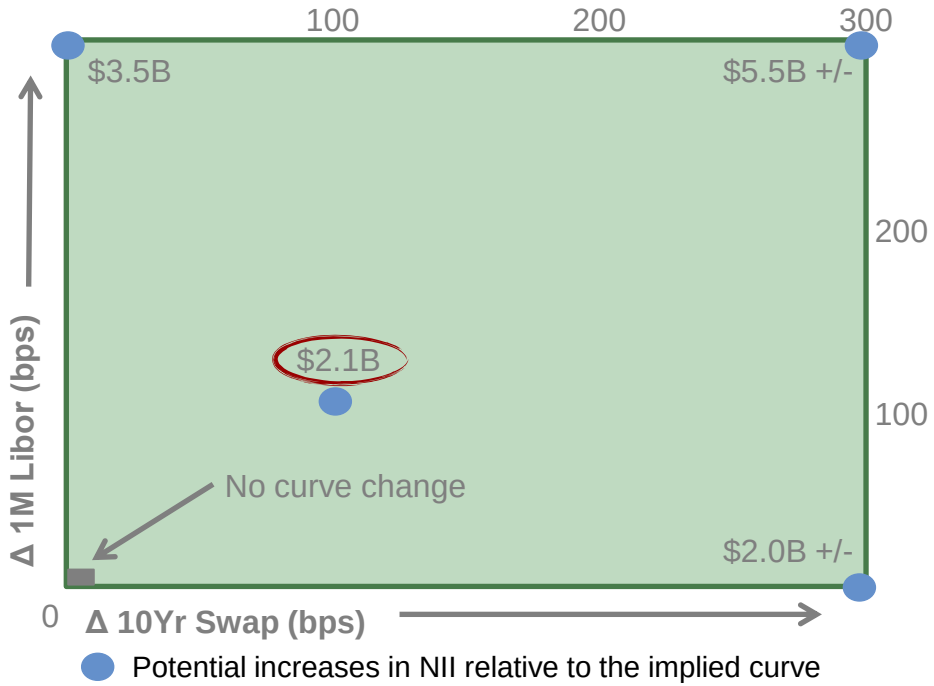
Balance sheet – Capital

Estimated Basel III capital projections[1] – After dividends[2], before share repurchases[3]

$B	2012	2013[3]	2014[3]	bps
Analysts' estimated net income[4]		~$22	~$22	
RWA, beginning		**~$1,650**	**$1,600**	
Run-off and mitigants (passive)		*(105)*	*(75)*	~100bps
Core growth		*55*	*15*	(40)bps
RWA, at year-end		**$1,600**	**$1,540**	
B3T1C (%)	8.7%	≥ 9.5%	≤ 11.5%	
Cumulative excess capital[5] at 9.5%			**$28B**	

Commentary

- Committed to 9.5% B3T1C by year-end, based on current understanding of rules
- There are potential risks, including model approvals and operational risk capital
- Additional levers include asset allocations in CIO and active mitigation in CIB
- Changes in AOCI not included in the analysis and will depend on rate environment



Significant excess capital in 2014

[1] See note 3 on slide 41
[2] Reflects Bloomberg average of analysts' estimates for dividends of $1.40 per share in 2013 and $1.58 in 2014 as of 2/22/13
[3] Net of annual preferred dividends of $700mm; assumes no share repurchases in 2013 and 2014 other than to offset the impact of employee issuance ($2B each year)
[4] Reflects Bloomberg average of analysts' estimates for net income of $21.5B in 2013 and $22.3B in 2014 as of 2/22/13
[5] Reflects estimated impact of final Basel 2.5 rules and Basel III Advanced NPR

Firm well-positioned for rising rates

Balance sheet – Capital

EaR – Potential net interest income increases[1]

Commentary

- The forward curve implies moderate rate increases
- The Firm is positioned to benefit from rising rates
- EaR of $2.1B for a 100bps parallel move beyond forward curve
- AOCI/NII relationship
  - Significant rate rise scenarios could move AOCI by $15B after-tax
  - Would increase NII and be recovered over 2 or 3 year period

[1] As of 12/31/2012. Reflects risk exposure to pretax NII of the Firm's non-market-based business activities (see 3Q12 Form 10-Q disclosure for further discussion on interest rate exposure). Implied curve represents the market expectation of rates over the next 12 months

2013 CCAR process update

Balance sheet – Capital

January 7th

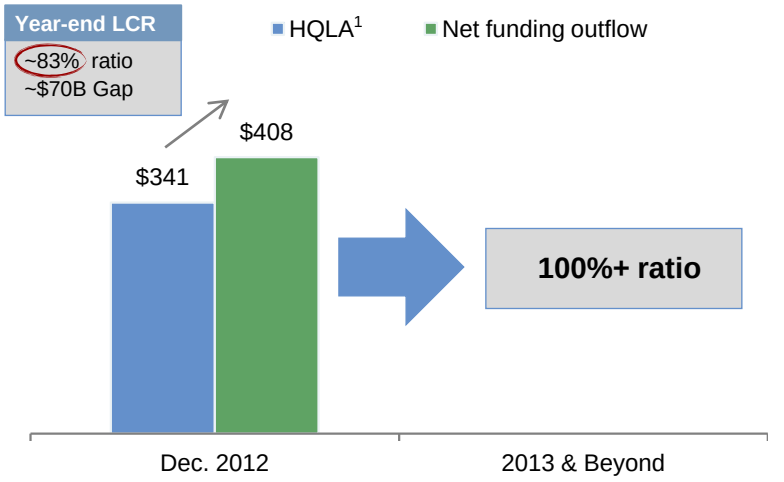
- CCAR submitted to the Fed with planned capital actions request
  - Planning to use the already approved $3B for 1Q13 in share repurchases
  - Dividend increases subject to Board and CCAR approval
  - Repurchases for 2Q13-1Q14, subject to the Fed CCAR approval

March 7th (after market close)

- Fed to release results of its calculations of the Dodd-Frank Act Stress Test (DFAST)
  - Assumes no share repurchases or changes to current dividend levels
  - Table with PPNR, provisions, loan losses by category, OTTI, trading and counterparty losses, other losses, pre-tax income, as well as beginning, ending and minimum pro forma regulatory capital ratios
  - Will not disclose CCAR results reflective of requested repurchases or dividends, or qualitative assessments

March 7th (after Fed release)

- Banks may choose to disclose their own DFAST results
  - Banks required to release DFAST results no later than March 31st
  - Banks may not comment on CCAR requests or status of quantitative or qualitative assessments
  - Banks may not have a detailed understanding of the Fed's DFAST results relative to own
  - Banks permitted to provide one-time downward adjustments to their capital requests if the Fed objects to the initial request

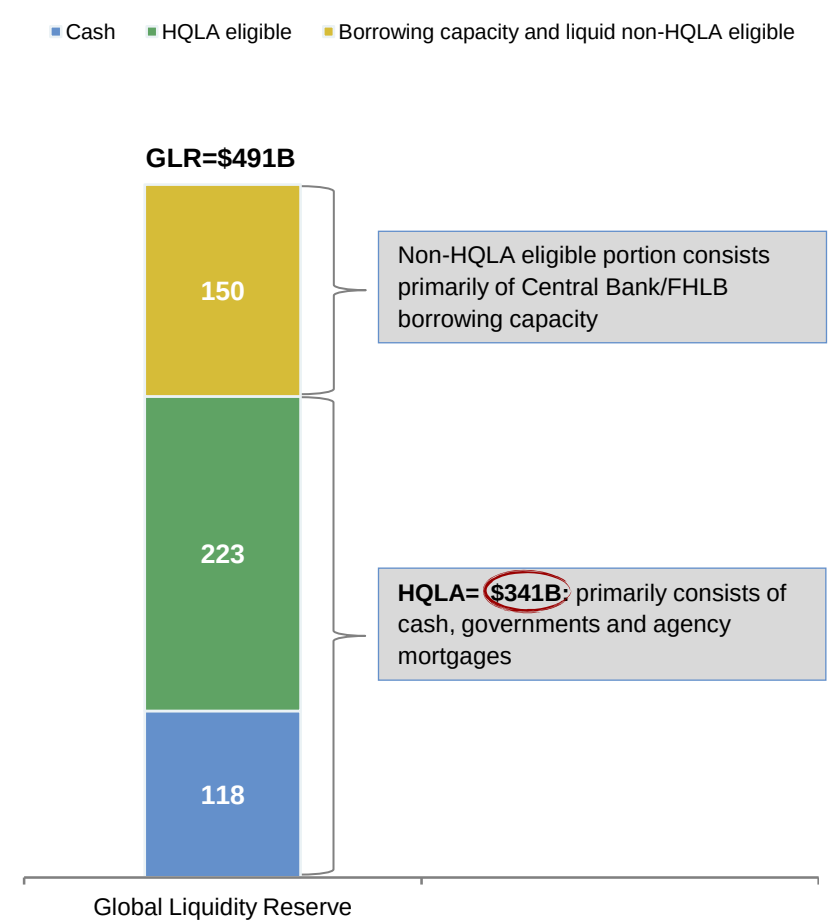


March 14th (after market close)

- Final CCAR results including non-objection/objection to requested capital actions released by the Fed
  - Disclosure format expected to be similar to prior years

Basel III – Liquidity Coverage Ratio (LCR)

Balance sheet – Firmwide liquidity



Estimated LCR Trajectory

Commentary

- 100% LCR compliance through:
  - Organic deposit growth
  - Reinvestment of AFS maturities into HQLA[1]
  - Funding mix optimization
- Recently released final Basel rules – marginally positive
- Awaiting final U.S. rules

Global Liquidity Reserve – December 2012 ($B)

[1] High Quality Liquid Assets (previously referred to as LAB)

Conclusion

- Clear and consistent strategy
  - Consistent client focus
  - Consistent investment strategies contributing to growth
  - Consistent partnership between our businesses
  - Consistent expense discipline
- Strong leadership positions and market share growth
- Best-in-class returns and efficiencies
  - Expect NII generally flat, supported by growth of interest-earning assets
  - Expect adjusted expense to trend down and improvement in overhead ratio
  - Significant opportunity for net income growth
- Maintain “fortress” operating model
  - Ability to adapt to new regulatory rules
  - Return excess capital to our shareholders

Peripheral European exposure[1]

Key investor topics – Europe

As of December 31, 2012 ($B)

		Securities and trading				
	Lending	AFS securities	Trading	Derivative collateral	Portfolio hedging	Net exposure
Spain	**$3.1**	**$0.5**	**$4.8**	**($3.3)**	**($0.4)**	**$4.7**
Sovereign	0.0	0.5	(0.4)	0.0	(0.1)	0.0
Non-sovereign	3.1	0.0	5.2	(3.3)	(0.3)	4.7
Italy	**$2.8**	**$0.0**	**$12.6**	**($2.6)**	**($5.3)**	**$7.5**
Sovereign	0.0	0.0	11.6	(1.4)	(4.9)	5.3
Non-sovereign	2.8	0.0	1.0	(1.2)	(0.4)	2.2
Other (Ireland, Portugal, and Greece)	**$1.1**	**$0.3**	**$2.5**	**($1.6)**	**($0.7)**	**$1.6**
Sovereign	0.0	0.3	0.5	0.0	(0.6)	0.2
Non-sovereign	1.1	0.0	2.0	(1.6)	(0.1)	1.4
Total firmwide exposure	**$7.0**	**$0.8**	**$19.9**	**($7.5)**	**($6.4)**	**$13.8**

- $13.8B total firmwide net exposure as of 4Q12, up from $11.7B as of 3Q12
  - Net exposure increased primarily due to the impact of client transactions in Italy
- The Firm continues to be active with clients in the region

[1] Exposure is a risk management view. Lending is net of liquid collateral. Trading includes net inventory, derivative netting under legally enforceable trading agreements, net CDS underlying exposure from market-making flows, unsecured net derivative receivables and under-collateralized securities financing counterparty exposure

Investment and duration management for CIO

Key investor topics – CIO AFS portfolio

CIO AFS portfolio (December 31, 2012)

($B)	Fair value	Pretax AOCI	Avg. credit rating[1]
Mortgage-backed securities:			
U.S. government agencies	$98	$4.7	AA+
Residential:			
Prime and Alt-A	2	0.1	AA-
Subprime	1	0.0	AA
Non-U.S.	72	1.5	AAA
Commercial	13	0.9	AA+
Total mortgage-backed securities	**186**	**7.2**	AA+
U.S. Treasury and government agencies	6	0.1	AA+
Obligations of U.S. states and municipalities	22	1.8	AA-
Certificates of deposit	2	0.0	NR
Non-U.S. government debt securities	50	0.9	AA+
Corporate debt securities	37	0.6	A+
Asset-backed securities:			
Collateralized loan obligations	28	0.4	AA+
Other	13	0.2	AAA
CIO AFS portfolio[2]	**$344**	**$11.2**	**AA+[3]**

Comments

- Current CIO AFS portfolio composition balanced between rates and credit products
- AA+ average rating; 1.4 year interest rate duration[4]
- Over 80% of CIO AFS portfolio is either government backed, U.S. government agency, or U.S. government rated or better

[1] Certain U.S. government and Agency products may not be externally rated, but are included in the AA+ categorization
[2] Data only includes CIO. Treasury and other lines of business comprise ~$27B in additional AFS
[3] Unrated/locally rated securities of ~$5B were omitted for purposes of calculating average rating
[4] Represents the estimated change in a security's value due to a 1% change in interest rates across the curve, expressed as a number of years (i.e., normalized by the value of the security)

[1] See notes 1 and 6 on slide 41
[2] Lending revenue includes net interest income, fees, gains or losses on loan sale activity, gains or losses on securities received as part of a loan restructuring, and the risk management results related to the credit portfolio (excluding trade finance)
[3] Includes results of the synthetic credit portfolio that was transferred from the CIO effective July 2, 2012
[4] Primarily includes credit portfolio credit valuation adjustments ("CVA") net of associated hedging activities; DVA on structured notes and derivative liabilities; and nonperforming derivative receivable results effective in the first quarter of 2012 and thereafter. Included DVA on structured notes and derivative liabilities measured at fair value. DVA gains/(losses) were $(930) million, $1.4 billion and $509 million for the years ended December 31, 2012, 2011 and 2010, respectively
[5] Return on equity excluding DVA, a non-GAAP financial measure, was 19%, 15% and 16% for the years ended December 31, 2012, 2011 and 2010, respectively
[6] Compensation expense as a percentage of total net revenue excluding DVA, a non-GAAP financial measure, was 32%, 36% and 38% for the years ended December 31, 2012, 2011 and 2010, respectively. In addition, compensation expense as a percent of total net revenue for the year ended December 31, 2010, excluding both DVA and the payroll tax expense related to the U.K. Bank Payroll Tax on certain compensation awarded from December 9, 2009, to April 5, 2010, to relevant banking employees, which is a non-GAAP financial measure, was 36%
[7] Average client deposits and other third party liabilities pertain to the Treasury Services and Securities Services businesses, and include deposits, as well as deposits that are swept to on-balance sheet liabilities (e.g., commercial paper, federal funds purchased and securities loaned or sold under repurchase agreements) as part of client cash management programs
[8] ALL/EOP Loans as reported was 1.19%, 1.35%, and 2.40% for FY12, FY11, and FY10, respectively
[9] Represents FY2012 rank of JPM Fixed Income Markets revenue of 10 leading competitors (which have released FY2012 as of 2/20/13; HSBC TTM 3Q12 basis)

Leadership positions

Corporate & Investment Bank

- 47% international revenue for FY2012; FY2012 up 6% excl. DVA
- International deposits increased 29% from FY2010, driven by growth in Asia
- International loans up 50% since FY2010
- Gross CIB revenue from CB clients up 9% YoY
- Strategic Reengineering Program ~80% complete

Banking

- Widened the gap to #2 competitor YoY in Global IB fees per Dealogic
- TS firmwide revenue up 9% YoY
- #1 in combined Fedwire and CHIPS volume, Federal Reserve, 2002 – 2012
- Total international electronic funds transfer volume up 31% from FY2010

Markets & Investor Services

- #1 Fixed Income Markets revenue share of top 10 investment banks[9]
- International AUC up 33% from FY2010; 44% of FY2012 total AUC
- JPM ranks #1 for FY2012, FY2011, and FY2010 for both All-American Fixed Income Research and Equity Research

Commercial Banking[1]

Notes

Notes on non-GAAP financial measures

1. In addition to analyzing the Firm's results on a reported basis, management reviews the Firm's results and the results of the lines of business on a "managed" basis, which is a non-GAAP financial measure. The Firm's definition of managed basis starts with the reported U.S. GAAP results and includes certain reclassifications to present total net revenue for the Firm (and each of the business segments) on a fully taxable-equivalent ("FTE") basis. Accordingly, revenue from investments that receive tax credits and tax-exempt securities is presented in the managed results on a basis comparable to taxable securities and investments. This non-GAAP financial measure allows management to assess the comparability of revenue arising from both taxable and tax-exempt sources. The corresponding income tax impact related to tax-exempt items is recorded within income tax expense. These adjustments have no impact on net income as reported by the Firm as a whole or by the lines of business.

2. Tangible common equity ("TCE") represents common stockholders' equity (i.e., total stockholders' equity less preferred stock) less goodwill and identifiable intangible assets (other than MSRs), net of related deferred tax liabilities. Return on tangible common equity measures the Firm's earnings as a percentage of TCE. In management's view, these measures are meaningful to the Firm, as well as analysts and investors, in assessing the Firm's use of equity, and in facilitating comparisons with peers.

3. The Basel I Tier 1 common ratio is Tier 1 common capital divided by Basel I risk-weighted assets. Tier 1 common capital is defined as Tier 1 capital less elements of Tier 1 capital not in the form of common equity, such as perpetual preferred stock, noncontrolling interests in subsidiaries, and trust preferred capital debt securities. Tier 1 common capital, a non-GAAP financial measure, is used by banking regulators, investors and analysts to assess and compare the quality and composition of the Firm's capital with the capital of other financial services companies. The Firm uses Tier 1 common capital along with other capital measures to assess and monitor its capital position. In December 2010, the Basel Committee finalized further revisions to the Basel Capital Accord, commonly referred to as "Basel III." In June 2012, U.S. federal banking agencies published final rules on Basel 2.5 that went into effect on January 1, 2013, that provide for additional capital requirements for trading positions and securitizations. In June 2012, U.S. federal banking agencies also published a Notice of Proposed Rulemaking (the "NPR") for implementing Basel III, in the United States. Basel III revised Basel II by, among other things, narrowing the definition of capital, and increasing capital requirements for specific exposures. Basel III also includes higher capital ratio requirements. The Firm's estimate of its Tier 1 common ratio under Basel III is a non-GAAP financial measure and reflects the Firm's current understanding of the Basel III rules based on information currently published by the Basel Committee and U.S. federal banking agencies and on the application of such rules to its businesses as currently conducted; it excludes the impact of any changes the Firm may make in the future to its businesses as a result of implementing the Basel III rules, possible enhancements to certain market risk models, and any further implementation guidance from the regulators. Management considers this estimate as a key measure to assess the Firm's capital position in conjunction with its capital ratios under Basel I requirements, in order to enable management, bank regulators, investors and analysts to assess the Firm's capital position and to compare the Firm's capital under the Basel III capital standards with similar estimates provided by other financial services companies.

4. In addition to reviewing JPMorgan Chase's net interest income on a managed basis, management also reviews core net interest income to assess the performance of its core lending, investing (including asset/liability management) and deposit-raising activities, excluding the impact of Corporate & Investment Bank ("CIB") market-based activities. The presentation includes information on managed core net interest income and core net interest margin. Each of these amounts is a non-GAAP financial measure due to the exclusion of CIB's market-based net interest income and the related assets. Management believes the exclusion of CIB's market-based activities provides investors and analysts a more meaningful measure by which to analyze non-market related business trends of the Firm and provides a comparable measure to other financial institutions primarily focused on core lending, investing and deposit-raising activities. Further, the impact of DVA is excluded from the calculation of return on Basel I risk-weighted assets, EPS growth, firmwide overhead ratio, and return on equity, which are non-GAAP financial measures used by management to assess the underlying performance of the business and for comparability with peers.

5. In Consumer & Community Banking, supplemental information is provided for Card Services, to provide more meaningful measures that enable comparability with prior periods. The net charge-off rate and 30+ day delinquency rate presented include loans held-for-sale.

6. CIB provides several non-GAAP financial measures which exclude the impact of DVA on: net revenue, net income, overhead ratio, compensation ratio and return on equity. These measures are used by management to assess the underlying performance of the business and for comparability with peers. The ratio for the allowance for loan losses to period-end loans is calculated excluding the impact of trade finance loans and consolidated Firm-administered multi-seller conduits, to provide a more meaningful assessment of CIB's allowance coverage ratio.

Additional notes on financial measures

7. Pretax margin represents income before income tax expense divided by total net revenue, which is, in management's view, a comprehensive measure of pretax performance derived by measuring earnings after all costs are taken into consideration. It is, therefore, another basis that management uses to evaluate the performance of AM against the performance of their respective peers.

CONSUMER & COMMUNITY BANKING

Gordon Smith, Chief Executive Officer Consumer & Community Banking

February 26, 2013

JPMorgan Chase & Co.

Chase Consumer & Community Banking is a consumer and small business franchise of unparalleled scope and quality – and would be nearly impossible to replicate

Strong financial returns	■ Delivered returns at target levels, despite a challenging environment ■ Three major growth opportunities – Chase Private Client, Business Banking, and New Branch Builds
Powerful customer franchise	■ We have consumer relationships with almost half of U.S. households ■ #1 in customer satisfaction[1], leading to cross-sell and relationship deepening
Firmwide capabilities to meet customer needs	■ Chase Private Client access to J.P. Morgan Private Bank investments platform ■ Business Banking access to Commercial Bank specialty lending and Treasury Services cash management
Attractive footprint	■ #2 Branch and #1 ATM network ■ Branch network heavily concentrated in the most attractive U.S. markets
Leading position in Digital Banking	■ #1 online financial services destination, #1 rated mobile app ■ The cost to serve fully digital customers is substantially lower
World-class payments franchise	■ #1 in total U.S. credit, debit, prepaid combined payments volume, #1 global Visa issuer ■ #2 wholly-owned merchant acquirer
National, scale lending businesses	■ Mortgage: #2 in originations, #3 in servicing ■ Auto: #3 Bank originator, #1 in super prime (FICO >740) originations ■ Business Banking: #1 Small Business Administration lender[2]

[1] Among large banks

[2] Based on number of loans issued, per SBA data

The underlying profitability of each of our businesses is strong

Consumer & Community Banking (CCB) lines of business outlook

		2012	2012 adjusted	Targets
Consumer & Business Banking (CBB)	Net branch-build	106	106	100 +/-
	ROE[1]	36%	30%	30% +
Mortgage Banking	Net charge-off rate[2]	2.68%	2.10%	0.35% +/-
	ROE[1,3]	19%	22%	15% +/-
Card Services	Revenue margin	12.4%	12.4%	12.0-12.5%
	Net charge-off rate	3.9%	3.9%	4.0% +/-
	ROE[1]	25%	27%	23% +/-
Auto & Student	ROE[1]	20%	21%	18% +/-

		2012	2012 adjusted	Targets
Consumer & Community Banking	ROE[1,4]	25%	23%	20% +

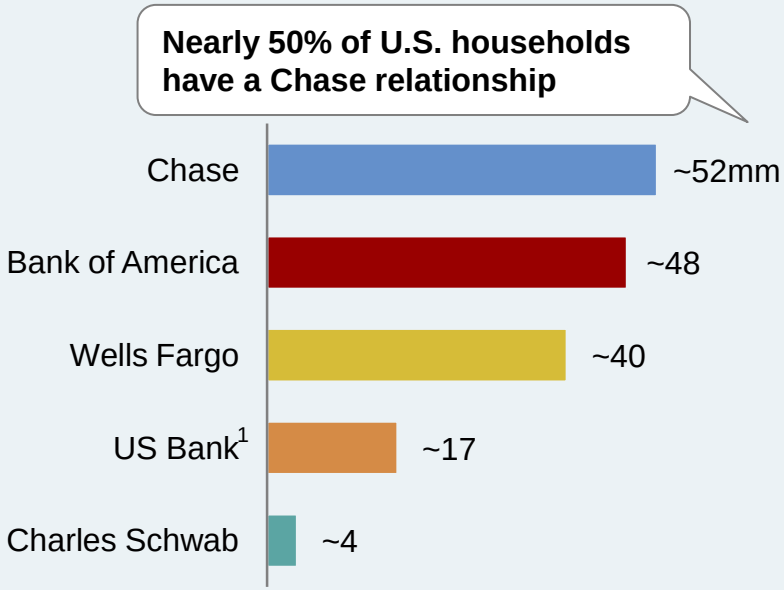
We continue to deliver target returns, even through a challenging environment

[1] Adjusted reflects 2012 net income divided by 2013 attributed common equity
[2] 2012 adjusted net charge-off rate reflects Real Estate Portfolios only, and excludes PCI loans and one-time adjustments related to the adoption of Chapter 7 Bankruptcy discharge regulatory guidance
[3] Adjusted and target ROE excludes liquidating real estate portfolios. Adjusted 2012 ROE including liquidating real estate portfolios would have been 17%
[4] Includes liquidating real estate portfolios

CCB (excluding Mortgage) expense expected to modestly increase as we continue to grow the business, while Mortgage expense will decline through year-end 2014

	2012 expense	2014
CCB (excluding Mortgage)	$19.7B	■ ~3% expense growth in 2013 ■ ~2% expense growth in 2014 ■ 3-4K headcount reduction by year-end 2014
Mortgage Banking	$9.1B[1]	■ Full year expense down $3B vs. 2012 ■ 13-15K headcount reduction by year-end 2014

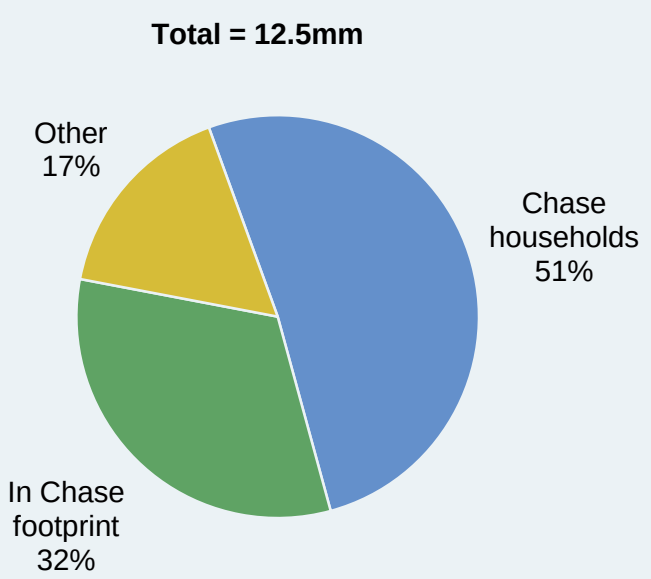
While we continue to control costs, we also continue to invest in the business to realize key opportunities



[1] Represents total 2012 MB expense, including Production, Servicing and REP. Includes $900mm expense for Foreclosure Related Matters, predominantly IFR settlement; also includes $2.8B of elevated (above normalized target) expense across Mortgage Banking

The impact of most regulatory changes from Dodd-Frank, Durbin Amendment and the CARD Act are fully accounted for in our 2012 financials

	On-book regulatory reform yet to take effect	Already in 2012 financials
Consumer & Business Banking	■ None	■ Regulation E (implemented Jul. '10) and voluntary actions to reduce NSF/OD fees ■ Net income impact of $700mm+/- (full run rate impact starting in 3Q10) ■ Durbin Amendment (implemented Oct. '11) ■ Net income impact of $600mm+/- (full run rate impact starting in 4Q11)
Mortgage Banking	■ Qualified Mortgage / Ability to Repay	■ Implemented DOJ servicing standards
Card, Merchant Services & Auto	■ None	■ CARD Act (implemented Feb. '10) ■ Net income impact of $750mm+/- (full run rate impact starting in 4Q10) ■ Includes impact to penalty pricing, limits on late fees, and changes to due date and payment allocation rules



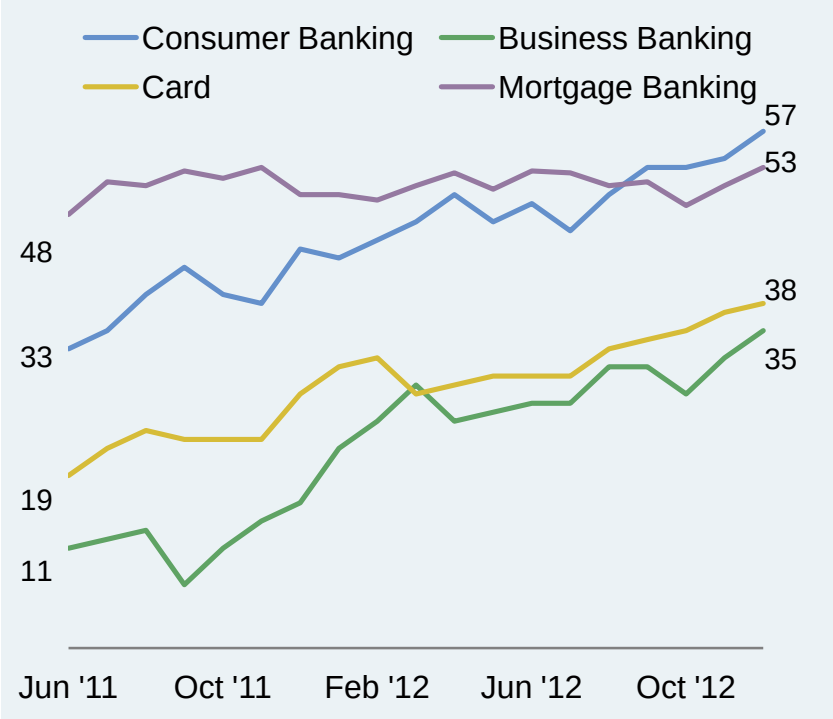
Chase has relationships with more U.S. households than any other financial services provider

Estimated penetration of U.S. households

Sources: Bank of America's and US Bank's Goldman Sachs Financial Services Conference presentations (12/04/12), Wells Fargo's 2011 Annual Reports, Charles Schwab 2012 Summer Business update, Fidelity.com, American Express 2012 Semi-Annual Financial Community Meeting

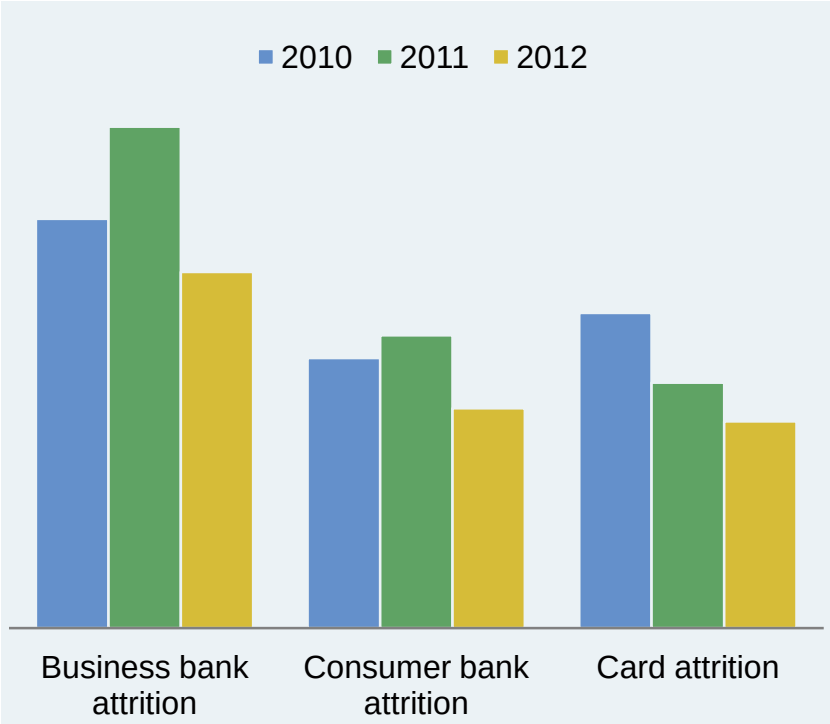
U.S. households with $500K-$5mm in deposits and investments

Source: Internal data



Implications

- Allows us to focus holistically on customer needs
- Provides deep insights into our customers
- Significant synergies: e.g., Card cross-sell to existing customers costs 25-50% less than to new customers



[1] Self-reported number of customers – by definition number of households must be equal to or lower than customer figure

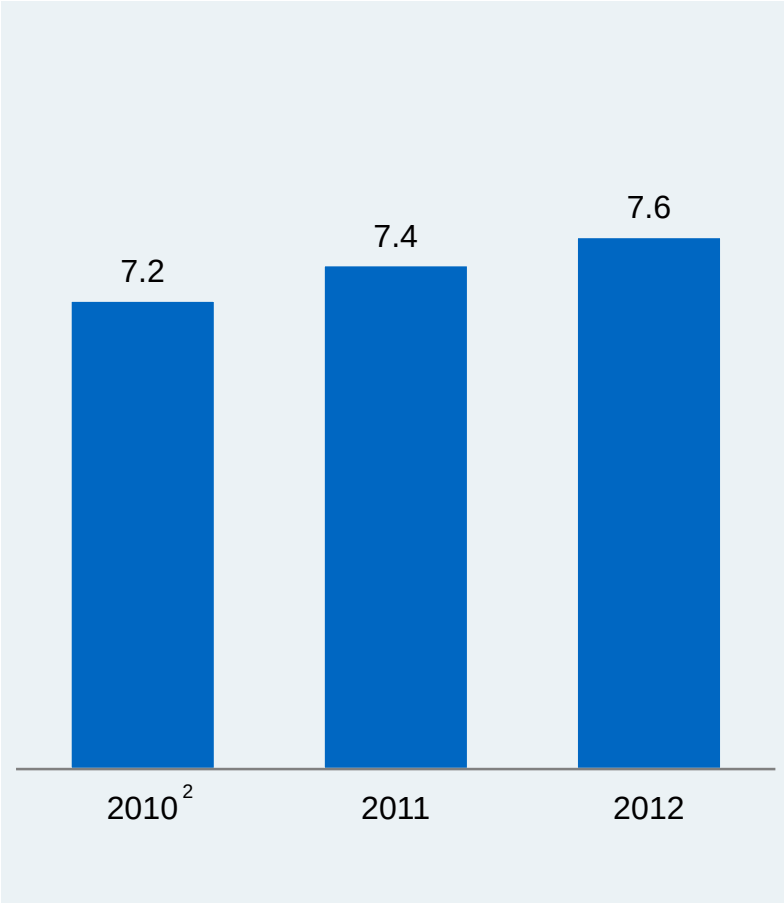
Our focus on customer experience is driving improved customer retention

Net promoter score[1]

Household attrition[2] by business line

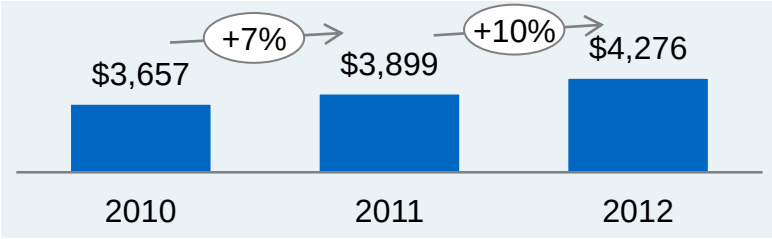
#1 Customer Satisfaction: Large Banks – ACSI

#1 Customer Satisfaction: Major Banks – Harris



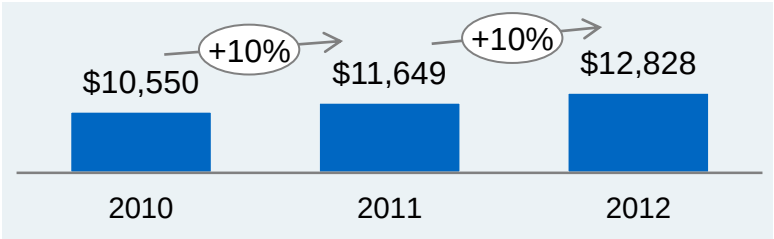
Source: Internal data, 2012 American Customer Satisfaction Index, 2012 Harris Poll

[1] % promoters minus % detractors

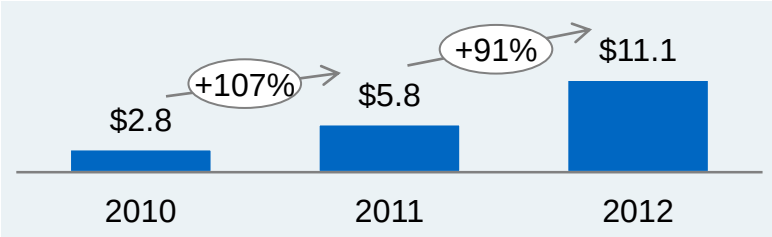


[2] Households that close all Chase relationships

We are among the best at cross-selling, but we manage the business to deepen relationships



Products and services[1] per Consumer Bank household

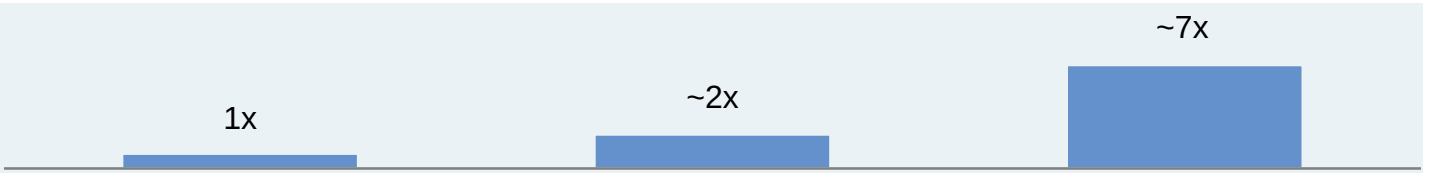


Average balance per consumer checking account

Card spend per active account[3]

Net new investments ($B)

Source: Internal Chase data



[1] Products and services counted in the Chase cross-sell definition include deposits (interest checking, money market, etc.), credit (mortgage loans, credit cards, etc.), investments, and services (online banking, mobile banking, etc.)

[2] Previously disclosed 2010 cross-sell of 6.7 has been restated to include mobile banking and pre-authorized transfers

[3] Reflects accounts that had sales activity during the year; excludes Commercial Card and Kohl's

We have organized around three consumer segments to better serve our customers' needs…

Indexed variable contribution[1] per household

	Segment I	Segment II	Segment III
Total investable assets[2]	<$25K *and*	$25K-$500K *or*	$500K+ *or*
Income	<$75K	$75K-$150K	$150K+
# of CB[3] households	8.7mm	9.4mm	3.2mm
% of CB households with positive variable contribution[4]	82%	89%	92%
Goals	Expand access and enhance self-service	Drive relationship consolidation through integrated solutions	Deepen relationships and provide wealth management services
Example products	Chase Liquid, Chase Savings, Chase Slate, Chase Mortgage	Chase Checking & Savings, Chase Investments, Chase Freedom, Chase Mortgage	CHASE PRIVATE CLIENT, Chase Sapphire, Chase Mortgage

Source: Internal Chase data
Note: Variable contribution and household counts exclude Chase Private Client households
[1] Post-implementation of Durbin Amendment and Regulation E opt-in requirement
[2] All of a household's liquid investable assets, held across all financial relationships
[3] Consumer Bank
[4] Consumer Bank households that cover variable costs and contribute to fixed costs

…and have similarly segmented our Business Banking clients

Indexed revenue to Chase per client

	Small Business	Business Banking
Client revenue	<$0.5mm in annual company revenue	$0.5-20mm in annual company revenue
# of clients	1.7mm	570K
Total deposits ($B)	$11.0	$61.8
Total loans outstanding ($B)[1]	$25.3	

- ~2,500 dedicated Relationship Managers in the market
- ~2,500 Small Business Specialists supporting client needs in branches today
- $3.3B annual revenue, ~20% of CBB

Source: Internal Chase data (analysis shows full year deposit and credit ADBs)
[1] Includes credit card

We have an attractive footprint and leading market share in top markets

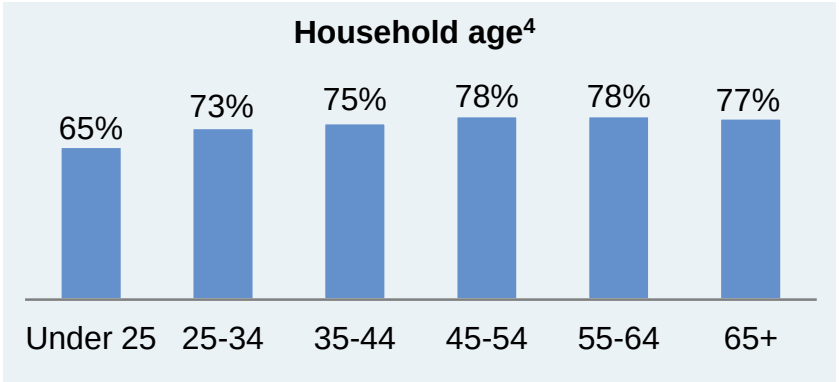
Note: Excludes branches with >$1B in deposits
[1] Market defined as Core Based Statistical Area



Branches are critical to serving all of our customers…

Consumers typically research online and finalize account opening in branch

% of Chase households that visited a branch[3] quarterly

On average, consumer households visit a branch ~4 times per quarter

Source: Novantas U.S. Multi-Channel Survey (2012), Internal Chase data

[1] Includes mobile, tablet computers, and online chat

[2] How do you prefer to research bank products?; Which of the following situations best describes how you opened your primary checking account? (N = 3,316)

[3] All CBB households, defined by CRM code

[4] Age of oldest member of household

…and they deliver value across all of JPMorgan Chase's businesses

Consumer & Business Banking

#1 Small Business Administration lender[1]	#1 ATM network	#3 in deposit market share[2]	#2 in branches

Leveraging the retail branch platform

Mortgage Banking

- ~50% of retail mortgages originated through branches
- In-footprint consumers 45+% more likely to consider[3] Chase for a Mortgage relationship

Card Services

- ~50% of Chase branded cards sold through branches
- ~65% of Chase Paymentech new sales sourced from Business Banking
- In-footprint consumers 20+% more likely to consider[3] Chase for a Card relationship

Commercial Banking

- ~55% of Commercial Bank customers visit a branch each quarter
- 1mm branch transactions per month

Asset Management

- ~30% of Private Bank households visit a branch each quarter
- $67B AUM managed for Chase clients
- Single largest retail distributor – branches account for $38B or ~20% of J.P. Morgan Investment Management US Retail AUM

[1] By number of loans

[2] FDIC data as of June 2012

[3] Top 2 box, among those aware

However, customer behavior is evolving and we are responding by managing our branches to best serve our customers going forward

Network optimization

- New builds
  - Higher value markets where we are underpenetrated
  - Out of footprint markets
  - Ensure access for all customer segments
- Repositioning
  - Evaluate evolving real estate costs
  - Evaluate evolving local population growth and traffic patterns
- Consolidations

+

Maximizing value per branch

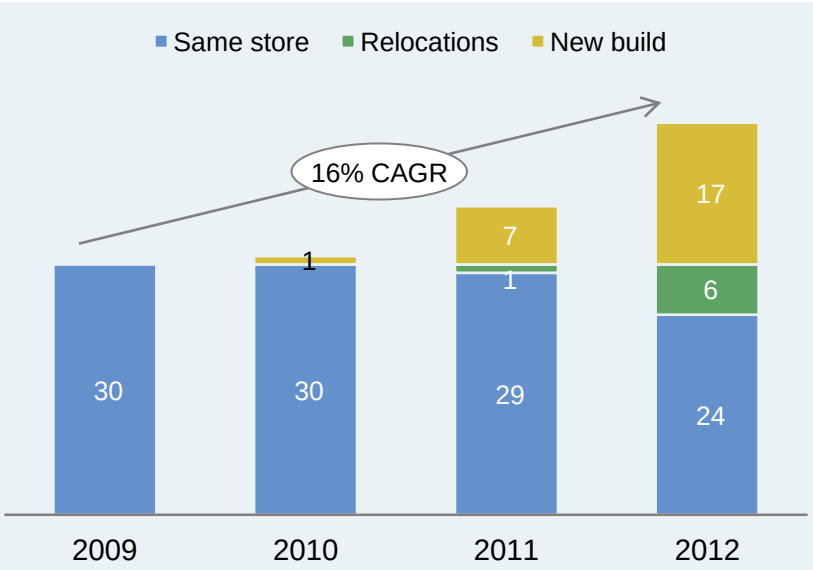
- Acquire attractive customers
- Reduce costs
  - Enable self-service
  - Staff more efficiently
- Deepen relationships
  - Evolve from service centers to sales and advice centers
  - Leverage existing branches and staff to pursue new initiatives, such as Chase Private Client

We actively manage our network to drive growth

Network optimization

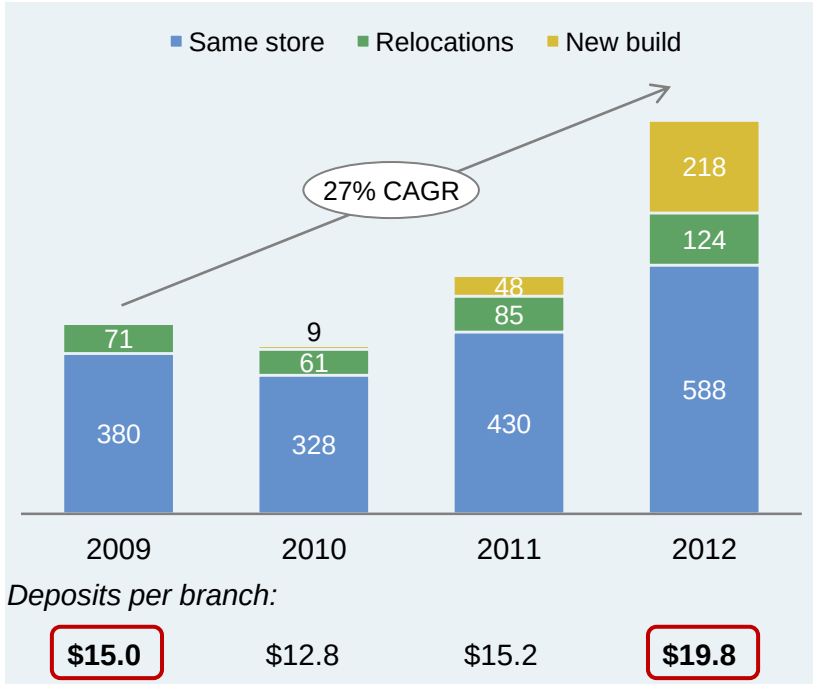
Network activity

		2010	2011	2012
Beginning branch count		5,154	5,268	5,508
Network management	Total new branches opened	171	282	179
	New builds	*154*	*260*	*150*
	Relocations	*17*	*22*	*29*
	Total branches closed	(57)	(42)	(73)
	Net branches opened	114	240	106
Ending branch count		5,268	5,508	5,614



For 2013-2014, we expect to add +/- 100 net branches annually (~+2% of our current network)

Source: Internal Chase data



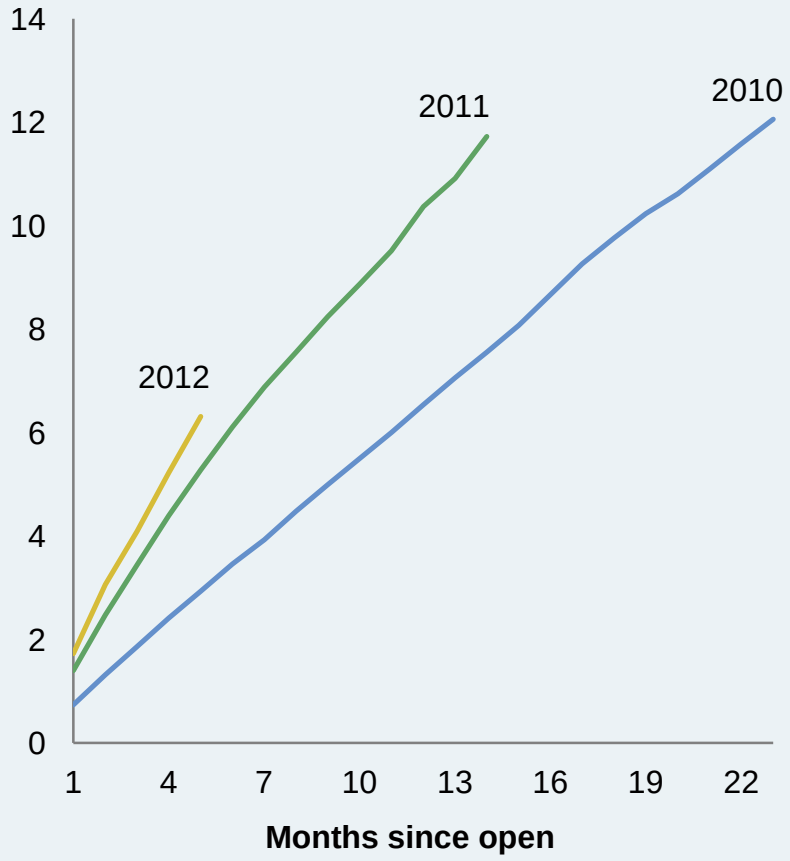
Our network repositioning is driving strong results in Tampa and many other markets

Network optimization

Tampa market[1] branches

Tampa market[1] deposits ($mm)

- **Business Banking deposits: CAGR of 57%**
- **Consumer investments: CAGR of 57%**
- **Cards sold in branches: CAGR of 30%**
- **Mortgage origination share rank: from #8 in 2009 to #2 in 2012**
- **Commercial: loans outstanding up $425mm+**



Source: SNL Financial, Marketrac

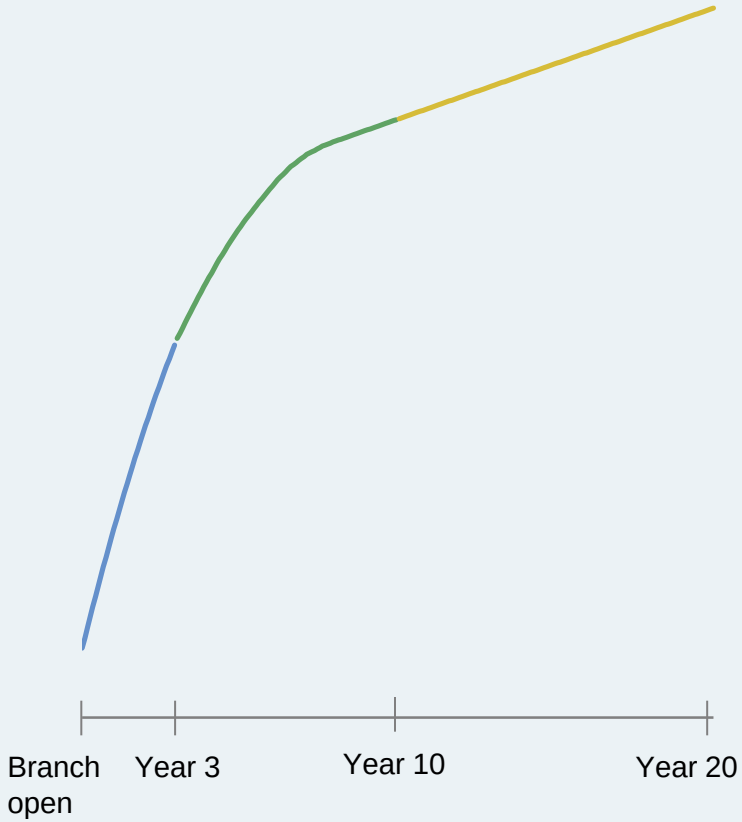
[1] Market defined as Core Based Statistical Area

We are seeing continuous improvement in new build performance

New builds

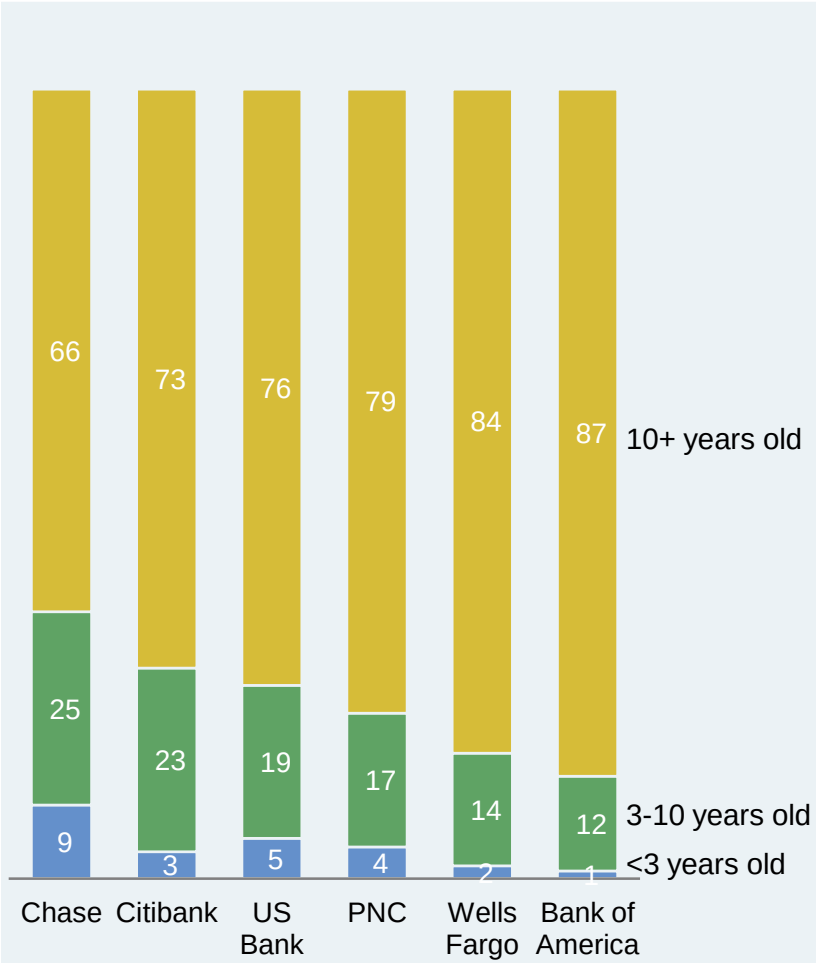
Consumer and business deposits per branch ($mm) by vintage

Source: Internal Chase data



Evolving branch model

- **Lower costs**
  - ~70% of new builds <4,000 square feet by 2014
  - 100% of new builds equipped with self-service banking kiosks
- **Higher opportunity**
  - ~80% of new builds will offer Chase Private Client services by 2014
  - More new builds staffed with Mortgage Bankers, Business Bankers, and CWM Advisors
- **Faster breakeven**
  - 6+ months faster breakeven



Our consistent investments in building our network will drive future growth

New builds

Typical branch consumer household growth

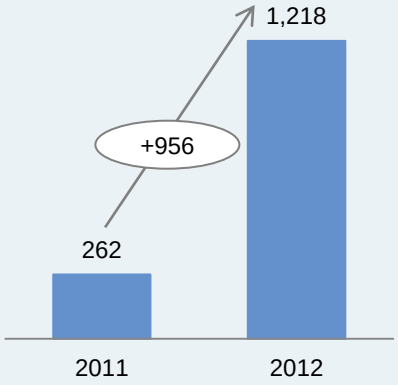
We are reducing staff as customers adopt self-service

Reduce costs

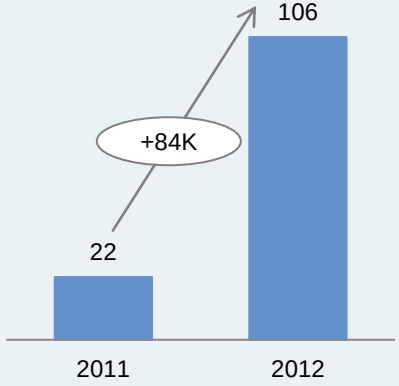
% of consumer deposits through tellers[1]

CBB branch staff 2011-2015e[2]



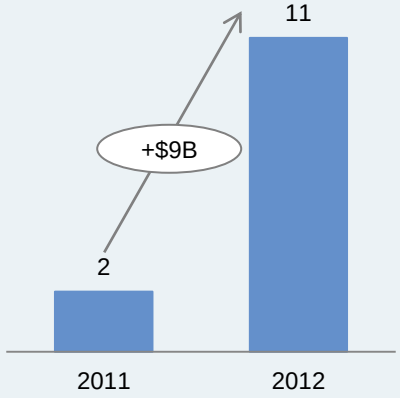
~20% same-store staffing decline by 2015 via attrition, while simultaneously growing the business

Source: Internal Chase data
[1] Includes non-Chase ATMs.
[2] Includes Tellers (FTE), Personal Bankers, Branch management, SSAs, Business Bankers, and CWM Advisors
[3] New builds defined as all branches opened post 1/1/2010



In 2012, we have taken Chase Private Client from a concept to a successful working model

Deepen relationships



Branches offering Chase Private Client

Chase Private Clients (K)

Net new deposits and investments ($B)

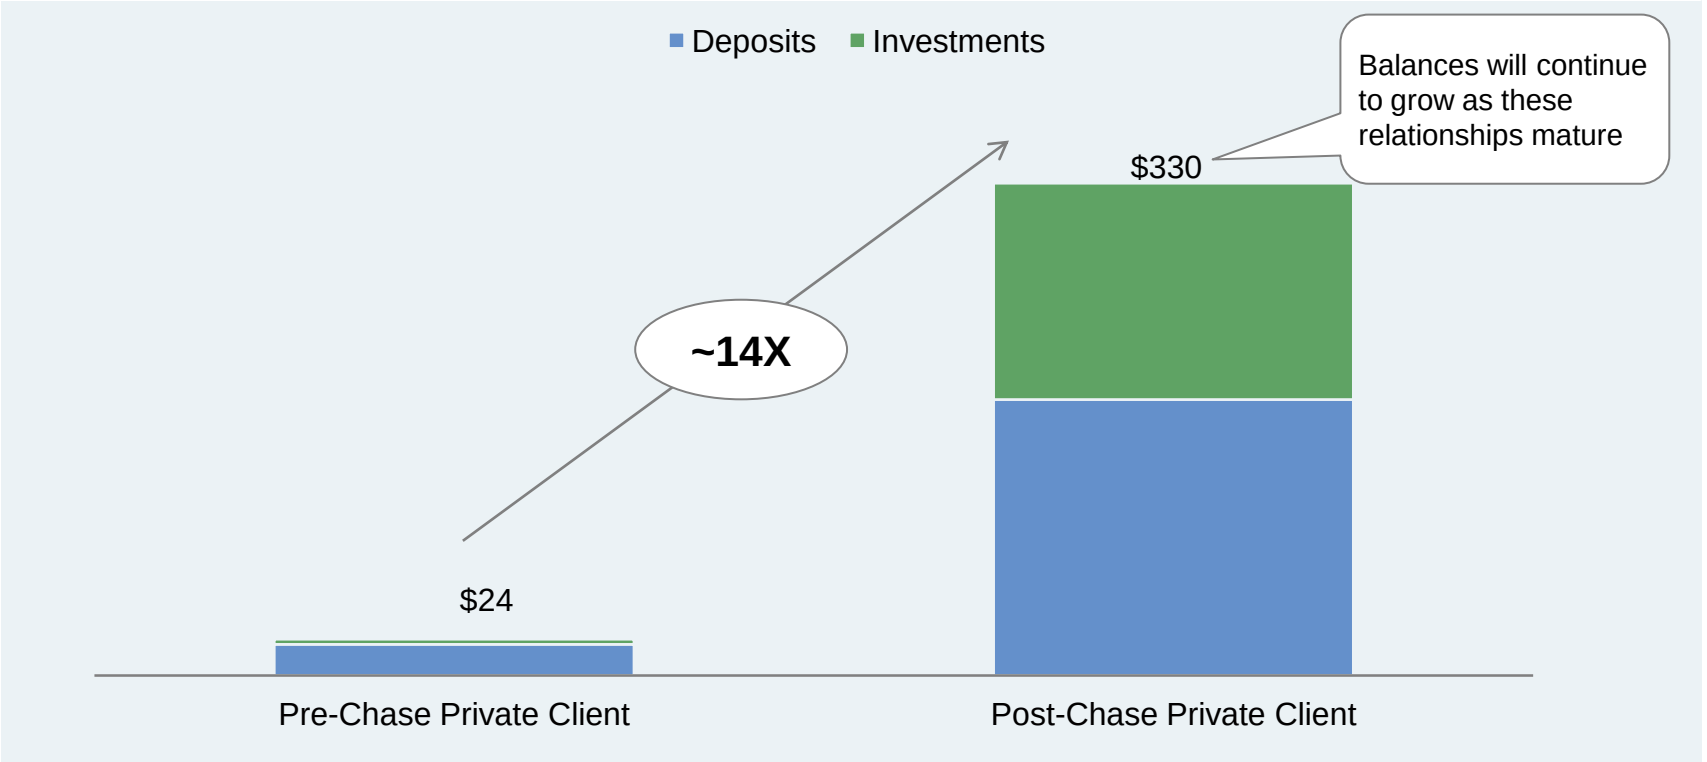
New investment $ per branch ($mm)[1]

2012

- Performance well above expectations in:
  - Deepening previously small relationships
  - Increasing investment penetration
- Leverages existing branches, bankers, advisors, and J.P. Morgan Private Bank investment platform – minimal incremental cost

2013

- By end of 2013, we will have about two thousand existing branches offering Chase Private Client
- Over 80% of Chase's Segment III clients will be within 5 miles of a branch offering Chase Private Client



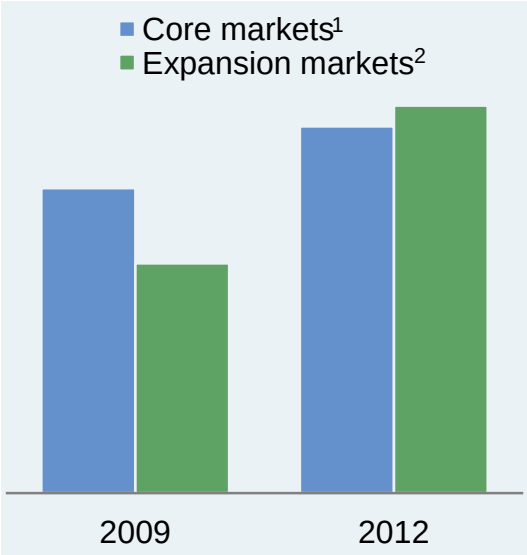
Source: Internal Chase data

[1] Excludes Chase Private Client pilot branches

~56% of Chase Private Client net new funds come from customers previously holding under $100K in balances with Chase, including those new to the bank

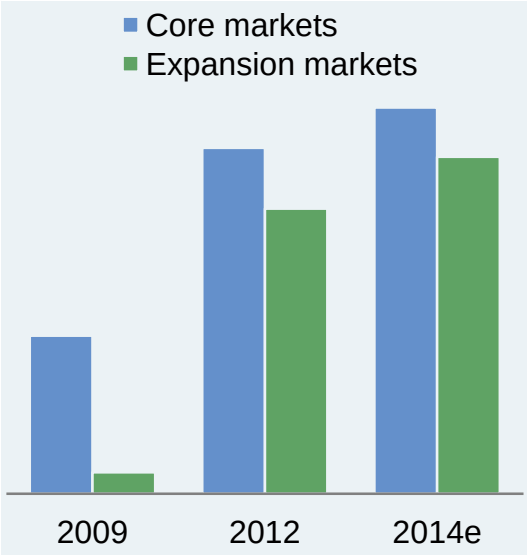
Deepen relationships

Balance ($K) per household for those with <$100K in balances at Chase before joining Chase Private Client[1]



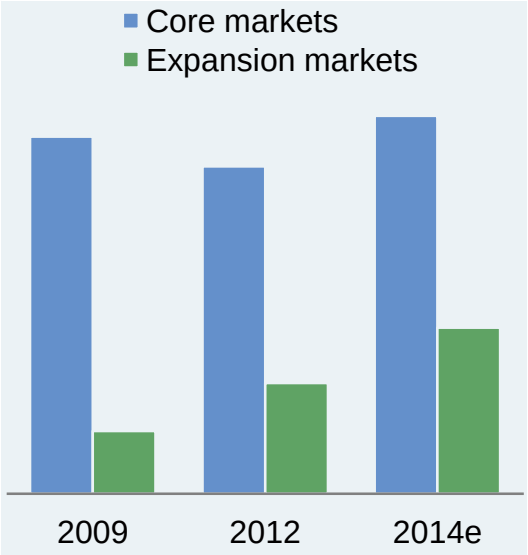
Source: Internal Chase data

[1] Includes new to bank households



We continue to invest in bringing Chase Business Banking to expansion markets and our performance is on track to meet prior guidance

Deepen relationships



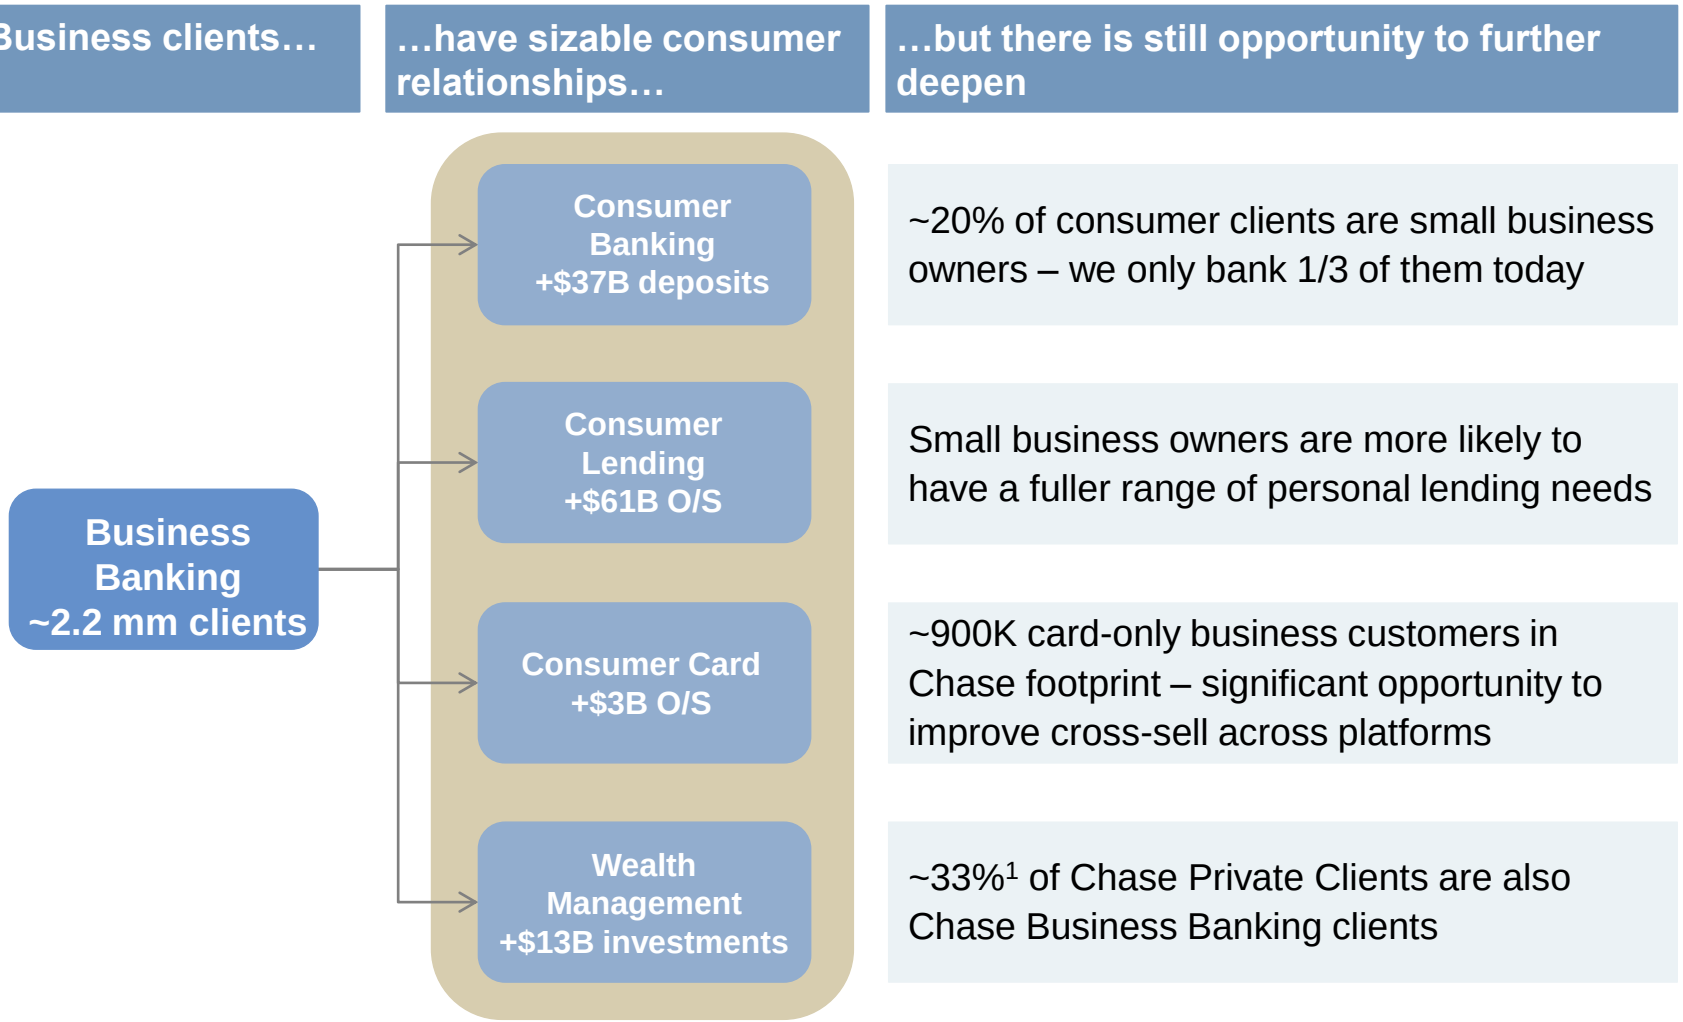
Business relationship managers per branch

Loan originations per branch

Loan balance per branch

Implications

- We have achieved our target staffing levels across our markets
- We will continue to see balance/revenue gains as newly deployed bankers in expansion markets mature and continue to build their books of business
- We are on track to realize the $1B Business Banking opportunity



Source: JPM Chase internal data

[1] Arizona, Colorado, Idaho, Utah, Kentucky, Illinois, Indiana, Michigan, Ohio, West Virginia, Wisconsin, Louisiana, Oklahoma, Texas, Connecticut, New Jersey, New York

[2] California, Florida, Georgia, Nevada, Oregon, Washington

We have a significant opportunity to further deepen personal relationships with Business Banking clients

Deepen relationships

Source: Internal Chase data
Note: Consumer Lending includes Home Equity Lending, Mortgages, Student Loans, and Auto Loans; Card Services includes small business cards and personal cards, excludes commercial and corporate cards
[1] CPC and Business client overlap as of Nov 2012, including primary and beneficiary CPC relationships.

We are well positioned to outperform

- Very strong momentum across all of our key business drivers
- Significantly improved customer experience helping us grow our customer base, deepen relationships with our clients, and win market share in all of our markets
- Thoughtful optimization of our branch network – new builds, relocations, and consolidations
- Disciplined cost management
  - Enabling self-service
  - ~20% reduction in same-store staff via attrition by 2015[1]
  - Smaller branch formats
- Chase Private Client and Business Banking are generating significant growth
- We expect to deliver 30%+ ROE, while growing the business

[1] Includes Tellers (FTE), Personal Bankers, Branch management, SSAs, Business Bankers, and CWM Advisors

Agenda

Consumer & Business Banking	15
Mortgage Banking	**36**
Card Services	54
Wrap-up	71

The Mortgage business is core to the Chase consumer franchise

Mortgage: a critical connection to our customers

- #2 in originations: $192 billion in 2012[1]
- #3 in servicing: 7.6 million customers in our servicing portfolio

Enormous competitive advantage on distribution and brand

- 4,700 Mortgage Bankers
- 5,600 bank branches
- Brand: strongest consideration among large bank peers[2]

Superior customer relationships, operations scale and capital strength

- Platform to build upon economies of scale
- Capital strength to grow servicing business
- Top ranked large bank in origination (#4) and servicer (#4) customer satisfaction by J.D. Power[3]

Source: Inside Mortgage Finance

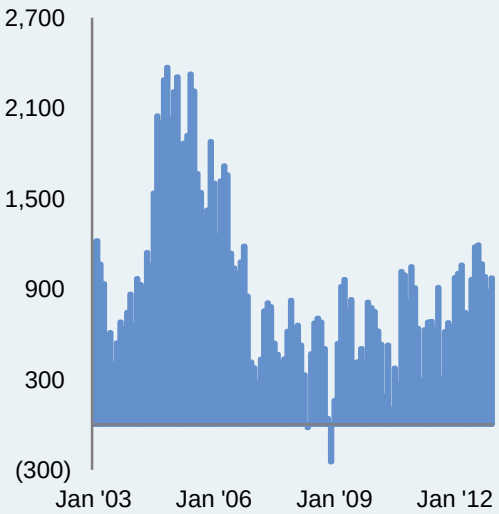
[1] Includes private bank and home equity originations

[2] Source: Millward Brown, 3Q12 Mortgage Brand Tracker

[3] J.D. Power and Associates industry-wide survey based on satisfaction index

2012 results demonstrate the strength of the Mortgage franchise

P&L ($mm)	2010 Actuals	2011 Actuals	2012 Actuals
Mortgage Production pretax [1]	($216)	$993	$3,551
Mortgage Servicing pretax	1,191	(3,797)	(1,167)
Real Estate Portfolios pretax	(4,311)	(504)	2,948
Mortgage Banking net income	($1,924)	($2,138)	$3,341



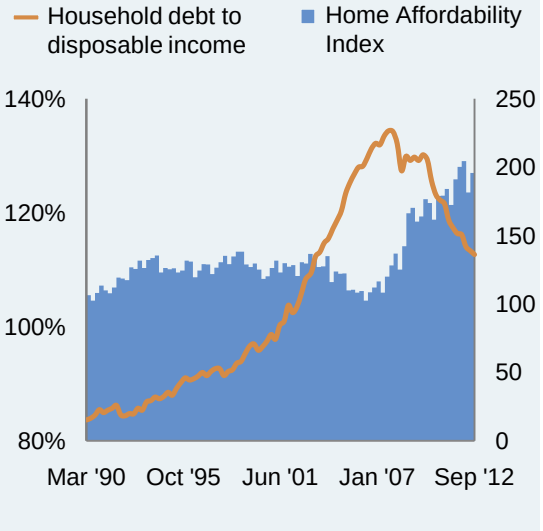
[1] Production pretax includes repurchases

Key indicators suggest the housing market has turned the corner

Commentary

- Demand is strong
- Supply is tight
- Capacity to purchase has improved

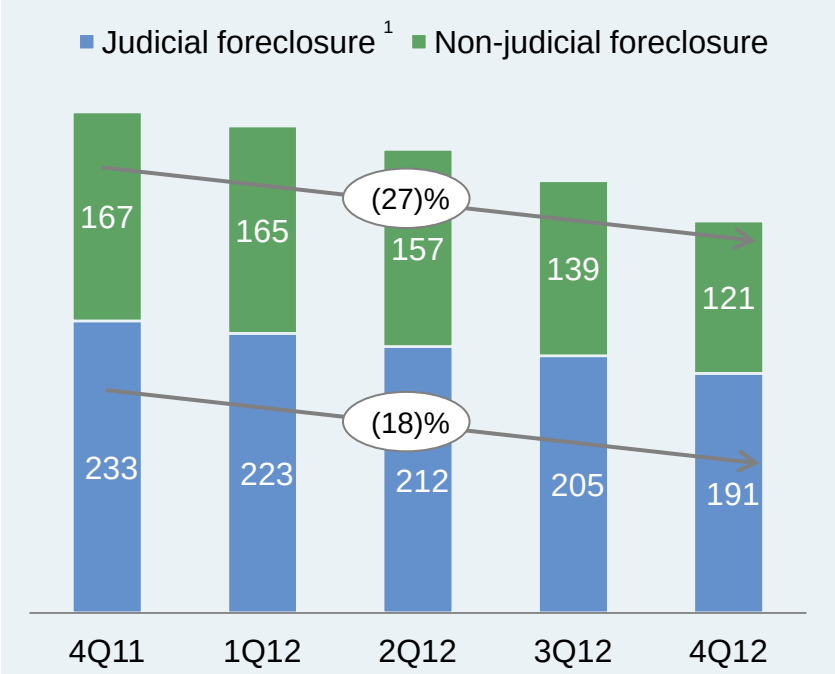
Household formation (K)



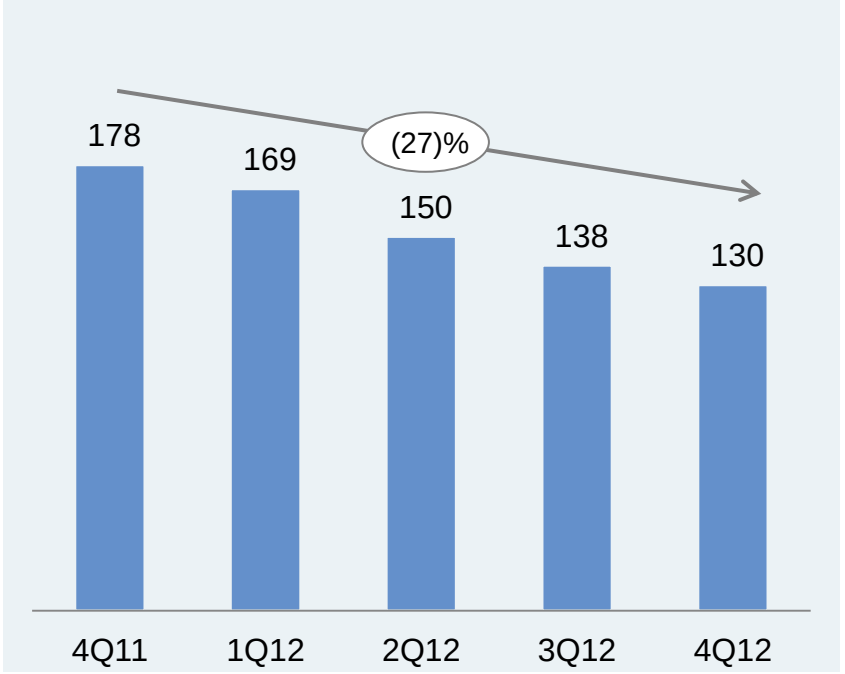
Source: Bloomberg

U.S. housing starts (K)

Source: Census Bureau



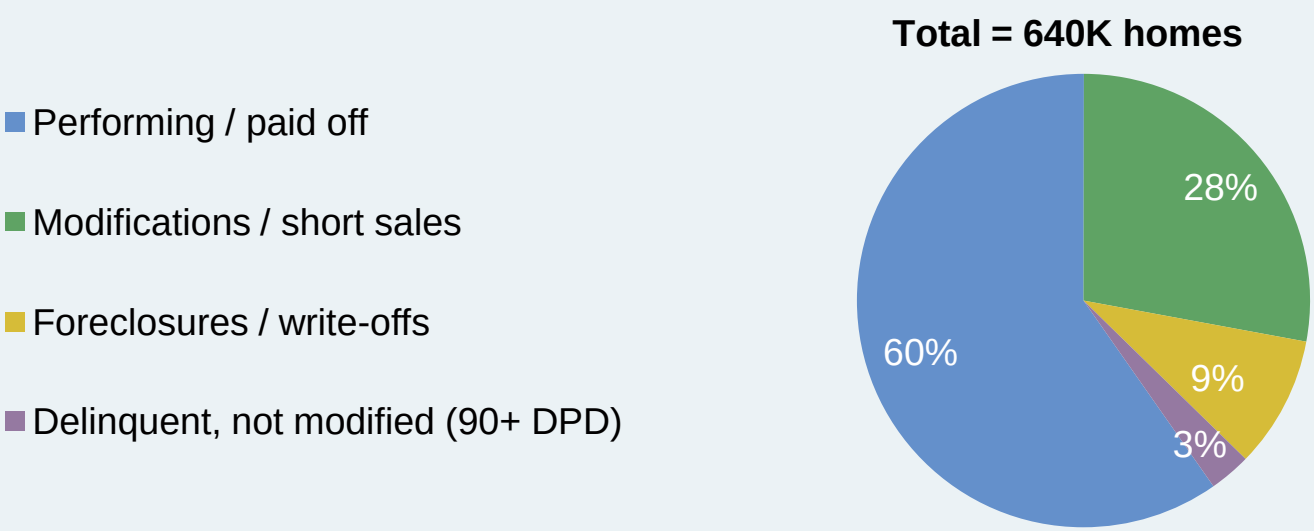
Capacity to purchase homes



Source: Bloomberg, Fed, BEA, JPMorgan

Legacy servicing and owned portfolio issues are resolving

Foreclosure inventory (in 000's)



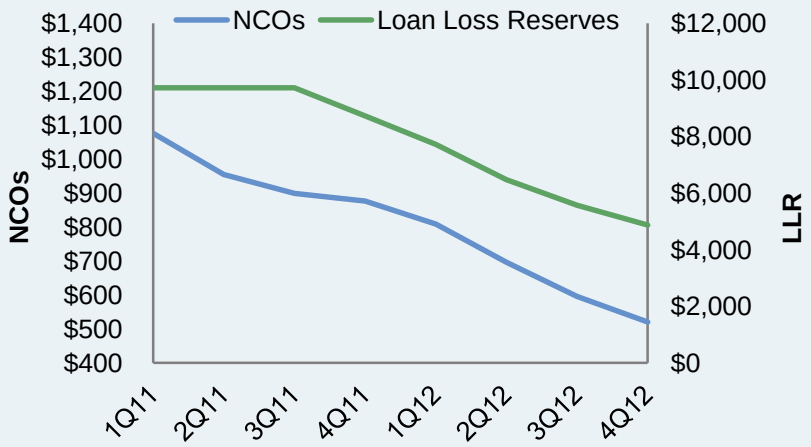
Modification inventory (in 000's)

[1] Judicial foreclosure is a foreclosure method by which the mortgaged property is sold through a court proceeding

Doing our part – Our efforts to prevent foreclosures have yielded tremendous results

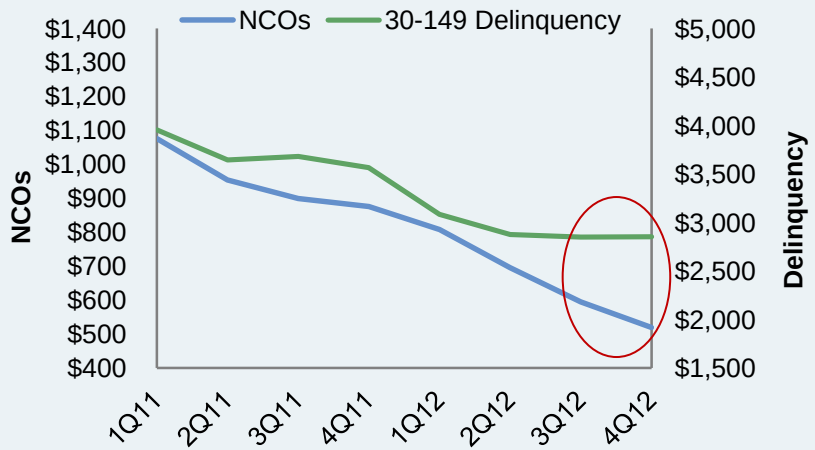
JPMorgan Chase owned mortgages (2009 to 2012[1])

[1] Excludes government insured loans, all statistics since 2009



Commentary

- For our owned mortgages, we have completed modifications/short sales for 28% of the portfolio, effectively forgiving over $10B of principal for more than 179,000 borrowers
- We have completed approximately 610,000 modifications to date across our owned and serviced portfolios
- Modifications have reduced borrowers payments by a current annual run rate of approximately $1.6B for our owned and serviced loans



Credit Update – Real Estate Portfolios

Non-credit-impaired (NCI, $mm)

Net charge-offs[1] vs. loan loss reserve ($mm)

Net charge-offs[1] vs. 30-149 delinquencies ($mm)

- Real Estate Portfolios reserves and net charge-offs generally declining at a consistent rate
- Net charge-offs declining faster than delinquencies as HPI improves and loss severities decline
- Total quarterly net charge-offs likely to be $550mm +/-

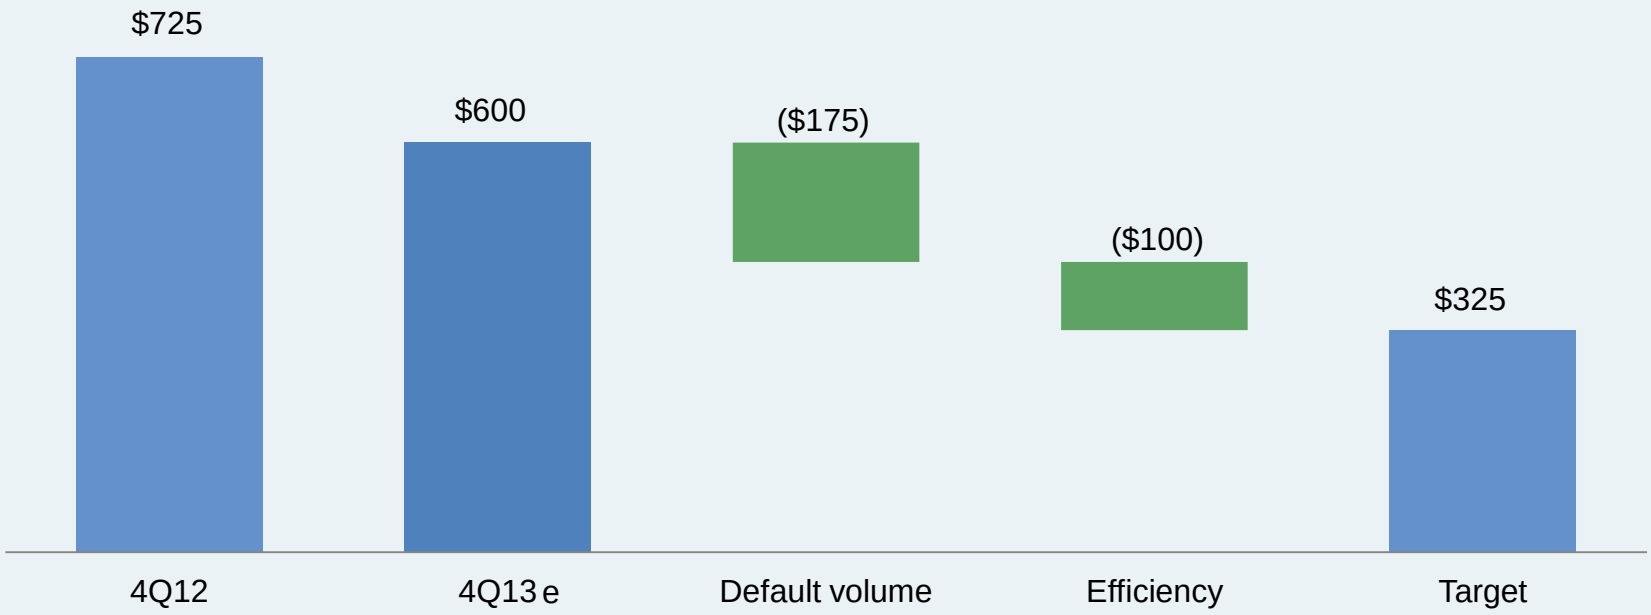
Purchased credit-impaired (PCI)

- Reserve and purchase accounting mark cover remaining lifetime losses
- Current reserve and mark reflect ~$34B of lifetime losses – ~$25B has been realized to date

[1] 4Q12 adjusted net charge-offs exclude the effect of an $825mm Chapter 7 Bankruptcy discharge adjustment based on regulatory guidance

Target earnings: Mortgage Banking can earn $2B

($mm)	2012 Total	Target
Mortgage Production		
Pretax income	$3,551	$1,500
Mortgage Servicing		
Servicing operating pretax	(1,783)	1,000
MSR risk management	616	-
Pretax income	($1,167)	$1,000
Real Estate Portfolios		
Total net revenue	4,092	2,400
Noninterest expense	1,653	950
Credit costs	(509)	450
Pretax income	$2,948	$1,000
Mortgage Banking pretax income	$5,332	$3,500
Mortgage Banking net income	$3,341	$2,100



- Market volume $1.5T
- Market share 15%
- Pre-tax margin 65bps

- Third party serviced UPB $1.0T
- Target expense $325mm/qtr

- Portfolio $125B
- Credit costs 35bps

Servicing and default expense will normalize over time

Servicing and default expense[1] ($mm)

[1] 4Q12 Servicing expense excludes Independent Foreclosure Review settlement of ~$700mm and IFR run rate of ~$150mm

Momentum toward normalizing expense (2+ years to achieve)

- Default volume continuing to decline naturally
- Pursuing delinquent loan sales to further reduce inventories
- IFR engagement ending
- Normalizing level of operating losses
- Realizing benefits of technology and control investments

Real Estate Portfolios update

Real Estate Portfolios[1] – Simulated ending loan balance run-off and pretax income ($mm)

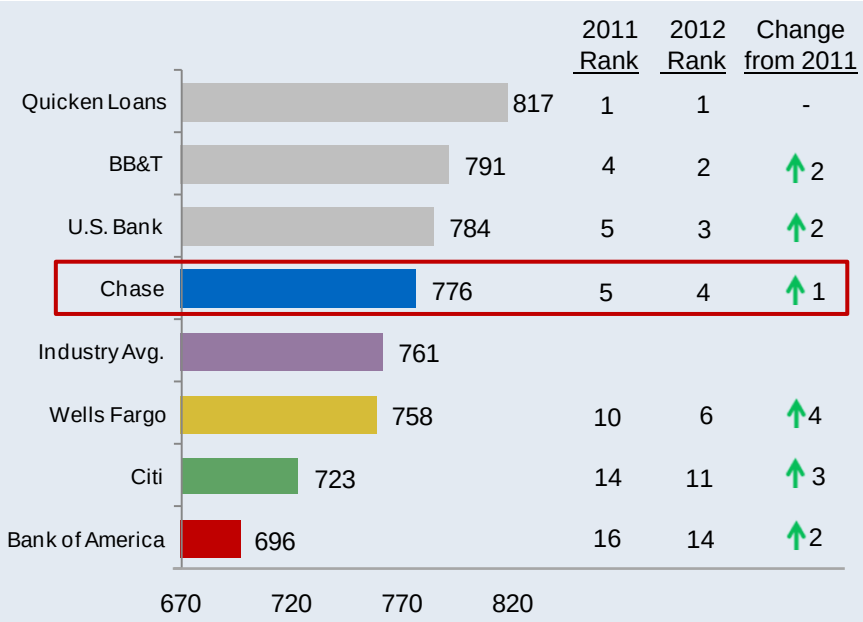
	2011 Actuals	2012 Actuals	2013 Estimate	2014 Estimate	2015 Estimate	Target
Ending loan balances ($B)	$198	$177	$165	$155	$146	$125
Ongoing ($B)	*36*	*36*	*43*	*47*	*52*	
Legacy ($B)	*162*	*141*	*122*	*108*	*94*	
Revenue	$4,592	$4,092	$3,500	$3,100	$2,900	$2,400
Net Charge-offs	3,805	3,341	2,200	1,800	1,000	450
Change in reserves	(230)	(3,850)				
Expense	1,521	1,653	1,500	1,300	1,200	950
Pretax income/(loss)	**($504)**	**$2,948**	**($200)**	**$0**	**$700**	**$1,000**

[1] Assumes provision for credit losses equals net charge-offs; other reserve actions not simulated

- Although NII will decline as portfolio runs down, expense and credit losses will also decline
- Additional portfolio growth opportunity exists by retaining high quality agency conforming product

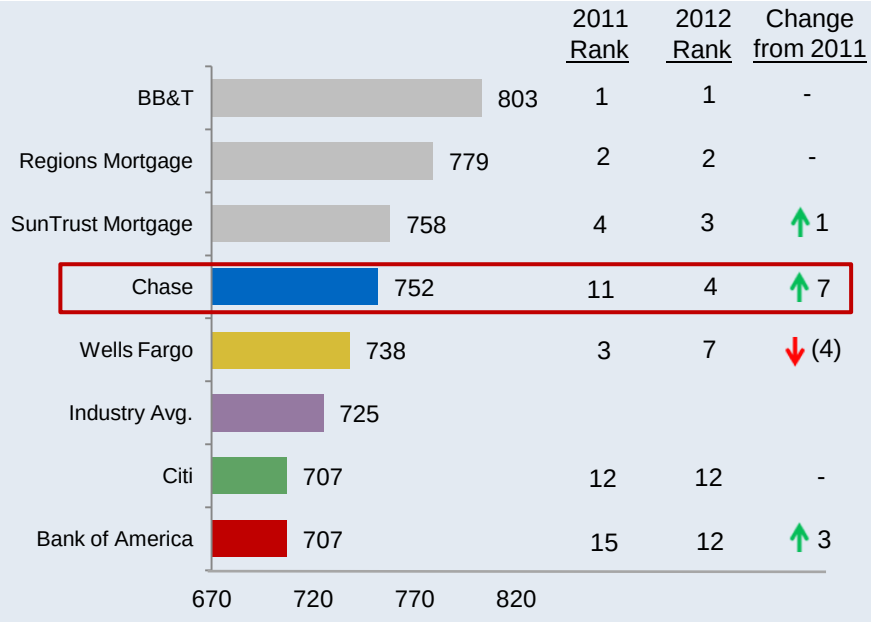
We have powerful competitive advantages in mortgage originations

Customer focus	■ Up to #4 in 2012 Originations Satisfaction Survey[1] ■ Complaints down ~70% from March 2011 to December 2012
Distribution	■ 4,700 Mortgage Bankers serving 5,600 bank branches and call centers ■ Branch traffic and marketing drives high sales force productivity ■ Hiring Mortgage Bankers to deepen branch coverage ■ Large, receptive customer base to cross-sell, including Chase Private Client ■ #2 Correspondent franchise, growing share
Marketing	■ Strong refinance recapture of existing mortgage customers ■ Chase brand has highest consideration, intent to apply[2]
Technology	■ Chase *My New Home* mobile app publicly released with strong media support in 2013 ■ 2013-2014 implementation of origination platform currently used by originator with best-in-class customer satisfaction



[1] J.D. Power and Associates industry-wide survey based on satisfaction index
[2] Source: Millward Brown, Mortgage Brand Tracker, as of 3Q12

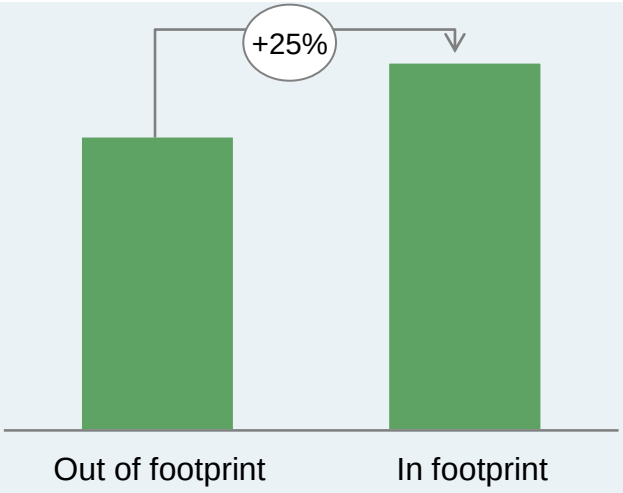
Consistent focus on the customer experience is driving results



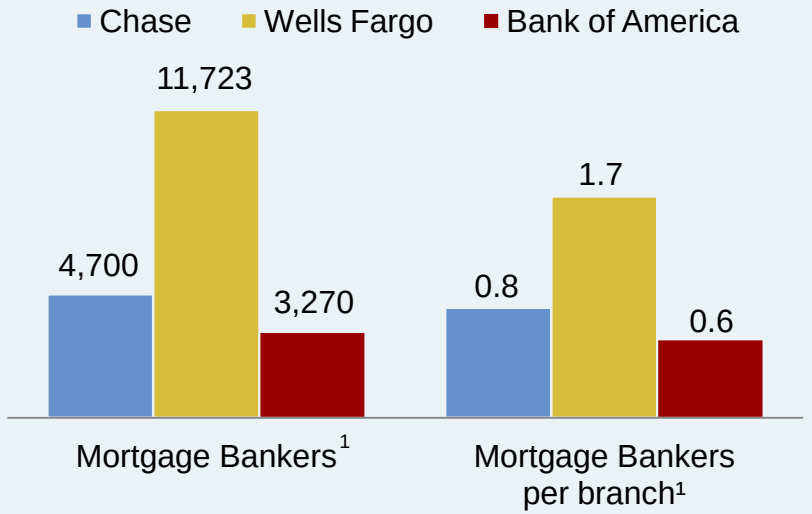
Commentary

- #1 among large bank peers, for both origination and servicing rankings
- Ranking up 8 spots since 2010 for Origination; up 9 spots for Servicing

J.D. Power Mortgage Origination Survey – Satisfaction index



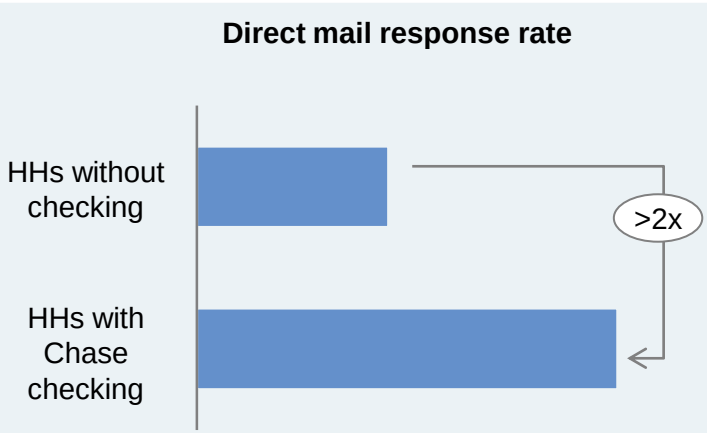
J.D. Power Mortgage Servicer Survey – Satisfaction index



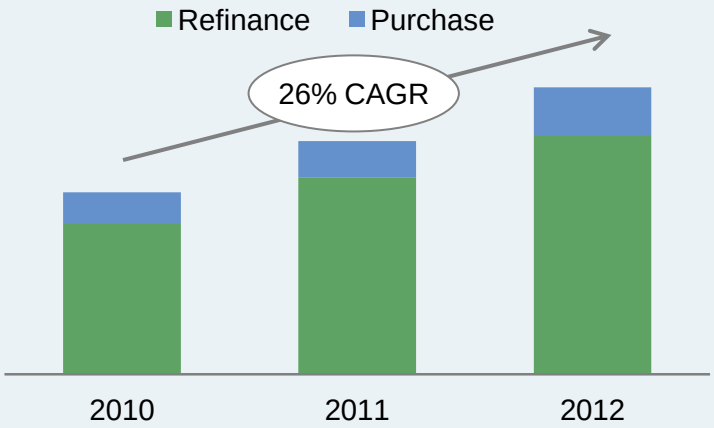
Productive sales force with opportunity to deepen coverage

2012 Chase mortgage banker productivity (applications per banker)

4Q12 mortgage bankers vs. branches

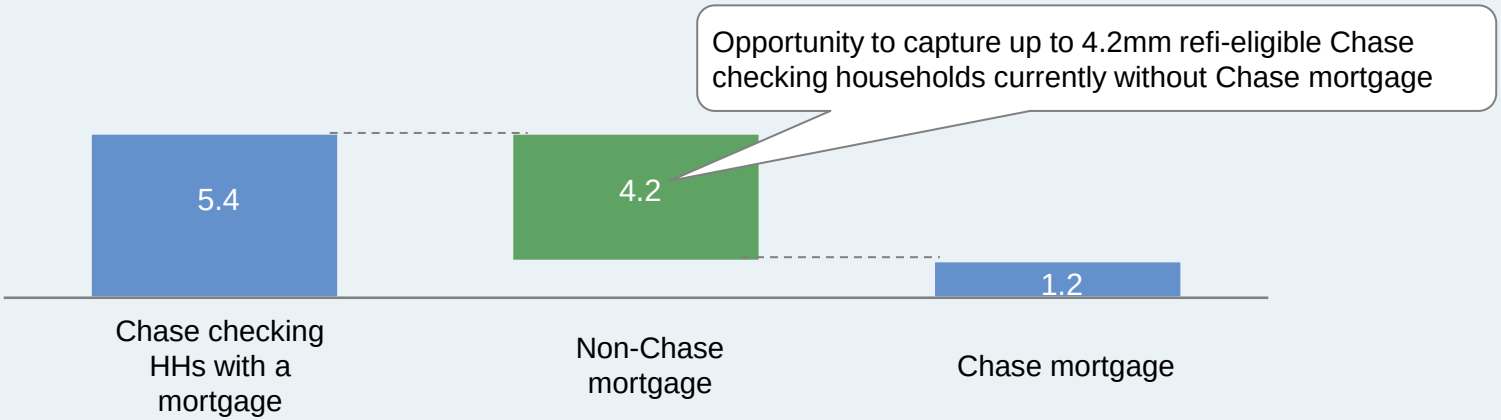


Source: Public documents
Note: Chase includes branch, out of footprint, and call center mortgage bankers
[1] EOP; Wells Fargo includes bank branches and mortgage stores



- Chase sales force is located in 5,600-strong branch network, five call centers, and mortgage offices in out of branch footprint strategic markets
- Chase increased size of Mortgage Banking sales force by 900 in 2012

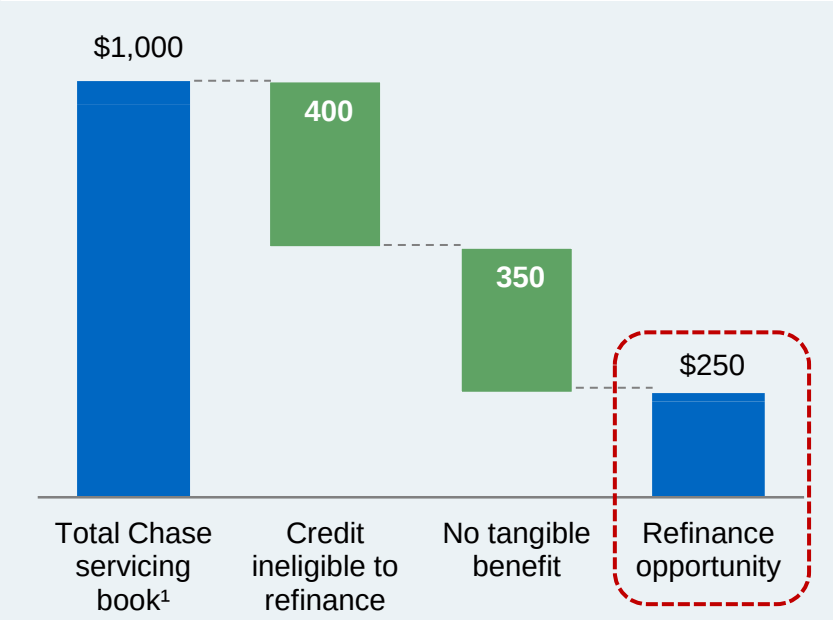
While cross-sell volumes to banking customers have increased, significant opportunity remains



Chase checking HHs are more likely to respond to our offers…

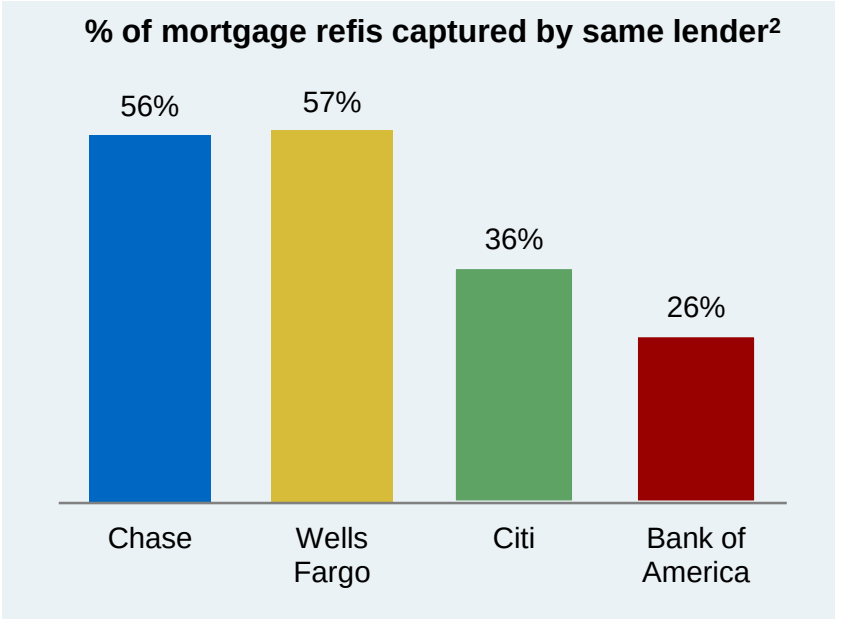
…and cross-sell of mortgages to them has grown rapidly[1]…

…but we still have significant opportunity (Dec. 2012, mm households)[2]



[1] Loans per branch

[2] Households eligible for refinance at 3.5% into a product with offer rate 50 bps lower than the current loan mortgage rate and credit eligible defined as meets FICO and LTV requirements with no bankruptcy or foreclosure history; analysis excludes Home Equity households

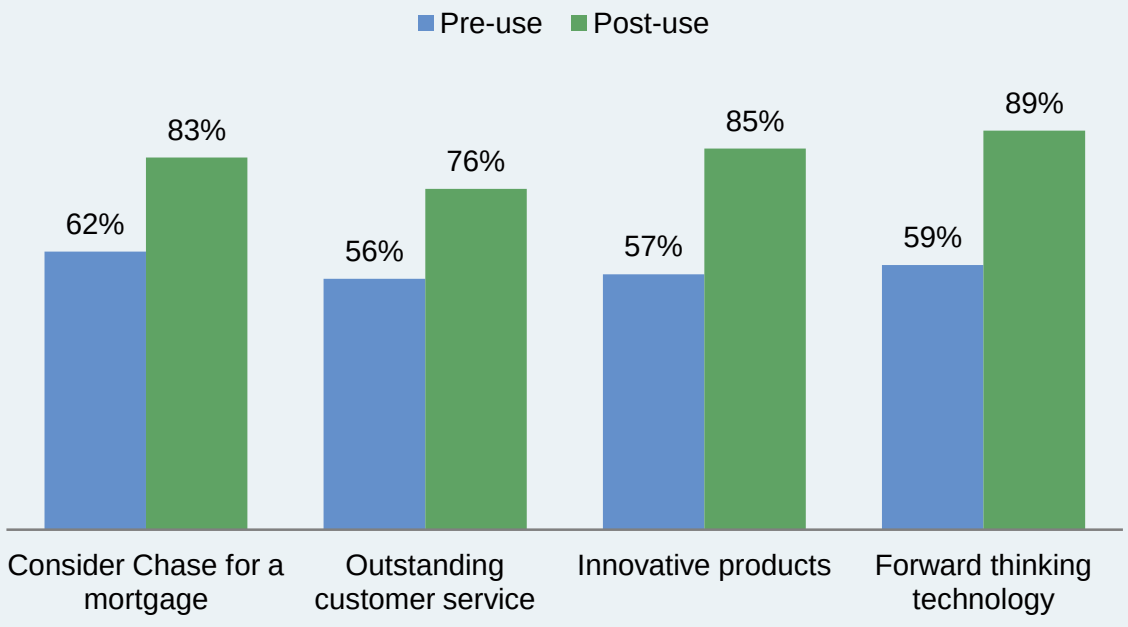


Similarly, the Chase Mortgage servicing portfolio represents an additional refinance opportunity

We have a significant refinance opportunity (Dec. 2012, $B)…

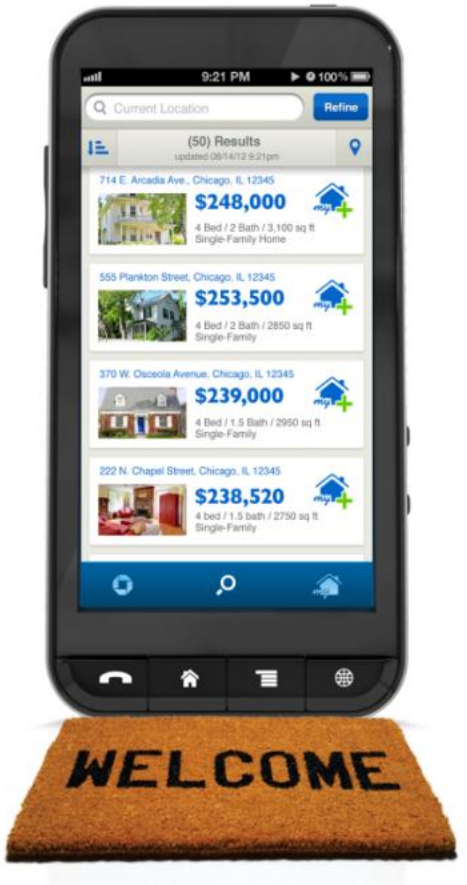
[1] Excludes Home Equity

…and we are strong at retaining our existing customers when they refinance



Recapture source: County courthouse recordings
Note: These recapture rates are limited to loans recorded at the county courthouse funded by specific lender brand (primarily direct originations, but also includes broker when applicable)
[2] In footprint and includes purchases captured by same lender

Chase's My New Home Mobile App develops customer relationships as they start their home purchase process



Chase My New Home Mobile App

- Critical to capture mortgage customers via mobile/internet
  - 90% of home buyers use the internet in their home search[1]
- Chase mobile app helps customers find and finance a home – the only app that brings both together

Chase My New Home impact on the brand and mortgage consideration

myNew Home℠

[1] 2012 Profile of Home Buyers and Sellers from the National Association of Realtors

Improving servicing profitability

Normalizing costs	■ Near term run rate savings from resolution of foreclosure-related matters and other operating losses ■ Longer term savings will come from decreasing inventories and technology and efficiency gains
Servicing strategies	■ Grow performing servicing portfolio to leverage economies of scale ■ Pursuing the sale (or subservicing) of high risk and non-performing segments ■ Continue to build off of #2 originations business
Controls	■ Implemented servicing standards required by the DOJ/AG settlement and Consent orders[1] ■ Marked improvements in audit and compliance reviews
Customer satisfaction[2]	■ Servicing customer satisfaction improved 10% points since mid-2011 to 73%

[1] Subject to regulatory reviews
[2] Internal Chase customer satisfaction rating

We have a strong and improving franchise

Mortgage Production	■ Broad distribution ■ Brand ■ Unique opportunity to enhance customer experience through technology
Mortgage Servicing	■ Sourced by #2 share originations business ■ Platform to build upon economies of scale ■ Capital strength to grow servicing business
Real Estate Portfolios	■ Capital strength to grow high quality loan portfolio ■ Robust deposit growth efficiently funds loan portfolio

Challenges to our business will continue, but the worst is behind us

[2] Includes BAMS, Citi Merchant Services, SunTrust Merchant Services and Sovereign Merchant Services

[3] Includes Wells Fargo Merchant Services and PNC Merchant Services

Today we are announcing Chase Merchant Services – a new payments partnership with Visa that will be in market by year end

Chase Merchant Services

- A customized processing and end-to-end payments platform, leveraging an expanded, 10-year strategic partnership with Visa
  - Provides merchants with an additional option for consumer payments
  - Chase Visa Cards continue to benefit from Visa's U.S. and international acceptance network
- Enables Chase to build direct relationships with merchants
  - Flexibility to negotiate pricing
  - Ability to streamline operating standards
  - Opportunity to work directly with merchants on differentiated issuing and acquiring solutions
- In the future, Chase cardholders will receive enhanced benefits at Chase Merchant Services merchants, e.g.,:
  - Targeted, data driven offers
  - Discounts at point of sale
  - Expanded pay-with-points capabilities

Chase is uniquely positioned to pursue this opportunity

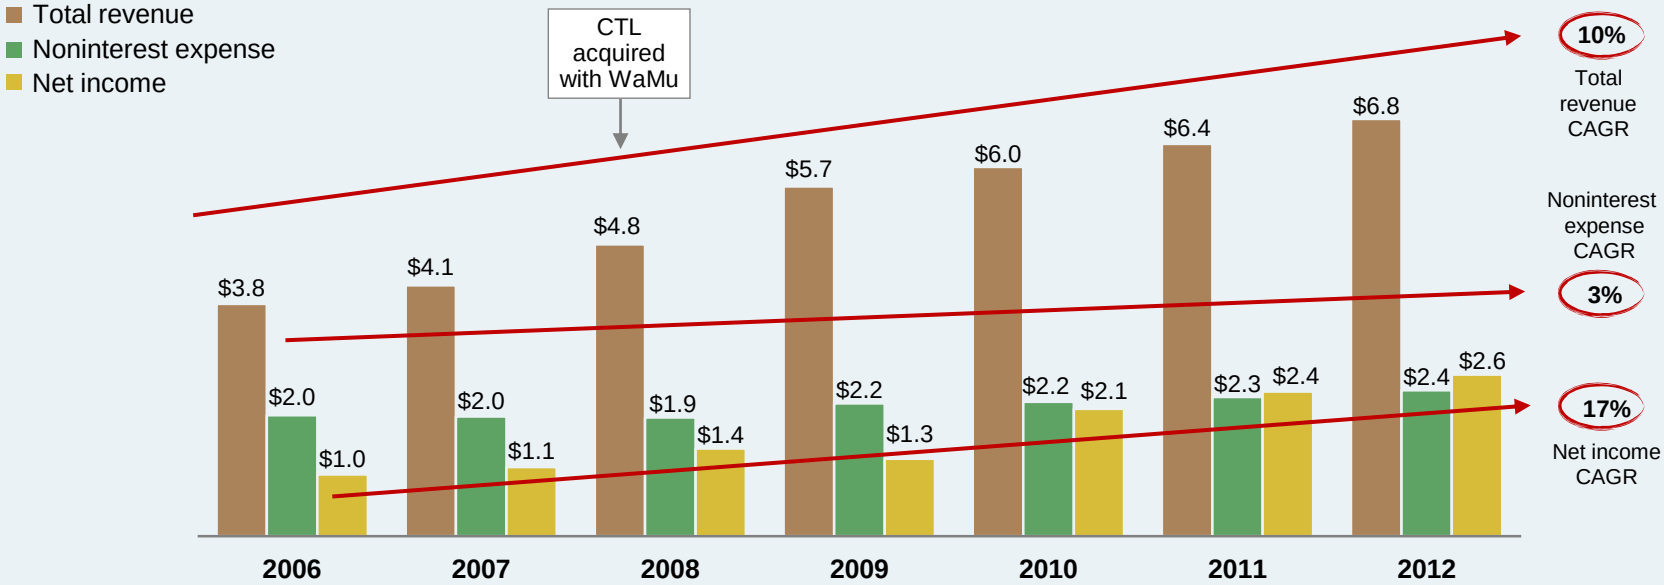
[1] Denotes Middle Market Banking presence
[2] Includes internal transfers, including transfer of Treasury Services Sales team from CIB into CB in 3Q12
[3] Based on total number of revenue producing employees
[4] Based on actively pursued client relationships; excludes CTL
[5] Reflects average number of products per client as of 2007
[6] CB revenue excludes CTL for this purpose
[7] Represents the total revenue related to investment banking products sold to CB clients
[8] 2006 NPLs based on period-average loan balances; 2012 NPLs based on end-of-period loan balances
[9] 2006 loan balances are period-average; 2012 loan balances are end-of-period
[10] Client deposits are period-average

Proven business model

CB has delivered strong financial results and consistent growth

Steady performance

- Deep customer relationships and broad product base provide resilient revenue
- Consistent organic growth in a volatile market environment
- M&A not a key growth driver



Long-term orientation

- Invest for long-term results
- Increase banker productivity
- Focus on asset and customer quality versus near-term growth

Exceptional returns

- Continuous expense discipline
- Excellent returns despite low deposit spreads and low utilization
- Strong margins, even with substantial investments
- Value of investments not fully realized

Historical performance ($B)

	2006	2007	2008	2009	2010	2011	2012

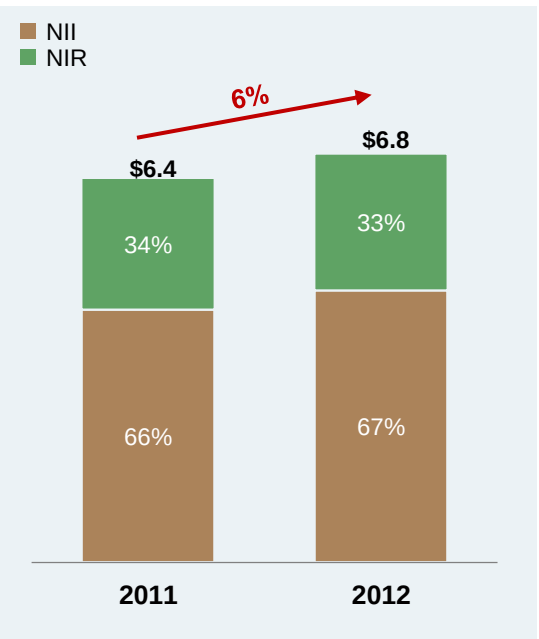
Diversified revenues

Growth across all business segments and products

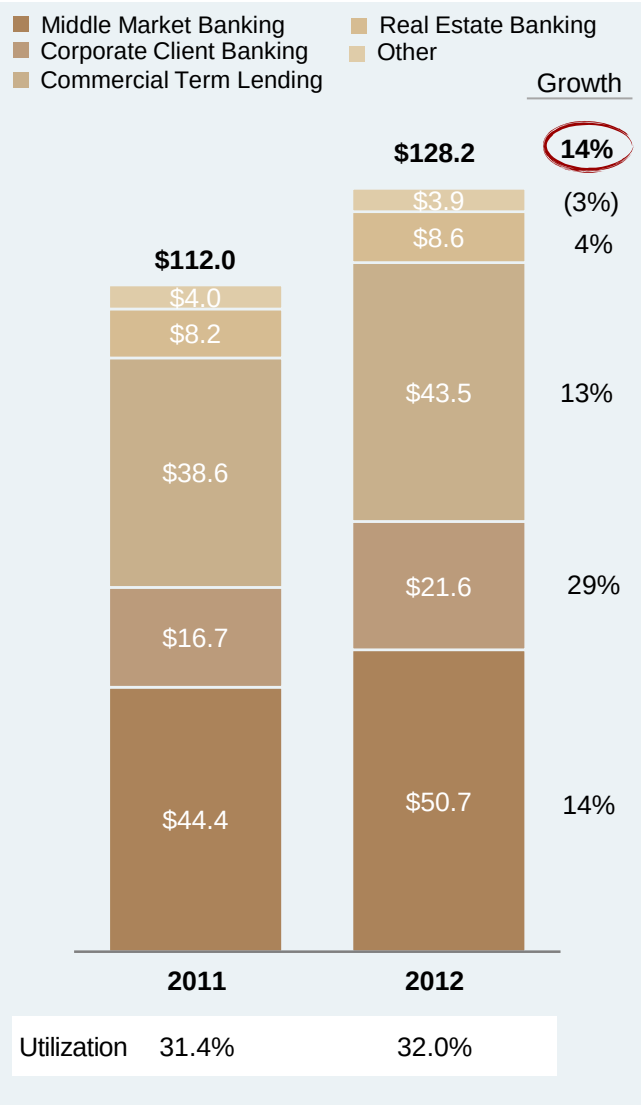


Revenue by segment ($B)

Revenue by product ($B)

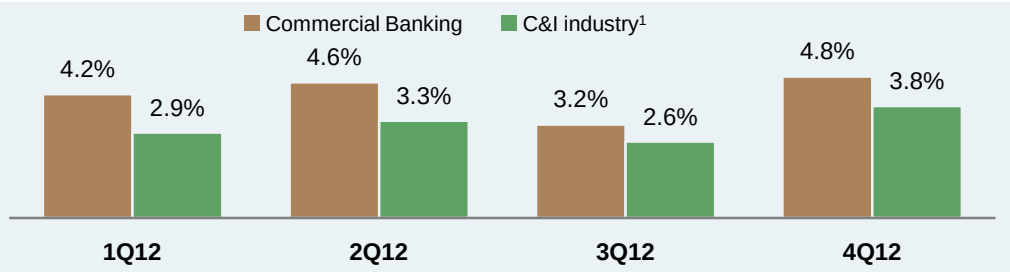
Revenue mix ($B)

2012 key highlights



- ✓ **Middle Market Banking**
  Double digit growth in both loans and deposits; ~950 new clients added; expansion markets contributing 49% of revenue growth
- ✓ **Corporate Client Banking**
  15% increase in revenue; record performance across all products
- ✓ **Commercial Term Lending**
  Record originations – 73% increase in 2012; improvement in credit quality
- ✓ **Real Estate Banking**
  Record originations – 19% increase in 2012; double digit deposit growth
- ✓ **Asset-Based Lending & Chase Equipment Finance**
  25% and 18% increase in loans respectively
- ✓ **Treasury Services**
  7% revenue growth driven by liquidity products
- ✓ **Investment Banking**
  Record gross revenue of $1.6B
- ✓ **International**
  Double digit growth in revenue, deposits and loans[4]

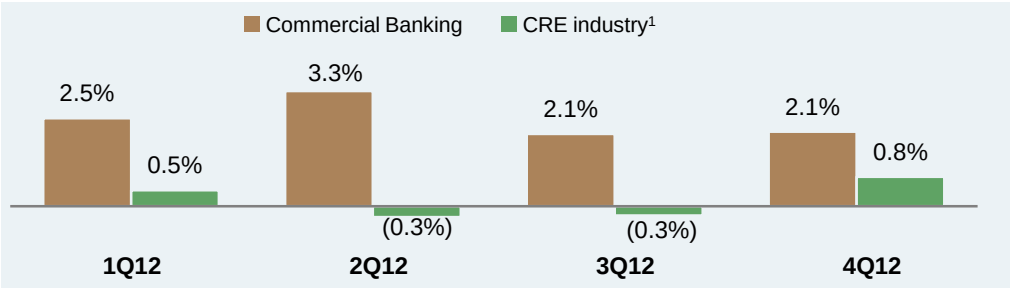
[1] Other primarily includes lending and investment activities within the Community Development Banking and Chase Capital businesses
[2] Includes revenue recognized by CB from a range of investment banking products provided to CB clients
[3] Other product revenue includes tax-equivalent adjustments generated from Community Development Banking activity and certain income derived from principal transactions
[4] Denotes U.S. multinational clients with overseas revenue



Strong loan growth across all businesses

Record loans in Middle Market, Corporate Client Banking and Commercial Term Lending

EOP loan balances ($B)



2012 C&I loan growth (QoQ)

- Broad based demand for credit across a range of industries
- Taking substantial share as the lead bank among larger corporate clients
- 11 consecutive quarters of loan growth in Middle Market
- Expansion markets continue to show solid growth momentum
- Competition on new deals has intensified
- Pressure on spreads but saw signs of stabilization in 4Q12

2012 CRE loan growth (QoQ)

- CTL loans increased 13% in 2012; record originations in REB
- Real estate fundamentals continue to improve; remain strong in core markets
- Spreads holding steady; competition is increasing

Note: Numbers may not sum due to rounding

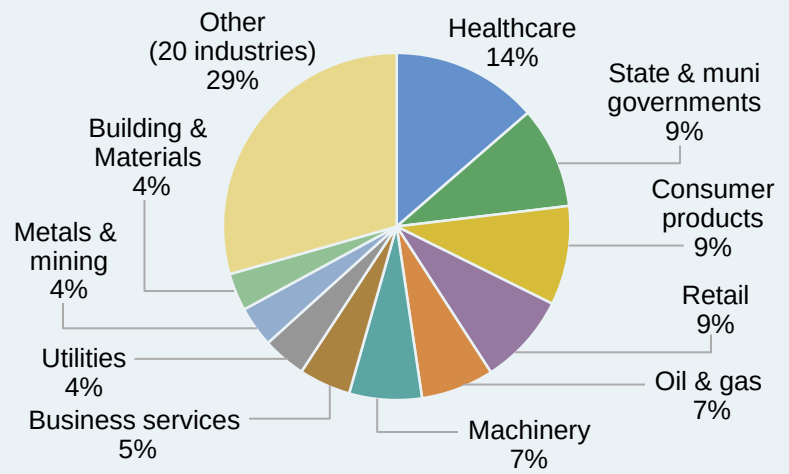
[1] Source: FRB H.8 Assets and Liabilities of Commercial Banks in the United States for February 6, 2012 (not seasonally adjusted)

High quality and granular portfolio

Risk discipline and asset quality remain our key focus

Risk culture

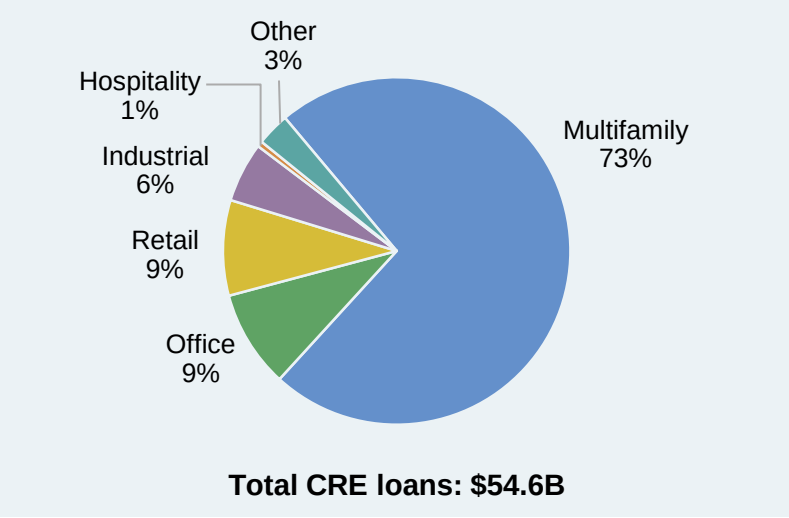
- Strong risk culture – joint client ownership between banking and risk teams
- Seasoned team – over 20 years average experience
- Local decision making – our teams really know our clients



Client selection

- Select good companies in attractive industries with proven management teams and broad product needs
- Bank clients that share our risk philosophy
- Long term relationship approach – building a lasting franchise
- Long-term client relationships

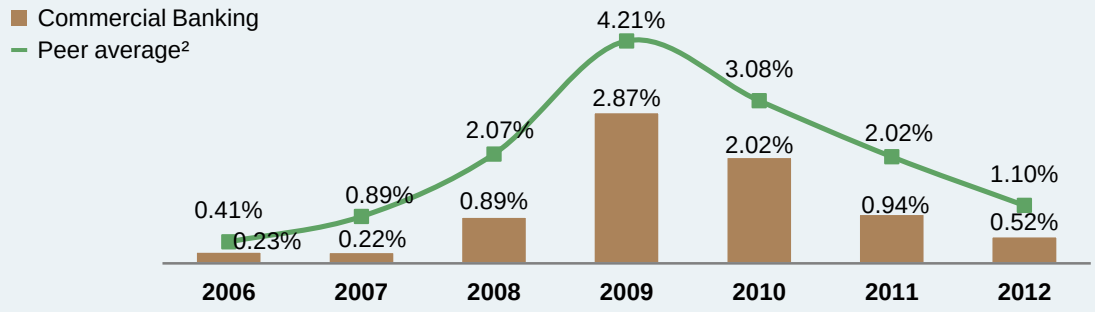
Risk discipline



- Discipline over growth philosophy – we don't need to do every deal
- Maintain granularity
- Sound structures
- Manage cyclical risks
- Track new originations

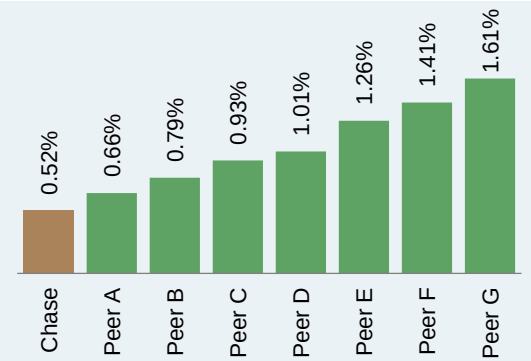
Commercial & Industrial

Total C&I loans: $73.6B



Commercial Real Estate

Total CRE loans: $54.6B



Best-in-class credit performance

Nonperforming loans[1]

2012 peer group NCOs

We are maintaining our discipline on new originations

Note: Numbers may not sum due to rounding

[1] 2006 Commercial Banking NPL ratios are based on average loans; 2007-2012 Commercial Banking NPL ratios are based on end-of-period loans

[2] Peer averages include CB-equivalent segments or wholesale portfolios at BAC, CMA, FITB, KEY, PNC, USB, WFC

[3] 2006-2007 CRE NPLs and NCOs reflect Real Estate Banking only; 2008-2012 CRE NPLs and NCOs also include Community Development Banking; 2009-2012 NPLs and NCOs also include Commercial Term Lending

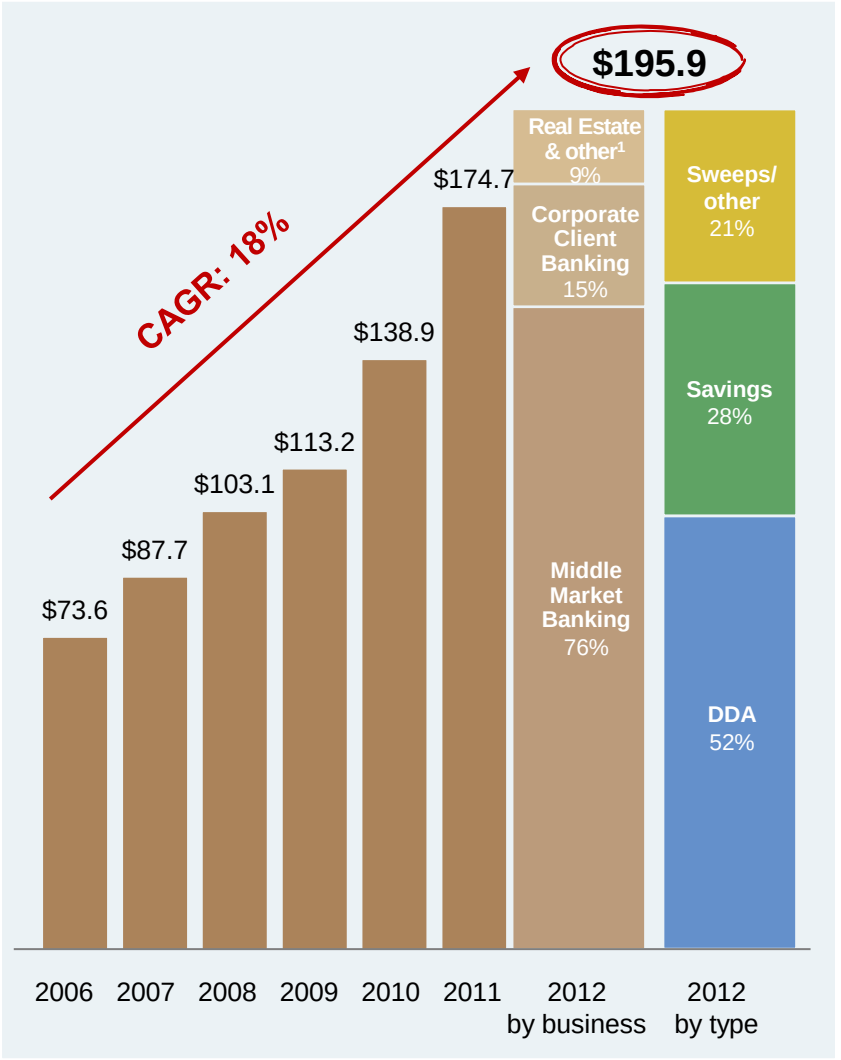
Stable and diversified deposit base

Excellent deposit gathering capabilities

- Over 17,300 deposit holding clients
- Geographically diverse deposit base using extensive branch network and client franchise
- Cross sell opportunity over time – average tenure of deposit holding clients is 17 years

Meaningful earnings source

- Shift to higher-value deposits – 52% DDA in 2012 versus 33% DDA in 2006
- Deposits will have material value when interest rates rise
- Mitigated NIM compression through disciplined deposit and earnings credit pricing



Outlook

- Minimal impact from expiration of Transaction Account Guarantee coverage on non-interest bearing deposits
- Expect clients to redeploy cash or seek other investments when interest rates rise

Note: Numbers may not sum due to rounding

[1] Includes Community Development Banking and Commercial Term Lending

Average deposits ($B)

Agenda

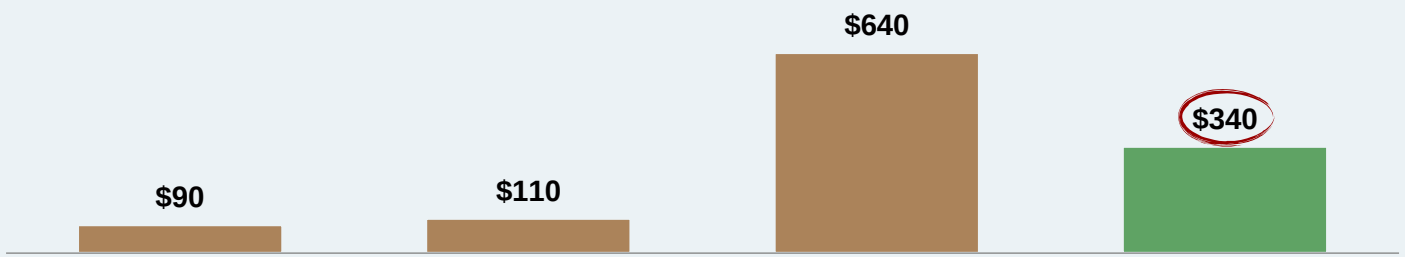
Franchise strength	2
Business performance	5
Growth opportunities	**13**

Core Commercial & Industrial businesses

We continue to grow in our legacy markets and through our core products



1 Expand our client base

- 17,000+ targeted prospects in legacy, non-expansion markets
  - ~700 new Middle Market clients in non-expansion markets in 2012
- Substantial revenue growth potential in legacy markets
  - Weak or distracted competition presents opportunities

2 Deepen relationships

- Up-tiering relationships through disciplined account targeting
- Increase client penetration of core products
  - Grow asset-based lending and equipment finance portfolio
  - Deliver expanded treasury capabilities
  - Increase Commercial Card and Merchant Services penetration of CB client base

Illustrative revenue per relationship[1] ($'000)

	Credit-only relationship[2]	Non-credit relationship[3]	Full relationship[4]	Average 2012
Average products per relationship[5]	**1.8**	**7.0**	**11.6**	**9.1**

Long-term, multi-solution relationships are core to our success

[1] Revenue numbers rounded to nearest $10K; revenue represents full JPM relationship totals and does not incorporate any revenue sharing agreements; excludes CTL clients
[2] Uses credit only; no other product category revenue
[3] No credit relationship; uses one or more products of AM, IB, TS or Card
[4] Uses credit and one or more of AM, IB, TS or Card
[5] Based on actively pursued client relationships; excludes CTL

Middle Market expansion – $1B long-term revenue opportunity

Extending a proven business model and building a long-term franchise

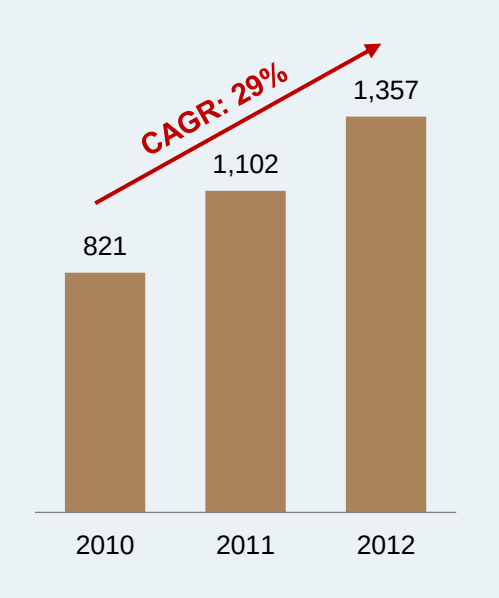
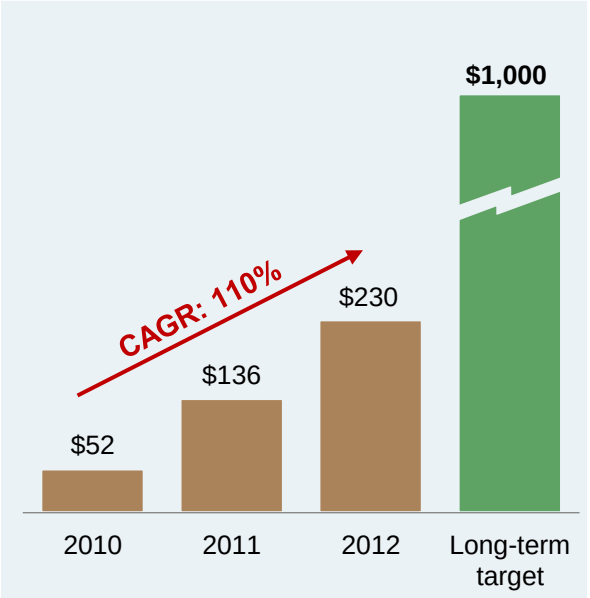
Incremental prospects: ~18,000



or equivalent to ~85% of total existing MM clients

[1] Reflects number of years of Middle Market banker presence in each MSA



Highlights

- Creating scale in 22 new top-50 MSAs and expanding into new high-potential markets
- Disciplined organic growth; only targeting best clients in the market
- JPMC's full capabilities and brand differentiate versus competitors
- Export Chase business model and culture; add to team by hiring the best bankers in each market
- 272 dedicated CB resources; continuing to add bankers, underwriting and service professionals

Total expansion clients

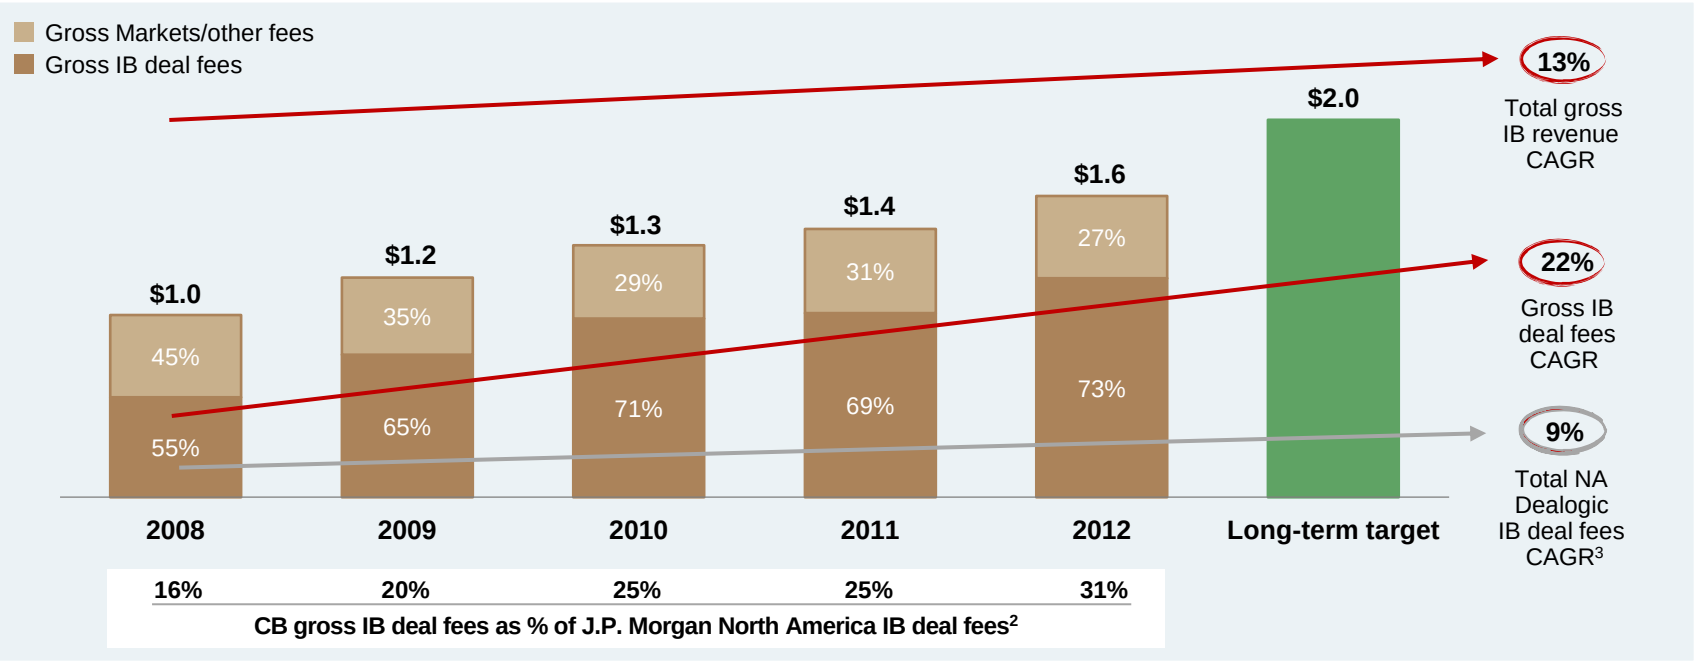
Total expansion revenue ($mm)

Investment banking – $2B long-term revenue opportunity

On track to deliver our growth target

Opportunity

- Strong partnership with leading investment bank
- ~2,400 CB clients and prospects jointly covered with IB bankers
- Middle Market clients
  - Increasing penetration nationally



Strategy

- Syndicated & Leveraged Finance
  - Continuing to strategically expand lead bookrunner roles
- M&A / Corporate Finance Advisory
  - Continuing build-out of dedicated, regionally-focused IB teams

2012 highlights

- Record gross IB revenue up 12% YoY despite market headwinds
  - IB deal fees are primary growth driver
- Record number of clients generating fees over $5mm
- More clients using multiple IB products

CB investment banking revenue (gross)[1]

[1] Represents the total revenue related to investment banking products sold to CB clients
[2] Calculated based on gross domestic IB revenue for SLF, M&A, Equity Underwriting, Bond Underwriting
[3] Source: Dealogic

International – $500 million long-term revenue opportunity

Delivering international banking solutions locally and differentiating from the competition

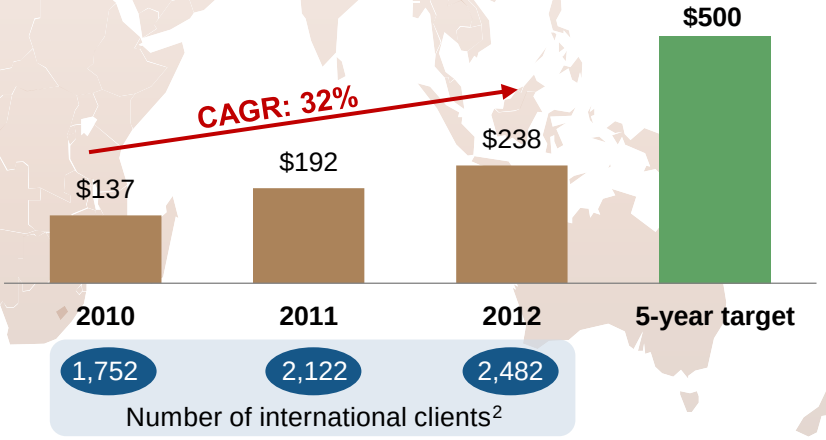
Small and mid-sized businesses are expanding overseas

- 58% of Chase Middle Market clients are active in global markets, up from 43% in 2011[1]
- 26% have operations in foreign countries today[1]
- Clients are expecting overseas revenue and activity to increase in 5 years[1]

We are best positioned

- Our global solutions delivered locally is a key differentiator
- J.P. Morgan platform in 59 countries and growing
- Leveraging CIB's capabilities and global scope
- Dedicated local coverage of CB clients in major foreign markets for lending, cash management, FX and trade finance

Continue to make progress



- Double digit growth in international revenue, loans and deposits between 2010 and 2012
- Adding bankers and expanding CB client coverage in major foreign markets
- Investing in dedicated CB client support infrastructure globally

Mid-sized companies aiming high in global expansion

Select responses of mid-sized U.S. companies from KPMG 2012 global expansion survey[3]

CB overseas revenue growth ($mm)

[1] Chase Middle Market Business Leaders Outlook survey, March 2012

[2] Denotes U.S. multinational clients with overseas revenue; periods prior to 2012 have been restated to conform with current presentation

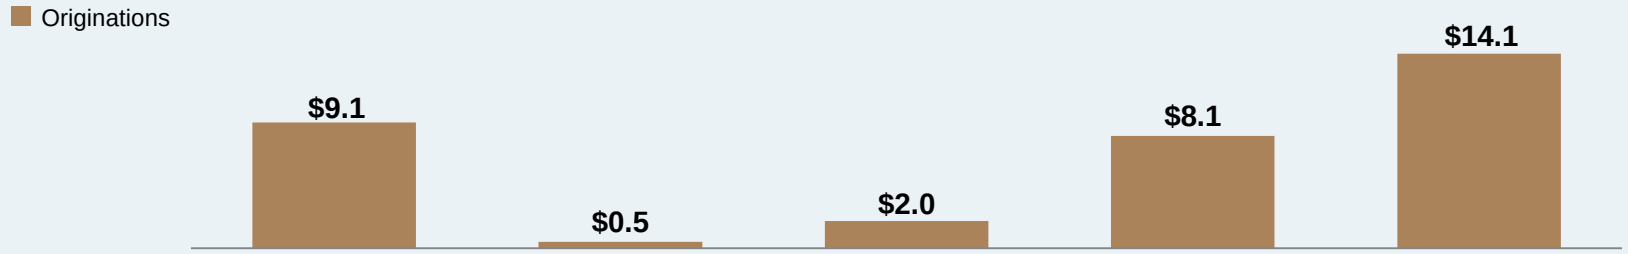
[3] Source: KPMG survey *Global Rewards Within Reach*, September 2012; conducted among 1,150 U.S. companies with annual sales generally between $200 million and $1 billion that have sold a product or service in a foreign market in the previous year

Commercial Term Lending

A sizable and profitable business with record originations in 2012

We acquired a valuable franchise

- #1 U.S. multifamily lender since 2008[1]
- Proven business model
- Strong profitability
- Profitable through-the-cycle



Invested in the business since acquisition

- Improved underwriting process
- Expanded in key markets
- Invested in platform and people
- Improved client response times

Focus on an attractive asset class

- Multifamily fundamentals remain favorable
- Core target markets; stabilized properties
- Average new loan size of $1.8mm[2]
- Strong underwriting standards for new originations

CTL originations have returned to pre-downturn levels ($B)

	2008	2009	2010	2011	2012
Portfolio size	$36.9	$36.2	$37.9	$38.6	$43.5
Weighted avg. LTV[3]	55%	51%	60%	62%	63%

[3] Reflects weighted average LTV and DSC of originations held for investment
[4] 2008 overhead and net charge-off ratios reflect 4Q only

Real Estate Banking

Strategy remains unchanged – Asset quality over absolute scale

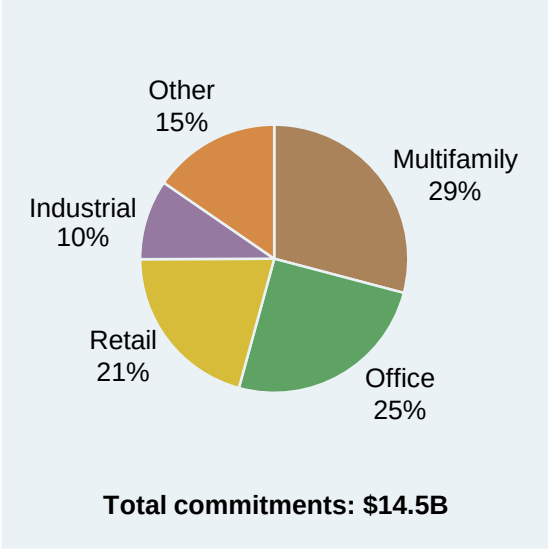
Attractive opportunity

- Strong overall market fundamentals
- Debt markets are open and active
- ~$1.7T in CRE debt maturities expected for 2013–2017[1]
- Capacity to grow CB portfolio

Top tier client base

- Relationships with over 500 high-quality developers and investors
  - Well-diversified portfolios
  - Broad product needs
  - Long-term relationships
- Dedicated TS and IB coverage teams

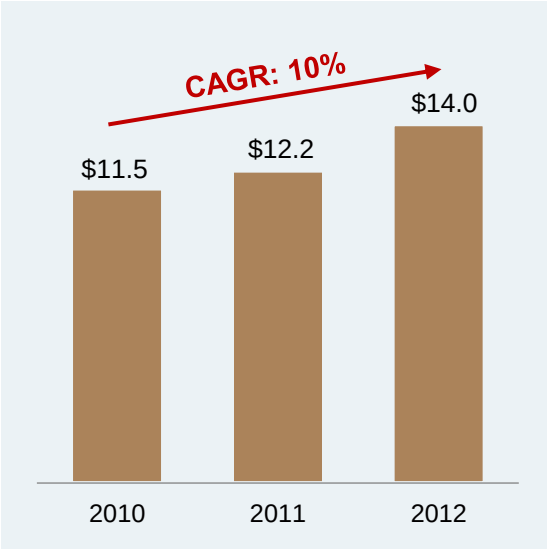
Strong risk discipline and portfolio quality



- Maintain underwriting standards
- Continuously monitor market fundamentals
- Low leverage and strong debt service coverage levels
- Well-diversified across core markets
- Limited construction risk

Targeted, market sensitive growth

Commitments and originations ($B)



2012 commitments by industry

Total commitments: $14.5B

Outlook

Our financial targets remain the same

		Long term target	2012 result	2010-2012 CAGR	
Key revenue growth initiatives	Middle Market expansion	**$1.0B**	**$230mm**	110%	Making progress towards long-term revenue goals
	Investment Banking[1]	**$2.0B**	**$1.6B**	9%	
	International	**$500mm**	**$238mm**	32%	
Overhead & credit costs	Overhead ratio	**35%**	**35%**	Maintaining expense and risk discipline	
	Through-the-cycle net charge-offs	**0.50%**	**0.03%**		
				2012 pro forma[2]	
Returns	Return on equity	**20% +/-**	**28%**	20%	Allocated capital increasing by 42% to $13.5B

[1] Reflects gross investment banking revenue
[2] Illustrative ROE calculated based on $13.5B in common equity; CB common equity increased from $9.5B to $13.5B on 1/1/2013

Common equity and returns

We should continue to generate solid returns, even with higher capital

ROE

Common equity ($B)	$5.7	$6.5	$7.3	$8.0	$8.0	$8.0	$9.5	$13.5[1]

Our overall returns are substantially enhanced by:

Competitive advantage

- ✓ Cost structure
- ✓ Credit cost performance
- ✓ Valuable deposit base
- ✓ Breadth of non-lending capabilities
- ✓ Cross-LOB revenue and expense synergy

Value differentiators

- ✓ Our brand
- ✓ Our scale and branch presence
- ✓ The quality of our bankers and industry insight
- ✓ Our fortress balance sheet

Future return on investments

- ✓ New relationships will continue to grow in profitability
- ✓ Market penetration with key non-lending services will increase returns over time

Market-driven upside, if

- ✓ Business confidence strengthens
- ✓ Deposit spreads improve
- ✓ Utilization increases with client activity

[1] Reflects attributed common equity effective 1/1/13

Commercial Banking

Wrap up

Excellent client-facing franchises

- ~ 23,000 corporate, state, municipal, financial institution and non-profit clients, and ~ 36,000 real estate clients, owners and investors
- Bankers, underwriters and service teams in 125 locations across 29 states, D.C. and 13 major international cities delivering global capabilities locally
- Full service client-driven model delivers unique solutions and global connectivity to our clients

Competitive advantages

- Carefully selected clients
- Local knowledge and delivery, global reach
- Broad range of solutions
- Supported by the entire JPMorgan Chase platform
- Seasoned and focused team

Strong returns and growth opportunities

- Consistent, repeated strong financial performance
  - Steady growth – 10% revenue and 17% net income CAGR since 2006
  - Strong returns – ROE of 20% +/- through-the-cycle
  - Risk discipline – NCOs below 50bps through-the-cycle
- Steadily investing in the business with long term view
- Tremendous opportunity in high potential markets

Industry leading capabilities and track record

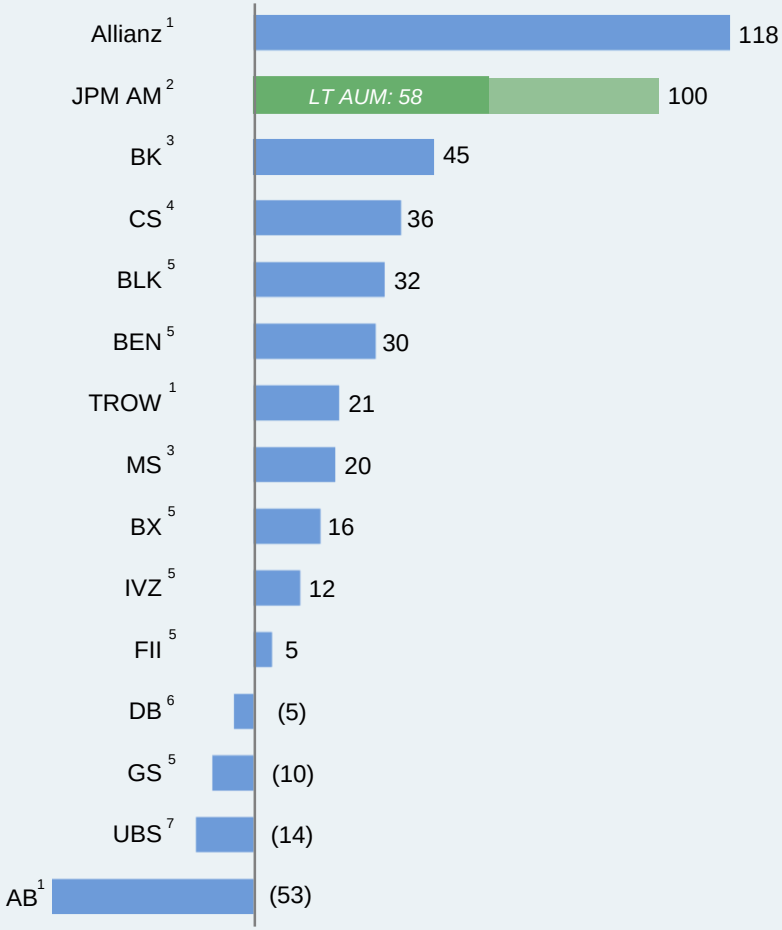
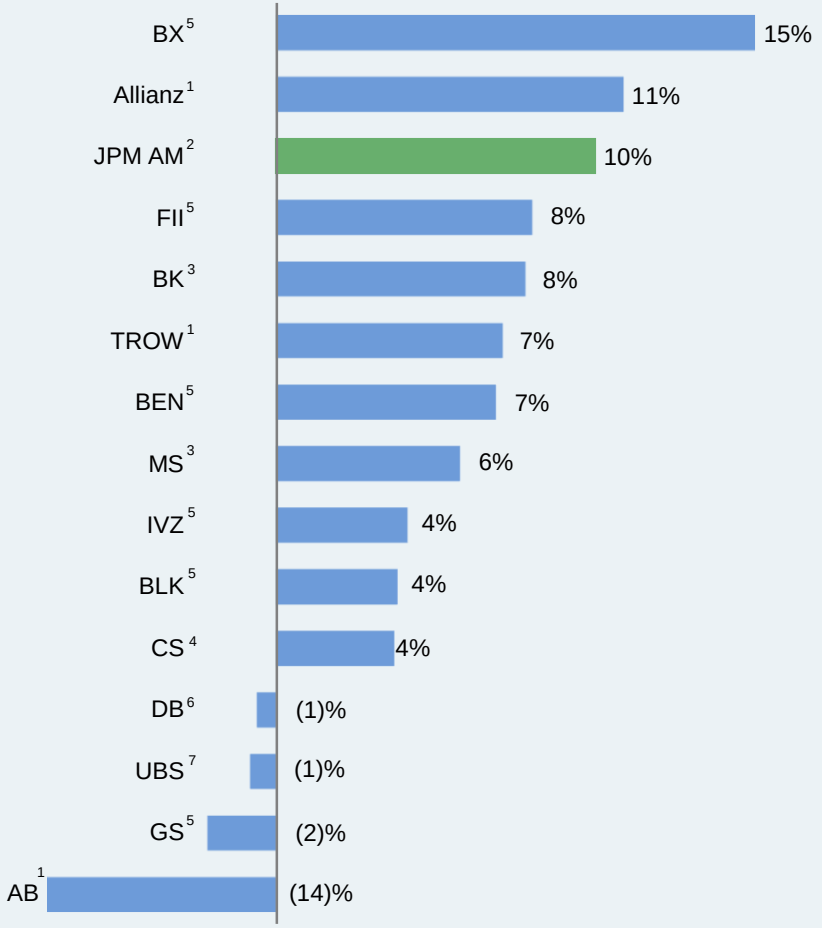
Partnership with CWM further adds to growth trajectory

Assets managed for CWM clients ($B)

CWM net new investment flows ($B)



Highlights



- **AM and CWM to cover U.S. wealth continuum**
  - CWM focuses on investment opportunity in the branches
  - One single affluent business – integrating ~77,000 U.S. PB affluent clients ($38B of assets) with CWM
  - Client referrals seamless between CWM and AM
- **Clients benefit from best-in-class investment and operating platform**
  - U.S. PB platform and investment expertise available for CWM clients
  - Fastest growing CWM products are managed accounts that leverage expertise of AM Solutions
- **CWM important distribution channel for U.S. Funds**
- **Accelerated growth expected going forward through CPC expansion**

Strong investment performance enables outsized flows

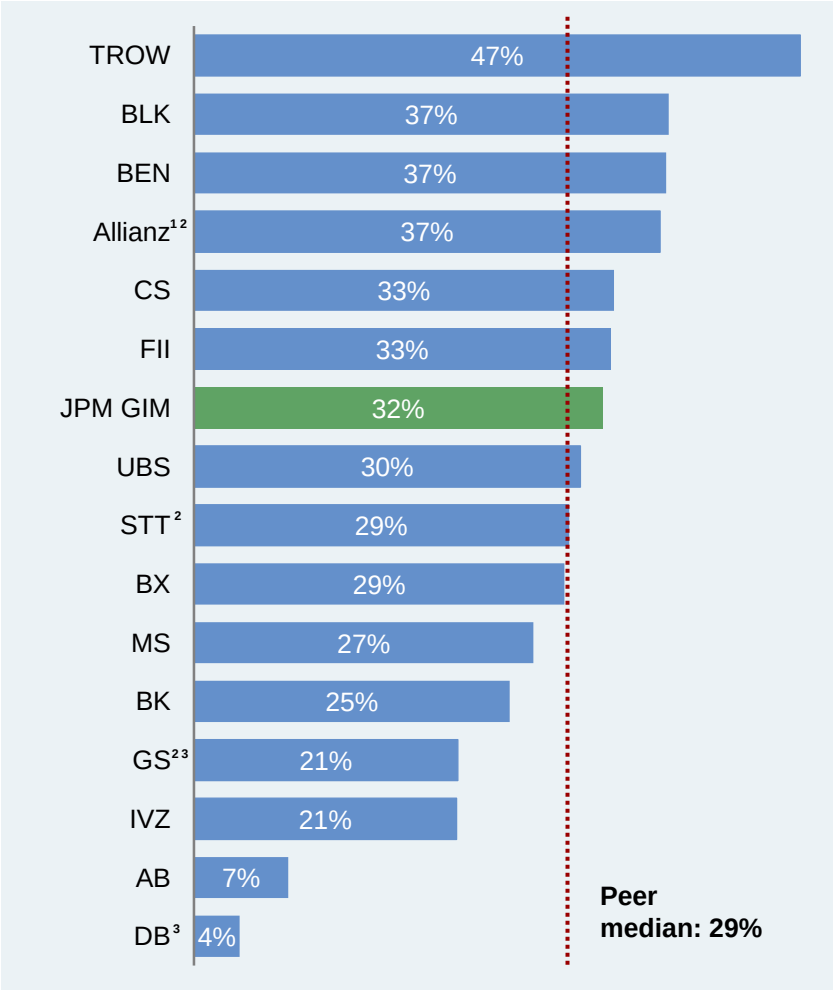
ASSET MANAGEMENT

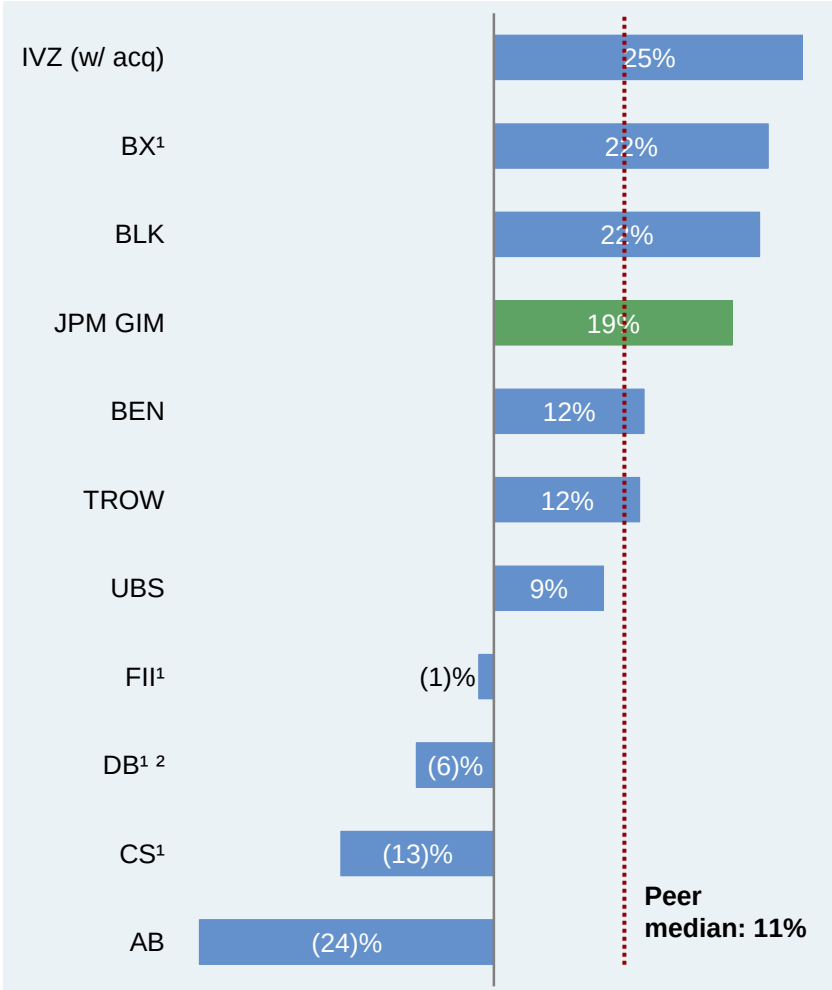
Expansion investments in 2010–2012 will fuel future growth and increase margins

Total AM P&L ($B)



Commentary

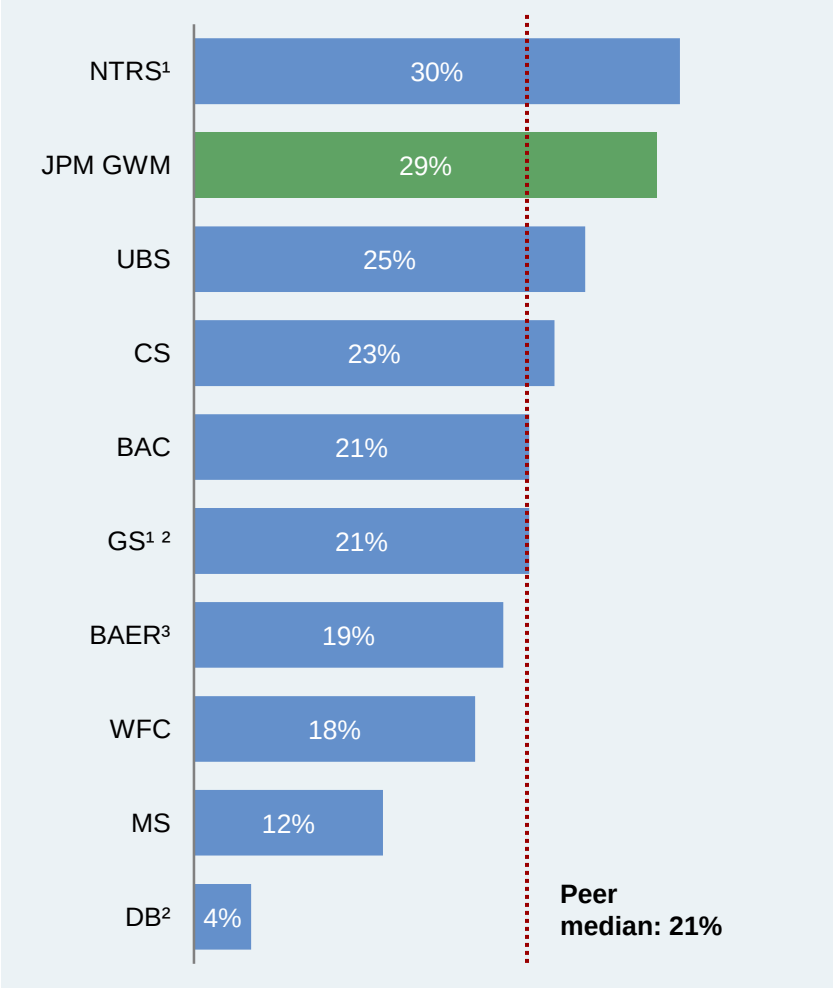
- Hired ~800 client advisors and investors across GWM and GIM
- Launched several new business initiatives in GIM (e.g., DCIS, Insurance)
- Targeting incremental, annual net income impact of ~$600mm
- Continued and accelerated revenue growth from new hires as they approach full productivity
- Expense growth will decline as:
  - Tech/infrastructure investment growth rates come down
  - Expense discipline continues



GIM delivered strong margins while continuously investing

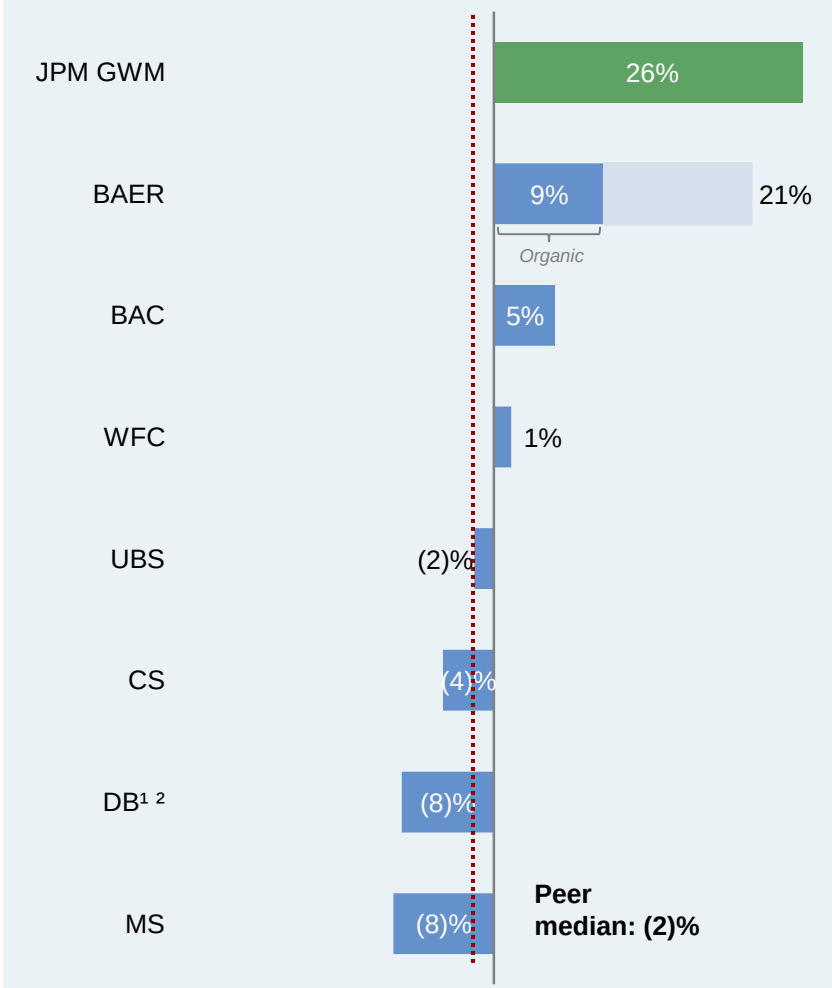
2012 pretax margin

Source: Company filings, J.P. Morgan estimates
Note: Figures shown on an as-reported basis. BX margin figures reflect pretax distributable earnings divided by total revenues
[1] Revenue presented gross of fees and commission expenses to ensure comparability with peers
[2] Has not yet reported segment margin for 2012; LTM through 3Q12 used instead
[3] Wealth Management vs. Investment Management margin split unavailable



3-year total headcount growth

Source: Company filings, J.P. Morgan estimates
Note: Figures as of year end shown on an as-reported basis. Not adjusted for acquisitions or divestitures
[1] Growth rates represent different time periods due to changes in reporting format and/or pending 2012 disclosure: BX (2009–2011); CS (2009–3Q12); DB (2010–2012); and FII (2009–2011)
[2] Wealth Management vs. Investment Management headcount split unavailable



GWM delivered industry-leading margins with unmatched investment levels

2012 pretax margin

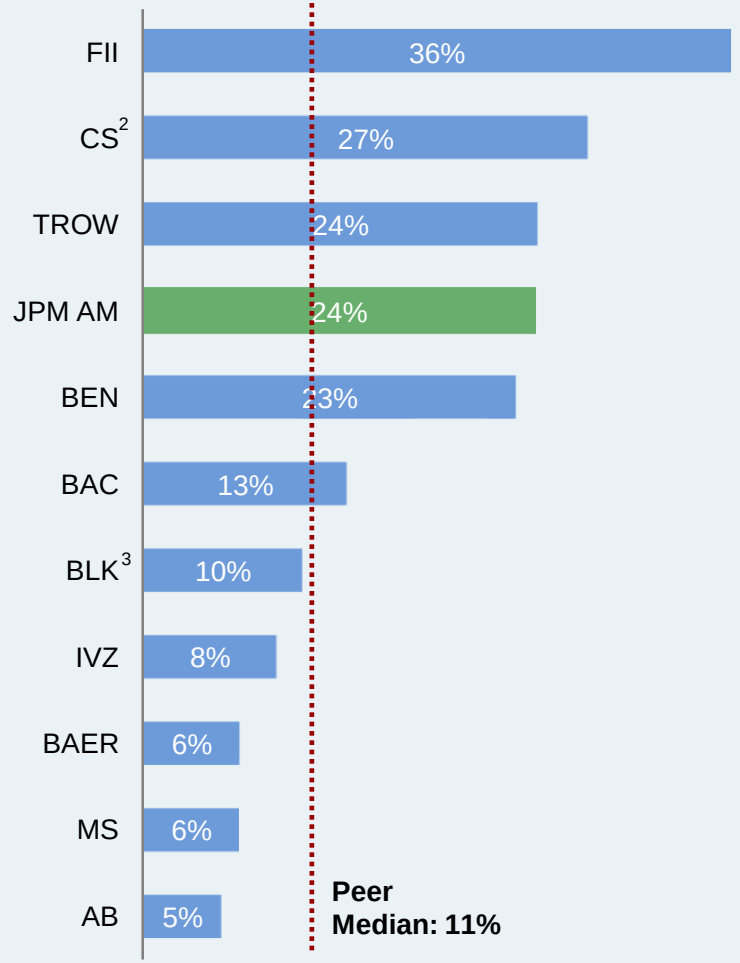
Source: Company filings, J.P. Morgan estimates
Note: Figures shown on an as-reported basis
[1] Has not yet reported segment margin for 2012; LTM through 3Q12 used instead
[2] Wealth Management vs. Investment Management margin split unavailable
[3] Revenue presented gross of fees and commission expenses to ensure comparability with peers

3-year client-facing headcount growth

Source: Company filings, J.P. Morgan estimates
Note: Figures as of year end shown on an as-reported basis. Not adjusted for acquisitions or divestitures
[1] Wealth Management vs. Investment Management headcount split unavailable
[2] DB figure reflects 2-year growth rate due to changes in reporting format

High ROE relative to peers

AM Return on Equity

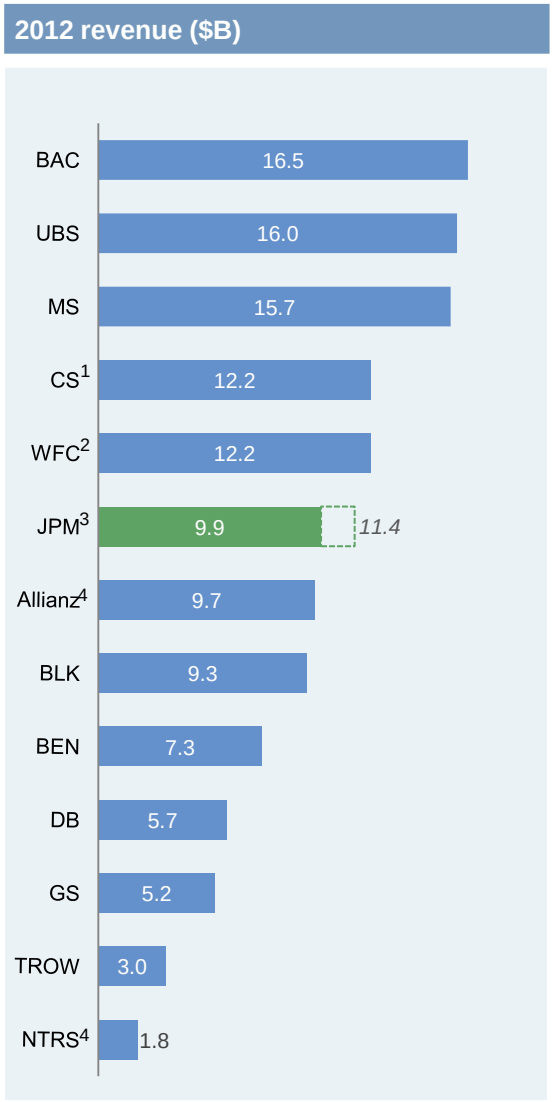


[1] 2012 net income applied to 2013 allocated capital of $9.0B

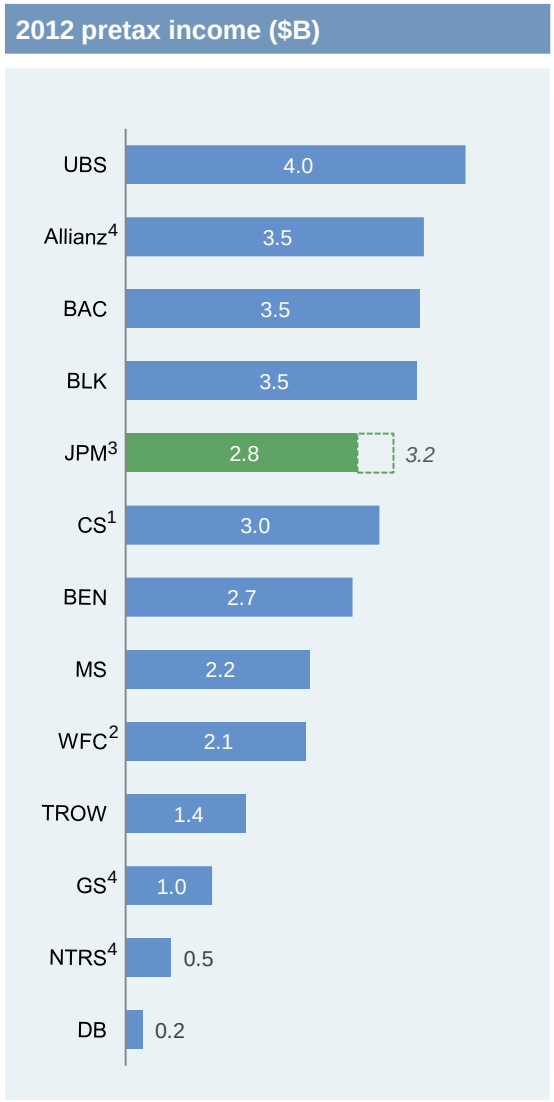
Observations

- Stable ROE despite capital increases and re-investments
- 2012 ROE comparable or better than most peers
- As of 1/13, JPM AM has $9B of allocated capital due to increased corporate allocations and expanding loan book

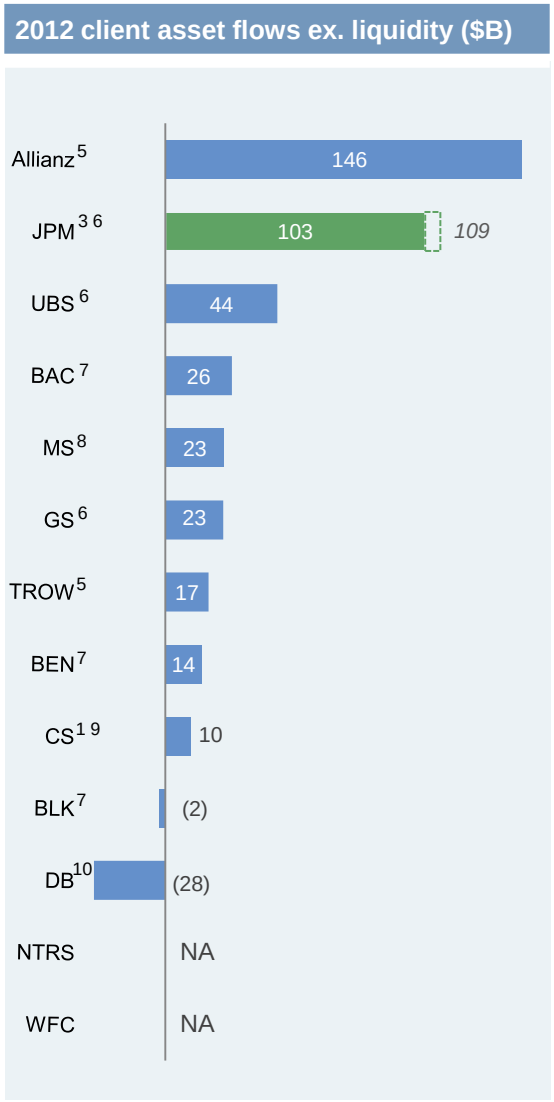
Comparative asset management 2012 ROE[1]



Source: Company filings, J.P. Morgan estimates



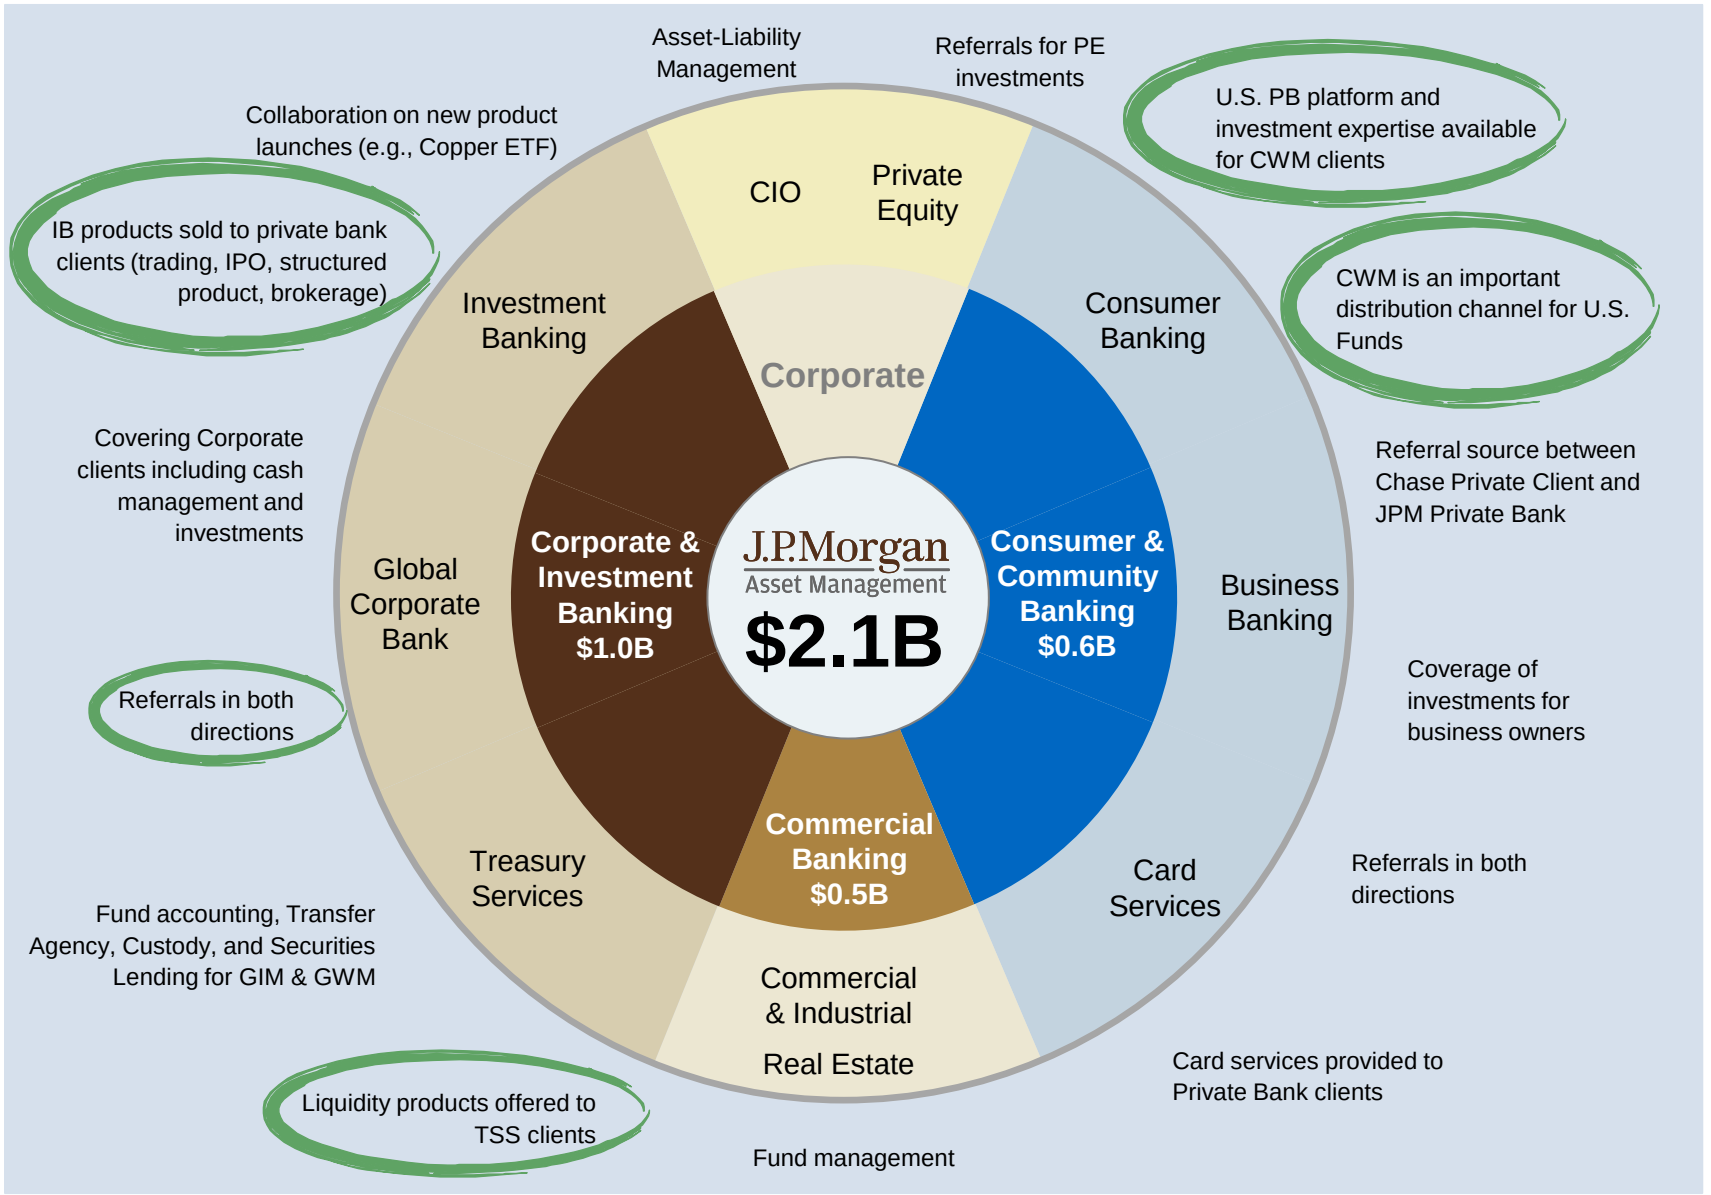
[1] Based on reported capital (including goodwill and intangibles where disclosed)



[2] Pretax income taxed at firmwide Core Results tax rate. Average utilized capital pro rated for pretax earnings of PBWM segment excluding Corporate and Institutional Clients

[3] Uses end of period shareholders' equity as of 9/30/12; 12/31/12 equity not yet reported

Combined Asset and Wealth Management space offers earnings growth potential



Source: Company filings, J.P. Morgan estimates
Note: Allianz, CS, DB, and UBS figures converted at average annual exchange rate
[1] Excludes revenue, pretax income, and client asset flows attributable to Corporate and Institutional Client unit
[2] Excludes Asset Management Group (AMG) which is reported in Wholesale Banking unit. AMG consists of $444B of AUM, of which $112B is accounted for in Wealth, Brokerage and Retirement unit (source: Wells Fargo Wholesale Banking Investor Relations presentation, May 2012)
[3] Includes GIM and GWM with CWM reflecting dashed extension. Client asset flows dashed extension reflects CWM net new investments
[4] Reflects LTM through 3Q12 as 2012 disclosure not yet available. Allianz revenue is presented gross of fees and commission expenses to ensure comparability with peers

Substantial cross-sell with the JPMorgan Chase franchise

~$2B in cross-sell revenue across lines of business

Continued delivery of strong growth and high returns

Key takeaways

- Consistent growth with high margins and ROE
- Strong, long-term investment performance
- Fiduciary culture since 1832
- Diversified by products, channels, and regions
- World's best clients
- Invaluable benefit of being part of JPMC

Future growth

- High-growth areas:
  - First wave of front office hires fully productive
  - Increased flows into strong performing strategies
  - International turnaround and expansion
  - New business initiatives including Insurance, Solutions, Alternatives, and CWM
- Financial targets:
  - Client assets: 7–10% p.a.
  - Revenue: 7–12% p.a.
  - Pretax income: 10–15% p.a.
  - Pretax margin: 30–35%
  - ROE: 25% +

3+ years

Revenue $13B | **Pretax income $4B** | **Client assets $3T**

CORPORATE & INVESTMENT BANK

Mike Cavanagh, Co-Chief Executive Officer Corporate & Investment Bank
Daniel Pinto, Co-Chief Executive Officer Corporate & Investment Bank

February 26, 2013

JPMorgan Chase & Co.

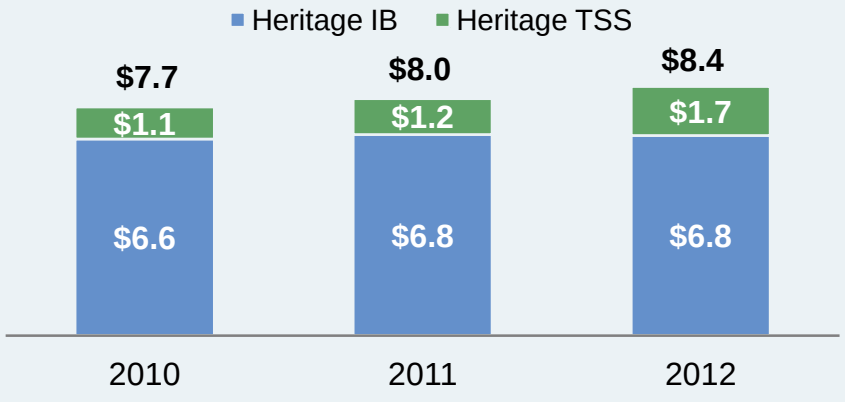
The Corporate & Investment Bank ("CIB") is operating from a position of strength

CIB performance

World class franchise – delivering best-in-class returns with leading market shares
Superior risk discipline and controls
Long-term outlook for capital markets and flow businesses is strong

More leadership positions in banking and markets businesses than any competitor

Banking



- #1 in IB Fees; widened gap to #2
- IB Fees of $5.8B; record debt underwriting
- Record Treasury Services revenue of $4.2B
- Lending revenue of $1.3B

Markets & Investor Services

- #1 in Fixed Income; revenue of $15.4B
- #4 in Equities; revenue of $4.4B
- Securities Services revenue of $4.0B; record $19T in Assets under Custody

CIB delivering strong results

- Revenue: $34.3B (largest in the industry[1])
- Cumulative 3-year earnings of $24.1B

	2010	2011	2012
H-IB	17%	17%	17%
H-TSS	17%	17%	22%
CIB	17%	17%	18%[2]

16% +/- through-the-cycle ROE on increased capital allocation of $56.5B

[1] Based on CIB/IB segment equivalent revenue, excl. DVA

[2] 19% CIB ROE excl. DVA, 15% CIB pro forma ROE based on new allocated capital,16% CIB pro forma ROE on new allocated capital excl. DVA. Throughout this presentation, CIB provides several non-GAAP financial measures which exclude the impact of DVA on: net revenue, net income, overhead ratio, compensation ratio and return on equity. These measures are used by management to assess the underlying performance of the business and for comparability with peers

Agenda

	Page
J.P. Morgan is positioned to maintain leadership in wholesale banking	**2**
Macro trends support long-term attractiveness of global wholesale banking	24
Management priorities for 2013	32
Wrap-up	44

CIB is positioned to maintain our leadership in wholesale banking

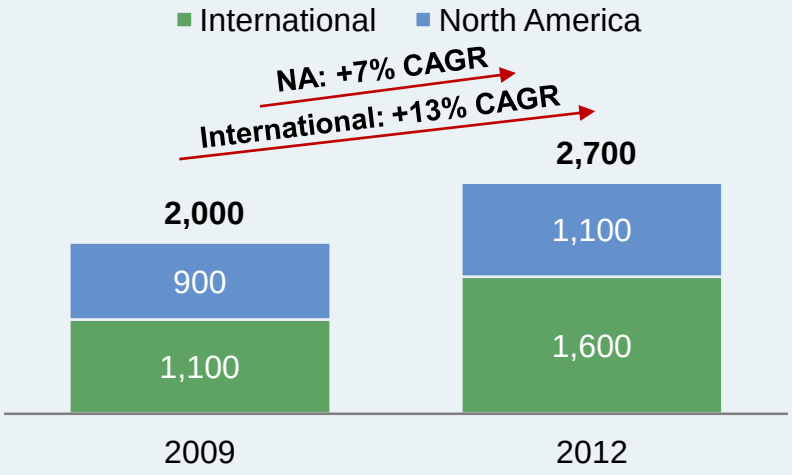
CIB possesses all of the best-in-class and global elements required to serve our clients

1. **Client-driven franchise** – CIB organization aligned to best serve the full set of needs of corporate and investor clients
2. **Economies of scale** – Scale and operating efficiency afford us the ability to continue to invest in and expand our platform
3. **Fortress balance sheet** – Being well-capitalized with stable funding sources gives us a durable business model and makes us a preferred and resilient counterparty
4. **Completeness of capabilities and global reach** – Leadership position in each business helps us deliver better solutions to clients
5. **Stable earnings** – Flow-based markets franchise generates very stable, consistent earnings with lower risk

6. ***Positioned to generate strong through-the-cycle returns on the stand-alone risk-based capital needs of the business***

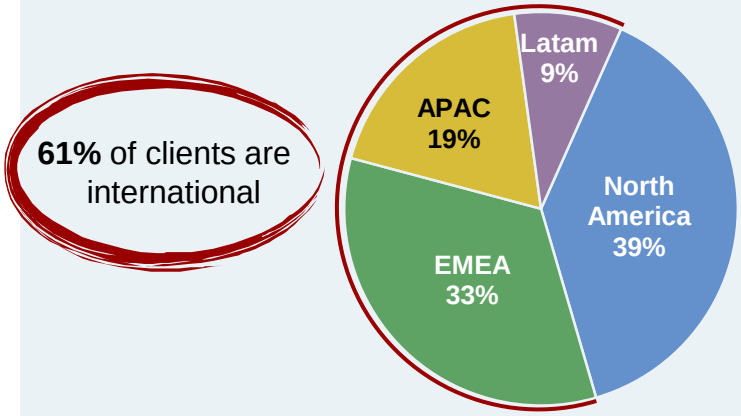
1

Our client franchise is large and diverse with deepening global relationships



Client-driven franchise

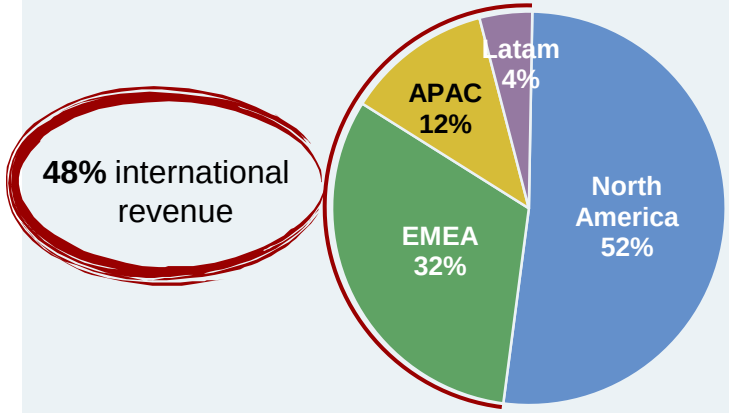
J.P. MORGAN IS POSITIONED TO MAINTAIN LEADERSHIP IN WHOLESALE BANKING



Highlights

- ~7,600 clients generating revenue >$50K
- ~22,000 accounts
- ~2,700 clients generating >$1mm in revenue
  - International business growing the fastest
- 61% of our clients are outside the U.S.
- 48% of our revenues are outside the U.S.

Significant clients (>$1mm in revenue)



Clients with >$50K in revenue (2012)

2012 CIB clients: ~7,600

CIB revenue by region (2012)

2012 CIB revenue, excl. DVA: $35.3B

1 We are recognized as best-in-class across all businesses

Client-driven franchise

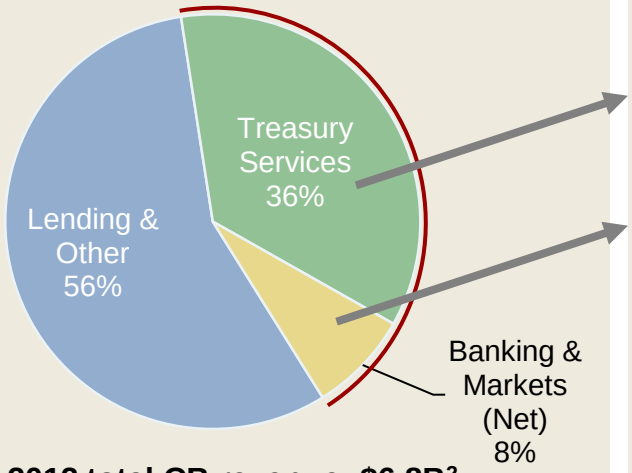
1 CIB is organized to best serve the full set of needs of corporate and investor clients

Client-driven franchise

- *Ability to leverage risk capital across transaction, commercial, and investment banking solutions*
- *Better combination of top-tier capabilities globally than almost any competitor*



- *No competitor combines a best-in-class Markets business with a top tier Investor Services business*

J.P. MORGAN IS POSITIONED TO MAINTAIN LEADERSHIP IN WHOLESALE BANKING

1 Leveraging the broad client franchise of JPMC – Resulting in significant benefits to all businesses

Client-driven franchise

J.P. MORGAN IS POSITIONED TO MAINTAIN LEADERSHIP IN WHOLESALE BANKING

$5.2B CIB[1]	2012 CB revenue by product	2012 CB cross-sell highlights
CB **$4.0B**	 **2012 total CB revenue: $6.8B[2]**	■ **44%** of CB revenue comes from CIB products ■ **$2.4B** of gross revenue from CB clients using Treasury Services (TS) products ■ **$1.6B** of gross IB revenue from CB clients ■ $1.1B from Banking & $0.4B from Markets ■ **23,000** CB Commercial & Industrial clients ■ 20,000+ use TS products[3] ■ ~1,000 use IB underwriting/advisory services[3]
AM **$1.0B**	■ Asset Management is an important client of CIB's research, execution, custody and fund services ■ Private Bank is a key distribution channel for CIB equity offerings and a source of referrals for investment banking mandates ■ CIB is a steady source of client referrals for the Private Bank	
CCB **$0.2B**	■ Strong linkages between Chase Mortgage and CIB Fixed Income ■ Our CIB Corporate clients benefit from processing through Chase Paymentech	

Note: Totals may not sum due to rounding

[1] Reflects gross CIB cross-LOB revenue for FY2012

[2] Treasury Services reflects gross revenue, Banking & Markets reflects net revenue

[3] Client count for TS products and IB underwriting/advisory includes CB Commercial & Industrial and select Commercial Real Estate clients that are not included in the 23,000 Commercial & Industrial figure

2

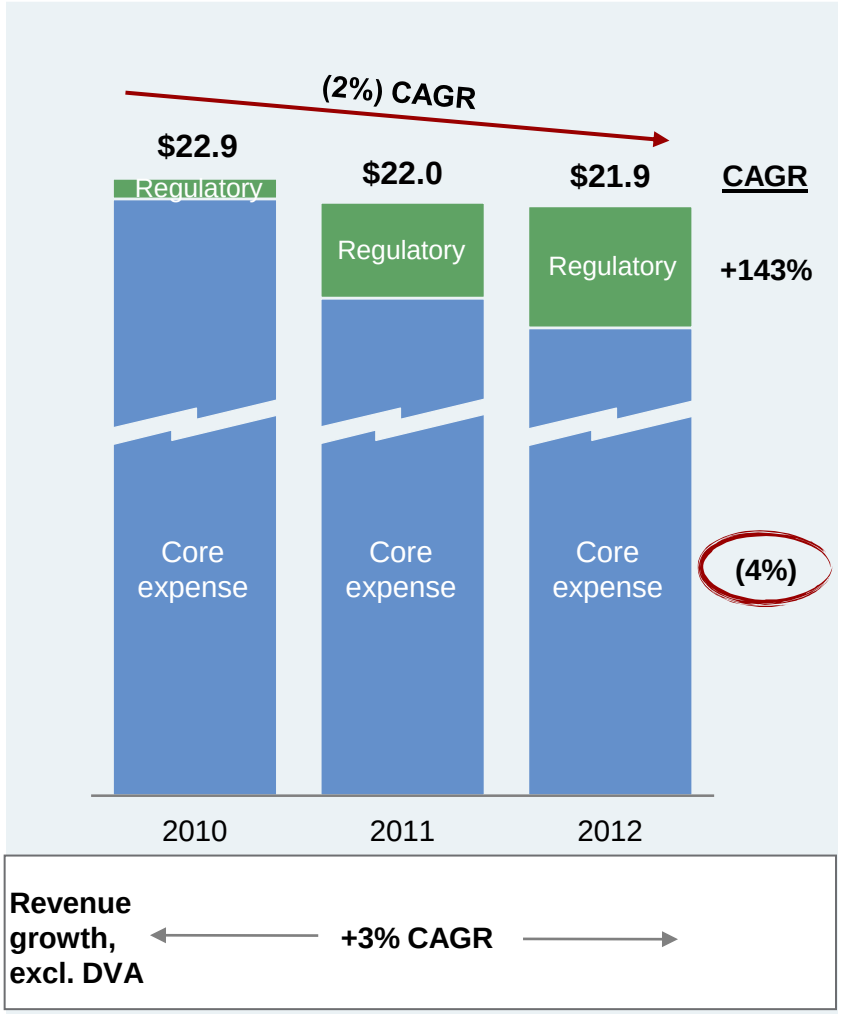
We have achieved scale that allows for efficiency and ongoing investment

Economies of scale

J.P. MORGAN IS POSITIONED TO MAINTAIN LEADERSHIP IN WHOLESALE BANKING

Trading	■ $1T+ of securities traded & settled daily ■ 125mm+ equity shares traded daily ■ 60K+ Fixed Income trades daily
Processing	■ $980T of USD payments; $4T average daily ■ #1 USD wire clearer with 20% share of Fedwire and CHIPS[1] ■ $19T in Assets under Custody
Lending & Capital Raising	■ In 2012, arranged $650B of loans & commitments for clients ■ $500B of debt and equity raised for clients in 2012
Resources & Footprint	■ 52,000+ employees (11,700+ technology professionals) ■ Conduct business in 100+ markets ■ Local presence in ~60 countries and growing

Scale gives us a natural efficiency advantage over smaller competitors

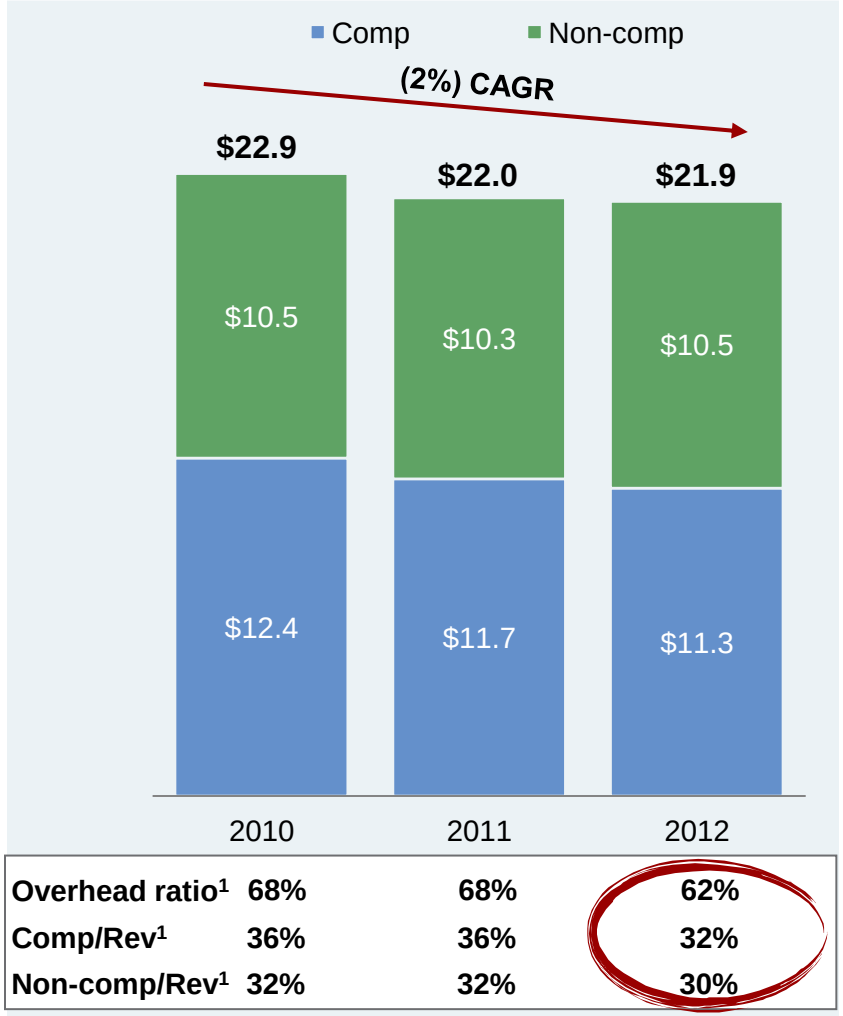


[1] Clearing House Interbank Payments System

2 Our disciplined focus on expenses is ongoing…

Economies of scale

J.P. MORGAN IS POSITIONED TO MAINTAIN LEADERSHIP IN WHOLESALE BANKING



CIB expense trend[1] ($B)

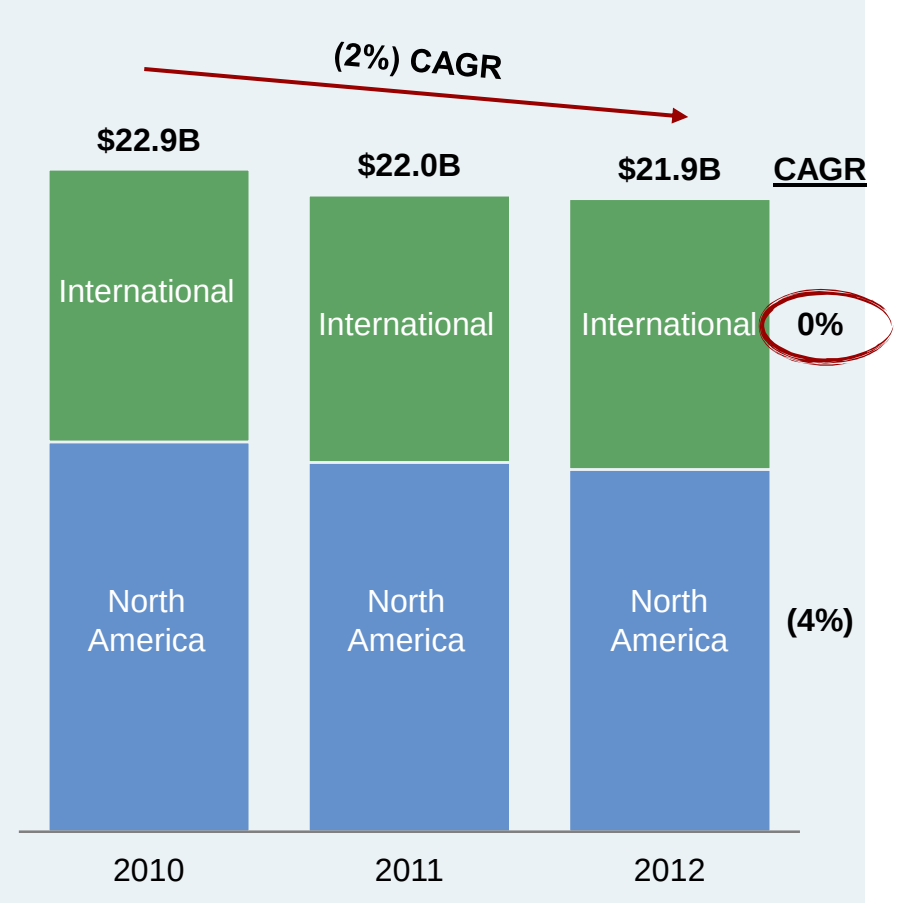
Revenue growth, excl. DVA	←	**+3% CAGR**	→

Note: Core expense scale broken for illustrative purposes
[1] Regulatory assessments include FDIC, UK Bank levy, FSA and other regulatory fees

CIB comp and non-comp expense ($B)

	2010	2011	2012
Overhead ratio[1]	**68%**	**68%**	**62%**
Comp/Rev[1]	**36%**	**36%**	**32%**
Non-comp/Rev[1]	**32%**	**32%**	**30%**

[1] Overhead, comp/revenue and non-comp/revenue ratios exclude DVA impact. Comp/revenue and overhead ratio in 2010 also excludes impact of UK Bank Payroll Tax



2

…and allows us to continue to commit resources to building a strong franchise

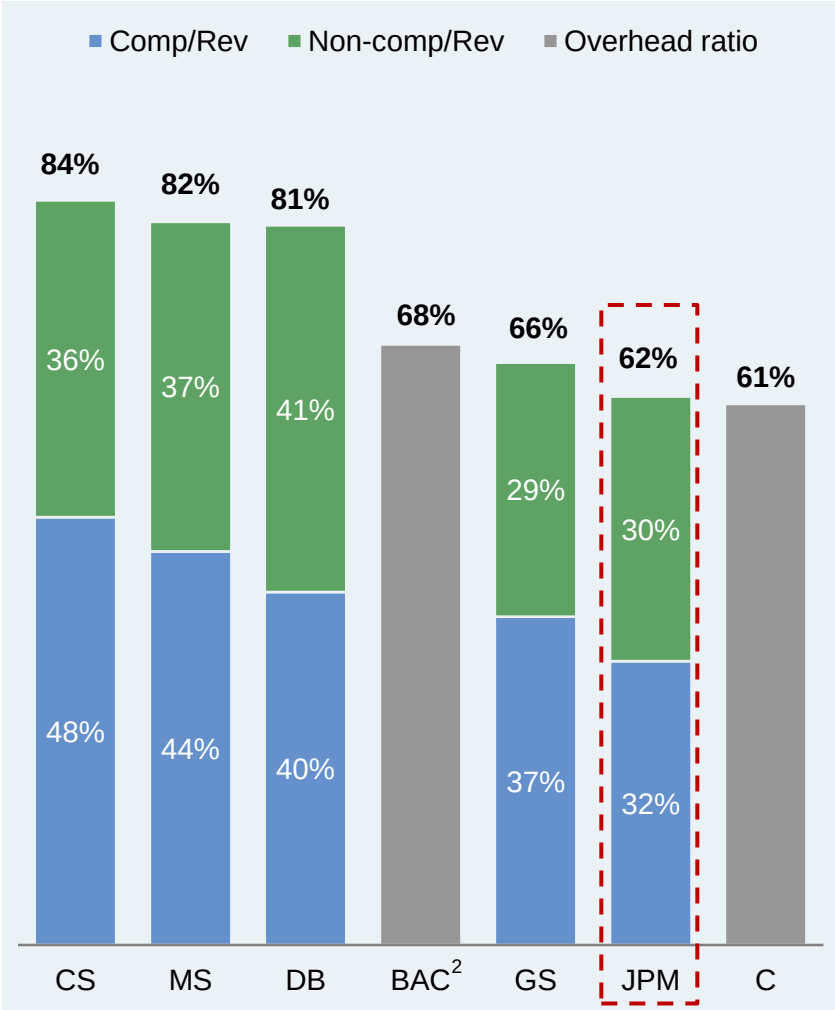
Economies of scale

J.P. MORGAN IS POSITIONED TO MAINTAIN LEADERSHIP IN WHOLESALE BANKING

Rebalancing expenses towards international opportunities…

…and other priorities

- Attracting the best talent
- Maintaining pay for performance culture
- Expanding businesses & products globally (e.g., Prime Brokerage, Commodities)
- Building leading electronic trading capabilities
- Funding best-in-class technology
- Investing in robust controls



2

We expect to continue to be able to deliver market leading margins

Economies of scale

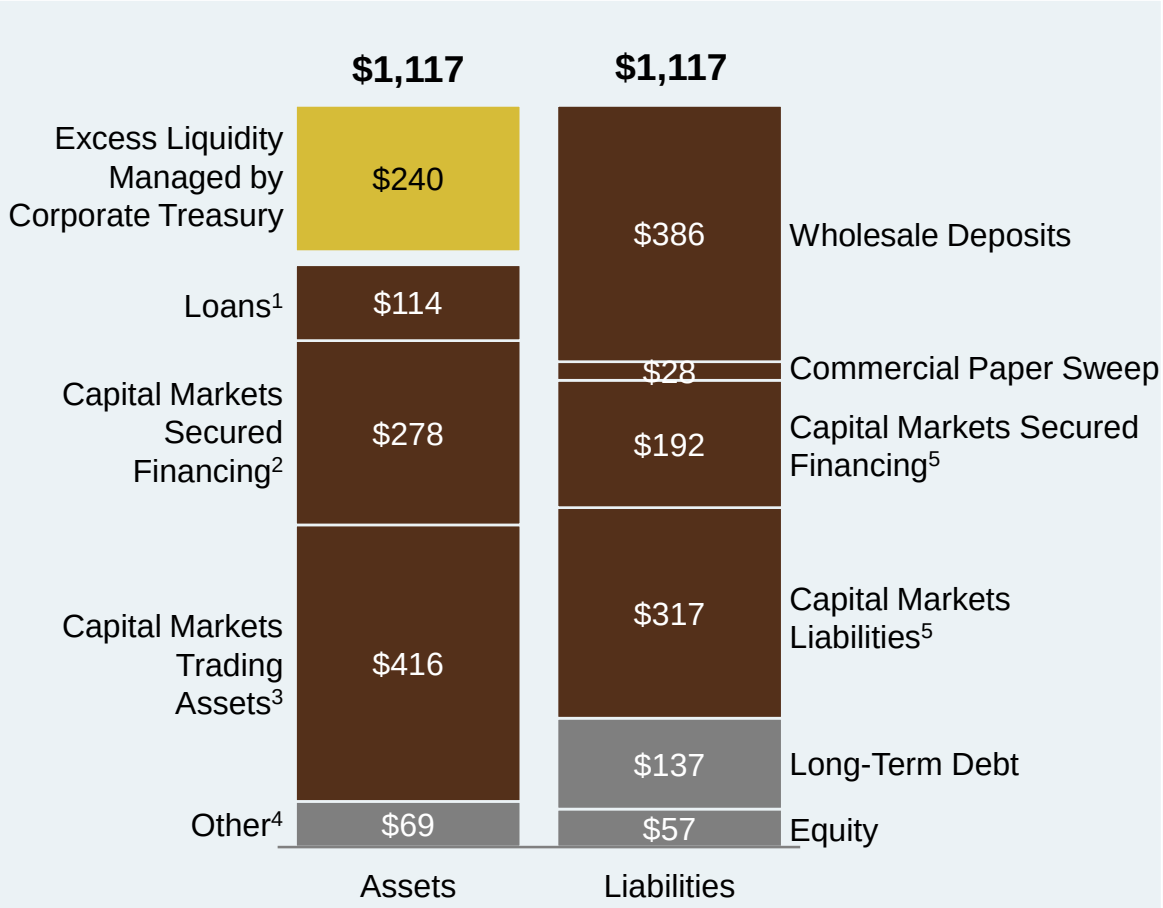
J.P. MORGAN IS POSITIONED TO MAINTAIN LEADERSHIP IN WHOLESALE BANKING

2012 overhead ratio vs. peers[1]

[1] Represents CIB/IB equivalent segments of competitors, excluding the impact of DVA
[2] Global Markets only

Outlook

- Ample ongoing efficiency opportunities
  - Heritage IB and Heritage TSS efforts (SRP, Value for Scale, WSS expense improvements, etc.)
  - New CIB opportunities (e.g., rationalize technology platforms, streamline coverage teams, improve client on-boarding, extract support area synergies, etc.)
- Continued support of new growth initiatives and investments
- We expect to maintain our compensation philosophy and approach
- Maintain our leading overhead ratio



3

We have a strong balance sheet and natural sources of funding from wholesale deposits

Fortress balance sheet

J.P. MORGAN IS POSITIONED TO MAINTAIN LEADERSHIP IN WHOLESALE BANKING

4Q12 pro forma balance sheet ($B)

Note: Reflects adjustments to 4Q12 spot balance sheet to reflect CIB capital realignment of $56.5B. Reported 4Q12 CIB allocated capital is $47.5B

[1] Net of allowance for loan losses

[2] Includes resales, securities borrowed and cash and due from banks from CIB

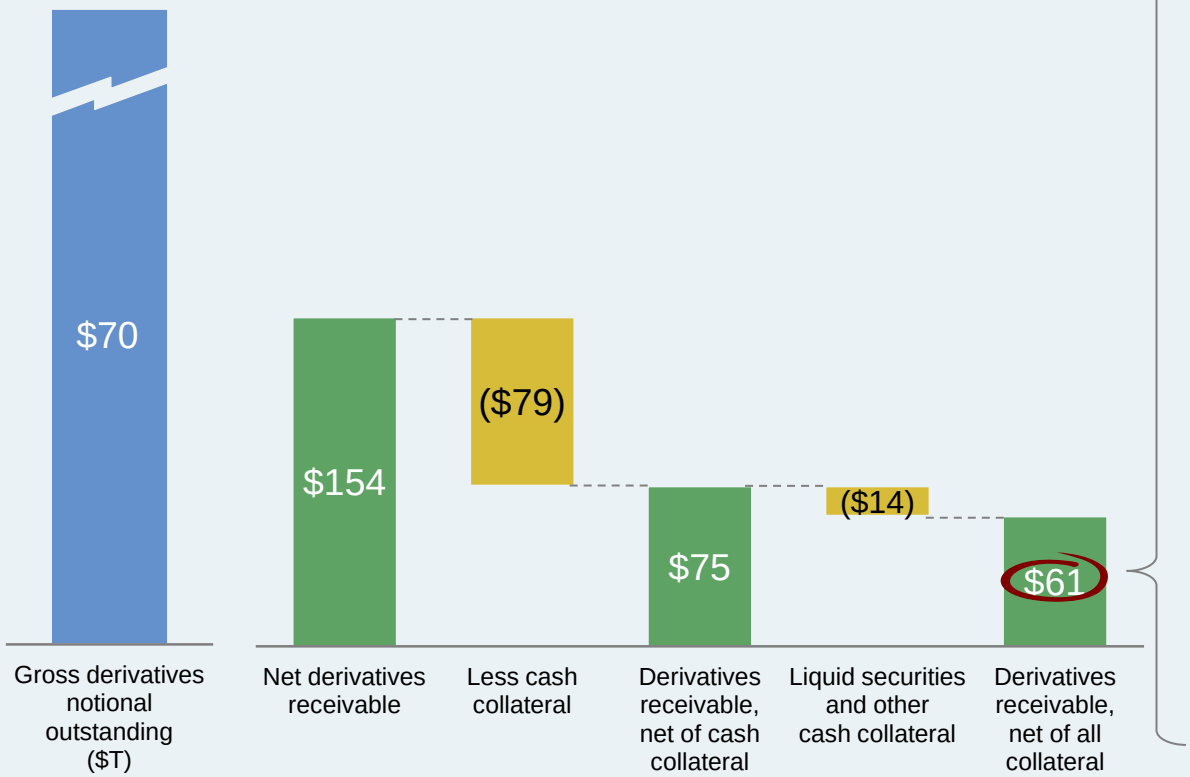
[3] Includes CIB trading assets and derivatives receivable

[4] Includes other assets, other intangible assets, MSR, premises and equipment, accrued interest and accounts receivable and non-CIB trading assets

[5] Includes trading liabilities, Fed funds purchased and securities loaned or sold under repurchase agreements, VIEs, other borrowed funds and other liabilities all in CIB and derivatives payable

Highlights

- Substantial excess wholesale deposits are used to create a strong liquid asset pool (managed by Corporate)
- Allocated equity supports a 9.5% pro forma Basel III Tier 1 Common ratio

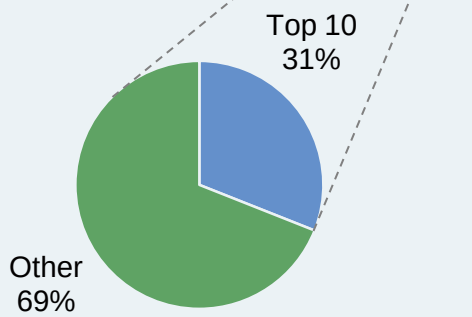


3

Our derivatives exposure is client-driven and high quality

Fortress balance sheet

J.P. MORGAN IS POSITIONED TO MAINTAIN LEADERSHIP IN WHOLESALE BANKING



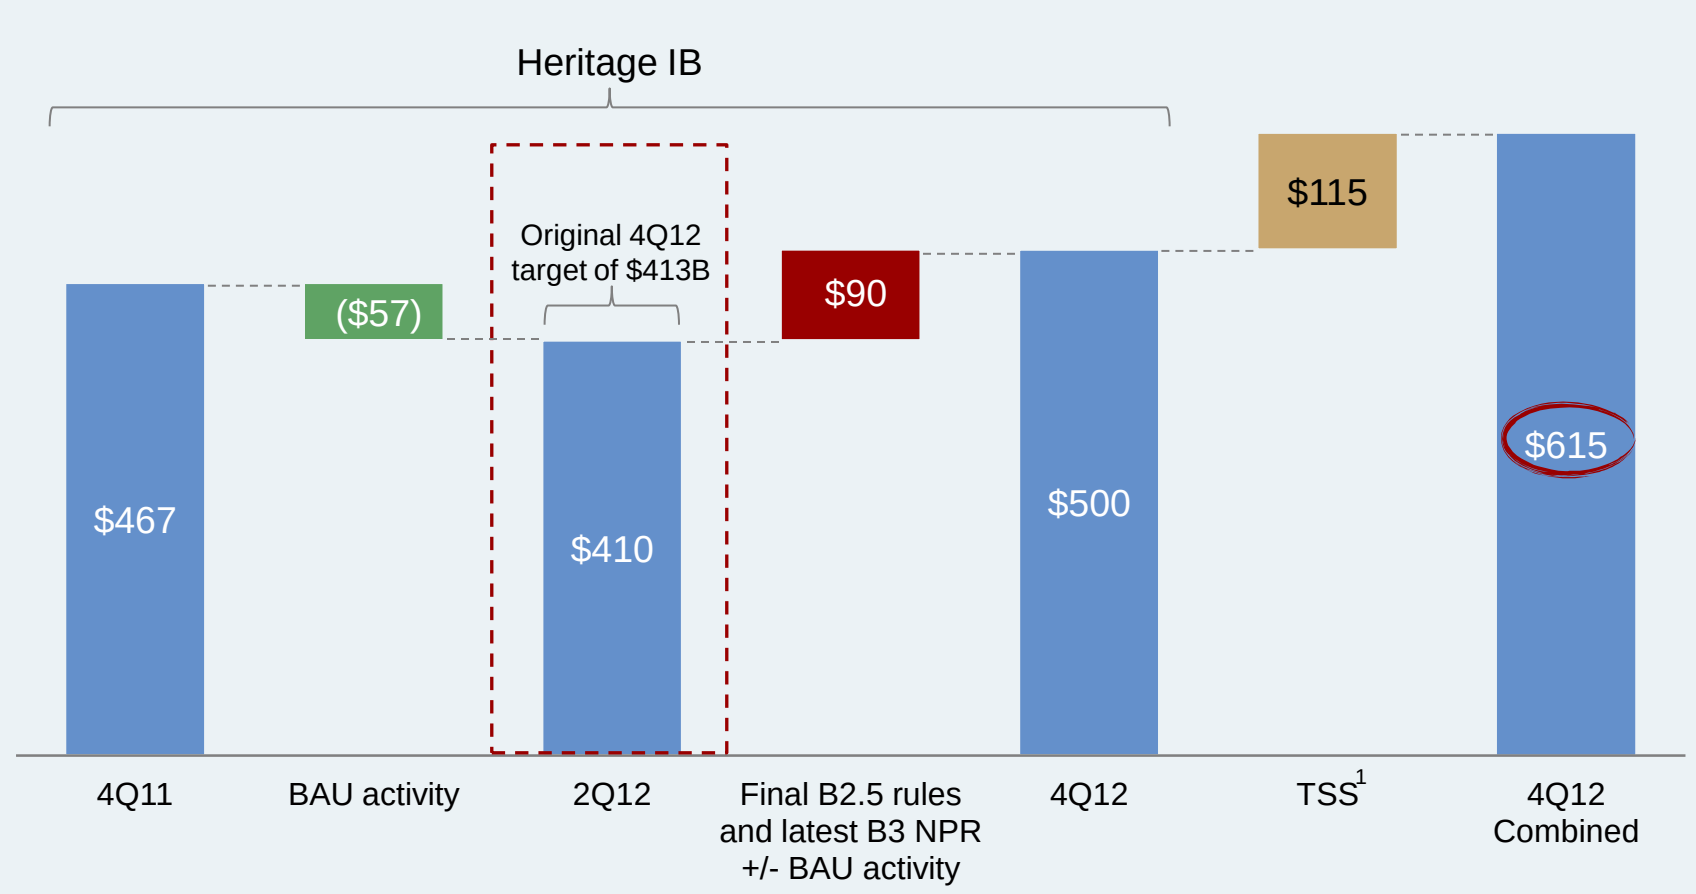
Firmwide derivative receivables, net (4Q12; $B unless otherwise specified)

Counterparty credit exposure

Maturity (years)	4Q12
Less than 1 year	22%
Between 1 and 5 years	41%
Greater than 5 years	37%

Risk Rating	4Q12
Investment grade	82%
Unrated or Non-investment grade	18%

Total: $11B



3

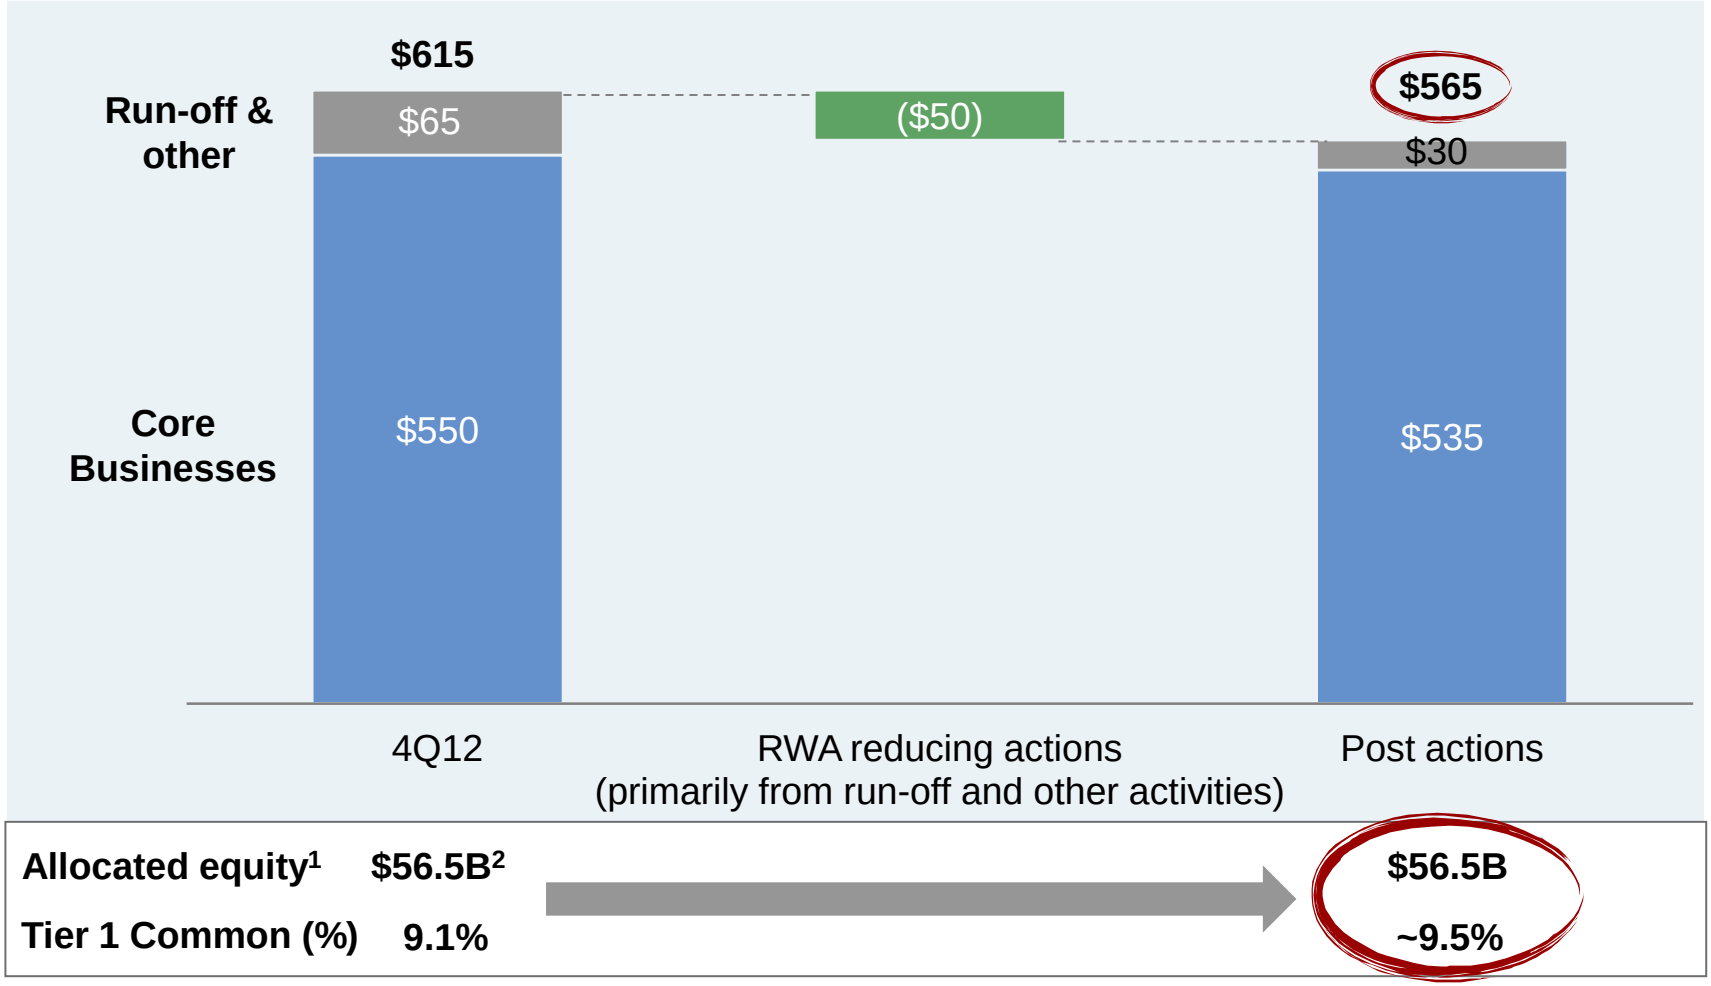
We achieved our 2012 RWA targets but new rules have now come into effect

Fortress balance sheet

J.P. MORGAN IS POSITIONED TO MAINTAIN LEADERSHIP IN WHOLESALE BANKING

Basel III RWA – 4Q11 to 4Q12 ($B)

[1] Includes impact of Corporate allocations



3

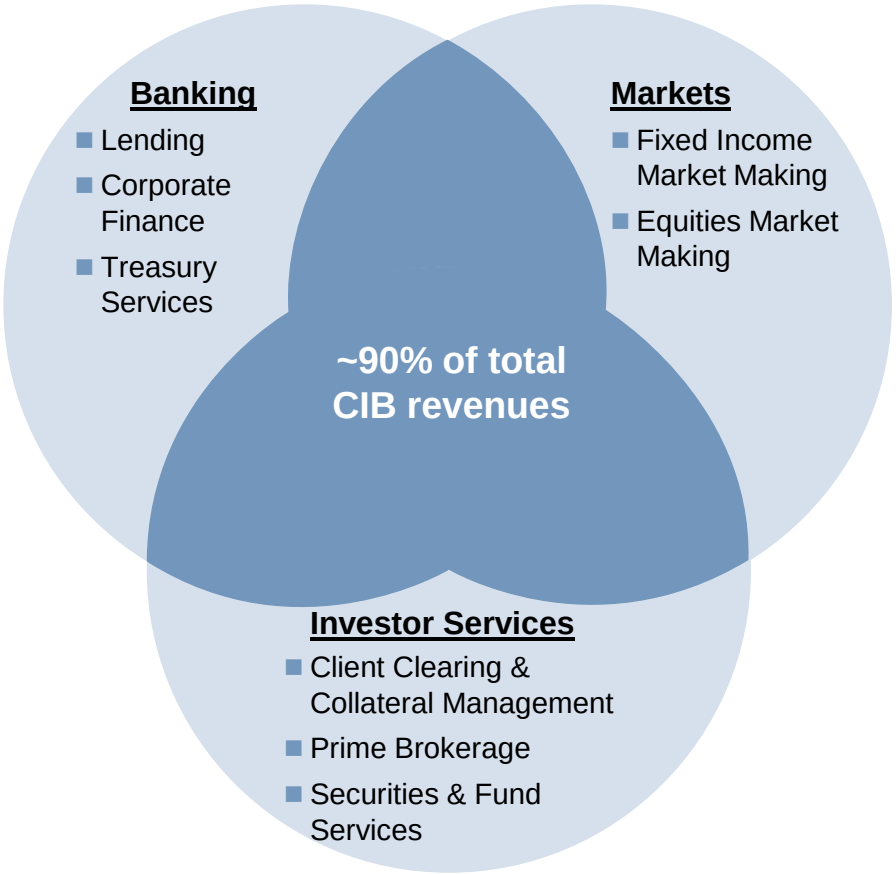
We are well-capitalized, targeting ~9.5% Tier 1 common on a stand-alone basis

Fortress balance sheet

J.P. MORGAN IS POSITIONED TO MAINTAIN LEADERSHIP IN WHOLESALE BANKING

Basel III RWA glidepath ($B)

[1] Tier 1 common equity equals allocated equity less $1B in goodwill
[2] Reflects attributed common equity effective 1/1/13



4

Our leadership position in each business helps us deliver better solutions for clients

Completeness of capabilities and global reach

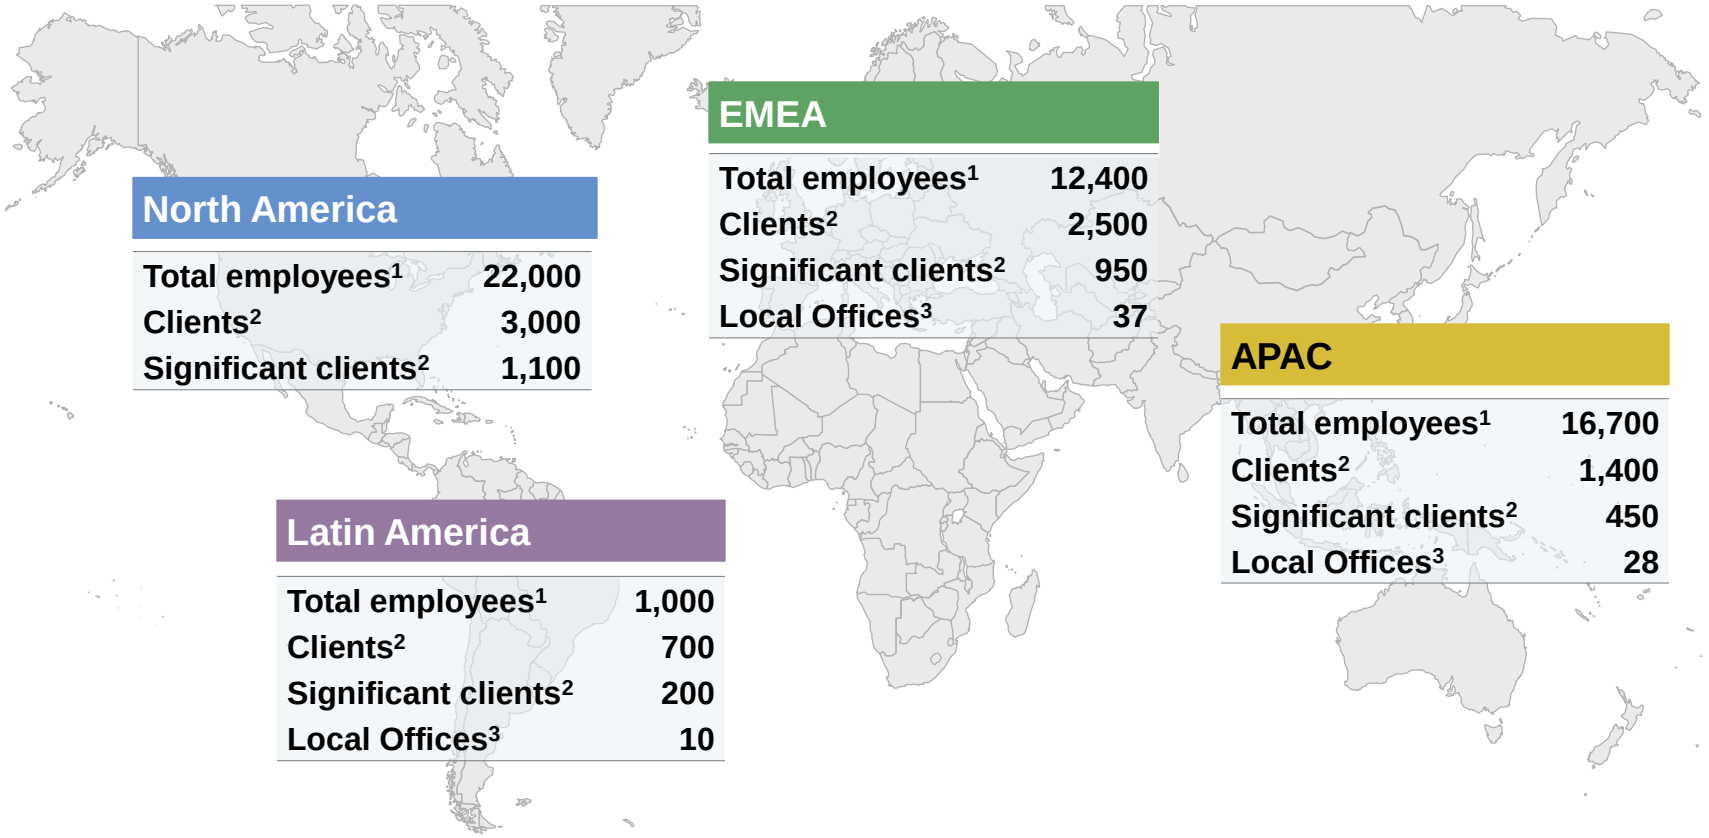
J.P. MORGAN IS POSITIONED TO MAINTAIN LEADERSHIP IN WHOLESALE BANKING

Leadership position in each business…

…helps deliver more complete client solutions

- Insights from best-in-class Markets franchise lead to differentiated credit & advisory solutions
- Leading cross-border capital raising and execution capability allow for more efficient financing solutions for clients
- Deep lending and transaction banking relationships with corporate clients lead to superior capital markets advisory
- Best-in-class financing, clearing and custody drive superior execution for Equity and Fixed Income clients
- Physical and financial commodity hedging offering provide superior trade finance solutions for corporate and government clients

4



We have a strong global network to support our clients

Completeness of capabilities and global reach

J.P. MORGAN IS POSITIONED TO MAINTAIN LEADERSHIP IN WHOLESALE BANKING

How we serve our clients globally

52,000+ professionals serving ~7,600 clients across the globe

North America

Total employees[1]	22,000
Clients[2]	3,000
Significant clients[2]	1,100

EMEA

Total employees[1]	12,400
Clients[2]	2,500
Significant clients[2]	950
Local Offices[3]	37

APAC

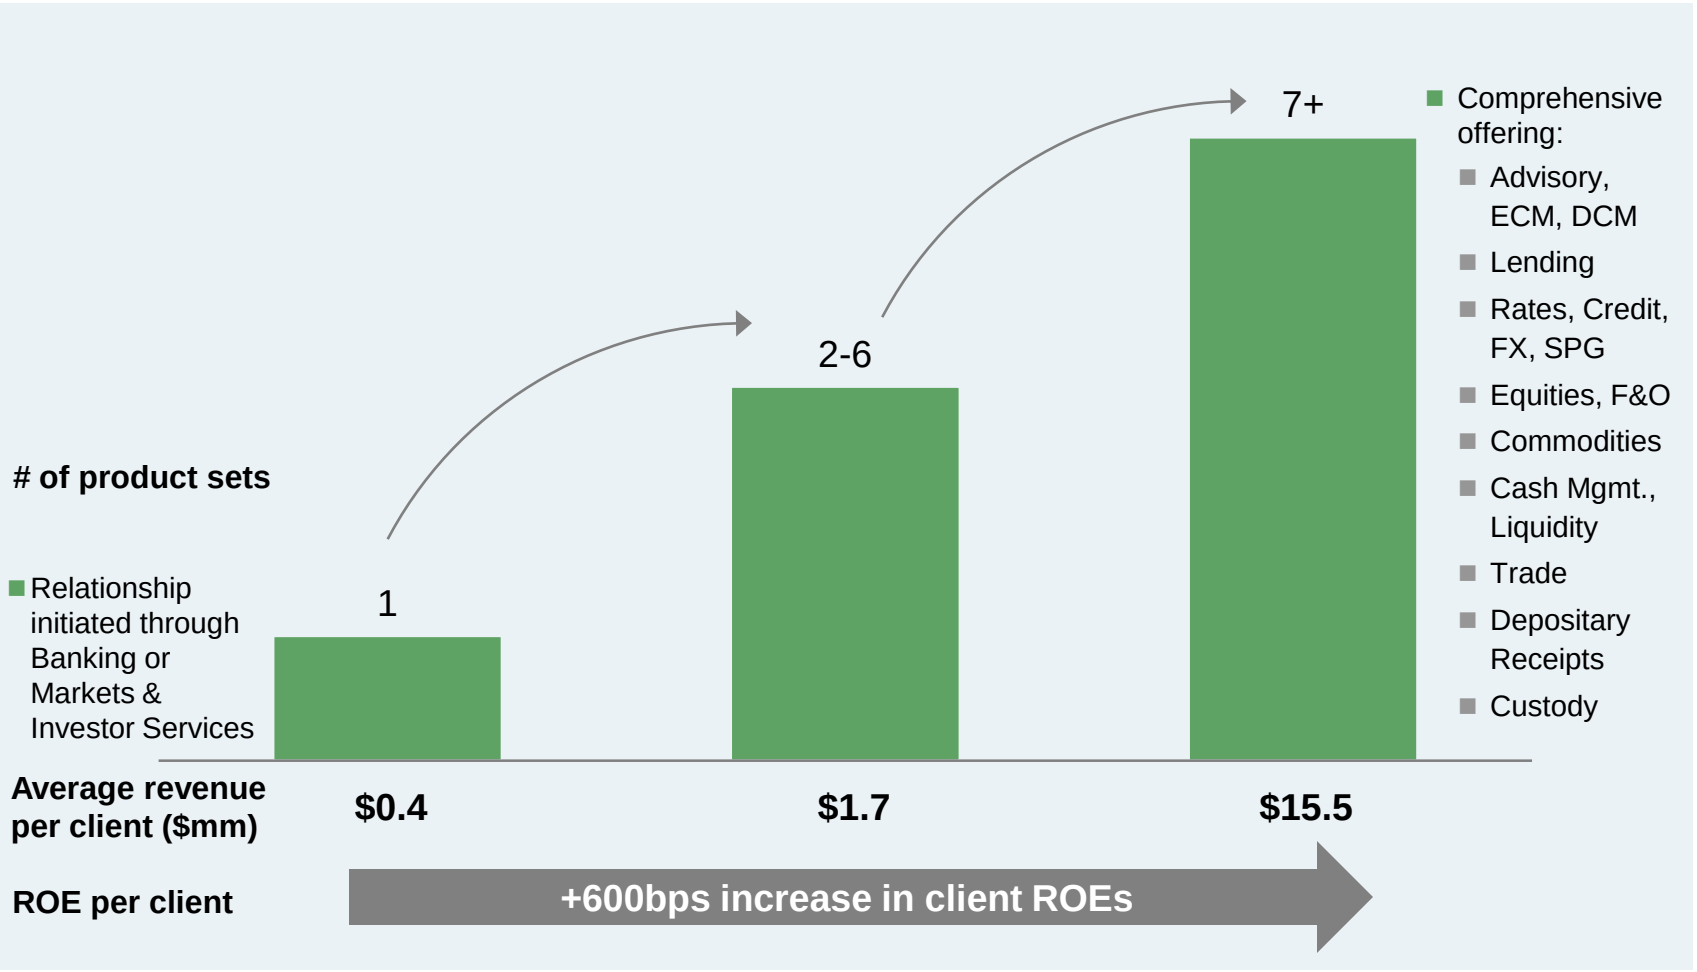
Total employees[1]	16,700
Clients[2]	1,400
Significant clients[2]	450
Local Offices[3]	28

Latin America

Total employees[1]	1,000
Clients[2]	700
Significant clients[2]	200
Local Offices[3]	10

Few institutions have the commitment and resources required to build and maintain a global network

[1] Reflects total number of employees located in the region per MD&A view. APAC includes ~8,800 employees in India, including those in global data and service centers
[2] Clients defined as clients with $50K+ in revenue; Significant clients defined as clients with $1mm+ in revenue
[3] Represents cities where CIB has client facing activity per the definition of "client facing" utilized in MD&A disclosure



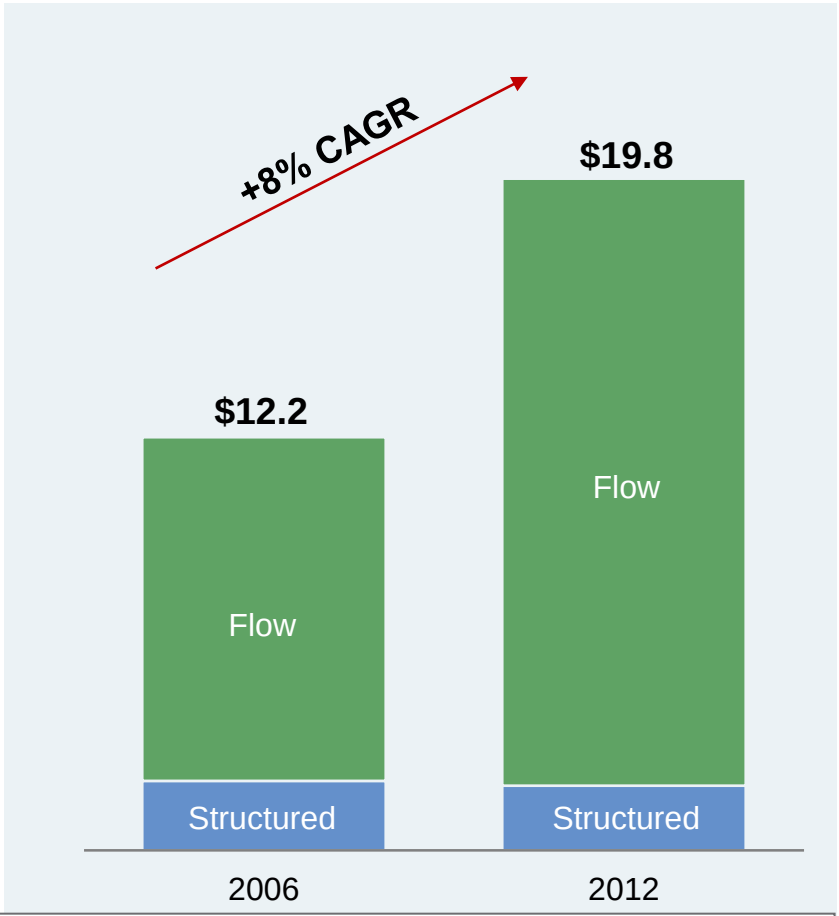
4

This has helped us significantly deepen our relationships with our clients

Completeness of capabilities and global reach

J.P. MORGAN IS POSITIONED TO MAINTAIN LEADERSHIP IN WHOLESALE BANKING

Evolution of product set usage among clients



5

Our Markets business is flow-based and diverse…

Stable earnings

J.P. MORGAN IS POSITIONED TO MAINTAIN LEADERSHIP IN WHOLESALE BANKING

Markets revenue by flow vs. structured

Agenda

	Page
J.P. Morgan is positioned to maintain leadership in wholesale banking	2
Macro trends support long-term attractiveness of global wholesale banking	**24**
Management priorities for 2013	32
Wrap-up	44

Macro trends support the long-term attractiveness of global wholesale banking

Macro trends affecting wholesale banking

1. **Regulation** – Global industry regulation will lead to increased operating expenses; scaled players better positioned
2. **Bank deleveraging, primarily in Europe** – Resulting in increased reliance on capital markets and opportunities for capital markets leaders
3. **Financial market deepening** – Continued deepening in financial markets, particularly in emerging markets
4. **Global commerce growth** – Renewed growth in global commerce post-crisis, resulting in growing cross-border opportunities
5. **Changing client demand** – Shift away from structured products; clients focused on less complex solutions

JPM is uniquely positioned to navigate these market forces

- **Client focus**
- **Scale**
- **Global reach**
- **Investment capacity**

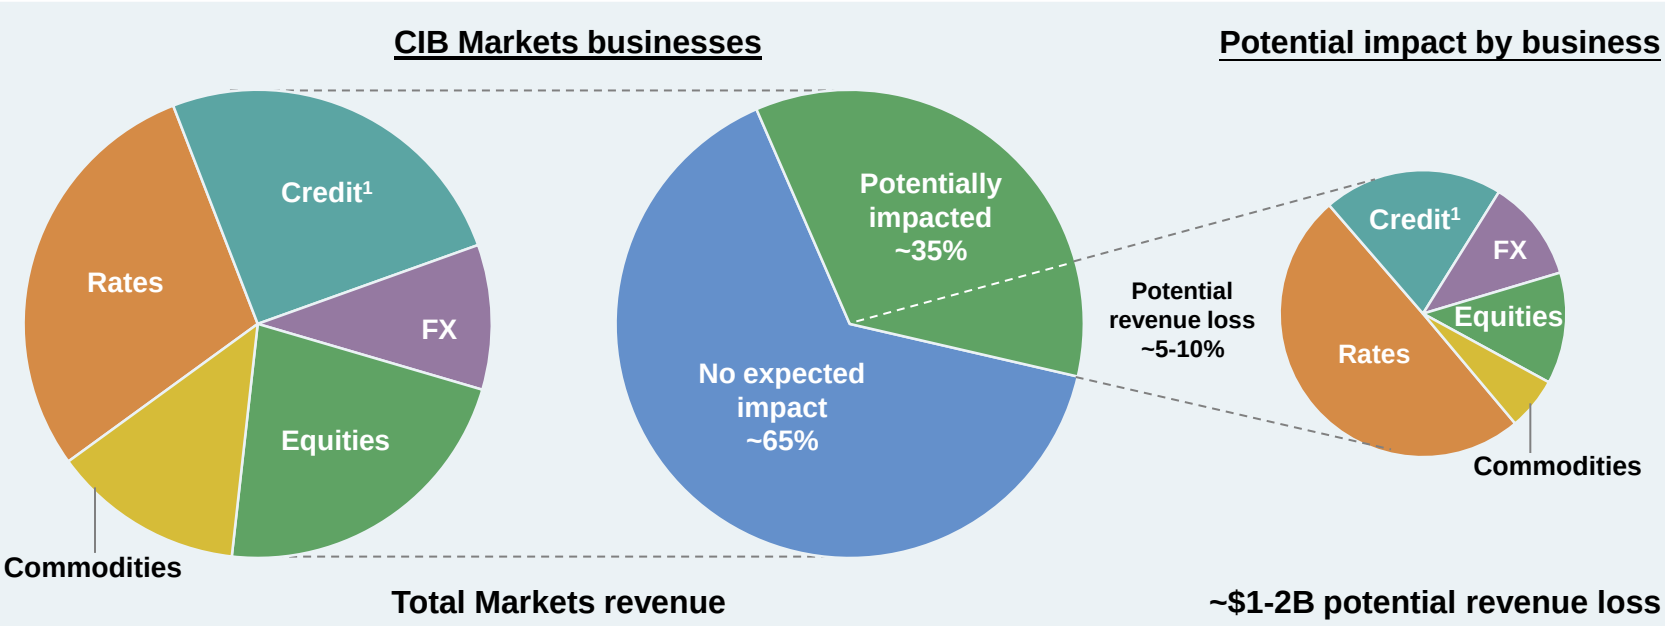
1 We are well positioned to adapt to changing regulations

Regulation

	Regulations	Market-wide impact
Market structure[1]	■ Dodd Frank-Title VII ■ EMIR ■ MiFID II	■ Reduced importance of **counterparty strength** ■ Increased importance of **e-trading capabilities** ■ **Blocks and less liquid instruments** harder to trade ■ Constrained **client leverage**
Bank structure	■ Volcker ■ Vickers ■ Liikanen ■ Dodd Frank-Section 716 ■ Recovery/Resolution	■ Potential changes in **legal entity structure** ■ Could hurt **liquidity** ■ Cost to implement changes
Customer protection	■ Dodd Frank-Title VII External Business Conduct ■ MiFID II	■ Additional **compliance effort** ■ Major **client re-documentation** program ■ **Technology investment** required

JPM position

- Depth and breadth of franchise provides sufficient ability to absorb changes
- Our business model is client-driven
- Strong culture of control, compliance and treating customers fairly
- Able to absorb necessary spend
- Aggressively expanding into new business areas



Our scale, franchise strength, large client base, operational excellence and ability to invest in new technology positions us well in changing regulatory environment

[1] Includes central clearing, trading on Swap Execution Facilities or similar platforms, post-trade transparency and additional margin for OTC derivatives

1 Depth and breadth of franchise provides sufficient ability to absorb regulatory impact

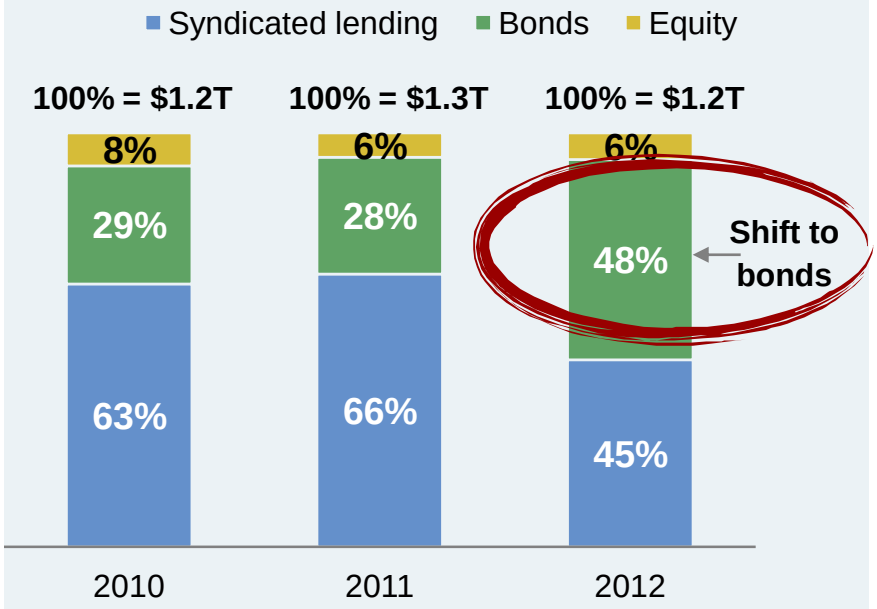
Regulation

CIB Markets business: Range of potential revenue impact from market structure regulations

Considerations

- Considers impact of post-trade transparency, mandatory clearing, SEF trading, new margin rules, and extraterritoriality: $1-2B potential revenue impact
- Does not take into consideration new revenue opportunities in OTC Clearing & Collateral Management: $0.3-0.5B potential revenue benefit
- Impact of Volcker not included above – will only see true effect 2-3 years post implementation – our well-established, flow-driven, client-focused franchise is a source of strength

[1] Credit includes Securitized Products



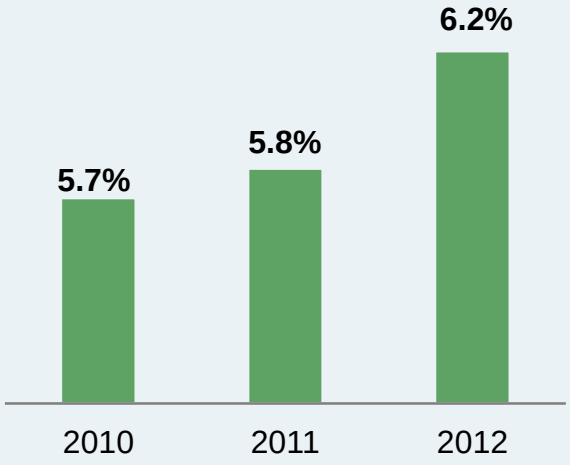
2

Bank deleveraging, especially in Europe, creates new capital markets opportunities

Bank deleveraging

MACRO TRENDS SUPPORT LONG-TERM ATTRACTIVENESS OF GLOBAL WHOLESALE BANKING

Shift from syndicated lending to bonds – Western European example



Source: Dealogic; new issuance volumes for Western European headquartered corporates

Driven by bank deleveraging

- **Tighter regulatory capital requirements forcing European & U.S. banks to reduce RWA by ~$1T[1]**
  - Banks scaling back/selling assets
  - Clients will need new sources of funding, primarily in Europe
  - Shift from lending to capital markets

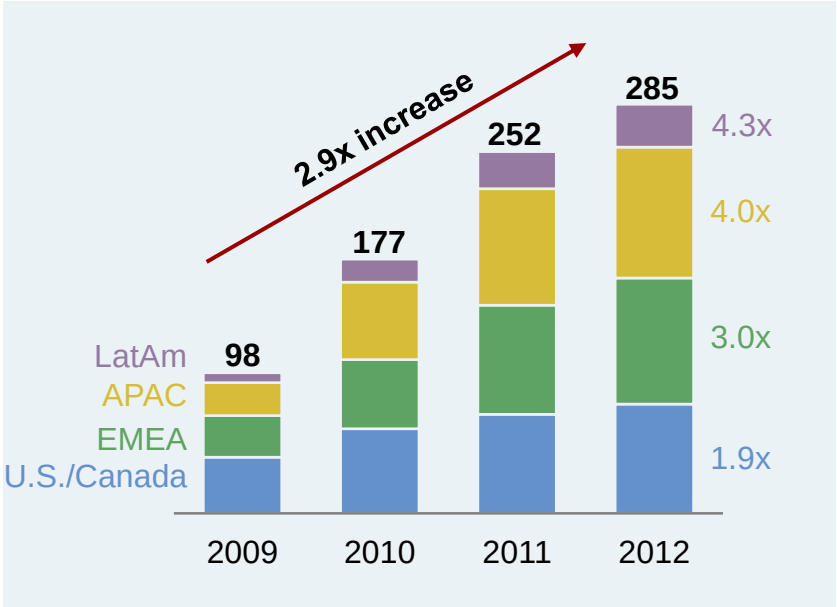
J.P. Morgan is positioned to maintain leadership in wholesale banking	2
Macro trends support long-term attractiveness of global wholesale banking	24
Management priorities for 2013	**32**
Wrap-up	44

Management priorities for 2013

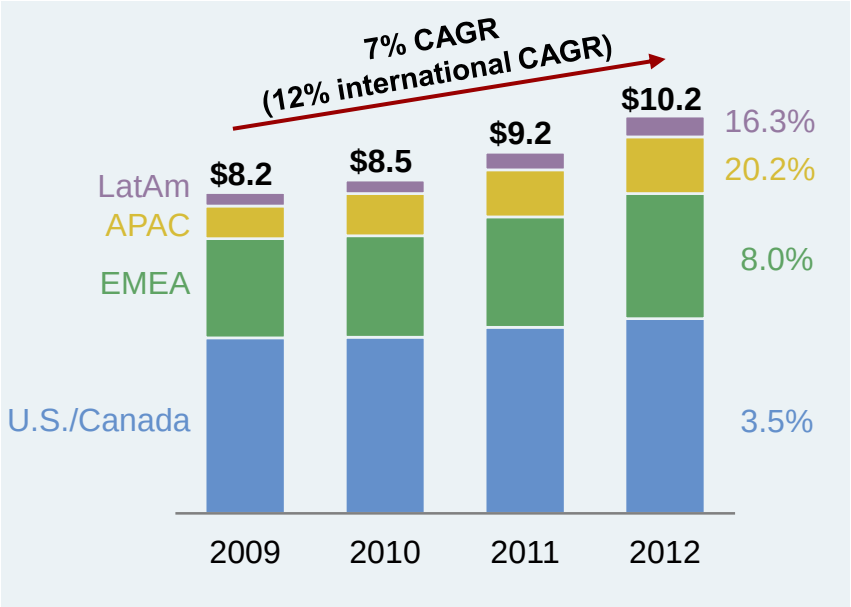
2013 CIB priorities

1. **International expansion** – Deepen Global Corporate Bank and Treasury Services solutions around the world, ensuring full integration of FX and Payments
2. **Prime Brokerage, Clearing & Collateral Management** – Continue Global Prime Brokerage build-out, expand OTC clearing platform, and build cutting-edge collateral management solutions
3. **Electronic trading** – Close the gap with leaders in Equities electronic trading and invest in Fixed Income capabilities to prepare for the future
4. **Technology efficiency & innovation** – Complete Strategic Reengineering Program and execute on Value for Scale efforts while continuing to invest and innovate
5. **Continued business optimization** – Optimize businesses across the CIB to effectively and efficiently service clients



Continued focus on strong risk management and controls, talent management and investment discipline

1



The firm has invested heavily in international coverage and product capabilities

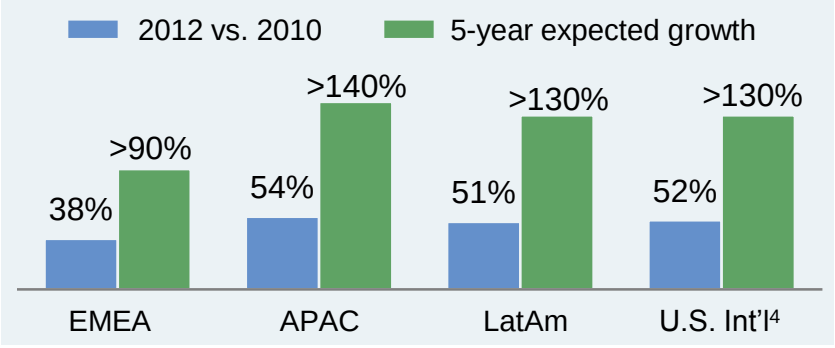
International expansion

Global Corporate Bank banker growth (2009-2012)

Global Corporate Bank associated revenue ($B) (2009-2012)

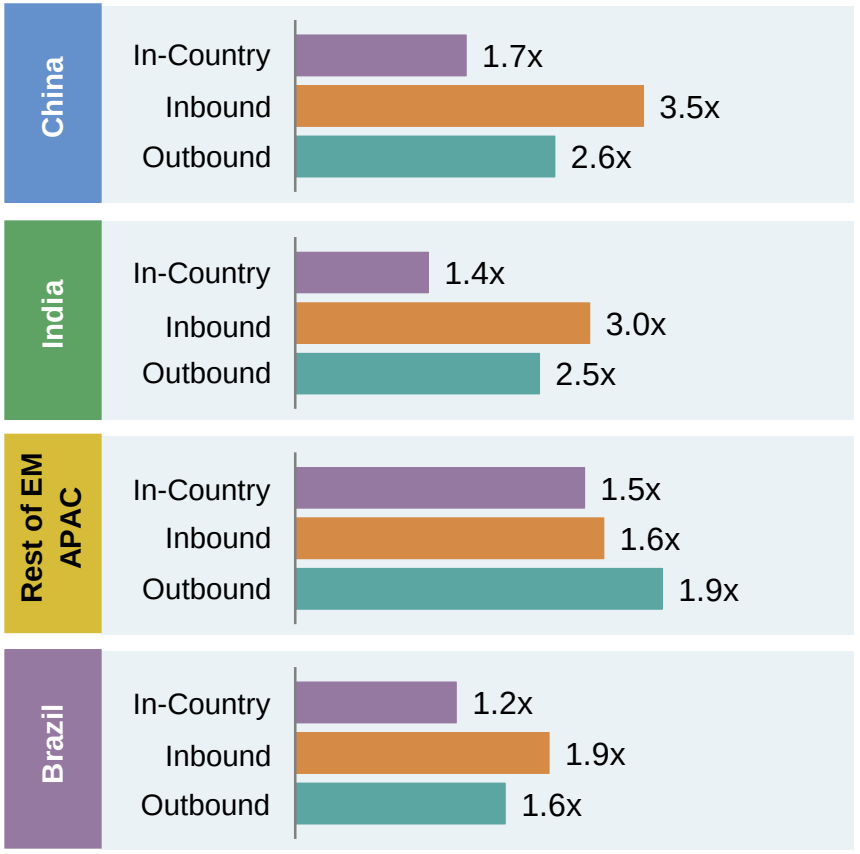
Priorities

- **Continue to deepen capabilities across key international locations:**
  - ~$800mm spent since 2010 on product investments (including local products and lending capabilities and global platform build)
  - Deep, differentiated capabilities in key emerging markets (India, China, Brazil, Mexico, Saudi Arabia)
  - Completing a competitive offering in ASEAN, Emerging EMEA (Russia, South Africa, UAE, Turkey) and Latin America (Argentina, Chile and Colombia)
  - Building innovative solutions in developed markets – Western Europe (e.g. SEPA payments), Japan, Australia
- **We expect the majority of these investments to be at or close to completion by the end of 2013**



1 We are making significant progress across all products and countries

International expansion



International revenue product growth with Corporate clients

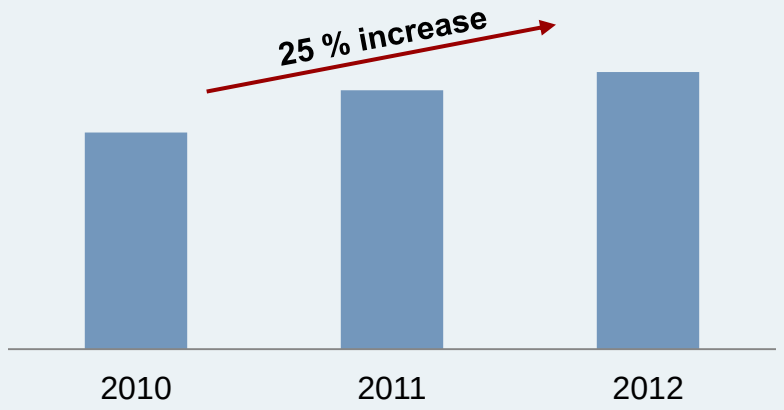
International revenue growth by region[3] with Corporate clients

Revenue growth in key emerging markets – 2012 vs. 2010[2]

Revenue growth ahead of plan; ~30% of pre-tax target achieved

[1] IB products include derivatives (mainly Commodities, FX, and Rates) and DCM (Debt Underwriting and Loan Syndication fees)
[2] Inbound refers to revenue with subsidiaries of foreign multinationals in the country (e.g. Wal-Mart in China). Outbound refers to revenue from subsidiaries of companies headquartered in these countries (e.g. Reliance revenue in Indonesia)
[3] Represents global revenue from companies headquartered in each respective region
[4] U.S. International includes revenue from subsidiaries of U.S. headquartered companies and FX revenue globally

2

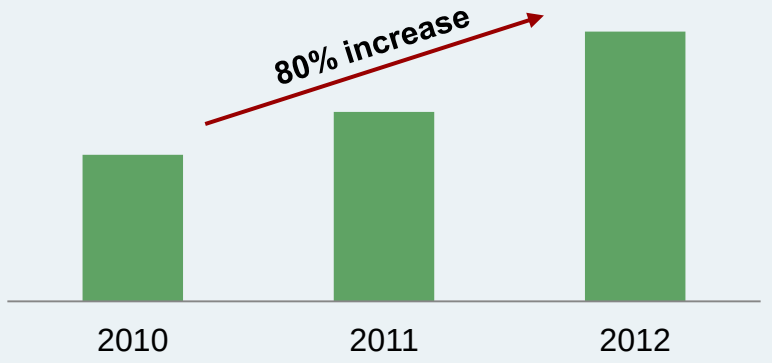


Continued global Prime Brokerage build-out

Prime Brokerage

International Prime Brokerage

- JPM Prime Brokerage has historically been a leading U.S. focused business
- Prime Brokerage clients need round-the-world coverage to finance and execute global trading strategies
- Goal is to be a top-tier player in EMEA and Asia



JPM Prime Brokerage balances increase

Status of build-out

- **In EMEA**
  - Executed key hires
  - Launched International Prime Brokerage in June 2011
  - Onboarding of new clients significantly ahead of expectations
- **In Asia**
  - Executed key hires
  - Developed regional strategy
  - Enhancing region-specific capabilities in 2013

JPM Int'l. Prime Brokerage balances increase

- Significant growth from a small starting base
- International revenue expected to approach ~$600mm in steady state (~2015), excluding future benefits to Equities

2

We are launching innovative solutions to help clients navigate the changing collateral management landscape

Collateral Management

Significant new client needs

- New regulations creating additional clearing and collateral requirements, most starting in 2013
- Wide ranging industry estimates on the need for additional collateral: ~$500B-$5T

JPM is uniquely positioned

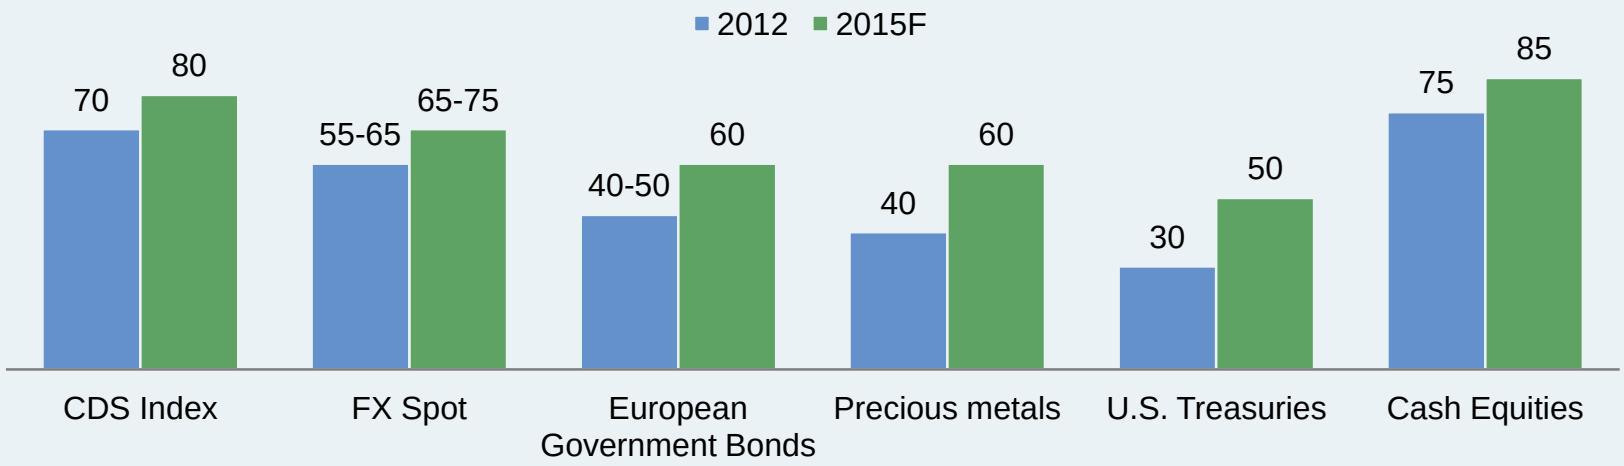
- **Strong existing product capability:** leveraging existing collateral management products and platform
- **Entrenched client relationships:** deep relationships with all target clients across Custody, Financing, Clearing, and Execution

We will offer end-to-end solutions...

Consolidated collateral view → **Margin management and analytics** → **Collateral optimization** → **Collateral transformation** → **Reporting and service delivery**

...that will deliver significant value to clients

- **Economic**
  - Optimal collateral posting mix
  - Reduce financing costs
  - Enhance yield on excess cash/securities
- **Risk mitigation**
  - Manage counterparty credit exposure
  - Verify margin requirements
  - Support dispute resolution
- **Operational efficiency**
  - Access to robust & scalable infrastructure
  - Transparent, efficient & cost effective collateral posting



Expected to generate incremental direct and ancillary revenue of ~$300-500mm from OTC Clearing & Collateral Management

3

Growth of electronic trading will continue to drive higher flow volumes at tighter spreads; players with best-in-class electronic capabilities will have a competitive advantage

Electronic trading

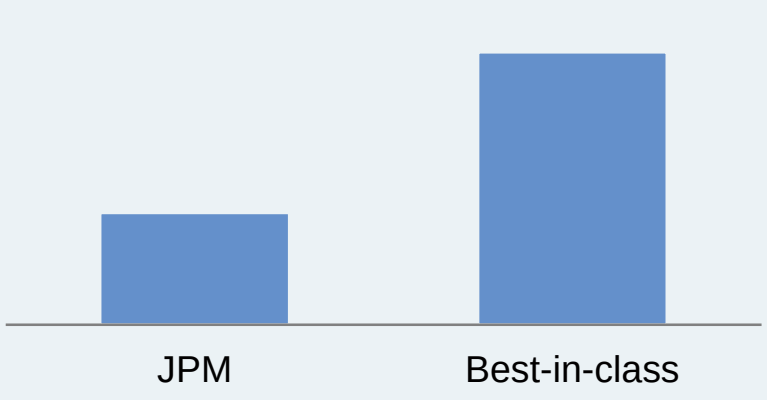
Industry Fixed Income & Equities e-trading volumes (%) by asset class

Source: McKinsey, Oliver Wyman, Greyspark

Evolution of Fixed Income e-trading landscape

- **Introduction of Swap Execution Facilities likely to accelerate trading electronification of Interest Rates and Credit default swaps**
  - Extent of electronification will depend on final regulation but likely to result in increased price transparency and automated execution and clearing capabilities
  - Non-standard end-user swaps likely to remain voice-traded for now
- **Emerging crossing networks for bonds are complementary to traditional dealer services**
  - Expect dealers will continue to provide inventory and liquidity and bring new issuance into the markets

3



We are aggressively building best-in-class electronic trading capabilities

Electronic trading

Continue to close the gap in Equities

- Algorithms and trading infrastructure now on par with market leaders
- Driving full integration of electronic and voice-based sales and trading
- Full integration across cash, derivatives, and prime brokerage offerings

Equities low touch revenue (2012)

Source: Coalition, JPM internal estimates

Preparing for the future in Fixed Income

- Building flexible platform that allows us to be ready to trade on any new format (e.g., RFQ, CLOB)
- Launched J.P. Morgan Markets – aggregating all research, execution, analytics and post-trade services across Fixed Income
- Scale FX, Rates, and Commodities e-trading capabilities to reach additional products and clients
- Continuing to invest in cross-asset infrastructure and venue connectivity

Potential to add ~$300-400mm in revenue as we build a leadership position; significant investments to ensure robust controls across the board

4

Multi-year technology investments are beginning to pay off – will deliver savings of $650mm+ in steady-state

Technology efficiency & innovation

Investments to drive efficiency…

Strategic Reengineering Program (SRP)

- 80% complete; on track for 2013 completion
- Cumulative spend of ~$700mm out of 4-year plan of ~$775mm; cumulative savings of $400mm+
- Annual savings achieved to date ~$215mm vs. $300mm+ (target at the end of 2013)
- 40 major applications decommissioned

Value for Scale

- Combining IB and TSS Technology & Operations components with focus on rationalizing:
  - Processing & Operating units – e.g., securities, derivatives, client on-boarding, reference data
  - International branches
- ~$150mm estimated spend to be incurred over-time
- $365mm+ in incremental annual savings by 2015

…and enhanced client experience

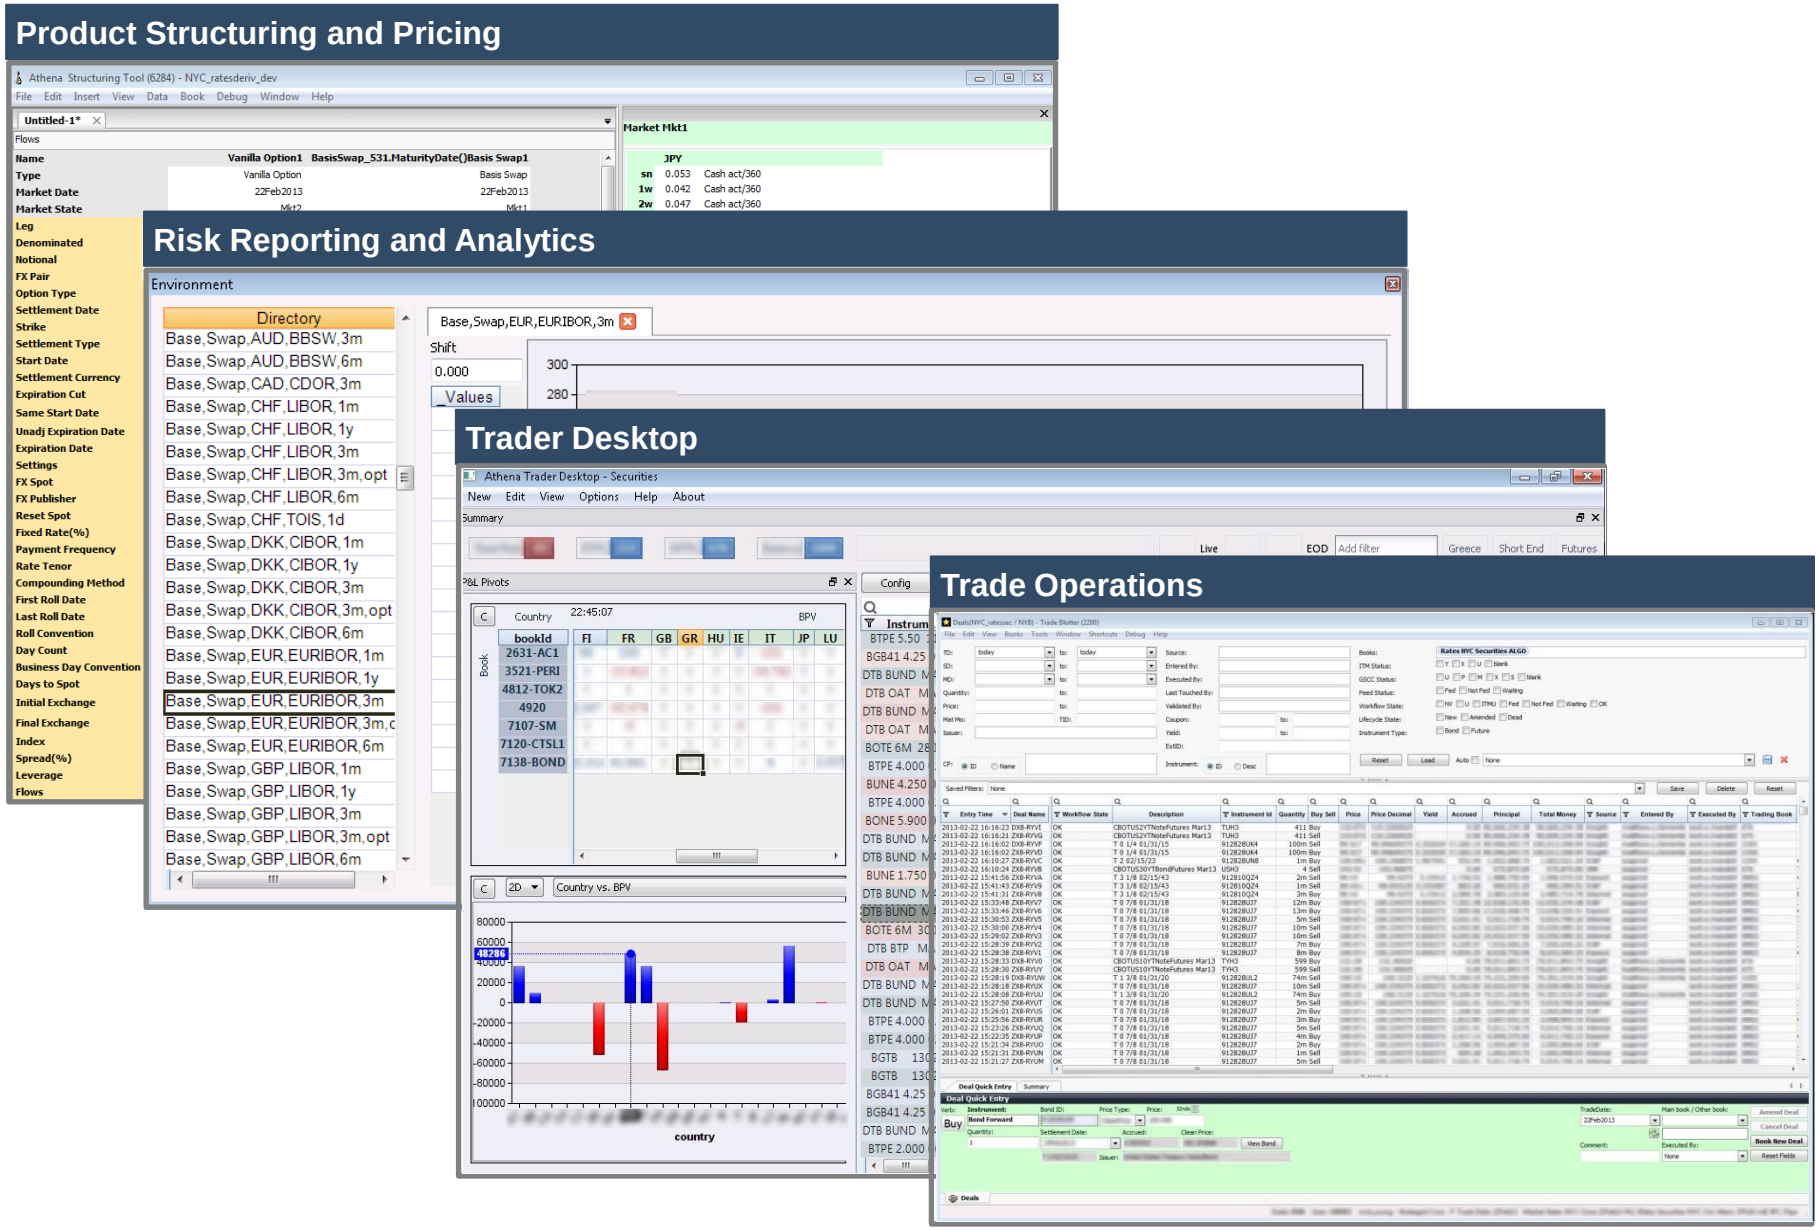
Investor clients

- Launched **J.P. Morgan Markets (JPMM)**, new web and mobile platform, as single client facing platform
  - 50,000 external users
  - 37 systems consolidated
- Merging Securities Services Portal with JPMM
- Integrated approach to client on-boarding process and tools, increasing transparency, quality and control and reducing duplication

Corporate clients

- Launched Cash Management portal – **J.P. Morgan ACCESS Next Generation**; will service 25,000 global clients and 180,000 users
- Launching **Global Payments Hub** - will provide leading payments capabilities globally

Continuing to differentiate through innovation – Athena, Mobile research and trading applications, Big Data, etc.



J.P. Morgan Markets: A single global platform offering clients access to advanced tools across the trade lifecycle

Technology efficiency & innovation

Athena is a next generation pricing, risk management, analysis and trade management platform that spans many asset classes

Technology efficiency & innovation

5 Optimize businesses across CIB to effectively & efficiently serve clients

Continued business optimization (select examples)

Equities

- ***Investing to be a top-tier Equities business***
  - Strategic foundation in place – diverse client base, talent, integrated platform
  - Integrating cash & derivatives sales and trading resources, optimizing equity research, driving productivity
  - Accelerating electronification of our execution services business model to drive incremental client commission revenue and internal efficiencies

Commodities

- ***Optimizing business for new regulation and improving efficiency***
  - Top 3 player with full product capabilities across Financial and Physical
  - Strong and diverse client driven franchise; we have 2,000+ clients
  - Significant efficiencies expected as old technology platforms and related infrastructure are retired

Client coverage

- ***Aligning client coverage models to create better client experience***
  - Integrated Banking Coverage teams regionally – bringing together best-in-class solutions for clients
  - Established regional Markets & Investor Service sales forces – delivering full suite of products across and within all regions

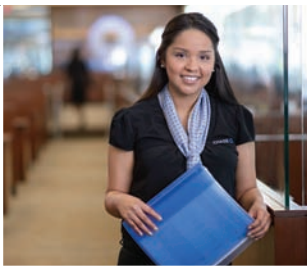
Continual identification & execution of new areas for optimization and integration

Agenda

	Page
J.P. Morgan is positioned to maintain leadership in wholesale banking	2
Macro trends support long-term attractiveness of global wholesale banking	24
Management priorities for 2013	32
Wrap-up	**44**

In summary…

- Leadership position across Banking, Markets and Investor Services, with room for growth
- Strong client franchise
- Scale & completeness of offerings
- Financial strength
- Capacity to continue to invest in future growth
- Strong track record of performance through challenging markets
- Regulatory headwinds, but long-term outlook for wholesale banking is strong



Significant earnings & return potential with a 16% +/- through-the-cycle ROE

JPMorgan Chase & Co.

Together we can.

Dear Fellow Shareholders,

Jamie Dimon,
Chairman and
Chief Executive Officer

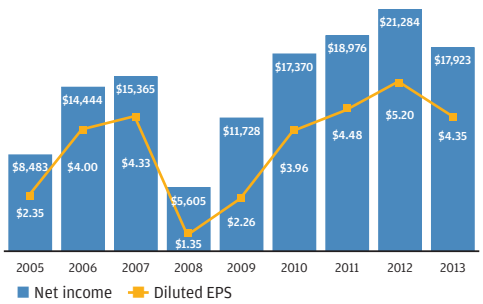
What a year. Despite tremendous challenges, your company earned $17.9 billion in net income on revenue of $96.6 billion in 2013. Our financial results reflected strong underlying performance across our four main businesses – unfortunately marred by significant legal settlements largely related to mortgages. These legal expenses cost the company $8.6 billion after-tax. Excluding these expenses and some one-time positive benefits from reserve reductions (which we never have considered true earnings) and one-time gains on the sale of assets, your company earned about $23 billion.

As tough as the year was – the company was under constant and intense pressure – I can hardly express the admiration, even pride, I feel because of the enduring resolve and resiliency of our management team and our employees. They never wavered as they attacked our problems while maintaining a relentless focus on serving our clients. We all owe them a great deal of gratitude.

The bad news was bad. The most painful, difficult and nerve-wracking experience that I have ever dealt with professionally was trying to resolve the legal issues we had this past year with multiple government agencies and regulators as we tried to get many large and risky legal issues behind us, including the Chief Investment Office (CIO) situation (that happened in 2012) and mortgage-related matters (that happened

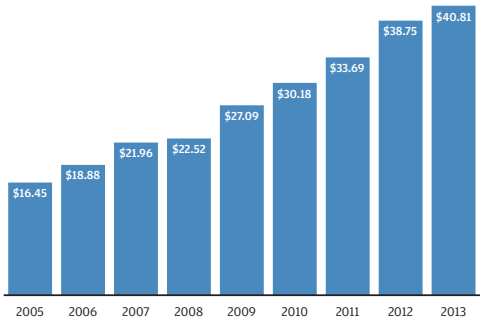
primarily in 2005-2008, a significant portion of which occurred at heritage Bear Stearns and Washington Mutual (WaMu)).

There is much to say and a lot to be learned in analyzing what happened, but I am not going to do so in this letter – more distance and perspective are required. Suffice it to say, we thought the best option, perhaps the only sensible option – for our company, our clients and our shareholders – was to acknowledge our issues and settle as much as we could all at once, albeit at a high price. This allowed us to focus on what we are here for: serving our clients and communities around the world.



The good news is that our four franchises maintained – and even strengthened – our leadership positions as we continued to gain market share and improve customer satisfaction in every business.

When I look back at our company last year with all of our ups and downs, I see it as *A Tale of Two Cities:* "It was the best of times, it was the worst of times." We came through it scarred but strengthened – steadfast in our commitment to do the best we can.



And we believe that we continued to deliver for our shareholders. For Bank One shareholders since March 27, 2000, the stock has performed far better than most financial companies and the Standard & Poor's 500 Index (S&P 500). And since the JPMorgan Chase & Co. merger with Bank One on July 1, 2004, we have performed well vs. other financial companies and slightly below the S&P 500. The details are shown in the tables on the following page. One of the tables also shows the growth in tangible book value per share, which we believe is a conservative measure of value. You can see that it has grown far more than the S&P 500 in both time periods.

Earnings and Diluted Earnings per Share 2005–2013

($ in millions, except diluted EPS)

Tangible Book Value per Share 2005–2013

Stock and Book Value Performance

Stock Total Return Analysis

	Bank One	S&P 500	S&P Financials Index
Performance since becoming CEO of Bank One (3/26/2000–12/31/2013)[a]:			
Compounded Annual Gain	10.4%	3.3%	1.3%
Overall Gain	289.8%	57.3%	19.3%

	JPMorgan Chase & Co.	S&P 500	S&P Financials Index
Performance since the Bank One and JPMorgan Chase & Co. merger (7/1/2004–12/31/2013):			
Compounded Annual Gain (Loss)	7.2%	7.4%	(0.5)%
Overall Gain (Loss)	94.1%	97.5%	(5.0)%

These charts show actual returns of the stock, with dividends included, for heritage shareholders of Bank One and JPMorgan Chase & Co. vs. the Standard & Poor's 500 Index (S&P 500) and the Standard & Poor's Financials Index (S&P Financials Index).

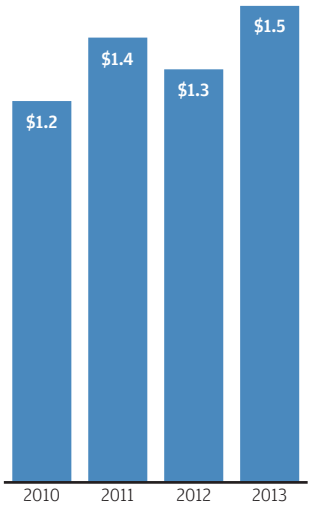
[a] On March 27, 2000, Jamie Dimon was hired as CEO of Bank One

Bank One/JPMorgan Chase & Co. Tangible Book Value per Share Performance vs. S&P 500

	Bank One (A)	S&P 500 (B)	Relative Results (A) – (B)
Performance since becoming CEO of Bank One (3/26/2000–12/31/2013)[a]:			
Compounded Annual Gain	12.9%	4.6%	8.3%
Overall Gain	385.7%	80.4%	305.3%

	JPMorgan Chase & Co. (A)	S&P 500 (B)	Relative Results (A) – (B)
Performance since the Bank One and JPMorgan Chase & Co. merger (7/1/2004–12/31/2013):			
Compounded Annual Gain	14.5%	7.4%	7.1%
Overall Gain	261.9%	97.5%	164.4%

Tangible book value over time captures the company's use of capital, balance sheet and profitability. In this chart, we are looking at heritage Bank One shareholders and JPMorgan Chase & Co. shareholders. The chart shows the increase in tangible book value per share; it is an after-tax number assuming all dividends were retained vs. the S&P 500 (a pre-tax number with dividends reinvested).



[a] On March 27, 2000, Jamie Dimon was hired as CEO of Bank One

Here's what most of the headlines left out: JPMorgan Chase continued to serve our clients and make a significant positive impact on our communities. In 2013, the firm **provided credit and raised capital of more than $2.1 trillion for our clients**. The firm also has hired more than 6,300 military veterans since 2011 as a proud founding member of the 100,000 Jobs Mission, which now has increased the goal to 200,000 jobs. Our firm was there to help small businesses – we **provided $19 billion of credit to U.S. small businesses,** which allowed them to develop new products, expand their operations and hire more workers. We also were there for families to buy their first home with a mortgage we made possible – overall, we **originated more than 800,000 mortgages** last year. In total, we **provided $274 billion of credit to consumers**. Our strength allows us to be there for our clients and communities in good times – and, more important, in bad times. In this, we have never faltered.

[b] Represents activities associated with the safekeeping and servicing of assets

In this letter, I will discuss the issues highlighted below. I also encourage you to read the letters written by several of our business leaders about our main businesses, our critical operations and controls, and some of our corporate responsibility efforts.

As usual, this letter will describe some of our successes and opportunities, as well as our challenges and issues. The main sections of the letter are as follows:

I. We face the future with a strong foundation and excellent franchises built to serve our clients

II. We will dedicate extraordinary effort in 2014 adapting to the new global financial architecture

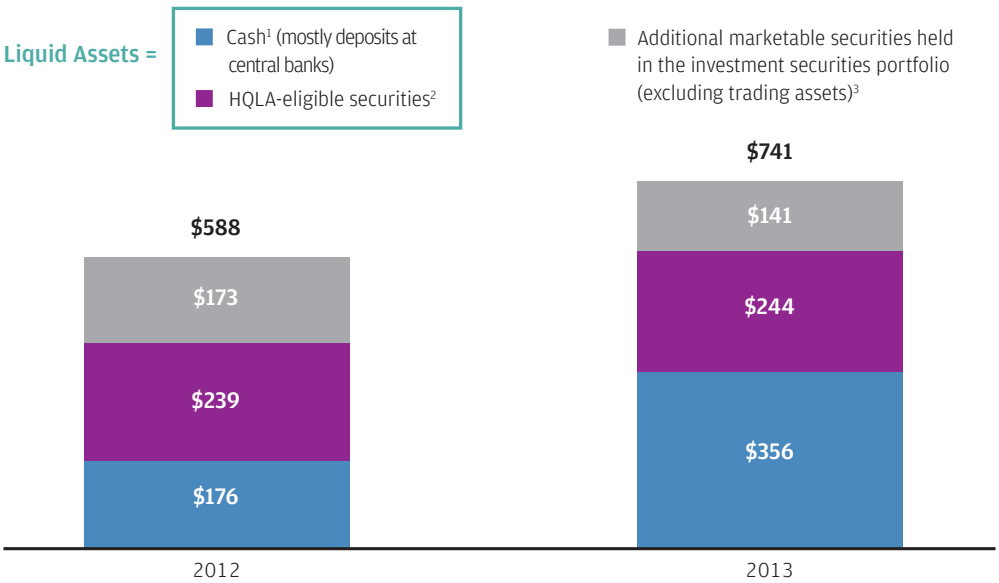
III. We have made significant progress strengthening our company

IV. We believe our long-term outlook is bright

I. WE FACE THE FUTURE WITH A STRONG FOUNDATION AND EXCELLENT FRANCHISES BUILT TO SERVE OUR CLIENTS

During 2014, most of the contours of the new and complex global financial architecture will be put in place. The changes are extensive – and later in this letter, I will talk about just how extensive they are. All banks will have to adjust to the new rules, which will be harder for some than for others. Some may have to make drastic changes to their business plan and strategies. So as we enter the year, we should take stock of where we stand.

We have consistently shown good financial performance and maintained our fortress balance sheet



All of our businesses have had good – in fact, close to best-in-class – financial performance over the last several years in terms of margins and returns on tangible common equity. We have done this while meeting increasingly higher standards in liquidity and capital. Our fortress balance sheet is stronger than ever.

We have an enormous amount of what we consider highly liquid assets

First and foremost are the High Quality Liquid Assets (HQLA), shown in the chart below, which are mostly deposits at central banks, agency mortgage-backed securities and Treasuries. Only HQLA count for liquid assets under the banking regulators' definition of liquidity. These assets are super safe and can provide cash to the company should it need cash in a crisis situation.

Cash and High Quality Securities

at December 31,
($ in billions)

[1] Represents total amount of cash reported on the balance sheet, including $294 billion and $120 billion of eligible cash included in HQLA in the Basel III Liquidity Coverage Ratio at December 31, 2013 and 2012, respectively

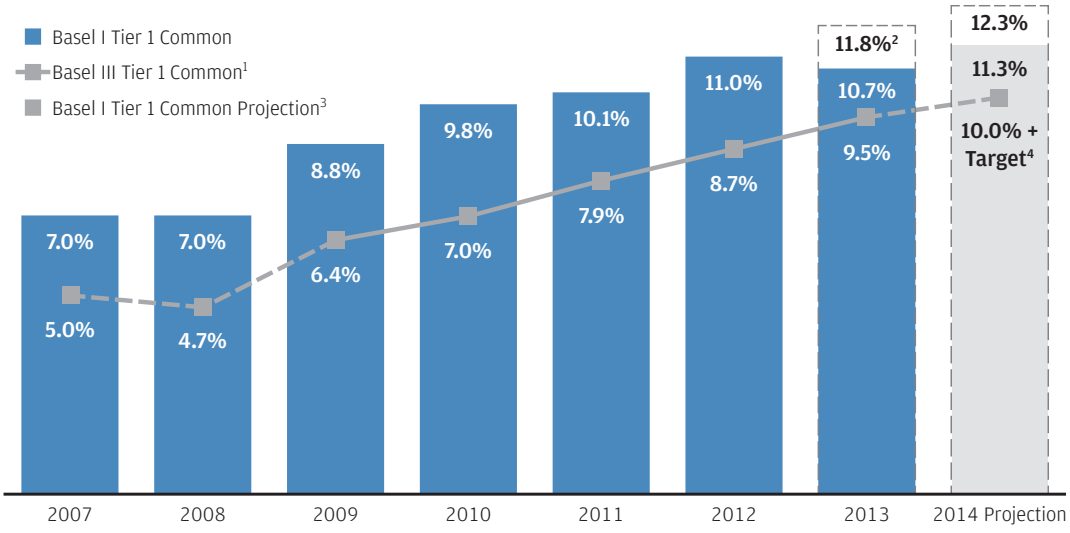
[2] HQLA is the estimated amount of assets the firm believes will qualify for inclusion in the Basel III Liquidity Coverage Ratio and primarily includes U.S. agency mortgage-backed securities, U.S. Treasuries, sovereign bonds and other government-guaranteed or government-sponsored securities

[3] Additionally, the firm has other unencumbered marketable securities available to raise liquidity if required. Excludes trading securities and collateral received in reverse repo agreements

In addition to the HQLA securities, other unencumbered marketable securities can provide significant liquidity for the company. (This category does not include any securities held in our trading portfolio.) Our investment securities portfolio has an average duration of 2.8 years and an average AA+ rating. The majority of securities balances presented above reside in our investment securities. These securities could be utilized to provide liquidity and a source of cash for the company if necessary.

Our total assets are $2.4 trillion so you can see just how liquid our balance sheet is. As a reference point, our cash and high-quality securities are essentially the same as the $740 billion of our total loans. This is a very conservative utilization of our total deposits of approximately $1.3 trillion.

We have increasingly strong capital ratios



You can see on the capital chart below that under Basel I, our Tier 1 Common has gone from 7.0% to 10.7% from 2007–2013 (if Basel I had been consistently applied, that number would have been 11.8%), and our new Basel III ratio has gone from 5.0% to 9.5% over that same time period.

In 2014, we will meet all of our current targets in capital, liquidity and leverage. One ratio not shown in the chart is called the Supplementary Leverage Ratio (SLR) that is, simply, the ratio of equity to assets and certain off-balance sheet exposures, regardless of the quality of assets. While that calculation still is being finalized, we currently are at 4.6% vs. a requirement of 5%. We intend to have a cushion over 5% by the end of this year.

We have good returns on capital despite increasingly higher capital ratios

Even with the increasingly higher capital ratios over the past several years, all of our main businesses have been earning strong returns on tangible equity (see Return on Equity (ROE) chart on the following page). Some of our competitors are not earning similar returns, and they likely will feel more pressure to alter their business strategies going forward.

JPMorgan Chase Capital Levels

[1] Through 2013, Basel III capital ratios reflect the firm's best estimate based on its understanding of the rules in the relevant period (2007-2008 ratios are pro forma)

[2] Reflects the firm's estimated Basel I capital ratio, excluding the impact on the firm's positions as of December 31, 2013 of Basel 2.5 market-risk rules, which became effective January 1, 2013

[3] Effective January 1, 2014, the Basel I ratio is no longer a regulatory capital measure. The ratios shown reflect an approximation of what the firm's Basel I capital ratio would be as of December 31, 2014, both including and excluding the impact of Basel 2.5 market-risk rules, were Basel I still in effect

[4] Reflects the firm's stated 2014 Basel III Tier 1 Common ratio objective

Return on Equity

	2011	2012	2013	Excluding significant items[c] 2013
JPMorgan Chase & Co. (ROTCE[a])	15%	15%	11%	15%
ROE by line of business				
Consumer & Community Banking	15%	25%	23%	
Corporate & Investment Bank	17%	18%	15%[b]	
Commercial Banking	30%	28%	19%	
Asset Management	25%	24%	23%	
Corporate/Private Equity	0%	(3)%	(9)%[d]	

[a] Represents return on tangible common equity

[b] Excluding funding and debit valuation adjustments (FVA and DVA), CIB ROE was 17% in 2013

[c] Primarily excludes legal expenses, benefits from reserve releases, one-time gains on the sale of assets and FVA/DVA

[d] Includes legal expenses and one-time gains on the sale of assets

Later in this letter, I will discuss how we think all the new rules will affect our returns.

Our scale and breadth create large cross-sell opportunities and strong competitive advantage

Each of our four major businesses operates at good economies of scale and gets significant additional advantages from the other businesses. We believe this is one of the key reasons we have maintained good financial performance.

Below are some pretty powerful examples:

- Our North America Investment Bank generates 29% of its investment banking revenue[1] through Commercial Bank clients covered locally. This helps both our Investment Bank and our Commercial Bank do a better job serving their clients.
- Our Global Corporate Bank helped generate $1.3 billion in revenue for our fixed income sales and trading operation, increasing business to our trading desks and helping them offer better pricing to our clients.
- Our Private Bank gets new clients from both our Investment Bank and our Commercial Bank. And the Private Bank and Commercial Bank would have a hard time existing without our Chase retail branch network. In fact, 55% of Commercial Bank clients and 35% of Private Bank households visit our retail branches each quarter.
- Of our $1.6 trillion of assets under management, approximately $300 billion comes from the Corporate & Investment Bank (CIB), the Commercial Bank or the Consumer Bank.
- Fifty-five percent of retail mortgages and 40% of Chase-branded credit cards are sold through the retail branches.

In total, we believe that the combination of our businesses accounts for $15 billion of additional revenue, which helps drive both profits and customer satisfaction. Each of our businesses would be worse off but for the other three.

Our capabilities are extraordinary and are difficult to replicate — we can bring huge resources to bear for the benefit of our company and our clients

Our scale creates huge cost efficiencies and enables significant resources to be brought to bear for the benefit of our company. For example, in global technology, we have nearly 30,000 programmers, application developers and information technology employees who keep our 7,200 applications, 32 data centers, 58,000 servers, 300,000 desktops and global network operating smoothly for all our clients. Resources like these allow us to constantly improve our operating efficiencies and bring enormous capability to deal with issues when we need to do so such as adjusting to all the new global rules and requirements. In total, we believe that expense synergies across the company save us approximately $3 billion a year.

[1] Calculated based on gross domestic investment banking revenue for syndicated leverage finance, mergers and acquisitions (M&A), equity underwriting and bond underwriting

Across the firm, we serve approximately 50% of U.S. households, approximately 80% of Fortune 500 companies, and 60% of the world's largest pensions, sovereigns and central banks. Today, our firm has on-the-ground operations in 60 countries and serves clients in more than 100 countries around the world. To support those clients, we move up to $10 trillion a day and lend or raise capital of over $500 billion each quarter. The markets in which we operate cover 5.6 billion people who speak 100+ languages and use close to 50 currencies. It would be difficult to replicate the size, capabilities and knowledgeable staff of our businesses globally. We can help our clients when and where they need it.

It is important to remember our capabilities and efficiencies accrue to our clients – over time, they get the benefit in improved pricing or better services.

This has led to increasing market share and customer satisfaction in all of our main businesses

None of the things previously mentioned would matter if they didn't help us do a better job for our customers. You know your business model is working when customers – voting with their feet – give you more business. Increasing market share and customer satisfaction may not always immediately show on the bottom line – but both are critical to the future growth of our businesses and drive current and ***potential*** earnings power of the company. The bullet points that follow say it strongly.

Consumer & Community Banking

- Total deposits of $453 billion up 10% from the prior year – more than two times the industry average.
- #1 credit card issuer in the U.S. based on loans outstanding. Record credit card sales volume of $420 billion was up 10% from the prior year – outpacing the industry in sales growth for 23 consecutive quarters.
- #1 in customer satisfaction among the largest banks for the second year in a row, as ranked by the American Customer Satisfaction Index (and, in the future, we want to be #1 among ***all*** banks).
- Customer attrition at an all-time low.
- #1 in customer satisfaction in small business banking in three of four regions of the U.S. by J.D. Power and Associates and #1 Small Business Administration lender for the fourth year in a row.
- #1 online financial services destination (chase.com) (per *compete.com* as of December 2013).
- #1 mobile banking functionality (Forrester Research's 2013 Global and U.S. Mobile Banking Functionality Rankings).
- #1 ATM network; #2 retail branch network.

Corporate & Investment Bank

- #1 in Global Investment Banking Fees.
- #1 Fixed Income Market revenue share of top 10 investment banks; #1 Total Markets revenue share of top 10 investment banks.
- #1 in Global Long-Term Debt.
- #1 in Global Loan Syndications.
- #1 in U.S. Announced M&A.
- #2 in Global Equity and Equity-Related; #2 in Global Announced M&A.
- #6 in Cash Equities (we're working on that one).

- Several groundbreaking transactions, including transformational deals for Verizon, Sprint, Facebook, Virgin Media and the University of California, to name just a few.
- #1 for both All-America Fixed Income Research and Equity Research – for the previous four years.

Commercial Banking

- #1 traditional Middle Market syndicated lender in the U.S.
- #1 multifamily lender in the U.S. – since 2008.
- Loan balances of $137 billion up 7% vs. the year before – reflecting 14 consecutive quarters of loan growth.
- Gains in market share in our Middle Market expansion regions and within our commercial real estate businesses – as we deliver our capabilities locally in 119 U.S. cities and 13 international ones.

Asset Management

- Client assets of $2.3 trillion up by $248 billion from the year before – reflecting 19 straight quarters of positive long-term inflows.
- Client assets double since the beginning of 2006.
- 80% of 10-year mutual fund assets under management in top two quartiles.
- #1 Ultra-High-Net-Worth Global Private Bank (*Euromoney*, 2013).
- #1 Institutional Money Market Fund Manager Worldwide (*iMoneyNet*, 2013).

We have never been a fair-weather friend – we hope that, over time, this builds more trust and respect

During the recent financial crisis and throughout our 200-year history, JPMorgan Chase always has been there for our constituents around the world – not only in good times but, more critically, in the toughest of times when strong banks are needed the most. However terrifying events became, we never wavered in supporting our clients and communities. In fact, we did many bold and unprecedented things, including acquiring Bear Stearns and WaMu. And we never stopped raising capital and providing credit for companies, nonprofits, states, municipalities, hospitals and universities during times of trouble. And when the situation became very difficult in European countries such as Greece, Italy and Spain, we stayed to help our clients, which included the countries themselves. While we may make mistakes along the way, we never lose sight of why we are here. We believe that our long-term view and consistent behavior earn us the trust and respect of our clients and the communities in which we operate.

Our strategy remains the same – and we always invest for the long run

While we need to make a lot of adjustments to adapt to the new world (I will discuss later in this letter how we intend to do that), we are fortunate not to have to do a strategic reset. Our strategies have worked – a consistent strategy properly executed is important for the long-term success of any company.

So whatever the future brings, we will face it from a position of strength and stability. And we will continue to do what we always have done – manage the company and invest for the long run.

II. WE WILL DEDICATE EXTRAORDINARY EFFORT IN 2014 ADAPTING TO THE NEW GLOBAL FINANCIAL ARCHITECTURE

While we will meet all of our new capital and liquidity requirements this year, we still have an enormous amount of work to do to conform and adapt to the plethora of new global rules.

The changes are substantial and will require significant changes to business practices

A quick look at the chart on the next page will give you a sense of the enormous number of new rules and reporting requirements with which we need to comply. They are global and range from the new European Union (EU) Markets in Financial Instruments Directive (MiFID) rules to the 398 Dodd-Frank rules to the Basel III capital and liquidity requirements, the Volcker Rule, and new mortgage rules around both origination and servicing, to name just a few. Fully complying with and adapting to the new world is a daunting task and will require enormous effort and energy on the part of all of us at JPMorgan Chase. We are going to get it right – both to meet the letter and spirit of the new regulations and to minimize disruption to our clients.

These rules will affect every client, every product, every system and every country in which we operate. We do not underestimate the extent of the changes. Never before have we focused so much time, technology, money and brainpower on such an enterprise-wide undertaking. In the end, all these efforts will make us a better and stronger company.

Importantly, these new regulations in total have unquestionably made the global banking system safer, more transparent and more accountable – which is good for everybody. Every bank is far better capitalized than in the past, and the liquidity in the system probably has never been higher. In addition, the new rules around minimum unsecured debt levels, the Recovery and Resolution plans (or so-called living wills), and the strengthened capabilities of the regulators have put an end, we hope, to the idea that anybody is "Too Big to Fail."

We are applying enormous resources to the task

Reading the bullet points below will give you a sense of the time, money and manpower we are applying to adapt to the new rules:

- **13,000** employees will have been added since the beginning of 2012 through the end of 2014 to support our regulatory, compliance and control effort (Risk, Compliance, Legal, Finance, Technology, Oversight and Control, and Audit) across the entire firm.
- **8,000** of our employees across our lines of business will be dedicated solely to building and maintaining an industry-leading Anti-Money Laundering (AML) program.
- **500** professionals (and thousands of additional contributors) were dedicated to the 2013 resubmission and 2014 submission of the Federal Reserve's capital stress test or Comprehensive Capital Analysis and Review (CCAR). These individuals developed and reviewed more than 100 new models and submodels; conducted over 130 independent qualitative and quantitative assessments of the firm's forecast methodologies and results; and established new permanent functions and processes to enhance the firm's overall capital planning process.
- **500** professionals globally across our lines of business and support functions are working on the firm's annual Recovery and Resolution plans.
- **400** people are dedicated to continue to build out our Liquidity Risk Management infrastructure, which will create far more detailed reporting on our daily global liquidity.

New Financial Architecture

	Description	Selected requirements	Selected JPMorgan Chase actions
Capital CCAR stress testing, leverage and risk-based requirements	■ Improving the banking sector's ability to absorb losses arising from financial and economic stress	■ 750+ requirements with 21 regulators involved ■ ~25 different capital ratio requirements	■ 500+ people ■ 5,000+ pages of supporting documentation ■ 100+ new models
Liquidity Liquidity Coverage Ratio and Net Stable Funding Ratio	■ Ensuring banks hold sufficient liquid assets to survive acute liquidity stress ■ Prevent overreliance on short-term wholesale funding	■ 258 requirements ■ 15+ jurisdictional variations expected	■ 400+ people ■ 5 billion records processed from over 200 feeds ■ 20+ million calculations performed daily
Recovery and Resolution U.S. Dodd-Frank[1] Title I & II, UK[2] Recovery and Resolution, EU BRRD[3]	■ Ensuring the resolvability of systemically important financial institutions ■ Preparing living wills	■ Resolution plans for 35 entities and plans by business, sub-business and for critical operations	■ 1+ million work hours devoted annually
Mortgages U.S. Dodd-Frank[1], Housing Finance Reform Legislation	■ Reforming the nation's housing finance system	■ ~9,000 pages of rules, guidance and legislative text	■ ~100,000 work hours of training ■ 1+ million work hours dedicated to system and process implementation
Securitization Basel Revised Securitization Framework, Risk Retention, Regulation AB II	■ Enhancing capital requirements and market standards for originators and investors ■ Improving the strength and safety of securitization markets	■ 2,000+ pages of proposals	■ 35,000+ work hours dedicated to system development to comply with Basel risk-weighted assets rules
Derivatives U.S. Dodd-Frank[1] Title VII, European Market Infrastructure Regulation, Markets in Financial Instruments Directive II/Markets in Financial Instruments Regulation	■ Enhancing pre- and post-trade transparency ■ Promoting the use of electronic trading venues and central clearing ■ Bolstering capital and margin requirements	■ 83 key rules (U.S.) and 237 articles (EU) finalized	■ 700+ people ■ 60 workstreams
Volcker Rule	■ Restricting banks from undertaking certain types of market activities ■ Insulating retail banking from wholesale banking	■ 1,000+ pages of rules and preamble text with 5 regulators involved ■ 36 requirements	■ 300+ people ■ 7 trading metrics in development across 13 business areas

Note: This list of regulations is not comprehensive; estimates of resources are approximate

[1] U.S. Dodd-Frank Wall Street Reform and Consumer Protection Act

[2] United Kingdom

[3] Bank Recovery and Resolution Directive

- **250+** employees are working in Model Risk and Development – up by more than 130 employees. In 2013, this highly specialized team completed over 450 model reviews, built capital models that enabled the firm to achieve the regulatory approval required to exit parallel Basel III reporting, and implemented a permanent new governance and control structure for the proper creation and implementation of models.
- **$600+ million** has been spent on technology focused on our agenda in the Regulatory and Control space – an increase of approximately 25% since 2011. We also have built a state-of-the-art control room in our corporate headquarters to provide streamlined data analysis and reporting capabilities of control and operational risk data across the firm.
- **$2+ billion** in additional expenses in our overall control effort will have been made since 2012 through the end of 2014.

The numbers above show some of the ***additional*** resources dedicated to this objective but barely represent the full resources dedicated to our regulatory and control agenda. It is hard to estimate, but perhaps 20%-30% of all our Risk, Compliance, Legal, Finance, Technology, Oversight and Control, and Audit employees have been reassigned

and will be devoted to this effort. In total, it is hard to measure the overall scope and investment since nearly all employees and systems are engaged in some way or another.

We will be applying the new rules all the way to the client level, the product level and the trading desk

We will be applying the new rules, particularly around capital, liquidity and the SLR (and the factors that increase our capital surcharge as a global systemically important bank), all the way down to each client we serve, each product we offer and each trading desk we operate. Doing so will allow our client executives as well as product and trading managers to understand how the new rules affect us at a very granular level and allow our professionals to begin making proper and compensating adjustments. At the most basic level, some of these rules conflict with one another; for example, the client may be profitable on Basel III capital but not on SLR capital or vice versa. The binding constraint at the client level may be very different from the binding constraint at the firmwide level. To be successful, we will need to actively manage all these constraints so we get a fair return on our capital and properly manage our risks.

At the firmwide level, once we satisfy Basel III capital, SLR capital and the Liquidity Coverage Ratio, the binding constraints on the firm may very well become the CCAR test, the annual stress test from the Federal Reserve Board. By its nature, the CCAR test is less predictable because it will change every year. And while you can't effectively manage stress testing at the client or product level, we will manage it at the business level so that it has more predictable outcomes, allowing for more predictable capital planning.

We are big believers in stress testing, and you should know that we do it all the time and successfully conduct a large number of different kinds of stress tests every week. This enables us to effectively manage risk to protect your company.

The new rules will have a major effect on certain clients and products

All the new rules will not affect all clients and all products equally. I obviously can't cover all client types and products, but I would like to give some examples of those that may be affected more than most – and what that impact means for both JPMorgan Chase and our clients.

Derivatives. Non-corporate users of derivatives (asset managers, hedge funds, financial companies, governments, etc.) will have to move all their standardized derivatives (mostly interest rate and credit derivatives) to exchanges, as opposed to handling them directly with a bank. Corporate end users of derivatives will be allowed to continue to trade bilaterally with a bank. However, for both of these segments, the cost to offer derivatives to our various client groups will increase due to capital, liquidity and margin requirements imposed on us. It still remains to be seen how all this will sort out.

Non-operational deposits. Essentially, these are deposits that wholesale clients hold with us that typically are short term and transactional in nature. We take these deposits more as a service to the client – not because they are profitable for us. The new rules require us to hold 100% of HQLA against financial institution deposits and 40% against non-financial corporate deposits. In addition, based on current proposals, we would have to hold 6% equity against the assets we maintain for financial institutions even if those assets consist of cash or other low-risk assets such as government bonds. This makes non-operational deposits hugely

unprofitable; therefore, over time, banks probably will minimize this type of deposit, and clients will seek other alternatives, probably in the money markets.

Committed, undrawn revolvers. Many clients have large, committed, unused revolvers so they can manage their cash flows and not leave too much unused cash on their balance sheet. Because new rules impose liquidity and additional capital requirements on committed, undrawn revolvers, the cost involved in providing them could increase by up to 60 basis points, depending on the client segment and nature of the facility. Banks will either have to charge more for this product or focus more acutely on the nature and value of the particular client relationship as a whole in considering whether to make revolvers available to that client.

Trade finance. The cost of short-term trade finance and standby letters of credit also will increase dramatically, with pricing potentially up by 75 basis points in the long term.

The rates business (mostly trading government securities and interest rate swaps). The new rules have a huge effect on this business because they require substantially more capital and liquidity. And for some banks, the rates business has gone from profitable to unprofitable, causing some banks to exit the business altogether. Because of our large volume and low costs, we already have begun to make significant changes to this business and expect to maintain decent profitability.

The mortgage business. The U.S. mortgage market still faces huge hurdles and has a long way to go before it is a well-functioning market that is good for consumers and the country's economic health (and makes sense for financial companies). There has been a large increase in the capital required to service and hold mortgages. Servicing itself has become far more costly and dangerous to the servicer – servicing costs alone have gone up 20 basis points. We still have been unable to reform the government-sponsored enterprises (GSE) or to get the securitization markets healthy again. This has real costs to consumers, especially for lower credit-quality consumers and particularly for government-guaranteed mortgages, which have become more expensive, more time intensive and less available for consumers. Originators are being more conservative because making loans that may default has become far more risky and costly due to:

- The highly litigious environment and uncertainty surrounding Federal Housing Administration (FHA) guarantees with respect to FHA mortgages.
- The ongoing "put-back" risk and the litigation costs around reps and warranties from the GSEs and sophisticated private investors.
- The increasing prescriptiveness of rules on servicing from different – and sometimes conflicting – regulators and government agencies.
- The increasing difficulty of moving servicing – again, especially for high-risk loans, which often are unprofitable to us and other large financial institutions – to other servicers that have systems and processes better able to serve these customers.

These issues make mortgages more costly and unpredictable for companies and far less consumer friendly. In many cases, deserving lower- and middle-income consumers may pay far more than they might have in the past for a mortgage or, worse yet, they won't be able to get one.

We need for all those involved in the mortgage business to come up with a practical set of coherent and consistent policies that work for originators, servicers, investors,

consumers and regulators. While it's critical to protect the consumer, the new rules should not allow for arbitrary and capricious interpretations or overly punitive penalties and litigation.

When you look at how the cost of specific products has changed, it's easy to see how some clients will be affected more than others. While most clients will see some higher costs, certain clients – for example, municipalities (which will see far higher costs for certain types of deposits and credit lines), clients with large amounts of trade, credit-only clients and specific types of financial companies – will experience far higher costs to transact banking business.

We need to achieve proper cross-border regulatory coordination

One of the initial objectives of the global regulatory regime was to set out fairly consistent global rules; i.e., a level playing field. The rules don't have to be exactly the same in all countries, but if they are dramatically different, that could cause large and unfair distortions in global competition. Some areas at risk are: 1) dramatically different calculations of risk-weighted assets, 2) much lower leverage ratios in some countries vs. others and 3) varying capital structures for a bank's subsidiaries in different countries. We are convinced that the regulators want to get this right, but there are a lot of interests involved, and only time will tell if they succeed.

We need to recognize that models and risk-weighted assets do not reflect all knowledge or judgment

We recognize the importance of detailed and disciplined modeling and forecasting, particularly around risk and risk-weighted assets. But we want our shareholders to know that even the best models provide an incomplete, sometimes misleading and backward-looking view of risk. Let me list a few things that are not incorporated in risk-weighted asset models:

- Character of the borrower.
- Changes in the tax code.
- Changes in the structure of the industry (usually driven by technology – look at what the Internet did to media and some types of retail).
- Changes in business practices (for example, virtually no one offers subprime mortgage lending anymore).
- Changes in government or regulatory policy.
- Geopolitical risk.

We need to do our math right, but we also need to remind ourselves to always try to add judgment and wisdom.

All things being equal, returns will be reduced

If you have to hold higher capital and higher liquidity and some of your costs are higher – all things being equal – your returns obviously will come down. Many analysts have estimated that the average effect of the higher capital, liquidity and costs on banks will reduce their return on equity substantially and for some banks far below fair market returns. These banks possibly would need to take dramatic action – shareholders would not accept poor market returns for long.

But all things are not equal

Clients, markets and businesses adjust to changing economic circumstances. Our company already has taken action that gives us some confidence that we will be able to maintain decent returns in spite of what a static analysis would show. The list below notes some of those things that likely will change over time and, in general, will allow banks, on average, to earn market returns:

- **Run-off of unprofitable products.** Banks simply will stop handling some very expensive products. For example, many exotic derivatives, subprime mortgages and other products no longer will be offered.
- **Product repricing.** Some products will reprice. For example, we expect the cost to the client for revolvers and transactional deposits to go up.
- **Product redesign.** Some products will be redesigned. For example, uncommitted lines of credit (that were popular many years ago) may make a comeback. Or revolvers may be written so that the borrower cannot borrow all the money all at once, reducing the liquidity burden and cost to the bank.
- **Client selection and re-optimization.** Banks will focus on clients that can be served profitably with a mix of products and services. For example, we may seek to earn more of certain clients' capital-lite business like cash management or a higher share of their fee-based business such as M&A or issuance. Some clients will go to other banks with a different mix of products and services, and some will be banked in the shadow banking market, which may be able to serve some clients in a less expensive way.
- **Tactical and strategic changes.** These changes are hard to forecast – but they will happen. Not all banks will adjust to the new world in the same way. Some banks will stop offering certain products or will leave certain markets – market shares will change and, in some cases, consolidate. This eventually should lead to margins in each product and business that are adequate for those that remain in the business.
- **Return on equity.** Some banks will continue to earn better-than-average ROEs. Not all companies are created equal, and in every industry that I have observed, some companies have outperformed for an extended period of time. Sometimes it is because these companies have lower cost structures, better technology or simply greater economies of scale due to higher market share. It also is important to remember that a complex business that has many products is not earning the same ROE on every product. Many industries have historic structural issues that lead to some products being loss leaders (e.g., selling milk at grocery stores). And some products have an extremely high return because there is little equity involved (for example, think of money management, transaction processing, etc.). It is the combination of how a company does all these things that determines the company's aggregate ROE.

In the past, we told you we would expect our average return on tangible equity through the cycle (by this, we mean in average times with normalized credit losses) to be 16%. With higher levels of capital, significant regulatory changes and some remaining uncertainties, we moved the number to be somewhere between 15% and 16%.

We continue to have a healthy fear of the unknown because we cannot predict the cumulative effect of so many changes on a complex system

We still worry about the cumulative effect of all the changes, which simply cannot be known. It is our nature to worry more about the downside than to guess about the upside; however, some of these changes actually may be good for JPMorgan Chase (and other banks). It could be that these changes may make it harder for new competitors. It is possible that many of these changes will create a bigger "moat" around the banking system. Regardless, we will be vigilant in looking for, and reacting to, any negative effects that we simply cannot predict today.

What we can predict is that we are going to have tough global competitors

We have a healthy fear of and respect for our competitors. No matter what business you're in or how strong you might look, there are a lot of smart, devoted, tough competitors that have the potential to gain on you. So we always make the assumption that we will have tough competition. In addition to the regular lineup of great competitors that we currently have, I want to point out three areas (among others) that we will be keeping an eye on.

Large, global Chinese banks. Today, there are four very large and rapidly growing Chinese banks. They may be operating under less restrictive rules than we are. They are ambitious, and they have a strategic reason to go global (following their rapidly growing Chinese companies overseas). They have begun their global expansion, and, over time, they will become tough global competitors.

Technological obsolescence. It's easy to be scared about this one. Many companies are working on new payment systems, trading has become increasingly electronic, customers want more and more mobile services, and, increasingly, companies are starting to handle lending online. Your company is deploying substantial resources and launching new programs and products and will try to be creative, innovative and nimble in all these areas, which we will talk more about in the last section of this letter.

Increasingly sophisticated shadow banks. We really should not call them "shadow" banks – they do not operate in shadows. They are non-bank financial competitors, and there is a wide set of them. They range from money market funds and asset managers, mortgage real estate investment trusts and mortgage servicers, and middle market lending funds to PayPal and clearinghouses. Many of these institutions are smart and sophisticated and will benefit as banks move out of certain products and services. Non-bank financial competitors will look at every product we price, and if they can do it cheaper with their set of capital providers, they will. There is nothing inherently wrong with this – it is a natural state of affairs and, in some cases, may benefit the clients who get the better price. But regulators should – and will – be looking at how all financial companies (including non-bank competitors) need to be regulated and will be evaluating what is better to be done by banks vs. non-banks and vice versa.

We will spend a lot of energy in 2014 adapting, adjusting and navigating to the new financial architecture, as well as monitoring its impact on our clients and keeping a watchful eye on the landscape as we move forward.

III. WE HAVE MADE SIGNIFICANT PROGRESS STRENGTHENING OUR COMPANY

We continue to make substantial progress strengthening our company. We have made enormous strides on our control agenda, which is detailed in a letter by our Chief Operating Officer on pages 33-35. We have continued our disciplined organic growth while also simplifying our business and continuing to reduce expenses. But first and foremost is the importance of maintaining the strength of our client franchises.

In this new global financial architecture, we will protect our great client franchises – at the expense of profits, if necessary

As we adapt to all the new rules, we will deliberately maintain our franchises even at the expense of sub-optimal profits. Since we don't know what the impact of all the new rules will be, we don't want to guess or make major changes in strategy in anticipation of these new rules. If some of the changes cause disappointing profits in the short term, so be it. We are fairly convinced that we will be able to adjust and earn fair profits in the long run.

We are aggressively pruning and simplifying our business – allowing us to reduce risk and to focus our resources on what is important

In general, it is good for any company to diligently prune and simplify its business so that it can focus on what it does best. This is just simple good housekeeping. It is even more important in this environment, largely to help with the control agenda. The chart below notes that we are exiting certain products and businesses. None of these exits will affect our main franchises. These actions eventually will reduce revenue by about $3 billion, but they will have little impact on profits. Some of the businesses we are selling originally had great promise – and we still have no problem trying things (and failing at them) as long as we have the discipline to stop doing them if they don't work. Some don't fit the new regulatory environment, some are not customer friendly and some are just simply too small to matter.

Business Simplification

Simplifying our business

- Exiting products non-core to our customers or with outsized operational risk – for example:
  - One Equity Partners
  - Physical commodities
  - Global Special Opportunities Group
  - Student lending originations
  - Canadian money orders
  - Co-branded business debit cards and gift cards
  - Rationalization of products in Mortgage Banking[1]
  - Identity theft protection
  - Credit insurance
- Discontinuing certain client businesses on a case-by-case basis in light of the new global requirements

Financial impact of business simplification ($ in billions)

	2014 impact	Run-rate impact
Revenue	$1.5	$2.8
Expense	(0.9)	(2.3)
Pre-tax income	0.6	0.4
Net income	$0.3	**$0.3**

Expense reductions lag revenue reductions

[1] Not included in the analysis

We still are investing in organic growth, and our investments from the past are paying off

As we have shown you in previous letters, the following nine investment initiatives (outlined in the chart below) will contribute to our profits over the next 10 years. All these projects are pretty much on track, and we expect they will provide substantial value for our clients and our shareholders in the future. Our current estimate is that they will add another $2 billion in profits by 2017. We like organic growth, and while we have not started as many major new initiatives this year as in previous years so we can focus on our control agenda, there will be great opportunities in the future.

We continue to be vigilant about our expenses

Earlier, we spoke about the regulatory and control issues that, by year-end 2014, will have increased our overhead expenses by $2 billion since 2012. Our total overhead (except litigation) was $60 billion in 2013, and we expect it will be less than $59 billion in 2014. We expect to continue to drive down expenses as a percentage of revenue over

Overview of Select Investments

Expense and net income impact of cumulative spend from select investments ($ in millions)

Line of business	Investment	Status	Comments	Target annual net income
Consumer & Community Banking	Branch builds	✓	■ Portfolio of branches opened from 2002–2012 ■ Average branch contributes $1 million+ to pre-tax income when mature ■ 4-year+/- breakeven and 7-year+/- payback for 2002–2012 portfolio	>$600
	Business Banking	✓	■ Expansion market branches fully staffed ■ Approaching core market productivity levels	$600+/-
	Chase Private Client	✓	■ Added 2,100+ Chase Private Client locations since beginning of 2011 ■ 22,000 clients as of 2011; 100,000+ clients as of 2012; 215,000+ clients as of 2013 ■ $14 billion net new money in 2013	$600+/-
Corporate & Investment Bank	Over-the-Counter Clearing & Collateral Management	In progress	■ Delivered a global platform and top three market share ■ Timing of steady state dependent on implementation of final Europe, Middle East and Africa and Asia Pacific rules	$150+/-
	Global Prime Brokerage build-out	✓	■ Build out international platform to facilitate clients' regional strategies ■ Successful launch of international prime brokerage in Europe, the Middle East and Africa in 2011; Asia Pacific launch in 2014	$175+/-
	Global Corporate Bank	✓	■ Committed to meeting needs of international clients ■ ~200 bankers hired since 2009	$600+/-
	Equities electronic trading	✓	■ Focused on building best-in-class electronic trading capabilities ■ Grew low-touch equities revenue at 21% CAGR since 2010	$100+/-
Commercial Banking	Middle Market expansion[1]	Ongoing	■ Expand Commercial Banking coverage into new markets ■ New cities added in 2013 include Tacoma and Jacksonville ■ Continue to add ~200 clients per year	$450+/-
Asset Management	Private Bankers/ Investment Management sales expansion Investment Management business initiatives	Ongoing	■ Hired ~700 Private Bank client advisors and ~300 Investment Management salespeople since beginning of 2010 ■ Expansion investments contributed net income of ~$100 million in 2013	$800+/-

✓ Indicates investment complete

2013 expense[2]	~$2.6 billion	**~$4,100**
2013 net income	**~$1 billion**	

Expect $3.5 billion+/– of net income in 2017 run-rate

[1] Includes WaMu, as well as out-of-footprint expansion markets

[2] Expense for aggregate investments reflects expenses related to select investments with overhead ratios higher than business average

the years. We are not doing this by skimping on investments – we never will do that since we believe investments in technology, training, controls, effective marketing and other efforts are critical for the long-term health and growth of the company. We are driving down costs by being extremely vigilant on expenses – always seeking out ways to automate and improve efficiency and operations. While we don't have a formal expense-cutting program, you can rest assured that we always are looking for ways to cut ***wasteful*** expenditures. We also believe that new industry utilities will emerge that will sharply reduce costs; for example, a utility could manage Know Your Customer processes (this way, corporate customers would not have to fill out the same forms and answer the same questions for all their banking partners). The financial sector always has been a large user of industry-wide utilities, particularly with regard to processes like settlement, clearance and payments.

And we always are learning (which also will make us a stronger company)

We always have believed that analyzing your mistakes makes you a better company. We often are asked about some of the management lessons we've learned over the past few years so let me share a few of them with you.

Customer advocacy. Treat the customer the way you want to be treated and make sure you see everything from the customer's eyes. Read customer complaints – and be the customer's advocate. This acts as an early warning system, it reduces problems and it will make you a better company.

Constantly improving systems and processes. We always have believed in this, but there is an example of where we didn't with our Anti-Money Laundering systems. For years, we scored fairly well on our AML program, but we did not continually improve our systems and processes, and, in hindsight, we fell behind. All systems and processes need to have regular review and continual improvement.

A tin ear. In the past few years, we had started to see regulatory and enforcement actions against our competitors – and saw signals from our regulators that things were going to get tougher going forward. Our response generally was, "We know what we're doing." Well, we should have done more self-examination. We need to be better listeners and do a better job at examining critiques of others so we can learn from other people's mistakes, too.

Enterprise-wide controls. We generally have had a preference for leaving things somewhat decentralized, if possible, to foster responsibility and innovation throughout the organization. We've prided ourselves on our controls, and, for the most part, we did them well. But not all critical controls were consistently executed throughout the firm – and they should have been. This reduces the chance of a control gap somewhere in the company, and it ensures a sustainable, rigorous discipline and process in place everywhere. In addition to our fortress balance sheet, we want a fortress control system.

Processes should be known, front to back. From the moment a customer is opening his or her account to conducting business through the middle office to properly recording that business on your books and records, you are only as strong as your weakest link. Management teams need to understand and review all the processes in their business.

Sustainability. It's not enough for an activity to be done well – it needs to be done well on a sustained basis. This means a rigorous risk assessment, a constant review of all processes, properly functioning risk and control committees, vigilant compliance and a thorough rechecking of everything by Audit.

Your management is taking full responsibility for all aspects of our business operations. Transparency and escalation are key so we can deal with problems properly and quickly. While we need to be extremely self-critical, we intend to do this in an environment of collaboration without finger-pointing.

CYBERSECURITY UPDATE

In last year's letter, I gave a frank assessment about cybersecurity and why it is such a critical priority for the entire company. We outlined how JPMorgan Chase had spent approximately $200 million in 2012 to protect ourselves from cyberwarfare and to make sure our data were safe and secure, and we dedicated more than 600 employees across the firm to the task. Despite these intense efforts, we acknowledged that the issue of cybersecurity worried us — and, today, that worry only has continued to intensify.

By the end of 2014, we will have spent more than $250 million annually with approximately 1,000 people focused on the effort. This effort will continue to grow exponentially over the years.

In our existing environment and at our company, cybersecurity attacks are becoming increasingly complex and more dangerous. The threats are coming in not just from computer hackers trying to take over our systems and steal our data but also from highly coordinated external attacks both directly and via third-party systems (e.g., suppliers, vendors, partners, exchanges, etc.). It appears that a large, successful attack on a major retailer last year was the result of a third-party system breach.

We are continuing to carefully protect our perimeter from external threats, beef up our processes to detect internal threats and monitor related third-party systems to make sure their protections are adequate. In addition, we are moving rapidly ahead with Europay Mastercard Visa (EMV) and tokenization for credit and debit card transactions, which we will need to do in conjunction with merchants. We also are building three state-of-the-art Cybersecurity Operations Centers in our regional headquarters to provide points of coordination for all incoming information, the identification of threats, the protocol around managing our responses and the security of our buildings around the world. A major focus of these centers is the concept of intelligence fusion, which will pull together all our internal information from Internet and systems monitoring, as well as reconnaissance from our partners in industry and government. This approach will give us a comprehensive and consolidated view of all the threats facing our firm and our customers, and it will help to inform our view on how best to combat them.

We're making good progress on these and other efforts, but cyberattacks are growing every day in strength and velocity across the globe. It is going to be a continual and likely never-ending battle to stay ahead of it — and, unfortunately, not every battle will be won. Rest assured that we will stay vigilant and do what we need to do to enhance our defenses and protect our company.

IV. WE BELIEVE OUR LONG-TERM OUTLOOK IS BRIGHT

In the last seven years, we have been through a global financial crisis, massive regulatory changes and a number of setbacks – but our company has been able to recover and prosper. Most important, our client franchises consistently got stronger. All companies, at some point, are going to have tough times. The ability of a company to overcome them and be better for having done so is a sign of its strength, not weakness.

As we navigate through 2014, our fortress company and the power of our franchises put us in good stead. We are in this business forever. And we need to look beyond current challenges so that we properly invest and plan for the future. When all is said and done, there is reason to believe that the future of banking will be quite good. The following paragraphs explain why.

The world has been getting better, not worse

It is hard to believe sometimes – when you read in the newspapers and see on TV all the terrible events happening on the planet – that the world has consistently, over the course of history, become a better place for human beings. A recent book by Harvard professor Steven Pinker entitled *The Better Angels of Our Nature* chronicles how mankind has made enormous progress and has improved society throughout the centuries. His research looks at issues like murder, torture and other acts of violence over the past thousands of years and shows how today's world is much safer and more humane than in the past. It's amazing that even the 20th century, bloodied by two world wars, was less violent than all other centuries before it. Cruelties such as torture and slavery over many, many years have become increasingly rare (though they tragically still exist). There are many contributing factors, but Pinker points out some of the reasons: increasingly just and moral governments; the invention of new institutions like courts of law and police forces; and expansion of human knowledge and a heightened sense of morality spread by the written word, religious institutions and schools, all of which have helped influence people's minds about what is acceptable – and what is not.

Dr. Martin Luther King said, "The arc of the moral universe is long, but it bends toward justice." Progress, sometimes painful and slow, has been happening all around us all the time, and the optimist in me believes that it will continue.

We have an abiding faith in the United States of America

I have spoken about this in the past, and I don't believe that it is blind optimism or patriotism. America today may be stronger than ever before. For example:

- The United States has the world's strongest military, and this will be the case for decades. We also are fortunate to be at peace with our neighbors and to have the protection of two great oceans.
- The United States has among the world's best universities and hospitals.
- The United States has a reliable rule of law and low corruption.
- The people of the United States have a great work ethic and "can do" attitude.
- Americans are among the most entrepreneurial and innovative people in the world – from those who work on the factory floors to geniuses like Steve Jobs. Improving "things" and increasing productivity are American pastimes. And America still fosters an entrepreneurial culture where risk taking is allowed – accepting that it can result in success or failure.

- The United States is home to many of the best businesses on the planet – from small and middle-sized companies to large, global multinationals.
- The United States also has the widest, deepest, most transparent and best financial markets in the world. And I'm not talking just about Wall Street and banks – I include the whole mosaic: venture capital, private equity, asset managers, individual and corporate investors, and the public and private capital markets. Our financial markets have been an essential part of the great American business machine.

America's future is not guaranteed, and, of course, America has its issues. Later in this section, I will discuss some of the issues, especially the ones possibly holding back our country's growth. But throughout history, we have shown great resiliency and a capacity to face our problems. Warren Buffett, the greatest investor of all time and my friend, has said, "It's never paid to bet against America." I think we all should take his advice.

The outlook for long-term growth is excellent – our clients are growing, and they need us

The financial needs of countries, companies and individuals will continue to grow over time. And that growth will be broad based and global. A few examples suffice.

GDP and trade

- World gross domestic product (GDP) is projected to grow an average of 7% per year through 2023, from $73 trillion in 2013 to $139 trillion in 2023.
- The value of the world's exports grew at an average rate of 11% per year between 2002 and 2012, from $8.1 trillion to $22.8 trillion. Many economists expect international trade to grow faster than world GDP over time.

Infrastructure

- Keeping pace with global GDP growth will require an estimated $57 trillion in infrastructure investment between now and 2030 – this is 60% more than the $36 trillion spent over the past 18 years. Emerging economies are likely to account for 40% to 50% of this infrastructure spending.
- Infrastructure-related trade is forecast to grow by 9% per year on average between 2013 and 2030, outpacing overall merchandise trade growth of 8% per year so that by 2030, infrastructure-related trade will account for 54% of total goods traded globally.

Growth of large companies

- A staggering 7,000 new large companies (those with revenue greater than $1 billion) are expected to develop between 2010 and 2025; 70% are expected to be in emerging regions, with the share of large company revenue generated from those based in emerging regions rising from 24% in 2010 to 46% in 2025.
- By 2025, emerging regions are expected to be home to almost 230 companies in the Fortune Global 500, up from 85 in 2010. Of the 230 emerging region companies, 120 are expected to be based in the China region.
- Today, 80% of the 2,200 large companies in emerging economies are spread across almost 100 cities; by 2025, 80% of the 7,000 large companies are likely to be spread across nearly 160 cities.

Urbanization and population growth

- A majority of the world's population now lives in urban areas for the first time in history, and by 2050, that number is expected to grow to 67%. This mass urbanization will create cities on a scale beyond what most of the world has seen. Providing the infrastructure and clean water, schooling, healthcare and social safety nets (to name just a few) to anticipate, accommodate and sustain this growth will be hugely challenging.

Financial assets

- Total global financial assets of consumers and businesses grew to $248 trillion by the end of 2013 and are projected to grow at a compound annual growth rate of 6.6% through 2023 to roughly $453 trillion.
- Much of this growth is expected to come from emerging market economies, which consisted of 20% of global financial assets in 2013 and is expected to grow to 34% by 2023.

All the points above are the fuel that drives all of our businesses. The growth will be there. The hard part about our businesses is managing the complexity and the often volatile and violent swings of moods and markets, as well as the episodic nature of some of the businesses. (Not all of our businesses operate on a convenient annual cycle.) What we try to do is see through the fog and noise and the madness of crowds to clearly, consistently and safely manage our businesses and invest in our future.

Of course risk and uncertainty remain, but we need to put it all into perspective

Of course there is risk in the system. There always was, and there always will be. As a company, we need to be prepared for even the unlikely and unpredictable bad outcomes. But like everything else, it helps to put risk into perspective. Some of the common risks spoken about today include geopolitical risks and what some think are inflated stock market values (I am not going to talk about the stock market as I have little to add to that debate). Probably the most discussed area of uncertainty is what effect the reversal of the Fed's Quantitative Easing (QE) policy will have on the economy and markets. I will speak about Fed policy later in this section. Here I will briefly review some of the risk issues we see today.

Geopolitical risk is a constant

History teaches us that geopolitical risk is always there. Some of the risks are well-known to us such as Afghanistan, Iran, North Korea, etc. But many of the risks are not known, and they often are the ones that create huge problems. For example, most people did not foresee the events in the Middle East (the "Arab Spring"), the start of World War I or the serious issues in the Eurozone, to name a few. Many of the changes in the geopolitical world were hugely positive; for example, the falling of the Berlin Wall, the re-emergence of China in the global economy and the spreading of democracy throughout many parts of the world. Two years ago, there was deep fear about the collapse of the Eurozone, which, of course, hasn't happened. When I graduated from business school 30 years ago, the great fear at the time was that America had seen its best days and was soon to be surpassed by a resurgent Japan.

While we are prepared and watchful, we see nothing that would change our long-term plans.

There are many positive factors:

- Consumers are in increasingly good financial shape. Over 6 million more Americans are working since the depths of the financial crisis. The amount of consumer income that they spend to service their debt is the lowest it has been since it has been recorded, dating back to 1980. And Americans' net worth has been increasing, along with stock market prices and the value of homes.
- Housing has turned the corner in most markets. We've moved from a buyer's market to a seller's market in four years, construction of new homes has steadily improved and home values have increased nationally more than 19% in the past two years due to the strengthening economy.
- Capital markets are wide open – credit, for the most part, is flowing freely. (The only exception I see here is that it still is too hard to get a mortgage for many people.)
- Corporations and middle market companies are in extremely good shape. Corporate cash balances now are 11.4% of assets, up from 5.2% in 2000.
- The banking system is almost fully recovered, and banks are better capitalized than they have been in 60 years. Banks had average equity to assets of 11.1% in 2013 – the highest it's been since 1950. And banks in total have $10 trillion in deposits vs. $7.6 trillion in loans today – the lowest loan-to-deposit ratio since 1970. In addition, banks currently hold HQLA of approximately $2 trillion.
- Consumers are benefiting from abundant and less costly oil and gas due to technological advances in extraction.

But something is holding back our growth

Something is holding back the strong recovery of the great American economic engine. It is not lack of access to capital or loans, but it might be a combination of some of the following factors:

- Concerns around excessive regulation and red tape – I travel around the U.S. all the time, and this is a loud and growing complaint that I hear from businesses, small to large, across virtually all industries.
- Whether you were for or against "Obamacare," when massive changes to such an important part of the American economy are made, it does create uncertainty for many businesses.
- The inability to face our fiscal reality is a concern. I believe that if we had adopted some form of the Simpson-Bowles plan to fix the debt, it would have been extremely beneficial to the economy.
- Entitlement spending – which now is 60% of federal spending and is growing – is crowding out infrastructure spending and spending on initiatives like research and development and training.
- In addition, uncertainty about the ultimate outcome of the Fed's unconventional QE policy (and our inability to deal with some fiscal issues) makes future Fed policy more complicated.
- Political gridlock resulting not only in our government shutdown but in two debt ceiling crises was damaging and irresponsible.
- U.S. corporate tax policy is hugely inefficient and, at the margin, drives American capital overseas.
- U.S. immigration policy (which we should fix for moral reasons alone) also is driving brains and entrepreneurs overseas. Most economists think a good immigration policy could accelerate U.S. economic growth by 0.2% right away and by 2% over a 10-year period. This, alone, could create 3 million jobs.

In addition, uncertainty and hypersensitivity to risk may be holding back growth

Uncertainty also has always been a constant in business. But coming out of a financial crisis, in addition to the items I mentioned above, we may be living in a time of heightened sensitivity, uncertainty and risk aversion. It seems that just about everyone has become a risk expert and sees risk behind every rock. They don't want to miss it – like they did in 2008. They want to be able to say, "I told you so." And, therefore, they identify everything as risky. Here are a few facts that support the uncertainty and risk aversion hypothesis:

- Corporations seem unduly conservative. We already have mentioned how much excess cash they hold.
- U.S. gross capital formation as a percentage of GDP has been at lower levels in the last five years than it has been for more than 40 years. Capital expenditures ultimately are the drivers of productivity, jobs and growth.
- The top 1,000 companies account for approximately 50% of all capital expenditures. One reason that large companies may be more conservative in their use of cash and debt is that rating agencies are much tougher on ratings. In 1993, the number of AAA and AA issuers was 413, and in 2013, that number was 147. Today, the companies are bigger, basic financial metrics (i.e., debt to equity and margins) essentially are the same and defaults are lower. I have defended the rating agencies' right to their opinions, but it seems they also may have largely overreacted to the financial crisis.
- Finally, one of the great aspects of the American system is that it is okay to fail and to try again. But even that seems to be diminishing as failure, other than in Silicon Valley, is severely punished.

This all can be fixed

There is nothing in all of the negative items that I mentioned above that can't be fixed through our own actions. Collaboration as opposed to destructive finger-pointing is needed. A few smart decisions and a lot of

constructive collaboration will improve confidence – and confidence is the "secret sauce" of growth. As consumers and businesses grow more confident, they will spend more and invest more. Stronger economic growth will create more jobs and higher incomes and give us the necessary resources to tackle pressing and important issues like inner city school education, income inequality and proper infrastructure investing.

The impact of tapering

Today, there is hyperfocus on central bank policy and, in particular, on what's called "Fed tapering." The U.S. Federal Reserve had been buying $85 billion a month in Treasuries and mortgage securities (it recently reduced that amount to $55 billion a month). Most observers expect that number to come down to zero by the end of the year. Eventually, the Fed may need to begin selling some of the securities it has purchased.

The Fed's balance sheet has gone from $1 trillion in 2007 to an estimated $4.5 trillion by the end of this year. Some feel the Fed's QE policies have been too aggressive and ultimately will be inflationary. Additionally, there is a fear that ending QE will be risky and complex, particularly since QE has little precedence.

We cannot predict the future, and it is rational to have a healthy fear of new and untested policies. However, we think it will be helpful to put some of these issues in perspective, too.

Put it in perspective

The value of all financial assets in America today is approximately $90 trillion. When the Fed stops buying securities, the $4.5 trillion it owns will run off to $2 trillion by 2020 simply from paydowns of principal in Treasuries and mortgages. While it is not clear what the new steady state will be – the Fed probably will not need to take its balance sheet all the way back down to $1 trillion. Even if the Fed eventually needs to sell some securities, the American economy should be able to handle it easily – particularly in a strong economy.

This unconventional monetary policy (QE) may have worked, but it is confusing

Figuring out the full effect of QE is hard to do. And, therefore, figuring out the effect of the reversal of QE is even harder to do.

QE replaced $3 trillion in Treasuries and mortgage securities held by individuals, investors, funds and others with cash reserves created by the Fed. If all that might happen is the various investors involved took the cash and deposited it at a bank and the bank, in turn, deposited it at the Fed, there essentially would be no real change in economic effect. But if those involved spent the money, bought additional stocks or bonds and invested in long-term assets, there would be an effect on the real economy.

There is little question that QE – because it drove long-term rates down – lifted asset prices, including stocks and home prices (there were other global effects, but I won't talk about them here), reduced funding costs, improved economic activity and helped the economy recover. This probably was more true early on with QE and less true later on.

But much of QE appeared to be "unused." At the end of 2007, before QE started, banks had $6.7 trillion in deposits, $6.8 trillion in loans and only $20.8 billion in deposits[2] at the Fed. Today, banks have $10 trillion in deposits, $7.6 trillion in loans and $2.6 trillion in deposits at the Fed. You can see that loans increased very little, while deposits and reserves at the Fed increased dramatically. Banks clearly did not use all of these additional deposits to make more loans, though this was due to several factors, including the weak economy and the banks' need to build up their capital and liquidity ratios. One concern is that this "unused" money will one day be aggressively used – and cause too much inflation.

The Fed has tools in place to reverse QE if necessary – and banks have more constraints in lending out the money anyway

The Fed has many tools to reverse QE if necessary, which it can readily use if too much credit is created in the system. However, banks will be far more constrained in how much they can lend than in the past because of the new, higher liquidity and

[2] Regardless of what those receiving cash for their securities did with the cash, it ultimately will end up back in the banking system in the form of deposits, both at the bank and, therefore, deposits at the Fed. The deposits at the Fed are called reserves

capital requirements. In the new regulatory environment, the transmission and effect of monetary policy by the Fed will be different from the way it was in the past. It is very hard to calculate this impact, although I'm sure the Fed is taking it into consideration. In addition, business financing needs are likely to be moderate because businesses will be able to fund many of their projects with their own excess cash and strong earnings.

Normalization is a good thing

Ultimately, a normalization of interest rates, capital flow and allocation without central bank interference, concurrent with a strengthening economy, has to be a good thing – something that we all eventually should want even though it probably will be accompanied by volatile movements in interest rates. When rates do normalize, we know one thing for certain – it will happen ***differently*** from what people expect. And my guess is that when it happens, it will be faster than people expect. A normalized interest rate curve might have short-term interest rates at 3%-4% and 10-year Treasury bond rates at 5% plus or minus. If the yield curve returns to those kinds of levels in a healthy economy, we all will be okay. And the Fed already has made it absolutely clear that it will normalize its monetary policy only as the economy strengthens.

Focus on the real economy vs. the money economy

The real U.S. economy includes 145 million people who get up and go to work every day, trying to improve their lives and the lives of their family (and counter to what you read in the newspapers, 80% of those people are happy with their job). The real economy includes millions of companies serving clients every day and generally building to expand and meet their customers' order flows. In fact, most people in the real economy appropriately pay very little attention to the money economy. I would remind our readers that there are 320 million Americans, but only a small fraction watch CNBC or read *The Wall Street Journal*. In the real economy, what matters to most people is one's family, job and quality of life.

Those of us who operate in the money economy are very sensitive to interest rates – maybe overly sensitive. And we should look through the ***volatility*** at interest rates, which will almost definitely be there as the Fed changes its policy. Volatility in interest rates will not ***necessarily*** dampen real growth in the real economy.

Rising interest rates (all things being equal) will be a big plus for your company

Even as we have grown deposits and market share in many of our businesses, profit margins have been squeezed because of abnormally low interest rates. If interest rates rise to the normalized scenario that I described earlier, our net interest margins could expand 2.2%-2.7%, increasing our net interest income and profits by approximately $6 billion after-tax, all things being equal. This, of course, would take place over three to five years and not in a straight line. But, indeed, all things are not equal – many other factors will have an impact on our business flows and results.

We have been vigilant in trying to analyze the effect of interest rates on interest margins (we have managed the balance sheet to benefit from rising interest rates), and we also have been vigilant in trying to predict the effect of interest rates and Fed monetary policy on deposit flows. There is little question that the Fed's QE policy increased deposits substantially and that, as QE is reversed, it will reduce deposits. It is possible that we could see significant outflows of certain types of deposits over the years – an event for which we will be prepared.

Banks still need to be there in good times and in bad times – but it will be a little harder in the new world

In the last financial crisis, many banks stood against the tide. They were there for their clients and continued to fund businesses, cities, schools, hospitals and investments when many other banks wouldn't or couldn't do so. It is not because these banks were irrational but because that is their job. Imagine yourself being a client of a bank, and, at the first sign of trouble, the bank runs like a rabbit.

The money markets and some of the capital markets are like rabbits – at the first sign of trouble, they run as far and as fast as they can. Human psychology isn't going to change, and even the Fed can only mitigate the effect of this reaction. It is quite possible that some shadow banks will act that way – they may make loans only in good times but not in bad times. So when the regulators finish designing the new system, they should try to keep this in mind.

Many of the new rules have added procyclicality. For example, Basel III capital rules require that risk-weighted assets will go up in a stressed environment. We estimate that between 10% to 20% of our capital may be used in an extreme stressed environment to satisfy additional regulatory requirements, and this will force us more quickly and more aggressively to reduce, or not add to, risk assets as the stressed environment unfolds. And the new liquidity rules require us to hold 100% of liquid assets against possible outflows. So as a crisis unfolds, by definition, we will have outflows higher than expected that will require more liquid assets. This will require the selling of risky assets to buy liquid assets. We hope the regulators will come up with a schematic that allows the use of liquid assets in stressed times without penalty so that banks can continue to lend when times are tough. We certainly don't want to have liquidity or capital rules aggravating a crisis.

And we have many exciting new things coming

We have focused a lot of attention in this letter on the new rules and regulations and on many issues about which we need to be worried. But there still are a lot of initiatives and innovative new products and services coming down the pike about which we are excited. I'd like to mention just a few of them:

- **Better client data management leading to deeper penetration.** In all of our businesses, we are building better client data management systems. This gives us a deeper understanding of our clients and better coordination of our selling efforts. This allows us to more effectively sell additional products to the same customers – which helps drive both profitability and customer satisfaction.
- **Increasing segmentation and focus on more refined market segments.** For example, this includes advertising and products specifically designed for market segments like retirees, women and certain minority groups. Our Commercial Bank has formed specialty lending departments so that, as a whole, this line of business has deep expertise about particular industries. And our mobile banking products will be specifically designed for different market segments. Even in areas where we already are ranked #1, like fixed income sales and trading, when you dig deeper, there still is a lot of room for improvement in certain parts of the world and in certain sub-businesses and products.
- **An exceptional customer experience.** We have been on this journey for a while, and we are getting better, but there is so much more to do. We want to be known for our customer service – and we want to be compared in this regard with the best in the business.
- **JPMorgan Chase Institute.** We are going to form a thought-leading institute backed by all of the knowledge, broad relationships and resources across the firm to help continue to educate the world on topics in which JPMorgan Chase has a distinct and deep knowledge. We intend to analyze and publish our insights on small, middle-sized and large businesses, the development of cities and communities, global trade and capital flows, and workforce development, among other themes.
- **Big Data.** We have created a high-powered group of experts to enhance our use of data (generated across JPMorgan Chase or purchased externally) to create intelligent solutions for our clients. For example, we are looking at our data assets to help clients in managing collateral positions, assist merchants in gaining insights and aid consumers in validating credit reports, among others. This group will have an unending supply of work.
- **ChaseNet.** We announced this initiative last year. It allows us to rethink the whole end-to-end payment experience for both

consumers and merchants. We now have several clients on a beta test, and we are hoping to roll out some exciting programs that are good for consumers and merchants alike.

- **Payments.** While this topic does keep us up at night due to the talent and innovation of the competition that would love to make us obsolete, we should point out that JPMorgan Chase is one of the biggest payment companies in the world (across credit cards, merchant payments, global wire transfers, etc.). We are even one of the biggest mobile payment companies. So in this space, there is both risk and opportunity. We have some good ideas and action plans so stay tuned!
- **European capital markets.** As the bank markets are shrinking in Europe, the public bond markets will be growing. It is hard for us to compete in the bank lending markets in Europe, but we are very qualified to gain market share in the public capital markets.

THE ROLE OF BANKS IN DEVELOPING SOCIETY

At JPMorgan Chase, we believe we have a responsibility to be part of the solution to the world's most pressing problems, not only because it's the right thing to do but because our own long-term success depends on the success of our communities and the people, companies and institutions we serve.

JPMorgan Chase contributes approximately $200 million a year — much of it to help the poor and disadvantaged — and our people dedicated more than 540,000 hours of volunteer service in local communities around the globe. The volunteer work that our employees do helps to define the meaning of corporate responsibility by creating tangible connections in communities around the world — from the largest countries to the smallest towns.

And our efforts go well beyond philanthropic work. We also develop programs that bring together our financial capital, as well as our core strengths, capabilities, and the expertise of our business and our people to help improve the world in which we live. It is a big responsibility to be a bank — and communities around the globe are better off if we do it well.

We will continue to use our size, scale and expertise to make a difference and to be a real, positive contributor to society — from fighting income inequality to improving education and work skills. I see evidence of the difference we make every day, and following are just a few examples that I'd like to mention.

Helping Close the Skills Gap

Even in the face of high unemployment, we hear from our clients daily about how hard it is to find workers with the right skills. Some 4 million jobs stand open, while 11 million Americans remain unemployed, and millions more have given up seeking employment. That's why we launched New Skills at Work, an unprecedented $250 million, five-year private sector initiative to improve job training at the middle-skill level (for jobs that require training beyond high school but not a four-year degree). The sense of urgency to address this issue is something we see everywhere we do business, and we are working with community leaders across the country — community colleges, technical training programs, policymakers and employers — to tackle the skills gap. We know that helping workers gain the skills they need is only one part of the solution to the unemployment challenge, but it is an area we can do something about right now. And JPMorgan Chase is uniquely suited to the task of rallying a broad range of business leaders around the goal of aligning our investments in education and skills training with current job openings and future career pathways.

- **Emerging markets.** As the world grows, so does the number of countries and companies that we can serve. Every time we open an operation in a country, we support companies from around the world to do business there – and we help the country's companies explore the world. The network effect is huge and hard to duplicate.

Taking everything on balance, all the risks and all the opportunities in what essentially is an improving and growing world, we remain optimistic about the future of banking.

Improving Educational Outcomes for Young Men of Color

We're also willing to roll up our sleeves. Over the last four years, our employees coached 24 young men of color from low-income New York City neighborhoods – where less than 30% of black and Hispanic males graduate from high school – in an end-to-end program that supplemented their academics, gave them leadership training and helped them apply for college. All 24 got into college – they started last fall – with $8 million in scholarships, and we're hoping we see them this summer in internships here.

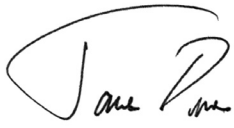
Attracting Private Capital to Social and Environmental Challenges

Foundations and governments, with their limited resources, can do only so much to solve the challenges facing low-income populations around the world. To make progress at the scale required, we need to create vehicles that attract private capital and apply it to generate measurable social and environmental benefits – alongside financial returns. The Global Health Investment Fund that we established with the Bill & Melinda Gates Foundation raised private capital to invest in new drugs and vaccines, emerging diagnostic tools, child-friendly formulations of existing products, and technologies to reduce maternal and infant mortality – all focusing on diseases that disproportionately affect the world's poorest countries. By including global access requirements, products are available at affordable prices to the populations most in need. And we're working now with The Nature Conservancy to establish a new center for natural capital investing that will structure transactions that generate revenue from sustainable use of a property – monetizing habitat protection, water conservation, sustainable timber harvesting, wetlands, etc. Stay tuned for more on that.

Serving Cities as Clients and the Engines of Economic Growth

JPMorgan Chase continues to focus on ways to help metropolitan communities operate and grow. We offer states and cities our best advice and considerable financial support. Last year, the firm provided more than $85 billion in capital or credit to nearly 1,500 government entities, including states, municipalities, hospitals, universities and nonprofits.

We extended the reach of our Global Cities Initiative with The Brookings Institution by creating a network of trading cities across the United States and ultimately around the globe – these are cities that will build new commercial relationships by strengthening trade and investment ties and by learning from each other about how to grow industries with real export potential. Our Global Cities Initiative with Brookings, which we launched two years ago, includes a $10 million financial commitment and the ability to tap our network of relationships around the world to convene an extraordinary series of events in cities from Los Angeles to São Paulo. These sessions bring together policymakers, business leaders and non-governmental organizations to share best practices and formulate strategies for improved competitiveness. As a result of these meetings, participants are developing locally driven, actionable strategies to strengthen their respective region's trade and investment practices.



IN CLOSING

It is important to acknowledge that no matter how good one's position is, no one has a divine right to success. Many of you have seen companies in extraordinary positions erode over time. Sometimes this happens because of structural or technological changes, but, frequently, it happens because of plain and simple mismanagement. And this is even more true when you operate in tough, complex, competitive and sometimes volatile global markets.

So to succeed long term, we need an excellent management team. And in my opinion, your management team has the character, culture, intellect, experience and wisdom necessary to succeed.

And importantly, this management team does not rest on its laurels and is continually questioning itself and often focusing not on what we do well but on what we have ***not*** done well. Years ago, the U.S. military adopted a review process called the After Action Reviews (AAR). An AAR is a disciplined process where military leaders review the results of all missions taken. This examination is conducted not so the commanders in charge can find faults and point fingers – but so everyone can continually get better. At our company, we have the same attitude and just hope that we can do it half as well as the U.S. military.

In closing, I want to reiterate how honored I am to work at this company and with its people. What they have accomplished during these difficult circumstances has been extraordinary. On behalf of JPMorgan Chase and its management, I want to express my deepest gratitude to our people – I am proud to be their partner.

Jamie Dimon
Chairman and Chief Executive Officer

April 9, 2014

Safeguarding the business

Matt Zames

Our goal is to be the safest, soundest and most profitable financial services company in the world, doing the highest-quality business and delivering to our clients and customers best-in-class products every day. How we operate as a company is key to accomplishing that goal. Looking across our entire enterprise, the Chief Operating Officer's office drives many of the processes and corporate utilities, as well as the infrastructure, to that end, ranging from managing the firm's liquidity, funding and structural interest rate risk to overseeing strategic firmwide functions such as global Technology and Operations, Oversight and Control, Compliance, Corporate Strategy and Regulatory Affairs, among others.

In the past year, we re-prioritized our major projects and initiatives, deployed massive new resources and refocused critical managerial time on these efforts. We've enhanced significantly our governance process and developed a system for management reporting that enables much greater transparency up to senior management and our Board. We are simplifying our business model, eliminating products and services that are not essential to serving our customers and are not core to our businesses. We are ensuring that our systems, practices, controls, technology and, above all, culture meet the highest standards.

Liquidity and interest rate risk management more critical than ever

Last year, we continued to advance our approach to liquidity and interest rate risk management, cornerstones of safety and soundness. We have focused on striking the appropriate calibration when it comes to managing our balance sheet, protecting the deposits our clients and customers entrust to us and, ultimately, our shareholders.

2013 represents a year of significant progress in managing the firm's liquidity risk. We evolved our internal liquidity framework to ensure that the firm has sufficient liquidity resources to continue business-as-usual operations under both a short-term and prolonged market and company-specific stress. Consistent with this new framework, we more narrowly defined the JPMorgan Chase liquid asset buffer available to meet short-term liquidity needs to be more conservative and consistent with the scale of our balance sheet. We further built out technology that will enable more flexible and timely liquidity stress testing for the enterprise and our major legal entities. Our internal framework is more conservative than the related Basel liquidity measures. Compliance with our framework, which was achieved in 2013, results in the firm exceeding regulatory minimums, notably the Basel III Liquidity Coverage Ratio. Of course, we are diligent in understanding new regulations as they are introduced and stand ready to comply.

We continued to make strides in advancing our Asset-Liability Management (ALM) capabilities, which are critically important as we contemplate the reversal of Fed monetary policy and the ensuing impact on interest rates. We established a global ALM portfolio strategy team in 2013, whose mandate includes working across the firm to ensure consistency in our analytical approach and modeling in relation to structural interest rate risk. A significant area of focus for us this past year was advancing our scenario and analytical capabilities, including materially investing in our technology and supporting infrastructure to allow for more dynamic analysis.

We continue to actively and conservatively manage our substantial investment securities portfolio, which is the primary vehicle we use to manage our firmwide structural interest rate risk. In 2013, we applied held-to-maturity accounting for certain investment securities the firm purchased, which will help to mitigate Basel III capital volatility in a

rising rate environment. The average yield of our investment securities portfolio increased by more than 50 basis points from 4Q 2012 to 4Q 2013, reflecting our ability to deploy new investments at higher yields throughout the year.

We have put enormous resources on the control and compliance agenda

We have developed and implemented an end-to-end control and compliance agenda, central to which is early issue identification and escalation and sustainable remediation. Over the course of 2013 and 2014, we will have increased our total spend on that agenda by approximately $2 billion.

We are looking at issues on a firmwide basis

One of the things we focused on last year is a series of firmwide reviews – issues raised by our regulators and issues we identified internally – that we thought should be examined on an enterprise-wide basis. We stood up 24 separate programs and dedicated teams around the globe to look at these issues across businesses and geographies to make sure we are appropriately and consistently managing the associated risks. They include matters like Anti-Money Laundering (AML), Basel implementation and how we evaluate new business initiatives. Oversight of our tens of thousands of vendors across our front and back offices is another example of a process we re-evaluated, so that across our company, we manage these relationships and their associated risks to a common set of highly developed standards. We report on these programs regularly to our Board of Directors.

Another thing we worked on in 2013 is how to take problems we find in one area of the firm and determine whether there are any similar risks in another part of the firm. We created a state-of-the-art controls room in our executive headquarters to maintain a repository of firmwide control-related information and to enable rapid access to relevant data, reporting capabilities, sophisticated analytics and more proactive issue identification.

We have made substantial progress in AML

We also are deploying unprecedented resources, dedicating senior managerial time and prioritizing efforts to build and maintain an industry-leading AML program. By the end of 2014, we will have dedicated close to 8,000 full-time employees solely to AML. We are making progress in strengthening our ability to measure AML risk, are improving how we onboard clients and perform customer due diligence, and are enhancing how we monitor client transactions to detect potentially suspicious activity. At the same time, we have taken substantial steps to de-risk, or simplify, our businesses. We have exited more than 500 relationships with foreign correspondent banks and are moving any accounts for foreign government officials/politically exposed persons out of Consumer Banking.

We want to make sure we have nothing but open and honest dialogues with our regulators

We have hundreds of regulators around the globe and are examined extensively each year. We also have thousands of documents and data points we periodically share with them. It is imperative that we are fully transparent with our regulators at every level of our organization.

We pay close attention to our regulatory environment, not only to make sure we behave in ways consistent with the spirit as well as the letter of the rules but to anticipate the evolving regulatory agenda. I personally meet with our primary regulators at least twice a month to make sure we as a company understand their expectations and fully address them.

Technology drives the experience of our clients and customers and our risk and controls management

Technology fuels almost every aspect of this company and is a core part of our value proposition to clients and customers. Over the past five years, the firm has invested 8%-9% of its annual revenue to fund our global technology capabilities. This is one of our largest investments as a company. Technology enables our business growth, supports our worldwide operations, helps us build stronger controls and meet regulatory requirements, enhances our productivity and efficiency, and, most important, protects the safety of our clients' assets.

The scale of our businesses continues to expand. Information Technology (IT) supports 300,000 desktops, 58,000 servers in 32 data centers, 26,000 databases and 7,250 business applications. Our global telecommunications network connects our presence in 60 countries along with our 5,600 Chase branches and 19,000 ATMs. Technology in our Consumer business supports 30+ million customers via our digital platform and 15+ million customers using our innovative mobile capabilities. In our Corporate & Investment Bank (CIB), we process up to $4 trillion of U.S. dollar payments daily.

Innovation is happening across our business lines every day. Our Consumer Branch of the Future is powered by IT innovation. Our recently completed Strategic Reengineering Program in the CIB has improved efficiency by hundreds of millions of dollars. IT is improving not only the speed and scale of our credit card authorizations but has enhanced our fraud protection capabilities and is the engine behind new, innovative products, including Blueprint™.

Each year, we invest hundreds of millions of dollars in our risk and controls technology agenda. A sizable part of this investment is dedicated to ensuring that we have the systems to identify problems – whether these problems have to do with AML risk, fraud risk or something else – on a real-time basis. A core objective of our technology strategy is to reduce variability and increase consistency and standardization. As such, one of our most important goals is to lessen our reliance on manual controls, which are more susceptible to human error. We also are seeking to substantially reduce subjectivity to allow for a more consistent and predictable way to identify control gaps in the environment. Systems enhancements, including information technology and data architecture, are critical to the broad management of financial risks.

Our technology environment continues to be tested. In the past two years, we have faced unprecedented cyber threats from sophisticated adversaries bent on wreaking havoc in the financial industry. Two years ago, we saw a rise in "denial of service" attacks aimed at disrupting the flow of financial transactions. We have invested heavily in improving our overall cyber defenses and dramatically improved our ability to withstand these attacks. However, as the threats continue to grow and attacks continue to evolve, it's crucial that we evolve as well and focus on tomorrow's threats, as well as today's. To that end, we've nearly doubled our investment in cybersecurity, including deployment of increased monitoring and protection technology, and we've expanded the number of dedicated cybersecurity professionals in the company to focus on protecting our customers and our staff.

Last year, we kicked off an effort to develop multi-year technology plans for our businesses and corporate functions that reflect the firm's top priorities and business requirements. These "road maps" will enable us to manage the firm's technology investments against the backdrop of a strategic plan, which we'll continue to revisit and refine.

As we look to 2014, our reliance on technology will continue to expand. We will spend close to $250 million on our cyber capabilities. IT will be at the core of what we need to do to adapt to the new global financial architecture and to meet regulatory requirements, including AML, Comprehensive Capital Analysis and Review (CCAR), Volcker and Dodd-Frank, among others. We will leverage our internal cloud platforms to further improve the efficiency and time to market for our IT infrastructure. Each of our business lines has a robust set of strategic initiatives. Whether it is upgrading our next-generation digital and mobile programs, enhancing our Asset Management Solutions business, improving our e-trading platforms, enabling growth in Commercial Banking or making our corporate functions more effective, technology is core to the delivery.

Conclusion

Not every organization has the leadership team, the talent and the fortitude to make this level of investment for the future. We feel privileged to be able to do so on behalf of our clients, our customers and our shareholders. I could not be more proud of our employees and our accomplishments to date. 2014 is another important year for us, and I am confident that we will continue to deliver at the level you expect of us – holding ourselves, our business practices and our culture to the highest standards.

Matt Zames
Chief Operating Officer

Consumer & Community Banking

Gordon Smith

Across Consumer & Community Banking (CCB), we are growing our business by building lifelong relationships with our customers. Throughout 2013, we maintained our strong momentum in creating a great customer experience across all of our channels. Chase ranked #1 among the largest banks by the American Customer Satisfaction Index (ACSI) for the second year in a row, and J.D. Power and Associates ranked us #1 in customer satisfaction in three out of four small business banking regions. These are all significant improvements from three years ago.

We started with the simple theory that if we treat people well, they will want to do more business with us; and this steady focus on improving the customer experience is working. We have relationships with nearly half of the households in America, and that number is growing. The number of households that we serve in Consumer Banking is up 5% from 2012. Average total deposits are up 10% from a year ago, and we've grown deposits at a rate that's more than twice the industry average – that's more than any other bank for the second year in a row.

But improving our customers' experiences does ***not*** mean being all things to all customers. Reducing operational complexity and simplifying our products were top priorities for us in 2013. Complexity can kill a great customer experience. In 2013, we exited products that were not core to our business or that served only a small number of customers. These products more often led to uneven experiences for customers, added complexity for our employees and required additional operational support. As one example, we have greatly streamlined our Mortgage products and programs. In 2010, we offered a suite of 37 products/programs in Mortgage. Over the course of 2013, we reduced them to 25, and throughout 2014, we will further reduce them to 15.

In 2013, we made significant investments in improving our controls. It was a challenging year, and I am very proud of all our Chase colleagues who stepped up to tackle these issues. Having strong controls is simply how we do business going forward, and it will make us a better, more efficient company. We still have work ahead in 2014, but I am confident that as we start 2015, we will have put many of these legacy issues behind us.

Exceptional franchise

CCB is an exceptional franchise with leadership positions across our businesses. I wouldn't trade our portfolio of businesses for anyone's. We are the #1 credit card issuer in the U.S. based on loans outstanding, the #1 Small Business Administration (SBA) lender, the #1 U.S. co-brand credit card issuer, #1 in total U.S. credit and debit card payments volume, the #2 mortgage originator and servicer, and the #3 bank auto loan originator.

In addition, we are leading the way in making it easier for our customers to do their banking when they want and how they want. Chase has the #1 ATM network, #2 retail branch network and #1 mobile banking functionality, and chase.com is the #1 online financial services destination. Few, if any, banks can provide customers the quality of products and channels that Chase can.

2013 financial results

In 2013, CCB delivered strong results in a challenging environment. Our net income was $10.7 billion, up slightly from $10.6 billion in 2012. Our revenue of $46.0 billion was down 8% from $49.9 billion in 2012, driven by lower mortgage production volume as fewer Americans refinanced when interest rates rose in the second half of the year. We also felt the impact of lower deposit margins and lower loan balances. We ended 2013 with a strong return on equity of 23%.

CCB had double-digit growth in most of our businesses. Consumer Banking average deposits were up 11%, client investment assets were up 19%, Business Banking average deposits were up 13%, credit card sales volume was up 10%, merchant processing volume was up 14% and auto originations were up 12%. These numbers are the strongest we've seen in years. The outlier was mortgage originations, which were down 8%, consistent with the industry.

Here are some highlights from our individual business units:

- Consumer & Business Banking net income of $2.9 billion was down 10% from 2012, but net revenue of $17.3 billion was up 1%. Chase Private Client (CPC) continues to be a big success with our customers. We reached a record $189 billion in client investment assets. Our net new investments per household have grown 77% per year since 2010. To date, we have opened roughly 2,150 CPC locations to serve more than 200,000 clients. We remain the #1 SBA lender for the fourth year in a row even with Business Banking loan originations down 21% from 2012.
- We are managing Mortgage Banking toward becoming a smaller, higher-quality and less volatile business. While Mortgage Production was strong in the first half of the year, our origination volume dropped 37% in the second half as rates increased. As a result, our full-year net income was $3.1 billion, down 8% from 2012. Return on equity was 16% for 2013. Although these results are lower than last year when production volume was a record, we are pleased that Mortgage Banking is maintaining profitability.
- Card, Merchant Services & Auto performed exceptionally well in 2013. Net income was up a very strong 19% to $4.8 billion from $4.0 billion in 2012, driven by lower provision for credit losses. Card Services sales volume of $419.5 billion was up 10% year-over-year, outperforming the industry for the 23rd consecutive quarter. Credit trends continue to improve, and charge-off rates continue to fall to historic lows. Our 2013 net charge-off rate for Credit Card of 3.14% was down from 3.95% in 2012.
- Over the years, Chase has developed a leading end-to-end payments franchise. Merchant Servicing processing volume of $750.1 billion was up 14% year-over-year, and transaction volume of 35.6 billion was up 21%.
- In Auto, our average loans were up 5% year-over-year, and originations were up 12%. The Auto net charge-off rate of 0.31% was down from 0.39% in 2012. In 2013, we also made the strategic decision to stop student loan originations. Student loan originations were becoming a smaller and smaller part of our business, and we chose to further de-risk our franchise by getting out of that product.

Expenses

CCB expenses were down by nearly $1 billion, or 3%, during 2013, and we will continue to drive out waste and improve efficiency. We are pleased that we met or exceeded our expense and headcount targets for 2013. Going forward, we have set a more ambitious goal to exit 2016 with expenses nearly $4 billion lower than they were in 2013. We intend to meet that goal while making further investments in controls, technology and self-service channels. We are keenly aware that every dollar of our budget is a dollar of shareholders' money, and we intend to manage our business with extreme financial discipline while producing strong, long-term returns.

2014 priorities

As we move into 2014, we recognize that the environment in which we operate has fundamentally changed. Our core strategy includes **further strengthening our controls, investing in digital service** and **running great community branches**.

Further strengthening our controls

Controls remain the #1 priority for the firm.

In 2014, CCB will invest approximately $500 million more in technology-related controls. That investment will be directed at automating manual processes and reducing complexity for our employees and our customers. We believe these investments will more than pay for themselves with fewer errors, more consistency and a higher-quality service experience for customers down the road.

Investing in digital service

Technology is changing our business rapidly, and consumer adoption of digital and mobile channels is staggering. In just the past three years, customer deposits made through self-service channels increased from 38% to 53%. The number of active mobile customers has more than tripled from 2010. Technology is driving service enhancements for our customers that will not only improve their banking experience but will serve them more efficiently and lower our cost base.

As an example, in December of 2013, we launched an Ultimate Rewards mobile app for our customers to redeem their credit card points. Within the first month, mobile reward redemptions reached 15%. Customers are very pleased by how easy it is to cash in their points. It's also far more efficient to do so; a mobile redemption costs about a penny vs. $3 through a call center. Technology innovations really are a win-win. They make banking more convenient for our customers ***and*** reduce our cost to serve them.

We intend to continue to be at the forefront of innovation in Payments. In 2014-2015, we will roll out two new features – Chase Wallet and Pay with Chase. Chase Wallet will greatly simplify online and mobile shopping for our customers by allowing users to access all their credit and debit cards, including non-Chase cards, in one digital wallet. And unlike other digital wallets, the Chase Wallet will automatically update the Chase card numbers when cards are replaced.

Chase Quick Checkout will give customers a "Pay with Chase" option when they shop online. Using their Chase log-in, they can access their digital wallet, select a payment option and place their order. It will reduce the online/mobile checkout from about two minutes to roughly 30 seconds. It's more convenient and safer for customers, and online businesses should see increased sales and lower shopping cart abandonment.

Running great community branches

Branches remain very important to our customers. More than 95% of Chase accounts are opened in a branch, and branches are essential to our other businesses across JPMorgan Chase. For example, 55% of Commercial Banking customers and 35% of Private Banking households visit a Chase branch every quarter. Branches are a core distribution channel for our other products as well – 55% of retail mortgages are originated through a branch, and 40% of Chase-branded credit cards are sold through the branches.

Branches aren't just a store – they also are centers of community. During and after severe storms or community crises, we've seen people come to the branch for help. They come in to make calls and charge their phones when they are out of power or they stop by simply for a hot cup of coffee. In addition, we've hosted events in branches on how to manage a small business or to better understand personal finance.

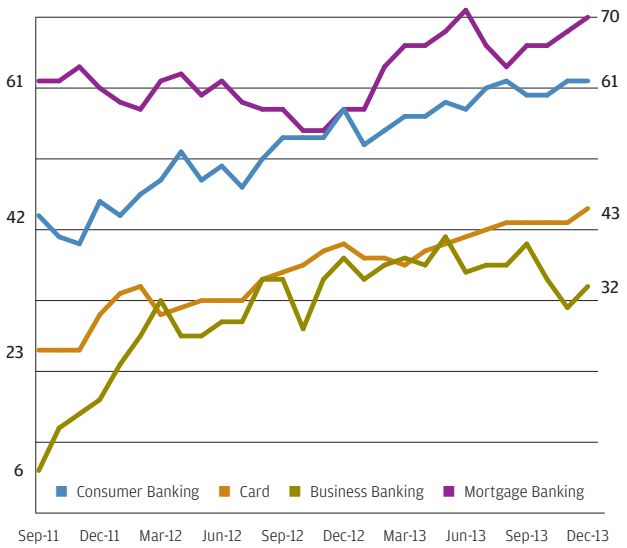
Branches will always be the lifeblood of our business, but we are seeing foot traffic and transaction volume come down as more customers prefer to do their daily banking online and through mobile. Teller transactions have declined 4% per year from 2010 to 2013, and nearly 60% of all traditional branch transactions now are handled through self-service channels.

Over the past several years, we have built out our network in growth markets, and that expansion now is complete. We have a terrific network to serve customers, and we plan to keep the number of branches in our footprint in the current range. We will further optimize the network we have – opening locations where we see growth opportunity and consolidating where we have enough density or low traffic. As always, customer behavior and satisfaction will drive those decisions.

The branches are changing. We used to talk about the "branch of the future," and, in many cases, it's here. Branches are becoming more and more automated. Today, over 300 branches have Express Banking Kiosks, which are designed to perform 85% of what can be done by a teller. Today's branch also will be more focused on providing great financial advice from one of our experts. If you haven't been to a Chase branch lately, I encourage you to stop by. We've come a long way.

Conclusion

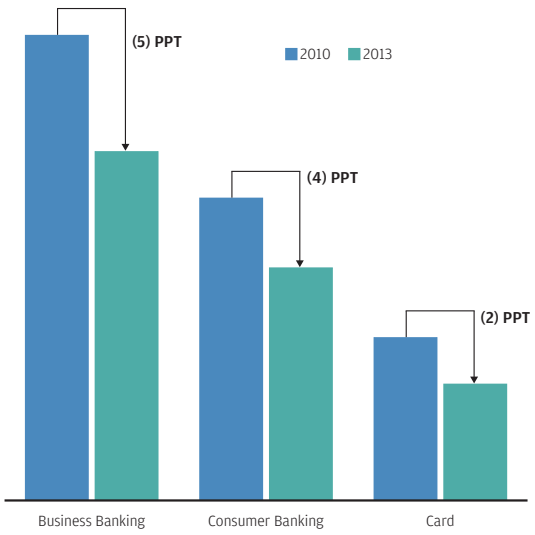
I'm proud to work at Chase. Our more than 150,000 employees work so hard to help customers achieve their goals, whether assisting in a branch or a call center or working hard behind the scenes. Thank you to our shareholders for your investment in us, and thank you to our customers for your business.



Gordon Smith
CEO, Consumer & Community Banking

2013 HIGHLIGHTS AND ACCOMPLISHMENTS

- #1 in customer satisfaction by ACSI among the largest banks for the second year in a row
- #1 in customer satisfaction by J.D. Power and Associates in three out of four small business banking regions
- #1 SBA lender for the fourth year in a row
- #1 for women-owned and minority-owned SBA loans
- Deposit growth more than double the industry average
- Customer relationships with almost half of U.S. households
- #1 credit card issuer in the U.S. based on loans outstanding
- #1 online financial services destination (chase.com) and #1 mobile banking functionality
- #1 in total U.S. credit and debit payments volume
- Record credit card sales and client investment assets
- #2 mortgage originator and servicer
- #1 ATM and #2 retail branch network for the second year in a row
- #2 wholly owned merchant acquirer
- #3 non-captive auto lender
- #5 in customer satisfaction by J.D. Power and Associates in mortgage originations and servicing
- 135,000 homeowner foreclosure preventions
- 360,000 downloads of the Chase My New Home℠ mobile app



Net Promoter Score[1]

Source: Internal data

[1] Net Promoter Score (NPS) represents the percentage of customers who say they would definitely recommend Chase to a friend or colleague (promoter who gave Chase a rating of 9 or 10 on a 10-point scale) vs. those who would not (detractors who gave Chase a rating of 0 to 6); a higher NPS signifies greater customer loyalty

Household Attrition[2] by Business Line

The future is here

Chase reopened its Water Street branch in downtown New York City after flooding from Superstorm Sandy destroyed it. The new Chase branch design uses some of the most advanced technology for customers. Chase has been redesigning many of its new locations to this format, about 400 in total.

Corporate & Investment Bank

Daniel Pinto

As the world's economy regained momentum in 2013, J.P. Morgan's Corporate & Investment Bank (CIB) solidified its leadership in an increasingly global financial market.

A truly global business, the CIB has 52,250 employees in 60 countries with a mission to serve 7,700 of the world's most significant companies, governments and institutions. To provide those clients with the range of services they need, more than 13,000 employees are in front office lines of business such as banking, markets, investor services and research. The remainder is primarily dedicated to technology, operations, risk and finance to ensure we have best-in-class controls and a robust operating infrastructure.

Demonstrating our ability to deliver strategic solutions, we helped clients raise nearly $500 billion in the public equity and bond capital markets in 2013, according to Dealogic. Overall, the CIB provided credit and raised capital for clients of more than $1.5 trillion[1] in 2013. Of that, $65 billion[2] was raised on behalf of states, local governments, hospitals, school districts and nonprofits, providing them with necessary funds to build schools, roads and college facilities and to support other infrastructure projects.

Markets revenue of $20 billion was up materially from the level in 2006, at $12 billion. More than 85% of the 2013 markets revenue was attributable to client-driven, flow-oriented products.

On the processing side of the CIB's operations, J.P. Morgan continues to rank as the #1 U.S. dollar clearer, processing up to $4 trillion of U.S. dollar payments daily. In our custodial business, clients entrusted the firm with a record $20.5 trillion in assets under custody, up 9% from 2012.

When J.P. Morgan combined the strengths of the heritage Investment Bank and Treasury & Securities Services in 2012, the aim was to ensure that clients benefit from the most effective mix of products, delivered in the most integrated way. Now organized within the CIB as Banking and Markets & Investor Services, the businesses have been aligned to promote their working together across sales, products and services, a structure that makes cohesive sense for our clients.

That collaborative structure enables the CIB to cover clients more comprehensively. Recognizing that trust is the cornerstone of our client relationships, we are committed to recommending only the solutions that serve our clients' long-term objectives. We never forget that their success is the best measure of our own.

We also know that our work for clients helps support a healthy global economy. Our deep and broad relationships enable us to connect investors looking for promising opportunities with the corporations and governments looking to access capital.

By raising money or by guiding a business through its initial public offering, we are providing clients with the resources they need to grow, to develop new products or to extend their footprint into new markets. When our Treasury Services business provides clients with liquidity management solutions for cash balances or helps clients secure trade financing, we're helping those clients enhance their operational efficiency. And when our Public Finance business provides financing for a metropolitan transit system, we're helping cities work better and improve the environment.

Those positive results ripple through the global economy. Ultimately, they help raise standards of living, expand job opportunities and create innovative technologies. We are proud of our accomplishments and look forward to continuing our work in 2014.

Our 2013 financial performance

The CIB's product strength and client focus were evident in our leadership roles on some of the major landmark transactions of 2013:

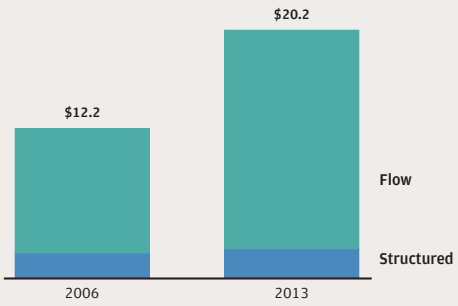
- J.P. Morgan advised Verizon on its $130 billion buyout of Vodafone's

45% stake in Verizon Wireless, serving as global coordinator, joint lead arranger, joint bookrunner and administrative agent on Verizon's $61 billion bridge facility, the largest corporate debt facility ever, and as joint bookrunner on the subsequent $49 billion bond. This transformational deal drew on the expertise of J.P. Morgan's franchise across multiple product and coverage groups globally.

- Just two days later, we followed that up with another significant transaction for a telecommunications company – a $6.5 billion bond offering for Sprint, the largest high-yield transaction ever sold to investors. The two transactions, coming within days of each other, made it a week the Technology, Media and Telecommunications team will long remember.
- In equities, Facebook closed out 2013 with a $3.9 billion follow-on offering, with J.P. Morgan acting as joint bookrunner. This was the largest follow-on offering of 2013 and the second-largest technology follow-on since 2006.
- In Public Finance, we came through for public agencies around the U.S. During the year, it led a $656 million series of bonds to modernize housing for New York City's lowest income residents and to refund previously outstanding debt. It served as senior manager on a $1.5 billion bond offering for JobsOhio, a unique program aimed at growing existing jobs and attracting new ones to the state, and was lead manager on $1.3 billion in revenue bonds for the University of California in a refinancing transaction that produced more than $200 million in debt service savings for the university system.

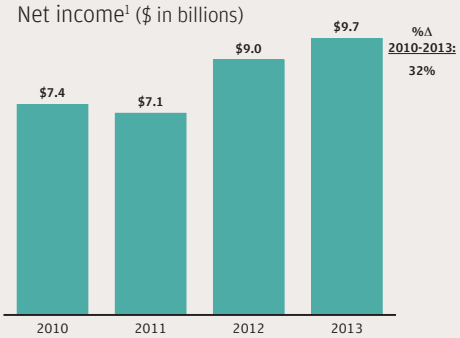
What distinguishes the CIB further, beyond our strong product capabilities, is how our integrated model works for our clients.

Because of that integrated approach, a leading European insurance company, after assigning a custody mandate to our Investor Services unit, also ultimately benefited from a credit facility from J.P. Morgan. And when a large asset manager, with a historically long relationship with the firm across Markets, Banking and Custody, needed prime brokerage services, it chose J.P. Morgan.



Turning to our financial results, 2013 was a strong year for the CIB, which reported net income of $8.5 billion

CIB Integrated Client Coverage Model



Markets Revenue Dominated by Client-Driven Flow Business

Markets revenue by flow vs. structured ($ in billions)

Strong Earnings Power

Net income[1] ($ in billions)

[1] Net income excludes funding valuation adjustments (FVA, effective 4Q 2013) and debit valuation adjustments (DVA)

on revenue of $34.2 billion and a reported return on equity of 15%. Excluding the impact of funding and debit valuation adjustments (FVA and DVA), the CIB delivered net revenue of $36.1 billion[3]; net income of $9.7 billion[3], an increase from last year's $9.0 billion[3] and up 32% from 2010; and a return on equity in 2013 of 17%[3], one of the strongest in the industry.

Our share of total industry revenue continues to grow. We put more distance between ourselves and our competitors with market share gains, as measured by both fee wallet and markets revenue share.

In an industry where investment banking fee wallet grew by 11% compared with the previous year, J.P. Morgan's wallet share advanced 110 basis points, according to Dealogic, more than what most other large firms experienced. Along with our #1 ranking in Global Investment Banking fee wallet share, Dealogic ranked J.P. Morgan, based on volume, #1 in Global Debt, Equity and Equity-Related; #1 in Global Long-Term Debt; and #1 in Global Loan Syndications. J.P. Morgan also earned a strong position in Global Equity and Equity-Related and Global M&A Announced, ranking #2 in both categories. Our M&A teams advised on eight of the top 10 transactions announced globally in 2013, ranking #1 in the U.S. and #2 in the Europe, Middle East and Africa (EMEA) region.

On the Markets side, we are a leader in fixed income, with an 18.6% market share in 2013, up from 15.6% in 2012[4]. We also earned a strong market position in Equity Markets this year, and we continue to be focused on moving from our current #4 equity markets overall revenue position[4] to a top three ranking as we build out key areas within our franchise. The CIB's Equity Markets performance in 2013 was materially strengthened by our #2 position in derivatives, according to Coalition, and the investments made in our electronic capabilities, which now are on par with the market leaders.

As noted above, our markets revenue is well-diversified, with the majority derived from client-driven, flow-oriented products. The remainder is driven by structured products, which are geared toward helping clients with their more complex risk management and other needs.

Across the spectrum of products in Banking and Markets & Investor Services, the CIB ranked among the top three in 15 out of 16 key product categories in 2013[5]. While we take pride in those rankings, we never are complacent about them. Nor do we take them for granted. The rankings are not the goal; they're a reflection of the quality of our product offerings, the dedication of our people to serving clients around the globe and a demonstration of our clients' increasing interest in working with us.

International reach

We are committed to having a presence where our multinational clients need us to be. And we intend to actively assist developing corporations in pursuing their growth aspirations so they, too, can take their place among the next generation of multinationals. Virtually half of the CIB's revenue today stems from international business activities and has grown at a compound annual growth rate of 5%[3] since 2010. More than 60% of our clients are international. Of our total employees, close to 60% are based in offices throughout EMEA, Asia Pacific and Latin America.

This international platform lays the foundation necessary to provide our multinational clients with the coverage to serve their needs, both in their headquarters and in subsidiary locations. Our international focus is not new. We've been in China for 93 years; we've done business in the United Kingdom since the mid-1800s; we've been in Mexico for more than 100 years. We are one of the few institutions that has the commitment and resources required to maintain a global client and product network of this magnitude. Although we continue to see growth in our existing international platform, the pace of that growth may slow in the near future as we ensure that we have best-in-class controls.

Being invested globally requires a long-term view as inevitable periods of volatility will arise from time to time. It's during those times, when capital is more scarce or when market-making becomes more challenged, that our clients need us the most. That's when our steady presence helps cement client relationships in a way that's lasting years later.

Our 2014 priorities

In 2013, our leadership across the breadth of Banking and Markets & Investor Services positioned us well to build on our strengths and provide clients with the financial tools to seed their growth and economic vitality into the future.

In support of these objectives, the CIB's 2014 priorities are focused on three broad pillars:

- Optimizing our business mix while investing in core growth opportunities;
- Adapting to the evolving regulatory landscape and market structure changes; and

- Maintaining expense discipline while absorbing increased regulatory and controls costs.

As the CIB, we strive to be at the forefront of market structure changes. As a major custody bank and leading broker-dealer, we are well-positioned to act as the agent of choice for clients – taking them from execution to clearing and custody. By our estimate, we have a top-three share in over-the-counter clearing and are connected with all the major swap venues. We also are assisting our clients to adapt to market structure changes through creative, new offerings such as Collateral Central. Launched in 2013, the service helps clients manage their collateral across multiple venues and enables them to continually track and optimize the use of their available assets against their obligations across all counterparties. And finally, also in the Investor Services space, our international prime brokerage platform has seen significant growth from EMEA-based managers since its 2011 launch, and as our Asia core platform now is live, we expect to ramp up meaningfully over the next several years.

Across Markets, we continue to develop our electronic market-making capabilities in equities, as well as in fixed income. We've seen significantly greater e-trading volume in both foreign exchange and equities since 2011, and we were the top-ranked bank by volume in U.S. Treasuries trading on electronic interdealer platforms in 2013.

While we are investing in these growth opportunities, we are selectively exiting certain activities – such as the Global Special Opportunities Group and our physical commodities business – having determined that they are not core offerings to our clients or no longer fit our desired risk profile. We do not expect these exits to meaningfully affect the CIB's return profile.

Our integrated platform of core businesses provides us with significant economies of scale, and our financial strength allows us to make the investments necessary to ensure compliance with an expanding set of regulations. By maintaining a disciplined approach in expenses, we have been able to largely offset increased spending on regulatory assessments and controls. In fact, the market share gains achieved during 2013 occurred even as the CIB's overhead ratio was reduced from 62%[3] in 2012 to 60%[3] in 2013.

Closing thoughts

Deep market knowledge, a global platform and long-lasting client relationships built on trust have served our firm and our clients well. We are a market leader because we set the standards for what can be done, not what has been done before.

Our top priority remains helping our clients achieve their objectives with the best possible advice and products we can provide. Since the formation of the CIB, clients have shown they are embracing our model and actively seek the range of capabilities and expertise we possess. With the continued energy and commitment that our employees demonstrate, we expect to earn our clients' business again this year, setting new standards for their success – and for ours.

Daniel Pinto
CEO, Corporate & Investment Bank

2013 HIGHLIGHTS AND ACCOMPLISHMENTS

- The CIB provided credit and raised capital of more than $1.5 trillion[1] for clients in 2013, up 20% from 2012
- The CIB produced net income of $9.7 billion[3] in 2013, up 32% from 2010, and a return on equity of 17%[3]
- The CIB ranked among the top three market positions in 15 out of 16 major products[5]
- J.P. Morgan ranked #1 in Global Investment Banking fees, with an 8.6% share, up from 7.5% in 2012, according to Dealogic
- Assets under custody reached a record $20.5 trillion, a 9% gain over 2012
- There are 52,250 employees globally, serving approximately 7,700 clients in 60 countries
- Key growth initiatives include global prime brokerage, electronic trading and market structure changes

Commercial Banking

Douglas Petno

In Commercial Banking, serving our clients is at the heart of everything we do. Each day, we come to work to generate ideas, deliver solutions and provide capital to help them grow and succeed. We take a long-term view and stand by our clients in tough times.

It is difficult to capture in words the strength of our relationships. There are so many incredible stories that I could share, but one of the most memorable came from a small business owner in Cleveland. He described how his international operations were crippled by the tsunami in Japan in 2011, and when – despite their 40-year relationship – his former bank refused to help, he turned to our team. In a matter of days, we were able to raise the needed capital to help him make it through a very difficult time. Today, the client's business is thriving again, and we have found additional ways to support him along the way. His emotional testament to our partnership was quite moving – and spoke to the power of our franchise and the quality of our bankers across the country.

Our people

The strength of our business starts and ends with our people – integrity, fortitude, compassion and partnership are the values they bring to work every day. These are what power our long-standing relationships and drive our success. Our 1,300 bankers[1], who average more than 20 years of experience, have deep local perspective and tested credit judgment.

Across Commercial Banking, our nearly 7,000 employees are dedicated to their communities, working with chambers of commerce, sitting on local boards, and staying active in school and service organizations. Over the past year, our people have made a difference in many ways, including volunteering their time to provide job counseling to military veterans, serving meals to families at a Ronald McDonald house in Chicago, stuffing backpacks for underprivileged children in Dallas and painting a community center in Brooklyn. I am inspired by our team's passion for their clients and communities.

Our model

Commercial Banking's proven business model provides the flexibility to manage challenging market conditions, regulatory changes and evolving client needs. Experienced teams in 29 states, 119 U.S. cities and 13 major international locations give us broad reach, and we serve approximately 59,000 clients, owners and investors in more than 40 of the top 50 U.S. metropolitan areas. Our bankers understand their markets, which enables them to make decisions locally and react quickly and proactively for clients. Rigorous client selection is one of the pillars of our model and results in a high-quality client base. Our industry expertise coupled with our local perspective allow us to select the best clients in the markets we serve.

Being a part of JPMorgan Chase means we can offer a broad range of unique capabilities. There are many examples of how we work across lines of business to deliver the firm to our clients. Our partnership with the Corporate & Investment Bank has never been stronger. We were extremely active last year, leading 833 financing transactions, including 31 initial public offerings, and advising clients on 67 merger and acquisition (M&A) transactions. In addition, the Corporate & Investment Bank's treasury services products are essential to our business, generating $2.4 billion in revenue last year.

The Consumer & Community Banking network has been critical to the success of our Middle Market Banking business. Our clients used Chase branches almost 18 million times last year. Increasingly, they use our commercial card and merchant processing services, and we see an opportunity to bring specialized payments solutions to even more clients.

Ultimately, there are many reasons why clients choose us. They recognize the quality of our professionals, the value of our brand, our financial strength and stability, our global reach and the ease of dealing with one firm for all of their financial services needs.

2013 results

Although the economy remained fragile and competition intensified in 2013, we continued to stay focused, invest in our business and maintain our risk discipline. Commercial Banking delivered revenue of $7.0 billion and net income of $2.6 billion, up 2% and down 3%, respectively, from 2012. Demonstrating our strong partnerships across the company, we had record-setting revenue in several areas, including investment banking revenue[2] of $1.7 billion, Card Services revenue[2] of $438 million and International Banking revenue of $261 million.

Even as many of our clients remained cautious, paying down debt and increasing liquidity, Commercial Banking continued to perform and has delivered 14 consecutive quarters of overall loan growth. Importantly, we achieved these results while adhering to our strict credit standards, and our net charge-off rate of 0.03% was one of the best in the industry. A solid credit culture and strong risk discipline have been critical to the success and stability of our franchise.

We continued to see our Middle Market Banking expansion strategy deliver steady results. Since 2006, we have successfully entered 16 major new markets across the country. Commercial Banking's growth in the Florida market is one of many excellent examples highlighting this progress. Five years ago, we entered the state with 20 employees and seven Middle Market Banking clients. By 2013, our Florida business had 77 employees, 250 clients, and more than $1.3 billion in loans and $1.2 billion in deposits. Over time, we believe this to be a tremendous opportunity to expand and deepen our Middle Market Banking franchise. Our long-term success will depend upon continuous investment, patience and the determination to stick to our strategy.

Since 2008, we have concentrated on selectively building our real estate loan portfolios, and the success of our real estate business remains a highlight. Commercial Term Lending saw record loan growth and continued to be the top multifamily lender in the U.S. Real Estate Banking had a record $9 billion in loan originations last year, and we continued to see excellent opportunities to support our clients and grow our portfolio. Exemplifying our strong focus on local communities, Community Development Banking remained quite active. The team completed transactions that financed the development of more than 8,200 units of affordable housing across the U.S., as well as other community-based projects, including charter schools, health clinics and grocers.

Overall, return on equity for the business was 19%. We achieved these returns despite a materially higher capital allocation and continual significant investments to grow our franchise and improve our compliance capabilities and controls. While we are proud of these results and our business is strong, we are committed to making Commercial Banking even better.

Looking ahead

As the U.S. economy continues to improve and our clients gain the confidence to increase borrowing for new projects and growth initiatives, we stand ready to support them. With greater economic activity, we expect to see more M&A and capital markets transactions, and we will work closely with the Corporate & Investment Bank to assist in these efforts. Our corporate clients are increasingly expanding outside the U.S., and we are well-placed to help them. In addition, to help our clients navigate transformational changes in key industries, we have invested in specialized teams covering areas that include healthcare, energy and technology.

A top priority across the firm is ensuring we fully meet the letter and spirit of all regulations governing our business. We will continue to improve our regulatory and compliance processes, and we have asked several of our key executives to lead those efforts full time.

In 2013, the Commercial Banking team rose to the occasion and overcame market uncertainty and regulatory challenges. I want to thank our dedicated professionals for their continued commitment and hard work. I am incredibly proud of what we have accomplished.

We have a solid foundation built upon our people and the extraordinary capabilities and scope of our firm. I believe we have the strategy and resources in place to continue to deliver dynamic opportunities for our employees, a great experience for our clients and strong returns for our shareholders.

Douglas Petno
CEO, Commercial Banking

2013 HIGHLIGHTS AND ACCOMPLISHMENTS

Performance highlights

- Record revenue of $7 billion
- Grew end-of-period loans 7%; 14 consecutive quarters of loan growth
- Generated return on equity of 19% on $13.5 billion of allocated capital
- Continued superior credit quality – net charge-off ratio at 0.03% for second consecutive year

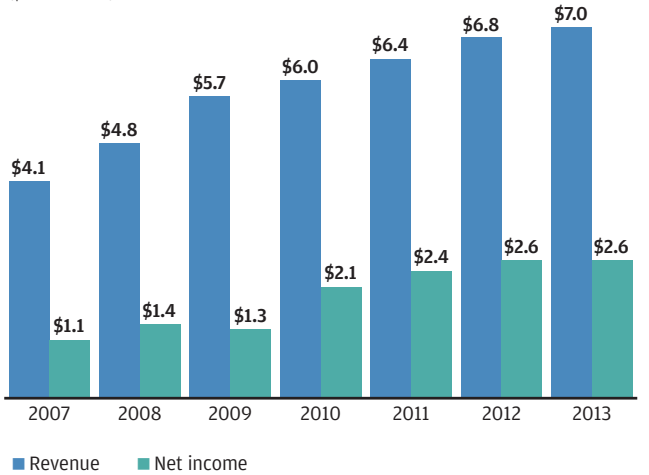
Leadership positions

- #1 traditional middle market syndicated lender[3]
- #1 U.S. multifamily lender[4]
- Recognized with 2013 Greenwich Associates' Excellence Awards in Middle Market online services, international service and treasury management and Mid-Corporate Banking investment banking and international service

Business segment highlights

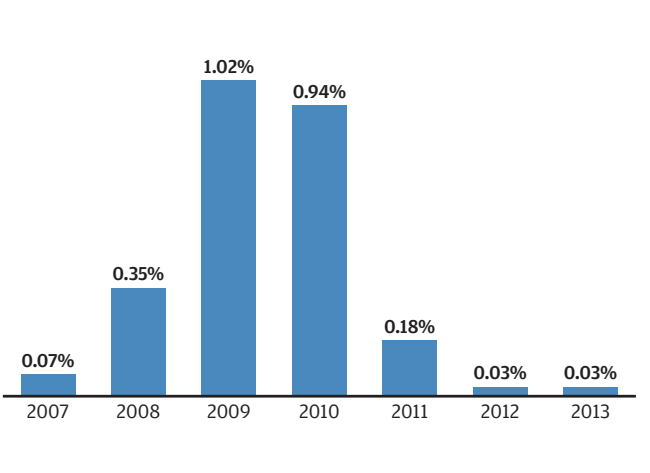
- Middle Market Banking – Record revenue of more than $3 billion; nearly 800 new client relationships; double-digit growth in both loans and deposits in expansion markets
- Corporate Client Banking – Record gross investment banking revenue[2] and credit quality improvement
- Commercial Term Lending – Record growth: $6 billion increase in multifamily loan balances (up 17%)
- Real Estate Banking – Record originations (up 35%); 6% deposit growth
- Community Development Banking – More than $1 billion in new commitments, supporting ~8,200 affordable housing units in the U.S.

Firmwide contribution



- Commercial Banking clients accounted for 29% of total North America investment banking fees[5]
- $2.4 billion in treasury services revenue
- Almost $100 billion in assets under management from Commercial Banking clients, generating close to $500 million in Investment Management revenue
- Nearly $440 million in Card Services revenue[2]

Progress in key growth areas



- Middle Market expansion – Record revenue of $287 million; 46% CAGR[6] since 2011
- Investment banking – Record gross revenue[2] of $1.7 billion; 9% CAGR[6] since 2011
- International Banking – Record revenue[7] of $261 million; 16% CAGR[6] since 2011

Asset Management

Mary Callahan Erdoes

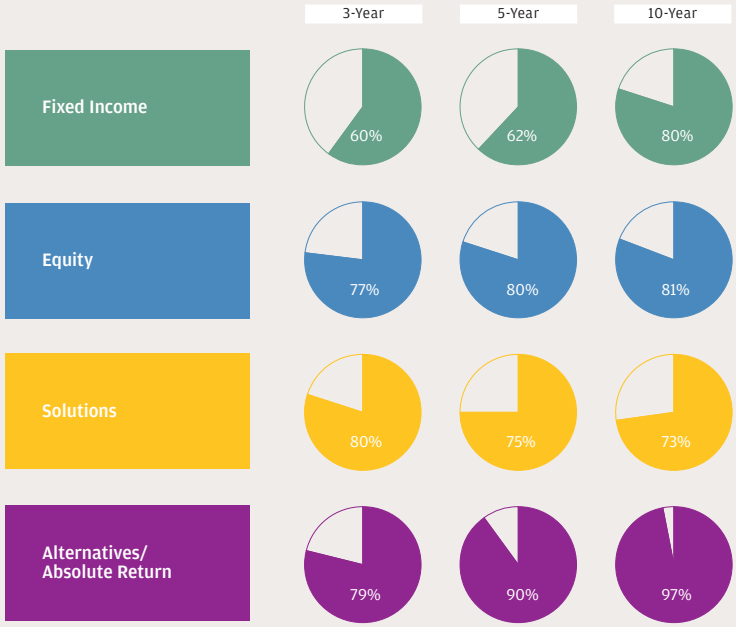
Strong fiduciary culture of managing money

In Asset Management, our heritage of managing client assets dates back over 180 years. During that time, we've stood side by side with our clients as markets have reached record highs, hit bottom and seen everything in between. Through the highs and lows, clients have relied on us to help them see through the noise to make smart, long-term decisions that are always in their best interests.

Our strong fiduciary culture enables us to provide advice and solutions that help individuals retire more comfortably, pension funds meet their obligations, universities reinvest in important endeavors and wealthy families ensure lasting legacies. Although difficult to quantify, those are our ultimate measures of success.

60% of the largest institutions and many of the world's wealthiest individuals

The core roots of our business began with serving the world's most sophisticated institutional clients. Today, not only do we work with 60% of the largest pensions and sovereigns, we also advise wealthy families and individuals on everything from money management to trusts and estates to mortgages, banking and lending.



3,000 intermediaries investing for clients

Our success in working with institutions and individuals provided the foundation for packaging our investment expertise into mutual funds. Globally, more than 3,000 financial intermediary firms invest on their clients' behalf in our full range of solutions, which spans fixed income, equities, multi-asset and alternatives strategies.

20,000 people in 30+ countries

Across the more than 30 countries where we operate, all of our 20,000 employees live by our ethos of first-class business in a first-class way. The heart of what they do is managing money for our clients. We are proud that 241 of our mutual funds ranked 4 or 5 stars by Morningstar and that 80% of all our assets

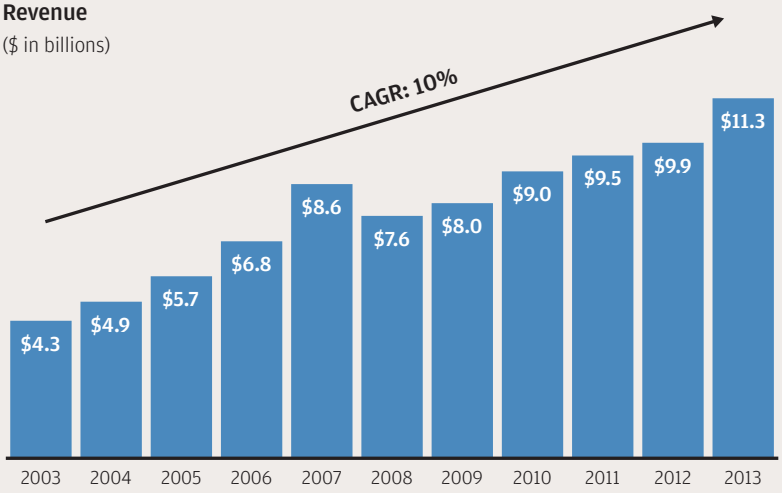
% of 2013 AUM Over Peers/Benchmark[1]
(net of fees)

[1] Fixed Income, Equity and Solutions represent percentage of mutual fund assets under management (AUM) in top two quartiles vs. Lipper, Morningstar and Nomura peers; Alternatives/Absolute Return represent percentage of AUM exceeding benchmark

are in the first or second performance quartile during the 10-year period.

Part of a global leader in every segment

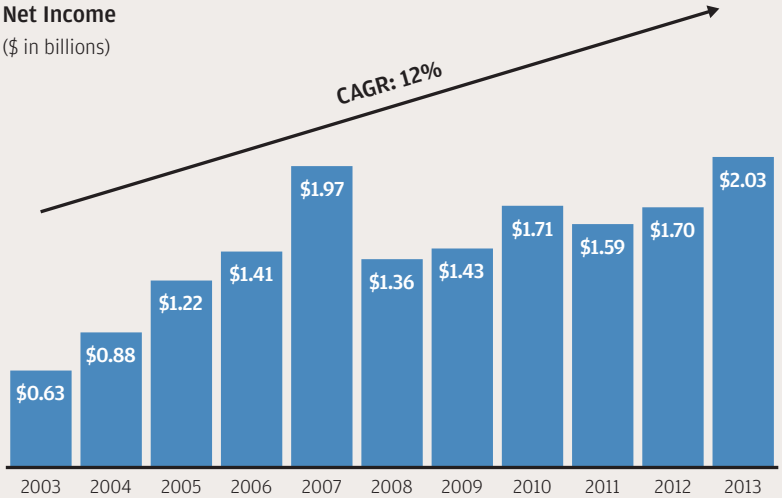
In addition to insights from some of the industry's best advisors and strategists, we can offer clients solutions that span their broad personal and business financial needs by partnering across the JPMorgan Chase franchise, which has best-in-class consumer and community banking, commercial banking and investment banking capabilities.



Half a trillion in five years

The stability and strength of the relationships we have built – some of which span generations and more than 100 years – perhaps are most evident in the $475 billion of cumulative positive long-term flows we received following the 2008 financial crisis. Since 2009, we have achieved positive net flows from every channel, every asset class and every region.

19 quarters and 11 years



Equally impressive, our investment management business reached its 19th consecutive quarter of net long-term inflows, the longest such streak by any of our key competitors. Our wealth management business marked its 11th year of positive client flows, as well as record year-end balances in deposits, mortgages and loans.

Revenue
($ in billions)

CAGR = Compound annual growth rate

Net Income
($ in billions)

Record financial results driven by continued investment

Asset Management's financial performance maintained its steady growth trajectory in 2013. Our revenue of $11.3 billion, net income of $2.0 billion and client assets of $2.3 trillion all were records – up 14%, 19% and 12%, respectively. While that's clearly an outstanding year, our long-term performance is just as strong, with a 10-year compound annual growth rate[2] of 10% for revenue, 12% for net income and 7% for client assets.

1,000+ new advisors and continued reinvestment

Our financial success is the result of having advisors who are laser-focused on our clients' needs and our constant dedication to growing the business by continually reinvesting in our people, technology and innovation. We have been focused on adding top talent on the ground where

[2] The 10-year compound annual growth rate for revenue, net income and client assets is based upon pro forma combined historical financial information reflecting how the operations of JPMorgan Chase & Co. and Bank One may have appeared on a combined basis had the two companies actually been merged as of January 1, 2003

clients need us most. We have hired more than 1,000 advisors globally since 2009. It's a virtuous cycle: As revenue and net income increase, both provide us with capital to fuel future growth and strengthen our infrastructure and coverage of clients around the world.

Priority #1: Controls

As we continue to invest, we also are scaling our infrastructure to ensure we have the appropriate oversight and controls. We've made great progress in these efforts, which will remain a top priority in 2014. We have a strong partnership with our regulators around the world and are committed to maintaining a world-class culture of compliance and controls.

2014 strategic priorities

Our long-term strategy and approach mean that many of our priorities remain consistent with what I have shared in recent years. Four of our core focuses continue to be:

- Strong investment performance across a broad range of products.
- Predictable delivery of financial targets.
- Continuous reinvestment into the business.
- Global enhancement of our clients' experience.

Deepening our client relationships

In addition, one of our biggest opportunities in 2014 is deepening existing client relationships. With strong performance across our franchise and a best-in-class offering spanning virtually every product and region, we want to meet even more of our clients' needs. When we can solve multiple problems for our clients, it simplifies their lives and enables them to get more complete financial solutions.

Sustaining leadership in alternatives and multi-asset strategies

Innovation also continues to be an important focus area for us, particularly in alternatives and multi-asset solutions, where more clients are turning to find enhanced returns.

We are the second-largest alternatives/absolute return manager with $207 billion in client assets. A number of our Alternatives strategies have exhibited consistent long-term outperformance, including U.S. Core Real Estate, Private Equity, Multi-Strategy Fund of Funds and Global Macro. In these funds, 100% of our assets under management have outperformed their benchmark over the three- and five-year periods.

Above all, we are humbled to have consistently maintained our clients' trust and confidence for nearly two centuries. There's no greater privilege or responsibility than being entrusted with a client's assets, and we are grateful every day that clients choose us as their first call.

Corporate Responsibility

Peter Scher

About corporate responsibility

Tremendous progress has been made in recent decades to address many of the world's most pressing social, economic and environmental problems. But a host of challenges persist, and there is an urgent need to find solutions that create greater economic opportunity for more people.

Companies like JPMorgan Chase have a responsibility to be part of the solution, not only because it's the right thing to do but because our own long-term success depends on the success of our communities and the people, companies and institutions we serve.

In the past, most corporations found it sufficient to fulfill this responsibility by simply donating money to charities. But today, we recognize that spurring greater economic growth and employment requires much more than writing checks. At a time when public sector resources are increasingly constrained, there is a compelling need for the private sector to do even more – in our case, by putting our financial expertise in the service of broader community needs. We are at our best when our core business helps communities thrive.

To be sure, the financial resources that firms provide are critical, but they are only one of many assets we can bring to bear. We can help make a difference by leveraging the skills, technology, data and expertise we use to drive our own business and then applying these assets to meet the global challenges that impact our communities.

At JPMorgan Chase, corporate responsibility always has been central to how we do business, starting with operating with integrity in all we do and extending to all the ways we help our clients and communities navigate a complex global economy. We strive to develop innovative programs that leverage the core strengths, capabilities and expertise of our business and our people – and those of our partners – to maximize our impact. We are very proud of what we accomplished in 2013.

2013 results

To help reduce unemployment and expand economic opportunity, we launched New Skills at Work, an unprecedented $250 million, five-year initiative aimed at helping close the skills gap around the world (see next page). The effort brings together our resources and capabilities with those of proven partners to help address the mismatch between the skills available in the workforce and those that employers need in order to grow their business.

Ongoing global health challenges presented another opportunity to work with great partners to launch a groundbreaking initiative. In partnership with the Bill & Melinda Gates Foundation, we created the Global Health Investment Fund to attract private capital into an investment vehicle with the potential to save millions of lives in low-income countries (see next page).

And there are many more examples of our work over the last year. JPMorgan Chase has collaborated with best-in-class partners to address the unique challenges military and veterans face in employment, education and housing; to help metro areas create global trade strategies through our Global Cities Initiative with The Brookings Institution; and to advance environmental stewardship and spur innovation across our business in partnership with our clients. And we roll up our sleeves to support these and other initiatives – last year, our employees provided more than 540,000 hours of volunteer service in local communities around the globe.

While there is much we were proud of during 2013, we know there is much more work to be done. The more we can break down the traditional barriers among the public, private and nonprofit sectors, the more we can achieve for our communities. It is a tall order, but JPMorgan Chase is profoundly optimistic about how much can be accomplished when people come together to do extraordinary things.

Peter Scher
Head of Corporate Responsibility

New Skills at Work

Helping people gain the skills they need to compete for jobs can transform lives — and strengthen economies. That's why JPMorgan Chase launched **New Skills at Work,** a $250 million, five-year initiative aimed at helping inform and accelerate efforts to develop a demand-driven approach to education and skills training.

The numbers seem contradictory: Unemployment is high across the globe, yet recent data reveal that employers are having trouble finding workers who are trained for the jobs that are available, particularly in middle-skill jobs — those jobs that require more than a high school but less than a four-year degree. Around the world, employers, educators, policymakers, training organizations and others have recognized the critical importance of tackling this skills gap. JPMorgan Chase believes doing so can be one of our most powerful tools for reducing unemployment, strengthening economies and creating more broadly shared prosperity.

New Skills at Work, the largest-ever private sector philanthropic effort in this area, will help address the skills gap by:

- **Encouraging industry collaboration:** Convening people from across sectors to share experiences and formulate strategies for building demand-driven workforce training systems
- **Investing in training programs:** Making targeted investments to strengthen and scale the most effective workforce training programs
- **Improving data:** Sponsoring data-driven analysis of skills demand and supply gaps in local markets

JPMorgan Chase has identified an initial set of best-in-class partner organizations, and we will add new local and regional partners in 2014. Our national partners in the U.S. include the Aspen Institute's Forum for Community Solutions, Jobs for the Future, National Academy Foundation, National Fund for Workforce Solutions, Year Up and YouthBuild USA, and in the U.K., they include the Institute for Public Policy Research and Participle.

Global Health Investment Fund

Emerging scientific and technological advances hold great hope for addressing infectious diseases and medical conditions that kill millions of people every year, mainly in low-income countries. But breakthroughs can save lives only if these new developments make it out of clinical trials and into the marketplace. And that requires financing. Filling that need is the new $108 million **Global Health Investment Fund (GHIF)** from JPMorgan Chase and the Bill & Melinda Gates Foundation.

The GHIF is a unique vehicle that was structured to attract investment capital as an alternative to grant-based funding for global health, building upon research and development executed by visionary philanthropists, sovereign donors and industry leaders over the past decade. The GHIF is intended to act as a pilot both to attract more capital of this nature into the global health sector and to serve as a model for delivering impact via investment in other sectors.

The GHIF brings together a diverse pool of investors to provide financing to advance the development of drugs, vaccines, diagnostics and other interventions against diseases that disproportionately burden low-income countries while at the same time seek a financial return for investors. The social impact of the fund will be achieved by focusing investments on diseases like tuberculosis, malaria, HIV and diarrhea and on conditions that contribute to maternal and infant mortality; investments will also include requirements to ensure the accessibility of products to the populations most in need. Financial returns will be linked to commercial success in developed country markets, while investors' downside is limited by a partial backstop provided by the Bill & Melinda Gates Foundation and the Swedish government. This structure allows individual investors, corporations, private foundations, development finance institutions and others to come together around the shared objective of ensuring that cutting-edge global health technologies reach the populations most in need.

2013 HIGHLIGHTS AND ACCOMPLISHMENTS

Supporting small business development

- Provided $19 billion in new credit to American small businesses and, for the fourth fiscal year in a row, was the #1 U.S. Small Business Administration lender by units.
- Awarded $3 million through our Mission Main Street℠ Grants program to support small businesses around the U.S. that are making a positive impact in their communities.
- Provided seed grants to four small business clusters across the U.S. to foster the development of investing networks, facilitate innovation and technology transfer, provide access to specialized suppliers and speed commercialization of new technologies.

Building financial capability

- Provided nearly $7 million in grants to leading nonprofits to promote the financial capability of consumers in cities around the world, including $1.15 million to Bank On 2.0, a program sponsored by the Cities for Financial Empowerment Fund to create a national approach in the U.S. to delivering safe, affordable banking products and services to low-income and underbanked people.
- Provided $600,000 over two years to Mission Asset Fund to help replicate its Lending Circle program, in which individuals in a community borrow from and loan to one another via zero-fee, zero-interest credit-building social loans and to develop high-quality financial education resources to support participants.
- Became the first financial institution to adopt The Pew Charitable Trusts' new model disclosure box for reloadable prepaid cards for Chase Liquid®.

Strengthening local economies and communities

- Provided approximately $1.1 billion in community development loans and $1.6 billion in equity investments to build or preserve 45,000 units of affordable housing for low- and moderate-income families in more than 260 U.S. cities.
- Lent $181 million to community development financial institutions (CDFI) that leveraged our capital to secure financing for more affordable housing, schools, healthcare clinics and small businesses.
- Launched the CDFI Collaboratives program, a three-year, $33 million philanthropic initiative to foster growth, collaboration and capacity building among smaller, regionally focused CDFIs that can uniquely reach communities that lack access to affordable financial products and services.
- Provided more than $31 million to nonprofits working to help first-time homebuyers, to offer home ownership counseling and to develop affordable housing in the U.S.

- Donated $275 million in the form of more than 6,100 free or discounted homes since 2008 to community associations, municipalities, veterans groups and nonprofit housing providers across the U.S., with nearly 1,600 homes donated or discounted in 2013 alone.
- Launched the Global Cities Exchange, a network of U.S. and international cities that will develop and implement regional strategies to boost global trade and investment. The network is part of the Global Cities Initiative, a joint project with The Brookings Institution launched in 2012 aimed at helping metropolitan leaders strengthen their regional economy.
- Launched New Skills at Work, a $250 million, five-year workforce development initiative (see previous page).

Honoring U.S. military and veterans

- Continued our leadership of the 100,000 Jobs Mission, a coalition of employers that collectively hired 117,439 U.S. military veterans by the end of 2013, prompting it to double its hiring goal to 200,000 veterans by 2020. JPMorgan Chase has hired more than 6,300 veterans since 2011.
- Joined the U.S. Department of Defense Military Spouse Employment Partnership, committing to recruit, hire, promote and retain military spouses.
- Launched internal training programs to help military-experienced employees assimilate into the firm and to educate our hiring managers about the skills that servicemembers bring to the table. We made our Military 101 program for hiring managers publicly available to other employers.
- Provided grants totaling more than $1 million to educational institutions focused on improving veteran performance and retention in higher education.

Promoting sustainable investing

- Led our industry in an effort to support responsible natural gas development by engaging with more than 100 oil and gas clients to understand how they manage environmental and community impacts from hydraulic fracturing, by funding research and by convening our clients to share insights on best practices.
- Worked with a group of peer investment banks to develop the Green Bond Principles, a set of voluntary guidelines designed to promote integrity and transparency in the growing market for Green Bonds, which are issued to finance environmentally beneficial projects.
- Announced the Global Health Investment Fund, a $108 million innovative social impact fund (see previous page) and invested an additional $9 million in best-in-class funds addressing the needs of low-income populations around the world.

Increasing transparency with stakeholders

- Collaborated with Ceres to engage a group of external stakeholders in a dialogue focused on sharing perspectives and priorities to help us enhance our approach to environmental sustainability and corporate responsibility.
- Convened regular Chase Advisory Panel sessions with experts from leading U.S. consumer policy groups to gain insight into the challenges facing low- and moderate-income consumers and learn how Chase can better serve them.
- Strengthened the firm's political disclosure and accountability policies, which led a leading nonprofit oversight organization to score JPMorgan Chase in the top 10 companies on the Center for Political Accountability-Zicklin Index of Corporate Political Accountability and Disclosure.

(a) TBVS and ROTCE are non-GAAP financial measures. TBVS represents the Firm's tangible common equity divided by period-end common shares. ROTCE measures the Firm's annualized earnings as a percentage of tangible common equity. For further discussion of these measures, see Explanation and Reconciliation of the Firm's Use of Non-GAAP Financial Measures on pages 82–83 of this Annual Report.
(b) Share prices shown for JPMorgan Chase's common stock are from the New York Stock Exchange. JPMorgan Chase's common stock is also listed and traded on the London Stock Exchange and the Tokyo Stock Exchange.
(c) Return on Basel I risk-weighted assets is the annualized earnings of the Firm divided by its average risk-weighted assets ("RWA").
(d) Basel 2.5 rules became effective for the Firm on January 1, 2013. The implementation of these rules in the first quarter of 2013 resulted in an increase of approximately $150 billion in RWA compared with the Basel I rules. The implementation of these rules also resulted in decreases of the Firm's Tier 1 capital, Total capital and Tier 1 common capital ratios by 140 basis points, 160 basis points and 120 basis points, respectively, at March 31, 2013. For further discussion of Basel 2.5, see Regulatory capital on pages 160–167 of this Annual Report.
(e) The Firm began estimating its total HQLA as of December 31, 2012, based on its current understanding of the Basel III LCR rules. For further discussion about HQLA, including its components, see Liquidity Risk on page 172 of this Annual Report.
(f) Basel I Tier 1 common capital ratio ("Tier 1 common ratio") is Tier 1 common capital ("Tier 1 common") divided by RWA. The Firm uses Tier 1 common capital along with the other capital measures to assess and monitor its capital position. For further discussion of the Tier 1 common capital ratio, see Regulatory capital on pages 161–165 of this Annual Report.
(g) Included held-to-maturity balances of $24.0 billion at December 31, 2013. Held-to-maturity balances for the other periods were not material.
(h) Included unsecured long-term debt of $199.4 billion, $200.6 billion, $231.3 billion, $238.2 billion and $258.1 billion, respectively, as of December 31, of each year presented.
(i) Effective January 1, 2013, interns are excluded from the firmwide and business segment headcount metrics. Prior periods were revised to conform with this presentation.
(j) Excludes the impact of residential real estate purchased credit-impaired ("PCI") loans. For further discussion, see Allowance for credit losses on pages 139–141 of this Annual Report.

FIVE-YEAR STOCK PERFORMANCE

The following table and graph compare the five-year cumulative total return for JPMorgan Chase & Co. ("JPMorgan Chase" or the "Firm") common stock with the cumulative return of the S&P 500 Index, the KBW Bank Index and the S&P Financial Index. The S&P 500 Index is a commonly referenced U.S. equity benchmark consisting of leading companies from different economic sectors. The KBW Bank Index seeks to reflect the performance of banks and thrifts that are publicly-traded in the U.S. and is composed of 24 leading national money center and regional banks and thrifts. The S&P Financial Index is an index of 81 financial companies, all of which are components of the S&P 500. The Firm is a component of all three industry indices.

The following table and graph assume simultaneous investments of $100 on December 31, 2008, in JPMorgan Chase common stock and in each of the above indices. The comparison assumes that all dividends are reinvested.

December 31, (in dollars)	2008	2009	2010	2011	2012	**2013**
JPMorgan Chase	$ 100.00	$ 134.36	$ 137.45	$ 110.00	$ 149.79	**$ 204.78**
KBW Bank Index	100.00	98.24	121.19	93.08	123.69	**170.39**
S&P Financial Index	100.00	117.15	131.36	108.95	140.27	**190.19**
S&P 500 Index	100.00	126.45	145.49	148.55	172.31	**228.10**

This section of JPMorgan Chase's Annual Report for the year ended December 31, 2013 ("Annual Report"), provides Management's discussion and analysis ("MD&A") of the financial condition and results of operations of JPMorgan Chase. See the Glossary of Terms on pages 341–345 for definitions of terms used throughout this Annual Report. The MD&A included in this Annual Report contains statements that are forward-looking within the meaning of the Private Securities Litigation Reform Act of 1995. Such statements are based on the current beliefs and expectations of JPMorgan Chase's management and are subject to significant risks and uncertainties. These risks and uncertainties could cause the Firm's actual results to differ materially from those set forth in such forward-looking statements. Certain of such risks and uncertainties are described herein (see Forward-looking Statements on page 181 of this Annual Report) and in JPMorgan Chase's Annual Report on Form 10-K for the year ended December 31, 2013 ("2013 Form 10-K"), in Part I, Item 1A: Risk factors; reference is hereby made to both.

INTRODUCTION

JPMorgan Chase & Co., a financial holding company incorporated under Delaware law in 1968, is a leading global financial services firm and one of the largest banking institutions in the United States of America ("U.S."), with operations worldwide; the Firm has $2.4 trillion in assets and $211.2 billion in stockholders' equity as of December 31, 2013. The Firm is a leader in investment banking, financial services for consumers and small businesses, commercial banking, financial transaction processing, asset management and private equity. Under the J.P. Morgan and Chase brands, the Firm serves millions of customers in the U.S. and many of the world's most prominent corporate, institutional and government clients.

JPMorgan Chase's principal bank subsidiaries are JPMorgan Chase Bank, National Association ("JPMorgan Chase Bank, N.A."), a national bank with U.S. branches in 23 states, and Chase Bank USA, National Association ("Chase Bank USA, N.A."), a national bank that is the Firm's credit card–issuing bank. JPMorgan Chase's principal nonbank subsidiary is J.P. Morgan Securities LLC ("JPMorgan Securities"), the Firm's U.S. investment banking firm. The bank and nonbank subsidiaries of JPMorgan Chase operate nationally as well as through overseas branches and subsidiaries, representative offices and subsidiary foreign banks. One of the Firm's principal operating subsidiaries in the United Kingdom ("U.K.") is J.P. Morgan Securities plc (formerly J.P. Morgan Securities Ltd.), a subsidiary of JPMorgan Chase Bank, N.A.

JPMorgan Chase's activities are organized, for management reporting purposes, into four major reportable business segments, as well as a Corporate/Private Equity segment. The Firm's consumer business is the Consumer & Community Banking segment. The Corporate & Investment Bank, Commercial Banking, and Asset Management segments comprise the Firm's wholesale businesses. A description of the Firm's business segments, and the products and services they provide to their respective client bases, follows.

Consumer & Community Banking

Consumer & Community Banking ("CCB") serves consumers and businesses through personal service at bank branches and through ATMs, online, mobile and telephone banking. CCB is organized into Consumer & Business Banking, Mortgage Banking (including Mortgage Production, Mortgage Servicing and Real Estate Portfolios) and Card, Merchant Services & Auto ("Card"). Consumer & Business Banking offers deposit and investment products and services to consumers, and lending, deposit, and cash management and payment solutions to small businesses. Mortgage Banking includes mortgage origination and servicing activities, as well as portfolios comprised of residential mortgages and home equity loans, including the purchased credit-impaired ("PCI") portfolio acquired in the Washington Mutual transaction. Card issues credit cards to consumers and small businesses, provides payment services to corporate and public sector clients through its commercial card products, offers payment processing services to merchants, and provides auto and student loan services.

Corporate & Investment Bank
The Corporate & Investment Bank ("CIB") comprised of Banking and Markets & Investor Services, offers a broad suite of investment banking, market-making, prime brokerage, and treasury and securities products and services to a global client base of corporations, investors, financial institutions, government and municipal entities. Within Banking, the CIB offers a full range of investment banking products and services in all major capital markets, including advising on corporate strategy and structure, capital-raising in equity and debt markets, as well as loan origination and syndication. Also included in Banking is Treasury Services, which includes transaction services, comprised primarily of cash management and liquidity solutions, and trade finance products. The Markets & Investor Services segment of the CIB is a global market-maker in cash securities and derivative instruments, and also offers sophisticated risk management solutions, prime brokerage, and research. Markets & Investor Services also includes the Securities Services business, a leading global custodian which includes custody, fund accounting and administration, and securities lending products sold principally to asset managers, insurance companies and public and private investment funds.

Commercial Banking
Commercial Banking ("CB") delivers extensive industry knowledge, local expertise and dedicated service to U.S. and U.S. multinational clients, including corporations, municipalities, financial institutions and nonprofit entities with annual revenue generally ranging from $20 million to $2 billion. CB provides financing to real estate investors and owners. Partnering with the Firm's other businesses, CB provides comprehensive financial solutions, including lending, treasury services, investment banking and asset management to meet its clients' domestic and international financial needs.

Asset Management
Asset Management ("AM"), with client assets of $2.3 trillion, is a global leader in investment and wealth management. AM clients include institutions, high-net-worth individuals and retail investors in every major market throughout the world. AM offers investment management across all major asset classes including equities, fixed income, alternatives and money market funds. AM also offers multi-asset investment management, providing solutions to a broad range of clients' investment needs. For individual investors, AM also provides retirement products and services, brokerage and banking services including trusts and estates, loans, mortgages and deposits. The majority of AM's client assets are in actively managed portfolios.

Corporate/Private Equity
The Corporate/Private Equity segment comprises Private Equity, Treasury and Chief Investment Office ("CIO") and Other Corporate, which includes corporate staff units and expense that is centrally managed. Treasury and CIO are predominantly responsible for measuring, monitoring, reporting and managing the Firm's liquidity, funding and structural interest rate and foreign exchange risks, as well as executing the Firm's capital plan. The major Other Corporate units include Real Estate, Central Technology, Legal, Compliance, Finance, Human Resources, Internal Audit, Risk Management, Oversight & Control, Corporate Responsibility and various Other Corporate groups. Other centrally managed expense includes the Firm's occupancy and pension-related expense that are subject to allocation to the businesses.

EXECUTIVE OVERVIEW

This executive overview of the MD&A highlights selected information and may not contain all of the information that is important to readers of this Annual Report. For a complete description of events, trends and uncertainties, as well as the enterprise risks and critical accounting estimates affecting the Firm and its various lines of business, this Annual Report should be read in its entirety.

Economic environment

The global economy regained momentum in 2013, led by faster growth in the advanced economies, helped by decisive policy actions in the U.S., European Union, U.K., and Japan. Uncertainties about U.S. fiscal policy were reduced substantially by year-end, as were extreme downside risks to performance in the Eurozone and China that had been concerns earlier in the year. In addition, real consumer spending in the U.S. was supported late in the year by solid job growth, falling gasoline prices, and rising equity and house prices.

The U.S. economic forecast for 2014 looks for a gradual acceleration in real sales growth and for inflation to remain well below the Federal Reserve's Open Market Committee's long-run target of 2%. If the economic forecast for 2014 is realized, the tapering of asset purchases by the Federal Reserve's Open Market Committee will proceed and is expected to be completed before the end of 2014. However, the forecast does not look for a first rate hike by the Federal Reserve's Open Market Committee until sometime in 2015.

The European Central Bank's ("ECB") support in stabilizing European financial markets, along with the constructive steps taken by the European Union to lay the groundwork for a more coherent banking union, helped the region to return to growth during the first half of 2013. However, later in the year, the pace of the Eurozone's recovery remained slow, high unemployment tested the social and political stability of several of Europe's weaker economies, and Cyprus became the fourth country in the Eurozone to receive a full bail-out. While Germany and the northern European economies continued to drive growth, elsewhere in Europe growth was more subdued. More encouraging were signs that the peripheral economies in the region are showing signs of healing.

Economic performance in Asia was mixed in 2013. Japan boomed; in contrast, activity decelerated across much of the rest of the region. Growth outcomes were also mixed across Latin America. Economic activity decelerated in Mexico. Brazil began 2013 with positive momentum but then lost significant steam, with a widening gap between projected growth outcomes and inflation indicators. Policy uncertainties, slowing China demand for commodities, credit overhangs, and elevated inflation all weighed on investment in many emerging countries.

In summary, there is reason to be optimistic about the U.S. economic outlook in 2014. The economy finally appears to have broken out of the 2% range of growth experienced in the first several years of recovery, and the extent of both fiscal policy restraint and fiscal policy uncertainty should be sharply reduced. While growth in emerging markets is expected to remain subdued, economic activity is expected to continue accelerating in Europe.

Financial performance of JPMorgan Chase

Year ended December 31, (in millions, except per share data and ratios)	2013	2012	Change
Selected income statement data			
Total net revenue	**$ 96,606**	$ 97,031	— %

Tier 1 capital	**11.9**	12.6	
Tier 1 common	**10.7**	11.0	

Summary of 2013 Results

JPMorgan Chase reported full-year 2013 net income of $17.9 billion, or $4.35 per share, on net revenue of $96.6 billion. Net income decreased by $3.3 billion, or 16%, compared with net income of $21.3 billion, or $5.20 per share, in 2012. ROE for the year was 9%, compared with 11% for the prior year.

The decrease in net income in 2013 was driven by a higher noninterest expense, partially offset by lower provision for credit losses. The increase in noninterest expense was driven by higher legal expense. The reduction in the provision for credit losses reflected continued favorable credit trends across the consumer and wholesale portfolios.

The decline in the provision for credit losses reflected lower consumer and wholesale provisions as net charge-offs decreased and the related allowance for credit losses was reduced by $5.6 billion in 2013. The decline in the allowance reflected improved home prices in the residential real estate portfolios, as well as improved delinquency trends in the residential real estate, credit card loan and wholesale portfolios. Firmwide, net charge-offs were $5.8 billion for the year, down $3.3 billion, or 36%, from 2012, which included $800 million of incremental charge-offs related to regulatory guidance. Nonperforming assets at year-end were $9.7 billion, down $2.2 billion, or 18%. Total firmwide allowance for credit losses was $17.0 billion, resulting in a loan loss coverage ratio of 1.80%, excluding the purchased credit-impaired portfolio, compared with 2.43% in 2012.

The Firm's results reflected strong underlying performance across its four major reportable business segments, with strong lending and deposit growth. Consumer & Business Banking within Consumer & Community Banking was #1 in deposit growth for the second year in a row and #1 in customer satisfaction among the largest banks for the second year in a row as measured by The American Customer Satisfaction Index ("ACSI"). In Card, Merchant Services & Auto, credit card sales volume (excluding Commercial Card) was up 10% for the year. The Corporate & Investment Bank maintained its #1 ranking in Global Investment Banking Fees and reported record assets under custody of $20.5 trillion at December 31, 2013. Commercial Banking loans increased to a record $137.1 billion, a 7% increase compared with the prior year. Asset Management achieved nineteen consecutive quarters of positive net long-term client flows into assets under management. Asset Management also increased loan balances to a record $95.4 billion at December 31, 2013.

JPMorgan Chase ended the year with a Basel I Tier 1 common ratio of 10.7%, compared with 11% at year-end 2012. The Firm estimated that its Tier 1 common ratio under the Basel III Advanced Approach on a fully phased-in basis, based on the interim final rule issued in October 2013, was 9.5% as of December 31, 2013. Total deposits increased to $1.3 trillion, up 8% from the prior year. Total stockholders' equity at December 31, 2013, was $211.2 billion. (The Basel I and III Tier 1 common ratios are non-GAAP financial measures, which the Firm uses along with the other capital measures, to assess and monitor its capital position. For further discussion of the Tier 1 common capital ratios, see Regulatory capital on pages 161–165 of this Annual Report.)

During 2013, the Firm worked to help its customers, corporate clients and the communities in which it does business. The Firm provided credit to and raised capital of more than $2.1 trillion for its clients during 2013; this included $19 billion lent to small businesses and $79 billion to nonprofit and government entities, including states, municipalities, hospitals and universities. The Firm also originated more than 800,000 mortgages.

The discussion that follows highlights the performance of each business segment compared with the prior year and presents results on a managed basis. Managed basis starts with the reported results under accounting principles generally accepted in the United States of America ("U.S. GAAP") and, for each line of business and the Firm as a whole, includes certain reclassifications to present total net revenue on a tax-equivalent basis. For more information about managed basis, as well as other non-GAAP financial measures used by management to evaluate the performance of each line of business, see pages 82–83 of this Annual Report.

Consumer & Community Banking net income increased compared with the prior year due to lower provision for credit losses and lower noninterest expense, predominantly offset by lower net revenue. Net interest income decreased, driven by lower deposit margins, lower loan balances due to net portfolio runoff and spread compression in Credit Card, largely offset by the impact of higher deposit balances. Noninterest revenue decreased, driven by lower mortgage fees and related income, partially offset by higher card income. The provision for credit losses was $335 million compared with $3.8 billion in the prior year. The current-year provision reflected a $5.5 billion reduction in the allowance for loan losses and total net charge-offs of $5.8 billion. The prior-year provision reflected a $5.5 billion reduction in the allowance for loan losses and total net charge-offs of $9.3 billion, including $800 million of incremental charge-offs related to regulatory guidance. Noninterest expense decreased compared with the prior year, driven by lower mortgage servicing expense, partially offset by investments in Chase Private Client expansion, higher non-MBS related legal expense in Mortgage Production, higher auto lease depreciation and costs related to the control agenda.

Corporate & Investment Bank net income increased by 2% compared with the prior year. Net revenue included a $1.5 billion loss from the implementation of a funding valuation adjustment ("FVA") framework for over-the-counter ("OTC") derivatives and structured notes in the fourth quarter, and a $452 million loss from debit valuation adjustments ("DVA") on structured notes and derivative liabilities. The prior year net revenue included a $930 million loss from DVA. Banking revenue increased compared with the prior year, reflecting higher lending and investment banking fees revenue, partially offset by Treasury Services revenue which was down slightly from the prior year. Lending revenue increased driven by gains on securities received from restructured loans. Investment banking fees revenue increased compared with the prior year driven by higher equity and debt underwriting fees, partially offset by lower advisory fees. Excluding FVA (effective fourth quarter 2013) and DVA, Markets and Investor Services revenue increased compared with the prior year. The provision for credit losses was a lower benefit reflecting lower recoveries compared with the prior year. Noninterest expense was slightly down from the prior year primarily driven by lower compensation expense.

Commercial Banking net income was slightly lower for 2013 compared with the prior year, reflecting higher noninterest expense and an increase in the provision for credit losses, partially offset by higher net revenue. Net interest income increased, driven by growth in loan balances and the proceeds from a lending-related workout, partially offset by lower purchase discounts recognized on loan repayments. Noninterest expense increased, primarily reflecting higher product- and headcount-related expense.

Asset Management net income increased in 2013, driven by higher net revenue, largely offset by higher noninterest expense. Net revenue increased, driven by net client inflows, the effect of higher market levels and net interest income resulting from higher loan and deposit balances. Noninterest expense increased, driven by higher headcount related expenses, higher performance-based compensation and costs related to the control agenda.

Corporate/Private Equity reported a higher net loss compared with the prior year driven by higher noninterest expense partially offset by higher net revenue. Noninterest expense for 2013 included $10.2 billion in legal expenses compared with $3.7 billion in the prior year. The current year net revenue included a $1.3 billion gain from the sale of Visa shares and a $493 million gain from the sale of One Chase Manhattan Plaza. The prior year net revenue included losses from the synthetic credit portfolio in the CIO.

Consent Orders and Settlements

During the course of 2013, the Firm continued to make progress on its control, regulatory, and litigation agenda and put some significant issues behind it. In January 2013, the Firm entered into the Consent Orders with its banking regulators relating to the Firm's Bank Secrecy Act/Anti-Money Laundering policies, procedures and controls, and with respect to the risk management and control functions in the CIO, as well as with respect to its other trading activities. Other settlements during the year included the Consent Orders entered into in September 2013 concerning oversight of third parties, operational processes and control functions related to credit card collections litigation practices and to billing practices for credit monitoring products formerly offered by the Firm; the settlements in November 2013 of certain repurchase representation and warranty claims by a group of institutional investors and with the U.S. Department of Justice, several other federal agencies and several State Attorneys General relating to certain residential mortgage-backed securitization activities of the Firm, Bear Stearns and Washington Mutual; the Deferred Prosecution Agreement entered into in January 2014 with the U.S. Department of Justice and related agreements with the OCC and FinCEN relating to Bernard L. Madoff Investment Securities LLC and the Firm's AML compliance programs; and the February 2014 settlement entered into with several federal government agencies relating to the Firm's participation in certain federal mortgage insurance programs.

In addition to the payment of restitution and, in several instances, significant penalties, these Consent Orders and settlements require that the Firm modify or enhance its processes and controls with respect to, among other items, its mortgage foreclosure and servicing procedures, Anti-Money Laundering procedures, oversight of third parties, credit card litigation practices, and risk management, model governance, and other control functions related to the CIO and certain other trading activities at the Firm. The Firm believes it was in the best interest of the company and its shareholders to accept responsibility for these matters, resolve them, and move forward. These settlements will allow the Firm to focus on continuing to serve its clients and communities, and to continue to build the Firm's businesses.

Business outlook

The following forward-looking statements are based on the current beliefs and expectations of JPMorgan Chase's management and are subject to significant risks and uncertainties. These risks and uncertainties could cause the Firm's actual results to differ materially from those set forth in such forward-looking statements. See Forward-Looking Statements on page 181 of this Annual Report and the Risk Factors section on pages 9–18 of the 2013 Form 10-K.

As a global financial services firm, JPMorgan Chase is subject to extensive regulation under state and federal laws in the United States, as well as the applicable laws of each of the various other jurisdictions outside the U.S. in which the Firm does business. The Firm is currently experiencing an unprecedented increase in regulations and supervision, and such changes could have a significant impact on how the Firm conducts business. For a summary of the more significant rules and regulations to which it currently is or will shortly be subject, as well as the more noteworthy rules and regulations currently being proposed to be implemented, see Supervision and Regulation on pages 1–9 of the 2013 Form 10-K.

Having reached the minimum capital levels required by the new and proposed rules, the Firm intends to continue to hold excess capital in order to support its businesses. However, the new rules will require the Firm to modify its on- and off-balance sheet assets and liabilities to meet the supplementary leverage ratio requirements, restrict or limit the way the Firm offers products to customers or charges fees for services, exit certain activities and product offerings, and make structural changes with respect to which of its legal entities offer certain products in order to comply with the margin, extraterritoriality and clearing rules promulgated pursuant to the Dodd-Frank Wall Street Reform and Consumer Protection Act (the "Dodd-Frank Act").

The Firm intends to respond to the new financial architecture resulting from this changing landscape in a way that will allow it to grow its revenues over time, manage its expenses, and comply with the new regulatory requirements, while at the same time investing in its businesses and meeting the needs of its customers and clients. Initiatives will include a disciplined approach to capital and liquidity management as well as optimization of the Firm's balance sheet. The Firm intends to continue to meet the higher U.S. and Basel III liquidity requirements and make progress towards meeting all of its capital targets in advance of regulatory deadlines, while at the same time returning capital to its shareholders. For further information, see Liquidity Risk Management and Capital Management on pages 168–173 and 160–167, respectively, of this Annual Report.

The Firm is also devoting substantial resources in order to continue to execute on its control and regulatory agendas. In 2012, it established its Oversight and Control function, which works closely with all control disciplines, including Compliance, Legal, Risk Management, Internal Audit and other functions, to provide a cohesive and centralized view of control functions and issues and to address complex control-related projects that are cross-line of business and that have significant regulatory impact or respond to regulatory actions such as the Consent Orders. See Operational Risk Management on pages 155–157 in this Annual Report for further information on the Oversight and Control function. The Firm's control agenda is receiving significant senior management and Board of Director attention and oversight, and represents a very high priority for the Firm, with 23 work-streams currently underway involving more than 3,500 employees. In 2013, the Firm increased the amount spent on the control agenda by approximately $1 billion, and expects to spend an incremental amount of slightly more than $1 billion on the control agenda in 2014.

The Firm is also executing a business simplification agenda that will allow it to focus on core activities for its core clients and better manage its operational, regulatory and litigation risks. These initiatives include ceasing student loan originations, ceasing to offer traveler's checks and money orders for non-customers, exiting certain high-complexity arrangements (such as third-party lockbox services), and being more selective about on-boarding certain customers, among other initiatives. These business simplification changes will not fundamentally change the breadth of the Firm's business model. However, they are anticipated to reduce both revenues and expenses over time, although the effect on annualized net income is expected to be modest. In addition, the efforts are also expected to have the benefit of freeing up capital over time.

The Firm expects it will continue to make appropriate adjustments to its business and operations, capital and liquidity management practices, and legal entity structure in the year ahead in response to developments in the legal and regulatory, as well as business and economic, environment in which it operates.

2014 Business Outlook

JPMorgan Chase's outlook for the full year 2014 should be viewed against the backdrop of the global and U.S. economies, financial markets activity, the geopolitical environment, the competitive environment, client activity levels, and regulatory and legislative developments in the U.S. and other countries where the Firm does business. Each of these inter-related factors will affect the performance of the Firm and its lines of business.

The Firm expects that net interest margin will be relatively stable in the near term. Firmwide adjusted expense is expected to be below $59 billion for the full year 2014, excluding firmwide (Corporate and non-Corporate) legal expenses and foreclosure-related matters, even as the Firm continues to invest in controls and compliance.

In the Mortgage Banking business within CCB, management expects that higher levels of mortgage interest rates will continue to have a negative impact on refinancing volumes and margins, and, accordingly, the pretax income of Mortgage Production is anticipated to be modestly negative for the first quarter of 2014. For Real Estate Portfolios within Mortgage Banking, if delinquencies continue to trend down and the macro-economic environment remains stable or improves, management expects charge-offs to decline and a further reduction in the allowance for loan losses.

In Card Services within CCB, the Firm expects that spread compression will continue in 2014; the shift from high-rate and low-FICO balances is expected to be replaced by more engaged customers or transactors, which is expected to positively affect card spend and credit performance in 2014. If current positive credit trends continue, the card-related allowance for loan losses could be reduced over the course of 2014.

The currently anticipated results for CCB described above could be adversely affected if economic conditions, including U.S. housing prices or the unemployment rate, do not continue to improve. Management continues to closely monitor the portfolios in these businesses.

In Private Equity, within the Corporate/Private Equity segment, earnings will likely continue to be volatile and influenced by capital markets activity, market levels, the performance of the broader economy and investment-specific factors.

For Treasury and CIO, within the Corporate/Private Equity segment, as the Firm continues to reinvest its investment securities portfolio, net interest income is expected to improve and to reach break-even during the second half of 2014.

Business events

Visa B Shares

In December 2013, the Firm sold 20 million Visa Class B shares, resulting in a net pretax gain of approximately $1.3 billion recorded in Other income. After the sale, the Firm continues to own approximately 40 million Visa Class B shares. For further information, see Note 2 on pages 326-332 of this Annual Report.

One Chase Manhattan Plaza

On December 17, 2013, the Firm sold One Chase Manhattan Plaza, an office building located in New York City, and recognized a pretax gain of $493 million in Other Income.

Other events

For information about the Firm's announcements regarding the physical commodities business, One Equity Partners, and the student loan business, see Note 2 on pages 326-332 of this Annual Report.

Subsequent events

Settlement agreement with The U.S. Departments Of Justice, Housing and Urban Development, and Veterans Affairs, and The Federal Housing Administration

On February 4, 2014, the Firm announced that it had reached a settlement with the U.S. Attorney's Office for the Southern District of New York, Federal Housing Administration ("FHA"), the U.S. Department of Housing and Urban Development ("HUD"), and the U.S. Department of Veterans Affairs ("VA") resolving claims relating to the Firm's participation in federal mortgage insurance programs overseen by FHA, HUD and VA ("FHA Settlement"). Under the FHA Settlement, which relates to FHA and VA insurance claims that have been paid to the Firm from 2002 through the date of the settlement, the Firm will pay $614 million in cash, and agree to enhance its quality control program for loans that are submitted in the future to FHA's Direct Endorsement Lender Program. The Firm is fully reserved for the settlement, and any financial impact related to exposure on future claims is not expected to be significant. For information about the ongoing collectibility of insurance reimbursements on loans sold to Ginnie Mae, see Note 31 on pages 326-332 of this Annual Report.

Madoff Litigation and Investigations

On January 7, 2014, the Firm announced that certain of its bank subsidiaries had entered into settlements with various governmental agencies in resolution of investigations relating to Bernard L. Madoff Investment Securities LLC ("BLMIS"). The Firm and certain of its subsidiaries also entered into settlements with several private parties in resolution of civil litigation relating to BLMIS. At the same time, certain bank subsidiaries of the Firm consented to the assessment of a civil money penalty by the OCC in connection with various Bank Secrecy Act/Anti-Money Laundering deficiencies, including with relation to the BLMIS fraud, and JPMorgan Chase Bank, N.A. additionally agreed to the assessment of a civil money penalty by the Financial Crimes Enforcement Network for failure to detect and adequately report suspicious transactions relating to BLMIS. For further information on these settlements, see Note 31 on pages 326-332 of this Annual Report.

The following section provides a comparative discussion of JPMorgan Chase's Consolidated Results of Operations on a reported basis for the three-year period ended December 31, 2013. Factors that relate primarily to a single business segment are discussed in more detail within that business segment. For a discussion of the Critical Accounting Estimates Used by the Firm that affect the Consolidated Results of Operations, see pages 174–178 of this Annual Report.

Revenue

Year ended December 31, (in millions)	2013	2012	2011
Investment banking fees	**$ 6,354**	$ 5,808	$ 5,911
Principal transactions[(a)]	**10,141**	5,536	10,005
Lending- and deposit-related fees	**5,945**	6,196	6,458
Asset management, administration and commissions	**15,106**	13,868	14,094
Securities gains	**667**	2,110	1,593
Mortgage fees and related income	**5,205**	8,687	2,721
Card income	**6,022**	5,658	6,158
Other income[(b)]	**3,847**	4,258	2,605
Noninterest revenue	**53,287**	52,121	49,545
Net interest income	**43,319**	44,910	47,689
Total net revenue	**$ 96,606**	$ 97,031	$ 97,234

(a) Included a $(1.5) billion loss in the fourth quarter of 2013 as a result of implementing an FVA framework for OTC derivatives and structured notes. Also included DVA on structured notes and derivative liabilities measured at fair value. DVA gains/(losses) were $(452) million, $(930) million and $1.4 billion for the years ended December 31, 2013, 2012 and 2011, respectively.

(b) Included operating lease income of $1.5 billion, $1.3 billion and $1.2 billion for the years ended December 31, 2013, 2012 and 2011, respectively.

2013 compared with 2012

Total net revenue for 2013 was $96.6 billion, down by $425 million, or less than 1%. The results of 2013 were driven by lower mortgage fees and related income, net interest income, and securities gains. These items were predominantly offset by higher principal transactions revenue, and asset management, administration and commissions revenue.

Investment banking fees increased compared with the prior year, reflecting higher equity and debt underwriting fees, partially offset by lower advisory fees. Equity and debt underwriting fees increased, driven by strong market issuance and improved wallet share in equity capital markets and loans. Advisory fees decreased, as the industry-wide M&A wallet declined. For additional information on investment banking fees, see CIB segment results on pages 98–102 and Note 7 on pages 234–235 of this Annual Report.

Principal transactions revenue, which consists of revenue primarily from the Firm's market-making and private equity investing activities, increased compared with the prior year. The current-year period reflected CIB's strong equity markets revenue, partially offset by a $1.5 billion loss as a result of implementing a funding valuation adjustment ("FVA") framework for OTC derivatives and structured notes in the fourth quarter of 2013, and a $452 million loss from DVA on structured notes and derivative liabilities (compared with a $930 million loss from DVA in the prior year). The prior year included a $5.8 billion loss on the synthetic credit portfolio incurred by CIO in the six months ended June 30, 2012; a $449 million loss on the index credit derivative positions retained by CIO in the three months ended September 30, 2012; and additional modest losses incurred by CIB from the synthetic credit portfolio in the last six months of 2012; these were partially offset by a $665 million gain recognized in 2012 in Other Corporate, representing the recovery on a Bear Stearns-related subordinated loan. For additional information on principal transactions revenue, see CIB and Corporate/Private Equity segment results on pages 98–102 and 109–111, respectively, and Note 7 on pages 234–235 of this Annual Report.

Lending- and deposit-related fees decreased compared with the prior year, largely due to lower deposit-related fees in CCB, resulting from reductions in certain product and transaction fees. For additional information on lending- and deposit-related fees, see the segment results for CCB on pages 86–97, CIB on pages 98–102 and CB on pages 103–105 of this Annual Report.

Asset management, administration and commissions revenue increased from 2012. The increase was driven by higher investment management fees in AM, due to net client inflows, the effect of higher market levels, and higher performance fees, as well as higher investment sales revenue in CCB. For additional information on these fees and commissions, see the segment discussions for CIB on pages 98–102, CCB on pages 86–97, AM on pages 106–108, and Note 7 on pages 234–235 of this Annual Report.

Securities gains decreased compared with the prior-year period, reflecting the results of repositioning the CIO available-for-sale ("AFS") portfolio. For additional information on securities gains, see the Corporate/Private Equity segment discussion on pages 109–111, and Note 12 on pages 249–254 of this Annual Report.

Mortgage fees and related income decreased in 2013 compared with 2012. The decrease resulted from lower Mortgage Banking net production and servicing revenue. The decrease in net production revenue was due to lower margins and volumes. The decrease in net servicing revenue was predominantly due to lower mortgage servicing rights ("MSR") risk management results. For additional

information on mortgage fees and related income, see CCB's Mortgage Banking's discussion on pages 92–93, and Note 17 on pages 299–304 of this Annual Report.

Card income increased compared with the prior year period. The increase was driven by higher net interchange income on credit and debit cards and merchant servicing revenue, due to growth in sales volume. For additional information on credit card income, see the CCB segment results on pages 86–97 of this Annual Report.

Other income decreased in 2013 compared with the prior year, predominantly reflecting lower revenues from significant items recorded in Corporate/Private Equity. In 2013, the Firm recognized a $1.3 billion gain on the sale of Visa shares, a $493 million gain from the sale of One Chase Manhattan Plaza, and a modest loss related to the redemption of trust preferred securities ("TruPS"). In 2012, the Firm recognized a $1.1 billion benefit from the Washington Mutual bankruptcy settlement and an $888 million extinguishment gain related to the redemption of TruPS. The net decrease was partially offset by higher revenue in CIB, largely from client-driven activity.

Net interest income decreased in 2013 compared with the prior year, primarily reflecting the impact of the runoff of higher yielding loans and originations of lower yielding loans, and lower trading-related net interest income. The decrease in net interest income was partially offset by lower long-term debt and other funding costs. The Firm's average interest-earning assets were $2.0 trillion in 2013, and the net interest yield on those assets, on a fully taxable-equivalent ("FTE") basis, was 2.23%, a decrease of 25 basis points from the prior year.

2012 compared with 2011

Total net revenue for 2012 was $97.0 billion, down slightly from 2011. Results for 2012 were driven by lower principal transactions revenue from losses incurred by CIO, and lower net interest income. These items were predominantly offset by higher mortgage fees and related income and higher other income.

Investment banking fees decreased slightly from 2011, reflecting lower advisory fees on lower industry-wide volumes, and to a lesser extent, slightly lower equity underwriting fees on industry-wide volumes that were flat from the prior year. These declines were predominantly offset by record debt underwriting fees, driven by favorable market conditions and the impact of continued low interest rates.

Principal transactions revenue decreased compared with 2011, predominantly due to $5.8 billion of losses incurred by CIO from the synthetic credit portfolio for the six months ended June 30, 2012, and $449 million of losses incurred by CIO from the retained index credit derivative positions for the three months ended September 30, 2012; and additional modest losses incurred by CIB from the synthetic credit portfolio in the last six months of 2012.

Principal transaction revenue also included a $930 million loss in 2012, compared with a $1.4 billion gain in 2011, from DVA on structured notes and derivative liabilities, resulting from the tightening of the Firm's credit spreads. These declines were partially offset by higher market-making revenue in CIB, driven by strong client revenue and higher revenue in rates-related products, as well as a $665 million gain recognized in Other Corporate associated with the recovery on a Bear Stearns-related subordinated loan. Private equity gains decreased in 2012, predominantly due to lower unrealized and realized gains on private investments, partially offset by higher unrealized gains on public securities.

Lending- and deposit-related fees decreased in 2012 compared with the prior year. The decrease predominantly reflected lower lending-related fees in CIB and lower deposit-related fees in CCB.

Asset management, administration and commissions revenue decreased from 2011, largely driven by lower brokerage commissions in CIB. This decrease was largely offset by higher asset management fees in AM driven by net client inflows, the effect of higher market levels, and higher performance fees; and higher investment service fees in CCB, as a result of growth in sales of investment products.

Securities gains increased, compared with the 2011 level, reflecting the results of repositioning the CIO AFS securities portfolio.

Mortgage fees and related income increased significantly in 2012 compared with 2011, due to higher Mortgage Banking net production and servicing revenue. The increase in net production revenue, reflected wider margins driven by favorable market conditions; and higher volumes due to historically low interest rates and the Home Affordable Refinance Programs ("HARP"). The increase in net servicing revenue resulted from a favorable swing in risk management results related to mortgage servicing rights ("MSR"), which was a gain of $619 million in 2012, compared with a loss of $1.6 billion in 2011.

Card income decreased during 2012, driven by lower debit card revenue, reflecting the impact of the Durbin Amendment; and to a lesser extent, higher amortization of loan origination costs. The decrease in credit card income was offset partially by higher net interchange income associated with growth in credit card sales volume, and higher merchant servicing revenue.

Other income increased in 2012 compared with the prior year, largely due to a $1.1 billion benefit from the Washington Mutual bankruptcy settlement, and $888 million of extinguishment gains in Corporate/Private Equity related to the redemption of TruPS. The extinguishment gains were related to adjustments applied to the cost basis of the TruPS during the period they were in a qualified hedge accounting relationship. These items were offset partially by the absence of a prior-year gain on the sale of an investment in AM.

Net interest income decreased in 2012 compared with the prior year, predominantly reflecting the impact of lower average trading asset balances, the runoff of higher-yielding

loans, faster prepayment of mortgage-backed securities, limited reinvestment opportunities, as well as the impact of lower interest rates across the Firm's interest-earning assets. The decrease in net interest income was partially offset by lower deposit and other borrowing costs. The Firm's average interest-earning assets were $1.8 trillion for 2012, and the net yield on those assets, on a fully taxable-equivalent ("FTE") basis, was 2.48%, a decrease of 26 basis points from 2011.

Provision for credit losses

Year ended December 31, (in millions)	2013	2012	2011
Consumer, excluding credit card	**$ (1,871)**	$ 302	$ 4,672
Credit card	**2,179**	3,444	2,925
Total consumer	**308**	3,746	7,597
Wholesale	**(83)**	(361)	(23)
Total provision for credit losses	**$ 225**	$ 3,385	$ 7,574

2013 compared with 2012

The provision for credit losses decreased compared with the prior year, due to a decline in the provision for total consumer credit losses. The decrease in the consumer provision was attributable to continued reductions in the allowance for loan losses, resulting from the impact of improved home prices on the residential real estate portfolio, and improved delinquency trends in the residential real estate and credit card portfolios, as well as lower net charge-offs partially due to the prior-year incremental charge-offs recorded in accordance with regulatory guidance on certain loans discharged under Chapter 7 bankruptcy. The wholesale provision in the current period reflected a favorable credit environment and stable credit quality trends. For a more detailed discussion of the loan portfolio and the allowance for credit losses, see the segment discussions for CCB on pages 86–97, CIB on pages 98–102, CB on pages 103–105, and Allowance For Credit Losses on pages 139–141 of this Annual Report.

2012 compared with 2011

The provision for credit losses decreased by $4.2 billion from 2011. The decrease was driven by a lower provision for consumer, excluding credit card loans, which reflected a reduction in the allowance for loan losses, due primarily to lower estimated losses in the non-PCI residential real estate portfolio as delinquency trends improved, partially offset by the impact of charge-offs of Chapter 7 loans. A higher level of recoveries and lower charge-offs in the wholesale provision also contributed to the decrease. These items were partially offset by a higher provision for credit card loans, largely due to a smaller reduction in the allowance for loan losses in 2012 compared with the prior year.

Noninterest expense

Year ended December 31, (in millions)	2013	2012	2011
Compensation expense	**$30,810**	$30,585	$29,037
Noncompensation expense:			
Occupancy	**3,693**	3,925	3,895
Technology, communications and equipment	**5,425**	5,224	4,947
Professional and outside services	**7,641**	7,429	7,482
Marketing	**2,500**	2,577	3,143
Other[(a)(b)]	**19,761**	14,032	13,559
Amortization of intangibles	**637**	957	848
Total noncompensation expense	**39,657**	34,144	33,874
Total noninterest expense	**$70,467**	$64,729	$62,911

(a) Included firmwide legal expense of $11.1 billion, $5.0 billion and $4.9 billion for the years ended December 31, 2013, 2012 and 2011, respectively.

(b) Included FDIC-related expense of $1.5 billion, $1.7 billion and $1.5 billion for the years ended December 31, 2013, 2012 and 2011, respectively.

2013 compared with 2012

Total noninterest expense for 2013 was $70.5 billion, up by $5.7 billion, or 9%, compared with the prior year. The increase was predominantly due to higher legal expense.

Compensation expense increased in 2013 compared with the prior year, due to the impact of investments across the businesses, including front office sales and support staff, as well as costs related to the Firm's control agenda; partially offset by lower compensation expense in CIB and a decline in CCB's mortgage business, which included the effect of lower servicing headcount.

Noncompensation expense increased in 2013 from the prior year. The increase was due to higher other expense, reflecting $11.1 billion of firmwide legal expense, predominantly in Corporate/Private Equity, representing additional reserves for several litigation and regulatory proceedings, compared with $5.0 billion of expense in the prior year. Investments in the businesses, higher legal-related professional services expense, and costs related to the Firm's control agenda also contributed to the increase. The increase was offset partially by lower mortgage servicing expense in CCB and lower occupancy expense for the Firm, which predominantly reflected the absence of charges recognized in 2012 related to vacating excess space. For a further discussion of legal expense, see Note 31 on pages 326–332 of this Annual Report. For a discussion of amortization of intangibles, refer to Note 17 on pages 299–304 of this Annual Report.

2012 compared with 2011
Total noninterest expense for 2012 was $64.7 billion , up by $1.8 billion, or 3%, from 2011. Compensation expense drove the increase from the prior year.

Compensation expense increased from the prior year, predominantly due to investments in the businesses, including the sales force in CCB and bankers in the other businesses, partially offset by lower compensation expense in CIB.

Noncompensation expense for 2012 increased from the prior year, reflecting continued investments in the businesses, including branch builds in CCB; higher expense related to growth in business volume in CIB and CCB; higher regulatory deposit insurance assessments; expenses related to exiting a non-core product and writing-off intangible assets in CCB; and higher legal expense in Corporate/Private Equity. These increases were partially offset by lower legal expense in AM and CCB (including the Independent Foreclosure Review settlement) and lower marketing expense in CCB.

Income tax expense

Year ended December 31, (in millions, except rate)	**2013**	2012	2011
Income before income tax expense	**$25,914**	$28,917	$26,749
Income tax expense	**7,991**	7,633	7,773
Effective tax rate	**30.8%**	26.4%	29.1%

2013 compared with 2012
The increase in the effective tax rate compared with the prior year was predominantly due to the effect of higher nondeductible expense related to litigation and regulatory proceedings in 2013. This was largely offset by the impact of lower reported pre-tax income in combination with changes in the mix of income and expense subject to U.S. federal, state and local taxes, business tax credits, tax benefits associated with prior year tax adjustments and audit resolutions. For additional information on income taxes, see Critical Accounting Estimates Used by the Firm on pages 174–178 and Note 26 on pages 313–315 of this Annual Report.

2012 compared with 2011
The decrease in the effective tax rate compared with the prior year was largely the result of changes in the proportion of income subject to U.S. federal and state and local taxes, as well as higher tax benefits associated with tax audits and tax-advantaged investments. This was partially offset by higher reported pretax income and lower benefits associated with the disposition of certain investments. The current and prior periods include deferred tax benefits associated with state and local income taxes.

Selected Consolidated Balance Sheets data

December 31, (in millions)	2013	2012	Change
Assets			
Cash and due from banks	**$ 39,771**	$ 53,723	(26)%

Total liabilities and stockholders' equity	**$ 2,415,689**	$ 2,359,141	2 %

Consolidated Balance Sheets overview

Total assets increased by $56.5 billion or 2%, and total liabilities increased by $49.4 billion or 2%, from December 31, 2012. The following is a discussion of the significant changes in the specific line item captions on the Consolidated Balance Sheets during 2013.

Cash and due from banks and deposits with banks

The net increase reflected the placement of the Firm's excess funds with various central banks, predominantly Federal Reserve Banks. For additional information, refer to the Liquidity Risk Management discussion on pages 168–173 of this Annual Report.

Federal funds sold and securities purchased under resale agreements; and securities borrowed

The decrease in securities purchased under resale agreements and securities borrowed was predominantly due to a shift in the deployment of the Firm's excess cash by Treasury.

Trading assets and liabilities – debt and equity instruments

The decrease in trading assets was driven by client-driven market-making activity in CIB, which resulted in lower levels of debt securities. For additional information, refer to Note 3 on pages 195–215 of this Annual Report.

The increase in trading liabilities was driven by client-driven market-making activity in CIB, which resulted in higher levels of short positions in debt and equity securities.

Trading assets and liabilities – derivative receivables and payables

Derivative receivables and payables decreased predominantly due to reductions in interest rate derivatives driven by an increase in interest rates and reductions in commodity derivatives due to market movements. The decreases were partially offset by an increase in equity derivatives driven by a rise in equity markets.

For additional information, refer to Derivative contracts on pages 135–136, and Note 3 and Note 6 on pages 195–215 and 220–233, respectively, of this Annual Report.

Securities

The decrease in securities was largely due to repositioning which resulted in lower levels of corporate debt, non-U.S. government securities and non-U.S. residential MBS. The decrease was partially offset by higher levels of U.S. Treasury and government agency obligations and obligations of U.S. states and municipalities. For additional information related to securities, refer to the discussion in the Corporate/Private Equity segment on pages 109–111, and Note 3 and Note 12 on pages 195–215 and 249–254, respectively, of this Annual Report.

Loans and allowance for loan losses

Loans increased predominantly due to continued growth in wholesale loans partially offset by a decrease in consumer,

excluding credit card loans, predominantly due to paydowns and the charge-off or liquidation of delinquent loans, partially offset by new mortgage and auto originations.

The allowance for loan losses decreased as a result of a $5.5 billion reduction in the consumer allowance, reflecting the impact of improved home prices on the residential real estate portfolio and improved delinquency trends in the residential real estate and credit card portfolios. For a more detailed discussion of the loan portfolio and the allowance for loan losses, refer to Credit Risk Management on pages 119–141, and Notes 3, 4, 14 and 15 on pages 195–215, 215–218, 258–283 and 284–287, respectively, of this Annual Report.

Premises and Equipment
The increase in premises and equipment was largely due to investments in CBB in the U.S. and other investments in facilities globally.

Mortgage servicing rights
The increase was predominantly due to originations and changes in market interest rates, partially offset by collection/realization of expected cash flows, dispositions, and changes in valuation due to model inputs and assumptions. For additional information on MSRs, see Note 17 on pages 299–304 of this Annual Report.

Other assets
The increase is primarily driven by the implementation of gross initial margin requirements for certain U.S. counterparties for exchange-traded derivatives ("ETD"), higher ETD margin balances, and mandatory clearing for certain over-the-counter derivative contracts in the U.S.

Deposits
The increase was due to growth in both wholesale and consumer deposits. The increase in wholesale client balances was due to higher short-term deposits as well as growth in client operating balances. Consumer deposit balances increased from the effect of continued strong growth in business volumes and strong customer retention. For more information on consumer deposits, refer to the CCB segment discussion on pages 86–97; the Liquidity Risk Management discussion on pages 168–173; and Notes 3 and 19 on pages 195–215 and 305, respectively, of this Annual Report. For more information on wholesale client deposits, refer to the AM, CB and CIB segment discussions on pages 106–108, 103–105 and 98–102, respectively, of this Annual Report.

Federal funds purchased and securities loaned or sold under repurchase agreements
The decrease was predominantly due to a change in the mix of the Firm's funding sources. For additional information on the Firm's Liquidity Risk Management, see pages 168–173 of this Annual Report.

Commercial paper and other borrowed funds
Commercial paper increased slightly due to higher commercial paper issuance from wholesale funding markets and an increase in the volume of liability balances related to CIB's liquidity management product, whereby clients choose to sweep their deposits into commercial paper. Other borrowed funds increased slightly due to higher secured short-term borrowings to meet short-term funding needs. For additional information on the Firm's Liquidity Risk Management and other borrowed funds, see pages 168–173 of this Annual Report.

Accounts payable and other liabilities
Accounts payable and other liabilities remained relatively flat compared with the prior year. For additional information on the Firm's accounts payable and other liabilities, see Note 20 on page 305 of this Annual Report.

Beneficial interests issued by consolidated VIEs
Beneficial interests issued by consolidated VIEs decreased primarily due to unwinds of municipal bond vehicles, net credit card maturities and a reduction in outstanding conduit commercial paper held by third parties. For additional information on Firm-sponsored VIEs and loan securitization trusts, see Note 16 on pages 288–299 of this Annual Report.

Long-term debt
The increase was primarily due to net issuances, which also reflected the redemption of trust preferred securities in the second quarter of 2013. For additional information on the Firm's long-term debt activities, see the Liquidity Risk Management discussion on pages 168–173 of this Annual Report.

Stockholders' equity
Total stockholders' equity increased, predominantly due to net income; net issuance of preferred stock; and the issuances and commitments to issue under the Firm's employee stock-based compensation plans. The increase was partially offset by the declaration of cash dividends on common and preferred stock, repurchases of common stock and a net decrease in accumulated other comprehensive income. The net decrease in accumulated other comprehensive income was primarily related to the decline in fair value of U.S. government agency issued MBS and obligations of U.S. states and municipalities due to market changes, as well as net realized gains. For additional information on the Firm's capital actions, see Capital actions on pages 166–167 of this Annual Report.

In the normal course of business, the Firm enters into various contractual obligations that may require future cash payments. Certain obligations are recognized on-balance sheet, while others are off-balance sheet under U.S. GAAP. The Firm is involved with several types of off-balance sheet arrangements, including through nonconsolidated special-purpose entities ("SPEs"), which are a type of VIE, and through lending-related financial instruments (e.g., commitments and guarantees).

Special-purpose entities

The most common type of VIE is an SPE. SPEs are commonly used in securitization transactions in order to isolate certain assets and distribute the cash flows from those assets to investors. SPEs are an important part of the financial markets, including the mortgage- and asset-backed securities and commercial paper markets, as they provide market liquidity by facilitating investors' access to specific portfolios of assets and risks. SPEs may be organized as trusts, partnerships or corporations and are typically established for a single, discrete purpose. SPEs are not typically operating entities and usually have a limited life and no employees. The basic SPE structure involves a company selling assets to the SPE; the SPE funds the purchase of those assets by issuing securities to investors.

JPMorgan Chase uses SPEs as a source of liquidity for itself and its clients by securitizing financial assets, and by creating investment products for clients. The Firm is involved with SPEs through multi-seller conduits, investor intermediation activities, and loan securitizations. See Note 16 on pages 288–299 for further information on these types of SPEs.

The Firm holds capital, as deemed appropriate, against all SPE-related transactions and related exposures, such as derivative transactions and lending-related commitments and guarantees.

The Firm has no commitments to issue its own stock to support any SPE transaction, and its policies require that transactions with SPEs be conducted at arm's length and reflect market pricing. Consistent with this policy, no JPMorgan Chase employee is permitted to invest in SPEs with which the Firm is involved where such investment would violate the Firm's Code of Conduct. These rules prohibit employees from self-dealing and acting on behalf of the Firm in transactions with which they or their family have any significant financial interest.

Implications of a credit rating downgrade to JPMorgan Chase Bank, N.A.

For certain liquidity commitments to SPEs, JPMorgan Chase Bank, N.A. could be required to provide funding if its short-term credit rating were downgraded below specific levels, primarily "P-1", "A-1" and "F1" for Moody's, Standard & Poor's and Fitch, respectively. These liquidity commitments support the issuance of asset-backed commercial paper by both Firm-administered consolidated and third-party sponsored nonconsolidated SPEs. In the event of such a short-term credit rating downgrade, JPMorgan Chase Bank, N.A., absent other solutions, would be required to provide funding to the SPE, if the commercial paper could not be reissued as it matured. The aggregate amounts of commercial paper outstanding, issued by both Firm-administered and third-party sponsored SPEs, that are held by third parties as of December 31, 2013 and 2012, was $15.5 billion and $18.1 billion, respectively. The aggregate amounts of commercial paper outstanding could increase in future periods should clients of the Firm-administered consolidated or third-party sponsored nonconsolidated SPEs draw down on certain unfunded lending-related commitments. These unfunded lending-related commitments were $9.2 billion and $10.9 billion at December 31, 2013 and 2012, respectively. The Firm could facilitate the refinancing of some of the clients' assets in order to reduce the funding obligation. For further information, see the discussion of Firm-administered multi-seller conduits in Note 16 on pages 292–293 of this Annual Report.

The Firm also acts as liquidity provider for certain municipal bond vehicles. The Firm's obligation to perform as liquidity provider is conditional and is limited by certain termination events, which include bankruptcy or failure to pay by the municipal bond issuer or credit enhancement provider, an event of taxability on the municipal bonds or the immediate downgrade of the municipal bond to below investment grade. See Note 16 on pages 288–299 of this Annual Report for additional information.

Off–balance sheet lending-related financial instruments, guarantees, and other commitments

JPMorgan Chase provides lending-related financial instruments (e.g., commitments and guarantees) to meet the financing needs of its customers. The contractual amount of these financial instruments represents the maximum possible credit risk to the Firm should the counterparty draw upon the commitment or the Firm be required to fulfill its obligation under the guarantee, and should the counterparty subsequently fail to perform according to the terms of the contract. Most of these commitments and guarantees expire without being drawn or a default occurring. As a result, the total contractual amount of these instruments is not, in the Firm's view, representative of its actual future credit exposure or funding requirements. For further discussion of lending-related financial instruments, guarantees and other commitments, and the Firm's accounting for them, see Lending-related commitments on page 135, and Note 29 (including the table that presents the related amounts by contractual maturity as of December 31, 2013) on pages 318–324 of this Annual Report. For a discussion of loan repurchase liabilities, see Mortgage repurchase liability on pages 78–79 and Note 29 on pages 318–324, respectively, of this Annual Report.

Contractual cash obligations

The accompanying table summarizes, by remaining maturity, JPMorgan Chase's significant contractual cash obligations at December 31, 2013. The contractual cash obligations included in the table below reflect the minimum contractual obligation under legally enforceable contracts with terms that are both fixed and determinable. Excluded from the below table are certain liabilities with variable cash flows and/or no contractual maturity.

The carrying amount of on-balance sheet obligations on the Consolidated Balance Sheets may differ from the minimum contractual amount of the obligations reported below. For a discussion of mortgage loan repurchase liabilities, see Mortgage repurchase liability on pages 78–79 of this Annual Report. For further discussion of other obligations, see the Notes to Consolidated Financial Statements in this Annual Report.

Contractual cash obligations

By remaining maturity at December 31, (in millions)	2013					2012

(a) Excludes structured notes where the Firm is not obligated to return a stated amount of principal at the maturity of the notes, but is obligated to return an amount based on the performance of the structured notes.
(b) Primarily includes dividends declared on preferred and common stock, deferred annuity contracts, pension and postretirement obligations and insurance liabilities. Prior periods were revised to conform with the current presentation.
(c) For further information, refer to unsettled reverse repurchase and securities borrowing agreements in Note 29 on pages 321–322 of this Annual Report.
(d) Includes accrued interest and future contractual interest obligations. Excludes interest related to structured notes where the Firm's payment obligation is based on the performance of certain benchmarks.
(e) Includes noncancelable operating leases for premises and equipment used primarily for banking purposes and for energy-related tolling service agreements. Excludes the benefit of noncancelable sublease rentals of $2.6 billion and $1.9 billion at December 31, 2013 and 2012, respectively. Prior periods were revised to conform with the current presentation.
(f) At December 31, 2013 and 2012, included unfunded commitments of $215 million and $370 million, respectively, to third-party private equity funds that are generally fair valued at net asset value as discussed in Note 3 on pages 195–215 of this Annual Report; and $1.9 billion and $1.5 billion of unfunded commitments, respectively, to other equity investments.
(g) Prior periods were revised to conform with the current presentation.

Mortgage repurchase liability

In connection with the Firm's mortgage loan sale and securitization activities with Fannie Mae and Freddie Mac (the "GSEs") and other mortgage loan sale and private-label securitization transactions, the Firm has made representations and warranties that the loans sold meet certain requirements. The Firm has been, and may be, required to repurchase loans and/or indemnify the GSEs (e.g., with "make-whole" payments to reimburse the GSEs for realized losses on liquidated loans) and other investors for losses due to material breaches of these representations and warranties. To the extent that repurchase demands that are received relate to loans that the Firm purchased from third parties that remain viable, the Firm typically will have the right to seek a recovery of related repurchase losses from the third party.

On October 25, 2013, the Firm announced it had reached a $1.1 billion agreement with the Federal Housing Finance Agency ("FHFA") to resolve, other than certain limited types of exposures, outstanding and future mortgage repurchase demands associated with loans sold to the GSEs from 2000

to 2008 ("FHFA Settlement Agreement"). The majority of the mortgage repurchase demands that the Firm had received from the GSEs related to loans originated from 2005 to 2008.

The Firm has recognized a mortgage repurchase liability of $681 million and $2.8 billion as of December 31, 2013 and 2012, respectively. The amount of the mortgage repurchase liability at December 31, 2013, relates to repurchase losses associated with loans sold in connection with loan sale and securitization transactions with the GSEs that are not covered by the FHFA Settlement Agreement (e.g., post-2008 loan sale and securitization transactions, mortgage insurance rescissions and certain mortgage insurance settlement-related exposures, as well as certain other specific exclusions). At December 31, 2013, the Firm had outstanding repurchase demands of $330 million and unresolved mortgage insurance rescission notices of $263 million (excluding mortgage insurance rescission notices on loans for which a repurchase demand also has been received).

The following table summarizes the change in the mortgage repurchase liability for each of the periods presented.

Summary of changes in mortgage repurchase liability

Year ended December 31, (in millions)	**2013**	2012	2011
Repurchase liability at beginning of period	**$ 2,811**	$ 3,557	$ 3,285
Net realized losses[a][b]	**(1,561)**	(1,158)	(1,263)
Reclassification to litigation reserve[c]	**(179)**	–	–
Provision for repurchase losses[d]	**(390)**	412	1,535
Repurchase liability at end of period	**$ 681**	$ 2,811	$ 3,557

(a) Presented net of third-party recoveries and includes principal losses and accrued interest on repurchased loans, "make-whole" settlements, settlements with claimants, and certain related expense. Make-whole settlements were $414 million, $524 million and $640 million, for the years ended December 31, 2013, 2012 and 2011, respectively.

(b) The 2013 amount includes $1.1 billion for the FHFA Settlement Agreement.

(c) Prior to December 31, 2013, in the absence of a repurchase demand by a party to the relevant contracts, the Firm's decision to repurchase loans from private-label securitization trusts when it determined it had an obligation to do so was recognized in the mortgage repurchase liability. Pursuant to the terms of the RMBS Trust Settlement, all repurchase obligations relating to the subject private-label securitization trusts, whether resulting from a repurchase demand or otherwise, are now recognized in the Firm's litigation reserves for this settlement. The RMBS Trust Settlement is fully accrued as of December 31, 2013.

(d) Included a provision related to new loan sales of $20 million, $112 million and $52 million, for the years ended December 31, 2013, 2012 and 2011, respectively.

Private label securitizations

The liability related to repurchase demands associated with private label securitizations is separately evaluated by the Firm in establishing its litigation reserves.

On November 15, 2013, the Firm announced it had reached a $4.5 billion agreement with 21 major institutional investors to make a binding offer to the trustees of 330 residential mortgage-backed securities trusts issued by J.P.Morgan, Chase and Bear Stearns ("RMBS Trust Settlement") to resolve all representation and warranty claims, as well as all servicing claims, on all trusts issued by J.P.Morgan, Chase and Bear Stearns between 2005 and 2008. The RMBS Trust Settlement may be subject to court approval. For further information about the RMBS Trust Settlement, see Note 31 on pages 326–332 of this Annual Report.

In addition, from 2005 to 2008, Washington Mutual made certain loan level representations and warranties in connection with approximately $165 billion of residential mortgage loans that were originally sold or deposited into private-label securitizations by Washington Mutual. Of the $165 billion, approximately $75 billion has been repaid. In addition, approximately $47 billion of the principal amount of such loans has liquidated with an average loss severity of 59%. Accordingly, the remaining outstanding principal balance of these loans as of December 31, 2013, was approximately $43 billion, of which $10 billion was 60 days or more past due. The Firm believes that any repurchase obligations related to these loans remain with the FDIC receivership.

For additional information regarding the mortgage repurchase liability, see Note 29 on pages 318–324 of this Annual Report.

CASH FLOWS ANALYSIS

For the years ended December 31, 2013, 2012 and 2011, cash and due from banks decreased $14.0 billion and $5.9 billion, and increased $32.0 billion, respectively. The following discussion highlights the major activities and transactions that affected JPMorgan Chase's cash flows during 2013, 2012 and 2011, respectively.

Cash flows from operating activities

JPMorgan Chase's operating assets and liabilities support the Firm's capital markets and lending activities, including the origination or purchase of loans initially designated as held-for-sale. Operating assets and liabilities can vary significantly in the normal course of business due to the amount and timing of cash flows, which are affected by client-driven and risk management activities, and market conditions. Management believes cash flows from operations, available cash balances and the Firm's ability to generate cash through short- and long-term borrowings are sufficient to fund the Firm's operating liquidity needs.

For the year ended December 31, 2013, net cash provided by operating activities was $108.0 billion, and it was significantly higher than net income. This resulted from a decrease in trading assets - debt and equity instruments driven by client-driven market-making activity in CIB, which resulted in lower levels of debt securities; and an increase in trading liabilities – debt and equity instruments driven by client-driven market-making activity in CIB, which resulted in higher levels of short positions in debt and equity securities. Net cash generated from operating activities also reflected adjustments for noncash items such as deferred taxes, depreciation and amortization, and stock-based compensation. Partially offsetting these cash inflows was cash used for loans originated and purchased with an initial intent to sell, which was slightly higher than the cash proceeds received from sales and paydowns of the loans, and also reflected significantly higher levels of activities over the prior-year period.

For the year ended December 31, 2012, net cash provided by operating activities was $25.1 billion. This resulted from a decrease in securities borrowed reflecting a shift in the deployment of excess cash to resale agreements, as well as lower client activity in CIB, and lower trading assets - derivative receivables, primarily related to the decline in the U.S. dollar and tightening of credit spreads. Partially offsetting these cash inflows was a decrease in accounts payable and other liabilities predominantly due to lower CIB client balances, and an increase in trading assets - debt and equity instruments driven by client-driven market-making activity in CIB. Net cash generated from operating activities was higher than net income largely as a result of adjustments for noncash items such as depreciation and amortization, provision for credit losses, and stock-based compensation. Cash used to acquire loans was slightly higher than cash proceeds received from sales and paydowns of such loans originated and purchased with an initial intent to sell, and also reflected a lower level of activity compared with the prior-year period.

For the year ended December 31, 2011, net cash provided by operating activities was $95.9 billion, and it was significantly higher than net income. This resulted from a net decrease in trading assets and liabilities – debt and equity instruments, driven by client-driven market-making activity in CIB; an increase in accounts payable and other liabilities predominantly due to higher CIB client balances, and a decrease in accrued interest and accounts receivables, primarily in CIB, driven by a large reduction in customer margin receivables due to changes in client activity. Net cash generated from operating activities also reflected adjustments for noncash items such as the provision for credit losses, depreciation and amortization, and stock-based compensation. Additionally, cash provided from sales and paydowns of loans originated or purchased with an initial intent to sell was higher than cash used to acquire such loans. Partially offsetting these cash proceeds was an increase in securities borrowed, predominantly in Corporate due to higher excess cash positions at year-end.

Cash flows from investing activities

The Firm's investing activities predominantly include loans originated to be held for investment, the investment securities portfolio and other short-term interest-earning assets. For the year ended December 31, 2013, net cash of $150.5 billion was used in investing activities. This resulted from an increase in deposits with banks reflecting the placement of the Firm's excess funds with various central banks, predominantly Federal Reserve banks; and continued growth of wholesale loans. Partially offsetting this cash outflow was a decrease in securities purchased under resale agreements predominantly due to a shift in the deployment of the Firm's excess cash by Treasury; a decrease in consumer loans excluding credit card loans, predominantly due to paydowns and liquidation of delinquent loans, partially offset by new mortgage and auto originations; and proceeds from maturities and sales of investment securities which were higher than the cash used to acquire new investment securities.

For the year ended December 31, 2012, net cash of $119.8 billion was used in investing activities. This resulted from an increase in securities purchased under resale agreements due to deployment of the Firm's excess cash by Treasury; higher deposits with banks reflecting placements of the Firm's excess cash with various central banks, primarily Federal Reserve Banks; and higher levels of wholesale loans, primarily in CB and AM, driven by higher wholesale activity across most of the Firm's regions and businesses. Partially offsetting these cash outflows were a decline in consumer, excluding credit card, loans predominantly due to mortgage-related paydowns and portfolio runoff, and a decline in credit card loans due to higher repayment rates; and proceeds from maturities and sales of AFS securities,

which were higher than the cash used to acquire new AFS securities.

For the year ended December 31, 2011, net cash of $170.8 billion was used in investing activities. This resulted from a significant increase in deposits with banks reflecting the placement of funds with various central banks, including Federal Reserve Banks, predominantly resulting from the overall growth in wholesale client deposits; an increase in loans reflecting continued growth in client activity across all of the Firm's wholesale businesses and regions; net purchases of AFS securities, largely due to repositioning of the portfolio in Corporate in response to changes in the market environment; and an increase in securities purchased under resale agreements, predominantly in Corporate due to higher excess cash positions at year-end. Partially offsetting these cash outflows were a decline in consumer, excluding credit card, loan balances due to paydowns and portfolio runoff, and in credit card loans, due to higher repayment rates, runoff of the Washington Mutual portfolio and the Firm's sale of the Kohl's portfolio.

Cash flows from financing activities

The Firm's financing activities predominantly include taking customer deposits, and issuing long-term debt as well as preferred and common stock. For the year ended December 31, 2013, net cash provided by financing activities was $28.3 billion. This increase was driven by growth in both wholesale and consumer deposits; net issuances of long-term borrowings, which also reflected the redemption of trust preferred securities in the second quarter of 2013; and proceeds from the net issuance of preferred stock. The increase in wholesale client deposit balances was due to higher short-term deposits as well as growth in client operating balances. Consumer deposit balances increased from the effect of continued strong growth in business volumes and strong customer retention. Partially offsetting these cash inflows was a decrease in securities loaned or sold under repurchase agreements, predominantly due to a change in the mix of the Firm's funding sources; repurchases of common stock; and payments of cash dividends on common and preferred stock.

For the year ended December 31, 2012, net cash provided by financing activities was $87.7 billion. This was driven by proceeds from long-term borrowings and a higher level of securitized credit cards; an increase in deposits due to growth in both consumer and wholesale deposits; an increase in federal funds purchased and securities loaned or sold under repurchase agreements due to higher secured financings of the Firm's assets; an increase in commercial paper issuance in the wholesale funding markets to meet short-term funding needs, partially offset by a decline in the volume of client deposits and other third-party liability balances related to CIB's liquidity management product; an increase in other borrowed funds due to higher secured and unsecured short-term borrowings to meet short-term funding needs; and proceeds from the issuance of preferred stock. Partially offsetting these cash inflows were redemptions and maturities of long-term borrowings, including trust preferred securities, and securitized credit cards; and payments of cash dividends on common and preferred stock and repurchases of common stock and warrants.

For the year ended December 31, 2011, net cash provided by financing activities was $107.7 billion. This was largely driven by a significant increase in deposits, predominantly due to an overall growth in wholesale client balances and, to a lesser extent, consumer deposit balances. The increase in wholesale client balances, particularly in CIB and CB, was primarily driven by lower returns on other available alternative investments and low interest rates during 2011, and in AM, driven by growth in the number of clients and level of deposits. In addition, there was an increase in commercial paper due to growth in the volume of liability balances in sweep accounts related to CIB's cash management program. Cash was used to reduce securities sold under repurchase agreements, predominantly in CIB, reflecting the lower funding requirements of the Firm based on lower trading inventory levels, and change in the mix of funding sources; for net repayments of long-term borrowings, including a decrease in long-term debt, predominantly due to net redemptions and maturities, as well as a decline in long-term beneficial interests issued by consolidated VIEs due to maturities of Firm-sponsored credit card securitization transactions; to reduce other borrowed funds, predominantly driven by maturities of short-term secured borrowings, unsecured bank notes and short-term Federal Home Loan Banks ("FHLB") advances; and for repurchases of common stock and warrants, and payments of cash dividends on common and preferred stock.

EXPLANATION AND RECONCILIATION OF THE FIRM'S USE OF NON-GAAP FINANCIAL MEASURES

The Firm prepares its consolidated financial statements using accounting principles generally accepted in the U.S. ("U.S. GAAP"); these financial statements appear on pages 184–188 of this Annual Report. That presentation, which is referred to as "reported" basis, provides the reader with an understanding of the Firm's results that can be tracked consistently from year to year and enables a comparison of the Firm's performance with other companies' U.S. GAAP financial statements.

In addition to analyzing the Firm's results on a reported basis, management reviews the Firm's results and the results of the lines of business on a "managed" basis, which is a non-GAAP financial measure. The Firm's definition of managed basis starts with the reported U.S. GAAP results and includes certain reclassifications to present total net revenue for the Firm (and each of the business segments) on a FTE basis. Accordingly, revenue from investments that receive tax credits and tax-exempt securities is presented in the managed results on a basis comparable to taxable investments and securities. This non-GAAP financial measure allows management to assess the comparability of revenue arising from both taxable and tax-exempt sources. The corresponding income tax impact related to tax-exempt items is recorded within income tax expense. These adjustments have no impact on net income as reported by the Firm as a whole or by the lines of business.

Management also uses certain non-GAAP financial measures at the business-segment level, because it believes these other non-GAAP financial measures provide information to investors about the underlying operational performance and trends of the particular business segment and, therefore, facilitate a comparison of the business segment with the performance of its competitors. Non-GAAP financial measures used by the Firm may not be comparable to similarly named non-GAAP financial measures used by other companies.

The following summary table provides a reconciliation from the Firm's reported U.S. GAAP results to managed basis.

	2013			2012			2011		
Year ended December 31, (in millions, except ratios)	Reported Results	Fully taxable-equivalent adjustments[a]	Managed basis	Reported Results	Fully taxable-equivalent adjustments[a]	Managed basis	Reported Results	Fully taxable-equivalent adjustments[a]	Managed basis
Other income	**$ 3,847**	**$ 2,495**	**$ 6,342**	$ 4,258	$ 2,116	$ 6,374	$ 2,605	$ 2,003	$ 4,608

(a) Predominantly recognized in CIB and CB business segments and Corporate/Private Equity.

Tangible common equity ("TCE"), ROTCE, tangible book value per share ("TBVS"), and Tier 1 common under Basel I and III rules are each non-GAAP financial measures. TCE represents the Firm's common stockholders' equity (i.e., total stockholders' equity less preferred stock) less goodwill and identifiable intangible assets (other than MSRs), net of related deferred tax liabilities. ROTCE measures the Firm's earnings as a percentage of TCE. TBVS represents the Firm's tangible common equity divided by period-end common shares. Tier 1 common under Basel I and III rules are used by management, along with other capital measures, to assess and monitor the Firm's capital position. TCE, ROTCE, and TBVS are meaningful to the Firm, as well as investors and analysts, in assessing the Firm's use of equity. The Firm uses ROTCE, a non-GAAP financial measure, to evaluate its use of equity and to facilitate comparisons with competitors. For additional information on Tier 1 common under Basel I and III, see Regulatory capital on pages 161–165 of this Annual Report.

Calculation of certain U.S. GAAP and non-GAAP metrics

The following U.S. GAAP and non-GAAP measures, we calculated as follows:

Return on common equity
Net income* / Average common stockholders' equity

Return on tangible common equity
Net income* / Average tangible common equity

Return on assets
Reported net income / Total average assets

Return on risk-weighted assets
Annualized earnings / Average risk-weighted assets

Overhead ratio
Total noninterest expense / Total net revenue

* Represents net income applicable to common equity

Average tangible common equity

Year ended December 31, (in millions)	2013	2012	2011
Common stockholders' equity	**$ 196,409**	$ 184,352	$ 173,266
Less: Goodwill	**48,102**	48,176	48,632
Less: Certain identifiable intangible assets	**1,950**	2,833	3,632
Add: Deferred tax liabilities[a]	**2,885**	2,754	2,635
Tangible common equity	**$ 149,242**	$ 136,097	$ 123,637

(a) Represents deferred tax liabilities related to tax-deductible goodwill and to identifiable intangibles created in nontaxable transactions, which are netted against goodwill and other intangibles when calculating TCE.

Core net interest income

In addition to reviewing net interest income on a managed basis, management also reviews core net interest income to assess the performance of its core lending, investing (including asset-liability management) and deposit-raising activities (which excludes the impact of CIB's market-based activities). The core data presented below are non-GAAP financial measures due to the exclusion of CIB's market-based net interest income and the related assets. Management believes this exclusion provides investors and analysts a more meaningful measure by which to analyze the non-market-related business trends of the Firm and provides a comparable measure to other financial institutions that are primarily focused on core lending, investing and deposit-raising activities.

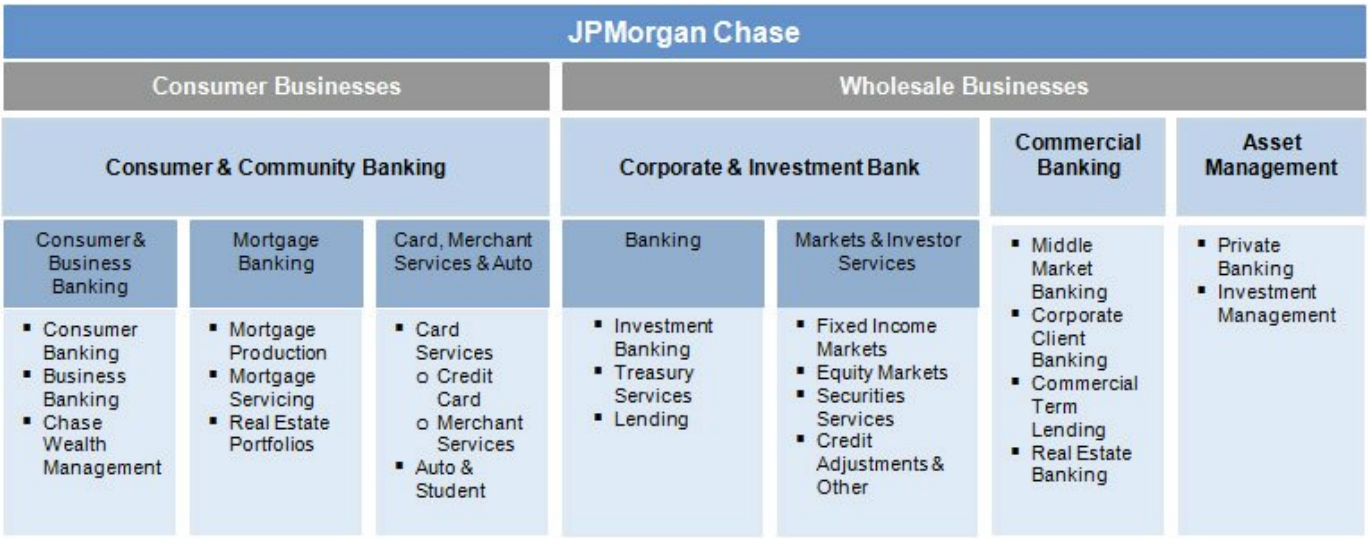
Core net interest income data

Year ended December 31, (in millions, except rates)	2013	2012	2011
Net interest income - managed basis[a][b]	**$ 44,016**	$ 45,653	$ 48,219
Less: Market-based net interest income	**4,979**	5,787	7,329
Core net interest income[a]	**$ 39,037**	$ 39,866	$ 40,890
Average interest-earning assets	**$1,970,231**	$1,842,417	$1,761,355
Less: Average market-based earning assets	**504,218**	499,339	519,655
Core average interest-earning assets	**$1,466,013**	$1,343,078	$1,241,700
Net interest yield on interest-earning assets - managed basis	**2.23%**	2.48%	2.74%
Net interest yield on market-based activities	**0.99**	1.16	1.41
Core net interest yield on core average interest-earning assets	**2.66%**	2.97%	3.29%

(a) Interest includes the effect of related hedging derivatives. Taxable-equivalent amounts are used where applicable.
(b) For a reconciliation of net interest income on a reported and managed basis, see reconciliation from the Firm's reported U.S. GAAP results to managed basis on page 82 of this Annual Report.

2013 compared with 2012

Core net interest income decreased by $829 million to $39.0 billion for 2013, and core average interest-earning assets increased by $122.9 billion in 2013 to $1,466.0 billion. The decline in net interest income in 2013 primarily reflected the impact of the runoff of higher yielding loans and originations of lower yielding loans. The decrease in net interest income was partially offset by lower long-term debt and other funding costs. The increase in average interest-earning assets reflected the impact of higher deposits with banks. The core net interest yield decreased by 31 basis points to 2.66% in 2013, primarily reflecting the impact of a significant increase in deposits with banks and lower loan yields, partially offset by the impact of lower long-term debt yields and deposit rates.



2012 compared with 2011

Core net interest income decreased by $1.0 billion to $39.9 billion for 2012, and core average interest-earning assets increased by $101.4 billion in 2012 to $1,343.1 billion. The decline in net interest income in 2012 reflected the impact of the runoff of higher-yielding loans, faster prepayment of mortgage-backed securities, and limited reinvestment opportunities, as well as the impact of lower interest rates across the Firm's interest-earning assets. The decrease in net interest income was partially offset by lower deposit and other borrowing costs. The increase in average interest-earning assets was driven by higher deposits with banks and other short-term investments, increased levels of loans, and an increase in investment securities. The core net interest yield decreased by 32 basis points to 2.97% in 2012, primarily driven by the runoff of higher-yielding loans, lower customer loan rates, higher financing costs associated with mortgage-backed securities, and limited reinvestment opportunities, slightly offset by lower customer deposit rates.

BUSINESS SEGMENT RESULTS

The Firm is managed on a line of business basis. There are four major reportable business segments – Consumer & Community Banking, Corporate & Investment Bank, Commercial Banking and Asset Management. In addition, there is a Corporate/Private Equity segment.

The business segments are determined based on the products and services provided, or the type of customer served, and they reflect the manner in which financial information is currently evaluated by management. Results of these lines of business are presented on a managed basis. For a definition of managed basis, see Explanation and Reconciliation of the Firm's use of non-GAAP financial measures, on pages 82–83 of this Annual Report.

Description of business segment reporting methodology
Results of the business segments are intended to reflect each segment as if it were essentially a stand-alone business. The management reporting process that derives business segment results allocates income and expense using market-based methodologies. The Firm continues to assess the assumptions, methodologies and reporting classifications used for segment reporting, and further refinements may be implemented in future periods.

Revenue sharing
When business segments join efforts to sell products and services to the Firm's clients, the participating business segments agree to share revenue from those transactions. The segment results reflect these revenue-sharing agreements.

Funds transfer pricing
Funds transfer pricing is used to allocate interest income and expense to each business and transfer the primary interest rate risk exposures to the Treasury group within Corporate/Private Equity. The allocation process is unique to each business segment and considers the interest rate risk, liquidity risk and regulatory requirements of that segment as if it were operating independently, and as compared with its stand-alone peers. This process is overseen by senior management and reviewed by the Firm's Asset-Liability Committee ("ALCO").

Business segment capital allocation changes
Each business segment is allocated capital by taking into consideration stand-alone peer comparisons, regulatory capital requirements (as estimated under Basel III) and economic risk measures. The amount of capital assigned to each business is referred to as equity. Effective January 1, 2013, the Firm refined the capital allocation framework to align it with the line of business structure described above. The increase in equity levels for the lines of businesses is largely driven by evolving regulatory requirements and the higher capital targets the Firm has established under the Basel III Advanced Approach. For further information about these capital changes, see Line of business equity on pages 165–166 of this Annual Report.

Expense allocation

Where business segments use services provided by support units within the Firm, or another business segment, the costs of those services are allocated to the respective business segments. The expense is generally allocated based on actual cost and upon usage of the services provided. In contrast, certain other expense related to certain corporate functions, or to certain technology and operations, are not allocated to the business segments and are retained in Corporate. Retained expense includes: parent company costs that would not be incurred if the segments were stand-alone businesses; adjustments to align certain corporate staff, technology and operations allocations with market prices; and other items not aligned with a particular business segment.

Segment Results – Managed Basis

The following table summarizes the business segment results for the periods indicated.

Year ended December 31,	Total net revenue			Total noninterest expense			Pre-provision profit/(loss)		
(in millions)	**2013**	2012	2011	**2013**	2012	2011	**2013**	2012	2011

(a) The 2012 and 2011 data for certain income statement line items (predominantly net interest income, compensation and noncompensation expense) were revised to reflect the transfer of certain technology and operations, as well as real estate-related functions and staff, from Corporate/Private Equity to CCB, effective January 1, 2013.

CONSUMER & COMMUNITY BANKING

Consumer & Community Banking ("CCB") serves consumers and businesses through personal service at bank branches and through ATMs, online, mobile and telephone banking. CCB is organized into Consumer & Business Banking, Mortgage Banking (including Mortgage Production, Mortgage Servicing and Real Estate Portfolios) and Card, Merchant Services & Auto ("Card"). Consumer & Business Banking offers deposit and investment products and services to consumers, and lending, deposit, and cash management and payment solutions to small businesses. Mortgage Banking includes mortgage origination and servicing activities, as well as portfolios comprised of residential mortgages and home equity loans, including the PCI portfolio acquired in the Washington Mutual transaction. Card issues credit cards to consumers and small businesses, provides payment services to corporate and public sector clients through its commercial card products, offers payment processing services to merchants, and provides auto and student loan services.

(a) The 2012 and 2011 data for certain income statement line items (predominantly net interest income, compensation and noncompensation expense) were revised to reflect the transfer of certain technology and operations, as well as real estate-related functions and staff, from Corporate/Private Equity to CCB, effective January 1, 2013.

2013 compared with 2012

Consumer & Community Banking net income was $10.7 billion, an increase of $198 million, or 2%, compared with the prior year, due to lower provision for credit losses and lower noninterest expense, predominantly offset by lower net revenue.

Net revenue was $46.0 billion, a decrease of $3.9 billion, or 8%, compared with the prior year. Net interest income was $28.5 billion, down $597 million, or 2%, driven by lower deposit margins, lower loan balances due to net portfolio runoff and spread compression in Credit Card, largely offset by higher deposit balances. Noninterest revenue was $17.6 billion, a decrease of $3.3 billion, or 16%, driven by lower mortgage fees and related income, partially offset by higher card income.

The provision for credit losses was $335 million, compared with $3.8 billion in the prior year. The current-year provision reflected a $5.5 billion reduction in the allowance for loan losses and total net charge-offs of $5.8 billion. The prior-year provision reflected a $5.5 billion reduction in the allowance for loan losses and total net charge-offs of $9.3 billion, including $800 million of incremental charge-offs related to regulatory guidance. For more information, including net charge-off amounts and rates, see Consumer Credit Portfolio on pages 120–129 of this Annual Report.

Noninterest expense was $27.8 billion, a decrease of $985 million, or 3%, from the prior year, driven by lower mortgage servicing expense, partially offset by investments in Chase Private Client expansion, higher non-MBS related legal expense in Mortgage Production, higher auto lease depreciation, and costs related to the control agenda.

2012 compared with 2011

Consumer & Community Banking net income was $10.6 billion, up 73% when compared with the prior year. The increase was driven by higher net revenue and lower provision for credit losses, partially offset by higher noninterest expense.

Net revenue was $49.9 billion, up $4.3 billion, or 9%, compared with the prior year. Net interest income was $29.1 billion, down $1.2 billion, or 4%, driven by lower deposit margins and lower loan balances due to portfolio runoff, largely offset by higher deposit balances. Noninterest revenue was $20.8 billion, up $5.5 billion, or 36%, driven by higher mortgage fees and related income, partially offset by lower debit card revenue, reflecting the impact of the Durbin Amendment.

The provision for credit losses was $3.8 billion compared with $7.6 billion in the prior year. The current-year provision reflected a $5.5 billion reduction in the allowance for loan losses due to improved delinquency trends and reduced estimated losses in the real estate and credit card loan portfolios. Current-year total net charge-offs were $9.3 billion, including $800 million of incremental charge-offs

related to regulatory guidance. Excluding these charge-offs, net charge-offs during the year would have been $8.5 billion compared with $11.8 billion in the prior year. For more information, including net charge-off amounts and rates, see Consumer Credit Portfolio on pages 120–129 of this Annual Report.

Noninterest expense was $28.8 billion, an increase of $1.2 billion, or 4%, compared with the prior year, driven by higher production expense reflecting higher volumes, and investments in sales force, partially offset by lower costs related to mortgage-related matters and lower marketing expense in Card.

Business metrics			
Number of:			
Branches	**5,630**	5,614	5,508
ATMs	**19,211**	18,699	17,235
Active online customers (in thousands)	**33,742**	31,114	29,749
Active mobile customers (in thousands)	**15,629**	12,359	8,203

(a) Net charge-offs and net charge-off rates for the year ended December 31, 2013 excluded $53 million of write-offs in the PCI portfolio. These write-offs decreased the allowance for loan losses for PCI loans. For further information, see Consumer Credit Portfolio on pages 120–129 of this Annual Report.

(b) Net charge-offs and net charge-off rates for the year ended December 31, 2012, included $800 million of charge-offs, recorded in accordance with regulatory guidance on certain loans discharged under Chapter 7 bankruptcy and not reaffirmed by the borrower ("Chapter 7 loans") to be charged off to the net realizable value of the collateral and to be considered nonaccrual, regardless of their delinquency status. Excluding these charges-offs, net charge-offs for the year ended December 31, 2012, would have been $8.5 billion and excluding these charge-offs and PCI loans, the net charge-off rate for the year ended December 31, 2012, would have been 2.45%. For further information, see Consumer Credit Portfolio on pages 120–129 of this Annual Report.

(c) Excludes PCI loans. The Firm is recognizing interest income on each pool of PCI loans as they are all performing.

(d) Certain mortgages originated with the intent to sell are classified as trading assets on the Consolidated Balance Sheets.

(e) At December 31, 2013, 2012 and 2011, nonperforming assets excluded: (1) mortgage loans insured by U.S. government agencies of $8.4 billion, $10.6 billion, and $11.5 billion, respectively, that are 90 or more days past due; (2) real estate owned insured by U.S. government agencies of $2.0 billion, $1.6 billion, and $954 million, respectively; and (3) student loans insured by U.S. government agencies under the Federal Family Education Loan Program ("FFELP") of $428 million, $525 million, and $551 million, respectively, that are 90 or more days past due. These amounts have been excluded from nonaccrual loans based upon the government guarantee.

(f) Nonaccrual loans included $3.0 billion of loans at December 31, 2012, based upon regulatory guidance. For further information, see Consumer Credit Portfolio on pages 120–129 of this Annual Report.

(g) Loans held-for-sale and loans accounted for at fair value were excluded when calculating the net charge-off rate.

(h) An allowance for loan losses of $4.2 billion at December 31, 2013, and $5.7 billion at December 31, 2012 and 2011 was recorded for PCI loans; these amounts were also excluded from the applicable ratios.

Consumer & Business Banking

Selected income statement data[a]

Year ended December 31, (in millions, except ratios)	2013	2012	2011
Revenue			
Lending- and deposit-related fees	**$ 2,942**	$ 3,068	$ 3,160
Asset management, administration and commissions	**1,815**	1,638	1,561
Card income	**1,495**	1,353	2,024
All other income	**492**	498	473
Noninterest revenue	**6,744**	6,557	7,218
Net interest income	**10,566**	10,594	10,732
Total net revenue	**17,310**	17,151	17,950
Provision for credit losses	**347**	311	419
Noninterest expense	**12,162**	11,490	11,336
Income before income tax expense	**4,801**	5,350	6,195
Net income	**$ 2,881**	$ 3,203	$ 3,699
Return on common equity	**26%**	36%	39%
Overhead ratio	**70**	67	63
Overhead ratio, excluding core deposit intangibles[b]	**69**	66	62
Equity (period-end and average)	**$ 11,000**	$ 9,000	$ 9,500

(a) The 2012 and 2011 data for certain income statement line items were revised to reflect the transfer of certain functions and staff from Corporate/Private Equity to CCB, effective January 1, 2013.

(b) Consumer & Business Banking ("CBB") uses the overhead ratio (excluding the amortization of core deposit intangibles ("CDI")), a non-GAAP financial measure, to evaluate the underlying expense trends of the business. Including CDI amortization expense in the overhead ratio calculation would result in a higher overhead ratio in the earlier years and a lower overhead ratio in later years; this method would therefore result in an improving overhead ratio over time, all things remaining equal. This non-GAAP ratio excluded CBB's CDI amortization expense related to prior business combination transactions of $163 million, $200 million, and $238 million for the years ended December 31, 2013, 2012 and 2011, respectively.

2013 compared with 2012

Consumer & Business Banking net income was $2.9 billion, a decrease of $322 million, or 10%, compared with the prior year, due to higher noninterest expense, partially offset by higher noninterest revenue.

Net revenue was $17.3 billion, up 1% compared with the prior year. Net interest income was $10.6 billion, flat compared with the prior year, driven by higher deposit balances, offset by lower deposit margin. Noninterest revenue was $6.7 billion, an increase of 3%, driven by higher investment sales revenue and debit card revenue, partially offset by lower deposit-related fees.

The provision for credit losses was $347 million, compared with $311 million in the prior year.

Noninterest expense was $12.2 billion, up 6% from the prior year, reflecting continued investments in the business, and costs related to the control agenda.

2012 compared with 2011

Consumer & Business Banking net income was $3.2 billion, a decrease of $496 million, or 13%, compared with the prior year. The decrease was driven by lower net revenue and higher noninterest expense, partially offset by lower provision for credit losses.

Net revenue was $17.2 billion, down 4% from the prior year. Net interest income was $10.6 billion, down 1% from the prior year, driven by the impact of lower deposit margins, predominantly offset by higher deposit balances. Noninterest revenue was $6.6 billion, down 9% from the prior year, driven by lower debit card revenue, reflecting the impact of the Durbin Amendment.

The provision for credit losses was $311 million, compared with $419 million in the prior year. The current-year provision reflected a $100 million reduction in the allowance for loan losses. Net charge-offs were $411 million compared with $494 million in the prior year.

Noninterest expense was $11.5 billion, up 1% from the prior year, resulting from investment in the sales force and new branch builds.

2013 compared with 2012

Mortgage Banking net income was $3.1 billion, a decrease of $259 million, or 8%, compared with the prior year, driven by lower net revenue, predominantly offset by a higher benefit from the provision for credit losses and lower noninterest expense.

Net revenue was $10.0 billion, a decrease of $3.9 billion compared with the prior year. Net interest income was $4.5 billion, a decrease of $260 million, or 5%, driven by lower loan balances due to net portfolio runoff. Noninterest revenue was $5.5 billion, a decrease of $3.7 billion, driven by lower mortgage fees and related income.

The provision for credit losses was a benefit of $2.7 billion, compared with a benefit of $490 million in the prior year. The current year reflected a $3.8 billion reduction in the allowance for loan losses due to continued improvement in home prices and delinquencies. The prior year included a $3.9 billion reduction in the allowance for loan losses.

Noninterest expense was $7.6 billion, a decrease of $1.5 billion, or 17%, from the prior year, due to lower servicing expense, partially offset by higher non-MBS related legal expense in Mortgage Production.

2012 compared with 2011

Mortgage Banking net income was $3.3 billion, compared with a net loss of $2.1 billion in the prior year. The increase was driven by higher net revenue and lower provision for credit losses, partially offset by higher noninterest expense.

Net revenue was $14.0 billion, up $5.4 billion, or 64%, compared with the prior year. Net interest income was $4.8 billion, down $516 million, or 10%, resulting from lower loan balances due to net portfolio runoff. Noninterest revenue was $9.2 billion, up $6.0 billion compared with the prior year, driven by higher mortgage fees and related income.

The provision for credit losses was a benefit of $490 million, compared with a provision expense of $3.6 billion in the prior year. The current year reflected a $3.85 billion reduction in the allowance for loan losses due to improved delinquency trends and lower estimated losses.

Noninterest expense was $9.1 billion, an increase of $865 million, or 10%, compared with the prior year, driven by higher production expense reflecting higher volumes, partially offset by lower costs related to mortgage-related matters.

Functional results

Other changes in MSR asset fair value due to other inputs and assumptions in model[b]	**(511)**	(46)	(1,727)
Changes in derivative fair value and other	**(1,875)**	1,252	5,553
Total risk management	**(267)**	619	(1,564)
Total net mortgage servicing revenue	**2,191**	3,169	666
Mortgage fees and related income	**$ 5,195**	$ 8,680	$ 2,714

(a) Represents both the impact of changes in estimated future prepayments due to changes in market interest rates, and the difference between actual and expected prepayments.

(b) Represents the aggregate impact of changes in model inputs and assumptions such as projected cash flows (e.g. cost to service), discount rates and changes in prepayments other than those attributable to changes in market interest rates (e.g. changes in prepayments due to changes in home prices).

Net production revenue includes net gains or losses on originations and sales of mortgage loans, other production-related fees and losses related to the repurchase of previously-sold loans.

Net mortgage servicing revenue includes the following components:

(a) Operating revenue predominantly represents the return on Mortgage Servicing's MSR asset and includes:

- Actual gross income earned from servicing third-party mortgage loans, such as contractually specified servicing fees and ancillary income; and
- The change in the fair value of the MSR asset due to the collection or realization of expected cash flows.

(b) Risk management represents the components of Mortgage Servicing's MSR asset that are subject to ongoing risk management activities, together with derivatives and other instruments used in those risk management activities

Mortgage origination channels comprise the following:

Retail – Borrowers who buy or refinance a home through direct contact with a mortgage banker employed by the Firm using a branch office, the Internet or by phone. Borrowers are frequently referred to a mortgage banker by a banker in a Chase branch, real estate brokers, home builders or other third parties.

Wholesale – Includes loans guaranteed by the U.S. Department of Agriculture under its Section 502 Guaranteed Loan program that serves low-and-moderate income families in small rural communities.

Correspondent – Banks, thrifts, other mortgage banks and other financial institutions that sell closed loans to the Firm.

2013 compared with 2012

Mortgage Production pretax income was $825 million, a decrease of $2.7 billion from the prior year, reflecting lower margins, lower volumes and higher legal expense, partially offset by a benefit in repurchase losses. Production-related revenue, excluding repurchase losses, was $3.6 billion, a decrease of $3.0 billion, or 45%, from the prior year, largely reflecting lower margins and lower volumes from rising rates. Production expense was $3.1 billion, an increase of $341 million from the prior year, due to higher non-MBS related legal expense and higher compensation-related expense. Repurchase losses for the current year reflected a benefit of $331 million, compared with repurchase losses of $272 million in the prior year. The current year reflected a reduction in repurchase liability largely as a result of the settlement with the GSEs. For further information, see Mortgage repurchase liability on pages 78–79 of this Annual Report.

Mortgage Servicing pretax loss was $372 million, compared with a pretax loss of $1.2 billion in the prior year, driven by lower expense, partially offset by mortgage servicing rights ("MSR") risk management loss. Mortgage net servicing-related revenue was $2.9 billion, a decrease of $88 million. MSR risk management was a loss of $268 million, compared with income of $616 million in the prior year, driven by the net impact of various changes in model inputs and assumptions. See Note 17 on pages 299–304 of this Annual Report for further information regarding changes in value of the MSR asset and related hedges. Servicing expense was $3.0 billion, a decrease of $1.8 billion from the prior year, reflecting lower costs associated with the Independent Foreclosure Review and lower servicing headcount.

Real Estate Portfolios pretax income was $4.7 billion, up $1.7 billion from the prior year, due to a higher benefit from the provision for credit losses, partially offset by lower net revenue. Net revenue was $3.5 billion, a decrease of $580 million, or 14%, from the prior year. This decrease was due to lower net interest income, resulting from lower loan balances due to net portfolio runoff, and lower noninterest revenue due to higher loan retention. The provision for credit losses was a benefit of $2.7 billion, compared with a benefit of $509 million in the prior year. The current-year provision reflected a $3.8 billion reduction in the allowance for loan losses, $2.3 billion from the non credit-impaired allowance and $1.5 billion from the purchased credit-impaired allowance, reflecting continued improvement in home prices and delinquencies. The prior-year provision included a $3.9 billion reduction in the allowance for loan losses from the non credit-impaired allowance. Net charge-offs were $1.1 billion, compared with $3.3 billion in the prior year. Prior-year total net charge-offs included $744 million of incremental charge-offs reported in accordance with regulatory guidance on certain loans discharged under Chapter 7 bankruptcy. See Consumer Credit Portfolio on pages 120–129 of this Annual Report for the net charge-off amounts and rates. Noninterest expense was $1.6 billion, a decrease of $100 million, or 6%, compared with the prior year, driven by lower foreclosed asset expense due to lower foreclosure inventory, largely offset by higher FDIC-related expense.

2012 compared with 2011

Mortgage Production pretax income was $3.6 billion, an increase of $2.6 billion compared with the prior year. Mortgage production-related revenue, excluding repurchase losses, was $6.6 billion, an increase of $2.3 billion, or 55%, from the prior year. These results reflected wider margins, driven by favorable market conditions, and higher volumes due to historically low interest rates and the Home Affordable Refinance Programs ("HARP"). Production expense, including credit costs, was $2.7 billion, an increase of $852 million, or 45%, reflecting higher volumes and additional litigation costs. Repurchase losses were $272 million, compared with $1.3 billion in the prior year. The current-year reflected a reduction in the repurchase liability of $683 million compared with a build of $213 million in the prior year, primarily driven by improved cure rates on Agency repurchase demands and lower outstanding repurchase demand pipeline. For further information, see Mortgage repurchase liability on pages 78–79 of this Annual Report.

Mortgage Servicing reported a pretax loss of $1.2 billion, compared with a pretax loss of $3.8 billion in the prior year. Mortgage servicing revenue, including amortization, was $3.0 billion, an increase of $337 million, or 13%, from the

prior year, driven by lower mortgage servicing rights ("MSR") asset amortization expense as a result of lower MSR asset value, partially offset by lower loan servicing revenue due to the decline in the third-party loans serviced. MSR risk management income was $616 million, compared with a loss of $1.6 billion in the prior year. The prior year MSR risk management loss was driven by refinements to the valuation model and related inputs. See Note 17 on pages 299–304 of this Annual Report for further information regarding changes in value of the MSR asset and related hedges. Servicing expense was $4.7 billion, down 2% from the prior year, but elevated in both the current and prior year primarily due to higher default servicing costs.

Real Estate Portfolios pretax income was $2.9 billion, compared with a pretax loss of $504 million in the prior year. The improvement was driven by a benefit from the provision for credit losses, reflecting the continued improvement in credit trends, partially offset by lower net revenue. Net revenue was $4.1 billion, down $500 million, or 11%, from the prior year. The decrease was driven by a decline in net interest income as a result of lower loan balances due to net portfolio runoff. The provision for credit losses reflected a benefit of $509 million, compared with a provision expense of $3.6 billion in the prior year. The current-year provision reflected a $3.9 billion reduction in the non credit-impaired allowance for loan losses due to improved delinquency trends and lower estimated losses. Current-year net charge-offs totaled $3.3 billion, including $744 million of incremental charge-offs reported in accordance with regulatory guidance on certain loans discharged under Chapter 7 bankruptcy, compared with $3.8 billion in the prior year. See Consumer Credit Portfolio on pages 120–129 of this Annual Report for the net charge-off amounts and rates. Nonaccrual loans were $7.9 billion, compared with $5.9 billion in the prior year. Excluding the impact of certain regulatory guidance, nonaccrual loans would have been $4.9 billion at December 31, 2012. For more information on the reporting of Chapter 7 loans and performing junior liens that are subordinate to senior liens that are 90 days or more past due as nonaccrual, see Consumer Credit Portfolio on pages 120–129 of this Annual Report. Noninterest expense was $1.7 billion, up $132 million, or 9%, compared with the prior year due to an increase in servicing costs.

PCI Loans

Included within Real Estate Portfolios are PCI loans that the Firm acquired in the Washington Mutual transaction. For PCI loans, the excess of the undiscounted gross cash flows expected to be collected over the carrying value of the loans (the "accretable yield") is accreted into interest income at a level rate of return over the expected life of the loans.

The net spread between the PCI loans and the related liabilities are expected to be relatively constant over time, except for any basis risk or other residual interest rate risk that remains and for certain changes in the accretable yield percentage (e.g., from extended loan liquidation periods and from prepayments). As of December 31, 2013, the remaining weighted-average life of the PCI loan portfolio is expected to be 8 years. The loan balances are expected to decline more rapidly over the next three years as the most troubled loans are liquidated, and more slowly thereafter as the remaining troubled borrowers have limited refinancing opportunities. Similarly, default and servicing expense are expected to be higher in the earlier years and decline over time as liquidations slow down.

For further information, see Note 14, PCI loans, on pages 274–276 of this Annual Report.

(a) Predominantly represents prime loans repurchased from Government National Mortgage Association ("Ginnie Mae") pools, which are insured by U.S. government agencies. See further discussion of loans repurchased from Ginnie Mae pools in Mortgage repurchase liability on pages 78–79 of this Annual Report.

(b) Predominantly consists of prime mortgages originated with the intent to sell that are accounted for at fair value and classified as trading assets on the Consolidated Balance Sheets.

(c) For more information on the Firm's mortgage repurchase liability, see Mortgage repurchase liability on pages 78–79 of this Annual Report.

(d) At December 31, 2013, 2012 and 2011, excluded mortgage loans insured by U.S. government agencies of $9.6 billion, $11.8 billion, and $12.6 billion, respectively, that are 30 or more days past due. These amounts have been excluded from nonaccrual loans based upon the government guarantee. For further discussion, see Note 14 on pages 258–283 of this Annual Report which summarizes loan delinquency information.

(e) At December 31, 2013, 2012 and 2011, nonperforming assets excluded: (1) mortgage loans insured by U.S. government agencies of $8.4 billion, $10.6 billion, and $11.5 billion, respectively, that are 90

or more days past due; and (2) real estate owned insured by U.S. government agencies of $2.0 billion, $1.6 billion, and $954 million, respectively. These amounts have been excluded from nonaccrual loans based upon the government guarantee. For further discussion, see Note 14 on pages 258–283 of this Annual Report which summarizes loan delinquency information.

Allowance for loan losses to period-end loans retained, excluding PCI loans	**2.23**	4.14	6.58

(a) Net charge-offs and net charge-off rates for the year ended December 31, 2013 excluded $53 million of write-offs in the PCI portfolio. These write-offs decreased the allowance for loan losses for PCI loans. For further information, see Consumer Credit Portfolio on pages 120–129 of this Annual Report.

(b) Net charge-offs and net charge-off rates for the year ended December 31, 2012, included $744 million of charge-offs related to regulatory guidance. Excluding these charges-offs, net charge-offs for the year ended December 31, 2012, would have been $1.8 billion, $410 million and $416 million for the home equity, prime mortgage, including option ARMs, and subprime mortgage portfolios, respectively. Net charge-off rates for the same period, excluding these charge-offs and PCI loans, would have been 2.41%, 0.97% and 4.65% for the home equity, prime mortgage, including option ARMs, and subprime mortgage portfolios, respectively. For further information, see Consumer Credit Portfolio on pages 120–129 of this Annual Report.

(c) The 30+ day delinquency rate for PCI loans was 15.31%, 20.14%, and 23.30% at December 31, 2013, 2012 and 2011, respectively.

(d) Excludes PCI loans. The Firm is recognizing interest income on each pool of PCI loans as they are all performing.

(e) Nonperforming assets at December 31, 2012, included loans based upon regulatory guidance. For further information, see Consumer Credit Portfolio on pages 120–129 of this Annual Report.

Mortgage servicing-related matters

The financial crisis resulted in unprecedented levels of delinquencies and defaults of 1-4 family residential real estate loans. Such loans required varying degrees of loss mitigation activities. Foreclosure is usually a last resort, and accordingly, the Firm has made, and continues to make, significant efforts to help borrowers remain in their homes.

The Firm has a well-defined foreclosure prevention process when a borrower fails to pay on his or her loan. The Firm makes multiple attempts, in various ways, to contact the borrower in an effort to pursue home retention or options other than foreclosure. If the Firm is unable to contact a borrower, the Firm completes various reviews of the borrower's facts and circumstances before a foreclosure sale is completed. Over the last year, the average delinquency period for the borrower at the time of foreclosure was approximately 28 months.

The high volume of delinquent and defaulted mortgages experienced during the financial crisis placed a significant amount of stress on servicing operations in the industry. The GSEs impose compensatory fees on mortgage servicers, including the Firm, if such servicers are unable to comply with the foreclosure timetables mandated by the GSEs. The Firm has incurred, and continues to incur, compensatory fees, which are reported in default servicing expense. The Firm has made, and will continue to make changes to and refine its mortgage operations to address mortgage servicing, loss mitigation, and foreclosure issues.

Since 2011, the Firm has entered into Consent Orders and settlements with federal and state governmental agencies and private parties related to mortgage servicing, origination, and residential mortgage-backed securities activities. The terms of these Consent Orders and settlements vary, but in general, required cash compensatory payments or fines and/or "borrower relief," including principal reductions, refinancing, short sale assistance, and other specified types of borrower relief. The Firm has satisfied or is committed to satisfying these obligations within the mandated timeframes.

Other obligations required under Consent Orders and settlements, as well as under new regulatory requirements, include enhanced mortgage servicing and foreclosure standards and processes. Among other initiatives, the Firm has implemented a new Customer Assistance Specialist organization to serve as a single point of contact for borrowers requiring assistance in the foreclosure or loss mitigation process; implemented specific controls on "dual tracking" of foreclosure and loss mitigation activities; strengthened its compliance program to ensure mortgage servicing and foreclosure operations comply with applicable legal requirements; and made technological enhancements to automate and streamline processes for document management, payment processing, training, and skills assessment. For further information on these settlements and Consent Orders, see Note 2 and Note 31 on pages 192–

194 and pages 326–332, respectively, of this Annual Report.

The mortgage servicing consent order is subject to ongoing oversight by the Mortgage Compliance Committee of the Board, and certain Consent Orders and settlements are the subject of ongoing reporting to various regulators, and the Office of Mortgage Settlement Oversight ("OMSO").

Equity (period-end and average)	**$ 15,500**	$ 16,500	$ 16,000

2013 compared with 2012

Card, Merchant Services & Auto net income was $4.8 billion, an increase of $779 million, or 19%, compared with the prior year, driven by lower provision for credit losses.

Net revenue was $18.7 billion, flat compared with the prior year. Net interest income was $13.4 billion, down $309 million, or 2%, from the prior year. The decrease was primarily driven by spread compression in Credit Card and Auto and lower average credit card loan balances, largely offset by the impact of lower revenue reversals associated with lower net charge-offs in Credit Card. Noninterest revenue was $5.3 billion, an increase of $229 million, or 4%, compared with the prior year primarily driven by higher net interchange income, auto lease income and merchant servicing revenue, largely offset by lower revenue from an exited non-core product and a gain on an investment security recognized in the prior year.

The provision for credit losses was $2.7 billion, compared with $4.0 billion in the prior year. The current-year provision reflected lower net charge-offs and a $1.7 billion reduction in the allowance for loan losses due to lower estimated losses reflecting improved delinquency trends and restructured loan performance. The prior-year provision included a $1.6 billion reduction in the allowance for loan losses. The Credit Card net charge-off rate was 3.14%, down from 3.95% in the prior year; and the 30+ day delinquency rate was 1.67%, down from 2.10% in the prior year. The Auto net charge-off rate was 0.31%, down from 0.39% in the prior year.

Noninterest expense was $8.1 billion, a decrease of $138 million, or 2%, from the prior year. This decrease is due to one-time expense items recognized in the prior year related to the exit of a non-core product and the write-off of intangible assets associated with a non-strategic relationship. The reduction in expenses was partially offset by increased auto lease depreciation and payments to customers required by a regulatory Consent Order during 2013.

2012 compared with 2011

Card, Merchant Services & Auto net income was $4.0 billion, a decrease of $537 million, or 12%, compared with the prior year. The decrease was driven by lower net revenue and higher provision for credit losses.

Net revenue was $18.8 billion, a decrease of $371 million, or 2%, from the prior year. Net interest income was $13.7 billion, down $580 million, or 4%, from the prior year. The decrease was driven by narrower loan spreads and lower average loan balances, partially offset by lower revenue reversals associated with lower net charge-offs. Noninterest revenue was $5.1 billion, an increase of $209 million, or 4%, from the prior year. The increase was driven by higher net interchange income, including lower partner revenue-sharing due to the impact of the Kohl's portfolio sale on April 1, 2011, and higher merchant servicing revenue, partially offset by higher amortization of loan origination costs.

The provision for credit losses was $4.0 billion, compared with $3.6 billion in the prior year. The current-year provision reflected lower net charge-offs and a $1.6 billion reduction in the allowance for loan losses due to lower estimated losses. The prior-year provision included a $3.9 billion reduction in the allowance for loan losses. The Credit Card net charge-off rate was 3.95%, down from 5.44% in the prior year; and the 30+ day delinquency rate was 2.10%, down from 2.81% in the prior year. The net charge-off rate would have been 3.88% absent a policy change on restructured loans that do not comply with their modified payment terms. The Auto net charge-off rate was 0.39%, up from 0.32% in the prior year, including $53 million of charge-offs related to regulatory guidance. Excluding these charge-offs, the net charge-off rate would have been 0.28%.

Noninterest expense was $8.2 billion, an increase of $171 million, or 2%, from the prior year, driven by expenses related to a non-core product that is being exited and the write-off of intangible assets associated with a non-strategic relationship, partially offset by lower marketing expense.

The following are brief descriptions of selected business metrics within Card, Merchant Services & Auto.

Card Services includes the Credit Card and Merchant Services businesses.

Merchant Services is a business that processes transactions for merchants.

Total transactions – Number of transactions and authorizations processed for merchants.

Commercial Card provides a wide range of payment services to corporate and public sector clients worldwide through the commercial card products. Services include procurement, corporate travel and entertainment, expense management services, and business-to-business payment solutions.

Sales volume - Dollar amount of cardmember purchases, net of returns.

Open accounts – Cardmember accounts with charging privileges.

Auto origination volume - Dollar amount of auto loans and leases originated.

(a) Net charge-offs and net charge-off rates for the year ended December 31, 2012, included $53 million of charge-offs of Chapter 7 loans. Excluding these incremental charge-offs, net charge-offs for the year ended December 31, 2012 would have been $135 million, and the net charge-off rate would have been 0.28%. For further information, see Consumer Credit Portfolio on pages 120–129 of this Annual Report.

(b) Average credit card loans included loans held-for-sale of $95 million, $433 million, and $833 million for the years ended December 31, 2013, 2012 and 2011, respectively. These amounts are excluded when calculating the net charge-off rate.

(c) Period-end credit card loans included loans held-for-sale of $326 million and $102 million at December 31, 2013 and 2011, respectively. There were no loans held-for-sale at December 31, 2012. These amounts are excluded when calculating delinquency rates and the allowance for loan losses to period-end loans.

(d) Excluded student loans insured by U.S. government agencies under the FFELP of $737 million, $894 million and $989 million at December 31, 2013, 2012 and 2011, respectively, that are 30 or more days past due. These amounts are excluded as reimbursement of insured amounts is proceeding normally.

(e) Nonperforming assets excluded student loans insured by U.S. government agencies under the FFELP of $428 million, $525 million and $551 million at December 31, 2013, 2012 and 2011, respectively, that are 90 or more days past due. These amounts are excluded as reimbursement of insured amounts is proceeding normally.

CORPORATE & INVESTMENT BANK

The Corporate & Investment Bank ("CIB") offers a broad suite of investment banking, market-making, prime brokerage, and treasury and securities products and services to a global client base of corporations, investors, financial institutions, government and municipal entities. Within Banking, the CIB offers a full range of investment banking products and services in all major capital markets, including advising on corporate strategy and structure, capital-raising in equity and debt markets, as well as loan origination and syndication. Also included in Banking is Treasury Services, which includes transaction services, comprised primarily of cash management and liquidity solutions, and trade finance products. The Markets & Investor Services segment of the CIB is a global market-maker in cash securities and derivative instruments, and also offers sophisticated risk management solutions, prime brokerage, and research. Markets & Investor Services also includes the Securities Services business, a leading global custodian which holds, values, clears and services securities, cash and alternative investments for investors and broker-dealers, and manages depositary receipt programs globally.

Total net revenue	**$34,225**	$34,326	$33,984

(a) Return on equity excluding FVA (effective fourth quarter 2013) and DVA, a non-GAAP financial measure, was 17%, 19% and 15% for the years ended December 31, 2013, 2012 and 2011, respectively.

(b) Overhead ratio excluding FVA (effective fourth quarter 2013) and DVA, a non-GAAP financial measure, was 60%, 62% and 68% for the years ended December 31, 2013, 2012 and 2011, respectively.

(c) Compensation expense as a percentage of total net revenue excluding FVA (effective fourth quarter 2013) and DVA, a non-GAAP financial measure, was 30%, 32% and 36% for the years ended December 31, 2013, 2012 and 2011, respectively.

(d) Includes results of the synthetic credit portfolio that was transferred from the CIO effective July 2, 2012.

(e) Primarily credit portfolio credit valuation adjustments ("CVA") net of associated hedging activities; DVA gains/(losses) on structured notes and derivative liabilities of $(452) million, $(930) million and $1.4 billion for the years ended December 31, 2013, 2012 and 2011, respectively; a $(1.5) billion loss in the fourth quarter of 2013 as a result of implementing an FVA framework for OTC derivatives and structured notes, and nonperforming derivative receivable results.

CIB provides several non-GAAP financial measures which exclude the impact of FVA (effective fourth quarter 2013) and DVA on: net revenue, net income, compensation ratio, overhead ratio, and return on equity. The ratio for the allowance for loan losses to end-of-period loans is calculated excluding the impact of consolidated Firm-administered multi-seller conduits and trade finance, to provide a more meaningful assessment of CIB's allowance coverage ratio. These measures are used by management to assess the underlying performance of the business and for comparability with peers.

2013 compared with 2012

Net income was $8.6 billion, up 2% compared with the prior year.

Net revenue was $34.2 billion compared with $34.3 billion in the prior year. Net revenue in the current year's fourth quarter included a $1.5 billion loss as a result of implementing a funding valuation adjustment ("FVA") framework for over-the-counter ("OTC") derivatives and structured notes. The FVA framework incorporates the impact of funding into the Firm's valuation estimates for OTC derivatives and structured notes and reflects an industry migration towards incorporating the market cost of unsecured funding in the valuation of such instruments. The loss recorded in the fourth quarter of 2013 is a one-time adjustment arising on implementation of the new FVA framework. In future periods the Firm will incorporate FVA in its estimates of fair value for OTC derivatives and structured notes from the date of initial recognition.

Net revenue also included a $452 million loss from debit valuation adjustments ("DVA") on structured notes and derivative liabilities, compared with a loss of $930 million in the prior year. Excluding the impact of FVA (effective fourth quarter of 2013) and DVA, net revenue was $36.1 billion and net income was $9.7 billion, compared with $35.3 billion and $9.0 billion in the prior year, respectively.

Banking revenues were $12.1 billion, compared with $11.3 billion in the prior year. Investment banking fees were $6.3 billion, up 10% from the prior year, driven by higher equity underwriting fees of $1.5 billion (up 46%) and record debt underwriting fees of $3.5 billion (up 8%), partially offset by lower advisory fees of $1.3 billion (down 12%). Equity underwriting results were driven by higher industry-wide issuance and an increase in the Firm's wallet share compared with the prior year, according to Dealogic. Industry-wide loan syndication volumes and wallet increased as the low rate environment continued to fuel refinancing activity. The Firm also ranked #1 in wallet and volumes shares across high grade, high yield and loan products. Advisory fees were lower compared with the prior year as industry-wide completed M&A wallet declined 13%. The Firm maintained its #2 ranking and improved share for both announced and completed volumes during the period.

Treasury Services revenue was $4.1 billion, down 3% compared with the prior year, primarily reflecting lower trade finance spreads, partially offset by higher net interest income on higher deposit balances. Lending revenue was $1.6 billion, up from $1.3 billion, in the prior year reflecting net interest income on retained loans, fees on lending related commitments, as well as gains on securities received from restructured loans.

Markets and Investor Services revenue was $22.2 billion compared to $23.0 billion in the prior year. Combined Fixed Income and Equity Markets revenue was $20.2 billion, up from $19.8 billion the prior year. Fixed Income Markets revenue of $15.5 billion was slightly higher reflecting consistently strong client revenue and lower losses from the synthetic credit portfolio, which was partially offset by lower rates-related revenue given an uncertain rate outlook and low spread environment. Equities Markets revenue of $4.8 billion was up 8% compared with the prior year driven by higher revenue in derivatives and cash equities products as well as Prime Services primarily on higher balances. Securities Services revenue was $4.1 billion compared with $4.0 billion in the prior year on higher custody and fund services revenue primarily driven by record assets under custody of $20.5 trillion. Credit Adjustments & Other was a loss of $2.1 billion predominantly driven by FVA (effective the fourth quarter of 2013) and DVA.

The provision for credit losses was a benefit of $232 million, compared with a benefit of $479 million in the prior year. The current year benefit reflected lower recoveries as compared to 2012 as the prior year benefited from the restructuring of certain nonperforming loans. Net recoveries were $78 million, compared with $284 million in the prior year reflecting a continued favorable credit environment with stable credit quality trends. Nonperforming loans were down 57% from the prior year.

Noninterest expense of $21.7 billion was slightly down compared with the prior year, driven by lower compensation expense, offset by higher non compensation expense related to higher litigation expense as compared to the prior year. The compensation ratio, excluding the impact of DVA and FVA which was effective for the fourth quarter of 2013, was 30% and 32% for 2013 and 2012, respectively.

Return on equity was 15% on $56.5 billion of average allocated capital and 17% excluding FVA (effective fourth quarter of 2013) and DVA.

2012 compared with 2011

Net income was $8.4 billion, up 5% compared with the prior year. These results primarily reflected slightly higher net revenue compared with 2011, lower noninterest expense and a larger benefit from the provision for credit losses. Net revenue was $34.3 billion, compared with $34.0 billion in the prior year. Net revenue included a $930 million loss from DVA on structured notes and derivative liabilities resulting from the tightening of the Firm's credit spreads. Excluding the impact of DVA, net revenue was $35.3 billion and net income was $9.0 billion, compared with $32.5 billion and $7.1 billion in the prior year, respectively.

Banking revenues were $11.3 billion, compared with $10.8 billion in the prior year. Investment banking fees were

$5.8 billion, down 2% from the prior year; these consisted of record debt underwriting fees of $3.3 billion (up 13%), advisory fees of $1.5 billion (down 17%) and equity underwriting fees of $1.0 billion (down 13%). Industry-wide debt capital markets volumes were at their second highest annual level since 2006, as the low rate environment continued to fuel issuance and refinancing activity. In contrast there was lower industry-wide announced mergers and acquisitions activity, while industry-wide equity underwriting volumes remained steady. Treasury Services revenue was a record $4.2 billion compared with $3.8 billion in the prior year driven by continued deposit balance growth and higher average trade loans outstanding during the year. Lending revenue was $1.3 billion, compared with $1.1 billion in the prior year due to higher net interest income on increased average retained loans as well as higher fees on lending-related commitments. This was partially offset by higher fair value losses on credit risk-related hedges of the retained loan portfolio.

Markets and Investor Services revenue was $23.0 billion compared to $23.2 billion in the prior year. Combined Fixed Income and Equity Markets revenue was $19.8 billion, up from $19.3 billion the prior year as client revenue remained strong across most products, with particular strength in rates-related products, which improved from the prior year. 2012 generally saw credit spread tightening and lower volatility in both the credit and equity markets compared with the prior year, during which macroeconomic concerns, including those in the Eurozone, caused credit spread widening and generally more volatile market conditions, particularly in the second half of the year. Securities Services revenue was $4.0 billion compared with $3.9 billion the prior year primarily driven by higher deposit balances. Assets under custody grew to a record $18.8 trillion by the end of 2012, driven by both market appreciation as well as net inflows. Credit Adjustments & Other was a loss of $841 million, driven predominantly by DVA, which was a loss of $930 million due to the tightening of the Firm's credit spreads.

The provision for credit losses was a benefit of $479 million, compared with a benefit of $285 million in the prior year, as credit trends remained stable. The 2012 benefit reflected recoveries and a net reduction in the allowance for credit losses, both related to the restructuring of certain nonperforming loans, credit trends and other portfolio activities. Net recoveries were $284 million, compared with net charge-offs of $161 million in the prior year. Nonperforming loans were down 35% from the prior year.

Noninterest expense was $21.9 billion, down 1%, driven primarily by lower compensation expense.

Return on equity was 18% on $47.5 billion of average allocated capital.

(a) Includes revenue from investment banking products and commercial card transactions.
(b) Total net revenue included tax-equivalent adjustments from income tax credits related to equity investments in designated community development entities that provide loans to qualified businesses in low-income communities, as well as tax-exempt income from municipal bond activity of $407 million, $381 million, and $345 million for the years ended December 31, 2013, 2012 and 2011, respectively.
(c) Effective July 1, 2012, certain Treasury Services product sales staff supporting CB were transferred from CIB to CB. As a result, compensation expense for these sales staff is now reflected in CB's compensation expense rather than as an allocation from CIB in noncompensation expense. CB's and CIB's previously reported headcount, compensation expense and noncompensation expense have been revised to reflect this transfer.
(d) Effective January 1, 2013, the financial results of financial institution clients were transferred to Corporate Client Banking from Middle Market Banking. Prior periods were revised to conform with this presentation.

CB revenue comprises the following:

Lending includes a variety of financing alternatives, which are predominantly provided on a basis secured by receivables, inventory, equipment, real estate or other assets. Products include term loans, revolving lines of credit, bridge financing, asset-based structures, leases, commercial card products and standby letters of credit.

Treasury services includes revenue from a broad range of products and services that enable CB clients to manage payments and receipts, as well as invest and manage funds.

Investment banking includes revenue from a range of products providing CB clients with sophisticated capital-raising alternatives, as well as balance sheet and risk management tools through advisory, equity underwriting, and loan syndications. Revenue from Fixed income and Equity market products available to CB clients is also included. Investment banking revenue, gross, represents total revenue related to investment banking products sold to CB clients.

Other product revenue primarily includes tax-equivalent adjustments generated from Community Development Banking activity and certain income derived from principal transactions.

Commercial Banking is divided into four primary client segments for management reporting purposes: Middle Market Banking, Commercial Term Lending, Corporate Client Banking, and Real Estate Banking.

Middle Market Banking covers corporate, municipal and nonprofit clients, with annual revenue generally ranging between $20 million and $500 million.

Commercial Term Lending primarily provides term financing to real estate investors/owners for multifamily properties as well as financing office, retail and industrial properties.

Corporate Client Banking covers clients with annual revenue generally ranging between $500 million and $2 billion and focuses on clients that have broader investment banking needs.

Real Estate Banking provides full-service banking to investors and developers of institutional-grade real estate properties.

Other primarily includes lending and investment activity within the Community Development Banking and Chase Capital businesses.

2013 compared with 2012

Net income was $2.6 billion, a decrease of $71 million, or 3%, from the prior year, driven by an increase in noninterest expense and the provision for credit losses partially offset by an increase in net revenue.

Net revenue was a record $7.0 billion, an increase of $148 million, or 2%, from the prior year. Net interest income was $4.7 billion, up by $133 million, or 3%, driven by higher loan balances and the proceeds from a lending-related workout, partially offset by lower purchase discounts recognized on loan repayments. Noninterest revenue was $2.3 billion, flat compared with the prior year.

Revenue from Middle Market Banking was $3.0 billion, an increase of $48 million, or 2%, from the prior year. Revenue from Commercial Term Lending was $1.2 billion, an increase of $21 million, or 2%, from the prior year. Revenue from Corporate Client Banking was $1.8 billion, flat compared with the prior year. Revenue from Real Estate Banking was $549 million, an increase of $111 million, or 25%, driven by the proceeds from a lending related-workout.

The provision for credit losses was $85 million, compared with $41 million in the prior year. Net charge-offs were $43 million (0.03% net charge-off rate) compared with net charge-offs of $35 million (0.03% net charge-off rate) in 2012. Nonaccrual loans were $514 million, down by $159 million, or 24%, due to repayments. The allowance for loan losses to period-end retained loans was 1.97%, down slightly from 2.06%.

Noninterest expense was $2.6 billion, an increase of $221 million, or 9%, from the prior year, reflecting higher product- and headcount-related expense.

2012 compared with 2011

Record net income was $2.6 billion, an increase of $279 million, or 12%, from the prior year. The improvement was driven by an increase in net revenue and a decrease in the provision for credit losses, partially offset by higher noninterest expense.

Net revenue was a record $6.8 billion, an increase of $407 million, or 6%, from the prior year. Net interest income was $4.5 billion, up by $319 million, or 8%, driven by growth in loans and client deposits, partially offset by spread compression. Loan growth was strong across all client segments and industries. Noninterest revenue was $2.3 billion, up by $88 million, or 4%, compared with the prior year, largely driven by increased investment banking revenue.

Revenue from Middle Market Banking was $3.0 billion, an increase of $168 million, or 6%, from the prior year driven by higher loans and client deposits, partially offset by lower spreads from lending and deposit products. Revenue from Commercial Term Lending was $1.2 billion, an increase of $26 million, or 2%. Revenue from Corporate Client Banking was $1.8 billion, an increase of $216 million, or 13%, driven by growth in loans and client deposits and higher revenue from investment banking products, partially offset by lower lending spreads. Revenue from Real Estate Banking was $438 million, an increase of $22 million, or 5%, partially driven by higher loan balances.

The provision for credit losses was $41 million, compared with $208 million in the prior year. Net charge-offs were $35 million (0.03% net charge-off rate) compared with net charge-offs of $187 million (0.18% net charge-off rate) in 2011. The decrease in the provision and net charge-offs was largely driven by improving trends in the credit quality of the portfolio. Nonaccrual loans were $673 million, down by $380 million, or 36%, due to repayments and loan sales. The allowance for loan losses to period-end retained loans was 2.06%, down from 2.34%.

Noninterest expense was $2.4 billion, an increase of $111 million, or 5%, from the prior year, reflecting higher compensation expense driven by expansion, portfolio growth and increased regulatory requirements.

Headcount[d][e]	**6,848**	6,117	5,782

(a) Effective January 1, 2013, whole loan financing agreements, previously reported as other assets, were reclassified as loans. For the year ended December 31, 2013, the impact on period-end and average loans was $1.6 billion.

(b) Effective January 1, 2013, the financial results of financial institution clients were transferred to Corporate Client Banking from Middle Market Banking. Prior periods were revised to conform with this presentation.

(c) Client deposits and other third-party liabilities include deposits, as well as deposits that are swept to on-balance sheet liabilities (e.g., commercial paper, federal funds purchased, and securities loaned or sold under repurchase agreements) as part of client cash management programs.

(d) Effective January 1, 2013, headcount includes transfers from other business segments largely related to operations, technology and other support staff.

(e) Effective July 1, 2012, certain Treasury Services product sales staff supporting CB were transferred from CIB to CB. For further discussion of this transfer, see footnote (c) on page 103 of this Annual Report.

As of or for the year ended December 31, (in millions, except headcount and ratios)	2013	2012	2011
Credit data and quality statistics			
Net charge-offs	**$ 43**	$ 35	$ 187
Nonperforming assets			
Nonaccrual loans:			
Nonaccrual loans retained[a]	**471**	644	1,036

Nonaccrual loans to total period-end loans	**0.37**	0.52	0.94

(a) Allowance for loan losses of $81 million, $107 million and $176 million was held against nonaccrual loans retained at December 31, 2013, 2012 and 2011, respectively.

(b) Loans held-for-sale and loans at fair value were excluded when calculating the net charge-off rate.

ASSET MANAGEMENT

Asset Management, with client assets of $2.3 trillion, is a global leader in investment and wealth management. AM clients include institutions, high-net-worth individuals and retail investors in every major market throughout the world. AM offers investment management across all major asset classes including equities, fixed income, alternatives and money market funds. AM also offers multi-asset investment management, providing solutions to a broad range of clients' investment needs. For individual investors, AM also provides retirement products and services, brokerage and banking services including trusts and estates, loans, mortgages and deposits. The majority of AM's client assets are in actively managed portfolios.

2013 compared with 2012

Net income was $2.0 billion, an increase of $328 million, or 19%, from the prior year, reflecting higher net revenue, largely offset by higher noninterest expense.

Net revenue was $11.3 billion, an increase of $1.4 billion, or 14%, from the prior year. Noninterest revenue was $9.0 billion, up $1.2 billion, or 15%, from the prior year, due to net client inflows, the effect of higher market levels and higher performance fees. Net interest income was $2.3 billion, up $192 million, or 9%, from the prior year, due to higher loan and deposit balances, partially offset by narrower loan and deposit spreads.

Revenue from Private Banking was $6.0 billion, up 11% from the prior year due to higher net interest income from loan and deposit balances and higher brokerage revenue. Revenue from Retail was $2.8 billion, up 30% due to net client inflows and the effect of higher market levels. Revenue from Institutional was $2.5 billion, up 6% due to higher valuations of seed capital investments, the effect of higher market levels and higher performance fees.

The provision for credit losses was $65 million, compared with $86 million in the prior year.

Noninterest expense was $8.0 billion, an increase of $912 million, or 13%, from the prior year, primarily due to higher headcount-related expense driven by continued front office expansion efforts, higher performance-based compensation and costs related to the control agenda.

2012 compared with 2011

Net income was $1.7 billion, an increase of $111 million, or 7%, from the prior year. These results reflected higher net revenue, partially offset by higher noninterest expense and a higher provision for credit losses.

Net revenue was $9.9 billion, an increase of $403 million, or 4%, from the prior year. Noninterest revenue was $7.8 billion, down $48 million, or 1%, due to lower loan-related revenue and the absence of a prior-year gain on the sale of an investment. These decreases were predominantly offset by net client inflows, higher valuations of seed capital investments, the effect of higher market levels, higher brokerage revenue and higher performance fees. Net interest income was $2.1 billion, up $451 million, or 27%, due to higher loan and deposit balances.

Revenue from Private Banking was $5.4 billion, up 6% from the prior year due to higher net interest income from loan and deposit balances and higher brokerage revenue, partially offset by lower loan-related fee revenue. Revenue from Institutional was $2.4 billion, up 5% due to net client inflows and the effect of higher market levels. Revenue from Retail was $2.1 billion, down 1% due to the absence of a prior-year gain on the sale of an investment, predominantly offset by higher valuations of seed capital investments and higher performance fees.

The provision for credit losses was $86 million, compared with $67 million in the prior year.

Noninterest expense was $7.1 billion, an increase of $102 million, or 1%, from the prior year, due to higher performance-based compensation and higher headcount-related expense, partially offset by the absence of non-client-related litigation expense.

(a) Derived from Morningstar for the U.S., the U.K., Luxembourg, France, Hong Kong and Taiwan; and Nomura for Japan.
(b) Quartile ranking sourced from: Lipper for the U.S. and Taiwan; Morningstar for the U.K., Luxembourg, France and Hong Kong; and Nomura for Japan.
(c) Included $18.9 billion, $10.9 billion and $2.1 billion of prime mortgage loans reported in the Consumer, excluding credit card, loan portfolio at December 31, 2013, 2012 and 2011, respectively. For the same periods, excluded $3.7 billion, $6.7 billion and $13.0 billion of prime mortgage loans reported in the CIO portfolio within the Corporate/Private Equity segment, respectively.
(d) Includes Chase Wealth Management ("CWM"), which is a unit of Consumer & Business Banking. The firmwide metrics are presented in order to capture AM's partnership with CWM. Management reviews firmwide metrics in assessing the financial performance of AM's client asset management business.
(e) Excludes CWM client assets that are managed by AM.

AM's client segments comprise the following:

Private Banking offers investment advice and wealth management services to high- and ultra-high-net-worth individuals, families, money managers, business owners and small corporations worldwide, including investment management, capital markets and risk management, tax and estate planning, banking, capital raising and specialty-wealth advisory services.

Institutional brings comprehensive global investment services – including asset management, pension analytics, asset-liability management and active risk-budgeting strategies – to corporate and public institutions, endowments, foundations, non-profit organizations and governments worldwide.

Retail provides worldwide investment management services and retirement planning and administration, through financial intermediaries and direct distribution of a full range of investment products.

J.P. Morgan Asset Management has two high-level measures of its overall fund performance.

- Percentage of assets under management in funds rated 4- and 5-stars (three years). Mutual fund rating services rank funds based on their risk-adjusted performance over various periods. A 5-star rating is the best and represents the top 10% of industry-wide ranked funds. A 4-star rating represents the next 22% of industry wide ranked funds. The worst rating is a 1-star rating.
- Percentage of assets under management in first- or second- quartile funds (one, three and five years). Mutual fund rating services rank funds according to a peer-based performance system, which measures returns according to specific time and fund classification (small-, mid-, multi- and large-cap).

Client assets

2013 compared with 2012

Client assets were $2.3 trillion at December 31, 2013, an increase of $248 billion, or 12%, compared with the prior year. Assets under management were $1.6 trillion, an increase of $172 billion, or 12%, from the prior year, due to net inflows to long-term products and the effect of higher market levels. Custody, brokerage, administration and deposit balances were $745 billion, up $76 billion, or 11%, from the prior year, due to the effect of higher market levels and custody inflows, partially offset by brokerage outflows.

2012 compared with 2011

Client assets were $2.1 trillion at December 31, 2012, an increase of $174 billion, or 9%, from the prior year. Assets under management were $1.4 trillion, an increase of $90 billion, or 7%, due to the effect of higher market levels and net inflows to long-term products, partially offset by net outflows from liquidity products. Custody, brokerage, administration and deposit balances were $669 billion, up $84 billion, or 14%, due to the effect of higher market levels and custody and brokerage inflows.

(a) Regional revenue is based on the domicile of the client.

The Corporate/Private Equity segment comprises Private Equity, Treasury and Chief Investment Office ("CIO"), and Other Corporate, which includes corporate staff units and expense that is centrally managed. Treasury and CIO are predominantly responsible for measuring, monitoring, reporting and managing the Firm's liquidity, funding and structural interest rate and foreign exchange risks, as well as executing the Firm's capital plan. The major Other Corporate units include Real Estate, Central Technology, Legal, Compliance, Finance, Human Resources, Internal Audit, Risk Management, Oversight & Control, Corporate Responsibility and various Other Corporate groups. Other centrally managed expense includes the Firm's occupancy and pension-related expense that are subject to allocation to the businesses.

Private equity	**$ 285**	$ 292	$ 391
Treasury and CIO	**(676)**	(2,093)	1,349
Other Corporate[a]	**(5,587)**	(221)	(821)
Total net income/(loss)	**$ (5,978)**	$ (2,022)	$ 919
Total assets (period-end)[a]	**$805,987**	$ 725,251	$ 689,718
Headcount[a]	**20,717**	17,758	16,653

(a) The 2012 and 2011 data for certain income statement line items (predominantly net interest income, compensation, and non compensation) were revised to reflect the transfer of certain technology and operations, as well as real estate-related functions and staff from Corporate/Private Equity to CCB, effective January 1, 2013. For further information on this transfer, see footnote (a) on page 86 of this Annual Report.

(b) Included tax-equivalent adjustments, predominantly due to tax-exempt income from municipal bond investments of $480 million, $443 million and $298 million for the years ended December 31, 2013, 2012 and 2011, respectively.

(c) Included litigation expense of $10.2 billion, $3.7 billion and $3.2 billion for the years ended December 31, 2013, 2012 and 2011, respectively.

2013 compared with 2012

Net loss was $6.0 billion, compared with a net loss of $2.0 billion in the prior year.

Private Equity reported net income of $285 million, compared with net income of $292 million in the prior year. Net revenue was of $589 million, compared with $601 million in the prior year.

Treasury and CIO reported a net loss of $676 million, compared with a net loss of $2.1 billion in the prior year. Net revenue was a loss of $792 million, compared with a loss of $3.1 billion in the prior year. Net revenue in the current year includes $659 million of net securities gains from the sales of available-for-sale investment securities, compared with securities gains of $2.0 billion and $888 million of pretax extinguishment gains related to the redemption of trust preferred capital debt securities in the prior year. The extinguishment gains were related to adjustments applied to the cost basis of the trust preferred securities during the period they were in a qualified hedge accounting relationship. The prior year loss also reflected $5.8 billion of losses incurred by CIO from the synthetic credit portfolio for the six months ended June 30, 2012, and $449 million of losses from the retained index credit derivative positions for the three months ended September 30, 2012. Current year net interest income was a loss of $1.4 billion compared with a loss of $683 million in the prior year, primarily due to low interest rates and limited reinvestment opportunities. Net interest income improved in the fourth quarter of 2013 due to higher interest rates and better reinvestment opportunities.

Other Corporate reported a net loss of $5.6 billion, compared with a net loss of $221 million in the prior year. Current year noninterest revenue was $1.8 billion compared with $1.8 billion in the prior year. Current year noninterest revenue included gains of $1.3 billion and $493 million on the sales of Visa shares and One Chase Manhattan Plaza, respectively. Noninterest revenue in the prior year included a $1.1 billion benefit for the Washington Mutual bankruptcy settlement and a $665 million gain for the recovery on a Bear Stearns-related subordinated loan. Noninterest expense of $9.7 billion was up $5.9 billion compared to the prior year. The current year included $10.2 billion of legal expense, including reserves for litigation and regulatory proceedings compared with $3.7 billion of expense for additional litigation reserves, largely for mortgage-related matters, in the prior year.

2012 compared with 2011

Net loss was $2.0 billion, compared with a net income of $919 million in the prior year.

Private Equity reported net income of $292 million, compared with net income of $391 million in the prior year. Net revenue was $601 million, compared with $836 million in the prior year, due to lower unrealized and realized gains on private investments, partially offset by higher unrealized gains on public securities. Noninterest expense was $145 million, down from $238 million in the prior year.

Treasury and CIO reported a net loss of $2.1 billion, compared with net income of $1.3 billion in the prior year. Net revenue was a loss of $3.1 billion, compared with net revenue of $3.2 billion in the prior year. The current year loss reflected $5.8 billion of losses incurred by CIO from the synthetic credit portfolio for the six months ended June 30, 2012, and $449 million of losses from the retained index credit derivative positions for the three months ended September 30, 2012. These losses were partially offset by securities gains of $2.0 billion. The current year revenue reflected $888 million of extinguishment gains related to the redemption of trust preferred securities, which are included in all other income in the above table. The extinguishment gains were related to adjustments applied to the cost basis of the trust preferred securities during the period they were in a qualified hedge accounting relationship. Net interest income was negative $683 million, compared with $1.4 billion in the prior year, primarily reflecting the impact of lower portfolio yields and higher deposit balances across the Firm.

Other Corporate reported a net loss of $221 million, compared with a net loss of $821 million in the prior year. Noninterest revenue of $1.8 billion was driven by a $1.1 billion benefit for the Washington Mutual bankruptcy settlement, which is included in all other income in the above table, and a $665 million gain from the recovery on a Bear Stearns-related subordinated loan. Noninterest expense of $3.8 billion was up $1.0 billion compared with the prior year. The current year included expense of $3.7 billion for additional litigation reserves, largely for mortgage-related matters. The prior year included expense of $3.2 billion for additional litigation reserves.

Treasury and CIO overview

Treasury and CIO are predominantly responsible for measuring, monitoring, reporting and managing the Firm's liquidity, funding and structural interest rate and foreign exchange risks, as well as executing the Firm's capital plan. The risks managed by Treasury and CIO arise from the activities undertaken by the Firm's four major reportable business segments to serve their respective client bases, which generate both on- and off-balance sheet assets and liabilities.

CIO achieves the Firm's asset-liability management objectives generally by investing in high-quality securities that are managed for the longer-term as part of the Firm's AFS and HTM investment securities portfolios (the "investment securities portfolio"). CIO also uses derivatives, as well as securities that are not classified as AFS or HTM, to meet the Firm's asset-liability management objectives. For further information on derivatives, see Note 6 on pages 220–233 of this Annual Report. For further information about securities not classified within the AFS or HTM portfolio, see Note 3 on pages 195–215 of this Annual Report. The Treasury and CIO investment securities portfolio primarily consists of U.S. and non-U.S. government securities, agency and non-agency mortgage-backed securities, other asset-backed securities, corporate debt securities and obligations of U.S. states and municipalities. At December 31, 2013, the total Treasury and CIO investment securities portfolio was $347.6 billion; the average credit rating of the securities comprising the Treasury and CIO investment securities portfolio was AA+ (based upon external ratings where available and where not available, based primarily upon internal ratings that correspond to ratings as defined by S&P and Moody's). See Note 12 on pages 249–254 of this Annual Report for further information on the details of the Firm's investment securities portfolio.

For further information on liquidity and funding risk, see Liquidity Risk Management on pages 168–173 of this Annual Report. For information on interest rate, foreign exchange and other risks, Treasury and CIO Value-at-risk ("VaR") and the Firm's structural interest rate-sensitive revenue at risk, see Market Risk Management on pages 142–148 of this Annual Report.

Selected income statement and balance sheet data

As of or for the year ended December 31, (in millions)	2013	2012	2011
Securities gains	**$ 659**	$ 2,028	$ 1,385
Investment securities portfolio (average)	**353,712**	358,029	330,885
Investment securities portfolio (period-end)[(a)]	**347,562**	365,421	355,605
Mortgage loans (average)	**5,145**	10,241	13,006
Mortgage loans (period-end)	**3,779**	7,037	13,375

(a) Period-end investment securities included held-to-maturity balance of $24.0 billion at December 31, 2013. Held-to-maturity balances for the other periods were not material.

Private Equity portfolio

Selected income statement and balance sheet data

Year ended December 31, (in millions)	2013	2012	2011
Private equity gains/(losses)			
Realized gains	**$ (170)**	$ 17	$ 1,842
Unrealized gains/(losses)[a]	**734**	639	(1,305)
Total direct investments	**564**	656	537
Third-party fund investments	**137**	134	417
Total private equity gains/ (losses)[b]	**$ 701**	$ 790	$ 954

(a) Includes reversals of unrealized gains and losses that were recognized in prior periods and have now been realized.
(b) Included in principal transactions revenue in the Consolidated Statements of Income.

Private equity portfolio information[a]

Direct investments

December 31, (in millions)	2013	2012	2011
Publicly held securities			
Carrying value	**$ 1,035**	$ 578	$ 805
Cost	**672**	350	573
Quoted public value	**1,077**	578	896
Privately held direct securities

Third-party fund investments[b]			
Carrying value	**1,768**	2,117	2,283
Cost	**1,797**	1,963	2,452
Total private equity portfolio			
Carrying value	**$ 7,868**	$ 8,074	$ 7,685
Cost	**8,491**	8,897	9,818

(a) For more information on the Firm's policies regarding the valuation of the private equity portfolio, see Note 3 on pages 195–215 of this Annual Report.
(b) Unfunded commitments to third-party private equity funds were $215 million, $370 million and $789 million at December 31, 2013, 2012 and 2011, respectively.

2013 compared with 2012

The carrying value of the private equity portfolio at December 31, 2013 was $7.9 billion, down from $8.1 billion at December 31, 2012. The decrease in the portfolio was predominantly driven by sales of investments, partially offset by new investments and unrealized gains.

2012 compared with 2011

The carrying value of the private equity portfolio at December 31, 2012 was $8.1 billion, up from $7.7 billion at December 31, 2011. The increase in the portfolio was predominantly driven by new investments and unrealized gains, partially offset by sales of investments.

INTERNATIONAL OPERATIONS

During the years ended December 31, 2013, 2012 and 2011, the Firm recorded $24.0 billion, $18.5 billion and $24.5 billion, respectively, of managed revenue derived from clients, customers and counterparties domiciled outside of North America. Of those amounts, 65%, 57% and 66%, respectively, were derived from Europe/Middle East/Africa ("EMEA"); 26%, 30% and 25%, respectively, from Asia/Pacific; and 9%, 13% and 9%, respectively, from Latin America/Caribbean. For additional information regarding international operations, see Note 32 on page 333 of this Annual Report.

International wholesale activities

The Firm is committed to meeting the needs of its clients as part of a coordinated international business strategy.

Set forth below are certain key metrics related to the Firm's wholesale international operations, including, for each of EMEA, Asia/Pacific and Latin America/Caribbean, the number of countries in each such region in which they operate, front-office headcount, number of significant clients, revenue and selected balance-sheet data.

As of or for the year ended December 31,	EMEA			Asia/Pacific			Latin America/Caribbean		
(in millions, except headcount and where otherwise noted)	**2013**	2012	2011	**2013**	2012	2011	**2013**	2012	2011
Revenue[a]	**$ 15,441**	$ 10,398	$ 16,141	**$ 6,138**	$ 5,590	$ 5,971	**$ 2,233**	$ 2,327	$ 2,232
Countries of operation[b]	**33**	33	33	**17**	17	16	**9**	9	9
New offices	**–**	–	1	**–**	2	2	**–**	–	4
Total headcount[c]	**15,560**	15,485	16,185	**21,699**	20,509	20,212	**1,495**	1,435	1,380
Front-office headcount	**6,285**	5,805	5,937	**4,353**	4,166	4,263	**655**	591	524
Significant clients[d]	**1,071**	1,008	950	**498**	509	496	**177**	162	138
Deposits (average)[e]	**$ 192,064**	$ 169,693	$ 168,882	**$ 56,440**	$ 57,329	$ 57,684	**$ 5,546**	$ 4,823	$ 5,318
Loans (period-end)[f]	**45,571**	40,760	36,637	**26,560**	30,287	31,119	**29,214**	30,322	25,141
Assets under management (in billions)	**305**	258	278	**132**	114	105	**47**	45	34
Client assets (in billions)	**367**	317	329	**180**	160	139	**117**	110	89
Assets under custody (in billions)	**7,348**	6,502	5,430	**1,607**	1,577	1,426	**231**	252	279

Note: International wholesale operations is comprised of CIB, AM, CB and Treasury and CIO.

(a) Revenue is based predominantly on the domicile of the client, the location from which the client relationship is managed, or the location of the trading desk.

(b) Countries of operation represents locations where the Firm has a physical presence with employees actively engaged in "client facing" activities.

(c) Total headcount includes all employees, including those in service centers, located in the region. Effective January 1, 2013, interns are excluded from the firmwide and business segment headcount metrics. Prior periods were revised to conform with this presentation.

(d) Significant clients are defined as companies with over $1 million in revenue over a trailing 12-month period in the region (excludes private banking clients).

(e) Deposits are based on the location from which the client relationship is managed.

(f) Loans outstanding are based predominantly on the domicile of the borrower and exclude loans held-for-sale and loans carried at fair value.

ENTERPRISE-WIDE RISK MANAGEMENT

Risk is an inherent part of JPMorgan Chase's business activities. The Firm employs a holistic approach to risk management that is intended to ensure the broad spectrum of risk types are considered in managing its business activities.

The Firm believes effective risk management requires:

- Acceptance of responsibility by all individuals within the Firm;
- Ownership of risk management within each line of business; and
- Firmwide structures for risk governance and oversight.

Firmwide Risk Management is overseen and managed on an enterprise-wide basis. The Firm's Chief Executive Officer ("CEO"), Chief Financial Officer ("CFO"), Chief Risk Officer ("CRO") and Chief Operating Officer ("COO") develop and set the risk management framework and governance structure for the Firm which is intended to provide comprehensive controls and ongoing management of the major risks inherent in the Firm's business activities. The Firm's risk management framework is intended to create a culture of risk transparency and awareness, and personal responsibility throughout the Firm where collaboration, discussion, escalation and sharing of information are encouraged. The CEO, CFO, CRO and COO are ultimately responsible and accountable to the Firm's Board of Director's.

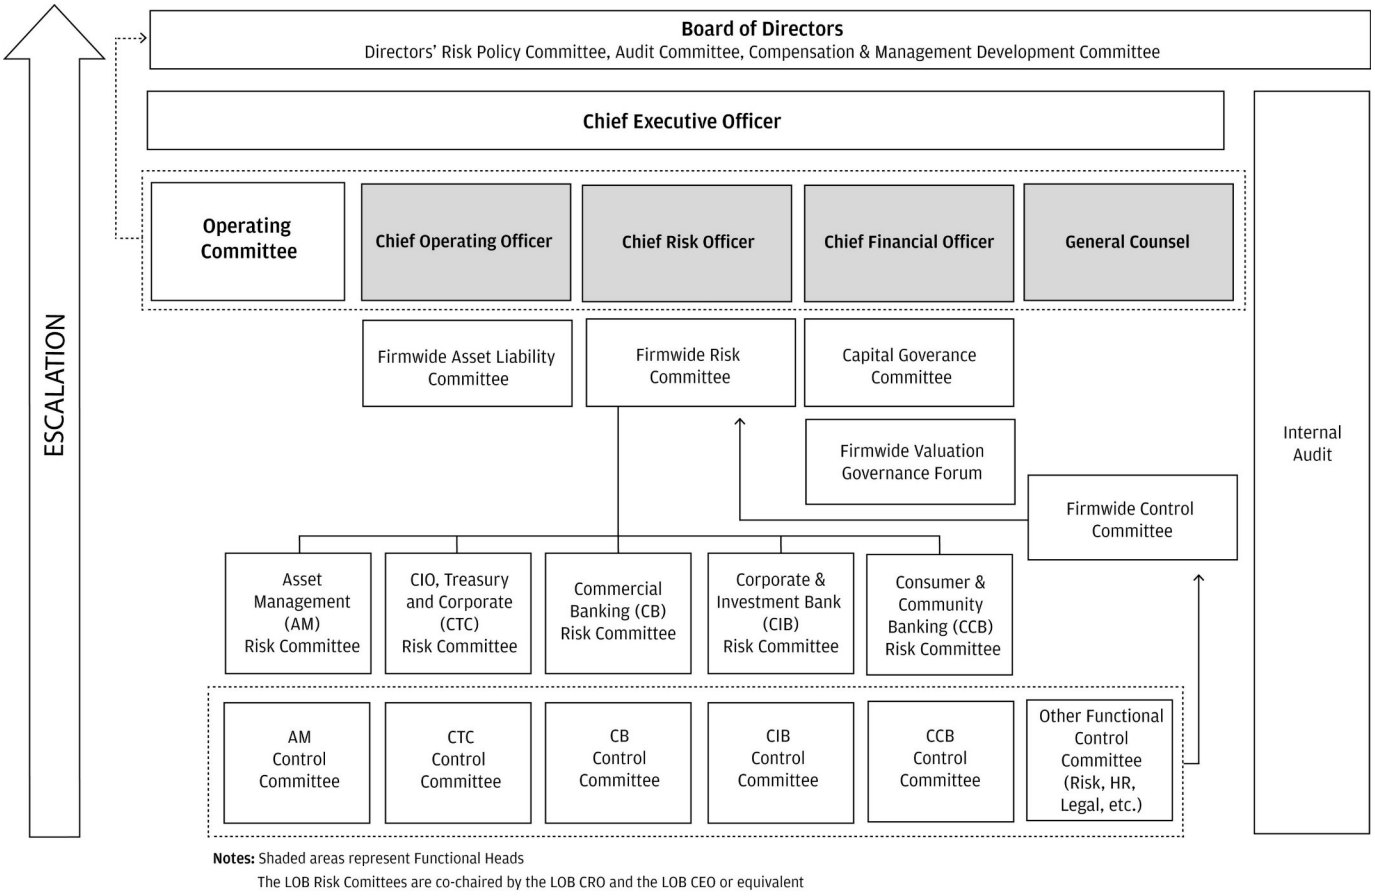
The Firm believes that risk management is the responsibility of every employee. Employees are expected to operate with the highest standards of integrity and identify, escalate, and correct mistakes. The Firm's risk culture strives for continual improvement through ongoing employee training and development, as well as talent retention. The Firm also approaches its incentive compensation arrangements through an integrated risk, compensation and financial management framework to encourage a culture of risk awareness and personal accountability. The Firm's overall objective in managing risk is to protect the safety and soundness of the Firm, and avoid excessive risk taking.

The following sections outline the key risks that are inherent in the Firm's business activities.

	Risk	Definition	Key risk management metrics	Page references
Risks managed centrally	Capital risk	The risk the Firm has insufficient capital resources to support the Firm's business activities and related risks.	Risk-based capital ratios, Supplementary Leverage ratio	160-167
	Liquidity risk	The risk the Firm will not have the appropriate amount, composition or tenor of funding and liquidity to support its assets and obligations.	LCR; Stress; Parent Holding Company Pre-Funding	168-173
	Non-USD FX risk	Risk arising from capital investments, forecasted expense and revenue, investment securities portfolio or issuing debt in denominations other than the U.S. dollar.	FX Net Open Position ("NOP")	220, 229-231
	Structural interest rate risk	Risk resulting from the Firm's traditional banking activities (both on- and off-balance sheet positions) arising from the extension of loans and credit facilities, taking deposits and issuing debt, and the impact of the CIO investment securities portfolio.	Earnings-at-risk	147-148
Risks managed on an LOB aligned basis	Country risk	Risk that a sovereign's unwillingness or inability to pay will result in market, credit, or other losses.	Default exposure at 0% recovery, Stress	149-152
	Credit risk	Risk of loss from obligor or counterparty default.	Total exposure; industry and geographic concentrations; risk ratings; delinquencies; loss experience; stress	117-141
	Fiduciary risk	Risk of failing to exercise the applicable standard of care or to act in the best interests of clients or treat all clients fairly as required under applicable law or regulation.	Not Applicable	159
	Legal risk	Risk of loss or imposition of damages, fines, penalties or other liability arising from failure to comply with a contractual obligation or to comply with laws or regulations to which the Firm is subject.	Not Applicable	158
	Market risk	Risk of loss arising from adverse changes in the value of the Firm's assets and liabilities resulting from changes in market variables such as interest rates, foreign exchange rates, equity and commodity prices and their implied volatilities, and credit spreads.	VaR, Stress, Sensitivities	142-148
	Model risk	Risk of a material inaccuracy in the quantification of the value of, or an inaccuracy of the identification and measurement of a position held by or activity engaged in by the Firm.	Model Status, Model Tier	153
	Operational risk	Risk of loss resulting from inadequate or failed processes or systems, human factors or external events	Various metrics- see page 156	155-157
	Principal risk	Risk of an adverse change in the value of privately-held financial assets and instruments, typically representing an ownership or junior capital position. These positions have unique risks due to their illiquidity or for which there is less observable market or valuation data.	Carrying Value, Stress	154
	Regulatory and Compliance risk	Risk of regulatory actions, including fines or penalties, arising from the failure to comply with the various U.S. federal and state laws and regulations and the laws and regulations of the various jurisdictions outside the United States in which the Firm conducts business.	Not Applicable	158
	Reputation risk	Risk that an action, transaction, investment or event will reduce the trust that clients, shareholders, employees or the broader public has in the Firm's integrity or competence.	Not Applicable	159

Risk governance and oversight

The Board of Directors provides oversight of risk principally through the Board of Directors' Risk Policy Committee ("DRPC"), Audit Committee and, with respect to compensation, Compensation & Management Development Committee.



The Firm's overall risk appetite is established by management taking into consideration the Firm's capital and liquidity positions, earnings power, and diversified business model. The risk appetite framework is a tool to measure the capacity to take risk and is expressed in loss tolerance parameters at the Firm and/or LOB levels, including net income loss tolerances, liquidity limits and market limits. Performance against these parameters informs management's strategic decisions and is reported to the DRPC.

The Firm-level risk appetite parameters are set and approved by the Firm's CEO, CFO, CRO and COO. LOB-level risk appetite parameters are set by the LOB CEO, CFO, and CRO and are approved by the Firm's functional heads as noted above. Firmwide LOB diversification allows the sum of the LOBs' loss tolerances to be greater than the Firmwide loss tolerance.

The CRO is responsible for the overall direction of the Firm's Risk Management function and is the head of the Risk Management Organization. The LOBs and legal entities are ultimately responsible for managing the risks inherent in their respective business activities.

The Firm's Risk Management Organization and other Firmwide functions with risk-related responsibilities (i.e., Regulatory Capital Management Office ("RCMO"), Oversight and Control Group, Valuation Control Group ("VCG"), Legal and Compliance) provide independent oversight of the monitoring, evaluation and escalation of risk.

The chart below illustrates the Firm's Risk Governance structure and certain key management level committees that are primarily responsible for key risk-related functions; there are additional committees not represented in the chart (e.g. Firmwide Fiduciary Risk Committee, and other functional forums) that are also responsible for management and oversight of risk. Additionally, the chart illustrates how the primary escalation mechanism works.

Notes: Shaded areas represent Functional Heads
The LOB Risk Comittees are co-chaired by the LOB CRO and the LOB CEO or equivalent

In assisting the Board in its oversight of risk, primary responsibility with respect to credit risk, market risk, structural interest rate risk, principal risk, liquidity risk, country risk, fiduciary risk and model risk rests with the DRPC, while primary responsibility with respect to operating risk, legal risk and compliance risk rests with the Audit Committee. Each committee of the Board oversees reputation risk issues within its scope of responsibility.

The Directors' Risk Policy Committee ("DRPC") assists the Board in its oversight of management's exercise of its responsibility to (i) assess and manage the Firm's risk; (ii) ensure that there is in place an effective system reasonably designed to evaluate and control such risks throughout the Firm; and (iii) manage capital and liquidity planning and analysis. The DRPC reviews and approves Primary Risk Policies (as designated by the DRPC), reviews firmwide value-at-risk, stress limits and any other metrics agreed to with management, and performance against such metrics. The Firm's CRO, LOB CROs, LOB CEOs, heads of risk for Country Risk, Market Risk, Wholesale Credit Risk, Consumer Credit Risk, Model Risk, Risk Management Policy, Reputation Risk Governance, Fiduciary Risk Governance, and Operational Risk Governance (all referred to as Firmwide Risk Executives) meet with and provide updates and escalations to the DRPC. Additionally, breaches in risk appetite tolerances, liquidity issues that may have a material adverse impact on the Firm and other significant matters as determined by the CRO or Firmwide functions with risk responsibility are escalated to the DRPC.

The Audit Committee assists the Board in its oversight of guidelines and policies that govern the process by which risk assessment and management is undertaken. In addition, the Audit Committee reviews with management the system of internal control that is relied upon to provide reasonable assurance of compliance with the Firm's execution of operational risk. In addition, Internal Audit, an independent function within the Firm that provides independent and objective assessments of the control environment, reports directly to the Audit Committee and administratively to the CEO. Internal Audit conducts independent reviews to evaluate the Firm's internal control structure and compliance with applicable regulatory requirements and is responsible for providing the Audit Committee, senior management and regulators with an independent assessment of the Firm's ability to manage and control risk.

The Compensation & Management Development Committee, assists the Board in its oversight of the Firm's compensation programs and reviews and approves the Firm's overall compensation philosophy and practices. The Committee

reviews the Firm's compensation practices as they relate to risk and risk management in light of the Firm's objectives, including its safety and soundness and the avoidance of excessive risk taking. The Committee reviews and approves the terms of compensation award programs, including recovery provisions, restrictive covenants and vesting periods. The Committee also reviews and approves the Firm's overall incentive compensation pools and reviews those of each of the Firm's lines of business and Corporate/ Private Equity segment. The Committee reviews the performance and approves all compensation awards for the Firm's Operating Committee on a name-by-name basis. The full Board's independent directors review the performance and approve the compensation of the Firm's CEO.

Among the Firm's management level committees that are primarily responsible for key risk-related functions are:

The Asset-Liability Committee ("ALCO"), chaired by the Corporate Treasurer under the direction of the COO, monitors the Firm's overall liquidity risk. ALCO is responsible for reviewing and approving the Firm's liquidity policy and contingency funding plan. ALCO also reviews the Firm's funds transfer pricing policy (through which lines of business "transfer" interest rate and foreign exchange risk to Treasury), overall structural interest rate risk position, funding requirements and strategy, and the Firm's securitization programs (and any required liquidity support by the Firm of such programs).

The Capital Governance Committee, chaired by the Firm's CFO, is responsible for reviewing the Firm's Capital Management Policy and the principles underlying capital issuance and distribution alternatives. The Committee is also responsible for governing the capital adequacy assessment process, including overall design, assumptions and risk streams; and, ensuring that capital stress test programs are designed to adequately capture the idiosyncratic risks across the Firm's businesses.

The Firmwide Risk Committee ("FRC") provides oversight of the risks inherent in the Firm's businesses, including market, credit, principal, structural interest rate, operational risk framework, fiduciary, reputational, country, liquidity and model risks. The Committee is co-chaired by the Firm's CEO and CRO. Members of the committee include the the Firm's COO, LOB CEOs, LOB CROs, General Counsel, and other senior managers from risk and control functions. This committee serves as an escalation point for risk topics and issues raised by the Firm's Operating Committee, the Line of Business Risk Committees, Firmwide Control Committee ("FCC") and other subordinate committees.

The Firmwide Control Committee ("FCC") provides a forum for senior management to review and discuss firmwide operational risks including existing and emerging issues, as well as operational risk metrics, management and execution. The FCC serves as an escalation point for significant issues raised from LOB and Functional Control Committees, particularly those with potential enterprise-wide impact. The FCC (as well as the LOB and Functional Control Committees) oversees the risk and control environment, which includes reviewing the identification, management and monitoring of operational risk, control issues, remediation actions and enterprise-wide trends. The FCC escalates significant issues to the FRC.

Each LOB Risk Committee is responsible for decisions relating to risk strategy, policy, measurement and control within its respective LOB. The committee is co-chaired by the LOB CRO and LOB CEO or equivalent. The committee has a clear set of escalation rules and it is the responsibility of committee members to escalate line of business risk topics to the Firmwide Risk Committee as appropriate.

Other corporate functions and forums with risk management-related responsibilities include:

The Firm's Oversight and Control Group is comprised of dedicated control officers within each of the lines of business and Corporate functional areas, as well as a central oversight team. The group is charged with enhancing the Firm's controls by looking within and across the lines of business and Corporate functional areas to identify and control issues. The group enables the Firm to detect control problems more quickly, escalate issues promptly and get the right people involved to understand common themes and interdependencies among the various parts of the Firm. The group works closely with the Firm's other control-related functions, including Compliance, Legal, Internal Audit and Risk Management, to effectively remediate identified control issues across all affected areas of the Firm. As a result, the group facilitates the effective execution of the Firm's control framework and helps support operational risk management across the Firm.

The Firmwide Valuation Governance Forum ("VGF") is composed of senior finance and risk executives and is responsible for overseeing the management of risks arising from valuation activities conducted across the Firm. The VGF is chaired by the firmwide head of the Valuation Control function (under the direction of the Firm's CFO), and also includes sub-forums for the CIB, Mortgage Bank, and certain corporate functions, including Treasury and CIO.

In addition to the committees, forums and groups listed above, the Firm has other management committees and forums at the LOB and regional levels, where risk-related topics are discussed and escalated as necessary. The membership of these committees is composed of senior management of the Firm including representation from the business and various control functions. The committees meet regularly to discuss a broad range of topics.

The JPMorgan Chase Bank N.A. Board of Directors is responsible for the oversight of management on behalf of JPMorgan Chase Bank N.A. The JPMorgan Chase Bank N.A. Board accomplishes this function acting directly and through the principal standing committees of the Firm's Board of Directors. Risk oversight on behalf of JPMorgan Chase Bank N.A. is primarily the responsibility of the Firm's DRPC, Audit Committee and, with respect to compensation-related matters, the Compensation & Management Development Committee.

Credit risk is the risk of loss from obligor or counterparty default. The Firm provides credit to a variety of customers, ranging from large corporate and institutional clients to individual consumers and small businesses. In its consumer businesses, the Firm is exposed to credit risk through its residential real estate, credit card, auto, business banking and student lending businesses. Originated mortgage loans are retained in the mortgage portfolio, or securitized or sold to U.S. government agencies and U.S. government-sponsored enterprises; other types of consumer loans are typically retained on balance sheet. In its wholesale businesses, the Firm is exposed to credit risk through its underwriting, lending and derivatives activities with and for clients and counterparties, as well as through its operating services activities, such as cash management and clearing activities. A portion of the loans originated or acquired by the Firm's wholesale businesses are generally retained on the balance sheet; the Firm's syndicated loan business distributes a significant percentage of originations into the market and is an important component of portfolio management.

Credit risk organization

Credit risk management is overseen by the Chief Risk Officer and implemented within the lines of business. The Firm's credit risk management governance consists of the following activities:

- Establishing a comprehensive credit risk policy framework
- Monitoring and managing credit risk across all portfolio segments, including transaction and line approval
- Assigning and managing credit authorities in connection with the approval of all credit exposure
- Managing criticized exposures and delinquent loans
- Determining the allowance for credit losses and ensuring appropriate credit risk-based capital management

Risk identification and measurement

Credit Risk Management works in partnership with the business segments in identifying and aggregating exposures across all lines of business. To measure credit risk, the Firm employs several methodologies for estimating the likelihood of obligor or counterparty default. Methodologies for measuring credit risk vary depending on several factors, including type of asset (e.g., consumer versus wholesale), risk measurement parameters (e.g., delinquency status and borrower's credit score versus wholesale risk-rating) and risk management and collection processes (e.g., retail collection center versus centrally managed workout groups). Credit risk measurement is based on the probability of default of an obligor or counterparty, the loss severity given a default event and the exposure at default.

Based on these factors and related market-based inputs, the Firm estimates credit losses for its exposures. Probable credit losses inherent in the consumer and wholesale loan portfolios are reflected in the allowance for loan losses, and probable credit losses inherent in lending-related commitments are reflected in the allowance for lending-related commitments. These losses are estimated using statistical analyses and other factors as described in Note 15 on pages 284–287 of this Annual Report. In addition, potential and unexpected credit losses are reflected in the allocation of credit risk capital and represent the potential volatility of actual losses relative to the established allowances for loan losses and lending-related commitments. The analyses for these losses include stress testing (considering alternative economic scenarios) as described in the Stress Testing section below.

The methodologies used to estimate credit losses depend on the characteristics of the credit exposure, as described below.

Scored exposure

The scored portfolio is generally held in CCB and includes residential real estate loans, credit card loans, certain auto and business banking loans, and student loans. For the scored portfolio, credit loss estimates are based on statistical analysis of credit losses over discrete periods of time and are estimated using portfolio modeling, credit scoring, and decision-support tools, which consider loan level factors such as delinquency status, credit scores, collateral values, and other risk factors. Credit loss analyses also consider, as appropriate, uncertainties and other factors, including those related to current macroeconomic and political conditions, the quality of underwriting standards, and other internal and external factors. The factors and analysis are updated on a quarterly basis or more frequently as market conditions dictate.

Risk-rated exposure

Risk-rated portfolios are generally held in CIB, CB and AM, but also include certain business banking and auto dealer loans held in CCB that are risk-rated because they have characteristics similar to commercial loans. For the risk-rated portfolio, credit loss estimates are based on estimates of the probability of default and loss severity given a default. The estimation process begins with risk-ratings that are assigned to each loan facility to differentiate risk within the portfolio. These risk-ratings are reviewed on an ongoing basis by Credit Risk management and revised as needed to reflect the borrower's current financial position, risk profile and related collateral. The probability of default is the likelihood that a loan will default and not be fully repaid by the borrower. The probability of default is estimated for each borrower, and a loss given default is estimated considering the collateral and structural support for each credit facility. The calculations and assumptions are based on management information systems and methodologies that are under continual review.

Stress testing

Stress testing is important in measuring and managing credit risk in the Firm's credit portfolio. The process assesses the potential impact of alternative economic and business scenarios on estimated credit losses for the Firm. Economic scenarios, and the parameters underlying those scenarios, are defined centrally and applied across the businesses. These scenarios are articulated in terms of macroeconomic factors, and the stress test results may indicate credit migration, changes in delinquency trends and potential losses in the credit portfolio. In addition to the periodic stress testing processes, management also considers additional stresses outside these scenarios, as necessary. The Firm uses stress testing to inform our decisions on setting risk appetite both at a Firm and line of business level, as well as for assessing the impact of stress on industry concentrations.

Risk monitoring and management

The Firm has developed policies and practices that are designed to preserve the independence and integrity of the approval and decision-making process of extending credit to ensure credit risks are assessed accurately, approved properly, monitored regularly and managed actively at both the transaction and portfolio levels. The policy framework establishes credit approval authorities, concentration limits, risk-rating methodologies, portfolio review parameters and guidelines for management of distressed exposures. In addition, certain models, assumptions and inputs used in evaluating and monitoring credit risk are independently validated by groups that are separate from the line of businesses.

For consumer credit risk, delinquency and other trends, including any concentrations at the portfolio level, are monitored, as certain of these trends can be modified through changes in underwriting policies and portfolio guidelines. Consumer Risk Management evaluates delinquency and other trends against business expectations, current and forecasted economic conditions, and industry benchmarks. Loss mitigation strategies are employed for all residential real estate portfolios. These strategies include interest rate reductions, term or payment extensions, principal and interest deferral and other actions intended to minimize economic loss and avoid foreclosure. Historical and forecasted trends are incorporated into the modeling of estimated consumer credit losses and are part of the monitoring of the credit risk profile of the portfolio. Under the Firm's model risk policy, new significant risk management models, as well as major changes to such models, are required to be reviewed and approved by the Model Review Group prior to implementation into the operating environment. Internal Audit also periodically tests the internal controls around the modeling process including the integrity of the data utilized. For a discussion of the Model Review Group, see page 153 of this Annual Report. For further discussion of consumer loans, see Note 14 on pages 258–283 of this Annual Report.

Wholesale credit risk is monitored regularly at an aggregate portfolio, industry and individual counterparty level with established concentration limits that are reviewed and revised, as deemed appropriate by management, typically on an annual basis. Industry and counterparty limits, as measured in terms of exposure and economic credit risk capital, are subject to stress-based loss constraints.

Management of the Firm's wholesale credit risk exposure is accomplished through a number of means including:

- Loan underwriting and credit approval process
- Loan syndications and participations
- Loan sales and securitizations
- Credit derivatives
- Use of master netting agreements
- Collateral and other risk-reduction techniques

In addition to Risk Management, Internal Audit performs periodic exams, as well as continuous review, where appropriate, of the Firm's consumer and wholesale portfolios. For risk-rated portfolios, a credit review group within Internal Audit is responsible for:

- Independently assessing and validating the changing risk grades assigned to exposures; and
- Evaluating the effectiveness of business units' risk-ratings, including the accuracy and consistency of risk grades, the timeliness of risk grade changes and the justification of risk grades in credit memoranda

Risk reporting

To enable monitoring of credit risk and effective decision-making, aggregate credit exposure, credit quality forecasts, concentration levels and risk profile changes are reported regularly to senior Credit Risk Management. Detailed portfolio reporting of industry, customer, product and geographic concentrations occurs monthly, and the appropriateness of the allowance for credit losses is reviewed by senior management at least on a quarterly basis. Through the risk reporting and governance structure, credit risk trends and limit exceptions are provided regularly to, and discussed with, senior management and the Board of Directors as appropriate.

2013 Credit Risk Overview

The credit environment in 2013 continued to improve, with reduced concerns around the European financial crisis and improving market conditions in the U.S. Over the course of the year, the Firm continued to actively manage its underperforming and nonaccrual loans and reduce such exposures through repayments, loan sales and workouts. The Firm saw decreased downgrade, default and charge-off activity and improved consumer delinquency trends. The Firm increased its overall lending activity driven by the wholesale businesses. The combination of these factors resulted in an improvement in the credit quality of the portfolio compared with 2012 and contributed to the Firm's reduction in the allowance for credit losses. For further discussion of the consumer credit environment and consumer loans, see Consumer Credit Portfolio on pages 120–129 and Note 14 on pages 258–283 of this Annual Report. For further discussion of wholesale credit environment and wholesale loans, see Wholesale Credit Portfolio on pages 130–138 and Note 14 on pages 258–283 of this Annual Report.

The following tables present the Firm's credit-related information with respect to its credit portfolio. Total credit exposure was $1.9 trillion at December 31, 2013, an increase of $2.2 billion from December 31, 2012, reflecting an increase in the wholesale portfolio of $13.7 billion offset by a decrease in the consumer portfolio of $11.5 billion. For further information on the changes in the credit portfolio, see Consumer Credit Portfolio on pages 120–129, and Wholesale Credit Portfolio on pages 130–138, of this Annual Report.

In the following tables, reported loans include loans retained (i.e., held-for-investment); loans held-for-sale (which are carried at the lower of cost or fair value, with valuation changes recorded in noninterest revenue); and certain loans accounted for at fair value. In addition, the Firm records certain loans accounted for at fair value in trading assets. For further information regarding these loans see Note 3 on pages 195–215 of this Annual Report. For additional information on the Firm's loans and derivative receivables, including the Firm's accounting policies, see Note 14 and Note 6 on pages 258–283 and 220–233, respectively, of this Annual Report.

For further information regarding the credit risk inherent in the Firm's investment securities portfolio, see Note 12 on pages 249–254 of this Annual Report.

Loans – reported	**720,152**	717,035
Loans – reported, excluding residential real estate PCI loans	**663,629**	654,454
Net charge-off rates[f]		
Loans – reported	**0.81%**	1.26%
Loans – reported, excluding PCI	**0.87**	1.38

(a) During 2013, certain loans that resulted from restructurings that were previously classified as performing were reclassified as nonperforming loans. Prior periods were revised to conform with the current presentation.

(b) Represents the net notional amount of protection purchased and sold through credit derivatives used to manage both performing and nonperforming wholesale credit exposures; these derivatives do not qualify for hedge accounting under U.S. GAAP. Excludes the synthetic credit portfolio. For additional information, see Credit derivatives on pages 137–138 and Note 6 on pages 220–233 of this Annual Report.

(c) Excludes PCI loans. The Firm is recognizing interest income on each pool of PCI loans as they are all performing.

(d) At December 31, 2013 and 2012, nonperforming assets excluded: (1) mortgage loans insured by U.S. government agencies of $8.4 billion and $10.6 billion, respectively, that are 90 or more days past due; (2) real estate owned insured by U.S. government agencies of $2.0 billion and $1.6 billion, respectively; and (3) student loans insured by U.S. government agencies under the FFELP of $428 million and $525 million, respectively, that are 90 or more days past due. These amounts have been excluded from nonaccrual loans based upon the government guarantee. In addition, the Firm's policy is generally to exempt credit card loans from being placed on nonaccrual status as permitted by regulatory guidance issued by the Federal Financial Institutions Examination Council ("FFIEC").

(e) At December 31, 2013 and 2012, total nonaccrual loans represented 1.16% and 1.48%, respectively, of total loans.

(f) Net charge-offs and net charge-off rates for the year ended December 31, 2012, included $800 million of incremental charge-offs of Chapter 7 loans. See Consumer Credit Portfolio on pages 120–129 of this Annual Report for further details.

CONSUMER CREDIT PORTFOLIO

JPMorgan Chase's consumer portfolio consists primarily of residential real estate loans, credit card loans, auto loans, business banking loans, and student loans. The Firm's focus is on serving the prime segment of the consumer credit market. For further information on consumer loans, see Note 14 on pages 258–283 of this Annual Report.

A substantial portion of the consumer loans acquired in the Washington Mutual transaction were identified as purchased credit-impaired ("PCI") based on an analysis of high-risk characteristics, including product type, loan-to-value ("LTV") ratios, FICO risk scores and delinquency status. These PCI loans are accounted for on a pool basis, and the pools are considered to be performing. For further information on PCI loans see Note 14 on pages 258–283 of this Annual Report.

The credit performance of the consumer portfolio continues to improve as the economy slowly expands and home prices improve. Loss rates are improving, particularly in the credit card and residential real estate portfolios. Early-stage residential real estate delinquencies (30–89 days delinquent), excluding government guaranteed loans, declined from December 31, 2012. Late-stage delinquencies (150+ days delinquent) continued to decline but remain elevated. The elevated level of the late-stage delinquent loans is due, in part, to loss mitigation activities currently being undertaken and to elongated foreclosure processing timelines. Losses related to these loans continue to be recognized in accordance with the Firm's standard charge-off practices, but some delinquent loans that would otherwise have been foreclosed upon remain in the mortgage and home equity loan portfolios.

The following table presents consumer credit-related information with respect to the credit portfolio held by CCB as well as for prime mortgage loans held in the Asset Management and the Corporate/Private Equity segments for the dates indicated. For further information about the Firm's nonaccrual and charge-off accounting policies, see Note 14 on pages 258–283 of this Annual Report.

Consumer credit portfolio

As of or for the year ended December 31, (in millions, except ratios)	Credit exposure		Nonaccrual loans[f][g]		Net charge-offs[h][i]		Average annual net charge-off rate[h][i][j]

Memo: Total consumer credit portfolio, excluding PCI	**$ 949,378**	$ 954,163	**$ 7,496**	$ 9,175	**$ 5,786**	$ 9,241	**1.62%**	2.55%

(a) At December 31, 2013 and 2012, excluded operating lease-related assets of $5.5 billion and $4.7 billion, respectively.
(b) Represents prime mortgage loans held-for-sale.
(c) Credit card and home equity lending-related commitments represent the total available lines of credit for these products. The Firm has not experienced, and does not anticipate, that all available lines of credit would be used at the same time. For credit card and home equity commitments (if certain conditions are met), the Firm can reduce or cancel these lines of credit by providing the borrower notice or, in some cases, without notice as permitted by law.
(d) Receivables from customers primarily represent margin loans to retail brokerage customers, which are included in accrued interest and accounts receivable on the Consolidated Balance Sheets.
(e) Includes accrued interest and fees net of an allowance for the uncollectible portion of accrued interest and fee income.
(f) At December 31, 2013 and 2012, nonaccrual loans excluded: (1) mortgage loans insured by U.S. government agencies of $8.4 billion and $10.6 billion, respectively, that are 90 or more days past due; and (2) student loans insured by U.S. government agencies under the FFELP of $428 million and $525 million, respectively, that are 90 or more days past due. These amounts have been excluded from nonaccrual loans based upon the government guarantee. In addition, the Firm's policy is generally to exempt credit card loans from being placed on nonaccrual status as permitted by regulatory guidance.

(g) Excludes PCI loans. The Firm is recognizing interest income on each pool of PCI loans as they are all performing.
(h) Charge-offs and net charge-off rates for the year ended December 31, 2012, included incremental Chapter 7 loan net charge-offs of $91 million for senior lien home equity, $539 million for junior lien home equity, $47 million for prime mortgage, including option ARMs, $70 million for subprime mortgage and $53 million for auto loans. Net charge-off rates for the for the year ended December 31, 2012, excluding these incremental net charge-offs would have been 0.90%, 3.03%, 0.58%, 4.65% and 0.28% for the senior lien home equity, junior lien home equity, prime mortgage, including option ARMs, subprime mortgages and auto loans, respectively. See Consumer Credit Portfolio on pages 120–129 of this Annual Report for further details.
(i) Net charge-offs and net charge-off rates excluded $53 million of write-offs of prime mortgages in the PCI portfolio for the year ended December 31, 2013. See Consumer Credit Portfolio on pages 120–129 of this Annual Report for further details.
(j) Average consumer loans held-for-sale were $209 million and $433 million, respectively, for the years ended December 31, 2013 and 2012. These amounts were excluded when calculating net charge-off rates.

Consumer, excluding credit card

Portfolio analysis

Consumer loan balances declined during the year ended December 31, 2013, due to paydowns and the charge-off or liquidation of delinquent loans, partially offset by new mortgage and auto originations. Credit performance has improved across most portfolios but residential real estate charge-offs and delinquent loans remain elevated compared with pre-recessionary levels.

The following discussion relates to the specific loan and lending-related categories. PCI loans are generally excluded from individual loan product discussions and are addressed separately below. For further information about the Firm's consumer portfolio, including information about delinquencies, loan modifications and other credit quality indicators, see Note 14 on pages 258–283 of this Annual Report.

Home equity: The home equity portfolio at December 31, 2013, was $57.9 billion, compared with $67.4 billion at December 31, 2012. The decrease in this portfolio primarily reflected loan paydowns and charge-offs. Early-stage delinquencies showed improvement from December 31, 2012, for both senior and junior lien home equity loans. Late-stage delinquencies also improved from December 31, 2012, but continue to be elevated as improvement in the number of loans becoming severely delinquent was offset by higher average carrying value on these loans, reflecting improving collateral values. Senior lien nonaccrual loans were flat compared with the prior year while junior lien nonaccrual loans decreased in 2013. Net charge-offs for both senior and junior lien home equity loans declined when compared with the prior year as a result of improvement in delinquencies and home prices, as well as the impact of prior year incremental charge-offs reported in accordance with regulatory guidance on certain loans discharged under Chapter 7 bankruptcy.

Approximately 20% of the Firm's home equity portfolio consists of home equity loans ("HELOANs") and the remainder consists of home equity lines of credit ("HELOCs"). HELOANs are generally fixed-rate, closed-end, amortizing loans, with terms ranging from 3–30 years. Approximately half of the HELOANs are senior liens and the remainder are junior liens. In general, HELOCs originated by the Firm are revolving loans for a 10-year period, after which time the HELOC recasts into a loan with a 20-year amortization period. At the time of origination, the borrower typically selects one of two minimum payment options that will generally remain in effect during the revolving period: a monthly payment of 1% of the outstanding balance, or interest-only payments based on a variable index (typically Prime). HELOCs originated by Washington Mutual were generally revolving loans for a 10-year period, after which time the HELOC converts to an interest-only loan with a balloon payment at the end of the loan's term.

The unpaid principal balance of non-PCI HELOCs outstanding was $50 billion at December 31, 2013. Based on the contractual terms of the loans, $30 billion of the non-PCI HELOCs outstanding are scheduled to recast at which time the borrower must begin to make fully amortizing payments, of which, $7 billion, $8 billion and $7 billion are scheduled to recast in 2015, 2016 and 2017, respectively. However, of the $30 billion in non-PCI HELOCs scheduled to recast, approximately $14 billion are currently expected to recast, with the remaining $16 billion representing loans to borrowers who are expected to prepay (including borrowers who appear to have the ability to refinance based on the borrower's LTV ratio and FICO score) or are loans that are expected to charge-off. The Firm has considered this payment recast risk in its allowance for loan losses based upon the estimated amount of payment shock (i.e., the excess of the fully-amortizing payment over the interest-only payment in effect prior to recast) expected to occur at the payment recast date, along with the corresponding estimated probability of default and loss severity assumptions. Certain factors, such as future developments in both unemployment and home prices, could have a significant impact on the expected and/or actual performance of these loans.

The Firm manages the risk of HELOCs during their revolving period by closing or reducing the undrawn line to the extent permitted by law when borrowers are exhibiting a material deterioration in their credit risk profile or when the collateral does not support the loan amount. The Firm will continue to evaluate both the near-term and longer-term repricing and recast risks inherent in its HELOC portfolio to ensure that changes in the Firm's estimate of incurred losses are appropriately considered in the allowance for loan losses and that the Firm's account management practices are appropriate given the portfolio's risk profile.

At December 31, 2013, the Firm estimated that its home equity portfolio contained approximately $2.3 billion of current junior lien loans where the borrower has a first mortgage loan that is either delinquent or has been modified ("high-risk seconds"), compared with $3.1 billion

at December 31, 2012. Such loans are considered to pose a higher risk of default than that of junior lien loans for which the senior lien is neither delinquent nor modified. The Firm estimates the balance of its total exposure to high-risk seconds on a quarterly basis using internal data and loan level credit bureau data (which typically provides the delinquency status of the senior lien). The estimated balance of these high-risk seconds may vary from quarter to quarter for reasons such as the movement of related senior liens into and out of the 30+ day delinquency bucket.

Current high risk junior liens

December 31, (in billions)	2013	2012
Junior liens subordinate to:		
Modified current senior lien	$ 0.9	$ 1.1
Senior lien 30 – 89 days delinquent	0.6	0.9
Senior lien 90 days or more delinquent[a]	0.8	1.1
Total current high risk junior liens	**$ 2.3**	$ 3.1

(a) Junior liens subordinate to senior liens that are 90 days or more past due are classified as nonaccrual loans. At both December 31, 2013 and 2012, excluded approximately $100 million of junior liens that are performing but not current, which were also placed on nonaccrual in accordance with the regulatory guidance.

Of the estimated $2.3 billion of high-risk junior liens at December 31, 2013, the Firm owns approximately 5% and services approximately 25% of the related senior lien loans to the same borrowers. The performance of the Firm's junior lien loans is generally consistent regardless of whether the Firm owns, services or does not own or service the senior lien. The increased probability of default associated with these higher-risk junior lien loans was considered in estimating the allowance for loan losses.

Mortgage: Mortgage loans at December 31, 2013, including prime, subprime and loans held-for-sale, were $94.9 billion, compared with $84.5 billion at December 31, 2012. The mortgage portfolio increased in 2013 as retained prime mortgage originations, which represent loans with high credit quality, were greater than paydowns and the charge-off or liquidation of delinquent loans. Net charge-offs decreased from the prior year reflecting continued home price improvement and favorable delinquency trends. Delinquency levels remain elevated compared with pre-recessionary levels.

Prime mortgages, including option adjustable-rate mortgages ("ARMs") and loans held-for-sale, were $87.8 billion at December 31, 2013, compared with $76.3 billion at December 31, 2012. Prime mortgage loans increased as retained originations exceeded paydowns, the run-off of option ARM loans and the charge-off or liquidation of delinquent loans. Excluding loans insured by U.S. government agencies, both early-stage and late-stage delinquencies showed improvement from December 31, 2012. Nonaccrual loans decreased from the prior year but remain elevated as a result of elongated foreclosure processing timelines. Net charge-offs continued to improve, as a result of improvement in delinquencies and home prices.

At December 31, 2013 and 2012, the Firm's prime mortgage portfolio included $14.3 billion and $15.6 billion, respectively, of mortgage loans insured and/or guaranteed by U.S. government agencies, of which $9.6 billion and $11.8 billion, respectively, were 30 days or more past due, including $8.4 billion and $10.6 billion, respectively, which were 90 days or more past due. Following the Firm's settlement regarding loans insured under federal mortgage insurance programs overseen by FHA, HUD, and VA, the Firm will continue to monitor exposure on future claim payments for government insured loans; however, any financial impact related to exposure on future claims is not expected to be significant.

At December 31, 2013 and 2012, the Firm's prime mortgage portfolio included $15.6 billion and $16.0 billion, respectively, of interest-only loans, which represented 18% and 21% of the prime mortgage portfolio, respectively. These loans have an interest-only payment period generally followed by an adjustable-rate or fixed-rate fully amortizing payment to maturity and are typically originated as higher-balance loans to higher-income borrowers. The decrease in this portfolio was primarily due to voluntary prepayments, as borrowers are generally refinancing into lower rate products. To date, losses on this portfolio generally have been consistent with the broader prime mortgage portfolio and the Firm's expectations. The Firm continues to monitor the risks associated with these loans.

Non-PCI option ARM loans acquired by the Firm as part of the Washington Mutual transaction, which are included in the prime mortgage portfolio, were $5.6 billion and $6.5 billion and represented 6% and 9% of the prime mortgage portfolio at December 31, 2013 and 2012, respectively. The decrease in option ARM loans resulted from portfolio runoff. As of December 31, 2013, approximately 4% of option ARM borrowers were delinquent. Substantially all of the remaining borrowers were making amortizing payments, although such payments are not necessarily fully amortizing and may be subject to risk of payment shock due to future payment recast. The Firm estimates the following balances of option ARM loans will undergo a payment recast that results in a payment increase: $807 million in 2014, $675 million in 2015 and $164 million in 2016. As the Firm's option ARM loans, other than those held in the PCI portfolio, are primarily loans with lower LTV ratios and higher borrower FICO scores, it is possible that many of these borrowers will be able to refinance into a lower rate product, which would reduce this payment recast risk. To date, losses realized on option ARM loans that have undergone payment recast have been immaterial and consistent with the Firm's expectations.

Subprime mortgages at December 31, 2013, were $7.1 billion, compared with $8.3 billion at December 31, 2012. The decrease was due to portfolio runoff. Early-stage and late-stage delinquencies as well as nonaccrual loans have improved from December 31, 2012, but remain at elevated

levels. Net charge-offs continued to improve as a result of improvement in delinquencies and home prices.

Auto: Auto loans at December 31, 2013, were $52.8 billion, compared with $49.9 billion at December 31, 2012. Loan balances increased due to new originations, partially offset by paydowns and payoffs. Delinquencies and nonaccrual loans improved compared with December 31, 2012. Net charge-offs decreased from the prior year due to prior year incremental charge-offs reported in accordance with regulatory guidance on certain loans discharged under Chapter 7 bankruptcy. Loss levels are considered low as a result of favorable trends in both loss frequency and loss severity, mainly due to enhanced underwriting standards and a strong used car market. The auto loan portfolio reflected a high concentration of prime-quality credits.

Business banking: Business banking loans at December 31, 2013, were $19.0 billion, compared with $18.9 billion at December 31, 2012. Business Banking loans primarily include loans that are collateralized, often with personal loan guarantees, and may also include Small Business Administration guarantees. Nonaccrual loans showed improvement from December 31, 2012. Net charge-offs declined for the year ended December 31, 2013, compared with the year ended December 31, 2012.

Student and other: Student and other loans at December 31, 2013, were $11.6 billion, compared with $12.2 billion at December 31, 2012. The decrease was primarily due to runoff of the student loan portfolio. Other loans primarily include other secured and unsecured consumer loans. Nonaccrual loans increased compared with December 31, 2012, while net charge-offs decreased for the year ended December 31, 2013, compared with the prior year.

Purchased credit-impaired loans: PCI loans at December 31, 2013, were $53.1 billion, compared with $59.7 billion at December 31, 2012. This portfolio represents loans acquired in the Washington Mutual transaction, which were recorded at fair value at the time of acquisition. PCI HELOCs originated by Washington Mutual were generally revolving loans for a 10-year period, after which time the HELOC converts to an interest-only loan with a balloon payment at the end of the loan's term. Substantially all undrawn HELOCs within the revolving period have been blocked.

As of December 31, 2013, approximately 19% of the option ARM PCI loans were delinquent and approximately 54% have been modified into fixed-rate, fully amortizing loans. Substantially all of the remaining loans are making amortizing payments, although such payments are not necessarily fully amortizing. This latter group of loans are subject to the risk of payment shock due to future payment recast.

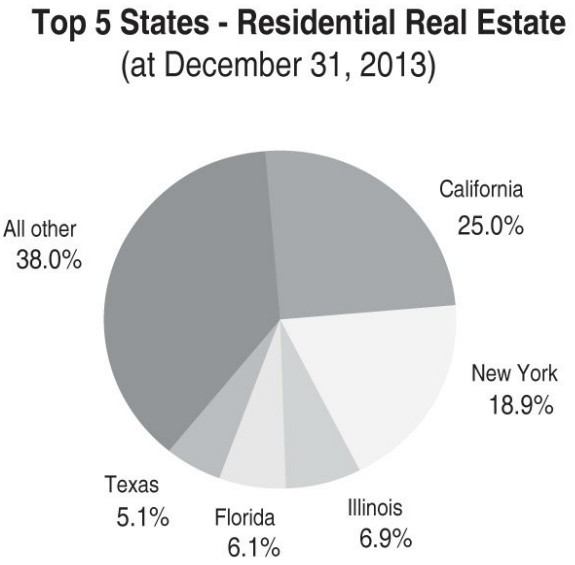
Default rates generally increase on option ARM loans when payment recast results in a payment increase. The expected increase in default rates is considered in the Firm's quarterly impairment assessment. The cumulative amount of unpaid interest added to the unpaid principal balance of the option ARM PCI pool was $724 million and $879 million at December 31, 2013, and December 31, 2012, respectively. The Firm estimates the following balances of option ARM PCI loans will undergo a payment recast that results in a payment increase: $487 million in 2014, $810 million in 2015 and $710 million in 2016.

The following table provides a summary of lifetime principal loss estimates included in both the nonaccretable difference and the allowance for loan losses.

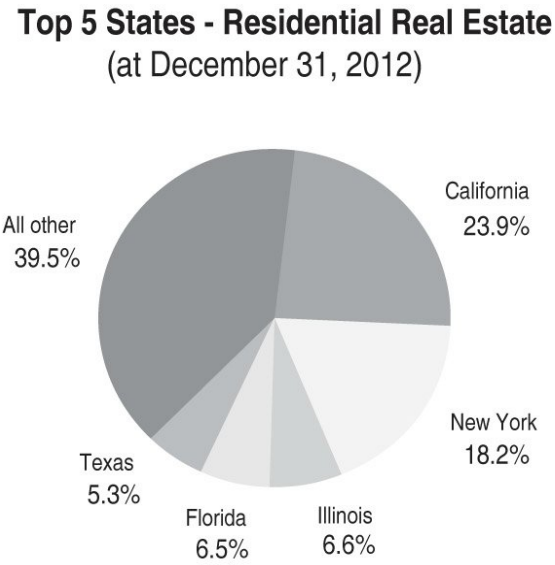
Summary of lifetime principal loss estimates

December 31, (in billions)	Lifetime loss estimates[a]		LTD liquidation losses[b]	
	2013	2012	**2013**	2012
Home equity	**$ 14.7**	$ 14.9	**$ 12.1**	$ 11.5
Prime mortgage	**3.8**	4.2	**3.3**	2.9
Subprime mortgage	**3.3**	3.6	**2.6**	2.2
Option ARMs	**10.2**	11.3	**8.8**	8.0
Total	**$ 32.0**	$ 34.0	**$ 26.8**	$ 24.6

(a) Includes the original nonaccretable difference established in purchase accounting of $30.5 billion for principal losses only plus additional principal losses recognized subsequent to acquisition through the provision and allowance for loan losses. The remaining nonaccretable difference for principal losses only was $3.8 billion and $5.8 billion at December 31, 2013 and 2012, respectively.



(b) Life-to-date ("LTD") liquidation losses represent both realization of loss upon loan resolution and any principal forgiven upon modification. LTD liquidation losses included $53 million of write-offs of prime mortgages for the year ended December 31, 2013.



Lifetime principal loss estimates declined from December 31, 2012, to December 31, 2013, reflecting improvement in home prices and delinquencies. The decline in lifetime principal loss estimates during the year ended December 31, 2013, resulted in a $1.5 billion reduction of the PCI allowance for loan losses ($1.0 billion related to option ARM loans, $200 million to subprime mortgage, $150 million to home equity loans and $150 million to prime mortgage). In addition, for the year ended December 31, 2013, PCI write-offs of $53 million were recorded against the prime mortgage allowance for loan losses. For further information about the Firm's PCI loans, including write-offs, see Note 14 on pages 258–283 of this Annual Report.

As a result of reserve actions and PCI prime mortgage write-offs, the allowance for loan loss for the PCI portfolio declined from $5.7 billion at December 31, 2012, to $4.2 billion at December 31, 2013. The allowance for loan losses decreased from $1.5 billion to $494 million for the option ARM portfolio, from $1.9 billion to $1.7 billion for prime mortgage, from $380 million to $180 million for subprime mortgage and from $1.9 billion to $1.8 billion for the home equity portfolio from December 31, 2012 to December 31, 2013.

Geographic composition of residential real estate loans

At December 31, 2013, California had the greatest concentration of residential real estate loans with 25% of the total retained residential real estate loan portfolio, excluding mortgage loans insured by U.S. government agencies and PCI loans, compared with 24% at December 31, 2012. Of these loans, $85.9 billion, or 62%, were concentrated in California, New York, Illinois, Florida and Texas at December 31, 2013, compared with $82.4 billion, or 60%, at December 31, 2012. The unpaid principal balance of PCI loans concentrated in these five states represented 74% of total PCI loans at December 31, 2013, compared with 73% at December 31, 2012.

Current estimated LTVs of residential real estate loans

The current estimated average LTV ratio for residential real estate loans retained, excluding mortgage loans insured by U.S. government agencies and PCI loans, was 75% at December 31, 2013, compared with 81% at December 31, 2012. Of these loans, 9% had a current estimated LTV ratio greater than 100%, and 2% had a current estimated LTV ratio greater than 125% at December 31, 2013, compared with 20% and 8%, respectively, at December 31, 2012.

Although home prices continue to recover, the decline in home prices since 2007 has had a significant impact on the collateral values underlying the Firm's residential real estate loan portfolio. In general, the delinquency rate for loans with high LTV ratios is greater than the delinquency rate for loans in which the borrower has equity in the collateral. While a large portion of the loans with current estimated LTV ratios greater than 100% continue to pay and are current, the continued willingness and ability of these borrowers to pay remains a risk.

The following table for PCI loans presents the current estimated LTV ratios, as well as the ratios of the carrying value of the underlying loans to the current estimated collateral value. Because such loans were initially measured at fair value, the ratios of the carrying value to the current estimated collateral value will be lower than the current estimated LTV ratios, which are based on the unpaid principal balances. The estimated collateral values used to calculate these ratios do not represent actual appraised loan-level collateral values; as such, the resulting ratios are necessarily imprecise and should therefore be viewed as estimates.

LTV ratios and ratios of carrying values to current estimated collateral values – PCI loans

	2013				2012			
December 31, (in millions, except ratios)	Unpaid principal balance	Current estimated LTV ratio[a]	Net carrying value[c]	Ratio of net carrying value to current estimated collateral value[c]	Unpaid principal balance	Current estimated LTV ratio[a]	Net carrying value[c]	Ratio of net carrying value to current estimated collateral value[c]
Home equity	**$ 19,830**	**90%** [b]	**$ 17,169**	**78%**	$ 22,343	111% [b]	$ 19,063	95%
Prime mortgage	**11,876**	**83**	**10,312**	**72**	13,884	104	11,745	88
Subprime mortgage	**5,471**	**91**	**3,995**	**66**	6,326	107	4,246	72
Option ARMs	**19,223**	**82**	**17,421**	**74**	22,591	101	18,972	85

(a) Represents the aggregate unpaid principal balance of loans divided by the estimated current property value. Current property values are estimated at least quarterly based on home valuation models that utilize nationally recognized home price index valuation estimates; such models incorporate actual data to the extent available and forecasted data where actual data is not available.

(b) Represents current estimated combined LTV for junior home equity liens, which considers all available lien positions, as well as unused lines, related to the property. All other products are presented without consideration of subordinate liens on the property.

(c) Net carrying value includes the effect of fair value adjustments that were applied to the consumer PCI portfolio at the date of acquisition and is also net of the allowance for loan losses at December 31, 2013 and 2012 of $1.8 billion and $1.9 billion for home equity, $1.7 billion and $1.9 billion for prime mortgage, $494 million and $1.5 billion for option ARMs, and $180 million and $380 million for subprime mortgage, respectively.

The current estimated average LTV ratios were 85% and 103% for California and Florida PCI loans, respectively, at December 31, 2013, compared with 110% and 125%, respectively, at December 31, 2012. Average LTV ratios have declined consistent with recent improvement in home prices. Although home prices have improved, home prices in California and Florida are still lower than at the peak of the housing market; this continues to negatively contribute to current estimated average LTV ratios and the ratio of net carrying value to current estimated collateral value for loans in the PCI portfolio. Of the total PCI portfolio, 26% had a current estimated LTV ratio greater than 100%, and 7% had a current LTV ratio of greater than 125% at December 31, 2013, compared with 55% and 24%, respectively, at December 31, 2012.

While the current estimated collateral value is greater than the net carrying value of PCI loans, the ultimate performance of this portfolio is highly dependent on borrowers' behavior and ongoing ability and willingness to continue to make payments on homes with negative equity, as well as on the cost of alternative housing. For further information on the geographic composition and current estimated LTVs of residential real estate – non-PCI and PCI loans, see Note 14 on pages 258–283 of this Annual Report.

Loan modification activities – residential real estate loans

For both the Firm's on-balance sheet loans and loans serviced for others, more than 1.5 million mortgage modifications have been offered to borrowers and approximately 734,000 have been approved since the beginning of 2009. Of these, more than 725,000 have achieved permanent modification as of December 31, 2013. Of the remaining modifications offered, 9% are in a trial period or still being reviewed for a modification, while 91% have dropped out of the modification program or otherwise were deemed not eligible for final modification.

The Firm is participating in the U.S. Treasury's Making Home Affordable ("MHA") programs and is continuing to offer its other loss-mitigation programs to financially distressed borrowers who do not qualify for the U.S. Treasury's programs. The MHA programs include the Home Affordable Modification Program ("HAMP") and the Second Lien Modification Program ("2MP"). The Firm's other loss-mitigation programs for troubled borrowers who do not qualify for HAMP include the traditional modification programs offered by the GSEs and other governmental agencies, as well as the Firm's proprietary modification programs, which include concessions similar to those offered under HAMP and 2MP but with expanded eligibility criteria. In addition, the Firm has offered specific targeted modification programs to higher risk borrowers, many of whom were current on their mortgages prior to modification. For further information about how loans are modified, see Note 14, Loan modifications, on pages 268–273 of this Annual Report.

Loan modifications under HAMP and under one of the Firm's proprietary modification programs, which are largely modeled after HAMP, require at least three payments to be made under the new terms during a trial modification period, and must be successfully re-underwritten with income verification before the loan can be permanently modified. In the case of specific targeted modification programs, re-underwriting the loan or a trial modification period is generally not required, unless the targeted loan is

delinquent at the time of modification. When the Firm modifies home equity lines of credit, future lending commitments related to the modified loans are canceled as part of the terms of the modification.

The primary indicator used by management to monitor the success of the modification programs is the rate at which the modified loans redefault. Modification redefault rates are affected by a number of factors, including the type of loan modified, the borrower's overall ability and willingness to repay the modified loan and macroeconomic factors. Reduction in payment size for a borrower has shown to be the most significant driver in improving redefault rates.

The performance of modified loans generally differs by product type and also on whether the underlying loan is in the PCI portfolio, due both to differences in credit quality and in the types of modifications provided. Performance metrics for modifications to the residential real estate portfolio, excluding PCI loans, that have been seasoned more than six months show weighted average redefault rates of 20% for senior lien home equity, 20% for junior lien home equity, 15% for prime mortgages including option ARMs, and 26% for subprime mortgages. The cumulative performance metrics for modifications to the PCI residential real estate portfolio seasoned more than six months show weighted average redefault rates of 20% for home equity, 16% for prime mortgages, 14% for option ARMs and 29% for subprime mortgages. The favorable performance of the PCI option ARM modifications is the result of a targeted proactive program which fixes the borrower's payment at the current level. The cumulative redefault rates reflect the performance of modifications completed under both HAMP and the Firm's proprietary modification programs from October 1, 2009, through December 31, 2013.

Certain loans that were modified under HAMP and the Firm's proprietary modification programs (primarily the Firm's modification program that was modeled after HAMP) have interest rate reset provisions ("step-rate modifications"). Beginning in 2014, interest rates on these loans will generally increase by 1% per year until the rate reaches a specified cap, typically at a prevailing market interest rate for a fixed-rate loan as of the modification date. The carrying value of non-PCI loans modified in step-rate modifications was $5 billion at December 31, 2013, with $1 billion and $2 billion scheduled to experience the initial interest rate increase in 2015 and 2016, respectively. The unpaid principal balance of PCI loans modified in step-rate modifications was $11 billion at December 31, 2013, with $2 billion and $3 billion scheduled to experience the initial interest rate increase in 2015 and 2016, respectively. The impact of these potential interest rate increases is appropriately considered in the Firm's allowance for loan losses. The Firm will continue to monitor this risk exposure to ensure that it is appropriately considered in the Firm's allowance for loan losses.

The following table presents information as of December 31, 2013 and 2012, relating to modified on-balance sheet residential real estate loans for which concessions have been granted to borrowers experiencing financial difficulty. Modifications of PCI loans continue to be accounted for and reported as PCI loans, and the impact of the modification is incorporated into the Firm's quarterly assessment of estimated future cash flows. Modifications of consumer loans other than PCI loans are generally accounted for and reported as troubled debt restructurings ("TDRs"). For further information on TDRs for the years ended December 31, 2013 and 2012, see Note 14 on pages 258–283 of this Annual Report.

Modified residential real estate loans

	2013		2012	
December 31, (in millions)	On-balance sheet loans	Nonaccrual on-balance sheet loans[d]	On-balance sheet loans	Nonaccrual on-balance sheet loans[d]
Modified residential real estate loans, excluding PCI loans[a][b]				
Home equity – senior lien	**$ 1,146**	**$ 641**	$ 1,092	$ 607
Home equity – junior lien	**1,319**	**666**	1,223	599
Prime mortgage, including option ARMs	**7,004**	**1,737**	7,118	1,888
Subprime mortgage	**3,698**	**1,127**	3,812	1,308
Total modified residential real estate loans, excluding PCI loans	**$ 13,167**	**$ 4,171**	$ 13,245	$ 4,402
Modified PCI loans[c]				
Home equity	**$ 2,619**	**NA**	$ 2,302	NA
Prime mortgage	**6,977**	**NA**	7,228	NA
Subprime mortgage	**4,168**	**NA**	4,430	NA
Option ARMs	**13,131**	**NA**	14,031	NA
Total modified PCI loans	**$ 26,895**	**NA**	$ 27,991	NA

(a) Amounts represent the carrying value of modified residential real estate loans.

(b) At December 31, 2013 and 2012, $7.6 billion and $7.5 billion, respectively, of loans modified subsequent to repurchase from Ginnie Mae in accordance with the standards of the appropriate government agency (i.e., FHA, VA, RHS) are not included in the table above. When such loans perform subsequent to modification in accordance with Ginnie Mae guidelines, they are generally sold back into Ginnie Mae loan pools. Modified loans that do not re-perform become subject to foreclosure. For additional information about sales of loans in securitization transactions with Ginnie Mae, see Note 16 on pages 288–299 of this Annual Report.

(c) Amounts represent the unpaid principal balance of modified PCI loans.

(d) As of December 31, 2013 and 2012, nonaccrual loans included $3.0 billion and $2.9 billion, respectively, of TDRs for which the borrowers were less than 90 days past due. For additional information about loans modified in a TDR that are on nonaccrual status, see Note 14 on pages 258–283 of this Annual Report.

Nonperforming assets

The following table presents information as of December 31, 2013 and 2012, about consumer, excluding credit card, nonperforming assets.

Nonperforming assets[a]

December 31, (in millions)	2013	2012
Nonaccrual loans[b]		
Residential real estate	**$ 6,864**	$ 8,460
Other consumer	**632**	714
Total nonaccrual loans	**7,496**	9,174
Assets acquired in loan satisfactions		
Real estate owned	**614**	647
Other	**41**	37
Total assets acquired in loan satisfactions	**655**	684
Total nonperforming assets	**$ 8,151**	$ 9,858

(a) At December 31, 2013 and 2012, nonperforming assets excluded: (1) mortgage loans insured by U.S. government agencies of $8.4 billion and $10.6 billion, respectively, that are 90 or more days past due; (2) real estate owned insured by U.S. government agencies of $2.0 billion and $1.6 billion, respectively; and (3) student loans insured by U.S. government agencies under the FFELP of $428 million and $525 million, respectively, that are 90 or more days past due. These amounts have been excluded from nonaccrual loans based upon the government guarantee.

(b) Excludes PCI loans that were acquired as part of the Washington Mutual transaction, which are accounted for on a pool basis. Since each pool is accounted for as a single asset with a single composite interest rate and an aggregate expectation of cash flows, the past-due status of the pools, or that of individual loans within the pools, is not meaningful. Because the Firm is recognizing interest income on each pool of loans, they are all considered to be performing.

Nonaccrual loans: The following table presents changes in the consumer, excluding credit card, nonaccrual loans for the years ended December 31, 2013 and 2012.

Nonaccrual loans

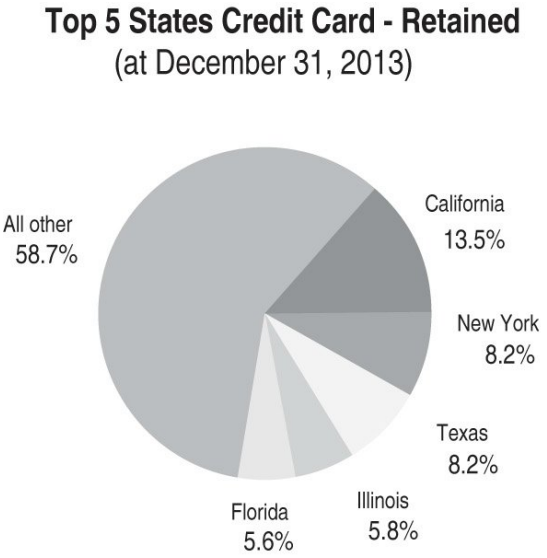
Year ended December 31, (in millions)	2013	2012	
Beginning balance	**$ 9,174**	$ 7,411	
Additions	**6,618**	12,605	[b]
Reductions:			
Principal payments and other[a]	**1,559**	1,445	
Charge-offs	**1,869**	2,771	
Returned to performing status	**3,793**	4,738	
Foreclosures and other liquidations	**1,075**	1,888	
Total reductions	**8,296**	10,842	
Net additions/(reductions)	**(1,678)**	1,763	
Ending balance	**$ 7,496**	$ 9,174	

(a) Other reductions includes loan sales.

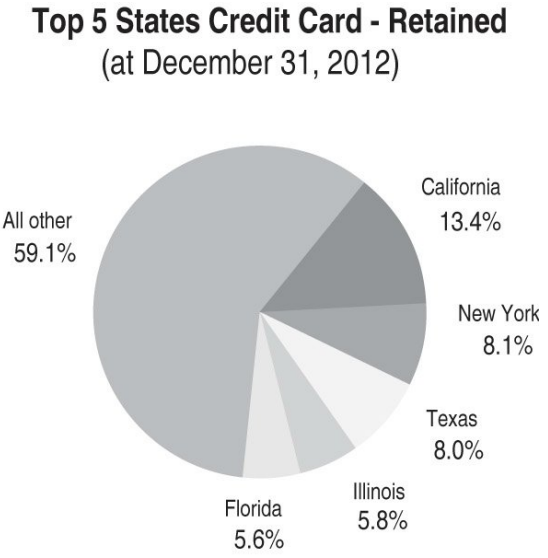
(b) Included $1.7 billion of Chapter 7 loans at September 30, 2012, and $1.6 billion as a result of reporting performing junior lien home equity loans that are subordinate to senior liens that are 90 days or more past due as nonaccrual loans based on regulatory guidance at March 31, 2012.

Nonaccrual loans in the residential real estate portfolio totaled $6.9 billion at December 31, 2013, of which 34% were greater than 150 days past due, compared with $8.5 billion at December 31, 2012, of which 42% were greater than 150 days past due. In the aggregate, the unpaid principal balance of residential real estate loans greater than 150 days past due was charged down by approximately 51% and 52% to estimated net realizable value of the collateral at December 31, 2013 and 2012, respectively. The elongated foreclosure processing timelines are expected to continue to result in elevated levels of nonaccrual loans in the residential real estate portfolios.

At December 31, 2012, the Firm reported, in accordance with regulatory guidance, $1.7 billion of residential real estate and auto loans that were discharged under Chapter 7 bankruptcy and not reaffirmed by the borrower ("Chapter 7 loans") as collateral-dependent nonaccrual TDRs, regardless of their delinquency status. Pursuant to that guidance, these Chapter 7 loans were charged off to the net realizable value of the collateral, resulting in $800 million of charge-offs for the year ended December 31, 2012. The Firm expects to recover a significant amount of these losses over time as principal payments are received. The Firm also began reporting performing junior liens that are subordinate to senior liens that are 90 days or more past due as nonaccrual loans in the first quarter of 2012, based upon regulatory guidance. Nonaccrual loans included $3.0 billion of loans at December 31, 2012 based upon the regulatory guidance noted above. The prior year was not restated for the policy changes.



Real estate owned ("REO"): REO assets are managed for prompt sale and disposition at the best possible economic value. REO assets are those individual properties where the Firm receives the property in satisfaction of a debt (e.g., by taking legal title or physical possession). The Firm generally recognizes REO assets at the completion of the foreclosure process or upon execution of a deed in lieu of foreclosure with the borrower. REO assets, excluding those insured by U.S. government agencies, decreased by $33 million from $647 million at December 31, 2012, to $614 million at December 31, 2013.



At December 31, 2013 and 2012, the Firm had non-PCI residential real estate loans, excluding those insured by the U.S. government agencies, with a carrying value of $2.1 billion and $3.4 billion, respectively; not included in REO, that were in the process of active or suspended foreclosure. The Firm also had PCI residential real estate loans that were in the process of active or suspended foreclosure at December 31, 2013 and 2012, with an unpaid principal balance of $4.8 billion and $8.2 billion, respectively.

Credit Card

Total credit card loans were $127.8 billion at December 31, 2013, a decrease of $202 million from December 31, 2012. The 30+ day delinquency rate decreased to 1.67% at December 31, 2013, from 2.10% at December 31, 2012. For the years ended December 31, 2013 and 2012, the net charge-off rates were 3.14% and 3.95% respectively. Charge-offs have improved compared with a year ago as a result of continued improvement in delinquent loans. The credit card portfolio continues to reflect a well-seasoned, largely rewards-based portfolio that has good U.S. geographic diversification. The greatest geographic concentration of credit card retained loans is in California, which represented 13% of total retained loans at both December 31, 2013 and 2012. Loan outstanding concentration for the top five states of California, New York, Texas, Illinois and Florida consisted of $52.7 billion in receivables, or 41% of the retained loan portfolio, at December 31, 2013, compared with $52.3 billion, or 41%, at December 31, 2012.

Geographic composition of Credit Card loans

Modifications of credit card loans

At December 31, 2013 and 2012, the Firm had $3.1 billion and $4.8 billion, respectively, of credit card loans outstanding that have been modified in TDRs. These balances included both credit card loans with modified payment terms and credit card loans that reverted back to their pre-modification payment terms because the cardholder did not comply with the modified payment terms. The decrease in modified credit card loans outstanding from December 31, 2012, was attributable to a reduction in new modifications as well as ongoing payments and charge-offs on previously modified credit card loans.

Consistent with the Firm's policy, all credit card loans typically remain on accrual status until charged-off. However, the Firm establishes an allowance, which is offset against loans and charged to interest income, for the estimated uncollectible portion of accrued interest and fee income.

For additional information about loan modification programs to borrowers, see Note 14 on pages 258–283 of this Annual Report.

WHOLESALE CREDIT PORTFOLIO

The wholesale credit environment remained favorable throughout 2013 driving an increase in commercial client activity. Discipline in underwriting across all areas of lending continues to remain a key point of focus, consistent with evolving market conditions and the Firm's risk management activities. The wholesale portfolio is actively managed, in part by conducting ongoing, in-depth reviews of credit quality and of industry, product and client concentrations. During the year, wholesale criticized assets and nonperforming assets decreased from higher levels experienced in 2012, including a reduction in nonaccrual loans by 39%.

As of December 31, 2013, wholesale exposure (primarily CIB, CB and AM) increased by $13.7 billion from December 31, 2012, primarily driven by increases of $11.4 billion in lending-related commitments and $8.4 billion in loans reflecting increased client activity primarily in CB and AM. These increases were partially offset by a $9.2 billion decrease in derivative receivables. Derivative receivables decreased predominantly due to reductions in interest rate derivatives driven by an increase in interest rates and reductions in commodity derivatives due to market movements. The decreases were partially offset by an increase in equity derivatives driven by a rise in equity markets.

Wholesale credit portfolio

December 31,	Credit exposure		Nonperforming[d]	
(in millions)	**2013**	2012	**2013**	2012
Loans retained	**$308,263**	$306,222	**$ 821**	$ 1,434

Total wholesale credit-related assets	**414,067**	411,814	**1,459**	1,956
Lending-related commitments	**446,232**	434,814	**206**	355
Total wholesale credit exposure	**$860,299**	$846,628	**$ 1,665**	$ 2,311
Credit Portfolio Management derivatives notional, net[c]	**$ (27,996)**	$ (27,447)	**$ (5)**	$ (25)
Liquid securities and other cash collateral held against derivatives	**(14,435)**	(15,201)	**NA**	NA

(a) During 2013, certain loans that resulted from restructurings that were previously classified as performing were reclassified as nonperforming loans. Prior periods were revised to conform with the current presentation.

(b) Receivables from customers and other primarily includes margin loans to prime and retail brokerage customers; these are classified in accrued interest and accounts receivable on the Consolidated Balance Sheets.

(c) Represents the net notional amount of protection purchased and sold through credit derivatives used to manage both performing and nonperforming wholesale credit exposures; these derivatives do not qualify for hedge accounting under U.S. GAAP. Excludes the synthetic credit portfolio. For additional information, see Credit derivatives on pages 137–138, and Note 6 on pages 220–233 of this Annual Report.

(d) Excludes assets acquired in loan satisfactions.

The following table presents summaries of the maturity and ratings profiles of the wholesale credit portfolio as of December 31, 2013 and 2012. The ratings scale is based on the Firm's internal risk ratings, which generally correspond to the ratings as defined by S&P and Moody's.

Wholesale credit exposure – maturity and ratings profile

	Maturity profile[e]				Ratings profile			
December 31, 2013 (in millions, except ratios)	Due in 1 year or less	Due after 1 year through 5 years	Due after 5 years	**Total**	Investment-grade AAA/Aaa to BBB-/Baa3	Noninvestment-grade BB+/Ba1 & below	**Total**	Total % of IG
Loans retained	**$ 108,392**	**$ 124,111**	**$ 75,760**	**$ 308,263**	**$ 226,070**	**$ 82,193**	**$ 308,263**	**73%**

Derivative receivables				74,983			74,983	
Less: Liquid securities and other cash collateral held against derivatives				(15,201)			(15,201)	
Total derivative receivables, net of all collateral	13,344	17,310	29,128	59,782	50,069	9,713	59,782	84
Lending-related commitments	164,327	261,261	9,226	434,814	347,316	87,498	434,814	80
Subtotal	292,898	396,244	111,676	800,818	611,831	188,987	800,818	76
Loans held-for-sale and loans at fair value[a]				6,961			6,961	
Receivables from customers and other				23,648			23,648	
Total exposure – net of liquid securities and other cash collateral held against derivatives				$ 831,427			$ 831,427	
Credit Portfolio Management derivatives net notional by reference entity ratings profile[b][c][d]	$ (1,579)	$ (16,475)	$ (9,393)	$ (27,447)	$ (24,622)	$ (2,825)	$ (27,447)	90%

(a) Represents loans held-for-sale primarily related to syndicated loans and loans transferred from the retained portfolio, and loans at fair value.
(b) These derivatives do not quality for hedge accounting under U.S. GAAP. Excludes the synthetic credit portfolio.
(c) The notional amounts are presented on a net basis by underlying reference entity and the ratings profile shown is based on the ratings of the reference entity on which protection has been purchased.
(d) Predominantly all of the credit derivatives entered into by the Firm where it has purchased protection, including Credit Portfolio Management derivatives, are executed with investment grade counterparties.
(e) The maturity profile of retained loans, lending-related commitments and derivative receivables is based on remaining contractual maturity. Derivatives contracts that are in a receivable position at December 31, 2013, may become a payable prior to maturity based on their cash flow profile or changes in market conditions. Prior to this Annual Report, the maturity profile of derivative receivables was based on the maturity profile of average exposure (see pages 135–136 of this Annual Report for more detail); prior period amounts have been revised to conform to the current presentation.

Wholesale credit exposure – selected industry exposures

The Firm focuses on the management and diversification of its industry exposures, paying particular attention to industries with actual or potential credit concerns. Exposures deemed criticized align with the U.S. banking regulators' definition of criticized exposures, which consist of the special mention, substandard and doubtful categories. The total criticized component of the portfolio, excluding loans held-for-sale and loans at fair value, decreased by 22% to $12.2 billion at December 31, 2013, from $15.6 billion at December 31, 2012, primarily due to repayments and sales.

Below are summaries of the top 25 industry exposures as of December 31, 2013 and 2012. For additional information on industry concentrations, see Note 5 on page 219 of this Annual Report.

As of or for the year ended **December 31, 2013** (in millions)	Credit exposure[d]	Investment-grade	Noninvestment-grade[e]			Selected metrics			
			Noncriticized	Criticized performing	Criticized nonperforming	30 days or more past due and accruing loans	Net charge-offs/ (recoveries)	Credit derivative hedges[f]	Liquid securities and other cash collateral held against derivative receivables

(a) The industry rankings presented in the table as of December 31, 2012, are based on the industry rankings of the corresponding exposures at December 31, 2013, not actual rankings of such exposures at December 31, 2012.

(b) In addition to the credit risk exposure to states and municipal governments (both U.S. and non-U.S.) at December 31, 2013 and 2012, noted above, the Firm held $7.9 billion and $18.2 billion, respectively, of trading securities and $30.4 billion and $21.7 billion, respectively, of AFS and HTM securities issued by U.S. state and municipal governments. For further information, see Note 3 and Note 12 on pages 195–215 and 249–254, respectively, of this Annual Report.

(c) All other includes: individuals, private education and civic organizations; SPEs; and holding companies, representing approximately 64%, 22% and 5%, respectively, at December 31, 2013, and 57%, 28% and 7%, respectively, at December 31, 2012.

(d) Credit exposure is net of risk participations and excludes the benefit of "Credit Portfolio Management derivatives net notional" held against derivative receivables or loans and "Liquid securities and other cash collateral held against derivative receivables".

(e) Exposures deemed criticized correspond to special mention, substandard and doubtful categories as defined by US bank regulatory agencies.

(f) Represents the net notional amounts of protection purchased and sold through credit derivatives used to manage the credit exposures; these derivatives do not qualify for hedge accounting under U.S. GAAP. The all other category includes purchased credit protection on certain credit indices. Credit Portfolio Management derivatives excludes the synthetic credit portfolio.

Presented below is a discussion of several industries to which the Firm has significant exposure and continues to monitor because of actual or potential credit concerns. For additional information, refer to the tables on the previous pages.

- Real estate: Exposure to this industry increased by $10.9 billion or 14%, in 2013 to $87.1 billion. The increase was largely driven by growth in multifamily exposure in the CB. The credit quality of this industry improved as the investment-grade portion of the exposures to this industry increased by 26% from 2012. The ratio of nonaccrual retained loans to total retained loans decreased to 0.50% at December 31, 2013 from 0.86% at December 31, 2012. For further information on commercial real estate loans, see Note 14 on pages 258–283 of this Annual Report.
- **State and municipal governments:** Exposure to this sector decreased by $6.2 billion in 2013 to $35.7 billion. Lending-related commitments comprise approximately 66% of the exposure to this sector, generally in the form of liquidity and standby letter of credit facilities backing bonds and commercial paper. The credit quality of the portfolio remains high as 97% of the portfolio was rated investment-grade, unchanged from 2012. The Firm continues to actively monitor this exposure in light of the challenging environment faced by certain state and municipal governments. For further discussion of commitments for bond liquidity and standby letters of credit, see Note 29 on pages 318–324 of this Annual Report.

Loans

In the normal course of its wholesale business, the Firm provides loans to a variety of customers, ranging from large corporate and institutional clients to high-net-worth individuals. For further discussion on loans, including information on credit quality indicators, see Note 14 on pages 258–283 of this Annual Report.

The Firm actively manages its wholesale credit exposure. One way of managing credit risk is through secondary market sales of loans and lending-related commitments. During 2013 and 2012, the Firm sold $16.3 billion and $8.4 billion, respectively, of loans and lending-related commitments.

The following table presents the change in the nonaccrual loan portfolio for the years ended December 31, 2013 and 2012. Nonaccrual wholesale loans decreased by $673 million from December 31, 2012, largely reflecting paydowns.

Wholesale nonaccrual loan activity

Year ended December 31, (in millions)	2013	2012
Beginning balance	**$ 1,717**	$ 2,581
Additions[a]	**1,293**	1,920
Reductions:		
Paydowns and other	**1,075**	1,784
Gross charge-offs	**241**	335
Returned to performing status	**279**	240
Sales	**371**	425
Total reductions	**1,966**	2,784
Net reductions	**(673)**	(864)
Ending balance	**$ 1,044**	$ 1,717

(a) During 2013, certain loans that resulted from restructurings that were previously classified as performing were reclassified as nonperforming loans. Prior periods were revised to conform with the current presentation.

The following table presents net charge-offs/recoveries, which are defined as gross charge-offs less recoveries, for the years ended December 31, 2013 and 2012. The amounts in the table below do not include gains or losses from sales of nonaccrual loans.

Wholesale net charge-offs/(recoveries)

Year ended December 31, (in millions, except ratios)	2013	2012
Loans – reported		
Average loans retained	**$ 307,340**	$ 291,980
Gross charge-offs	**241**	346
Gross recoveries	**(225)**	(524)
Net charge-offs/(recoveries)	**16**	(178)
Net charge-off/(recovery) rate	**0.01%**	(0.06)%

Receivables from customers

Receivables from customers primarily represent margin loans to prime and retail brokerage clients that are collateralized through a pledge of assets maintained in clients' brokerage accounts that are subject to daily minimum collateral requirements. In the event that the collateral value decreases, a maintenance margin call is made to the client to provide additional collateral into the account. If additional collateral is not provided by the client, the client's position may be liquidated by the Firm to meet the minimum collateral requirements.

Lending-related commitments

JPMorgan Chase uses lending-related financial instruments, such as commitments (including revolving credit facilities) and guarantees, to meet the financing needs of its customers. The contractual amounts of these financial instruments represent the maximum possible credit risk should the counterparties draw down on these commitments or the Firm fulfills its obligations under these guarantees, and the counterparties subsequently fails to perform according to the terms of these contracts.

In the Firm's view, the total contractual amount of these wholesale lending-related commitments is not representative of the Firm's actual future credit exposure or funding requirements. In determining the amount of credit risk exposure the Firm has to wholesale lending-related commitments, which is used as the basis for allocating credit risk capital to these commitments, the Firm has established a "loan-equivalent" amount for each commitment; this amount represents the portion of the unused commitment or other contingent exposure that is expected, based on average portfolio historical experience, to become drawn upon in an event of a default by an obligor. The loan-equivalent amount of the Firm's lending-related commitments was $218.9 billion and $223.7 billion as of December 31, 2013 and 2012, respectively.

Clearing services

The Firm provides clearing services for clients entering into securities and derivative transactions. Through the provision of these services the Firm is exposed to the risk of non-performance by its clients and may be required to share in losses incurred by central counterparties ("CCPs"). Where possible, the Firm seeks to mitigate its credit risk to its clients through the collection of adequate margin at inception and throughout the life of the transactions and can also cease provision of clearing services if clients do not adhere to their obligations under the clearing agreement. For further discussion of Clearing services, see Note 29 on 318–324, of this Annual Report.

Derivative contracts

In the normal course of business, the Firm uses derivative instruments predominantly for market-making activities. Derivatives enable customers to manage exposures to fluctuations in interest rates, currencies and other markets. The Firm also uses derivative instruments to manage its own credit exposure. The nature of the counterparty and the settlement mechanism of the derivative affect the credit risk to which the Firm is exposed. For over-the-counter ("OTC") derivatives the Firm is exposed to the credit risk of the derivative counterparty. For exchange traded derivatives ("ETD") such as futures and options, and "cleared" over-the-counter ("OTC-cleared") derivatives, the firm is generally exposed to the credit risk of the relevant CCP. Where possible, the Firm seeks to mitigate its credit risk exposures arising on derivatives transactions through the use of legally enforceable master netting arrangements and collateral agreements. For further discussion of derivative contracts, counterparties and settlement types, see Note 6 on pages 220–233 of this Annual Report. The following table summarizes the net derivative receivables for the periods presented.

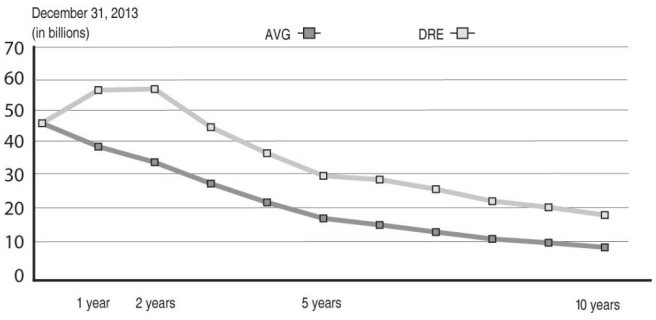
Derivative receivables

	Derivative receivables	
December 31, (in millions)	**2013**	2012
Interest rate	**$ 25,782**	$ 39,205
Credit derivatives	**1,516**	1,735
Foreign exchange	**16,790**	14,142
Equity	**12,227**	9,266
Commodity	**9,444**	10,635
Total, net of cash collateral	**65,759**	74,983
Liquid securities and other cash collateral held against derivative receivables	**(14,435)**	(15,201)
Total, net of all collateral	**$ 51,324**	$ 59,782

Derivative receivables reported on the Consolidated Balance Sheets were $65.8 billion and $75.0 billion at December 31, 2013 and 2012, respectively. These amounts represent the fair value of the derivative contracts, after giving effect to legally enforceable master netting agreements and cash collateral held by the Firm. However, in management's view, the appropriate measure of current credit risk should also take into consideration additional liquid securities (primarily U.S. government and agency securities and other G7 government bonds) and other cash collateral held by the Firm aggregating $14.4 billion and $15.2 billion at December 31, 2013 and 2012, respectively, that may be used as security when the fair value of the client's exposure is in the Firm's favor.

In addition to the collateral described in the preceding paragraph, the Firm also holds additional collateral (primarily: cash; G7 government securities; other liquid government-agency and guaranteed securities; and corporate debt and equity securities) delivered by clients at the initiation of transactions, as well as collateral related to contracts that have a non-daily call frequency and collateral that the Firm has agreed to return but has not yet settled as of the reporting date. Though this collateral does not reduce the balances and is not included in the table above, it is available as security against potential exposure that could arise should the fair value of the client's derivative transactions move in the Firm's favor. As of December 31, 2013 and 2012, the Firm held $29.0 billion, of this additional collateral. The derivative receivables fair value, net of all collateral, also does not include other credit enhancements, such as letters of credit. For additional information on the Firm's use of collateral agreements, see Note 6 on pages 220–233 of this Annual Report.

While useful as a current view of credit exposure, the net fair value of the derivative receivables does not capture the potential future variability of that credit exposure. To capture the potential future variability of credit exposure, the Firm calculates, on a client-by-client basis, three measures of potential derivatives-related credit loss: Peak, Derivative Risk Equivalent ("DRE"), and Average exposure ("AVG"). These measures all incorporate netting and collateral benefits, where applicable.



Peak exposure to a counterparty is an extreme measure of exposure calculated at a 97.5% confidence level. DRE exposure is a measure that expresses the risk of derivative exposure on a basis intended to be equivalent to the risk of loan exposures. The measurement is done by equating the unexpected loss in a derivative counterparty exposure (which takes into consideration both the loss volatility and the credit rating of the counterparty) with the unexpected loss in a loan exposure (which takes into consideration only the credit rating of the counterparty). DRE is a less extreme measure of potential credit loss than Peak and is the primary measure used by the Firm for credit approval of derivative transactions.

Finally, AVG is a measure of the expected fair value of the Firm's derivative receivables at future time periods, including the benefit of collateral. AVG exposure over the total life of the derivative contract is used as the primary metric for pricing purposes and is used to calculate credit capital and the CVA, as further described below. The three year AVG exposure was $35.4 billion and $42.3 billion at December 31, 2013 and 2012, respectively, compared with derivative receivables, net of all collateral, of $51.3 billion and $59.8 billion at December 31, 2013 and 2012, respectively.

The fair value of the Firm's derivative receivables incorporates an adjustment, the CVA, to reflect the credit quality of counterparties. The CVA is based on the Firm's AVG to a counterparty and the counterparty's credit spread in the credit derivatives market. The primary components of changes in CVA are credit spreads, new deal activity or unwinds, and changes in the underlying market environment. The Firm believes that active risk management is essential to controlling the dynamic credit risk in the derivatives portfolio. In addition, the Firm's risk management process takes into consideration the potential impact of wrong-way risk, which is broadly defined as the potential for increased correlation between the Firm's exposure to a counterparty (AVG) and the counterparty's credit quality. Many factors may influence the nature and magnitude of these correlations over time. To the extent that these correlations are identified, the Firm may adjust the CVA associated with that counterparty's AVG. The Firm risk manages exposure to changes in CVA by entering into credit derivative transactions, as well as interest rate, foreign exchange, equity and commodity derivative transactions.

The accompanying graph shows exposure profiles to derivatives over the next 10 years as calculated by the DRE and AVG metrics. The two measures generally show that exposure will decline after the first year, if no new trades are added to the portfolio.

Exposure profile of derivatives measures

The following table summarizes the ratings profile by derivative counterparty of the Firm's derivative receivables, including credit derivatives, net of other liquid securities collateral, for the dates indicated.

Ratings profile of derivative receivables

Rating equivalent	2013		2012	
December 31, (in millions, except ratios)	Exposure net of all collateral	% of exposure net of all collateral	Exposure net of all collateral	% of exposure net of all collateral
AAA/Aaa to AA-/Aa3	**$ 12,453**	**24%**	$ 19,964	34%
A+/A1 to A-/A3	**17,243**	**34**	12,039	20
BBB+/Baa1 to BBB-/Baa3	**14,981**	**29**	18,066	30
BB+/Ba1 to B-/B3	**5,820**	**11**	8,434	14
CCC+/Caa1 and below	**827**	**2**	1,279	2
Total	**$ 51,324**	**100%**	$ 59,782	100%

As noted above, the Firm uses collateral agreements to mitigate counterparty credit risk. The percentage of the Firm's derivatives transactions subject to collateral agreements – excluding foreign exchange spot trades, which are not typically covered by collateral agreements due to their short maturity – was 86% as of December 31, 2013, largely unchanged compared with December 31, 2012.

Credit derivatives

The Firm uses credit derivatives for two primary purposes: first, in its capacity as a market-maker; and second, as an end-user, to manage the Firm's own credit risk associated with various exposures.

For a detailed description of credit derivatives, see Credit derivatives in Note 6 on pages 220–233 of this Annual Report.

Credit portfolio management activities

Included in end-user activities are credit derivatives used to mitigate the credit risk associated with traditional lending activities (loans and unfunded commitments) and derivatives counterparty exposure in the Firm's wholesale businesses (collectively, "credit portfolio management" activities). Information on credit portfolio management activities is provided in the table below. For further information on derivatives used in credit portfolio management activities, see Credit derivatives in Note 6 on pages 220–233 of this Annual Report.

The Firm also uses credit derivatives as an end-user to manage other exposures, including credit risk arising from certain AFS securities and from certain securities held in the Firm's market-making businesses. These credit derivatives, as well as the synthetic credit portfolio, are not included in credit portfolio management activities; for further information on these credit derivatives as well as credit derivatives used in the Firm's capacity as a market maker in credit derivatives, see Credit derivatives in Note 6 on pages 231–233 of this Annual Report.

Credit derivatives used in credit portfolio management activities

	Notional amount of protection purchased and sold [(a)]	
December 31, (in millions)	**2013**	2012
Credit derivatives used to manage:		
Loans and lending-related commitments	**$ 2,764**	$ 2,166
Derivative receivables	**25,328**	25,347
Total net protection purchased	**28,092**	27,513
Total net protection sold	**96**	66
Credit portfolio management derivatives notional, net	**$ 27,996**	$ 27,447

(a) Amounts are presented net, considering the Firm's net protection purchased or sold with respect to each underlying reference entity or index.

The credit derivatives used in credit portfolio management activities do not qualify for hedge accounting under U.S. GAAP; these derivatives are reported at fair value, with gains and losses recognized in principal transactions revenue. In contrast, the loans and lending-related commitments being risk-managed are accounted for on an accrual basis. This asymmetry in accounting treatment, between loans and lending-related commitments and the credit derivatives used in credit portfolio management activities, causes earnings volatility that is not representative, in the Firm's view, of the true changes in value of the Firm's overall credit exposure.

The effectiveness of the Firm's credit default swap ("CDS") protection as a hedge of the Firm's exposures may vary depending on a number of factors, including the named reference entity (i.e., the Firm may experience losses on specific exposures that are different than the named reference entities in the purchased CDS), and the contractual terms of the CDS (which may have a defined credit event that does not align with an actual loss realized by the Firm) and the maturity of the Firm's CDS protection (which in some cases may be shorter than the Firm's exposures). However, the Firm generally seeks to purchase credit protection with a maturity date that is the same or similar to the maturity date of the exposure for which the protection was purchased, and remaining differences in maturity are actively monitored and managed by the Firm.

Credit portfolio hedges

The following table sets out the fair value related to the Firm's credit derivatives used in credit portfolio management activities, the fair value related to the CVA (which reflects the credit quality of derivatives counterparty exposure), as well as certain other hedges used in the risk management of CVA. These results can vary from period-to-period due to market conditions that affect specific positions in the portfolio.

Net gains and losses on credit portfolio hedges

Year ended December 31, (in millions)	**2013**	2012	2011
Hedges of loans and lending-related commitments	**$ (142)**	$ (163)	$ (32)
CVA and hedges of CVA	**(130)**	127	(769)
Net gains/(losses)	**$ (272)**	$ (36)	$ (801)

COMMUNITY REINVESTMENT ACT EXPOSURE

The Community Reinvestment Act ("CRA") encourages banks to meet the credit needs of borrowers in all segments of their communities, including neighborhoods with low or moderate incomes. The Firm is a national leader in community development by providing loans, investments and community development services in communities across the United States.

At December 31, 2013 and 2012, the Firm's CRA loan portfolio was approximately $18 billion and $16 billion, respectively. At December 31, 2013 and 2012, 50% and 62%, respectively, of the CRA portfolio were residential mortgage loans; 26% and 13%, respectively, were commercial real estate loans; 16% and 18%, respectively, were business banking loans; and 8% and 7%, respectively, were other loans. CRA nonaccrual loans were 3% and 4%, respectively, of the Firm's total nonaccrual loans. For the years ended December 31, 2013 and 2012, net charge-offs in the CRA portfolio were 1% and 3%, respectively, of the Firm's net charge-offs in both years.

ALLOWANCE FOR CREDIT LOSSES

JPMorgan Chase's allowance for loan losses covers the consumer (primarily scored) portfolio; and wholesale (risk-rated) portfolio. The allowance represents management's estimate of probable credit losses inherent in the Firm's loan portfolio. Management also determines an allowance for wholesale and certain consumer lending-related commitments.

The allowance for loan losses includes an asset-specific component, a formula-based component, and a component related to PCI loans. For a further discussion of the components of the allowance for credit losses and related management judgments, see Critical Accounting Estimates Used by the Firm on pages 174–178 and Note 15 on pages 284–287 of this Annual Report.

At least quarterly, the allowance for credit losses is reviewed by the Chief Risk Officer, the Chief Financial Officer and the Controller of the Firm, and discussed with the Risk Policy and Audit Committees of the Board of Directors of the Firm. As of December 31, 2013, JPMorgan Chase deemed the allowance for credit losses to be appropriate and sufficient to absorb probable credit losses inherent in the portfolio.

The allowance for credit losses was $17.0 billion at December 31, 2013, a decrease of $5.6 billion from $22.6 billion at December 31, 2012. The decrease in the allowance for loan losses was due to a $5.5 billion reduction in the consumer portfolio allowance reflecting lower estimated losses due to the impact of improved home prices on the residential real estate portfolio and improved delinquency trends in the residential real estate and credit card portfolios. However, relatively high unemployment, uncertainties regarding the ultimate success of loan modifications, and the risk attributes of certain loans within the portfolio (e.g., loans with high LTV ratios, junior lien loans that are subordinate to a delinquent or modified senior lien, HELOCs with future payment recast) continued to contribute to uncertainty regarding the performance of the residential real estate portfolio; these uncertainties were considered in estimating the allowance for loan losses.

The consumer, excluding credit card, allowance for loan losses decreased $3.8 billion from December 31, 2012, of which $2.3 billion was from the real estate portfolio non credit-impaired allowance and $1.6 billion from the PCI allowance. The decrease in the allowance was largely due to the impact of improved home prices as well as improved delinquency trends. For additional information about delinquencies and nonaccrual loans in the consumer, excluding credit card, loan portfolio, see Consumer Credit Portfolio on pages 120–129 and Note 14 on pages 258–283 of this Annual Report.

The credit card allowance for loan losses decreased by $1.7 billion from December 31, 2012. The decrease included reductions in both the asset-specific and formula-based allowance. The reduction in the asset-specific allowance, which relates to loans restructured in TDRs, largely reflects the changing profile of the TDR portfolio. The volume of new TDRs, which have higher loss rates due to expected redefaults, continues to decrease, and the loss rate on existing TDRs is also decreasing over time as previously restructured loans continue to perform. The reduction in the formula-based allowance was primarily driven by the continuing trend of improving delinquencies and a reduction in bankruptcies. For additional information about delinquencies in the credit card loan portfolio, see Consumer Credit Portfolio on pages 120–129 and Note 14 on pages 258–283 of this Annual Report.

The wholesale allowance was relatively unchanged reflecting a favorable credit environment and stable credit quality trends.

The allowance for lending-related commitments for both the consumer, excluding credit card, and wholesale portfolios, which is reported in other liabilities, was $705 million and $668 million at December 31, 2013, and December 31, 2012, respectively.

Summary of changes in the allowance for credit losses

Year ended December 31, (in millions, except ratios)	2013 Consumer, excluding credit card	2013 Credit card	2013 Wholesale	2013 Total	2012 Consumer, excluding credit card	2012 Credit card	2012 Wholesale	2012 Total

(a) Write-offs of PCI loans are recorded against the allowance for loan losses when actual losses for a pool exceed estimated losses that were recorded as purchase accounting adjustments at the time of acquisition. Any write-offs of PCI loans are recognized when the underlying loan is removed from a pool (e.g., upon liquidation).
(b) Includes risk-rated loans that have been placed on nonaccrual status and loans that have been modified in a TDR.
(c) The Firm's policy is generally to exempt credit card loans from being placed on nonaccrual status as permitted by regulatory guidance.
(d) Net charge-offs and net charge-off rates for the year ended December 31, 2012, included $800 million of charge-offs of Chapter 7 loans. See Consumer Credit Portfolio on pages 120–129 of this Annual Report for further details.

Provision for credit losses

For the year ended December 31, 2013, the provision for credit losses was $225 million, down by 93% from 2012. The provision for the year ended December 31, 2013 included a $5.6 billion reduction in the allowance for loan losses, due to the impact of improved home prices on the residential real estate portfolio and improved delinquency trends in the residential real estate and credit card portfolios.

Total consumer provision for credit losses was $308 million in 2013, compared with $3.7 billion in 2012. The decline in the total consumer provision was attributable to continued reductions in the allowance for loan losses, resulting from the impact of improved home prices on the residential real estate portfolio, and improved delinquency trends in the residential real estate and credit card portfolios, as well as lower net charge-offs, partially due to the prior year incremental charge-offs of $800 million recorded in accordance with regulatory guidance on certain loans discharged under Chapter 7 bankruptcy.

In 2013 the wholesale provision for credit losses was a benefit of $83 million, compared with a benefit of $361 million in 2012. The current periods' wholesale provision for credit losses reflected a favorable credit environment and stable credit quality trends. For further information on the provision for credit losses, see the Consolidated Results of Operations on pages 71–74 of this Annual Report.

Year ended December 31,	Provision for loan losses			Provision for lending-related commitments			Total provision for credit losses

MARKET RISK MANAGEMENT

Market risk is the potential for adverse changes in the value of the Firm's assets and liabilities resulting from changes in market variables such as interest rates, foreign exchange rates, equity prices, commodity prices, implied volatilities or credit spreads.

Market risk management

Market Risk is an independent risk management function that works in close partnership with the lines of business, including Treasury and CIO within Corporate/Private Equity, to identify and monitor market risks throughout the Firm and to define market risk policies and procedures. The Market Risk function reports to the Firm's CRO.

Market Risk seeks to control risk, facilitate efficient risk/return decisions, reduce volatility in operating performance and provide transparency into the Firm's market risk profile for senior management, the Board of Directors and regulators. Market Risk is responsible for the following functions:

- Establishment of a market risk policy framework
- Independent measurement, monitoring and control of line of business and firmwide market risk
- Definition, approval and monitoring of limits
- Performance of stress testing and qualitative risk assessments

Risk identification and classification

Each line of business is responsible for the management of the market risks within its units. The independent risk management group responsible for overseeing each line of business is charged with ensuring that all material market risks are appropriately identified, measured, monitored and managed in accordance with the risk policy framework set out by Market Risk.

Risk measurement

Tools used to measure risk

Because no single measure can reflect all aspects of market risk, the Firm uses various metrics, both statistical and nonstatistical, including:

- VaR
- Economic-value stress testing
- Nonstatistical risk measures
- Loss advisories
- Profit and loss drawdowns
- Risk identification for large exposures ("RIFLEs")
- Earnings-at-risk

The following table summarizes by LOB the predominant business activities that give rise to market risks, and the market risk management tools utilized to manage those risks; CB is not presented in the table below as it does not give rise to significant market risk.

Risk identification and classification for business activities

LOB	Predominant business activities and related market risks	Positions included in Risk Management VaR	Positions included in other risk measures *(Not included in Risk Management VaR)*[a][b]
CIB	• Makes markets and services its clients' activity in products across fixed income, foreign exchange, equities and commodities • Market risk arising from market making and other derivatives activities which may lead to a potential decline in net income as a result of changes in market prices; e.g. rates and credit spreads	• Trading assets/liabilities - debt and equity instruments, and derivatives • Certain securities purchased under resale agreements and securities borrowed • Certain securities loaned or sold under repurchase agreements • Structured notes, see Note 4 on pages 215-218 of this Annual Report • Derivative CVA • Hedges of the retained loan portfolio and CVA, classified as derivatives	• Principal investing activities • Retained loan portfolio • Deposits
CCB	• Origination and servicing of mortgage loans • Complex, non-linear interest rate risks, as well as basis risk • Non-linear risk arises primarily from prepayment options embedded in mortgages and changes in the probability of newly originated mortgage commitments actually closing • Basis risk results from differences in the relative movements of the rate indices underlying mortgage exposure and other interest rates	*Mortgage Banking* • Mortgage pipeline loans, classified as derivatives • Warehouse loans, classified as trading assets - debt instruments • MSRs • Hedges of the MSRs and loans, classified as derivatives • Interest only securities, classified as trading assets and related hedges classified as derivatives	• Retained loan portfolio • Deposits
Corporate/ Private equity	• Predominantly responsible for managing the Firm's liquidity, funding, structural interest rate and foreign exchange risks arising from activities undertaken by the Firm's four major reportable business segments, as well as executing the Firm's capital plan	*Treasury and CIO* • Primarily derivative positions measured at fair value through earnings, classified as derivatives	• Private Equity • Investment securities portfolio and related hedges • Deposits • Long-term debt and related hedges
AM	• Market risk arising from the Firm's initial capital investments in products, such as mutual funds, which are managed by AM	• Hedges of seed capital investments, classified as derivatives	• Initial seed capital investments • Capital invested alongside third-party investors, typically in privately distributed collective vehicles managed by AM (i.e., Co-Investments) • Retained loan portfolio • Deposits

(a) Additional market risk positions result from debit valuation adjustments ("DVA") taken on structured notes and derivative liabilities to reflect the credit quality of the Firm. Neither DVA nor the additional market risk positions resulting from it are included in VaR.

(b) During the fourth quarter of 2013, the Firm implemented a funding valuation adjustment ("FVA") framework in order to incorporate the impact of funding into its valuation estimates for OTC derivatives and structured notes. FVA gives rise to additional market risk positions, and is not currently included in VaR. Effective in the first quarter of 2014, the FVA market risk exposure and its associated hedges will be included in CIB's average VaR.

Value-at-risk

JPMorgan Chase utilizes VaR, a statistical risk measure, to estimate the potential loss from adverse market moves in a normal market environment consistent with the day-to-day risk decisions made by the lines of business.

The Firm has one overarching VaR model framework, Risk Management VaR, used for risk management purposes across the Firm, which utilizes historical simulation based on data for the previous 12 months. The framework's approach assumes that historical changes in market values are representative of the distribution of potential outcomes in the immediate future. The Firm believes the use of Risk Management VaR provides a stable measure of VaR that closely aligns to the day-to-day risk management decisions made by the lines of business and provides necessary/appropriate information to respond to risk events on a daily basis.

Risk Management VaR is calculated assuming a one-day holding period and an expected tail-loss methodology which approximates a 95% confidence level. This means that, assuming current changes in market values are consistent with the historical changes used in the simulation, the Firm would expect to incur VaR "band breaks," defined as losses greater than that predicted by VaR estimates, not more than five times every 100 trading days. The number of VaR band breaks observed can differ from the statistically expected number of band breaks if the current level of market volatility is materially different from the level of market volatility during the twelve months of historical data used in the VaR calculation.

Underlying the overall VaR model framework are individual VaR models that simulate historical market returns for individual products and/or risk factors. To capture material market risks as part of the Firm's risk management framework, comprehensive VaR model calculations are performed daily for businesses whose activities give rise to market risk. These VaR models are granular and incorporate numerous risk factors and inputs to simulate daily changes in market values over the historical period; inputs are selected based on the risk profile of each portfolio as sensitivities and historical time series used to generate daily market values may be different across product types or risk management systems. The VaR model results across all portfolios are aggregated at the Firm level.

Data sources used in VaR models may be the same as those used for financial statement valuations. However, in cases where market prices are not observable, or where proxies are used in VaR historical time series, the sources may differ. In addition, the daily market data used in VaR models may be different than the independent third-party data collected for VCG price testing in their monthly valuation process (see pages 196–200 of this Annual Report for further information on the Firm's valuation process.) VaR model calculations require more timely (i.e., daily) data and a consistent source for valuation and therefore it is not practical to use the data collected in the VCG monthly valuation process.

VaR provides a consistent framework to measure risk profiles and levels of diversification across product types and is used for aggregating risks across businesses and monitoring limits. These VaR results are reported to senior management, the Board of Directors and regulators.

Since VaR is based on historical data, it is an imperfect measure of market risk exposure and potential losses, and it is not used to estimate the impact of stressed market conditions or to manage any impact from potential stress events. In addition, based on their reliance on available historical data, limited time horizons, and other factors, VaR measures are inherently limited in their ability to measure certain risks and to predict losses, particularly those associated with market illiquidity and sudden or severe shifts in market conditions. As VaR cannot be used to determine future losses in the Firm's market risk positions, the Firm considers other metrics, such as economic-value stress testing and other techniques, as described further below, to capture and manage its market risk positions under stressed scenarios.

For certain products, specific risk parameters are not captured in VaR due to the lack of inherent liquidity and availability of appropriate historical data. The Firm uses proxies to estimate the VaR for these and other products when daily time series are not available. It is likely that using an actual price-based time series for these products, if available, would affect the VaR results presented. The Firm uses alternative methods to capture and measure those risk parameters that are not otherwise captured in VaR, including economic-value stress testing, nonstatistical measures and risk identification for large exposures as described further below.

The Firm's VaR model calculations are continuously evaluated and enhanced in response to changes in the composition of the Firm's portfolios, changes in market conditions, improvements in the Firm's modeling techniques and other factors. Such changes will also affect historical comparisons of VaR results. Model changes go through a review and approval process by the Model Review Group prior to implementation into the operating environment. For further information, see Model risk on page 153 of this Annual Report.

Separately, the Firm calculates a daily aggregated VaR in accordance with regulatory rules ("Regulatory VaR"), which is used to derive the Firm's regulatory VaR-based capital requirements under the Basel 2.5 Market Risk Rule ("Basel 2.5"). This Regulatory VaR model framework currently assumes a ten business-day holding period and an expected tail loss methodology which approximates a 99% confidence level. Regulatory VaR is applied to "covered" positions as defined by Basel 2.5, which may be different than the positions included in the Firm's Risk Management VaR. For example, credit derivative hedges of accrual loans

are included in the Firm's Risk Management VaR, while Regulatory VaR excludes these credit derivative hedges. For additional information on Regulatory VaR and the other components of market risk regulatory capital (e.g. VaR-based measure, stressed VaR-based measure and the respective backtesting) for the Firm, see JPMorgan Chase's "Regulatory Capital Disclosures – Market Risk Pillar 3 Report" which are available on the Firm's website (http://investor.shareholder.com/jpmorganchase/basel.cfm) and Capital Management on pages 160–167 of this Annual Report.

The table below shows the results of the Firm's Risk Management VaR measure using a 95% confidence level.

Total VaR

As of or for the year ended December 31,	2013			2012			At December 31,	
(in millions)	Avg.	Min	Max	Avg.	Min	Max	**2013**	2012
CIB trading VaR by risk type

Other VaR	**14**	**6**	**28**	101	18	204	**7**	25
Diversification benefit to CIB and other VaR	**(9)** [b]	**NM** [c]	**NM** [c]	(45) [b]	NM [c]	NM [c]	**(5)** [b]	(11) [b]
Total VaR	**$ 52**	**$ 29**	**$ 87**	$ 152	$ 93	$ 254	**$ 44**	$ 98

(a) On July 2, 2012, CIO transferred its synthetic credit portfolio, other than a portion aggregating approximately $12 billion notional, to CIB; CIO's retained portfolio was effectively closed out during the three months ended September 30, 2012.
(b) Average portfolio VaR and period-end portfolio VaR were less than the sum of the VaR of the components described above, which is due to portfolio diversification. The diversification effect reflects the fact that risks are not perfectly correlated.
(c) Designated as not meaningful ("NM"), because the minimum and maximum may occur on different days for distinct risk components, and hence it is not meaningful to compute a portfolio-diversification effect.
(d) The Firm restated its 2012 first quarter financial statements regarding the CIO synthetic credit portfolio. The CIO VaR amounts for 2012 were not recalculated to reflect the restatement.
(e) Effective in the fourth quarter of 2012, CIB's VaR includes the VaR of the former reportable business segments, Investment Bank and Treasury & Securities Services ("TSS"), which were combined to form the CIB business segment as a result of the reorganization of the Firm's business segments. TSS VaR was not material and was previously classified within Other VaR. Prior period VaR disclosures were not revised as a result of the business segment reorganization.
(f) The Treasury and CIO VaR includes Treasury VaR as of the third quarter of 2013.
(g) The minimum Asset Management VaR for 2012 was immaterial.

As presented in the table above, average Total VaR and average CIB VaR decreased during 2013 compared with 2012. These decreases were primarily driven by reduced risk in the synthetic credit portfolio and lower market volatility across multiple asset classes.

During the third quarter of 2012, the Firm applied a new VaR model to calculate VaR for CIO's synthetic credit portfolio that had been transferred to the CIB on July 2, 2012. In the first quarter of 2013, in order to achieve consistency among like products within CIB and in conjunction with the implementation of Basel 2.5 requirements, the Firm moved CIO's synthetic credit portfolio to an existing VaR model within the CIB. This change had an insignificant impact to the average fixed income VaR and average total CIB trading and credit portfolio VaR, and it had no impact to the average Total VaR compared with the model used in the third and fourth quarters of 2012.

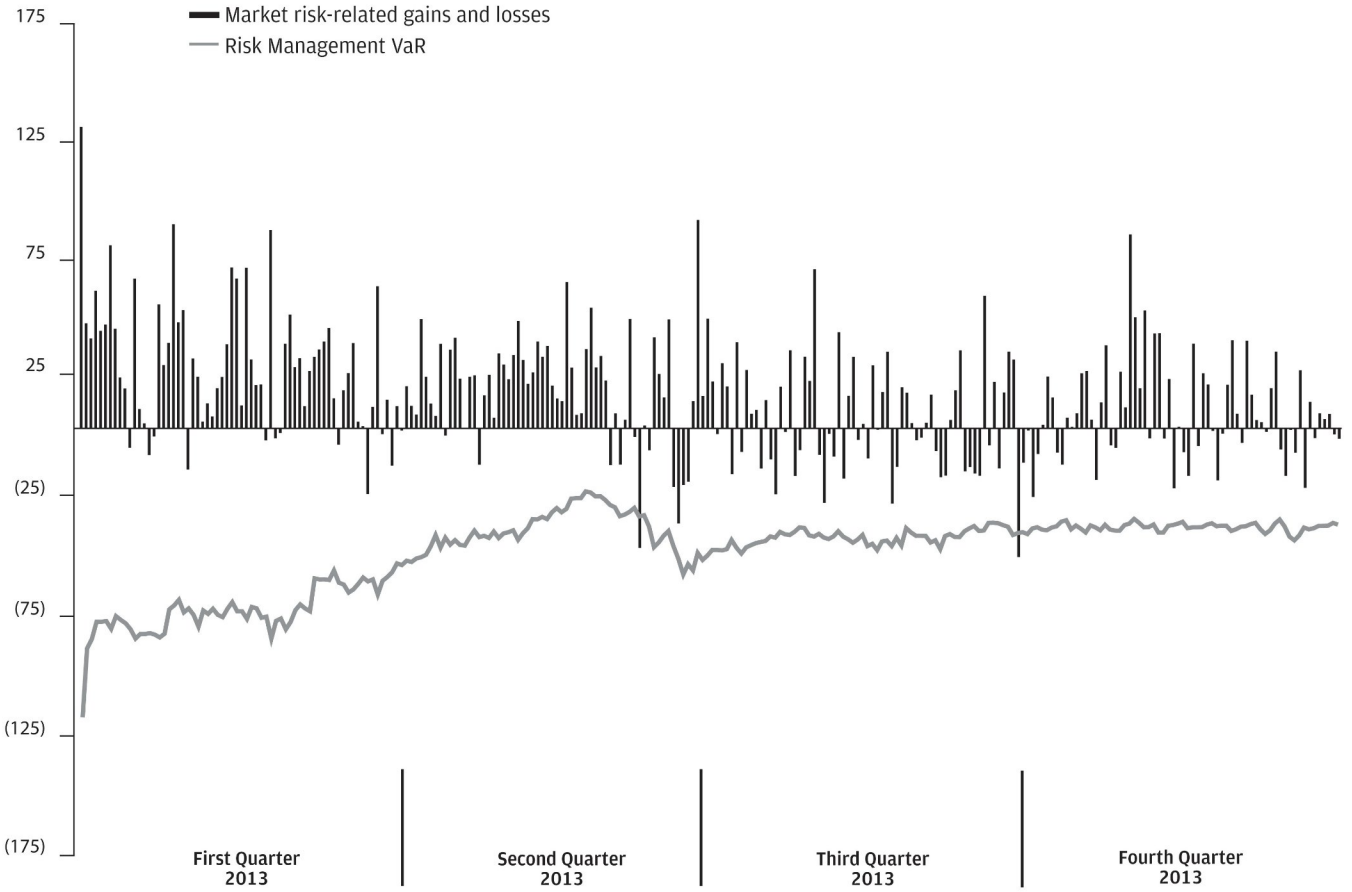
Average Treasury and CIO VaR for the year ended December 31, 2013, decreased from 2012, predominantly reflecting the reduction in and transfer of risk from CIO's synthetic credit portfolio to the CIB on July 2, 2012. The index credit derivative positions retained by CIO were effectively closed out during the three months ended September 30, 2012.

Average Mortgage Banking VaR for the year ended December 31, 2013, decreased from 2012. The decrease is attributable to reduced risk across the Mortgage Production and Mortgage Servicing businesses.

The Firm's average Total VaR diversification benefit was $9 million or 15% of the sum for 2013, compared with $45 million or 23% of the sum for 2012. In general, over the course of the year, VaR exposure can vary significantly as positions change, market volatility fluctuates and diversification benefits change.

VaR back-testing

The Firm evaluates the effectiveness of its VaR methodology by back-testing, which compares the daily Risk Management VaR results with the daily gains and losses recognized on market-risk related revenue.



Effective during the fourth quarter of 2013, the Firm revised its definition of market risk-related gains and losses to be consistent with the definition used by the banking regulators under Basel 2.5. Under this definition market risk-related gains and losses are defined as: profits and losses on the Firm's Risk Management positions, *excluding* fees, commissions, fair value adjustments, net interest income, and gains and losses arising from intraday trading.

The following chart compares the daily market risk-related gains and losses on the Firm's Risk Management positions for the year ended December 31, 2013, under the revised definition. As the chart presents market risk-related gains and losses related to those positions included in the Firm's Risk Management VaR, the results in the table below differ from the results of backtesting disclosed in the Firm's Basel 2.5 report, which are based on Regulatory VaR. The chart shows that for the year ended December 31, 2013, the Firm observed two VaR band breaks and posted gains on 177 of the 260 days in this period.

Daily market risk-related gains and losses vs. Risk Management VaR (1-day, 95% confidence level)

Year ended December 31, 2013

($ in millions)

Prior to the fourth quarter of 2013, the Firm disclosed a histogram which presented the results of daily backtesting against its daily market risk-related gains and losses for positions included in the Firm's Risk Management VaR calculation. Under this previous presentation, the market risk related revenue was defined as the change in value of: principal transactions revenue for CIB, and Treasury and CIO; trading-related net interest income for CIB, Treasury and CIO, and Mortgage Production and Mortgage Servicing in CCB; CIB brokerage commissions, underwriting fees or other revenue; revenue from syndicated lending facilities that the Firm intends to distribute; mortgage fees and related income for the Firm's mortgage pipeline and warehouse loans, MSRs, and all related hedges; and market-risk related revenue from Asset Management hedges; gains and losses from DVA were excluded. Under this prior measure there were no VaR band breaks nor any trading loss days for the year ended December 31, 2013.

Other risk measures

Economic-value stress testing

Along with VaR, stress testing is an important tool in measuring and controlling risk. While VaR reflects the risk of loss due to adverse changes in markets using recent historical market behavior as an indicator of losses, stress testing is intended to capture the Firm's exposure to unlikely but plausible events in abnormal markets. The Firm runs weekly stress tests on market-related risks across the lines of business using multiple scenarios that assume significant changes in risk factors such as credit spreads, equity prices, interest rates, currency rates or commodity prices. The framework uses a grid-based approach, which calculates multiple magnitudes of stress for both market rallies and market sell-offs for each risk factor. Stress-test results, trends and explanations based on current market risk positions are reported to the Firm's senior management and to the lines of business to allow them to better understand the sensitivity of positions to certain defined events and to enable them to manage their risks with more transparency.

Stress scenarios are defined and reviewed by Market Risk, and significant changes are reviewed by the relevant Risk Committees. While most of the scenarios estimate losses based on significant market moves, such as an equity market collapse or credit crisis, the Firm also develops scenarios to quantify risk arising from specific portfolios or concentrations of risks, which attempt to capture certain idiosyncratic market movements. Scenarios may be redefined on an ongoing basis to reflect current market conditions. Ad hoc scenarios are run in response to specific market events or concerns. Furthermore, the Firm's stress testing framework is utilized in calculating results under scenarios mandated by the Federal Reserve's CCAR and ICAAP ("Internal Capital Adequacy Assessment Process") processes.

Nonstatistical risk measures

Nonstatistical risk measures include sensitivities to variables used to value positions, such as credit spread sensitivities, interest rate basis point values and market values. These measures provide granular information on the Firm's market risk exposure. They are aggregated by line-of-business and by risk type, and are used for tactical control and monitoring limits.

Loss advisories and profit and loss drawdowns

Loss advisories and profit and loss drawdowns are tools used to highlight trading losses above certain levels of risk tolerance. Profit and loss drawdowns are defined as the decline in net profit and loss since the year-to-date peak revenue level.

Risk identification for large exposures

Individuals who manage risk positions consider potential material losses that could arise from specific, unusual events, such as a potential change in tax legislation, or a particular combination of unusual market moves. This information allows the Firm to monitor further earnings vulnerability that is not adequately covered by standard risk measures.

Earnings-at-risk

The VaR and stress-test measures described above illustrate the total economic sensitivity of the Firm's Consolidated Balance Sheets to changes in market variables. The effect of interest rate exposure on reported net income is also important as interest rate risk represents one of the Firm's significant market risks. Interest rate risk arises not only from trading activities but also from the Firm's traditional banking activities, which include extension of loans and credit facilities, taking deposits and issuing debt. The CIO, Treasury and Corporate ("CTC") Risk Committee establishes the Firm's structural interest rate risk policies and market risk limits, which are subject to approval by the Risk Policy Committee of the Firm's Board of Directors. CIO, working in partnership with the lines of business, calculates the Firm's structural interest rate risk profile and reviews it with senior management including the CTC Risk Committee and the Firm's ALCO.

Structural interest rate risk can occur due to a variety of factors, including:

- Differences in the timing among the maturity or repricing of assets, liabilities and off-balance sheet instruments.
- Differences in the amounts of assets, liabilities and off-balance sheet instruments that are repricing at the same time.
- Differences in the amounts by which short-term and long-term market interest rates change (for example, changes in the slope of the yield curve).
- The impact of changes in the maturity of various assets, liabilities or off-balance sheet instruments as interest rates change.

The Firm manages interest rate exposure related to its assets and liabilities on a consolidated, corporate-wide basis. Business units transfer their interest rate risk to Treasury through a transfer-pricing system, which takes into account the elements of interest rate exposure that can be risk-managed in financial markets. These elements include asset and liability balances and contractual rates of interest, contractual principal payment schedules, expected prepayment experience, interest rate reset dates and maturities, rate indices used for repricing, and any interest rate ceilings or floors for adjustable rate products. All transfer-pricing assumptions are dynamically reviewed.

Oversight of structural interest rate risk is managed through a dedicated risk function reporting to the CTC CRO. This risk function is responsible for providing independent oversight,

creating governance over assumptions and establishing and monitoring limits for structural interest rate risk.

The Firm manages structural interest rate risk generally through its investment securities portfolio and related derivatives. The Firm evaluates its structural interest rate risk exposure through earnings-at-risk, which measures the extent to which changes in interest rates will affect the Firm's core net interest income (see page 83 of this Annual Report for further discussion of core net interest income) and interest rate-sensitive fees. Earnings-at-risk excludes the impact of trading activities and MSR, as these sensitivities are captured under VaR.

The Firm conducts simulations of changes in structural interest rate-sensitive revenue under a variety of interest rate scenarios. Earnings-at-risk scenarios estimate the potential change in this revenue, and the corresponding impact to the Firm's pretax core net interest income, over the following 12 months, utilizing multiple assumptions as described below. These scenarios highlight exposures to changes in interest rates, pricing sensitivities on deposits, optionality and changes in product mix. The scenarios include forecasted balance sheet changes, as well as prepayment and reinvestment behavior. Mortgage prepayment assumptions are based on current interest rates compared with underlying contractual rates, the time since origination, and other factors which are updated periodically based on historical experience.

JPMorgan Chase's 12-month pretax core net interest income sensitivity profiles.
(Excludes the impact of trading activities and MSRs)

	Instantaneous change in rates[a]			
(in millions)	+200 bps	+100 bps	-100 bps	-200 bps
December 31, 2013	**$ 4,718**	**$ 2,518**	**NM** [b]	**NM** [b]
December 31, 2012	3,886	2,145	NM [b]	NM [b]

(a) Instantaneous changes in interest rates present a limited view of risk, and so alternative scenarios are also reviewed.
(b) Downward 100- and 200-basis-points parallel shocks result in a federal funds target rate of zero and negative three- and six-month treasury rates. The earnings-at-risk results of such a low-probability scenario are not meaningful.

The change in earnings-at-risk from December 31, 2012, resulted from higher expected deposit balances, partially offset by repositioning the investment securities portfolio. The Firm's benefit to rising rates is largely a result of reinvesting at higher yields and assets re-pricing at a faster pace than deposits.

Additionally, another interest rate scenario used by the Firm — involving a steeper yield curve with long-term rates rising by 100 basis points and short-term rates staying at current levels — results in a 12-month pretax core net interest income benefit of $407 million. The increase in core net interest income under this scenario reflects the Firm reinvesting at the higher long-term rates, with funding costs remaining unchanged.

Risk monitoring and control

Limits

Market risk is controlled primarily through a series of limits set in the context of the market environment and business strategy. In setting limits, the Firm takes into consideration factors such as market volatility, product liquidity and accommodation of client business and management experience. The Firm maintains different levels of limits. Corporate level limits include VaR and stress limits. Similarly, line of business limits include VaR and stress limits and may be supplemented by loss advisories, nonstatistical measurements and profit and loss drawdowns. Limits may also be allocated within the lines of business, as well at the portfolio level.

Limits are established by Market Risk in agreement with the lines of business. Limits are reviewed regularly by Market Risk and updated as appropriate, with any changes approved by lines of business management and Market Risk. Senior management, including the Firm's Chief Executive Officer and Chief Risk Officer, are responsible for reviewing and approving certain of these risk limits on an ongoing basis. All limits that have not been reviewed within specified time periods by Market Risk are escalated to senior management. The lines of business are responsible for adhering to established limits against which exposures are monitored and reported.

Limit breaches are required to be reported in a timely manner by Risk Management to limit approvers, Market Risk and senior management. In the event of a breach, Market Risk consults with Firm senior management and lines of business senior management to determine the appropriate course of action required to return to compliance, which may include a reduction in risk in order to remedy the excess. Any Firm or line of business-level limits that are in excess for three business days or longer, or that are over limit by more than 30%, are escalated to senior management and the Firmwide Risk Committee.

COUNTRY RISK MANAGEMENT

Country risk is the risk that a sovereign event or action alters the value or terms of contractual obligations of obligors, counterparties and issuers, or adversely impacts markets related to a country. The Firm has a comprehensive country risk management framework for assessing country risks, determining risk tolerance, and measuring and monitoring direct country exposures in the Firm. The Country Risk Management group is responsible for developing guidelines and policy for managing country risk in both emerging and developed countries. The Country Risk Management group actively monitors the various portfolios giving rise to country risk to ensure the Firm's country risk exposures are diversified and that exposure levels are appropriate given the Firm's strategy and risk tolerance relative to a country.

Country risk organization

The Country Risk Management group is an independent risk management function which works in close partnership with other risk functions to identify and monitor country risk within the Firm. The Firmwide Risk Executive for Country Risk reports to the Firm's CRO.

Country Risk Management is responsible for the following functions:

- Developing guidelines and policies consistent with a comprehensive country risk framework
- Assigning sovereign ratings and assessing country risks
- Measuring and monitoring country risk exposure and stress across the Firm
- Managing country limits and reporting trends and limit breaches to senior management
- Developing surveillance tools for early identification of potential country risk concerns
- Providing country risk scenario analysis

Country risk identification and measurement

The Firm is exposed to country risk through its lending, investing, and market-making activities, whether cross-border or locally funded. Country exposure includes activity with both government and private-sector entities in a country. Under the Firm's internal country risk management approach, country exposure is reported based on the country where the majority of the assets of the obligor, counterparty, issuer or guarantor are located or where the majority of its revenue is derived, which may be different than the domicile (legal residence) or country of incorporation of the obligor, counterparty, issuer or guarantor. Country exposures are generally measured by considering the Firm's risk to an immediate default of the counterparty or obligor, with zero recovery. Assumptions are sometimes required in determining the measurement and allocation of country exposure, particularly in the case of certain tranched credit derivatives. Different measurement approaches or assumptions would affect the amount of reported country exposure.

Under the Firm's internal country risk measurement framework:

- Lending exposures are measured at the total committed amount (funded and unfunded), net of the allowance for credit losses and cash and marketable securities collateral received
- Securities financing exposures are measured at their receivable balance, net of collateral received
- Debt and equity securities are measured at the fair value of all positions, including both long and short positions
- Counterparty exposure on derivative receivables, including credit derivative receivables, is measured at the derivative's fair value, net of the fair value of the related collateral
- Credit derivatives protection purchased and sold is reported based on the underlying reference entity and is measured at the notional amount of protection purchased or sold, net of the fair value of the recognized derivative receivable or payable. Credit derivatives protection purchased and sold in the Firm's market-making activities is presented on a net basis, as such activities often result in selling and purchasing protection related to the same underlying reference entity; this reflects the manner in which the Firm manages these exposures

The Firm also has indirect exposures to country risk (for example, related to the collateral received on securities financing receivables or related to client clearing activities). These indirect exposures are managed in the normal course of business through the Firm's credit, market, and operational risk governance, rather than through Country Risk Management.

The Firm's internal country risk reporting differs from the reporting provided under FFIEC bank regulatory requirements as there are significant differences in reporting methodology. For further information on the FFIEC's reporting methodology, see Cross-border outstandings on page 357 of the 2013 Form 10-K.

Country risk stress testing

The country risk stress framework aims to identify potential losses arising from a country crisis by capturing the impact of large asset price movements in a country based on market shocks combined with counterparty specific assumptions. Country Risk Management periodically defines and runs ad hoc stress scenarios for individual countries in response to specific market events and sector performance concerns.

Country risk monitoring and control

The Country Risk Management Group establishes guidelines for sovereign ratings reviews and limit management. Country stress and nominal exposures are measured under a comprehensive country limit framework. Country ratings and limits activity are actively monitored and reported on a regular basis. Country limit requirements are reviewed and approved by senior management as often as necessary, but at least annually. In addition, the Country Risk Management group uses surveillance tools for early identification of potential country risk concerns, such as signaling models and ratings indicators.

Country risk reporting

The following table presents the Firm's top 20 exposures by country (excluding the U.S.). The selection of countries is based solely on the Firm's largest total exposures by country, based on the Firm's internal country risk management approach, and does not represent the Firm's view of any actual or potentially adverse credit conditions.

Top 20 country exposures

	December 31, 2013			
(in billions)	Lending[a]	Trading and investing[b][c]	Other[d]	**Total exposure**
United Kingdom	$ 34.4	$ 43.5	$ 1.4	$ 79.3
Germany	13.0	29.1	0.2	42.3
Netherlands	5.3	25.5	2.6	33.4
France	13.9	17.0	–	30.9
Switzerland	19.9	1.7	0.6	22.2
Canada	13.8	5.4	0.2	19.4
Australia	7.4	11.3	–	18.7
China	11.1	3.9	0.7	15.7
Brazil	5.7	5.6	–	11.3
India	6.8	3.8	0.1	10.7
Hong Kong	3.8	3.5	1.7	9.0
Korea	4.8	2.9	–	7.7
Italy	3.4	4.0	–	7.4
Singapore	3.4	2.0	1.3	6.7
Mexico	2.3	4.4	–	6.7
Japan	3.9	2.6	–	6.5
Sweden	1.8	4.0	0.1	5.9
Russia	4.7	0.7	–	5.4
Spain	3.2	1.3	–	4.5
Malaysia	2.4	1.5	0.6	4.5

(a) Lending includes loans and accrued interest receivable, net of collateral and the allowance for loan losses, deposits with banks, acceptances, other monetary assets, issued letters of credit net of participations, and undrawn commitments to extend credit. Excludes intra-day and operating exposures, such as from settlement and clearing activities.

(b) Includes market-making inventory, securities held in AFS accounts and hedging.

(c) Includes single-name and index and tranched credit derivatives for which one or more of the underlying reference entities is in a country listed in the above table.

(d) Includes capital invested in local entities and physical commodity inventory.

Selected European exposure

Notwithstanding the economic and fiscal situation in Europe showing signs of stabilization, with Spain and Ireland exiting their bail out programs and some encouraging progress on financial reform, the Firm continues to closely monitor its exposures in Spain, Italy, Ireland, Portugal and Greece. Management believes its exposure to these five countries is modest relative to the Firm's aggregate exposures. The Firm continues to conduct business and support client activity in these countries and, therefore, the Firm's aggregate net exposures and sector distribution may vary over time. In addition, the net exposures may be affected by changes in market conditions, including the effects of interest rates and credit spreads on market valuations.

The following table presents the Firm's direct exposure to Spain, Italy, Ireland, Portugal and Greece at December 31, 2013, as measured under the Firm's internal country risk management approach. For individual exposures, corporate clients represent approximately 93% of the Firm's non-sovereign exposure in these five countries, and substantially all of the remaining 7% of the non-sovereign exposure is to the banking sector.

December 31, 2013 (in billions)	Lending net of Allowance[a]	AFS securities	Trading[b]	Derivative collateral[c]	Portfolio hedging[d]	**Total exposure**
Spain

Non-sovereign	0.1	–	0.5	(0.5)	–	0.1
Total Greece exposure	$ 0.1	$ –	$ 0.6	$ (0.5)	$ –	$ 0.2
Total exposure	$ 7.4	$ 0.5	$ 16.2	$ (5.0)	$ (5.5)	$ 13.6

(a) Lending includes loans and accrued interest receivable, deposits with banks, acceptances, other monetary assets, issued letters of credit net of participations, and undrawn commitments to extend credit. Excludes intra-day and operating exposures, such as from settlement and clearing activities. Amounts are presented net of the allowance for credit losses of $100 million (Spain), $43 million (Italy), $6 million (Ireland), $19 million (Portugal), and $13 million (Greece) specifically attributable to these countries. Includes $3.0 billion of unfunded lending exposure at December 31, 2013. These exposures consist typically of committed, but unused corporate credit agreements, with market-based lending terms and covenants.

(b) Primarily includes: $13.9 billion of counterparty exposure on derivative and securities financings, $1.6 billion of issuer exposure on debt and equity securities. Securities financings of approximately $25.2 billion were collateralized with approximately $27.5 billion of cash and marketable securities as of December 31, 2013.

(c) Includes cash and marketable securities pledged to the Firm, of which approximately 95% of the collateral was cash at December 31, 2013.

(d) Reflects net protection purchased through the Firm's credit portfolio management activities, which are managed separately from its market-making activities. Predominantly includes single-name CDS and also includes index credit derivatives and short bond positions.

Effect of credit derivatives on selected European exposures

Country exposures in the Selected European exposure table above have been reduced by purchasing protection through single name, index, and tranched credit derivatives. The following table presents the effect of purchased and sold credit derivatives on the trading and portfolio hedging activities in the Selected European exposure table.

December 31, 2013	Trading			Portfolio hedging		
(in billions)	Purchased	Sold	Net	Purchased	Sold	Net
Spain	$ (92.5)	$ 92.3	$ (0.2)	$ (7.8)	$ 7.4	$ (0.4)
Italy	(139.7)	140.9	1.2	(23.6)	18.7	(4.9)
Ireland	(7.2)	7.1	(0.1)	(0.7)	0.6	(0.1)
Portugal	(32.9)	33.2	0.3	(2.8)	2.7	(0.1)
Greece	(7.7)	7.7	–	(0.7)	0.7	–
Total	$ (280.0)	$ 281.2	$ 1.2	$ (35.6)	$ 30.1	$ (5.5)

Under the Firm's internal country risk management approach, credit derivatives are generally reported based on the country where the majority of the assets of the reference entity are located. Exposures are measured assuming that all of the reference entities in a particular country default simultaneously with zero recovery. For example, single-name and index credit derivatives are measured at the notional amount, net of the fair value of the derivative receivable or payable. Exposures for index credit derivatives, which may include several underlying reference entities, are determined by evaluating the relevant country for each of the reference entities underlying the named index, and allocating the applicable amount of the notional and fair value of the index credit derivative to each of the relevant countries. Tranched credit derivatives are measured at the modeled change in value of the derivative assuming the simultaneous default of all underlying reference entities in a specific country; this approach considers the tranched nature of the derivative (i.e., that some tranches are subordinate to others) and the Firm's own position in the structure.

The "Total" line in the table above represents the simple sum of the individual countries. Changes in the Firm's methodology or assumptions would produce different results.

The credit derivatives reflected in the "Portfolio hedging" column are predominantly single-name CDS used in the Firm's credit portfolio management activities, which are intended to mitigate the credit risk associated with traditional lending activities and derivative counterparty exposure. The effectiveness of the Firm's CDS protection as a hedge of the Firm's exposures may vary depending upon a number of factors, including the maturity of the Firm's CDS protection, the named reference entity, and the contractual terms of the CDS. For further information about credit derivatives see Credit derivatives on pages 137–138, and Note 6 on pages 220–233 of this Annual Report.

The Firm's net presentation of purchased and sold credit derivatives reflects the manner in which this exposure is managed, and reflects, in the Firm's view, the substantial mitigation of market and counterparty credit risk in its credit derivative activities. Market risk is substantially mitigated because market-making activities, and to a lesser extent, hedging activities, often result in selling and purchasing protection related to the same underlying reference entity. For example, for each of the five named countries as of December 31, 2013, the protection sold by the Firm was more than 94% offset by protection purchased on the identical reference entity.

In addition, counterparty credit risk has also been substantially mitigated by the master netting and collateral agreements in place for these credit derivatives. As of December 31, 2013, 100% of the purchased protection presented in the table above is purchased under contracts that require posting of cash collateral; 88% is purchased from investment-grade counterparties domiciled outside of the selected European countries; and 68% of the protection purchased offsets protection sold on the identical reference entity, with the identical counterparty subject to a master netting agreement.

Model risk

The Firm uses models, for many purposes, but primarily for the measurement, monitoring and management of risk positions. Valuation models are employed by the Firm to value certain financial instruments which cannot otherwise be valued using quoted prices. These valuation models may also be employed as inputs to risk management models, including VaR and economic stress models. The Firm also makes use of models for a number of other purposes, including the calculation of regulatory capital requirements and estimating the allowance for credit losses.

Models are owned by various functions within the Firm based on the specific purposes of such models. For example, VaR models and certain regulatory capital models are owned by the line-of-business aligned risk management functions. Owners of models are responsible for the development, implementation and testing of their models, as well as referral of models to the Model Risk function (within the Model Risk and Development unit) for review and approval. Once models have been approved, model owners are responsible for the maintenance of a robust operating environment and must monitor and evaluate the performance of the models on an ongoing basis. Model owners may seek to enhance models in response to changes in the portfolios and for changes in product and market developments, as well as to capture improvements in available modeling techniques and systems capabilities.

The Model Risk function is part of the Firm's Model Risk and Development unit, which in turn reports to the Chief Risk Officer. The Model Risk function is independent of the model owners and reviews and approves a wide range of models, including risk management, valuation and certain regulatory capital models used by the Firm.

Models are tiered based on an internal standard according to their complexity, the exposure associated with the model and the Firm's reliance on the model. This tiering is subject to the approval of the Model Risk function. A model review conducted by the Model Risk function considers the model's suitability for the specific uses to which it will be put. The factors considered in reviewing a model include whether the model accurately reflects the characteristics of the product and its significant risks, the selection and reliability of model inputs, consistency with models for similar products, the appropriateness of any model-related adjustments, and sensitivity to input parameters and assumptions that cannot be observed from the market. When reviewing a model, the Model Risk function analyzes and challenges the model methodology and the reasonableness of model assumptions and may perform or require additional testing, including back-testing of model outcomes. Model reviews are approved by the appropriate level of management within the Model Risk function based on the relevant tier of the model.

Under the Firm's model risk policy, new models, as well as material changes to existing models, are reviewed and approved by the Model Risk function prior to implementation in the operating environment.

In the event that the Model Risk function does not approve a model, the model owner is required to remediate the model within a time period agreed upon with the Model Risk function. The model owner is also required to resubmit the model for review to the Model Risk function and to take appropriate actions to mitigate the model risk if it is to be used in the interim. These actions will depend on the model and may include, for example, limitation of trading activity. The Firm may also implement other appropriate risk measurement tools to augment the model that is subject to remediation.

Exceptions to the Firm's model risk policy may be granted by the head of the Model Risk function to allow a model to be used prior to review or approval.

For a summary of valuations based on models, see Critical Accounting Estimates Used by the Firm on pages 176–177 and Note 3 on pages 195–215 of this Annual Report.

PRINCIPAL RISK MANAGEMENT

Principal investments are predominantly privately-held financial assets and instruments, typically representing an ownership or junior capital position, that have unique risks due to their illiquidity or for which there is less observable market or valuation data. Such investing activities, including private equity investments, mezzanine financing, and tax-oriented investments are typically intended to be held over extended investment periods and, accordingly, the Firm has no expectation for short-term gain with respect to these investments.

The Firm's approach to managing principal risk is consistent with the Firm's general risk governance structure. A firm-wide risk policy framework exists for all principal investing activities. All investments are approved by investment committees that include executives who are independent from the investing businesses. An independent valuation function is responsible for reviewing the appropriateness of the carrying values of principal investments, in accordance with relevant accounting, valuation and risk policies. Targeted levels for total and annual investments are established in order to manage the overall size of the portfolios. Industry, geographic, and position level concentration limits are in place and intended to ensure diversification of the portfolios. The Firm also conducts stress testing on these portfolios using specific scenarios that estimate losses based on significant market moves and/or other risk events.

The Firm's principal investments are managed under various lines of business and are captured within the respective LOB's financial results. Principal investments cover multiple asset classes and occur either as a standalone investing businesses or as part of a broader business platform. Asset classes include private equity, tax equity investments including affordable housing, and mezzanine/junior debt investments. The majority of the Firm's private equity is reported separately under Corporate/Private Equity (for detailed information, see Private Equity portfolio on page 111 of this Annual Report).

Operational risk is the risk of loss resulting from inadequate or failed processes or systems, human factors or external events.

Overview

Operational risk is inherent in each of the Firm's businesses and support activities. Operational risk can manifest itself in various ways, including errors, fraudulent acts, business interruptions, inappropriate behavior of employees, or vendors that do not perform in accordance with their arrangements. These events could result in financial losses, including litigation and regulatory fines, as well as other damage to the Firm, including reputational harm. To monitor and control operational risk, the Firm maintains an overall framework that includes oversight and governance, policies and procedures, consistent practices across the lines of business, and enterprise risk management tools intended to provide a sound and well-controlled operational environment.

The framework clarifies:

- Roles and Responsibilities
  - Ownership of the risk by the businesses and functional areas
  - Monitoring and validation by business control officers
  - Oversight by independent risk management
- Governance through business risk and control committees
- Risk Categories
- Independent review by Internal Audit
- Tools to measure, monitor, and mitigate risk

The goal is to keep operational risk at appropriate levels, in light of the Firm's financial strength, the characteristics of its businesses, the markets in which it operates, and the competitive and regulatory environment to which it is subject.

In order to strengthen the focus on the Firm's control environment and drive consistent practices across businesses and functional areas, the Firm established a Firmwide Oversight and Control Group during 2012. Oversight and Control is comprised of dedicated control officers within each of the lines of business and Corporate functional areas, as well as a central oversight team. The group is charged with enhancing the Firm's controls by looking within and across the lines of business and Corporate functional areas to identify and control issues. The group enables the Firm to detect control problems more quickly, escalate issues promptly and get the right people involved to understand common themes and interdependencies among the various parts of the Firm. The group works closely with the Firm's other control-related functions, including Compliance, Legal, Internal Audit and Risk Management, to effectively remediate identified control issues across all affected areas of the Firm. As a result, the group facilitates the effective execution of the Firm's control framework and helps support operational risk management across the Firm.

Risk Management is responsible for defining the Operational Risk Management Framework and providing independent oversight of the framework across the Firm.

Operational risk management framework

The Firm's approach to operational risk management is intended to identify potential issues and mitigate losses by supplementing traditional control-based approaches to operational risk with risk measures, tools and disciplines that are risk-specific, consistently applied and utilized firmwide. Key themes are transparency of information, escalation of key issues and accountability for issue resolution.

In addition to the standard Basel risk event categories, the Firm has developed the operational risk categorization taxonomy below for purposes of identification, monitoring, reporting and analysis:

- Fraud risk
- Market practices
- Client management
- Processing error
- Financial reporting error
- Information risk
- Technology risk (including cybersecurity risk)
- Third-party risk
- Disruption and safety risk
- Employee risk
- Risk management error (including model risk)
- Oversight and governance errors

Key components of the Operational Risk Management Framework include:

Risk governance

The Firmwide Control Committee ("FCC") provides a forum for senior management to review and discuss firmwide operational risks including existing and emerging issues as well as operational risk metrics, management and execution. The FCC serves as an escalation point for significant issues raised from LOB and Functional Control Committees, particularly those with potential enterprise-wide impact. The FCC (as well as the LOB and Functional Control Committees) oversees the risk and control environment, which includes reviewing the identification, management and monitoring of operational risk, control issues, remediation actions and enterprise-wide trends. The FCC escalates significant issues to the FRC.

Risk identification assessment
In order to evaluate and monitor operational risk, businesses and functions utilize the Firm's standard risk and control self-assessment ("RCSA") process and supporting architecture. The RCSA process requires management to identify material inherent operational risks, assess the design and operating effectiveness of relevant controls designed to mitigate such risks, and evaluate residual risk.

Action plans are developed for control issues that are identified, and businesses are held accountable for tracking and resolving issues on a timely basis.

Risk monitoring
The Firm has a process for monitoring operational risk event data, which permits analysis of errors and losses as well as trends. Such analysis, performed both at a line of business level and by risk-event type, enables identification of the causes associated with risk events faced by the businesses. Where available, the internal data can be supplemented with external data for comparative analysis with industry patterns.

Risk reporting and analysis
Operational risk management reports provide information, including actual operational loss levels, self-assessment results and the status of issue resolution to the lines of business and senior management. The purpose of these reports is to enable management to maintain operational risk at appropriate levels within each line of business, to escalate issues and to provide consistent data aggregation across the Firm's businesses and functions.

Risk measurement
Operational risk is measured using a statistical model based on the loss distribution approach. The operational risk capital model uses actual losses, a comprehensive inventory of forward looking potential loss scenarios and adjustments to reflect changes in the quality of the control environment in determining firmwide operational risk capital. This methodology is designed to comply with the Advanced Measurement rules under the Basel framework. For additional information on operational risk capital, see Regulatory Capital on pages 161–165 of this Annual Report.

Operational risk management system
The Firm's operational risk framework is supported by Phoenix, an internally designed operational risk system, which integrates the individual components of the operational risk management framework into a unified, web-based tool. Phoenix enhances the capture, reporting and analysis of operational risk data by enabling risk identification, measurement, monitoring, reporting and analysis to be done in an integrated manner across the Firm.

Audit alignment
Internal Audit utilizes a risk-based program of audit coverage to provide an independent assessment of the design and effectiveness of key controls over the Firm's operations, regulatory compliance and reporting. This includes reviewing the operational risk framework, the effectiveness of the business self-assessment process, and the loss data-collection and reporting activities.

Insurance
One of the ways operational loss is mitigated is through insurance maintained by the Firm. The Firm purchases insurance to be in compliance with local laws and regulations (e.g., workers compensation), as well as to serve other needs (e.g., property loss and public liability). Insurance may also be required by third parties with whom the Firm does business. The insurance purchased is reviewed and approved by senior management.

Cybersecurity
The Firm devotes significant resources to maintain and regularly update its systems and processes that are designed to protect the security of the Firm's computer systems, software, networks and other technology assets against attempts by third parties to obtain unauthorized access to confidential information, destroy data, disrupt or degrade service, sabotage systems or cause other damage. The Firm and several other U.S. financial institutions continue to experience significant distributed denial-of-service attacks from technically sophisticated and well-resourced third parties which are intended to disrupt online banking services. The Firm is also regularly targeted by third-parties using malicious code and viruses, and has also experienced other attempts to breach the security of the Firm's systems and data which, in certain instances, have resulted in unauthorized access to customer account data. The Firm has established, and continues to establish, defenses on an ongoing basis to mitigate these attacks, and these cyberattacks have not, to date, resulted in any material disruption of the Firm's operations, material harm to the Firm's customers, and have not had a material adverse effect on the Firm's results of operations.

Third parties with which the Firm does business or that facilitate the Firm's business activities (e.g., vendors, exchanges, clearing houses, central depositories, and financial intermediaries) could also be sources of cybersecurity risk to the Firm, including with respect to breakdowns or failures of their systems, misconduct by the employees of such parties, or cyberattacks which could affect their ability to deliver a product or service to the Firm or result in lost or compromised information of the Firm or its clients.

The Firm is working with appropriate government agencies and other businesses, including the Firm's third-party service providers, to continue to enhance defenses and improve resiliency to cybersecurity threats.

Business resiliency

JPMorgan Chase's global resiliency and crisis management program is intended to ensure that the Firm has the ability to recover its critical business functions and supporting assets (i.e., staff, technology and facilities) in the event of a business interruption, and to remain in compliance with global laws and regulations as they relate to resiliency risk. The program includes corporate governance, awareness and training, as well as strategic and tactical initiatives to ensure that risks are properly identified, assessed, and managed.

The Firm's Global Resiliency team has established comprehensive and qualitative tracking and reporting of resiliency plans in order to proactively anticipate and manage various potential disruptive circumstances such as severe weather, technology and communications outages, flooding, mass transit shutdowns and terrorist threats, among others. The resiliency measures utilized by the Firm include backup infrastructure for data centers, a geographically distributed workforce, dedicated recovery facilities, ensuring technological capabilities to support remote work capacity for displaced staff and accommodation of employees at alternate locations. JPMorgan Chase continues to coordinate its global resiliency program across the Firm and mitigate business continuity risks by reviewing and testing recovery procedures. The strength and proficiency of the Firm's global resiliency program has played an integral role in maintaining the Firm's business operations during and quickly after various events that have resulted in business interruptions, such as Superstorm Sandy and Hurricane Isaac in the U.S., monsoon rains in the Philippines, tsunamis in Asia, and earthquakes in Latin America.

LEGAL RISK, REGULATORY RISK, AND COMPLIANCE RISK MANAGEMENT

The Firm's success depends not only on its prudent management of the liquidity, capital, credit, market, principal and operational risks that are part of its business risks, but equally on the recognition among its many constituents – customers and clients, employees, investors, government officials, regulators, as well as the general public – that the Firm adheres consistently to a set of core values that drive the way the Firm conducts business. The Firm has established policies and procedures, and has in place various oversight functions intended to promote its core values and the Firm's culture of "doing the right thing" by doing "first class business in a first class way".

The Firm has in place a Code of Conduct (the "Code"), and each employee is given annual training in respect of the Code and is required annually to affirm his or her compliance with the Code. The Code sets forth the Firm's core principles and fundamental values, including that no employee should ever sacrifice integrity – or give the impression that he or she has – even if one thinks it would help the Firm's business. The Code requires prompt reporting of any known or suspected violation of the Code, any internal Firm policy, or any law or regulation applicable to the Firm's business. It also requires the reporting of any illegal conduct, or conduct that violates the underlying principles of the Code, by any of the Firm's customers, suppliers, contract workers, business partners, or agents. Specified employees are specially trained and designated as "code specialists" who act as a resource to employees on Code of Conduct matters. In addition, concerns may be reported anonymously and the Firm prohibits retaliation against employees for the good faith reporting of any actual or suspected violations of the Code.

Management of conflicts of interest is essential to the maintenance of the Firm's client relationships, and its reputation. Each of the various committees of senior management that oversee and approve transactions and activities undertaken by the Firm are responsible for considering any potential conflicts that may arise from such transactions or activities. In addition, the Firm's Conflicts Office examines the Firm's wholesale transactions that may have the potential to create conflicts of interest for the Firm.

The risk of legal or regulatory fines or sanctions or of financial damage or loss due to the failure to comply with laws, rules, and regulations, is a primary focus of the Legal, Compliance and Oversight and Controls functions. In recent years, the Firm has experienced heightened scrutiny by its regulators of its compliance with regulations, and with respect to its controls and operational processes. The Firm expects such regulatory scrutiny will continue, and that regulators will increasingly use formal actions (such as Consent Orders) instead of informal supervisory actions (such as "Matters Requiring Attention"), resulting in findings of violations of law and impositions of fines and penalties.

In addition to providing legal services and advice to the Firm, and communicating and helping businesses adjust to the legal and regulatory changes facing the businesses, including the heightened scrutiny and expectations of its regulators, the global Legal function is responsible for partnering with the businesses to fully understand and assess the businesses' adherence to laws and regulations, as well as potential exposures on key litigation and transactional matters.

Global Compliance Risk Management is responsible for identifying and advising on compliance risks, establishing policies and procedures intended to mitigate and control compliance risks, implementing training and communication forums to provide appropriate oversight and coordination of compliance risks, overseeing remediation of compliance risks and issues, and independently monitoring and testing the Firm's compliance risk controls.

Legal and Compliance, together with the Oversight and Control function, share responsibility with the businesses for identifying legal, compliance and regulatory issues, escalating these issues through the Firm's risk governance structures, and, as necessary, in assisting the businesses in their remediation efforts. For information about the Oversight & Control function, see Enterprise-Wide Risk Management on pages 113–173.

FIDUCIARY RISK MANAGEMENT

Fiduciary risk is the risk of failing to exercise the applicable standard of loyalty and care, or to act in the best interests of clients or to treat all clients fairly as required under applicable law or regulation, potentially resulting in regulatory action, reputational harm or financial liability.

Depending on the fiduciary activity and capacity in which the Firm is acting, federal and state statutes, common law and regulations require the Firm to adhere to specific duties in which the Firm must always place the client's interests above its own.

Fiduciary risk governance
Fiduciary Risk Management is the responsibility of the relevant LOB risk committees. Senior business, legal, risk and compliance management, who have particular responsibility for fiduciary issues, work with the relevant LOB risk committees with the goal of ensuring that businesses providing investment, trusts and estates, or other fiduciary products or services that give rise to fiduciary duties to clients, perform at the appropriate standard relative to their fiduciary relationship with a client. Each LOB and its respective risk and governance committees are responsible for the oversight and management of the fiduciary risks in their businesses. Of particular focus are the policies and practices that address a business' responsibilities to a client, including performance and service requirements and expectations; client suitability determinations; and disclosure obligations and communications. In this way, the relevant LOB risk committees provide oversight of the Firm's efforts to monitor, measure and control the performance and risks that may arise in the delivery of products or services to clients that give rise to such fiduciary duties, as well as those stemming from any of the Firm's fiduciary responsibilities under the Firm's various employee benefit plans.

During 2013 the Firm created the Firmwide Fiduciary Risk Committee ("FFRC"). The FFRC provides a forum for discussing the risks inherent in the Firm's fiduciary activities. The Committee is responsible for a cross-LOB process to support the consistent identification, escalation and reporting of fiduciary risk issues firmwide. Issues from the FFRC may be escalated to the Firmwide Risk Committee.

REPUTATION RISK MANAGEMENT

Maintenance of the Firm's reputation is the responsibility of each individual employee of the Firm.The Firm's Reputation Risk policy explicitly vests each employee with the responsibility to consider the reputation of the Firm, rather than business benefits and regulatory requirements alone, in deciding whether to pursue any new product, transaction, client, or any other activity. Since the types of events that could harm the Firm's reputation are so varied across the Firm's lines of business, each line of business has a separate reputation risk governance infrastructure in place, which comprises three key elements: clear, documented escalation criteria appropriate to the business footprint; a designated primary discussion forum – in most cases, one or more dedicated reputation risk committees; and a list of designated contacts. Line of business reputation risk governance is overseen by a Firmwide Reputation Risk Governance function, which provides oversight of the governance infrastructure and process to support the consistent identification, escalation, management and reporting of reputation risk issues firmwide.

CAPITAL MANAGEMENT

A strong capital position is essential to the Firm's business strategy and competitive position. The Firm's capital strategy focuses on long-term stability, which enables the Firm to build and invest in market-leading businesses, even in a highly stressed environment. Prior to making any decisions on future business activities, senior management considers the implications on the Firm's capital. In addition to considering the Firm's earnings outlook, senior management evaluates all sources and uses of capital with a view to preserving the Firm's capital strength. Maintaining a strong balance sheet to manage through economic volatility is considered a strategic imperative by the Firm's Board of Directors, CEO and Operating Committee. The Firm's balance sheet philosophy focuses on risk-adjusted returns, strong capital and reserves, and robust liquidity.

The Firm's capital management objectives are to hold capital sufficient to:

- Cover all material risks underlying the Firm's business activities;
- Maintain "well-capitalized" status under regulatory requirements;
- Maintain debt ratings that enable the Firm to optimize its funding mix and liquidity sources while minimizing costs;
- Retain flexibility to take advantage of future investment opportunities;
- Maintain sufficient capital in order to continue to build and invest in its businesses through the cycle and in stressed environments; and
- Distribute excess capital to shareholders while balancing other stated objectives.

These objectives are achieved through ongoing monitoring of the Firm's capital position, regular stress testing, and a capital governance framework. Capital management is intended to be flexible in order to react to a range of potential events. JPMorgan Chase has firmwide and LOB processes for ongoing monitoring and active management of its capital position.

Capital strategy and governance

The Firm's CEO and Operating Committee establish principles and guidelines for capital planning, capital issuance, usage and distributions; and, establish capital targets and minimums for the level and composition of capital in both business-as-usual and highly-stressed environments.

The Firm's capital targets and minimums are calibrated to the U.S. Basel III requirements. The Firm's target Tier 1 common ratio under the Basel III Advanced approach, on a fully phased-in basis, is 10%+. This long-term Tier 1 common ratio target level will enable the Firm to retain market access, continue the Firm's strategy to invest in and grow its businesses; and, maintain flexibility to distribute excess capital. The Firm intends to manage its capital so that it achieves the required capital levels and composition during the transition from Basel I to Basel III, in line with, or ahead of, the required timetable.

The Firm's senior management recognizes the importance of a capital management function that supports strategic decision-making. The Firm has established the Capital Governance Committee and the Regulatory Capital Management Office ("RCMO") as key components in support of this objective. The Capital Governance Committee is responsible for reviewing the Firm's Capital Management Policy and the principles underlying capital issuance and distribution alternatives. The Committee is also responsible for governing the capital adequacy assessment process, including overall design, assumptions and risk streams, and ensuring that capital stress test programs are designed to adequately capture the idiosyncratic risks across the Firm's businesses. The RCMO is responsible for reviewing, approving and monitoring the implementation of the Firm's capital policies and strategies, as well as its capital adequacy assessment process. The Board of Director's Risk Policy Committee assesses the Firm's capital adequacy process and its components. This review encompasses determining the effectiveness of the capital adequacy process, the appropriateness of the risk tolerance levels, and the strength of the control infrastructure. For additional discussion on the Board's Risk Policy Committee, see Risk Management on pages 113–173 of this Annual Report.

Internal Capital Adequacy Assessment Process

Semiannually, the Firm completes the Internal Capital Adequacy Assessment Process ("ICAAP"), which provides management with a view of the impact of severe and unexpected events on earnings, balance sheet positions, reserves and capital. The Firm's ICAAP integrates stress testing protocols with capital planning.

The process assesses the potential impact of alternative economic and business scenarios on the Firm's earnings and capital. Economic scenarios, and the parameters underlying those scenarios, are defined centrally and applied uniformly across the businesses. These scenarios are articulated in terms of macroeconomic factors, which are key drivers of business results; global market shocks, which generate short-term but severe trading losses; and idiosyncratic operational risk events. The scenarios are intended to capture and stress key vulnerabilities and idiosyncratic risks facing the Firm. However, when defining a broad range of scenarios, realized events can always be worse. Accordingly, management considers additional stresses outside these scenarios, as necessary. ICAAP results are reviewed by management and the Board of Directors.

Comprehensive Capital Analysis and Review ("CCAR")

The Federal Reserve requires large bank holding companies, including the Firm, to submit a capital plan on an annual basis. The Federal Reserve uses the CCAR and Dodd-Frank Act Wall Street Reform and Consumer Protection Act (the "Dodd-Frank Act") stress test processes

to ensure that large bank holding companies have sufficient capital during periods of economic and financial stress, and have robust, forward-looking capital assessment and planning processes in place that address each bank holding company's unique risks to enable them to have the ability to absorb losses under certain stress scenarios. Through the CCAR, the Federal Reserve evaluates each bank holding company's capital adequacy and internal capital adequacy assessment processes, as well as its plans to make capital distributions, such as dividend payments or stock repurchases.

The Firm's CCAR process is integrated into and employs the same methodologies utilized in the Firm's ICAAP process. On January 7, 2013, the Firm submitted its capital plan to the Federal Reserve under the Federal Reserve's 2013 CCAR process. On March 14, 2013, the Federal Reserve informed the Firm that it did not object to the Firm's 2013 capital plan, but asked the Firm to submit an additional capital plan.

On September 18, 2013, the Firm submitted the additional capital plan which addressed the weaknesses the Federal Reserve had identified in the Firm's original 2013 submission. On December 2, 2013, the Federal Reserve informed the Firm it did not object to the Firm's 2013 capital plan, as resubmitted.

On January 6, 2014, the Firm submitted its 2014 capital plan to the Federal Reserve under the Federal Reserve's 2014 CCAR process. The Firm expects to receive the Federal Reserve's final response to its plan no later than March 14, 2014.

For additional information on the Firm's capital actions, see Capital actions on pages 166–167, and Notes 22 and 23 on pages 309 and 310, respectively, of this Annual Report.

Capital Disciplines

The Firm uses three primary capital disciplines:

- *Regulatory capital*
- *Economic capital*
- *Line of business equity*

Regulatory capital

The Federal Reserve establishes capital requirements, including well-capitalized standards, for the consolidated financial holding company. The Office of the Comptroller of the Currency ("OCC") establishes similar capital requirements and standards for the Firm's national banks, including JPMorgan Chase Bank, N.A. and Chase Bank USA, N.A.

In connection with the U.S. Government's Supervisory Capital Assessment Program in 2009 ("SCAP"), U.S. banking regulators developed an additional measure of capital, Tier 1 common, which is defined as Tier 1 capital less elements of Tier 1 capital not in the form of common equity, such as perpetual preferred stock, noncontrolling interests in subsidiaries and trust preferred securities. In 2013, the Federal Reserve employed a minimum 5% Tier 1 common ratio standard for CCAR purposes, in addition to other minimum capital requirements, to assess a bank holding company's capital adequacy. For the 2014 CCAR process, the Federal Reserve has introduced a requirement to include, in addition to the Basel I Tier 1 common standards, a Basel III Tier 1 common test with a minimum of 4% for 2014 projections and 4.5% for 2015 projections.

Basel I and Basel 2.5

The minimum U.S. risk-based capital requirements in effect on December 31, 2013, follow the Capital Accord ("Basel I") of the Basel Committee. In June 2012, U.S. federal banking agencies published the final rule that specifies revised market risk regulatory capital requirements ("Basel 2.5"). While the Firm is still subject to the capital requirements of Basel I, Basel 2.5 rules also became effective for the Firm on January 1, 2013. The Basel 2.5 final rule revised the scope of positions subject to the market risk capital requirements and introduced new market risk measures, which resulted in additional capital requirements for covered positions as defined. The implementation of Basel 2.5 in the first quarter of 2013 resulted in an increase of approximately $150 billion in RWA compared with the Basel I rules at March 31, 2013. The implementation of these rules also resulted in decreases of the Firm's Tier 1 capital, Total capital and Tier 1 common capital ratios by 140 basis points, 160 basis points and 120 basis points, respectively, at March 31, 2013.

A reconciliation of total stockholders' equity to Tier 1 common, Tier 1 capital and Total qualifying capital is presented in the table below.

Risk-based capital components and assets

December 31, (in millions)	2013	2012
Total stockholders' equity	**$ 211,178**	$ 204,069
Less: Preferred stock	**11,158**	9,058
Common stockholders' equity	**200,020**	195,011
Effect of certain items in accumulated other comprehensive income/(loss) excluded from Tier 1 common	**(1,337)**	(4,198)
Less: Goodwill[a]	**45,320**	45,663
Other intangible assets[a]	**2,012**	2,311
Fair value DVA on structured notes and derivative liabilities related to the Firm's credit quality	**1,300**	1,577
Investments in certain subsidiaries and other	**1,164**	920
Tier 1 common	**148,887**	140,342
Preferred stock	**11,158**	9,058
Qualifying hybrid securities and noncontrolling interests[b]	**5,618**	10,608
Other	**–**	(6)
Total Tier 1 capital	**165,663**	160,002
Long-term debt and other instruments qualifying as Tier 2	**16,695**	18,061
Qualifying allowance for credit losses	**16,969**	15,995
Other	**(41)**	(22)
Total Tier 2 capital	**33,623**	34,034
Total qualifying capital	**$ 199,286**	$ 194,036
Credit risk RWA	**$ 1,223,147**	$ 1,156,102
Market risk RWA	**164,716**	114,276
Total RWA	**$ 1,387,863**	$ 1,270,378
Total adjusted average assets	**$ 2,343,713**	$ 2,243,242

(a) Goodwill and other intangible assets are net of any associated deferred tax liabilities.

(b) Primarily includes trust preferred securities of certain business trusts. Under the Basel III interim final rule published by U.S. federal banking agencies in October 2013, trust preferred securities will be phased out from inclusion as Tier 1 capital, but included as Tier 2 capital, beginning in 2014 through the end of 2015 and phased out from inclusion as Tier 2 capital beginning in 2016 through the end of 2021.

Capital rollforward

The following table presents the changes in Basel I Tier 1 common, Tier 1 capital and Tier 2 capital for the year ended December 31, 2013.

Year ended December 31, (in millions)	2013
Tier 1 common at December 31, 2012	$ 140,342
Net income applicable to common equity	17,118
Dividends declared on common stock	(5,585)
Net issuance of treasury stock	(2,845)
Changes in capital surplus	(776)
Effect of certain items in accumulated other comprehensive income/(loss) excluded from Tier 1 common	(40)
Qualifying noncontrolling minority interests in consolidated subsidiaries	(47)
DVA on structured notes and derivative liabilities	277
Goodwill and other nonqualifying intangibles (net of deferred tax liabilities)	642
Other	(199)
Increase in Tier 1 common	8,545
Tier 1 common at December 31, 2013	$ 148,887
Tier 1 capital at December 31, 2012	$ 160,002
Change in Tier 1 common	8,545
Net issuance of noncumulative perpetual preferred stock	2,100
Redemption of qualifying trust preferred securities	(4,942)
Other	(42)
Increase in Tier 1 capital	5,661
Tier 1 capital at December 31, 2013	$ 165,663
Tier 2 capital at December 31, 2012	$ 34,034
Change in long-term debt and other instruments qualifying as Tier 2	(1,366)
Change in allowance for credit losses	974
Other	(19)
Decrease in Tier 2 capital	(411)
Tier 2 capital at December 31, 2013	$ 33,623
Total capital at December 31, 2013	$ 199,286

RWA Rollforward

The following table presents the changes in the credit risk and market risk components of RWA under Basel I including Basel 2.5 for the year ended December 31, 2013. The rollforward categories are estimates, based on the predominant driver of the change.

	Year ended December 31, 2013		
(in billions)	Credit risk RWA	Market risk RWA	Total RWA
RWA at December 31, 2012	$ 1,156	$ 114	$ 1,270
Rule changes[a]	39	134	
Model & data changes[b]	24	1	
Portfolio runoff[c]	(11)	(45)	
Movement in portfolio levels[d]	15	(39)	
Increase in RWA	67	51	118
RWA at December 31, 2013	$ 1,223	$ 165	$ 1,388

(a) Rule changes refer to movements in RWA as a result of changes in regulations, in particular, Basel 2.5, which resulted in certain positions previously captured under market risk under Basel I being included as noncovered positions under credit risk RWA.

(b) Model & data changes refer to movements in RWA as a result of revised methodologies and/or treatment per regulatory guidance (exclusive of rule changes).

(c) Portfolio runoff for credit risk RWA reflects lower loan balances in Mortgage Banking and for market risk RWA reflects reduced risk from position rolloffs, including changes in the synthetic credit portfolio.

(d) Movement in portfolio levels for credit risk RWA refers to changes in book size, composition, quality, as well as market movements; and for market risk RWA, refers to changes in position and market movements.

The following table presents the risk-based capital ratios for JPMorgan Chase at December 31, 2013 and 2012, under Basel I (and, for December 31, 2013, inclusive of Basel 2.5)

Risk-based capital ratios

December 31,	**2013**	2012
Capital ratios		
Tier 1 capital	**11.9%**	12.6%
Total capital	**14.4**	15.3
Tier 1 leverage	**7.1**	7.1
Tier 1 common[a]	**10.7**	11.0

(a) The Tier 1 common ratio is Tier 1 common capital divided by RWA.

At December 31, 2013 and 2012, JPMorgan Chase maintained Basel I Tier 1 and Total capital ratios in excess of the well-capitalized standards established by the Federal Reserve. In addition, at December 31, 2013 and 2012, the Firm's Basel I Tier 1 common ratio was significantly above the 2013 5% CCAR standard.

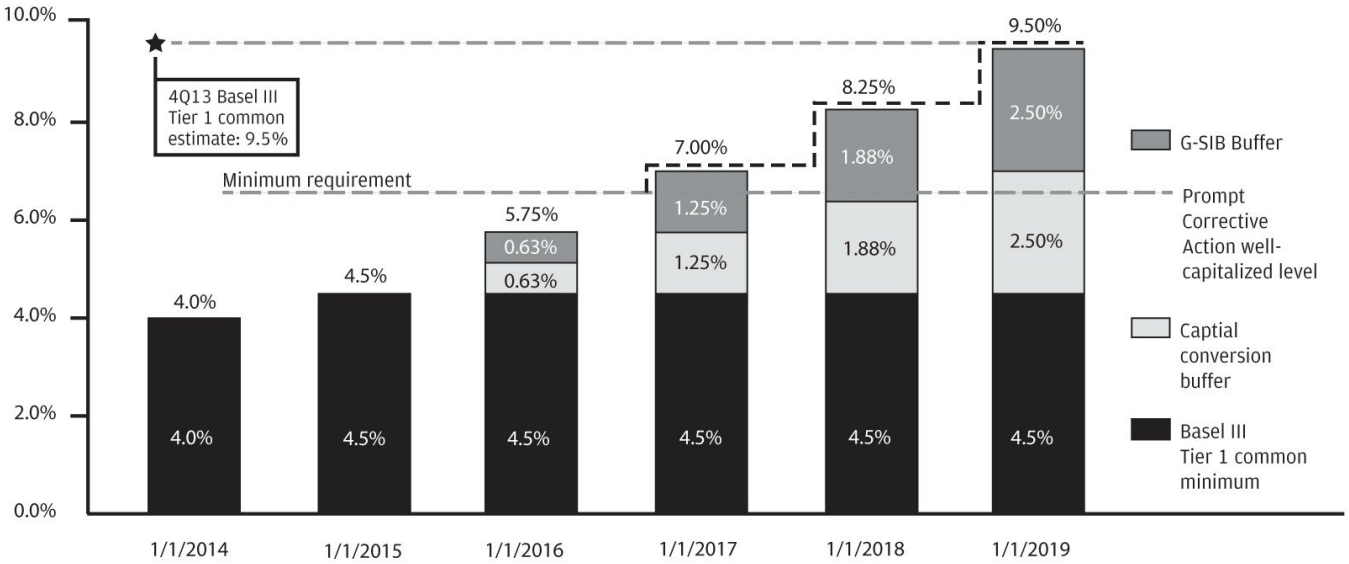
Additional information regarding the Firm's capital ratios and the federal regulatory capital standards to which the Firm is subject is presented in Note 28 on pages 316–318 of this Annual Report and the Supervision and Regulation section of the 2013 10-K. For further information on the Firm's Basel 2.5 measures and additional market risk disclosures, see the Firm's consolidated Basel 2.5 Market Risk Pillar 3 Reports which are available on the Firm's website (http://investor.shareholder.com/jpmorganchase/basel.cfm) within 60 days after December 31, 2013.

Basel II & Basel III

U.S. banking regulators published a final Basel II rule in December 2007, which was intended to be more risk sensitive than Basel I and eventually replace Basel I for large and internationally active U.S. banks, including the Firm. The Firm has been reporting Basel II capital ratios in parallel to the banking agencies since 2008. In October 2013, U.S. federal banking agencies published an interim final rule implementing further revisions to the Capital Accord in the U.S.; such further revisions are commonly referred to as "Basel III." Basel III is comprised of a Standardized Approach and an Advanced Approach. For large and internationally active banks, including the Firm, both the Basel III Standardized and Advanced Approaches became effective commencing January 1, 2014.

For 2014, the Basel III Standardized Approach requires the Firm to calculate its capital ratios using the Basel III definition of capital divided by the Basel I definition of RWA, inclusive of Basel 2.5 for market risk. Commencing January 1, 2015 the Basel III Standardized Approach requires the Firm to calculate the ratios using the Basel III definition of capital divided by the Basel III Standardized RWA, inclusive of Basel 2.5 for market risk.

Prior to full implementation of the Basel III Advanced Approach, the Firm is required to complete a qualification period ("parallel run") of at least four consecutive quarters (inclusive of quarters in which the Firm reported in parallel under Basel II) during which it needs to demonstrate that it meets the requirements of the rule to the satisfaction of its U.S. banking regulators. Pursuant to the requirements of the Dodd-Frank Act, the Firm, upon exiting the Basel III Advanced Approach parallel run, will be required to calculate regulatory capital ratios under both the Standardized and Advanced Approaches. The Firm's capital adequacy will be evaluated against the approach that results in the lower ratio.



Basel III revises Basel I and II by, among other things, narrowing the definition of capital, and increasing capital requirements for specific exposures. Basel III introduces a new Tier 1 common ratio requirement which has a phase-in period from 2015 to 2019. By January 1, 2019, the minimum Tier 1 common ratio requirement is 7%, comprised of a minimum ratio of 4.5% plus a 2.5% capital conservation buffer.

Global systemically important banks ("GSIBs") will also be required to maintain Tier 1 common requirements above the 7% minimum, in amounts ranging from an additional 1% to an additional 2.5%. In November 2013, the Financial Stability Board ("FSB") indicated that it would require the Firm, as well as one other bank, to hold the additional 2.5% of Tier 1 common; the requirement will be phased in beginning in 2016. The Basel Committee also stated that certain GSIBs could be required to hold as much as an additional 3.5% of Tier 1 common above the 7% minimum if they were to take actions that further increase their systemic importance. Currently, no GSIB (including the

Firm) is required to hold more than the additional 2.5% of Tier 1 common.

In addition, Basel III establishes a 6.5% Tier I common equity standard for the definition of "well capitalized" under the Prompt Corrective Action ("PCA") requirements of the FDIC Improvement Act ("FDICIA"). The Tier I common equity standard is effective from the first quarter of 2015.

The following chart presents the Basel III minimum risk-based capital ratios during the transitional periods and on a fully phased-in basis. The chart also includes management's target for the Firm's Tier 1 common ratio. It is the Firm's current expectation that its Basel III Tier 1 common ratio will exceed the regulatory minimums, both during the transition period and upon full implementation in 2019 and thereafter.

The Firm estimates that its Tier 1 common ratio under the Basel III Advanced Approach on a fully phased-in basis would be 9.5% as of December 31, 2013, achieving management's previously stated objectives. The Tier 1 common ratio as calculated under the Basel III Standardized Approach is estimated at 9.4% as of December 31, 2013. The Tier 1 common ratio under both Basel I and Basel III are non-GAAP financial measures. However, such measures are used by bank regulators, investors and analysts to assess the Firm's capital position and to compare the Firm's capital to that of other financial services companies.

The following table presents a comparison of the Firm's Tier 1 common under Basel I rules to its estimated Tier 1 common under the Advanced Approach of the Basel III rules, along with the Firm's estimated risk-weighted assets. Key differences in the calculation of RWA between Basel I and Basel III Advanced Approach include: (1) Basel III credit risk RWA is based on risk-sensitive approaches which largely rely on the use of internal credit models and parameters, whereas Basel I RWA is based on fixed supervisory risk-weightings which vary only by counterparty type and asset class; and (2) Basel III includes RWA for operational risk, whereas Basel I does not. Operational risk capital takes into consideration operational losses in the quarter following the period in which those losses were realized, and the calculation generally incorporates such losses irrespective of whether the issues or business activity giving rise to the losses have been remediated or reduced. The Firm's operational risk capital model continues to be refined in conjunction with the Firm's Basel III Advanced Approach parallel run. As a result of model enhancements in 2013, as well as taking into consideration the legal expenses incurred by the Firm in 2013, the Firm's operational risk capital increased substantially in 2013 over 2012.

Tier 1 common under Basel III includes additional adjustments and deductions not included in Basel I Tier 1 common, such as the inclusion of accumulated other comprehensive income ("AOCI") related to AFS securities and defined benefit pension and other postretirement employee benefit ("OPEB") plans.

December 31, 2013 (in millions, except ratios)		
Tier 1 common under Basel I rules	$	148,887
Adjustments related to AOCI for AFS securities and defined benefit pension and OPEB plans		1,474
Add back of Basel I deductions[(a)]		1,780
Deduction for deferred tax asset related to net operating loss and foreign tax credit carryforwards		(741)
All other adjustments		(198)
Estimated Tier 1 common under Basel III rules	$	151,202
Estimated risk-weighted assets under Basel III Advanced Approach[(b)]	$	1,590,873
Estimated Tier 1 common ratio under Basel III Advanced Approach[(c)]		9.5%

(a) Certain exposures, which are deducted from capital under Basel I, are risked-weighted under Basel III.

(b) RWA under Basel III Advanced Approach is on a fully phased-in basis. Effective January 1, 2013, market risk RWA requirements under Basel 2.5 became largely consistent across Basel I and Basel III.
(c) The Tier 1 common ratio under Basel III rules is Tier 1 common divided by RWA under Basel III Advanced Approach.

Additionally, the Firm estimates that its Tier 1 capital ratio under the Basel III Advanced Approach on a fully phased-in basis would be 10.2% as of December 31, 2013. The Tier 1 capital ratio as calculated under the Basel III Standardized Approach on a fully phased-in basis is estimated at 10.1% as of December 31, 2013.

Management's current objective is for the Firm to reach an estimated Basel III Tier I common ratio of 10%+ and a Basel III Tier 1 capital ratio of 11.0%, both by the end of 2014. Tier 1 common capital and the Tier 1 common and Tier 1 capital ratios under Basel III are all non-GAAP financial measures. However, such measures are used by bank regulators, investors and analysts to assess the Firm's capital position and to compare the Firm's capital to that of other financial services companies.

The Basel III interim final rule also includes a requirement for advanced approach banking organizations, including the Firm, to calculate a supplementary leverage ratio ("SLR"). The SLR, a non-GAAP financial measure, is defined as Tier 1 capital under Basel III divided by the Firm's total leverage exposure. Total leverage exposure is calculated by taking the Firm's total average on-balance sheet assets, less amounts permitted to be deducted for Tier 1 capital, and adding certain off-balance sheet exposures, such as undrawn commitments and derivatives future exposure.

Following approval of the Basel III interim final rule, the U.S. banking agencies issued proposed rulemaking relating to the SLR that would require U.S. bank holding companies, including JPMorgan Chase, to have a minimum SLR of at least 5% and insured depository institutions ("IDI"), including JPMorgan Chase Bank, N.A. and Chase Bank USA, N.A., to have a minimum SLR of at least 6%. The Firm and its IDI subsidiaries are not required to meet the minimum SLR until January 1, 2018. The Firm estimates, based on its current understanding of the U.S. rules, that if the rules were in effect at December 31, 2013, the Firm's SLR would have been approximately 4.7% and JPMorgan Chase Bank, N.A.'s SLR would have been approximately 4.7%. Management's current objective is to achieve an SLR of 5.5% for the Firm and an SLR of 6% for JPMorgan Chase Bank, N.A, each in advance of the SLR effective date.

On January 12, 2014, the Basel Committee issued a revised framework for the calculation of the denominator of the SLR. The estimated impact of these revisions would have been to reduce each of the Firm's SLR and J.P. Morgan Chase Bank, N.A.'s SLR by 10 basis points as of December 31, 2013.

The Firm's estimates of its Tier 1 common ratio under Basel III and of the Firm's and JPMorgan Chase Bank, N.A.'s SLR reflect its current understanding of the U.S. Basel III rules based on the current published rules and on the application of such rules to its businesses as currently conducted. The actual impact on the Firm's capital and SLR ratios at the effective date of the rules may differ from the Firm's current estimates depending on changes the Firm may make to its businesses in the future, further implementation guidance from the regulators, and regulatory approval of certain of the Firm's internal risk models (or, alternatively, regulatory disapproval of the Firm's internal risk models that have previously been conditionally approved).

Economic risk capital

Economic risk capital is another of the disciplines the Firm uses to assess the capital required to support its businesses. Economic risk capital is a measure of the capital needed to cover JPMorgan Chase's business activities in the event of unexpected losses. The Firm measures economic risk capital using internal risk-assessment methodologies and models based primarily on four risk factors: credit, market, operational and private equity risk and considers factors, assumptions and inputs that differ from those required to be used for regulatory capital requirements. Accordingly economic risk capital provides a complementary measure to regulatory capital. As economic risk capital is a separate component of the capital framework for Advanced Approach banking organizations under Basel III, the Firm is currently in the process of enhancing its economic risk capital framework to address the Basel III interim final rule.

Line of business equity

The Firm's framework for allocating capital to its business segments is based on the following objectives:

- Integrate firmwide and line of business capital management activities;
- Measure performance consistently across all lines of business; and
- Provide comparability with peer firms for each of the lines of business

Equity for a line of business represents the amount the Firm believes the business would require if it were operating independently, considering capital levels for similarly rated peers, regulatory capital requirements (as estimated under Basel III) and economic risk measures. Capital is also allocated to each line of business for, among other things, goodwill and other intangibles associated with acquisitions effected by the line of business. ROE is measured and internal targets for expected returns are established as key measures of a business segment's performance.

Line of business equity Year ended December 31, (in billions)	Yearly average 2013	2012	2011
Consumer & Community Banking	**$ 46.0**	$ 43.0	$ 41.0
Corporate & Investment Bank	**56.5**	47.5	47.0
Commercial Banking	**13.5**	9.5	8.0
Asset Management	**9.0**	7.0	6.5
Corporate/Private Equity	**71.4**	77.4	70.8
Total common stockholders' equity	**$ 196.4**	$ 184.4	$ 173.3

Effective January 1, 2012, the Firm revised the capital allocated to each of its businesses, reflecting each segment's Basel III Tier 1 common capital requirements.

Effective January 1, 2013, the Firm further refined the capital allocation framework to align it with the revised line of business structure that became effective in the fourth quarter of 2012. The increase in equity levels for the lines of businesses was largely driven by the evolving regulatory requirements and higher capital targets the Firm has established under the Basel III Advanced Approach.

Effective January 1, 2014, the Firm further revised the capital allocated to certain businesses and will continue to assess the level of capital required for each line of business, as well as the assumptions and methodologies used to allocate capital to the business segments. Further refinements may be implemented in future periods.

Capital actions

Dividends

On March 18, 2011, the Board of Directors increased the Firm's quarterly common stock dividend from $0.05 to $0.25 per share, effective with the dividend paid on April 30, 2011, to shareholders of record on April 6, 2011.

On March 13, 2012, the Board of Directors increased the Firm's quarterly common stock dividend from $0.25 to $0.30 per share, effective with the dividend paid on April 30, 2012, to shareholders of record on April 5, 2012.

On May 21, 2013, the Board of Directors increased the Firm's quarterly common stock dividend from $0.30 to $0.38 per share, effective with the dividend paid on July 31, 2013, to shareholders of record on July 5, 2013.

The Firm's common stock dividend policy reflects JPMorgan Chase's earnings outlook, desired dividend payout ratio, capital objectives, and alternative investment opportunities.

The Firm's current expectation is to continue to target a payout ratio of approximately 30% of normalized earnings over time.

For information regarding dividend restrictions, see Note 22 and Note 27 on pages 309 and 316, respectively, of this Annual Report.

The following table shows the common dividend payout ratio based on reported net income.

Year ended December 31,	2013	2012	2011
Common dividend payout ratio	**33%**	23%	22%

Preferred stock

On August 27, 2012, the Firm issued $1.3 billion of fixed-rate noncumulative perpetual preferred stock.

On February 5, 2013 the Firm issued $900 million of noncumulative preferred stock. On each of April 23, 2013, and July 29, 2013, the Firm issued $1.5 billion of noncumulative preferred stock.

The Firm redeemed all $1.8 billion of its outstanding 8.625% noncumulative preferred stock, Series J on September 1, 2013.

On January 22, 2014, January 30, 2014, and February 6, 2014, the Firm issued $2.0 billion, $850 million, and $75 million, respectively, of noncumulative preferred stock. For additional information on the Firm's preferred stock, see Note 22 on page 309 of this Annual Report.

Redemption of outstanding trust preferred securities

On May 8, 2013, the Firm redeemed approximately $5.0 billion, or 100% of the liquidation amount, of the following eight series of trust preferred securities: JPMorgan Chase Capital X, XI, XII, XIV, XVI, XIX, XXIV, and BANK ONE Capital VI. For a further discussion of trust preferred securities, see Note 21 on pages 306–308 of this Annual Report.

Common equity repurchases

On March 13, 2012, the Board of Directors authorized a $15.0 billion common equity (i.e., common stock and warrants) repurchase program. The amount of equity that may be repurchased is also subject to the amount that is set forth in the Firm's annual capital plan that is submitted to the Federal Reserve as part of the CCAR process. As part of this authorization, and in conjunction with the Firm's 2013 CCAR submission, the Board of Directors authorized the Firm to repurchase up to $6 billion gross of common equity commencing with the second quarter of 2013 through the end of the first quarter of 2014. From April 1, 2013, through December 31, 2013, the Firm repurchased $2.2 billion of common equity. The following table shows the Firm's repurchases of common equity for the years ended December 31, 2013, 2012 and 2011, on a trade-date basis. As of December 31, 2013, $8.6 billion of authorized repurchase capacity remained under the $15.0 billion repurchase program.

Year ended December 31, (in millions)	2013	2012	2011
Total number of shares of common stock repurchased	**96**	31	229
Aggregate purchase price of common stock repurchases	**$ 4,789**	$ 1,329	$ 8,827
Total number of warrants repurchased	**–**	18	10
Aggregate purchase price of warrant repurchases	**$ –**	$ 238	$ 122

The Firm may, from time to time, enter into written trading plans under Rule 10b5-1 of the Securities Exchange Act of 1934 to facilitate repurchases in accordance with the common equity repurchase program. A Rule 10b5-1 repurchase plan allows the Firm to repurchase its equity during periods when it would not otherwise be repurchasing common equity – for example, during internal trading "black-out periods." All purchases under a Rule 10b5-1 plan must be made according to a predefined plan established when the Firm is not aware of material nonpublic information.

The authorization to repurchase common equity will be utilized at management's discretion, and the timing of purchases and the exact amount of common equity that may be repurchased is subject to various factors, including market conditions; legal and regulatory considerations affecting the amount and timing of repurchase activity; the Firm's capital position (taking into account goodwill and intangibles); internal capital generation; and alternative investment opportunities. The repurchase program does not include specific price targets or timetables; may be executed through open market purchases or privately negotiated transactions, or utilizing Rule 10b5-1 programs; and may be suspended at any time.

For additional information regarding repurchases of the Firm's equity securities, see Part II, Item 5: Market for registrant's common equity, related stockholder matters and issuer purchases of equity securities on pages 20–21 of JPMorgan Chase's 2013 Form 10-K.

Broker-dealer regulatory capital

JPMorgan Chase's principal U.S. broker-dealer subsidiaries are J.P. Morgan Securities LLC ("JPMorgan Securities") and J.P. Morgan Clearing Corp. ("JPMorgan Clearing"). JPMorgan Clearing is a subsidiary of JPMorgan Securities and provides clearing and settlement services. JPMorgan Securities and JPMorgan Clearing are each subject to Rule 15c3-1 under the Securities Exchange Act of 1934 (the "Net Capital Rule"). JPMorgan Securities and JPMorgan Clearing are also each registered as futures commission merchants and subject to Rule 1.17 of the Commodity Futures Trading Commission ("CFTC").

JPMorgan Securities and JPMorgan Clearing have elected to compute their minimum net capital requirements in accordance with the "Alternative Net Capital Requirements" of the Net Capital Rule. At December 31, 2013, JPMorgan Securities' net capital, as defined by the Net Capital Rule, was $12.9 billion, exceeding the minimum requirement by $10.8 billion, and JPMorgan Clearing's net capital was $7.1 billion, exceeding the minimum requirement by $5.3 billion.

In addition to its minimum net capital requirement, JPMorgan Securities is required to hold tentative net capital in excess of $1.0 billion and is also required to notify the Securities and Exchange Commission ("SEC") in the event that tentative net capital is less than $5.0 billion, in accordance with the market and credit risk standards of Appendix E of the Net Capital Rule. As of December 31, 2013, JPMorgan Securities had tentative net capital in excess of the minimum and notification requirements.

J.P. Morgan Securities plc (formerly J.P. Morgan Securities Ltd.) is a wholly owned subsidiary of JPMorgan Chase Bank, N.A. and is the Firm's principal operating subsidiary in the U.K. It has authority to engage in banking, investment banking and broker-dealer activities. J.P. Morgan Securities plc is jointly regulated by the U.K. Prudential Regulation Authority ("PRA") and Financial Conduct Authority ("FCA") (together, formerly the U.K. Financial Services Authority). During the fourth quarter of 2013, J.P. Morgan Securities plc received a capital contribution of $3.3 billion from JPMorgan Chase Bank, N.A., which was made to cover the anticipated capital requirements related to the introduction of Basel III rules, to which J.P. Morgan Securities plc is subject beginning January 1, 2014. Following this capital contribution, at December 31, 2013, J.P. Morgan Securities plc had total capital of $26.5 billion, or a Pillar 1 Total capital ratio of 18.1%, which exceeded the 8% well-capitalized standard applicable to it under Basel 2.5.

LIQUIDITY RISK MANAGEMENT

Liquidity risk management is intended to ensure that the Firm has the appropriate amount, composition and tenor of funding and liquidity in support of its assets. The primary objectives of effective liquidity management are to ensure that the Firm's core businesses are able to operate in support of client needs and meet contractual and contingent obligations through normal economic cycles, as well as during market stress events, and to maintain debt ratings that enable the Firm to optimize its funding mix and liquidity sources while minimizing costs.

The Firm manages liquidity and funding using a centralized, global approach in order to optimize liquidity sources and uses for the Firm as a whole, monitor exposures, identify constraints on the transfer of liquidity among legal entities within the Firm, and maintain the appropriate amount of surplus liquidity as part of the Firm's overall balance sheet management strategy.

In the context of the Firm's liquidity management, Treasury is responsible for:

- Measuring, managing, monitoring and reporting the Firm's current and projected liquidity sources and uses;
- Understanding the liquidity characteristics of the Firm's assets and liabilities;
- Defining and monitoring firmwide and legal entity liquidity strategies, policies, guidelines, and contingency funding plans;
- Liquidity stress testing under a variety of adverse scenarios
- Managing funding mix and deployment of excess short-term cash;
- Defining and implementing funds transfer pricing ("FTP") across all lines of business and regions; and
- Defining and addressing the impact of regulatory changes on funding and liquidity.

The Firm has a liquidity risk governance framework to review, approve and monitor the implementation of liquidity risk policies at the firmwide, regional and line of business levels.

Specific risk committees responsible for liquidity risk governance include ALCO as well as lines of business and regional asset and liability management committees, and the CTC Risk Committee. For further discussion of the risk committees, see Enterprise-wide Risk Management on pages 113–173 of this Annual Report. In addition, during 2013, the Firm established an independent liquidity risk oversight function reporting into the CIO, Treasury and Corporate ("CTC") CRO, which provides independent assessments and monitoring of liquidity risk across the Firm.

Management considers the Firm's liquidity position to be strong as of December 31, 2013, and believes that the Firm's unsecured and secured funding capacity is sufficient to meet its on- and off-balance sheet obligations.

LCR and NSFR

In December 2010, the Basel Committee introduced two new measures of liquidity risk: the liquidity coverage ratio ("LCR"), which is intended to measure the amount of "high-quality liquid assets" ("HQLA") held by the Firm in relation to estimated net cash outflows within a 30-day period during an acute stress event; and the net stable funding ratio ("NSFR") which is intended to measure the "available" amount of stable funding relative to the "required" amount of stable funding over a one-year horizon. The standards require that the LCR be no lower than 100% and the NSFR be greater than 100%.

In January 2013, the Basel Committee introduced certain amendments to the formulation of the LCR, and a revised timetable to phase in the standard. The LCR will continue to become effective on January 1, 2015, but the minimum requirement will begin at 60%, increasing in equal annual increments to reach 100% on January 1, 2019. At December 31, 2013, the Firm was compliant with the Basel III LCR. The LCR may fluctuate from period-to-period due to normal flows from client activity.

On October 24, 2013, the U.S. banking regulators released a proposal to implement a U.S. quantitative liquidity requirement consistent with, but more conservative than, Basel III LCR for large banks and bank holding companies ("U.S. LCR"). The proposal also provides for an accelerated transition period compared to that which is currently required under the Basel III LCR rules. At December 31, 2013, the Firm was also compliant with the U.S. LCR based on its current understanding of the proposed rules.

On January 12, 2014, the Basel Committee released proposed revisions to the NSFR. Based on its current understanding of the proposed revisions, the Firm was compliant with the NSFR as of December 31, 2013.

Funding

Sources of funds

The Firm funds its global balance sheet through diverse sources of funding including a stable deposit franchise as well as secured and unsecured funding in the capital markets. The Firm's loan portfolio, aggregating approximately $722.2 billion, net of allowance, at December 31, 2013, is funded with a portion of the Firm's deposits (aggregating approximately $1,287.8 billion at December 31, 2013), and through securitizations and, with respect to a portion of the Firm's real estate-related loans, with secured borrowings from the Federal Home Loan Banks. Deposits in excess of the amount utilized to fund loans are primarily invested in the Firm's investment securities portfolio or deployed in cash or other short-term liquid investments based on their interest rate and liquidity

risk characteristics. Capital markets secured financing assets and trading assets are primarily funded by the Firm's capital market secured financing liabilities, trading liabilities and a portion of the Firm's long-term debt and equity.

In addition to funding capital markets assets, proceeds from the Firm's debt and equity issuances are used to fund certain loans, and other financial and non-financial assets, or may be invested in the Firm's investment securities portfolio. See the discussion below for additional disclosures relating to Deposits, Short-term funding, and Long-term funding and issuance.

Deposits

A key strength of the Firm is its diversified deposit franchise, through each of its lines of business, which provides a stable source of funding and limits reliance on the wholesale funding markets. As of December 31, 2013, the Firm's loans-to-deposits ratio was 57%, compared with 61% at December 31, 2012.

As of December 31, 2013, total deposits for the Firm were $1,287.8 billion, compared with $1,193.6 billion at December 31, 2012 (58% and 55% of total liabilities at December 31, 2013 and 2012, respectively). The increase was due to growth in both wholesale and consumer deposits. For further information, see Balance Sheet Analysis on pages 75–76 of this Annual Report.

The Firm typically experiences higher customer deposit inflows at period-ends. Therefore, the Firm believes average deposit balances are more representative of deposit trends. The table below summarizes, by line of business, the period-end and average deposit balances as of and for the years ended December 31, 2013 and 2012.

Deposits			Year ended December 31,	
As of or for the period ended December 31,			Average	
(in millions)	**2013**	2012	**2013**	2012
Consumer & Community Banking	**$ 464,412**	$ 438,517	**$ 453,304**	$ 413,948
Corporate & Investment Bank	**446,237**	385,560	**384,289**	353,048
Commercial Banking	**206,127**	198,383	**184,409**	181,805
Asset Management	**146,183**	144,579	**139,707**	129,208
Corporate/Private Equity	**24,806**	26,554	**27,433**	27,874
Total Firm	**$ 1,287,765**	$ 1,193,593	**$ 1,189,142**	$ 1,105,883

A significant portion of the Firm's deposits are consumer deposits (36% and 37% at December 31, 2013 and 2012, respectively), which are considered particularly stable as they are less sensitive to interest rate changes or market volatility. Additionally, the majority of the Firm's institutional deposits are also considered to be stable sources of funding since they are generated from customers that maintain operating service relationships with the Firm. For further discussions of deposit and liability balance trends, see the discussion of the results for the Firm's business segments and the Balance Sheet Analysis on pages 86–111 and 75–76, respectively, of this Annual Report.

The following table summarizes short-term and long-term funding, excluding deposits, as of December 31, 2013 and 2012, and average balances for the years ended December 31, 2013 and 2012. For additional information, see the Balance Sheet Analysis on pages 75–76 and Note 21 on pages 306–308 of this Annual Report.

Sources of funds (excluding deposits)

As of or for the year ended December 31, (in millions)	2013	2012	Average 2013	Average 2012
Commercial paper:				
Wholesale funding	**$ 17,249**	$ 15,589	**$ 17,785**	$ 14,302
Client cash management	**40,599**	39,778	**35,932**	36,478

Total long-term unsecured funding	**$ 199,380**	$ 200,621	**$ 202,312**	$ 218,490
Credit card securitization	**$ 26,580**	$ 30,123	**$ 27,834**	$ 29,249
Other securitizations[d]	**3,253**	3,680	**3,501**	3,974
FHLB advances	**61,876**	42,045	**55,487**	20,415
Other long-term secured funding[e]	**6,633**	6,358	**6,284**	6,757
Total long-term secured funding	**$ 98,342**	$ 82,206	**$ 93,106**	$ 60,395
Preferred stock[f]	**$ 11,158**	$ 9,058	**$ 10,960**	$ 8,236
Common stockholders' equity[f]	**$ 200,020**	$ 195,011	**$ 196,409**	$ 184,352

(a) Excludes federal funds purchased.
(b) Excluded long-term structured repurchase agreements of $4.6 billion and $3.3 billion as of December 31, 2013 and 2012, respectively, and average balance of $4.2 billion and $7.0 billion for the years ended December 31, 2013 and 2012, respectively.
(c) Excluded long-term securities loaned of $483 million and $457 million as of December 31, 2013 and 2012, respectively, and average balance of $414 million and $113 million for the years ended December 31, 2013 and 2012, respectively.
(d) Other securitizations includes securitizations of residential mortgages and student loans. The Firm's wholesale businesses also securitize loans for client-driven transactions; those client-driven loan securitizations are not considered to be a source of funding for the Firm and are not included in the table.
(e) Includes long-term structured notes which are secured.
(f) For additional information on preferred stock and common stockholders' equity see Capital Management on pages 160–167, Consolidated Statements of Changes in Stockholders' Equity on page 187, Note 22 on page 309 and Note 23 on page 310 of this Annual Report.

Short-term funding

A significant portion of the Firm's total commercial paper liabilities, approximately 70% as of December 31, 2013, are not sourced from wholesale funding markets, but were originated from deposits that customers choose to sweep into commercial paper liabilities as a cash management program offered to customers of the Firm.

The Firm's sources of short-term secured funding primarily consist of securities loaned or sold under agreements to repurchase. Securities loaned or sold under agreements to repurchase are secured predominantly by high-quality securities collateral, including government-issued debt, agency debt and agency MBS, and constitute a significant portion of the federal funds purchased and securities loaned or sold under purchase agreements. The amounts of securities loaned or sold under agreements to repurchase at December 31, 2013, decreased predominantly due to a change in the mix of the Firm's funding sources. The balances associated with securities loaned or sold under agreements to repurchase fluctuate over time due to customers' investment and financing activities; the Firm's demand for financing; the ongoing management of the mix of the Firm's liabilities, including its secured and unsecured financing (for both the investment and market-making portfolios); and other market and portfolio factors.

Long-term funding and issuance

Long-term funding provides additional sources of stable funding and liquidity for the Firm. The Firm's long-term funding plan is driven by expected client activity and the liquidity required to support this activity. Long-term funding objectives include maintaining diversification, maximizing market access and optimizing funding cost, as well as maintaining a certain level of pre-funding at the parent holding company. The Firm evaluates various funding markets, tenors and currencies in creating its optimal long-term funding plan.

The majority of the Firm's long-term unsecured funding is issued by the parent holding company to provide maximum flexibility in support of both bank and nonbank subsidiary funding. The following table summarizes long-term unsecured issuance and maturities or redemption for the years ended December 31, 2013 and 2012. For additional information, see Note 21 on pages 306–308 of this Annual Report.

Long-term unsecured funding

Year ended December 31, (in millions)	2013	2012
Issuance		
Senior notes issued in the U.S. market	**$ 19,835**	$ 15,566
Senior notes issued in non-U.S. markets	**8,843**	8,341
Total senior notes	**28,678**	23,907
Trust preferred securities	**–**	–
Subordinated debt	**3,232**	–
Structured notes	**16,979**	15,120
Total long-term unsecured funding – issuance	**$ 48,889**	$ 39,027
Maturities/redemptions		
Total senior notes	**$ 18,418**	$ 40,244
Trust preferred securities[(a)]	**5,052**	9,482
Subordinated debt	**2,418**	1,045
Structured notes	**17,785**	18,638
Total long-term unsecured funding – maturities/redemptions	**$ 43,673**	$ 69,409

(a) On May 8, 2013, the Firm redeemed approximately $5.0 billion, or 100% of the liquidation amount, of trust preferred securities pursuant to the optional redemption provisions set forth in the documents governing those trust preferred securities.

In addition, from January 1, 2014, through February 19, 2014, the Firm issued $12.7 billion of senior notes.

The Firm raises secured long-term funding through securitization of consumer credit card loans and advances from the FHLBs. It may also in the future raise long-term funding through securitization of residential mortgages, auto loans and student loans, which will increase funding and investor diversity.

The following table summarizes the securitization issuance and FHLB advances and their respective maturities or redemption for the years ended December 31, 2013 and 2012.

Long-term secured funding

Year ended December 31,	Issuance		Maturities/Redemptions	
(in millions)	**2013**	2012	**2013**	2012
Credit card securitization	**$ 8,434**	$ 10,800	**$ 11,853**	$ 13,187
Other securitizations[(a)]	**–**	–	**427**	487
FHLB advances	**23,650**	35,350	**3,815**	11,124
Other long-term secured funding	**$ 751**	$ 534	**$ 159**	$ 1,785
Total long-term secured funding	**$ 32,835**	$ 46,684	**$ 16,254**	$ 26,583

(a) Other securitizations includes securitizations of residential mortgages and student loans.

On January 27, 2014, the Firm securitized $1.8 billion of consumer credit card loans.

The Firm's wholesale businesses also securitize loans for client-driven transactions; those client-driven loan securitizations are not considered to be a source of funding for the Firm and are not included in the table above. For further description of the client-driven loan securitizations, see Note 16 on pages 288–299 of this Annual Report.

Parent holding company and subsidiary funding

The parent holding company acts as an important source of funding to its subsidiaries. The Firm's liquidity management is intended to ensure that liquidity at the parent holding company is maintained at levels sufficient to fund the operations of the parent holding company and its subsidiaries for an extended period of time in a stress environment where access to normal funding sources is disrupted.

To effectively monitor the adequacy of liquidity and funding at the parent holding company, the Firm uses three primary measures:

- Number of months of pre-funding: The Firm targets pre-funding of the parent holding company to ensure that both contractual and non-contractual obligations can be met for at least 18 months assuming no access to wholesale funding markets. However, due to conservative liquidity management actions taken by the Firm, the current pre-funding of such obligations is greater than target.
- Excess cash: Excess cash is managed to ensure that daily cash requirements can be met in both normal and stressed environments. Excess cash generated by parent holding company issuance activity is placed on deposit with or is advanced to both bank and nonbank subsidiaries or held as liquid collateral purchased through reverse repurchase agreements.
- Stress testing: The Firm conducts regular stress testing for the parent holding company and major subsidiaries to

ensure sufficient liquidity for the Firm in a stressed environment. The Firm's liquidity management takes into consideration its subsidiaries' ability to generate replacement funding in the event the parent holding company requires repayment of the aforementioned deposits and advances. For further information, see the Stress testing discussion below.

HQLA

HQLA is the estimated amount of assets the Firm believes will qualify for inclusion in the Basel III LCR. HQLA primarily consists of cash and certain unencumbered high quality, liquid assets as defined in the rule.

As of December 31, 2013, HQLA was estimated to be approximately $522 billion, compared with $341 billion as of December 31, 2012. The increase in HQLA was due to higher cash balances primarily driven by increased deposits and long-term debt issuance, as well as by a reduction in trading assets. HQLA may fluctuate from period-to-period due to normal flows from client activity.

The following table presents the estimated Basel III LCR HQLA broken out by HQLA-eligible cash and HQLA-eligible securities as of December 31, 2013.

(in billions)	December 31, 2013
HQLA[(a)]	
Eligible cash	$ 294
Eligible securities	228
Total HQLA	$ 522

(a) Table represents Basel III LCR HQLA. HQLA under proposed U.S. LCR is estimated to be lower primarily due to exclusions of certain security types based on the Firm's understanding of the proposed rule.

In addition to HQLA, as of December 31, 2013, the Firm has approximately $282 billion of unencumbered marketable securities, such as equity securities and fixed income debt securities, available to raise liquidity, if required. Furthermore, the Firm maintains borrowing capacity at various FHLBs, the Federal Reserve Bank discount window and various other central banks as a result of collateral pledged by the Firm to such banks. Although available, the Firm does not view the borrowing capacity at the Federal Reserve Bank discount window and the various other central banks as a primary source of liquidity. As of December 31, 2013, the Firm's remaining borrowing capacity at various FHLBs and the Federal Reserve Bank discount window was approximately $109 billion. This borrowing capacity excludes the benefit of securities included above in HQLA or other unencumbered securities held at the Federal Reserve Bank discount window for which the Firm has not drawn liquidity.

Stress testing

Liquidity stress tests are intended to ensure sufficient liquidity for the Firm under a variety of adverse scenarios. Results of stress tests are therefore considered in the formulation of the Firm's funding plan and assessment of its liquidity position. Liquidity outflow assumptions are modeled across a range of time horizons and varying degrees of market and idiosyncratic stress. Standard stress tests are performed on a regular basis and ad hoc stress tests are performed in response to specific market events or concerns. Stress scenarios are produced for the parent holding company and the Firm's major subsidiaries. In addition, separate regional liquidity stress testing is performed.

Liquidity stress tests assume all of the Firm's contractual obligations are met and then take into consideration varying levels of access to unsecured and secured funding markets. Additionally, assumptions with respect to potential non-contractual and contingent outflows include, but are not limited to, the following:

- Deposits
  - For bank deposits that have no contractual maturity, the range of potential outflows reflects the type and size of deposit account, and the nature and extent of the Firm's relationship with the depositor.
- Secured funding
  - Range of haircuts on collateral based on security type and counterparty.
- Derivatives
  - Margin calls by exchanges or clearing houses;
  - Collateral calls associated with ratings downgrade triggers and variation margin;
  - Outflows of excess client collateral;
  - Novation of derivative trades.
- Unfunded commitments
  - Potential facility drawdowns reflecting the type of commitment and counterparty.

Contingency funding plan

The Firm's contingency funding plan ("CFP"), which is reviewed and approved by ALCO, provides a documented framework for managing both temporary and longer-term unexpected adverse liquidity stress. The CFP incorporates the limits and indicators set by the Liquidity Risk Oversight group. These limits and indicators are reviewed regularly to identify emerging risks or increased vulnerabilities in the Firm's liquidity position. The CFP is also regularly updated to identify alternative contingent liquidity resources that can be accessed under adverse liquidity circumstances.

Credit ratings

The cost and availability of financing are influenced by credit ratings. Reductions in these ratings could have an adverse effect on the Firm's access to liquidity sources, increase the cost of funds, trigger additional collateral or funding requirements and decrease the number of investors and counterparties willing to lend to the Firm. Additionally, the Firm's funding requirements for VIEs and other third party commitments may be adversely affected by a decline in credit ratings. For additional information on the impact of a credit ratings downgrade on the funding requirements for VIEs, and on derivatives and collateral agreements, see Special-purpose entities on page 77, and Credit risk, liquidity risk and credit-related contingent features in Note 6 on pages 220–233, of this Annual Report.

The credit ratings of the parent holding company and certain of the Firm's significant operating subsidiaries as of December 31, 2013, were as follows.

	JPMorgan Chase & Co.			JPMorgan Chase Bank, N.A. Chase Bank USA, N.A.			J.P. Morgan Securities LLC		
December 31, 2013	Long-term issuer	Short-term issuer	Outlook	Long-term issuer	Short-term issuer	Outlook	Long-term issuer	Short-term issuer	Outlook
Moody's Investor Services	A3	P-2	Stable	Aa3	P-1	Stable	Aa3	P-1	Stable
Standard & Poor's	A	A-1	Negative	A+	A-1	Stable	A+	A-1	Stable
Fitch Ratings	A+	F1	Stable	A+	F1	Stable	A+	F1	Stable

On June 11, 2013, S&P announced a reassessment of the government support assumptions reflected in its holding company ratings of eight systemically important financial institutions, including the Firm. As a result of this reassessment, the outlook for the parent company was revised to negative from stable; the outlook for the Firm's operating subsidiaries remained unchanged at stable.

On November 14, 2013, Moody's downgraded the Firm and several other bank holding companies based on Moody's reassessment of its assumptions relating to implicit government support for such companies. Specifically, Moody's downgraded the senior and subordinated debt ratings of JPMorgan Chase and Co., and the subordinated debt rating of JPMorgan Chase Bank, N.A. and upgraded the long-term issuer rating of JPMorgan Securities. The parent company downgrade also resulted in Moody's downgrade of the parent company's short-term rating. The rating actions did not have a material adverse impact on the Firm's cost of funds or its ability to fund itself.

Additional downgrades of the Firm's long-term ratings by one notch or two notches could result in a further downgrade of the Firm's short-term ratings. If this were to occur, the Firm believes its cost of funds could increase and access to certain funding markets could be reduced. The nature and magnitude of the impact of further ratings downgrades depends on numerous contractual and behavioral factors (which the Firm believes are incorporated in its liquidity risk and stress testing metrics). The Firm believes it maintains sufficient liquidity to withstand a potential decrease in funding capacity due to further ratings downgrades.

JPMorgan Chase's unsecured debt does not contain requirements that would call for an acceleration of payments, maturities or changes in the structure of the existing debt, provide any limitations on future borrowings or require additional collateral, based on unfavorable changes in the Firm's credit ratings, financial ratios, earnings, or stock price.

Critical factors in maintaining high credit ratings include a stable and diverse earnings stream, strong capital ratios, strong credit quality and risk management controls, diverse funding sources, and disciplined liquidity monitoring procedures. Rating agencies continue to evaluate economic and geopolitical trends, regulatory developments, rating uplift assumptions surrounding government support, future profitability, risk management practices, and legal expenses, all of which could lead to adverse ratings actions. Although the Firm closely monitors and endeavors to manage factors influencing its credit ratings, there is no assurance that its credit ratings will not be further changed in the future.

CRITICAL ACCOUNTING ESTIMATES USED BY THE FIRM

JPMorgan Chase's accounting policies and use of estimates are integral to understanding its reported results. The Firm's most complex accounting estimates require management's judgment to ascertain the value of assets and liabilities. The Firm has established detailed policies and control procedures intended to ensure that valuation methods, including any judgments made as part of such methods, are well-controlled, independently reviewed and applied consistently from period to period. In addition, the policies and procedures are intended to ensure that the process for changing methodologies occurs in an appropriate manner. The Firm believes its estimates for determining the value of its assets and liabilities are appropriate. The following is a brief description of the Firm's critical accounting estimates involving significant valuation judgments.

Allowance for credit losses

JPMorgan Chase's allowance for credit losses covers the retained consumer and wholesale loan portfolios, as well as the Firm's consumer and wholesale lending-related commitments. The allowance for loan losses is intended to adjust the carrying value of the Firm's loan assets to reflect probable credit losses inherent in the loan portfolio as of the balance sheet date. Similarly, the allowance for lending-related commitments is established to cover probable credit losses inherent in the lending-related commitments portfolio as of the balance sheet date.

The allowance for loan losses includes an asset-specific component, a formula-based component, and a component related to PCI loans. The determination of each of these components involves significant judgment on a number of matters, as discussed below. For further discussion of the methodologies used in establishing the Firm's allowance for credit losses, see Note 15 on pages 284–287 of this Annual Report.

Asset-specific component

The asset-specific allowance for loan losses for each of the Firm's portfolio segments is generally measured as the difference between the recorded investment in the impaired loan and the present value of the cash flows expected to be collected, discounted at the loan's original effective interest rate. Estimating the timing and amounts of future cash flows is highly judgmental as these cash flow projections further rely upon estimates such as redefault rates, loss severities, the amounts and timing of prepayments and other factors that are reflective of current and expected future market conditions. These estimates are, in turn, dependent on factors such as the level of future home prices, the duration of current overall economic conditions, and other macroeconomic and portfolio-specific factors. All of these estimates and assumptions require significant management judgment and certain assumptions are highly subjective.

Formula-based component - Consumer loans and lending-related commitments, excluding PCI loans

The formula-based allowance for credit losses for the consumer portfolio, including credit card, is calculated by applying statistical credit loss factors to outstanding principal balances over an estimated loss emergence period to arrive at an estimate of incurred credit losses in the portfolio. The loss emergence period represents the time period between the date at which the loss is estimated to have been incurred and the ultimate realization of that loss (through a charge-off). Estimated loss emergence periods may vary by product and may change over time; management applies judgment in estimating loss emergence periods, using available credit information and trends. In addition, management applies judgment to the statistical loss estimates for each loan portfolio category, using delinquency trends and other risk characteristics to estimate the total incurred credit losses in the portfolio. Management uses additional statistical methods and considers portfolio and collateral valuation trends to review the appropriateness of the primary statistical loss estimate.

The statistical calculation is then adjusted to take into consideration model imprecision, external factors and current economic events that have occurred but that are not yet reflected in the factors used to derive the statistical calculation; these adjustments are accomplished in part by analyzing the historical loss experience for each major product segment. However, it is difficult to predict whether historical loss experience is indicative of future loss levels. Management applies judgment in making this adjustment, taking into account uncertainties associated with current macroeconomic and political conditions, quality of underwriting standards, borrower behavior, the potential impact of payment recasts within the HELOC portfolio, and other relevant internal and external factors affecting the credit quality of the portfolio. In certain instances, the interrelationships between these factors create further uncertainties. For example, the performance of a HELOC that experiences a payment recast may be affected by both the quality of underwriting standards applied in originating the loan and the general economic conditions in effect at the time of the payment recast. For junior lien products, management considers the delinquency and/or modification status of any senior liens in determining the adjustment. The application of different inputs into the statistical calculation, and the assumptions used by management to adjust the statistical calculation, are subject to management judgment, and emphasizing one input or assumption over another, or considering other inputs or assumptions, could affect the estimate of the allowance for loan losses for the consumer credit portfolio.

Overall, the allowance for credit losses for the consumer portfolio, including credit card, is sensitive to changes in the economic environment (e.g., unemployment rates), delinquency rates, the realizable value of collateral (e.g.,

housing prices), FICO scores, borrower behavior and other risk factors. While all of these factors are important determinants of overall allowance levels, changes in the various factors may not occur at the same time or at the same rate, or changes may be directionally inconsistent such that improvement in one factor may offset deterioration in the other. In addition, changes in these factors would not necessarily be consistent across all geographies or product types. Finally, it is difficult to predict the extent to which changes in these factors would ultimately affect the frequency of losses, the severity of losses or both.

PCI loans

In connection with the Washington Mutual transaction, JPMorgan Chase acquired certain PCI loans, which are accounted for as described in Note 14 on pages 258–283 of this Annual Report. The allowance for loan losses for the PCI portfolio is based on quarterly estimates of the amount of principal and interest cash flows expected to be collected over the estimated remaining lives of the loans.

These cash flow projections are based on estimates regarding default rates, loss severities, the amounts and timing of prepayments and other factors that are reflective of current and expected future market conditions. These estimates are dependent on assumptions regarding the level of future home price declines, and the duration of current overall economic conditions, among other factors. These estimates and assumptions require significant management judgment and certain assumptions are highly subjective.

Formula-based component - Wholesale loans and lending-related commitments

The Firm's methodology for determining the allowance for loan losses and the allowance for lending-related commitments requires the early identification of credits that are deteriorating. The Firm uses a risk-rating system to determine the credit quality of its wholesale loans. Wholesale loans are reviewed for information affecting the obligor's ability to fulfill its obligations. In assessing the risk rating of a particular loan, among the factors considered are the obligor's debt capacity and financial flexibility, the level of the obligor's earnings, the amount and sources for repayment, the level and nature of contingencies, management strength, and the industry and geography in which the obligor operates. These factors are based on an evaluation of historical and current information and involve subjective assessment and interpretation. Emphasizing one factor over another or considering additional factors could affect the risk rating assigned by the Firm to that loan.

The Firm applies its judgment to establish loss factors used in calculating the allowances. Wherever possible, the Firm uses independent, verifiable data or the Firm's own historical loss experience in its models for estimating the allowances. Many factors can affect estimates of loss, including volatility of loss given default, probability of default and rating migrations. Consideration is given to the particular source of external data used as well as the time period to which loss data relates (for example, point-in-time loss estimates and estimates that reflect longer views of the credit cycle). Finally, differences in loan characteristics between the Firm's specific loan portfolio and those reflected in the external data could also affect loss estimates. The application of different inputs would change the amount of the allowance for credit losses determined appropriate by the Firm.

Management also applies its judgment to adjust the modeled loss estimates, taking into consideration model imprecision, external factors and economic events that have occurred but are not yet reflected in the loss factors. Historical experience of both loss given default and probability of default are considered when estimating these adjustments. Factors related to concentrated and deteriorating industries also are incorporated where relevant. These estimates are based on management's view of uncertainties that relate to current macroeconomic and political conditions, quality of underwriting standards and other relevant internal and external factors affecting the credit quality of the current portfolio.

Allowance for credit losses sensitivity

As noted above, the Firm's allowance for credit losses is sensitive to numerous factors, depending on the portfolio. Changes in economic conditions or in the Firm's assumptions could affect its estimate of probable credit losses inherent in the portfolio at the balance sheet date. For example, deterioration in the following inputs would have the following effects on the Firm's modeled loss estimates as of December 31, 2013, without consideration of any offsetting or correlated effects of other inputs in the Firm's allowance for loan losses:

- For PCI loans, a combined 5% decline in housing prices and a 1% increase in unemployment from current levels could imply an increase to modeled credit loss estimates of approximately $1.4 billion.
- For the residential real estate portfolio, excluding PCI loans, a combined 5% decline in housing prices and a 1% increase in unemployment from current levels could imply an increase to modeled annual loss estimates of approximately $300 million.
- A 50 basis point deterioration in forecasted credit card loss rates could imply an increase to modeled annualized credit card loan loss estimates of approximately $600 million.
- A one-notch downgrade in the Firm's internal risk ratings for its entire wholesale loan portfolio could imply an increase in the Firm's modeled loss estimates of approximately $2.1 billion.

The purpose of these sensitivity analyses is to provide an indication of the isolated impacts of hypothetical alternative assumptions on modeled loss estimates. The changes in the inputs presented above are not intended to imply management's expectation of future deterioration of those risk factors.

These analyses are not intended to estimate changes in the overall allowance for loan losses, which would also be influenced by the judgment management applies to the modeled loss estimates to reflect the uncertainty and imprecision of these modeled loss estimates based on then current circumstances and conditions.

It is difficult to estimate how potential changes in specific factors might affect the allowance for credit losses because management considers a variety of factors and inputs in estimating the allowance for credit losses. Changes in these factors and inputs may not occur at the same rate and may not be consistent across all geographies or product types, and changes in factors may be directionally inconsistent, such that improvement in one factor may offset deterioration in other factors. In addition, it is difficult to predict how changes in specific economic conditions or assumptions could affect borrower behavior or other factors considered by management in estimating the allowance for credit losses. Given the process the Firm follows in evaluating the risk factors related to its loans, including risk ratings, home price assumptions, and credit card loss estimates, management believes that its current estimate of the allowance for credit loss is appropriate.

Fair value of financial instruments, MSRs and commodities inventory

JPMorgan Chase carries a portion of its assets and liabilities at fair value. The majority of such assets and liabilities are measured at fair value on a recurring basis. Certain assets and liabilities are measured at fair value on a nonrecurring basis, including certain mortgage, home equity and other loans, where the carrying value is based on the fair value of the underlying collateral.

Assets measured at fair value

The following table includes the Firm's assets measured at fair value and the portion of such assets that are classified within level 3 of the valuation hierarchy. For further information, see Note 3 on pages 195–215 of this Annual Report.

December 31, 2013 (in billions, except ratio data)	Total assets at fair value	Total level 3 assets	
Trading debt and equity instruments	$ 308.9	$ 27.2	
Derivative receivables	65.8	18.6	
Trading assets	374.7	45.8	
AFS securities	330.0	2.3	(a)
Loans	2.0	1.9	
MSRs	9.6	9.6	
Private equity investments	7.5	6.5	
Other	36.5	3.2	
Total assets measured at fair value on a recurring basis	760.3	69.3	
Total assets measured at fair value on a nonrecurring basis	6.2	5.8	
Total assets measured at fair value	$ 766.5	$ 75.1	
Total Firm assets	$ 2,415.7		
Level 3 assets as a percentage of total Firm assets		3.1%	(a)
Level 3 assets as a percentage of total Firm assets at fair value		9.8%	(a)

(a) Reflects $27.4 billion of collateralized loan obligations ("CLOs") transferred from level 3 to level 2 during the year ended December 31, 2013. For further discussion of the transfers, see Note 3 on pages 195–215 of this Annual Report.

Valuation

Fair value is defined as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. The Firm has established well-documented processes for determining fair value; for further details see Note 3 on pages 195–215 of this Annual Report. Fair value is based on quoted market prices, where available. If listed prices or quotes are not available for an instrument or a similar instrument, fair value is generally based on models that consider relevant transaction characteristics (such as maturity) and use as inputs market-based or independently sourced parameters.

Estimating fair value requires the application of judgment. The type and level of judgment required is largely dependent on the amount of observable market information available to the Firm. For instruments valued using internally developed models that use significant unobservable inputs and are therefore classified within level 3 of the valuation hierarchy, judgments used to estimate fair value are more significant than those required when estimating the fair value of instruments classified within levels 1 and 2.

In arriving at an estimate of fair value for an instrument within level 3, management must first determine the appropriate model to use. Second, the lack of observability of certain significant inputs requires management to assess all relevant empirical data in deriving valuation inputs — including, for example, transaction details, yield curves, interest rates, prepayment rates, default rates, volatilities, correlations, equity or debt prices, valuations of comparable instruments, foreign exchange rates and credit curves. For further discussion of the valuation of level 3 instruments, including unobservable inputs used, see Note 3 on pages 195–215 of this Annual Report.

For instruments classified in levels 2 and 3, management judgment must be applied to assess the appropriate level of valuation adjustments to reflect counterparty credit quality, the Firm's credit-worthiness, liquidity considerations, unobservable parameters, and for certain portfolios that meet specified criteria, the size of the net open risk position. The judgments made are typically affected by the type of product and its specific contractual terms, and the level of liquidity for the product or within the market as a whole.

During the fourth quarter of 2013 the Firm implemented the FVA framework to incorporate the impact of funding into its valuation estimates for OTC derivatives and structured notes, reflecting an industry migration towards incorporating the market cost of unsecured funding in the valuation of such instruments. Implementation of the FVA framework required a number of important management judgments including: (i) determining when the accumulation of market evidence was sufficiently compelling to implement the FVA framework; (ii) estimating the market clearing price for funding in the relevant market; and (iii) determining the interaction between DVA and FVA, given that DVA already reflects credit spreads, which are a significant component of funding spreads that drive FVA. For further discussion of valuation adjustments applied by the Firm, including FVA, see Note 3 on pages 195–215 of this Annual Report.

Imprecision in estimating unobservable market inputs or other factors can affect the amount of gain or loss recorded for a particular position. Furthermore, while the Firm believes its valuation methods are appropriate and consistent with those of other market participants, the methods and assumptions used reflect management judgment and may vary across the Firm's businesses and portfolios.

The Firm uses various methodologies and assumptions in the determination of fair value. The use of methodologies or assumptions different than those used by the Firm could result in a different estimate of fair value at the reporting date. For a detailed discussion of the Firm's valuation process and hierarchy, and its determination of fair value for individual financial instruments, see Note 3 on pages 195–215 of this Annual Report.

Goodwill impairment

Under U.S. GAAP, goodwill must be allocated to reporting units and tested for impairment at least annually. The Firm's process and methodology used to conduct goodwill impairment testing is described in Note 17 on pages 299–304 of this Annual Report.

Management applies significant judgment when estimating the fair value of its reporting units. Estimates of fair value are dependent upon estimates of (a) the future earnings potential of the Firm's reporting units, including the estimated effects of regulatory and legislative changes, such as the Dodd-Frank Act, (b) long-term growth rates and (c) the relevant cost of equity. Imprecision in estimating these factors can affect the estimated fair value of the reporting units.

Based upon the updated valuations for all of its reporting units, the Firm concluded that goodwill allocated to its reporting units was not impaired at December 31, 2013, nor was any goodwill written off during 2013. The fair values of almost all of the Firm's reporting units exceeded their carrying values and did not indicate a significant risk of goodwill impairment based on current projections and valuations. For those reporting units where fair value exceeded carrying value, the excess fair value as a percent of carrying value ranged from approximately 15% to 180%.

As of December 31, 2013, the estimated fair value of the Firm's mortgage lending business within CCB did not exceed its carrying value. While the implied fair value of the goodwill allocated to the mortgage lending business exceeded its carrying value as of December 31, 2013, the associated goodwill remains at an elevated risk for goodwill impairment due to its exposure to U.S. consumer credit risk and the effects of economic, regulatory and legislative changes. The assumptions used in the valuation of this business include: (a) estimates of future cash flows for the business (which are dependent on outstanding loan balances, net interest margin, operating expense, credit losses and the amount of capital necessary to meet regulatory capital requirements), and (b) the cost of equity used to discount those cash flows to a present value. Each of these factors requires significant judgment and the assumptions used are based on management's current best estimate and most current projections, including the anticipated effects of regulatory and legislative changes, derived from the Firm's business forecasting process as reviewed with senior management.

The projections for all of the Firm's reporting units are consistent with the short-term assumptions discussed in the Business Outlook on pages 68–69 of this Annual Report, and, in the longer term, incorporate a set of macroeconomic assumptions and the Firm's best estimates of long-term growth and returns of its businesses. Where possible, the Firm uses third-party and peer data to benchmark its assumptions and estimates.

Deterioration in economic market conditions, increased estimates of the effects of recent regulatory or legislative changes, or additional regulatory or legislative changes may result in declines in projected business performance beyond management's current expectations. For example, in the Firm's mortgage lending business, such declines could result from increases in primary mortgage interest rates, lower mortgage origination volume, higher costs to resolve foreclosure-related matters or from deterioration in economic conditions that result in increased credit losses, including decreases in home prices beyond management's current expectations. Declines in business performance, increases in equity capital requirements, or increases in the estimated cost of equity, could cause the estimated fair values of the Firm's reporting units or their associated goodwill to decline, which could result in a material impairment charge to earnings in a future period related to some portion of the associated goodwill.

For additional information on goodwill, see Note 17 on pages 299–304 of this Annual Report.

Income taxes

JPMorgan Chase is subject to the income tax laws of the various jurisdictions in which it operates, including U.S. federal, state and local and non-U.S. jurisdictions. These laws are often complex and may be subject to different interpretations. To determine the financial statement impact of accounting for income taxes, including the provision for income tax expense and unrecognized tax benefits, JPMorgan Chase must make assumptions and judgments about how to interpret and apply these complex tax laws to numerous transactions and business events, as well as make judgments regarding the timing of when certain items may affect taxable income in the U.S. and non-U.S. tax jurisdictions.

JPMorgan Chase's interpretations of tax laws around the world are subject to review and examination by the various taxing authorities in the jurisdictions where the Firm operates, and disputes may occur regarding its view on a tax position. These disputes over interpretations with the various taxing authorities may be settled by audit, administrative appeals or adjudication in the court systems of the tax jurisdictions in which the Firm operates. JPMorgan Chase regularly reviews whether it may be assessed additional income taxes as a result of the resolution of these matters, and the Firm records additional reserves as appropriate. In addition, the Firm may revise its estimate of income taxes due to changes in income tax laws, legal interpretations and tax planning strategies. It is possible that revisions in the Firm's estimate of income taxes may materially affect the Firm's results of operations in any reporting period.

The Firm's provision for income taxes is composed of current and deferred taxes. Deferred taxes arise from differences between assets and liabilities measured for financial reporting versus income tax return purposes. Deferred tax assets are recognized if, in management's judgment, their realizability is determined to be more likely than not. The Firm has also recognized deferred tax assets in connection with certain net operating losses. The Firm performs regular reviews to ascertain whether deferred tax assets are realizable. These reviews include management's estimates and assumptions regarding future taxable income, which also incorporates various tax planning strategies, including strategies that may be available to utilize net operating losses before they expire. In connection with these reviews, if it is determined that a deferred tax asset is not realizable, a valuation allowance is established. The valuation allowance may be reversed in a subsequent reporting period if the Firm determines that, based on revised estimates of future taxable income or changes in tax planning strategies, it is more likely than not that all or part of the deferred tax asset will become realizable. As of December 31, 2013, management has determined it is more likely than not that the Firm will realize its deferred tax assets, net of the existing valuation allowance.

JPMorgan Chase does not provide U.S. federal income taxes on the undistributed earnings of certain non-U.S. subsidiaries, to the extent that such earnings have been reinvested abroad for an indefinite period of time. Changes to the income tax rates applicable to these non-U.S. subsidiaries may have a material impact on the effective tax rate in a future period if such changes were to occur.

The Firm adjusts its unrecognized tax benefits as necessary when additional information becomes available. Uncertain tax positions that meet the more-likely-than-not recognition threshold are measured to determine the amount of benefit to recognize. An uncertain tax position is measured at the largest amount of benefit that management believes is more likely than not to be realized upon settlement. It is possible that the reassessment of JPMorgan Chase's unrecognized tax benefits may have a material impact on its effective tax rate in the period in which the reassessment occurs.

For additional information on income taxes, see Note 26 on pages 313–315 of this Annual Report.

Litigation reserves

For a description of the significant estimates and judgments associated with establishing litigation reserves, see Note 31 on pages 326–332 of this Annual Report.

Presentation of other comprehensive income
In June 2011, the FASB issued guidance that modifies the presentation of other comprehensive income in the Consolidated Financial Statements. The guidance requires that items of net income, items of other comprehensive income, and total comprehensive income be presented in one continuous statement or in two separate but consecutive statements. The guidance was effective in the first quarter of 2012, and the Firm adopted the new guidance by electing the two-statement approach, effective January 1, 2012. The application of this guidance only affected the presentation of the Consolidated Financial Statements and had no impact on the Firm's Consolidated Balance Sheets or results of operations.

In February 2013, the FASB issued guidance that requires enhanced disclosures of any reclassifications out of accumulated other comprehensive income. The guidance was effective in the first quarter of 2013. The application of this guidance had no impact on the Firm's Consolidated Balance Sheets or results of operations. For further information, see Note 25 on page 312 of this Annual Report.

Balance sheet netting
In December 2011, the FASB issued guidance that requires enhanced disclosures about certain financial assets and liabilities that are subject to enforceable master netting agreements or similar agreements, or that have otherwise been offset on the balance sheet under certain specific conditions that permit net presentation. In January 2013, the FASB clarified that the scope of this guidance is limited to derivatives, repurchase and reverse repurchase agreements, and securities borrowing and lending transactions. The Firm adopted the new guidance effective the first quarter of 2013. The application of this guidance had no impact on the Firm's Consolidated Balance Sheets or results of operations. For further information, see Notes 1, 6, and 13 on pages 189–191, 220–233, and 255–257, respectively, of this Annual Report.

Investment companies
In June 2013, the FASB issued guidance that clarifies the characteristics of an investment company and requires new disclosures for investment companies. Under the guidance, a company regulated under the Investment Company Act of 1940 is considered an investment company for accounting purposes. All other companies must meet all of the fundamental characteristics described in the guidance and consider other typical characteristics to qualify as an investment company. An investment company will be required to provide additional disclosures, including the fact that the company is an investment company, information about changes, if any, in a company's status as an investment company, and information about financial support provided or contractually required to be provided by an investment company to any of its investees. The guidance will become effective in the first quarter of 2014. The adoption of the guidance is not expected to have a material impact on the Firm's Consolidated Balance Sheets or results of operations.

Inclusion of the Fed funds effective swap rate
In July 2013, the FASB issued guidance that amends the acceptable U.S. benchmark interest rates for hedge accounting involving interest rate risk. In addition to interest rates on direct U.S. Treasury obligations and the LIBOR swap rate, the guidance also permits the overnight indexed swap rate ("OIS") to be designated as a benchmark interest rate for hedge accounting purposes. The amendments are effective prospectively for qualifying new or redesignated hedging relationships entered into on or after July 17, 2013. For further information on the Firm's benchmark interest rate hedges, see Note 6 on pages 220–233 of this Annual Report.

Investments in qualified affordable housing projects
In January 2014, the FASB issued guidance regarding the accounting for investments in affordable housing projects that qualify for the low-income housing tax credit. The guidance replaces the effective yield method and allows companies to make an accounting policy election to amortize the cost of its investments in proportion to the tax benefits received if certain criteria are met, and present the amortization as a component of income tax expense. The guidance will become effective in the first quarter of 2015, with early adoption permitted in the first quarter of 2014. The Firm is currently evaluating this guidance to determine any potential impact on the Firm's Consolidated Financial Statements.

NONEXCHANGE TRADED COMMODITY DERIVATIVE CONTRACTS AT FAIR VALUE

In the normal course of business, JPMorgan Chase trades nonexchange-traded commodity derivative contracts. To determine the fair value of these contracts, the Firm uses various fair value estimation techniques, primarily based on internal models with significant observable market parameters. The Firm's nonexchange-traded commodity derivative contracts are primarily energy-related.

The following table summarizes the changes in fair value for nonexchange-traded commodity derivative contracts for the year ended December 31, 2013.

Year ended December 31, 2013 (in millions)	Asset position	Liability position
Net fair value of contracts outstanding at January 1, 2013[a]	$ 7,934	$ 10,745
Effect of legally enforceable master netting agreements[a]	20,729	22,392
Gross fair value of contracts outstanding at January 1, 2013	28,663	33,137
Contracts realized or otherwise settled	(21,406)	(23,246)
Fair value of new contracts	11,955	12,709
Changes in fair values attributable to changes in valuation techniques and assumptions	–	–
Other changes in fair value	3,998	2,647
Gross fair value of contracts outstanding at December 31, 2013	23,210	25,247
Effect of legally enforceable master netting agreements	(15,082)	(15,318)
Net fair value of contracts outstanding at December 31, 2013	$ 8,128	$ 9,929

(a) The prior period has been revised.

The following table indicates the maturities of nonexchange-traded commodity derivative contracts at December 31, 2013.

December 31, 2013 (in millions)	Asset position	Liability position
Maturity less than 1 year	$ 13,750	$ 14,766
Maturity 1–3 years	7,155	6,733
Maturity 4–5 years	1,214	1,048
Maturity in excess of 5 years	1,091	2,700
Gross fair value of contracts outstanding at December 31, 2013	23,210	25,247
Effect of legally enforceable master netting agreements	(15,082)	(15,318)
Net fair value of contracts outstanding at December 31, 2013	$ 8,128	$ 9,929

FORWARD-LOOKING STATEMENTS

From time to time, the Firm has made and will make forward-looking statements. These statements can be identified by the fact that they do not relate strictly to historical or current facts. Forward-looking statements often use words such as "anticipate," "target," "expect," "estimate," "intend," "plan," "goal," "believe," or other words of similar meaning. Forward-looking statements provide JPMorgan Chase's current expectations or forecasts of future events, circumstances, results or aspirations. JPMorgan Chase's disclosures in this Annual Report contain forward-looking statements within the meaning of the Private Securities Litigation Reform Act of 1995. The Firm also may make forward-looking statements in its other documents filed or furnished with the Securities and Exchange Commission. In addition, the Firm's senior management may make forward-looking statements orally to analysts, investors, representatives of the media and others.

All forward-looking statements are, by their nature, subject to risks and uncertainties, many of which are beyond the Firm's control. JPMorgan Chase's actual future results may differ materially from those set forth in its forward-looking statements. While there is no assurance that any list of risks and uncertainties or risk factors is complete, below are certain factors which could cause actual results to differ from those in the forward-looking statements:

- Local, regional and international business, economic and political conditions and geopolitical events;
- Changes in laws and regulatory requirements, including as a result of recent financial services legislation;
- Changes in trade, monetary and fiscal policies and laws;
- Securities and capital markets behavior, including changes in market liquidity and volatility;
- Changes in investor sentiment or consumer spending or savings behavior;
- Ability of the Firm to manage effectively its capital and liquidity, including approval of its capital plans by banking regulators;
- Changes in credit ratings assigned to the Firm or its subsidiaries;
- Damage to the Firm's reputation;
- Ability of the Firm to deal effectively with an economic slowdown or other economic or market disruption;
- Technology changes instituted by the Firm, its counterparties or competitors;
- Mergers and acquisitions, including the Firm's ability to integrate acquisitions;
- Ability of the Firm to develop new products and services, and the extent to which products or services previously sold by the Firm (including but not limited to mortgages and asset-backed securities) require the Firm to incur liabilities or absorb losses not contemplated at their initiation or origination;
- Ability of the Firm to address enhanced regulatory requirements affecting its mortgage business;
- Acceptance of the Firm's new and existing products and services by the marketplace and the ability of the Firm to increase market share;
- Ability of the Firm to attract and retain employees;
- Ability of the Firm to control expense;
- Competitive pressures;
- Changes in the credit quality of the Firm's customers and counterparties;
- Adequacy of the Firm's risk management framework, disclosure controls and procedures and internal control over financial reporting;
- Adverse judicial or regulatory proceedings;
- Changes in applicable accounting policies;
- Ability of the Firm to determine accurate values of certain assets and liabilities;
- Occurrence of natural or man-made disasters or calamities or conflicts, including any effect of any such disasters, calamities or conflicts on the Firm's power generation facilities and the Firm's other physical commodity-related activities;
- Ability of the Firm to maintain the security of its financial, accounting, technology, data processing and other operating systems and facilities;
- The other risks and uncertainties detailed in Part I, Item 1A: Risk Factors in the Firm's Annual Report on Form 10-K for the year ended December 31, 2013.

Any forward-looking statements made by or on behalf of the Firm speak only as of the date they are made, and JPMorgan Chase does not undertake to update forward-looking statements to reflect the impact of circumstances or events that arise after the date the forward-looking statements were made. The reader should, however, consult any further disclosures of a forward-looking nature the Firm may make in any subsequent Annual Reports on Form 10-K, Quarterly Reports on Form 10-Q, or Current Reports on Form 8-K.

Management's report on internal control over financial reporting

Management of JPMorgan Chase & Co. ("JPMorgan Chase" or the "Firm") is responsible for establishing and maintaining adequate internal control over financial reporting. Internal control over financial reporting is a process designed by, or under the supervision of, the Firm's principal executive and principal financial officers, or persons performing similar functions, and effected by JPMorgan Chase's Board of Directors, management and other personnel, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with accounting principles generally accepted in the United States of America.

JPMorgan Chase's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records, that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the Firm's assets; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the Firm are being made only in accordance with authorizations of JPMorgan Chase's management and directors; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use or disposition of the Firm's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate. Management has completed an assessment of the effectiveness of the Firm's internal control over financial reporting as of December 31, 2013. In making the assessment, management used the framework in "Internal Control - Integrated Framework (1992)" promulgated by the Committee of Sponsoring Organizations of the Treadway Commission, commonly referred to as the "COSO" criteria.

Based upon the assessment performed, management concluded that as of December 31, 2013, JPMorgan Chase's internal control over financial reporting was effective based upon the COSO 1992 criteria. Additionally, based upon management's assessment, the Firm determined that there were no material weaknesses in its internal control over financial reporting as of December 31, 2013.

The effectiveness of the Firm's internal control over financial reporting as of December 31, 2013, has been audited by PricewaterhouseCoopers LLP, an independent registered public accounting firm, as stated in their report which appears herein.

James Dimon
Chairman and Chief Executive Officer

Marianne Lake
Executive Vice President and Chief Financial Officer

February 19, 2014

To the Board of Directors and Stockholders of JPMorgan Chase & Co.:

In our opinion, the accompanying consolidated balance sheets and the related consolidated statements of income, comprehensive income, changes in stockholders' equity and cash flows present fairly, in all material respects, the financial position of JPMorgan Chase & Co. and its subsidiaries (the "Firm") at December 31, 2013 and 2012 and the results of their operations and their cash flows for each of the three years in the period ended December 31, 2013 in conformity with accounting principles generally accepted in the United States of America. Also in our opinion, the Firm maintained, in all material respects, effective internal control over financial reporting as of December 31, 2013 based on criteria established in *Internal Control - Integrated Framework (1992)* issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). The Firm's management is responsible for these financial statements, for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting, included in the accompanying "Management's report on internal control over financial reporting". Our responsibility is to express opinions on these financial statements and on the Firm's internal control over financial reporting based on our integrated audits. We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audits to obtain reasonable assurance about whether the financial statements are free of material misstatement and whether effective internal control over financial reporting was maintained in all material respects. Our audits of the financial statements included examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, and evaluating the overall financial statement presentation. Our audit of internal control over financial reporting included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. Our audits also included performing such other procedures as we considered necessary in the circumstances. We believe that our audits provide a reasonable basis for our opinions.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (i) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (ii) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (iii) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

Liabilities		
Deposits (included **$6,624** and $5,733 at fair value)	**$ 1,287,765**	$ 1,193,593
Federal funds purchased and securities loaned or sold under repurchase agreements (included **$5,426** and $4,388 at fair value)	**181,163**	240,103
Commercial paper	**57,848**	55,367
Other borrowed funds (included **$13,306** and $11,591 at fair value)	**27,994**	26,636
Trading liabilities	**137,744**	131,918
Accounts payable and other liabilities (included **$25** and $36 at fair value)	**194,491**	195,240
Beneficial interests issued by consolidated variable interest entities (included **$1,996** and $1,170 at fair value)	**49,617**	63,191
Long-term debt (included **$28,878** and $30,788 at fair value)	**267,889**	249,024
Total liabilities[(a)]	**2,204,511**	2,155,072
Commitments and contingencies (see Notes 29, 30 and 31 of this Annual Report)		
Stockholders' equity		
Preferred stock ($1 par value; authorized 200,000,000 shares: issued **1,115,750** and **905,750** shares)	**11,158**	9,058
Common stock ($1 par value; authorized 9,000,000,000 shares; issued **4,104,933,895** shares)	**4,105**	4,105
Capital surplus	**93,828**	94,604
Retained earnings	**115,756**	104,223
Accumulated other comprehensive income	**1,199**	4,102
Shares held in RSU Trust, at cost (476,642 and 479,126 shares)	**(21)**	(21)
Treasury stock, at cost (**348,825,583** and 300,981,690 shares)	**(14,847)**	(12,002)
Total stockholders' equity	**211,178**	204,069
Total liabilities and stockholders' equity	**$ 2,415,689**	$ 2,359,141

(a) The following table presents information on assets and liabilities related to VIEs that are consolidated by the Firm at December 31, 2013 and 2012. The difference between total VIE assets and liabilities represents the Firm's interests in those entities, which were eliminated in consolidation.

December 31, (in millions)	2013	2012
Assets		
Trading assets	**$ 6,366**	$ 11,966
Loans	**70,072**	82,723
All other assets	**2,168**	2,090
Total assets	**$ 78,606**	$ 96,779
Liabilities		
Beneficial interests issued by consolidated variable interest entities	**$ 49,617**	$ 63,191
All other liabilities	**1,061**	1,244
Total liabilities	**$ 50,678**	$ 64,435

The assets of the consolidated VIEs are used to settle the liabilities of those entities. The holders of the beneficial interests do not have recourse to the general credit of JPMorgan Chase. At December 31, 2013 and 2012, the Firm provided limited program-wide credit enhancement of $2.6 billion and $3.1 billion, respectively, related to its Firm-administered multi-seller conduits, which are eliminated in consolidation. For further discussion, see Note 16 on pages 288–299 of this Annual Report.

The Notes to Consolidated Financial Statements are an integral part of these statements.

Note 1 – Basis of presentation

JPMorgan Chase & Co. ("JPMorgan Chase" or the "Firm"), a financial holding company incorporated under Delaware law in 1968, is a leading global financial services firm and one of the largest banking institutions in the United States of America ("U.S."), with operations worldwide. The Firm is a leader in investment banking, financial services for consumers and small business, commercial banking, financial transaction processing, asset management and private equity. For a discussion of the Firm's business segments, see Note 33 on pages 334–337 of this Annual Report.

The accounting and financial reporting policies of JPMorgan Chase and its subsidiaries conform to accounting principles generally accepted in the U.S. ("U.S. GAAP"). Additionally, where applicable, the policies conform to the accounting and reporting guidelines prescribed by regulatory authorities.

Certain amounts reported in prior periods have been reclassified to conform with the current presentation.

Consolidation

The Consolidated Financial Statements include the accounts of JPMorgan Chase and other entities in which the Firm has a controlling financial interest. All material intercompany balances and transactions have been eliminated. The Firm determines whether it has a controlling financial interest in an entity by first evaluating whether the entity is a voting interest entity or a variable interest entity ("VIE").

Voting Interest Entities

Voting interest entities are entities that have sufficient equity and provide the equity investors voting rights that enable them to make significant decisions relating to the entity's operations. For these types of entities, the Firm's determination of whether it has a controlling interest is primarily based on the amount of voting equity interests held. Entities in which the Firm has a controlling financial interest, through ownership of the majority of the entities' voting equity interests, or through other contractual rights that give the Firm control, are consolidated by the Firm.

Investments in companies in which the Firm has significant influence over operating and financing decisions (but does not own a majority of the voting equity interests) are accounted for (i) in accordance with the equity method of accounting (which requires the Firm to recognize its proportionate share of the entity's net earnings), or (ii) at fair value if the fair value option was elected. These investments are generally included in other assets, with income or loss included in other income.

Certain Firm-sponsored asset management funds are structured as limited partnerships or limited liability companies. For many of these entities, the Firm is the general partner or managing member, but the non-affiliated partners or members have the ability to remove the Firm as the general partner or managing member without cause (i.e., kick-out rights), based on a simple majority vote, or the non-affiliated partners or members have rights to participate in important decisions. Accordingly, the Firm does not consolidate these funds. In the limited cases where the nonaffiliated partners or members do not have substantive kick-out or participating rights, the Firm consolidates the funds.

The Firm's investment companies make investments in both publicly-held and privately-held entities, including investments in buyouts, growth equity and venture opportunities. These investments are accounted for under investment company guidelines and accordingly, irrespective of the percentage of equity ownership interests held, are carried on the Consolidated Balance Sheets at fair value, and are recorded in other assets.

Variable Interest Entities

VIEs are entities that, by design, either (1) lack sufficient equity to permit the entity to finance its activities without additional subordinated financial support from other parties, or (2) have equity investors that do not have the ability to make significant decisions relating to the entity's operations through voting rights, or do not have the obligation to absorb the expected losses, or do not have the right to receive the residual returns of the entity.

The most common type of VIE is a special purpose entity ("SPE"). SPEs are commonly used in securitization transactions in order to isolate certain assets and distribute the cash flows from those assets to investors. The basic SPE structure involves a company selling assets to the SPE; the SPE funds the purchase of those assets by issuing securities to investors. The legal documents that govern the transaction specify how the cash earned on the assets must be allocated to the SPE's investors and other parties that have rights to those cash flows. SPEs are generally structured to insulate investors from claims on the SPE's assets by creditors of other entities, including the creditors of the seller of the assets.

The primary beneficiary of a VIE (i.e., the party that has a controlling financial interest) is required to consolidate the assets and liabilities of the VIE. The primary beneficiary is the party that has both (1) the power to direct the activities of the VIE that most significantly impact the VIE's economic performance; and (2) through its interests in the VIE, the obligation to absorb losses or the right to receive benefits from the VIE that could potentially be significant to the VIE.

To assess whether the Firm has the power to direct the activities of a VIE that most significantly impact the VIE's economic performance, the Firm considers all the facts and circumstances, including its role in establishing the VIE and its ongoing rights and responsibilities. This assessment includes, first, identifying the activities that most significantly impact the VIE's economic performance; and second, identifying which party, if any, has power over those activities. In general, the parties that make the most significant decisions affecting the VIE (such as asset

managers, collateral managers, servicers, or owners of call options or liquidation rights over the VIE's assets) or have the right to unilaterally remove those decision-makers are deemed to have the power to direct the activities of a VIE.

To assess whether the Firm has the obligation to absorb losses of the VIE or the right to receive benefits from the VIE that could potentially be significant to the VIE, the Firm considers all of its economic interests, including debt and equity investments, servicing fees, and derivative or other arrangements deemed to be variable interests in the VIE. This assessment requires that the Firm apply judgment in determining whether these interests, in the aggregate, are considered potentially significant to the VIE. Factors considered in assessing significance include: the design of the VIE, including its capitalization structure; subordination of interests; payment priority; relative share of interests held across various classes within the VIE's capital structure; and the reasons why the interests are held by the Firm.

The Firm performs on-going reassessments of: (1) whether entities previously evaluated under the majority voting-interest framework have become VIEs, based on certain events, and therefore subject to the VIE consolidation framework; and (2) whether changes in the facts and circumstances regarding the Firm's involvement with a VIE cause the Firm's consolidation conclusion to change.

In January 2010, the Financial Accounting Standards Board ("FASB") issued an amendment which deferred the requirements of the accounting guidance for VIEs for certain investment funds, including mutual funds, private equity funds and hedge funds. For the funds to which the deferral applies, the Firm continues to apply other existing authoritative accounting guidance to determine whether such funds should be consolidated.

Assets held for clients in an agency or fiduciary capacity by the Firm are not assets of JPMorgan Chase and are not included on the Consolidated Balance Sheets.

Use of estimates in the preparation of consolidated financial statements

The preparation of the Consolidated Financial Statements requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities, revenue and expense, and disclosures of contingent assets and liabilities. Actual results could be different from these estimates.

Foreign currency translation

JPMorgan Chase revalues assets, liabilities, revenue and expense denominated in non-U.S. currencies into U.S. dollars using applicable exchange rates.

Gains and losses relating to translating functional currency financial statements for U.S. reporting are included in other comprehensive income/(loss) ("OCI") within stockholders' equity. Gains and losses relating to nonfunctional currency transactions, including non-U.S. operations where the functional currency is the U.S. dollar, are reported in the Consolidated Statements of Income.

Offsetting assets and liabilities

U.S. GAAP permits entities to present derivative receivables and derivative payables with the same counterparty and the related cash collateral receivables and payables on a net basis on the balance sheet when a legally enforceable master netting agreement exists. U.S. GAAP also permits securities sold and purchased under repurchase agreements to be presented net when specified conditions are met, including the existence of a legally enforceable master netting agreement. The Firm has elected to net such balances when the specified conditions are met.

The Firm uses master netting agreements to mitigate counterparty credit risk in certain transactions, including derivatives transactions, repurchase and reverse repurchase agreements, and securities borrowed and loaned agreements. A master netting agreement is a single contract with a counterparty that permits multiple transactions governed by that contract to be terminated and settled through a single payment in a single currency in the event of a default (e.g., bankruptcy, failure to make a required payment or securities transfer or deliver collateral or margin when due after expiration of any grace period). Upon the exercise of termination rights by the non-defaulting party, (i) all transactions are terminated, (ii) all transactions are valued and the positive value or "in the money" transactions are netted against the negative value or "out of the money" transactions and (iii) the only remaining payment obligation is of one of the parties to pay the netted termination amount. Upon exercise of repurchase agreement and securities loaned default rights (i) all securities loan transactions are terminated and accelerated, (ii) all values of securities or cash held or to be delivered are calculated, and all such sums are netted against each other and (iii) the only remaining payment obligation is of one of the parties to pay the netted termination amount.

Typical master netting agreements for these types of transactions also often contain a collateral/margin agreement that provides for a security interest in or title transfer of securities or cash collateral/margin to the party that has the right to demand margin (the "demanding party"). The collateral/margin agreement typically requires a party to transfer collateral/margin to the demanding party with a value equal to the amount of the margin deficit on a net basis across all transactions governed by the master netting agreement, less any threshold. The collateral/margin agreement grants to the demanding party, upon default by the counterparty, the right to set-off any amounts payable by the counterparty against any posted collateral or the cash equivalent of any posted collateral/margin. It also grants to the demanding party the right to liquidate collateral/margin and to apply the proceeds to an amount payable by the counterparty.

For further discussion of the Firm's derivative instruments, see Note 6 on pages 220–233 of this Annual Report. For further discussion of the Firm's repurchase and reverse repurchase agreements, and securities borrowing and lending agreements, see Note 13 on pages 255–257 of this Annual Report.

Statements of cash flows

For JPMorgan Chase's Consolidated Statements of Cash Flows, cash is defined as those amounts included in cash and due from banks.

Significant accounting policies

The following table identifies JPMorgan Chase's other significant accounting policies and the Note and page where a detailed description of each policy can be found.

Note 2 – Business changes and developments

Student loan business
In September 2013, the Firm announced it ceased student loan originations.

Physical commodities businesses
On July 26, 2013 the Firm announced that it is pursuing strategic alternatives for its physical commodities businesses. Pursuant to that announcement, the Firm is exploring the sale of certain physical commodities operations, including physical oil, gas, power, warehousing facilities and transportation operations. During this process, the Firm will continue to run its physical commodities business as a going concern. The Firm remains fully committed to its traditional banking activities in the commodities markets, including financial derivatives and the trading of precious metals, which are not part of these strategic alternatives.

One Equity Partners
As announced on June 14, 2013, One Equity Partners ("OEP") is expected to raise its next fund from an external group of limited partners and then become independent from JPMorgan Chase. Until it becomes independent from the Firm, OEP will continue to make direct investments for JPMorgan Chase, and thereafter is expected to continue managing the then-existing group of portfolio companies for JPMorgan Chase in order to maximize value for the Firm.

Other business events

Visa B Shares
In December 2013, JP Morgan Chase sold 20 million Visa Class B shares, resulting in a net pre-tax gain of approximately $1.3 billion recorded in other income. In conjunction with the sale, the Firm entered into a derivative instrument with the purchaser under which the Firm will (a) make periodic fixed payments, calculated by reference to the market price of Visa Class A common shares and (b) make or receive payments based on subsequent changes in the conversion rate of Visa Class B shares into Visa Class A shares. The payments under the derivative continue as long as Class B shares remain "restricted". The derivative is accounted for as a trading liability. The fair value of the derivative is estimated using a discounted cash flow methodology and is dependent upon the final resolution of certain Visa litigation matters; changes in fair value will be recognized in other income.

After the sale, the Firm continues to own approximately 40 million Visa Class B shares. These shares will be converted into Visa Class A shares upon final resolution of certain Visa litigation matters; the conversion rate of Visa Class B shares to Visa Class A shares is 0.4206 as of December 31, 2013 and will be adjusted by Visa depending on developments related to certain Visa litigation matters.

One Chase Manhattan Plaza
On December 17, 2013, the Firm sold One Chase Manhattan Plaza, an office building located in New York City, and recognized a pretax gain of $493 million in Other Income.

Settlement with the President's Task Force on Residential Mortgage-Backed Securities ("RMBS")
On November 19, 2013, the Firm announced a resolution of actual and potential civil claims by a number of federal and state government agencies, including the U.S. Department of Justice and, several State Attorneys General, as well as litigation by the Federal Deposit Insurance Corporation, the National Credit Union Administration and the Federal Housing Finance Agency relating to residential mortgage-backed securities activities by JPMorgan Chase, Bear Stearns and Washington Mutual (the "RMBS settlement"). Under the settlement, the Firm paid a total of $9 billion in cash, and committed to provide $4 billion in borrower relief. The cash portion consists of a $2 billion civil monetary penalty and $7 billion in compensatory payments, including $4 billion to resolve the Federal Housing Finance Agency litigation (see "Mortgage-backed securities settlements with the Federal Housing Finance Agency, Freddie Mac, and Fannie Mae" below). The $4 billion of borrower relief will be in the form of principal reduction, forbearance and other direct benefits from various relief programs. The Firm has committed to complete the delivery of the relief to borrowers before the end of 2017.

The Firm's 2013 results of operations reflected the estimated costs of the settlement (i.e., the cash payments as well as the borrower relief). The estimated impact of the cash settlement has been considered in the Firm's legal reserve, whereas the impact of the borrower relief portion of the settlement has been considered in the allowance for loan losses.

RMBS Trust Settlement
On November 15, 2013, the Firm announced it had reached a $4.5 billion agreement with 21 major institutional investors to make a binding offer to the trustees of 330 residential mortgage-backed securities trusts issued by J.P. Morgan, Chase, and Bear Stearns ("RMBS Trust Settlement") to resolve all representation and warranty claims, as well as all servicing claims, on all trusts issued by J.P. Morgan, Chase, and Bear Stearns between 2005 and 2008. The RMBS Trust Settlement is under consideration by the trustees and may be subject to court approval. This agreement does not resolve claims on trusts issued by Washington Mutual. For further information about the RMBS Trust Settlement, see Note 31 on pages 326–332 of this Annual Report.

Mortgage-backed securities settlements with the Federal Housing Finance Agency, Freddie Mac and Fannie Mae
On October 25, 2013, the Firm announced that it had reached a $4.0 billion agreement to resolve all of its mortgage-backed securities ("MBS") litigation with the Federal Housing Finance Agency ("FHFA") as conservator for Freddie Mac and Fannie Mae. The Firm also simultaneously agreed to resolve, for $1.1 billion, other than certain limited types of exposures, outstanding and future mortgage repurchase demands associated with loans sold to the GSEs from 2000 to 2008 ("FHFA Settlement Agreement").

Mortgage foreclosure settlement agreement with the Office of the Comptroller of the Currency and the Board of Governors of the Federal Reserve System
On January 7, 2013, the Firm announced that it and a number of other financial institutions entered into a settlement agreement with the Office of the Comptroller of the Currency ("OCC") and the Board of Governors of the Federal Reserve System ("Federal Reserve") providing for the termination of the independent foreclosure review programs (the "Independent Foreclosure Review"). Under this settlement, the Firm made a cash payment of approximately $760 million into a settlement fund for distribution to qualified borrowers. The Firm has also committed $1.2 billion to foreclosure prevention actions, which will be fulfilled through credits given to the Firm for modifications, short sales and other specified types of borrower relief. Foreclosure prevention actions that earn credit under the Independent Foreclosure Review settlement are in addition to actions taken by the Firm to earn credit under the global settlement entered into by the Firm with state and federal agencies (see "Global settlement on servicing and origination of mortgages" below). The estimated impact of the foreclosure prevention actions required under the Independent Foreclosure Review settlement have been considered in the Firm's allowance for loan losses. The Firm recognized a pretax charge of approximately $700 million in the fourth quarter of 2012 related to the Independent Foreclosure Review settlement.

Washington Mutual, Inc. bankruptcy plan confirmation
On March 19, 2012, a bankruptcy court approved the joint plan containing the global settlement agreement resolving numerous disputes among Washington Mutual, Inc. ("WMI"), JPMorgan Chase and the Federal Deposit Insurance Corporation ("FDIC") as well as significant creditor groups (the "WaMu Global Settlement"). The Firm recognized additional assets, including certain pension-related assets, as well as tax refunds, resulting in a pretax gain of $1.1 billion in 2012.

Global settlement on servicing and origination of mortgages
On February 9, 2012, the Firm announced that it had agreed to a settlement in principle (the "global settlement") with a number of federal and state government agencies, including the U.S. Department of Justice ("DOJ"), the U.S. Department of Housing and Urban Development, the Consumer Financial Protection Bureau and the State Attorneys General, relating to the servicing and origination of mortgages.

The global settlement releases the Firm from certain further claims by the participating government entities related to servicing activities, including foreclosures and loss mitigation activities; certain origination activities; and certain bankruptcy-related activities. Not included in the global settlement are any claims arising out of securitization activities, including representations made to investors with respect to mortgage-backed securities; criminal claims; and repurchase demands from U.S. government-sponsored entities ("GSEs"), among other items.

Also on February 9, 2012, the Firm entered into agreements with the Federal Reserve and the OCC for the payment of civil money penalties related to conduct that was the subject of consent orders entered into with the banking regulators in April 2011.

Subsequent events

Settlement agreement with The U.S. Departments Of Justice, Housing and Urban Development, and Veterans Affairs, and The Federal Housing Administration

On February 4, 2014, the Firm announced that it had reached a settlement with the U.S. Attorney's Office for the Southern District of New York, Federal Housing Administration ("FHA"), the U.S. Department of Housing and Urban Development ("HUD"), and the U.S. Department of Veterans Affairs ("VA") resolving claims relating to the Firm's participation in federal mortgage insurance programs overseen by FHA, HUD and VA ("FHA Settlement"). Under the FHA Settlement, which relates to FHA and VA insurance claims that have been paid to the Firm from 2002 through the date of the settlement, the Firm will pay $614 million in cash, and agree to enhance its quality control program for loans that are submitted in the future to FHA's Direct Endorsement Lender Program. The Firm is fully reserved for the settlement, and any financial impact related to exposure on future claims is not expected to be significant.

Madoff Litigation and Investigations

On January 7, 2014, the Firm announced that certain of its bank subsidiaries had entered into settlements with various governmental agencies in resolution of investigations relating to Bernard L. Madoff Investment Securities LLC ("BLMIS"). The Firm and certain of its subsidiaries also entered into settlements with several private parties in resolution of civil litigation relating to BLMIS. At the same time, certain bank subsidiaries of the Firm consented to the assessment of a civil money penalty by the OCC in connection with various Bank Secrecy Act/Anti-Money Laundering deficiencies, including with relation to the BLMIS fraud, and JPMorgan Chase Bank, N.A. additionally agreed to the assessment of a civil money penalty by the Financial Crimes Enforcement Network for failure to detect and adequately report suspicious transactions relating to BLMIS. For further information on these settlements, see Note 31 on pages 326–332 of this Annual Report.

Note 3 – Fair value measurement

JPMorgan Chase carries a portion of its assets and liabilities at fair value. These assets and liabilities are predominantly carried at fair value on a recurring basis (i.e., assets and liabilities that are measured and reported at fair value on the Firm's Consolidated Balance Sheets). Certain assets (e.g., certain mortgage, home equity and other loans, where the carrying value is based on the fair value of the underlying collateral), liabilities and unfunded lending-related commitments are measured at fair value on a nonrecurring basis; that is, they are not measured at fair value on an ongoing basis but are subject to fair value adjustments only in certain circumstances (for example, when there is evidence of impairment).

Fair value is defined as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. Fair value is based on quoted market prices, where available. If listed prices or quotes are not available, fair value is based on models that consider relevant transaction characteristics (such as maturity) and use as inputs observable or unobservable market parameters, including but not limited to yield curves, interest rates, volatilities, equity or debt prices, foreign exchange rates and credit curves. Valuation adjustments may be made to ensure that financial instruments are recorded at fair value, as described below.

Imprecision in estimating unobservable market inputs or other factors can affect the amount of gain or loss recorded for a particular position. Furthermore, while the Firm believes its valuation methods are appropriate and consistent with those of other market participants, the methods and assumptions used reflect management judgment and may vary across the Firm's businesses and portfolios.

The Firm uses various methodologies and assumptions in the determination of fair value. The use of different methodologies or assumptions to those used by the Firm could result in a different estimate of fair value at the reporting date.

Valuation process

Risk-taking functions are responsible for providing fair value estimates for assets and liabilities carried on the Consolidated Balance Sheets at fair value. The Firm's valuation control function, which is part of the Firm's Finance function and independent of the risk-taking functions, is responsible for verifying these estimates and determining any fair value adjustments that may be required to ensure that the Firm's positions are recorded at fair value. In addition, the Firm has a firmwide Valuation Governance Forum ("VGF") comprising senior finance and risk executives to oversee the management of risks arising from valuation activities conducted across the Firm. The VGF is chaired by the firm-wide head of the valuation control function, and also includes sub-forums for the Corporate & Investment Bank ("CIB"), Mortgage Banking, (part of Consumer & Community Banking) and certain corporate functions including Treasury and Chief Investment Office ("CIO").

The valuation control function verifies fair value estimates leveraging independently derived prices, valuation inputs and other market data, where available. Where independent prices or inputs are not available, additional review is performed by the valuation control function to ensure the reasonableness of estimates that cannot be verified to external independent data, and may include: evaluating the limited market activity including client unwinds; benchmarking of valuation inputs to those for similar instruments; decomposing the valuation of structured instruments into individual components; comparing expected to actual cash flows; reviewing profit and loss trends; and reviewing trends in collateral valuation. In addition there are additional levels of management review for more significant or complex positions.

The valuation control function determines any valuation adjustments that may be required to the estimates provided by the risk-taking functions. No adjustments are applied to the quoted market price for instruments classified within level 1 of the fair value hierarchy (see below for further information on the fair value hierarchy). For other positions, judgment is required to assess the need for valuation adjustments to appropriately reflect liquidity considerations, unobservable parameters, and, for certain portfolios that meet specified criteria, the size of the net open risk position. The determination of such adjustments follows a consistent framework across the Firm:

- Liquidity valuation adjustments are considered when the Firm may not be able to observe a recent market price for a financial instrument that trades in an inactive (or less active) market. The Firm estimates the amount of uncertainty in the initial fair value estimate based on the degree of liquidity in the market. Factors that may be considered in determining the liquidity adjustment include: (1) the amount of time since the last relevant pricing point; (2) whether there was an actual trade or relevant external quotes or alternatively pricing points for similar instruments in active markets; and (3) the volatility of the principal risk component of the financial instrument.

  The Firm manages certain portfolios of financial instruments on the basis of net open risk exposure and, as permitted by US GAAP, has elected to estimate the fair value of such portfolios on the basis of a transfer of the entire net open risk position in an orderly transaction. Where this is the case, valuation adjustments may be necessary to reflect the cost of exiting a larger-than-normal market-size net open risk position. Where applied, such adjustments are based on factors that a relevant market participant would consider in the transfer of the net open risk position including the size of the adverse market move that is likely to occur during the period required to reduce the net open risk position to a normal market-size.

- Unobservable parameter valuation adjustments may be made when positions are valued using internally developed models that incorporate unobservable parameters – that is, parameters that must be estimated and are, therefore, subject to management judgment. Unobservable parameter valuation adjustments are applied to reflect the uncertainty inherent in the valuation estimate provided by the model.

Where appropriate, the Firm also applies adjustments to its estimates of fair value in order to appropriately reflect counterparty credit quality and the Firm's own creditworthiness, applying a consistent framework across the Firm. For more information on such adjustments see Credit adjustments on page 212 of this Note

Impact of funding on valuation estimates

The Firm incorporates the impact of funding in its valuation estimates where there is evidence that a market participant in the principal market would incorporate it in a transfer of the instrument. As a result, the fair value of collateralized derivatives is estimated by discounting expected future cash flows at the relevant overnight indexed swap ("OIS") rate given the underlying collateral agreement with the counterparty. Prior to the fourth quarter of 2013, the Firm did not incorporate the impact of funding in its valuation of uncollateralized (including partially collateralized) derivatives and structured notes. However, during the fourth quarter of 2013, the Firm implemented a funding valuation adjustment ("FVA") framework to incorporate its best estimate of the funding cost or benefit that a relevant market participant would consider in the transfer of an OTC derivative or structured note. As a result, the Firm recorded a one time $1.5 billion loss in principal transactions revenue in the fourth quarter, which was recorded in the CIB.

The FVA framework applies to both assets and liabilities, but the adjustment in the fourth quarter largely relates to uncollateralized derivative receivables given that the impact of the Firm's own credit risk, which is a significant component of funding costs, is already incorporated in the valuation of liabilities through the application of DVA.

Valuation model review and approval

If prices or quotes are not available for an instrument or a similar instrument, fair value is generally determined using valuation models that consider relevant transaction data such as maturity and use as inputs market-based or independently sourced parameters. Where this is the case the price verification process described above is applied to the inputs to those models.

The Firm's Model Risk function within the Firm's Model Risk and Development Group, which in turn reports to the Chief Risk Officer, reviews and approves valuation models used by the Firm. Model reviews consider a number of factors about the model's suitability for valuation of a particular product including whether it accurately reflects the characteristics and significant risks of a particular instrument; the selection and reliability of model inputs; consistency with models for similar products; the appropriateness of any model-related adjustments; and sensitivity to input parameters and assumptions that cannot be observed from the market. When reviewing a model, the Model Risk function analyzes and challenges the model methodology and the reasonableness of model assumptions and may perform or require additional testing, including back-testing of model outcomes.

New significant valuation models, as well as material changes to existing models, are reviewed and approved prior to implementation except where specified conditions are met. The Model Risk function performs an annual firmwide model risk assessment where developments in the product or market are considered in determining whether valuation models which have already been reviewed need to be reviewed and approved again.

Valuation hierarchy

A three-level valuation hierarchy has been established under U.S. GAAP for disclosure of fair value measurements. The valuation hierarchy is based on the transparency of inputs to the valuation of an asset or liability as of the measurement date. The three levels are defined as follows.

- Level 1 – inputs to the valuation methodology are quoted prices (unadjusted) for identical assets or liabilities in active markets.
- Level 2 – inputs to the valuation methodology include quoted prices for similar assets and liabilities in active markets, and inputs that are observable for the asset or liability, either directly or indirectly, for substantially the full term of the financial instrument.
- Level 3 – one or more inputs to the valuation methodology are unobservable and significant to the fair value measurement.

A financial instrument's categorization within the valuation hierarchy is based on the lowest level of input that is significant to the fair value measurement.

The following table describes the valuation methodologies used by the Firm to measure its more significant products/ instruments at fair value, including the general classification of such instruments pursuant to the valuation hierarchy.

Product/instrument	Valuation methodology	Classifications in the valuation hierarchy
Securities financing agreements	Valuations are based on discounted cash flows, which consider: • Derivative features. For further information refer to the discussion of derivatives below. • Market rates for the respective maturity • Collateral	Level 2
Loans and lending-related commitments - wholesale		
Trading portfolio	Where observable market data is available, valuations are based on: • Observed market prices (circumstances are limited) • Relevant broker quotes • Observed market prices for similar instruments Where observable market data is unavailable or limited, valuations are based on discounted cash flows, which consider the following: • Yield • Lifetime credit losses • Loss severity • Prepayment speed • Servicing costs	Level 2 or 3
Loans held for investment and associated lending related commitments	Valuations are based on discounted cash flows, which consider: • Credit spreads, derived from the cost of CDS; or benchmark credit curves developed by the Firm, by industry and credit rating, and which take into account the difference in loss severity rates between bonds and loans • Prepayment speed Lending related commitments are valued similar to loans and reflect the portion of an unused commitment expected, based on the Firm's average portfolio historical experience, to become funded prior to an obligor default For information regarding the valuation of loans measured at collateral value, see Note 14 on pages 258-283 of this Annual Report.	Predominantly level 3
Loans - consumer		
Held for investment consumer loans, excluding credit card	Valuations are based on discounted cash flows, which consider: • Discount rates (derived from primary origination rates and market activity) • Expected lifetime credit losses (considering expected and current default rates for existing portfolios, collateral prices, and economic environment expectations (i.e., unemployment rates)) • Estimated prepayments • Servicing costs • Market liquidity For information regarding the valuation of loans measured at collateral value, see Note 14 on pages 258-283 of this Annual Report.	Predominantly level 3
Held for investment credit card receivables	Valuations are based on discounted cash flows, which consider: • Projected interest income and late fee revenue, funding, servicing and credit costs, and loan repayment rates • Estimated life of receivables (based on projected loan payment rates) • Discount rate - based on expected return on receivables • Credit costs - allowance for loan losses is considered a reasonable proxy for the credit cost based on the short-term nature of credit card receivables	Level 3
Trading loans - Conforming residential mortgage loans expected to be sold	Fair value is based upon observable prices for mortgage-backed securities with similar collateral and incorporates adjustments to these prices to account for differences between the securities and the value of the underlying loans, which include credit characteristics, portfolio composition, and liquidity.	Predominantly level 2

Product/instrument	Valuation methodology, inputs and assumptions	Classifications in the valuation hierarchy
Securities	Quoted market prices are used where available.	Level 1
	In the absence of quoted market prices, securities are valued based on: • Observable market prices for similar securities • Relevant broker quotes • Discounted cash flows In addition, the following inputs to discounted cash flows are used for the following products: *Mortgage- and asset-backed securities specific inputs:* • Collateral characteristics • Deal-specific payment and loss allocations • Current market assumptions related to yield, prepayment speed, conditional default rates and loss severity *Collateralized loan obligations ("CLOs"), specific inputs:* • Collateral characteristics • Deal-specific payment and loss allocations • Expected prepayment speed, conditional default rates, loss severity • Credit spreads • Credit rating data	Level 2 or 3
Physical commodities	Valued using observable market prices or data	Predominantly Level 1 and 2
Derivatives	Exchange-traded derivatives that are actively traded and valued using the exchange price, and over-the-counter contracts where quoted prices are available in an active market.	Level 1
	Derivatives that are valued using models such as the Black-Scholes option pricing model, simulation models, or a combination of models, that use observable or unobservable valuation inputs (e.g. plain vanilla options and interest rate and credit default swaps). Inputs include: • Contractual terms including the period to maturity • Readily observable parameters including interest rates and volatility • Credit quality of the counterparty and of the Firm • Market funding levels • Correlation levels In addition, the following specific inputs are used for the following derivatives that are valued based on models with significant unobservable inputs: *Structured credit derivatives specific inputs include:* • CDS spreads and recovery rates • Credit correlation between the underlying debt instruments (levels are modeled on a transaction basis and calibrated to liquid benchmark tranche indices) • Actual transactions, where available, are used to regularly recalibrate unobservable parameters *Certain long-dated equity option specific inputs include:* • Long-dated equity volatilities *Certain interest rate and FX exotic options specific inputs include:* • Interest rate correlation • Interest rate spread volatility • Foreign exchange correlation • Correlation between interest rates and foreign exchange rates • Parameters describing the evolution of underlying interest rates *Certain commodity derivatives specific inputs include:* • Commodity volatility • Forward commodity price Adjustments to reflect counterparty credit quality (credit valuation adjustments or "CVA"), the Firms own creditworthiness (debit valuation adjustments or "DVA"), and FVA to incorporate the impact of funding see page 212 of this Note.	Level 2 or 3

Product/instrument	Valuation methodology, inputs and assumptions	Classification in the valuation hierarchy
Mortgage servicing rights ("MSRs")	See Mortgage servicing rights in Note 17 on pages 299-304 of this Annual Report.	Level 3
Private equity direct investments	*Private equity direct investments* Fair value is estimated using all available information and considering the range of potential inputs, including: • Transaction prices • Trading multiples of comparable public companies • Operating performance of the underlying portfolio company • Additional available inputs relevant to the investment • Adjustments as required, since comparable public companies are not identical to the company being valued, and for company-specific issues and lack of liquidity	Level 3
	Public investments held in the Private Equity portfolio • Valued using observable market prices less adjustments for relevant restrictions, where applicable	Level 1 or 2
Fund investments (i.e., mutual/collective investment funds, private equity funds, hedge funds, and real estate funds)	Net asset value ("NAV") • NAV is validated by sufficient level of observable activity (i.e., purchases and sales)	Level 1
	• Adjustments to the NAV as required, for restrictions on redemption (e.g., lock up periods or withdrawal limitations) or where observable activity is limited	Level 2 or 3
Beneficial interests issued by consolidated VIE	Valued using observable market information, where available In the absence of observable market information, valuations are based on the fair value of the underlying assets held by the VIE	Level 2 or 3
Long-term debt, not carried at fair value	Valuations are based on discounted cash flows, which consider: • Market rates for respective maturity • The Firm's own creditworthiness (DVA), see page 212 of this Note.	Predominantly level 2
Structured notes (included in deposits, other borrowed funds and long-term debt)	• Valuations are based on discounted cash flow analyses that consider the embedded derivative and the terms and payment structure of the note. • The embedded derivative features are considered using models such as the Black-Scholes option pricing model, simulation models, or a combination of models that use observable or unobservable valuation inputs, depending on the embedded derivative. The specific inputs used vary according to the nature of the embedded derivative features, as described in the discussion above regarding derivative valuation. Adjustments are then made to this base valuation to reflect the Firm's own credit risk (DVA) and to incorporate the impact of funding (FVA). See page 212 of this Note.	Level 2 or 3

The following table presents the asset and liabilities measured at fair value as of December 31, 2013 and 2012 by major product category and fair value hierarchy.

Assets and liabilities measured at fair value on a recurring basis

	Fair value hierarchy				
December 31, 2013 (in millions)	Level 1	Level 2	Level 3	Netting adjustments	Total fair value

(a) At December 31, 2013 and 2012, included total U.S. government-sponsored enterprise obligations of $91.5 billion and $119.4 billion, respectively, which were predominantly mortgage-related.

(b) At December 31, 2013 and 2012, included within trading loans were $14.8 billion and $26.4 billion, respectively, of residential first-lien mortgages, and $2.1 billion and $2.2 billion, respectively, of commercial first-lien mortgages. Residential mortgage loans include conforming mortgage loans originated with the intent to sell to U.S. government agencies of $6.0 billion and $17.4 billion, respectively, and reverse mortgages of $3.6 billion and $4.0 billion, respectively.

(c) Physical commodities inventories are generally accounted for at the lower of cost or market. "Market" is a term defined in U.S. GAAP as not exceeding fair value less costs to sell ("transaction costs"). Transaction costs for the Firm's physical commodities inventories are either not applicable or immaterial to the value of the inventory. Therefore, market approximates fair value for the Firm's physical commodities inventories. When fair value hedging has been applied (or when market is below cost), the carrying value of physical commodities approximates fair value, because under fair value hedge accounting, the cost basis is adjusted for changes in fair value. For a further discussion of the Firm's hedge accounting relationships, see Note 6 on pages 220–233 of this Annual Report. To provide consistent fair value disclosure information, all physical commodities inventories have been included in each period presented.

(d) Balances reflect the reduction of securities owned (long positions) by the amount of securities sold but not yet purchased (short positions) when the long and short positions have identical Committee on Uniform Security Identification Procedures numbers ("CUSIPs").

(e) As permitted under U.S. GAAP, the Firm has elected to net derivative receivables and derivative payables and the related cash collateral received and paid when a legally enforceable master netting agreement exists. For purposes of the tables above, the Firm does not reduce derivative receivables and derivative payables balances for this netting adjustment, either within or across the levels of the fair value hierarchy, as such netting is not relevant to a presentation based on the transparency of inputs to the valuation of an asset or liability. Therefore, the balances reported in the fair value hierarchy table are gross of any counterparty netting adjustments. However, if the Firm were to net such balances within level 3, the reduction in the level 3 derivative receivables and payables balances would be $7.6 billion and $7.4 billion at December 31, 2013 and 2012, respectively; this is exclusive of the netting benefit associated with cash collateral, which would further reduce the level 3 balances.

(f) Private equity instruments represent investments within the Corporate/Private Equity line of business. The cost basis of the private equity investment portfolio totaled $8.0 billion and $8.4 billion at December 31, 2013 and 2012, respectively.

(g) Includes investments in hedge funds, private equity funds, real estate and other funds that do not have readily determinable fair values. The Firm uses net asset value per share when measuring the fair value of these investments. At December 31, 2013 and 2012, the fair values of these investments were $3.2 billion and $4.9 billion, respectively, of which $899 million and $1.1 billion, respectively were classified in level 2, and $2.3 billion and $3.8 billion, respectively, in level 3.

(h) The prior period amounts have been revised. This revision had no impact on the Firm's Consolidated Balance Sheets or its results of operations.

Transfers between levels for instruments carried at fair value on a recurring basis

For the year ended December 31, 2013 and 2011, there were no significant transfers between levels 1 and 2.

During the year ended December 31, 2013, transfers from level 3 to level 2 included certain highly rated CLOs, including $27.4 billion held in the Firm's available-for-sale ("AFS") securities portfolio and $1.4 billion held in the trading portfolio, based on increased liquidity and price transparency; and $1.3 billion of long-term debt, largely driven by an increase in observability of certain equity structured notes. Transfers from level 2 to level 3 included $1.4 billion of corporate debt securities in the trading portfolio largely driven by a decrease in observability for certain credit instruments.

For the year ended December 31, 2012, $113.9 billion of settled U.S. government agency mortgage-backed securities were transferred from level 1 to level 2. While the U.S. government agency mortgage-backed securities market remained highly liquid and transparent, the transfer reflected greater market price differentiation between settled securities based on certain underlying loan specific factors. There were no significant transfers from level 2 to level 1 for the year ended December 31, 2012.

For the years ended December 31, 2012 and 2011, there were no significant transfers from level 2 into level 3. For the year ended December 31, 2012, transfers from level 3 into level 2 included $1.2 billion of derivative payables based on increased observability of certain structured equity derivatives; and $1.8 billion of long-term debt due to increased observability of certain equity structured notes. For the year ended December 31, 2011, transfers from level 3 into level 2 included $2.6 billion of long-term debt due to a decrease in valuation uncertainty of certain structured notes.

All transfers are assumed to occur at the beginning of the quarterly reporting period in which they occur.

During 2012 the liquidity for certain collateralized loan obligations increased and price transparency improved. Accordingly, the Firm incorporated a revised valuation model into its valuation process for CLOs to better calibrate to market data where available. The Firm began to verify fair value estimates from this model to independent sources during the fourth quarter of 2012. Although market liquidity and price transparency have improved, CLO market prices were not yet considered materially observable and therefore CLOs remained in level 3 as of December 31, 2012. The change in the valuation process did not have a significant impact on the fair value of the Firm's CLO positions. As previously described, a portion of the CLOs that were subject to the revised valuation model (namely certain highly rated CLOs) were transferred from level 3 to level 2 of the fair value hierarchy during the year ended December 31, 2013.

Level 3 valuations

The Firm has established well-documented processes for determining fair value, including for instruments where fair value is estimated using significant unobservable inputs (level 3). For further information on the Firm's valuation process and a detailed discussion of the determination of fair value for individual financial instruments, see pages 196–200 of this Note.

Estimating fair value requires the application of judgment. The type and level of judgment required is largely dependent on the amount of observable market information available to the Firm. For instruments valued using internally developed models that use significant unobservable inputs and are therefore classified within level 3 of the fair value hierarchy, judgments used to estimate fair value are more significant than those required when estimating the fair value of instruments classified within levels 1 and 2.

In arriving at an estimate of fair value for an instrument within level 3, management must first determine the appropriate model to use. Second, due to the lack of observability of significant inputs, management must assess all relevant empirical data in deriving valuation inputs — including, but not limited to, transaction details, yield curves, interest rates, prepayment speed, default rates, volatilities, correlations, equity or debt prices, valuations of comparable instruments, foreign exchange rates and credit curves.

Finally, management judgment must be applied to assess the appropriate level of valuation adjustments to reflect counterparty credit quality, the Firm's creditworthiness, the impact of funding, constraints on liquidity and unobservable parameters, where relevant. The judgments made are typically affected by the type of product and its specific contractual terms, and the level of liquidity for the product or within the market as a whole.

The following table presents the Firm's primary level 3 financial instruments, the valuation techniques used to measure the fair value of those financial instruments, the significant unobservable inputs, the range of values for those inputs and, for certain instruments, the weighted averages of such inputs. While the determination to classify an instrument within level 3 is based on the significance of the unobservable inputs to the overall fair value measurement, level 3 financial instruments typically include observable components (that is, components that are actively quoted and can be validated to external sources) in addition to the unobservable components. The level 1 and/or level 2 inputs are not included in the table. In addition, the Firm manages the risk of the observable components of level 3 financial instruments using securities and derivative positions that are classified within levels 1 or 2 of the fair value hierarchy.

The range of values presented in the table is representative of the highest and lowest level input used to value the significant groups of instruments within a product/instrument classification. The input range does not reflect the level of input uncertainty; rather, it is driven by the different underlying characteristics of the various instruments within the classification. For example, two option contracts may have similar levels of market risk exposure and valuation uncertainty, but may have significantly different implied volatility levels because the option contracts have different underlyings, tenors, or strike prices.

Where provided, the weighted averages of the input values presented in the table are calculated based on the fair value of the instruments that the input is being used to value. In the Firm's view, the input range and the weighted average value do not reflect the degree of input uncertainty or an assessment of the reasonableness of the Firm's estimates and assumptions. Rather, they reflect the characteristics of the various instruments held by the Firm and the relative distribution of instruments within the range of characteristics. The input range and weighted average values will therefore vary from period-to-period and parameter to parameter based on the characteristics of the instruments held by the Firm at each balance sheet date.

For the Firm's derivatives and structured notes positions classified within level 3, the equity and interest rate correlation inputs used in estimating fair value were concentrated at the upper end of the range presented, while the credit correlation inputs were distributed across the range presented and the foreign exchange correlation inputs were concentrated at the lower end of the range presented. In addition, the interest rate volatility inputs used in estimating fair value were concentrated at the upper end of the range presented, while equity volatilities were concentrated at the lower end of the range. The forward commodity prices used in estimating the fair value of commodity derivatives were concentrated within the lower end of the range presented.

Level 3 inputs[a]

December 31, 2013 (in millions, except for ratios and basis points)

Product/Instrument	Fair value	Principal valuation technique	Unobservable inputs	Range of input values	Weighted average
Residential mortgage-backed securities and loans	$ 11,089	Discounted cash flows	Yield	3 % - 18%	7%
			Prepayment speed	0 % - 15%	7%
			Conditional default rate	0 % - 100%	26%
			Loss severity	0 % - 100%	21%
Commercial mortgage-backed securities and loans[b]	1,204	Discounted cash flows	Yield	6 % - 29%	11%
			Conditional default rate	0 % - 100%	10%
			Loss severity	0 % - 40%	33%
Corporate debt securities, obligations of U.S. states and municipalities, and other[c]	15,209	Discounted cash flows	Credit spread	88 bps - 255 bps	154 bps
			Yield	1 % - 40%	10%
	5,843	Market comparables	Price	3 - 122	95
Net interest rate derivatives	2,379	Option pricing	Interest rate correlation	(75)% - 95%	
			Interest rate spread volatility	0 % - 60%	
Net credit derivatives[b][c]	95	Discounted cash flows	Credit correlation	34 % - 82%	
Net foreign exchange derivatives	(1,200)	Option pricing	Foreign exchange correlation	45 % - 75%	
Net equity derivatives	(1,063)	Option pricing	Equity volatility	20 % - 55%	
Net commodity derivatives	115	Discounted cash flows	Forward commodity price	$20 - $160 per megawatt hour	
Collateralized loan obligations	821	Discounted cash flows	Credit spread	214 bps - 575 bps	234 bps
			Prepayment speed	20%	20%
			Conditional default rate	2%	2%
			Loss severity	40%	40%
	487	Market comparables	Price	0 - 114	88
Mortgage servicing rights (“MSRs”)	9,614	Discounted cash flows	Refer to Note 17 on pages 299–304 of this Annual Report.		
Private equity direct investments	4,872	Market comparables	EBITDA multiple	4.0x - 14.7x	8.1x
			Liquidity adjustment	0 % - 37%	11%
Private equity fund investments[d]	1,602	Net asset value	Net asset value[f]		
Long-term debt, other borrowed funds, and deposits[e]	13,282	Option pricing	Interest rate correlation	(75)% - 95%	
			Foreign exchange correlation	0 % - 75%	
			Equity correlation	(50)% - 85%	
	1,055	Discounted cash flows	Credit correlation	34 % - 82%	

(a) The categories presented in the table have been aggregated based upon the product type, which may differ from their classification on the Consolidated Balance Sheets.

(b) The unobservable inputs and associated input ranges for approximately $735 million of credit derivative receivables and $644 million of credit derivative payables with underlying mortgage risk have been included in the inputs and ranges provided for commercial mortgage-backed securities and loans.

(c) The unobservable inputs and associated input ranges for approximately $1.0 billion of credit derivative receivables and $890 million of credit derivative payables with underlying asset-backed securities risk have been included in the inputs and ranges provided for corporate debt securities, obligations of U.S. states and municipalities and other.

(d) As of December 31, 2013, $757 million of private equity fund exposure was carried at a discount to net asset value per share.

(e) Long-term debt, other borrowed funds and deposits include structured notes issued by the Firm that are predominantly financial instruments containing embedded derivatives. The estimation of the fair value of structured notes is predominantly based on the derivative features embedded within the instruments. The significant unobservable inputs are broadly consistent with those presented for derivative receivables.

(f) The range has not been disclosed due to the wide range of possible values given the diverse nature of the underlying investments.

Changes in and ranges of unobservable inputs

The following discussion provides a description of the impact on a fair value measurement of a change in each unobservable input in isolation, and the interrelationship between unobservable inputs, where relevant and significant. The impact of changes in inputs may not be independent as a change in one unobservable input may give rise to a change in another unobservable input, and where relationships exist between two unobservable inputs, those relationships are discussed below. Relationships may also exist between observable and unobservable inputs (for example, as observable interest rates rise, unobservable prepayment rates decline). Such relationships have not been included in the discussion below. In addition, for each of the individual relationships described below, the inverse relationship would also generally apply.

In addition, the following discussion provides a description of attributes of the underlying instruments and external market factors that affect the range of inputs used in the valuation of the Firm's positions.

Yield – The yield of an asset is the interest rate used to discount future cash flows in a discounted cash flow calculation. An increase in the yield, in isolation, would result in a decrease in a fair value measurement.

Credit spread – The credit spread is the amount of additional annualized return over the market interest rate that a market participant would demand for taking exposure to the credit risk of an instrument. The credit spread for an instrument forms part of the discount rate used in a discounted cash flow calculation. Generally, an increase in the credit spread would result in a decrease in a fair value measurement.

The yield and the credit spread of a particular mortgage-backed security primarily reflect the risk inherent in the instrument. The yield is also impacted by the absolute level of the coupon paid by the instrument (which may not correspond directly to the level of inherent risk). Therefore, the range of yield and credit spreads reflects the range of risk inherent in various instruments owned by the Firm. The risk inherent in mortgage-backed securities is driven by the subordination of the security being valued and the characteristics of the underlying mortgages within the collateralized pool, including borrower FICO scores, loan-to-value ratios for residential mortgages and the nature of the property and/or any tenants for commercial mortgages. For corporate debt securities, obligations of U.S. states and municipalities and other similar instruments, credit spreads reflect the credit quality of the obligor and the tenor of the obligation.

Prepayment speed – The prepayment speed is a measure of the voluntary unscheduled principal repayments of a prepayable obligation in a collateralized pool. Prepayment speeds generally decline as borrower delinquencies rise. An increase in prepayment speeds, in isolation, would result in a decrease in a fair value measurement of assets valued at a premium to par and an increase in a fair value measurement of assets valued at a discount to par.

Prepayment speeds may vary from collateral pool to collateral pool, and are driven by the type and location of the underlying borrower, the remaining tenor of the obligation as well as the level and type (e.g., fixed or floating) of interest rate being paid by the borrower. Typically collateral pools with higher borrower credit quality have a higher prepayment rate than those with lower borrower credit quality, all other factors being equal.

Conditional default rate – The conditional default rate is a measure of the reduction in the outstanding collateral balance underlying a collateralized obligation as a result of defaults. While there is typically no direct relationship between conditional default rates and prepayment speeds, collateralized obligations for which the underlying collateral have high prepayment speeds will tend to have lower conditional default rates. An increase in conditional default rates would generally be accompanied by an increase in loss severity and an increase in credit spreads. An increase in the conditional default rate, in isolation, would result in a decrease in a fair value measurement. Conditional default rates reflect the quality of the collateral underlying a securitization and the structure of the securitization itself. Based on the types of securities owned in the Firm's market-making portfolios, conditional default rates are most typically at the lower end of the range presented.

Loss severity – The loss severity (the inverse concept is the recovery rate) is the expected amount of future realized losses resulting from the ultimate liquidation of a particular loan, expressed as the net amount of loss relative to the outstanding loan balance. An increase in loss severity is generally accompanied by an increase in conditional default rates. An increase in the loss severity, in isolation, would result in a decrease in a fair value measurement.

The loss severity applied in valuing a mortgage-backed security investment depends on a host of factors relating to the underlying mortgages. This includes the loan-to-value ratio, the nature of the lender's charge over the property and various other instrument-specific factors.

Correlation – Correlation is a measure of the relationship between the movements of two variables (e.g., how the change in one variable influences the change in the other). Correlation is a pricing input for a derivative product where the payoff is driven by one or more underlying risks. Correlation inputs are related to the type of derivative (e.g., interest rate, credit, equity and foreign exchange) due to the nature of the underlying risks. When parameters are positively correlated, an increase in one parameter will result in an increase in the other parameter. When parameters are negatively correlated, an increase in one parameter will result in a decrease in the other parameter. An increase in correlation can result in an increase or a decrease in a fair value measurement. Given a short correlation position, an increase in correlation, in isolation, would generally result in a decrease in a fair value measurement. Correlation inputs between risks within the same asset class are generally narrower than those between underlying risks across asset classes. In addition, the ranges of credit correlation inputs tend to be narrower than those affecting other asset classes.

The level of correlation used in the valuation of derivatives with multiple underlying risks depends on a number of factors including the nature of those risks. For example, the correlation between two credit risk exposures would be different than that between two interest rate risk exposures. Similarly, the tenor of the transaction may also impact the correlation input as the relationship between the underlying risks may be different over different time periods. Furthermore, correlation levels are very much dependent on market conditions and could have a relatively wide range of levels within or across asset classes over time, particularly in volatile market conditions.

Volatility – Volatility is a measure of the variability in possible returns for an instrument, parameter or market index given how much the particular instrument, parameter or index changes in value over time. Volatility is a pricing input for options, including equity options, commodity options, and interest rate options. Generally, the higher the volatility of the underlying, the riskier the instrument. Given a long position in an option, an increase in volatility, in isolation, would generally result in an increase in a fair value measurement.

The level of volatility used in the valuation of a particular option-based derivative depends on a number of factors, including the nature of the risk underlying the option (e.g., the volatility of a particular equity security may be significantly different from that of a particular commodity index), the tenor of the derivative as well as the strike price of the option.

EBITDA multiple – EBITDA multiples refer to the input (often derived from the value of a comparable company) that is multiplied by the historic and/or expected earnings before interest, taxes, depreciation and amortization ("EBITDA") of a company in order to estimate the company's value. An increase in the EBITDA multiple, in isolation, net of adjustments, would result in an increase in a fair value measurement.

Net asset value – Net asset value is the total value of a fund's assets less liabilities. An increase in net asset value would result in an increase in a fair value measurement.

Changes in level 3 recurring fair value measurements

The following tables include a rollforward of the Consolidated Balance Sheet amounts (including changes in fair value) for financial instruments classified by the Firm within level 3 of the fair value hierarchy for the years ended December 31, 2013, 2012 and 2011. When a determination is made to classify a financial instrument within level 3, the determination is based on the significance of the unobservable parameters to the overall fair value measurement. However, level 3 financial instruments typically include, in addition to the unobservable or level 3 components, observable components (that is, components that are actively quoted and can be validated to external sources); accordingly, the gains and losses in the table below include changes in fair value due in part to observable factors that are part of the valuation methodology. Also, the Firm risk-manages the observable components of level 3 financial instruments using securities and derivative positions that are classified within level 1 or 2 of the fair value hierarchy; as these level 1 and level 2 risk management instruments are not included below, the gains and losses in the following tables do not reflect the effect of the Firm's risk management activities related to such level 3 instruments.

Year ended December 31, 2013 (in millions)	Fair value at January 1, 2013	Total realized/ unrealized gains/ (losses)	Purchases[g]	Sales	Settlements	Transfers into and/or out of level 3[h]	Fair value at Dec. 31, 2013	Change in unrealized gains/ (losses) related to financial instruments held at Dec. 31, 2013

(a) All level 3 derivatives are presented on a net basis, irrespective of underlying counterparty.
(b) Level 3 liabilities as a percentage of total Firm liabilities accounted for at fair value (including liabilities measured at fair value on a nonrecurring basis) were 18%, 18% and 22% at December 31, 2013, 2012 and 2011, respectively.
(c) Predominantly reported in principal transactions revenue, except for changes in fair value for Consumer & Community Banking ("CCB") mortgage loans, lending-related commitments originated with the intent to sell, and mortgage loan purchase commitments, which are reported in mortgage fees and related income.

(d) Realized gains/(losses) on AFS securities, as well as other-than-temporary impairment losses that are recorded in earnings, are reported in securities gains. Unrealized gains/(losses) are reported in OCI. Realized gains/(losses) and foreign exchange remeasurement adjustments recorded in income on AFS securities were $17 million, $145 million, and $(240) million for the years ended December 31, 2013, 2012 and 2011, respectively. Unrealized gains/(losses) recorded on AFS securities in OCI were $13 million, $45 million and $145 million for the years ended December 31, 2013, 2012 and 2011, respectively.
(e) Changes in fair value for CCB mortgage servicing rights are reported in mortgage fees and related income.
(f) Largely reported in other income.
(g) Loan originations are included in purchases.
(h) All transfers into and/or out of level 3 are assumed to occur at the beginning of the quarterly reporting period in which they occur.

Level 3 analysis

Consolidated Balance Sheets changes

Level 3 assets (including assets measured at fair value on a nonrecurring basis) were 3.1% of total Firm assets at December 31, 2013. The following describes significant changes to level 3 assets since December 31, 2012, for those items measured at fair value on a recurring basis. For further information on changes impacting items measured at fair value on a nonrecurring basis, see Assets and liabilities measured at fair value on a nonrecurring basis on page 213 of this Annual Report.

For the year ended December 31, 2013

Level 3 assets were $69.3 billion at December 31, 2013, reflecting a decrease of $28.8 billion from December 31, 2012, due to the following:

- $27.0 billion decrease in asset-backed AFS securities, predominantly driven by transfers of highly rated CLOs from level 3 to into level 2 during the year ended 2013, based on increased liquidity and price transparency;
- $3.7 billion decrease in gross derivative receivables, predominantly driven by a $2.7 billion decrease from the impact of tightening reference entity credit spreads and risk reductions of credit derivatives, $1.4 billion decrease in foreign exchange derivatives due to market movements, and $1.2 billion decrease in interest rate derivatives due to the increase in interest rates, partially offset by $2.1 billion increase in equity derivatives due to client-driven market-making activity;
- $1.1 billion decrease in all other assets, predominantly driven by sales of tax-oriented and hedge fund investments, and redemptions from investment funds.

The decreases above are partially offset by:

- $2.0 billion increase in MSRs. For further discussion of the change, refer to Note 17 on pages 299–304 of this Annual Report;
- $1.6 billion increase in trading assets – debt and equity instruments, largely driven by net purchases of trading loans, new client-driven financing transactions, and partially offset by transfers of highly rated CLOs from level 3 to into level 2 during the year ended 2013, based on increased liquidity and price transparency.

Gains and Losses

The following describes significant components of total realized/unrealized gains/(losses) for instruments measured at fair value on a recurring basis for the years ended 2013, 2012 and 2011. For further information on these instruments, see Changes in level 3 recurring fair value measurements rollforward tables on pages 207–210 of this Annual Report.

2013

- $3.0 billion of net gains on derivatives, largely driven by $2.6 billion of gains on equity derivatives, primarily related to client-driven market-making activity and a rise in equity markets; and $1.4 billion of gains, predominantly on interest rate lock and mortgage loan purchase commitments; partially offset by $1.7 billion of losses on credit derivatives from the impact of tightening reference entity credit spreads;
- $2.2 billion of net gains on trading assets - debt and equity instruments, largely driven by market making and credit spread tightening in nonagency mortgage-backed securities and trading loans, and the impact of market movements on client-driven financing transactions;
- $1.6 billion of net gains on MSRs. For further discussion of the change, refer to Note 17 on pages 299–304 of this Annual Report.

2012

- $1.3 billion of net gains on trading assets - debt and equity instruments, largely driven by tightening of credit spreads and fluctuation in foreign exchange rates;
- $1.1 billion of net gains on derivatives, driven by $6.9 billion of net gains predominantly on interest rate lock commitments due to increased volumes and lower interest rates, partially offset by $4.5 billion of net losses on credit derivatives largely as a result of tightening of reference entity credit spreads.

2011

- $7.1 billion of losses on MSRs. For further discussion of the change, refer to Note 17 on pages 299–304 of this Annual Report;
- $6.1 billion of net gains on derivatives, related to declining interest rates and widening of reference entity credit spreads, partially offset by losses due to fluctuation in foreign exchange rates.

Credit and funding adjustments

When determining the fair value of an instrument, it may be necessary to record adjustments to the Firm's estimates of fair value in order to reflect the counterparty credit quality and the Firm's own creditworthiness:

- Credit valuation adjustments ("CVA") are taken to reflect the credit quality of a counterparty in the valuation of derivatives. CVA adjustments are necessary when the market price (or parameter) is not indicative of the credit quality of the counterparty. As few classes of derivative contracts are listed on an exchange, derivative positions are predominantly valued using models that use as their basis observable market parameters. An adjustment therefore may be necessary to reflect the credit quality of each derivative counterparty to arrive at fair value.

  The Firm estimates derivatives CVA using a scenario analysis to estimate the expected credit exposure across all of the Firm's positions with each counterparty, and then estimates losses as a result of a counterparty credit event. The key inputs to this methodology are (i) the expected positive exposure to each counterparty based on a simulation that assumes the current population of existing derivatives with each counterparty remains unchanged and considers contractual factors designed to mitigate the Firm's credit exposure, such as collateral and legal rights of offset; (ii) the probability of a default event occurring for each counterparty, as derived from observed or estimated credit default swap ("CDS") spreads; and (iii) estimated recovery rates implied by CDS, adjusted to consider the differences in recovery rates as a derivative creditor relative to those reflected in CDS spreads, which generally reflect senior unsecured creditor risk.

- Debit valuation adjustments ("DVA") are taken to reflect the credit quality of the Firm in the valuation of liabilities measured at fair value. The DVA calculation methodology is generally consistent with the CVA methodology described above and incorporates JPMorgan Chase's credit spread as observed through the CDS market to estimate the probability of default and loss given default as a result of a systemic event affecting the Firm. Structured notes DVA is estimated using the current fair value of the structured note as the exposure amount, and is otherwise consistent with the derivative DVA methodology.

During the fourth quarter of 2013 the Firm implemented the FVA framework to incorporate the impact of funding into its valuation estimates for OTC derivatives and structured notes. The Firm's FVA framework leverages its existing CVA and DVA calculation methodologies, and the key inputs are: (i) the expected funding requirements arising from the Firm's positions with each counterparty and collateral arrangements; (ii) for assets, the estimated market funding cost in the principal market; and (iii) for liabilities, the hypothetical market funding cost for a transfer to a market participant with similar credit standing as the Firm.

The following table provides the credit and funding adjustments, excluding the effect of any hedging activity, reflected within the Consolidated Balance Sheets as of the dates indicated.

December 31, (in millions)	**2013**	2012
Derivative receivables balance[a]	**$ 65,759**	$ 74,983
Derivative payables balance[a]	**57,314**	70,656
Derivatives CVA[b][c]	**(2,352)**	(4,238)
Derivatives DVA and FVA[b][d]	**(322)**	830
Structured notes balance (net of structured notes DVA and FVA)[b][e]	**48,808**	48,112
Structured notes DVA and FVA[b][f]	**952**	1,712

(a) Balances are presented net of applicable credit and funding adjustments.
(b) Positive credit and funding adjustments represent amounts that increased receivable balances or decreased payable balances; negative credit and funding adjustments represent amounts that decreased receivable balances or increased payable balances.
(c) Derivatives CVA, gross of hedges, includes results managed by the Credit Portfolio and other lines of business within the CIB.
(d) At December 31, 2013 and 2012 included derivatives DVA of $715 million and $830 million, respectively.
(e) Structured notes are predominantly financial instruments containing embedded derivatives. At December 31, 2013 and 2012, included $1.1 billion and $1.1 billion, respectively, of financial instruments with with no embedded derivative for which the fair value option has been elected.
(f) At December 31, 2013 and 2012 included structured notes DVA of $1.4 billion and $1.7 billion, respectively.

The following table provides the impact of credit and funding adjustments on earnings in the respective periods, excluding the effect of any hedging activity.

Year ended December 31, (in millions)	**2013**	2012	2011
Derivative CVA[a]	**$ 1,886**	$ 2,698	$ (2,574)
Derivative DVA and FVA[b]	**(1,152)**	(590)	538
Structured notes DVA and FVA[c][d]	**(760)**	(340)	899

(a) Derivatives CVA, gross of hedges, includes results managed by the Credit Portfolio and other lines of business within the CIB.
(b) At December 31, 2013, 2012 and 2011 included derivatives DVA of $(115) million, $(590) million and $538 million, respectively.
(c) Structured notes are measured at fair value based on the Firm's election under the fair value option. For further information on these elections, see Note 4 on pages 215–218 of this Annual Report.
(d) At December 31, 2013, 2012 and 2011 included structured notes DVA of $(337) million, $(340) million and $899 million, respectively.

Assets and liabilities measured at fair value on a nonrecurring basis

At December 31, 2013 and 2012, assets measured at fair value on a nonrecurring basis were $6.2 billion and $5.1 billion, respectively, comprised predominantly of loans. At December 31, 2013, $339 million and $5.8 billion of these assets were classified in levels 2 and 3 of the fair value hierarchy, respectively. At December 31, 2012, $667 million and $4.4 billion of these assets were classified in levels 2 and 3 of the fair value hierarchy, respectively. Liabilities measured at fair value on a nonrecurring basis were not significant at December 31, 2013 and 2012. For the years ended December 31, 2013, 2012 and 2011, there were no significant transfers between levels 1, 2, and 3.

Of the $6.2 billion of assets measured at fair value on a nonrecurring basis, $3.6 billion related to trade finance loans that were reclassified to held-for-sale during the fourth quarter of 2013 and subject to a lower of cost or fair value adjustment. These loans were classified as level 3, as they are valued based on the indicative pricing received from external investors, which ranged from a spread of 30 bps to 78 bps, with a weighted average of 60 bps.

At December 31, 2013, the assets measured at fair value on a nonrecurring basis also included $1.7 billion related to residential real estate loans at the net realizable value of the underlying collateral (i.e., collateral-dependent loans and other loans charged off in accordance with regulatory guidance). These amounts are classified as level 3, as they are valued using a broker's price opinion and discounted based upon the Firm's experience with actual liquidation values. These discounts to the broker price opinions ranged from 17% to 62%, with a weighted average of 29%.

The total change in the value of assets and liabilities for which a fair value adjustment has been included in the Consolidated Statements of Income for the years ended December 31, 2013, 2012 and 2011, related to financial instruments held at those dates were losses of $789 million, $1.6 billion and $2.2 billion, respectively; these losses were predominantly associated with loans. The changes reported for the year ended December 31, 2012, included the impact of charge-offs recognized on residential real estate loans discharged under Chapter 7 bankruptcy, as described in Note 14 on page 267 of this Annual Report.

For further information about the measurement of impaired collateral-dependent loans, and other loans where the carrying value is based on the fair value of the underlying collateral (e.g., residential mortgage loans charged off in accordance with regulatory guidance), see Note 14 on pages 258–283 of this Annual Report.

Additional disclosures about the fair value of financial instruments that are not carried on the Consolidated Balance Sheets at fair value

U.S. GAAP requires disclosure of the estimated fair value of certain financial instruments, and the methods and significant assumptions used to estimate their fair value. Financial instruments within the scope of these disclosure requirements are included in the following table. However, certain financial instruments and all nonfinancial instruments are excluded from the scope of these disclosure requirements. Accordingly, the fair value disclosures provided in the following table include only a partial estimate of the fair value of JPMorgan Chase's assets and liabilities. For example, the Firm has developed long-term relationships with its customers through its deposit base and credit card accounts, commonly referred to as core deposit intangibles and credit card relationships. In the opinion of management, these items, in the aggregate, add significant value to JPMorgan Chase, but their fair value is not disclosed in this Note.

Financial instruments for which carrying value approximates fair value

Certain financial instruments that are not carried at fair value on the Consolidated Balance Sheets are carried at amounts that approximate fair value, due to their short-term nature and generally negligible credit risk. These instruments include cash and due from banks; deposits with banks; federal funds sold; securities purchased under resale agreements and securities borrowed with short-dated maturities; short-term receivables and accrued interest receivable; commercial paper; federal funds purchased; securities loaned and sold under repurchase agreements with short-dated maturities; other borrowed funds; accounts payable; and accrued liabilities. In addition, U.S. GAAP requires that the fair value of deposit liabilities with no stated maturity (i.e., demand, savings and certain money market deposits) be equal to their carrying value; recognition of the inherent funding value of these instruments is not permitted.

The following table presents the carrying values and estimated fair values at December 31, 2013 and 2012, of financial assets and liabilities, excluding financial instruments which are carried at fair value on a recurring basis, and information is provided on their classification within the fair value hierarchy. For additional information regarding the financial instruments within the scope of this disclosure, and the methods and significant assumptions used to estimate their fair value, see pages 196–200 of this Note.

(a) Carrying value includes unamortized discount or premium.

(b) Fair value is typically estimated using a discounted cash flow model that incorporates the characteristics of the underlying loans (including principal, contractual interest rate and contractual fees) and other key inputs, including expected lifetime credit losses, interest rates, prepayment rates, and primary origination or secondary market spreads. For certain loans, the fair value is measured based on the value of the underlying collateral. The difference between the estimated fair value and carrying value of a financial asset or liability is the result of the different methodologies used to determine fair value as compared with carrying value. For example, credit losses are estimated for a financial asset's remaining life in a fair value calculation but are estimated for a loss emergence period in the allowance for loan loss calculation; future loan income (interest and fees) is incorporated in a fair value calculation but is generally not considered in the allowance for loan losses. For a further discussion of the Firm's methodologies for estimating the fair value of loans and lending-related commitments, see Valuation hierarchy on pages 196–200 of this Annual Report.

(c) Carrying value includes unamortized original issue discount and other valuation adjustments.

The majority of the Firm's lending-related commitments are not carried at fair value on a recurring basis on the Consolidated Balance Sheets, nor are they actively traded. The carrying value and estimated fair value of the Firm's wholesale lending-related commitments were as follows for the periods indicated.

	December 31, 2013					December 31, 2012				
		Estimated fair value hierarchy					Estimated fair value hierarchy			
(in billions)	Carrying value[a]	Level 1	Level 2	Level 3	Total estimated fair value	Carrying value[a]	Level 1	Level 2	Level 3	Total estimated fair value
Wholesale lending-related commitments	**$ 0.7**	**$ –**	**$ –**	**$ 1.0**	**$ 1.0**	$ 0.7	$ –	$ –	$ 1.9	$ 1.9

(a) Represents the allowance for wholesale lending-related commitments. Excludes the current carrying values of the guarantee liability and the offsetting asset, each of which are recognized at fair value at the inception of guarantees.

The Firm does not estimate the fair value of consumer lending-related commitments. In many cases, the Firm can reduce or cancel these commitments by providing the borrower notice or, in some cases, without notice as permitted by law. For a further discussion of the valuation of lending-related commitments, see page 198 of this Note.

Trading assets and liabilities

Trading assets include debt and equity instruments owned by JPMorgan Chase ("long" positions) that are held for client market-making and client-driven activities, as well as for certain risk management activities, certain loans managed on a fair value basis and for which the Firm has elected the fair value option, and physical commodities inventories that are generally accounted for at the lower of cost or market (market approximates fair value). Trading liabilities include debt and equity instruments that the Firm has sold to other parties but does not own ("short" positions). The Firm is obligated to purchase instruments at a future date to cover the short positions. Included in trading assets and trading liabilities are the reported receivables (unrealized gains) and payables (unrealized losses) related to derivatives. Trading assets and liabilities are carried at fair value on the Consolidated Balance Sheets. Balances reflect the reduction of securities owned (long positions) by the amount of identical securities sold but not yet purchased (short positions).

Trading assets and liabilities – average balances

Average trading assets and liabilities were as follows for the periods indicated.

Year ended December 31, (in millions)	2013	2012	2011
Trading assets – debt and equity instruments	**$ 340,449**	$ 349,337	$ 393,890
Trading assets – derivative receivables	**72,629**	85,744	90,003
Trading liabilities – debt and equity instruments[(a)]	**77,706**	69,001	81,916
Trading liabilities – derivative payables	**64,553**	76,162	71,539

(a) Primarily represent securities sold, not yet purchased.

Note 4 – Fair value option

The fair value option provides an option to elect fair value as an alternative measurement for selected financial assets, financial liabilities, unrecognized firm commitments, and written loan commitments not previously carried at fair value.

Elections

Elections were made by the Firm to:

- Mitigate income statement volatility caused by the differences in the measurement basis of elected instruments (for example, certain instruments elected were previously accounted for on an accrual basis) while the associated risk management arrangements are accounted for on a fair value basis;
- Eliminate the complexities of applying certain accounting models (e.g., hedge accounting or bifurcation accounting for hybrid instruments); and/or
- Better reflect those instruments that are managed on a fair value basis.

Elections include the following:

- Loans purchased or originated as part of securitization warehousing activity, subject to bifurcation accounting, or managed on a fair value basis.
- Securities financing arrangements with an embedded derivative and/or a maturity of greater than one year.
- Owned beneficial interests in securitized financial assets that contain embedded credit derivatives, which would otherwise be required to be separately accounted for as a derivative instrument.
- Certain investments that receive tax credits and other equity investments acquired as part of the Washington Mutual transaction.
- Structured notes issued as part of CIB's client-driven activities. (Structured notes are predominantly financial instruments that contain embedded derivatives.)
- Long-term beneficial interests issued by CIB's consolidated securitization trusts where the underlying assets are carried at fair value.

Changes in fair value under the fair value option election

The following table presents the changes in fair value included in the Consolidated Statements of Income for the years ended December 31, 2013, 2012 and 2011, for items for which the fair value option was elected. The profit and loss information presented below only includes the financial instruments that were elected to be measured at fair value; related risk management instruments, which are required to be measured at fair value, are not included in the table.

	2013			2012			2011

Trading liabilities	**(46)**	**–**	**(46)**	(41)	–	(41)	(57)	–	(57)
Beneficial interests issued by consolidated VIEs	**(278)**	**–**	**(278)**	(166)	–	(166)	(83)	–	(83)
Other liabilities	**–**	**2** [d]	**2**	–	–	–	(3)	(5) [d]	(8)
Long-term debt:									
Changes in instrument-specific credit risk[a]	**(271)**	**–**	**(271)**	(835)	–	(835)	927	–	927
Other changes in fair value[b]	**1,280**	**–**	**1,280**	(1,025)	–	(1,025)	322	–	322

(a) Total changes in instrument-specific credit risk related to structured notes were $(337) million, $(340) million, and $899 million for the years ended December 31, 2013, 2012 and 2011, respectively. These totals include adjustments for structured notes classified within deposits and other borrowed funds, as well as long-term debt.

(b) Structured notes are predominantly financial instruments containing embedded derivatives. Where present, the embedded derivative is the primary driver of risk. Although the risk associated with the structured notes is actively managed, the gains/(losses) reported in this table do not include the income statement impact of the risk management instruments used to manage such risk.

(c) Reported in mortgage fees and related income.

(d) Reported in other income.

Determination of instrument-specific credit risk for items for which a fair value election was made

The following describes how the gains and losses included in earnings during December 31, 2013, 2012 and 2011, which were attributable to changes in instrument-specific credit risk, were determined.

- Loans and lending-related commitments: For floating-rate instruments, all changes in value are attributed to instrument-specific credit risk. For fixed-rate instruments, an allocation of the changes in value for the period is made between those changes in value that are interest rate-related and changes in value that are credit-related. Allocations are generally based on an analysis of borrower-specific credit spread and recovery information, where available, or benchmarking to similar entities or industries.
- Long-term debt: Changes in value attributable to instrument-specific credit risk were derived principally from observable changes in the Firm's credit spread.
- Resale and repurchase agreements, securities borrowed agreements and securities lending agreements: Generally, for these types of agreements, there is a requirement that collateral be maintained with a market value equal to or in excess of the principal amount loaned; as a result, there would be no adjustment or an immaterial adjustment for instrument-specific credit risk related to these agreements.

Difference between aggregate fair value and aggregate remaining contractual principal balance outstanding

The following table reflects the difference between the aggregate fair value and the aggregate remaining contractual principal balance outstanding as of December 31, 2013 and 2012, for loans, long-term debt and long-term beneficial interests for which the fair value option has been elected.

	2013			2012		
December 31, (in millions)	Contractual principal outstanding	Fair value	Fair value over/ (under) contractual principal outstanding	Contractual principal outstanding	Fair value	Fair value over/ (under) contractual principal outstanding
Loans[a]						
Nonaccrual loans						
Loans reported as trading assets	**$ 5,156**	**$ 1,491**	**$ (3,665)**	$ 4,217	$ 960	$ (3,257)
Loans[d]	**209**	**154**	**(55)**	293	236	(57)
Subtotal	**5,365**	**1,645**	**(3,720)**	4,510	1,196	(3,314)
All other performing loans						
Loans reported as trading assets	**33,069**	**29,295**	**(3,774)**	44,084	40,581	(3,503)
Loans[d]	**1,618**	**1,563**	**(55)**	2,034	1,927	(107)
Total loans	**$ 40,052**	**$ 32,503**	**$ (7,549)**	$ 50,628	$ 43,704	$ (6,924)
Long-term debt						
Principal-protected debt	**$ 15,797** [c]	**$ 15,909**	**$ 112**	$ 16,541 [c]	$ 16,391	$ (150)
Nonprincipal-protected debt[b]	**NA**	**12,969**	**NA**	NA	14,397	NA
Total long-term debt	**NA**	**$ 28,878**	**NA**	NA	$ 30,788	NA
Long-term beneficial interests						
Nonprincipal-protected debt[b]	**NA**	**$ 1,996**	**NA**	NA	$ 1,170	NA
Total long-term beneficial interests	**NA**	**$ 1,996**	**NA**	NA	$ 1,170	NA

(a) There were no performing loans that were ninety days or more past due as of December 31, 2013 and 2012, respectively.
(b) Remaining contractual principal is not applicable to nonprincipal-protected notes. Unlike principal-protected structured notes, for which the Firm is obligated to return a stated amount of principal at the maturity of the note, nonprincipal-protected structured notes do not obligate the Firm to return a stated amount of principal at maturity, but to return an amount based on the performance of an underlying variable or derivative feature embedded in the note.
(c) Where the Firm issues principal-protected zero-coupon or discount notes, the balance reflected as the remaining contractual principal is the final principal payment at maturity.
(d) During 2013, certain loans that resulted from restructurings that were previously classified as performing were reclassified as nonperforming loans. Prior periods were revised to conform with the current presentation.

At December 31, 2013 and 2012, the contractual amount of letters of credit for which the fair value option was elected was $4.5 billion and $4.5 billion, respectively, with a corresponding fair value of $(99) million and $(75) million, respectively. For further information regarding off-balance sheet lending-related financial instruments, see Note 29 on pages 318–324 of this Annual Report.

Structured note products by balance sheet classification and risk component

The table below presents the fair value of the structured notes issued by the Firm, by balance sheet classification and the primary risk to which the structured notes' embedded derivative relates.

	December 31, 2013				December 31, 2012			
(in millions)	Long-term debt	Other borrowed funds	Deposits	Total	Long-term debt	Other borrowed funds	Deposits	Total
Risk exposure								
Interest rate	**$ 9,516**	**$ 615**	**$ 1,270**	**$ 11,401**	$ 8,669	$ 1,143	$ 559	$ 10,371
Credit	**4,248**	**13**	**–**	**4,261**	6,166	–	–	6,166

Note 5 – Credit risk concentrations

Concentrations of credit risk arise when a number of customers are engaged in similar business activities or activities in the same geographic region, or when they have similar economic features that would cause their ability to meet contractual obligations to be similarly affected by changes in economic conditions.

JPMorgan Chase regularly monitors various segments of its credit portfolios to assess potential concentration risks and to obtain collateral when deemed necessary. Senior management is significantly involved in the credit approval and review process, and risk levels are adjusted as needed to reflect the Firm's risk appetite.

In the Firm's consumer portfolio, concentrations are evaluated primarily by product and by U.S. geographic region, with a key focus on trends and concentrations at the portfolio level, where potential risk concentrations can be remedied through changes in underwriting policies and portfolio guidelines. In the wholesale portfolio, risk concentrations are evaluated primarily by industry and monitored regularly on both an aggregate portfolio level and on an individual customer basis. Management of the Firm's wholesale exposure is accomplished through loan syndications and participations, loan sales, securitizations, credit derivatives, use of master netting agreements, and collateral and other risk-reduction techniques. For additional information on loans see Note 14 on pages 258–283 of this Annual Report.

The Firm does not believe that its exposure to any particular loan product (e.g., option adjustable rate mortgages ("ARMs")), industry segment (e.g., commercial real estate) or its exposure to residential real estate loans with high loan-to-value ratios results in a significant concentration of credit risk. Terms of loan products and collateral coverage are included in the Firm's assessment when extending credit and establishing its allowance for loan losses.

Customer receivables representing primarily margin loans to prime and retail brokerage clients of $26.9 billion and $23.8 billion at December 31, 2013 and 2012, respectively, are included in the table below. These margin loans are generally over-collateralized through a pledge of assets maintained in clients' brokerage accounts and are subject to daily minimum collateral requirements. In the event that the collateral value decreases, a maintenance margin call is made to the client to provide additional collateral into the account. If additional collateral is not provided by the client, the client's positions may be liquidated by the Firm to meet the minimum collateral requirements. As a result of the Firm's credit risk mitigation practices, the Firm did not hold any reserves for credit impairment on these receivables as of December 31, 2013 and 2012.

The table below presents both on-balance sheet and off-balance sheet consumer and wholesale-related credit exposure by the Firm's three credit portfolio segments as of December 31, 2013 and 2012.

	2013				2012

(a) For more information on exposures to SPEs included within All other see Note 16 on pages 288–299 of this Annual Report.
(b) Represents lending-related financial instruments.
(c) For further information regarding on-balance sheet credit concentrations by major product and/or geography, see Notes 6, 14 and 15 on pages 220–233, 258–283 and 284–287, respectively, of this Annual Report. For information regarding concentrations of off-balance sheet lending-related financial instruments by major product, see Note 29 on pages 318–324 of this Annual Report.

Note 6 – Derivative instruments

Derivative instruments enable end-users to modify or mitigate exposure to credit or market risks. Counterparties to a derivative contract seek to obtain risks and rewards similar to those that could be obtained from purchasing or selling a related cash instrument without having to exchange upfront the full purchase or sales price. JPMorgan Chase makes markets in derivatives for customers and also uses derivatives to hedge or manage its own risk exposures. Predominantly all of the Firm's derivatives are entered into for market-making or risk management purposes.

Market-making derivatives
The majority of the Firm's derivatives are entered into for market-making purposes. Customers use derivatives to mitigate or modify interest rate, credit, foreign exchange, equity and commodity risks. The Firm actively manages the risks from its exposure to these derivatives by entering into other derivative transactions or by purchasing or selling other financial instruments that partially or fully offset the exposure from client derivatives. The Firm also seeks to earn a spread between the client derivatives and offsetting positions, and from the remaining open risk positions.

Risk management derivatives
The Firm manages its market risk exposures using various derivative instruments.

Interest rate contracts are used to minimize fluctuations in earnings that are caused by changes in interest rates. Fixed-rate assets and liabilities appreciate or depreciate in market value as interest rates change. Similarly, interest income and expense increases or decreases as a result of variable-rate assets and liabilities resetting to current market rates, and as a result of the repayment and subsequent origination or issuance of fixed-rate assets and liabilities at current market rates. Gains or losses on the derivative instruments that are related to such assets and liabilities are expected to substantially offset this variability in earnings. The Firm generally uses interest rate swaps, forwards and futures to manage the impact of interest rate fluctuations on earnings.

Foreign currency forward contracts are used to manage the foreign exchange risk associated with certain foreign currency-denominated (i.e., non-U.S. dollar) assets and liabilities and forecasted transactions, as well as the Firm's net investments in certain non-U.S. subsidiaries or branches whose functional currencies are not the U.S. dollar. As a result of fluctuations in foreign currencies, the U.S. dollar-equivalent values of the foreign currency-denominated assets and liabilities or forecasted revenue or expense increase or decrease. Gains or losses on the derivative instruments related to these foreign currency-denominated assets or liabilities, or forecasted transactions, are expected to substantially offset this variability.

Commodities contracts are used to manage the price risk of certain commodities inventories. Gains or losses on these derivative instruments are expected to substantially offset the depreciation or appreciation of the related inventory. Also in the commodities portfolio, electricity and natural gas futures and forwards contracts are used to manage price risk associated with energy-related tolling and load-serving contracts and investments.

The Firm uses credit derivatives to manage the counterparty credit risk associated with loans and lending-related commitments. Credit derivatives compensate the purchaser when the entity referenced in the contract experiences a credit event, such as bankruptcy or a failure to pay an obligation when due. Credit derivatives primarily consist of credit default swaps. For a further discussion of credit derivatives, see the discussion in the Credit derivatives section on pages 231–233 of this Note.

For more information about risk management derivatives, see the risk management derivatives gains and losses table on page 231 of this Note, and the hedge accounting gains and losses tables on pages 229–231 of this Note.

Derivative counterparties and settlement types
The Firm enters into over-the-counter ("OTC") derivatives, which are negotiated and settled bilaterally with the derivative counterparty. The Firm also enters into, as principal, certain exchange traded derivatives ("ETD") such as futures and options, and "cleared" over-the-counter ("OTC-cleared") derivative contracts with central counterparties ("CCPs"). ETD contracts are generally standardized contracts traded on an exchange and cleared by the CCP, which is the counterparty from the inception of the transactions. OTC-cleared derivatives are traded on a bilateral basis and then novated to the CCP for clearing.

Accounting for derivatives
All free-standing derivatives that the Firm executes for its own account are required to be recorded on the Consolidated Balance Sheets at fair value. For information on the derivatives that the Firm clears for its clients' accounts, see Note 29 on pages 318–324 of this Annual Report.

As permitted under U.S. GAAP, the Firm nets derivative assets and liabilities, and the related cash collateral receivables and payables, when a legally enforceable master netting agreement exists between the Firm and the derivative counterparty. For further discussion of the offsetting of assets and liabilities, see Note 1 on pages 189–191 of this Annual Report. The accounting for changes in value of a derivative depends on whether or not the transaction has been designated and qualifies for hedge accounting. Derivatives that are not designated as hedges are reported and measured at fair value through earnings. The tabular disclosures on pages 223–233 of this Note provide additional information on the amount of, and reporting for, derivative assets, liabilities, gains and losses. For further discussion of derivatives embedded in structured notes, see Notes 3 and 4 on pages 195–215 and 215–218, respectively, of this Annual Report.

Derivatives designated as hedges

The Firm applies hedge accounting to certain derivatives executed for risk management purposes – generally interest rate, foreign exchange and commodity derivatives. However, JPMorgan Chase does not seek to apply hedge accounting to all of the derivatives involved in the Firm's risk management activities. For example, the Firm does not apply hedge accounting to purchased credit default swaps used to manage the credit risk of loans and lending-related commitments, because of the difficulties in qualifying such contracts as hedges. For the same reason, the Firm does not apply hedge accounting to certain interest rate and commodity derivatives used for risk management purposes.

To qualify for hedge accounting, a derivative must be highly effective at reducing the risk associated with the exposure being hedged. In addition, for a derivative to be designated as a hedge, the risk management objective and strategy must be documented. Hedge documentation must identify the derivative hedging instrument, the asset or liability or forecasted transaction and type of risk to be hedged, and how the effectiveness of the derivative is assessed prospectively and retrospectively. To assess effectiveness, the Firm uses statistical methods such as regression analysis, as well as nonstatistical methods including dollar-value comparisons of the change in the fair value of the derivative to the change in the fair value or cash flows of the hedged item. The extent to which a derivative has been, and is expected to continue to be, effective at offsetting changes in the fair value or cash flows of the hedged item must be assessed and documented at least quarterly. Any hedge ineffectiveness (i.e., the amount by which the gain or loss on the designated derivative instrument does not exactly offset the change in the hedged item attributable to the hedged risk) must be reported in current-period earnings. If it is determined that a derivative is not highly effective at hedging the designated exposure, hedge accounting is discontinued.

There are three types of hedge accounting designations: fair value hedges, cash flow hedges and net investment hedges. JPMorgan Chase uses fair value hedges primarily to hedge fixed-rate long-term debt, AFS securities and certain commodities inventories. For qualifying fair value hedges, the changes in the fair value of the derivative, and in the value of the hedged item for the risk being hedged, are recognized in earnings. If the hedge relationship is terminated, then the adjustment to the hedged item continues to be reported as part of the basis of the hedged item and for interest-bearing instruments is amortized to earnings as a yield adjustment. Derivative amounts affecting earnings are recognized consistent with the classification of the hedged item – primarily net interest income and principal transactions revenue.

JPMorgan Chase uses cash flow hedges primarily to hedge the exposure to variability in forecasted cash flows from floating-rate assets and liabilities and foreign currency–denominated revenue and expense. For qualifying cash flow hedges, the effective portion of the change in the fair value of the derivative is recorded in OCI and recognized in the Consolidated Statements of Income when the hedged cash flows affect earnings. Derivative amounts affecting earnings are recognized consistent with the classification of the hedged item – primarily interest income, interest expense, noninterest revenue and compensation expense. The ineffective portions of cash flow hedges are immediately recognized in earnings. If the hedge relationship is terminated, then the value of the derivative recorded in accumulated other comprehensive income/(loss) ("AOCI") is recognized in earnings when the cash flows that were hedged affect earnings. For hedge relationships that are discontinued because a forecasted transaction is expected to not occur according to the original hedge forecast, any related derivative values recorded in AOCI are immediately recognized in earnings.

JPMorgan Chase uses foreign currency hedges to protect the value of the Firm's net investments in certain non-U.S. subsidiaries or branches whose functional currencies are not the U.S. dollar. For foreign currency qualifying net investment hedges, changes in the fair value of the derivatives are recorded in the translation adjustments account within AOCI.

The following table outlines the Firm's primary uses of derivatives and the related hedge accounting designation or disclosure category.

Type of Derivative	Use of Derivative	Designation and disclosure	Affected segment or unit	Page reference
Manage specifically identified risk exposures in qualifying hedge accounting relationships:				
◦ Interest rate	Hedge fixed rate assets and liabilities	Fair value hedge	Corporate/PE	229
◦ Interest rate	Hedge floating rate assets and liabilities	Cash flow hedge	Corporate/PE	230
◦ Foreign exchange	Hedge foreign currency-denominated assets and liabilities	Fair value hedge	Corporate/PE	229
◦ Foreign exchange	Hedge forecasted revenue and expense	Cash flow hedge	Corporate/PE	230
◦ Foreign exchange	Hedge the value of the Firm's investments in non-U.S. subsidiaries	Net investment hedge	Corporate/PE	231
◦ Commodity	Hedge commodity inventory	Fair value hedge	CIB	229
Manage specifically identified risk exposures not designated in qualifying hedge accounting relationships:				
◦ Interest rate	Manage the risk of the mortgage pipeline, warehouse loans and MSRs	Specified risk management	CCB	231
◦ Credit	Manage the credit risk of wholesale lending exposures	Specified risk management	CIB	231
◦ Credit[(a)]	Manage the credit risk of certain AFS securities	Specified risk management	Corporate/PE	231
◦ Commodity	Manage the risk of certain commodities-related contracts and investments	Specified risk management	CIB	231
◦Interest rate and foreign exchange	Manage the risk of certain other specified assets and liabilities	Specified risk management	Corporate/PE	231
Market-making derivatives and other activities:				
• Various	Market-making and related risk management	Market-making and other	CIB	231
• Various[(b)]	Other derivatives, including the synthetic credit portfolio	Market-making and other	CIB, Corporate/PE	231

(a) Includes a limited number of single-name credit derivatives used to mitigate the credit risk arising from specified AFS securities.

(b) The synthetic credit portfolio is a portfolio of index credit derivatives, including short and long positions, that was held by CIO. On July 2, 2012, CIO transferred the synthetic credit portfolio, other than a portion that aggregated to a notional amount of approximately $12 billion, to CIB. The positions making up the portion of the synthetic credit portfolio retained by CIO on July 2, 2012, were effectively closed out during the third quarter of 2012. The results of the synthetic credit portfolio, including the portion transferred to CIB, have been included in the gains and losses on derivatives related to market-making activities and other derivatives category discussed on page 231 of this Note.

Notional amount of derivative contracts

The following table summarizes the notional amount of derivative contracts outstanding as of December 31, 2013 and 2012.

	Notional amounts[c]	
December 31, (in billions)	**2013**	2012
Interest rate contracts[a]		
Swaps	**$ 35,221**	$ 33,037
Futures and forwards	**11,251**	11,756
Written options	**3,991**	3,860
Purchased options	**4,187**	3,909
Total interest rate contracts	**54,650**	52,562
Credit derivatives[b]	**5,386**	5,981
Foreign exchange contracts[a]		
Cross-currency swaps	**3,488**	3,413
Spot, futures and forwards	**3,773**	4,005
Written options	**659**	651
Purchased options	**652**	662
Total foreign exchange contracts	**8,572**	8,731
Equity contracts		
Swaps	**205**	163
Futures and forwards[a]	**49**	38
Written options[a]	**425**	441
Purchased options	**380**	403
Total equity contracts	**1,059**	1,045
Commodity contracts		
Swaps[a]	**124**	120
Spot, futures and forwards[a]	**234**	367
Written options	**202**	262
Purchased options	**203**	260
Total commodity contracts	**763**	1,009
Total derivative notional amounts	**$ 70,430**	$ 69,328

(a) The prior period amounts have been revised. This revision had no impact on the Firm's Consolidated Balance Sheets or its results of operations.

(b) Primarily consists of credit default swaps. For more information on volumes and types of credit derivative contracts, see the Credit derivatives discussion on pages 231–233 of this Note.

(c) Represents the sum of gross long and gross short third-party notional derivative contracts.

While the notional amounts disclosed above give an indication of the volume of the Firm's derivatives activity, the notional amounts significantly exceed, in the Firm's view, the possible losses that could arise from such transactions. For most derivative transactions, the notional amount is not exchanged; it is used simply as a reference to calculate payments.

Impact of derivatives on the Consolidated Balance Sheets

The following table summarizes information on derivative receivables and payables (before and after netting adjustments) that are reflected on the Firm's Consolidated Balance Sheets as of December 31, 2013 and 2012, by accounting designation (e.g., whether the derivatives were designated in qualifying hedge accounting relationships or not) and contract type.

Free-standing derivative receivables and payables[a]

	Gross derivative receivables				Gross derivative payables

(a) Balances exclude structured notes for which the fair value option has been elected. See Note 4 on pages 215–218 of this Annual Report for further information.

(b) The prior period amounts have been revised. This revision had no impact on the Firm's Consolidated Balance Sheets or its results of operations.

(c) As permitted under U.S. GAAP, the Firm has elected to net derivative receivables and derivative payables and the related cash collateral receivables and payables when a legally enforceable master netting agreement exists.

The following table presents, as of December 31, 2013 and 2012, the gross and net derivative receivables by contract and settlement type. Derivative receivables have been netted on the Consolidated Balance Sheets against derivative payables to the same counterparty with respect to derivative contracts for which the Firm has obtained an appropriate legal opinion with respect to the master netting agreement. Where such a legal opinion has not been either sought or obtained, the receivables are not eligible under U.S. GAAP for netting against related derivative payables on the Consolidated Balance Sheets, and are shown separately in the table below.

	2013			2012		
December 31, (in millions)	Gross derivative receivables	Amounts netted on the Consolidated balance sheets	Net derivative receivables	Gross derivative receivables	Amounts netted on the Consolidated balance sheets	Net derivative receivables
