**Managed: adjusted to include credit card loans that have been securitized and removed from the balance sheet.*

Bank One, confronting daunting challenges, had an extremely difficult year in 2000. We lost $511 million after taking $5 billion in charge-offs, reserve additions, write-downs and various adjustments. We reduced the dividend by 50 percent — something no corporation should ever have to do. We faced management changes, customer service problems, litigation, incompatible computer systems, costly and inefficient operations and a rapidly deteriorating credit climate. These results are absolutely unacceptable — to you and to Bank One's management.

After you read this letter, I hope you'll see concrete reasons for optimism. The most important are these: This company has strong franchises and a solid core; we've got good market positions; fine, albeit underperforming, businesses; and excellent products and services. As a result, we did not have to resort to radical restructuring to restore the company to health. Yet, we did make many tough decisions. We did what we believed was right and in the best long-term interest of our company. Now that we have put a significant portion of our problems behind us, we enter 2001 a much stronger company.

Since this is my first letter to you, I'd like to tell you about the principles that guide us and then note some of the actions we have taken to revitalize Bank One. You'll find information on Bank One's major businesses elsewhere in this report and in expanded detail in the 10-K.

As we move ahead with Bank One's turnaround, we can't promise you specific outcomes or risk-free results. But here's what we *will* promise you:

1. We will share with you the truth, and offer honest assessments of our businesses and our prospects.
2. We will relentlessly follow our business principles.
3. We will act with integrity and honor.
4. We will always try to do the right thing, not the easy or expedient thing.
5. We will work hard and with fierce resolve to make this a company of which our shareholders, employees, customers and communities can be proud.

Our priorities are to:

BE FIELD AND CLIENT DRIVEN True customer orientation means acting in the customer's best interest, by offering great products and services — not once in a while, but all the time. It also means being highly responsive, courteous and quick to follow through on promises. It requires adopting an outward, not an inward focus, thinking and responding to the competition. It requires always worrying about the competition. We want to infuse that keen awareness into every part of the organization. The field should drive the process, and staff employees in their important support roles need to always remember they are there because of the field; they need to be lean, knowledgeable and extremely responsive.

We have begun to dramatically improve customer service through a variety of actions and sweeping systems enhancements. This renewed customer focus is starting to pay off. As an example, we've put advanced technology, including Internet-enabled PCs, into all of our banking centers, giving our people in the field far better access to information that helps them serve our customers. Our field people also have much more authority and accountability. We also have started a lot of new initiatives because of our new online "suggestion box," where we have received more than 6,000 ideas from employees, who know the most about the company. By most measures, customer problems are down dramatically and service levels are up substantially. We have made substantial progress, but we know we still have a way to go to be the best in class.

SET THE HIGHEST STANDARDS OF PERFORMANCE It's up to each company, each leadership team and each individual to set their own standards of performance. Ours will be the highest. We will not shy away from comparing ourselves to the best companies, knowing that often we'll come up short. Striving to be the best motivates us to seek constant improvement.

Toward that end, we take corporate governance seriously. Our Board has reviewed its own governance and adopted best practices as to how it will conduct itself. This led us to reduce the size of the Board, while adding two outside directors with considerable expertise. A smaller Board helps create more active dialogue and a thorough and open review of all our issues, whether they are strategic, risk or management related.

SET THE HIGHEST STANDARDS OF INTEGRITY In business, as in every other arena, ethical behavior doesn't just happen. It has to be cultivated and repeatedly affirmed throughout the organization. At Bank One, acting with integrity is a paramount expectation. It applies to every aspect of our company, including compliance, employee relations, marketing and sales.

Maintaining the highest standards of integrity involves faithfully meeting our commitments to our customers, to fellow employees, to the Board, to you our shareholders and to all of our other partners. Every commitment we make should, and will, be sacrosanct.

BUILD FOR GOOD AND BAD TIMES A mark of an exceptional company is consistently good performance relative to that of its competitors, regardless of economic conditions and competitive threats. We want Bank One to be that kind of company.

As you know, there's been a considerable slowdown in the economy, and no one can say with assurance where it's headed. While we have great confidence in the American economy, we also prepare for its occasional unpredictable volatility. Our obligation is to build the company so it can thrive in any environment. The best companies capitalize on their strength to grow aggressively in downturns, when their competition is unable to do so.

To help us withstand economic downturns and competitive pressures, we've taken a number of strong steps, which I will continue to highlight.

CREATE A FORTRESS BALANCE SHEET In 2000, we fortified Bank One's balance sheet by:

Scouring the balance sheet, to thoroughly understand our assets and liabilities; to make sure that someone is accountable for them; to use conservative, economically appropriate accounting; and to have strong financial controls.

Strengthening loan loss reserves. For example, we began 2000 with reserves attributable to loan losses of 1.4 percent of loans — by some measures, the weakest in the industry. During the year we added almost $2 billion to reserves, to end 2000 with loan loss reserves to loans of 2.4 percent — among the industry's strongest. While this reserve addition was needed to address the deteriorating credit environment, we've strengthened our relative position.

Achieving strong capital ratios. We also ended the year with a tangible-equity to managed-assets ratio of 5.5 percent and Tier 1 capital ratio of 7.3 percent — both considered to be strong capital ratios. We expect these ratios to improve even more in 2001.

Maintaining strong credit ratings. We are grateful that we were able to take all of the actions we did and avoid a downgrade. We are committed to maintaining strong credit ratings; in fact, we'd like to improve them over time.

Generating capital and flexibility. Cutting the dividend, as tough as that decision was, has greatly enhanced our capital retention. It has allowed us to reclaim our ability to actively decide what to do with our capital. By the end of this year, we anticipate that we'll be generating substantial excess capital. And we will try to deploy it wisely and in the shareholders' best interest, whether by retaining it, investing in our businesses, acquiring other businesses or buying back our stock.

ACHIEVE AND MAINTAIN GREAT FINANCIAL DISCIPLINE Financial discipline is the bedrock of a healthy and growing company. We need to understand our business in excruciating detail. This means:

Great reporting and management information systems, resulting in financial and operating reports that are comprehensive, comprehensible and transparent; and management reports that are frequent, precise and detailed. We have also tried to enhance our disclosures to the business and financial community.

Meaningful profit and loss statements. We've created more than 2,000 profit and loss statements, including one for each banking center. These will help us make decisions based on fact, allocate capital appropriately and properly compensate based on performance. There will be one set of numbers inside and outside the company, so there can be no disputes about how any unit has performed.

Together, these actions should lead to high-quality earnings that:

- are increasing, recurring and predictable in nature,
- yield high returns on capital,
- produce good margins, and
- have reasonable risk relative to the capital deployed.

These financial disciplines will give us the tools, information and knowledge that we need to be a great company.

Reducing credit risk. It's appropriate here to comment on our corporate credit exposure, particularly in light of a deteriorating credit environment. Based on our analysis, our company has taken too much overall credit risk, has assumed too many big individual risks, and has experienced low returns relative to the capital deployed. Credit has often been a loss leader for commercial banks — a situation that is acceptable if risks are appropriate and if other revenue sources make up for the loss leader. Therefore, we intend to reduce our individual and gross aggregate credit risk, while trying to win more business from our customers to justify the risks that we do take. We expect this to reduce commercial exposures on and off the balance sheet by $10 billion to $20 billion and free up capital that has been earning low returns.

It's important to understand that our goal isn't to reduce the size of our business, but to achieve better returns and create a healthier business. While some of these changes are institutionally and culturally difficult, we will exit unprofitable relationships relentlessly, albeit carefully and respectfully. This action will enable us to develop stronger, deeper and more meaningful relationships with our customers over time.

We also expect and are prepared for several quarters of commercial credit costs at a rate at least double that of the approximately 40 basis points experienced in the last several years. To put these numbers into historical perspective, the 40 basis points is a cyclical low. Although the level expected for the next several quarters would be considered higher than normal, in a deep recession, commercial costs can run as high as 175 basis points. While none of us would like the impact on our earnings of a recession, because of all the steps we have taken we are now prepared to weather even that kind of environment.

BUILD A SOLID INFRASTRUCTURE Great companies — profitable companies — consistently build their infrastructures. They strive for the best systems and back-office operations. They are highly efficient, they cut waste constantly and they invest continuously.

Bank One must be a low-cost producer by eliminating unnecessary costs wherever we find them. In 2001, we will have cut $500 million in wasteful spending from our operations, after investing hundreds of millions of dollars in our businesses. We have reduced our total overhead, net of investments, by $500 million. This waste cutting has not hurt our company's performance or customer service. In fact, it has enhanced our operations by eliminating unnecessary, redundant and bureaucratic behavior.

We have reduced headcount by 8 percent, from 87,700 to 80,800, mainly through attrition and selective staff reductions. Our remaining employees are more productive, and potentially happier and better rewarded. Yet our cost structure, though greatly improved, is still too high. We must continue to reduce it.

We're creating effective systems and efficient operations. As examples, we're aggressively consolidating, streamlining, standardizing and centralizing our back-office activities. In addition, we are collapsing our 20 major bank charters into three and integrating our computer systems. We have four major conversions to do, and we hope to complete two by the end of this year. While these actions will cost us roughly $150 million a year for the next several years, they are critical. Converting to uniform operating systems — and doing it quickly — will help us run our businesses more efficiently, provide better customer service and put us in a strong position to aggressively grow internally or by acquisition. Ultimately, it should save Bank One hundreds of millions of dollars a year.

Centralizing operations does not mean consolidating authority. We won't be doing the latter. Instead, we'll be providing the field with better products and services at a cheaper cost. These changes will enhance our ability to push more authority and decision making to the field.

We are making substantial technological and other investments for the future. No company has ever had much of a future by cutting costs alone. Success is measured by top- and bottom-line growth. So we're investing substantially in our businesses to increase our market share, revenues and profits. Our retail service efforts, banking center platform, e-commerce products and expanding capital markets activities are just some of the areas receiving added support. Also, the importance of technology (here we include the Internet) cannot be overemphasized. We believe it will be critical in the financial services business, and, therefore, we need to embrace it and integrate it into everything we do. We need to continually strive to give our customers more, better, faster and cheaper. Technology, in all of its forms, allows companies to do this as they gain the benefits of economies of scale.

EXECUTE SUPERBLY As important as strategy is, we need to improve our execution, because without it, we will surely fail. Execution involves every employee, every phone call and every contact we have with customers. It is the devil in the details. We've got to execute or we will fail. And we *will* execute, by:

Acting with greater urgency and speed. One thing that has kept us from moving fast is bureaucracy. We still have too much of it at Bank One, and we will eradicate it. Bureaucracy, silos and politics are the bane of large corporations; they must be combated vigorously and continually. Fast and lean is the antidote to creeping bureaucracy. We'll continue to de-layer the organization and empower employees at all levels.

Becoming much more disciplined, which means meeting *all* of our commitments. Without discipline, mediocrity rules.

Giving ample resources and authority to the field, because that's where we interact with our customers. We need all of our banking center managers and business heads to feel and act like they are the president of their own company.

Remembering that our businesses are highly interrelated and field based. Each unit's success depends on the success and contributions of the others. Our strength resides in our regions; therefore, regional teams of senior executives from each business are driving our effort to improve customer service and revenues at the local level.

Communicating effectively and often. Real teamwork demands nothing less. In addition to urging employees to share best practices across the company, we need to be brutally honest with ourselves and foster open debate about what we do well, what we don't do well and what we can do better. Problems don't age well; denying or hiding them guarantees that they will get worse.

Treating fellow employees as customers. At Bank One, everyone counts, and we've got to remember that we support one another. Above all, it means doing what's right for Bank One, even if we have to make unpopular decisions and forgo near-term rewards. We all need to earn each other's respect every day.

CREATE A GREAT TEAM AND WINNING CULTURE Eventually, it all comes down to our people. Building a great team and developing deep "bench strength" are requisites for any company's long-term performance. One of our biggest priorities of 2000 was to assemble an exceptionally capable group of leaders by adding talented executives from outside Bank One and by promoting the deserving from within. We believe that we have done that. Of the top 12 executives who now make up the senior management team, six are new to the company and six come from within the company — three recently promoted to their jobs. This process of seeking out the best individuals for the job is happening throughout the organization, and I believe we are well on our way to having a world-class management team.

Creating a meritocracy. Managers and employees perform best when they're motivated, challenged and rewarded for doing the right thing. And companies perform best when shareholder, management and employee interests are aligned. We're seeking that alignment in a number of ways. For one thing, we are trying to establish a true meritocracy. Employees

will be rewarded for their efforts and contributions. We want employees to contribute in any way they can. Some employees' contributions go far beyond the P&L, and hopefully we will have the insight to reward people for the "soft" things they do to help the company, like recruiting, mentoring or simply having the courage and character to stand up for what is right.

You have to get incentives right. We want employees to think and act as owners by offering them an appropriate stake in Bank One's financial performance. We're modernizing compensation to make it fairer, simpler and more performance based. (With our new P&Ls, we are able to do that.) And in the spirit of these principles, we've eliminated most entitlements, special perks and special deals. Compensation will follow performance, not titles. Done right, our new incentive plans will create the proper balance of individual and collective accountability. We want our people to make more money, but only if the company performs. Ultimately, we would love to be the leanest, best performing and highest paying company.

It starts at the top. Your senior management received no bonuses for the year just ended. All of the Planning Group members, including those with guarantees, decided it was appropriate to give them up. This company cannot and will not pay the senior people more when the company does worse. Now we will be the first to sacrifice, as is appropriate. The higher the manager, the more his or her compensation will be tied to the company's performance — no excuses. Leadership is an honor, a privilege and a responsibility to do the right thing and set the right example.

It should include everyone. We made changes to the employee 401(k) and other benefit plans — not just to save money but, more important, to encourage greater stock ownership and long-term commitment to the company. The company match for 401(k) participants is now in Bank One stock. While we have reduced the company match (and eliminated it totally for highly paid individuals), we have added an outright grant of $300 (which we hope to increase as our performance improves) for lower paid individuals who probably did not have enough money to invest in the 401(k) and get the match in the first place. We believe this will add 15,000 of our employees to our shareholder ranks, bringing the total number of employee shareholders to approximately 60,000.

The 2001 stock option awards were spurred by the same principle. They were granted to more people and are based more on performance than on position. We also lengthened the vesting period of all new options from two years to five years. Simply put, we want the most benefits to go to our highest performers who stay to make Bank One a great company.

IN CLOSING Bank One, like all other companies, was built on the shoulders of those who came before us, and we are grateful to all of our retired employees and directors for their service to this company. In particular, we would like to express special appreciation to Verne Istock, who retired in September as President after 35 years. We also want to welcome our newest Board members Heidi Miller and David Novak to our company. We believe that we have started on the path to make Bank One a company that our customers, shareowners, employees (current and former) and communities can be proud of.

I especially want to thank our 80,000 employees. They've made Herculean efforts to turn this company around and to build the platform for enduring success. I'm delighted and honored to work with them, and I am confident that working together we can build Bank One into one of the best financial services companies in America.

Yours truly,

James Dimon
Chairman and Chief Executive Officer

February 20, 2001

CORPORATE BANKING provides services to corporations, financial institutions, governments and nonprofit entities with annual revenues exceeding $250 million. Services include credit products, corporate finance, treasury, international and capital markets products.

Profile

#3 commercial bank in the U.S., with other offices in Australia, Canada, Germany, Hong Kong, Japan, Mexico, People's Republic of China, Singapore, South Korea, Taiwan, United Kingdom

#1 commercial bank in the Midwest

Leading provider of cash and treasury management services

#4 League table standing (for loan syndications)

Goals

Increase ROE and net income

Improve market penetration of non-credit products

Build only where we can compete

Focus on high-value customer relationships

Exit low-value relationships

Customers
1,500+ (Fortune 1,000 and mid corporate)

Employees

Description Of Business

BANK ONE CORPORATION ("Bank One" or the "Corporation") is a multibank holding company registered under the Bank Holding Company Act of 1956 (the "BHC Act"), and is headquartered in Chicago, Illinois. Bank One was incorporated in Delaware on April 9, 1998, to effect the merger (the "Merger") of Banc One Corporation ("Banc One") and First Chicago NBD Corporation ("FCN"). The Merger became effective on October 2, 1998.

Bank One provides domestic retail banking, finance and credit card services; worldwide commercial banking services; and trust and investment management services. Bank One operates banking offices in Arizona, Colorado, Florida, Illinois, Indiana, Kentucky, Louisiana, Michigan, Ohio, Oklahoma, Texas, Utah, West Virginia and Wisconsin and in selected international markets. Bank One also engages in other businesses related to banking and finance, including credit card and merchant processing, consumer and education finance, mortgage lending and servicing, insurance, venture capital, investment and merchant banking, trust, brokerage, investment management, leasing, community development and data processing. These activities are conducted through bank subsidiaries (collectively, the "Banks") and nonbank subsidiaries.

Bank One is a leader in retail and small business banking, operating more than 1,800 banking centers and a nationwide network of ATMs. The Corporation is the #3 commercial bank in the United States. Bank One has leadership positions in syndicated lending, asset-backed financing and middle market banking. The Corporation is the third largest credit card company in the United States and is the largest VISA® credit card issuer in the world. Bank One is one of the leading bank-owned investment management companies with in excess of $130 billion in assets under management.

Basis of Presentation

Management's discussion and analysis may contain forward-looking statements provided to assist in the understanding of anticipated future financial performance. However, such performance involves risks and uncertainties that may cause actual results to differ materially from those expressed in forward-looking statements. See pages 101–102 for a full discussion of these factors.

For funding and risk management purposes, the Corporation periodically securitizes loans, primarily in support of credit card activities. The accounting for securitizations complicates the understanding of underlying trends in net interest income, net interest margin and noninterest income, as well as the underlying growth rates of reported loans. For clarification, these trends are also reviewed on a "managed" basis, which adds data on securitized credit card loans to reported data on loans. Results on a managed basis, where presented, should be read in conjunction with reported results. See page 43 for reconciliation of reported to managed results.

Business Segments

The Corporation is managed on a line of business basis. The business segments' financial results presented reflect the current organization of the Corporation. The following table summarizes certain financial information by line of business for the periods indicated:

	Net Income (Loss) (In millions)		Average Managed Assets (In billions)	
	2000	**1999**	**2000**	**1999**
Retail	**$ 389**	$1,041	**$ 79.0**	$ 72.5
Commercial Banking	**(226)**	788	**109.5**	106.0
First USA	**(1)**	1,135	**70.0**	74.9
Investment Management	**322**	317	**7.6**	7.1
Corporate Investments	**239**	371	**8.5**	7.8
Corporate/Unallocated	**(1,234)**	424	**40.4**	33.9
Total business segment results	**(511)**	4,076	**315.0**	302.2
Merger-related items and other significant items	**—**	(597)	**—**	—
Total Corporation	**$ (511)**	$3,479	**$315.0**	$302.2

Performance in 2000, and to a lesser degree 1999, was impacted by a number of significant items (see Tables 1 and 2 on page 15). In 2000, these items consisted primarily of asset valuation writedowns resulting in a net negative impact on earnings of $2.887 billion pretax ($1.879 billion after tax). These items primarily reflected the result of an intensive review of businesses, systems, operations and the balance sheet conducted throughout the year and exclude any provision for credit loss items. In 1999, such items consisted primarily of merger-related charges and writedowns and gains from asset sales resulting in a net negative impact on earnings of $880 million pretax ($597 million after tax).

Description of Methodology

The results of the business segments are intended to reflect each as if it were a stand-alone business. The management reporting process that derives these results allocates income and expenses using market-based methodologies. Funds transfer pricing is used to allocate interest income and interest expense and reflect an appropriate level of interest rate risk in each line of business. The Corporation's remaining interest rate risk position is included in the Corporate/Unallocated segment.

Beginning in the second quarter of 2000, the provision for credit losses was fully allocated to the appropriate lines of business and reflects Management's estimate of inherent losses. Prior to the second quarter, the provision in the lines of business was determined using standard credit cost methodologies that measured expected losses over a certain period of time. Any difference between the aggregate provision of the businesses and the Corporation's total was reflected in Corporate/Unallocated.

Historically, the costs of certain support units were allocated to the lines of business based on factors other than usage, such as headcount and total assets. The methodology was changed in the third quarter of 2000 to better reflect the actual cost and usage of services provided and was consistently applied to all lines of business. Costs allocated to First USA decreased, while unallocated costs that are included in Corporate/Unallocated increased.

The lines of business are assigned capital that reflects the underlying risk in that business. See the ''Capital Management'' section on page 43 for a discussion of the economic capital framework.

The 1999 merger-related charges and the effect of certain identified transactions in prior periods were not attributed to any business segment since they were not considered a part of core business activities.

BUSINESS SEGMENT RESULTS AND OTHER DATA

Retail

Retail includes consumer and small business banking, auto and consumer lending, and interactive banking and financial management through bankone.com and WingspanBank.com. Retail provides a broad range of financial products and services, including deposits, investments, loans, and insurance, to more than 8 million consumers and 425,000 small businesses, over 900,000 of which are serviced on-line.

Retail operates banking centers in 14 states where it has #1 or #2 market share in more than 60% of its markets. Retail's distribution channels include approximately 1,800 banking centers, 6,000 ATMs, online banking, and 24-hour telephone banking.. The ONE Card, issued by Retail is one of the country's leading debit cards for individuals. Bank One is the #3 lender to small businesses.

Bank One is a leader in originating consumer credit nationwide through direct and indirect channels, including its banking centers, relationships with brokers, the Internet and telephone. The Corporation offers real

estate secured, education, tax refund, and consumer installment loans, and auto loans and leases to individuals. The Corporation is also the #3 bank provider of home equity loans.

N/M—Not meaningful.

N/A—Not available due to changes in segment composition, see Note 5 on page 59.

Retail reported net income of $389 million in 2000, down from $1.041 billion in 1999. This reduction reflected a combination of factors, most notably a significant increase in provision for credit losses and the negative impact of significant items in 2000 (see Tables 1 and 2 on page 15), which were partially offset by an increase in net interest income. Excluding the significant items, Retail's net income would have been $870 million for 2000.

Net interest income increased $516 million, or 12%, from 1999, reflecting 13% growth in average loans, wider deposit spreads and improved pricing on indirect auto loans, partially offset by a shift in deposit mix toward higher rate certificates of deposits. Loan growth was driven by a 38% increase in average home equity loans, partially offset by a decline in other personal loans.

Provision for credit losses increased $455 million in 2000. This principally reflected the significant growth in home equity loans, higher net charge-offs and increases in home equity nonperforming loans.

Noninterest income declined $923 million, or 60%, from 1999. The most significant factor contributing to this decrease was losses associated with auto leases. Results for 2000 included a $532 million increase in the auto lease residual reserve plus $225 million of losses on sales of autos. An additional $113 million was related to

writedowns for planned loan sales and $25 million of writedowns for interest-only strips. At December 31, 2000, Management decided to discontinue its plan to sell these loans. The 2000 results included $83 million less in miscellaneous asset sale gains than in 1999.

Noninterest expense increased $102 million, or 3%, from the prior year reflecting $85 million of significant items, principally $54 million of severance and other writedowns related to business restructuring, and $31 million of operational and other. A $54 million increase in expenses was associated with Wingspan's full year of operation. Excluding these items, noninterest expense was down slightly, reflecting the positive impacts from waste reduction initiatives, reduced incentive compensation and the sale of the consumer finance business.

Commercial Banking

Commercial Banking offers a broad array of products, including cash management, capital markets and lending, to Corporate Banking and Middle Market Banking customers.

Corporate Banking serves more than 1,500 large corporations, financial institutions, government and not-for-profit entities with revenues greater than $250 million. It is the #1 commercial bank in the Midwest and the #3 commercial bank in the United States. In addition to lending, Corporate Banking offers a broad range of financial products and develops, markets, and delivers cash management, capital markets, international treasury and trade, e-Business and other noncredit products and services. Bank One's Capital Markets business is engaged in the origination, trading, and distribution of asset-backed securities, investment grade and high yield securities, derivatives, tax-exempt securities, and government bonds, for which the broker/dealer is a primary dealer. Capital Markets is also actively engaged in loan syndications, market research, advisory services, and private placements.

Middle Market Banking serves customers with annual revenues in excess of $5 million up to $250 million. With more than 18,000 customers, Bank One's market share exceeds 20% in 10 of the 12 states in which it operates. These customers use a wide variety of services with nearly one third using Bank One exclusively. Since privately held companies comprise the vast majority of the Middle Market customer base, providing credit is fundamental to the success of this business. The loan portfolio is well diversified across a broad range of industries and geographic locations. In addition to credit, this customer segment actively uses Bank One's treasury management, international, capital markets, and investment management products and services. Bank One's Middle Market Banking business is the #1 provider of cash management services in the 12 state footprint. Middle Market Banking benefits from both the retail banking infrastructure and investment management capabilities of the Corporation.

N/M—Not meaningful.

N/A—Not available due to changes in segment composition, see Note 5 on page 59.

Commercial Banking reported a net loss of $226 million for 2000, compared with 1999's net income of $788 million. This $1.014 billion decrease was principally driven by an increase in the provision for credit losses of $1.778 billion.

Net interest income increased $179 million, or 7% from the prior year, driven by 10% average loan growth partially offset by a modest decline in spread due to competitive pricing pressures in Corporate Banking and Middle Market banking and higher nonperforming loans. Middle Market Banking average loans were $32.1 billion, increasing 8% from the prior year. Corporate Banking reported a 12% increase in average loans year-over-year. While loan balances continued to grow throughout the year in Middle Market Banking, Corporate Banking loans started to decline in the fourth quarter, reflecting efforts to focus on more profitable customers.

The provision for credit losses increased $1.778 billion in 2000 from the prior year due to deterioration in the quality of loans and a higher reserve level established for the general loan portfolio. The deterioration in credit quality reflected the slowing of the economy as well as weakness in several industries and leveraged finance transactions. See Credit Risk Management (on page 26) for additional credit related discussion.

Noninterest income of $1.397 billion increased $116 million, or 9% from the prior year. Treasury Management Services revenue of $647 million increased $71 million, or 12%, driven by strong growth in commercial card activity, higher sweep fees and continued growth in wholesale lockbox imaging. Capital markets revenue of $429 million improved $25 million, or 6%, due to growing market share in municipals, increased activity in the asset-backed finance business, foreign exchange trading and high yield securities. Lending-related fees of $205 million increased $60 million, or 41%, reflecting higher levels of loan commitment fees.

Noninterest expense increased $62 million, or 3%, from the prior year, and included $21 million for severance and $6 million for fixed asset writeoffs, as well as an increase in treasury management services investment spending. These increases were partially offset by lower incentive compensation and waste reduction efforts.

First USA

First USA is the third largest credit card company in the United States and is the largest Visa® credit card issuer in the world, with $67 billion in managed credit card receivables and 51.7 million cardmembers. First USA.com is the leader in online card marketing and customer service, with over 2.3 million registered users of its web site.

First USA offers its products through cards marketed directly to customers under the First USA brand, affinity groups and co-brand relationships. First USA offers two types of general-purpose credit cards, premium and standard, as well as small business cards. All cards are issued to customers under either the Visa® or MasterCard® name. Premium cards, which include Platinum and Titanium cards, generally have higher usage and balances than do standard cards. First USA directs the majority of its new account acquisition efforts to members of endorsing groups, commercial firms, and financial institutions, including Bank One and has more than 1,800 marketing partners.

First USA grants credit by carefully applying a credit decision model to new customers. This model has been developed over the years, and is the result of the over 100 million credit decisions that First USA has made over its history.

N/M—Not meaningful.

N/A—Not available due to changes in segment composition, see Note 5 on page 59.

First USA reported a net loss of $1 million in 2000, compared with net income of $1.135 billion in 1999. This reflected a 23% decline in revenue and a slightly higher provision for credit losses, partially offset by lower expenses. Current year results included $830 million pretax of significant items (see Tables 1 and 2 on page 15). Excluding these items, 2000 results represented a 1.3% pretax return on outstandings, down from 2.5% in 1999. On this same basis, return on equity declined to 9% from 19% in 1999.

Net interest income declined $1.046 billion, or 15%, from 1999. This was primarily driven by decreased spread, lower late fee revenue, and a decline in average loans. Average managed outstandings were $66.2 million, down 4% from the prior year. Attrition on mature vintage balances continued to improve throughout 2000. At year-end 2000, First USA had 51.7 million cards issued, compared to 64.2 million at December 31, 1999. Approximately 7 million inactive accounts were purged during 2000.

Provision for credit losses increased only 1% in 2000. This reflected an increase in provision mostly offset by a decrease in the managed charge-off rate to 5.42% from 5.49% in 1999. The prior year charge-offs included $183 million related to the early adoption of the Federal Financial Institutions Examination Council's (FFIEC) revised consumer credit guidelines. At year end, the managed 30-day and 90-day delinquency rates were 4.51% and 2.02%, respectively, down from 4.57% and 2.13% a year earlier.

Noninterest income declined $886 million, or 54% from the prior year. Current year results included $467 million of significant items primarily related to writedowns of the interest-only strip on securitized credit card receivables and marketing partnership agreements (see Table 1 on page 15). In addition, 2000 results included $116 million of net securitization amortization compared with net securitization gains of $61 million in 1999. Revenue sharing payments to partnership and affinity groups, which are included in noninterest income, increased in 2000 reflecting the emphasis on these growing customer groups. In addition, lower revenue from fee-based products contributed to the decline in noninterest income from the prior year, as well as the prior year's inclusion of $126 million of nonrecurring items.

Noninterest expense declined $258 million, or 8%, from the prior year. Excluding the impact of $328 million of significant items, noninterest expense declined $586 million, or 18%. This decrease reflected a decline in marketing expenses and the positive impact of waste reduction initiatives, such as lower headcount and improved operating efficiency, as well as the sale of the international operations, lower processing costs due to the decrease in portfolio size, and a decrease in internal costs related to a change in allocation methodology. This change in allocation methodology was implemented in the 2000 third quarter to better reflect the actual cost of services provided. These positive impacts were partially offset by increased fraud and operational losses.

Investment Management

The Investment Management Group (IMG) provides investment, insurance, trust and private banking services to individuals. The Group also provides investment-related services, including retirement and custody services, securities lending and corporate trust to institutions.

The Investment Management Group's registered investment advisory arm, Banc One Investment Advisors, ranks among the nation's top asset managers, with approximately $131 billion in assets under management. In addition, the Investment Management Group manages One Group Mutual Funds, one of the largest mutual fund families with more than $70 billion in assets under management. Performance of the funds has been exceptionally strong with 97% ranked 3 stars or better and 62% ranked 4 stars or better by Morningstar.

Private Client Services (PCS) is uniquely designed to help manage and build wealth for high net worth clients. PCS provides integrated financial advice and services such as brokerage, investment and alternative asset management, personal trust, private banking, insurance and financial planning through 585 advisors.

Investment Management serves Bank One's retail customer base by delivering investment products and services through our 1,800 banking centers in 14 states. IMG teams 700 dedicated investment professionals with 2,700 licensed bankers in Retail's banking centers to deliver high quality investment and insurance products.

Custody, master trust and retirement services (such as 401(k), defined benefit and non-qualified plans) are provided to institutional customers. Corporate trust services are provided to governmental and municipal entities, as well as a broad range of middle market and large companies. The Corporate Trust unit ranks among the three largest providers in the country for bond trustee services.

Investment Management reported net income of $322 million, up $5 million from the prior year.

Net interest income increased $33 million, or 9%, from the prior year, reflecting a 16% increase in average loans partially offset by narrower spreads related to the 3% decrease in average deposits.

Provision for credit losses increased $11 million, principally related to higher net charge-offs and loan growth.

Noninterest income, which is principally fiduciary and investment fees, decreased $18 million, or 2%, due to the sale of a subsidiary in the 1999 second quarter. Excluding the impact of this sale, noninterest income increased 2%, reflecting growth in retail brokerage and insurance volumes and moderate growth in assets under management.

Noninterest expense decreased $26 million, or 2%, also related to the 1999 second quarter sale of a subsidiary. Excluding the impact of this sale, expenses increased 2%, principally related to volume growth in retail brokerage and insurance activities.

Assets under management totaled $131.2 million, up 2% from the end of 1999. One Group® mutual fund assets under management increased 9% to $70.4 billion. One Group® fund performance continued to remain strong, with 97% of these funds rated three stars or higher by Morningstar. Average assets under management increased 5% compared with 1999, driven principally by a 14% increase in One Group mutual funds.

Corporate Investments

The Corporate Investments Group engages in proprietary investment activities for the account of Bank One. A diversified portfolio of investments is allocated between tax-oriented transactions and portfolios of more traditional asset classes.

Tax-oriented investments include investments in and advising on leases for commercial aircraft and major industrial and power production facilities and equipment. Investments also are made in alternative energy programs and affordable housing projects qualifying for federal tax credits.

Investment portfolios in the other asset classes are executed by a combination of direct investing and fund investing. Fund investments are made pursuant to allocations for selected investment strategies and are committed to proven managers satisfying established due diligence criteria. Fund investments include venture capital funds, hedge funds and commercial real estate funds. Direct investments are comprised of a diversified portfolio that includes exposure to several market sectors, including commercial mortgage-backed securities, asset-backed securities, collateralized debt obligations, high-yield bonds, private equity and mezzanine debt.

Corporate Investment's portfolio is diversified among several asset classes, some of which provide stable earnings streams while others may be more volatile.

N/A—Not available due to changes in segment composition, see Note 5 on page 59.

Corporate Investments reported net income of $239 million, down $132 million, or 36%, from 1999. Tax-oriented strategies continued to provide stable core performance. This performance was offset by the third quarter sale of the operations and substantially all of the assets of Banc One Capital Funding Corporation (primarily housing and healthcare investments and related servicing rights), as well as a decline in the collective contribution from all other investment strategies during the year's difficult capital markets environment.

Net interest income declined $68 million, or 39%. Growth in investment levels for venture capital, private equity, hedge funds and tax-oriented housing and energy investments which are noninterest yielding, accounted for $43 million of the decline, and was due to the funding cost of these investments. Spread income from Banc One Capital Funding Corporation activities declined $39 million from the prior year. Spread income is expected to decline approximately $8 million in the coming year as compared to 2000 due to the absence of the Banc One Capital Funding activities, with negligible impact to net income.

Noninterest income declined $194 million, or 48%. Equity securities gains totaled $187 million in 2000, down from $334 million in 1999. Securities gains from venture capital and private equity investing declined $148 million, or 55%, reflecting the weak market for initial public offerings (IPOs) and financial restructurings in 2000. Asset impairment charges and realized losses related to the collateralized debt obligation investment portfolios represented $27 million of the overall decline.

Noninterest expense declined $32 million, or 24%, reflecting the benefits from waste reduction efforts, lower performance-based compensation, and a $5 million reduction attributable to the sale of certain assets.

Corporate/Unallocated

Corporate/Unallocated includes certain items that are not allocated to the lines of business. Going forward, Corporate/Unallocated results are expected to reflect the Corporation's investment securities portfolio, the unallocated interest rate risk position, unallocated expenses of certain corporate support areas, and the impact of unallocated net assets and capital. The 2000 and 1999 results included certain unallocated expenses for support areas, gains and losses, restructuring charges, and writedowns and expenses resulting from Management's review of the business.

(Dollars in millions)	2000	1999	% Change

N/A—Not available due to changes in segment composition, see Note 5 on page 59.

The net loss in Corporate/Unallocated was $1.234 billion in 2000, compared with net income of $424 million in 1999. The 2000 results included the negative impact of $1.279 billion, pretax, of significant items. (See tables 1 and 2 on page 15).

Net interest expense was $457 million in 2000, compared with net interest income of $108 million for 1999. The year-over-year change reflects the interest rate risk position of the Corporation and the level of unallocated equity and assets. The 1999 unallocated equity was a positive $2.1 billion, while in 2000 the unallocated equity was a negative $1.3 billion. The amount of unallocated equity represents the difference between shareholders' equity and attributed economic capital. Refer to the ''Capital Management'' section, beginning on page 43 for additional information. The change, in part, reflects the writedowns taken during 2000 in conjunction with Management's effort to strengthen the balance sheet.

Provision for credit losses was fully allocated to the lines of business in 2000. The 1999 provision was a negative $107 million, reflecting the difference between standard credit costs in the lines of business and the Corporation's actual provision expense.

Noninterest income was a negative $240 million in 2000, compared with $433 million in 1999. Investment securities losses totaled $428 million in 2000, compared with gains of $94 million in 1999. The investment securities losses in 2000 included $415 million of losses resulting from the repositioning of the Corporation's investment portfolio in the second quarter of 2000, more than offsetting the income on corporate-owned life insurance. Income on corporate-owned life insurance and gains on sales of assets were included in 1999's results.

Noninterest expense was $1.218 billion for 2000, compared with $77 million in 1999. Significant items recorded in 2000 included $350 million for operational and other losses, $315 million for occupancy-related costs, a $190 million addition to legal accruals and $9 million in severance.

Significant Items

The following table summarizes significant items recorded in 2000 by each business segment and income statement line, excluding provision for credit losses not FFIEC-related:

Business Segments—Table 1 (In millions)	Retail	Commercial	First USA	Investment Management	Corporate Investments	Corporate/ Unallocated	Total
Pretax expense (income):							
Writedown of auto lease residuals	$532	$ —	$ —	$—	$—	$ —	$ 532

Total noninterest expense	85	(36)	328	(2)	—	859	1,234
Pretax expense	$760	$ 8	$830	$—	$10	$1,279	$2,887

(1) Includes $75 million of incentive accruals reversed in the fourth quarter relating to the full year in which existing plans were adjusted to a pay for performance basis.

(2) At December 31, 2000, Management discontinued its plan to dispose of these loans, and as such, are now considered part of the general portfolio.

During 1999, significant items totaling $880 million pretax ($597 million after-tax) were not allocated to specific business segments. These items included charges of $722 million for merger and restructuring costs, $321 million for asset impairment, valuation adjustments and other charges, and $197 million for provision for credit losses primarily associated with the FFIEC implementation. These charges were partially offset by gains of $111 million and $249 million, respectively, for the sale of Concord/EPS and the Indiana divestitures.

The income statement lines affected in 1999 are as follows:

(In millions)	
Provision for credit losses	**$ 176**
Noninterest income	**(169)**
Noninterest expense	**873**
Pretax expense	**$ 880**
After tax	**$ 597**

Consolidated Results

Summary of Financial Results

The Corporation reported a 2000 net loss of $511 million, or $0.45 per share, compared with net income of $3.479 billion, or $2.95 per diluted share, in 1999, and $3.108 billion, or $2.61 per diluted share, in 1998.

Net Interest Income

Net interest income includes spreads on earning assets as well as items such as loan fees, cash interest collections on problem loans, dividend income, interest reversals, and income or expense on derivatives used to manage interest rate risk. Net interest margin measures how effectively the Corporation uses its earning assets and underlying capital.

In order to understand fundamental trends in net interest income, average earning assets and net interest margins, it is useful to analyze financial performance on a managed portfolio basis, which adds data on securitized loans to reported data on loans as presented below:

	Year Ended December 31		
(Dollars in millions)	2000	1999	1998
Managed:			
Net interest income—tax-equivalent basis	**$ 13,506**	$ 14,457	$ 13,828
Average earning assets	**284,035**	269,237	248,621
Net interest margin	**4.76%**	5.37%	5.56%
Reported:			
Net interest income—tax-equivalent basis	**$ 8,974**	$ 9,142	$ 9,469
Average earning assets	**241,058**	223,539	209,514
Net interest margin	**3.72%**	4.09%	4.52%

Lower average credit card outstandings, lower fee revenues and narrower spread on credit card loans were the most significant causes of the decline in both the net interest income and related margin in 2000. Lower average credit card outstandings and fee revenues reflected customer attrition and reduced new account origination, while narrower spread reflected higher funding costs in 2000. Competitive pricing pressures in Corporate Banking and Middle Market Banking and higher nonperforming loans reduced margins slightly in the commercial loan portfolio.

During the second half of 2000, net interest income declined, reflecting a lower level of loans and the cost of carrying a higher level of nonperforming assets. Exposure to the Corporate Banking market could decline in 2001 as the line of business places increased emphasis on relationship profitability.

On a reported basis, net interest margin was 3.72% in 2000, compared with 4.09% in 1999 and 4.52% in 1998. The decrease in net interest margin in 2000 was related to lower credit card spreads as well as a less favorable earning asset mix.

Loans, which are presented on a managed basis, are as follows:

(Dollars in millions)	2000	Percent	1999	Percent	1998	Percent
Average managed loans:						
Credit card	**$ 66,178**	**28%**	$ 68,980	32%	$ 60,532	30%
Commercial	**100,202**	**43**	90,182	41	82,118	41
Consumer	**66,812**	**29**	59,440	27	57,206	29
Total	**$233,192**	**100%**	$218,602	100%	$199,856	100%

Average managed credit card loans in 2000 were down $2.8 billion, or 4%, from 1999 levels. Average managed credit card loans in 1999 were up 14% or $8.4 billion from 1998 levels to $69.0 billion.

Average commercial loans increased $10.0 billion or 11% in 2000 and $8.1 billion or 10% in 1999, reflecting underlying growth, concentrated in the Corporate Banking and Middle Market Banking portfolios.

Average consumer loans, excluding credit card loans, were up $7.4 billion, or 12%, from 1999. Growth in home equity loans was partially offset by run-off in residential mortgages and portfolio sales. The Corporation expects continued growth in consumer loans in 2001.

Noninterest Income

The table below shows the components of noninterest income for the periods indicated:

	Year Ended December 31			Percent Increase (Decrease)	
(Dollars in millions)	2000	1999	1998	1999-2000	1998-1999
Non-deposit service charges	**$1,537**	$1,502	$1,390	2%	8%
Credit card revenue (1)	**1,104**	1,363	1,244	(19)	10
Service charges on deposits	**1,310**	1,283	1,255	2	2
Fiduciary and investment management fees	**783**	793	807	(1)	(2)
Investment securities gains (losses)	**(235)**	509	405	N/M	26
Trading	**134**	147	141	(9)	4
Other income (loss)	**(738)**	685	718	N/M	(5)
Gains from banking center sales	**—**	—	259	—	N/M
Gain on Indiana Divestitures	**—**	249	—	N/M	N/M
Gain on sale of Concord/EPS	**—**	111	—	N/M	N/M
Managed noninterest income	**$3,895**	$6,642	$6,219	(41)%	7%

(1) Excludes net credit card revenue due to securitization totaling $1.195 billion in 2000, $2.050 billion in 1999 and $1.852 billion in 1998.
N/M—Not meaningful.

In order to provide more meaningful trend analysis, credit card fee revenue and total noninterest income in the above table are shown on a managed basis. Credit card fee revenue excludes the net interest revenue associated with securitized credit card receivables. Components of noninterest income that are primarily related to a single business segment are discussed within that business segment rather than the consolidated section.

Noninterest income in each of the last three years was affected by a number of significant items. In 2000, such items resulted in a negative impact of $1.606 billion (see Table 2 on page 15), primarily related to securities losses and writedowns of auto lease residuals and planned loan sales. In 1999, these items resulted in a $191 million net positive impact ($169 million of negative impact related to asset impairment and valuation adjustments (see page 15), which were offset by $360 million of gains), and 1998 included $259 million of one-time gains (see above table).

Excluding the impact of these items, noninterest income in 2000 was $5.500 billion, down $951 million, or 15%, from $6.451 billion in 1999, with results for 1999 up $491 million, or 8%, from $5.960 billion in 1998.

Non-deposit service charges increased 2% in 2000, compared with the 1999 levels, as higher loan syndication fees were partially offset by lower leasing fees for auto loans. Non-deposit service charges in 1999 increased 8% from 1998 levels, reflecting growth in fees from asset-backed finance transactions, higher loan syndication fees, and continued growth in other fee revenue from retail product areas.

Managed credit card revenue declined 19% to $1.104 billion in 2000 as compared to 1999, reflecting a decline in managed credit card receivables as well as writedowns for certain affinity partnership agreements of $137 million, which included the second quarter writedown of $121 million. Credit card fee revenue in 1999 included asset impairment writedowns of $59 million for certain assets, including affinity programs.

Service charges on deposit accounts, which include deficient balance fees, increased 2% in both 2000 and 1999, reflecting growth in cash management fees, due in part to the extensive cross selling of product offerings across an expanded geographic region. Effective cross selling was supported by enhanced product features and functionality of the core treasury management services provided to customers on a national basis.

Fiduciary and investment management fees decreased slightly in 2000 as compared to 1999, as fee growth from traditional trust products and services, investment management activities and shareholder services was offset by the absence of revenues from certain unprofitable account relationships exited in 2000. In 1999, fiduciary and investment management fees, adjusted for certain noncomparable items recorded in 1998, were up 11% over 1998 as a result of higher market values of trust assets and increases in proprietary mutual fund revenue.

Investment securities portfolio activities produced a loss of $235 million in 2000 as compared to $509 million of net revenue in 1999, primarily as the result of the repositioning of the Corporation's investment portfolio in the 2000 second quarter (see Significant Items Tables 1 and 2 on page 15) and lower venture capital valuations. The 26% increase in investment securities gains in 1999 as compared to 1998 primarily reflected favorable equity market conditions.

Trading results declined slightly to $134 million in 2000 compared with $147 million in 1999 as improved foreign exchange trading was offset by a decline in revenue generated from interest rate derivatives. The 1999 improvement over the $141 million in 1998 reflected favorable results in interest rate derivatives offset by a decline in foreign exchange trading income.

Other activities generated losses of $738 million in 2000, compared with $685 million of income in 1999. Net securitization amortization in 2000 totaled $116 million, compared with net gains of $54 million and $180 million in 1999 and 1998, respectively. Asset impairment writedowns associated with credit card interest-only strip securities were $432 million for 2000 compared to $40 million for 1999. These writedowns were driven by the narrower margin and increased attrition based on the earnings decline in the credit card business. Auto residual losses totaled $757 million for 2000, compared with $167 million for 1999. Included in these losses were charges of $552 million ($532 million significant items), $100 million and $102 million in 2000, 1999 and 1998, respectively, for asset valuation adjustments. While the Corporation has estimated the level of other than temporary impairment inherent in its leasing residual portfolio at December 31, 2000, continued deterioration in used car prices may result in additional charges, further reducing the carrying value of the Corporation's auto lease residual portfolio.

Included in other income in 1999 were $249 million of gains on the divestiture of banking centers in Indiana required in connection with the Banc One/FCN merger and a $111 million gain from an investment in Concord/EPS. Gains of $259 million from sales of banking centers were recorded in 1998.

Noninterest Expense

Noninterest expense in 2000 was $11.608 billion, compared with $11.490 billion in 1999. Noninterest expense has been relatively flat over the past three years. Certain expense categories decreased during 2000 as a result of the Corporation's waste reduction efforts.

The table below shows the components of noninterest expense for the periods indicated:

	Year Ended December 31			Percent Increase (Decrease)	
(Dollars in millions)	2000	1999	1998	1999-2000	1998-1999
Salaries and employee benefits:					
Salaries	**$ 3,735**	$ 3,668	$ 3,770	2%	(3)%
Employee benefits	**653**	603	707	8	(15)
Total salaries and employee benefits	**4,388**	4,271	4,477	3	(5)
Occupancy and equipment expense	**1,010**	910	845	11	8
Outside service fees and processing	**1,532**	1,743	1,349	(12)	29
Marketing and development	**874**	1,188	1,024	(26)	16
Communication and transportation	**841**	829	781	1	6
Depreciation	**454**	460	512	(1)	(10)
Other intangible amortization	**410**	168	91	N/M	85
Goodwill amortization	**70**	69	77	1	(10)
Other	**1,868**	1,298	1,327	44	(2)
Total noninterest expense before merger-related and restructuring charges	**11,447**	10,936	10,483	5	4
Merger-related and restructuring charges	**161**	554	1,062	(71)	(48)
Total noninterest expense	**$11,608**	$11,490	$11,545	1	—
Employees (1)	**80,778**	87,735	92,800	(8)	(5)
Efficiency ratio—managed basis	**66.7%**	54.5%	57.6%		

(1) For 2000 and 1999 employee headcount is based on full-time and part-time employment with benefits. Employee headcount for 1998 is an estimate based on full-time and part-time employment with benefits.

N/M—Not meaningful.

Components of noninterest expense that are primarily related to a single business segment are discussed within that business segment rather than the consolidated section.

Salary and benefit costs, including severance charges, were $4.388 billion in 2000, up 3% from $4.271 billion in 1999. The increase was due to higher salary levels, partially offset by reduced headcount and lower incentive compensation in 2000. At December 31, 2000, the number of employees with benefits totaled 80,778, down 8% from 87,735 in 1999. The decrease in salary and benefits costs in 1999 from 1998 was largely attributable to staff reductions and reduced pension costs and the integration of employee benefit programs.

Occupancy and equipment expense in 2000 was up $100 million, or 11%, from 1999 levels. This increase included $98 million of the $337 million significant item (see table 1 on page 15) related to writedowns concerning vacant space and other occupancy-related matters. The increase in 1999 reflected growth in production facilities as well as higher equipment costs for certain business units. The 1999 increase also reflected the outsourcing of various property management services and the implementation and ongoing support of an expanded ATM delivery network, including the Rapid Cash retail banking initiative.

Outside service fees and processing expense decreased 12% in 2000 after increasing 29% in 1999. A portion of the decrease in 2000 and the increase in 1999 reflected consulting and implementation costs incurred to support Year 2000 readiness, as well as other development, technology and reengineering initiatives in various businesses in 1999. The 2000 decrease also included benefits from the Corporation's waste reduction initiatives.

Marketing and development expense decreased 26% in 2000 and increased 16% in 1999 from 1998. Credit card marketing efforts accounted for much of the fluctuations in these periods. These expenses are expected to increase in 2001 as First USA begins to refocus on certain marketing programs. The increase in these expenses in 1999 over 1998 included a change in business practice, which resulted in expensing credit card account sourcing costs as they are incurred rather than capitalizing them.

Other intangible amortization expense included $288 million and $21 million of additional writedowns in purchased credit card relationships in 2000 and 1999, respectively. In 2000, $275 million of these writedowns is included in the Significant Items tables on page 15. These asset writedowns reduced the carrying value of identified intangible assets and will reduce the ongoing level of related amortization expense.

Other operating expense increased $570 million in 2000 compared with 1999, primarily relating to $538 million of significant items recorded in 2000. These charges included $190 million to the legal reserve to cover increased corporate and business litigation exposure, approximately $85 million of fixed assets and software writeoffs, as well as miscellaneous and operational errors.

Applicable Income Taxes

The following table shows the Corporation's income (loss) before income taxes, as well as applicable income tax expense (benefit) and effective tax rate for each of the past three years:

(Dollars in millions)	2000	1999	1998
Income (loss) before income taxes	**$(1,080)**	$4,974	$4,465
Applicable income taxes (benefit)	**(569)**	1,495	1,357
Effective tax rates	**52.7%**	30.1%	30.4%

Applicable income tax expense or (benefit) for all three years included benefits for tax-exempt income, tax-advantaged investments and general business tax credits offset by the effect of nondeductible expenses, including goodwill. In the case of a loss before income taxes, the effect of the net tax benefits described above is to increase, rather than decrease, the effective tax benefit. This is the primary reason for the difference in effective tax rates between 2000 and the previous years. More detail on income taxes can be found in Note 19, beginning on page 78.

Risk Management

Risk Management Policy and Structure

Risk is an inherent part of the Corporation's businesses and activities. The extent to which the Corporation properly and effectively identifies, assesses, monitors and manages each of the various types of risk involved in its business activities is critical to its soundness and profitability. The Corporation's lines of businesses help reduce the impact that volatility in any particular area or related areas may have on its operating results as a whole. The Corporation seeks to identify, assess, monitor and manage, in accordance with defined policies and procedures, the following principal risks involved in the Corporation's business activities: liquidity risk, market risk, credit risk and operational risk.

The risk management process of the Corporation is dynamic with independent oversight that requires effective communication between lines of businesses and corporate-level departments, judgment and knowledge of specialized products and markets. The Corporation's senior management takes an active role in the risk

management process and has developed policies and procedures that require specific functions to assist in the identification, assessment and control of various risks. In recognition of the nature of the Bank One's business activities, the Corporation's risk management policies, procedures and methodologies are evolutionary in nature and are subject to ongoing review and modification.

Overall risk management policies for the Corporation are established by the Corporate Risk and Capital Committee, who reviews the Corporation's performance relative to these policies. The Corporate Risk and Capital Committee has oversight responsibility for various risk committees of the Corporation's distinct lines of business and assists the Audit and Risk Management Committee of the Board of Directors in monitoring Bank One's policy standards and guidelines for risk management, among other duties. The individual line of business committees monitor and review their respective lines of businesses compliance with the Corporation's risk management practices, as well as manage and monitor specific risks, sales practices, pricing and reserve adequacy, legal enforceability, and operational and systems risks. Line of business subsidiary committees, which report to the respective line of business risk management committees, approve transactions, manage market and credit risk, approve significant policy and underwriting decisions, review major analytical findings for business implications, and develop and maintain credit underwriting policy initiatives.

The Corporation's Corporate Risk Management Department, Finance Department and Law, Compliance and Governmental Relations Department, also assist senior management and the Corporate Risk and Capital Committee in monitoring and controlling the Corporation's risk profile. The Corporate Risk Management department is responsible for risk policy development, risk analysis and risk reporting to senior management and the Corporate Risk and Capital Committee and has operational responsibility for measuring and monitoring aggregate market and credit risk with respect to institutional trading activities. In addition, the Internal Audit Department, which also reports to senior management, periodically examines and evaluates the Corporation's operations and control environment. The Corporation continues to be committed to employing qualified personnel with appropriate expertise in each of its various areas to implement effectively the Company's risk management and monitoring systems and processes.

The Corporation's various business activities generate liquidity, market, credit and operating risks:

- Liquidity risk is the possibility of being unable to meet all current and future financial obligations in a timely manner.
- Market risk is the possibility that changes in future market rates or prices will make the Corporation's positions less valuable.
- Credit risk is the possibility of loss from borrowers and counterparties failing to perform according to the terms of a transaction.
- Operating risk, among other things, includes the risk of fraud by employees or persons outside the Corporation, the execution of unauthorized transactions by employees, and errors relating to transaction processing and systems.

Liquidity Risk Management

Liquidity is managed in order to preserve stable, reliable and cost-effective sources of cash to meet all current and future financial obligations in a timely manner. The Corporation considers strong capital ratios, credit quality and core earnings essential to retaining high credit ratings and, consequently, cost-effective access to market liquidity. In addition, a portfolio of liquid assets, consisting of federal funds sold, deposit placements and selected highly marketable investment securities, is maintained to meet short-term demands on liquidity.

The Consolidated Statement of Cash Flows, on page 51, presents data on cash and cash equivalents provided and used in operating, investing and financing activities.

The Corporation's ability to attract wholesale funds on a regular basis and at a competitive cost is fostered by strong ratings from the major credit rating agencies. As of December 31, 2000, the Corporation and its principal banks had the following long- and short-term debt ratings:

	Short-Term Debt		Senior Long-Term Debt	
	S & P	Moody's	S & P	Moody's
The Corporation (Parent)	A-1	P-1	A	Aa3
Principal Banks	A-1	P-1	A+	Aa2

The Treasury Department is responsible for identifying, measuring and monitoring the Corporation's liquidity profile. The position is evaluated monthly by analyzing the composition of the liquid asset portfolio, performing various measures to determine the sources and stability of the wholesale purchased funds market, tracking the exposure to off-balance sheet draws on liquidity, and monitoring the timing differences in short-term cash flow obligations.

Access to a variety of funding markets and customers in the retail and wholesale sectors is vital both to liquidity management and to cost minimization. A large retail customer deposit base is one of the significant strengths of the Corporation's liquidity position. In addition, a diversified mix of short- and long-term funding sources from the wholesale markets is maintained through active participation in global capital markets and by securitizing and selling assets such as credit card receivables.

Deposits and Other Purchased Funds

The following table shows the total funding source at December 31:

(In millions)	2000	1999	1998	1997	1996
Domestic offices:					
Demand	**$ 30,738**	$ 31,194	$ 39,854	$ 35,954	$ 33,479
Savings	**63,414**	64,435	62,645	58,946	56,359
Time:					
Under $100,000	**25,302**	22,825	24,483	28,815	30,955
$100,000 and over	**22,656**	14,052	11,819	11,329	10,312
Foreign offices	**24,967**	29,772	22,741	18,682	14,101
Total deposits	**167,077**	162,278	161,542	153,726	145,206
Federal funds purchased and securities Under repurchase agreements	**12,120**	18,720	23,164	20,346	21,662
Commercial paper	**3,048**	3,184	2,113	1,507	2,446
Other short-term borrowings	**14,955**	18,027	14,824	11,299	10,593
Long-term debt (1)	**40,911**	35,435	22,298	21,546	15,363
Total other purchased funds	**71,034**	75,366	62,399	54,698	50,064
Total	**$238,111**	$237,644	$223,941	$208,424	$195,270

(1) Includes trust preferred capital securities.

Changes in the relative mix of funding sources reflect an ongoing shift in consumer investment preferences and the Corporation's decision, for liquidity management purposes, to decrease reliance on short-term borrowings through the issuance of longer-term deposits and debt.

Overview

Market risk refers to potential losses arising from changes in interest rates, foreign exchange rates, equity prices and commodity prices, as well as the correlation among these factors and their volatility. The portfolio effect of engaging in diverse trading activities helps reduce the potential impact of market risk on earnings. Through its trading activities, the Corporation strives to take advantage of profit opportunities available in interest and exchange rate movements. In asset and liability management activities, policies are in place that are designed to closely manage structural interest rate and foreign exchange rate risk. Disclosures about the fair value of financial instruments, which reflect changes in market prices and rates, can be found in Note 22, beginning on page 82.

Trading Activities

The Corporation's trading activities are primarily customer-oriented. Cash instruments are sold to satisfy customers' investment needs. Derivative contracts are initially entered into to meet the risk management needs of customers. In general, the Corporation then enters into offsetting positions to reduce market risk. In order to accommodate customers, an inventory of capital markets instruments is carried, and access to market liquidity is maintained by making bid-offer prices to other market makers. The Corporation may also take proprietary trading positions in various capital markets cash instruments and derivatives, and these positions are designed to profit from anticipated changes in market factors.

Many trading positions are kept open for brief periods of time, often less than one day. Other positions may be held for longer periods. Trading positions are valued at estimated fair value. Realized and unrealized gains and losses on these positions are included in noninterest income as trading profits.

Value-At-Risk

The Corporation has developed policies and procedures to manage market risk through a value-at-risk measurement and control system, through a stress testing process and through dollar trading limits. The objective of this process is to quantify and manage market risk in order to limit single and aggregate exposures. Dollar trading limits are subject to varying levels of approval by senior line of business management, with review by the Capital Markets Risk Management Department. The Corporation's Capital Markets Risk Management Department works with various line of business personnel in refining and monitoring of the Corporation's market risk policies and procedures, and is the primary oversight unit for market risk arising from line of business trading and trading related activity.

Value-at-risk is intended to measure the maximum fair value the Corporation could lose on a trading position, given a specified confidence level and time horizon. Value-at-risk limits and exposure are monitored on a daily basis for each significant trading portfolio. Stress testing is similar to value-at-risk except that the confidence level is geared to capture more extreme, less frequent market events.

The Corporation's value-at-risk calculation measures potential losses in fair value using a 99% confidence level and a one-day time horizon. This equates to 2.33 standard deviations from the mean under a normal distribution. This means that, on average, daily profits and losses are expected to exceed value-at-risk one out of every 100 overnight trading days. Value-at-risk is calculated using various statistical models and techniques for cash and derivative positions, including options.

The following table shows the average, high and low of the value-at-risk measurements at each quarter end in 2000 and 1999, along with value-at-risk amounts at December 31, 2000 and December 31, 1999:

	2000				1999			
(In millions)	Average	High	Low	Dec 31	Average	High	Low	Dec 31
Risk type								
Interest rate	**$11**	**$15**	**$7**	**$7**	$21	$28	$14	$14
Currency exchange rate	**1**	**1**	**—**	**1**	1	2	—	—
Equity	**1**	**2**	**1**	**1**	1	1	1	1
Diversification benefit				**—**				(2)
Aggregate portfolio market risk				**$9**				$13

The activities covered by the table above reflect trading and other activities, including certain overseas balance sheet positions that are managed principally as trading risk. Value-at-risk from commodity price risk was immaterial.

Interest rate risk was the predominant type of market risk incurred during 2000. At December 31, 2000, approximately 75% of primary market risk exposures were related to interest rate risk. Exchange rate, equity and commodity risks accounted for 11%, 11% and 3%, respectively, of primary market risk exposures.

U.S. Treasury, corporate, asset-backed, municipal and mortgage-backed securities generated 79% of interest rate risk. Interest rate derivatives accounted for 19% of interest rate risk. The remaining 2% of interest rate risk were derived from money market and foreign exchange trading activities.

Within the category of currency exchange rate risk, foreign exchange spot, forward and option trading generated 98% of the risk. Of the currency exchange rate risk arising from these activities, 62% related to major currency exposures and 38% to minor currencies.

Equity derivatives trading generated 93% of equity price risk, and equity cash instruments generated the remaining 7% of equity price risk.

At December 31, 2000, aggregate portfolio market risk exposures were 30% lower than at year-end 1999. The majority of this decline was due to decreased market risk in various trading books.

Structural Interest Rate Risk Management

Interest rate risk exposure in the Corporation's "core" business (non-trading) activities, i.e., asset/liability management ("ALM") position, is a result of reprice, option and basis risks associated with on- and off-balance sheet positions. Reprice risk represents timing mismatches in the Corporation's ability to alter contractual rates earned on financial assets or paid on liabilities in response to changes in market interest rates. Basis risk refers to the potential for changes in the underlying relationship between market rates or indices, which subsequently result in a narrowing of the spread earned on a loan or investment relative to its cost of funds. Option risk arises from "embedded options" present in many financial instruments such as interest rate options, loan prepayment options and deposit early withdrawal options. These provide customers and investors opportunities to take advantage of directional changes in rates, which could have an adverse impact on the Corporation's margin performance. Embedded options are complex risk positions that are difficult to predict and offset, and are a large component of the interest rate risk exposure to the Corporation.

The Corporation has established risk measures, limits, policy guidelines and internal control mechanisms (collectively referred to as the Interest Rate Risk Policy) for managing the overall ALM position. According to

these policies, responsibility for the management of interest rate risk resides in the Corporate Treasury function. Other business units are prohibited from purposefully assuming interest rate risk, except in circumstances where it is uniquely related to a product or business offering.

The ALM position is measured and monitored using sophisticated and detailed risk management tools, including earnings simulation modeling and economic value of equity sensitivity analysis, to capture both near-term and longer-term interest rate risk exposures. The level of interest rate risk taken by the Corporation is closely monitored and managed by a comprehensive risk control process involving senior executives from across the Corporation, including finance, risk management and the various lines of business. Senior Management is regularly apprised of the risks associated with the ALM position, with exposures tested under multiple rate and yield curve scenarios. The Corporation balances the return potential of the ALM position against the desire to limit volatility in earnings and/or economic value.

Earnings simulation analysis, or earnings-at-risk, measures the sensitivity of pretax earnings to various interest rate movements. The base-case scenario is established using the implied forward curve. The comparative scenarios assume an immediate parallel shock of the forward curve in increments of ± 100 basis point rate movements. Numerous other scenarios are analyzed, including more gradual rising or declining rate changes and non-parallel rate shifts. Estimated earnings for each scenario are calculated over a 12-month and 24-month horizon. The interest rate scenarios are used for analytical purposes and do not necessarily represent Management's view of future market movements. Rather, these are intended to provide a measure of the degree of volatility interest rate movements may introduce into the earnings and economic value of the Corporation.

The table below shows the Corporation's pretax earnings sensitivity profile as of year-end 2000 and 1999:

	Immediate Change in Rates	
(In millions)	**−100 bp**	**+100 bp**
December 31, 2000	**$29**	**$ 5**
December 31, 1999	194	(178)

The change in the earnings sensitivity between 1999 and 2000 primarily reflects Management's decision to maintain a relatively neutral rate risk posture, and was achieved largely by shortening the duration of investments held for liquidity and collateral purposes.

Modeling the sensitivity of earnings to interest rate risk is highly dependent on the numerous assumptions embedded in the model. While the earnings sensitivity analysis incorporates Management's best estimate of interest rate and balance sheet dynamics under various market rate movements, the actual behavior and resulting earnings impact will likely differ from that projected. For mortgage-related assets, the earnings simulation model captures the expected prepayment behavior under changing interest rate environments. Additionally, the model measures the impact of interest rate caps and floors on adjustable-rate loan products. Assumptions and methodologies regarding the interest rate or balance behavior of indeterminate maturity products, e.g., credit card receivables, savings, money market, NOW and demand deposits reflect Management's best estimate of expected future behavior and are reviewed regularly. Sensitivity of service fee income to market interest rate levels, such as those related to cash management products, is included as well. The earnings sensitivity profile does not reflect potential differences in the timing of income recognition on transactions that were designed to have an offsetting economic effect. For example, the interest-only strip recorded in conjunction with a credit card securitization may be subsequently subject to the accounting recognition of impairment due to adverse changes in market interest and payment rates while the income or expense on offsetting asset and liability positions are recorded on an accrual basis.

The Corporation has risk exposure at time periods beyond the 24 months captured in earnings sensitivity analysis. Management uses an economic value of equity sensitivity technique to capture the risk in both short and long-term positions. This analysis involves calculating future cash flows over the full life of all current assets, liabilities and off-balance sheet positions under different rate scenarios. The discounted present value of all cash flows represents the Corporation's economic value of equity. The sensitivity of this value to shifts in the yield curve allows Management to measure longer-term repricing and option risk in the portfolio. Interest rate risk in trading activities and other activities, including certain overseas balance sheet positions, is managed principally as trading risk.

Foreign Exchange Risk Management

Whenever possible, foreign currency-denominated assets are funded with liability instruments denominated in the same currency. If a liability denominated in the same currency is not immediately available or desired, a forward foreign exchange or cross-currency swap contract is used to fully hedge the risk due to cross-currency funding.

To minimize the capital impact of translation gains or losses measured on an after-tax basis, the Corporation uses forward foreign exchange contracts to hedge the exposure created by investments in overseas branches and subsidiaries.

Credit Risk Management

In conducting its business operations, the Corporation is exposed to the risk that borrowers or counterparties may default on their obligations to the Corporation. These transactions create credit exposure that is reported both on and off the balance sheet. On-balance sheet credit exposure includes such items as loans. Off-balance sheet credit exposure includes unfunded credit commitments and other credit-related financial instruments. Credit exposures resulting from derivative financial instruments are reported both on and off the balance sheet; see page 38 for more details.

The Corporation has developed policies and procedures to manage the level and composition of risk in its credit portfolio. The objective of this credit risk management process is to quantify and manage credit risk on an aggregate portfolio basis as well as to reduce the risk of a loss resulting from a customer's failure to perform according to the terms of a transaction. The Corporation's Risk Management Department works with lending officers and other various line of business personnel involved in credit decision making and is involved in the implementation, refinement and monitoring of the Corporation's credit policies and procedures. Credit limits are subject to varying levels of approval by senior line of business management and the Corporate Risk Management Department.

In order to meet its credit risk management objectives, the Corporation maintains a risk profile that is diverse in terms of borrower concentrations, product-type, and industry and geographic concentrations. Additional diversification of the Corporation's exposure is accomplished through syndication of credits, participations, loan sales, securitizations and other risk-reduction measures.

Consumer Risk Management

The Corporation's consumer risk management process utilizes sophisticated risk assessment tools, including credit scoring, across each of the consumer lines of business, including credit cards, loans secured by real estate, automobile loans and leases, and other unsecured loans. With these tools, product and price offerings are targeted to best match the consumer risk profile.

Management of consumer lines of business continue to proactively manage the risk/reward relationship of each consumer loan portfolio segment, such that these businesses are positioned to achieve profitability targets and required rates of return on investment.

Commercial Risk Management

The Corporation's commercial risk management process utilizes enterprise policies focused on origination, portfolio management and managed asset related activities. This risk management framework establishes approval authorities and related processes, risk rating methodologies, portfolio review parameters and management of problem loans. Line of business senior management and the Corporate Risk Management Department are actively engaged in these activities as well as continuously exploring methods to improve commercial risk management.

Management of the commercial lines of business continue to proactively manage the risk/reward relationship of each commercial relationship and portfolio segment such that these businesses are positioned to achieve profitability targets and required rates of return.

Within the commercial portfolio, borrowers/transactions are assigned specific risk ratings (on a scale from 1–12, with 1 and 12 the highest and lowest rating, respectively) by the originating credit officer based upon an established underwriting and approval process. Approvals are made based upon the amount of credit exposure inherent in the credit extension and are reviewed by senior line of business management and the Corporate Risk Management Department, as appropriate. Risk ratings are reviewed periodically by senior line of business personnel and the Corporate Risk Management Department and revised, if needed, to reflect the borrowers'/transactions' current risk profile. The lower categories of credit risk are equivalent to the four bank regulatory classifications: Special Mention, Substandard, Doubtful and Loss.

Operating Risk Management

In addition to being exposed to liquidity, market and credit risk, the Corporation is also exposed to numerous types of operating risk. Operating risk generally refers to the risk of loss resulting from the Corporation's operations, including, but not limited to, the risk of fraud by employees or persons outside the Corporation, the execution of unauthorized transactions by employees, errors relating to transaction processing and systems, and other breaches of the internal control system and compliance requirements. This risk of loss also includes the potential legal actions that could arise as a result of the operational deficiency or as a result of noncompliance with applicable regulatory standards.

The Corporation operates in many different businesses in diverse markets and placed reliance on the ability of its employees and systems to process a high number of transactions. In the event of a breakdown in the internal control systems, improper operation of systems or improper employee actions, the Corporation could suffer financial loss, face regulatory action and suffer damage to its reputation. In order to address this risk, Management maintains a system of internal controls with the objective of providing proper transaction authorization, safeguarding of assets from misuse or theft, and ensuring the reliability of financial and other data.

The Corporation maintains systems of controls that it believes are reasonably designed to provide Management with timely and accurate information about the operations of Bank One. These systems have been designed to manage operating risk at appropriate levels given the Corporation's financial strength, the environment in which it operates, and considering factors such as competition and regulation. Bank One has also established procedures that are designed to ensure that Management's policies relating to conduct, ethics and business practices are followed on a uniform basis. In certain cases, the Corporation has experienced losses from operating risk. Such losses, among other things, have included the effects of operational errors that the Corporation has discovered and taken charges for (see Significant Items on page 15). While there can be no assurance that the Corporation will not suffer such losses in the future, Management believes that substantial progress has been made in improving internal controls, systems and corporate-wide processes and procedures. Furthermore, Management believes the plans to streamline the organization through charter consolidations and further systems integration, as well as policies enacted to push down reporting accountabilities further in the organization, have improved the Corporation's ability to identify and limit operating risk.

Selected Statistical Information

The significant components of credit risk and the related ratios, presented on a reported basis, for the years indicated are as follows:

(Dollars in millions)	December 31, 2000	1999	1998	1997	1996
At year-end:					
Loans outstanding	**$174,251**	$163,877	$155,398	$159,579	$153,496
Nonperforming loans	**2,475**	1,559	1,207	1,025	912
Other, including other real estate owned	**98**	106	90	61	71
Nonperforming assets	**2,573**	1,665	1,297	1,086	983
Allowance for credit losses	**4,110**	2,285	2,271	2,817	2,687
Nonperforming assets/ related assets	**1.48%**	1.02%	0.83%	0.68%	0.64%
Allowance for credit losses/loans outstanding	**2.36**	1.39	1.46	1.77	1.75
Allowance for credit losses/nonperforming loans	**166**	147	188	275	295
For the year ended:					
Average loans	**$171,768**	$156,855	$154,952	$155,926	$146,094
Net charge-offs	**1,391**	1,206(1)	1,498	1,887	1,522
Net charge-offs/average loans	**0.81%**	0.77%	0.97%	1.21%	1.04%
Allowance for credit losses/net charge-offs	**295**	189(1)	152	149	177

(1) The $1.206 billion net charge-off amount in 1999 included $143 million of charges required to bring the consumer portfolio into compliance with FFIEC guidelines. Excluding these incremental charge-offs, the adjusted coverage ratio would have been 215%.

Loan Composition

For analytical purposes, the Corporation's portfolio is divided into commercial, consumer and credit card categories as of December 31 for the years indicated:

	2000		1999		1998		1997		1996	
	Amount	**% (1)**	**Amount**	**% (1)**	**Amount**	**% (1)**	**Amount**	**% (1)**	**Amount**	**% (1)**

Total managed	**$236,492**	**100%**	$229,196	100%	$216,391	100%	$196,993	100%	$182,799	100%
Total reported	**$174,251**		$163,877		$155,398		$159,579		$153,496	

(1) Percentages shown above for loan type are determined as a percentage of total managed assets.

(2) During 1998, the Corporation's certificated retained interests in credit card securitizations were reclassified to investment securities—available for sale. The Corporation's certificated retained interests totaled $22.6 billion, $19.7 billion and $16.7 billion at December 31, 2000, 1999 and 1998, respectively.

Consumer and Credit Card Portfolio

Consumer loans consist of credit card receivables as well as loans secured by residential real estate, automobile financing, and other forms of secured and unsecured consumer installment credit. Individual decisions to grant credit are made pursuant to processes existing at the appropriate line of business level, with the Credit Risk Management Department's oversight for overall credit policies (see Consumer Risk Management discussion on page 27). Excluding securitized receivables, the aggregate consumer and credit card loan portfolio increased during the year to $73.8 billion at year-end 2000. Including securitized credit card receivables, the consumer portfolio increased $3.2 billion, or 2%, to $136 billion at December 31, 2000.

Credit quality within the Corporation's consumer and credit card portfolios deteriorated modestly in 2000 from 1999 levels, reflecting increases in nonperforming consumer finance and home equity loans. Consumer bankruptcies, while down from their peak levels experienced in 1998, remain at historically high levels. An increase in the rate of bankruptcy filings in 2001 would result in higher credit losses across the consumer and credit card portfolios.

Managed Credit Card Receivables

For analytical purposes, the Corporation reports credit card receivables on both a reported basis and a managed basis. Reported credit card receivables include those receivables held in the portfolio and reported on the balance sheet. Managed credit card receivables include reported credit card receivables and those sold to investors through securitization (see page 41 for discussion of Loan Securitizations).

	December 31		
(Dollars in millions)	**2000**	**1999**	**1998**
Average balances:			
Credit card loans	**$ 4,754**	$ 7,233	$15,628
Securitized credit card receivables	**61,424**	61,747	44,904
Total average managed credit card receivables	**$66,178**	$68,980	$60,532
Total net charge-offs (including securitizations)	**$ 3,584**	$ 3,790	$ 3,369
Net charge-offs/average total receivables (1)	**5.42%**	5.49%	5.57%
Credit card delinquency rate at period-end:			
30 or more days	**4.51%**	4.57%	4.47%
90 or more days	**2.02%**	2.13%	1.98%

(1) Ratios include $183 million of securitized charge-offs taken in the fourth quarter of 1999 related to the early adoption of certain of the FFIEC's new consumer charge-off guidelines.

Average managed credit card receivables at December 31, 2000 were down slightly from year-end 1999, reflecting attrition, the disposition of international card operations and reduced new account origination. The increase in managed credit card loans in 1999 from 1998 reflected in part the Corporation's September 1998 purchase of the credit card operations of Chevy Chase Bank, FSB, including $4.8 billion of managed credit card loans.

The decline in the managed credit card charge-off rate to 5.42% in 2000 from 5.49% in 1999 reflected the effect of $183 million of securitized charge-offs taken in the 1999 fourth quarter related to the early adoption of certain new FFIEC consumer charge-off guidelines. The 1999 rate also included the effect of charge-off policy conformance changes made in the 1998 fourth quarter. Without conforming such practices, and excluding the impact of the $183 million of securitized charge-offs, the 1999 charge-off rate would have been 5.36%, compared with 5.57% in 1998. Future charge-offs in the credit card portfolio and credit quality are subject to uncertainties which may cause actual results to differ widely from that forecasted, including the direction and level of loan delinquencies, changes in consumer behavior, bankruptcy trends, portfolio seasoning, interest rate movements,

and portfolio mix, among other things. Current economic data suggests that credit quality will not significantly deteriorate. However, any change in the general economy could materially change these expectations.

Consumer Loans

Information pertaining to consumer loans (i.e., non-credit card) for the years ended is as follows:

	December 31		
(Dollars in millions)	**2000**	**1999**	**1998**
Average balances	**$66,812**	$59,440	$57,206
Total net charge-offs	**547**	558	413
Net charge-offs/average balances (1)	**0.82%**	0.94%	0.72%

(1) Ratios include $143 million of consumer charge-offs taken in the fourth quarter of 1999 related to the early adoption of the FFIEC's new consumer charge-off guidelines. Excluding these charge-offs, the 1999 rate was 0.70%.

The consumer loan portfolio primarily consists of loans secured by real estate as well as auto loans and leases, and provides broad diversification of risk from both a product and geographic perspective. The net charge-off rate for non-credit card consumer loans in 2000 was 0.82%. The decrease from 1999 reflects $143 million of consumer charge-offs taken in the fourth quarter of 1999 related to early adoption of the FFIEC's new consumer credit guidelines. The 1999 consumer charge-off rate, excluding these charge-offs, would have been 0.70%. The 12 basis point increase in the 2000 net charge-off rate over the adjusted 1999 rate reflected the maturing credit loss profile associated with high volume prior year vintages. The adjusted 1999 consumer charge-off rate of 0.70% was down two basis points from the 1998 ratio, reflecting consistent performance. Future consumer portfolio charge-offs and credit quality are subject to uncertainties which may cause actual results to differ widely from that forecasted, including the direction and level of loan delinquencies, changes in consumer behavior, bankruptcy trends, portfolio seasoning, interest rate movements, and portfolio mix, among other things. Current data suggests that credit quality will not significantly deteriorate with the exception of certain indirect portfolios underwritten over the past few years. However, any change in the general economy could materially change these expectations.

The Corporation continues to proactively manage its consumer credit operation to ensure profitable and manageable growth that can be sustained regardless of the economic environment. Recent actions taken include 1) tightening of credit underwriting criteria, 2) rationalization of the number and quality of third party loan originators (i.e., brokers and correspondents) and 3) refinement of pricing and risk management models. Collectively, these actions are intended to result in a more prudent and profitable portfolio growth trend in 2001.

Commercial Portfolio

The Corporation's commercial portfolio primarily comprises Corporate Banking (including syndicated credits) and Middle Market Banking loans and leases as well as commercial real estate loans made across various industries and geographic regions. Commercial loans increased 4%, from $96.4 billion at December 31, 1999, to $100.5 billion at December 31, 2000, primarily driven by growth in both the Corporate Banking and Middle Market Banking portfolios. Nonperforming commercial loans increased $708 million to $1.761 billion at year-end 2000, from $1.053 billion at December 31, 1999, primarily due to portfolio deterioration across several industries and acquisition finance transactions. Commercial net charge-offs were $597 million, or 0.60% of average loans, in 2000, compared with $306 million, or 0.34%, in 1999. For 2001, net charge-offs are expected to increase given increases in nonperforming commercial loans and loan losses observed in 2000, and the general outlook for weaker economic conditions in 2001. Future charge-offs and credit quality in the commercial portfolio are subject to uncertainties which may cause actual results to differ widely from that forecasted, including the direction and level of economic activity and its impact on selected industries, commercial real estate

values, interest rate movements, and portfolio mix, among other things. Management currently anticipates that commercial credit losses for the next several quarters will at least double that of the approximately 40 basis points experienced in the last several years. While credit losses expected for the next several quarters would be considered higher than normal, a deep recession would cause dramatically higher credit losses than currently anticipated.

Commercial Portfolio Concentrations

The following table reflects the more significant borrower industry concentrations of the commercial loan portfolio as of December 31, 2000:

(Dollars in millions)	Carrying Amount	Percent
Commercial real estate	**$ 22,535**	**22.4%**
Wholesale trade	**6,080**	**6.0**
Industrial materials	**4,775**	**4.8**
Oil and gas	**4,207**	**4.2**
Metals and products	**4,128**	**4.1**
Consumer staples	**3,880**	**3.9**
Other	**54,855**	**54.6**
Total commercial	**$100,460**	**100.0%**

Commercial Real Estate

The commercial real estate segment of the portfolio is the largest product category and consists primarily of loans secured by real estate as well as certain loans that are real estate-related. This exposure includes loans and commitments that finance both owner-occupied and investment properties/projects.

At December 31, 2000, commercial real estate loans totaled $22.5 billion, or 22% of commercial loans, compared with $24.7 billion, or 26% of commercial loans, at December 31, 1999. This 9% decline was largely due to Management efforts to reduce commercial real estate exposure. During 2000, net charge-offs in the commercial real estate portfolio segment were $14 million, compared with $1 million in 1999. Nonperforming commercial real estate assets, including other real estate owned, totaled $401 million, or 1.8% of related assets, at December 31, 2000, compared with $413 million, or 1.7% of related assets, at December 31, 1999.

Commercial real estate lending is conducted in several lines of business with the majority of these loans originated by Corporate Banking primarily through its specialized National Commercial Real Estate Group. This group's focus is lending to targeted regional and national real estate developers, homebuilders and REITs/REOCs. As of December 31, 2000, this group's loan outstandings totaled $9.5 billion or 42% of the commercial real estate portfolio. Middle Market Banking originates primarily owner-occupied real estate loans located in the various markets served by Middle Market bankers.

The table below presents commercial real estate loans for the National Commercial Real Estate Group by property type as of December 31, 2000:

PROPERTY-TYPE (National Commercial Real Estate Group only) (Dollars in millions)	Carrying Amount	Percent
Retail	**$ 1,608**	**16.9%**
Apartment complexes	**1,525**	**16.1**
Office buildings	**1,412**	**14.9**
REIT/REOC	**1,228**	**12.9**
Industrial	**491**	**5.2**
Lodging	**402**	**4.2**
Other	**2,823**	**29.8**
Total National Commercial Real Estate Group loans	**9,489**	**100.0%**
Other commercial real estate loans (1)	**13,046**	
Total commercial real estate loans	**$22,535**	

(1) Comprised primarily of Middle Market Banking loans secured by real estate.

The commercial real estate portfolio is geographically diverse, with no geographic concentrations greater than 10% of the portfolio at December 31, 2000.

Asset Quality

Nonperforming Assets

The Corporation defines nonperforming loans as commercial loans that are impaired and/or on nonaccrual status, consumer loans (i.e., non-credit card) greater than 90 days past due and restructured loans. These loans, along with assets primarily consisting of foreclosed real estate, represent nonperforming assets.

The following table shows the Corporation's nonperforming assets for the past five years:

	December 31				
(Dollars in millions)	2000	1999	1998	1997	1996
Nonperforming Loans:					
Commercial	**$1,761**	$1,053	$ 729	$ 609	$536
Consumer (1)	**714**	506	478	416	376
Total (2)	**2,475**	1,559	1,207	1,025	912
Other, primarily other real estate owned	**98**	106	90	61	71
Total nonperforming assets	**$2,573**	$1,665	$1,297	$1,086	$983
Nonperforming assets/related assets	**1.48%**	1.02%	0.83%	0.68%	0.64%
Loans 90 days or more past due and accruing interest (1)	**$ 62**	$ 126	$ 239	$ 578	$542

(1) Prior year amounts were restated for comparison purposes to reflect a change in policy adopted in 2000 to classify consumer loans 90 days past due as nonperforming.

(2) The amount of interest on nonperforming loans that was contractually due in 2000 totaled $143 million. Of this amount, $22 million was actually recorded in 2000.

At December 31, 2000, nonperforming assets totaled $2.573 billion, compared with $1.665 billion at year-end 1999 and $1.297 billion at year-end 1998. The increase in nonperforming assets from year-end 1999 was primarily due to increases in nonperforming loans in the non-real estate portion of the commercial portfolio, and to a lesser extent, the consumer portfolio. The $208 million increase in consumer nonperforming loans in 2000 was attributable mainly to a deterioration in the home equity portfolio segment. Consumer nonperforming

loans are written down to net realizable value once they reach 120 days delinquent and within 60 days of bankruptcy notification, thus minimizing the potential for additional credit charge-offs in this portfolio segment. The $708 million increase in nonperforming loans in the commercial portfolio resulted from credit deterioration across several industries and leveraged acquisition finance transactions. During 2000, Management substantially increased its focus on reviewing and analyzing credit, including giving more weight to recent history in estimating the potential for borrower default. This has led in some cases to earlier recognition of nonperforming and problem assets as compared to previous years.

Despite the Corporation's diversified commercial portfolio, the Corporation has experienced credit quality deterioration in a number of distinct market segments. A weakening economy, among other things, had led to an increase in nonperforming loans. The Corporation has established processes for identifying potential problem areas of the portfolio, which currently include exposure to leveraged lending and acquisition finance activities, healthcare, automotive parts and manufacturing, business finance and leasing, professional services, miscellaneous transportation services, selected utilities, telecommunications, and companies engaged in ongoing asbestos litigation. The Corporation will continue its enhanced focus on identifying and monitoring these potential exposure areas.

Charge-offs

Managed net charge-offs increased 2% during 2000 to $4.728 billion, reflecting higher commercial charge-offs. This increase was partially offset by lower consumer and credit card charge-offs relative to the 1999 period, which reflected early adoption of certain new FFIEC consumer charge-off guidelines. The managed net charge-off rate decreased to 2.03% in 2000 versus 2.13% in 1999. Excluding the FFIEC-related charges adopted in 1999, the net charge-off rate for 2000 was five basis points higher than in 1999.

The following table shows a breakout of net charge-offs by portfolio segment for the past three years ended December 31:

	2000			1999			1998		
(Dollars in millions)	**Net charge-offs**	**Average balance**	**Net charge-off rate**	**Net charge-offs**	**Average balance**	**Net charge-off rate**	**Net charge-offs**	**Average balance**	**Net charge-off rate**
Commercial	**$ 597**	**$100,202**	**0.60%**	$ 306	$ 90,182	0.34%	$ 222	$ 82,118	0.27%
Consumer (1)	**547**	**66,812**	**0.82**	558	59,440	0.94	413	57,206	0.72
Credit card (1)(2)	**3,584**	**66,178**	**5.42**	3,790	68,980	5.49	3,369	60,532	5.57
Total—Managed	**4,728**	**$233,192**	**2.03%**	4,654	$218,602	2.13%	4,004	$199,856	2.00%
Securitized	**(3,337)**			(3,448)			(2,506)		
Total—Reported	**$ 1,391**	**$171,768**	**0.81%**	$ 1,206	$156,855	0.77%	$ 1,498	$154,952	0.97%

(1) Includes $143 million of consumer charge-offs and $183 million of securitized charge-offs taken in the fourth quarter of 1999 related to the early adoption of certain of the FFIEC's new consumer charge-off guidelines.

(2) Reported on a managed basis.

Charge-off Policies

A charge-off on commercial loans is recorded in the reporting period in which either an event occurs that confirms the existence of a loss or it is determined that a loan or a portion of a loan is uncollectible.

The timing and amount of the charge-off on consumer loans will depend on the type of loan, giving consideration to available collateral, as well as the circumstances giving rise to the delinquency. The Corporation adheres to uniform guidelines published by FFIEC in charging off consumer loans. A credit card loan is charged off when it becomes 180 days past due or in the event of bankruptcy notification, specifically, 60 days of receipt of notification. Consumer loans (i.e., non-credit card) are generally charged-off following a delinquency period of 120 days past due, or 60 days of receipt of notification in case of bankruptcy. Closed-end consumer loans such as auto loans and leases, and home mortgage loans, are typically written down to the extent of loss after considering the net realizable value of the collateral.

Allowance for Credit Losses

The allowance for credit losses is maintained at a level that in Management's judgment is adequate to provide for estimated probable credit losses inherent in various on- and off-balance sheet financial instruments. Reserves are based on an estimate of potential inherent loss at a point in time using a combination of empirically driven tests and Management's judgment. Each quarter, reserves are formally estimated by each line of business and reviewed and modified by the Corporate Risk Management Department and Senior Management. The allowance for credit losses also include provisions for losses on loans considered impaired and measured pursuant to Statement of Financial Accounting Standards (''SFAS'') No. 114, ''Accounting by Creditors for Impairment of a Loan'' (see Note 7 to the Consolidated Financial Statements on page 61). Securitized and held for sale loans, including credit card receivables, are not subject to this reserve process.

It is the Corporate Risk Management Department's responsibility to recommend a reserve and provision that result in adequate coverage of inherent losses within the Corporation's credit portfolios. The Corporate Risk Management Department's assessment is based on line-of-business reserve tests, portfolio-level econometric modeling and stress testing, as well as Management's judgment. The Corporate Risk Management Department also utilizes third-party analysis to validate internal measures of expected inherent loss, credit quality and reserve adequacy.

The table below summarizes the changes in the allowance for credit losses for the years ended December 31:

(In millions)	2000	1999	1998	1997	1996
Balance, beginning of year	**$2,285**	$2,271	$2,817	$2,687	$2,422

Credit card	**14**	44	159	164	101
Total recoveries	**276**	325	447	510	405
Net charge-offs:					
Commercial	**597**	306	222	87	79
Consumer	**547**	558	413	420	328
Credit Card	**247**	342	863	1,380	1,115
Total net charge-off	**1,391**	1,206	1,498	1,887	1,522
Provision for credit losses	**3,398**	1,249	1,408	1,988	1,716
Transfers	**(182)**	(29)	(456)	29	71
Balance, end of year	**$4,110**	$2,285	$2,271	$2,817	$2,687

Transfers from the allowance for credit losses primarily represent allocable credit reserves associated with consumer loan sale transactions, including securitization transactions.

Composition of Allowance for Credit Losses

While the allowance for credit losses is available to absorb credit losses in the entire portfolio, the tables below present an estimate of the allowance for credit losses allocated by loan type and the percentage of loans in each category to total loans as of December 31:

(Dollars in millions)	**2000**		**1999**		**1998**		**1997**		**1996**	
Commercial (1)	**$3,199**	**78%**	$ 972	43%	$ 834	37%	$ 660	23%	$ 674	25%
Consumer	**714**	**17**	486	21	440	19	484	17	345	13
Credit Card	**197**	**5**	148	6	199	9	813	29	930	35
Unallocated	**—**	**—**	679	30	798	35	860	31	738	27
Total	**$4,110**	**100%**	$2,285	100%	$2,271	100%	$2,817	100%	$2,687	100%
Percentage of loans to total loans:										
Commercial		**58%**		59%		57%		50%		48%
Consumer		**39**		39		37		36		36
Credit Card		**3**		2		6		14		16
Total		**100%**		100%		100%		100%		100%

(1) Includes reserves related to Business and Community Banking loans, which are included in the Retail business segment results.

The $1.825 billion increase in the allowance for credit losses in 2000, of which $1 billion relates to the fourth quarter, was due primarily to significantly higher commercial net charge-offs and nonperforming loans, and to some extent, portfolio growth. Contributing to the increase were refinements in the credit management process that involved analyzing all of the Corporation's credit exposure at an increasingly granular level. These actions include:

- Giving more weight to recent history when estimating expected default rates.
- Increasing the loss assumptions from default across most risk categories.
- Increasing the likelihood of draw downs against unfunded commitments.
- Stress-testing the portfolio based upon more recent, as well as long-term trends.

At December 31, 2000, the allowance for credit losses was 295% of current year net charge-offs (on a reported basis) as compared to a reserve coverage ratio of 189% at December 31, 1999. This increase reflected significant deterioration in certain components of the commercial portfolio, leading to a strengthening of loan loss reserves. The allowance for credit losses at December 31, 2000, represented 2.36% of period-end loans and 166% of nonperforming loans, up from 1.39% and 147%, respectively, at December 31, 1999. The allowance for credit losses established for specifically identified off-balance sheet lending exposures was insignificant at December 31, 2000.

Reserve Determination

The Corporation determines reserve amounts based upon the probable loss in the credit portfolios. The reserve is based on ranges of estimates and is intended to be adequate but not excessive. This process includes deriving probable loss estimates that are based on historical loss rates, portfolio stress testing of probable loss estimates and Management's judgment.

During the fourth quarter of 2000, the Corporation reviewed its practice of maintaining unallocated reserves in light of continuing refinement in loss estimation processes, including improvements in portfolio level stress testing techniques. It was concluded that the use of unallocated reserves would be discontinued. These reserves are now aligned with their respective portfolios.

Probable Loss Estimation

The Corporation employs several different methodologies for estimating probable losses. Methodologies are determined based on a number of factors, including type of asset (e.g., consumer installment versus commercial loan), risk measurement parameters (e.g., delinquency status and bureau score versus commercial risk rating), and risk management and collection processes (e.g., retail collection center versus centrally managed workout units).

For each of the consumer portfolios, including the credit card portfolio, reserves are established based on a statistical analysis of inherent loss over discrete periods of time. The analysis reviews historical losses, vintage performance, delinquencies and other risk characteristics of the various consumer products to estimate probable losses. These other risk characteristics evaluated may include, among other things, recent loss experience in the consumer portfolios, changes in origination sources, portfolio seasoning and underlying credit practices, including charge-off policies. These factors and analysis are updated on a quarterly basis.

For the commercial portfolio, the Corporation conducts a two-part test. First, significant credits that have a risk rating equivalent to the bank regulatory classifications of substandard, doubtful and loss are formally reviewed each quarter and asset-specific reserves are established as appropriate. Second, inherent losses for the remaining commercial portfolio are estimated by assigning a specific reserve factor to each risk category of the portfolio based on a statistical analysis of historical loss experience over a discrete period of time. During the second quarter of 2000, the Corporation refined its measurement process for estimating probable losses inherent in the commercial portfolio. To refine the process, the Corporation analyzed historical credit loss and risk-rating migration data. The results of the analysis showed deterioration in the Corporation's risk-class-specific default probabilities and loss given default estimates. The factors were updated to reflect a higher estimate of incurred losses in the portfolio, based on recent experience and Management's view of the current portfolio and economic conditions. The Corporation continues to review its estimated loss factors on a regular basis and updates such factors where appropriate.

Portfolio Stress-Testing

Stress-test based reserves are established in order to appropriately reflect the presence of indicators of inherent losses that are not fully reflected in the historical loss information. The factors considered include: nonperforming, charge-off, delinquency, portfolio growth and concentration trends; the imprecision inherent in the rating process that drives the application of reserve factors; and the effect of known changes in the economy or other events that affect loss performance and Management's judgment.

The Corporation has incorporated portfolio level stress testing since the first quarter of 1999. The focus of stress testing is to provide a range of reserve estimates which incorporate the Corporation's historical loss experience and the reserve impact of events that have occurred but which are not reflected in either the Corporation's historical expected loss factors or the current assigned risk rating.

Stress testing of the commercial portfolio is accomplished using a framework developed to test default and loss probability estimates and the expected downgrades to exposures in identified high-risk industries. This process includes: a base case scenario using three alternative market comparable probability sets and an estimated loss given default probability to measure the impact on reserves; determining the need to apply a higher loss given default probability to the base case since historical loss rates may vary over the business cycle; and the determination of trend based reserves in high-risk industries that may not be fully reflected in the historically based loss factors, using market-based tools and information as well as sanctioned macroeconomic forecasts.

Beginning in the second quarter of 2000, results of econometric modeling and stress testing of the consumer (i.e., non-credit card) portfolio by the Corporate Risk Management Department were formally incorporated into the estimation process. The purpose of this analysis is to quantify the impact of events that have occurred but whose effects are not yet incorporated into the historically based reserve rates. In this analysis, the consumer

subportfolios were subjected to seven distinct economic scenarios, and aggregate twelve-month losses were forecasted. Findings for the various scenarios were weighted to reflect the relative likelihood of the scenarios, and weighted average losses were obtained for each subportfolio within the consumer portfolio. The weighted average losses represent our best estimate of expected losses for each segment of the consumer portfolio. Based on an analysis of these tests and Management's judgment, line of business specific stress test based reserves were established. Specific factors incorporated into these tests included: increased concentration of higher loan-to-value ("LTV" greater than 90%) and sub-prime credits untested by a higher interest rate environment; higher concentration levels of used auto installment loans; lower new application quality; increased third party obligations; longer loan durations; and higher advance rates.

Beginning in the second quarter of 2000, results of econometric modeling and stress testing of the credit card portfolio by the Corporate Risk Management Department were formally incorporated into the estimation process. The purpose of this analysis is to quantify the impact of events that have occurred but whose effects are not yet incorporated into the historically based reserve rates. In this analysis, the subportfolios of First USA were subjected to seven distinct economic scenarios, and aggregate nine-month losses were forecasted. Findings for the various scenarios were weighted to reflect the relative likelihood of the scenarios and weighted average loss was obtained for the line of business. The weighted average loss represents our best estimate of expected losses for the credit card portfolio. Based on an analysis of these tests and Management's judgment, specific stress test based reserves were established for the credit card portfolio as detailed above.

Derivative Financial Instruments

The Corporation uses a variety of derivative financial instruments in its trading, asset and liability management, and corporate investment activities. See Note 21 (c), beginning on page 81, for a discussion of the nature and the terms of derivative financial instruments.

Notional Principal or Contractual Amounts of Derivative Financial Instruments

The following tables represent the gross notional principal or contractual amounts of outstanding derivative financial instruments used in certain activities:

December 31, 2000 (In billions)	Trading	Asset and Liability Management	Total
Interest rate contracts	**$ 695**	**$13**	**$ 708**
Foreign exchange contracts	**91**	**1**	**92**
Equity contracts	**8**	**—**	**8**
Commodity contracts	**3**	**—**	**3**
Total	**$ 797**	**$14**	**$ 811**
December 31, 1999 (In billions)			
Interest rate contracts	$ 895	$20	$ 915
Foreign exchange contracts	106	1	107
Equity contracts	10	—	10
Commodity contracts	1	—	1
Total	$1,012	$21	$1,033

These amounts indicate the volume of transaction activity, and they do not represent the market or credit risk associated with these instruments. In addition, these volumes do not reflect the netting of offsetting transactions.

Accounting for Derivative Financial Instruments

Derivative financial instruments used in trading activities are valued at estimated fair value. Such instruments include swaps, forwards, spot, futures, options, caps, floors and forward rate agreements and other conditional or exchange contracts in the interest rate, foreign exchange, equity and commodity markets. The estimated fair values are based on quoted market prices or pricing and valuation models on a present value basis using current market information. Realized and unrealized gains and losses, including any interest income or expense, are recorded in noninterest income as trading profits. Where appropriate, compensation for credit risk and ongoing servicing is deferred and recorded as income over the life of the derivative financial instruments.

Purchased option, cap and floor contracts are reported in derivative product assets, and written option, cap and floor contracts are reported in derivative product liabilities. For other derivative financial instruments, an unrealized gain is reported in derivative product assets, and an unrealized loss is reported in derivative product liabilities. However, fair value amounts recognized for derivative financial instruments executed with the same counterparty under a legally enforceable master netting arrangement are reported on a net basis. Cash flows from derivative financial instruments are reported net as operating activities.

Derivative financial instruments used in ALM activities, principally interest rate swaps, are typically classified as synthetic alterations or anticipatory hedges and are required to meet specific criteria. Such interest rate swaps are designated as ALM derivatives, and are linked to and adjust the interest rate sensitivity of a specific asset, liability, firm commitment, or anticipated transaction or a specific pool of transactions with similar risk characteristics. Interest rate swaps that do not meet these and the following criteria are designated as derivatives used in trading activities and are accounted for at estimated fair value.

Synthetic Alteration—(1) the asset or liability to be converted creates exposure to interest rate risk; (2) the swap is effective as a synthetic alteration of the balance sheet item; (3) the start date of the swap does not extend beyond that point in time at which it is believed that modeling systems produce reliable interest rate sensitivity information; and (4) the related balance sheet item, from trade date to final maturity, has sufficient balances for alteration.

Anticipatory Hedge—(1) the transaction to be hedged creates exposure to interest rate risk; (2) the swap acts to reduce inherent rate risk by moving closer to being insensitive to interest rate changes; (3) the swap is effective as a hedge of the transaction; (4) the significant characteristics and expected terms of the anticipated transaction are identified; and (5) it is probable that the anticipated transaction will occur.

Income or expense on most ALM derivatives used to manage interest rate exposure is recorded on an accrual basis, as an adjustment to the yield of the linked exposures over the periods covered by the contracts. This matches the income recognition treatment of that exposure, generally assets or liabilities carried at historical cost, that are recorded on an accrual basis. If an interest rate swap is terminated early or dedesignated as an ALM derivative, any unrecognized gain or loss at that point in time is deferred and amortized as an adjustment of the yield on the linked interest rate exposure position over the remaining periods originally covered by the swap. If all or part of a linked position is terminated, e.g., a linked asset is sold or prepaid, or if the amount of an anticipated transaction is likely to be less than originally expected, then the related pro rata portion of any unrecognized gain or loss on the swap is recognized in earnings at that time, and the related pro rata portion of the swap is subsequently accounted for at estimated fair value.

Income Resulting from Derivative Financial Instruments

The Corporation uses interest rate derivative financial instruments to reduce structural interest rate risk and the volatility of net interest margin. Net interest margin reflects the effective use of these derivatives. Without their use, net interest income would have been lower by $52 million in 2000, lower by $181 million in 1999 and lower by $78 million in 1998.

Deferred gains, net of deferred losses, on interest rate swaps terminated early or dedesignated as ALM derivatives totaled $19 million as of December 31, 2000. This amount will be amortized as an adjustment to interest income or expense on the linked interest rate exposure position. The net adjustment remaining to be amortized is $31 million in 2001, $12 million in 2002, $1 million in 2003 and $(25) million thereafter.

Credit Exposure Resulting from Derivative Financial Instruments

The Corporation maintains risk management policies that monitor and limit exposure to credit risks. For a further discussion of credit risks, see the "Credit Risk Management" section, beginning on page 26.

Credit exposure from derivative financial instruments arises from the risk of a counterparty default on the derivative contract. The amount of loss created by the default is the replacement cost or current fair value of the defaulted contract. The Corporation utilizes master netting agreements whenever possible to reduce its credit exposure from customer defaults. These agreements allow the netting of contracts with unrealized losses against contracts with unrealized gains to the same counterparty, in the event of a counterparty default.

The table below shows the impact of these master netting agreements:

	December 31	
(In millions)	2000	1999
Gross replacement cost	**$9,769**	$12,254
Less: Adjustment due to master netting agreements	**(7,222)**	(8,895)
Current credit exposure	**2,547**	3,359
Unrecognized net (gains) losses due to nontrading activity	**(225)**	13
Balance sheet exposure	**$2,322**	$ 3,372

Current credit exposure represents the total loss the Corporation would have suffered had every counterparty been in default on those dates. These amounts are adjusted by the unrealized and unrecognized gains and losses on derivatives used in asset and liability management activities to arrive at the balance sheet exposure.

Asset and Liability Management Derivatives

Access to the derivatives market is an important element in maintaining the Corporation's desired interest rate risk position. In general, the assets and liabilities generated through ordinary business activities do not naturally create offsetting positions with respect to repricing, basis or maturity characteristics. Using off-balance sheet instruments, principally plain vanilla interest rate swaps (ALM swaps), the interest rate sensitivity of specific on-balance sheet transactions, as well as pools of assets, is adjusted to maintain the desired interest rate risk profile.

At December 31, 2000, the notional value of ALM interest rate swaps tied to specific assets or liabilities totaled $12.6 billion as follows:

(In millions)	Receive Fixed Pay Floating	Pay Fixed Receive Floating	Basis Swaps	Total
Interest rate swaps associated with:				
Investment securities	$ —	$ 50	$—	$ 50
Funds borrowed (including long-term debt)	5,300	7,212	60	12,572
Total	$5,300	$7,262	$60	$12,622

Interest rate swaps used to adjust the interest rate sensitivity of specific transactions will not need to be replaced at maturity, since the corresponding asset or liability will mature along with the swap.

The Corporation has reviewed and modified its policies and procedures regarding the designation of hedged assets and liabilities in response to the January 1, 2001 adoption of a new accounting standard for derivatives, SFAS No. 133, ''Accounting for Derivative Instruments and Hedging Activities''. Certain types of assets and liabilities are less likely to be designated as hedged under the new accounting standard. However, this new standard has had only a minor impact on the Corporation's ability to hedge structural interest rate risk using interest rate swaps. The accounting treatment for derivative instruments used in hedging activities changed significantly on January 1, 2001, with the adoption of SFAS 133. See Note 1(j), beginning on page 54 for more information.

Asset and Liability Management Swaps—Maturities and Rates

The notional amounts, expected maturity, and weighted-average pay and receive rates for the ALM swap position at December 31, 2000, are summarized as follows:

(Dollars in millions)	2001	2002	2003	2004	2005	Thereafter	Total
Receive fixed/pay floating swaps:							
Notional amount	$ 475	$ —	$ 25	$ —	$2,000	$2,800	$ 5,300
Weighted average:							
Receive rate	7.24%	—%	7.61%	—%	7.12%	6.97%	7.05%
Pay rate	6.85%	—%	7.17%	—%	6.85%	6.87%	6.86%
Pay fixed/receive floating swaps:							
Notional amount	$ —	$2,787	$1,250	$2,690	$ 250	$ 285	$ 7,262
Weighted average:							
Receive rate	—%	7.03%	7.06%	6.99%	7.23%	7.11%	7.03%
Pay rate	—%	6.90%	7.18%	6.69%	7.67%	6.91%	6.90%
Basis swaps:							
Notional amount	$ 50	$ —	$ —	$ 10	$ —	$ —	$ 60
Total notional amount	$ 525	$2,787	$1,275	$2,700	$2,250	$3,085	$12,622

For generic interest rate swaps, the maturities are contractual. Variable interest rates—which generally are the one-month, three-month and six-month London interbank offered rates (''LIBOR'') in effect on the date of repricing—are assumed to remain constant. However, interest rates will change and consequently will affect the related weighted-average information presented.

LOAN SECURITIZATIONS

The Corporation transforms loans into securities, which are sold to investors—a process referred to as securitization. The Corporation primarily securitizes credit card receivables but also securitizes home equity loans and consumer assets to a limited extent. In a credit card securitization, a designated pool of credit card receivables is removed from the balance sheet and transferred to a third-party special purpose entity (''SPE'' or ''Trust''), that in turn sells securities to investors entitling them to receive specified cash flows during the life of the security. The proceeds from the issuance are then distributed by the SPE to the Corporation as consideration for the loans transferred. Following a securitization, the Corporation receives: fees for servicing the receivables and any excess finance charges, yield-related fees, and interchange revenue on the receivables over and above the interest paid to the investors, net credit losses and servicing fees (termed ''the excess spread'').

The Corporation's continuing involvement in the securitized assets includes the process of managing and servicing the transferred receivables, as well as maintaining an undivided, pro rata interest in all credit card receivables that have been securitized, referred to as seller's interest, which is generally equal to the pool of assets included in the securitization less the investor's portion of those assets. As the amount of the loans in the securitized pool fluctuates due to customer payments, purchases, cash advances, and credit losses, the carrying

amount of the seller's interest will vary. However, the seller's interest is required to be maintained at a minimum level to ensure receivables are available for allocation to the investor interest. This minimum level is generally between 4% and 7% of the SPE's principal receivables.

Investors in the beneficial interests of the securitized loans have no recourse against the Corporation if cash flows generated from the securitized loans are inadequate to service the obligations of the SPE. To help ensure that adequate funds are available in the event of a shortfall, the Corporation is required to deposit funds into cash spread accounts if excess spread falls below certain minimum levels. Spread accounts are funded from excess spread that would normally be returned to the Corporation. In addition, various forms of other credit enhancement are provided to protect more senior investor interests from loss. Credit enhancements associated with credit card securitizations, such as cash collateral or spread accounts, totaled $311 million at December 31, 2000, and are classified on the balance sheet as other assets.

The following comprised the Corporation's managed credit card loans at December 31, 2000:

(In millions)	
Owned credit card loans—held in portfolio	$ 2,835
Owned credit card loans—held for future securitization	1,909
Seller's interest in credit card loans (investment securities) (1)	22,446
Total credit card loans reflected on balance sheet	27,190
Securities sold to investors and removed from balance sheet	39,795
Managed credit card loans	$66,985

(1) Includes approximately $900 million of credit card loans sold in a securitization occurring in the first quarter of 2001.

For analytical purposes only, the following table shows income statement line items adjusted for the net impact of securitization of credit card receivables for the years ended December 31:

(Dollars in millions)	Reported	Credit Card Securitizations	Managed
		2000	
Net interest income—tax-equivalent basis	**$ 8,974**	**$ 4,532**	**$ 13,506**
Provision for credit losses	**3,398**	**3,337**	**6,735**
Noninterest income	**5,090**	**(1,195)**	**3,895**
Noninterest expense	**11,608**	**—**	**11,608**
Net income (loss)	**(511)**	**—**	**(511)**
Total average loans	**171,768**	**61,424**	**233,192**
Total average earning assets	**241,058**	**42,977**	**284,035**
Total average assets	**271,984**	**42,977**	**314,961**
Net interest margin	**3.72%**	**10.55%**	**4.76%**
Delinquency and charge-off rates:			
Credit card delinquencies over 30 days as a percentage of ending credit card loan balances	**2.74%**	**4.64%**	**4.51%**
Credit card delinquencies over 90 days as a percentage of ending credit card loan balances	**1.20%**	**2.08%**	**2.02%**
Net credit card charge-offs as a percentage of average credit card loan Balances	**5.20%**	**5.43%**	**5.42%**
		1999	
Net interest income—tax-equivalent basis	$ 9,142	$ 5,315	$ 14,457
Provision for credit losses	1,249	3,265	4,514
Noninterest income	8,692	(2,050)	6,642
Noninterest expense	11,490	—	11,490
Net income	3,479	—	3,479
Total average loans	156,855	61,747	218,602
Total average earning assets	223,539	45,698	269,237
Total average assets	256,491	45,698	302,189
Net interest margin	4.09%	11.63%	5.37%
Delinquency and charge-off rates:			
Credit card delinquencies over 30 days as a percentage of ending credit card loan balances	4.06%	4.60%	4.57%
Credit card delinquencies over 90 days as a percentage of ending credit card loan balances	1.87%	2.15%	2.13%
Net credit card charge-offs as a percentage of average credit card loan Balances	4.73%	5.58%	5.49%

Capital Management

Capital represents the stockholders' investment on which the Corporation strives to generate attractive returns. It is the foundation of a cohesive risk management framework and links return with risk. Capital supports business growth and provides protection to depositors and creditors.

In conjunction with the annual financial planning process, a capital plan is established to ensure that the Corporation and all of its subsidiaries have capital structures consistent with prudent management principles and regulatory requirements.

Economic Capital

An important aspect of risk management and performance measurement is the ability to evaluate the risk and return of a business unit, product or customer consistently across all lines of business. The Corporation's economic capital framework facilitates this standard measure of risk and return. Business units are assigned capital consistent with the underlying risks of their product methodology set, customer base and delivery channels. The following principles are inherent in the capital attribution employed:

- An equal amount of capital is assigned for each measured unit of risk.
- Risk is defined in terms of ''unexpected'' losses over the life of the exposure, measured at a confidence interval consistent with that level of capitalization necessary to achieve a targeted AA debt rating. Unexpected losses are in excess of those normally incurred and for which reserves are maintained.
- Business units are assessed a uniform charge against allotted capital, representing a target hurdle rate on equity investments. Returns on capital in excess of the hurdle rate contribute to increases in shareholder value.

Four forms of risk are measured—credit, market, operational and lease residual. Credit risk capital is determined through an analysis of both historical loss experience and market expectations. Market risk capital is set consistent with value at risk limits established by the Corporation's risk oversight committees. Operational risk capital incorporates event and technology risks, as well as the general business risks arising from operating leverage. The operating risk evaluation process involves an examination of various risk factors that contribute to a greater likelihood of loss due to business failure, fraud or processing error. Finally, lease residual risk capital covers the potential for losses arising from the disposition of assets returned at the end of lease contracts. This price risk is analyzed based upon historical loss experiences and market factors, as well as by reviewing event-specific scenarios.

The economic capital process provides a valuable analytical tool that is critical to the understanding of business segment performance trends. The methodologies employed are subject to ongoing development and review. Over time, the Corporation's view of individual risks and associated capital will likely change given improvements in our ability to quantify risks inherent in various business activities.

Regulatory Capital Requirements

Bank One is subject to capital requirements and guidelines imposed on bank holding companies by the Federal Reserve Board. The Office of the Comptroller of the Currency (''OCC''), the Federal Deposit Insurance Corporation (''FDIC'') and the Federal Reserve Board impose similar requirements and guidelines on the Banks within their respective jurisdictions. These capital requirements establish higher capital standards for banks and bank holding companies that assume greater risks. For this purpose, a bank holding company's or bank's assets and certain specified off-balance sheet commitments are assigned to four risk categories, each weighted differently based on the level of credit risk ascribed to such assets or commitments. A bank holding company's or bank's total capital, in turn, is divided into three tiers:

- core (''Tier 1'') capital, which includes common equity, certain qualifying cumulative and noncumulative perpetual preferred stock and related surplus, and minority interests in equity accounts of consolidated subsidiaries;
- supplementary (''Tier 2'') capital, which includes perpetual preferred stock and related surplus not meeting the Tier 1 definition, hybrid capital instruments, perpetual debt and mandatory convertible securities, subordinated debt, intermediate-term preferred stock, and allowances for loan and lease losses; and
- market risk (''Tier 3'') capital, which includes qualifying unsecured subordinated debt.

Goodwill, certain identifiable intangible assets, and certain other assets must be deducted in calculating the sum of the core capital elements.

Bank One, like other bank holding companies, is required to maintain Tier 1 and total capital (the sum of Tier 1, Tier 2 and Tier 3 capital) equal to at least 4% and 8%, respectively, of its total risk-weighted assets. At December 31, 2000, Bank One met both requirements, with Tier 1 and total capital equal to 7.3% and 10.8%, respectively, of its total risk-weighted assets. Each of the Banks was in compliance with its applicable minimum capital requirement at December 31, 2000.

The Federal Reserve Board, the FDIC and the OCC have adopted rules to incorporate market and interest-rate risk components into their risk-based capital standards. Under these market risk requirements, capital is allocated to support the amount of market risk related to a financial institution's ongoing trading activities.

The Federal Reserve Board also requires bank holding companies to maintain a minimum ''leverage ratio'' (Tier 1 capital to adjusted average assets) of 3% for bank holding companies that have the highest regulatory rating or have implemented the risk-based capital measures for market risk, or 4% for holding companies that do not meet either of these requirements. Each of the Banks is subject to similar requirements adopted by the applicable federal regulatory agency. At December 31, 2000, Bank One's leverage ratio was 7.3%, and each of the Banks was in compliance with its applicable leverage ratio requirement.

Each federal banking regulator may set capital requirements higher than the minimums noted above if circumstances warrant it. For example, institutions experiencing or anticipating significant growth may be expected to maintain capital ratios, including tangible capital positions, well above the minimum levels. Furthermore, the Federal Reserve Board has indicated that it will consider a ''tangible Tier 1 capital leverage ratio'' (deducting all intangibles) and other measures of capital strength in evaluating proposals for expansion or new activities. No federal banking regulator has imposed any such special capital requirement on Bank One or the Banks.

Failure to meet capital requirements could subject a bank to a variety of enforcement remedies, including the termination of deposit insurance by the FDIC, and to certain restrictions on its business, which are described below.

The Federal Deposit Insurance Corporation Improvement Act of 1991 (''FDICIA''), among other things, identifies five capital categories (from ''well capitalized'' to ''critically undercapitalized'') for insured depository institutions and requires the respective federal bank regulatory agencies to implement systems for ''prompt corrective action'' for insured depository institutions that do not meet minimum capital requirements within these categories.

Failure to meet the capital guidelines could subject a depository institution to capital-raising requirements. An ''undercapitalized'' depository institution must develop a capital restoration plan, and its parent holding company must guarantee the bank's compliance with the plan. In the event of the bankruptcy of the parent holding company, this guarantee would take priority over the parent's general unsecured creditors. In addition, FDICIA requires the federal bank regulatory agencies to prescribe certain non-capital standards for safety and soundness relating generally to operations and management, asset quality and executive compensation, and it permits regulatory action against a financial institution that does not meet these standards.

As of December 31, 2000, each Bank was ''well capitalized'' based on the ''prompt corrective action'' ratios and guidelines described above. It should be noted, however, that a Bank's capital category is determined solely for the purpose of applying the federal banking agencies' ''prompt corrective action'' regulations; the capital category may not constitute an accurate representation of the Bank's overall financial condition or prospects.

Selected Capital Ratios

The Corporation aims to maintain regulatory capital ratios, including those of the principal banking subsidiaries, in excess of the well-capitalized guidelines under federal banking regulations. The Corporation has maintained a well-capitalized regulatory position of the past five years.

The tangible common equity to tangible managed assets ratio is also monitored. This ratio adds securitized credit card loans to reported total assets and is calculated net of total intangible assets. The tangible common equity to tangible managed assets ratio was 5.5% at December 31, 2000, down from 5.7% at December 31, 1999. Tier 1 and Total Capital ratios were 7.3% and 10.8%, respectively, at December 31, 2000, down from 7.7% and up from 10.7%, respectively, at December 31, 1999.

The Corporation's capital ratios that adhere to regulatory guidelines appear in the table below:

	December 31					Well-Capitalized Regulatory Guidelines
	2000	1999	1998	1997	1996	
Regulatory leverage (1)	**7.3%**	7.7%	8.0%	7.8%	8.9%	3.0%
Risk-based capital ratios (1)						
Tier 1	**7.3**	7.7	7.9	8.2	9.5	6.0
Total	**10.8**	10.7	11.3	12.3	13.6	10.0
Common equity/managed assets	**6.0**	6.3	6.7	6.7	8.0	
Tangible common equity/tangible managed assets	**5.5**	5.7	5.8	6.2	6.9	—
Double leverage ratio (1)	**108**	112	108	107	107	—
Divided payout ratio	**N/M**	57	58	61	38	—

(1) Includes trust preferred capital securities.
N/M—Not meaningful.

The components of the Corporation's regulatory risk-based capital and risk-weighted assets are as follows December 31:

(In millions)	**2000**	1999	1998	1997	1996
Regulatory risk-based capital:					
Tier 1 capital	**$ 19,824**	$ 20,247	$ 19,495	$ 17,958	$ 19,241
Tier 2 capital	**9,316**	7,967	8,295	9,000	8,196
Total capital	**$ 29,140**	$ 28,214	$ 27,790	$ 26,958	$ 27,437
Total risk-weighted assets	**$270,182**	$263,169	$244,473	$219,557	$202,213

In deriving Tier 1 and total capital, goodwill and other nonqualifying intangible assets are deducted as indicated December 31:

(In millions)	**2000**	1999	1998	1997	1996
Goodwill	**$ 858**	$ 934	$1,075	$1,120	$ 920
Other nonqualifying intangibles	**375**	669	637	109	61
Subtotal	**1,233**	1,603	1,712	1,229	981
Qualifying intangibles	**214**	583	984	473	278
Total intangibles	**$1,447**	$2,186	$2,696	$1,702	$1,259

Dividend Policy

The Corporation's common dividend policy reflects its earnings outlook, desired payout ratios, the need to maintain an adequate capital level and alternative investment opportunities. The common dividend payout ratio

is targeted in the range of 25%—30% of earnings over time. Common stock dividends declared for 2000 were $1.26 per share compared with $1.68 per share for 1999. This reflects a 50% reduction of the quarterly dividend rate from 42 cents per share to 21 cents per share in the third quarter of 2000. On January 16, 2001, the Corporation declared its quarterly common cash dividend of 21 cents per share, payable on April 1, 2001.

On January 20, 1998, Banc One declared a 10% common stock dividend to shareholders of record on February 12, 1998. On January 18, 2000, the Corporation announced the discontinuation of the biannual 10% stock dividend.

Double Leverage

Double leverage is the extent to which the Corporation's debt is used to finance investments in subsidiaries. Double leverage was 108% at December 31, 2000 and 112% at December 31, 1999. Trust Preferred Capital Securities of $2.483 billion in 2000 and $1.578 billion in 1999 were included in capital for purposes of this calculation.

Stock Repurchase Program and Other Capital Activities

On May 18, 1999, the Corporation's Board of Directors authorized the purchase of up to 65 million shares of the Corporation's common stock. As of December 31, 2000, the Corporation had purchased 36.6 million shares of common stock at an average price of $44.95 per share. No shares have been repurchased under the authorized plan since September 30, 1999.

On January 30, 2001, the Corporation added to its Tier 1 capital through the sponsorship of a trust that issued $300 million aggregate principal amount of trust preferred securities, maturing on January 30, 2031, with a distribution rate of 8.00%. The sole asset of the sponsored trust is $309.3 million principal amount of 8.00% junior subordinated debt of the Corporation that will mature on January 30, 2031, and is redeemable prior to maturity at the Corporation's option on or after January 30, 2006.

During 2000, the Corporation added to its Tier 1 capital through the sponsorship of three trusts that issued $915 million in aggregate principal amount of trust preferred securities. During 1999, the Corporation sponsored one trust that issued $575 million in aggregate principal amount of trust preferred securities. These preferred securities are tax-advantaged issues that qualify for Tier 1 capital treatment. See Note 12 to the Corporation's consolidated financial statements for more detail.

On August 10, 1999, the Corporation redeemed all of its outstanding 7½% Preferred Purchase Units, totaling $150 million. The redemption price was $25.00 per unit, plus accrued and unpaid interest and contract fees totaling $0.47 per unit.

During 2000 and 1999, the Corporation strengthened its capital position through the issuance of $1 billion and $350 million of subordinated debt, respectively.

On December 1, 2000, the Corporation converted all outstanding 12¾% First Commerce Convertible Debenture Bonds, Series A and B. The conversion rate was 18.9473. All of the debentures were converted to shares of the Corporation's common stock.

BANK ONE CORPORATION and Subsidiaries

NOTE 1—Summary of Significant Accounting Policies

The consolidated financial statements of BANK ONE CORPORATION (''the Corporation'' and ''Bank One'') and subsidiaries have been prepared in conformity with generally accepted accounting principles. Management is required to make estimates and assumptions that affect the amounts reported in the consolidated financial statements and accompanying notes that could differ from actual results. Certain prior-year financial statement information has been reclassified to conform to the current year's financial statement presentation. Consolidated financial statements have been restated to include the results of operations, financial position and changes in cash flows for each period in which an acquisition was accounted for as a pooling of interests. Adjustments to conform accounting policies have been made upon integration of each acquired entity.

(a) Principles of Consolidation

The Corporation's consolidated financial statements include all accounts of the Corporation (the ''Parent Company'') and all significant majority-owned subsidiaries. All significant intercompany accounts and transactions have been eliminated.

(b) Trading Activities

Trading assets and liabilities are carried at fair value. Trading profits include realized and unrealized gains and losses from both cash and derivative financial instruments used in trading activities. Trading profits also include any interest income or expense from derivative instruments. Trading activities involve instruments with interest rate, exchange rate, equity price and commodity price market risk.

(c) Investment Securities

Debt and equity investment securities classified as available-for-sale are carried at fair value. Fair value for venture capital investments that are publicly traded is determined using quoted market prices when the investment is unrestricted; otherwise fair value is estimated using quoted market prices adjusted for market liquidity and sale restrictions. Fair value for venture capital investments that are not publicly traded is estimated based on the investees' financial results, conditions and prospects, values of comparable public companies, market liquidity and sales restrictions. Unrealized and realized gains and losses related to venture capital investments and realized gains and losses, including other than temporary impairments, on other available-for-sale equity securities are included in noninterest income as equity securities gains. Unrealized gains and losses, net of taxes, on all other available-for-sale securities are included in accumulated other adjustments to stockholders' equity. Realized gains and losses, including other than temporary impairments, on available-for-sale investment debt securities are included in investment securities gains. The specific identification method is used to calculate realized gains or losses.

(d) Loans

Loans held for the foreseeable future are carried at cost. Unearned income includes deferred loan origination fees reduced by loan origination costs. Loans held for sale are carried at the lower of cost or fair value with unrealized losses included in other income. Realized gains or losses resulting from loan sales typically are included in other income but may be recorded as a recovery or charge-off when the shortfall is primarily credit related. The Corporation typically provides lease financing to its customers through direct financing leases. Leveraged leases, which represent direct financing leases involving nonrecourse debt, also are provided to customers.

Loan origination fees and commitment fees are typically deferred and amortized over the life of the related loan. Loan origination fees and costs on credit card and other revolving loans are typically deferred and amortized

into interest income using a straight-line method over one year. Other credit-related fees, such as syndication management fees, commercial letter of credit fees, and fees on unused, available lines of credit, are recorded as service charges and commissions when received or over time to match the earnings process.

Direct financing leases are recorded at the aggregate amount of lease payments to be received plus the estimated residual values of the underlying leased assets, plus any unamortized initial direct costs, less unearned income. Leveraged leases are recorded net of nonrecourse debt. Income from direct lease financing is recognized over the lives of the leases on an approximate level rate of return on the unrecovered investment. The income recognition pattern for leveraged leases is to record losses in the early years and earnings in the later years. Residual values of leased assets are reviewed periodically for reasonableness. Declines in residual values judged to be other than temporary are recognized in the period such determinations are made.

(e) Nonperforming Loans

A loan is considered nonperforming when placed on nonaccrual status, or when renegotiated at terms that represent an economic concession to the borrower. Commercial nonperforming loans are generally identified as impaired loans. An economic concession on a renegotiated loan may represent forgiveness of principal and/or interest or a below-market interest rate offered to the borrower to maximize recovery of the loan. Generally, this occurs when the borrower's cash flow is insufficient to service the loan under its original terms. Subject to the nonaccrual policy below, interest on these loans is accrued at the reduced rates.

Management places a commercial loan or lease financing receivable on nonaccrual status when the collection of contractual principal or interest is deemed doubtful, or it becomes 90 days or more past due, is not well-secured and in the process of collection. Accrued but uncollected interest is reversed and charged against interest income. Subsequently, the commercial loan or lease financing receivable is accounted for on a cash basis. Cash payments received are recognized either as interest income or as a reduction of principal when collection of principal is doubtful. A commercial loan or lease financing receivable is returned to accrual status only when all of the principal and interest amounts contractually due are reasonably assured of repayment within a reasonable time frame and when the borrower has demonstrated payment performance. Subsequently, the commercial loan or lease financing receivable is accounted for on an accrual basis.

A credit card loan is charged off rather than placed on nonaccrual status when it becomes 180 days past due. Prior to the second quarter of 2000, other consumer loans also were charged off rather than placed on nonaccrual status. During the second quarter of 2000, the accounting policy for other consumer loans was changed, and the Corporation now places other consumer loans on nonaccrual status when they become 90 days past due. Accrued but uncollected interest is reversed and charged against interest income when credit card loans are charged off or other consumer loans are placed on nonaccrual status. Reporting of nonperforming loans was restated for all prior periods to reflect the change in accounting policy.

The Corporation's charge-off policies for both commercial and consumer loans are presented on page 33.

(f) Allowance for Credit Losses

Management maintains the allowance for credit losses at a level it believes is adequate to provide for estimated probable credit losses inherent in on- and off-balance sheet credit exposure. The allowance for credit losses attributable to specifically identified off-balance sheet credit exposure is not material. For a more detailed discussion, see the ''Allowance for Credit Losses'' section on page 34.

(g) Premises and Equipment

Depreciation and amortization is computed using the straight-line method over the estimated useful life of the owned asset and, for leasehold improvements, over the lesser of the remaining term of the leased facility or the estimated economic life of the improvement. For owned and capitalized assets, estimated useful lives range

from three to 30 years. Maintenance and repairs are charged to expense as incurred, while major improvements are capitalized.

(h) Other Real Estate Owned

Other real estate owned includes assets that have been received in satisfaction of debt. Other real estate owned is initially recorded and subsequently carried at the lower of cost or fair value less estimated selling costs. Any valuation adjustments required at the date of transfer are charged to the allowance for credit losses. Subsequently, unrealized losses and realized gains and losses on sale typically are included in other income. Operating results from other real estate are recorded in other noninterest expense.

(i) Intangible Assets

Intangible assets include goodwill resulting from acquisitions accounted for by the purchase method and identifiable intangible assets, such as customer lists, core deposits and credit card relationships. Goodwill is equal to an acquired company's acquisition cost less the net fair value assigned to identifiable assets acquired and liabilities assumed.

Intangible assets are reported in other assets and are amortized into other noninterest expense on an accelerated or straight-line basis over the period the Corporation expects to benefit from such assets. Goodwill is amortized over estimated periods ranging from five to 40 years (See Note 3—Mergers and Acquisitions for further details). Intangible assets are periodically reviewed for other than temporary impairment with any such declines in value included in other noninterest expense.

(j) Derivative Financial Instruments

Effective January 1, 2001, the Corporation adopted SFAS No. 133, "Accounting for Derivative Instruments and Hedging Activities" ("SFAS No. 133"), as amended by SFAS No. 137, "Accounting for Derivative Instruments and Hedging Activities—Deferral of the Effective Date of FASB Statement No. 133" and SFAS No. 138, "Accounting for Certain Derivative Instruments and Certain Hedging Activities—an Amendment of FASB Statement No. 133." SFAS No. 133, as amended, establishes new accounting and reporting standards for derivative instruments and hedging activities. It requires that an entity recognizes all derivatives as either assets or liabilities on the balance sheet and measure those derivatives at fair value. The accounting for the gains or losses resulting from changes in the value of those derivatives depends on the intended use of the derivative and whether it qualifies for hedge accounting. SFAS No. 133, as amended, significantly changes the accounting treatment for interest rate and foreign exchange derivatives the Corporation uses in its asset and liability management activities.

SFAS No. 133, as amended, requires that certain adjustments be made to the financial statements upon adoption of the standard. Based upon qualified and documented hedging relationships as of December 31, 2000, these adjustments, referred to as transition adjustments, had the following impact on the Corporation's financial position on January 1, 2001 (In millions):

Increase in derivative product assets	$ 319
Increase in all other assets	2
Increase in derivative product liabilities	(162)
Increase in all other liabilities	(312)
Pretax balance sheet impact of transition adjustments	(153)
Increase in deferred tax asset	56
	(97)
Decrease in accumulated other adjustments to stockholders' equity, net of tax	(98)
Pretax increase in net income	$ 1

The transition adjustments recorded on January 1, 2001, were reported in net income and accumulated other adjustments to stockholders' equity, as appropriate.

For a discussion of the Corporation's pre-SFAS No. 133 accounting policies for derivative financial instruments in effect for all periods presented herein, see the "Derivative Financial Instruments" section, beginning on page 38.

(k) Foreign Currency Translation

If a foreign installation's functional currency is the U.S. dollar, then its local currency financial statements are remeasured to U.S. dollars. Remeasurement effects and the results of related hedging transactions are included in other income.

If a foreign installation's functional currency is its local currency, then its local currency financial statements are translated into U.S. dollars. Translation adjustments, related hedging results and applicable income taxes are included in accumulated other adjustments to stockholders' equity.

(l) Income Taxes

Deferred tax assets and liabilities are determined based on temporary differences between financial reporting and tax basis of assets and liabilities and are measured using the enacted tax rates and laws that are expected to be in effect when the differences are expected to reverse. The effect on deferred tax assets and liabilities of a change in rates is recognized as income or expense in the period that includes the enactment date.

(m) Cash Flow Reporting

The Corporation uses the indirect method, which reports cash flows from operating activities by adjusting net income to reconcile to net cash flows from operating activities. Cash and cash equivalents consist of cash and due from banks, whether interest-bearing or not. Net reporting of cash transactions has been used when the balance sheet items consist predominantly of maturities of three months or less, or where otherwise permitted. Other items are reported on a gross basis.

(n) Stock-Based Compensation

The Corporation has elected to continue to account for stock options granted and its Employee Stock Purchase Plan pursuant to the methods prescribed in Accounting Principles Board ("APB") Opinion No. 25, "Accounting for Stock Issued to Employees", as permitted by Statement of Financial Accounting Standards ("SFAS") No. 123, "Accounting for Stock-Based Compensation," and related interpretations. Accordingly, there are no charges to earnings associated with stock options granted or with the Employee Stock Purchase Plan offered by the Corporation. Compensation expense related to restricted stock awards is recorded ratably over the period the shares remain restricted. Information on the Corporation's stock-based compensation plans and disclosure of the pro forma effect of applying the fair value method contained in SFAS No. 123 is included in Note 18, beginning on page 75.

(o) New Accounting Pronouncements

Accounting for Transfers and Servicing of Financial Assets and Liabilities

In September 2000, the FASB issued SFAS No. 140, "Accounting for Transfers and Servicing of Financial Assets and Liabilities" ("SFAS No. 140"). SFAS No. 140 revises certain criteria promulgated in previous accounting literature (SFAS No. 125) for accounting for securitizations and other transfers of financial assets and collateral, and requires additional disclosures concerning these activities. The accounting requirements of SFAS No. 140 for securitizations and other transfers of financial assets are effective for securitizations and transfers occurring on or after April 1, 2001. The applicable disclosures are required to be adopted for calendar year

companies effective December 15, 2000, and accordingly, have been incorporated in these Notes to Consolidated Financial Statements. The Corporation is currently evaluating the effects of adopting the remaining provisions of SFAS No. 140 on its current accounting policies for loan securitizations and other transfers of financial assets. The Corporation currently believes that the impact, if any, of adopting SFAS No. 140 will be insignificant to its financial position and net income.

Revenue Recognition in Financial Statements

In December 1999, the Securities and Exchange Commission ("SEC") issued Staff Accounting Bulletin No. 101, "Revenue Recognition in Financial Statements" ("SAB No. 101"). SAB No. 101 summarizes certain of the SEC's views in applying generally accepted accounting principles to revenue recognition in financial statements. In June 2000, the SEC issued SAB No. 101B to defer the effective date of implementation of SAB No. 101 until the fourth quarter of fiscal 2000. The Corporation has reviewed its existing revenue recognition practices related to various products and services and has determined these practices are in compliance with the recognition rules prescribed in SAB No. 101 and the recent interpretive guidance issued by the SEC.

NOTE 2—Earnings Per Share

Basic EPS is computed by dividing income available to common stockholders by the average number of common shares outstanding for the period. Except when the effect would be antidilutive, the diluted EPS calculation includes shares that could be issued under outstanding stock options and the employee stock purchase plans, and common shares that would result from the conversion of convertible preferred stock and convertible debentures. In the diluted calculation for 1998, net income is not reduced by dividends related to convertible preferred stock in the amount of $2 million, since such dividends would not have been paid had the convertible portion of the preferred stock converted to common stock. In addition, interest on convertible debentures (net of tax) is added to net income, since this interest would not be paid if the debentures were converted to common stock.

The following table sets forth the computation of basic and diluted earnings per share:

(In millions, except per share data)	Year Ended December 31 2000	1999	1998
Basic:			
Net income (loss)	**$ (511)**	$3,479	$3,108
Preferred stock dividends	**(12)**	(12)	(14)
Net income (loss) attributable to common stockholders' equity	**$ (523)**	$3,467	$3,094
Diluted:			
Net income (loss)	**$ (511)**	$3,479	$3,108
Interest on convertible debentures, net of tax (1)	**—**	6	7
Preferred stock dividends	**(12)**	(12)	(12)
Diluted income (loss) available to common stockholders (1)	**$ (523)**	$3,473	$3,103
Average shares outstanding	**1,154**	1,168	1,170
Dilutive shares:			
Stock options (1)	**—**	6	12
Convertible preferred stock	**—**	—	1
Convertible debentures (1)	**—**	4	4
Employee stock purchase plans	**—**	—	2
Average shares outstanding, assuming full dilution	**1,154**	1,178	1,189
Earnings (loss) per share:			
Basic	**$(0.45)**	$ 2.97	$ 2.65
Diluted (1)	**$(0.45)**	$ 2.95	$ 2.61

(1) Common equivalent shares and related income have been excluded from the computation of diluted loss per share for the year ended December 31, 2000, as the effect would be antidilutive.

NOTE 3—Mergers and Acquisitions

On October 2, 1998, Banc One Corporation ("Banc One") and First Chicago NBD Corporation ("FCN") were each merged into the Corporation, which was a wholly owned subsidiary of Banc One formed in 1998 to effect the Merger. Each share of Banc One common stock was converted into one share of the Corporation's common stock. Each share of FCN common stock was converted into the right to receive 1.62 shares of the Corporation's common stock. In aggregate, 291 million shares of FCN were converted into 471 million shares of the Corporation's common stock. Each share of preferred stock of FCN outstanding immediately prior to the Merger was converted into one share of a series of corresponding preferred stock of the Corporation with substantially the same terms. The transaction was accounted for as a pooling of interests.

On September 30, 1998, the Corporation purchased the credit card operation of Chevy Chase Bank, FSB. The portfolio included $4.8 billion in managed credit card loans and 2.8 million Visa® and Master Card® credit card accounts. At the purchase date, a credit card account premium of $291 million was recognized on the balance sheet and is being amortized over seven years using the straight-line method. During 2000, the Corporation recognized an impairment loss associated with this purchased premium of $107 million.

On June 12, 1998, the Corporation completed its acquisition of First Commerce Corporation ("First Commerce") located in New Orleans, Louisiana, resulting in the issuance of approximately 56 million shares of the Corporation's common stock valued at $3.5 billion for all the outstanding shares of First Commerce common stock, in a tax-free exchange. Each share of First Commerce common stock was exchanged for 1.408 shares of the Corporation's common stock. First Commerce was a multi-bank holding company with total assets of approximately $9.3 billion and stockholders' equity of approximately $805 million at June 12, 1998. The acquisition was accounted for as a pooling of interests.

NOTE 4—Merger-Related and Restructuring Charges

a) Second Quarter 2000 Restructuring Charge

The Corporation recorded restructuring costs in the second quarter of 2000 related to the restructuring of certain of its retail businesses as well as exit costs associated with specific decisions made to abandon identified facilities, equipment and application software. The following table summarizes the details of these restructuring charges:

(In millions)	Personnel-Related Costs	Asset Writedowns	Contractual Obligations	Total
June 30, 2000 Restructuring Charge	**$32**	**$104**	**$97**	**$233**
Reserve Adjustments:				
Increases	**—**	**—**	**—**	**—**
Decreases	**(14)**	**(1)**	**—**	**(15)**
Amounts Paid/Asset Writedowns	**(1)**	**(27)**	**(96)**	**(124)**
December 31, 2000 Reserve Balance	**$17**	**$ 76**	**$ 1**	**$ 94**

Personnel-related items recorded initially consisted primarily of severance costs related to identified staff reductions totaling 2,200 positions in the Retail line of business that would be implemented when assets were sold. Asset writedowns included leasehold write-offs related to leased properties following the decision to abandon such facilities, as well as in the case of fixed assets and capitalized software for which similar decisions were made. Contractual obligations included the estimated costs associated with lease and other contract termination costs incorporated in the business restructuring plans.

At December 31, 2000, Management decided not to dispose of the assets previously identified for sale and, as a result, Management reduced its estimate of staff reductions to approximately 1,257 positions. Accordingly, Management reduced the severance reserve established for this potential asset sale to $14 million. The remaining liabilities, including severance, associated with these actions will be paid as required over the contract period.

b) Fourth Quarter 1999 Restructuring Charge

Restructuring costs recorded in the fourth quarter of 1999 totaled $207 million. The following table summarizes the activity related to this restructuring reserve during 2000:

(In millions)	Personnel-Related Costs	Asset Writedowns	Contractual Obligations	Total
December 31, 1999 Reserve Balance	$143	$ 24	$ 40	$ 207
Reserve Adjustments:				
Increases	4	1	16	21
Decreases	(26)	(3)	(17)	(46)
Amounts Paid/Asset Writedowns	(91)	(22)	(36)	(149)
December 31, 2000 Reserve Balance	**$ 30**	**$ —**	**$ 3**	**$ 33**

The Corporation's restructuring plan included severance and other exit costs related to the closure of the Corporation's consumer finance branch network. Personnel-related items consisted primarily of severance and benefits costs for separated employees and executives due to delayering and management realignment. The net reduction in force was anticipated to approximate 5,100 positions. Other charges include identified asset write-offs and the termination costs associated with lease and other vendor contracts.

The restructuring plan was modified in 2000 as the branch network was packaged for sale with $2.2 billion in consumer loans. The final transaction included a provision to provide job opportunities for employees and for

the assumption of remaining lease obligations. As a result, $16 million in reserves established to cover these costs were reversed and an additional restructuring charge of $4 million was taken in the first quarter of 2000 to reflect further planned integration efforts in the consumer lending function, primarily associated with staff reductions.

At December 31, 2000, Management reduced its estimate of remaining staff reductions to approximately 725 positions and accordingly, recorded a $26 million reduction in the severance reserve. Actions under this restructuring plan were completed by year-end 2000. The remaining liabilities, including severance, associated with these actions will be paid as required over the contract period.

c) Banc One/FCN Merger

Actions under this restructuring plan have been completed, with only the payment of identified obligations remaining. Unpaid amounts totaled $28 million at December 31, 2000, and will be paid as required over the contract period.

Note 5—Business Segments

In the second quarter of 2000, the Corporation significantly realigned its organization, which resulted in the following changes in the composition of the Corporation's externally reported segments compared to those reported in the Corporation's 1999 Form 10-K:

- Consumer Lending and Other Consumer were combined in a new segment defined as "Retail"; WingspanBank.com was moved to Retail from First USA.
- Private Banking was transferred from Commercial Banking to Investment Management.
- Investment Management, which was previously allocated to the other segments, was presented as a separate line of business.
- Corporate Investments, which was previously included in Commercial Banking, was presented as a separate line of business.
- The segment defined as "Other Activities" was eliminated.

The Corporation has not presented segment information for the year ended December 31, 1998, as it would be impracticable to restate the 1998 period based on the current segment compositions in an efficient and cost-effective matter. The Corporation also has not presented 2000 data under both the "old" and "new" segment compositions, as it would be impracticable to restate 2000 financial data using the 1999 segment definitions and methodologies.

The information presented on page 3 is consistent with the content of business segment data provided to the Corporation's management. The Corporation's management currently does not use product group revenues to assess consolidated results. Aside from investment management and insurance products, product offerings are tailored to specific customer segments. As a result, the aggregation of product revenues and related profit measures across lines of business is not available.

Aside from the United States, no single country or geographic region generates a significant portion of the Corporation's revenues or assets. In addition, there are no single customer concentrations of revenue or profitability.

See the following "Business Segments" sections for additional disclosure regarding the Corporation's operating segments:

- "Business Segments" on page 3.

- Data presented in tables up until sections entitled "Supplemental Information" are included in the "Business Segment Results and Other Data" section beginning with "Retail" through "Corporate/Unallocated" on pages 4–14.

NOTE 6—Investment Securities—Available for Sale

The following table is a summary of the available-for-sale investment portfolio:

December 31, 2000 (In millions)	Amortized Cost	Gross Unrealized Gains	Gross Unrealized Losses	Fair Value (Book Value)
U.S. Treasury	**$ 2,587**	**$ 2**	**$ 34**	**$ 2,555**
U.S. government agencies	**14,415**	**18**	**47**	**14,386**
States and political subdivisions	**1,276**	**24**	**8**	**1,292**
Interest in credit card securitized receivables	**22,652**	**116**	**205**	**22,563**
Other debt securities	**5,237**	**18**	**57**	**5,198**
Equity securities (1) (2)	**4,373**	**253**	**59**	**4,567**
Total	**$50,540**	**$431**	**$410**	**$50,561**

December 31, 1999 (In millions)	Amortized Cost	Gross Unrealized Gains	Gross Unrealized Losses	Fair Value (Book Value)
U.S. Treasury	$ 2,569	$ 1	$101	$ 2,469
U.S. government agencies	12,919	3	412	12,510
States and political subdivisions	1,599	20	38	1,581
Interests in securitized credit card receivables	20,369	279	193	20,455
Other debt securities	7,611	5	172	7,444
Equity securities (1) (2)	3,238	281	66	3,453
Total	$48,305	$589	$982	$47,912

December 31, 1998 (In millions)	Amortized Cost	Gross Unrealized Gains	Gross Unrealized Losses	Fair Value (Book Value)
U.S. Treasury	$ 4,496	$ 66	$ 12	$ 4,550
U.S. government agencies	10,469	108	18	10,559
States and political subdivisions	1,980	84	—	2,064
Interests in securitized credit card receivables	17,544	201	375	17,370
Other debt securities	8,174	72	75	8,171
Equity securities (1) (2)	2,094	115	71	2,138
Total	$44,757	$646	$551	$44,852

(1) The fair values of certain securities for which market quotations were not available were estimated. In addition, the fair values of certain securities reflect liquidity and other market-related factors.

(2) Includes investments accounted for at fair value in keeping with specialized industry practice.

As of December 31, 2000, debt investment securities had the following maturity and yield characteristics:

(Dollars in millions)	Due in 1 year or less		Due after 1 year through 5 years		Due after 5 years through 10 years		Due after 10 years		Total	
	Amortized Cost	Yield	Amortized Cost	Yield	Amortized Cost	Yield	Amortized Cost	Yield	Amortized Cost	Yield
U.S. Treasury	$ 1,178	5.97%	$ 993	4.66%	$ 175	4.75%	$ 241	5.25%	$ 2,587	5.31%
U.S. government agencies	11,695	6.16	848	5.82	878	5.95	994	6.54	14,415	6.15
States and political subdivisions (1)	185	7.72	487	8.00	261	8.28	343	5.10	1,276	7.24
Other debt securities	21,193	9.33	5,620	7.65	697	7.67	379	8.94	27,889	8.94
Total debt securities —at amortized cost	$34,251	8.12%	$7,948	7.10%	$2,011	6.74%	$1,957	6.59%	$46,167	7.82%
Total debt securities —at fair value	$34,171		$7,913		$1,999		$1,911		$45,994	

(1) Includes tax-equivalent adjustments based on federal income tax rate of 35%.

The distribution of mortgage-backed securities and collateralized mortgage obligations is based on average expected maturities. Actual maturities might differ because issuers may have the right to call or prepay obligations.

NOTE 7—Loans

Loan composition is as follows:

December 31 (in millions)	2000	1999
Commercial:		
Domestic:		
Commercial	$ 65,270	$ 59,070
Real estate:		
Construction	5,757	5,836
Other	16,778	18,817
Lease financing	5,818	5,562
Foreign	6,837	7,067
Total commercial	100,460	96,352
Consumer:		
Residential real estate	40,596	32,313
Automotive—loans	12,130	12,925
Automotive—leases	8,611	10,642
Other	7,710	7,608
Total consumer	69,047	63,488
Credit card	4,744	4,037
Total loans	174,251	163,877
Less: Allowance for credit losses	4,110	2,285
Total loans, net	$170,141	$161,592

Loans are net of unearned income of $3.467 billion and $4.075 billion as of December 31, 2000 and 1999, respectively. Loans held for sale totaled $3.0 billion at both December 31, 2000 and 1999.

The Corporation's primary goal in managing credit risk is to minimize the impact of default by an individual borrower or group of borrowers. As a result, the Corporation strives to maintain a loan portfolio that is diverse in terms of loan type, industry, borrower and geographic concentrations. As of December 31, 2000 and 1999,

there were no significant loan concentrations with any single borrower, industry or geographic segment (see Credit Portfolio Composition on pages 28–32).

The Corporation's impaired loan information is as follows:

(In millions)	Year Ended December 31 2000	1999
Impaired loans with related allowance	**$1,748**	$1,026
Impaired loans with no related allowance (1)	**13**	27
Total impaired loans	**$1,761**	$1,053
Allowance on impaired loans (2)	**$ 407**	$ 246

(In millions)	Year Ended December 31 2000	1999	1998
Average balance of impaired loans	**$1,335**	$ 972	$ 638
Interest income recognized on impaired loans	**31**	46	38

(1) Impaired loans for which the discounted cash flows, collateral value or market price equals or exceeds the carrying value of the loan do not require an allowance under SFAS No. 114.

(2) The allowance for impaired loans is included in the Corporation's overall allowance for credit losses.

A loan is considered impaired when it is probable that all principal and interest amounts due will not be collected in accordance with the loan's contractual terms. Certain loans, such as loans carried at the lower of cost or fair value or small-balance homogeneous loans (e.g., credit card, home mortgages and installment credit) are exempt from impairment determinations for disclosure purposes. Impairment is recognized to the extent that the recorded investment of an impaired loan or pool of loans exceeds its value either based on the loan's underlying collateral or the calculated present value of projected cash flows discounted at the contractual interest rate. Loans having a significant recorded investment are measured on an individual basis, while loans not having a significant recorded investment are grouped and measured on a pool basis.

Maturity Distribution and Interest Rate Sensitivity of Loans

The following table shows a distribution of the maturity of loans and, for those loans due after one year, a breakdown between those loans that have floating interest rates and those that have predetermined interest rates at December 31, 2000 follows:

(In millions)	One Year or Less	One to Five Years	Over Five Years	Total
Domestic:				
Commercial	$24,926	$34,582	$5,762	$65,270
Real estate	10,422	10,207	1,906	22,535
Total domestic	35,348	44,789	7,668	87,805
Foreign	4,472	2,132	233	6,837
Total	$39,820	$46,921	$7,901	$94,642
Loans with floating interest rates		$34,786	$3,521	$38,307
Loans with predetermined interest rates		12,135	4,380	16,515
Total		$46,921	$7,901	$54,822

The amounts above exclude domestic consumer loans and domestic lease financing receivables.

Foreign Outstandings

Included in claims are loans, balances with banks, acceptances, securities, equity investments, accrued interest, other monetary assets and current credit exposure on derivative contracts. At year-end 2000 and 1998, there were no countries for which cross-border and net local country claims exceeded 1.0% of total assets.

The table below presents 1999 foreign outstandings where such outstandings exceeded 1.0% of total assets:

(In millions) December 31, 1999	Cross-Border Claims			Net Local Country Claims	Total Cross-Border & Net Local Country Claims
	Banks	Governments & Official Institutions	Other		
Germany (1)	$2,199	$600	$319	—	$3,118

(1) At year-end 1999, local country claims were reduced by $129 million of local country liabilities.

At December 31, 2000 and 1998, Germany was the only country for which cross-border and net local country claims totaled between 0.75% and 1.0% of total assets. These outstandings amounted to $2.512 billion and $2.194 billion, respectively.

At December 31, 1999, there were no countries for which cross-border and net local country claims totaled between 0.75% and 1.0% of total assets.

NOTE 8—Loan Securitizations

The Corporation transforms loans into securities, which are sold to investors—a process referred to as securitization. At the time the Corporation enters into a securitization, a gain or loss is generally recognized based upon the fair value of the retained interests, primarily the interest-only strip. During the revolving period of a credit card securitization, the cash excess spread (excluding interchange income) received reduces the interest-only strip. At the same time, an additional gain is recognized each month over the life of the transaction as additional receivables are sold. The interest-only strip is ultimately extinguished when the securities sold to investors are repaid. For the year ended December 31, 2000, the Corporation's normal revolving credit card activities resulted in a net decrease in the interest-only strip of $52 million. This was comprised of $594 million in revolving gains on credit card securitizations, less cash excess spread of $646 million received. In addition, $432 million of impairment write-downs of the interest-only strip were recorded. The Corporation recognized $116 million in net securitization amortization in the managed income statement, including amortization of transaction costs, as investors in individual series were repaid.

A servicing asset or liability is not generally recognized in a credit card securitization (and thus considered in the gain or loss computation) since the Corporation receives adequate compensation relative to current market servicing prices to service the receivables sold. Transaction costs in credit card securitizations are typically deferred and amortized over the life of the security as a reduction of noninterest income. Other securitization transaction costs may be included in the gain or loss on sale.

At December 31, 2000, the estimated fair value of seller's interest and interest-only strip from credit card securitizations were as follows:

(In millions)	
Seller's interest	$22,356
Interest-only strip	221
Total interests in credit card securitizations	$22,577

Certain estimates are used in determining the fair value of the interest-only strip at both the date of securitization and the balance sheet date, including the excess spread, receivable lives and the discount rate. The

components of excess spread, which are estimated, include finance charge and fee revenue (excluding interchange income) generated by the securitized loans in excess of interest paid to investors, related net credit losses and servicing fees. The resulting expected cash flows over the lives of the receivables are discounted at a rate commensurate with the risk of the cash flows to determine the fair value. Such estimates and assumptions are subject to change, and accordingly, the Corporation may not recover all of the recorded investment of the interest-only strip (and thus be measured for impairment). The receivables in each trust have unique attributes and therefore the interest-only strip related to each trust is evaluated separately. The seller's interest resulting from credit card securitizations is recorded at fair value using a present value approach, with assumptions that are consistent with the valuation of the interest-only strip.

The following represents the Corporation's key weighted-average assumptions used to estimate the fair value of the interest-only strip and seller's interest relating to credit card securitizations at December 31, 2000, and the pretax sensitivity of the fair values to immediate 10 and 20 percent adverse changes in these assumptions are as follows:

(Dollars in millions)	Interest-Only Strip (1)	Sellers Interest (2)	Total Retained Interests
Receivable Lives			**0.5 Years**
10% Adverse Change	$ 23.6	$11.3	$ 34.9
20% Adverse Change	47.4	22.7	70.1
Excess Spread:			**1.23%**
10% Adverse Change	24.2	11.6	35.8
20% Adverse Change	48.4	23.2	71.6
Expected Net Credit Losses (3):			**6.80%**
10% Adverse Change	103.4	56.2	159.6
20% Adverse Change	194.1	98.1	292.2
Discount Rate:			**10.00%**
10% Adverse Change	0.7	0.3	1.0
20% Adverse Change	1.5	0.7	2.2

(1) The effect of adverse changes in key assumptions on the fair value of the interest-only strip would be recorded in non-interest income.

(2) The effect of adverse changes in key assumptions on the value of the seller's interest is recorded in accumulated other adjustments to stockholders' equity, unless the decline in value is deemed to be other than temporary, which would result in a charge to noninterest income upon recognition.

(3) Certain Trust legal documents include finance charge and fee revenue reversals in the definition of net credit losses, resulting in a higher net credit loss rate for Trust purposes.

The sensitivity analysis presented above illustrates the potential magnitude of significant adverse changes in key assumptions used in valuing the interest-only strip and seller's interest, and thus the potential impact to the Corporation's financial position and results of operations. However, the sensitivities of the fair values of the interest-only strip and seller's interest to changes in each key assumption presented above may not be linear. Furthermore, the sensitivities above for each key variable are calculated independently of changes in the other key variables. Therefore, the sensitivity analysis above does not purport to present the maximum impairment loss that would result from 10 and 20 percent adverse changes in these assumptions. Actual experience observed may result in changes in multiple key assumptions concurrently, the magnitude of which on the fair value of the interest-only strip and seller's interest would be dependent on the relative change and the direction of change. In addition, the sensitivity analysis does not give effect to corrective action that Management could and would take to mitigate the impact of adverse changes in key assumptions. The asset values of the seller's interest, interest-only strip and credit enhancements are periodically reviewed for other-than-temporary impairment (see page 10 for 2000 impairment related disclosures for First USA).

The key weighted average economic assumptions and ranges of assumptions used to estimate the fair value of interest-only strip and seller's interest at the date of securitization (including transfer of new balances under revolving structures) for credit card securitizations occurring during 2000 were as follows:

	Assumptions
Receivable Lives	0.5 Years
Excess Spread	1.22% to 3.14%
Expected Net Credit Losses	6.47% to 6.82%
Discount Rate	10.00%

The table below summarizes the cash flows received from (paid to) credit card securitization master trusts (i.e., SPEs) during the year ended December 31, 2000:

(In millions)	
Cash collections used by Trusts to purchase new revolving balances	$83,469
Servicing fees received	649
Cash flows received on retained interests (1)	2,224
Cash used to fund reserve (spread) accounts	(32)

(1) Includes cash flows from interest-only strips as well as interchange fees received from securitized accounts.

For a detailed discussion of the Corporation's loan securitization process for credit card loans, see the "Loan Securitizations" section, beginning on page 41.

Note 9—Allowance for Credit Losses

Changes in the allowance for credit losses for the years ended December 31 were as follows:

(In millions)	**2000**	**1999**	**1998**
Balance, beginning of year	**$ 2,285**	$ 2,271	$ 2,817
Additions (deductions):			
Charge-offs	**(1,667)**	(1,531)	(1,945)
Recoveries	**276**	325	447
Net charge-offs	**(1,391)**	(1,206)	(1,498)
Provision for credit losses	**3,398**	1,249	1,408
Transfers	**(182)**	(29)	(456)
Balance, end of year	**$ 4,110**	$ 2,285	$ 2,271

NOTE 10—Long-Term Debt

Long-term debt consists of borrowings having an original maturity of greater than one year. Original issue discount and deferred issuance costs are amortized into interest expense over the terms of the related notes. Long-term debt at December 31, 2000 and 1999, was as follows:

(Dollars in millions)	Effective Rate(1)	2000	1999
Parent Company			
Subordinated debt			
9⅞% notes due 2000	—%	**$ —**	$ 100
9⅕% notes due 2001	9.20	**5**	5
9¼% notes due 2001	9.27	**100**	100

Subordinated 6% notes due 2005	6.84	**149**	148
Subordinated 6¼% notes due 2008	6.40	**496**	496
Subordinated 8¼% notes due 2024	7.72	**248**	254
Capitalized lease and others, at various rates and maturities	various	**2,534**	769
Total subsidiaries		**17,604**	13,746
Total long-term debt		**$38,428**	$33,857

(1) The effective rate includes amortization of premium or discount. Interest rate swap agreements have been entered into that have altered the stated interest rate for certain of the borrowings from fixed to variable interest rates and from variable to fixed interest rates. The effective rates include the impact of these interest rate swap agreements at December 31, 2000. The terms to maturity of the interest rate swaps are equal to those of the altered borrowings.

(2) The notes are not subject to redemption and impose certain limitations relating to funded debt, liens and the sale or issuance of capital stock of significant bank subsidiaries.

(3) The floating rate notes due in 2003 have an interest rate priced at the greater of 4¼% or the three-month LIBOR plus ⅛%. The floating rate notes due in 2005 have an interest rate of the greater of 5¼% or the three-month LIBOR rate plus ¼%.

Aggregate annual scheduled repayments of long-term debt at December 31, 2000:

(In millions)	Total
2001	$10,925
2002	8,007
2003	4,435
2004	3,718
2005	4,118
Thereafter	7,225
Total	$38,428

NOTE 11—Deposits and Short-Term Borrowings

Deposits

The following tables show a maturity distribution of domestic time certificates of deposit of $100,000 and over, other domestic time deposits of $100,000 and over, and deposits in foreign offices, predominantly in amounts in excess of $100,000 at December 31, 2000:

(Dollars in millions) Domestic Time Certificates of Deposit of $100,000 and Over	Amount	Percent
Three months or less	**$ 6,645**	30%
Over three months to six months	**2,021**	9
Over six months to twelve months	**3,108**	14
Over twelve months	**10,671**	47
Total	**$22,445**	100%

Domestic Other Time Deposits of $100,000 and Over	Amount	Percent
Three months or less	**$ 206**	98%
Over three months to six months	**—**	—
Over six months to twelve months	**—**	—
Over twelve months	**5**	2
Total	**$ 211**	100%

Foreign Offices	Amount	Percent
Three months or less	**$22,423**	90%
Over three months to six months	**1,761**	7
Over six months to twelve months	**738**	3
Over twelve months	**45**	—
Total	**$24,967**	100%

Short-Term Borrowings

Borrowings with original maturities of one year or less are classified as short-term. The following is a summary of short-term borrowings for each of the three years ended December 31:

(Dollars in millions)	2000	1999	1998
Federal funds purchased:			
Outstanding at year-end	**$ 5,253**	$ 5,483	$12,112
Weighted-average rate at year-end.	**5.89%**	4.54%	4.65%
Daily average outstanding for the year	**$ 6,281**	$ 7,060	$ 9,262
Weighted-average rate for the year	**6.14%**	4.96%	5.24%
Highest outstanding at any month-end	**$ 9,663**	$ 8,806	$12,112
Securities under repurchase agreements:			
Outstanding at year-end	**$ 6,867**	$13,237	$11,052
Weighted-average rate at year-end	**6.01%**	4.08%	4.43%
Daily average outstanding for the year	**$12,680**	$12,651	$12,423
Weighted-average rate for the year	**5.96%**	4.62%	4.87%
Highest outstanding at any month-end	**$17,609**	$16,102	$15,676
Bank notes:			
Outstanding at year-end	**$12,426**	$12,707	$10,321
Weighted-average rate at year-end	**6.71%**	5.60%	5.22%
Daily average outstanding for the year	**$12,298**	$11,112	$ 8,175
Weighted-average rate for the year	**6.50%**	5.57%	5.52%
Highest outstanding at any month-end	**$13,327**	$12,947	$10,321
Commercial paper:			
Outstanding at year-end	**$ 3,048**	$ 3,184	$ 2,113
Weighted-average rate at year-end	**6.62%**	6.09%	4.54%
Daily average outstanding for the year	**$ 3,137**	$ 3,006	$ 1,882
Weighted-average rate for the year	**5.94%**	5.23%	5.58%
Highest outstanding at any month-end	**$ 3,303**	$ 3,595	$ 2,491
Other short-term borrowings:			
Outstanding at year-end	**$ 2,529**	$ 5,320	$ 4,503
Weighted-average rate at year-end	**6.22%**	4.46%	4.51%
Daily average outstanding for the year	**$ 3,543**	$ 3,739	$ 3,733
Weighted-average rate for the year	**6.50%**	4.98%	4.86%
Highest outstanding at any month-end	**$ 6,861**	$ 5,475	$ 7,202
Total short-term borrowings:			
Outstanding at year-end	**$30,123**	$39,931	$40,101
Weighted-average rate at year-end	**6.36%**	4.86%	4.73%
Daily average outstanding for the year	**$37,939**	$37,568	$35,475
Weighted-average rate for the year	**6.26%**	5.00%	5.15%

NOTE 12—Guaranteed Preferred Beneficial Interest in the Corporation's Junior Subordinated Debt

The Corporation has sponsored eight trusts with a total aggregate issuance of $2.483 billion at December 31, 2000 in trust preferred securities. These trust preferred securities are tax-advantaged issues that qualify for Tier 1 capital treatment. Distributions on these securities are included in interest expense on long-term debt. Each of the trusts is a statutory business trust organized for the sole purpose of issuing trust securities and investing the proceeds thereof in junior subordinated debentures of the Corporation, the sole asset of each trust. The preferred trust securities of each trust represent preferred beneficial interests in the assets of the respective trusts and are subject to mandatory redemption upon payment of the junior subordinated debentures held by the trust. The common securities of each trust are wholly owned by the Corporation. Each trust's ability to pay amounts due on the trust preferred securities is solely dependent upon the Corporation making payment on the related junior subordinated debentures. The Corporation's obligations under the junior subordinated securities and other relevant trust agreements, in aggregate, constitute a full and unconditional guarantee by the Corporation of each respective trust's obligations under the trust securities issued by such trust. See Note 14 for discussion of the restrictions on the ability of the Corporation to obtain funds from its subsidiaries.

	Trust Preferred			Junior Subordinated Debt Owned by Trust		
(Dollars in millions)	IssuanceDate	Initial Liquidation Value	Distribution Rate	Initial Principal Amount	Maturity	Redeemable Beginning
Capital IV	August 30, 2000	$160	3-mo LIBOR plus 1.50%	$164.9	September 1, 2030	See (1) below.
Capital III	August 30, 2000	475	8.75	489.7	September 1, 2030	See (1) below.
Capital II	August 8, 2000	280	8.50	288.7	August 15, 2030	August 15, 2005
Capital I	September 20, 1999	575	8.00	593	September 15, 2029	September 20, 2004
First Chicago NBD Capital 1	January 31, 1997	250	3-mo LIBOR plus 0.55%	258	February 1, 2027	February 1, 2007
First USA Capital Trust I (2)	December 20, 1996	200	9.33	206.2	January 15, 2027	January 15, 2007
First Chicago NBD Institutional Capital A	December 3, 1996	500	7.95	515	December 1, 2026	December 1, 2006
First Chicago NBD Institutional Capital B	December 5, 1996	250	7.75	258	December 1, 2026	December 1, 2006

(1) Redeemable at any time subject to approval by the Federal Reserve Board.

(2) The Corporation paid a premium of $36 million to repurchase $193 million of these securities in 1997.

NOTE 13—Stock Dividends and Preferred Stock

The Corporation is authorized to issue 50,000,000 shares of preferred stock with a par value of $0.01 per share. The Board of Directors is authorized to fix the particular designations, preferences, rights, qualifications and restrictions for each series of preferred stock issued. All preferred shares rank prior to common shares, both as to dividends and liquidation, but have no general voting rights. The dividend rate on each of the cumulative adjustable rate series is based on stated value and adjusted quarterly, based on a formula that considers the interest rates for selected short- and long-term U.S. Treasury securities prevailing at the time the rate is set.

Information on preferred stock is as follows:

	Stated Value	Issued and Outstanding December 31		Carrying Amount December 31 (in millions)	
		2000	1999	2000	1999
Preferred Stock					
Series B	$100	1,191,000	1,191,000	$119	$119
Series C	100	713,800	713,800	71	71

The maximum, minimum and current dividend rates for individual series of preferred stock were as follows at December 31, 2000:

	Shares Outstanding	Stated Value Per Share	Annual Dividend Rate			Redemption Price (1)
			Maximum	Minimum	Current	
Cumulative Adjustable Rate (2)						
Series B	1,191,000	$100.00	12.0%	6.0%	6.0%	$100.00
Series C	713,800	$100.00	12.5%	6.5%	6.5%	$100.00

(1) Plus accrued and unpaid dividends.
(2) Currently redeemable.

On January 18, 2000, the Corporation announced the discontinuation of a biannual 10% stock dividend.

Note 14—Dividends and Capital Restrictions

The Corporation's national bank subsidiaries are subject to two statutory limitations on their ability to pay dividends. Under the first, dividends cannot exceed the level of undivided profits. In addition, a national bank cannot declare a dividend, without regulatory approval, in an amount in excess of its net income for the current year combined with the combined net profits for the preceding two years. State bank subsidiaries may also be subject to limitations on dividend payments. The amount of dividends available from certain nonbank subsidiaries that are subject to dividend restrictions is regulated by the governing agencies to which they report.

Based on these statutory requirements, the bank affiliates could, in the aggregate, have declared additional dividends of up to approximately $409 million without regulatory approval at January 1, 2001. The payment of dividends by any bank may also be affected by other factors, such as the maintenance of adequate capital.

The bank affiliates are subject to various regulatory capital requirements that may require them to maintain minimum ratios of total and Tier 1 capital to risk-weighted assets and of Tier 1 capital to average assets. Failure to meet minimum capital requirements results in certain actions by bank regulators that could have a direct material effect on the bank affiliates' financial statements. As of December 31, 2000, management believed that each of the bank affiliates met all capital adequacy requirements to which it is subject and is correctly categorized as well capitalized under the regulatory framework for prompt corrective action. There are no conditions or events since that categorization that management believes have changed the institution's category. For more information, see the "Capital Management—Regulatory Capital Requirements" section, beginning on page 44.

The actual and required capital amounts and ratios for the Corporation and its principal banking subsidiaries are presented as follows:

	Actual		To Be Categorized Adequately Capitalized	
	Capital Amount	Capital Ratio	Capital Amount	Capital Ratio
At December 31, 2000 (Dollars in millions)				
Risk-adjusted capital (to risk-weighted assets):

(1) Formerly The First National Bank of Chicago.

(2) Formerly NBD Bank (Michigan).

Federal banking law restricts each bank subsidiary from extending credit to the Corporation in excess of 10% of the subsidiary's capital stock and surplus, as defined. Any such extensions of credit are subject to strict collateral requirements.

NOTE 15—Supplemental Disclosures for Statement of Cash Flows

During 2000, the Corporation transferred $6.5 billion of available for sale securities to trading securities. The transfer was for capital management purposes. All of these securities were sold during 2000.

During 1999, the Corporation transferred $2.3 billion of asset-backed securities and variable corporate coupons from investment securities available for sale to trading assets. This transfer was for capital management purposes and reflects the Corporation's intent to sell these assets in the short term.

In connection with the Banc One/FCN merger, a $656 million transfer was made in 1998 to reclassify debt investment securities from held to maturity to available for sale. The reclassification was made to maintain an interest rate risk position that existed prior to the business combination.

During 1998, the Corporation reclassified $9.5 billion from loans, and $468 million from other assets, to investment securities-available for sale. The amounts transferred represent the Corporation's retained interests in its securitized credit card receivables.

Loans transferred to other real estate owned totaled $131 million, $113 million and $239 million in 2000, 1999 and 1998, respectively.

During both 2000 and 1999, the Corporation recognized several noncash charges to earnings for significant items. Several of these items will never result in future cash outflows while other items represent future uses of cash. See tables 1 and 2 on page 15 and "Business Segments" on pages 4–14 for a detailed listing of significant items.

NOTE 16—Supplemental Disclosures for Accumulated Other Adjustments to Stockholders' Equity

Accumulated other adjustments to stockholders' equity is as follows:

(In millions)	2000	1999	1998
Fair value adjustment on investment securities—available for sale:			
Balance, beginning of period	**$(271)**	$ 218	$203
Change in fair value, net of taxes of $6 in 2000, $(180) in 1999 and $72 in 1998	**(5)**	(391)	120
Reclassification adjustment, net of taxes of $151 in 2000, $(56) in 1999 and $(57) in 1998	**261**	(98)	(105)
Balance, end of period	**(15)**	(271)	218
Accumulated translation adjustment:			
Balance, beginning of period	**8**	21	6
Translation gain(loss), net of hedge results and taxes	**2**	(13)	15
Balance, end of period	**10**	8	21
Total accumulated other adjustments to stockholders' equity	**$ (5)**	$(263)	$239

NOTE 17—Employee Benefits

(a) Pension Plans

Prior to 2000, the Corporation had various noncontributory defined benefit pension plans covering substantially all salaried employees. Effective December 31, 1999, all noncontributory defined benefit pension plans were combined into one plan. Effective December 31, 2000, the supplemental executive retirement plan was discontinued. There was no effect on the 2000 periodic pension cost, however, ongoing periodic pension cost will be reduced by approximately $4.3 million annually.

The tables below set forth the Corporation's qualified plans' change in benefit obligation, change in plan assets and funded status:

(In millions)	2000	1999
Change in benefit obligation		
Benefit obligation, January 1	**$2,250**	$2,380
Service cost	**103**	116
Interest cost	**182**	165
Actuarial loss (gain)	**128**	(259)
Plan change	**—**	109
Curtailment	**—**	(12)
Benefits paid	**(415)**	(249)
Benefit obligation, December 31	**2,248**	2,250
Change in plan assets		
Fair value of plan assets, January 1	**3,400**	3,393
Actual return on plan assets	**146**	254
Corporation contribution	**3**	2
Benefits paid	**(415)**	(249)
Fair value of plan assets, December 31	**3,134**	3,400
Funded status	**886**	1,150
Unrecognized net actuarial loss (gain)	**(357)**	(655)
Unrecognized prior service cost	**28**	32
Unrecognized net transition assets	**(7)**	(21)
Prepaid pension costs, December 31	**$ 550**	$ 506

Plan assets include approximately 1.0 million shares of the Corporation's common stock with a fair value of approximately $37 million at December 31, 2000, and $32 million at December 31, 1999.

The table below sets forth net periodic pension cost for 2000, 1999 and 1998 for the Corporation's qualified and nonqualified pension plans:

(In millions)	2000	1999	1998
Service cost—benefits earned during the period	**$ 110**	$ 123	$ 135
Interest cost on benefit obligation	**194**	175	172
Expected return on plan assets	**(300)**	(293)	(271)
Amortization of prior service cost	**9**	(1)	(2)
Recognized actuarial (gain) loss	**(11)**	(1)	1
Amortization of transition assets	**(13)**	(13)	(13)
Curtailment gain	**—**	(13)	—
Net periodic pension cost	**$ (11)**	$ (23)	$ 22

The accrued pension cost for the Corporation's nonqualified supplemental pension plans was $77 million and $90 million at December 31, 2000 and 1999, respectively. Such plans are unfunded.

The assumptions used in determining the Corporation's benefit obligation and net periodic pension cost for both qualified and nonqualified supplemental pension plans are as follows:

	December 31		
(In millions)	2000	1999	1998
Actuarial assumptions:			
Weighted-average discount rate for benefit obligation	**7.50%**	8.00%	7.00%
Weighted-average rate of compensation increase	**4.25%**	5.00%	5.00%
Expected long-term rate of return on plan assets	**9.50%**	9.50%	9.50%

(b) Postretirement Benefits Other Than Pensions

The Corporation sponsors postretirement life insurance plans and provides health care benefits for certain retirees and grandfathered employees when they retire. The postretirement life insurance benefit is noncontributory, while the health care benefits are contributory.

The Corporation's postretirement benefit plans' change in benefit obligation and funded status at December 31, 2000 and 1999 are as follows:

(In millions)	2000	1999
Change in benefit obligation		
Benefit obligation, January 1	**$ 164**	$ 190
Service cost	**—**	1
Interest cost	**13**	13
Actuarial loss (gain)	**37**	(21)
Benefits paid	**(17)**	(19)
Curtailment	**(2)**	—
Benefit obligation, December 31	**195**	164
Change in plan assets		
Fair value of plan assets, January 1	**—**	—
Employer contribution	**17**	19
Benefits paid	**(17)**	(19)
Fair value of plan assets, December 31	**—**	—
Funded status	**(195)**	(164)
Unrecognized net actuarial loss (gain)	**20**	(17)
Unrecognized prior service cost	**(38)**	(47)
Accrued postretirement benefit costs, December 31	**$(213)**	$(228)

Net periodic cost for postretirement health care and life insurance benefits during 2000, 1999 and 1998 includes the following:

(In millions)	2000	1999	1998
Service cost—benefits earned during the period	**$ —**	$ 1	$ 6
Interest cost on accumulated postretirement benefit obligation	**13**	13	17
Amortization of prior service cost	**(12)**	(12)	—
Adjustment for acquisitions	**—**	2	—
Curtailment	**1**	—	—
Net periodic postretirement benefit cost	**$ 2**	$ 4	$23

The weighted average discount rate used in determining the accumulated postretirement benefit obligation was 7.50% at December 31, 2000, and 8.00% at December 31, 1999.

For measurement purposes, an annual rate of increase of 6.00% was assumed for 2000 in the cost of covered health care benefits; this range was assumed to decrease to 5.00% in the years 2001 and thereafter. These assumptions have a significant effect on the amounts reported. Accordingly, the effect of a 1.00% change in the assumed health-care-cost trend rates is as follows:

(In millions)	1% increase	1% decrease
Effect on 2000 service and interest cost components	**$0.8**	**$0.7**
Effect on December 31, 2000, accumulated postretirement benefit obligation	**$9.6**	**$8.5**

(c) 401(k) Plans

The Corporation sponsored various 401(k) plans that together covered substantially all of its employees. Up until 2000, the Corporation was required to make contributions to the plans in varying amounts. The expense related to these plans was $137 million in 2000, $81 million in 1999 and $89 million in 1998. Effective December 31, 1999, all new contributions are being made to one Corporation-sponsored 401(k) plan, thereby establishing uniform contribution requirements for the entire Corporation.

NOTE 18—Stock-Based Compensation

The Corporation utilizes several types of stock-based awards as part of its overall compensation program. In addition, the Corporation provides employees the opportunity to purchase its shares through its Employee Stock Purchase Plan. The Corporation's stock-based compensation plans provide for the granting of awards to purchase or receive common shares and include limits as to the aggregate number of shares available for grants and the total number of shares available for grants of stock awards in any one year. The compensation cost that has been charged against income for the Corporation's stock-based compensation plans was $59 million for 2000, $38 million for 1999 and $52 million for 1998. As a result of the 1999 fourth-quarter restructuring plan, $4 million was recorded as a restructuring charge related to the immediate vesting of restricted shares for certain executives. In 1998, $113 million was recorded as a restructuring charge related to the immediate vesting of certain restricted and performance shares resulting from the respective changes in control at FCN and First Commerce.

(a) Restricted Shares

Restricted shares granted to key officers of the Corporation require them to continue employment for a stated number of years from the grant date before restrictions on the shares lapse. The market value of the restricted shares as of the date of grant is amortized to compensation expense ratably over the period the shares

remain restricted. Holders of restricted stock receive dividends and have the right to vote the shares. As a result of the respective changes in control at FCN and First Commerce in 1998, substantially all outstanding restricted stock issued at these entities vested immediately at the time of the respective changes in control.

(b) Stock Options

The Corporation's stock option plans generally provide that the exercise price of any stock option may not be less than the fair value of the common stock on the date of grant.

Options granted under the Corporation's current stock-based compensation program generally vest over a five-year period and have a term of ten years. Certain option grants include the right to receive additional option grants ("reload" or "restorative" options) in an amount equal to the number of common shares used to satisfy the exercise price. Upon grant, reload options assume the same remaining term as the related original option and vest over a six-month period. Under a number of predecessor programs, options were granted with distinct provisions including vesting periods generally ranging from two to five years and possessing maximum terms of eight to 20 years. As a result of the change in control at FCN and First Commerce in 1998, all outstanding stock options issued at these entities vested and became exercisable immediately at the time of the respective changes in control.

The following tables summarize stock option activity for 2000, 1999 and 1998, respectively, and provide details of the Corporation's stock options outstanding at December 31, 2000:

	2000		1999		1998	
(Shares in Thousands)	Shares	Wtd. Avg. Exercise Price	Shares	Wtd. Avg. Exercise Price	Shares	Wtd. Avg. Exercise Price
Outstanding at January 1	**44,630**	**$40.88**	38,247	$34.34	40,798	$26.60
Granted	**42,659**	**27.25**	15,556	50.35	8,896	54.79
Exercised	**(2,089)**	**19.66**	(6,473)	24.34	(9,902)	20.29
Forfeited	**(7,885)**	**38.56**	(2,700)	36.56	(1,545)	37.77
Outstanding at December 31	**77,315**	**$34.17**	44,630	$40.88	38,247	$34.34
Exercisable at December 31	**25,503**	**$36.41**	19,847	$32.86	22,983	$29.30

	Options Outstanding			Options Exercisable	
(Shares in Thousands) Range of Exercise Prices	Number Outstanding Dec. 31, 2000	Wtd. Avg. Exercise Price	Wtd. Avg. Remaining Contractual Life	Number Exercisable Dec. 31, 2000	Wtd. Avg. Exercise Price
Less than $20.00	**3,031**	16.58	2.6 years	**3,031**	$16.58
$20.01—$25.00	**4,060**	24.27	4.6	**4,060**	24.27
$25.01—$30.00	**37,990**	26.60	16.6	**3,752**	26.43
$30.01—$35.00	**5,288**	32.54	8.0	**1,645**	32.42
$35.01—$45.00	**6,056**	38.82	7.2	**3,540**	39.00
$45.01—$55.00	**16,695**	49.55	12.9	**6,778**	48.71
Greater than $55.00	**4,195**	59.12	8.7	**2,697**	59.00
Total	**77,315**	$34.17	12.8 years	**25,503**	$36.41

(c) Employee Stock Purchase Plan

The Corporation sponsors an Employee Stock Purchase Plan designed to encourage employee stock ownership. This plan generally allows eligible employees to purchase shares of the Corporation's common stock at a 15% discount from the market price at the beginning of an offering or the market price at the end of such

offerings, whichever is lower. During the current 18-month offering period, an employee is allowed to make deposits of up to 20% of his/her earnings (up to a designated maximum) on an annual basis to an interest-bearing savings account to purchase the number of shares permissible under the plan. The maximum number of shares each participant may purchase cannot exceed the contribution limit divided by the applicable purchase price on the offering date. The Corporation does not recognize any compensation expense with respect to this plan.

(d) Pro Forma Costs of Stock-Based Compensation

The grant date fair values of stock options granted under the Corporation's various stock option plans and the Employee Stock Purchase Plan were estimated using the Black-Scholes option-pricing model. This model was developed to estimate the fair value of traded options, which have different characteristics than employee stock options. In addition, changes to the subjective input assumptions can result in materially different fair market value estimates. Therefore, the Black-Scholes model may not necessarily provide a reliable single measure of the fair value of employee stock options and purchase rights.

The following table summarizes stock-based compensation grants and their related weighted-average grant-date fair values for the years ended December 31:

	2000		1999		1998	
(Shares in Thousands)	Number of Shares	Wtd. Avg. Grant Date Fair Value	Number of Shares	Wtd. Avg. Grant Date Fair Value	Number of Shares	Wtd. Avg. Grant Date Fair Value
Stock option plans . . .	**42,659**	**$ 9.80**	15,556	$12.28	8,896	$12.03
Restricted shares	**4,517**	**27.85**	1,728	51.13	651	56.54
Employee Stock Purchase Plan (1)	**2,122**	**3.27**	2,974	7.28	—	—

(1) Estimated number of shares that employees would purchase under the plan for 1999.

The following assumptions were used to determine the Black-Scholes weighted-average grant date fair value of stock option awards and conversions in 2000, 1999 and 1998: (1) expected dividend yields ranged from 2.61%—4.86%, (2) expected volatility ranged from 19.11%—42.29%, (3) risk-free interest rates ranged from 4.36%—6.43% and (4) expected lives ranged from two to 13 years.

The following assumptions were used to determine the Black-Scholes weighted-average grant-date fair value of employees' purchase rights under the employee stock purchase plans in 2000 and 1999, respectively: (1) expected dividend yields of 2.58% and 2.86%, (2) expected volatility of 39.63% and 34.68%, (3) risk-free interest rates of 6.22% and 5.07% and (4) expected lives of 0.5 and 1.0 years. As certain employee stock purchase plans expired during 1998 and no additional rights were granted, determination of the average grant date fair value was not required in 1998.

Had the compensation cost for the Corporation's stock-based compensation plans been determined in accordance with the fair-value-based accounting method provided by SFAS No. 123, the net income and earnings per share implications for the years ended December 31, 2000, 1999 and 1998 would have been as follows:

	2000		1999		1998	
(In millions, except per share data)	Pro Forma(1)	As Reported	Pro Forma(1)	As Reported	Pro Forma(1)	As Reported
Net income (loss)	**$ (646)**	**$ (511)**	$3,413	$3,479	$3,034	$3,108
Net income per common share, basic	**(0.57)**	**(0.45)**	2.91	2.97	2.58	2.65
Net income per common share, diluted	**(0.57)**	**(0.45)**	2.89	2.95	2.55	2.61

(1) The above pro forma information may not be representative of the pro forma impact in future years.

As a result of the change in control at FCN and First Commerce, additional compensation expense of $21 million associated with the accelerated vesting of stock options was included in the 1998 pro forma net income under SFAS No. 123.

NOTE 19—Income Taxes

The components of total applicable income tax expense (benefit) in the consolidated income statement for the years ended December 31, 2000, 1999 and 1998, are as follows:

(In millions)	2000	1999	1998
Income tax expense:			
Current:			
Federal	**$ 571**	$ 735	$ 801
Foreign	**25**	2	4
State	**26**	97	98
Total	**622**	834	903
Deferred:			
Federal	**(1,151)**	624	424
State	**(40)**	37	30
Total	**(1,191)**	661	454
Applicable income taxes (benefit)	**$ (569)**	$1,495	$1,357

The tax effects of fair value adjustments on securities available for sale, foreign currency translation adjustments and certain tax benefits related to stock options are recorded directly to stockholders' equity. The net tax (benefit) charge recorded directly to stockholders' equity amounted to $107 million in 2000, $(259) million in 1999 and $(66) million in 1998.

A summary reconciliation of the differences between applicable income taxes and the amounts computed at the applicable regular federal tax rate of 35% follows:

(Dollars in millions)	2000		1999		1998	
Statutory tax rate	**$(378)**	**35.0%**	$1,741	35.0%	$1,563	35.0%
Increase (decrease) resulting from:						
State income taxes, net of federal income tax benefit	**(4)**	**0.3**	87	1.8	83	1.9
Tax-exempt interest	**(57)**	**5.3**	(66)	(1.3)	(58)	(1.3)
Tax credits	**(179)**	**16.6**	(133)	(2.7)	(94)	(2.1)
Goodwill	**25**	**(2.3)**	23	0.5	25	0.5
Cash surrender value of life insurance	**(56)**	**5.2**	(48)	(1.0)	(45)	(1.0)
Nontaxable liquidating distributions	—	—	—	—	(142)	(3.2)
Other, net	**80**	**(7.4)**	(109)	(2.2)	25	0.6
Applicable income taxes (benefit)	**$(569)**	**52.7%**	$1,495	30.1%	$1,357	30.4%

A net deferred tax liability is included in other liabilities in the consolidated balance sheet as a result of temporary differences between the carrying amounts of assets and liabilities in the consolidated financial statements and their related tax bases. The components of the net deferred tax liability as of December 31, 2000 and 1999 are as follows:

(In millions)	2000	1999
Deferred tax liabilities:		
Deferred income on lease financing	**$3,895**	$3,632
Prepaid pension costs	**165**	91
Securitizations of credit card receivables	**155**	247
Deferred fee income	**336**	59
Other	**200**	36
Gross deferred tax liabilities	**4,751**	4,065
Deferred tax assets:		
Allowance for credit losses	**1,667**	969
Restructure reserves	**127**	142
Incentive compensation	**257**	112
Other	**933**	(4)
Gross deferred tax assets	**2,984**	1,219
Net deferred tax liability	**$1,767**	$2,846

The Corporation has an alternative minimum tax (AMT) credit carryforward for tax purposes of $109 million at December 31, 2000. The Corporation also had carryforwards of foreign tax credits (FTC) and general business credits (GBC) in the amounts of $25 million and $156 million respectively. The FTC's will expire after 2006 and the GBC's will expire after 2020.

NOTE 20—Lease Commitments

The Corporation has entered into a number of operating lease agreements for premises and equipment. The minimum annual rental commitments under these leases are shown below:

(In millions)	
2001	$ 279
2002	250
2003	242
2004	213
2005	180
2006 and thereafter	1,035
Total	$2,199

The leasing commitments presented above include $259 million of cumulative charges to earnings taken through December 31, 2000, relating to the early exit from certain facilities. Rental income from premises leased to others in the amount of $80 million in 2000, $87 million in 1999 and $101 million in 1998 has reduced occupancy expense. Rental expense under operating leases approximated $384 million in 2000, $414 million in 1999 and $356 million in 1998.

NOTE 21—Financial Instruments with Off-Balance Sheet Risk

In the normal course of business, the Corporation is a party to financial instruments containing credit and/or market risks that are not required to be reflected in the balance sheet. These financial instruments include credit-related instruments as well as certain derivative instruments. The Corporation has risk management policies to identify, monitor and limit exposure to credit, liquidity and market risks.

The following disclosures represent the Corporation's credit exposure, assuming that every counterparty to financial instruments with off-balance sheet credit risk fails to perform completely according to the terms of the contracts, and that the collateral and other security, if any, proves to be of no value to the Corporation.

This note does not address the amount of market losses the Corporation would incur if future changes in market prices make financial instruments with off-balance sheet market risk less valuable or more onerous.

(a) Collateral and Other Security Arrangements

The credit risk of both on- and off-balance sheet financial instruments varies based on many factors, including the value of collateral held and other security arrangements. To mitigate credit risk, the Corporation generally determines the need for specific covenant, guarantee and collateral requirements on a case-by-case basis, depending on the nature of the financial instrument and the customer's creditworthiness. The Corporation may also receive comfort letters and oral assurances. The amount and type of collateral held to reduce credit risk varies but may include real estate, machinery, equipment, inventory and accounts receivable, as well as cash on deposit, stocks, bonds and other marketable securities that are generally held in the Corporation's possession or at another appropriate custodian or depository. This collateral is valued and inspected on a regular basis to ensure both its existence and adequacy. Additional collateral is requested when appropriate.

(b) Credit-Related Financial Instruments

The table below summarizes credit-related financial instruments, including both commitments to extend credit and letters of credit:

	December 31	
(In billions)	**2000**	**1999**
Unused credit card lines	**$272.7**	$270.5
Unused loan commitments	**162.9**	143.6
Standby letters of credit and foreign office guarantees	**19.0**	16.8
Commercial letters of credit	**0.7**	0.8

Since many of the unused commitments are expected to expire unused or be only partially used, the total amount of unused commitments in the preceding table does not necessarily represent future cash requirements.

Credit card lines allow customers to use a credit card to buy goods or services and to obtain cash advances. However, the Corporation has the right to change or terminate any terms or conditions of a customer's credit card account, upon notification to the customer. Loan commitments are agreements to make or acquire a loan or lease as long as the agreed-upon terms (e.g., expiry, covenants or notice) are met. The Corporation's commitments to purchase or extend loans help its customers meet their liquidity needs.

Standby letters of credit and foreign office guarantees are issued in connection with agreements made by customers to counterparties. If the customer fails to comply with the agreement, the counterparty may enforce the standby letter of credit or foreign office guarantee as a remedy. Credit risk arises from the possibility that the customer may not be able to repay the Corporation for standby letters of credit or foreign office guarantees. At December 31, 2000 and 1999, standby letters of credit and foreign office guarantees had been issued for the following purposes:

	December 31	
(In millions)	**2000**	**1999**
Financial	**$15,705**	$14,261
Performance	**3,305**	2,551
Total (1)	**$19,010**	$16,812

(1) Includes $2.7 billion at December 31, 2000, and $1.9 billion at December 31, 1999, participated to other institutions.

At December 31, 2000, $14.8 billion of standby letters of credit and foreign office guarantees was due to expire within three years, and $4.2 billion was to expire after three years.

Commercial letters of credit are issued or confirmed to ensure payment of customers' payables or receivables in short-term international trade transactions. Generally, drafts will be drawn when the underlying transaction is consummated as intended. However, the short-term nature of this instrument serves to mitigate the risk associated with these contracts.

(c) Derivative Financial Instruments

The Corporation enters into a variety of derivative financial instruments in its trading, asset and liability management, and corporate investment activities. These instruments offer customers protection from rising or falling interest rates, exchange rates, equity prices and commodity prices. They can either reduce or increase the Corporation's exposure to such changing rates or prices.

The following is a brief description of such derivative financial instruments:

- Interest rate forward and futures contracts represent commitments either to purchase or sell a financial instrument at a specified future date for a specified price, and may be settled in cash or through delivery.
- An interest rate swap is an agreement in which two parties agree to exchange, at specified intervals, interest payment streams calculated on an agreed-upon notional principal amount with at least one stream based on a specified floating rate index.
- Interest rate options are contracts that grant the purchaser, for a premium payment, the right either to purchase from or sell to the writer of the option, a financial instrument at a specified price within a specified period of time or on a specified date.
- Interest rate caps and floors are contracts with notional principal amounts that require the seller, in exchange for a fee, to make payments to the purchaser if a specified market interest rate exceeds the fixed cap rate or falls below the fixed floor rate on specified future dates.
- Forward rate agreements are contracts with notional principal amounts that settle in cash at a specified future date based on the differential between a specified market interest rate and a fixed interest rate.
- Foreign exchange contracts represent swap, spot, forward, futures and option contracts to exchange currencies.
- Equity price contracts represent swap, forward, futures, cap, floor and option contracts that derive their values from underlying equity prices.
- Commodity price contracts represent swap, futures, cap, floor and option contracts that derive their values from underlying commodity prices.

The Corporation's objectives and strategies for using derivative financial instruments for structural interest rate risk management and foreign exchange risk management are discussed on pages 24 to 26.

Balance sheet exposure for derivative financial instruments includes the amount of recognized gains in the market valuations of those contracts. Those amounts fluctuate as a function of maturity, interest rates, foreign exchange rates, equity prices and commodity prices.

The credit risk associated with exchange-traded derivative financial instruments is limited to the relevant clearinghouse. Options written do not expose the Corporation to credit risk, except to the extent of the underlying risk in a financial instrument that the Corporation may be obligated to acquire under certain written put options. Caps and floors written do not expose the Corporation to credit risk.

On some derivative financial instruments, the Corporation may have additional risk. This is due to the underlying risk in the financial instruments that the Corporation may be obligated to acquire or the risk that the Corporation will deliver under a contract, but the customer fails to deliver the countervailing amount. The Corporation believes that its credit and settlement procedures minimize these risks.

Not all derivative financial instruments have off-balance sheet market risk. Market risk associated with options purchased and caps and floors purchased are recorded in the balance sheet.

NOTE 22—Fair Value of Financial Instruments

The Corporation is required to disclose the estimated fair value of its financial instruments in accordance with SFAS No. 107, ''Disclosures about Fair Value of Financial Instruments.'' These disclosures do not attempt to estimate or represent the Corporation's fair value as a whole. The disclosure excludes assets and liabilities that are not financial instruments as well as the significant unrecognized value associated with core deposits and credit card relationships.

Fair value amounts disclosed represent point-in-time estimates that may change in subsequent reporting periods due to market conditions or other factors. Estimated fair value amounts in theory represent the amounts at which financial instruments could be exchanged or settled in a current transaction between willing parties. In practice, however, this may not be the case due to inherent limitations in the methodologies and assumptions used to estimate fair value. For example, quoted market prices may not be realized because the financial instrument may be traded in a market that lacks liquidity; or a fair value derived using a discounted cash flow approach may not be the amount realized because of the subjectivity involved in selecting underlying assumptions, such as projecting cash flows or selecting a discount rate. The fair value amount also may not be realized because it ignores transaction costs and does not include potential tax effects. The Corporation does not plan to dispose of, either through sale or settlement, the majority of its financial instruments at these estimated fair values.

The following table summarizes the carrying values and estimated fair values of financial instruments as of December 31, 2000 and 1999:

(In millions)	2000 Carrying Value	2000 Estimated Fair Value	1999 Carrying Value	1999 Estimated Fair Value
Financial assets:				
Cash and other short-term financial instruments (a)	**$ 27,640**	**$ 27,640**	$ 32,869	$ 32,869
Trading assets (a)	**2,788**	**2,788**	7,952	7,952
Investment securities (b)	**50,561**	**50,561**	47,912	47,912
Loans (c)	**174,251**	**171,633**	163,877	161,911
Allowance for credit losses	**(4,110)**	**—**	(2,285)	—
Loans, net	**170,141**	**171,633**	161,592	161,911

Trading purposes (1)(f)	**2,148**	**2,148**	3,160	3,160
Other than trading purposes (f)	**174**	**313**	212	199
Total derivative product assets	**2,322**	**2,461**	3,372	3,359
Financial instruments in other assets (a)	**2,220**	**2,220**	1,911	1,911
Financial liabilities:				
Deposits (d)	**167,077**	**167,882**	162,278	162,135
Securities sold not yet purchased (a)	**285**	**285**	753	753
Other short-term financial instruments (a)	**30,240**	**30,240**	39,544	39,544
Long-term debt (2)(e)	**40,911**	**40,867**	35,435	35,678
Derivative product liabilities:				
Trading purposes (1)(f)	**2,090**	**2,090**	3,115	3,115
Other than trading purposes (f)	**122**	**161**	217	137
Total derivative product liabilities	**2,212**	**2,251**	3,332	3,252
Financial instruments in other liabilities (a)	**1,828**	**1,828**	1,363	1,363

(1) The estimated average fair values of derivative financial instruments used in trading activities during 2000 and 1999 were $2.8 billion and $4.3 billion, respectively, classified as assets and $2.8 billion and $4.4 billion, respectively, classified as liabilities.

(2) Includes trust preferred capital securities.

Estimated fair values are determined as follows:

(a) Financial Instruments Whose Carrying Value Approximates Fair Value

A financial instrument's carrying value approximates its fair value when the financial instrument has an immediate or short-term maturity (generally one year or less), or is carried at fair value.

Quoted market prices or dealer quotes typically are used to estimate fair values of trading securities and securities sold under repurchase agreements.

Commitments to extend credit and letters of credit typically result in loans with a market interest rate when funded. The recorded book value of deferred fee income approximates the fair value.

(b) Investment Securities

Quoted market prices typically are used to estimate the fair value of debt investment securities. Quoted market prices for similar securities are used to estimate fair value when a quoted market price is not available for a specific debt investment security. See Note 1(c) on page 52 for the methodologies used to determine the fair value of equity investment securities.

(c) Loans

The loan portfolio was segmented based on loan type, credit quality and repricing characteristics. Carrying values are used to estimate fair values of certain variable rate loans with no significant credit concerns and frequent repricing. A discounted cash flow method was used to estimate the fair value of other loans. Discounting was based on the contractual cash flows, and discount rates typically are based on the year-end yield curve plus a spread that reflects pricing on loans with similar characteristics. If applicable, prepayment assumptions are factored into the fair value determination based on historical experience and current economic and lending conditions.

(d) Deposits

The amount payable on demand at the report date is used to estimate fair value of demand and savings deposits with no defined maturity. A discounted cash flow method is used to estimate the fair value of fixed-rate time deposits. Discounting was based on the contractual cash flows and the current rates at which similar deposits with similar remaining maturities would be issued, adjusted for servicing costs. Carrying value typically is used to estimate the fair value of floating-rate time deposits.

(e) Long-Term Debt

Quoted market prices or the discounted cash flow method was used to estimate the fair value of the Corporation's fixed-rate long-term debt. Discounting was based on the contractual cash flows and the current rates at which debt with similar terms could be issued. Carrying value typically is used to estimate the fair value of floating-rate long-term debt.

(f) Derivative Product Assets and Liabilities

Quoted market prices or pricing and valuation models were used to estimate the fair value of derivative product assets and liabilities. Assumptions input into models were based on current market information.

NOTE 23—Related Party Transactions

Certain executive officers, directors and their related interests are loan customers of the Corporation's affiliates. The Securities and Exchange Commission (the "Commission") has determined that, with respect to the Corporation and significant subsidiaries (as defined by the Commission), disclosure of borrowings by directors and executive officers and certain of their related interests should be made if the loans are greater than 5% of stockholders' equity, in the aggregate. These loans in aggregate were not greater than 5% of stockholders' equity at December 31, 2000 or 1999.

NOTE 24—Pledged Assets

Assets having a book value of $44.2 billion as of December 31, 2000, and $62.7 billion as of December 31, 1999, were pledged as collateral for repurchase agreements, off-balance sheet investment products, and governmental and trust department deposits in accordance with federal and state requirements, and for other purposes required by law. The assets pledged generally were comprised of commercial mortgage loans and investment securities. Of the total collateral pledged as of December 31, 2000, $491 million of collateral, which was comprised of investment securities posted as collateral for repurchase agreements, was permitted to be sold or repledged by the secured party.

The Corporation's bank affiliates are required to maintain average noninterest-bearing cash balances, in accordance with Federal Reserve Board regulations. The average required reserve balances were $2.5 billion in 2000 and $2.9 billion in 1999.

NOTE 25—Collateral Policy Related to Certain Asset Transfer Activity

It is the Corporation's policy to take possession of securities purchased under agreements to resell in order to secure the risk of counterparty nonperformance on the transaction. The Corporation monitors the fair value of the underlying securities as compared to the related receivable, including accrued interest, and adjusts the level of collateral as necessary. With respect to securities lent, the Corporation receives collateral to secure the risk of counterparty nonperformance in the form of cash or other collateral, in an amount generally in excess of the fair value of the lent securities. The Corporation monitors the fair value of the securities lent on a daily basis, and additional cash or securities are obtained as necessary.

The fair value of collateral accepted by the Corporation in connection with these activities was $4.1 billion at December 31, 2000, of which, $3.8 billion had been sold or repledged as of the balance sheet date.

NOTE 26—Contingent Liabilities

The Corporation and certain of its subsidiaries have been named as defendants in various legal proceedings, including certain class actions, arising out of the normal course of business or operations. In certain of these proceedings, which are based on alleged violations of consumer protection, securities, banking, insurance and other laws, rules or principles, substantial money damages are asserted against the Corporation and its subsidiaries. Since the Corporation and certain of its subsidiaries, which are regulated by one or more federal and state regulatory authorities, are the subject of numerous examinations and reviews by such authorities, the Corporation also is and will be, from time to time, normally engaged in various disagreements with regulators, related primarily to its financial services businesses. The Corporation has also received certain tax deficiency assessments. In view of the inherent difficulty of predicting the outcome of such matters, the Corporation cannot state what the eventual outcome of pending matters will be; however, based on current knowledge and after consultation with counsel, Management does not believe that liabilities arising from these matters, if any, will have a material adverse effect on the consolidated financial position of the Corporation.

In connection with issuances of commercial paper, the Corporation has an agreement providing future credit availability (back-up lines of credit) with non-affiliated banks. The agreements aggregated $300 million at December 31, 2000. The commitment fee paid under these agreements was 0.07%. The back-up lines of credit, together with overnight money market loans, short-term investments and other sources of liquid assets, exceeded the amount of commercial paper issued at December 31, 2000.

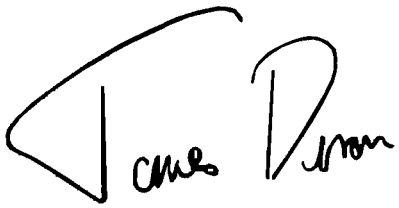
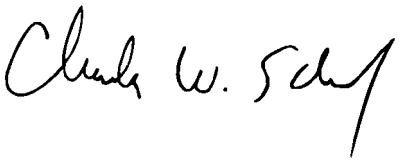
(2) Common equivalent shares have been excluded from the computation of diluted loss per share in the second and fourth quarters of 2000 as the effect would be antidilutive.

REPORT OF MANAGEMENT



Management of BANK ONE CORPORATION and its subsidiaries ("the Corporation") is responsible for the preparation, integrity and fair presentation of its published financial reports. These reports include consolidated financial statements that have been prepared in accordance with Generally Accepted Accounting Principles, using Management's best judgment and all information available.

The consolidated financial statements of the Corporation have been audited by Arthur Andersen LLP, independent auditors. Their accompanying report is based upon an audit conducted in accordance with generally accepted auditing standards, including the related review of internal accounting controls and financial reporting matters. The Audit and Risk Management Committee of the Board of Directors, which consists solely of outside directors, meets at least quarterly with the independent auditors, the Internal Audit Department and representatives of management to discuss, among other things, accounting and financial reporting matters.



Management of the Corporation is responsible for establishing and maintaining an effective internal control structure over financial reporting, including the safeguarding of assets against unauthorized acquisition, use or disposition. The Corporation maintains systems of controls that it believes are reasonably designed to provide Management with timely and accurate information about the operations of the Corporation. Both the Corporation's independent auditors and the internal audit function directly provide reports on significant matters to the Audit and Risk Management Committee. The Corporation's independent auditors, the internal audit function and the Audit and Risk Management Committee have free access to each other. Substantial changes were made in 2000 which Management believes improved internal controls, systems and corporate-wide processes and procedures.

The Corporation is dedicated to maintaining a culture that reflects the highest standards of integrity and ethical conduct when engaging in its business activities. Management of the Corporation is responsible for compliance with various federal and state laws and regulations, and the Corporation has established procedures that are designed to ensure that Management's policies relating to conduct, ethics and business practices are followed on a uniform basis.

Report of Independent Public Accountants

To the Stockholders and Board of Directors
of BANK ONE CORPORATION:

We have audited the accompanying consolidated balance sheets of BANK ONE CORPORATION (a Delaware corporation) and subsidiaries as of December 31, 2000 and 1999, and the related consolidated statements of income, stockholders' equity and cash flows for each of the three years in the period ended December 31, 2000. These financial statements are the responsibility of BANK ONE CORPORATION's management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with auditing standards generally accepted in the United States. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the financial position of BANK ONE CORPORATION and subsidiaries as of December 31, 2000 and 1999, and the results of their operations and their cash flows for each of the three years in the period ended December 31, 2000, in conformity with accounting principles generally accepted in the United States.

Chicago, Illinois,
January 17, 2001

(1) The combined amounts for investment securities available for sale and held to maturity are based on their respective carrying values. Based on the amortized cost of investment securities available for sale, the combined average balance for 2000, 1999, 1998, 1997 and 1996 would be $45.500 billion, $46.612 billion, $33.415 billion, $26.246 billion and $28.613 billion, respectively, and the average earned rate in 2000, 1999, 1998, 1997 and 1996 would be 7.53%, 7.11%, 7.12%, 6.63% and 6.73%, respectively.

(2) The Corporation's undivided interest in securitized credit card receivables was reclassified from loans to investment securities during 1998. Such amounts averaged $18,447 million for 2000, $16,048 million for 1999 and $5,798 million for 1998.

(3) Nonperforming loans are included in average balances used to determine rates.

(4) Includes tax-equivalent adjustments based on federal income tax rate of 35%.

(5) Includes international banking facilities' deposit balances in domestic offices and balances of Edge Act and overseas offices.

(6) Includes trust preferred capital securities.

For purposes of this table, changes that are not due solely to volume or rate changes are allocated to volume.

ANNUAL REPORT ON FORM 10-K

SECURITIES AND EXCHANGE COMMISSION
Washington, D.C. 20549

Annual Report Pursuant to Section 13 or 15(d) of the Securities Exchange Act of 1934
For the fiscal year ended December 31, 2000

Commission file number 001-15323

BANK ONE CORPORATION
Incorporated in the State of Delaware
IRS Employer Identification #31-0738296
Address: 1 Bank One Plaza, Chicago, Illinois 60670
Telephone: (312) 732-4000

Securities registered pursuant to Section 12(b) of the Act (Common Stock listed on the New York Stock Exchange and the Chicago Stock Exchange; all others listed only on the New York Stock Exchange):

Common Stock, $0.01 par value
Preferred Stock with Cumulative and Adjustable Dividends, Series B ($100 stated value), $0.01 par value
Preferred Stock with Cumulative and Adjustable Dividends, Series C ($100 stated value), $0.01 par value
7¼% Subordinated Debentures Due 2004
8.10% Subordinated Notes Due 2002
Guarantee of 8.00% Preferred Securities of BANK ONE Capital I
Guarantee of 8.50% Preferred Securities of BANK ONE Capital II
Guarantee of 8.00% Preferred Securities of BANK ONE Capital V

Securities registered pursuant to Section 12(g) of the Act: None.

The registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months, and (2) has been subject to such filing requirements for the past 90 days.

Disclosure of delinquent filers pursuant to Item 405 of Regulation S-K is not contained herein, and will not be contained, to the best of the registrant's knowledge, in definitive proxy or information statements incorporated by reference in Part III of this Form 10-K or any amendment to this Form 10-K.

The aggregate market value of voting stock held by nonaffiliates of the Corporation at December 31, 2000, was approximately $37,800,000,000 (based on the average price of such stock on February 23, 2001). At December 31, 2000, the Corporation had 1,159,828,803 shares of its Common Stock, $0.01 par value, outstanding.

Item 12—"Beneficial Ownership of Bank One's Common Stock."

Item 13—"Transactions with Directors, Executive Officers, Stockholders and Associates."

EMPLOYEES

As of December 31, 2000, Bank One and its subsidiaries had 80,778 full time and part time employees with benefits.

COMPETITION

Bank One and its subsidiaries face active competition in all of their principal activities, not only from commercial banks, but also from savings and loan associations, credit unions, finance companies, mortgage companies, leasing companies, insurance companies, mutual funds, securities brokers and dealers, other domestic and foreign financial institutions, and various nonfinancial institutions. The Gramm-Leach-Bliley Act of 1999 (''the GLB Act'') likely will intensify competition. Additional discussion of this legislation is included in the ''Supervision and Regulation'' section below.

MONETARY POLICY AND ECONOMIC CONTROLS

The earnings of the Banks, and therefore the earnings of Bank One, are affected by the policies of regulatory authorities, including the Board of Governors of the Federal Reserve System (the ''Federal Reserve Board''). An important function of the Federal Reserve Board is to promote orderly economic growth by influencing interest rates and the supply of money and credit. Among the methods that have been used to achieve this objective are open market operations in United States government securities, changes in the discount rate for member bank borrowings and changes in reserve requirements against bank deposits. These methods are used in varying combinations to influence overall growth and distribution of bank loans, investments and deposits, interest rates on loans and securities, and rates paid for deposits.

The effects of the various Federal Reserve Board policies on the future business and earnings of Bank One cannot be predicted. Other economic controls also have affected Bank One's operations in the past. Bank One cannot predict the nature or extent of any effects that possible future governmental controls or legislation might have on its business and earnings.

SUPERVISION AND REGULATION

General

As a bank holding company, Bank One is regulated under the BHC Act, and is subject to inspection, examination and supervision by the Federal Reserve Board. Under the BHC Act, bank holding companies generally may not own or control more than 5% of the voting shares of any company, including a bank, or acquire certain assets of banks and other companies, without the Federal Reserve Board's prior approval. In addition, bank holding companies (except those that have become ''financial holding companies'') generally may engage, directly or indirectly, only in banking and such other activities as are determined by the Federal Reserve Board to be closely related to banking. The BHC Act, as amended by the Riegle-Neal Interstate Banking and Branching Efficiency Act of 1994 (''Riegle-Neal''), permits bank holding companies, subject to certain restrictions, to merge with or acquire banks and branches in any state that has not opted out of Riegle-Neal.

The 'GLB Act' eliminated many of the restrictions placed on the activities of certain qualified bank holding companies. Among other things, the GLB Act repealed certain Glass-Steagall Act restrictions on affiliations between banks and securities firms, and amended the BHC Act to permit bank holding companies that qualify as ''financial holding companies'' (''FHCs'') to engage in activities, and acquire companies engaged in activities, that are: financial in nature (including insurance underwriting, insurance company portfolio investment, financial advisory, securities underwriting, dealing and market-making, and merchant banking activities); incidental to financial activities; or complementary to financial activities if the Federal Reserve Board determines that they pose no substantial risk to the safety or soundness of depository institutions or the financial system in general.

The GLB Act also permits national banks, under certain circumstances, to engage through special financial subsidiaries in the financial and other incidental activities authorized for FHCs. Bank One has not yet determined when it may elect to become an FHC or to establish a financial subsidiary.

Liability for Bank Subsidiaries

The Federal Reserve Board requires that a bank holding company act as a source of financial and managerial strength to each of its subsidiary banks and to maintain resources adequate to support each subsidiary bank. In addition, the National Bank Act permits the Office of the Comptroller of the Currency (''OCC'') to order the pro rata assessment of shareholders of a national bank whose capital has become impaired. If a shareholder fails to pay such an assessment, the OCC can order the sale of the shareholder's stock to cover the deficiency. In the event of a bank holding company's bankruptcy, any commitment by the bank holding company to a federal bank regulatory agency to maintain the capital of a subsidiary bank would be assumed by the bankruptcy trustee and entitled to priority of payment.

Under the Federal Deposit Insurance Act, the Federal Deposit Insurance Corporation (''FDIC'') can hold any FDIC-insured depository institution liable for any loss the FDIC incurs, or reasonably expects to incur, in connection with (1) the default of any commonly controlled FDIC-insured depository institution or (2) any assistance provided by the FDIC to any commonly controlled depository institution that is in danger of default. ''Default'' is defined generally as the appointment of a conservator or receiver and ''in danger of default'' is defined generally as the existence of certain conditions indicating that a ''default'' is likely to occur absent regulatory assistance. All of the Banks are FDIC-insured depository institutions.

Capital Requirements

Bank One is subject to capital requirements and guidelines imposed on bank holding companies by the Federal Reserve Board. The OCC, the FDIC and the Federal Reserve Board impose similar requirements and guidelines on the Banks within their respective jurisdictions. These capital requirements are described in ''Capital Management—Regulatory Capital Requirements'' on pages 44-45.

The Banks

Most of the Banks are national banking associations and, as such, are subject to regulation primarily by the OCC and, secondarily, by the FDIC and the Federal Reserve Board. Bank One's state-chartered Banks are subject to regulation by the Federal Reserve Board and the FDIC and, in addition, by their respective state banking departments. The Banks' operations in other countries are subject to various restrictions imposed by the laws of those countries.

Various federal and state laws limit the amount of dividends the Banks can pay to Bank One without regulatory approval. In addition, federal bank regulatory agencies have authority to prohibit the Banks from engaging in unsafe or unsound practices in conducting their business. The payment of dividends, depending upon the financial condition of the bank in question, could be deemed to constitute an unsafe or unsound practice.

Depositor Preference Statute

Federal law provides that deposits and certain claims for administrative expenses and employee compensation against an insured depository institution are afforded a priority over other general unsecured claims against such institution, including federal funds and letters of credit, in the liquidation or other resolution of the institution by any receiver.

OTHER

Bank One's nonbank subsidiaries and banking-related business units are subject to regulation by various state and federal regulatory agencies and self-regulatory organizations. Activities subject to such regulation include investment management, investment advisory services, commodities and securities brokerage, insurance services and products, securities dealing and transfer agency services.

PROPERTIES

Bank One's headquarters are in Chicago, Illinois. The 60-story building, located in the center of the Chicago "Loop" business district, is master-leased and has 1,750,000 square feet of space, of which Bank One occupies approximately 57%; the balance is subleased to other tenants. Bank One and its subsidiaries occupy more than 2,800 owned or leased domestic properties, including banking centers, operations facilities and commercial banking offices. In addition, Bank One has foreign offices in major cities in Canada, Mexico, Europe, Asia and Australia. These offices all are located in leased premises.

FORWARD-LOOKING STATEMENTS

This Annual Report on Form 10-K contains certain forward-looking statements within the meaning of the Private Securities Litigation Reform Act of 1995. In addition, the Corporation may make or approve certain statements in future filings with the Securities and Exchange Commission, in press releases, and in oral and written statements made by or with the Corporation's approval that are not statements of historical fact and may constitute forward-looking statements. Forward-looking statements may relate to, without limitation, the Corporation's financial condition, results of operations, plans, objectives, future performance or business.

Forward-looking statements can be identified by the fact that they do not relate strictly to historical or current facts. They often include the words "believes", "anticipates", "expects", "intends", "plans", "estimates", "targets" or words of similar meaning or future or conditional verbs such as "will", "would", "should", "could" or "may".

Forward-looking statements involve risks and uncertainties. Actual conditions, events or results may differ materially from those contemplated by a forward-looking statement. Factors that could cause this difference—many of which are beyond the Corporation's control—include the following, without limitation:

- Local, regional and international business or economic conditions may differ from those expected.
- The effects of and changes in trade, monetary and fiscal policies and laws, including the Federal Reserve Board's interest rate policies may adversely affect the Corporation's business.
- The timely development and acceptance of new products and services may be different than anticipated.
- Technological changes instituted by the Corporation and by persons who may affect the Corporation's business may be more difficult to accomplish or more expensive than anticipated or may have unforeseen consequences.
- Acquisitions and integration of acquired businesses may be more difficult or expensive than expected.
- The ability to increase market share and control expenses may be more difficult than anticipated.
- Changes in laws and regulations (including laws and regulations concerning taxes, banking, securities and insurance) may adversely affect the Corporation or its business.
- Changes in accounting policies and practices, as may be adopted by regulatory agencies and the Financial Accounting Standards Board, may affect expected financial reporting.
- The costs, effects and outcomes of litigation may adversely affect the Corporation or its business.
- The Corporation may not manage the risks involved in the foregoing as well as anticipated.

Forward-looking statements speak only as of the date they are made. The Corporation undertakes no obligation to update any forward-looking statement to reflect subsequent circumstances or events.

EXECUTIVE OFFICERS OF THE REGISTRANT

Name and Age	Current Position Held with the Corporation and Effective Date First Elected to Office Indicated
James Dimon (45)	Director, Chairman and Chief Executive Officer (3/27/00)
Austin A. Adams (57)	Executive Vice President (3/1/01)
David P. Bolger (43)	Executive Vice President (4/20/99)
James S. Boshart, III (55)	Executive Vice President (9/5/00)
Christine A. Edwards (48)	Executive Vice President, Chief Legal Officer and Secretary (5/16/00)
Philip G. Heasley (51)	Executive Vice President (1/2/01)
David J. Kundert (58)	Executive Vice President (12/15/98)
Sarah L. McClelland (41)	Executive Vice President (9/4/00)
Timothy P. Moen (48)	Executive Vice President (12/15/98)
Robert A. O'Neill, Jr. (47)	Executive Vice President and Chief Auditor (1/19/99)
Charles W. Scharf (35)	Executive Vice President and Chief Financial Officer (6/12/00)
R. Michael Welborn (49)	Executive Vice President (5/16/00)

Messrs. Bolger, Kundert, Moen, O'Neill and Welborn, and Ms. McClelland, each have served as an officer of Bank One, or a subsidiary or predecessor, for more than five years. The prior business experience of the other executive officers is set forth below:

James Dimon: November 1998–March 2000—private investor; October–November 1998—President, Citigroup, Inc., and Chairman and Co-Chief Executive Officer of Citigroup subsidiary Salomon Smith Barney Holdings, Inc.; November 1993–October 1998—President and Chief Operating Officer, Travelers Group, as well as executive positions with Travelers' subsidiaries Smith Barney, Inc. and Salomon Smith Barney Holdings, Inc. during that period.

Austin A. Adams: 1985–February 2001—Executive Vice President of the Automation and Operations Group, First Union Corporation.

James S. Boshart, III: June 1998–September 2000—Co-Chief Executive Officer, Schroder Salomon Smith Barney; January 1998–June 1998—Head of Transition Team, Salomon Smith Barney; 1997–January 1998—Vice Chairman and Co-Head of Investment Banking, Salomon Smith Barney; 1995–1997—Head of Capital Markets, Smith Barney, Inc.

Christine A. Edwards: 1999–May 2000—Executive Vice President and Chief Legal Officer, ABN AMRO North America; 1997–1999—Executive Vice President, Chief Legal Officer and Secretary, Morgan Stanley Dean Witter; 1990–1997—Executive Vice President, General Counsel and Secretary, Dean Witter Discover & Co.

Philip G. Heasley: July, 1999–November, 2000—President and Chief Operating Officer, U.S. Bancorp; 1994–July 1999—Vice Chairman, U.S. Bancorp.

Charles W. Scharf: 1998–June, 2000—Chief Financial Officer, Citigroup Global Corporate and Investment Bank; 1995–1998—Chief Financial Officer, Salomon Smith Barney, Inc.

Bank One's executive officers serve until the annual meeting of the Board of Directors (May 15, 2001).

EXHIBITS, FINANCIAL STATEMENT SCHEDULES AND REPORTS ON FORM 8-K

ONE Access
from anywhere

Whenever our customers need our attention, Bank One is there. We offer service through 1,802 banking centers, 5,141 ATM's, 24-hour telephone banking, and bankone.com, which serves more than 1,083,000 users. Customers like Santiago Borja appreciate the choices. Whether he needs to check his balance while on the golf course or make a late-night payment online, being able to decide how and when he does business with us is extremely important to this busy small business owner. We realize that occasionally time really is more precious than money, and people like Santiago shouldn't have to wait.

ONE Provider
for many needs

It helps to do business with a banker who takes the time to understand all your needs. Bob and Myrna Schlegel, owners of Pavestone, began banking with us in 1987. In the last 10 years, annual revenues have soared from $5 million to $170 million. Of course, growth at that level presents tremendous challenges. Bank One has provided the credit, leasing, capital markets, treasury management, and international tools the Schlegels have needed to grow their business. On the personal side, the Schlegels are also working with us to manage their wealth. One customer working with one provider has made for one great success story.

ONE Relationship
50 million faces

Throughout all areas of our business – whether in retail banking, business banking, payment solutions, or investment management – Bank One is coming together to help meet the unique needs of individual customers. Since 1934, we have been the lead credit and treasury management bank for the Chicago Bears. Based on the trust we have earned over the years, the Bears recently expanded our relationship to include management of the team's season ticket and playoff lockbox, financing of the Soldier Field renovation, and investment of their reserve funds. This is one relationship that's building a winning team for all of us.

ONE Community
many locations

Bank One is working to help improve the lives of people all over the country. Our contribution, investment, and lending programs support community-based projects and organizations such as Homeward Bound – a transitional housing program in Maricopa County, Arizona, for homeless, impending homeless, and families affected by domestic violence. In 2001, Bank One contributed more than $40 million to educational, community development, and civic leadership causes. Our community investment program worked to ensure access to financial services and to promote economic development throughout our markets. One community, many locations. Bank One is working to make one big difference in each community we serve.

2001 was a year that none of us will ever forget. It was an extraordinary time for our nation and our economy. At Bank One, it was a year of coming together as one company and one team with a singular passion to win. A time to make enormous progress in the face of numerous unforeseen challenges.

Bank One made good progress in 2001. We earned $2.6 billion in a difficult economic environment. Equally important, we substantially improved our systems and service, financial discipline, balance sheet, cost structure, and management team. Of course, 2001 had its pluses, minuses, challenges and lessons. In the first part of this letter, I will report on what we accomplished (or didn't) in 2001 and how we have positioned ourselves for 2002. In the second part, I will deal with some more forward-looking issues, specifically our developing views of our businesses and a few of the key challenges we must confront.

I. REVIEW OF 2001, OUTLOOK FOR 2002

Our financial performance – earnings of $2.6 billion and a return on equity of 13% – was satisfactory but not outstanding. Despite the recession, we should have done better. Our credit costs were worse than you should expect, and worse than most of our competitors. On most other measures, however, we made good progress in positioning ourselves for 2002 and beyond.

IMPROVED FINANCIAL DISCIPLINE AND RISK MANAGEMENT

In 2001, we strengthened the quality of both earnings and capital. Our actions were, and will continue to be, driven by the following priorities:

Conservative Accounting Policies and Practices. Your company uses relatively conservative accounting policies and assumptions that affect valuation of assets and liabilities. For example, we manage all off-balance sheet assets and liabilities with the same attention and level of consistency as if they were on the balance sheet. (For the interested reader, we make full disclosures on these in the financial review section.)

We have consistently strengthened reserves to protect against loan losses. While a material amount of the reserve increase was necessary due to declining credit quality, we are also more accurately reflecting the risk within our loan book through a more disciplined and granular rating system (a 20-grade system versus a 12-grade system), and a more rapid recognition and response to loan deterioration. In fact, I believe that where in the past we significantly lagged changes in ratings by the rating agencies, we now recognize deterioration more quickly.

In addition, we report internally thousands of profit-and-loss statements, covering everything from individual branches and products to cost and capital allocations. These disciplines are allowing us to make better and more informed decisions.

Managing Risk. Last year we told you we had too much aggregate risk, too much risk in individual names, and that we were not properly compensated for the risks we were taking. Three examples illustrate how seriously we undertook the task of properly managing risk:

1. In our large corporate business, we reduced on- and off-balance sheet credit exposures by $38.5 billion, or 26%. Our total exposure is now $109 billion, which is close to the aggregate level we believe is appropriate. Additionally, we instituted tougher individual limits, and now have fewer exceptions. Most importantly, our corporate business revenue is essentially flat, which means that our revenue per dollar of risk is up 22%. Furthermore, our revenue is of better quality because a greater percentage comes from the higher margin fee businesses.

   In spite of this, fourth quarter credit losses for our large corporate business were 1.7% – higher than normal – and our full-year return on equity (ROE) was 8%. If normalized for credit losses (60-70 basis points through a cycle), our ROE would have been 13%, a respectable number and one that is now far more stable than in the past. Middle market losses, at 1.9% in the fourth quarter, were also embarrassingly high. Even with this high loss, however, our full-year ROE was 13%, which demonstrates how strong this business can be when properly executed. Finally, our loan loss reserve for our total commercial business is now a very strong 4.37% of loans, giving us great comfort against adverse events.

2. We stopped buying brokered home equity loans that: 1) we did not individually underwrite, and 2) had certain high risk characteristics, even though they were at the time among the most profitable and rapidly growing part of our home equity business. At their peak, these loans totaled approximately $8 billion and credit losses were running under 1%. In 2002, however, we expect credit losses to reach over 4%. Since we stopped writing this

business in 2000, we have reduced exposure to $5 billion and the remainder is running off. This explains a large part of our higher than expected consumer credit losses.

3. We substantially reduced auto lease production from $500 million per month to $50 million per month due to concerns related to declining used auto valuations. Our total auto lease portfolio has been reduced to $6.1 billion from a peak of nearly $11 billion. By the end of 2003, the portfolio should be at approximately $2.5 billion, leaving us with what we believe is an appropriate level of risk.

These three examples illustrate how we manage risk and deal with problems. We could have sold these assets, but they would have been hugely discounted below what we believe was their intrinsic value. This would not, in our opinion, be in the best financial interest of shareholders. We are willing to make the tough decisions. These are just a few examples of how we have tightened policies and procedures across the board. We know these actions can slow short-term growth, but we value a clean balance sheet over growth at any cost. We want our growth to be solid and healthy.

We believe the actions we have taken will substantially lower future credit losses. We are determined to become superior – not just average – credit underwriters. While credit risk tends to deteriorate during a recession, borrowers still have the contractual right and option to borrow. We need to incorporate these facts into our analysis of risk over an economic cycle. We also must acknowledge and account for the fact that in average times credit quality increases and decreases proportionately, but in a recession it generally moves only downward. We want to be ready for that contingency, especially in times like these. Whatever the future holds – and we expect at least the first half of 2002 to continue to be a difficult credit environment – we are prepared.

Improving Quality of Earnings and Capital. Higher fundamental margins (mostly due to a lower cost structure), higher levels of recurring revenues, and reduced risk on the balance sheet have improved the quality of our earnings. They also effectively improve the quality of our capital: The quality of our capital is higher than that of an identically capitalized company with more aggressive accounting and more risk on its balance sheet.

Better Capital, Capital Usage and Flexibility. We have higher quality capital and more of it: Our year-end Tier 1 capital ratios went from 7.3% in 2000 to 8.6% in 2001, among the highest for a bank our size. According to our internal calculations, which are more conservative than in the past, we are now more than adequately capitalized. We believe we are at the right place, particularly during these uncertain economic times.

We want a fortress balance sheet with unquestionable strength. I cannot overemphasize how happy we were to maintain our credit ratings as we went through our restructuring, nor can I overemphasize how absolutely committed we are to keeping and hopefully improving our ratings – even if it means reducing short-term earnings or slowing short-term growth.

Clearly, we are now generating capital in excess of our immediate needs. This capital flexibility is a strategic imperative, providing us with the option to increase our dividends, invest in our businesses, make acquisitions, or simply do nothing. This year, we added another capital tool when your Board approved (without any negative rating implication) a modest $500 million stock buyback program. We will use this provision wisely based on our view of opportunities and risk. We also believe tough times can provide better relative opportunities for strong companies.

One more year of fine-tuning and intensive management, and these finance and risk disciplines will be part of our culture. Of course, error and surprise can never be entirely eliminated. However, we are far more secure, enabling us to make sound decisions based on economics, not on accounting.

BUILDING OUR CORE AND INFRASTRUCTURE We made good progress on building our "core" in 2001 by:

Becoming More Efficient. We are now well on our way to becoming a low-cost provider. We reduced our overhead costs by approximately $1.2 billion in 2001, which was more than we originally hoped for. Headcount decreased from 81,000 to 73,500 and will continue to drop in 2002 as we complete more consolidations and conversions. With overhead now running at approximately $9.2 billion, we

plan to strengthen our business by reinvesting additional efficiencies of more than $300 million into systems, services, and marketing in the coming year. As a shareholder, I would be concerned to see costs cut dramatically if proper investments weren't being made for the future. I can assure you we are making substantial investments that we believe will pay dividends in the future.

Consolidating and Upgrading Our Technology. We completed one major credit card and two major deposit conversions, all virtually flawlessly, this year. The deposit conversions cost upwards of $75 million, and covered four states serving five million customers. We still have two remaining deposit system conversions to go in 2002. Due to the higher level of complexity of these conversions, they may not go as smoothly, but we have established discrete milestones to ensure that deadline pressures do not compromise our franchise. It's more important to do these right than it is to do them quickly.

If we accomplish these conversions by the end of the year, then we will essentially be on one platform. Throughout the process, we will continue to retire hundreds of obsolete programs, upgrade some, and install top-of-the-line systems. We are also upgrading loan and deposit systems, as well as our cash management systems and banker workstations. These workstations standardize sales and profitability platforms, and automate many manual functions. They also deliver new customer information systems which provide a complete view of customer relationships and allow for greatly enhanced service. Imagine our capabilities in 2003 if our team can accomplish all of this. I can't wait.

Lastly, we will have substantially upgraded our national telecom network and reduced reliance on consultants and vendors. We are taking advantage of the downturn in the technology business to hire hundreds of great, talented individuals.

Providing Better Customer Service. Through better systems and proper compensation plans, the quality of service is now tracked, measured and rewarded. It is constantly getting better and we are confident that in the next few years we will be best in class. Perhaps the most dramatic example is at First USA, where our customer satisfaction ratings over the past two years have improved by 23%.

BUILDING MANAGEMENT CAPABILITIES At the end of the day, great management and great people are the most important elements for success (although capital allocation and luck come close). Sustained success, however, requires integrity, courage, trust, openness and a true meritocracy at all levels. We want everyone – branch managers, call center employees, sales managers and staff department managers – to know their job, know it counts, share information freely, and fight to win. People now speak up when something is wrong. Teamwork requires practice, perseverance *and* maximum individual effort. It's not just one or another. And we are getting there. People throughout our company are stepping up and fighting for their team. Highlights include:

A Changing Culture. We are now acting with more openness, passion and urgency. For example, when we introduced a new Bureaucracy Busters program to rid ourselves of stifling bureaucracy and to streamline processes, we received thousands of recommendations, many of which have been implemented. The process of busting bureaucracy never ends, but what's different now is that all of our folks are engaged in challenging the system and solving the problems.

Giving More Authority to the Field. As we centralize operations and standardize policies and procedures, we also strive to give our people in the field more authority and responsibility. Each of our local businesses supports and feeds the others with ideas, customers and products. Local profit-and-loss statements now allow us to push decision-making into the field, where it belongs. At the same time, by centralizing certain functions we were able to achieve economies of scale, maintain quality standards, and create better products, cheaper and faster. These efficiencies and improvements help empower our employees on the front lines. We have terrific people in the field, and we want to support them, not impede them. Once we get the balance right, it will be one of our greatest strengths.

Increasing Ownership and Teamwork. This year, we gave nearly 40,000 of our lower paid people with a year or more of service a $300 grant of Bank One stock to their 401(k). At the time these grants were issued, roughly 15,600 of these employees didn't have a 401(k) and for the most part didn't own stock. Now, almost everyone who has been with us for more than a year owns stock. There is a feeling that

this is *our* company. Teamwork within and across business lines is growing. For example, our corporate bankers now join with our investment managers on customer calls. The result: record asset growth in our investment management group during a year when most money managers saw assets shrinking.

There are, of course, many other great examples, but one touched me in particular. American National Bank, a proud institution that has been part of Bank One since 1984, decided to change its name to Bank One, as did our credit card subsidiary, First USA. These decisions were made in the lines of business – not by management here at headquarters. Although systems conversions had something to do with it, the real impetus was their desire to come together with us: One Company, One Name, One Stock, One Team. Incentives must be done right, but they aren't what matter most. Teamwork creates real winners.

II. LOOKING FORWARD

We believe our immediate priorities of customer service, financial discipline, system conversions, and building the management team are absolutely the right ones for us. They are essential to building a great company, but they are, admittedly, not sufficient. We also need good franchises and solid growth. With that in mind, I'd like to give you a view of our current thinking about our franchise and growth prospects.

Building Strong Franchises. Retail banking and asset management, small business banking, private client services and middle market banking are strong franchises. We group these businesses together because they feed and complement each other and their strength is in the field. They are particularly valuable when a company has a significant local market share, which we mostly do.

When taken together and run properly, we believe these businesses are an attractive franchise that can deliver good returns and solid growth. These businesses should grow at least with the economy, and probably faster as we expand our products and services. Of course, local competition can be fierce, and some of the basic products will gradually be disintermediated by innovations and other changes. But how many businesses can consistently average 15-20% ROE over time while growing? I think these businesses can.

Therefore, our goal in these businesses is to simply be very good at them, and to grow both organically (e.g., "same store" sales, new products, market-share gains, etc.) and by acquisition. Our view is that as these businesses continue to consolidate, the winners will be those that combine a superior customer experience with the benefits of economies of scale, great systems, product breadth, lower funding costs, credit diversification, and branding. That is, of course, if the scourge of large corporations – bureaucracy – is kept at bay. Our actions to date – taming bureaucracy, improving financial and operating disciplines, and strengthening management – put us in a position to win.

Three of our other businesses – credit cards, payment systems and asset management – are excellent businesses on their own. They are also a natural fit with the "general banking" business. Together, they provide each other with the competitive advantage of free access and a vast distribution network.

In credit cards, we have made significant progress in the past year. We have dramatically lowered expenses and our service platform is as good as any. The credit card industry is consolidating. Growth in a consolidating industry comes from taking share from others, as well as through acquisitions. Our capabilities and scale, combined with our access to capital and distribution, put us in an excellent position to be a winning consolidator.

Payment systems, which include card, traditional cash management, and Paymentech (our merchant processor), are outstanding businesses. They have solid margins, require low capital and grow with time. They, too, benefit from our large distribution network and in 2002 we hope to prove to our shareholders their extraordinary potential.

Asset management has always been a terrific business (although we believe margins will be squeezed over time because they are simply too high in a low-return environment). Competitively, we feel we are well positioned for growth as we continue to leverage our superior performance and natural distribution advantage.

Large corporate banking is probably our toughest competitive business, but it also gives us the opportunity to develop highly sophisticated, industrial-strength products that can be used in all of our franchises. With proper risk management and cross-selling, returns are reasonable. Large corporate relationships are deep and our bankers have been extremely successful selling additional payment systems,

asset management, and capital markets products. We believe that many of our capital markets products (syndication, foreign exchange, derivatives, asset-backed securities and investment grade bond origination) can compete with the industry's best without our being forced to take excessive risk. We still owe our shareholders a more defined strategy in this arena. As we develop it, we will continue to run the business well and grow it profitably with reasonable risk.

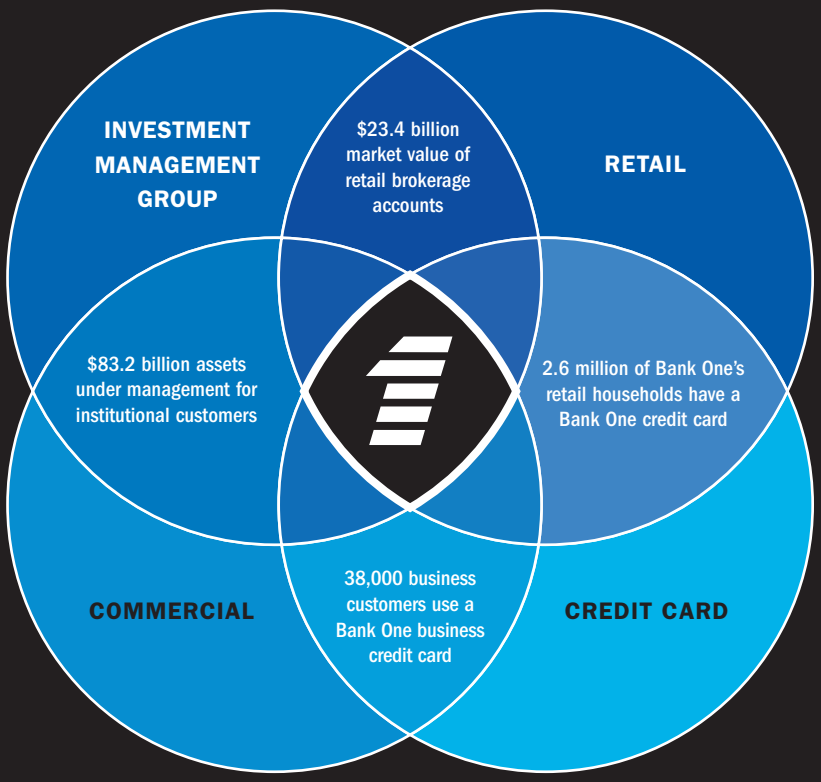
Building A Brand. One of our new goals for 2002 will be building our national brand. One of our advantages is that Bank One does business with more than 60 million individuals and institutions. But many of them aren't aware of it. For instance, many of our First USA customers don't draw a connection to Bank One, which is one of the reasons First USA is moving to the Bank One name. The value of a unified brand will be far greater. A brand is a promise to customers, but more importantly it is a commitment we are making to ourselves about who we are and just how good we want to be. We're now ready to step up our game at all levels – inside the company, for our customers, and against the competition.

Becoming Innovative. We want to make innovation part of our DNA. This does not mean spending hundreds of millions of dollars on failed ideas. It does mean we will take some chances knowing that some will fail. It requires that we build forward-looking ideas into every conversation, every analysis and every new product we look at. We have a few new products coming out this year that we think fill this bill.

An example is our recent agreement with Microsoft. We have a number of specific leading edge products, but the truly exciting idea is that we are now working together to use new technology and the Internet to continuously develop new financial products and services. We believe this pioneering work will put us at the forefront as the industry constantly changes.

Growing through Mergers and Acquisitions. We believe all of our current businesses will continue to consolidate. A weak economy creates opportunities for strong companies. Based on the actions we are taking and the core disciplines we are developing, I believe we are in a position to take advantage of emerging opportunities.

IN CLOSING This hasn't been an easy year for our employees. Yet, despite conversions, cost cutting and a recession, we went full speed ahead building our core systems, financial discipline, balance sheet and management. Even though we are probably only two-thirds of the way through our "infrastructure building," the boot camp phase is over and we are devoting more resources to the future. We understand that fixing our infrastructure sometimes inhibits short-term growth, but you can't build something great and lasting on a weak foundation. We are committed to creating a company that delivers solid, profitable long-term growth. In fact, we are convinced that good profit growth is coming – initially from improved operations and margins, then increasingly from true "unit" growth.



We are aggressively engaged in building our company. We are now strong enough to move even faster. I am proud to work with such a talented, committed group and am more convinced than ever that together we will build Bank One into one of the best financial services companies in America.

James Dimon
CHAIRMAN AND CHIEF EXECUTIVE OFFICER
FEBRUARY 20, 2002

Bank One is coming together as one team and one brand to deliver one great customer experience. We are integrating the best Bank One has to offer to serve consumers, governments, and businesses large and small. We're listening carefully, anticipating needs, advising customers and holding ourselves accountable for results. From our retail associates helping a banking customer get a credit card to our commercial bankers introducing a business owner to a Private Client Service advisor, we're doing business as one to help our customers achieve their financial goals.

The success of our Commercial Banking division stems from our extensive knowledge of our customers, our superior products and services, and our experienced relationship managers.

CREATING MUTUALLY BENEFICIAL RELATIONSHIPS

In 2001, we took significant steps to position ourselves for growth.

In the Middle Market segment, which focuses on privately held companies, we strengthened our sales process and put in place systems to manage risk better.

In Corporate Banking, which focuses on Fortune 1000 customers, we redefined many of our relationships, expanding our work in fee-based services and reducing our emphasis on loan products. The result: better service for our best customers and a $38.5 billion reduction in risk exposure for us.

LEVERAGING OUR PRESENCE IN MIDDLE MARKET BANKING

Bank One is a proven leader in Middle Market banking, ranking first or second in 22 out of the 35 markets we serve. More than 70% of our 18,000 customers consider us their lead bank, creating an extraordinary franchise with solid potential for growth.

While returns among this segment were not where we wanted them in 2001, we have made good strides in improving relationship profitability and building the base for more stable, higher returns.

Our goals for the coming year are to continue improving our risk management processes and to expand delivery of capital markets, investment management, and treasury management solutions to this important and growing customer base.

REDEFINING RELATIONSHIPS WITH CORPORATE CUSTOMERS

By redefining our relationships with large corporate customers, we are now in a stronger position to deliver superior products and services to our best customers.

Consistently ranked in the top five in all treasury management product categories, our treasury management services division proved its leadership once again, producing revenues of more than $1.1 billion – 10% more than last year.

Our capital markets group also had a successful year. We positioned ourselves solidly in loan syndications, asset-backed securitization, investment grade securities, and derivatives, increasing our revenue from capital markets products by 41%.

As evidence of our success, we improved our league table standings from 17th to 8th in the asset-backed term market and from 15th to 12th in investment grade securities. In syndications, our $2.7 billion financing of Suiza Foods' acquisition of Dean Foods was named the "U.S. Leveraged Loan of the Year" for 2001 by the International Financing Review.

Working with our partners throughout Bank One, we have been able to help deepen customer relationships by providing tools like investment and liquidity management, as well as corporate trust, securities custody, and retirement plan services.

When organizations choose to work with Bank One, they get the personal attention and full resources of a national provider who is wholly committed to helping them meet their needs. The changes we made in 2001 position us well to operate as a single, efficient business focused on delivering competitive, world-class solutions to our customers.

Wade Reed, who started Hannon Hydraulics in his Dallas garage as a spunky 23-year-old, has learned plenty about finance by running the company for 26 years. But he needed post-graduate assistance after he bought his biggest competitor and revenues grew more than 50 percent over the next year. Banker Carlos Munguia (right) used capital markets capabilities to convert traditional debt to variable-rate bonds and used derivatives to hedge Reed's interest rate risk. "Carlos knew my business and got me financing I never knew existed – and he saved me money," Reed said. Hannon has also used treasury management, leasing, and investment products. "Carlos always tells me the truth, not just what I want to hear. He has made us a better company."

With more than 55 million cards in force and a card membership base that is spending $140 billion annually with us, we are a leader in offering payment products customized to the needs of an increasingly sophisticated consumer.

CUSTOMIZING PRODUCTS TO MEET CUSTOMER NEEDS

In an industry that is rapidly consolidating, we continue to lead by offering customers a broad range of credit and payment solutions.

Whether they are seeking cards with competitive interest rates, cards offering rewards, affinity cards, or pre-loaded spending cards, we've got the products to meet our customers' needs.

Frequently that means working with partners like United Airlines, providing mileage for travel, or General Mills, which contributes money to customers' local schools for every purchase.

POSITIONING FOR GROWTH

2001 was an important year for us. With a new management team in place, we reorganized to become more customer-centric, assigning profit and loss accountability at both the product and segment levels. We focused on becoming a more efficient, disciplined organization, which resulted in a reduction in operating expenses by 19% and a significant improvement in returns.

We also renewed key partnership agreements, including our agreement with United Airlines, while rebuilding the sales organization to establish additional strategic partner relationships with hotels, airlines, universities, other banks, and retailers. Additionally, we created a special team to employ state-of-the art analytics to help us manage decisions related to all stages of our customer relationships.

Another noteworthy achievement was the acquisition and successful integration of the Wachovia credit card portfolio, which added millions of new customers.

These and many other initiatives are setting the foundation for profitable growth.

ULTIMATELY, IT GETS PERSONAL

Intense competition for customers dictates one thing: our success tomorrow will be built on how well we treat customers today.

In this high-tech world, it's great to know there are people out there who really care about individual customers. They are people like Beverly Small, who helped a cardmember meet a very important deadline – her wedding in Italy.

When the bride's airline tickets were cancelled due to a reservation error, Beverly not only got the tickets reinstated but convinced the airline to issue them at the original price. (An important and difficult challenge, because the ticket price had more than doubled.)

Beverly is an example of the thousands of people on our team who know winning requires us to prove ourselves to each of our customers every day in all that we do.

And with technologies and commerce changing so rapidly, we know it's not about plastic, it's about the payment transaction and the value we add to it. We will continue to lead by giving consumers and commercial customers innovative products that provide convenient, beneficial, and satisfying ways to purchase the things they want and need.

When MSN® wanted to offer customers a credit card worthy of parent Microsoft's name, they came to us. Jennifer Osborn (right) and her team created the MSN Titanium Visa® credit card with a hip translucent look, excellent rates, and free Microsoft® Money software. "We know we can trust Bank One to take care of our customers," said Yusuf Mehdi, vice president of MSN Personal Services & Business at Microsoft Corporation. And like MSN's trademark butterfly, the Bank One/Microsoft relationship has spread its wings. Today, Bank One products are being integrated into Microsoft channels and we're working together to develop financial products and services for delivery to Bank One and Microsoft customers.

MILLION STATEMENTS MAILED PER YEAR

Each day, more than 33,000 Bank One associates are deepening our relationships with customers by listening carefully, anticipating needs, providing solutions, and holding themselves accountable for results.

BUILDING RELATIONSHIPS ONE CUSTOMER AT A TIME

In retail banking, our focus is on helping consumers and small business owners achieve their financial goals. For the nearly 7.3 million households who bank with us, that might mean helping them take advantage of new tax laws to save for a child's education, plan for retirement, evaluate insurance needs, or weigh the benefits of a home equity loan.

For our network of 500,000 small business customers, it means going beyond just traditional banking to provide things like cash flow management tools, payroll services, employee health insurance, or succession planning services – products and services once used primarily by larger companies.

EMPOWERING OUR PEOPLE

We realize that our people perform best when backed by technology that gives them the information they need to make smart decisions. That's why we invested approximately $79 million this year alone to upgrade and convert to company-wide technology systems.

Even as we move toward common systems, customer service is our top priority. By taking the time to reach out to customers before our conversions in Texas, Utah, Arizona, and Louisiana, we smoothed the transition and enhanced our customer relationships. In fact, 14,500 customers we spoke with during the conversions took the time to open a new Premier One® account with us.

Our customer service and technology investments are paying off at the branch-level. Using enhanced e-business technology, for example, our banking center managers now have quick access to – and responsibility for – their own profit and loss statements.

These P&L's, accompanied by online management training and best practices tools, are helping our managers run their business as owners, giving them the information they need to work most effectively at the local level.

LEVERAGING OUR STRENGTHS

The geographic breadth of our retail franchise – 1,800 banking centers in 14 states – positions us well to balance a wide range of national trends – from expanding customer relationships in high-growth markets to serving an increasingly mobile customer base.

In addition to our geographic breadth, we are working harder than ever to help meet customer needs by bringing together the best Bank One has to offer.

Working with our partners in Bank One's commercial banking, credit card, and investment management units, we can now provide customers with access to virtually any financial product or service they may need.

But our work is just beginning. Technology and regulatory advances are changing what it means to be a retail bank. By listening to our customers and responding with solutions that meet their individual needs, we believe we're well positioned not just to win in this new world, but to help define it.

Two years ago, Bank One customer David Weaver felt like "just another number." In fact, he was moving his accounts to another bank when branch manager Kenyon Warren (right) interceded and asked for one more shot. "David had legitimate concerns," said Kenyon. "I simply took the time to listen and fix the service issues – not just for David, but for our other customers as well." Today, David has expanded his relationship with Bank One to include cash management services and installment loans that are helping him manage and grow his businesses. "My needs are unique and my team at Bank One understands that," says David, who clearly doesn't feel like a number anymore.

Institutions and individuals look to us for help in accumulating, growing, protecting, and transferring wealth. With more than $142 billion in assets under management, we are a proven leader in our field.

FUELING GROWTH IN CHALLENGING TIMES

This was an exceptional year for the Investment Management Group: in a year that saw the value of market assets declining, we grew assets under management by 9% to $142.6 billion.

Our growth was driven by three factors: our continued ability to deliver solid risk-adjusted performance, our successful efforts to expand product availability, and a strengthened focus on teaming within Bank One.

At the heart of the Investment Management Group is Banc One Investment Advisors – our SEC-registered investment advisory group that ranks among the top 40 asset managers in the country.

Last year, more than half of our One Group® Mutual Funds were rated 4- or 5-stars by Morningstar, placing us among the best performers in the industry.

In a recent report rating our One Group® Mutual Funds "number one in the bank channel in 2001," *Mutual Fund Market News* wrote that investors like us for our "reasonable fees, adroit stock-picking ability and lack of style drift." (In other words, we do what we say we're going to do, we do it well and we price it right. Is there any other way to do business?)

EXPANDING OUR CUSTOMER BASE

This year we also stepped up our commitment to expand our customer base.

Within Bank One, our institutional customers accounted for $83.2 billion of our assets under management, up 30% from $63.8 billion in 2000.

We also reached out to Bank One retail banking customers, completing the year with four consecutive quarters of record retail investment sales and year-over-year-growth of 14%.

Our record of performance has also earned us the trust of numerous brokerage and financial advisory firms who sell our mutual funds. In 2001, third-party sales of One Group® funds were up 75%.

PARTNERING TO SERVE WEALTHY INDIVIDUALS

Realizing that high net worth individuals have special needs, our Private Client Services group helps qualified customers manage and grow wealth.

Using an advisory approach, we are able to draw upon the best minds in each element of financial planning to customize solutions. Our particular expertise in working with owners of privately held companies has allowed us to serve an increasing number of customers in Bank One's Middle Market banking segment.

PERFORMANCE-DRIVEN RESULTS

Our growth strategy for the coming year is to continue on the path set in 2001. As economic conditions continue to fluctuate, we are challenging ourselves to continue delivering solid risk-adjusted performance to a growing customer base. Ultimately, in our business, that's how all of us distinguish ourselves in the marketplace.

When Utilities, Inc. began the process of selling their company, investment specialist Sarah Norris (right) and several other members of the Private Client Services team provided guidance to company Chairman Jim Camaren and President/ CFO Larry Schumacher for transitioning their wealth.

"For years, 99% of our money has been tied up in the company and we've been there to watch and protect it," said Camaren, who has been working with Private Client Services for nearly a decade. "Once the sale of our company is finalized, we'll need a knowledgeable partner to help us out," said Schumacher. "Bank One has been Utilities, Inc.'s business bank for over 35 years. On both the business and the personal side, our bankers not only 'get it' but they make things so easy that working with them during this next stage in our lives is simply natural."

Employees [4]	**73,519**	80,778	87,735	92,800	95,900

(1) Common equivalent shares and related income were excluded from the computation of diluted loss per share for the year-ended December 31, 2000 as the effect was antidilutive.

(2) Includes trust preferred capital securities.

(3) The year ended December 31, 2001 includes $92 million of charge-offs which are not classified as such in the Corporation's GAAP financial information because they are part of a portfolio which has been accounted for as loans held at a discount. The inclusion of this amount in charge-offs more accurately reflects the credit performance of the portfolio. In the Corporation's financial statements, this item results in a higher provision in excess of net charge-offs.

(4) Beginning in 2001, employees on long-term disability and employees of unconsolidated subsidiaries are excluded. Prior period data have not been reclassified for this change.

OTHER FINANCIAL DATA

The Corporation's consolidated operating financial results and ratios at December 31 are as follows:

(In millions, except ratios and per share data)	**2001**	2000	2000 Adjusted	1999
Operating income (loss)	**$2,904**	$ (409)	$1,751	$4,076
Operating earnings per share-diluted	**$ 2.47**	$ (0.35)	$ 1.52	$ 3.46
Return (loss) on average assets	**1.09%**	(0.15)%	0.63%	1.49%
Return (loss) on average common equity	**14.7**	(2.1)	8.8	18.9
Net interest margin:				
Managed	**4.89**	4.76	4.76	5.37
Reported	**3.69**	3.72	3.72	4.09
Efficiency ratio:				
Managed	**47.4**	65.8	54.7	51.8
Reported	**57.5**	81.4	66.4	61.3

These results and ratios exclude merger and restructuring-related charges and, change in accounting and the 2000 adjusted and 1999 ratios exclude items outlined in the Significant Items table on page 42.

DESCRIPTION OF BUSINESS

BANK ONE CORPORATION and subsidiaries ("Bank One" or the "Corporation") is a diversified financial holding company that offers a full range of financial services to consumers and commercial customers. Bank One is:

- A leader in retail and small business banking
- A premier provider of lending, treasury management, and capital markets products to commercial customers
- The third largest credit card issuer in the United States
- A leading investment management company

Basis of Presentation

The Corporation's financial statements are based on the application of generally accepted accounting principles, which are described in the notes to the consolidated financial statements starting on page 74. Certain accounting principles involve significant management judgment, including the use of assumptions and estimates. By their nature, changes in the assumptions and estimates potentially could significantly affect the Corporation's financial position and results of operations. The Corporation's accounting policies are discussed throughout this Financial Review section.

Management's discussion and analysis may contain forward-looking statements provided to assist in the understanding of anticipated future financial performance. However, such performance involves risks and uncertainties that may cause actual results to differ materially from those expressed in forward-looking statements. See page 69 for a discussion of these factors.

For funding and risk management purposes, the Corporation periodically securitizes loans, primarily in support of credit card activities. The accounting for securitizations complicates the understanding of underlying trends in net interest income, net interest margin and noninterest income, as well as the underlying growth rates of reported loans. For clarification, these trends are also reviewed on a "managed" basis, which adds data on securitized credit card loans to reported data on loans. Results on a managed basis, where presented, should be read in conjunction with reported results. See page 65 for the reconciliation of reported to managed results.

BUSINESS SEGMENTS

The Corporation is managed on a line of business basis. The business segments' financial results presented reflect the current organization of the Corporation. The following table summarizes certain financial information by line of business for the periods indicated.

	Operating/Net Income (Loss) (In millions)			Average Managed Assets (In billions)		
	2001 [1]	2000 [2]	1999	**2001**	2000	1999

Total Corporation net income (loss)	**$2,638**	$ (511)	$3,479			

(1) During 2001, the tax-oriented portfolio of Corporate Investments was transferred to Commercial Banking, while the principal investments and fixed income portfolios were transferred to Corporate. All results for prior periods conform to the current line of business organization.

(2) Beginning in the second quarter of 2000, the provision for credit losses was fully allocated to the appropriate lines of business. Prior to the second quarter of 2000, the business' provision was based upon standard credit costs, with any difference between the aggregate provision of the businesses and the Corporation's total reflected in Corporate.

Description of Methodology

The results of the business segments are intended to reflect each as if it were a stand-alone business. The management reporting process that derives these results allocates income and expenses using market-based methodologies. Funds transfer pricing is used to allocate interest income and expense to each line of business. A portion of the Corporation's interest rate risk position is currently included in Corporate.

Historically, the costs of certain support units were allocated to the lines of business based on factors other than usage, such as headcount and total assets. The methodology was changed in the third quarter of 2000 to better reflect the actual cost and usage of services provided and was consistently applied to all lines of business. Costs allocated to First USA decreased, while unallocated costs that are included in Corporate increased.

The lines of business are assigned capital that reflects the underlying risk in that business. See the "Capital Management" section on page 67 for a discussion of the economic capital framework.

For 1999, the effect of certain identified transactions were not attributed to any business segment since they were not considered a part of core business activities.

BUSINESS SEGMENT RESULTS AND OTHER DATA

The information provided in the line of business tables beginning with the caption entitled "Financial Performance" is included herein for analytical purposes only and is based on management information systems, assumptions and methodologies that are under continual review.

The financial information and supplemental data presented in the tables below for the respective lines of business are reported on an actual basis. However, to assist with the analysis of underlying trends, the discussion of business segment results excludes merger and restructuring-related charges and the impact of the 2000 and 1999 significant items noted in the "Significant Items" section on pages 41–42.

Retail

Retail provides a broad range of financial products and services, including deposits, investments, loans, insurance, and interactive banking to nearly 7.3 million households and 500,000 small business customers, over 1 million of whom are registered online users.

Products and services are delivered to customers through approximately 33,000 employees, 1,800 branches in 14 states, a large network of ATM's, bankone.com, and 24-hour telephone banking. THE ONE Card, issued by Retail, is one of the country's leading debit cards for individuals and small businesses, with 4.4 million cards issued.

Retail originates consumer credit nationwide through its banking centers, relationships with brokers, the Internet, and the telephone. Retail offers real estate-secured, education, tax refund, consumer installment loans, and auto loans and leases to individuals. Retail is also a leading lender to small businesses.

N/M–Not meaningful.

N/A–Not available due to changes in segment composition.

(1) Banking fees and commissions include insurance fees, documentary fees, loan servicing fees, commitment fees, mutual fund commissions, syndicated management fees, leasing fees, safe deposit fees, official checks fees, ATM interchange and miscellaneous other fee revenue.

(2) Credit card revenue includes credit card fees, merchant fees and interchange fees.

(3) Service charges on deposits include service charges on deposits, deficient balance fees, non-sufficient funds/overdraft fees and waived fees.

(4) Fiduciary and investment management fees include asset management fees, personal trust fees, other trust fees and advisory fees.

(5) Ratios are based on operating income.

(6) Beginning in 2001, employees on long-term disability and employees of unconsolidated subsidiaries are excluded. Prior period data has not been reclassified.

(7) The year ended December 31, 2001 includes $92 million of charge-offs which are not classified as such in the Corporation's GAAP financial information because they are part of a portfolio which has been accounted for as loans held at a discount. The inclusion of this amount in charge-offs more accurately reflects the credit performance of the portfolio. In the Corporation's financial statements, this item results in a higher provision in excess of net charge-offs.

(8) Includes consumer balances that are placed on nonaccrual status when the collection of contractual principal or interest becomes 90 days past due.

2001 compared to 2000

Retail reported operating income of $1.272 billion in 2001 compared to $870 million in 2000. The prior year's operating income reflected an adjustment for significant items totaling $456 million after tax. The $402 million, or 46%, year-over-year increase on an adjusted basis was principally driven by a $300 million after tax reduction in noninterest expense.

Net interest income was $5.025 billion for the year, up $116 million, or 2%, from the prior year due to lower rates, improved spreads on the indirect auto loan portfolio and 11% growth in average home equity outstandings. December loan balances were down $5.3 billion from the prior year as Retail managed reductions in certain segments of auto lease and brokered home equity loan portfolios while direct home equity loans grew.

Deposits generated a narrower margin compared to 2000, reflecting the lower rate environment and a decline in average balances. Favorable mix changes from time to savings helped mitigate the impact of lower rates and balances. More positive trends emerged late in 2001 as demand deposit balances posted 2% growth from the fourth quarter of 2000 to the fourth quarter of 2001. This growth was accompanied by a 5% increase in new accounts year over year.

Noninterest income was $1.442 billion, up $174 million, or 14%, compared to 2000. The absence of lease residual losses and higher fee revenue from deposit accounts and investment sales were partially offset by gains from the sale of miscellaneous assets in 2000. Sales of mutual funds and annuities totaled $4.9 billion in the year, up $595 million, or 14%, from the prior year.

The provision for credit losses was $1.010 billion, up $151 million, or 18%, from 2000. Managed net charge-offs were $913 million, up $371 million from the prior year. Charge-offs on brokered home equity loans and auto loans and leases were the primary drivers of Retail's year over year increase.

Nonperforming assets were $1.474 billion, up $479 million, or 48%, compared to 2000, driven primarily by an increase in brokered home equity nonperforming loans. Nonperforming assets were 2.04% of related assets in the year, up from 1.29% the previous year. The allowance for credit losses expressed as a percent of year-end loans increased to 1.44% compared to 1.09% a year ago.

Noninterest expense was $3.477 billion, down $473 million, or 12%, from the prior year driving an improvement in the efficiency ratio from 64% in 2000 to 54% in the current year. The consolidation of operating sites in 2000 and 2001 and better overall expense management in Retail, and throughout the Corporation, drove the efficiency improvement. In addition, staffing levels were down 2,600 year over year leading to a 4% decrease in salary and benefit expense.

2000 compared to 1999

Retail reported operating income of $870 million in 2000, down from $1.041 billion in 1999. The $171 million reduction was driven by lower noninterest income and higher provision expense partially offset by higher net interest income.

Net interest income increased $530 million, or 12%, from 1999, reflecting 13% growth in average loans, wider deposit spreads and improved pricing on indirect auto loans, partially offset by a shift in deposit mix toward higher rate certificates of deposit. Loan growth was driven by a 38% increase in average home equity loans, partially offset by a decline in other personal loans.

Noninterest income declined $273 million, or 18%, from 1999. Lease residual losses were $126 million higher in 2000 than 1999, while gains from the sale of miscellaneous assets were down $83 million.

Provision for credit losses increased $444 million in 2000. This principally reflected the significant growth in home equity loans, higher net charge-offs, and increases in home equity nonperforming loans.

Noninterest expense was $17 million higher in 2000 than 1999, principally related to investments in new internet capabilities, partially offset by positive impacts from waste reduction initiatives, reduced incentive compensation, and the sale of the consumer finance business.

Commercial Banking

Commercial Banking offers a broad array of products, including global cash management, capital markets, commercial cards, investment management, and lending to Corporate Banking and Middle Market customers.

Corporate Banking serves large corporations, financial institutions, municipalities, and not-for-profit entities. In addition to lending, Corporate Banking offers a wide range of financial products and develops, markets, and delivers cash management, capital markets, global treasury and trade, e-business and other noncredit products and services. Bank One's Capital Markets business is engaged in the origination, trading, and distribution of asset-backed securities, investment grade and high yield securities, derivatives, tax-exempt securities, and government bonds. Capital Markets is also actively engaged in loan syndications, market research, advisory services, and private placements.

Middle Market Banking serves approximately 18,000 customers with annual revenues from about $10 million up to $500 million. These customers use a wide variety of services, with nearly one third using Bank One exclusively. Since privately held companies comprise the vast majority of the Middle Market customer base, providing credit is fundamental to the success of this business. The loan portfolio is diversified across a broad range of industries and geographic locations. In addition to credit, this customer segment actively uses Bank One's cash management, international, capital markets, and investment management products and services.

(9) Treasury Management Services includes both fees and fee equivalents from compensating balances.

(10) Capital Markets includes trading revenues and underwriting, syndicated lending and advisory fees.

(11) Full-time headcount in 2000 has been reclassified to reflect the movement of Support and Other Administrative personnel into the respective business units reported.

2001 compared to 2000

Commercial Banking reported operating income of $721 million for 2001, up $836 million from 2000 primarily due to a significantly lower credit provision. After adjusting for the negative impact of $404 million after tax of significant items in 2000, operating income increased by $432 million, or 149%. The year's results reflected strategic efforts to reduce Corporate Banking credit exposure and improve the cross-sell of Capital Markets and Treasury Management products.

At December 31, 2001, loans were $70.1 billion, down $15.0 billion, or 18%, from the prior year. Corporate Banking loans were $36.6 billion at year-end, down $15.1 billion, or 29%, from a year ago. Middle Market loans were $33.5 billion, essentially flat from last year.

Revenue totaled $4.276 billion, up $53 million, or 1%, from 2000, with a decline in net interest income more than offset by growth in noninterest income, particularly in Treasury Management and Capital Markets.

Net interest income was $2.702 billion, down $116 million, or 4%, from the prior year reflecting the earnings impact of lower average loan balances resulting from efforts to reduce credit risk exposure.

Noninterest income was $1.574 billion, up $169 million, or 12%, from the prior year. Banking fees and commissions increased $109 million, or 18%, due to growth in the asset-backed and investment grade underwriting business and higher business sweep fees. Service charges on deposits increased $90 million, or 17%, reflecting improvement in Treasury Management volumes and pricing, as well as a shift in payment for services to fees from net interest income due to the lower value ascribed to customers' compensating deposit balances. Trading revenue increased $42 million, primarily reflecting improvement in fixed income trading activities. Other income decreased by $72 million mainly due to losses on the sale of loans.

The provision for credit losses was $1.070 billion, down $519 million, or 33%, from 2000. Net charge-offs were $1.041 billion, up $479 million, or 85%, from the prior year and represented 1.34% of average loans, up from 0.66% in 2000. Corporate Banking net charge-offs were $638 million, or 1.47% of average loans, up from 0.81% in 2000. 2001 charge-offs included $216 million related to nonperforming and other credit related loan sales. There were no losses on loan sales in 2000. Middle Market net charge-offs were $403 million, or 1.17% of average loans, up from 0.40% of average loans in the prior year. For additional detail on Commercial Banking net charge-offs see the table on page 57.

The allowance for credit losses at December 31, 2001 was $3.066 billion, up $22 million, or 1%, from the prior year. This represented 4.37% of year-end loans and 146% of nonperforming loans compared with 3.58% and 200%, respectively, at December 31, 2000. Nonperforming loans were $2.101 billion, up $578 million, or 38%, from year-end 2000. Corporate Banking nonperforming loans at year-end were $1.154 billion, up $89 million, or 8%, from the prior year. Before reflecting the sale of nonperforming loans, Corporate Banking nonperforming loans increased $671 million during the year. Middle Market nonperforming loans were $947 million at December 31, 2001, up $489 million, or 107%, from the prior year. For additional detail on Commercial Banking nonperforming assets and allowance for credit losses see the tables on page 56 and page 58, respectively.

Noninterest expense was $2.220 billion, down $87 million, or 4%, from 2000 reflecting the impact of waste-reduction efforts and lower headcount. The 2001 efficiency ratio improved to 52% from 55% in 2000.

2000 compared to 1999

Commercial Banking reported operating income of $289 million for 2000 on an adjusted basis, compared with $906 million in 1999. This $617 million decrease was primarily driven by an increase in the provision for credit losses of $1.153 billion.

Net interest income increased $163 million, or 6%, from the prior year, driven by 10% average loan growth partially offset by a modest decline in spread due to competitive pricing pressures and higher nonperforming loans.

The provision for credit losses increased $1.153 billion in 2000 from the prior year due to deterioration in the quality of loans and a higher reserve level established for the commercial loan portfolio. The deterioration in credit quality reflected the slowing of the economy as well as weakness in several industries and leveraged finance transactions.

Noninterest income of $1.405 billion increased $157 million, or 13%, from the prior year primarily due to growth in Treasury Management Service revenue of $71 million, or 12%, lending related fees of $60 million, or 41%, and Capital Markets revenue of $25 million, or 6%.

Noninterest expense increased $99 million, or 4%, from the prior year, principally related to Treasury Management Services investment spending.

First USA

First USA offers a wide variety of card products, including co-brand, affinity, rewards, business, general purpose, and smart credit cards, as well as stored-value cards. All of these cards carry the respective Visa® or MasterCard® brand names.

With more than 55 million cards in circulation, First USA is the third largest credit card provider in the United States and the largest Visa® credit card issuer in the world. First USA has $68 billion in managed credit card receivables, which includes a portfolio of approximately $6 billion in card receivables which was acquired from Wachovia Corporation ("Wachovia") in 2001. FirstUSA.com is also a leader in online card marketing and customer service, with more than 1.9 million registered users of its website.

First USA offers credit cards for consumers and businesses under the First USA and Bank One names and on behalf of its 1,900 marketing partners. These partners include some of the leading corporations, universities, and affinity organizations in the United States.

(12) 2001 ratio includes Wachovia net charge-offs but excludes Wachovia loans.

(13) Approximately 1 million registered users were purged in late 2001 due to inactivity.

2001 compared to 2000

First USA reported operating income of $946 million in 2001, up from $3 million in the prior year. Adjusted for $522 million after tax of significant items, 2000 operating income was $525 million. Increased reported operating income reflected lower expenses, the addition of the Wachovia portfolio and higher revenue, partially offset by increased credit costs. The Corporation expects the acquisition of the Wachovia portfolio to add approximately $100 million annually to after tax earnings. The pre-tax return on outstandings was 2.3% in 2001, up from 1.3% in 2000.

Net interest income totaled $6.090 billion, up $255 million, or 4%, from the prior year reflecting lower interest rates and the addition of the Wachovia portfolio, partially offset by lower average outstandings and loan fee income. Average managed outstandings were $65.4 billion, down $800 million, or 1%, from the prior year. End of period managed loans were $68.2 billion, up $1.2 billion from the prior year. First USA opened 3.9 million new accounts during the year, an 18% increase from the prior year. At December 31, 2001, 55.6 million cards were issued.

Noninterest income was $1.362 billion, a $149 million, or 12%, increase from the prior year reflecting the addition of the Wachovia portfolio and increased securitization activity.

The managed provision for credit losses was $3.823 billion, a $221 million, or 6%, increase from the prior year reflecting the addition of the Wachovia portfolio and increased net charge-offs.

Noninterest expense totaled $2.119 billion, a $499 million, or 19%, decrease from the prior year, reflecting lower fraud and operational losses, processing costs and a decrease in internally allocated costs related to a mid-year 2000 change in methodology. The decline from last year also reflected the sale of international operations in the second quarter of 2000. These reductions were partially offset by the addition of the Wachovia portfolio and higher marketing expense.

2000 compared to 1999

First USA reported operating income of $525 million for 2000, down $610 million, or 54%, from 1999. A decline in revenue was partially offset by lower expenses. The 2000 results represented a 1.3% return on outstandings, down from 2.5% in 1999.

Net interest income was $5.835 billion, down $1.046 billion, or 15%, from 1999, reflecting narrower spread, lower late fee revenue, and lower average outstandings. Average managed outstandings for 2000 were $66.2 billion, down 4% from 1999. End of period managed loans declined to $67.0 billion, or 3%. First USA opened 3.3 million accounts in 2000, down 59% from 1999.

Noninterest income was $1.213 billion, down $419 million, or 26%, from 1999, due to decreased securitization activity and higher revenue sharing payments to partnership and affinity groups reflecting the emphasis on these growing customer groups. In addition, lower revenue from fee-based products contributed to the decline as well as the prior year's inclusion of $126 million of nonrecurring items.

The provision for credit losses was $3.602 billion, relatively flat with 1999. The charge-off rate decreased slightly to 5.42% from 5.49% in 1999. The 1999 charge-offs included $183 million from the early adoption of the Federal Financial Institutions Examination Council's (FFIEC) revised consumer credit guidelines. At year-end, the managed 30-day and 90-day delinquency rates were 4.51% and 2.02%, respectively, down from 4.57% and 2.13% a year earlier.

Noninterest expense was $2.618 billion, down $586 million, or 18%, from 1999, reflecting a decline in marketing expenses, improved operating efficiencies, lower processing costs, the sale of the international operations, and a decrease in internally allocated costs related to a mid-year 2000 change in methodology. These positive impacts were partially offset by increased fraud and operational losses.

Investment Management

The Investment Management Group (IMG) provides investment, insurance, trust and private banking services to individuals. IMG also provides investment and investment related services, including retirement and custody services, securities lending and corporate trust to institutions.

IMG's registered investment advisory arm, Banc One Investment Advisors, ranks among the nation's top asset managers with more than $142 billion in assets under management. In addition, IMG manages One Group® Mutual Funds, one of the largest mutual fund complexes with 50 funds and more than $83 billion in assets under management. Performance of the funds continues to remain strong. 88% of the assets are in funds ranked 3 stars or better and 57% of the assets are in funds ranked 4 stars or better by Morningstar.

Private Client Services (PCS) helps manage and build wealth for high net worth clients. PCS provides integrated financial advice and services such as brokerage, investments and alternative asset management, personal trust, private banking, insurance and financial planning through over 600 client advisors.

The Retail Investment Services (RIS) business serves Bank One's retail customer base by delivering investment products and services through 1,800 banking centers in 14 states. RIS teams have more than 3,000 licensed bankers in Bank One retail banking centers to deliver high quality investment and insurance products.

The Global Corporate Trust business ranks among the three largest providers in the country for bond trustee services. These services are provided to governmental and municipal entities, as well as a broad range of middle market and large institutions.

2001 compared to 2000

IMG reported operating income of $374 million, up $52 million from the prior year.

Net interest income increased $18 million, or 4%, from the prior year, reflecting a 5% increase in average loans partially offset by narrower deposit spreads and a 4% decrease in average deposits.

Provision for credit losses increased $25 million, principally related to higher net charge-offs resulting from a difficult economic climate and loan growth.

Noninterest income, which is principally fiduciary and investment fees, increased $96 million, or 8%. Beginning in November 2000, fees associated with the administration of the One Group® mutual funds were recorded as revenue, with a corresponding increase in expense. Prior to that, a third-party administrator incurred such fees and expenses, which totaled $80 million in 2000. Excluding the impact of this change, noninterest income increased $16 million reflecting growth in retail brokerage sales offset by lower investment advisory fees on equity assets because of overall market conditions.

Noninterest expense increased $1 million, principally related to expenses of $80 million associated with the administration of the One Group® funds, offset by a decrease in expenses related to tighter cost control, lower headcount and reduced operating losses. Excluding the expenses associated with the administration of the One Group® funds, noninterest expenses declined 8%.

Assets under management totaled $142.6 billion, up 9% from the end of 2000. One Group® mutual fund assets under management increased 19% to $83.5 billion. One Group® fund performance continued to remain strong, with 88% of these funds rated three stars or higher by Morningstar. Average assets under management increased 3% compared with 2000, driven principally by a 12% increase in One Group® mutual funds.

2000 compared to 1999

IMG reported operating income of $322 million, up $5 million from the prior year.

Net interest income increased $33 million, or 9%, from the prior year, reflecting a 16% increase in average loans partially offset by narrower spreads related to the 3% decrease in average deposits.

Provision for credit losses increased $11 million, principally related to higher net charge-offs and loan growth.

Noninterest income, which is principally fiduciary and investment fees, decreased $16 million, or 1%, due to the sale of a subsidiary in the 1999 second quarter. Excluding the impact of this sale, noninterest income increased 2%, reflecting growth in retail brokerage and insurance volumes and moderate growth in assets under management.

Noninterest expense decreased $24 million, or 2%, also related to the 1999 second quarter sale of a subsidiary. Excluding the impact of this sale, expenses increased 2%, principally related to volume growth in retail brokerage and insurance activities.

Assets under management totaled $131.2 billion, up 2% from the end of 1999. One Group® mutual fund assets under management increased 9% to $70.4 billion. One Group® fund performance continued to remain strong, with 99% of these funds rated three stars or higher by Morningstar. Average assets under management increased 5% compared with 1999, driven principally by a 14% increase in One Group® mutual funds.

Corporate

Corporate includes Treasury, fixed income and principal investment portfolios, unallocated corporate expenses, and any gains or losses from corporate transactions.

For additional footnote detail see page 28.

(14) Net interest income primarily includes Treasury results and interest spread on investment related activities.

(15) Noninterest income primarily includes the gains and losses from investment activities and other corporate transactions.

(16) Noninterest expense primarily includes corporate expenses not allocated to the lines of business.

2001 compared to 2000

Corporate reported an operating loss of $409 million for 2001, compared with an operating loss of $1,033 million in 2000. Excluding significant items of $778 million after tax, the operating loss in 2000 was $255 million.

Net interest expense increased to $664 million for 2001 from $464 million in 2000. These results were principally due to changes in the Treasury investment portfolio and an increase in unallocated equity.

Investments, which includes Treasury, fixed income and principal investment portfolios, declined $143 million after tax from 2000 due to market conditions. These results are principally reflected in investment securities gains and losses.

Unallocated corporate expenses were $332 million in 2001 versus $473 million in 2000. The $141 million reduction from 2000 was principally due to increased allocations.

2000 compared to 1999

Corporate reported an operating loss of $255 million in 2000, compared with operating income of $677 million in 1999.

Treasury results worsened in 2000, driven by declining interest rates and the level of unallocated equity and assets. This change was principally reflected in net interest expense, which was $464 million in 2000, compared to net interest income of $166 million for 1999.

Investments results declined $141 million after tax from 1999 principally due to the weakening market for initial public offerings and financial restructurings, and lower gains in the Treasury portfolio.

Noninterest expense was $473 million for 2000, compared with $198 million in 1999. Expenses for 2000 included higher legal expenses, severance-related expenses and other operational losses. Additionally, unallocated corporate expenses increased in 2000 due to the change in allocation methodology.

Significant Items

Results in 2000 included the negative impact of $2.160 billion after tax ($3.329 billion pre-tax) of significant items. The following summarizes significant items recorded in 2000 by each business segment and income statement line, excluding merger and restructuring–related charges:

Business Segments–Table 1

(In millions)	Retail	Commercial	First USA	Investment Management	Corporate	Total
Pretax expense (income)						
Writedown of auto lease residuals	$532					$ 532
Provision for credit losses		$628				628
Repositioning of investment securities portfolio					$ 415	415
Operational and other [1]	2	(18)	$ 56		220	260
Writedown of interest-only strip			354			354
Occupancy and fixed asset related	9	6	11	$(4)	315	337
Writedown of purchased credit card relationship intangibles			275			275
Writedowns primarily related to planned loan sales [2]	167					167
Increase to legal accruals					190	190
Writedown of marketing partnership agreements			121			121
Severance related	10	21	6	4	9	50
Total	$720	$637	$823	$ –	$1,149	$3,329
After tax	$456	$404	$522	$ –	$ 778	$2,160

Income Statement Line–Table 2

(In millions)	Retail	Commercial	First USA	Investment Management	Corporate	Total
Net interest income	$ 14	$ (7)			$ (6)	$ 1
Noninterest income:						
Banking fees and commissions					(1)	(1)

Other	24	1	39	8	466	538
Total noninterest expense	45	(35)	321	(2)	719	1,048
Pretax expense	$720	$637	$823	$ –	$1,149	$3,329

(1) Includes $75 million of incentive accruals reversed in the fourth quarter relating to the full year in which existing plans were adjusted to a pay for performance basis.

(2) At December 31, 2000, Management discontinued its plan to dispose of these loans, and as such, are now considered part of the general portfolio.

During 1999, significant items totaling $880 million pretax ($597 million after-tax) were not allocated to specific business segments. These items included charges of $722 million for merger and restructuring costs, $321 million for asset impairments, valuation adjustments and other charges, and $197 million for provision for credit losses primarily associated with the implementation of the FFIEC's revised consumer credit guidelines. These charges were partially offset by gains of $111 million and $249 million, respectively, from the sale of Concord and the Indiana divestitures.

Below is a reconciliation of managed 2000 actual results with results adjusted for significant items:

2000 Significant Items – Table 3 – Managed Basis

(In millions)	2001 Actual	2000 Actual	2000 Adjustments	2000 Adjusted	1999 Actual	2001 Actual vs. 2000 Adjusted		2000 Adjusted vs. 1999 Actual

N/M–Not meaningful.

(1) Consolidated noninterest income, provision for credit losses, and noninterest expense include $(169) million, $176 million, and $319 million, respectively, of significant items that were not allocated to specific business segments. Excluding these amounts segment operating income was $4,076 million.

(2) Consolidated results for 2001 include $44 million after tax of cumulative effect of change in accounting principle not allocated to specific business segments.

CONSOLIDATED RESULTS

Net Interest Income

Net interest income includes spreads on earning assets as well as items such as loan fees, cash interest collections on problem loans, dividend income, interest reversals, and income or expense on derivatives used to manage interest rate risk.

In order to understand fundamental trends in net interest income, average earning assets and net interest margins, it is useful to analyze financial performance on a managed portfolio basis, which adds data on securitized loans to reported data on loans as presented below:

YEAR ENDED DECEMBER 31	**2001**	2000	1999
(Dollars in millions)			
Managed:			
Net interest income–FTE basis	**$ 13,580**	$ 13,506	$ 14,457
Average earning assets	**277,672**	284,035	269,237
Net interest margin	**4.89%**	4.76%	5.37%
Reported:			
Net interest income–FTE basis	**$ 8,769**	$ 8,974	$ 9,142
Average earning assets	**237,869**	241,058	223,539
Net interest margin	**3.69%**	3.72%	4.09%

2001 compared to 2000

On a managed basis, net interest income increased modestly in 2001 relative to 2000. The earnings benefit derived from falling interest rates was partially offset by lower earning assets. The decline in average earning assets was largely due to efforts to reduce commercial credit exposure, brokered home equity loan and auto lease outstandings, and also reflected lower credit card receivables. As represented by the year-over-year improvement in net interest margin, overall balance sheet profitability improved. This reflected the reduction in low margin commercial credits, more disciplined pricing in the consumer loan sector, and increases in the percentage of funding provided by core retail deposits and net free funds.

On a reported basis, net interest income was slightly below that reported in 2000, largely due to lower earning assets as mentioned above.

2000 compared to 1999

Lower average credit card outstandings, lower fee revenues and narrower spread on credit card loans were the most significant causes of the decline in both the net interest income and related margin in 2000. Lower average credit card outstandings and fee revenues reflected customer attrition and reduced new account origination, while narrower spread reflected higher funding costs in 2000. Competitive pricing pressures in Corporate Banking and Middle Market Banking and higher nonperforming loans reduced margins slightly in the commercial loan portfolio.

During 2000, net interest income declined, reflecting a lower level of loans and the cost of carrying a higher level of nonperforming assets.

On a reported basis, net interest margin was 3.72% in 2000, compared with 4.09% in 1999. The decrease in net interest margin in 2000 was related to lower credit card spreads as well as a less favorable earning asset mix.

Noninterest Income

The components of noninterest income for the periods indicated are:

(Dollars in millions)				% Change	
YEAR ENDED DECEMBER 31	**2001**	2000	1999	2001-2000	2000-1999
Banking fees and commissions	**$1,731**	$1,537	$1,502	13%	2%
Credit card revenue	**1,395**	1,104	1,363	26	(19)
Service charges on deposits	**1,449**	1,310	1,283	11	2
Fiduciary and investment management fees	**754**	783	793	(4)	(1)
Investment securities gains (losses)	**(66)**	(235)	509	72	N/M
Trading	**220**	134	147	64	(9)
Other income (loss)	**360**	(738)	685	N/M	N/M
Gain on Indiana divestitures	**–**	–	249	N/M	N/M
Gain on sale of Concord	**–**	–	111	N/M	N/M
Managed noninterest income	**$5,843**	$3,895	$6,642	50%	(41)%

N/M–Not meaningful.

In order to provide more meaningful trend analysis, credit card revenue and total noninterest income in the above table are shown on a managed basis. Credit card fee revenue excludes the net interest revenue associated with securitized credit card receivables. Components of noninterest income that are primarily related to a single business segment are discussed within that business segment rather than the consolidated section.

2001 compared to 2000

Managed banking fees and commissions increased by $194 million, or 13%, compared to 2000 levels. This increase was primarily the result of increased annuity sales and fees associated with the in-house administration of the One Group® mutual funds, which the Corporation began recording as revenue in the 2000 fourth quarter. Additionally, this increase reflects growth in retail brokerage sales.

Managed credit card revenue increased $291 million, or 26%, in 2001 when compared to 2000. This improvement was due to the third quarter addition of the Wachovia portfolio and significant items recorded in 2000 (see table 2 on page 41).

Service charges on deposits increased $139 million, or 11%, in 2001 when compared to 2000. A lower rate environment produced a shift to the payment of fees from net interest income due to the lower value ascribed to customers' compensating deposit balances.

Fiduciary and investment management fees declined by $29 million, or 4%, in 2001 compared to levels maintained in 2000. This reduction was as a result of lower investment advisory fees on equity assets because of overall market conditions.

Investment securities losses were $66 million for 2001 due to principal investment losses and lower market valuations, partially offset by the gains on sale of fixed income securities. This was an improvement from 2000 when investment securities portfolios activity produced a loss of $235 million. This loss occurred when significant items were recorded in the second quarter of 2000 (see table 2 on page 41).

Trading produced gains of $220 million, an increase of $86 million, or 64%, when compared to 2000. This improvement was due to significant items recorded in 2000 (see table 2 on page 41) and market value gains.

Other income in 2001 was $360 million compared to a $738 million loss in 2000. This improvement over last year was predominately due to significant items recorded in 2000 (see table 2 on page 41).

2000 compared to 1999

Banking fees and commissions increased 2% in 2000, compared with the 1999 levels, as higher loan syndication fees were partially offset by lower leasing fees for auto loans.

Managed credit card revenue declined 19% to $1.104 billion in 2000 as compared to 1999, reflecting a decline in managed credit card receivables as well as writedowns for certain affinity partnership agreements included in the 2000 significant items (see table 2 on page 41).

Service charges on deposit accounts, which include deficient balance fees, increased 2% reflecting growth in cash management fees, due in part to the extensive cross selling of product offerings, which was supported by enhanced product features and functionality of the core treasury management services provided to customers on a national basis.

Fiduciary and investment management fees decreased slightly in 2000 as compared to 1999, as fee growth from traditional trust products and services, investment management activities and shareholder services was offset by the absence of revenues from certain unprofitable account relationships exited in 2000.

Investment securities portfolio activities produced a loss of $235 million in 2000 as compared to $509 million of net gains in 1999, primarily as the result of the repositioning of the Corporation's investment portfolio in the 2000 second quarter (see table 2 on page 41) and lower principal valuations.

Trading results declined slightly to $134 million in 2000 compared with $147 million in 1999 as improved foreign exchange trading was offset by a decline in revenue generated from interest rate derivatives.

Other activities generated losses of $738 million in 2000, compared with $685 million of income in 1999. Net securitization amortization in 2000 totaled $116 million, compared with net gains of $61 million in 1999. Asset impairment writedowns associated with credit card interest-only strip securities were $432 million for 2000 compared to $40 million for 1999. These writedowns were driven by the narrower margin and increased attrition based on the earnings decline in the credit card business. Auto residual losses totaled $757 million for 2000, compared with $167 million for 1999. Included in these losses were charges of $552 million ($532 million significant items) and $100 million in 2000 and 1999, respectively, for asset valuation adjustments.

Noninterest Expense

The components of noninterest expense for the periods indicated are:

(Dollars in millions)				% Change	
YEAR ENDED DECEMBER 31	**2001**	2000	1999	2001-2000	2000-1999
Salaries and employee benefits:					
Salaries	**$ 3,638**	$ 3,949	$ 3,925	(8)%	1%
Employee benefits	**560**	653	603	(14)	8

Merger and restructuring-related charges	**351**	161	554	N/M	(71)
Total noninterest expense [1]	**$ 9,551**	$11,608	$11,490	(18)	1
Employees	**73,519**	80,778	87,735	(9)	(8)
Efficiency ratio–managed basis	**49.2%**	66.7%	54.5%		

N/M–Not meaningful.

(1) Certain expenses have been reclassified from salaries to other expenses in all periods.

Components of noninterest expense that are primarily related to a single business segment are discussed within that business segment rather than the consolidated section.

2001 compared to 2000

Salary and benefit costs were $4.198 billion in 2001, down 9% from $4.602 billion in 2000. This decline was attributed to expense savings from reduced headcount and cost reductions associated with the modification of the Corporation's benefit plans.

Occupancy expense declined in 2001 by $186 million, or 21%, from 2000 levels. The decrease in 2001 was the result of less occupied space.

Equipment expense in 2001 decreased $136 million compared to the previous year. Reduced furniture and equipment rental along with lower maintenance and depreciation expense was primarily the reason for the 23% decline.

Outside service fees and processing expense also declined in 2001 compared to a year ago. The majority of the 23% decline was attributed to a reduction in consulting expense and the benefits from contract renegotiations and other waste-reduction initiatives.

For 2001, marketing and development expense decreased $38 million, or 4%, compared to 2000 as continued expense reductions in the Retail line of business more than offset increased expenditures for First USA.

Other intangible amortization expense decreased by $313 million, or 76%, from a year ago, predominately due to significant items recorded in 2000 (see table 2 on page 41).

Other expense was reduced by $806 million, or 39%, when compared to the year 2000. This decrease was primarily due to significant items recorded in 2000 (see table 2 on page 41). This reduction also reflects the continuation of the Corporation's waste-reduction initiatives to lower expenses for such items as travel, entertainment and other miscellaneous items, which was partially offset by system conversion costs. The Corporation successfully converted the Texas/Louisiana deposit system during the 2001 third quarter and the Arizona/Utah deposit system in the 2001 fourth quarter and is working to complete the remaining system conversions around year-end 2002.

The Corporation recorded a $354 million pre-tax restructuring-related charge in the 2001 fourth quarter for additional real estate and severance costs to accomplish more rapid expense reductions, accelerated systems conversions and other consolidations.

2000 compared to 1999

Salary and benefit costs were $4.602 billion in 2000, up 2% from $4.528 billion in 1999. The increase was due to higher salary levels, partially offset by reduced headcount and lower incentive compensation in 2000.

Occupancy expense in 2000 was up $169 million, or 24%, from 1999 levels. This increase included $98 million of the $337 million significant item (see table 2 on page 41) related to writedowns concerning vacant space and other occupancy-related matters.

Equipment expense decreased 11% in 2000 from 1999, primarily due to reduced furniture and equipment rental and lower maintenance and depreciation expense.

Outside service fees and processing expense decreased 13% compared to 1999. A portion of the decrease in 2000 reflected consulting and implementation costs incurred to support Year 2000 readiness, as well as other development, technology and reengineering initiatives in various businesses in 1999. The 2000 decrease also included benefits from the Corporation's waste-reduction initiatives.

Marketing and development expense decreased 27% in 2000 from 1999. Credit card marketing efforts accounted for much of the fluctuations in this period.

Other intangible amortization expense included $288 million and $21 million of additional writedowns in purchased credit card relationships in 2000 and 1999, respectively. In 2000, $275 million of these writedowns is included in table 1 on page 41.

Other expense increased $591 million in 2000 compared with 1999, primarily relating to $538 million of significant items recorded in 2000 (see table 2 on page 41). These charges included $190 million increase to the legal reserve to cover increased corporate and business litigation exposure, approximately $85 million of fixed assets and software write-offs, as well as miscellaneous and operational errors.

Applicable Income Taxes

The Corporation's income (loss) before income taxes and cumulative effect of change in accounting principle, as well as applicable income tax expense (benefit) and effective tax rate for each of the past three years follows:

(Dollars in millions)	**2001**	2000	1999
Income (loss) before income taxes and the cumulative effect of change in accounting principle	**$3,800**	$(1,080)	$4,974
Applicable income taxes (benefits)	**1,118**	(569)	1,495
Effective tax rate	**29.4%**	52.7%	30.1%

Applicable income tax expense (benefit) for all three years included benefits for tax-exempt income, tax-advantaged investments and general business tax credits offset by the effect of nondeductible expenses, including goodwill. In the case of a loss before income taxes and the cumulative effect of change in accounting principle, the effect of the net tax benefits described above is to increase, rather than decrease, the effective rate of tax. This is the primary reason for the difference in effective tax rates between 2000 and the other years presented. More detail on income taxes can be found in Note 20 to the consolidated financial statements beginning on page 90.

RISK MANAGEMENT

Risk is an inherent part of the Corporation's businesses and activities. The Corporation's ability to properly and effectively identify, assess, monitor and manage risk in its business activities is critical to its soundness and profitability. The diversity of the Corporation's lines of business helps reduce the impact that volatility in any particular area has on its operating results as a whole.

The risk management process of the Corporation is dynamic and requires effective communication between lines of business and corporate-level departments, as well as judgment and knowledge of specialized products and markets. The Corporation's risk management activities consider both on- and off-balance sheet exposure. The Corporation's Senior Management takes an active role in the risk management process and has developed policies and procedures that require specific functions to assist in the identification, assessment and control of various risks. In recognition of the nature of Bank One's business activities, the Corporation's risk management policies, procedures and methodologies are subject to ongoing review and modification.

Overall risk management policies for the Corporation are established by the Corporate Risk and Capital Committee, which reviews the Corporation's performance relative to these policies. The Corporate Risk and Capital Committee has responsibility for various risk committees of the Corporation's lines of business and assists the Audit and Risk Management Committee of the Board of Directors in monitoring Bank One's policies and guidelines for risk management. The Audit and Risk Management Committee reviews risk management policies and procedures, and receives regular updates regarding the Corporation's compliance with these policies and procedures, including credit, market, liquidity, and operational risks. Individual line of business committees monitor and review their respective line of business compliance with the Corporation's risk management practices. These committees manage specific risks, sales practices, pricing, allowance adequacy, legal enforceability, and operational and systems risks.

Corporate Risk Management, Finance, Law, Compliance and Government Relations also assist Senior Management and the Corporate Risk and Capital Committee in monitoring and controlling the Corporation's risk profile. Corporate Risk Management is responsible for risk policy development and overseeing implementation, risk analysis, and risk reporting to Senior Management. The Corporate Risk and Capital Committee has responsibility for monitoring aggregate market and credit risk. The Corporation's Asset/Liability Committee ("ALCO") has direct oversight responsibility for the Corporation's liquidity position and periodically updates the Audit and Risk Management Committee. Corporate Audit periodically examines and evaluates the Corporation's operations and control environment. The Corporation remains committed to employing qualified personnel with appropriate expertise to implement effectively the Corporation's risk management and monitoring systems.

The Corporation's business activities generate liquidity, market, credit and operational risks:

- Liquidity risk is the risk that the Corporation is unable to meet all current and future financial obligations in a timely manner.
- Market risk is the risk that changes in future market rates or prices will make the Corporation's positions less valuable.
- Credit risk is the risk of loss from borrowers and counterparties' failure to perform according to the terms of a transaction.
- Operational risk, among other things, includes the risk of loss due to errors in product and service delivery, failure of internal controls over information systems and accounting records, and internal and external fraud.

LIQUIDITY RISK MANAGEMENT

Liquidity is managed to preserve stable, reliable and cost-effective sources of cash to meet all current and future financial obligations. At Bank One, strong liquidity is provided by a variety of sources including:

- A portfolio of liquid assets, comprised of federal funds sold, deposit placements and marketable securities.
- A large customer deposit base arising through the Corporation's Commercial Banking and Retail business activities.
- A diversified mix of short- and long-term funding sources from the wholesale financial markets.
- Significant borrowing capacity at the Federal Reserve Discount Window.

Bank One is an active participant in the global financial markets through which it obtains a significant amount of funding. These markets serve as a cost-effective source of funds and are a critical component of the Corporation's liquidity management. Decisions to access these markets are based upon relative costs, prospective views of balance sheet growth, and a targeted liquidity profile. A disruption in the financial markets could limit access to liquidity for the Corporation.

The Corporation's ability to maintain regular access to competitively priced wholesale funds is fostered by strong debt ratings from the major credit rating agencies. Management views the following factors as critical to retaining high credit ratings:

- Strong capital ratios and credit quality
- A stable, diverse earnings stream
- Diversity of liquidity sources
- Strong liquidity monitoring procedures

At December 31, 2001, the Corporation and its principal banks had the following long- and short-term debt ratings:

	Short-Term Debt		Senior Long-Term Debt	
	S & P	Moody's	S & P	Moody's
The Corporation (Parent)	A-1	P-1	A	Aa3
Principal Banks	A-1	P-1	A+	Aa2

Treasury is responsible for measuring and managing the liquidity profile with oversight from ALCO. A combination of daily, weekly and monthly reports provided to Senior Management detail the following:

- Internal liquidity risk metrics
- Composition and level of the liquid asset portfolio
- Timing differences in short-term cash flow obligations
- Available pricing and market access to the financial markets for capital, term-debt and securitization transactions
- Exposure to contingent draws on the Corporation's liquidity

The Corporation monitors and manages liquidity considering both on- and off-balance sheet exposures. On-balance sheet liquidity is impacted by balance sheet growth, level and mix of customer deposits, and access to wholesale funding. In the normal course of business, the Corporation enters into certain forms of off-balance sheet transactions, including credit card securitizations, unfunded loan commitments and letters of credit. These transactions are managed through the Corporation's various risk management processes. Liquidity facilities provided to Bank One administered and third party administered specialized financing entities might require funding if the Corporation's short-term rating were to fall to A-2 or P-2. Credit card securitizations would be subject to early amortization if certain performance measures of the issuing trust are not maintained. Either event would result in additional funding requirements for the Corporation.

MARKET RISK MANAGEMENT

Overview

Market risk refers to potential losses arising from changes in interest rates, foreign exchange rates, equity prices and commodity prices. The portfolio effect of diverse trading activities helps reduce market risk. Through its trading activities, the Corporation strives to take advantage of profit opportunities available in interest and exchange rate movements. In asset and liability management activities, policies are in place to closely manage structural interest rate and foreign exchange rate risk. Disclosures about the fair value of financial instruments, which reflect changes in market prices and rates, can be found in Note 23 to the consolidated financial statements beginning on page 93.

Trading Activities

The Corporation's trading activities are primarily customer-oriented. Cash instruments are bought and sold to satisfy customers' investment needs. Derivative contracts are initially entered into to meet the risk management needs of customers. The Corporation enters into subsequent transactions to manage the level of risk in accordance with approved limits. In order to accommodate customers, an inventory of capital markets instruments is carried, and access to market liquidity is maintained by making bid-offer prices to other market makers. The Corporation may also take proprietary trading positions in various capital markets cash instruments and derivatives, and these positions are designed to profit from anticipated changes in market factors.

Many trading positions are kept open for brief periods of time, often less than one day. Other positions may be held for longer periods. Trading positions are carried at estimated fair value. Realized and unrealized gains and losses on these positions are included in noninterest income as trading.

Value-At-Risk

The Corporation has developed policies and procedures to manage market risk in its trading activities through a value-at-risk measurement and control system, a stress testing process and dollar trading limits. The objective of this process is to quantify and manage market risk in order to limit single and aggregate exposures. Dollar trading limits are subject to varying levels of approval by senior line of business management, with review by Corporate Market Risk Management. Corporate Market Risk Management works with various line of business personnel in refining and monitoring market risk policies and procedures, and is the primary oversight unit for market risk arising from line of business activities creating market risk for the Corporation.

For trading portfolios, value-at-risk measures the maximum fair value the Corporation could lose on a trading position, given a specified confidence level and time horizon. Value-at-risk limits and exposures are monitored daily for each significant trading portfolio. Stress testing is similar to value-at-risk except that the confidence level is geared to capture more extreme, less frequent market events.

The Corporation's value-at-risk calculation measures potential losses in fair value using a 99% confidence level and a one-day time horizon. This equates to 2.33 standard deviations from the mean under a normal distribution. This means that, on average, daily profits and losses are expected to exceed value-at-risk one out of every 100 overnight trading days. Value-at-risk is calculated using a statistical model applicable to cash and derivative positions, including options.

Average, high and low of the value-at-risk measurements for 2001 and 2000, along with value-at-risk amounts at December 31, 2001 and December 31, 2000 are:

	2001			
(In millions)	Average	High	Low	Dec. 31
Risk type				
Interest rate	**$11**	**$15**	**$8**	**$11**
Currency exchange rate	**1**	**4**	**–**	**–**
Equity	**1**	**4**	**–**	**1**
Aggregate trading portfolio market risk				**$12**

	2000			
(In millions)	Average	High	Low	Dec. 31
Risk type				
Interest rate	$11	$15	$7	$7
Currency exchange rate	1	1	–	1
Equity	1	2	1	1
Aggregate trading portfolio market risk				$9

Interest rate risk was the predominant type of market risk incurred during 2001. At December 31, 2001, approximately 90% of primary market risk exposures were related to interest rate risk. Currency exchange rate, equity and commodity risks accounted for 3%, 6% and 1%, respectively, of primary market risk exposures.

U.S. Treasury, corporate, asset-backed, municipal, and mortgage-backed securities generated 75% of interest rate risk. Interest rate derivatives accounted for 22% of interest rate risk, while the remaining 3% was derived primarily from money market and foreign exchange trading activities.

Foreign exchange spot, forward and option trading generated 100% of the currency exchange rate risk. Of the currency exchange rate risk arising from these activities, 55% related to major currency exposures and 45% to minor currencies.

Equity derivatives trading and off-setting cash positions generated 100% of equity price risk.

At December 31, 2001, aggregate portfolio market risk exposures were 33% higher than at year-end 2000. The majority of this increase was due to increased market risk in various trading books.

Structural Interest Rate Risk Management

Interest rate risk exposure in the Corporation's core non-trading business activities, i.e., asset/liability management ("ALM") position, is a result of reprice, option, and basis risks associated with on- and off-balance sheet positions. Reprice risk represents timing mismatches in the Corporation's ability to alter contractual rates earned on financial assets or paid on liabilities in response to changes in market interest rates. Basis risk refers to the potential for changes in the underlying relationship between market rates or indices, which subsequently result in a narrowing of the spread earned on a loan or investment relative to its cost of funds. Option risk arises from "embedded options" present in many financial instruments such as interest rate options, loan prepayment options and deposit early withdrawal options. These provide customers and investors opportunities to take advantage of directional changes in rates, which could have an adverse impact on the Corporation's margin performance. Embedded options are complex risk positions that are difficult to predict and offset, and are a large component of the interest rate risk exposure to the Corporation.

The Corporation has established risk measures, limits, policy guidelines and internal control mechanisms (collectively referred to as the Interest Rate Risk Policy) for managing the overall ALM position, including both on- and off-balance sheet positions. Responsibility for the management of interest rate risk resides with Treasury with oversight by the Corporation's ALCO. Business unit management is responsible for understanding their interest rate risk, while the Corporation controls and monitors this risk centrally.

The ALM position is measured using sophisticated risk management tools, including earnings simulation modeling and economic value of equity sensitivity analysis, to capture near-term and longer-term interest rate risk exposures. Senior Management is regularly apprised of the risks associated with the ALM position, with exposures tested under multiple rate and yield curve scenarios. The Corporation balances the return potential of the ALM position against the desire to limit volatility in earnings and/or economic value.

Earnings simulation analysis, or earnings-at-risk, measures the sensitivity of pretax earnings to various interest rate movements. The base-case scenario is established using current interest rates. The comparative scenarios assume an immediate parallel shock in increments of ± 100 basis point rate movements. Numerous other scenarios are analyzed, including more gradual rising or declining rate changes and non-parallel rate shifts. Estimated earnings for each scenario are calculated over multiple years. The interest rate scenarios are used for analytical purposes and do not necessarily represent Management's view of future market movements. Rather, these are intended to provide a measure of the degree of volatility interest rate movements may introduce into the earnings and economic value of the Corporation.

The Corporation's 12-month pretax earnings sensitivity profile as of year-end 2001 and 2000 is as follows:

	Immediate Change in Rates	
(In millions)	-100 bp	+100 bp
December 31, 2001	**$174**	**$(341)**
December 31, 2000	$ 29	$ 5

The increase in earnings sensitivity during the year reflects an increase in the duration of the Corporation's earning assets, in part driven by management actions taken in anticipation of declining short-term interest rates.

Modeling the sensitivity of earnings to interest rate risk is highly dependent on numerous assumptions embedded in the model. While the earnings sensitivity analysis incorporates Management's best estimate of interest rate and balance sheet dynamics under various market rate movements, the actual behavior and resulting earnings impact will likely differ from that projected. For mortgage-related assets, the earnings simulation model captures the expected prepayment behavior under changing interest rate environments. Additionally, the model measures the impact of interest rate caps and floors on adjustable-rate loan products. Assumptions and methodologies regarding the interest rate or balance behavior of indeterminate maturity products, e.g., credit card receivables, savings, money market, NOW and demand deposits reflect Management's best estimate of expected future behavior. Sensitivity of service fee income to market interest rate levels, such as those related to cash management products, is included as well. The earnings sensitivity profile does not reflect potential differences in the timing of income recognition on transactions that were designed to have an offsetting economic effect. For example, the interest-only strip recorded in conjunction with a credit card securitization may be subsequently subject to the accounting recognition of impairment due to adverse changes in market interest and payment rates while the income or expense on offsetting asset and liability positions are recorded on an accrual basis.

In addition to the earnings sensitivity analysis described above, Management uses an economic value of equity sensitivity technique to capture the risk in both short- and long-term positions. This analysis involves calculating future cash flows over the full life of all current assets, liabilities and off-balance sheet positions under different rate scenarios. The discounted present value of all cash flows represents the Corporation's economic value of equity. The sensitivity of this value to shifts in the yield curve allows Management to measure longer-term repricing and option risk in the portfolio. Interest rate risk in trading activities and other activities, including certain overseas balance sheet positions, is managed principally as trading risk.

Foreign Exchange Risk Management

Whenever possible, foreign currency-denominated assets are funded with liability instruments denominated in the same currency. If a liability denominated in the same currency is not immediately available or desired, a forward foreign exchange or cross-currency swap contract is used to hedge the risk due to cross-currency funding.

To minimize the capital impact of translation gains or losses measured on an after-tax basis, the Corporation uses forward foreign exchange contracts to hedge the exposure created by non-U.S. dollar investments in overseas branches and subsidiaries.

CREDIT RISK MANAGEMENT

The Corporation is exposed to the risk that borrowers or counterparties may default on their obligations to the Corporation. These transactions create credit exposure that is reported both on- and off- balance sheet. On-balance sheet credit exposure includes such items as loans. Off-balance sheet credit exposure includes unfunded credit commitments and other credit-related financial instruments. Credit exposures resulting from derivative financial instruments are discussed in the "Derivative Financial Instruments" section beginning on page 61.

The Corporation's Risk and Capital Committee has developed policies to manage the level and composition of risk in its credit portfolio, and reviews the Corporation's performance relative to those policies. The objective of this credit risk management process is to quantify and manage credit risk on an aggregate portfolio basis as well as to reduce the risk of loss resulting from an individual customer default. Corporate Risk Management works with lending officers and line of business personnel involved in credit decision making and is involved in the implementation, refinement, and monitoring of the Corporation's credit policies and procedures. Credit limits are subject to varying levels of approval by senior line of business management and Corporate Risk Management.

In order to meet its credit risk management objectives, the Corporation maintains a risk profile that is diverse in terms of borrower concentrations, product-type, and industry and geographic concentrations. Additional diversification of the Corporation's exposure is accomplished through syndication of credits, participations, loan sales, securitizations, credit derivatives and other risk-reduction measures.

Consumer Credit Risk Management (Including Credit Card and Retail)

The Corporation's consumer risk management process utilizes sophisticated risk assessment tools, including credit scoring, across the life cycle of each type of loan product, including credit cards, loans secured by real estate, vehicle loans and leases, and other unsecured loans. These tools are used to target product and price offerings to best match the consumer risk profile to identify consumers whose risk profile has deteriorated for proactive risk mitigation efforts, and to initiate portfolio-wide risk management strategies to ensure that the portfolios remain within Management-defined risk tolerance levels.

Management of consumer lines of business continues to proactively manage the risk/reward relationship of each consumer loan portfolio segment such that these businesses are positioned to achieve profitability targets and required rates of return on investment.

Commercial Credit Risk Management

The Corporation's commercial risk management process utilizes enterprise policies focused on origination, portfolio management and managed asset related activities. This risk management framework establishes approval authorities and related processes, risk rating methodologies, portfolio review parameters and management of problem loans. Line of business Senior Management and Corporate Risk Management are actively engaged in these activities as well as continuously exploring methods to improve commercial risk management.

Management of the Commercial Banking line of business continues to proactively manage the risk/reward relationship of each commercial relationship and portfolio segment such that these businesses are positioned to achieve profitability targets and required rates of return.

Within the Commercial Banking portfolio, borrowers/transactions are assigned specific obligor risk ratings (on a scale from 1–20, and facility rating 1-8 based upon collateral supporting the transaction) by the originating credit officer based upon an established underwriting and approval process. Approvals are made based upon the amount of credit exposure inherent in the credit extension and are reviewed by senior line of business management and Corporate Risk Management, as appropriate. Risk ratings are reviewed periodically by senior line of business personnel and Corporate Risk Management and revised, if needed, to reflect the borrowers'/transactions' current risk profile. The lower categories of credit risk are equivalent to the four bank regulatory classifications: Special Mention, Substandard, Doubtful and Loss.

The Corporation occasionally enters into credit derivatives as one method of credit protection against the deterioration of identified credit risk on loans and loan commitments. At December 31, 2001, credit derivatives were in place to cover approximately $3.3 billion in notional commercial credit exposure. Realized and unrealized gains and lossses on credit derivatures are recorded in noninterest income as trading.

OPERATIONAL RISK MANAGEMENT

The Corporation is exposed to numerous types of operational risk. Operational risk generally refers to the risk of loss resulting from the Corporation's operations, including, but not limited to, the risk of fraud by employees or persons outside the Corporation, the execution of unauthorized transactions by employees, errors relating to transaction processing and systems, and breaches of the internal control system and compliance requirements. This risk of loss also includes the potential legal actions that could arise as a result of the operational deficiency or as a result of noncompliance with applicable regulatory standards.

The Corporation operates in many different businesses in diverse markets and places reliance on the ability of its employees and systems to process a high number of transactions. In the event of a breakdown in the internal control systems, improper operation of systems or improper employee actions, the Corporation could suffer financial loss, face regulatory action and suffer damage to its reputation. In order to address this risk, Management maintains a system of internal controls with the objective of providing proper transaction authorization and execution, safeguarding of assets from misuse or theft, and ensuring the reliability of financial and other data.

The Corporation maintains systems of controls that provide Management with timely and accurate information about the operations of Bank One. These systems have been designed to manage operational risk at appropriate levels given the Corporation's financial strength, the environment in which it operates, and considering factors such as competition and regulation. Bank One has also established procedures that are designed to ensure that policies relating to conduct, ethics and business practices are followed on a uniform basis. In certain cases, the Corporation has experienced losses from operational risk. Such losses have included the effects of operational errors that the Corporation has discovered and taken charges in the income statement. While there can be no assurance the Corporation will not suffer such losses in the future, Management continually monitors and improves its internal controls, systems and corporate-wide processes and procedures. Furthermore, Management believes the plans to streamline the organization through charter consolidations and further systems integration and policies enacted to push down reporting accountabilities further in the organization, have improved the Corporation's ability to identify and limit operational risk.

Selected Statistical Information

The significant components of credit risk and the related ratios, presented on a reported basis, for the years indicated are as follows:

DECEMBER 31,	2001	2000	1999	1998	1997
(Dollars in millions)					
Loans outstanding	**$156,733**	$174,251	$163,877	$155,398	$159,579
Average loans	**167,054**	171,768	156,855	154,952	155,926
Nonperforming loans	**3,551**	2,475	1,559	1,207	1,025
Other, including other real estate owned	**137**	98	106	90	61
Nonperforming assets	**3,688**	2,573	1,665	1,297	1,086
Allowance for credit losses	**4,528**	4,110	2,285	2,271	2,817
Net charge-offs	**2,288**	1,391	1,206[1]	1,498	1,887
Nonperforming assets to related assets	**2.35%**	1.48%	1.02%	0.83%	0.68%
Allowance for credit losses/loans outstanding	**2.89**	2.36	1.39	1.46	1.77
Allowance for credit losses/nonperforming loans	**128**	166	147	188	275
Net charge-offs/average loans	**1.37**	0.81	0.77	0.97	1.21
Allowance for credit losses/net charge-offs	**198**	295	189[1]	152	149

(1) Includes $143 million of charges required to bring the consumer portfolio into compliance with FFIEC guidelines. Excluding these incremental charge-offs, the adjusted coverage ratio would have been 215%.

Loan Composition

In 2001, the Corporation changed its loan composition methodology to a line of business approach, dividing the loan portfolio into Retail, Commercial Banking, First USA, and other lines of business. The Corporation has presented 2000 information under both the "old" and "new" compositions, but has not presented 1999, 1998 and 1997 under the "new" composition as it would be impractical to reclassify those periods using the new methodologies.

The Corporation's loan portfolio at December 31 are as follows:

	2001		2000	
(Dollars in millions)	Amount	% [1]	Amount	% [1]
Retail:				
Small business commercial	**$ 12,347**	6	$ 12,103	5
Home equity	**30,268**	14	31,361	13
Vehicles:				
Loans	**13,481**	6	14,300	6
Leases	**6,155**	3	8,840	4
Other personal	**9,779**	4	10,697	5
Total Retail	**72,030**	33	77,301	33
Commercial Banking:				
Corporate Banking:				
Commercial and industrial	**22,268**	10	N/A	
Commercial real estate	**8,975**	4	N/A	
Lease financing	**4,669**	2	N/A	
Other	**731**	–	N/A	
Total Corporate Banking	**36,643**	16	51,700	22
Middle Market:				
Commercial and industrial	**28,676**	13	N/A	
Commercial real estate	**3,472**	2	N/A	
Lease financing	**1,053**	1	N/A	
Other	**294**	–	N/A	
Total Middle Market	**33,495**	16	33,400	14
Total Commercial Banking	**70,138**	32	85,100	36
Other lines of business	**7,779**	4	7,106	3
First USA:				
On balance sheet	**6,786**	3	4,744	2
Securitized [2]	**61,369**	28	62,241	26
Managed credit card	**68,155**	31	66,985	28
Total managed	**$218,102**	100%	$236,492	100%
Total reported	**$156,733**		$174,251	

N/A–Not available.

(1) Percentages shown above for loan type are determined as a percentage of total managed loans.

(2) Includes seller's interest in credit card loans and securities sold to investors and removed from the balance sheet.

Prior to 2001, the Corporation's loan portfolio was divided into commercial, consumer and credit card loan categories as of December 31:

	2000		1999		1998		1997	
(Dollars in millions)	Amount	% [1]	Amount	% [1]	Amount	% [1]	Amount	% [1]
Commercial:								
Domestic:								
Commercial	$ 65,270	28%	$ 59,070	26%	$ 53,362	25%	$ 48,458	25%
Real estate:								
Construction	5,757	2	5,836	3	5,108	2	4,639	2
Other	16,778	7	18,817	8	17,787	8	16,545	8
Lease financing	5,818	3	5,562	2	6,236	3	4,537	2

Total managed	$236,492	100%	$229,196	100%	$216,391	100%	$196,993	100%
Total reported	$174,251		$163,877		$155,398		$159,579	

(1) Percentages shown above for loan type are determined as a percentage of total managed loans.

(2) Includes seller's interest in credit card loans and securities sold to investors and removed from the balance sheet.

Managed Credit Card Receivables

For analytical purposes, the Corporation reports credit card receivables on both a reported basis and a managed basis. Reported credit card receivables include those receivables held in the portfolio and reported on the balance sheet. Managed credit card receivables include reported credit card receivables and those sold to investors through securitization (see page 64 for discussion of Loan Securitizations).

The following table shows the average managed credit card receivables and the related charge-off and delinquency rates for the years ended:

DECEMBER 31,	**2001**	2000	1999
(Dollars in millions)			
Average balances:			
Credit card loans	**$ 6,884**	$ 4,754	$ 7,233
Securitized credit card receivables	**58,563**	61,424	61,747
Total average managed credit card receivables	**65,447**	66,178	68,980
Total net charge-offs (including securitizations)	**$ 3,823**	$ 3,584	$ 3,790
Net charge-offs/average total receivables [1]	**5.84%**	5.42%	5.49%
Credit card delinquency rate at period-end:			
30 or more days	**4.46%**	4.51%	4.57%
90 or more days	**1.93%**	2.02%	2.13%

(1) Ratios include $143 million of securitized charge-offs taken in the fourth quarter of 1999 related to the early adoption of certain of the FFIEC's consumer charge-off guidelines.

The increase in the managed credit card charge-off rate to 5.84% in 2001 from 5.42% in 2000 reflected the general weakness in the United States economy during 2001. Consumer credit markets generally saw increased levels of delinquency and loss through 2001. Nationally, consumers filed for bankruptcy in 2001 in much higher numbers than in any prior year. Credit management tools used to manage the level and volatility of losses for credit card accounts have been continually updated and where appropriate these tools were adjusted to reduce credit risk in 2001. Management believes the quality of new credit card accounts opened in 2001 is superior to the quality of accounts opened in preceding years. Management of risk in the existing accounts also improved in 2001.

The benefit of these actions is seen in a modest level of volatility experienced in losses on credit card accounts despite the weakness in the economy. The Corporation currently expects that credit losses will increase modestly in 2002. Future charge-offs in the credit card portfolio and credit quality are subject to uncertainties which may cause actual results to differ widely from that forecasted, including the direction and level of loan delinquencies, changes in consumer behavior, bankruptcy trends, portfolio seasoning, interest rate movements, and portfolio mix, among other things. While current economic and credit data suggests that credit quality will not significantly deteriorate, material deterioration in the general economy could materially change these expectations.

Retail

The retail loan portfolio primarily consists of loans secured by real estate as well as vehicle loans and leases, and provides broad diversification of risk from both a product and geographic perspective. Average receivable balances for 2001 were $74.7 billion. Even though average receivables were flat compared to the prior year, the Corporation continues to effectively enhance the composition of loans in the portfolio by emphasizing high quality prime credit lending reflecting the organization's desire for profitability. During 2001, the Corporation continued to de-emphasize vehicle leasing and significantly refocused its indirect real estate lending involving loans sourced through brokers. New loans originated in 2001 on average reflect higher credit quality consistent with management's focus on the prime credit market segment. The net charge-off rate for retail loans in 2001 was 1.10%, up 37 basis points from the prior year. The increase from 2000 reflected the impact of general weakness in economic conditions including higher consumer bankruptcies and higher losses on brokered home equity loans. Given the current state of the economy, Management expects consumer loan losses to rise modestly for the foreseeable future. Future retail portfolio charge-offs and credit quality are subject to uncertainties which may cause actual results to differ widely from that forecasted, including the direction and level of loan delinquencies, changes in consumer behavior, bankruptcy trends, portfolio seasoning, interest rate movements and portfolio mix among other things.

The Corporation continues to proactively manage its retail credit operation to ensure profitability even in difficult economic conditions. Ongoing efforts include continual review and enhancement of credit underwriting criteria, rationalization of the number and quality of third-party loan originators (i.e., brokers and correspondents) and refinement of pricing and risk management models.

Commercial Banking

Commercial Banking loans decreased by $15.0 billion, or 18%, between December 31, 2000 and December 31, 2001, primarily due to a planned and managed reduction of the Corporate Banking portfolio. Nonperforming Commercial Banking loans increased by $578 million, or 38%, to $2.1 billion at December 31, 2001, as compared to $1.5 billion at December 31, 2000, primarily due to continued portfolio deterioration across a number of industry segments. Commercial Banking's net charge-offs in 2001 were $1.041 billion, or 1.34% of average loans, compared with $562 million of net charge-offs, or 0.66% of average loans, in 2000. Given the current state of the economy, the Corporation expects Middle Market nonperforming loans to increase, with charge-offs rising modestly for the foreseeable future. Future charge-offs and credit quality in the Commercial Banking portfolio are subject to uncertainties that may cause actual results to differ from that forecasted, including the state of the economy and its impact on individual industries, commercial real estate values, interest rate movements and portfolio mix, among other things. While credit losses expected for the foreseeable future would be considered higher than normal, a deepening of the recession would cause higher credit losses than currently anticipated.

Commercial and Industrial Loans

Commercial and industrial loans represent commercial loans other than commercial real estate. At December 31, 2001, commercial and industrial loans totaled $50.9 billion, which represents 73% of the Commercial Banking portfolio.

The more significant borrower industry concentrations of the Commercial Banking commercial and industrial portfolio as of December 31, 2001 are:

(Dollars in millions)	Outstanding	Percent of Total Commercial and Industrial Loans
Wholesale trade	$ 4,409	8.7%
Industrial materials	3,355	6.6
Oil and gas	3,219	6.3
Consumer staples	3,008	5.9
Metals and products	2,749	5.4

Commercial Real Estate

Commercial real estate loans represent credit extended for real-estate related purposes to borrowers or counterparties who are primarily in the real estate development or investment business and for which the ultimate repayment of the loan is dependent on the sale, lease, rental or refinancing of the property.

Commercial real estate lending is conducted in several lines of business with the majority of these loans originated by Corporate Banking primarily through its specialized National Commercial Real Estate Group. This group's focus is lending to targeted regional and national real estate developers, homebuilders and REITs/REOCs. As of December 31, 2001, National Commercial Real Estate Group's loan outstandings totaled $8.8 billion or 70% of the commercial real estate portfolio.

At December 31, 2001, commercial real estate loans totaled $12.4 billion, or 18% of Commercial Banking loans. During 2001, net charge-offs in the commercial real estate portfolio segment were $14 million. Nonperforming commercial real estate assets, including other real estate owned, totaled $199 million, or 1.6% of related assets, at December 31, 2001.

The commercial real estate loan portfolio by both collateral location and property type as of December 31, 2001 are as follows:

(Dollars in millions)	Outstanding	
By Collateral Location:	Amount	% of Portfolio
Illinois	$ 1,682	14%
Michigan	1,348	11
Texas	1,004	8
California	960	8
Arizona	958	8
Ohio	839	7
Indiana	504	4
Louisiana	487	4
Colorado	356	3
Kentucky	326	3
Other areas	1,806	13
Unsecured	1,670	13
Secured by other than real estate	507	4
Total	$12,447	100%
By Property Type:		
Retail	$ 1,913	15%
Office	1,804	15
Apartment	1,770	14
REIT/diversified	1,297	10
Single family residential development	1,273	10
Industrial/warehouse	1,230	10
Hotels	625	5
Residential lots	472	4
Miscellaneous commercial income producing	1,864	15
Miscellaneous residential developments	199	2
Total	$12,447	100%

ASSET QUALITY

In 2001, the Corporation changed its loan composition methodology to a line of business approach, dividing the loan portfolio into Retail, Commercial Banking, First USA, and other lines of business. The Corporation has presented 2000 information under both the "old" and "new" compositions, but has not presented 1999, 1998 and 1997 under the "new" composition as it would be impractical to reclassify those periods using the new methodologies.

Nonperforming Assets

The Corporation places loans on nonaccrual status as follows:

- Retail consumer loans are placed on nonaccrual status when the collection of contractual principal or interest becomes 90 days past due. Accrued but uncollected interest and fee income are reversed and charged against interest income when the consumer loan is placed on nonaccrual status. Subsequent cash collections are recognized as interest income unless the consumer loan is subsequently charged-off, in which case cash collections are recognized as recoveries.
- Commercial Banking and Retail small business commercial loans are placed on nonaccrual status when the collection of contractual principal or interest is deemed doubtful, or it becomes 90 days or more past due and is both not well-secured and in the process of collection. Accrued but uncollected interest and fee income are reversed and charged against interest income when placed on nonaccrual status. Cash interest payments received are recognized either as interest income or as a reduction of principal when collection of principal is doubtful. The loan is returned to accrual status only when all of the principal and interest amounts contractually due are reasonably assured within a reasonable time frame and when the borrower has demonstrated payment performance.
- Credit card receivables are charged-off rather than placed on nonaccrual status.

The Corporation's nonperforming loans by line of business and total nonperforming assets for the periods indicated are as follows:

DECEMBER 31,	**2001**	2000
(Dollars in millions)		
Nonperforming Loans:		
Retail	**$1,370**	$ 912
Commercial Banking:		
Corporate Banking	**1,154**	1,065
Middle Market Banking	**947**	458
Other lines of business	**80**	40
Total [1]	**3,551**	2,475
Other, primarily other real estate owned	**137**	98
Total nonperforming assets	**$3,688**	$2,573
Nonperforming assets/related assets	**2.35%**	1.48%
Loans 90-days or more past due and accruing interest:		
Credit Card	**$ 96**	$ 57
Other	**1**	5
Total	**$ 97**	$ 62

(1) The amount of interest on nonperforming loans that was contractually due in 2001 totaled $202 million. Of this amount, $34 million was actually recorded in 2001.

Prior to 2001, the Corporation's nonperforming assets as of December 31 are:

(Dollars in millions)	2000	1999	1998	1997
Nonperforming Loans:				
Commercial	$1,761	$1,053	$ 729	$ 609
Consumer	714	506	478	416
Total	2,475	1,559	1,207	1,025
Other, primarily other real estate owned	98	106	90	61
Total nonperforming assets	$2,573	$1,665	$1,297	$1,086
Nonperforming assets/related assets	1.48%	1.02%	0.83%	0.68%
Loans 90 days or more past due and accruing interest:				
Credit Card	$ 57	$ 76	$ 161	$ 438
Other	5	50	78	140
Total	$ 62	$ 126	$ 239	$ 578

The Corporation has experienced credit quality deterioration in a number of distinct Commercial Banking market segments. The Corporation has established processes for identifying potential problem areas of the portfolio, which currently include exposure to leveraged lending and acquisition finance activities, healthcare, automotive parts and manufacturing, business finance and leasing, professional services, miscellaneous transportation services, telecommunications and selected utilities. The Corporation will continue to monitor and manage these potential risks.

Nonperforming loans within Retail, which includes all consumer balances more than 90-days past due, increased by $458 million in 2001 to $1.4 billion reflecting deterioration in credit performance consistent with general economic conditions. These increases primarily reflect loans secured by residential real estate

where the Corporation maintains a loss recognition policy including the writing down of assets to net realizable value at 120-days past due. Retail nonperforming assets are likely to continue to increase modestly for the foreseeable future and will be influenced in part by the future direction of economic conditions including residential real estate valuation trends.

Charge-off Policies

The Corporation records charge-offs as follows:

- Commercial loans are charged-off in the reporting period in which either an event occurs that confirms the existence of a loss or it is determined that a loan or a portion of a loan is uncollectible.
- A credit card loan is charged-off in the month it becomes contractually 180 days past due and remains unpaid at the end of that month or in the event of bankruptcy notification, specifically, 60 days after receipt of notification. Interest on credit card loans is accrued until the loan is charged-off. At the time of charge-off, accrued but uncollected finance charges and fee income are reversed and charged against interest income and credit card revenue, respectively. Subsequent cash collections are recorded as recoveries.
- Retail loans are generally charged-off following a delinquency period of 120 days, or within 60 days after receipt of notification in case of bankruptcy. Closed-end consumer loans, such as auto loans and leases and home mortgage loans, are typically written down to the extent of loss after considering the net realizable value of the collateral.

The timing and amount of the charge-off on consumer loans will depend on the type of loan, giving consideration to available collateral, as well as the circumstances giving rise to the delinquency. The Corporation adheres to uniform guidelines published by the FFIEC in charging off consumer loans.

The following table shows the Corporation's net charge-offs by line of business for the years ended December 31:

	2001			2000		
(Dollars in millions)	**Net charge-offs**	**Average balance**	**Net charge-off rate**	Net charge-offs	Average balance	Net charge-off rate
Retail [1]	**$ 821**	**$ 74,749**	**1.10%**	$ 542	$ 74,632	0.73%
Commercial banking:						
Corporate Banking	**638**	**43,495**	**1.47**	435	53,343	0.81
Middle Market Banking	**403**	**34,310**	**1.17**	127	32,178	0.40
First USA	**3,823**	**65,447**	**5.84**	3,584	66,178	5.42
Other lines of business	**34**	**7,616**		40	6,861	
Total–Managed [1]	**5,719**	**$225,617**	**2.53%**	4,728	$233,192	2.03%
Securitized	**(3,431)**			(3,337)		
Total–Reported	**$2,288**	**$167,054**	**1.37%**	$ 1,391	$171,768	0.81%

(1) 2001 amounts exclude $92 million of charge-offs relating to part of a portfolio that has been accounted for as loans held at a discount, but viewed for management purposes as charge-offs.

Prior to 2001, net charge-offs by portfolio for the years ended December 31 are:

	2000			1999		
(Dollars in millions)	Net charge-offs	Average balance	Net charge-off rate	Net charge-offs	Average balance	Net charge-off rate
Commercial	$ 597	$100,202	0.60%	$ 306	$ 90,182	0.34%
Consumer [1]	547	66,812	0.82	558	59,440	0.94
Credit card [1]	3,584	66,178	5.42	3,790	68,980	5.49
Total–Managed [1]	4,728	$233,192	2.03%	4,654	$218,602	2.13%
Securitized	(3,337)			(3,448)		
Total–Reported	$ 1,391	$171,768	0.81%	$1,206	$156,855	0.77%

(1) Includes $143 million of consumer charge-offs and $183 million of securitized charge-offs taken in the fourth quarter of 1999 related to the early adoption of certain of the FFIEC's new consumer charge-off guidelines.

Charge-offs

Managed net charge-offs increased 21% during 2001 to $5.719 billion, reflecting higher charge-offs in all lines of business. The managed net charge-off rate increased to 2.53% in 2001 versus 2.03% in 2000.

Retail net charge-offs for 2001 totaled $821 million, up from $542 million in 2000. Increases in credit losses across all consumer portfolios including small business were recorded. Several factors contributing to these increased losses include: increased consumer bankruptcies; increased severity per default involving auto loans and leases tied to weaker market prices for repossessed vehicles; and overall weakening of consumer economic fundamentals associated with an economy in recession.

Loan Sales

A summary of the Corporation's Corporate Banking loan sales in 2001 follows:

(In millions)	Loans Sold	Charge-offs	Loss on Sales
Nonperforming loans	$ 582	$124	$ –
Other credit related loans sold	487	92	1
Other loans sold	1,148	–	43
Total	$2,217	$216	$44

The Corporation sells Corporate Banking loans in the normal course of its business activities. These loans are subject to the Corporation's overall risk management practices and are one alternative the Corporation uses to manage credit risk. Decisions to sell particular loans are made after taking into account various alternatives to manage credit exposure. Sales transactions are initiated when Management determines its sales intent. When a loan is sold, the gain or loss is evaluated to determine whether it resulted from credit deterioration or other conditions. Based upon this evaluation, the losses on other loans sold in 2001 were deemed to be caused by other than credit deterioration. The sale of nonperforming and other credit related loans were primarily recorded as charge-offs as the losses on sale were attributable to credit deterioration.

Allowance for Credit Losses

The allowance for credit losses is maintained at a level that in Management's judgment is adequate to provide for estimated probable credit losses inherent in various on- and off-balance sheet financial instruments. This process includes deriving probable loss estimates that are based on historical loss ratios and portfolio stress testing and Management's judgment. The allowance is based on ranges of estimates and is intended to be adequate but not excessive. Each quarter, an allowance level is formally estimated by each line of business and reviewed by Corporate Risk and Senior Management. The allowance for credit losses also includes provisions for losses on loans considered impaired and measured pursuant to Statement of Financial Accounting Standards ("SFAS") No. 114, "Accounting by Creditors for Impairment of a Loan" (see Note 8 to the consolidated financial statements on page 80). Securitized and loans held for sale, including credit card receivables, are not subject to this process.

Corporate Risk Management recommends an allowance and provision for credit losses that result in adequate coverage of inherent losses within the Corporation's credit portfolios. Corporate Risk Management's assessment is based on line of business tests, portfolio-level econometric modeling and stress testing, as well as Management's judgment. Corporate Risk Management also utilizes third-party analysis to validate internal measures of inherent loss, credit quality and allowance adequacy.

The change in the Corporation's allowance for credit losses for the years ended December 31 are as follows:

(In millions)	**2001**	2000

Transfers	(182)	(29)	(456)	29
Balance, end of year	$4,110	$2,285	$2,271	$2,817

Transfers from the allowance for credit losses primarily represent allocable credit allowances associated with consumer loan sale transactions, including securitization transactions.

Composition of Allowance for Credit Losses

While the allowance for credit losses is available to absorb credit losses in the entire portfolio, presented below is an allocation of the allowance for credit losses by line of business as of December 31:

	2001		2000	
(Dollars in millions)	**Amount**	**%**	Amount	%
Retail	**$1,040**	**23%**	$ 846	20%
Commercial Banking				
Corporate Banking	**1,714**	**38**	1,699	41
Middle Market	**1,352**	**30**	1,345	33
First USA	**396**	**8**	197	5
Other lines of business	**26**	**1**	23	1
Total	**$4,528**	**100%**	$4,110	100%

For analytical purposes, an allocation of the allowance for credit losses by loan type as of December 31 follows:

	2000		1999		1998		1997	
(Dollars in millions)	Amount	%	Amount	%	Amount	%	Amount	%
Commercial [1]	$3,199	78%	$ 972	43%	$ 834	37%	$ 660	23%
Consumer	714	17	486	21	440	19	484	17
Credit Card	197	5	148	6	199	9	813	29
Unallocated	–	–	679	30	798	35	860	31
Total	$4,110	100%	$2,285	100%	$2,271	100%	$2,817	100%

(1) Includes allowance related to Business and Community Banking loans, which are included in the Retail business segment results.

At December 31, 2001, the allowance for credit losses was 198% of current year net charge-offs (on a reported basis) as compared to a reserve coverage ratio of 295% at December 31, 2000. This decrease reflects deterioration in certain components of the Commercial Banking and brokered home equity portfolios. The allowance for credit losses at December 31, 2001, represented 2.89% of period-end loans and 128% of nonperforming loans, compared to 2.36% and 166%, respectively, at December 31, 2000. The allowance for credit losses established for specifically identified off-balance sheet lending exposures was not material at December 31, 2001.

Reserve Determination

The Corporation determines allowance levels based upon the probable loss in the credit portfolios. The allowance is based on ranges of estimates and is intended to be adequate but not excessive. The estimation process includes deriving probable loss estimates that are based on historical loss rates, portfolio stress testing of probable loss estimates and Management's judgment.

During 2000, the Corporation reviewed its practice of maintaining unallocated reserves in light of continuing refinement in loss estimation processes, including improvements in portfolio level stress testing techniques. It was concluded that the use of unallocated reserves would be discontinued. These reserves were aligned with their respective portfolios.

Probable Loss Estimation

The Corporation employs several methodologies for estimating probable losses. Methodologies are determined based on a number of factors, including type of asset (e.g., consumer installment versus commercial loan), risk measurement parameters (e.g., delinquency status and bureau score versus commercial risk rating), and risk management and collection processes (e.g., retail collection center versus centrally managed workout units).

For the Retail and Credit Card portfolios, the allowance is based on a statistical analysis of inherent losses over discrete periods of time. The analysis reviews historical losses, vintage performance, delinquencies and other risk characteristics of the various products to estimate probable losses. Other risk characteristics evaluated may include: recent loss experience in the portfolios, changes in origination sources, portfolio seasoning and underlying credit practices, including charge-off policies. These factors and analysis are updated on a quarterly basis.

For the Commercial Banking portfolio, the Corporation conducts a two-part test. First, significant credits that have a risk rating equivalent to the bank regulatory classifications of Substandard, Doubtful and Loss are formally reviewed periodically and at least quarterly and asset-specific reserves are established as appropriate. Second, inherent losses for the remaining Commercial Banking portfolio are estimated by assigning an expected loss factor to each risk category of the portfolio based on a statistical analysis of historical loss experience over a discrete period of time. During the second quarter of 2001, the Corporation refined its measurement process for estimating probable losses inherent in the Commercial Banking portfolio. To refine the process, the Corporation analyzed historical credit loss, risk-rating migration and loss given default data and assigned probability of default and loss given default factors to each exposure in the portfolio.

Portfolio Stress-Testing

Stress testing is performed on all significant portfolios to simulate the effect of economic deterioration on credit performance. Stress testing the portfolios provides Management with a range of loss estimates that incorporates the Corporation's historical loss experience and the reserve impact of events that have occurred, or might possibly occur, but that have not been reflected in either the historical expected loss factors or the currently assigned risk ratings.

Stress testing of the commercial portfolio is accomplished using a framework developed to test expected default factors and loss given default estimates and to test the effect of downgrades to exposures in identified high-risk industries. This process includes, establishing a base case scenario using three alternative market probability sets and an estimated loss given default probability to measure the impact on reserves; determining the effect of applying a higher loss given default probability to the base case to take into consideration the variability of historical loss rates over the business cycle; and estimating trend-based reserves in high-risk industries that may not be fully reflected in the historically based loss factors, using market-based tools and information as well as sanctioned macroeconomic forecasts.

Stress testing the consumer portfolios, including credit card, is accomplished by applying the results of econometric modeling to each of the portfolio segments. The purpose of this analysis is to quantify the impact of economic deterioration on existing weaknesses in the portfolios, whose effects are not yet incorporated into the historically based reserve rates. The stress test models employ a regression methodology that incorporates the latest national trends for each consumer credit product segment. Economic variables used include consumer debt, unemployment rates, consumer debt burdens, consumer confidence, bankruptcies, and interest rates, among other statistics. Additionally, a series of portfolio specific stress tests are performed to simulate individual economic events. These include such events as declining residential real estate prices, weakening used car prices, rising interest rates, spikes in personal bankruptcies, and economic recession scenarios. The results of the stress testing are used by Management to support the adequacy of the allowance established.

DERIVATIVE FINANCIAL INSTRUMENTS

The Corporation uses a variety of derivative financial instruments in its trading, asset and liability management, as well as to manage certain currency translation exposures of foreign operations. These instruments include interest rate, currency, equity and commodity swaps, forwards, spot, futures, options, caps, floors, forward rate agreements, and other conditional or exchange contracts, and include both exchange-traded and over-the-counter contracts.

Accounting for Derivative Financial Instruments

Effective January 1, 2001, the Corporation adopted SFAS No. 133, "Accounting for Derivative Instruments and Hedging Activities" ("SFAS No. 133"), as amended. The new standard significantly changed the accounting treatment for interest rate and foreign exchange derivatives the Corporation uses in its derivative activity accounted for as a hedge. The new accounting treatment for derivatives is described below.

Trading Derivative Instruments

Derivative financial instruments used in trading activities are carried at fair value. Such instruments include swaps, forwards, spot, futures, options, caps, floors and forward rate agreements and other conditional or exchange contracts in the interest rate, foreign exchange, equity and commodity markets. The estimated fair

values are based on quoted market prices or pricing and valuation models on a present value basis using current market information. Realized and unrealized gains and losses, including any interest income or expense, are recorded in noninterest income as trading. Where appropriate, compensation for credit risk and ongoing servicing is deferred and recorded as income over the life of the derivative financial instruments.

Purchased option, cap and floor contracts are reported in derivative product assets, and written option, cap and floor contracts are reported in derivative product liabilities. For other derivative financial instruments, unrealized gains are reported in derivative product assets, and unrealized losses are reported in derivative product liabilities. However, fair value amounts recognized for derivative financial instruments executed with the same counterparty under a legally enforceable master netting arrangement are reported on a net basis. Cash flows from derivative financial instruments are reported net as operating activities.

Credit derivatives are accounted for as derivative instruments under SFAS No. 133. As a result, the change in fair value of credit derivative instruments is included in trading results in the Corporation's financial statements while any credit assessment change in the identified commercial credit exposure is reflected as a change in the allocated credit reserves.

Hedging Derivative Instruments

Derivative financial instruments used in hedging activities are designated as fair value hedges, cash flow hedges, or hedges of net investments in foreign operations, and are required to meet specific criteria. The instruments used in fair value hedges and cash flow hedges are principally interest rate swaps. Such interest rate swaps are linked to and adjust effectively the interest rate sensitivity of specific assets and liabilities. Interest rate swaps not designated and qualified as a hedge are treated as trading derivative instruments.

Fair Value Hedges (primarily hedges of fixed rate interest-bearing instruments)–The change in fair value of both the hedging derivative and hedged item is recorded in current earnings. If a hedge is dedesignated prior to maturity, previous adjustments to the carrying value of the hedged item are recognized in earnings to match the earnings recognition pattern of the hedged item (e.g., level yield amortization if hedging an interest-bearing instrument).

Cash Flow Hedges (primarily hedges of variable rate interest-bearing instruments)–The effective portion of the change in fair value of the hedging derivative is recorded in Accumulated Other Adjustments to Stockholders' Equity ("AOASE") and the ineffective portion directly in earnings. Amounts in AOASE are reclassified into earnings in a manner consistent with the earnings pattern of the underlying hedged item (generally, reflected in interest expense). The total amount of such reclassification into earnings is projected to be charges of $105 million after tax ($163 million pre-tax) over the next twelve months. The maximum length of time exposure to the variability of future cash flows for forecasted transactions hedged is 12 months. If a hedge is dedesignated prior to maturity, previous adjustments to AOASE are recognized in earnings to match the earnings recognition pattern of the hedged item (e.g., level yield amortization if hedging an interest-bearing instrument). The effect on earnings from the discontinuance of cash flow hedges due to the determination that a forecasted transaction is no longer likely to occur was immaterial.

Interest income or expense on most hedging derivatives used to manage interest rate exposure is recorded on an accrual basis, as an adjustment to the yield of the linked exposures over the periods covered by the contracts. This matches the income recognition treatment of that exposure, generally assets or liabilities carried at historical cost, with interest recorded on an accrual basis. If all or part of a linked position is terminated, e.g., a linked asset is sold or prepaid, or if the amount of an anticipated transaction is likely to be less than originally expected, then the related pro rata portion of any unrecognized gain or loss on the derivative is recognized in earnings at that time, and the related pro rata portion of the derivative is subsequently accounted for as a trading instrument.

Hedges of non-U.S Dollar Net Investment in Foreign Operations–In order to minimize the capital impact of translation gains or losses measured on an after-tax basis, the Corporation uses forward foreign exchange contracts to hedge the exposure relating to non-U.S. dollar net investments in foreign operations. The effective portion of the change in fair value of the hedging derivatives is recorded in AOASE as part of the cumulative translation adjustment. The amount of after-tax gains included in the cumulative translation adjustment during the year ended December 31, 2001, related to hedges of the foreign currency exposures of net investments in foreign operations, totaled $6 million.

Income Resulting from Derivative Financial Instruments

The Corporation uses interest rate derivative financial instruments to reduce structural interest rate risk and the volatility of net interest margin. Net interest margin reflects the effective use of these derivatives. Without their use, net interest income would have been lower by $68 million in 2001, $52 million in 2000, and $181 million in 1999.

The amount of hedge ineffectiveness recognized for cash flow and fair value hedges in the year ended December 31, 2001 was insignificant. No component of a hedging derivative instrument's gain or loss is excluded from the assessment of hedge effectiveness.

Credit Exposure Resulting from Derivative Financial Instruments

The credit risk associated with exchange-traded derivative financial instruments is limited to the relevant clearinghouse. Options written do not expose the Corporation to credit risk, except to the extent of the underlying risk in a financial instrument that the Corporation may be obligated to acquire under certain written put options. Caps and floors written do not expose the Corporation to credit risk.

Credit exposure from derivative financial instruments arises from the risk of a counterparty default on the derivative contract. The amount of loss created by the default is the replacement cost or current positive fair value of the defaulted contract. The Corporation utilizes master netting agreements whenever possible to reduce its credit exposure from counterparty defaults. These agreements allow the netting of contracts with unrealized losses against contracts with unrealized gains to the same counterparty, in the event of a counterparty default.

The impact of these master netting agreements for the year ended December 31 follows:

(In millions)	**2001**	2000
Gross replacement cost	**$12,262**	$ 9,769
Less: Adjustment due to master netting agreements	**(9,037)**	(7,222)
Current credit exposure	**3,225**	2,547
Unrecognized net gains due to nontrading activity [1]	**–**	(225)
Balance sheet credit exposure	**$ 3,225**	$ 2,322

(1) At December 31, 2001, exposure amount is zero due to the January 1, 2001 adoption of SFAS No. 133.

Asset and Liability Management Derivatives

Access to the derivatives market is an important element in maintaining the Corporation's desired interest rate risk position. In general, the assets and liabilities generated through ordinary business activities do not naturally create offsetting positions with respect to repricing, basis or maturity characteristics. Using derivative instruments, principally plain vanilla interest rate swaps (ALM swaps), interest rate sensitivity is adjusted to maintain the desired interest rate risk profile.

At December 31, 2001, the notional value of ALM interest rate swaps linked to specific assets or liabilities totaled $12.5 billion as follows:

	Receive Fixed Pay Floating	Pay Fixed Receive Floating		
(In millions)	Fair Value Hedge	Fair Value Hedge	Cash Flow Hedge	Total Swaps
Interest rate swaps associated with:				
Investment securities	$ –	$50	$ –	$ 50
Funds borrowed (including long-term debt)	7,939	–	4,522	12,461
Total	$7,939	$50	$4,522	$12,511

Interest rate swaps used to adjust the interest rate sensitivity of securities and funds borrowed will not need to be replaced at maturity, since the corresponding asset or liability will mature along with the swap. Interest rate swaps designated as an interest rate related hedge of an existing fixed rate asset or liability are fair value type hedges. Conversely, interest rate swaps designated as an interest rate hedge of an existing variable rate asset or liability are cash flow type hedges. Management designates interest rate swaps as hedges of both fixed and variable rate assets and liabilities interchangeably. The type of hedge for accounting purposes is not a strategic consideration. The Corporation has an insignificant amount of hedges involving forecasted transactions and no nonderivative instruments are designated as a hedge.

Asset and Liability Management Swaps–Maturities and Rates

The notional amounts, maturity, and weighted-average pay and receive rates for the ALM swap position at December 31, 2001 are summarized as follows:

(Dollars in millions)	2002	2003	2004	2005	2006	Thereafter	Total
Receive fixed/pay floating swaps:							
Notional amount	$1,664	$25	$–	$2,000	$ –	$4,250	$ 7,939
Weighted average:							
Receive rate	4.31%	7.61%	–%	7.12%	–%	6.51%	6.21%
Pay rate	2.20	2.35	–	2.26	–	2.38	2.31
Pay fixed/receive floating swaps:							
Notional amount	$2,787	$1,250	$–	$ 250	$235	$50	$ 4,572
Weighted average:							
Receive rate	2.22%	2.13%	–%	2.35%	2.30%	2.46%	2.21%
Pay rate	6.90	7.18	–	7.67	6.74	7.70	7.02
Total notional amount	$4,451	$1,275	$–	$2,250	$235	$4,300	$12,511

Variable interest rates–which generally are the one-month, three-month and six-month London interbank offered rates ("LIBOR") in effect on the date of repricing–are assumed to remain constant. However, interest rates will change and consequently will affect the related weighted-average information presented.

LOAN SECURITIZATIONS AND OFF-BALANCE SHEET ACTIVITIES

Loan Securitizations

The Corporation transforms loans into securities, which are sold to investors–a process referred to as securitization. The Corporation primarily securitizes credit card receivables but also securitizes home equity loans and consumer assets to a limited extent. In a credit card securitization, a designated pool of credit card receivables is removed from the balance sheet and transferred to a third-party special purpose entity ("SPE" or "Trust"), that in turn sells securities to investors entitling them to receive specified cash flows during the life of the security. The proceeds from the issuance are then distributed by the SPE to the Corporation as consideration for the loans transferred. Following a securitization, the Corporation receives: fees for servicing the receivables and any excess finance charges, yield-related fees, and interchange revenue on the receivables over and above the interest paid to the investors, net credit losses and servicing fees (termed "the excess spread").

The Corporation's continuing involvement in the securitized assets includes the process of managing and servicing the transferred receivables, as well as maintaining an undivided, pro rata interest in all credit card receivables that have been securitized, referred to as seller's interest, which is generally equal to the pool of assets included in the securitization less the investor's portion of those assets. The Corporation's seller's interest ranks pari-passu with the investors' interests in the Trusts. As the amount of the loans in the securitized pool fluctuates due to customer payments, purchases, cash advances, and credit losses, the carrying amount of the seller's interest will vary. However, the seller's interest is required to be maintained at a minimum level to ensure receivables are available for allocation to the investor interest. This minimum level is generally between 4% and 7% of the SPE's principal receivables.

Investors in the beneficial interests of the securitized loans have no recourse against the Corporation if cash flows generated from the securitized loans are inadequate to service the obligations of the SPE. To help ensure that adequate funds are available in the event of a shortfall, the Corporation is required to deposit funds into cash spread accounts if excess spread falls below certain minimum levels. Spread accounts are funded from excess spread that would normally be returned to the Corporation. In addition, various forms of other credit enhancements are provided to protect more senior investor interests from loss. Credit enhancements associated with credit card securitizations, such as cash collateral or spread accounts, totaled $165 million and $311 million at December 31, 2001 and 2000, respectively, and are classified on the balance sheet as other assets.

The following comprised the Corporation's managed credit card loans at December 31:

(In millions)	**2001**	2000
Owned credit card loans – held in portfolio	**$ 5,040**	$ 2,835
Owned credit card loans – held for future securitization	**1,746**	1,909
Seller's interest in credit card loans (investment securities)	**24,019**	22,446
Total credit card loans reflected on balance sheet	**30,805**	27,190
Securities sold to investors and removed from balance sheet	**37,350**	39,795
Managed credit card loans	**$68,155**	$66,985

For analytical purposes only, income statement line items are adjusted for the net impact of securitization of credit card receivables for the years ended December 31:

	2001			2000			1999		
(Dollars in millions)	**Reported**	**Credit Card Securi-tizations**	**Managed**	Reported	Credit Card Securi-tizations	Managed	Reported	Credit Card Securi-tizations	Managed
Net interest income–FTE basis	**$ 8,769**	**$ 4,811**	**$ 13,580**	$ 8,974	$ 4,532	$ 13,506	$ 9,142	$ 5,315	$ 14,457
Provision for credit losses	**2,510**	**3,431**	**5,941**	3,398	3,337	6,735	1,249	3,265	4,514
Noninterest income	**7,223**	**(1,380)**	**5,843**	5,090	(1,195)	3,895	8,692	(2,050)	6,642
Noninterest expense	**9,551**	**–**	**9,551**	11,608	–	11,608	11,490	–	11,490
Net income (loss)	**2,638**	**–**	**2,638**	(511)	–	(511)	3,479	–	3,479
Total average loans	**167,054**	**58,563**	**225,617**	171,768	61,424	233,192	156,855	61,747	218,602

30+ days	**3.00**	**4.84**	**4.46**	2.74	4.64	4.51	4.06	4.60	4.57
90+ days	**1.41**	**2.08**	**1.93**	1.20	2.08	2.02	1.87	2.15	2.13
Net credit card charge-off ratio	**5.69**	**5.86**	**5.84**	5.20	5.43	5.42	4.73	5.58	5.49

Other Off-Balance Sheet Activities

In the normal course of business, the Corporation is a party to a number of activities that contain credit, market and operational risk that are not reflected in whole or in part in the Corporation's consolidated financial statements. Such activities include: traditional off-balance sheet credit-related financial instruments; commitments under capital and operating leases and long term debt; credit enhancement associated with asset-backed securities business; and joint venture activities.

The Corporation provides customers with off-balance sheet credit support through loan commitments, standby letters of credit and guarantees, as well as commercial letters of credit. Summarized credit-related financial instruments, including both commitments to extend credit and letters of credit, at December 31, 2001 are as follows:

		Amount of Commitment Expiration Per Period			
(In billions)	Total	Less Than 1 Year	1 - 3 Years	3 - 5 Years	Over 5 Years
Unused credit card lines	$299.3	$299.3	$ –	$ –	$ –
Unused loan commitments	148.2	109.0	23.7	14.7	0.8
Standby letters of credit and foreign office guarantees	19.4	10.1	6.0	2.7	0.6
Commercial letters of credit	0.6	0.6	–	–	–

Since many of the unused commitments are expected to expire unused or be only partially used, the total amount of unused commitments in the preceding table does not necessarily represent future cash requirements.

In addition to owned banking facilities, the Corporation has entered into a number of long-term leasing arrangements to support the ongoing activities of the Corporation. The required payments under such commitments and long-term debt at December 31, 2001 are as follows:

(In millions)	2002	2003	2004	2005	2006	2007 and After	Total
Operating leases	$ 264	$ 249	$ 214	$ 169	$ 152	$ 890	$ 1,938
Trust preferred capital securities	–	–	–	–	–	3,315	3,315
Long-term debt, including capital leases	8,512	7,910	5,575	3,932	6,935	7,239	40,103
Total	$8,776	$8,159	$5,789	$4,101	$7,087	$11,444	$45,356

The Corporation is an active participant in the asset-backed securities business where it helps meet customers' financing needs by providing access to commercial paper markets in conjunction with specialized financing entities. Customers benefit from such structured financing transactions as such transactions provide an ongoing source of asset liquidity and a potentially favorable financing alternative.

The Corporation, in its role as administrator of these independently rated specialized financing entities, structures financing transactions for customers such that the receivables financed through the specialized financing entities are appropriately diversified and credit enhanced to support the issuance of asset-backed commercial paper. The Corporation does not service these assets and does not transfer its own receivables into these specialized financing entities. Credit enhancement facilities, in the form of either loan or asset purchase commitments, support each transaction in the specialized financing entities. At December 31, 2001, credit enhancement facilities for these entities approximated $52.1 billion, of which the Corporation provided $38.3 billion. At December 31, 2000, credit enhancement facilities for these entities approximated $42.0 billion, of which the Corporation provided $29.7 billion. Assets in the trust are principally trade receivables, auto loans and leases, credit card and a variety of other receivables.

In addition to customer financing transactions, these specialized financing entities fund, through the issuance of asset-backed commercial paper, other selected portfolios of marketable investment securities that are not reflected on the Corporation's balance sheet. Such transactions are structured in a similar fashion to the customer transactions. Off-balance sheet liquidity lines provided by the Corporation associated with these transactions were $4.0 billion at December 31, 2001 and $3.0 billion at December 31, 2000.

The Corporation also provides credit enhancement facilities to other than Bank One administered specialized financing entities. These credit enhancements approximated $2.1 billion and $1.5 billion at December 31, 2001 and 2000, respectively.

The Corporation provides program-wide credit enhancement, in the form of subordinated debt, for certain specialized financing entities it administers. The Corporation provided $1.1 billion in subordinated debt at December 31, 2001 and $845 million at December 31, 2000. In addition, the Corporation provides to customers transaction specific credit enhancement in the form of subordinated interests and off-balance sheet purchase commitments. At December 31, 2001 and 2000, the Corporation provided credit enhancements through subordinated interest positions of $59 million and $72 million, respectively, and off-balance sheet purchase commitments totaling $297 million and $123 million, respectively.

The risk associated with the credit enhancement provided in these transactions is managed as part of the Corporation's risk management practices.

The Corporation is a participant in several operating joint venture initiatives where the Corporation has a majority equity interest in the entity; however, based on the terms of the joint venture arrangement, the ventures are jointly controlled and managed. As a result, such investments are currently accounted for under the equity method of accounting rather than being consolidated on a line-by-line basis in the Corporation's financial statements. In 2002, Management has exerted additional influence over two of these joint ventures. As a result, the Corporation consolidated these two joint ventures beginning in the first quarter of 2002. Total assets of these two joint ventures are $1.2 billion as of December 31, 2001 and this consolidation will have no net impact to the Corporation's consolidated net income. The Corporation's investment in the remaining joint ventures totaled $302 million at December 31, 2001.

CAPITAL MANAGEMENT

Economic Capital

An important aspect of risk management and performance measurement is the ability to evaluate the risk and return of a business unit, product or customer consistently across all lines of business. The Corporation's economic capital framework facilitates this standard measure of risk and return. Business units are assigned capital consistent with the underlying risks of their product set, customer base and delivery channels.

The following principles are inherent in the capital allocation methodology employed:

- An equal amount of capital is assigned for each measured unit of risk.
- Risk is defined in terms of "unexpected" losses over the life of the exposure, measured at a confidence interval consistent with that level of capitalization necessary to achieve a targeted AA debt rating. Unexpected losses are in excess of those normally incurred and for which reserves are maintained.
- Business units are assessed a uniform charge against allotted capital, representing a target hurdle rate on equity investments. Returns on capital in excess of the hurdle rate contribute to increases in shareholder value.

Four forms of risk are measured–credit, market, operational and lease residual. Credit risk capital is determined through an analysis of both historical loss experience and market expectations. Market risk capital is set consistent with value-at-risk limits established by the Corporation's risk oversight committees. Operational risk capital incorporates event and technology risks. The operational risk evaluation process involves an examination of various risk factors that contribute to a greater likelihood of loss due to such things as fraud or processing error. Finally, lease residual risk capital covers the potential for losses arising from the disposition of assets returned at the end of lease contracts. This price risk is analyzed based upon historical loss experiences and market factors, as well as by reviewing event-specific scenarios.

The economic capital process provides a valuable analytical tool that is critical to the understanding of business segment performance trends. The methodologies employed are subject to ongoing development and review. Over time, the Corporation's view of individual risks and associated capital will likely change given improvements in the Corporation's ability to quantify risks inherent in various business activities.

Selected Capital Ratios

The Corporation aims to maintain regulatory capital ratios, including those of the principal banking subsidiaries, in excess of the well-capitalized guidelines under federal banking regulations. The Corporation maintains a well-capitalized regulatory position.

The tangible common equity to tangible managed assets ratio is also monitored. This ratio adds securitized credit card loans to reported total assets and is calculated net of total intangible assets.

The Corporation's capital ratios follow:

DECEMBER 31,	2001	2000	1999	1998	1997	Well-Capitalized Regulatory Guidelines
Regulatory leverage	**8.2%**	7.3%	7.7%	8.0%	7.8%	3.0%
Risk-based capital ratios						
Tier 1	**8.6**	7.3	7.7	7.9	8.2	6.0
Total	**12.2**	10.8	10.7	11.3	12.3	10.0
Common equity/managed assets	**6.6**	6.0	6.3	6.7	6.7	–
Tangible common equity/tangible managed assets	**5.9**	5.5	5.7	5.8	6.2	–
Double leverage ratio	**103**	108	112	108	107	–
Dividend payout ratio	**38**	N/M	57	58	61	–

N/M–Not meaningful.

The components of the Corporation's regulatory risk-based capital and risk-weighted assets are as follows at December 31:

(In millions)	2001	2000	1999	1998	1997
Regulatory risk-based capital:					
Tier 1 capital	**$ 21,749**	$ 19,824	$ 20,247	$ 19,495	$ 17,958
Tier 2 capital	**9,091**	9,316	7,967	8,295	9,000
Total capital	**$ 30,840**	$ 29,140	$ 28,214	$ 27,790	$ 26,958
Total risk-weighted assets	**$253,330**	$270,182	$263,169	$244,473	$219,557

In deriving Tier 1 and total capital, goodwill and other nonqualifying intangible assets are deducted as indicated for the period ended December 31:

(In millions)	2001	2000	1999	1998	1997
Goodwill	**$1,560**	$ 858	$ 934	$1,075	$1,120
Other nonqualifying intangibles	**207**	375	669	637	109
Subtotal	**1,767**	1,233	1,603	1,712	1,229
Qualifying intangibles	**414**	214	583	984	473
Total intangibles	**$2,181**	$1,447	$2,186	$2,696	$1,702

In November 2001, the U.S. banking regulators revised the risk based capital rules for the treatment of recourse arrangements, direct credit substitutes, asset and mortgage backed securities, and residual interests in securitization structures. Additionally, in January 2002, the U.S. banking regulators announced changes in the risk based capital rules, related to the treatment of certain equity investments made in nonfinancial companies. Both of the new rules become effective during 2002, and the risk capital ratios presented above do not reflect these changes. It is anticipated that the revised rules will not have a material impact on the Corporation's risk based capital ratios.

Dividend Policy

The Corporation's common stock dividend policy reflects its earnings outlook, desired payout ratios, the need to maintain an adequate capital level and alternative investment opportunities. The common stock dividend payout ratio is currently targeted in the range of 25% - 30% of earnings over time. Common stock dividends declared for 2001 were $0.84 per share compared with $1.26 per share for 2000. This reflects a 50% reduction of the quarterly dividend rate from 42 cents per share to 21 cents per share in the third quarter of 2000. On January 15, 2002, the Corporation declared its quarterly common cash dividend of 21 cents per share, payable on April 1, 2002.

On January 18, 2000, the Corporation announced the discontinuation of the biannual 10% stock dividend.

Double Leverage

Double leverage is the extent to which the Corporation's resources are used to finance investments in subsidiaries. Double leverage was 103% at December 31, 2001 and 108% at December 31, 2000. Trust Preferred Capital Securities of $3.315 billion in 2001 and $2.483 billion in 2000 were included in capital for purposes of this calculation.

Stock Repurchase Program and Other Capital Activities

On November 1, 2001, the Corporation redeemed all outstanding preferred stock with cumulative and adjustable dividends, Series B and C, totaling $190 million. The redemption price for both of the Series B and C preferred stock was $100.00 per share, plus accrued and unpaid dividends totaling $1.00 per share and $1.083 per share, respectively.

On September 17, 2001, the Corporation's Board of Directors approved the repurchase of up to $500 million of the Corporation's common stock. This buyback is part of the remaining 28.4 million share buyback program authorized in May 1999. The timing of the purchases and the exact number of shares to be repurchased will depend on market conditions. The share repurchase program does not include specific price targets or timetables and may be suspended at any time. In 2001, the Corporation purchased 2.6 million shares of common stock at an average price of $29.62 per share, leaving 25.8 million shares available for repurchase under the buyback program.

During 2001, the Corporation added to its Tier 1 capital through the sponsorship of two trusts that issued $825 million in aggregate principal amount of trust preferred securities. During 2000, the Corporation added to its Tier 1 capital through the sponsorship of three trusts that issued $915 million in aggregate principal amount of trust preferred securities. These preferred securities are tax-advantaged issues that qualify for Tier 1 capital treatment. See Note 13 to the consolidated financial statements on page 85 for more detail.

During 2001 and 2000, the Corporation strengthened its capital position through the issuance of $750 million and $1 billion of subordinated debt, respectively.

On December 1, 2000, the Corporation converted all outstanding 12 3/4% First Commerce Convertible Debenture Bonds, Series A and B. The conversion rate was 18.9473. All of the debentures were converted to shares of the Corporation's common stock.

FORWARD-LOOKING STATEMENTS

This discussion of financial results contains forward-looking statements about the Corporation, including descriptions of plans or objectives of its management for future operations, products or services, and forecasts of its revenues, earnings or other measures of economic performance. Forward-looking statements can be identified by the fact that they do not relate strictly to historical or current facts. They often include the words "believe," "expect," "anticipate," "intend," "plan," "estimate" or words of similar meaning, or future or conditional verbs such as "will," "would," "should," "could" or "may."

Forward-looking statements, by their nature, are subject to risks and uncertainties. A number of factors—many of which are beyond the Corporation's control—could cause actual conditions, events or results to differ significantly from those described in the forward-looking statements. Some of these factors include certain credit, market, operational, liquidity and interest rate risks associated with the Corporation's business and operations. Other factors described in the Corporation's Form 10-K include changes in business and economic conditions, competition, fiscal and monetary policies and legislation.

Forward-looking statements speak only as of the date they are made. The Corporation does not undertake to update forward-looking statements to reflect circumstances or events that occur after the date the forward-looking statements are made or to reflect the occurrence of unanticipated events, such as further market deterioration that adversely affects credit quality, auto lease residuals and credit card asset values.

Note 1–Summary of Significant Accounting Policies

BANK ONE CORPORATION and subsidiaries ("Bank One" or the "Corporation") is a financial holding company that offers a full range of financial services to commercial and business customers and consumers. The consolidated financial statements have been prepared in conformity with generally accepted accounting principles, and certain prior-year financial statement information has been reclassified to conform to the current year's presentation. The preparation of the consolidated financial statements require Management to make estimates and assumptions that affect the amounts reported and disclosures of contingent assets and liabilities. Actual results could differ from those estimates.

(a) Principles of Consolidation

The Corporation's consolidated financial statements include all accounts of BANK ONE CORPORATION (the "Parent Company") and all significant majority-owned subsidiaries. All significant intercompany accounts and transactions have been eliminated. Results of operations of acquired entities are included from the acquisition date, and assets and liabilities are stated at their estimated fair values at the acquisition date.

(b) Resale and Repurchase Agreements

Securities purchased under resale agreements and securities sold under repurchase agreements are treated as collateralized financing transactions and carried at the amount at which the securities will be subsequently resold or repurchased, plus accrued interest. Where appropriate, resale and repurchase agreements with the same counterparty are reported on a net basis.

(c) Trading Activities

Trading assets and liabilities are carried at fair value. Trading profits include realized and unrealized gains and losses from both cash and derivative financial instruments used in trading activities. Trading activities involve instruments with interest rate, exchange rate, equity price, credit and commodity price market risk.

(d) Investment Securities

Debt and equity investment securities designated as available-for-sale are carried at fair value, with unrealized gains and losses, net of taxes, included in accumulated other adjustments to stockholders' equity. The estimated fair value of a security is determined based on market quotations when available or, if not available, by using a discounted cash flow approach. Realized gains and losses, including other than temporary impairments, are included in noninterest income as investment securities gains (losses). The specific identification method is used to calculate realized gains or losses.

Effective April 1, 2001, the Corporation adopted Emerging Issues Task Force (EITF) Issue No. 99-20, "Recognition of Interest Income and Impairment on Purchased and Retained Beneficial Interests in Securitized Financial Assets" ("EITF No. 99-20"). Under EITF No. 99-20, impairment on certain securitized financial assets must be recognized when the asset's fair value is below its carrying value and there has been an adverse change in estimated cash flows. Prior to EITF No. 99-20, the Corporation judged declines as other than temporary based on the underlying facts and circumstances surrounding the investment, such as the length of time the market value had been below cost or based on the creditworthiness of the issuer. Under EITF No. 99-20, the Corporation recognizes interest income based on the amount of the excess of estimated cash flows over the recorded investment in the securitized financial asset. Changes in estimated cash flows are recognized on a prospective basis. The effect of adopting EITF No. 99-20 was a one-time, non-cash charge to earnings of $44 million after-tax ($69 million pre-tax) or $0.04 per diluted share. This charge has been presented as a cumulative effect of a change in accounting principle in the consolidated income statement.

Principal investments are carried at fair value, with unrealized and realized gains and losses included in noninterest income as investment securities gains (losses). The fair value of a publicly traded principal investment is determined using quoted market prices when the investment is unrestricted; otherwise fair value is estimated using quoted market prices adjusted for market liquidity and sale restrictions. The fair value for principal investments that are not publicly traded is estimated based on the investees' financial results, conditions and prospects, values of comparable public companies, market liquidity and sales restrictions.

(e) Loans, including lease finance receivables

Loans are carried at the principal amount outstanding, net of unearned income and amounts charged off. Unearned income, which includes deferred loan origination fees reduced by loan origination costs, for loans, excluding credit cards, is amortized to interest income over the life of the related loan using the straight-line method that approximates the effective interest rate method. Fees received for providing loan commitments and letters of credit that result in loans are typically deferred and amortized to interest income over the life of the related loan, beginning with the initial borrowing. Fees on commitments and letters of credit that are not expected to be funded are amortized to noninterest income as banking fees and commissions over the commitment period. Other credit-related fees, including syndication management fees, are recorded to noninterest income as banking fees and commissions when received or over time to match the earnings process.

The carrying amount of credit card loans also includes unpaid interest and fees. Loan origination fees and costs on credit card loans are typically deferred and amortized over one year using a straight-line method to noninterest income as credit card revenue.

The Corporation typically provides lease financing to its customers through direct financing leases. Leveraged leases, which represent direct financing leases involving nonrecourse debt, also are provided to customers. Unearned income on a direct financing lease is amortized to income over the lease term so as to yield a constant rate of return on the net investment in the lease. Periodic recognition of lease income on leveraged leases is based on an analysis of cash flows using the original investment less deferred taxes arising from the difference between the pretax financial accounting income and taxable income. Residual values for leased automobiles are reviewed at least annually with periodic reviews performed as warranted by the underlying circumstances. Valuations are based upon various assumptions and estimates including the probability of the automobile being returned to the Corporation, estimated costs incurred to reduce the number of returned automobiles from the customer, estimated collectable fees for mileage and other wear and tear, reconditioning costs, and estimated used car sales prices. Declines in estimated residual value that are other than temporary are recognized in the period such determination is made in other noninterest income.

(f) Loan Sales

When a commercial loan is sold, the loan's carrying value is compared to the net sales proceeds. Any shortfall in value that is presumed to be credit related is recorded as a charge-off reducing the allowance for credit losses. Any shortfall in value not presumed to be credit related is recorded as a charge to other noninterest income.

With consumer loan portfolio sales, the allocable portion of the allowance for credit losses adjusts the carrying value of the loan portfolio and is treated as a transfer out of the allowance for credit losses. The difference between the portfolio's carrying value adjusted for the allocable credit reserves and the net sales proceeds is recorded as a component of other noninterest income.

(g) Nonperforming Loans

A loan is considered nonperforming when placed on nonaccrual status, or when renegotiated at terms that represent an economic concession to the borrower because of a decline in the borrower's financial condition. For a more detailed discussion, see the "Nonperforming Assets" section beginning on page 56. The Corporation's charge-off policies are presented on page 57.

(h) Allowance for Credit Losses

Management maintains the allowance for credit losses at a level it believes is adequate to provide for estimated probable credit losses inherent in on- and off-balance sheet credit exposure. For a more detailed discussion, see the "Allowance for Credit Losses" section beginning on page 58.

(i) Premises and Equipment

Premises and equipment are carried at cost less accumulated depreciation and amortization. Depreciation and amortization is computed using the straight-line method over the estimated useful life of the owned asset and, for leasehold improvements, over the lesser of the remaining term of the leased facility or the estimated economic life of the improvement. For owned and capitalized assets, estimated useful lives range from three to 30 years. Maintenance and repairs are charged to expense as incurred, while major improvements are capitalized and amortized to operating expense over their identified useful life.

(j) Other Real Estate Owned ("OREO")

OREO includes real estate assets that have been received in satisfaction of debt. OREO is initially recorded and subsequently carried at the lower of cost or fair value less estimated selling costs. Any valuation adjustments required at the date of transfer are charged to the allowance for credit losses. Subsequently, unrealized losses and realized gains and losses on sale are included in other noninterest income. Operating results from OREO are recorded in other noninterest expense.

(k) Intangible Assets

Intangible assets include goodwill resulting from acquisitions and identifiable intangible assets, such as customer lists, core deposits and credit card relationships. Goodwill is equal to an acquired company's acquisition cost less the value of net tangible and intangible assets.

Intangible assets are reported in other assets and are amortized into other noninterest expense on an accelerated or straight-line basis over the period the Corporation expects to benefit from such assets. Goodwill is amortized over estimated periods ranging from five to 40 years. Intangible assets are periodically reviewed for other than temporary impairment with any such declines in value included in other noninterest expense.

(l) Income Taxes

Deferred tax assets and liabilities are determined based on temporary differences between financial reporting and tax bases of assets and liabilities and are measured using the enacted tax rates and laws that are in effect. The effect on deferred tax assets and liabilities of a change in rates is recognized as income or expense in the period that includes the enactment date.

(m) Cash Flow Reporting

Cash and cash equivalents consist of cash and due from banks, whether interest-bearing or not. Net reporting of cash transactions has been used when the balance sheet items consist predominantly of maturities of three months or less, or where otherwise permitted. Other items are reported on a gross basis.

(n) Stock-Based Compensation

The Corporation accounts for stock awards pursuant to the methods prescribed in Accounting Principles Board ("APB") Opinion No. 25, "Accounting for Stock Issued to Employees." As stock options are granted at fair value, there are no charges to earnings associated with stock options granted. Compensation expense related to restricted stock awards is recorded as earned over the restriction period.

(o) New and Pending Accounting Pronouncements

The Corporation adopted in 2001 the following new accounting pronouncements and will adopt in 2002 the following pending accounting pronouncements. In general, the effect of those adopted in 2001 were not significant to the Corporation's consolidated financial statements. Upon adoption of SFAS No. 142. "Goodwill and Other Intangible Assets" ("SFAS No. 142"), the Corporation does not currently anticipate significant goodwill impairment based upon the current analysis of facts and circumstances.

Accounting for Transfers and Servicing of Financial Assets and Liabilities

Effective April 1, 2001, the Corporation adopted SFAS No. 140, "Accounting for Transfers and Servicing of Financial Assets and Liabilities" ("SFAS No. 140"). On July 23, 2001, the Financial Accounting Standards Board ("FASB") issued a Technical Bulletin that delayed the effective date of certain provisions of SFAS No. 140 relating to isolation in bankruptcy for banks subject to FDIC receivership and for certain other financial institutions. For these entities, the isolation provisions are effective for transfers of financial assets occurring after December 31, 2001, except for transfers involving revolving credits such as credit card securitizations. An additional transition period was granted for securitizations involving revolving credits that ends three months after the earliest date at which sufficient approvals can be obtained to permit the necessary changes to existing master trusts to meet the isolation provisions, but in no event extend later than June 30, 2006. The Corporation is analyzing the effect of SFAS No. 140 on its current securitization structures. The new standard also provides revised guidance for an entity to be considered a qualifying special purpose entity and requires additional disclosures concerning securitization activities and collateral.

Accounting for Derivative Instruments and Hedging Activities

Effective January 1, 2001, the Corporation adopted SFAS No. 133, as amended. The new standard significantly changed the accounting treatment for interest rate and foreign exchange derivatives the Corporation uses in its asset and liability management activities. The Corporation's accounting for derivatives used in trading activities has not changed as the result of SFAS No. 133. Hedging derivatives are now recognized on the balance sheet at fair value as either assets or liabilities. Hedge ineffectiveness, if any, is calculated and recorded in current earnings. The accounting for the effective portion of the change in value of a hedging derivative is based on the nature of the hedge. See "Derivative Financial Instruments" beginning on page 61 for detailed information on the Corporation's strategy in using derivative instruments in its asset and liability management and trading activities, as well as the accounting principles and disclosures for these instruments.

Business Combinations and Goodwill and Other Intangible Assets

In July 2001, the FASB issued SFAS No. 141, "Business Combinations" ("SFAS No. 141") and SFAS No. 142. SFAS No. 141 requires that all business combinations initiated after June 30, 2001 be accounted for under the purchase method and establishes the specific criteria for the recognition of intangible assets separately from goodwill. Under SFAS No. 142, goodwill will no longer be amortized, but will be subject to impairment tests at least annually. SFAS No. 142 will be effective for the Corporation on January 1, 2002. However, any acquired goodwill or intangible assets recorded in transactions closed subsequent to June 30, 2001 were immediately subject to the amortization provisions of SFAS No. 142. Upon adoption of SFAS No. 142, the Corporation estimates the elimination of goodwill amortization will positively impact net income by approximately $69 million annually.

Note 2–Earnings Per Share

Basic EPS is computed by dividing income available to common stockholders by the average number of common shares outstanding for the period. Except when the effect would be antidilutive, the diluted EPS calculation includes shares that could be issued under outstanding stock options and the employee stock purchase plans, and common shares that would result from the conversion of convertible preferred stock and convertible debentures. In addition, interest on convertible debentures (net of tax) is added to net income, since this interest would not be paid if the debentures were converted to common stock.

The computation of basic and diluted earnings per share follows:

YEAR ENDED DECEMBER 31,	**2001**	2000	1999
(In millions, except per share data)			
Income (loss) before cumulative effect of accounting change	**$2,682**	$ (511)	$3,479
Cumulative effect of accounting change, net of tax	**(44)**	–	–
Net income (loss)	**2,638**	(511)	3,479
Preferred stock dividends	**(10)**	(12)	(12)
Net income (loss) available to common stockholders for basic EPS	**2,628**	(523)	3,467
Interest on convertible debentures, net of tax [1]	**–**	–	6
Diluted income (loss) available to common stockholders [1]	**$2,628**	$ (523)	$3,473
Average shares outstanding	**1,166**	1,154	1,168
Stock options [1]	**8**	–	6
Convertible debentures [1]	**–**	–	4
Average shares outstanding assuming full dilution	**1,174**	1,154	1,178
Earnings (loss) per share before cumulative effect of change in accounting principle:			
Basic	**$ 2.28**	$ (0.45)	$ 2.97
Diluted [1]	**2.28**	(0.45)	2.95
Earnings (loss) per share:			
Basic	**$ 2.25**	$ (0.45)	$ 2.97
Diluted [1]	**2.24**	(0.45)	2.95

(1) Common equivalent shares and related income have been excluded from the computation of diluted loss per share for the year ended December 31, 2000, as the effect would be antidilutive.

Note 3–Acquisitions

On July 27, 2001, the Corporation completed its acquisition of the Wachovia credit card business, including a credit card portfolio of approximately $7.5 billion consumer credit card receivables. The acquisition was accounted for under the provisions of SFAS No. 141 and SFAS No. 142. The first component of the transaction was the primary portfolio of $6.2 billion in receivables of credit card holders who are not customers of Wachovia's retail bank. The second component was the agent bank portfolio of $1.3 billion.

On September 7, 2001, the Corporation announced its agreement with Wachovia to end the agent bank relationship and sell back to Wachovia the approximately $1.3 billion of consumer credit card receivables of customers who also have a Wachovia retail banking relationship. Under the terms of the agreement, Wachovia paid a $350 million termination fee and will reimburse the Corporation for the premium paid for the repurchased receivables and conversion costs related to the repurchase.

Note 4–Restructuring-Related Charges

a) Fourth Quarter 2001 Restructuring-Related Charges

The Corporation recorded restructuring-related charges in the fourth quarter of 2001 for additional real estate and severance costs to accomplish more rapid expense reductions, accelerated systems conversions and other consolidations. Summarized below are the details of these restructuring-related charges:

DECEMBER 31, 2001 (In millions)	Personnel-Related Costs	Contractual Obligations and Asset Writedowns	Total
Restructuring-related charges	**$ 76**	**$278**	**$354**

Personnel-related items consist primarily of severance costs related to identified staff reductions in the lines of business totaling approximately 6,900 positions. Contractual obligations included the estimated costs associated with lease and other contract termination costs incorporated in the business restructuring plans. Asset writedowns included leasehold write-offs related to leased properties following the decision to abandon such facilities, as well as in the case of fixed assets and capitalized software for which similar decisions were made. Actions under this overall restructuring plan are expected to be completed within a 12-month period. Certain contractual payments associated with these actions, as required, will extend beyond this 12-month time-frame.

b) Second Quarter 2000 Restructuring-Related Charges

Actions under this restructuring plan have been completed, with only payments of identified obligations remaining, which consist primarily of lease obligations. Unpaid amounts totaled $58 million as of December 31, 2001, and will be paid as required over the remaining contractual periods.

Note 5–Business Segments

In the third quarter of 2001, certain organizational changes were made involving Corporate Investments and Commercial Banking business. The tax-oriented portfolio of Corporate Investments was transferred to Commercial Banking, while the principal investments and fixed income portfolios were transferred to Corporate. Additionally, certain expenses were reclassified from salaries to other expenses. Results for prior periods have been adjusted to reflect these and other insignificant changes and to conform to the current line of business structure.

The information presented on page 26 is consistent with the content of business segment data provided to the Corporation's management which does not use product group revenues to assess consolidated results. Aside from investment management and insurance products, product offerings are tailored to specific customer segments. As a result, the aggregation of product revenues and related profit measures across lines of business is not available.

Aside from the United States, no single country or geographic region generates a significant portion of the Corporation's revenues or assets. In addition, there are no single customer concentrations of revenue or profitability.

See the following "Business Segments" sections for additional disclosure regarding the Corporation's operating segments:

- "Business Segments" on page 26.
- Data presented in tables up until the section entitled "Financial Performance" included in the "Business Segment Results and Other Data" section beginning with "Retail" through "Corporate" on pages 27–40.

Note 6–Interest Income and Interest Expense

Details of interest income and expense are as follows:

FOR THE YEAR ENDED DECEMBER 31, (In millions)	**2001**	2000	1999
Interest Income			
Loans, including fees	**$13,213**	$15,214	$13,051
Bank balances	**145**	503	233
Federal funds sold and securities under resale agreements	**418**	577	445
Trading assets	**309**	440	330
Investment securities	**3,219**	3,344	3,235
Total	**17,304**	20,078	17,294
Interest Expense			
Deposits	**4,895**	6,137	4,651
Federal funds purchased and securities sold under repurchase agreements	**633**	1,142	935
Other short-term borrowings	**659**	1,216	942
Long-term debt	**2,479**	2,747	1,745
Total	**8,666**	11,242	8,273
Net Interest Income	**8,638**	8,836	9,021
Provision for credit losses	**2,510**	3,398	1,249
Net Interest Income After Provision for Credit Losses	**$ 6,128**	$ 5,438	$ 7,772

Note 7–Investment Securities

A summary of the Corporation's investment portfolio follows:

FOR THE YEAR ENDED DECEMBER 31, 2001	Amortized Cost	Gross Unrealized Gains	Gross Unrealized Losses	Fair Value (Book Value)
(In millions)				
U.S. Treasury	$ 1,424	$ 30	$ 4	$ 1,450
U.S. government agencies	25,265	113	132	25,246
States and political subdivisions	1,310	28	8	1,330
Interests in credit card securitized receivables	23,998	107	–	24,105
Other debt securities	4,397	24	18	4,403
Equity securities [1]	2,775	10	15	2,770
Total available for sale securities	$ 59,169	$ 312	$ 177	59,304
Principal and other investments [2]				1,579
Total investment securities				$ 60,883
FOR THE YEAR ENDED DECEMBER 31, 2000				
(In millions)				
U.S. Treasury	$ 2,587	$ 2	$ 34	$ 2,555
U.S. government agencies	14,415	18	47	14,386
States and political subdivisions	1,276	24	8	1,292
Interests in credit card securitized receivables	22,447	116	–	22,563
Other debt securities	5,237	18	57	5,198
Equity securities [1]	2,730	15	40	2,705
Total available for sale securities	$ 48,692	$ 193	$ 186	48,699
Principal and other investments [2]				1,862
Total investment securities				$ 50,561
FOR THE YEAR ENDED DECEMBER 31, 1999				
(In millions)				
U.S. Treasury	$ 2,569	$ 1	$ 101	$ 2,469
U.S. government agencies	12,919	3	412	12,510
States and political subdivisions	1,599	20	38	1,581
Interests in credit card securitized receivables	20,176	279	–	20,455
Other debt securities	7,611	5	172	7,444
Equity securities [1]	2,002	11	5	2,008
Total available for sale securities	$ 46,876	$ 319	$ 728	46,467
Principal and other investments [2]				1,445
Total investment securities				$47,912

(1) The fair values of certain securities for which market quotations were not available were estimated.

(2) The fair values of certain securities reflect liquidity and other market-related factors, and includes investments accounted for at fair value consistent with specialized industry practice.

For the year ended December 31, 2001, gross recognized gains and losses on the sale of investment securities were $537 million and $603 million, respectively.

As of December 31, 2001, debt investment securities had the following maturity and yield characteristics:

	Due in 1 year or less		Due after 1 year through 5 years		Due after 5 years through 10 years		Due after 10 years		Total	
	Amortized Cost	Yield	Amortized Cost	Yield	Amortized Cost	Yield	Amortized Cost	Yield	Amortized Cost	Yield
(Dollars in millions)										
U.S. Treasury	$ 190	3.36%	$ 1,151	4.28%	$ 59	5.89%	$ 24	7.06%	$ 1,424	4.27%
U.S. government agencies	630	4.89	2,132	4.77	1,010	4.93	21,493	5.86	25,265	5.71
States and political subdivisions	169	5.02	387	5.05	338	5.02	416	5.24	1,310	7.78
Other debt securities	22,223	7.94	4,385	5.74	1,330	4.96	457	8.46	28,395	7.47
Total debt securities –at amortized cost	$23,212	7.80%	$ 8,055	5.24%	$ 2,737	4.97%	$22,390	5.91%	$56,394	6.61%
Total debt securities– –at fair value	$23,316		$ 8,132		$ 2,741		$22,345		$56,534	

The distribution of mortgage-backed securities and collateralized mortgage obligations is based on average expected maturities. Actual maturities might differ because issuers may have the right to call or prepay obligations.

Note 8–Loans

Loan composition by line of business is as follows:

FOR THE YEAR ENDED DECEMBER 31,	2001	2000
(In millions)		
Retail:		
Small business commercial	**$ 12,347**	$ 12,103
Home equity	**30,268**	31,361
Vehicles:		
Loans	**13,481**	14,300
Leases	**6,155**	8,840
Other personal	**9,779**	10,697
Total Retail	**72,030**	77,301
Commercial Banking:		
Corporate Banking:		
Commercial and industrial	**22,268**	N/A
Commercial real estate	**8,975**	N/A
Lease financing	**4,669**	N/A
Other	**731**	N/A
Middle Market:		
Commercial and industrial	**28,676**	N/A
Commercial real estate	**3,472**	N/A
Lease financing	**1,053**	N/A
Other	**294**	N/A
Total Commercial Banking	**70,138**	85,100
Other lines of business	**7,779**	7,106
First USA	**6,786**	4,744
Total loans	**156,733**	174,251
Less: Allowance for credit losses	**4,528**	4,110
Total loans, net	**$152,205**	$170,141

N/A–Not available.

Loans are net of unearned income of $2.749 billion and $3.467 billion as of December 31, 2001 and 2000, respectively. Loans held for sale, which are carried at the lower of cost or fair value, totaled $3.000 billion and $2.964 billion at December 31, 2001 and 2000, respectively.

The Corporation's primary goal in managing credit risk is to minimize the impact of default by an individual borrower or group of borrowers. As a result, the Corporation strives to maintain a loan portfolio that is diverse in terms of loan type, industry, borrower and geographic concentrations. As of December 31, 2001 and 2000, there were no significant loan concentrations with any single borrower, industry or geographic segment (see "Credit Portfolio Composition" on pages 52–55).

A loan is considered impaired when it is probable that all principal and interest amounts due will not be collected in accordance with the loan's contractual terms. Certain loans, such as loans carried at the lower of cost or fair value or small-balance homogeneous loans (e.g., credit card, home mortgages and installment credit) are exempt from impairment determinations for disclosure purposes. Impaired loans, accordingly, exclude consumer loans classified as nonaccrual. Such consumer loans totaled $1.064 billion and $714 million at December 31, 2001 and 2000, respectively.

Impairment is recognized to the extent that the recorded investment of an impaired loan or pool of loans exceeds its value either based on the loan's underlying collateral or the calculated present value of projected cash flows discounted at the contractual interest rate. Loans having a significant recorded investment are measured on an individual basis, while loans not having a significant recorded investment are grouped and measured on a pool basis.

The Corporation's impaired loan information is as follows:

FOR THE YEAR ENDED DECEMBER 31,	2001	2000
(In millions)		
Impaired loans with related allowance	**$2,487**	$1,748
Impaired loans with no related allowance[1]	**–**	13
Total impaired loans	**$2,487**	$1,761
Allowance on impaired loans [2]	**$ 731**	$ 407

FOR THE YEAR ENDED DECEMBER 31,	2001	2000	1999
(In millions)			
Average balance of impaired loans	**$2,047**	$1,335	$ 972
Interest income recognized on impaired loans	**46**	31	46

(1) Impaired loans for which the discounted cash flows, collateral value or market price equals or exceeds the carrying value of the loan do not require an allowance under SFAS No. 114.

(2) The allowance for impaired loans is included in the Corporation's overall allowance for credit losses.

Maturity Distribution and Interest Rate Sensitivity of Loans

A distribution of the maturity of loans by line of business and, for those loans due after one year, a breakdown between those loans that have floating interest rates and those that have predetermined interest rates at December 31, 2001 follows:

(In millions)	One Year or Less	One to Five Years	Over Five Years	Total
Retail:				
Small business commercial	$ 3,290	$ 6,159	$ 2,898	$ 12,347
Home equity	628	1,279	28,361	30,268
Vehicles:				
Loans	549	9,784	3,148	13,481
Leases	1,655	4,500	–	6,155
Other personal	1,765	807	7,207	9,779
Total Retail	7,887	22,529	41,614	72,030
Commercial Banking:				
Corporate Banking:				
Commercial and industrial	5,953	15,009	1,306	22,268
Commercial real estate	4,324	4,319	332	8,975
Lease financing	80	588	4,001	4,669
Other	731	–	–	731
Middle Market:				
Commercial and industrial	12,276	13,554	2,846	28,676
Commercial real estate	1,048	1,994	430	3,472
Lease financing	72	708	273	1,053
Other	294	–	–	294
Total Commercial Banking [1]	24,778	36,172	9,188	70,138
Total reported [1]	$ 32,665	$ 58,701	$ 50,802	$142,168
Loans with floating interest rates		$ 27,451	$ 13,186	$ 40,637
Loans with predetermined interest rates		31,250	37,616	68,866
Total		$ 58,701	$ 50,802	$109,503

(1) Excludes Commercial Banking lease financing receivables, credit card, and other lines of business.

Foreign Outstandings

Foreign outstandings include loans, balances with banks, acceptances, securities, equity investments, accrued interest, other monetary assets and current credit exposure on derivative contracts. At year-end 2001 and 2000, there were no countries for which cross-border and net local country claims exceeded 1.0% of total assets. At December 31, 1999, Germany was the only country with cross-border claims exceeding 1.0% of total assets. The oustandings amounted to $3.118 billion.

At December 31, 2001 and 1999 there were no countries for which cross-border claims totaled between 0.75% and 1.0% of total assets. At December 31, 2000, Germany was the only country for which cross-border and net local country claims totaled between 0.75% and 1.0% of total assets. These outstandings amounted to $2.512 billion.

Note 9–Credit Card Securitizations

The Corporation transforms credit card receivables into securities, which are sold to investors–a process referred to as securitization. Gain or loss on the sale of the credit card receivable depends in part on the previous carrying amount of the financial assets involved in the transfer, allocated between the assets sold and the retained interests based on their relative fair value at the date of transfer. During 2001, the Corporation securitized approximately $3.8 billion in credit card receivables. Maturities of credit card securitizations during 2001 totaled $9.2 billion, with an additional $10.3 billion scheduled for 2002. During 2001 and 2000, the Corporation recognized $62 million and $116 million, respectively, in net securitization amortization in the consolidated income statement, including amortization of transaction costs, as the gain on securitization from new transactions was offset by amortization as investors in individual series were repaid.

A servicing asset or liability is not generally recognized in a credit card securitization (and thus not considered in the gain or loss computation) since the Corporation receives adequate compensation relative to current market servicing prices to service the receivables sold. Transaction costs in credit card securitizations are typically deferred and amortized over the life of the security as a reduction of noninterest income.

At December 31, 2001 and 2000, the estimated fair value of the interest-only strip associated with credit card securitizations was $219 million and $221 million, respectively, while the estimated fair value of the seller's interest was $23.9 billion and $22.4 billion, respectively. The interest-only strip and seller's interest are both recorded as investment securities.

Certain estimates are used in determining the fair value of the interest-only strip at both the date of securitization and the balance sheet date, including the excess spread, receivable lives and the discount rate. The components of excess spread, which are estimated, include finance charge and fee revenue (excluding interchange income) generated by the securitized loans in excess of interest paid to investors, related net credit losses and servicing fees. The resulting expected cash flows over the lives of the receivables are discounted at a rate commensurate with the risk of the cash flows to determine the fair value. Such estimates and assumptions are subject to change, and accordingly, the Corporation may not recover all of the recorded investment of the interest-only strip (and thus be measured for impairment). The receivables in each trust have unique attributes and therefore the interest-only strip related to each trust is evaluated separately. The seller's interest resulting from credit card securitizations is recorded at fair value using a present value approach, with assumptions that are consistent with the valuation of the interest-only strip.

The following represents the Corporation's key weighted-average assumptions used to estimate the fair value of the retained interests relating to credit card securitizations at December 31, 2001, and the pretax sensitivity of the fair values to immediate 10 and 20 percent adverse changes in these assumptions are as follows:

(Dollars in millions)	Interest-Only Strip [1]	Sellers Interest [2]	Total Retained Interests
Receivable Lives:			**0.5 years**
10% Adverse Change	$ 23.4	$ 11.6	35.0
20% Adverse Change	47.0	23.1	70.1
Excess Spread:			**1.24%**
10% Adverse Change	24.0	11.8	35.8
20% Adverse Change	48.0	23.7	71.7
Expected Net Credit Losses [3]:			**7.11%**
10% Adverse Change	120.4	67.4	187.8
20% Adverse Change	204.6	116.4	321.0
Discount Rate:			**10.00%**
10% Adverse Change	0.7	0.3	1.0
20% Adverse Change	1.5	0.7	2.2

(1) The effect of adverse changes in key assumptions on the fair value of the interest-only strip would be recorded in noninterest income.

(2) The effect of adverse changes in key assumptions on the value of the sellers interest is recorded in accumulated other adjustments to stockholders' equity, unless the decline in value is deemed to be other than temporary, which would result in a charge to noninterest income upon recognition.

(3) Certain Trust legal documents include finance charge and fee revenue reversals in the definition of net credit losses, resulting in a higher net credit loss rate for Trust purposes.

The sensitivity analysis illustrates the potential magnitude of significant adverse changes in key assumptions used in valuing the retained interests, and thus the potential impact to the Corporation's financial position and results of operations. However, the sensitivities of the fair values of the retained interests to changes in each key assumption may not be linear. Furthermore, the sensitivities for each key variable are calculated independently of changes in the other key variables. Therefore, the sensitivity analysis does not purport to present the maximum impairment loss that would result from 10 and 20 percent adverse changes in these assumptions. Actual experience observed may result in changes in multiple key assumptions concurrently, the magnitude of which on the fair value of the retained interests would be dependent on the relative change and the direction of change. In addition, the sensitivity analysis does not give effect to corrective action that Management could and would take to mitigate the impact of adverse changes in key assumptions. The asset values of the retained interests are periodically reviewed for other-than-temporary impairment.

The key weighted-average economic assumptions and ranges of assumptions used to estimate the fair value of retained interests at the date of securitization (including transfer of new balances under revolving structures) for credit card securitizations occurring during 2001 were approximately the same as the assumptions used to value the retained interests at December 31, 2001.

Cash flows received from (paid to) credit card securitization master trusts (i.e., SPEs) during the year ended December 31, 2001 and 2000 are as follows:

(In millions)	**2001**	2000
Proceeds from reinvestment in revolving securitizations	**$72,206**	$83,469
Proceeds from new securitizations	**3,845**	–
Servicing fees received	**598**	649
Cash flows received on retained interests [1]	**2,577**	2,224
Cash released from (used to fund) spread accounts	**146**	(32)

(1) Includes cash flows from interest-only strips as well as interchange fees received from securitized accounts.

For a detailed discussion of the Corporation's loan securitization process for credit card loans, see the "Loan Securitizations" section beginning on page 64.

Note 10–Allowance for Credit Losses

Changes in the allowance for credit losses for the years ended December 31 were as follows:

(In millions)	**2001**	2000	1999
Balance, beginning of year	**$ 4,110**	$ 2,285	$ 2,271
Additions (deductions):			
Charge-offs	**(2,630)**	(1,667)	(1,531)
Recoveries	**342**	276	325
Net charge-offs	**(2,288)**	(1,391)	(1,206)
Provision for credit losses	**2,510**	3,398	1,249
Transfers [1]	**196**	(182)	(29)
Balance, end of year	**$ 4,528**	$ 4,110	$ 2,285

(1) Transfers to the allowance for credit losses in 2001 primarily represent the addition of the Wachovia credit card portfolio. Transfers from the allowance for credit losses for prior years primarily represent allocable credit allowances associated with consumer loan sale transactions, including securitization transactions.

Note 11–Long-Term Debt

Long-term debt consists of borrowings having an original maturity of greater than one year. Original issue discount and deferred issuance costs are amortized into interest expense over the terms of the related notes. Long-term debt at December 31, 2001 and 2000 was as follows:

(Dollars in millions)	Interest Rate	Maturities	**2001**	2000
Parent Company				
Senior debt:				
Medium-term notes	1.98–7.63%	2002–2008	**$14,387**	$14,360
Other	–	–	**8**	14
Subordinated debt:				
Notes	5.90–10.00	2002–2027	**6,920**	6,204
Floating rate notes	Various	2003	**150**	246
Subsidiaries				
Bank notes	1.76–7.93	2002–2006	**12,933**	13,375
Subordinated notes	6.00–8.25	2002–2008	**1,729**	1,695
Capital leases	5.50–11.07	2002–2019	**66**	71
Other	1.85–11.14	2002–2028	**3,910**	2,463
Total long-term debt			**$40,103**	$38,428

Aggregate annual scheduled repayments of long-term debt at December 31, 2001 are as follows:

(In millions)	Total
2002	$ 8,512
2003	7,910
2004	5,575
2005	3,932
2006	6,935
Thereafter	7,239
Total	$40,103

Note 12–Deposits and Short-Term Borrowings

Deposits

The maturity distribution of domestic time certificates of deposit of $100,000 and over and deposits in foreign offices, predominantly in amounts in excess of $100,000, at December 31, 2001 is as follows:

(Dollars in millions)	Amount	Percent
Domestic Time Certificates of Deposit of $100,000 and Over:		
Three months or less	$ 4,934	28%
Over three months to six months	2,040	11
Over six months to twelve months	2,446	14
Over twelve months	8,445	47
Total	$17,865	100%
Foreign Offices:		
Three months or less	16,057	97%
Over three months to six months	278	2
Over six months to twelve months	208	1
Over twelve months	32	–
Total	$16,575	100%

The Corporation has an aggregate amount of domestic other time deposits of $100,000 and over of $206 million at December 31, 2001, which primarily mature within three months.

Short-Term Borrowings

Borrowings with original maturities of one year or less are classified as short-term. The following is a summary of short-term borrowings for each of the three years ended December 31:

	At Year-End			For the Year	
(Dollars in millions)	Outstandings	Weighted-Average rate	Daily Average Outstandings	Weighted-Average Rate	Highest Outstandings at Month End
2001:					
Federal funds purchased	**$ 3,171**	**1.62%**	**$ 5,121**	**4.32%**	**$ 6,353**
Securities sold under repurchase agreements	**10,557**	**1.43**	**11,543**	**3.57**	**13,386**
Bank notes	**4,529**	**3.07**	**8,267**	**5.48**	**13,047**
Commercial paper	**828**	**1.58**	**1,968**	**4.75**	**2,634**
Other short-term borrowings	**4,898**	**1.60**	**3,273**	**3.43**	**4,629**
Total short-term borrowings	**$23,983**	**1.83%**	**$30,172**	**4.28%**	
2000:					
Federal funds purchased	$ 5,253	5.89%	$ 6,281	6.14%	$ 9,663
Securities sold under repurchase agreements	6,867	6.01	12,680	5.96	17,609
Bank notes	12,426	6.71	12,298	6.50	13,327
Commercial paper	3,048	6.62	3,137	5.94	3,303
Other short-term borrowings	2,529	6.22	3,543	6.50	6,861
Total short-term borrowings	$30,123	6.36%	$37,939	6.26%	
1999:					
Federal funds purchased	$ 5,483	4.54%	$ 7,060	4.96%	$ 8,806
Securities sold under repurchase agreements	13,237	4.08	12,651	4.62	16,102
Bank notes	12,707	5.60	11,112	5.57	12,947
Commercial paper	3,184	6.09	3,006	5.23	3,595
Other short-term borrowings	5,320	4.46	3,739	4.98	5,475
Total short-term borrowings	$39,931	4.86%	$37,568	5.00%	

Note 13–Guaranteed Preferred Beneficial Interest in the Corporation's Junior Subordinated Debt

The Corporation has sponsored ten trusts with a total aggregate issuance outstanding of $3.315 billion at December 31, 2001 in trust preferred securities as follows.

	Trust Preferred			Junior Subordinated Debt Owned by Trust		
(Dollars in millions)	Issuance Date	Initial Liquidation Value	Distribution Rate	Initial Principal Amount	Maturity	Redeemable Beginning
Capital VI	September 28, 2001	$525	7.20%	$541.2	October 15, 2031	October 15, 2006
Capital V	January 30, 2001	300	8.00%	309.3	January 30, 2031	January 30, 2006
Capital IV	August 30, 2000	160	3-mo LIBOR plus 1.50%	164.9	September 1, 2030	September 1, 2005
Capital III	August 30, 2000	475	8.75%	489.7	September 1, 2030	See (1) below.
Capital II	August 8, 2000	280	8.50%	288.7	August 15, 2030	August 15, 2005
Capital I	September 20, 1999	575	8.00%	593.0	September 15, 2029	September 20,2004
First Chicago NBD Capital 1	January 31, 1997	250	3-mo LIBOR plus 0.55%	258.0	February 1, 2027	February 1, 2007
First USA Capital Trust I [2]	December 20, 1996	200	9.33%	206.2	January 15, 2027	January 15, 2007
First Chicago NBD Institutional Capital A	December 3, 1996	500	7.95%	515.0	December 1, 2026	December 1, 2006
First Chicago NBD Institutional Capital B	December 5, 1996	250	7.75%	258.0	December 1, 2026	December 1, 2006

(1) Redeemable at any time subject to approval by the Federal Reserve Board.

(2) The Corporation paid a premium of $36 million to repurchase $193 million of these securities in 1997.

These trust preferred securities are tax-advantaged issues that qualify for Tier 1 capital treatment. Distributions on these securities are included in interest expense on long-term debt. Each of the trusts is a statutory business trust organized for the sole purpose of issuing trust securities and investing the proceeds thereof in junior subordinated debentures of the Corporation, the sole asset of each trust. The preferred trust securities of each trust represent preferred beneficial interests in the assets of the respective trusts and are subject to mandatory redemption upon payment of the junior subordinated debentures held by the trust. The common securities of each trust are wholly-owned by the Corporation. Each trust's ability to pay amounts due on the trust preferred securities is solely dependent upon the Corporation making payment on the related junior subordinated debentures. The Corporation's obligations under the junior subordinated securities and other relevant trust agreements, in aggregate, constitute a full and unconditional guarantee by the Corporation of each respective trust's obligations under the trust securities issued by such trust. See Note 15 to the consolidated financial statements on page 85 for discussion of the restrictions on the ability of the Corporation to obtain funds from its subsidiaries.

Note 14–Stock Dividends and Preferred Stock

The Corporation is authorized to issue 50 million shares of preferred stock with a par value of $0.01 per share. On November 1, 2001 the Corporation redeemed all outstanding preferred stock with cumulative and adjustable dividends, Series B and C, totaling $190 million. The redemption price for both the Series B and C preferred stock was $100 per share, plus accrued and unpaid dividends totaling $1.00 per share and $1.083 per share, respectively. At December 31, 2000 the Corporation had outstanding 1,191,000 and 713,800 shares of Series B and C preferred stock with a stated value of $100 per share and a carrying value of $119 million and $71 million, respectively. The dividend rate on each of the cumulative adjustable rate series was based on a stated value and adjusted quarterly, based on a formula that considers the interest rates for selected short- and long-term U.S. Treasury securities prevailing at the time the rate is set.

Note 15–Dividends and Capital Restrictions

The Corporation's national bank subsidiaries are subject to statutory limitations on their ability to pay dividends. Dividends cannot exceed the level of undivided profits. In addition, a national bank cannot declare a dividend, without regulatory approval, in an amount in excess of its net income for the current year combined with the combined net profits for the preceding two years. State bank subsidiaries may also be subject to limitations on dividend payments.

Based on these statutory requirements, the bank affiliates could have declared aggregate additional dividends of up to approximately $620 million without regulatory approval at January 1,

2002. The payment of dividends by any bank may also be affected by other factors, such as the maintenance of adequate capital.

The bank affiliates are subject to various regulatory capital requirements that require them to maintain minimum ratios of total and Tier 1 capital to risk-weighted assets and of Tier 1 capital to average assets. Failure to meet minimum capital requirements results in certain regulatory actions that could have a direct material effect on the bank affiliates' financial statements. As of December 31, 2001, Management believed that each of the bank affiliates met all applicable capital adequacy requirements and are correctly categorized as "well capitalized" under the regulatory framework for prompt corrective action. There are no conditions or events since that categorization that Management believes have changed the institution's category.

The actual and required capital amounts and ratios for the Corporation and its principal banking subsidiaries are presented as follows:

	Actual		To Be Categorized Adequately Capitalized	
(Dollars in millions)	Capital Amount	Capital Ratio	Capital Amount	Capital Ratio
At December 31, 2001				
Risk-adjusted capital (to risk-weighted assets):				
The Corporation (consolidated)	**$30,840**	**12.2%**	**$20,266**	**8.0%**
Bank One, N.A. (Chicago)	**16,112**	**12.6%**	**10,191**	**8.0**
Bank One, N.A. (Columbus)	**4,594**	**10.9**	**3,373**	**8.0**

Bank One, N.A. (Columbus)	2,867	8.0	1,431	4.0
Bank One, Michigan	1,582	7.2	879	4.0
First USA Bank, N.A.	2,110	15.0	563	4.0
Tier 1 leverage (to average assets):				
The Corporation (consolidated)	$19,824	7.3%	$ 8,167	3.0%
Bank One, N.A. (Chicago) [1]	9,689	6.4	6,078	4.0
Bank One, N.A. (Columbus)	2,867	7.8	1,471	4.0
Bank One, Michigan	1,582	7.2	878	4.0
First USA Bank, N.A.	2,110	11.8	718	4.0

(1) Reclassified to show the effect of the 2001 mergers with Bank One, Texas, N.A., Bank One, Louisiana, N.A., Bank One, Florida, Bank One, Arizona, N.A., and Bank One, Utah, N.A.

Federal banking law restricts each bank subsidiary from extending credit to the Corporation in excess of 10% of the subsidiary's capital stock and surplus, as defined. Any such extensions of credit are subject to strict collateral requirements.

Note 16–Supplemental Disclosures for Statements of Cash Flows

During 2000 and 1999, the Corporation transferred $6.5 billion and $2.3 billion, respectively, of investment securities available for sale to trading securities. These transfers were for capital management purposes.

Loans transferred to other real estate owned totaled $162 million, $131 million, and $113 million in 2001, 2000, and 1999, respectively.

During 2000 and 1999, the Corporation recognized several non-cash charges to earnings for significant items. Several of these items will not result in future cash outflows while other items represent future uses of cash. See tables 1 and 2 on page 41 for a detailed listing of significant items.

Note 17–Supplemental Disclosures for Accumulated Other Adjustments to Stockholders' Equity

Accumulated other adjustments to stockholders' equity are as follows:

(In millions)	**2001**	2000	1999
Fair value adjustment on investment securities–available for sale:			
Balance, beginning of period	**$ (15)**	$ (271)	$ 218
Change in fair value, net of taxes of $86 in 2001, $(6) in 2000 and $(180) in 1999	**158**	(5)	(391)
Reclassification adjustment, net of taxes of $(38) in 2001, $151 in 2000 and $(56) in 1999	**(65)**	261	(98)
Balance, end-of-period	**78**	(15)	(271)
Fair value adjustment on derivative instruments–cash flow type hedges:			
Balance, beginning of period	**–**	–	–
Transition adjustment at January 1, 2001, net of taxes of $(56) [1]	**(98)**	–	–
Net change in fair value associated with current period hedging activities, net of taxes of $(70) in 2001	**(139)**	–	–
Net reclassification into earnings, net of taxes of $49 in 2001 [1]	**91**	–	–
Balance, end-of-period	**(146)**	–	–
Accumulated translation adjustment:			
Balance, beginning of period	**10**	8	21
Translation gain (loss), net of hedge results and taxes	**(7)**	2	(13)
Balance, end of period	**3**	10	8
Total accumulated other adjustments to stockholders' equity	**$ (65)**	$ (5)	$ (263)

(1) During 2001, $89 million after-tax of the transition adjustment recorded at January 1, 2001 was reclassified into earnings.

Note 18–Employee Benefits

(a) Pension Plans

Prior to 2000, the Corporation had various noncontributory defined benefit pension plans covering substantially all salaried employees. Effective December 31, 1999, all noncontributory defined benefit pension plans were combined into one plan. Effective December 31, 2000, the supplemental executive retirement plan was discontinued.

The Corporation's qualified plans' change in benefit obligation, change in plan assets and funded status are as follows:

(In millions)	**2001**	2000
Change in benefit obligation:		
Benefit obligation, January 1	**$2,248**	$2,250
Service cost	**92**	103
Interest cost	**168**	182
EGTRRA adjustment [1]	**7**	–
Actuarial loss	**108**	128
Benefits paid	**(326)**	(415)
Benefit obligation, December 31	**$2,297**	$2,248
Change in plan assets:		
Fair value of plan assets, January 1	**$3,134**	$3,400
Actual return (loss) on plan assets	**(114)**	146
Corporation contribution	**53**	3
Benefits paid	**(326)**	(415)
Fair value of plan assets, December 31	**$2,747**	$3,134
Funded status	**$ 450**	886
Unrecognized net actuarial loss (gain)	**156**	(357)
Unrecognized prior service cost	**24**	28
Unrecognized net transition assets	**–**	(7)
Prepaid pension costs, December 31	**$ 630**	$ 550

(1) The Economic Growth and Tax Relief Reconciliation Act of 2001 (EGTRRA) contained various provisions relating to the operations of qualified pension plans. Increases to the benefit limits and the limit on pensionable earnings caused a shift in pension obligation from the non-qualified to the qualified plan.

Plan assets include approximately 1.0 million shares of the Corporation's common stock with a fair value of approximately $40 million and $37 million at December 31, 2001 and 2000, respectively.

The net periodic pension benefit for 2001, 2000 and 1999 for the Corporation's qualified and nonqualified pension plans are as follows:

(In millions)	**2001**	2000	1999
Service cost–benefits earned during the period	**$ 96**	$ 110	$ 123
Interest cost on benefit obligation	**177**	194	175
Expected return on plan assets	**(287)**	(300)	(293)
Amortization of prior service cost	**8**	9	(1)
Recognized actuarial (gain)	**(1)**	(11)	(1)
Amortization of transition assets	**(7)**	(13)	(13)
Curtailment gain	**–**	–	(13)
Net periodic pension benefit	**$ (14)**	$ (11)	$ (23)

The accrued pension cost for the Corporation's nonqualified supplemental pension plans was $39 million and $77 million at December 31, 2001 and 2000, respectively. Such plans are unfunded.

The assumptions used in determining the Corporation's benefit obligation and net periodic pension cost for both qualified and nonqualified supplemental pension plans are as follows:

FOR THE YEAR ENDED DECEMBER 31,	2002	**2001**	2000	1999
Actuarial assumptions:				
Weighted-average discount rate for benefit obligation	7.00%(1)	**7.00%**	7.50%	8.00%
Weighted-average rate of compensation increase	4.25%	**4.25%**	4.25%	5.00%
Expected long-term rate of return on plan assets	8.50%	**9.50%**	9.50%	9.50%

(1) Rate currently expected at December 31, 2002.

(b) Postretirement Benefits Other Than Pensions

The Corporation sponsors postretirement life insurance plans and provides health care benefits for certain retirees and grandfathered employees when they retire. The postretirement life insurance benefit is noncontributory, while the health care benefits are contributory.

The Corporation's postretirement benefit plans' change in benefit obligation and funded status at December 31, 2001 and 2000 are as follows:

(In millions)	**2001**	2000
Change in benefit obligation:		
Benefit obligation, January 1	**$ 195**	$ 164
Service cost	**–**	–
Interest cost	**14**	13
Actuarial loss	**48**	37
Benefits paid	**(24)**	(17)
Curtailment	**–**	(2)
Benefit obligation, December 31	**233**	195
Change in plan assets:		
Fair value of plan assets, January 1	**–**	–
Employer contribution	**24**	17
Benefits paid	**(24)**	(17)
Fair value of plan assets, December 31	**–**	–
Funded status	**(233)**	(195)
Unrecognized net actuarial loss	**67**	20
Unrecognized prior service cost	**(25)**	(38)
Accrued postretirement costs, December 31	**$(191)**	$(213)

Net periodic cost for postretirement health care and life insurance benefits during 2001, 2000 and 1999 includes the following:

(In millions)	**2001**	2000	1999
Service cost–benefits earned during the period	**$ –**	$ –	$ 1
Interest cost on accumulated postretirement benefit obligation	**14**	13	13
Amortization of prior service cost	**(12)**	(12)	(12)
Adjustment for acquisitions	**–**	–	2
Curtailment	**–**	1	–
Net periodic postretirement cost	**$ 2**	$ 2	$ 4

The weighted average discount rate used in determining the accumulated postretirement benefit obligation was 7.00% at December 31, 2001, and 7.50% at December 31, 2000.

For measurement purposes, an annual rate of increase of 10.00% was assumed for 2001 in the cost of covered health care benefits; this range was assumed to decrease to 5.00% in the years 2009 and thereafter. These assumptions have a significant effect on the amounts reported. Accordingly, the effect of a 1.00% change in the assumed health care cost trend rates is as follows:

(In millions)	1% increase	1% decrease
Effect on 2001 service and interest cost components	$ 0.9	$ 0.8
Effect on December 31, 2001, accumulated postretirement benefit obligation	$14.3	$12.6

(c) 401(k) Plans

The Corporation sponsored various 401(k) plans that together covered substantially all of its employees. Up until 2000, the Corporation was required to make contributions to the plans in varying amounts. The expense related to these plans was $95 million in 2001, $137 million in 2000 and $81 million in 1999. Effective December 31, 1999, all new contributions are being made to one Corporation-sponsored 401(k) plan, thereby establishing uniform contribution requirements for the entire Corporation.

Note 19–Stock-Based Compensation

The Corporation utilizes several types of stock-based awards as part of its overall compensation program. In addition, the Corporation provides employees the opportunity to purchase its shares through its Employee Stock Purchase Plan. The Corporation's stock-based compensation plans provide for the granting of awards to purchase or receive common shares and include limits as to the aggregate number of shares available for grants and the total number of shares available for grants of stock awards in any one year. The compensation cost that has been charged against income for the Corporation's stock-based compensation plans was $70 million for

2001, $59 million for 2000 and $38 million for 1999. As a result of the 1999 fourth-quarter restructuring plan, $4 million was recorded as a restructuring charge related to the immediate vesting of restricted shares for certain executives.

(a) Restricted Shares

Restricted shares granted to key officers of the Corporation require them to continue employment for a stated number of years from the grant date before restrictions on the shares lapse. The market value of the restricted shares as of the date of grant is amortized to compensation expense as earned over the restriction period. Holders of restricted stock receive dividends and have the right to vote the shares.

(b) Stock Options

The Corporation's stock option plans generally provide that the exercise price of any stock option may not be less than the closing price of the common stock on the trading day preceding the date of grant of the common stock.

Options granted under the Corporation's stock-based compensation program generally vest ratably over a five-year period and have a term of ten years. Certain option grants include the right to receive additional option grants ("reload" or "restorative" options) in an amount equal to the number of common shares used to satisfy the exercise price and applicable withholding taxes. Upon grant, reload options assume the same remaining term as the related original option and vest six months from the date of grant.

Summarized stock option activity for 2001, 2000 and 1999, respectively, and details of the Corporation's stock options outstanding at December 31, 2001 follows:

	2001		2000		1999	
(Shares in thousands)	**Shares**	**Wtd. Avg. Exercise Price**	**Shares**	**Wtd. Avg. Exercise Price**	**Shares**	**Wtd. Avg. Exercise Price**
Outstanding at January 1	**77,315**	**$34.17**	44,630	$40.88	38,247	$34.34
Granted	**23,573**	**37.73**	42,659	27.25	15,556	50.35
Exercised	**(7,262)**	**25.09**	(2,089)	19.66	(6,473)	24.34

Less than $20.00	**2,084**	$16.21	1.8 years	**2,084**	$16.21
$20.01 - $25.00	**3,261**	24.47	3.8 years	**3,261**	24.47
$25.01 - $30.00	**31,640**	26.61	14.5 years	**16,139**	26.46
$30.01 - $35.00	**5,632**	32.70	7.2 years	**3,137**	32.33
$35.01 - $45.00	**27,623**	38.04	8.5 years	**5,211**	38.80
$45.01 - $55.00	**16,166**	49.53	10.7 years	**12,190**	49.34
Greater than $55.00	**4,076**	59.13	6.8 years	**3,503**	59.09
Total	**90,482**	$35.72	10.5 years	**45,525**	$36.30

(c) Employee Stock Purchase Plan

The Corporation sponsors an Employee Stock Purchase Plan designed to encourage employee stock ownership. This plan generally allows eligible employees to purchase shares of the Corporation's common stock at a 15% discount from the market price at the beginning of an offering or the market price at the end of such offering, whichever is lower. During the current 18-month offering period, an employee is allowed to make deposits of up to 20% of his/her earnings (up to a designated maximum) on an annual basis to an interest-bearing savings account to purchase the number of shares permissible under the plan. The maximum number of shares each participant may purchase cannot exceed the contribution limit divided by the applicable purchase price on the offering date. Shares purchased by the participant are subject to a one year holding period and cannot be sold or transferred for one year after the purchase date. The Corporation does not recognize any compensation expense with respect to this plan.

(d) Pro Forma Costs of Stock-Based Compensation

The grant date fair values of stock options granted under the Corporation's various stock option plans and the Employee Stock Purchase Plan were estimated using the Black-Scholes option-pricing model. This model was developed to estimate the fair value of traded options, which have different characteristics than employee stock options. In addition, changes to the subjective input assumptions can result in materially different fair market value estimates. Therefore, the Black-Scholes model may not necessarily provide a reliable single measure of the fair value of employee stock options and purchase rights.

Summarized stock-based compensation grants and their related weighted-average grant-date fair values for the years ended December 31 follows:

	2001		2000		1999	
(Shares in thousands)	**Number of Shares**	**Wtd. Avg. Grant Date Fair Value**	**Number of Shares**	**Wtd. Avg. Grant Date Fair Value**	**Number of Shares**	**Wtd. Avg. Grant Date Fair Value**
Stock option plans	**23,573**	**$ 13.34**	42,659	$ 9.80	15,556	$ 12.28
Restricted shares	**2,065**	**37.68**	4,517	27.85	1,728	51.13
Employee Stock Purchase Plan [1]	**2,483**	**9.68**	2,122	3.27	2,974	7.28

(1) Estimated number of shares that employees would purchase under the 2001, 2000 and 1999 plans.

The following assumptions were used to determine the Black-Scholes weighted-average grant date fair value of stock option awards and conversions in 2001, 2000 and 1999: (1) expected dividend yields ranged from 2.29% - 4.86%, (2) expected volatility ranged from 19.11% - 42.29%, (3) risk-free interest rates ranged from 4.85% - 6.43% and (4) expected lives ranged from 2 to 13 years.

The following assumptions were used to determine the Black-Scholes weighted-average grant-date fair value of employees' purchase rights under the employee stock purchase plans in 2001, 2000 and 1999, respectively: (1) expected dividend yields of 2.30%, 2.58% and 2.86%, (2) expected volatility of 33.80%, 39.63% and 34.68%, (3) risk-free interest rate of 2.61%, 6.22% and 5.07% and (4) expected lives of 1.5, 0.5 and 1.0 years.

Had the compensation cost for the Corporation's stock-based compensation plans been determined in accordance with the fair-value-based accounting method provided by SFAS No. 123 "Accounting for Stock-Based Compensation," the net income and earnings per share implications for the years ended December 31, 2001, 2000 and 1999 would have been as follows:

	2001		2000		1999	
(In millions, except per share data)	**Pro Forma[1]**	**As Reported**	**Pro Forma[1]**	**As Reported**	**Pro Forma[1]**	**As Reported**
Net income (loss)	**$2,452**	**$2,638**	$ (646)	$ (511)	$3,413	$3,479
Net income (loss) per common share, basic	**2.09**	**2.25**	(0.57)	(0.45)	2.91	2.97

Note 20–Income Taxes

The components of total applicable income tax expense (benefit) in the consolidated income statement for the years ended December 31, 2001, 2000 and 1999 are as follows:

(In millions)	**2001**	2000	1999
Income tax expense:			
Current:			
Federal	**$ 797**	$ 571	$ 735
Foreign	**11**	32	2
State	**115**	26	97
Total	**923**	629	834
Deferred:			
Federal	**194**	(1,151)	624
Foreign	**5**	(7)	–
State	**(4)**	(40)	37
Total	**195**	(1,198)	661
Applicable income taxes (benefit)	**$ 1,118**	$ (569)	$ 1,495

The tax effects of fair value adjustments on securities available for sale, derivative instruments in cash flow type hedges, foreign currency translation adjustments and certain tax benefits related to stock options are recorded directly to stockholders' equity. The net tax (benefit) charge recorded directly to stockholders' equity amounted to $(47) million in 2001, $107 million in 2000 and $(259) million in 1999.

A reconciliation of expected income tax expense at the federal statutory rate of 35% to the Corporation's applicable income tax expense and effective tax rate follows:

(Dollars in millions)	**2001**		2000		1999	
Statutory tax rate	**$1,330**	**35.0%**	$ (378)	35.0%	$1,741	35.0%
Increase (decrease) resulting from:						
State income taxes, net of federal income tax benefit	**72**	**1.9**	(4)	0.3	87	1.8
Tax-exempt interest	**(56)**	**(1.5)**	(57)	5.3	(66)	(1.3)
Tax credits	**(231)**	**(6.1)**	(179)	16.6	(133)	(2.7)
Goodwill	**23**	**0.6**	25	(2.3)	23	0.5
Cash surrender value of life insurance	**(57)**	**(1.5)**	(56)	5.2	(48)	(1.0)
Other, net	**37**	**1.0**	80	(7.4)	(109)	(2.2)
Applicable income taxes (benefit)	**$1,118**	**29.4%**	$ (569)	52.7%	$1,495	30.1%

A net deferred tax liability is included in other liabilities in the consolidated balance sheet as a result of temporary differences between the carrying amounts of assets and liabilities in the consolidated financial statements and their related tax bases. The components of the net deferred tax liability as of December 31, 2001 and 2000 are as follows:

(In millions)	**2001**	2000
Deferred tax liabilities:		
Deferred income on lease financing	**$4,242**	$3,895
Prepaid pension costs	**216**	165
Securitizations of credit card receivables	**121**	155
Deferred fee income	**333**	336
Other	**77**	200
Gross deferred tax liabilities	**4,989**	4,751
Deferred tax assets:		
Allowance for credit losses	**1,744**	1,667
Restructure reserves	**177**	127
Incentive compensation	**302**	257
Other	**862**	933
Gross deferred tax assets	**3,085**	2,984
Net deferred tax liability	**$1,904**	$1,767

The Corporation has an alternative minimum tax (AMT) credit carryforward for tax purposes of $87 million at December 31, 2001. The Corporation also has carryforwards of foreign tax credits ("FTC") in the amounts of $38 million. The FTC's will expire after 2005.

Note 21–Lease Commitments

The Corporation has entered into a number of operating lease agreements for premises and equipment. The minimum annual rental commitments under these leases are shown below:

(In millions)	
2002	$ 264
2003	249
2004	214
2005	169
2006	152
2007 and thereafter	890
Total	$1,938

Rental income from premises leased to others in the amount of $77 million in 2001, $80 million in 2000, and $87 million in 1999 has reduced occupancy expense. Rental expense under operating leases approximated $332 million in 2001, $384 million in 2000, and $414 million in 1999.

Note 22–Financial Instruments with Off-Balance Sheet Risk

In the normal course of business, the Corporation is a party to financial instruments containing credit and/or market risks that are not required to be reflected in the balance sheet. These financial instruments are primarily credit-related instruments. The Corporation has risk management policies to identify, monitor and limit exposure to credit, liquidity and market risks.

The following disclosures represent the Corporation's credit exposure, assuming that every counterparty to financial instruments with off-balance sheet credit risk fails to perform completely according to the terms of the contracts, and that the collateral and other security, if any, proves to be of no value to the Corporation.

This note does not address the amount of market losses the Corporation would incur if future changes in market prices make financial instruments with off-balance sheet market risk less valuable or more onerous. For a more detailed discussion of off-balance sheet activities see the "Other Off-Balance Sheet Activities" section beginning on page 66.

(a) Collateral and Other Security Arrangements

The credit risk of both on- and off-balance sheet financial instruments varies based on many factors, including the value of collateral held and other security arrangements. To mitigate credit risk, the Corporation generally determines the need for specific covenant, guarantee and collateral requirements on a case-by-case basis, depending on the nature of the financial instrument and the customer's creditworthiness. The Corporation may also receive comfort letters and oral assurances. The amount and type of collateral held to reduce credit risk varies but may include real estate, machinery, equipment, inventory and accounts receivable, as well as cash on deposit, stocks, bonds and other marketable securities that are generally held in the Corporation's possession or at another appropriate custodian or depository. This collateral is valued and inspected on a regular basis to ensure both its existence and adequacy. Additional collateral is requested when appropriate.

(b) Credit-Related Financial Instruments

Summarized credit-related financial instruments, including both commitments to extend credit and letters of credit are as follows:

FOR THE YEAR ENDED DECEMBER 31,	**2001**	2000
(In billions)		
Unused credit card lines	**$299.3**	$272.7
Unused loan commitments	**148.2**	162.9
Standby letters of credit and foreign office guarantees	**19.4**	19.0
Commercial letters of credit	**0.6**	0.7

Since many of the unused commitments are expected to expire unused or be only partially used, the total amount of unused commitments in the preceding table does not necessarily represent future cash requirements.

Credit card lines allow customers to use a credit card to buy goods or services and to obtain cash advances. However, the Corporation has the right to change or terminate any terms or conditions of a customer's credit card account, upon notification to the customer. Loan commitments are agreements to make or acquire a loan or lease as long as the agreed-upon terms (e.g., expiry, covenants or notice) are met. The Corporation's commitments to purchase or extend loans help its customers meet their liquidity needs.

Standby letters of credit and foreign office guarantees are issued in connection with agreements made by customers to counterparties. If the customer fails to comply with the agreement, the counterparty may enforce the standby letter of credit or foreign office guarantee as a remedy. Credit risk arises from the possibility that the customer may not be able to repay the Corporation for standby letters of credit or foreign office guarantees. At December 31, 2001 and 2000, standby letters of credit and foreign office guarantees had been issued for the following purposes:

FOR THE YEAR ENDED DECEMBER 31,	**2001**	2000
(In millions)		
Financial	**$15,611**	$15,705
Performance	**3,786**	3,305
Total [1]	**$19,397**	$19,010

(1) Includes $3.4 billion at December 31, 2001, and $2.7 billion at December 31, 2000, participated to other institutions.

Commercial letters of credit are issued or confirmed to ensure payment of customers' payables or receivables in short-term international trade transactions. Generally, drafts will be drawn when the underlying transaction is consummated as intended. However, the short-term nature of this instrument serves to mitigate the risk associated with these contracts.

Note 23–Fair Value of Financial Instruments

The Corporation is required to disclose the estimated fair value of its financial instruments in accordance with SFAS No. 107, "Disclosures about Fair Value of Financial Instruments." These disclosures do not attempt to estimate or represent the Corporation's fair value as a whole. The disclosure excludes assets and liabilities that are not financial instruments as well as the significant unrecognized value associated with core deposits and credit card relationships.

Fair value amounts disclosed represent point-in-time estimates that may change in subsequent reporting periods due to market conditions or other factors. Estimated fair value amounts in theory represent the amounts at which financial instruments could be exchanged or settled in a current transaction between willing parties. In practice, however, this may not be the case due to inherent limitations in the methodologies and assumptions used to estimate fair value. For example, quoted market prices may not be realized because the financial instrument may be traded in a market that lacks liquidity; or a fair value derived using a discounted cash flow approach may not be the amount realized because of the subjectivity involved in selecting underlying assumptions, such as projecting cash flows or selecting a discount rate. The fair value amount also may not be realized because it ignores transaction costs and does not include potential tax effects. The Corporation does not plan to dispose of, either through sale or settlement, the majority of its financial instruments at these estimated fair values.

Summarized carrying values and estimated fair values of financial instruments as of December 31, 2001 and 2000 follows:

	2001		2000	
(In millions)	**Carrying Value**	**Estimated Fair Value**	**Carrying Value**	**Estimated Fair Value**
Financial assets:				
Cash and other short-term financial instruments (a)	**$ 28,017**	**$ 28,017**	$ 27,640	$ 27,640
Trading assets (a)	**6,167**	**6,167**	2,788	2,788
Investment securities (b)	**60,883**	**60,883**	50,561	50,561

Allowance for credit losses	**(4,528)**	**–**	(4,110)	–
Loans, net	**152,205**	**154,619**	170,141	171,633
Derivative product assets (f)	**3,225**	**3,225**	2,322	2,461
Financial instruments in other assets (a)	**1,459**	**1,459**	2,220	2,220
Financial liabilities:				
Deposits (d)	**167,530**	**168,414**	167,077	167,882
Securities sold not yet purchased (a)	**1,237**	**1,237**	285	285
Other short-term financial instruments (a)	**23,003**	**23,003**	30,240	30,240
Long-term debt [(1)](e)	**43,418**	**44,521**	40,911	40,867
Derivative product liabilities (f)	**2,574**	**2,574**	2,212	2,251
Financial instruments in other liabilities (a)	**1,273**	**1,273**	1,828	1,828

(1) Includes trust preferred capital securities.

Estimated fair values are determined as follows:

(a) Financial Instruments Whose Carrying Value Approximates Fair Value

A financial instrument's carrying value approximates its fair value when the financial instrument has an immediate or short-term maturity (generally one year or less), or is carried at fair value.

Quoted market prices or dealer quotes typically are used to estimate fair values of trading securities and securities sold under repurchase agreements.

Commitments to extend credit and letters of credit typically result in loans with a market interest rate when funded. The recorded book value of deferred fee income approximates the fair value.

(b) Investment Securities

Quoted market prices typically are used to estimate the fair value of debt investment securities. Quoted market prices for similar securities are used to estimate fair value when a quoted market price is not available for a specific debt investment security. See Note 1(d) to the consolidated financial statements on page 74 for the methodologies used to determine the fair value of equity investment securities.

(c) Loans

The loan portfolio was segmented based on loan type, credit quality and repricing characteristics. Carrying values are used to estimate fair values of certain variable rate loans with no significant credit concerns and frequent repricing. A discounted cash flow method was used to estimate the fair value of other loans. Discounting was based on the contractual cash flows, and discount rates typically are based on the year-end yield curve plus a spread that reflects pricing on loans with similar characteristics. If applicable, prepayment assumptions are factored into the fair value determination based on historical experience and current economic and lending conditions.

(d) Deposits

The amount payable on demand at the report date is used to estimate fair value of demand and savings deposits with no defined maturity. A discounted cash flow method is used to estimate the fair value of fixed-rate time deposits. Discounting was based on the contractual cash flows and the current rates at which similar deposits with similar remaining maturities would be issued, adjusted for servicing costs. Carrying value typically is used to estimate the fair value of floating-rate time deposits.

(e) Long-Term Debt

Quoted market prices or the discounted cash flow method was used to estimate the fair value of the Corporation's fixed-rate long-term debt. Discounting was based on the contractual cash flows and the current rates at which debt with similar terms could be issued. Carrying value typically is used to estimate the fair value of floating-rate long-term debt.

(f) Derivative Product Assets and Liabilities

For December 2001, the carrying value equals the estimated fair value due to the adoption of SFAS No. 133 during 2001. For the year 2000, quoted market prices or pricing and valuation models were used to estimate the fair value of derivative product assets and liabilities. Assumptions input into models were based on current market information.

Note 24–Related Party Transactions

Certain executive officers, directors and their related interests are loan customers of the Corporation. These loans in the aggregate were less than 5% of stockholders' equity at December 31, 2001 and 2000.

Note 25–Pledged Assets

Assets having a book value of $70.3 billion as of December 31, 2001, and $44.2 billion as of December 31, 2000, were pledged as collateral for repurchase agreements, certain derivative instrument transactions, and governmental and trust department deposits in accordance with federal and state requirements, and for other purposes required by law. The assets pledged generally were comprised of commercial mortgage loans and investment securities. Of the total collateral pledged as of December 31, 2001, $3.1 billion of collateral, which was comprised of securities posted as collateral for repurchase agreements, was permitted to be sold or repledged by the secured party. The Corporation does not issue equity puts.

The Corporation's bank affiliates are required to maintain average noninterest-bearing cash balances, in accordance with Federal Reserve Board regulations. The average required reserve balances were $2.3 billion in 2001 and $2.5 billion in 2000.

Note 26–Collateral Policy Related to Certain Asset Transfer Activity

It is the Corporation's policy to take possession of securities purchased under agreements to resell in order to secure the risk of counterparty nonperformance on the transaction. The Corporation monitors the fair value of the underlying securities as compared to the related receivable, including accrued interest, and adjusts the level of collateral as necessary. With respect to securities lent, the Corporation receives collateral to secure the risk of counterparty nonperformance in the form of cash or other collateral, in an amount generally in excess of the fair value of the lent securities. The Corporation monitors the fair value of the securities lent on a daily basis, and additional cash or securities are obtained as necessary.

At December 31, 2001 and 2000, the fair value of collateral accepted by the Corporation in connection with these activities was $6.3 billion and $4.1 billion, respectively, of which, $5.9 billion and $3.8 billion, respectively, had been sold or repledged as of the balance sheet date.

Note 27–Contingent Liabilities

The Corporation and certain of its subsidiaries have been named as defendants in various legal proceedings, including certain class actions, arising out of the normal course of business or operations. In certain of these proceedings, which are based on alleged violations of consumer protection, securities, banking, insurance and other laws, rules or principles, substantial money damages are asserted against the Corporation and its subsidiaries. Since the Corporation and certain of its subsidiaries, which are regulated by one or more federal and state regulatory authorities, are the subject of numerous examinations and reviews by such authorities, the Corporation also is and will be, from time to time, normally engaged in various disagreements with regulators, related primarily to its financial services businesses. The Corporation has also received certain tax deficiency assessments. In view of the inherent difficulty of predicting the outcome of such matters, the Corporation cannot state what the eventual outcome of pending matters will be; however, based on current knowledge and after consultation with counsel, Management does not believe that liabilities arising from these matters, if any, will have a material adverse effect on the consolidated financial position of the Corporation.

N/A–Not available.

(1) Common equivalent shares and related income were excluded from the computation of diluted loss per share for the three months ended December 31, 2000 and June 30, 2000 as the effect would be antidilutive.

(2) Includes trust preferred capital securities.

(3) Fourth quarter, third quarter, second quarter and first quarter 2001 amounts include $14 million, $14 million, $24 million and $40 million, respectively, of charge-offs which are not classified as such in the Corporation's GAAP financial information because they are part of a portfolio which has been accounted for as loans held at a discount. The inclusion of these amounts in charge-offs more accurately reflects the credit performance of the portfolio. In the Corporation's financial statements, these items result in a higher provision in excess of net charge-offs.

(4) Beginning in the first quarter of 2001, employees on long-term disability and employees of unconsolidated subsidiaries are excluded. Prior period data have not been restated for this change.

REPORT OF MANAGEMENT

Management of BANK ONE CORPORATION and its subsidiaries (the "Corporation") is responsible for the preparation, integrity and fair presentation of its published financial reports. These reports include consolidated financial statements that have been prepared in accordance with generally accepted accounting principles, using Management's best judgment and all information available.

The consolidated financial statements of the Corporation have been audited by KPMG LLP, independent public accountants. Their accompanying report is based upon an audit conducted in accordance with generally accepted auditing standards, including the related review of internal accounting controls and financial reporting matters. The Audit and Risk Management Committee of the Board of Directors, which consists solely of outside directors, meets at least quarterly with the independent auditors, Corporate Audit and representatives of Management to discuss, among other things, accounting and financial reporting matters.

Management of the Corporation is responsible for establishing and maintaining an effective internal control structure over financial reporting, including the safeguarding of assets against unauthorized acquisition, use or disposition. The Corporation maintains systems of controls that it believes are reasonably designed to provide Management with timely and accurate information about the operations of the Corporation. This process is supported by an internal audit function along with the ongoing appraisal of internal controls by the Audit and Risk Management Committee. Both the Corporation's independent auditors and the internal audit function directly provide reports on significant matters to the Audit and Risk Management Committee. The Corporation's independent auditors, the internal audit function and the Audit and Risk Management Committee have free access to each other. Internal controls, systems and corporate-wide processes and procedures are continually enhanced.

The Corporation is dedicated to maintaining a culture that reflects the highest standards of integrity and ethical conduct when engaging in its business activities. Management of the Corporation is responsible for compliance with various federal and state laws and regulations, and the Corporation has established procedures that are designed to ensure that Management's policies relating to conduct, ethics and business practices are followed on a uniform basis.

REPORT OF INDEPENDENT PUBLIC ACCOUNTANTS

The Board of Directors and Stockholders
BANK ONE CORPORATION

We have audited the accompanying consolidated balance sheet of BANK ONE CORPORATION and subsidiaries as of December 31, 2001 and the related consolidated statements of income, stockholders' equity, and cash flows for the year then ended. These consolidated financial statements are the responsibility of the Corporation's Management. Our responsibility is to express an opinion on these consolidated financial statements based on our audit. The accompanying consolidated balance sheet of BANK ONE CORPORATION and subsidiaries as of December 31, 2000 and the related consolidated statements of income, stockholders' equity, and cash flows for each of the years in the two-year period ended December 31, 2000 were audited by other auditors whose report thereon dated January 17, 2001, expressed an unqualified opinion on those statements.

We conducted our audit in accordance with auditing standards generally accepted in the United States of America. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by Management, as well as evaluating the overall financial statement presentation. We believe that our audit provides a reasonable basis for our opinion.

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the financial position of BANK ONE CORPORATION and subsidiaries as of December 31, 2001 and the results of their operations and their cash flows for the year then ended, in conformity with accounting principles generally accepted in the United States of America.

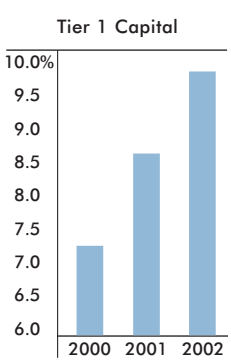
N/M=Not meaningful

Bank One made very good progress in 2002. We earned $3.3 billion – or approximately 15% return on equity (ROE) – versus $2.6 billion in 2001. In many ways 2002 ended the "fix-it" chapter for Bank One. I can now say that we are appropriately and responsibly investing in all parts of our business. This clearly wasn't true in the past. In 2003 we will continue to make substantial investments in all areas, including people, technology, marketing, products, branches, and branding.

Today Bank One is positioned to grow properly and profitably. Our discipline and investments will drive revenue growth. Efficiency will gradually improve operating margins and pay for our investments. Credit will improve due to our pruning and better management of exposures and the eventual economic recovery.

In this letter I will review our accomplishments of 2002 and share how we will build on this progress in 2003 and beyond. I will also discuss some critical subjects in the news.



This year I've asked the heads of our four main lines of business, as well as our Chief Information Officer and our Chief Risk Management Officer, to add to this letter with their own shareholder letters. Each area is facing specific business opportunities and challenges, and each leader does an outstanding job of assessing and addressing them.

You will note some consistent themes across our lines of business. First, we are not in any business where we can't effectively compete. Second, each of our businesses is beginning to perform and demonstrate signs of growth. Third, each is realizing its competitive advantages and becoming an efficient, best-in-class provider.

As you read our letters, I hope you feel – as I do every day – the growing energy and competitive spirit at Bank One.

I. THE IMPORTANCE OF 2002 ACCOMPLISHMENTS

By the end of 2002 we had significantly cut expenses, run off large, unprofitable, and risky books of business, consolidated and upgraded massively complex systems and operations, strengthened our management teams, and implemented highly structured risk controls. I am extremely pleased that during a time of dramatic change we were also able to show growth.

Building our fortress balance sheet. We ended the year with Tier 1 capital of 9.9% and a loan-loss reserve ratio of 3.2% – both among the highest of all major banks. Even if new accounting rules require us to move certain off-balance-sheet exposures, such as asset-backed conduits, onto our balance sheet, our capital ratios will continue to be among the strongest in the industry.

Our pension obligations are fully funded. This year we expanded our authorized share buyback program from $500 million to $2 billion and to date have purchased more than $600 million of stock.

In the event of continued economic weakness, we are extremely well capitalized and well reserved. We are also well protected against rising interest rates, which I will talk about later in this letter.

Building a foundation for growth while sustaining strong and expanding margins. In 2003 expenses will increase approximately $300 million, to $9.9 billion. A large portion of this increase is related to the expensing of options and higher medical, pension, and insurance costs. Your company is also dramatically increasing investments in key areas such as new products, marketing, systems, and branch upgrades. This spending is what I would call good spending. While these investments increase expenses in the short run, they fortify and drive growth in the long run.

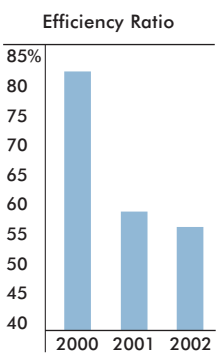
Realizing the benefits of a risk management culture. Today we are more disciplined in assessing and pricing risk than ever before. Moving to a more rigorous and disciplined risk management process has been difficult for both our people and our customers, but in 2002 we began to see the fruits of our labor. Credit costs were down in middle market in every quarter of the year, and nonperforming loans in both corporate banking and middle market were down in the third and fourth quarters. In the last cycle our losses were worse than those of our competitors. In the next cycle our goal is to do better than our competitors and I am confident we can achieve it.

Anticipating a decline in credit costs. Although we don't know when the economic recovery will begin, we do know that we are in very good shape, regardless of whether the economy improves slowly or even gets worse for a while. It is unlikely that we will need to increase reserves, raise capital, or modify our investment spending. When the recovery does take hold, as it inevitably will, credit losses in both the consumer and commercial businesses should trend down to more normal levels.

The one issue to keep in mind is the lumpiness of the large corporate credit losses. There are still some industries showing weaknesses, such as airlines and merchant energy, which could keep the losses in corporate banking fairly high for the next several quarters.

I will talk later about how we intend to manage the credit cycle, but clearly any continued reduction in loss rates will add to earnings. Eventually, we may find ourselves in a situation where we have a clear need for lower loss provisioning. That's a problem that we can't wait to have!

Some thoughts on United Airlines. In the fourth quarter Bank One provided $600 million of debtor-in-possession (DIP) financing to United Airlines. This is an extremely large loan to a troubled company. We insisted that the DIP financing stand on its own two feet. As such, we believe the protections built into the financing provide us with good collateral coverage. Even in the worst possible case (liquidation of the company), we could expect to get our money back on our DIP financing.



One factor in our decision to make this loan was our credit card relationship with United. Reward programs are extremely important for the future of the credit card business and this particular program would be very hard to replace. It is in our interest that United return to full health.

While we are hoping for a positive outcome, and are doing whatever is in our power to make that happen, we need to take into consideration the worst-case scenario.

In the event the worst case does happen, we would expect to write off several hundred million dollars not related to the DIP financing, but to the various costs associated with discontinuing and trying to replace the United rewards program.

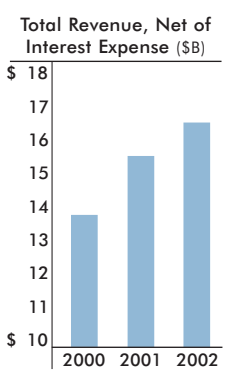
It is a complicated calculation of probabilities that brought us to this position. If the worst case does occur, we are prepared to work as hard as it takes to make up for it.

Converting and upgrading systems. This year we completed the virtually flawless conversion of our two most complex systems, Michigan and Illinois. We did not spend the past two years simply converting many poor systems into one. That alone would have been a tremendous accomplishment, but we also massively upgraded major systems, including check processing, deposit systems, loan systems, cash management systems, and banker workstations. In the process we became one of the first financial institutions to launch online check imaging, which is available free of charge to all customers. Our plans for 2003 are equally impressive.

In-sourcing our systems capabilities. We don't believe our technology accomplishments would have been possible if we had continued to rely

on outsourced systems. During the past 18 months we have in-sourced most of our systems, hiring more than 1,700 new technology professionals. These people are patriots – not mercenaries – who are allowing us to take control of our destiny. They are developing a deep understanding of our customers and they share our passion for winning by improving service, expanding capabilities, and reducing costs.

We are also in-sourcing and upgrading our data processing capabilities by building two state-of-the-art, secure, fully mirrored facilities that offer real-time backup.



With our volume of business and the quality of our people, we do not believe we are sacrificing any economies of scale or capability by managing the technology ourselves. In fact, we are seeing evidence to the contrary.

Strengthening and broadening management disciplines. Our success depends upon our ability to develop great business strategies, improve products and customer service, execute well, and pay attention to every asset, every branch, every employee, every detail.

To that end we are setting the highest expectations and standards for ourselves. We are not there yet, but given our rate of progress, we will be there soon.

Ensuring "good" growth. Profitable, sustainable, properly underwritten growth is not a vision; it is the result of excellent management discipline, an unrelenting focus on execution, consistent management of risk, a competitive product set, and outstanding customer service.

In 2002 we began to see signs of good growth. Debit cards, credit cards, home equity loans, assets under management, and capital market revenues are all growing. And for the first time in five years, we are beginning to see growth in retail transaction accounts. While we aren't where we want to be, we are clearly seeing signs that we're moving in the right direction.

In addition, we are nearing the completion of the deliberate runoff of business (and unfortunate nondeliberate runoff due to the many changes made in the last three years) in both our commercial and consumer businesses.

Furthermore, we're making all the investments necessary to drive future growth, from enhanced technology to new products and marketing.

Most important, because of the tough work we have done, we can now begin to grow our businesses responsibly and more aggressively, knowing that the growth is profitable, sustainable, and properly underwritten – not the kind of growth that we might regret later in the business cycle.

We expect 2003 to be a decent year (weaker in the beginning and stronger as the year goes on) and, assuming a reasonable level of economic recovery, 2004 could be a very good year.

II. THOUGHTS ON QUALITY OF EARNINGS AND MANAGING GROWTH, THE BALANCE SHEET, AND WALL STREET

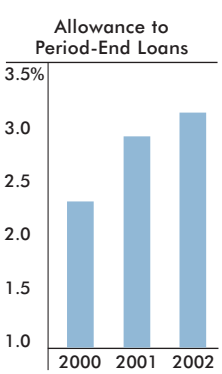
The first thing people talk about when discussing company results is earnings, but earnings tell just a small part of the story and sometimes not even the most important part. Decisions that can positively or negatively affect earnings one year can easily have the opposite effect in future years. Each decision must be evaluated by how it will affect not just the short term but also the long-term health of the company.

Measuring results through a complete and balanced scorecard. Any financial company can improve earnings in the short run by taking on additional risk and cutting back on investments in people, products, service, and brand. Such decisions, however, may not be in the company's best interest long-term. Those companies may report short-term growth, but it may be the kind of growth one comes to regret. Good companies fight for profitable, sustainable

growth that builds over time. They don't make shortsighted decisions to achieve it and they don't offer excuses when they don't achieve it.

The real trick is in managing the risk/reward trade-off – while still being prepared for different economic environments and investing in the future. We seek good growth – profitable, sustainable, well-underwritten growth that builds over time. Getting there requires the use of a complete and balanced scorecard – one that goes beyond earnings to address many questions, such as:

- Are we recruiting and developing great people?
- Are we investing wisely for the future?
- Are we innovating better products?
- Are we relentlessly improving our core processes?
- Are we making good returns on capital?
- Are we properly underwriting and managing our risk?



Business leaders are frequently asked to identify their "three big areas of focus." It's a frustrating question. If you want to build a great company, you must focus on many issues – and balancing them is an art.

Managing through cycles and recessions. We must be able to manage our business through difficult cycles and recessions.

A lot of people have referred to our current economic environment as "a perfect storm," but the reality is that our country has experienced and survived many storms. In the past 20 years alone, we have been involved in numerous military conflicts, some countries have defaulted multiple times, and we have experienced at least three significant recessions. It's hard to predict when a storm will happen, but one thing is inevitable: it will happen.

We cannot control these events; we can barely predict them. But we can, and must, be prepared for them. Risk is not symmetrical. You can make a lot of money in the good times, but if you aren't careful, you'll go bankrupt in the bad.

The most cyclical part of *our* business is the credit cycle. We must risk rate and price exposures to get a good return through the cycle – not just during the good times.

Last year I told you we had moved to a more granular risk rating system (a 20-grade system versus a 12-grade system) that helps us more accurately rate credits and allows for direct comparisons to public ratings and, where applicable, to market prices. If we properly rate credits and manage our risk, credit losses through the cycle can be fairly predictable.

For example, in corporate banking, we believe that if we properly rate our credits, average losses will be approximately 60 to 80 basis points through the cycle – or as low as 20 to 30 basis points in the good times and as high as 150 to 175 basis points in the bad. We would like to run the business to achieve a 15% average ROE. This means in the good times we should earn in excess of 20%, and in the bad, we must be prepared to earn as low as 5% to 10%.

In middle market, we believe our losses could be as low as 20 to 30 basis points in the good times and as high as 100 basis points in the bad. As such, we should achieve an average ROE of approximately 20% through the cycle.

Clearly we will always try to mitigate the downside, but at the same time we must rationally plan for it.

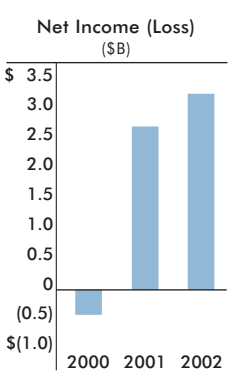
Managing interest rate exposure. Interest rate exposure is another area in which financial services companies can assume excess risk – often at great peril. As with underwriting credit, good analysis of interest rate exposure is rooted in facts and evaluations based on a variety of realistic assumptions and scenarios. This analysis should be a never-ending process.

Although we analyze hundreds of variables, only a few can dramatically change results. For example, three of the biggest assumptions in our interest rate models are:

- How competitive pricing of new credit cards will change with interest rates;
- How consumer deposits will act in various interest rate environments;
- How interest rate changes will affect the values of mortgages.

It is often natural for a financial services company to maintain some interest rate risk since short-term funding rates are usually lower than long-term rates. In the past, it was better for companies to fund short and lend long. Recently, however, we have positioned ourselves to benefit modestly from various rising interest rate scenarios. The decision cost us approximately $400 million in revenue in 2002 and thus impacted revenue growth. We based our decision on a strong belief that rates are near historic lows and, while they could go a little lower, they could clearly go a lot higher during the next several years. Given that risk is not symmetrical, we are willing to pay the price to protect ourselves against a significant rise in interest rates.

Creating flexibility with a fortress balance sheet. As discussed earlier, companies can also increase earnings fairly easily by increasing their leverage. In 2002 we could have increased earnings by 25 to 30 cents a share simply by buying back $5 billion in stock, which would have reduced our Tier 1 capital from 9.9% to a still healthy 7.8%. However, by not doing this, we haven't lost these earnings. Instead, we think of them as "earnings-in-store" that will become evident as we deploy our capital. Our current capital position reduces our risk and provides us with greater flexibility.



Analyzing quality of earnings. There is an active debate about whether GAAP earnings properly reflect results or whether results are better reflected through "operating," "core," or "pro forma" numbers. These differences are, at best, confusing and, at worst, artificial and misleading. However, it is critical that shareholders understand the quality and *type* of earnings. Certain earnings are, in fact, nonrecurring, and we are committed to fully disclosing and distinguishing between those results we view as recurring and those that are not.

For example, we have a $31.6 billion corporate banking loan book, which we hold reserves against and *don't* mark-to-market. We hedge approximately 20% with credit derivatives, which we *do* mark-to-market through the income statement. We believe we are making the right economic decisions to manage and hedge our risk (usually to reduce individual credit exposures to levels with which we are comfortable). Although we expect the credit derivatives position to go up or down every quarter, we do not consider the mark-to-market impact to be real earnings. That's why we have separately disclosed the credit derivatives notional amount and the quarterly mark-to-market impact.

Similarly, we don't expect all gains on investments to be recurring. For example, we have $2 billion in equity investments, from which we anticipate an adequate return (although we haven't made much lately). It is reasonable for shareholders to expect an average return of 10%, even though we think we will do much better. We certainly don't anticipate a high valuation on peak-year investment earnings. We make every effort to give you the numbers as clearly as possible and then let you decide.

Managing Wall Street. CEOs often feel enormous pressure from Wall Street to deliver quarterly and annual earnings, but I would venture to say that most of our investors don't really care about 1 or 2 cents of quarterly earnings. They do, however, want to understand the dynamics of our business, to be assured that we are looking at our business with brutal honesty, and to feel confident that we are taking the right actions, however difficult, to ensure long-term success.

That's why we strive to tell our whole story – the good, the bad, and the ugly. In doing so, we know we may earn the respect of some, lose the respect of others, but ultimately attract the kind of shareholders who seek balanced tough decision making that is in the company's best, long-term interest.

Growing organically versus through acquisitions. Our first objective in each of our businesses is to achieve good returns. To that end we must first demonstrate the capacity to grow organically without relying upon acquisitions. We believe this is possible in all of our businesses. If we can't run our own businesses well, then

we have not earned the right to run someone else's. In 2002 we made tremendous progress toward earning that right.

Banks have been consolidating for a long time, and I believe this trend will continue. The industry is still highly fragmented and there are still tremendous economies of scale to be achieved in systems, branding, product innovation, and diversification.

To be attractive, a potential acquisition must meet our criteria with regard to three critical factors:

– Price
– Business logic
– Ability to execute

We know these are extremely complex transactions and that many brilliantly conceived acquisitions have failed because of their inability to overcome crippling bureaucracies, culture clashes, or office politics. Yet companies that acquire well have been enormously successful.

Bank One is in a fortunate position. We can – and will – continue to grow on our own. We do not have to acquire to be successful. However, if the right acquisition opportunity presents itself, we are now ready and able to pursue it. But the rationale must be compelling.

III. COMMENTS ON RECENT NEWS EVENTS

The root cause of many of the recent problems in corporate America (at least in my opinion) was a complete lack of business ethics. Weak corporate governance practices, poor accounting standards, and bubble markets simply created additional opportunities for people to abuse the system. While we can't legislate ethics, we can strengthen governance practices, reduce flexibility in interpreting accounting guidelines, and improve disclosure requirements.

Strengthening corporate governance. Extreme examples of corporate fraud and deceit prompted a rigorous, but appropriate, focus on corporate governance issues in 2002. Many of the changes now being adopted will have little effect on the vast majority of companies – they had the right principles, although practices varied. Conversely, some of the corporate governance actions will have a material impact on the small number of companies that had the wrong principles *and* practices.

One of the wonderful attributes of this country and American business, however, is that we are constantly reforming and striving to improve.

Governance has been a focus at Bank One for several years. When I joined the company in 2000, one of our first actions was to dramatically reduce the size of the Board. It is hard to have a candid dialogue or make meaningful decisions in a group of 22 people. (As one of my friends says, "The bigger the crowd, the better the news.") We also limited the number of inside directors to one – me.

In addition, we directly tied executive compensation to company performance. You may remember that we paid no bonuses to our senior management team in 2000, even though many of us were new to the company.

In 2001 I asked the Board to meet without me to review my performance. We have since formalized our governance policies to require twice-yearly board sessions without the CEO. We also stipulated that senior management must maintain ownership of 75% of all stock they obtain through options or restricted stock. In addition, we eliminated the Supplemental Executive Retirement Plan and 401(k) match for senior executives.

This year we modified every Board committee charter to reflect the highest standards of governance. In the second quarter we began expensing stock options and in the fourth quarter we created a Board Governance Committee to ensure that we maintain the best practices and principles. We also eliminated split-dollar life insurance. (We should have done that sooner.) Shareholders can continue to feel confident that we are striving to manage according to the highest standards of governance and that senior management will be the first to pay the price for inadequate company performance.

The need for tougher accounting standards. While the current debate has centered on whether we need a rules-based or principles-based accounting system, I believe we need both stricter rules and better principles in accounting. The enormous flexibility that currently exists in accounting has made it extremely difficult for investors to properly assess a company's results. While progress has been made in these areas, we must continue to be vigilant, particularly with regard to:

1. *Improved application of principles.* The goal in reporting should be to clarify – not obfuscate – results. Technical accounting rules should never be used as an excuse for nondisclosure of material information. For example, just because an exposure is off-balance-sheet doesn't mean it doesn't exist and that it shouldn't be talked about if it might have a material effect on results.

2. *Better disclosure of assumptions.* When accounting rules are sensitive to assumptions, those assumptions should be fully disclosed, including a discussion of what would happen if those assumptions changed. This should be done consistently across companies in like industries so investors can make valid comparisons.

3. *Stricter and consistent application of rules (i.e., those not based on assumptions).* For example, in the credit card business, regulators should tell us exactly how to account for credit card charge-offs and recoveries. Right now companies have multiple choices, and an investor would have to be a detective to figure out the impact of these differences. Create one strict set of rules to allow for direct comparison across companies.

Until accounting rules and principles are applied rigorously and consistently, it will be difficult to compare and analyze results across like companies, and the unethical will continue to have opportunities to abuse the system.

We are continuously striving to the best of our ability to improve our reporting and enhance our disclosures.

IV. REALIZING THE POWER OF THE FRANCHISE WHILE FOCUSING ON WHAT REALLY MATTERS

Our customers are our top priority, but we can't meet their needs without the full backing and support of our employees. That's why I consider our 74,000 employees to be our most important asset. They know all about their businesses and are the ones who should be making the vast majority of decisions.

Getting the best from our people. "Empowerment" may be an overused and misunderstood word, but we simply can't win without it. We must constantly seek to improve our products, invent new ones, and give our customers better, faster service – preferably at a lower cost. Innovation doesn't come from one department or one individual. It comes when everyone participates, and people participate when they feel respected as full members of the team. (Wouldn't each of us advise friends to look for a new job if their company didn't treat them this way?) We will never stop trying to foster the spirit of partnership among all our employees at Bank One.

We also believe our employees should share in the company's success. That's why we've built stock ownership into our culture. Today more than 90% of our employees who have been with us a year or more own Bank One stock. And although we will continue to reward people with options, we are considering changes in the programs to make them less capricious and more effective. We will also continue to put stock into the 401(k) accounts of all employees who earn less than $40,000 a year, regardless of whether they buy stock on their own.

Giving people a stake in the company, however, goes well beyond financial rewards. Incentives must be done right, but they aren't what matters most. Our employees are not here just for the money. They are here because they want to be part of a winning team.

Creating a winning team takes hard work and there is no substitute for it. Teams do not win because they have a new stadium or the best uniforms. Some of the best teams don't even have the best individual athletes. Teams win because they are disciplined, they work well together, they execute consistently, and they have a passion to win.

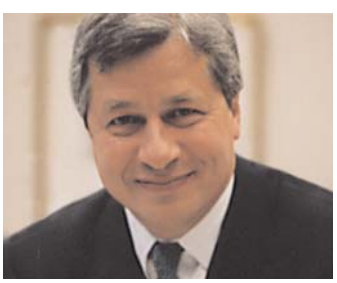
Building a self-sustaining culture. We are working to build a culture based on truth, knowledge, constructive debate, a passion to win, and the courage to face and fix mistakes.

We encourage people with diverse styles to work together. We recognize that there are legitimate differences in style, and that's OK. However, we do not confuse poor behavior with "style differences." For example, if a manager doesn't foster active and honest communication, that's not a "style difference." That's bad management.

Our commitment is to create a self-sustaining culture that will ensure the health of this company for decades to come.

Leadership is key to creating a healthy culture. It's management's job to see things for what they are – and, just as important – for what they aren't. My experience is that if you ask people to tell you the truth about what needs to be done, they'll tell you. Our responsibility is to create a company that promotes this kind of constructive exchange. Then – and I believe this is the hardest part of leadership – we must have the fortitude and courage to take action and do the right things, however difficult.

Problems don't age well. Addressing them early may be hard, but in the long run it's far less painful.



Giving back. Our success has enabled us to give back to our communities. In 2002 we donated $40 million in cash to local nonprofit organizations. Our greatest source of pride, however, is in our employees, who have contributed tremendous time and talent to worthwhile causes throughout the country.

We are also proud of our commitment to pay the full salary differential for the entire tour of duty of all Bank One employees called to serve our country. These individuals are willing to make the ultimate sacrifice. Their lives – and the lives of their families – should not be made more stressful by financial hardship.

In closing. I am thrilled to report that Bob Lipp, chairman and CEO of Travelers Property Casualty Corporation, and Steve Burke, president of Comcast Cable Communications, have accepted our invitations to join our Board of Directors. Both bring to Bank One tremendous management experience and the highest standards of ethics and integrity. I am honored that they have chosen to commit their energies to our company.

Bank One exits 2002 financially stronger than it has been in years, with sharpened disciplines and signs of growth. We end the year as one company, operating as one team, with one brand.

There is one thing we strive for above all else: to build one of the best financial services companies in America – a company that stands the test of time. All of us want to feel proud when it's time to pass this company along to the next generation. Building a vibrant, healthy company is in the best interests of everyone – our shareholders, customers, employees, and, ultimately, our country. And we intend to do it.

James Dimon
CHAIRMAN AND CHIEF EXECUTIVE OFFICER
FEBRUARY 14, 2003

one commitment : 60 million customers

Implicit in our strategy is the commitment to serve those who put their trust and their confidence in Bank One. How we serve them speaks to a deeper commitment to understand, appreciate and respond to individual needs.

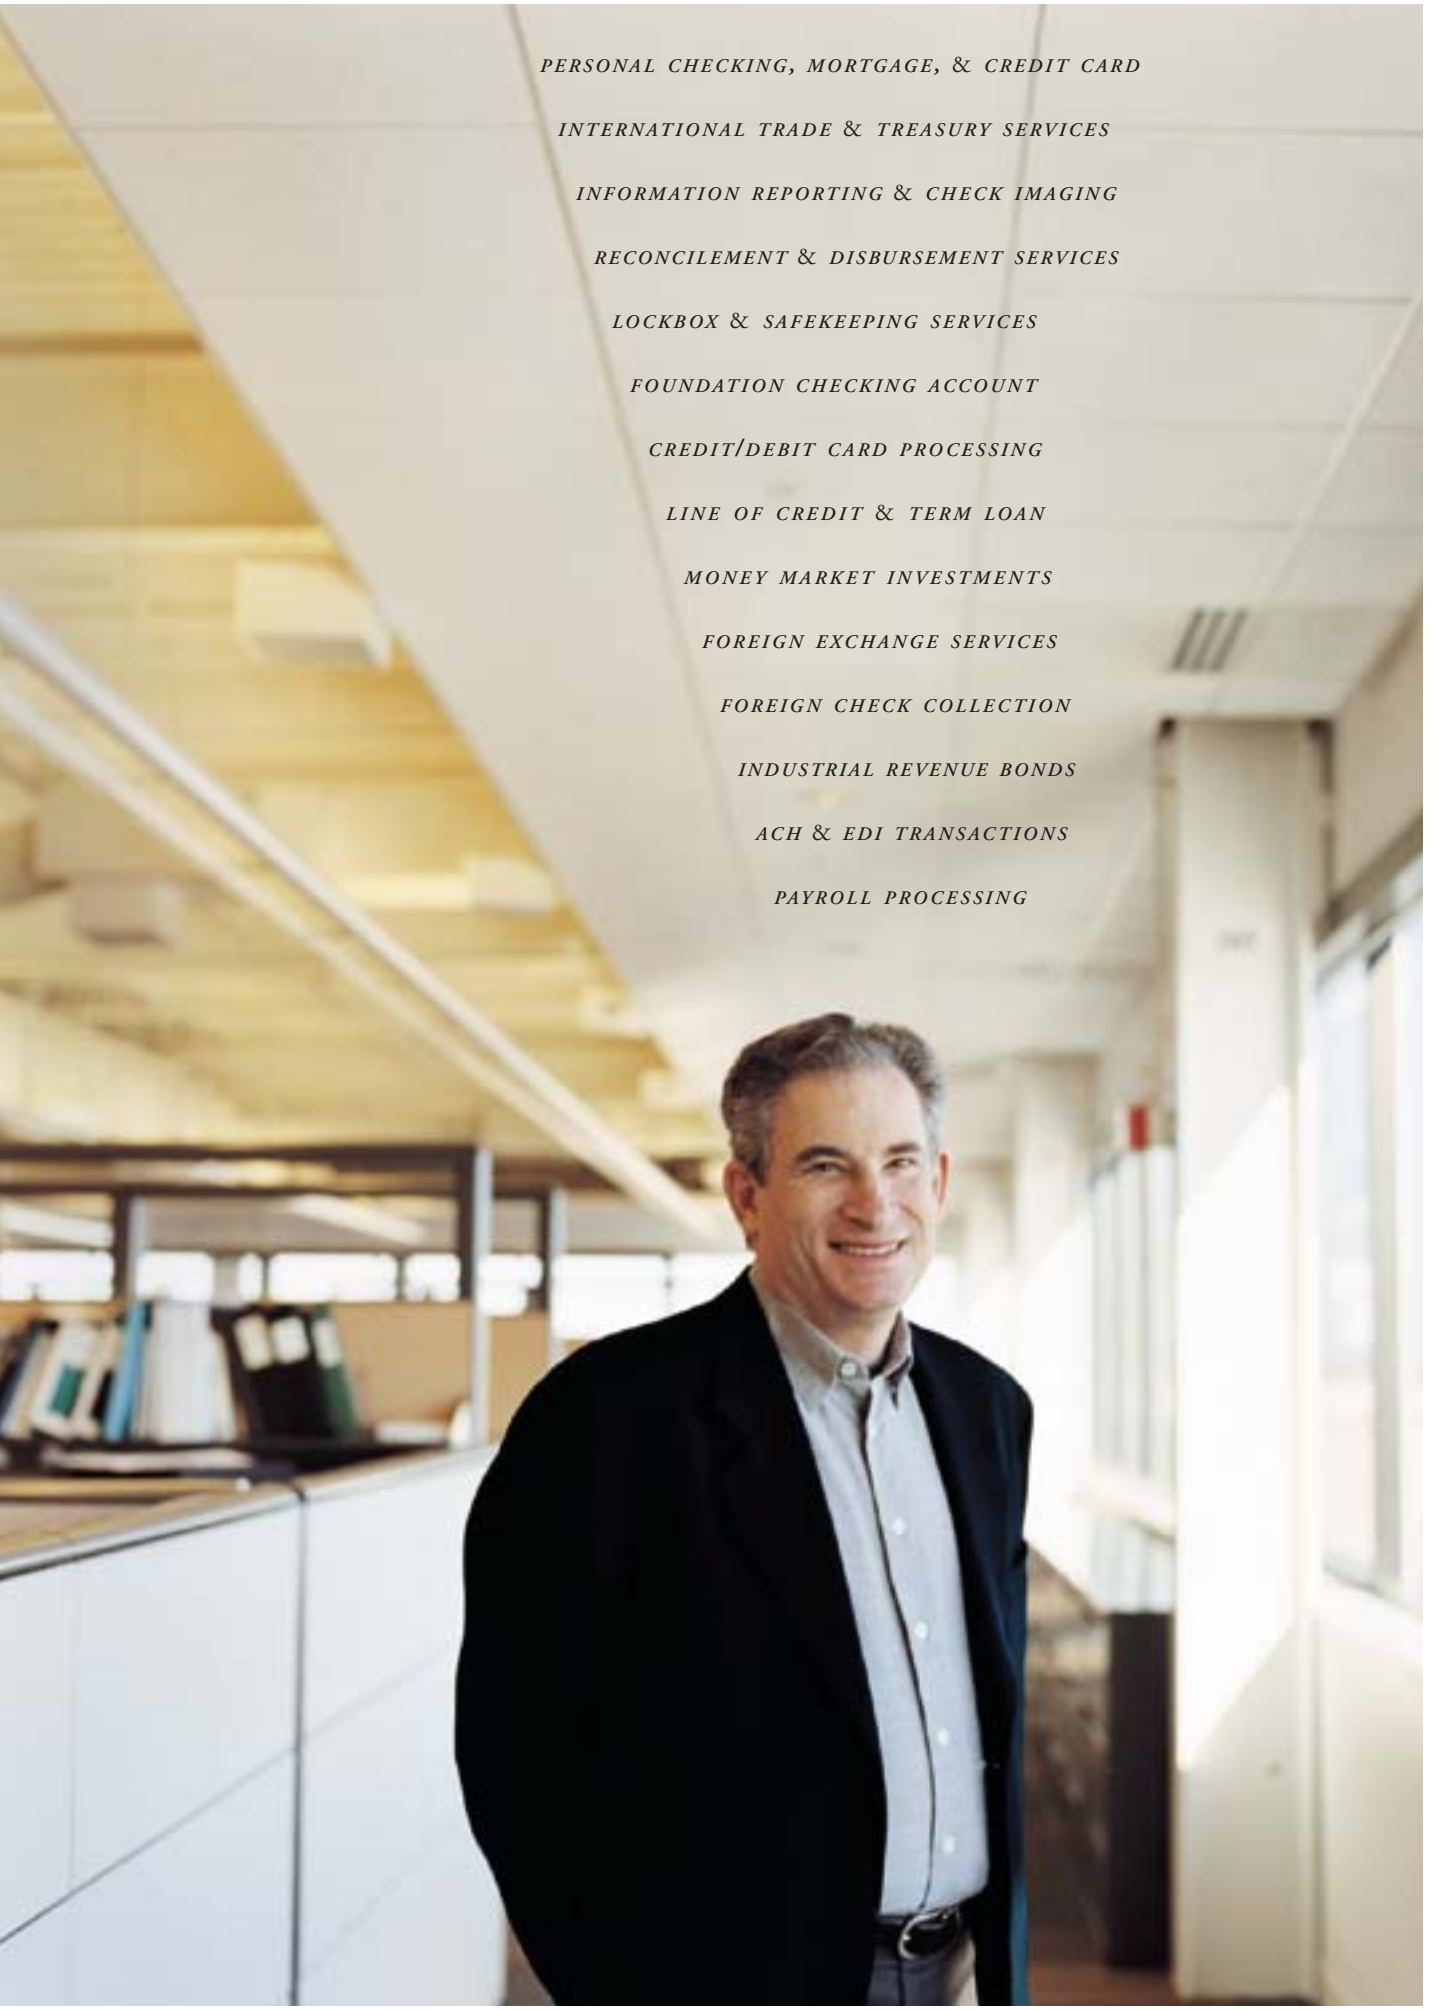
KATRINA MARKOFF

ENTREPRENEUR AND CHOCOLATIER

CUSTOMER SINCE 1997

Sweet sensation

Katrina Markoff is a daring soul. An Indiana native with Macedonian roots, she's that rare combination of artist and entrepreneur who's able to take unlikely ingredients and turn them into gold. Her grandmother, who taught her that love can start in a kitchen, wasn't surprised when Katrina started selling chocolates in a hatbox, but truffle lovers were blown away. And they weren't the only ones to sit up and ask for more.



As the owner and creative force behind Vosges Haut-Chocolat, Katrina doesn't lack for confidence. Her bold moves and uncanny combinations are grounded in training from Le Cordon Bleu and a relentless desire to get things right. What began in her basement is now generating annual sales of $2 million. She's got two boutiques, strong sales through the Internet, and plans to open a shop in New York. She's also got a bank that appreciates how a little Japanese wasabi root or Indian curry powder can turn a bonbon into a bonanza.

"They've been much more than a bank to me," says Katrina, as she juggles two phones and three mixing bowls. "The people at Bank One act like consultants and partners. They brought me a recipe for growth, and with their help I've been able to bring my 'haut-chocolat' experience to the world."

That's one sweet relationship.

With nearly $10 billion in loans outstanding, Bank One is the country's 5th leading lender to small businesses.

In 2002 the Retail Investment Sales group sold $5.4 billion in investment products, an increase of $540 million from 2001.

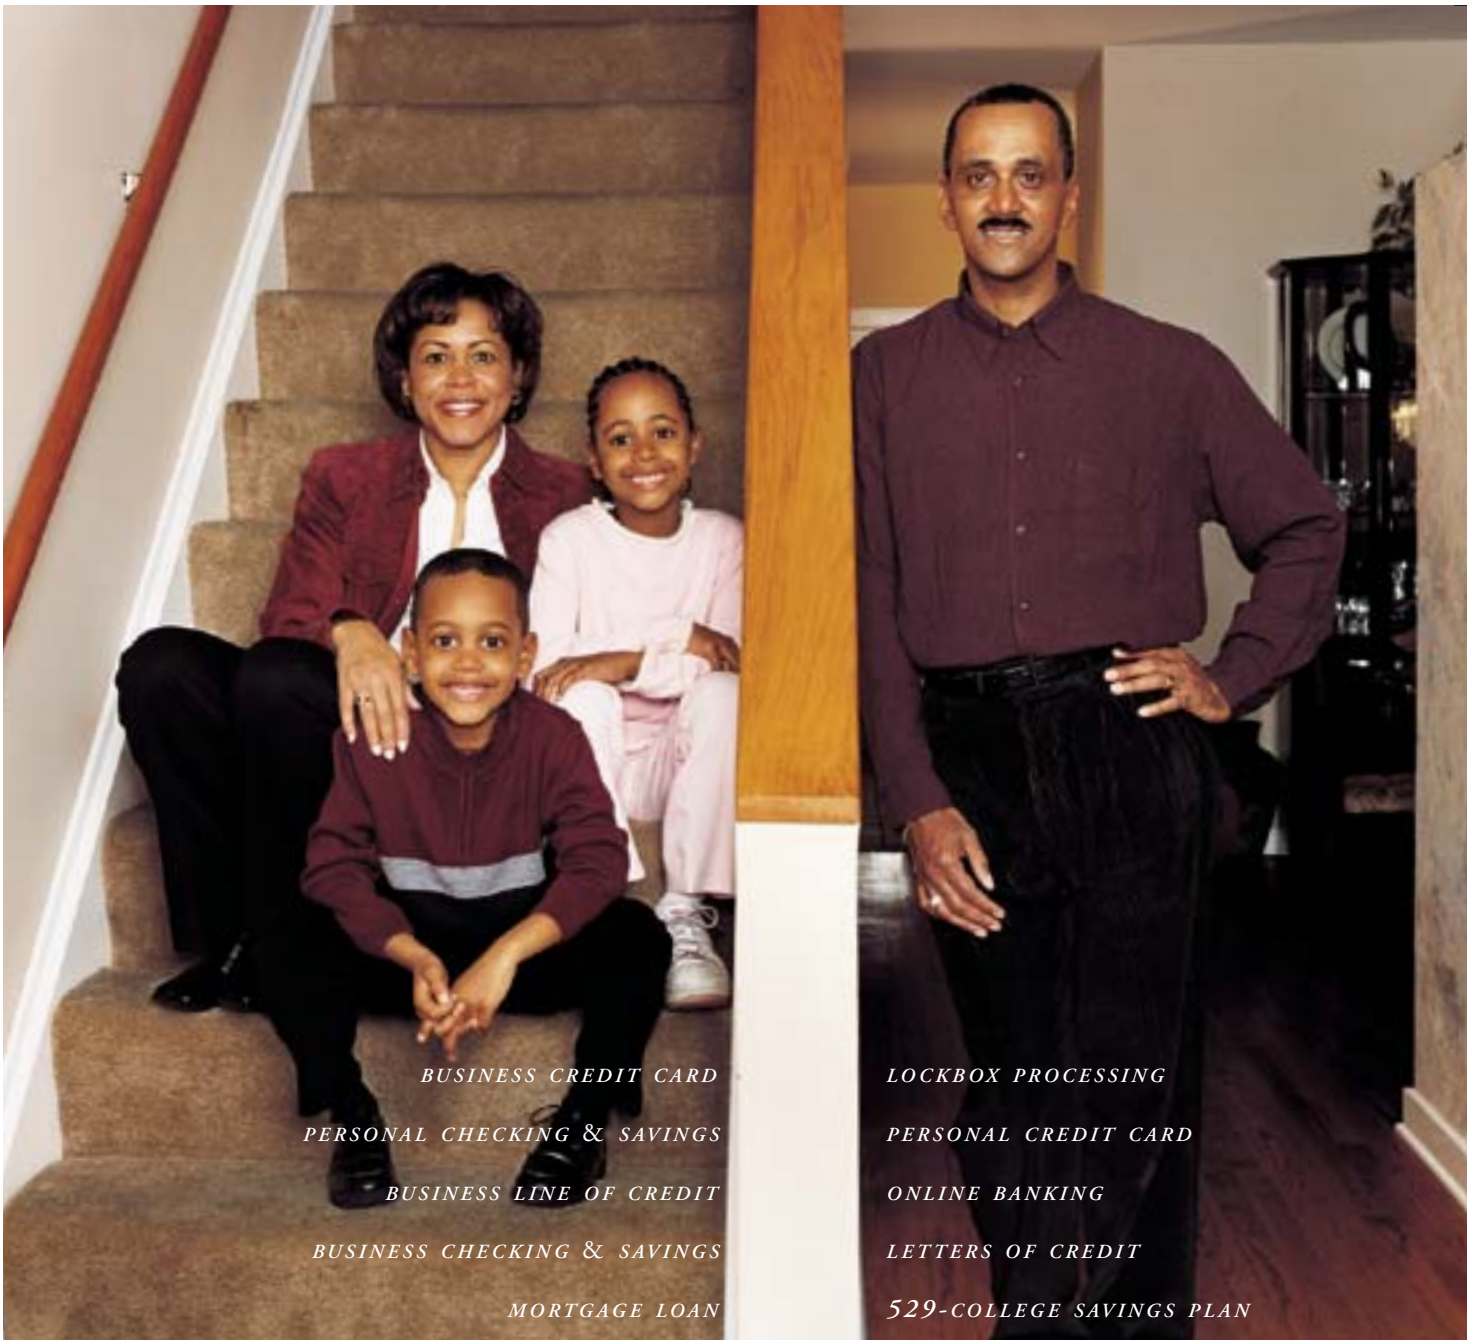
EDWARD KAPLAN

ENGINEER AND VISIONARY

CUSTOMER SINCE 1992

Earning its stripes

Zebra Technologies is one of America's fastest-growing companies. Since 1992 the company has increased annual sales from $58 million to $450 million, and now has a market cap near $2 billion. Ed Kaplan, Zebra's leader and cofounder, says the company's growth trajectory is based on meeting customer needs. "To keep Zebra on track, our team delivers operational excellence and innovative products," he remarks. "Our employees meet these demands, and we expect the same from our bank. They must be as fast and nimble as we are."



Bank One helps Zebra by providing a variety of domestic and international services that improve efficiency and speed productivity. "We're a technology company, so we're always looking to technology to make things work better, and Bank One has definitely come through in that area," states Ed. "They've provided us with a host of Web-based applications and technological solutions that have made our lives easier. They anticipate our needs. That's the best type of financial partnership you can have."

When it comes to meeting Ed's financial needs, it's not all black and white. That's why today, Bank One's relationship with Ed Kaplan extends beyond his business to include helping him manage his personal wealth and his foundation.

Could there be a new king of the jungle out there?

Bank One ranks as one of the top 3 bank issuers of commercial cards to large corporate and middle market customers.

In 2002 Bank One maintained its strong 4th place league table position in syndicated loans, gaining both in absolute and relative volume.

PAUL AND ADRIENNE FREGIA WITH DANIELLE AND PRESTON

ENTREPRENEURS, PARENTS AND FIRST-TIME INVESTORS

CUSTOMERS SINCE 1984

How one thing leads to another

Paul Fregia didn't think much about it when he first opened his checking account at Bank One. His office was located in the Bank One headquarters' building, so it made sense. Today, however, location has nothing to do with it.

"What started as a relationship of convenience has turned into a solid partnership based on trust," says Paul, who has since started his own business. Beginning with a simple checking and savings account, Paul went on to work with Bank One to secure a home loan, start-up capital for his own company and ongoing business financing. Recently Paul's wife got into the act as well, establishing Bank One business banking accounts to support her newly opened medical practice.

"Relationships are the building blocks of any successful business," says Paul, owner of Grandma Maud's DownHome Cookin'®. "What we appreciate most is the ability of our banker to learn about our goals and then pull together the full range of services we'll need to achieve them."

With the businesses now established and growing, the Fregias' focus is on their growing family as well. Today they are working with Bank One to prepare a financial plan that will ensure college educations and – yes, they're already thinking about it – weddings for the kids.

That's definitely another trip to the bank.

Each hour $17.7 million in purchases are made with Bank One credit cards.

Customers can choose from more than 1,200 co-branded, affinity and other cards issued by Bank One in association with many of America's favorite brands.

TRUSTEE BANK • CUSTODIAN SERVICES • INVESTMENT MANAGEMENT • DONOR ADVISED FUND

CAROL CRENSHAW

FINANCIAL MASTERMIND – THE CHICAGO COMMUNITY TRUST

CUSTOMER SINCE 1929

Trusted ally

"Our needs may appear simple, but that doesn't mean they're easy," says Carol Crenshaw, chief financial officer of The Chicago Community Trust, the nation's second-oldest community foundation. "We require outstanding investment assistance and risk management along with a steady stream of workable solutions for challenges as varied as Chicago itself."

So where does Carol turn for such assistance? An often-called number connects her to Bank One's institutional investment group, which manages $110 million of the Trust's endowment funds.

Proper management of that money means a world of difference to thousands of not-for-profit groups. Each year the Trust extends more than $40 million in grants to organizations that care for the homeless, protect battered women and educate the youth. Continued success like that requires strong partners.

Bank One has been an active and committed trustee of The Chicago Community Trust since 1929. It's a lasting relationship that continues to grow and evolve. In 2002 the bank developed, through the Trust's corporate affiliate, The Chicago Community Foundation, a donor advised fund program that enables contributors to establish named funds and recommend grants to eligible charitable groups. "It's a great idea," says Carol, "one that will further our mission of identifying and assisting worthy groups throughout the region."

Here's to a 74-year relationship that's still going strong.

Institutional investment sales increased by 26% from 2001, resulting in $78 billion in institutional assets with Banc One Investment Advisors.

Bank One's CollegeChoice 529 Investment Plan℠, featuring numerous investment portfolios, was introduced in 2002 and grew to $100 million in assets.

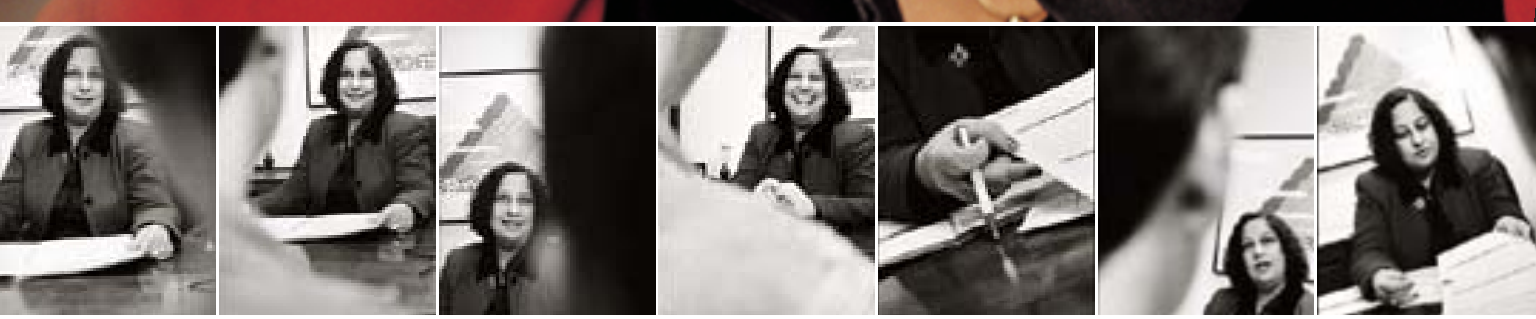
74,000 employees : one goal

Success is measured in many ways, but for us the ultimate success is to connect with our customers and advance their best interests. Each and every day, in thousands of places and in countless ways, Bank One reaches its customers with specific solutions and individual answers.

Dream catcher



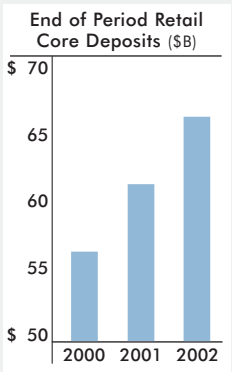
"People don't simply want a bank account. What they want is a relationship with someone they trust who can help them achieve their goals. The account is simply a means to an end. Whenever I meet with new customers, it's my job to connect with them and get a sense of their goals and dreams – whether it's buying a first home, preparing for a new baby, planning for retirement or sending a child off to college. The way I see it, if a customer leaves my desk without that conversation, then I haven't done my job."

Clearly, Gita Chopra is doing her job. Today she's the leading relationship banker in the country. "The people I work with aren't simply customers. They have truly become friends. I take an active interest in where their lives are going, and am proud of the role we at Bank One can play to help them get there."

GITA CHOPRA

RELATIONSHIP BANKER

EMPLOYEE SINCE 1994



2,839 relationship bankers provide solutions for 6.9 million retail households across 14 states.

1.4 million customers use bankone.com for their online banking, an increase of 30% from 2001.

DEAR SHAREHOLDER:

Retail Banking produced strong financial results in 2002. Net income increased 18% from the prior year and ROE was 22%. We grew our core businesses while aggressively downsizing several under-performing portfolios. The liquidation of our under-performing portfolios reduced assets by almost $4.5 billion, revenues by $198 million, and negatively impacted 2002 earnings. While these actions hurt our short-term financial performance, they will improve our long-term returns.

We are extremely focused on growing our core businesses – retail branch banking, small business banking, and consumer lending. These businesses are very attractive, with ROEs in excess of 25% excluding our liquidating portfolios. We intend to grow by leveraging our existing network of 1,795 branches, by opening new branches and, eventually, through acquisition.

Our success depends on growing our core deposit franchise and then cross-selling our other products through financial profiles that uncover customer needs. This past year marked the first time since 1998 that we opened more accounts than we closed. While we are glad that we reversed the trend, we will not be satisfied until we have achieved meaningful and consistent growth in this account base accompanied by robust cross-selling.

MARKETING AND PRODUCT FOCUS We have increased both the effectiveness and the amount we spend on marketing and are committed to having the best products in the market. This past year we rolled out several new product initiatives including free checking and free online imaged statements, and we eliminated the assisted teller fee. We will constantly look for ways to make our products more attractive to our customers.

STRENGTHENING OUR SALES FOCUS We have dramatically improved our internal sales effort, growing our sales force from 2,296 to 2,839 at year-end. We have moved our salespeople to production-based compensation and our internal sales campaigns are now tightly coordinated with our external marketing efforts.

IMPROVING THE CUSTOMER EXPERIENCE To be successful, we must decrease the level of account attrition. Our research indicates most of our customers leave us within the first year because they aren't put into an account appropriate for their needs. In response, we have changed our procedures to ensure a qualified salesperson takes a comprehensive look at a customer's financial needs when opening an account. Additionally, our focus is on opening all new accounts with convenience items such as debit cards, direct deposit and bill pay to increase customer satisfaction and retention.

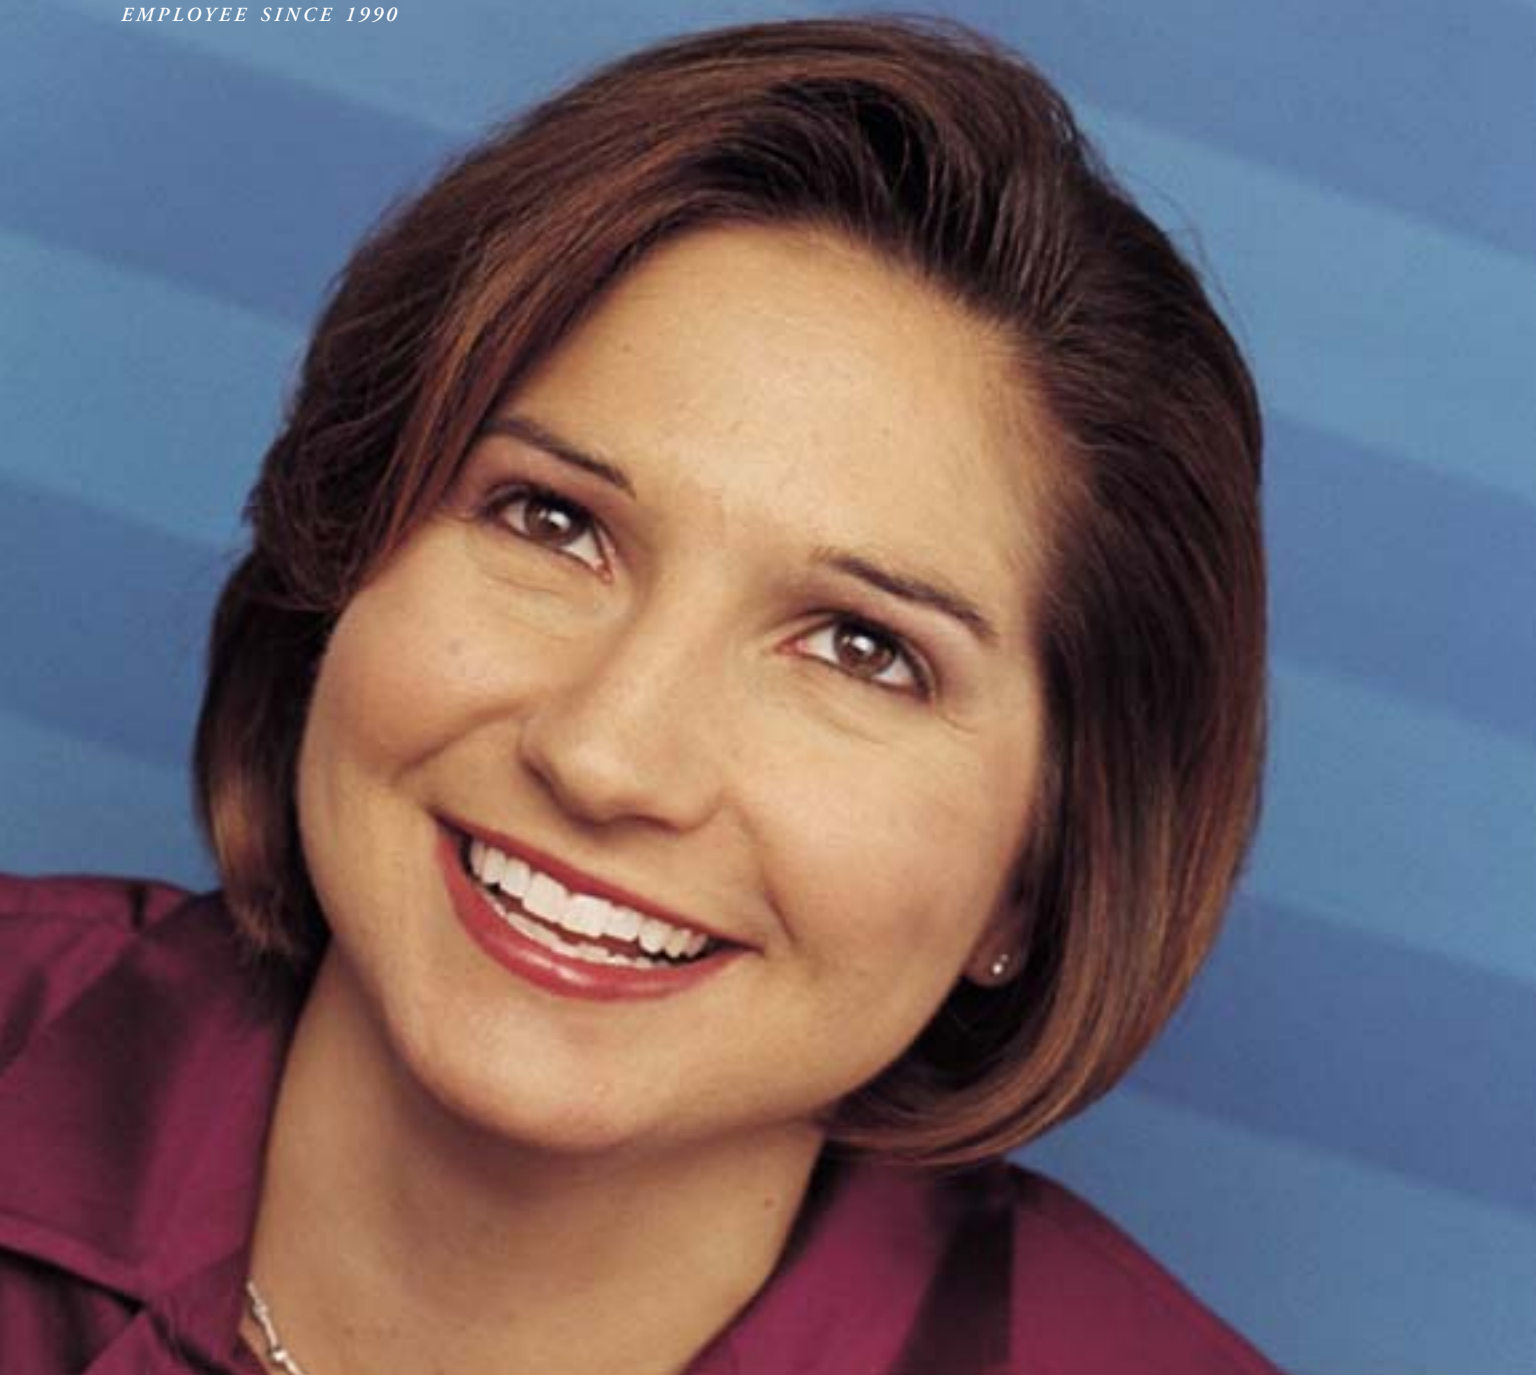
We are confident these actions will decrease attrition and ultimately result in increased sales. Using our financial profiles, we are in a stronger position to assess other customer needs that create opportunities to cross-sell a loan, credit card, investment product, CD, or savings account.

We are also making our branches and ATMs more convenient and attractive places to conduct business. We are extending hours in 85% of our branches by 10 hours per week, or an increase of 20%, and we are upgrading branch interiors, exterior signage and ATMs. While extending hours provides a greater convenience for our customers, it also provides us more time to meet with customers, which will increase sales.

STRENGTHENING MANAGEMENT DISCIPLINE We are running our branch system with far greater discipline. We have set clear expectations for our people and we communicate with them constantly. Equally important is our rigorous process of reviewing progress against these expectations as we coach our people toward success.

GOING FORWARD Our 1,795 branches provide a tremendous advantage as we seek to grow our franchise. In our communities, Bank One is well recognized as a market leader. We are the number one or two bank in nearly half of our markets, which translates to strong name recognition. The convenience of our branches and ATMs makes us an attractive choice for customers in need of banking products. Our size and strength allow us to attract and retain the best people as well as deliver the most relevant product set at the most competitive prices. Our goal is to leverage all these advantages to provide a trusted, consistent customer experience in every branch, every day.

We believe our future is extremely bright. We have a qualified and dedicated team of people serving our customers. We have a passion for winning in the marketplace. The business has outstanding returns, and we are confident in our ability to grow it profitably.



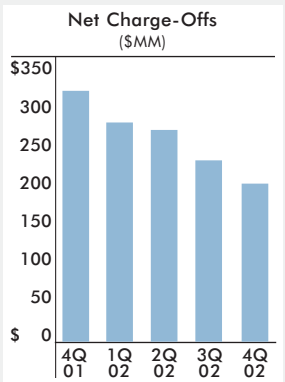
Charles W. Scharf
President and CEO, Retail Banking

In the cards

Pauline Trusiak was born to be a banker, or at least she thinks so. Her father, who also works for Bank One, first brought her to work when she was six. Now, several years and a few degrees later, Pauline manages a $400 million commercial card portfolio that includes two of Bank One's largest commercial card customers, ChevronTexaco and the University of California.

"There's nothing I like better than delivering an innovative, out-of-the-box solution for my customers," explains Pauline between phone calls. "On second thought," she adds, "maybe there's one thing that's better – I love winning business away from a competitor."

PAULINE TRUSIAK
COMMERCIAL CARD CONSULTANT
EMPLOYEE SINCE 1990



With nearly 20% of the market share, Bank One is the #1 originator of debit ACH transactions for commercial customers.

Charge volume on Bank One commercial card products increased more than $1.0 billion, or 21%, in 2002.

DEAR SHAREHOLDER:

Commercial Banking successfully tackled several ambitious and difficult tasks in 2002 that strengthened our business and positioned us for the future. We created one integrated line of business with one set of common systems and moved an important part of our franchise, American National Bank, to the Bank One brand. Along the way we proved to ourselves and to the public that we have the leadership and teamwork it takes to successfully identify and execute complex changes when they are right for our business.

FINANCIAL RESULTS Overall, our full-year ROE for the large corporate business was 9% and 13% for the middle market. This is below our expectations and was negatively impacted by our efforts to further reduce credit exposure and the ongoing challenge of the current economic environment.

However, in the fourth quarter of 2002 we realized an improvement in our net charge-offs. Credit losses for the large corporate business were at 1.03%, an improvement of 99 basis points from fourth quarter 2001, and 0.70% for middle market, an improvement of 105 basis points from the prior-year quarter. These improved credit losses drove ROE increases, with large corporate at 15% and middle market at 17%.

OUR BUSINESS IS POISED FOR GROWTH In addition to moving to one set of common systems, we simultaneously upgraded many of our systems and products. We continued to improve existing processes to further increase revenue in core products and decrease our operating costs, while simplifying our operating environment. The result is a solid foundation of systems, products and services that allows us to be more flexible and respond quickly to market demands.

Our product groups, global treasury services and capital markets, remain leaders in their fields. Our cash management products continue to be ranked in the top five of all cash management categories, and our emerging product areas, including commercial card and electronic products, realized strong growth. Fee-based cash management revenue did decline due to the reduction of our loan exposure and lower interest rates as well as companies migrating from paper to electronic transactions.

Despite very turbulent market conditions in many of the product segments in which capital markets competes, 2002 finished on a high note, with profitability up 10% from a record 2001 performance. Additionally, we maintained or improved our capital markets product rankings, including placing third for credit card and seventh for automotive in the term asset-backed markets and maintaining a fourth-place position in loan syndications, while increasing market share.

In addition to investing in our systems, we also invested in state-of-the-art workstation tools to enhance our understanding of our customers and help manage those relationships. Upon the complete deployment of these tools in the first quarter of 2003, we will have an unprecedented view of our customers, not to mention a standardized methodology for tracking profitability.

What we learned about ourselves in 2002 may prove to be our most significant accomplishment. We are moving forward with a confidence that can only be gained from setting aggressive goals and executing them successfully. The leadership, teamwork and tenacity displayed by our people are unmatched by anything I have witnessed in my career.

LOOKING AHEAD In 2003 we will focus our energy on doing what we do best – building relationships with our customers, listening carefully to their needs, ensuring that our products and services meet those needs and providing high-quality execution. Many new products and product enhancements are under development, and there will be a significant investment in service. We will also continue to communicate with our clients early and often, a strategy that gave us an advantage last year.

I began by explaining how our activities in 2002 have positioned us for growth. I'll conclude by saying how confident I am in our future. We certainly have new challenges ahead of us. You can be assured, however, that we will apply the same discipline to growing our business this year as we did to laying a solid foundation in 2002.

James S. Boshart III
President and CEO, Commercial Banking

Problem = Opportunity + Opportunity + Opportunity

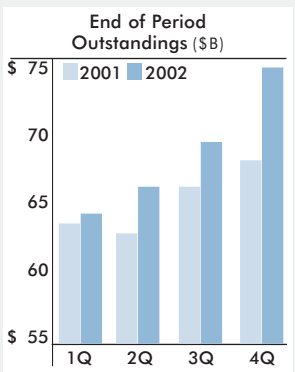
After spending more than 30 years in customer service, there aren't many things Richard Jackson hasn't seen or heard before. He manages each situation as if it's his first, but a single philosophy drives each interaction. "In every problem, there's an opportunity," he says. "The secret is in listening carefully to each person. No two situations are alike. The moment you think you have the answer before hearing the problem is the moment you're in trouble."

"There's a reason people pull one credit card out of their wallet and not another," Richard explains. "Most of the time it's a decision based on trust – trust that if there's a problem it will be solved without hassle or delay." Today Bank One Card Services meets the needs of 50 million credit card customers and maintains one of the highest customer satisfaction ratings in the industry.

Looks like these cardmember service advisors aren't missing many opportunities at all.

RICHARD JACKSON
CARDMEMBER SERVICE ADVISOR/
MARKETING COORDINATOR
EMPLOYEE SINCE 1999

Each week Card Services advisors answer about 923,000 phone calls from customers across the world.



The Bank One Card Services business card portfolio grew by 23% in 2002.

DEAR SHAREHOLDER:

At Card Services we made solid progress on our growth initiatives in 2002 as we benefited from a focus on control and profitability in the previous year. We took the lead in quality, credit and co-branding, and we significantly closed the gap in our drive to become the lowest-cost provider.

We have reengineered many processes around the customer, allowing us to deliver industry-leading service. Better product pricing and more feature choice for our cardmembers helped reinforce customer loyalty, while our six Card Services operating centers provided high levels of customer service. This positive performance allows us to focus our resources on enhancing our 50 million credit card relationships as well as acquiring more profitable and stable accounts.

We also rebalanced our credit card loan portfolio, employing improved credit cycle skills and more intelligent asset management. Our risk-based, customer-driven strategies allowed us to take these actions. As a result, in 2002 we saw excellent credit performance, an 11% increase in charge volume, an 8.7% growth in outstandings, and strong evidence of a more loyal customer base.

LEADING BRANDS HELP DRIVE GROWTH Our new business development effort, guided by our strategy to become the preferred partner of America's leading brands, was successfully restarted in 2002. With the addition of large new co-brand partners such as Amazon.com, BJ's Wholesale Club®, The Walt Disney Company, UPS® and many others, we now have triple the co-brand relationships of our nearest competitor and anticipate growth from these additions beginning in 2003. As more and more consumers switch to rewards-based payment products, our partnerships give us a powerful competitive advantage.

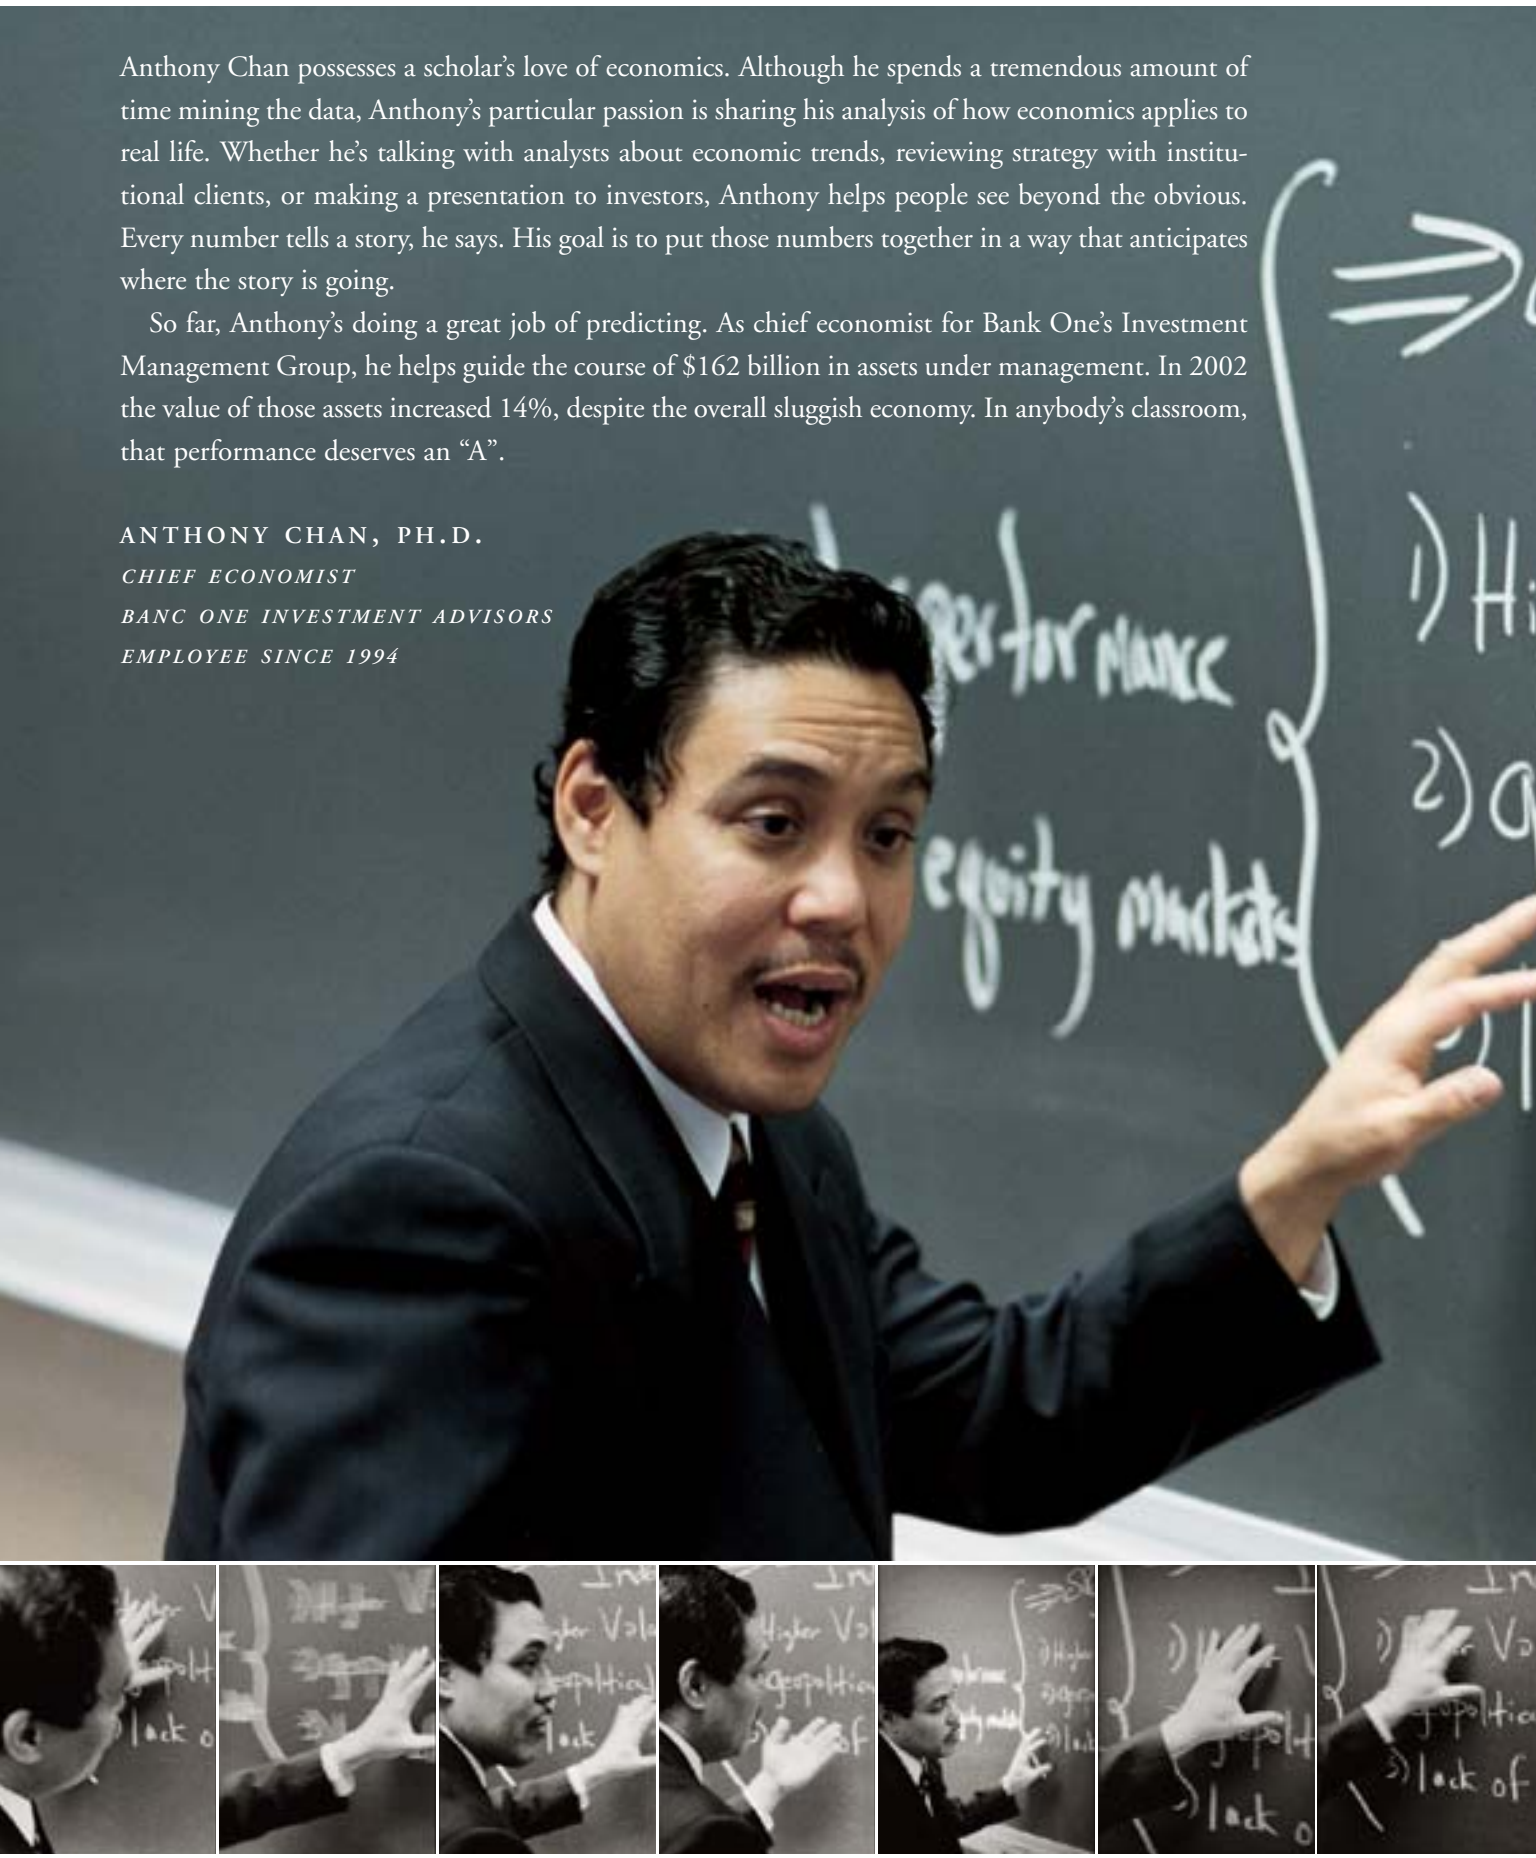
The Mileage Plus segment did well throughout 2002 despite the financial difficulties experienced by United Airlines. Cardmembers responded to our expanded suite of products and rewards promotions, and we expect to continue rewarding customer loyalty with aggressive promotions this year. As I write this letter, we remain cautiously optimistic about the future of this portfolio, although the successful reorganization of United Airlines is necessary for the program to remain viable.

Our brand awareness work began in 2002 and included the successful conversion of millions of First USA cards to the Bank One brand. At the same time we launched our first-ever national television advertising campaign to build awareness of our extensive credit card product line, our partnerships with well-known American icons, and our new name.

FOCUS ON LOWER COSTS AND BETTER RESPONSE RATES We've worked hard to drive down costs as we aspire to become the industry's lowest-cost provider. None of us will be satisfied until we reach that goal. We pushed down our average cost per active statement and expect further benefits from our focus on quality and infrastructure. The improvements are not ends in themselves, but rather point to our efforts to better the customer experience at every touch point. The resulting lower costs and higher customer satisfaction are evidence of a quality dividend we will continue to enjoy.

Net response rates to our direct mail campaigns were relatively flat in 2002. We did not perform as well as some of our peers for most of the year; however, we are tackling this concern. Our new analytical models, which help us increase our response rates, show a lot of promise. We are dedicated to improving this capability, as it is critical for our growth projections.

MOVING FORWARD For 2003, we look to our customers for steady growth and improved profitability. We also expect our partners and prospective partners to continue to rely on our expertise. We are committed to maintaining our credit improvements and strengthening our share of the payments business. Several major co-brand and new product launches take center stage in the first half of the year, and we will continue to keep service levels high and costs low. Know that you have a management team committed to building a strong cards and payments business for Bank One, and we appreciate your support.



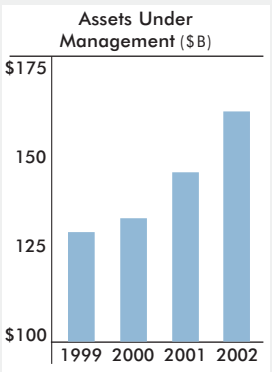
Philip G. Heasley
President and CEO, Card Services

Numbers guy

Anthony Chan possesses a scholar's love of economics. Although he spends a tremendous amount of time mining the data, Anthony's particular passion is sharing his analysis of how economics applies to real life. Whether he's talking with analysts about economic trends, reviewing strategy with institutional clients, or making a presentation to investors, Anthony helps people see beyond the obvious. Every number tells a story, he says. His goal is to put those numbers together in a way that anticipates where the story is going.

So far, Anthony's doing a great job of predicting. As chief economist for Bank One's Investment Management Group, he helps guide the course of $162 billion in assets under management. In 2002 the value of those assets increased 14%, despite the overall sluggish economy. In anybody's classroom, that performance deserves an "A".

ANTHONY CHAN, PH.D.
CHIEF ECONOMIST
BANC ONE INVESTMENT ADVISORS
EMPLOYEE SINCE 1994



In 2002 One Group® mutual fund assets grew 21% versus an industry average of -8%.

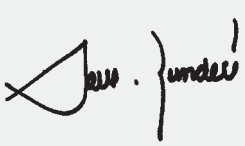
The 118 investment professionals at Banc One Investment Advisors have an average investment experience of more than 13 years.

DEAR SHAREHOLDER:

In 2002 the Investment Management Group had another year of challenging market conditions and nervous investors. It was the third consecutive year of volatile and unfavorable securities markets, but it was our third consecutive year of double-digit asset and earnings growth. On a year-to-year basis, assets under management grew 14%; earnings grew 14%; and expenses decreased 4%, including restructuring-related charges and reversals.

Assets under management, a key driver of our earnings, grew from $143 billion to $162 billion in 2002, while mutual fund assets industry-wide experienced an 8% decline. In the 2002 year-end edition of *Barron's*, Banc One Investment Advisors ranked better than two-thirds of its peers in its ability to protect equity investors and shareholders during difficult markets. We also ranked second in our ability to retain equity assets.

DISCIPLINED RESULTS By adhering to a disciplined asset management philosophy, our money managers keep delivering competitive investment returns – avoiding fads and short-term trends. We are forever conscious of the risk inherent in the investment markets. We cannot eliminate that risk, but we can attempt to manage it for our clients. In 2002 our equity returns, although at negative levels, stood up well against peer averages, as the equity markets reeled from geopolitical, corporate integrity and economic concerns. Our fixed income team excelled in one of the most difficult bond markets we've ever seen. Our fixed income Lipper rankings are top-tier for one-, three- and five-year time periods.



Another key to our financial performance is the same principle we espouse for our clients – diversification. We are not overly dependent on any single client segment, asset style or product category. This breadth of product and distribution helped produce record investment sales in 2002. In retail brokerage, sales of mutual funds and annuities reached $5.4 billion, 11% above sales in 2001. In our institutional business, investment sales hit a new record, $30 million as measured by annualized revenue, 66% above last year. Neither of these achievements would have happened without the strong support of our Retail and Commercial Banking partners. In our third-party distribution business, sales of One Group® through external channels reached $3 billion, 94% above 2001 levels.

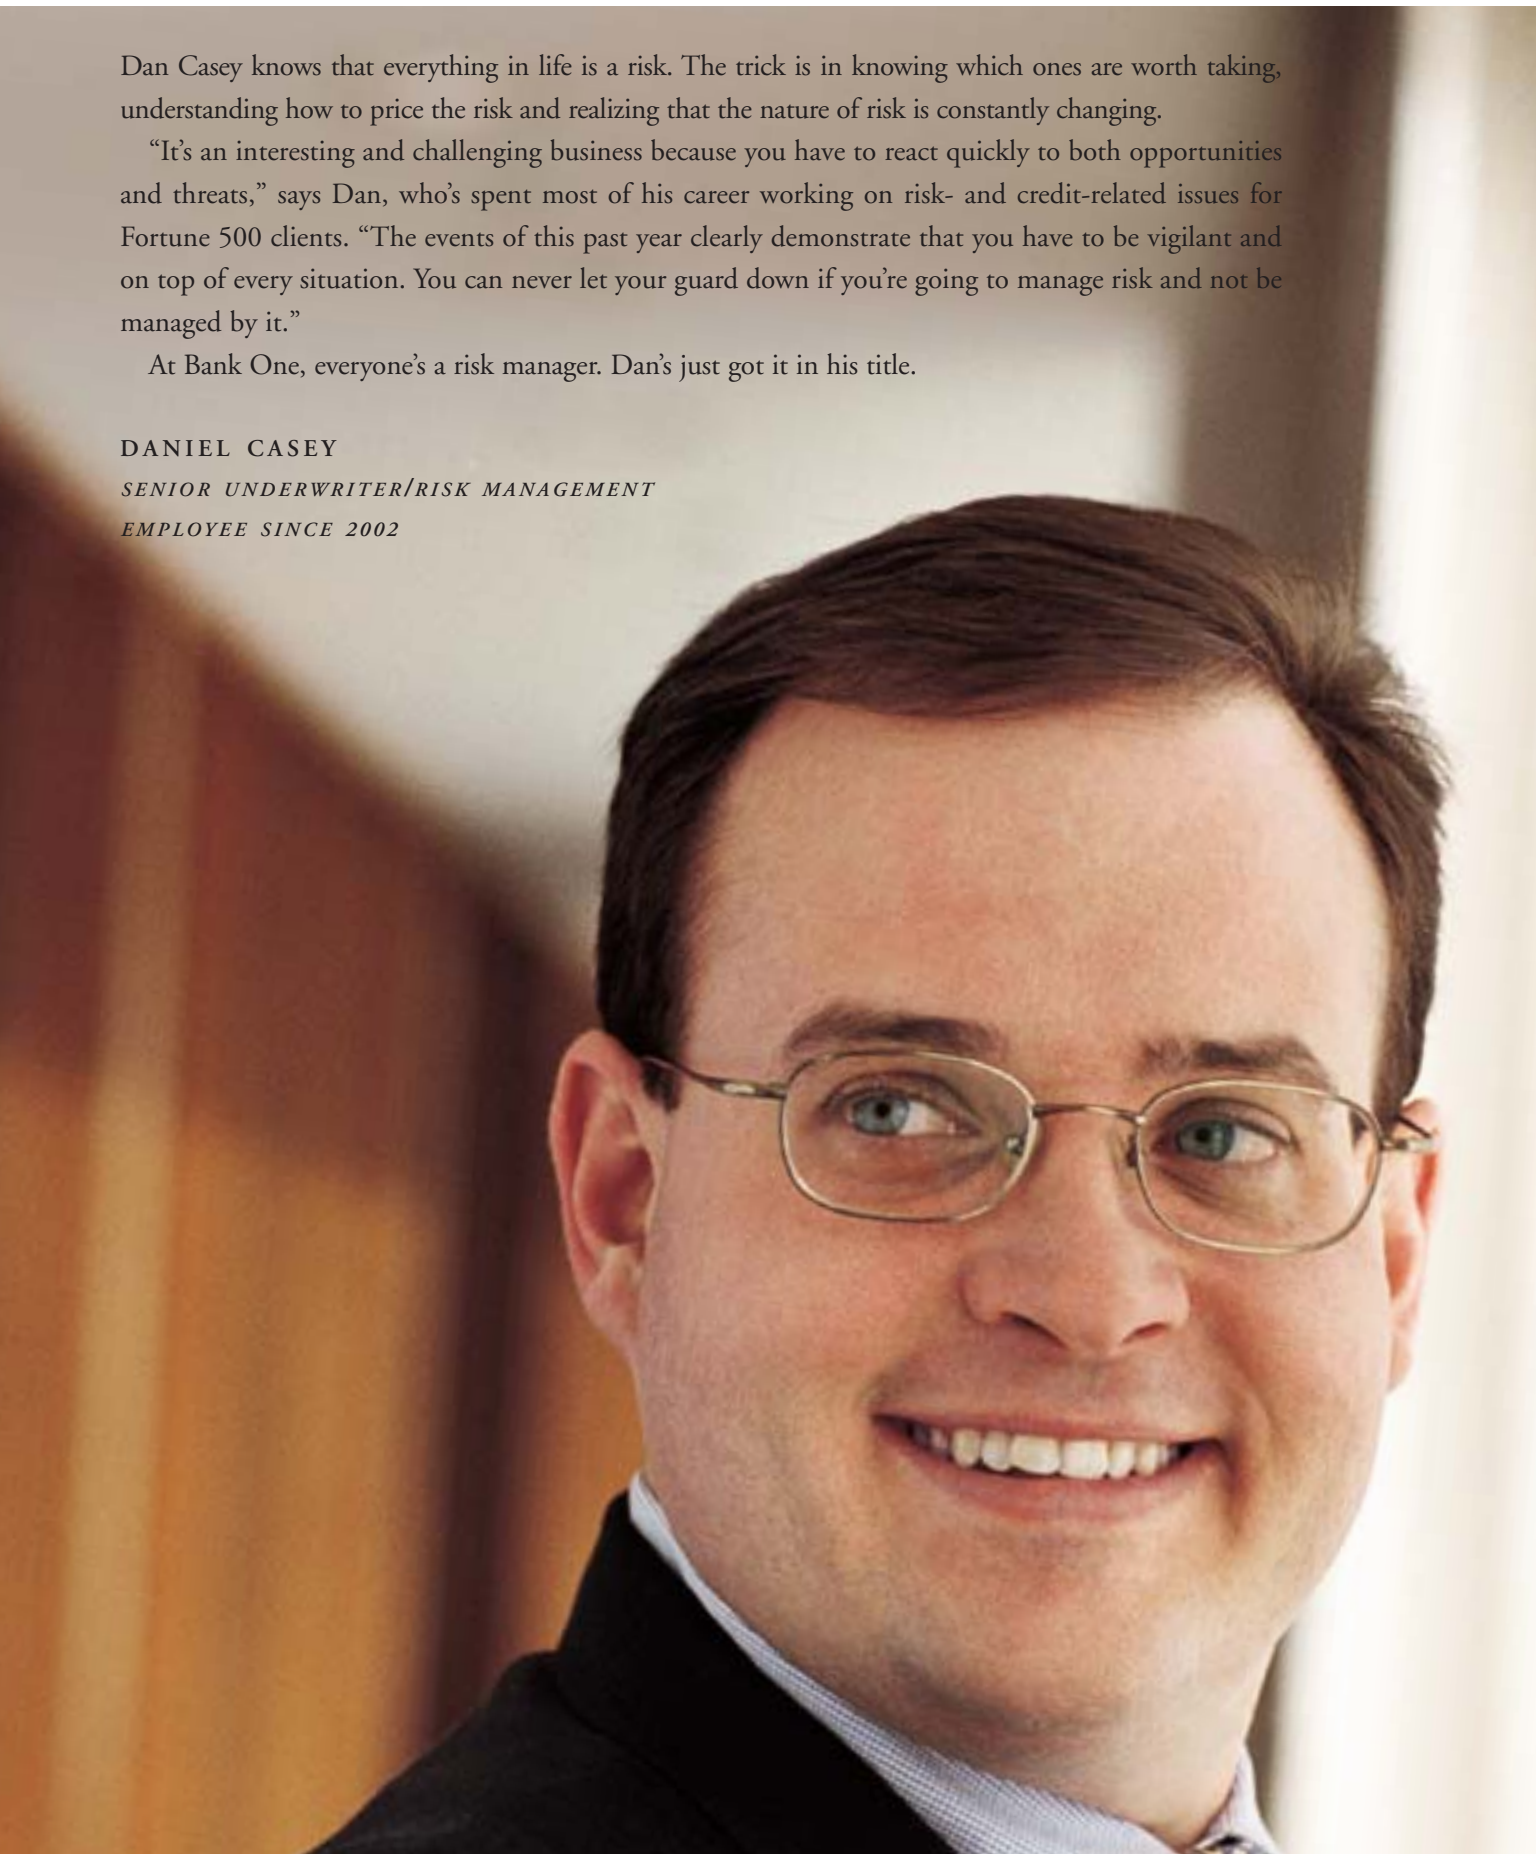
GROWTH INITIATIVES Our private client services business continued to develop an integrated platform to serve the needs of high net worth individuals. We added 73 new private client services advisors and made real progress leveraging Bank One's commercial relationships. During 2002 average deposits increased by $1.3 billion, 19% more than 2001. However, the market value of customer assets declined 15%. This is an attractive, high-growth business in which Bank One has tremendous potential to be a major player.

Going forward, another area of growth for us will be insurance services. In 2002 we brought in an experienced executive management team that launched several successful products and developed a solid game plan to grow on multiple levels. One of our priorities will be to acquire life and annuity insurance manufacturing capabilities.

We realize we can only reach our long-term goals with both organic growth and acquisitions. Throughout the year we looked hard at a number of companies to extend our manufacturing and distribution capabilities; however, we didn't find the right target at the right price. We'll keep looking, but we're not willing to make an acquisition just for the sake of doing so. As the securities markets continue to struggle, we believe there will be attractive opportunities to consider.

Finally, at year-end we announced a realignment of our companies to further accelerate growth. Retail investment services has become part of Retail Banking. Private client services has become a stand-alone business. The Investment Management Group will now focus exclusively on our asset management, corporate trust and insurance capabilities. This new structure recognizes the value of each of these businesses to the future of Bank One and positions the corporation to maximize their earnings in the years ahead.

David J. Kundert
President and CEO, Investment Management



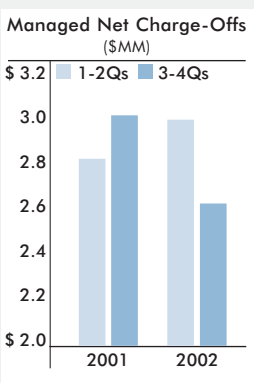
On guard

Dan Casey knows that everything in life is a risk. The trick is in knowing which ones are worth taking, understanding how to price the risk and realizing that the nature of risk is constantly changing.

"It's an interesting and challenging business because you have to react quickly to both opportunities and threats," says Dan, who's spent most of his career working on risk- and credit-related issues for Fortune 500 clients. "The events of this past year clearly demonstrate that you have to be vigilant and on top of every situation. You can never let your guard down if you're going to manage risk and not be managed by it."

At Bank One, everyone's a risk manager. Dan's just got it in his title.

DANIEL CASEY
SENIOR UNDERWRITER/RISK MANAGEMENT
EMPLOYEE SINCE 2002



Bank One's 3.2% ratio of reserves to loans stands among the best in the industry.

Bank One's nonperforming loans decreased by $275 million, or 8%, from 2001.

DEAR SHAREHOLDER:

Being the Chief Risk Officer for a leading financial institution presented significant challenges in 2002. With a market characterized by significant corporate misbehavior and fraud, continued decline in stock values, a soft economy, high consumer debt, rising personal bankruptcies, and a lack of market growth, solid risk management discipline was more important than ever.

The good news is that Bank One was prepared for these difficult times. We began restructuring risk management disciplines in late 2000, with continuing improvements through 2002. This enabled us to improve our risk profile and react quickly to a rapidly changing economic environment. Our balance sheet is strong and our risk profile is healthy. Compared with 2001, we have lower charge-offs (managed basis) and nonperforming loans that reduce earnings volatility.

RISK MANAGEMENT IS A STATE OF MIND

Risk management is the responsibility of every Bank One employee, not just the corporate risk staff. Each of our 74,000 employees owns the risk issues of his or her specific daily activities. Our basic principles of risk management include:

- Know your business and customer.
- Think outside the box.
- Raise red flags immediately.
- Be forward looking as to where risk might lurk.
- Get paid for risk.
- Manage risk dynamically.

Incorporating these principles into employees' mindsets and activities is a cultural shift we emphasize throughout the organization.

Risk management governance approach and infrastructure changes were put into place in 2002 to support this cultural shift. Each line of business head and chief risk officer chairs a risk committee overseeing changes in policy, business initiatives, current risk profiles and market conditions. Weekly risk reports highlight key changes in business trends and serve to identify risk issues and create mitigation plans. We're developing new processes and systems to improve risk measurement and reporting. Our focus includes credit, market and operational risk, as they all contribute to our overall risk profile.

UPGRADING RISK MANAGEMENT PEOPLE, PROCESS AND SYSTEMS Although we run Card Services and Retail units as separate lines of business, we integrated those risk management activities under one Consumer Chief Risk Officer to better manage the credit relationships of our consumer customers across all products. To support this growing portfolio, we added depth to the risk management team, revamped underwriting systems/models, and improved data quality and reporting.

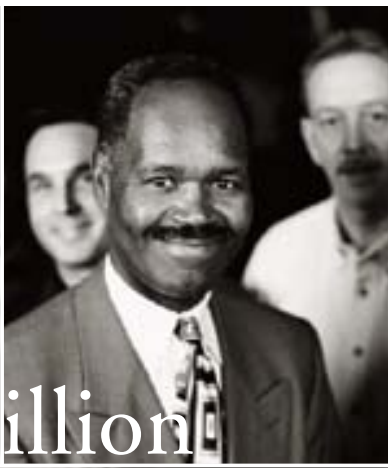
Commercial Banking risk management practices continue to become more sophisticated. We aggressively manage credit risk to our corporate, middle market, global treasury and capital markets customers through active portfolio management; a focus on risk/reward; forward-looking, externally focused risk measurement; risk-based limit setting and monitoring; expanded loan risk distribution (sales and credit derivatives); an evolution to more sophisticated portfolio management tools; and routine testing of probability of default and loss given default assumptions.

We applied risk management philosophies and committee structures consistent with the Commercial Banking governance structure to private client services to have consistent methods of risk assessment across all lines of business. Within Investment Management, we identified issues that created operational and reputational risk and developed new processes to minimize those risks.

PROFITING FROM SMART RISK DECISIONS

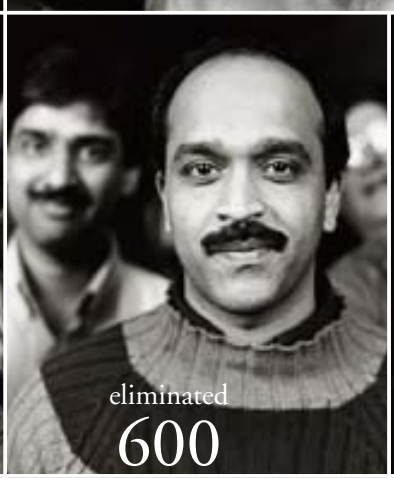
Much has been printed about Bank One's participation in the financing of two separate United Airlines Debtor-In-Possession (DIP) credit facilities. Due to our credit card relationship with United, we clearly have a vested interest in a healthy, prosperous United Airlines franchise. However, we did not compromise our risk principles; the transactions stand on their own merits. They are well structured, well priced and clearly within our credit competence of execution.

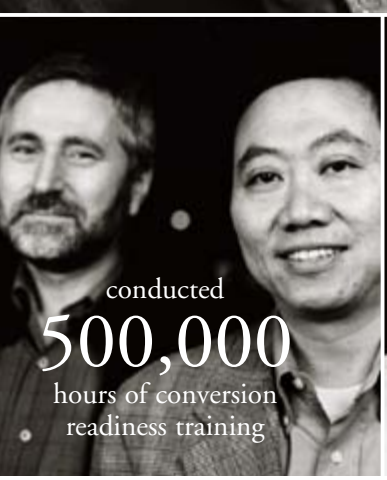
MAKING A NAME FOR OURSELVES Aggressive portfolio management techniques and proactive risk management disciplines allowed us to manage and prosper in a challenging year. We're confident that we'll be known for our core competency in risk management disciplines. With strong risk disciplines in place, we are poised to support growth – focused on balancing risk and reward to build a stronger future for Bank One.



Linda Bammann
Chief Risk Management Officer

One system won





DEAR SHAREHOLDER:

In today's financial services marketplace, technology is a critical component for success. We believe that when technology is developed in a cooperative and synergistic way throughout the enterprise, it can become a competitive advantage.

Two years ago Bank One launched strategic initiatives to standardize computer systems and streamline operations nationwide. The objectives of both were to improve customer service, simplify our employees' work and reduce costs.

A "HERCULEAN EFFORT" In the last 18 months we have successfully completed four major system conversions, essentially tripling the number of customer accounts on the standard deposit platform from four million to 12 million. When plans were announced to accomplish statewide system conversions for Michigan and Illinois in 2002, the media and industry analysts viewed the commitment with skepticism, saying it would take a "Herculean effort."

Charter and System Reductions

JANUARY 2001	JANUARY 2002	JANUARY 2004
20 Bank Charters	15 Bank Charters	5 Bank Charters
9 Deposit Systems	6 Deposit Systems	1 Deposit System
11 Lending Systems	10 Lending Systems	3 Lending Systems

It was with tremendous pride that we deemed completion of the last major state conversion – Illinois in November 2002 – an unqualified success. It was the largest conversion of any type in Bank One history, and in my 30-year banking career I have never seen a more seamless, large conversion with virtually no significant customer impacts.

In addition to the enormous effort put forth for conversion activities, we continued to streamline our operations and enhance our systems.

- We realized an annual savings of $53.2 million as a result of credit card and operating site consolidations and improved productivity.
- We developed a desktop system that allows frontline employees to provide tailored financial solutions for customers.
- We built a check image archive and retrieval system that now provides all Bank One customers with access to digital images of their checks on bankone.com.
- We upgraded our national telecommunications network for faster information retrieval and improved customer service.
- We brought a number of functions in-house to build internal expertise and enable greater control of our technical support.

During the past 18 months we have invested heavily in time, dollars and people to create competitive parity. We hired more than 1,750 top-notch technology professionals, significantly increasing our workforce both in quantity and quality, while competitors and other businesses were reducing their headcount.

LOOKING FORWARD Completion of the major system conversions in 2002 allows us to redirect $200 million into the development of new technology. These investments will strengthen and expand our business and product offerings to better compete in the marketplace. We are also targeting an additional $100 million in savings in 2004 as we continue to better leverage our operating systems and infrastructure across the enterprise.

Moving into 2003, we will continue to consolidate and standardize our systems, but on a much smaller scale. We will work toward our three-year goal of reducing the total number of systems from 1,277 to less than 700. With much of the foundational work complete, we will align our energy and resources to focus on significantly improving our systems' availability for our customers, and on developing systems that provide products to increase corporate revenue.

We will develop new technology to support our business lines in delivering quality products and services. Priorities include:

- A state-of-the-art teller banking system
- A new suite of Internet tools for commercial clients
- A relationship management system to provide better customer information
- New systems to better manage our financial planning and risk management
- An expanded ability to service customers across broad geographic areas

IN CLOSING We have an incredible sense of accomplishment when we review 2002. Our focus, our commitment, our productivity, and our pride – for what no one really thought could be accomplished in one year – have energized our team. We look forward to building on this foundation in 2003 to fully differentiate ourselves in the marketplace and improve Bank One's financial performance.

(1) Net interest income-FTE includes taxable equivalent adjustments of $145 million, $131 million, $138 million, $121 million and $122 million for the years ended December 31, 2002, 2001, 2000, 1999 and 1998, respectively.

(2) Common equivalent shares and related income were excluded from the computation of diluted loss per share for the year-ended December 31, 2000 as the effect was antidilutive.

(3) Includes trust preferred capital securities.

(4) Related assets consist of loans outstanding, including loans held for sale and other real estate owned.

(5) Results include the effects of the consolidation of Paymentech, Inc. and Anexsys, LLC.

(6) Beginning in 2001, employees on long-term disability and employees of unconsolidated subsidiaries are excluded. Prior period data have not been reclassified for this change.

DESCRIPTION OF BUSINESS

BANK ONE CORPORATION and subsidiaries ("Bank One" or the "Corporation") is a diversified financial holding company that offers a full range of financial services to consumers and commercial customers. The Corporation is:

- A leader in retail and small business banking
- A premier provider of lending, treasury management, and capital markets products to commercial customers
- The third largest credit card issuer in the United States and the largest Visa® issuer in the world
- A leading investment management company

For a description of each business segment refer to "Business Segment Results and Other Data" beginning on page 38.

Basis of Presentation

The Corporation's financial statements are based on the application of accounting principles generally accepted in the United States of America, which are described in the notes to the consolidated financial statements starting on page 84. The Corporation's financial statements are highly dependent upon certain judgments, assumptions and estimates made by the Corporation. Those that are most critical to the overall financial statements are described below.

Management's discussion and analysis may contain forward-looking statements provided to assist in the understanding of anticipated future financial performance. However, such performance involves risks and uncertainties that may cause actual results to differ materially from those expressed in forward-looking statements. See page 79 for a discussion of these factors.

APPLICATION OF CRITICAL ACCOUNTING POLICIES

Generally accepted accounting principles are complex and require management to apply significant judgment to various accounting, reporting and disclosure matters. Management must use assumptions and estimates to apply these principles where actual measurement is not possible or practical.

For a complete discussion of the Corporation's significant accounting policies, see the footnotes to the Consolidated Financial Statements (pages 84-108) and discussion throughout this financial review document. Below is a plain-English discussion of the Corporation's critical accounting policies. These policies are critical because they are highly dependent upon subjective or complex judgments, assumptions and estimates. Changes in such estimates may have a significant impact on the financial statements. Management has reviewed the application of these policies with the Audit and Risk Management Committee of the Corporation's Board of Directors.

Allowance for Credit Losses

The allowance for credit losses represents management's estimate of probable losses inherent in the Corporation's credit portfolios. In determining an adequate allowance, management makes numerous assumptions, estimates and assessments. At the end of 2002, the allowance for credit losses was $4.5 billion, representing 3.20% of loans at year end.

The Corporation's allowance consists of three components: asset specific, expected loss and stress. The Corporation's methodology for determining each component is more fully described on pages 57-58 and 71-72.

The asset specific component applies to loans evaluated individually for impairment and is based upon management's best estimate of discounted cash repayments and proceeds from liquidating collateral. The actual timing and amount of repayments and the ultimate realizable value of the collateral may differ from management's estimates.

The expected loss component for commercial credits is based upon internal risk ratings that are applied to individual credits based upon the probability and amount of loss in the event of a default. These expected loss estimates are sensitive to changes in the risk profile of a customer, realizable value of collateral, other risk factors and actual loss experience.

The expected loss component of consumer credits is generally determined by applying statistical loss factors and other risk indicators to pools of loans by asset type. These expected loss estimates are sensitive to changes in delinquency status, credit bureau scores, the realizable value of collateral, and other risk factors.

The stress component represents the effect of probable economic deterioration above and beyond what is reflected in the asset specific and expected loss components. This amount is determined based upon the results of a series of tests that stress the credit portfolios. The Corporation's stress testing methodology is more fully described on pages 71 – 72.

The underlying assumptions, estimates and assessments used by management to determine these components are continually evaluated and updated to reflect management's current view of overall economic conditions and relevant factors impacting credit quality and inherent losses. Changes in such estimates could significantly impact the allowance and provision for credit losses in each business segment. The Corporation could experience credit losses that are different from the current estimates made by management.

Securitizations

The Corporation packages primarily credit card loans into securities that are sold to investors or retained on the balance sheet through the process of securitization. By applying detailed accounting guidelines, the Corporation determines if a securitization transaction results in a sale (as opposed to a secured borrowing), the amount of any gain or loss on such sale, and the value of retained interests in the securitized assets. During 2002, Card Services recognized $55 million in gains from the securitization of $6.8 billion in credit card receivables. The retained interest was approximately $28 billion at the end of 2002.

Management utilizes a discounted cash flow model to estimate the value of retained interests. Projected cash flows are generally based upon estimates of finance charges and fees related to the securitized assets, net credit losses, average life, the contractual fee to service the loans, and also contractual interest paid to third party investors. See page 94 for a pretax sensitivity analysis of the assumptions used to determine the fair values assigned to the Corporation's retained interests.

Changes in the cash flow estimates used may have a significant impact on Card Services' valuation of retained interests and the initial gain or loss on sale. See the "Loan Securitizations" on page 74 and Note 9 "Credit Card Securitizations" on pages 94-95 for further information on the Corporation's securitization activities.

Valuation of Certain Financial Instruments

The majority of the Corporation's financial instruments that require fair value measurements are determined based on quoted market prices. The Corporation must estimate the fair value of certain financial instruments, such as some principal investments and credit derivatives, which are not publicly traded or are traded in limited markets. These amounts represent the estimated values at which financial instruments could be currently exchanged or settled between willing parties.

While the fair value of a publicly traded investment is determined using quoted market prices, the fair value of some investments must be estimated based upon the investees' financial results, conditions and prospects, values of comparable public companies, market liquidity, and sale restrictions. Other investments require the use of a discounted cash flow model or other modeling techniques utilizing the limited market information to estimate fair value. These fair value estimates are most sensitive to the timing and amount of actual cash flows and market liquidity.

Changes in these estimates may have a significant impact on the carrying amount and the related valuation gains and losses on these financial instruments in the Commercial Banking and Corporate lines of business.

Stock Option Compensation

Prior to 2002, the Corporation did not record compensation expense for stock option awards. In 2002, the Corporation began recognizing the expense associated with stock options granted during 2002 using the fair value method. Compensation cost is calculated based on the fair value of the award at the grant date, and is recognized as an expense over the vesting period of the grant. The Corporation uses the Black-Scholes option pricing model to estimate the value of granted options. This model takes into account the option exercise price, the expected life, expected forfeitures, the current price of the underlying stock, the expected volatility of the Corporation's stock, expected dividends on the stock and a discount rate.

Since compensation cost is measured at the grant date, the only variable whose change would impact expected compensation expense recognized in future periods for 2002 grants is actual forfeitures. If the Corporation experiences a 50% lower forfeiture rate than estimated, compensation expense in the period of change would increase by $4 million. See Note 19 "Stock-Based Compensation" on page 100 for the specific assumptions used to calculate the fair value of options granted.

Pension

The Corporation provides pension benefits to its employees. In accordance with applicable accounting rules, the Corporation does not consolidate the assets and liabilities associated with the pension plan. (At the end of 2002, the fair value of pension plan assets was $2.5 billion and the plan was overfunded). Instead, the Corporation recognizes a prepaid asset for contributions the Corporation has made to the pension plan in excess of pension expense. The measurement of the prepaid asset and the annual pension expense involves actuarial and economic assumptions.

The assumptions used in pension accounting relate to the expected rate of return on plan assets, the rate of increase in salaries, the interest-crediting rate, the discount rate, and other assumptions. See Note 18 "Employee Benefits" on page 98 for the specific assumptions used by the Corporation.

The annual pension expense for the Corporation is currently most sensitive to the return on asset assumption. For example, each 25 basis point reduction in the 2003 expected rate of return of 7.5% would increase the Corporation's 2003 pension expense by approximately $8 million. In addition, each 25 basis point reduction in the 2003 discount rate of 6.5% would impact the Corporation's 2003 pension expense by approximately $1 million.

SUMMARY OF RESULTS

(All comparisons are to the prior year unless otherwise specified)

Net income was $3.3 billion, or $2.80 per diluted share. This is compared to net income of $2.6 billion, or $2.24 per diluted share.

Net interest income remained relatively unchanged at $8.6 billion. Decreases resulting from the intentional reduction of certain segments of the loan portfolio were offset by increases in Retail core deposits and the benefit of lower interest rates.

Noninterest income of $8.2 billion increased $1.0 billion, and as a percentage of total revenue increased to 48.9% from 45.5%. This increase was primarily due to growth in credit card revenue resulting from the acquisition of the Wachovia credit card business in the third quarter of 2001, and the consolidation of Paymentech, Inc. beginning January 1, 2002.

Noninterest income included numerous offsetting items, including net investment security gains of $165 million compared to losses of $66 million. The gain included a $261 million gain on sale of the interest in the GE Monogram joint venture, partially offset by net losses in the investment portfolios. Also included in the change in noninterest income were the $129 million increase in service charges on deposits, increases in asset-backed finance and underwriting fees in capital markets of $48 million, and $42 million in fee income related to increased annuity and mutual fund sales. In addition, noninterest income included $42 million of mark-to-market adjustments on the credit derivatives portfolio used to hedge exposure to specific credits in the loan portfolio, compared to $6 million in the prior year. Partially offsetting these increases were various asset writedowns. In addition, 2001 included $73 million of gains on the sales of the Corporation's interests in EquiServe Limited Partnership and Star Systems, an ATM network.

Total noninterest expenses of $9.6 billion increased by $30 million including a $414 million reduction in restructuring related charges. Excluding restructuring related charges and reversals, the change is a result of increased marketing expenditures of $192 million, $118 million for the consolidation of Paymentech and Anexsys, $89 million for terminating and renegotiating certain vendor contracts, and increased compensation expense for incentives and stock options.

Provision for credit losses was $2.5 billion for the year ended December 31, 2002, a decrease of $23 million. The allowance for credit losses was $4.5 billion as of December 31, 2002, unchanged from December 31, 2001. As a percentage of period end loans, the allowance increased to 3.20% from 2.97%. This is due to the reduction of the overall loan portfolio from $156.7 billion to $148.1 billion.

BALANCE SHEET ANALYSIS

In 2002, the Corporation took actions relating to both the asset and liability sides of the balance sheet in order to defensively position itself for a higher rate environment. On the asset side, the treasury investment portfolio was repositioned for rising rates, and the Corporation adjusted the funding of the balance sheet to selectively lengthen maturities and fix rates.

The Corporation's loan portfolio was $148.1 billion compared with $156.7 billion, a decrease of $8.6 billion, or 5%. Commercial Banking loans totaled $61.9 billion compared to $72.5 billion, a decrease of $10.6 billion, or 15%. Reductions of $8.5 billion and $1.8 billion in commercial and industrial and commercial real estate loans, respectively, reflected the impact of risk management initiatives to reduce aggregate risk, risk in specific credits and to be properly compensated for risks taken. Card Services loans totaled $11.6 billion compared to $6.8 billion, an increase of $4.8 billion, or 71%, reflecting lower attrition and higher utilization. During the year, 4.9 million credit card accounts were opened, an increase of 25%. Retail loans totaled $67.7 billion compared with $69.6 billion, a decrease of $1.9 billion, due primarily to the intentional reduction of the discontinued brokered home equity portfolios and auto lease offset by growth in the on-going home equity portfolio.

Investment securities totaled $67.6 billion compared with $60.9 billion. This increase of $6.7 billion, or 11%, was driven by an increase of $4.2 billion, or 18%, in retained interests in securitized credit card receivables, a $1.8 billion, or 7%, increase in U.S. government agencies, an increase of $639 million, or 23%, in equity securities, and an increase of $342 million, or 8%, in other debt securities. Partially offsetting these increases were the previously mentioned asset writedowns.

Total deposits were $170.0 billion compared to $167.5 billion, an increase of $2.5 billion, or 1%. Savings deposits totaled $88.9 billion compared to $80.6 billion, an increase of $8.3 billion, or 10%. Demand deposits totaled $34.3 billion compared to $32.2 billion, an increase of $2.1 billion, or 7%. Offsetting these increases was a decrease in time deposits of $7.7 billion, or 20%, to $30.5 billion from $38.2 billion.

The Corporation is managed on a line of business basis. The business segments' financial results presented reflect the current organization of the Corporation. The following table summarizes net income (loss) by line of business for the periods indicated.

For the Year Ended December 31,	**2002**[1]	2001[2]	2000
(In millions)			
Retail	**$1,390**	$1,181	$367
Commercial Banking	**617**	700	(92)
Card Services	**1,166**	907	(1)
Investment Management	**411**	362	322
Corporate	**(289)**	(468)	(1,107)
Income (loss) before cumulative effect of change in accounting principle	**3,295**	2,682	(511)
Cumulative effect of change in accounting principle, net of taxes of ($25)	**—**	(44)	—
Net income (loss)[3]	**$3,295**	$2,638	$(511)

(1) During 2002, the dealer commercial services business was transferred from Retail to Commercial Banking. All results for prior periods conform to the current line of business organization.

(2) During 2001, the tax-oriented portfolio of corporate investments was transferred to Commercial Banking, while the principal investments and fixed income portfolios were transferred to Corporate. All results for prior periods conform to the current line of business organization.

(3) Net income includes restructuring-related charges (reversals) net of tax expense (benefit) of $(40) million, $222 million and $102 million for 2002, 2001, and 2000, respectively

Description of Methodology

The results of the business segments are intended to reflect each segment as if it were a stand-alone business. The management reporting process that derives these results allocates income and expenses using market-based methodologies. Funds transfer pricing is used to allocate interest income and expense to each line of business. A portion of the Corporation's interest rate risk position is currently included in Corporate. The lines of business are assigned economic capital that reflects the underlying risk in that business. See the "Capital Management" section on page 77 for a discussion of the economic capital framework.

Historically, the costs of certain support units were allocated to the lines of business based on factors other than usage, such as headcount and total assets. The methodology was changed in the third quarter of 2000 to better reflect the actual cost and usage of services provided and was consistently applied to all lines of business. As a result of this methodology change, costs allocated to Card Services decreased, while unallocated costs that are included in Corporate increased.

The information provided in the line of business tables beginning with the caption entitled "Financial Performance" is included herein for analytical purposes only and is based on management information systems, assumptions and methodologies that are under continual review by management.

The financial information and supplemental data presented in the tables below for the respective lines of business are reported on an actual basis. To assist with the analysis of underlying trends, a discussion of merger and restructuring-related charges and their impact on business segment results is included for 2000 on pages 52–53.

Retail

Retail provides a broad range of financial products and services, including deposits, investments, loans, insurance, and on-line banking to nearly 6.9 million households including 489,000 small business customers. 1.4 million of total households are registered on-line users.

Products and services are delivered to customers through approximately 32,000 employees, 1,795 banking centers in 14 states, a large network of ATM's, bankone.com, and 24-hour telephone banking. THE ONE® Card, issued by Retail, is one of the country's leading debit cards for individuals and small businesses, with 4.6 million cards issued.

Retail originates consumer credit nationwide through its banking centers, relationships with brokers, the Internet, and the telephone. Retail offers real estate-secured, education, tax refund, consumer installment and auto loans and leases to individuals. Retail is also a leading lender to small businesses.

N/A Not available due to changes in segment composition.

N/M Not meaningful.

(1) Net interest income-FTE includes tax equivalent adjustments of $22 million, $21 million and $25 million for the years ended December 31, 2002, 2001 and 2000, respectively.

(2) Net interest income is presented rather than gross interest income and gross interest expense because the Corporation relies primarily on net interest revenue to assess the performance of the segment and make resource allocations.

(3) Banking fees and commissions include insurance fees, documentary fees, commitment fees, mutual fund commissions, leasing fees, safe deposit fees, official checks fees, ATM interchange and miscellaneous other fee revenue.

(4) Credit card revenue includes credit card fees, debit card fees, merchant fees and interchange fees.

(5) Service charges on deposits include deficient balance fees, non-sufficient funds/overdraft fees and other service related fees.

(6) Restructuring-related charges (reversals) are allocated to each line of business for management reporting purposes. Restructuring-related charges (reversals) are discussed on pages 52–53 and in Note 4 "Restructuring-Related Activity" on page 89. Income before restructuring-related charges (reversals) for Retail, net of $(7) million, $38 million and $14 million of income taxes (benefit) was $1.4 billion, $1.2 billion and $392 million, for the years ended December 31, 2002, 2001 and 2000, respectively.

(7) Beginning in 2001, employees on long-term disability and employees of unconsolidated subsidiaries are excluded. Prior period data has not been reclassified.

(8) Loans include loans held for sale of $2.7 billion, $2.3 billion and $1.8 billion at December 31, 2002, 2001 and 2000, respectively. These amounts are not included in allowance coverage statistics. Prior periods have been recalculated to conform to current period presentation.

(9) Includes consumer balances that are placed on nonaccrual status when the collection of contractual principal or interest becomes 90 days past due.

(10) Nonperforming loans include loans held for sale of $3 million at December 31, 2002. There were no nonperforming loans held for sale at December 31, 2001 and 2000. These amounts are not included in allowance coverage statistics. Prior periods have been recalculated to conform to current period presentation.

2002 compared to 2001

Retail reported net income of $1.4 billion, up $209 million, or 18%, primarily reflecting reductions in noninterest expense.

Net interest income declined to $4.9 billion for the year, down $90 million, or 2%, driven by the intentional reduction of $5.1 billion of average loan balances for the vehicle lease and discontinued brokered home equity portfolios. This decline was partially offset by a 10% increase in core deposits, which include demand and savings products.

Noninterest income was $1.4 billion, down $21 million, or 1%, primarily as a result of lower mortgage-related revenue and lower revenue from the reduction of non-branded ATMs, partially offset by higher deposit service charges and debit card revenue.

Noninterest expense was $3.2 billion, a decline of $320 million, or 9% including a $122 million reduction in restructuring-related charges. Excluding restructuring costs, improvements were driven by lower staffing, the absence of goodwill amortization, lower fraud and operating losses and lower ATM expenses. The decline was partially offset by additional investments in marketing and benefits costs.

The provision for credit losses was $910 million, down $97 million, or 10%, due to the absence of reserve increases and reductions in net charge-offs in discontinued brokered home equity and vehicle leases offset by higher charge-offs in on-going home equity and vehicle loans.

The allowance for credit losses of $1.0 billion represented 1.57% of period-end loans, an increase from 1.53% in the prior year. Nonperforming assets were $1.6 billion, up $106 million, or 7%, due to increases in other real estate owned offset by nominal declines in commercial loans and consumer loans.

2001 compared to 2000

Retail reported net income of $1.2 billion in 2001 compared to $367 million in 2000. The 2000 net income reflected an adjustment for significant items totaling $456 million after-tax. The $358 million, or 43%, year-over-year increase, on an adjusted basis was principally driven by a $260 million reduction in noninterest expense.

Net interest income was $5.0 billion for the year, up $127 million, or 3%, due to improved spreads on the indirect auto loan portfolio and 11% growth in average home equity outstandings, partially offset by a narrower deposit margin. Loan balances were down $4.9 billion as Retail managed reductions in certain segments of the loan portfolio while direct home equity loans grew.

Deposits generated a narrower margin compared to 2000, reflecting the lower rate environment and a decline in average balances. Favorable mix changes from time to savings helped mitigate the impact of lower rates and balances. More positive trends emerged late in 2001 as average demand deposit balances posted 2% growth from the fourth quarter of 2000 to the fourth quarter of 2001.

Noninterest income was $1.4 billion, up $824 million compared to 2000. The absence of lease residual losses and higher fee revenue from deposit accounts and investment sales was partially offset by gains from the sale of miscellaneous assets in 2000. Sales of mutual funds and annuities totaled $4.9 billion in the year, up $595 million, or 14%.

Noninterest expense was $3.6 billion, down $455 million, or 11%, driving an improvement in the efficiency ratio from 74% in 2000 to 56% in 2001. The consolidation of operating sites in 2000 and 2001 and better overall expense management in Retail, and throughout the Corporation, drove the efficiency improvement. In addition, staffing levels were down 2,600 year-over-year leading to a 4% decrease in salaries and employee benefits expense.

The provision for credit losses was $1.0 billion, up $142 million, or 16%, from 2000. Net charge-offs were $820 million, up $278 million. Charge-offs on brokered home equity loans and auto loans and leases were the primary drivers of Retail's year-over-year increase.

Nonperforming assets were $1.4 billion, up $454 million, or 46%, compared to 2000, driven primarily by an increase in brokered home equity nonperforming loans. Nonperforming assets were 2.08% of related assets in the year, up from 1.33%. The allowance for credit losses expressed as a percent of year-end loans increased to 1.53% compared to 1.15% a year ago.

Commercial Banking

Commercial Banking offers a broad array of products, including global cash management, treasury services, capital markets, commercial cards, lending and other noncredit products and services to corporate banking and middle market banking customers.

Corporate banking serves primarily large corporations, financial institutions and commercial real estate entities. The Corporation's capital markets business is engaged in the origination, trading, and distribution of asset-backed securities, investment grade and high yield securities, derivatives, tax-exempt securities, foreign exchange, government bonds and tax oriented investments. Capital markets is also actively engaged in loan syndications, market research, advisory services, and private placements.

Middle market banking serves the customer segment with annual revenues from approximately $10 million to $500 million, which includes corporations, municipalities and not-for-profit entities. These customers use a wide variety of services, with nearly one-third using the Corporation exclusively. Since privately held companies comprise the vast majority of the middle market customer base, providing credit is fundamental to the success of this business. The loan portfolio is diversified across a broad range of industries and geographic locations. In addition to credit, this customer segment actively uses the Corporation's cash management, international, capital markets, and investment management products and services.

(11) Net interest income-FTE includes taxable equivalent adjustments of $91 million, $79 million and $111 million for the years ended December 31, 2002, 2001 and 2000, respectively.

(12) Results include the effect of consolidating Anexsys, LLC which had an impact on individual line items of revenue and expense but no impact on net income for the year ended December 31, 2002. The consolidation resulted in a $46 million increase in net interest income, a $19 million increase in noninterest income and a $65 million increase in noninterest expense.

(13) Fiduciary and investment management fees include asset management fees, personal trust fees, other trust fees and advisory fees.

(14) Trading income primarily includes realized and unrealized mark-to-market changes from trading assets, derivative financial instruments and foreign exchange products.

(15) Prior period data has been adjusted for the transfer of the national retail lockbox operations and cash vault services business from Commercial Banking to Corporate in 2002.

(16) Restructuring-related charges (reversals) are discussed on pages 52–53 and in Note 4 "Restructuring-Related Activity" on page 89. Income (loss) before restructuring-related charges (reversals) for Commercial Banking, net of $(1) million, $27 million and $(1) million of income taxes (benefit), was $614 million, $746 million and $(93) million, for the years ended December 31, 2002, 2001 and 2000, respectively.

(17) Prior periods have been adjusted to conform to material organizational changes.

(18) Capital markets includes trading income and underwriting, syndicated lending and advisory fees.

(19) Full-time headcount in 2000 has been reclassified to reflect the movement of support and other administrative personnel into the respective business units reported.

(20) Loans include loans held for sale of $235 million, $83 million and $488 million at December 31, 2002, 2001 and 2000, respectively. These amounts are not included in allowance coverage statistics. Prior periods have been recalculated to conform to current period presentation.

(21) Nonperforming loans include loans held for sale of $19 million at December 31, 2002. There were no nonperforming loans held for sale at December 31, 2001, and 2000. These amounts are not included in allowance coverage statistics. Prior periods have been recalculated to conform to current period presentation.

2002 compared to 2001

Commercial Banking reported net income of $617 million for 2002, down $83 million, or 12%, from 2001, due to lower net interest income offset by lower income taxes, lower credit provision and the absence of restructuring charges in 2002.

Net interest income was $2.5 billion, down $298 million, or 11%, reflecting a reduction in average loans of $14.4 billion or 18%. Average loans decreased $10.5 billion, or 24%, in corporate banking and $3.9 billion, or 11%, in middle market.

Mark-to-market adjustments on the credit derivatives portfolio positively impacted the current year by $42 million and the prior year by $6 million. Given the mark-to-market accounting treatment of this portfolio, continued volatility is expected. Excluding the impact of the gain in each period, noninterest income increased $26 million, or 2%, primarily as a result of the following items: banking fees and commissions increased $62 million, or 9%, due to growth in asset-backed finance underwriting and other capital markets products; service charges on deposits increased $96 million, or 16%, reflecting a shift in payment for services to fees due to the lower value of customers' compensating deposit balances; trading revenue decreased by $57 million, or 22%, primarily reflecting a decrease in fixed income trading revenues; and other income decreased by $63 million primarily due to higher losses in tax-oriented investments and various asset write-downs.

Noninterest expense was $2.3 billion, up $15 million, or 1%, from 2001 including a $77 million reduction in restructuring-related charges. Excluding restructuring costs, noninterest expense increased by $92 million, or 4%, as a result of a $65 million impact from the consolidation of Anexsys, LLC, as well as higher incentive compensation and systems conversion-related expenses.

The effective tax rate (on an FTE basis) of 20.8% in 2002 decreased from 26.4% in 2001 primarily due to an increase in tax credits generated from tax oriented investments combined with a decrease in pre-tax income in 2002.

The provision for credit losses was $994 million, down $79 million, or 7%, from 2001. Net charge-offs were $994 million, down $48 million, or 5%, and represented 1.51% of average loans, up from 1.30% in 2001. Corporate banking net charge-offs were $639 million, or 1.94% of average loans, up from 1.47% in 2001. Middle market net charge-offs were $355 million, or 1.08% of average loans, down slightly from 1.09% of average loans in the prior year. For additional detail on Commercial Banking net charge-offs, see the table on page 67.

The allowance for credit losses at December 31, 2002, was $3.1 billion, down $8 million from the prior year. This represented 4.98% of year-end loans and 166% of nonperforming loans compared with 4.25% and 145%, respectively, at December 31, 2001. Nonperforming loans were $1.9 billion, down $253 million, or 12%, from year-end 2001. Corporate banking nonperforming loans at year-end were $873 million, down $281 million, or 24%, from the prior year. Middle market nonperforming loans were $1.0 billion at December 31, 2002, up $28 million, or 3%, from the prior year. For additional detail on Commercial Banking nonperforming assets and the allowance for credit losses, see the tables on page 66 and page 69 respectively.

2001 compared to 2000

Commercial Banking reported net income of $700 million for 2001, up $792 million from 2000, primarily due to a significantly lower credit provision. 2001 results reflected strategic efforts to reduce corporate banking credit exposure and improve the cross-sell of capital markets and global treasury services products.

Net interest income was $2.8 billion, down $121 million, or 4%, reflecting the earnings impact of lower average loan balances resulting from efforts to reduce credit risk exposure.

Noninterest income was $1.6 billion, up $221 million, or 16%. Banking fees and commissions increased $110 million, or 18%, due to growth in the asset-backed and investment grade underwriting business and higher account sweep fees. Service charges on deposits increased $95 million, or 18%, reflecting improvement in global treasury services' volumes and pricing, as well as a shift in payment for services to fees due to the lower value of customers' compensating deposit balances. Trading revenue increased $86 million, or 47%, primarily reflecting improvement in fixed income trading activities. Other income decreased by $69 million mainly due to losses on the sale of loans.

The provision for credit losses was $1.1 billion, down $1.1 billion, or 52%, from 2000. In 2000, the allowance for credit losses increased substantially as the provision exceeded net charge-offs by $1.7 billion. In 2001 net charge-offs were $1.0 billion, up $480 million, or 85%, and represented 1.30% of average loans, up from 0.64% in 2000.

Noninterest expense was $2.3 billion, up $25 million from 2000, and included $73 million of additional restructuring-related charges. Excluding restructuring costs, noninterest expense declined $50 million, or 2%, reflecting the impact of waste-reduction efforts and lower headcount. The 2001 efficiency ratio improved to 53% from 54% in 2000.

Card Services

Card Services (previously referred to as Credit Card) offers customers more than 1,200 co-brand, affinity and other cards. These cards include some of the leading corporations, financial institutions, universities, sports franchises and affinity organizations. All of these cards carry the respective Visa® or MasterCard® brand names.

With 50.4 million cards in circulation, Card Services is the third largest credit card provider in the United States and the largest Visa credit card issuer in the world. Card Services is also a leader in online card marketing and customer service, with more than 3.4 million registered users of its website.

Through securitization the Corporation transforms a substantial portion of its credit card receivables into securities, which are sold to investors. Securitization impacts the Corporation's consolidated balance sheet by removing those credit card receivables that have been sold and by reclassifying those credit card receivables whose ownership has been transformed into certificate form (referred to as "Seller's Interest") from loans to investments. Gain or loss on the sale of credit card receivables, net of amortization of transaction costs and amortization from securitization repayments, is reported as securitization income in other income. Securitization also impacts the Corporation's consolidated income statement by reclassifying interest income and fees, interchange income, credit losses and recoveries related to securitized receivables as securitization income. Credit card interest income and fees, interchange income, credit losses and recoveries related to credit card receivables that have been converted to certificate form are reclassified as investment income in net interest income.

The Corporation evaluates its Card Services line of business trends on a managed basis, which treats the securitization as a secured financing transaction and assumes that receivables have not been sold and are still on the balance sheet. The Corporation manages its Card Services operations on a managed basis because the receivables that are securitized are subject to underwriting standards comparable to the owned portfolio and are serviced by operating personnel without regard to ownership. The Corporation believes that investors should be informed, and often request information, about the credit performance of the entire managed portfolio in order to understand the quality of the Card Services originations and the related credit risks inherent in the owned portfolio and retained interests in securitizations. In addition, the Corporation funds its Card Services operations, reviews operating results and makes decisions about allocating resources, such as employees and capital, on a managed basis. See "Loan Securitizations" on page 74 and Note 9 "Credit Card Securitizations," on pages 94–95 for additional information related to the Corporation's securitization activity.

The following table presents certain Card Services information on a managed basis.

Card Services – Managed Basis	**2002**[23]	2001	2000

For additional footnote detail see pages 40 and 43.

(22) Net interest income-FTE did not have tax equivalent adjustments for the years ended December 31, 2002, 2001 and 2000.

(23) Results include the effect of consolidating Paymentech beginning in the first quarter of 2002. As a result of this consolidation net interest income included $13 million, noninterest income included $322 million and noninterest expense included $285 million. There was no impact on net income.

(24) Restructuring-related charges (reversals) are discussed on pages 52–53 and in Note 4 "Restructuring-Related Activity" on page 89. Income (loss) before restructuring-related charges (reversals) for Card Services, net of $(7) million, $22 million and $3 million of income taxes (benefit), was $1.1 billion, $946 million and $3 million for the years ended December 31, 2002, 2001 and 2000, respectively.

(25) Loans include loans held for sale of $4.0 billion, $1.7 billion and $1.9 billion at December 31, 2002, 2001 and 2000, respectively. These amounts are not included in allowance coverage statistics. Prior periods have been recalculated to conform to current period presentation.

(26) Approximately 4.5 million previously acquired inactive accounts were purged during 2002 and prior periods have been recalculated to conform to current period presentation.

(27) Approximately 1 million registered users were purged in late 2001 due to inactivity.

(28) The investor portion of accrued interest receivable was $685 million and is recorded in other assets at December 31, 2002.

(29) The current year lagged loss rate includes Wachovia net credit losses while the prior year average loans only includes five months of Wachovia balances. The prior year lagged loss rate includes five months of Wachovia net credit losses while the 2000 average loans do not include Wachovia balances. The 2001 ratio includes Wachovia net charge-offs but excludes Wachovia loans.

2002 compared to 2001

Card Services reported net income of $1.2 billion, up $259 million, or 29%. 2002 results reflected twelve months of earnings from the acquisition of the Wachovia credit card business while 2001 results reflected five months of Wachovia earnings.

Total reported revenue was $4.9 billion, up $843 million or 21%. Net interest income was $1.3 billion, down $9 million, or 1%, reflecting lower spreads due to competitive pricing partially offset by higher volumes. Excluding the $322 million impact of the Paymentech consolidation effective January 1, 2002, noninterest income was $3.3 billion, an increase of $530 million, or 19%, primarily driven by higher volume related revenue and higher income earned on securitized loans.

Excluding the $285 million impact from the consolidation of Paymentech, noninterest expense was $2.1 billion, a decrease of $39 million, or 2%, resulting from continued expense management and the impact of restructuring-related charges (reversals) partially offset by higher marketing expense.

The reported provision for credit losses was $531 million, an increase of $139 million, or 35%, as a result of portfolio growth.

Securitization gains were $55 million resulting from the securitization of $6.8 billion in credit card receivables. This compares with securitization gains of $28 million resulting from the securitization of $3.8 billion in credit card receivables in the previous year.

Card Services has a significant co-branding relationship with United Airlines, the Mileage Plus® award program. In the fourth quarter of 2002, United Airlines announced their intent to reorganize under Chapter 11 of the U.S. Bankruptcy Code. The outcome is uncertain at this time, and could have a significant impact on Card Services. If United Airlines is unsuccessful, and in the worst scenario is liquidated, Card Services' net income would be negatively impacted by the dissolution of the marketing agreement, loss of fee and interest income and increased marketing expense to encourage customers to continue card usage. Management expects the amount could be as high as several hundred million dollars.

2001 compared to 2000

Card Services reported net income of $907 million in 2001, up from a net loss of $1 million. Adjusted for $522 million after-tax of significant items, 2000 net income was $521 million. Increased reported net income reflected lower expenses, the addition of the Wachovia credit card business and higher income on securitized loans, partially offset by increased credit costs and lower spreads.

Total reported revenue was $4.0 billion, up $776 million or 24%. Net interest income was $1.3 billion, down $23 million, or 2%, reflecting lower spreads partially offset by the addition of the Wachovia credit card business and higher fees.

Noninterest income was $2.7 billion, an increase of $799 million, or 41%. 2000 noninterest income included $467 million in significant items. Excluding these charges, noninterest income increased $332 million, or 14%, reflecting the Wachovia credit card business, higher income on securitized loans and increased securitization activity.

The reported provision for credit losses was $392 million, an increase of $91 million, or 30%, as a result of portfolio growth partially offset by lower provision funding.

Noninterest expense totaled $2.2 billion, a decrease of $766 million, or 26%. 2000 noninterest expense included significant items of $321 million. Excluding these charges, noninterest expense decreased $445 million, or 17%, reflecting lower fraud and operational losses, processing costs and a decrease in internally allocated costs related to a mid-year 2000 change in methodology. The decline from 2000 also reflected the sale of international operations in the second quarter. These reductions were partially offset by the addition of the Wachovia credit card business, additional restructuring reserves and higher marketing expense.

Securitization gains were $28 million resulting from the securitization of $3.8 billion in credit card receivables. There were no securitizations entered into in 2000.

Investment Management

The Investment Management Group (IMG) provides investment, insurance, trust and private banking services to individuals. IMG also provides investment and investment related services, including retirement and custody services, securities lending and corporate trust to institutions.

IMG's registered investment advisory arm, Banc One Investment Advisors, ranks among the nation's top asset managers with $162.0 billion in assets under management. In addition, IMG manages One Group® mutual funds, one of the largest mutual fund complexes with over 50 funds and $101.2 billion in assets under management. Performance of the funds continues to remain strong. 89% of the assets are in funds ranked 3 stars or better and 50% of the assets are in funds ranked 4 stars or better by Morningstar®. During 2002 the distribution function for the One Group mutual funds was brought in-house.

Private client services (PCS) helps manage and build wealth for high net worth clients. PCS provides integrated financial advice and services such as brokerage, investments and alternative asset management, personal trust, private banking, insurance and financial planning through nearly 700 client advisors.

The retail investment services (RIS) business serves the Corporation's retail customer base by delivering high quality investment and insurance products and services through nearly 3,100 licensed bankers in 1,795 banking centers in 14 states.

The global corporate trust business ranks among the largest providers in the country for bond trustee services. These services are provided to governmental and municipal entities, as well as a broad range of middle market and large institutions.

(30) Net interest income-FTE did not have tax equivalent adjustments for the years ended December 31, 2002, 2001 and 2000, respectively.

(31) Restructuring-related charges (reversals) are discussed on pages 52–53 and in Note 4 "Restructuring Related Activity" on page 89. Income before restructuring-related charges (reversals) for IMG, net of $244 million and $222 million of income taxes, was $411 million and $374 million for the years ended December 31, 2002 and 2001, respectively.

(32) Includes broker/dealers, trust companies, and registered investment advisors that sell, or offer, One Group funds.

(33) One Group funds invested in other One Group funds and other mutual funds sub-advised.

(34) Morningstar changed the rating process effective June 30, 2002 with no prior period restatements.

(35) Certain adjustments, primarily definitional in nature, were made to prior periods to conform to the current period presentation. Ending balances are estimated.

(36) During 2002, PCS offices that were in close proximity were consolidated to realize operational efficiencies.

2002 compared to 2001

IMG reported net income of $411 million, up $49 million from the prior year. Net interest income decreased $4 million, or 1%, reflecting narrower spreads on deposits and an increase in other funding costs.

Noninterest income, which is principally fiduciary, investment and banking fees and commissions, increased $36 million, or 3%. The principal driver of growth in noninterest income was an 11% increase in retail brokerage sales, partially offset by lower management fee revenue resulting from weak market conditions and a shift in assets under management from equities to money market and fixed income assets.

Noninterest expense was $1.0 billion, a decrease of $23 million, or 2%, excluding the impact of the restructuring charges and reversals. The principal drivers of the decrease were lower headcount and other cost savings initiatives.

The provision for credit losses was $35 million, a $3 million decrease from the prior year. The allowance for credit losses increased $15 million to $40 million reflecting the deterioration in credit quality of certain large loans. Nonperforming assets were $72 million, a $29 million increase, reflecting the aforementioned deterioration.

Assets under management were $162.0 billion, an increase of $19.4 billion, or 14%, as a result of strong money market and fixed income asset growth, partially offset by a decline in equity assets, reflecting weak market conditions. One Group mutual fund assets grew to $101.2 billion, an increase of $17.7 billion, or 21%.

2001 compared to 2000

IMG reported net income of $362 million, up $40 million. Net interest income increased $18 million, or 4%, reflecting a 5% increase in average loans partially offset by narrower deposit spreads and a 3% decrease in average deposits.

Noninterest income, which is principally fiduciary, investment and banking fees and commissions, increased $98 million, or 8%. Beginning in November 2000, fees associated with the administration of the One Group mutual funds were recorded as revenue, with a corresponding increase in expense. Prior to that, a third-party administrator incurred such fees and expenses, which totaled $80 million in 2000. Excluding the impact of this change, noninterest income increased $18 million reflecting growth in retail brokerage sales offset by lower investment advisory fees on equity assets because of overall market conditions.

Noninterest expense before restructuring-related charges increased $3 million, principally related to expenses of $80 million associated with the administration of the One Group mutual funds, offset by a decrease in expenses related to tighter cost control, lower headcount and reduced operating losses. Excluding the expenses associated with the administration of the One Group mutual funds, noninterest expenses declined 7%.

Provision for credit losses increased $25 million, principally related to higher net charge-offs resulting from a difficult economic climate and loan growth.

Assets under management totaled $142.6 billion, up 9% from the end of 2000. One Group mutual fund assets under management increased 19% to $83.5 billion. One Group mutual fund performance continued to remain strong, with 88% of these funds rated three stars or higher by Morningstar. Average assets under management increased 3% compared with 2000, driven principally by a 12% increase in One Group mutual funds.

Corporate

Corporate includes treasury, fixed income and principal investment portfolios, mortgage-servicing assets, unallocated corporate expenses, and any gains or losses from corporate transactions. The treasury group within the Corporate line of business risk manages mortgage-servicing assets on behalf of the Corporation.

(37) Net interest expense-FTE includes tax equivalent adjustments of $32 million, $25 million and $2 million for the years ended December 31, 2002, 2001 and 2000, respectively.

(38) Net interest expense-FTE primarily includes treasury results and interest spread on investment related activities.

(39) Noninterest income primarily includes the gains and losses from investment activities and other corporate transactions.

(40) Restructuring-related charges (reversals) are discussed on pages 52–53 and in Note 4 "Restructuring-Related Activity" on page 89. Loss before merger and restructuring-related charges (reversals) for Corporate, net of $(8) million, $35 million and $44 million in income tax expense (benefit), was $302 million, $409 million and $1.0 billion for the years ended December 31, 2002, 2001 and 2000, respectively.

(41) Noninterest expense primarily includes corporate expenses not allocated to the lines of business.

(42) Treasury investments may include U.S. government and agency debt securities, mortgage and other asset backed securities and other fixed income investments.

(43) Principal investments include primarily private equity investments and venture capital fund investments.

2002 compared to 2001

Corporate net loss was $289 million, compared with a net loss of $468 million. Excluding the impact of restructuring charges/reversals, net loss was $302 million in 2002 and $409 million in 2001.

Net interest expense was $292 million, an improvement of $372 million, primarily a result of lower interest rates. During the latter part of the year the Corporation took actions to position the balance sheet more defensively for rising interest rates. These actions primarily involved raising fixed rate funding and swapping existing floating rate liabilities to fixed rate. As a result, the Corporation significantly shifted its interest rate risk posture as further detailed in the "Market Risk Management Non-Trading Activities" discussion beginning on page 61.

Net investment securities gains were $178 million reflecting the gain on the sale of the GE Monogram joint venture of $261 million, partially offset by net losses in the investment portfolios. In 2001, net investment losses were $54 million due to writedowns in the principal investments portfolio partially offset by treasury investment portfolio gains. The valuation adjustments in principal investments in 2002 and 2001 were primarily a result of the overall decline in the value of the equity market, the interest rate environment and a decline in the value of private investments as a result of existing economic conditions.

Other income was $147 million, compared with $304 million. The decrease of $157 million was primarily a result of mortgage related losses and valuation adjustments on other investments in 2002, and $73 million of gains realized in 2001 on the sales of the Corporation's interests in EquiServe Limited Partnership and Star Systems, an ATM network.

Corporate noninterest expenses were $558 million, compared with $426 million in the prior year. The current year increase was primarily due to salaries and benefits, including stock options, and one-time charges of $89 million related to the in-sourcing of certain vendor contracts.

2001 compared to 2000

Corporate reported a net loss of $468 million, compared with a net loss of $1.1 billion. Excluding restructuring charges of $59 million after-tax, the net loss in 2001 was $409 million. Excluding restructuring charges and significant items of $73 million and $778 million, after-tax, respectively, the net loss in 2000 was $256 million.

Net interest expense increased to $664 million from $458 million in 2000. These results were principally due to changes in the treasury investment portfolio and an increase in unallocated equity.

Noninterest income was $206 million compared with $15 million in 2000. Excluding significant item charges of $436 million, noninterest income in 2000 was $451 million. The $245 million decrease from 2000 was primarily driven by higher investment security losses resulting from market conditions.

Unallocated corporate expenses were $426 million compared with $1.3 billion. Excluding restructuring charges and significant items, unallocated corporate expenses were $332 million in 2001 versus $473 million in 2000. The $141 million reduction from 2000 was principally due to increased allocations.

Significant Items

In 2000, the Corporation initiated certain actions (e.g., decisions related to staff reductions and the use of existing real estate and fixed assets), made certain decisions regarding its business activities (e.g., substantially reducing the vehicle lease portfolio), reacted to changes in market conditions (e.g., decline in used car market, investment portfolio repositioning), and applied assumptions reflective of current market conditions, including current deterioration in performance, in its valuation process (e.g., interest-only strip, purchased credit card relationships). The results of these actions were adjustments to the carrying value of related assets and liabilities. These items were identified as significant items to differentiate these actions from ongoing/routine business activities.

The Corporation determined and recorded the adjustments for these actions (in general) as follows:

- Severance costs related to staff reductions were based on the identified number of employees terminated.
- Real estate and fixed asset costs were based on the estimated costs to close and consolidate facilities, including the write-off of capitalized costs.
- Due to overcapacity in the used automobile market, especially with sport utility vehicles (a major component of the Corporation's lease portfolio), estimated residual values for leased automobiles declined significantly. Accordingly, the Corporation wrote down the residual value related to these automobile leases. In addition, the Corporation planned to sell certain vehicle loans, which were written down to fair value. The Corporation's lease financing accounting policy is presented on page 85.
- The losses on the repositioning of the investment portfolio, as part of the Corporation's overall investment strategy, were based on market prices.
- The Corporation evaluates the fair value of its interest-only strip resulting from securitization transactions at both the date of the securitization and the balance sheet date. In 2000, the Corporation adjusted these assumptions and estimates to reflect the change in the fair value for these types of assets and, accordingly, recorded a writedown in its interest-only strip. For a more detailed discussion of the factors used in this process, see Note 9 "Credit Card Securitizations" on pages 94-95.
- The writedown of purchased credit card relationship intangibles reflected revised assumptions in the Corporation's discounted cash flow analysis reflecting higher cost of funds assumptions, consistent with the interest rate environment, and loss trends resulting from deterioration in performance.

As a result of the significant items noted and the restructuring plans initiated in 2000 and 2001, the Corporation's noninterest expense, before restructuring-related reversals was $9.6 billion for 2002, which represented a reduction in annualized noninterest expense of approximately $1.2 billion and decreased headcount of approximately 9,000 employees from June 30, 2000.

Results in 2000 included the negative impact of $2.2 billion after-tax ($3.3 billion pre-tax) of significant items. Business Segments – Table 1 – summarizes these significant items by action taken within each line of business. Income Statement Line – Table 2 – reflects these same actions by income statement line. Both tables exclude merger and restructuring–related charges.

(1) Includes $75 million of incentive accruals reversed in the fourth quarter relating to the full year in which existing plans were adjusted to a pay for performance basis.

(2) At December 31, 2000, management discontinued its plan to dispose of these loans, and as such, are considered part of the general portfolio.

CONSOLIDATED RESULTS

Net Interest Income

Net interest income represents the spread on interest earning assets over interest bearing liabilities as well as items such as loan fees, cash interest collections on problem loans, dividend income, interest reversals, and income or expense on derivatives used to manage interest rate risk.

				Percent Change	
For the Year Ended December 31,	**2002**[3]	2001	2000	2002-2001	2001-2000
(Dollars in millions)					
Net interest income-FTE basis [1] [2]	**$ 8,740**	$ 8,769	$ 8,974	—%	(2)%
Average earning assets	**231,401**	237,869	241,058	(3)	(1)
Net interest margin	**3.78%**	3.69%	3.72%		

(1) Net interest income-FTE includes taxable equivalent adjustments of $145 million, $131 million, and $138 million for years ended December 31, 2002, 2001 and 2000, respectively.

(2) Net interest income is presented rather than gross interest income and gross interest expense because the Corporation relies primarily on net interest revenue to assess performance.

(3) Results include the effects of the consolidation of Paymentech, Inc. and Anexsys, LLC.

2002 compared to 2001

While the net interest margin increased to 3.78% from 3.69%, net interest income declined $29 million to $8.7 billion from $8.8 billion. This decrease was primarily a result of intentionally reducing earning assets such as large corporate loans, vehicle leases and brokered home equity loans. In addition, the Corporation took actions to both the assets and liabilities sides of the balance sheet to defensively position itself for a higher rate environment.

2001 compared to 2000

Net interest income declined $205 million from that reported in 2000, largely due to lower earning assets. The decline in average earning assets was attributed to efforts to reduce commercial credit exposure, discontinued brokered home equity loan and auto lease outstandings, and also reflected lower credit card receivables.

Noninterest Income

The components of noninterest income for the periods indicated are:

				Percent Change	
For the Year Ended December 31,	**2002** [1]	2001	2000	2002-2001	2001-2000
(Dollars in millions)					
Banking fees and commissions	**$1,775**	$1,731	$1,537	3%	13%
Credit card revenue	**3,816**	2,775	2,299	38	21
Service charges on deposits	**1,578**	1,449	1,310	9	11

Investment securities gains (losses)	**165**	(66)	(235)	N/M	(72)
Trading	**224**	220	134	2	64
Other income (losses)	**(62)**	360	(738)	N/M	N/M
Total noninterest income	**$8,236**	$7,223	$5,090	14	42
Noninterest income to total revenue	**48.9%**	45.5%	36.6%		

N/M Not meaningful.

(1) Results include the effects of the consolidation of Paymentech, Inc. and Anexsys, LLC.

Components of noninterest income that are primarily related to a single business segment are discussed within that business segment rather than the consolidated section.

2002 compared to 2001

Banking fees and commissions of $1.8 billion increased $44 million, or 3%. This increase was primarily the result of increased annuity and mutual fund sales, as well as from growth in asset-backed finance and other underwriting fees in capital markets, partially offset by lower mortgage-related revenue.

Credit card revenue of $3.8 billion increased $1.0 billion, or 38%. This increase was due to the addition of the Wachovia credit card business, consolidation of Paymentech, higher volume-related revenue and higher income earned on securitized loans.

Service charges on deposits of $1.6 billion increased $129 million, or 9%. This increase primarily reflected improvement in global treasury services as clients shifted their payment method to fees due to the lower value of their compensating deposit balances.

Net investment gains were $165 million compared to losses of $66 million. Included in 2002 results was the $261 million gain on sale of the GE Monogram joint venture, partially offset by net losses in the investment portfolios.

Trading produced gains of $224 million, an increase of $4 million, or 2%. This slight increase was primarily the result of an increase in the fair value of credit derivatives used to hedge the commercial loan portfolio and limit exposures for specific credits, partially offset by lower results across multiple trading products.

Other income decreased $422 million. This decrease was primarily due to higher losses on tax-oriented investments, mortgage-related losses, valuation adjustments on other investments, various asset write-downs and the consolidation of Paymentech and Anexsys. Gains on the sale of ownership interests in EquiServe Limited Partnership and Star Systems recognized in the prior year also contributed to the decrease.

2001 compared to 2000

Banking fees and commissions increased $194 million, or 13%. This increase was primarily the result of increased annuity sales and fees associated with the in-house administration of the One Group mutual funds, which the Corporation began recording as revenue in the 2000 fourth quarter. Additionally, this increase reflected growth in retail brokerage sales.

Credit card revenue increased $476 million, or 21%. This improvement was due to the third quarter 2001 addition of the Wachovia credit card business and significant items recorded in 2000 (see table 2 on page 53).

Service charges on deposits increased $139 million, or 11%. A lower rate environment produced a shift to the payment of fees from net interest income due to the lower value ascribed to customers' compensating deposit balances.

Fiduciary and investment management fees declined by $29 million, or 4%. This reduction was as a result of lower investment advisory fees on equity assets because of overall market conditions.

Investment securities losses were $66 million due to principal investment losses and lower market valuations, partially offset by the gains on sale of fixed income securities. This was an improvement from 2000 when investment securities portfolio activity produced a loss of $235 million. This loss occurred when significant items were recorded in the second quarter of 2000 (see table 2 on page 53).

Trading produced gains of $220 million, an increase of $86 million, or 64%. This improvement was due to significant items recorded in 2000 (see table 2 on page 53) and market value gains.

Other income was $360 million compared to a $738 million loss in 2000. This improvement was predominately due to significant items recorded in 2000 (see table 2 on page 53).

Noninterest Expense

The components of noninterest expense for the periods indicated are as follows:

				Percent Change	
For the Year Ended December 31,	**2002**	2001	2000	2002-2001	2001-2000

N/M Not meaningful.

(1) Certain expenses have been reclassified from salaries to other expenses in all periods.

Components of noninterest expense that are primarily related to a single business segment are discussed within that business segment rather than the consolidated section.

2002 compared to 2001

Salaries and employee benefits of $4.5 billion increased $267 million, or 6%. This increase was due to insourcing activities previously performed by outside vendors, increased incentive compensation, the consolidation of Paymentech and Anexsys, and also included $45 million related to the adoption of the fair value method of accounting for stock option and stock purchase plans.

Outside service fees and processing expense of $1.3 billion increased $125 million, or 11%, due to the increase in contract programming charges related to the Corporation's systems conversion efforts and the one-time charge of $89 million related to termination and renegotiation of certain vendor contracts.

Marketing and development expense of $1.1 billion increased $192 million, or 22%, primarily due to increased advertising expenditures for Card Services and certain Retail products.

Telecommunication expense of $365 million decreased $42 million, or 10%, primarily due to lower servicing expenses resulting from the termination and renegotiation of certain vendor contracts.

Other intangible amortization of $125 million increased $28 million, or 29%, primarily due to the amortization of purchased credit card relationships associated with the addition of the Wachovia credit card business. In accordance with SFAS No. 142, "Goodwill and Other Intangible Assets," the Corporation no longer amortizes goodwill and thus did not incur any goodwill amortization expense during 2002.

Other expense increased by $15 million primarily due to systems conversion costs. The Corporation successfully completed the Michigan, Florida and Illinois conversions during 2002.

As a result of the significant items noted on pages 52-53 and restructuring plans initiated in 2000 and 2001, the Corporation's noninterest expense before restructuring-related reversals was $9.6 billion for 2002, which represents a reduction in annualized noninterest expense of $1.2 billion and decreased headcount of approximately 9,000 employees from June 30, 2000.

2001 compared to 2000

Salaries and employee benefits were $4.2 billion, down 9% from $4.6 billion. This decline was attributed to expense savings from reduced headcount and cost reductions associated with the modification of the Corporation's benefit plans.

Occupancy expense declined by $186 million, or 21%. The decrease was the result of less occupied space.

Equipment expense in 2001 decreased $136 million. Reduced furniture and equipment rental along with lower maintenance and depreciation expense was primarily the reason for the 23% decline.

The Corporation recorded restructuring-related charges in the fourth quarter of 2001 affecting all lines of business for additional real estate and staff reductions (severance) costs to accomplish expense reductions, accelerated systems conversions, and other consolidations. Actions under the plan were implemented. See Note 4 "Restructuring-Related Activity" on page 89.

The Corporation recorded restructuring-related charges in the second quarter of 2000 related to restructuring its indirect lending and home mortgage business as well as exit costs associated with specific decisions made to permanently abandon identified facilities, equipment and application software (for all lines of business). Actions under this plan have been completed, with only payments of identified obligations remaining. See Note 4 "Restructuring-Related Activity" on page 89.

Restructuring-related charges (reversals) are allocated to each line of business (see tables on pages 52-53) for management reporting purposes.

Outside service fees and processing expense also declined 23%, attributed to a reduction in consulting expense and the benefits from contract renegotiations and other waste-reduction initiatives.

Marketing and development expense decreased $38 million, or 4%, as continued expense reductions in the Retail line of business more than offset increased expenditures for Card Services.

Other intangible amortization expense decreased by $313 million, or 76%, predominately due to significant items recorded in 2000 (see table 2 on page 53).

Other expense was reduced by $806 million, or 39%. This decrease was primarily due to significant items recorded in 2000 (see table 2 on page 53). This reduction also reflects the continuation of the Corporation's waste-reduction initiatives to lower expenses for such items as travel, entertainment and other miscellaneous items, which was partially offset by system conversion costs. The Corporation successfully converted the Texas/Louisiana and the Arizona/Utah deposit systems during 2001.

Applicable Income Taxes

The Corporation's income (loss) before income taxes and cumulative effect of change in accounting principle, as well as applicable income tax expense (benefit) and effective tax rate for each of the past three years follows:

(Dollars in millions)	**2002**	2001	2000
Income (loss) before income taxes (benefit) and cumulative effect of change in accounting principle	**$4,763**	$3,800	$(1,080)
Applicable income taxes (benefit)	**1,468**	1,118	(569)
Effective tax rate	**30.8%**	29.4%	52.7%

Applicable income tax expense (benefit) for all three years included benefits for tax-exempt income, tax-advantaged investments and general business tax credits offset by the effect of nondeductible expenses. In the case of a loss before income taxes and the cumulative effect of change in accounting principle, the effect of the net tax benefits described above is to increase, rather than decrease, the effective rate of tax. This is the primary reason for the difference in effective tax rates between 2000 and the other years presented. More detail on income taxes can be found in Note 20 "Income Taxes" on page 101.

RISK MANAGEMENT

Risk is an inherent part of the Corporation's business activities. The Corporation's ability to properly and effectively identify, measure, monitor, and report risk in its business activities is critical to its soundness and profitability. The diversity of the Corporation's lines of business helps reduce the impact that volatility in any particular area has on its operating results as a whole.

Corporate Risk Management Governance Structure

While the lines of business are primarily responsible for managing the risks inherent in their businesses, the Corporation has established a risk management governance structure to establish policy, monitor adherence to policy and manage the overall risk profile of the organization.

The Corporation believes risk management is the responsibility of every employee. However, various functional groups have specific roles and responsibilities to manage risk:

- **Board of Directors:** determines risk appetite and risk capacity. The Audit and Risk Management Committee routinely reviews risk issues.
- **Risk Committees:** ensure appropriate management of aggregate risks and capital, acceptable corporate and line of business risk profiles and the integrity of risk governance processes. Risks addressed include, but are not limited to credit, market and operational risk. The Executive Risk Committee is co-chaired by the Chief Executive Officer and Chief Risk Officer. Lines of business sub-committees are co-chaired by the heads of the lines of business and their respective chief risk officers. Committee members represent the lines of business, corporate risk management, finance and legal functions.
- **Chief Risk Officer:** establishes effective risk management infrastructure (people, process and systems).
- **Lines of Business:** manages risk exposures to approved limit structures for their applicable line of business and identifies risk linkages to other businesses.
- **Investment Committee:** ensure appropriate management of both new investment proposals and the existing portfolio of investments; approve new investment proposals and divestment strategies. The committe is co-chaired by the Chief Financial Officer and Head of Financial Planning and Acquisitions.
- **Principal Investments Committee:** a separate investment committee exists for governing the principal investments portfolio and is chaired by the Chief Executive Officer.
- **Corporate Audit:** independently assesses and recommends actions to mitigate risk.
- **Asset and Liability Committee ("ALCO"):** provides governance and oversight of liquidity, structural interest rate risk and capital and is co-chaired by the Chief Financial Officer and Treasurer.

Risk Management Process

There are four critical elements to the Corporation's risk management process:

- **Risk Identification:** The Corporation identifies risk dynamically by assessing the potential impact of internal and external factors on current businesses and new products/programs, and by developing risk mitigation strategies to effectively manage identified risks.
- **Risk Measurement:** The Corporation measures risk using a variety of methodologies including: calculating expected loss, unexpected loss and value-at-risk; and conducting stress tests and making comparisons to external benchmarks. Measurement models and underlying assumptions are routinely validated to ensure accurate risk measurement.
- **Risk Monitoring/Control:** The Corporation establishes risk management policies and procedures. These policies contain approved limits by customer, product and business that are monitored weekly.
- **Risk Reporting:** Risk reporting covers all lines of business and is comprehensively provided to management on a weekly basis.

Risk Types

There are seven major risk types identified by the Corporation:

- **Credit risk** is the risk to earnings or capital arising from an obligor's failure to meet the terms of any contract with the lender or otherwise fail to perform as agreed.
- **Liquidity risk** is the risk of loss arising from an institution's inability to meet its obligations when they come due without incurring unacceptable losses.
- **Market risk** is the risk that changes in future market rates or prices will make the Corporation's positions less valuable.
- **Operational risk** is the risk of loss resulting from inadequate or failed internal processes, people or systems or from external events.
- **Reputation risk** is the risk to earnings or capital arising from negative public opinion. This affects the institution's ability to establish new relationships or services, or continue servicing existing relationships.
- **Strategic risk** is the risk to earnings or capital arising from adverse business decisions or improper implementation of those decisions.
- **Compliance risk** is the risk to earnings or capital arising from violations of, or non-conformance with, laws, rules, regulations, prescribed practices, or ethical standards.

CREDIT RISK MANAGEMENT

Credit risk is a significant risk to the Corporation. It represents risk to earnings arising from an obligor's failure to meet the terms of any contract with the Corporation or otherwise fail to perform as agreed. Credit risk is found in all activities where success depends on issuer, borrower or counterparty performance. It arises any time funds are extended, committed, invested, or otherwise exposed through actual or implied contractual agreements, whether reflected on or off the balance sheet. On-balance sheet credit exposure includes such items as loans. Off-balance sheet credit exposure includes unfunded credit commitments and other credit-related financial instruments.

Management proactively manages the risk/reward relationship of each portfolio to achieve profitability targets and required rates of return on investment. The Corporation uses credit derivatives (primarily single name credit swaps) and short bond positions, as protection against deterioration of credit quality on commercial loans and loan commitments.

Risk Identification

Credit risk is the most prevalent risk associated with banking, and encompasses more than the traditional definition associated with lending activities. Credit risk also arises in conjunction with a broad range of bank activities, including selected investment portfolio products, derivatives trading partners, or foreign exchange counterparties. Credit risk also arises due to country or sovereign exposure, as well as indirectly through guarantor performance.

Risk Measurement

Expected and Unexpected Losses

Using statistical techniques, expected and unexpected losses are calculated for each segment of the portfolio. Expected loss is the average expected loss over a cycle, and unexpected loss represents the potential volatility of losses relative to expected loss levels.

Expected loss calculations and related stress tests are used as a basis for evaluating allowance for credit losses adequacy. Unexpected loss calculations are used as a basis for calculating economic capital, which is a management tool used to allocate capital for internal management purposes. Expected and unexpected loss calculations are made at the facility and portfolio levels, and are used as a basis for pricing to ensure appropriate risk/reward balance.

The Corporation employs several methodologies for estimating expected and unexpected losses. Methodologies are determined based on a number of factors, including type of asset (e.g., consumer installment versus commercial loan), risk measurement parameters (e.g., delinquency status and bureau score versus commercial risk rating), and risk management and collection processes (e.g., retail collection center versus centrally managed workout units). Risk measurement is primarily based upon two methodologies: risk rating exposure and credit scoring exposure.

Risk-Rated Exposure

For portfolios that are risk-rated (generally commercial), expected and unexpected loss calculations are based on estimates of probability of default and loss given default. Probability of default is the one-year expected default calculated on an obligor basis. Loss given default is an estimate of losses that are based upon collateral and structural support for each credit facility. Calculations and assumptions are based on management information systems and methodologies that are under continual review.

In the second quarter 2001, the Corporation refined its measurement process for estimating expected loss by enhancing its risk rating system to provide for discrete estimates of probability of default and loss given default. In addition, the Corporation moved from a one-tier, 12 point combined obligor and facility-based scale to estimate expected loss to a two-tiered methodology: a 20 point obligor-based scale, which estimates probability of default, and an 8 point facility-based scale, which estimates loss

given default. The benefit of the 20 point obligor-based scale is it enables the Corporation to benchmark its internal measures of risk with publicly available ratings and market prices. The estimated probability of default covers a one-year time horizon. Expected loss represents the combined effect of estimates from both components. While the risk rating system changed, estimates of expected loss were relatively unaffected and no increase to the reserve was required.

Risk ratings are reviewed on an ongoing basis by corporate risk management and revised, if needed, to reflect the borrowers' current risk profile and the related collateral position. The lower categories of credit risk are equivalent to the four bank regulatory classifications: Special Mention, Substandard, Doubtful and Loss.

Credit-Scored Exposure

For credit-scored portfolios (generally Retail and Card Services), expected loss is based on a statistical analysis of inherent losses over discrete periods of time. Expected losses are estimated using statistical analysis, such as roll rate models, which use historical losses, and vintage forecasting models. Other risk characteristics evaluated include: recent loss experience in the portfolios, changes in origination sources, portfolio seasoning, loss severity, and underlying credit practices, including charge-off policies. This analysis is applied to the current portfolios in order to forecast delinquencies and severity of losses, which determines the amount of future probable losses. These factors and analysis are updated on a quarterly basis.

Risk Monitoring/Control

The Executive Risk Committee has developed policies to manage the level and composition of risk in its portfolio, and reviews the Corporation's performance relative to those policies.

The line of business risk committees have developed policies that focus on origination, portfolio management and managed assets related activities. The policy framework establishes approval authorities and related processes, risk rating methodologies, portfolio review parameters and management of problem loans. The objective of the credit risk management process is to quantify and manage credit risk on an aggregate portfolio basis as well as to reduce the risk of loss resulting from an individual customer default. Corporate risk management works with lending officers and line of business personnel involved in credit decision making and is involved in the implementation, refinement, and monitoring of the Corporation's credit policies and procedures. Credit limits are approved by the Executive Risk Committee and adherence to those limits is monitored weekly.

In order to meet its credit risk management objectives, the Corporation maintains a risk profile that is diverse in terms of borrower, product-type, and industry and geographic concentrations. Additional diversification of the Corporation's exposure is accomplished through syndication of credits, participations, loan sales, securitizations, credit derivatives and other risk-reduction techniques.

Risk Reporting

Aggregate credit exposure, credit metric forecasts, hold limit exceptions and risk profile changes are reported weekly for all portfolios. Expected loss calculations and detailed portfolio reporting of industry, customer and geographic concentrations are reported monthly to senior management. In addition, the results of comprehensive stress tests of expected loss for reserve establishment are presented in the quarterly reports to senior management. Through the Risk Committee governance structure, credit risk trends and limit exceptions are regularly discussed on a comprehensive basis.

LIQUIDITY RISK MANAGEMENT

Liquidity is managed to preserve stable, reliable and cost-effective sources of funding to meet all current and future financial obligations.

At the Corporation, strong liquidity is provided by a variety of sources including:

- A portfolio of liquid assets, comprised of federal funds sold, deposit placements and marketable securities.
- A large customer deposit base arising through the Corporation's Commercial Banking and Retail business activities.
- A diversified mix of short- and long-term funding sources from the wholesale financial markets.
- A substantial and growing capital position in excess of regulatory well-capitalized standards.
- Significant borrowing capacity at the Federal Reserve discount window.

The Corporation is an active participant in the global financial markets through which it obtains a significant amount of funding. These markets serve as a cost-effective source of funds and are a critical component of the Corporation's liquidity management. Decisions to access these markets are based upon relative costs, prospective views of balance sheet growth, and a targeted liquidity profile. A disruption in the financial markets could limit access to liquidity for the Corporation.

The Corporation's ability to maintain regular access to competitively priced wholesale funds is fostered by strong debt ratings from the major credit rating agencies. Management views the following factors as critical to retaining high credit ratings:

- Strong capital ratios and credit quality
- A stable, diverse earnings stream
- Diversity of liquidity sources
- Strong liquidity monitoring procedures

At December 31, 2002, the Corporation and its principal banks had the following long- and short-term debt ratings:

	Short-Term Debt			Senior Long-Term Debt		
	S & P	Moody's	Fitch	S & P	Moody's	Fitch
The Corporation (parent)	A-1	P-1	F-1	A	Aa3	A+
Principal banks	A-1	P-1	F-1+	A+	Aa2	AA-

Risk Identification

Treasury is responsible for measuring and managing the liquidity profile with oversight from the ALCO. Liquidity risks reviewed include the diversity of the Corporation's sources of funding and the maturity structure of those sources, quantity of liquid assets held, contingent funding requirements and sensitivity to changes in credit ratings. Treasury tests a series of liquidity scenarios and works with the lines of business to understand and manage the potential liquidity risks in the Corporation.

Measurement and Monitoring/Control

The Corporation has established operating guidelines around balance sheet liquidity that include required levels of liquid assets and limits on liquidity gaps. Liquidity gaps measure balance sheet cash flow mismatches and quantify certain liability maturities in excess of liquid assets.

The Corporation monitors and manages liquidity considering both on- and off-balance sheet exposures. On-balance sheet liquidity is impacted by balance sheet growth, level and mix of customer deposits, and access to wholesale funding. In the normal course of business, the Corporation enters into certain forms of off-balance sheet transactions, including credit card securitizations, unfunded loan commitments and letters of credit. These transactions are managed through the Corporation's various risk management processes. For example, liquidity facilities provided to Corporation-and third party-administered specialized financing entities might require funding if the Corporation's short-term rating were to fall to A-2 or P-2. Credit card securitizations may be subject to early amortization if certain performance measures of the issuing trust were not maintained. Other events could result in additional funding requirements for the Corporation.

The parent company faces unique liquidity constraints due to legal limitations on its ability to borrow funds from its banking subsidiaries. The parent company obtains funding to meet its obligations through bank and non-bank subsidiary dividends (within regulatory limitations) and through the issuance of debt securities. The parent company holds liquid assets equal to at least 12 months of its upcoming debt maturities to ensure adequate liquidity is available.

Reporting

A combination of daily, weekly, monthly and periodic reports provided to senior management detail the following:

- Internal liquidity risk metrics
- Composition and level of the liquid asset portfolio
- Timing differences in short-term cash flow obligations
- Available pricing and market access to the financial markets for capital, term-debt and securitization transactions
- Exposure to contingent draws on the Corporation's liquidity
- Liquidity stress testing under systemic and Corporation specific scenarios

MARKET RISK MANAGEMENT

Market risk refers to potential losses arising from changes in interest rates, foreign exchange rates, equity prices, commodity prices and credit spreads in market risk sensitive instruments. Market risk arises in both trading and non-trading portfolios. The section on "Market Risk Management-Nontrading Activities" on page 61 provides an overview of our approach to managing market risks arising from non-trading portfolios. In these asset and liability management activities, policies are in place to closely manage structural interest rate risk. Disclosures about the fair value of financial instruments, which reflect changes in market prices and rates, can be found in Note 23 "Fair Value of Financial Instruments" on pages 103–105.

Market Risk Management — Trading Activities

Through its trading activities, the Corporation strives to take advantage of profit opportunities due to changes in interest rates, exchange rates, equity prices, commodity prices and credit spreads. The Corporation's trading activities are primarily customer-oriented. For example, cash instruments are bought and sold to satisfy customers' investment needs. Derivative contracts are initially entered into to meet the risk management needs of customers. The Corporation enters into subsequent transactions to manage the level of risk in accordance with approved limits. In order to accommodate customers, an inventory of capital markets instruments is carried, and access to market liquidity is maintained by making bid-offer prices to other market makers. The Corporation may also take proprietary trading positions in various capital markets cash instruments and derivatives, and these positions are designed to profit from anticipated changes in market factors. Activity is focused in OECD (Organisation for Economic Cooperation and Development) markets, with very little activity in emerging markets.

Many trading positions are kept open for brief periods of time, often less than one day. Other positions may be held for longer periods. Trading positions are carried at estimated fair value, with realized and unrealized gains and losses included in noninterest income as trading income.

Risk Identification

Corporate market risk management works with various lines of business personnel to refine and monitor market risk policies and procedures, and is the primary independent oversight unit for market risk arising from line of business activities. The line of business, working in conjunction with corporate market risk management, is responsible for comprehensive identification of market risks. These market risks include the sensitivities to such market factors as changes in prices, interest rate curves, spreads, basis, volatility, gamma, time decay and correlations. Market risk management also conducts annual reviews of each of the trading businesses to confirm approved products and trading strategies.

Risk Measurement

The Corporation relies on a number of statistical and non-statistical measurements to monitor the level of market risk arising from interest rates, foreign exchange, equities, commodities and credit spreads. The Corporation has developed policies and procedures to manage market risk in its trading activities through a value-at-risk measurement, stress testing and dollar trading limits. The objective of this process is to quantify and manage market risk in order to limit single and aggregate exposures. Dollar trading limits are subject to varying levels of approval by senior line of business management, with review by corporate market risk management. For non-trading portfolios, the primary measures of market risk are earnings at risk and the economic value of equity.

Value-At-Risk

For trading portfolios, value-at-risk measures the maximum fair value the Corporation could be reasonably expected to lose on a trading position, given a specified confidence level and time horizon. Value-at-risk limits and exposure are monitored daily for each significant trading portfolio. Value-at-risk was not calculated for credit derivatives used to hedge specific credits in the loan portfolio. However, stress testing is regularly performed for these credit

derivative positions. See discussion of credit derivatives under the "Trading Derivative Instruments" section on page 72. Likewise, value-at-risk calculations do not include the principal investments portfolio that is being accounted for similar to trading portfolios in that realized and unrealized gains and losses are recorded currently in income.

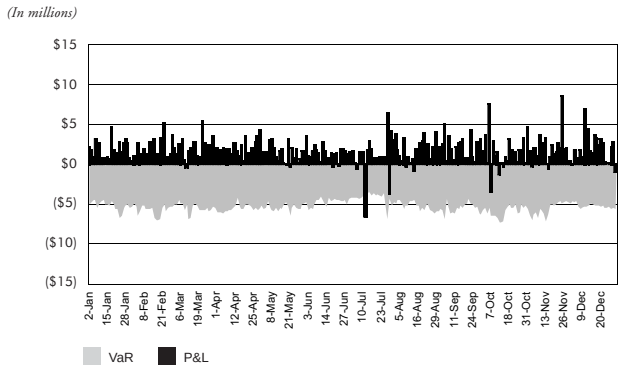
The Corporation applies a statistical model to its portfolios of cash and derivative positions, including options, to calculate value-at-risk. The variance-covariance model estimates the volatility of returns on individual assets, as well as the correlation of changes of asset price pairs. These volatility and correlation estimates are made on the basis of one-year, equally-weighted historical observations of market variables. The model then computes the volatility of changes in the market values of the portfolios (i.e., the value-at-risk results) by applying each portfolio's statistical sensitivities to the correlations.

The Corporation's value-at-risk calculation measures potential losses in fair value using a 99% confidence level and a one-day time horizon. This equates to 2.33 standard deviations from the mean under a normal distribution. This means that, on average, daily profits and losses are expected to exceed value-at-risk one out of every 100 overnight trading days.

The value-at-risk in the Corporation's trading portfolio was as follows (excluding credit derivatives and other instruments used to hedge specific credits in the loan portfolio with a notional amount of $7.3 billion and $3.3 billion at December 31, 2002 and 2001, respectively):

	2002			
(In millions)	**December 31**	**Average**	**High**	**Low**
High Volume Capital Markets Trading Portfolios and Mortgage Pipeline [1]				
Risk type:				
Interest rate	**$6**	**$5**	**$7**	**$3**
Commodity price	**—**	**—**	**2**	**—**
Currency exchange rate	**—**	**—**	**3**	**—**
Equity	**1**	**1**	**2**	**—**
Diversification benefit	**—**	**—**	**N/A**	**N/A**
Other Trading Portfolios	**7**	**6**	**8**	**3**
Risk type:				
Interest rate	**7**	**7**	**8**	**7**
Aggregate trading portfolio market risk	**$14**	**13**	**16**	**11**

	2001			
(In millions)	December 31	Average	High	Low
High Volume Capital Markets Trading Portfolios and Mortgage Pipeline [1]				
Risk type:				
Interest rate	$5	$5	$7	$3
Commodity price	—	—	—	—
Currency exchange rate	—	1	4	—
Equity	1	1	4	—
Diversification benefit	—	—	N/A	N/A
Other Trading Portfolios	6	7	15	3
Risk type:				
Interest rate	6	6	8	5
Aggregate trading portfolio market risk	$12	13	16	9



(1) Subject to backtesting.

Interest rate risk was the predominant type of market risk incurred during 2002. At December 31, 2002, approximately 95% of primary market risk exposures were related to interest rate risk. Currency exchange rate, equity and commodity risks accounted for 1%, 3% and 1%, respectively, of primary market risk exposures.

- U.S. Treasury, corporate, asset-backed, municipal, and mortgage-backed securities generated 82% of the interest rate risk component. Interest rate derivatives accounted for 15% of the interest rate risk, while the remaining 3% was derived primarily from money market and foreign exchange trading activities.
- Foreign exchange spot, forward and option trading generated 100% of the currency exchange rate risk. Of the currency exchange rate risk arising from these activities, 43% related to major currency exposures and 57% to minor currencies.
- Equity derivatives trading and off-setting cash positions generated 100% of equity price risk.

At December 31, 2002, aggregate portfolio market risk exposures were 17% higher than at year-end 2001. The majority of this increase was due to increased market risk in various trading books.

Value-at-risk levels are regularly backtested to validate the model by comparing predictions with actual results. For 2002, backtesting results for the high volume capital markets portfolios and the mortgage pipeline appear in the following graph:

These backtesting results reflect only the higher volume trading portfolios that are actively managed and marked-to-market on a daily basis (i.e., the capital markets trading portfolios and the mortgage pipeline in the consumer lending business). Based on a 99% confidence interval in predicting actual profit or loss, the Corporation would expect actual profit or loss to exceed value-at-risk one day for every one hundred days. As shown in the graph above, there was only one day in 2002 where the actual loss exceeded the calculated value-at-risk. The Corporation's value-at-risk measure provides a conservative measure of the level of market risk.

Stress Testing

Stress tests are conducted regularly for all capital markets trading portfolios including credit derivatives for a standard set of forward-looking scenarios for large, low probability changes in the market variables. Scenarios may be derived from either severe historical crises or forward assessment of developing market trends. The scenarios are continuously reviewed to reflect changing market and economic conditions.

Risk Monitoring

The Corporation establishes limits for value-at-risk, market variable exposures, position limits and dollar trading loss limits for all capital markets trading portfolios. Actual activity compared with these limits is monitored daily. In addition, trading limits have been established for trading portfolios within other areas of the Corporation, including treasury and principal investments. Actual activity compared with these trading limits is regularly monitored. As a rule, all businesses are expected to maintain exposure within approved limits. Should a risk exposure level exceed approved limit levels, business management provides a strategy for bringing risk levels down within approved levels.

Risk Reporting

Value-at-risk, market variable exposures and dollar trading loss limit exceptions are reported daily for each capital markets trading portfolio. Market risk exposure trends, value-at-risk trends, profit and loss changes, aged asset inventories and portfolio concentrations are reported daily to business management and weekly to executive management. In addition, the results of comprehensive, weekly stress tests are presented in the weekly reports to executive management. Market risk exposure for treasury and principal investment trading portfolios are reported regularly through the Risk Committee governance structure. Market risk trends and limit exceptions are comprehensively and regularly discussed.

Market Risk Management — Non-Trading Activities

Interest rate risk exposure in the Corporation's core non-trading business activities, (i.e., asset/liability management ("ALM") position), is a result of reprice, option, and basis risks associated with on- and off-balance sheet positions. Reprice risk represents timing mismatches in the Corporation's ability to alter contractual rates earned on financial assets or paid on liabilities in response to changes in market interest rates. Basis risk refers to the potential for change in the underlying relationship between market rates or indices, which subsequently result in a narrowing of the spread earned on a loan or investment relative to its cost of funds. Option risk arises from "embedded options" present in many financial instruments such as interest rate options, loan prepayment options and deposit early withdrawal options. These provide customers and investors opportunities to take advantage of directional changes in rates, which could have an adverse impact on the Corporation's margin performance. Embedded options are complex risk positions that are difficult to predict and offset, and are a significant component of the interest rate risk exposure for the Corporation.

Risk Identification

Interest rate risk arises through ongoing banking activities, including traditional customer lending and deposit activities and wholesale funding and portfolio actions. The Corporation identifies interest rate risk by quantifying the impact of new programs, products and strategies on overall balance sheet sensitivity.

Responsibility for management of interest rate risk resides with treasury under the oversight of the Corporation's ALCO and is apprised weekly of newly discovered risks associated with the ALM position and the strategies to manage resultant exposure.

Risk Measurement

The ALM position is measured using sophisticated earnings simulation and valuation tools. The primary risk measure employed is earnings-at-risk, which measures the sensitivity of pretax earnings to various interest rate movements as compared to a base-case scenario established using current rates. Earnings-at-risk incorporates estimates of balance sheet growth, pricing and customer behavior under each scenario analyzed. The analysis is calculated over multiple time horizons.

In addition to earnings-at-risk analysis, management uses an economic value of equity sensitivity technique to capture the risk in both short- and long-term positions. This analysis involves calculating future cash flows over the life of all current assets, liabilities and off-balance sheet positions under different rate scenarios. The discounted present value of all cash flows represents the Corporation's economic value of equity. The sensitivity of this value to shifts in the yield curve allows management to measure longer-term repricing and option risk in the portfolio.

The measurement of interest rate risk is highly dependent on numerous assumptions. While the risk analysis incorporates management's best estimate of interest rate and balance sheet dynamics under various market rate movements, the actual behavior and resulting earnings impact will likely differ from that projected. Sensitivities to key assumptions are tested and reviewed to provide a range of possible outcomes. For mortgage-related assets, the simulation model captures the expected prepayment behavior under changing interest rate environments. Assumptions and methodologies regarding the interest rate or balance behavior of indeterminate maturity products, (e.g., credit card receivables, savings, money market, NOW and demand deposits), reflect management's best estimate of expected future behavior. Sensitivity of

service fee income to market interest rate levels, such as those related to cash management products, is included as well.

Risk Monitoring

The Corporation has established risk measures, policy limits and internal control mechanisms (collectively referred to as the Interest Rate Risk Policy) for managing the overall ALM position, including both on- and off-balance sheet positions. Policy limits are based on immediate parallel shocks of +/-100 basis point rate movements.

Responsibility for the management of interest rate risk resides with treasury under the oversight of the ALCO. Business unit management is responsible for understanding their interest rate risk, while the Corporation controls and monitors this risk centrally. ALCO is apprised weekly of the risks associated with the ALM position, with exposures tested under multiple rate and yield curve scenarios. The Corporation balances the return potential of the ALM position against the desire to limit volatility in earnings and/or economic value.

Risk Reporting

Based on immediate parallel shocks, the Corporation's earnings-at-risk to rising interest rates, versus base-case, has improved. The Corporation's 12-month pretax earnings sensitivity profile as of year-end 2002 and 2001 is as follows:

	Immediate Change in Rates			
(In millions)	+200 bp	+100 bp	-50 bp	-100 bp
December 31, 2002	**$165**	**$100**	**$(89)**	**$(177)**
December 31, 2001	$(754)	$(341)	$135	$174

The decrease in earnings-at-risk during the year largely reflects management's decision to reduce exposure to rising market interest rates and take advantage of market opportunities to secure long-term, low cost funding. These activities included the termination of $6 billion notional value in receive fixed/pay floating swaps, execution of $15 billion pay fixed/receive floating swaps and the issuance of $5 billion in fixed rate term funding.

Numerous alternative scenarios are reviewed internally, including more gradual and more severe rate movements and non-parallel rate shifts. These scenarios are intended to provide a more comprehensive view of the Corporation's interest rate risk exposure by further detailing reprice, option, yield curve and basis risk. The interest rate scenarios are used for analytical purposes and do not necessarily represent management's view of future market movements. Rather, they are intended to provide a measure of the degree of volatility interest rate movements may introduce into the earnings and economic value of the Corporation.

Rates as represented by implied forward rates (or the market's expectations for rates as embedded in the current yield curve) provide an important benchmark in the evaluation of balance sheet management strategies and the overall risk posture. The market's view of rates is embedded in the price of all financial instruments. Strategies to modify risk are therefore evaluated based on a comparison of management's and the market's expectations about the degree and timing of the expected rate movement. At year-end, implied forward rates suggested a modest increase in interest rates in the second half of 2003. This rate scenario would not materially impact the earnings of the Corporation.

The Corporation generally benefits if rates increase earlier or more than expected under the implied forwards or if the general level of rate increase is sudden and severe due to actions taken over the year to minimize increases in funding costs relative to assets repricings. The benefit of increasing short-term rates is further enhanced when rates increase more than 425 basis points and the rate earned on a portion of the credit card portfolio moves above contractual floors. The Corporation would be negatively impacted by sudden rate increases accompanied by a flattening yield curve that would diminish the benefit of term asset repricing.

Steeper yield curves typically benefit earnings, particularly when the increase in long-term rates is not accompanied by increasing short-term rates. Falling long-term rates negatively impact earnings and can also expose the Corporation to additional option risk. The Corporation's basis risk is largely the result of corporate and consumer demand for prime-based loan products. Declines in the prime rate relative to bank funding costs will result in decreased earnings.

OPERATIONAL RISK MANAGEMENT

The Corporation is exposed to numerous types of operational risk. Operational risk is defined as the risk of loss resulting from the inadequate or failed internal processes, people and systems or from external events. Operational risk generally refers to the risk of loss resulting from the Corporation's operations, including, but not limited to, the risk of fraud by employees or persons outside the Corporation, the execution of unauthorized transactions by employees, errors relating to transaction processing and systems, and breaches of the internal control system and compliance requirements. This risk of loss also includes the potential legal actions that could arise as a result of the operational deficiency or as a result of noncompliance with applicable regulatory standards.

The Corporation operates in many different businesses in diverse markets and places reliance on the ability of its employees and systems to process a high number of transactions. In the event of a breakdown in the internal control systems, improper operation of systems or improper employee actions, the Corporation could suffer financial loss, face regulatory action and suffer damage to its reputation. The Corporation's framework for managing operational risk establishes a foundation on which to comprehensively and effectively identify, measure, mitigate, monitor and report operational risks.

The Corporation maintains systems of controls that provide management with timely and accurate information about the operations of the Corporation. These systems have been designed to manage operational risk at appropriate levels given the Corporation's financial strength, the environment in which it operates, and considering factors such as competition and regulation. The Corporation has also established procedures that are designed to ensure that policies relating to conduct, ethics and business practices are followed on a uniform basis. In certain cases, the Corporation has experienced losses from operational risk. Such losses have included the effects of operational errors that the Corporation has discovered and taken as charges in the income statement. While there can be no assurance the Corporation will not suffer such losses in the future, management continually monitors and improves its internal controls, systems and corporate-wide processes and procedures. Furthermore, management believes the plans to streamline the organization through charter consolidations and further systems integration and policies enacted to push down reporting accountabilities further in the organization, have improved the Corporation's ability to identify and limit operational risk.

Selected Statistical Information

The significant components of credit risk and the related ratios for the years indicated are as follows:

December 31,	**2002**	2001	2000	1999	1998
(Dollars in millions)					
Loans outstanding	**$148,125**	$156,733	$174,251	$163,877	$155,398
Average loans	**150,805**	167,054	171,768	156,855	154,952
Nonperforming loans [1]	**3,276**	3,551	2,475	1,559	1,207
Other, including other real estate owned	**251**	137	98	106	90
Nonperforming assets	**3,527**	3,688	2,573	1,665	1,297
Allowance for credit losses	**4,525**	4,528	4,110	2,285	2,271
Net charge-offs	**2,465**	2,288	1,391	1,206[3]	1,498
Nonperforming assets to related assets [2]	**2.38%**	2.35%	1.48%	1.02%	0.83%
Allowance to period end loans	**3.20**	2.97	2.42	1.42	1.51
Allowance to nonperforming loans	**139**	128	166	147	188
Net charge-offs to average loans	**1.63**	1.37	0.81	0.77	0.97
Allowance to net charge-offs	**184**	198	295	189[3]	152

(1) Includes loans held for sale of $22 million for the year ended December 31, 2002. For December 31, 2001, 2000, 1999 and 1998 there were no nonperforming loans included in loans held for sale. These amounts are not included in allowance coverage statistics.

(2) Related assets consist of loans outstanding, including loans held for sale and other real estate owned.

(3) Includes $143 million of charge-offs required to bring the consumer portfolio into compliance with FFIEC guidelines. Excluding these incremental charge-offs, the adjusted coverage ratio would have been 215%.

Loan Composition

In 2001, the Corporation changed its loan composition methodology to a line of business approach, dividing the loan portfolio into Retail, Commercial Banking, Card Services, IMG and Corporate. The Corporation has presented 2000 information under both the "old" and "new" compositions, but has not presented 1999 and 1998 under the "new" composition as it would be impractical to reclassify those periods using the new methodologies.

The Corporation's loan portfolios at December 31 are as follows:

	2002		2001		2000	
(Dollars in millions)	**Amount**	**Percent**	Amount	Percent	Amount	Percent
Retail:

N/A Not available due to changes in segment composition.

Loans held for sale, which are classified as loans, are carried at lower of cost or fair value and totaled $6.9 billion, $4.2 billion and $4.2 billion at December 31, 2002, 2001 and 2000, respectively. At December 31, 2002, loans held for sale included Commercial Banking loans of $235 million of which approximately $19 million were included in nonperforming loans, and Card Services and other consumer loans of $6.7 billion.

Prior to 2001, the Corporation's loan portfolio was divided into commercial, consumer and credit card loan categories as follows:

	2000		1999		1998	
(Dollars in millions)	Amount	Percent	Amount	Percent	Amount	Percent
Commercial:						
Domestic:						
Commercial	$ 65,270	38%	$ 59,070	36%	$ 53,362	34%

Managed Credit Card Receivables

For analytical purposes, the Corporation reports credit card receivables on both a reported basis and a managed basis. Reported credit card receivables include those receivables held in the portfolio and reported on the balance sheet. Managed credit card receivables include reported credit card receivables, receivables sold to investors through securitization and retained interests (see page 74 for discussion of "Loan Securitizations").

The following table shows the average managed credit card receivables and the related charge-off and delinquency rates for the years ended:

December 31,	**2002**	2001	2000
(Dollars in millions)			
Average balances:			
Credit card loans	**$ 9,899**	$ 6,884	$ 4,754
Credit card receivables transferred to trusts	**57,969**	58,563	61,424
Total average managed credit card receivables	**67,868**	65,447	66,178
Total net charge-offs (including securitizations)	**$ 3,632**	$ 3,823	$ 3,584
Net charge-offs/average total receivables	**5.35%**	5.84%	5.42%
Card Services delinquency rate at period end:			
30+ days	**4.02%**	4.46%	4.51%
90+ days	**1.80%**	1.93%	2.02%

The decrease in the managed net charge-off rate to 5.35% in 2002 from 5.84% in 2001 reflected management's continued emphasis on prudent credit risk management including disciplined underwriting and account management practices targeted to the prime and super prime credit sectors. Nationally, consumers filed for bankruptcy in 2002 in much higher numbers than in any prior year. Credit risk management tools used to manage the level and volatility of losses for credit card accounts have been continually updated, and, where appropriate, these tools were adjusted to reduce credit risk in 2002 and beyond. The managed credit card portfolio continues to reflect a well-seasoned portfolio that has good national geographic diversification.

Future charge-offs in the credit card portfolio and overall credit quality are subject to uncertainties, which may cause actual results to differ from current and historic performance. This could include the direction and level of loan delinquencies, changes in consumer behavior, bankruptcy trends, portfolio seasoning, interest rate movements, and portfolio mix, among other things. While current economic and credit data suggests that credit quality will not significantly deteriorate, significant deterioration in the general economy could materially change these expectations.

Retail

The retail loan portfolio primarily consists of loans secured by real estate as well as vehicle loans and leases, and provides broad diversification of risk from both a product and geographic perspective. Average loan balances for 2002 were $67.7 billion. The Corporation continues to effectively enhance the composition of loans in the portfolio by emphasizing loans to prime credit quality prospects. During 2002, the Corporation continued to de-emphasize vehicle leasing and significantly refocused its indirect real estate lending involving loans sourced through brokers. New loans originated in 2002 on average reflect higher credit quality consistent with management's focus on the prime credit market segment. The net charge-off rate for retail loans in 2002, however, was 1.36%, an increase of 22 basis points from 2001. The increase in part reflected higher loss severity on vehicle loans due to price weakness in the secondary market for used vehicles, increased consumer bankruptcies and higher losses from discontinued segments of the broker home equity portfolio.

Future retail portfolio charge-offs and credit quality are subject to uncertainties which may cause actual results to differ from current anticipated performance, including the direction and level of loan delinquencies, changes in consumer behavior, bankruptcy trends, portfolio seasoning, interest rate movements and portfolio mix among other things.

The Corporation continues to proactively manage its retail credit operation even in difficult economic conditions. Ongoing efforts include continual review and enhancement of credit underwriting criteria, rationalization of the number and quality of third-party loan originators (i.e., brokers and correspondents) and refinement of pricing and risk management models.

Commercial Banking

Commercial Banking loans decreased by $10.6 billion, or 15%, between December 31, 2001, and December 31, 2002, primarily due to a planned and managed reduction of the corporate banking portfolio. Nonperforming Commercial Banking loans decreased by $253 million, or 12%, to $1.9 billion at December 31, 2002, as compared to $2.1 billion at December 31, 2001, primarily driven by improvement in corporate banking. Commercial Banking's net charge-offs in 2002 were $994 million, or 1.51% of average loans, compared with $1.0 billion of net charge-offs, or 1.30% of average loans, in 2001.

Management believes that actions taken over the past two years have led to an overall improvement in both the corporate banking and middle market credit portfolios. These actions, including the deliberate reductions in the loan portfolio, are essentially complete. The Corporation remains increasingly comfortable with its ability to better control, manage and underwrite risk in a consistent and disciplined manner. In spite of this improvement, future charge-offs and credit quality in the Commercial Banking portfolio are subject to uncertainties that may cause actual results to differ from historical experience or forecasted results, including the state of the economy and its impact on individual industries, commercial real estate values, interest rate movements and portfolio mix, among other things.

Commercial and Industrial Loans

Commercial and industrial loans represent commercial loans other than commercial real estate. At December 31, 2002, commercial and industrial loans totaled $44.8 billion, which represents 73% of the Commercial Banking portfolio.

The more significant industry concentrations of the Commercial Banking commercial and industrial portfolio for the year ended December 31, 2002 are as follows:

	2002	
(Dollars in millions)	Outstanding	Percent[1]
Motor vehicles and parts/auto related	$ 3,990	8.9%
Wholesale trade	3,558	7.9
Oil and gas	3,069	6.8
Industrial materials	2,471	5.5
Business finance and leasing	2,222	5.0
Other [2]	29,539	65.9
Total	$44,849	100%

(1) Total outstanding by industry concentration as a percentage of total commercial and industrial loans.

(2) Presented for informational purposes and includes 36 industry concentrations including telephone, wireless and cable of $557 million (or 1.2% of the total portfolio).

Commercial Real Estate

Commercial real estate loans represent credit extended for real estate-related purposes to borrowers or counterparties who are primarily in the real estate development or investment business and for which the primary source of repayment of the loan is from the sale, lease, rental, management, operations or refinancing of the property.

Commercial real estate lending is conducted in several lines of business with the majority of these loans originated by corporate banking primarily through its specialized National Commercial Real Estate Group. This group's focus is lending to targeted regional and national real estate developers and homebuilders. As of December 31, 2002, National Commercial Real Estate Group's loan outstandings totaled $8.3 billion or 78% of the commercial real estate portfolio.

At December 31, 2002 and 2001, commercial real estate loans totaled $10.6 billion and $12.4 billion, or 17% and 18% of Commercial Banking loans, respectively. During 2002 and 2001, net charge-offs in the commercial real estate portfolio segment were $46 million and $14 million, respectively. Nonperforming commercial real estate assets, including other real estate owned, totaled $212 million, or 2.0% of related assets, at December 31, 2002. As of December 31, 2001, nonperforming commercial real estate assets, including other real estate owned, totaled $199 million, or 1.6% of related assets.

The commercial real estate loan portfolio by both collateral location and property type as of December 31, 2002 are as follows:

(Dollars in millions)	Outstanding	
By Collateral Location:	Amount	Percent of Portfolio
Michigan	$ 1,118	11%
California	1,109	10
Illinois	1,088	10
Ohio	848	8
Texas	824	8
Arizona	741	7
Louisiana	376	3
Kentucky	369	3
Indiana	363	3
Colorado	288	3
Other areas	1,563	15
Unsecured	1,341	13
Secured by other than commercial real estate	611	6
Total	$10,639	100%

By Property Type:	Amount	Percent of Portfolio
Apartment	$ 1,854	17%
Retail	1,762	17
Office	1,738	16
Industrial/warehouse	1,161	11
Single family residential development	1,137	11
Hotels	560	5
Residential lots	543	5
Miscellaneous commercial income producing	1,758	17
Miscellaneous residential developments	126	1
Total	$10,639	100%

ASSET QUALITY

In 2001, the Corporation changed its loan composition methodology to a line of business approach, dividing the loan portfolio into Retail, Commercial Banking, Card Services, and other lines of business. The Corporation has presented 2000 information under both the "old" and "new" compositions, but has not presented 1999 and 1998 under the "new" composition as it would be impractical to reclassify those periods using the new methodologies.

Nonperforming Assets

The Corporation places loans on nonaccrual status as follows:

- Retail consumer loans are placed on nonaccrual status when the collection of contractual principal or interest becomes 90 days past due. Accrued but uncollected interest and fee income are reversed and charged against interest income when the consumer loan is placed on nonaccrual status. Subsequent cash collections are recognized as interest income unless the consumer loan is subsequently charged-off, in which case cash collections are recognized as recoveries.
- Commercial Banking and Retail small business commercial loans are placed on nonaccrual status when the collection of contractual principal or interest is deemed doubtful, or it becomes 90 days or more past due and is not both well-secured and in the process of collection. Accrued but uncollected interest and fee income are reversed and charged against interest income when placed on nonaccrual status. Cash interest payments received are recognized either as interest income or as a reduction of principal when collection of principal is doubtful. The loan is returned to accrual status only when all of the principal and interest amounts contractually due are reasonably assured within a reasonable time frame and when the borrower has demonstrated payment performance.
- Credit card receivables are charged-off rather than placed on nonaccrual status.

The Corporation's nonperforming assets for the years ended December 31 are as follows:

(Dollars in millions)	**2002**	2001	2000
Nonperforming Loans:			
Retail	**$1,331**	$1,344	$ 911
Commercial Banking:			
Corporate banking	**873**	1,154	1,065
Middle market banking	**1,001**	973	459
Total Commercial Banking	**1,874**	2,127	1,524
IMG and Corporate	**71**	80	40
Total [1] [2]	**3,276**	3,551	2,475
Other, including other real estate owned	**251**	137	98
Total nonperforming assets	**$3,527**	$3,688	$2,573
Nonperforming assets to related assets [3]	**2.38%**	2.35%	1.48%
Loans 90-days or more past due and accruing interest:			
Card Services	**$ 160**	$ 96	$ 57
Other	**1**	1	5
Total	**$ 161**	$ 97	$ 62

(1) Nonperforming loans at December 31, 2002, include $22 million of loans held for sale. For December 31, 2001 and 2000, there were no nonperforming loans included in held for sale.

(2) The amount of interest on nonperforming loans that was contractually due in 2002 totaled $281 million. Of this amount, $111 million was actually recorded in 2002.

(3) Related assets consist of loans outstanding, including loans held for sale, and other real estate owned.

Prior to 2001, the Corporation's nonperforming assets as of December 31 were:

(Dollars in millions)	2000	1999	1998
Nonperforming Loans:			
Commercial	$1,761	$1,053	$ 729
Consumer	714	506	478
Total	2,475	1,559	1,207
Other, including other real estate owned	98	106	90
Total nonperforming assets	$2,573	$1,665	$1,297
Nonperforming assets to related assets [1]	1.48%	1.02%	0.83%
Loans 90-days or more past due and accruing interest:			
Card Services	$ 57	$ 76	$ 161
Other	5	50	78
Total	$ 62	$ 126	$ 239

(1) Related assets consist of loans outstanding, including loans held for sale, and other real estate owned.

Credit quality improved in 2002 as nonperforming assets declined $161 million from the prior year. In Commercial Banking, nonperforming loans declined $253 million from the prior year. These declines are a result of risk management actions including: loan sales, distressed portfolio sales, and ongoing review of individual credits. The Corporation has established processes for identifying potential problem areas of the portfolio, which currently include exposure to energy, auto-related, airlines and telecommunications. The Corporation will continue to monitor and manage these potential risks, however, concerns remain due to the uncertain economic environment and the potential effect they may have on future credit quality.

Nonperforming loans within Retail at December 31, 2002, were $1.3 billion, a decrease of $13 million. This decrease was primarily driven by discontinued segments of the brokered home equity business. Home equity loans are written down to net realizable value once a loan reaches 120 days delinquency. However, due to the time necessary to complete foreclosure and acquire title, real estate loans remain in nonperforming status for an extended period.

Charge-offs

The Corporation records charge-offs as follows:

- Commercial loans are charged-off in the reporting period in which either an event occurs that confirms the existence of a loss or it is determined that a loan or a portion of a loan is uncollectible.
- A credit card loan is charged-off in the month it becomes contractually 180 days past due and remains unpaid at the end of that month, or 60 days after receipt of bankruptcy notification. Interest on credit card loans is accrued until the loan is charged-off. All interest and fees on loans greater than 90 days delinquent are fully reserved for. At the time of charge-off, accrued but uncollected finance charges and fee income are reversed and charged against interest income and credit card revenue, respectively. Subsequent cash collections are recorded as recoveries. Beginning in 2003, recoveries of previously reversed interest income related to charged off loans are recorded as interest income.
- Retail loans are generally charged-off following a delinquency period of 120 days, or within 60 days for unsecured Retail loans after receipt of notification in case of bankruptcy. Closed-end consumer loans, such as auto loans and leases and home mortgage loans, are typically written down to the extent of loss after considering the net realizable value of the collateral.

The timing and amount of the charge-off on consumer loans will depend on the type of loan, giving consideration to available collateral, as well as the circumstances giving rise to the delinquency. The Corporation adheres to uniform guidelines published by the FFIEC in charging off consumer loans.

The Corporation's net charge-offs for the years ended December 31 are as follows:

	2002			2001			2000		
(Dollars in millions)	**Net charge-offs**	**Average balance**	**Net charge-off rate**	Net charge-offs	Average balance	Net charge-off rate	Net charge-offs	Average balance	Net charge-off rate
Retail	**$ 919**	**$ 67,671**	**1.36%**	$ 820	$ 72,149	1.14%	$ 542	$ 72,282	0.75%
Commercial Banking:									
Corporate banking	**639**	**32,973**	**1.94**	638	43,495	1.47	435	53,343	0.81
Middle market banking	**355**	**32,996**	**1.08**	404	36,910	1.09	127	34,528	0.37
Total Commercial Banking	**994**	**65,969**	**1.51**	1,042	80,405	1.30	562	87,871	0.64
Card Services	**514**	**9,899**	**5.19**	392	6,884	5.69	247	4,754	5.20
IMG and Corporate	**38**	**7,266**	**—**	34	7,616	—	40	6,861	—
Total	**$2,465**	**$150,805**	**1.63%**	$2,288	$167,054	1.37%	$1,391	$171,768	0.81%

Net charge-offs increased 8% during 2002 to $2.5 billion from the prior year reflecting higher charge-offs in nearly all lines of business. The net charge-off rate increased to 1.63% in 2002 versus 1.37% in 2001.

Retail net charge-offs for 2002 totaled $919 million, up from $820 million in 2001. Several factors contributed to these increased losses including: increased consumer bankruptcies; increased severity per default involving auto loans and leases tied to weaker market prices for repossessed vehicles; and high losses on discontinued brokered home equity loans.

For a discussion of Commercial Banking net charge-offs see "Commercial Banking" on page 65.

Card Services net charge-offs for 2002 totaled $514 million, up from $392 million pimarily as a result of growth in the portfolio.

Loan Sales

A summary of the Corporation's Commercial Banking loan sales, excluding syndications, and syndication-related activity and trade finance transactions, for the years indicated are as follows:

(In millions)	**2002**	2001
Loans sold and loans transferred to loans held for sale: [1]		
Nonperforming loans	**$ 508**	$ 582
Other loans with credit related losses	**670**	487
Other loans	**852**	1,148
Total	**$2,030**	$2,217
Impact of sales, transfers to loans held for sale and valuation adjustments on held for sale:		
Charge-offs on loans sold and transferred to held for sale:		
Nonperforming loans	**$ 92**	$ 124
Other loans with credit related losses	**42**	92
Total charge-offs to allowance	**134**	216
Losses on loans sold and held for sale	**35**	43
Total	**$ 169**	$ 259

(1) December 31, 2002 data includes loans reclassified to loans held for sale that are not yet sold of approximately $19 million, $148 million and $68 million in nonperforming loans, other loans with credit related losses and other loans, respectively.

The Corporation sells Commercial Banking loans in the normal course of its business activities as one alternative to manage credit risk. These loans are subject to the Corporation's overall risk management practices. When a loan is sold or transferred to held for sale, the gain or loss is evaluated to determine whether it resulted from credit deterioration or other conditions. Based upon this evaluation, losses resulting from credit deterioration are recorded as charge-offs. Losses or gains deemed to be from other than credit deterioration are recorded as losses or gains on sale. Subsequent writedowns in fair value on loans held for sale are reflected in other noninterest income.

Loans classified as held for sale are carried at the lower of cost or market value. Accordingly, these loans are no longer included in the evaluation of the adequacy of the allowance for credit losses.

ALLOWANCE FOR CREDIT LOSSES

The allowance for credit losses is maintained at a level that in management's judgment is adequate to provide for estimated probable credit losses inherent in various on- and off-balance sheet financial instruments. This process includes deriving expected loss estimates that are based on historical loss ratios, portfolio stress testing and management's judgment. The allowance is based on ranges of estimates and is intended to be adequate but not excessive. Each quarter, an allowance level is estimated by each line of business and reviewed by corporate risk management and senior management. The allowance for credit losses also includes provisions for losses on loans considered impaired and measured pursuant to Statement of Financial Accounting Standards ("SFAS") No. 114, "Accounting by Creditors for Impairment of a Loan," (see Note 8 "Loans" on page 92). Securitized loans and loans held for sale, including credit card receivables, are not subject to this process.

Corporate risk management recommends an allowance and provision for credit losses that result in adequate coverage of inherent losses within the Corporation's credit portfolios. Corporate risk management's assessment is based on line of business tests, portfolio-level modeling and stress testing, as well as management's judgment. Corporate risk management also utilizes third-party benchmarks to validate internal measures of probability of default, loss given default, credit quality and allowance adequacy.

The changes in the Corporation's allowance for credit losses for the years ended December 31 are as follows:

(In millions)	**2002**	2001	2000

(1) Transfers from the allowance for credit losses primarily represent allocable credit allowances associated with consumer loan sale transactions, including securitization transactions.

Composition of Allowance for Credit Losses

While the allowance for credit losses is available to absorb credit losses in the entire portfolio, allocations of the allowance for credit losses by line of business as of December 31 are as follows:

	2002		2001		2000	
(Dollars in millions)	**Amount**	**Percent**	Amount	Percent	Amount	Percent
Retail	**$1,018**	**22%**	$1,027	23%	$ 836	20%
Commercial Banking:						
Corporate banking	**1,706**	**38**	1,714	38	1,699	41
Middle market	**1,365**	**30**	1,365	30	1,355	33
Total Commercial Banking	**3,071**	**68**	3,079	68	3,054	74
Card Services	**396**	**9**	396	8	197	5
IMG and Corporate	**40**	**1**	26	1	23	1
Total	**$4,525**	**100%**	$4,528	100%	$4,110	100%

For analytical purposes using the previous methodology for portfolio segmentation, an allocation of the allowance for credit losses by loan type as of December 31 follows:

	2000		1999		1998	
(Dollars in millions)	Amount	Percent	Amount	Percent	Amount	Percent
Commercial [1]	$3,199	78%	$ 972	43%	$ 834	37%
Consumer	714	17	486	21	440	19
Card Services	197	5	148	6	199	9
Unallocated	—	—	679	30	798	35
Total	$4,110	100%	$2,285	100%	$2,271	100%

(1) Includes allowance related to Business and Community Banking loans, which are included in the Retail business segment results.

Components of Allowance for Credit Losses

The Corporation determines allowance levels based upon the probable losses in the credit portfolios. Several methodologies are employed for estimating probable losses. A detailed discussion of the process is presented beginning on page 57.

The table below presents the components of the probable loss estimate as of December 31:

(In millions)	**2002**	2001
Asset specific	**$ 678**	$ 731
Expected loss	**2,810**	3,167
Stress	**1,037**	630
Total [1]	**$4,525**	$4,528

(1) The underlying assumptions, estimates and assessments made by management to determine the components of the allowance for credit losses are continually evaluated by management and updated to reflect management's judgments regarding economic conditions and various relevant factors impacting credit quality and inherent losses.

The December 31, 2002 allowance for credit losses remained relatively unchanged; however, due to decreases in nonperforming loans and asset levels, coverage ratios improved. The allowance for credit losses at December 31, 2002 represented 3.20% of period-end loans and 139% of nonperforming loans, compared to 2.97% and 128%, respectively, at December 31, 2001. The asset-specific and expected loss components of the allowance for credit losses decreased from prior year reflecting some improvement in credit quality. However, this was offset by an increase in the stress component of the allowance for credit losses reflecting management's ongoing assessment and outlook of the probable losses inherent in the portfolio resulting from the overall economic environment. The allowance for credit losses established for specifically identified off-balance sheet lending exposures was not material at December 31, 2002.

As a result of significant deterioration in certain components of the commercial loan portfolio, the allowance for credit losses was increased to $4.1 billion at December 31, 2000. The majority of the increase in the allowance occurred in the fourth quarter of 2000 as the Corporation identified an increase in the losses inherent in the portfolio not yet realized. During 2001, increases in both charge-offs and nonperforming loans occurred as net charge-offs increased from $1.4 billion in 2000 to $2.3 billion in 2001, and nonperforming loans increased from $2.5 billion at December 31, 2000 to $3.6 billion at December 31, 2001. While credit deterioration occurred during 2000, necessitating the increase in the allowance for credit losses, its impact on delinquencies and charge-offs on the commercial loan portfolio was realized in subsequent periods. While the calculated coverage ratios for 2001 declined in comparison to 2000, the decline was a result of the lagging nature of charge-offs.

Portfolio Stress-Tests

Stress testing is performed on all significant portfolios to simulate the effect of economic deterioration on credit performance. Stress testing the portfolios provides management with a range of loss estimates that incorporates the Corporation's historical loss experience and the reserve impact of events that have occurred, but that have not been reflected in either the historical expected loss factors or the currently assigned risk ratings.

Stress testing of the commercial portfolio is accomplished using a framework developed to test expected default factors and loss given default estimates and to test the effect of downgrades to exposures in identified high-risk industries. This process includes: establishing a base case scenario using three alternative market probability sets and an estimated loss given default probability to measure the impact on reserves; determining the effect of apply-

ing a higher loss given default probability to the base case to take into consideration the variability of historical loss rates over the business cycle; and estimating trend-based reserves in high-risk industries that may not be fully reflected in the historically based loss factors, using market-based tools and information as well as sanctioned macroeconomic forecasts.

Stress testing the consumer portfolios, including credit card, is accomplished in part by analyzing the 5-year historical loss experience for each major product segment. Management analyzes the range of credit loss experienced for each major portfolio segment taking into account economic cycles, portfolio seasoning, underwriting criteria, and then formulates a stress test range that incorporates relevant risk factors that can impact overall credit performance.

DERIVATIVE FINANCIAL INSTRUMENTS

In the normal course of business, the Corporation uses a variety of derivative financial instruments in its trading activity and asset and liability management, and to a lesser extent, in its mortgage operations and to manage certain currency translation exposures of foreign entities.

Effective January 1, 2001, the Corporation adopted SFAS No. 133, "Accounting for Derivative Instruments and Hedging Activities" ("SFAS No. 133"), as amended. This standard significantly changed the accounting treatment for interest rate and foreign exchange derivatives the Corporation uses in its derivative activity. As required by SFAS No. 133, all derivative instruments are carried at fair value irrespective of the purpose for entering into the contracts (i.e., trading, hedging, etc). Purchased option contracts are reported in derivative product assets, and written option contracts are reported in derivative product liabilities. For other derivative financial instruments, unrealized gains are reported in derivative product assets, and unrealized losses are reported in derivative product liabilities. However, fair value amounts recognized for derivative financial instruments executed with the same counterparty under a legally enforceable master netting arrangement are reported on a net basis. Cash flows from derivative financial instruments are reported net as operating activities in the statement of cash flows.

Trading Derivative Instruments

Derivative financial instruments used in trading activities include swaps, forwards, futures, options, and other conditional or exchange contracts in the interest rate, foreign exchange, equity and commodity markets. The estimated fair values are based on quoted market prices or valuation models using current market information. Realized and unrealized gains and losses, including any interest income or expense on derivative instruments, are recorded in noninterest income as trading.

The Corporation uses credit derivatives (primarily single name credit default swaps) and short bond positions, as protection against the deterioration of credit quality on commercial loans and loan commitments. The change in fair value of credit derivative instruments is included in trading results in the Corporation's financial statements, while any credit assessment change in the identified commercial credit exposure is reflected as a change in the allocated credit reserves. At December 31, 2002, the notional amount of credit derivatives economically hedging commercial credit exposure totaled $7.3 billion, and related trading income was $42 million.

Asset and Liability Management Hedging Derivative Instruments

Derivatives are an integral component of the Corporation's asset/liability management activities and associated management of interest rate risk. In general, the assets and liabilities generated through the ordinary course of business activities do not naturally create offsetting positions with respect to repricing, basis or maturity characteristics. Using derivative instruments, principally plain vanilla interest rate swaps (ALM swaps), interest rate sensitivity is adjusted to maintain the desired interest rate risk profile. Interest rate swaps used to adjust the interest rate sensitivity of certain interest-bearing assets and liabilities will not need to be replaced at maturity, since the corresponding asset or liability will mature along with the interest rate swap.

Derivative financial instruments used in hedging activities are designated as fair value hedges, cash flow hedges, or hedges of net investments in foreign operations, and are required to meet specific criteria. The instruments used in fair value hedges and cash flow hedges are principally interest rate swaps. Such interest rate swaps are designated as a hedge, and adjust effectively the interest rate sensitivity of specific assets and liabilities. Interest rate swaps not designated as a qualified hedge are treated as trading derivative instruments.

Interest rate swaps designated as an interest rate related hedge of an existing fixed rate asset or liability are fair value type hedges. Conversely, interest rate swaps designated as an interest rate hedge of an existing variable rate asset or liability are cash flow type hedges. The risk characteristics of the item being hedged generally determine the type of hedge for accounting purposes. Maximizing hedge effectiveness is the primary consideration in choosing the specific asset, liability or forecasted transaction to be hedged.

Fair Value Hedges

Fair value hedges primarily represent hedges of fixed rate interest-bearing instruments. The change in fair value of both the hedging derivative and hedged item is recorded in current earnings. If a hedge is dedesignated prior to maturity, previous adjustments to the carrying value of the hedged item are recognized in earnings to match the earnings recognition pattern of the hedged item (e.g., level yield amortization if hedging an interest-bearing instrument that has not been sold or extinguished).

Cash Flow Hedges

Cash flow hedges primarily represent hedges of variable rate interest-bearing instruments. The effective portion of the change in fair value of the hedging derivative is recorded in Accumulated Other Adjustments to Stockholders' Equity ("AOASE"), which is reclassified into earnings in a manner consistent with the earnings pattern of the underlying hedged instrument or transaction. At December 31, 2002, the total amount of such reclassification into earnings is projected to be a decrease in net interest income of $323 million after-tax ($510 million pre-tax) over the next twelve months. This decrease, along with the contractual interest on the underlying variable rate debt, achieves the overall intended result of converting the variable rate to a specified fixed rate and is included in our analysis of interest rate exposure. These projections involve the use of currently forecasted interest rates over the next twelve months. These rates, and the resulting reclassifications into earnings, are subject to change. The maximum length of time is 27 months for which exposure to the variability of future cash flows for forecasted transactions is hedged. No events occurred in 2002 that impacted earnings from the discontinuance of cash flow hedges due to the determination that a forecasted transaction is no longer likely to occur.

Interest income or expense on most hedging derivatives used to manage interest rate exposure is recorded on an accrual basis as an adjustment to the yield of the designated hedged exposures over the periods covered by the contracts. This matches the income recognition treatment of that exposure, generally assets or liabilities carried at historical cost, with interest recorded on an accrual basis. If all or part of a designated hedged position is terminated (e.g., a hedged asset is sold or prepaid), or if the amount of an anticipated transaction is likely to be less than originally expected, then the related pro rata portion of any unrecognized gain or loss on the derivative is recognized in earnings at that time, and the related pro rata portion of the derivative is subsequently accounted for as a trading instrument.

Hedges entered into by the Corporation are regularly monitored to verify that the hedge continues to be effective in offsetting changes in fair value or cash flows of the risk being hedged. In the event that hedges cease to be effective, hedge accounting is discontinued. Amounts previously recognized as adjustments to the carrying value of the hedged item (in a fair value hedge), and accumulated in AOASE (in a cash flow hedge) are subsequently recognized in earnings when the previously hedged item affects earnings.

The amount of hedge ineffectiveness recognized for cash flow and fair value hedges for the twelve months ended December 31, 2002 and 2001, was a gain of $2 million and $14 million, respectively, recognized in noninterest income. No component of a hedging derivative instrument's gain or loss is excluded from the assessment of hedge effectiveness. The Corporation has no non-derivative instruments designated as a hedge.

Asset and Liability Management Swaps — Maturities and Rates

The notional amounts, maturity, and weighted-average pay and receive rates for the ALM swap position at December 31, 2002, are summarized as follows:

(Dollars in millions)	2003	2004	2005	2006	2007	Thereafter	Total
Receive fixed/pay floating swaps:[1]							
Notional amount	$ 225	$ —	$ —	$ —	$ —	$2,475	$ 2,700
Weighted average:							
Receive rate	3.13%	—%	—%	—%	—%	6.22%	5.96%
Pay rate	1.43	—	—	—	—	1.74	1.72
Pay fixed/receive floating swaps:[1]							
Notional amount	$1,310	$2,970	$9,582	$2,895	$1,821	$ 50	$18,628
Weighted average:							
Receive rate	1.67%	1.63%	1.36%	1.46%	1.53%	1.78%	1.46%
Pay rate	6.93	3.67	4.19	4.77	3.69	7.71	4.35
Total notional amount	$1,535	$2,970	$9,582	$2,895	$1,821	$2,525	$21,328

(1) Variable interest rates – which generally are the one-month, three-month and six-month London interbank offered rates ("LIBOR") in effect on the date of repricing.

Mortgage Banking Hedging Activity

The Corporation uses derivatives, primarily mortgage backed security forward sale agreements, to hedge exposure to changes in interest rates in its mortgage loan origination and sale activity. Changes in fair value of mortgage loan interest rate lock commitments granted to customers and the related derivative contracts used to economically hedge this exposure are recorded in other noninterest income. In contrast, fair value hedge accounting, as described above, is used to account for the derivatives entered into to hedge the 15 and 30 year closed loan warehouse that is held for sale. Changes in fair value of derivatives used to economically hedge the adjustable rate closed loan warehouse are also recorded in other noninterest income.

Hedges of Non-U.S Dollar Net Investment in Foreign Operations

In order to minimize the capital impact of translation gains or losses measured on an after-tax basis, the Corporation uses forward foreign exchange contracts to hedge the exposure relating to non-U.S. dollar net investments in foreign operations. The effective portion of the change in fair value of the hedging derivatives is recorded in AOASE as part of the cumulative translation adjustment. The amount of after-tax gains included in the cumulative translation adjustment during the years ended December 31, 2002 and 2001, related to hedges of the foreign currency exposures of net investments in foreign operations, totaled $9 million and $6 million, respectively.

Credit Exposure Resulting from Derivative Financial Instruments

The credit risk associated with exchange-traded derivative financial instruments is limited to the relevant clearinghouse. Written options do not expose the Corporation to credit risk, except to the extent of the underlying risk in a financial instrument that the Corporation may be obligated to acquire under certain written put options. Written caps and floors do not expose the Corporation to credit risk.

Credit exposure from derivative financial instruments arises from the risk of a counterparty default on the derivative contract. The amount of loss created by the default is the replacement cost or current positive fair value of the defaulted contract. The Corporation utilizes master netting agreements whenever possible to reduce its credit exposure from counterparty defaults. These agreements allow the netting of contracts with unrealized losses against contracts with unrealized gains to the same counterparty, in the event of a counterparty default.

The impact of these master netting agreements at December 31 follows:

(In millions)	**2002**	2001
Gross replacement cost	**$22,066**	$12,262
Less: Adjustment due to master netting agreements	**17,793**	9,037
Balance sheet credit exposure	**$ 4,273**	$ 3,225

LOAN SECURITIZATIONS AND OFF-BALANCE SHEET ACTIVITIES

Loan Securitizations

The Corporation transforms loans into securities that are sold to investors through the process of securitization. The Corporation primarily securitizes credit card receivables and home equity loans and consumer assets. In a credit card securitization, a designated pool of credit card receivables is removed from the balance sheet and transferred to a QSPE, that in turn sells securities to investors entitling them to receive specified cash flows during the life of the security. The proceeds from the issuance of securities are then distributed by the QSPE to the Corporation as consideration for the loans transferred. Following a securitization, the Corporation receives fees for servicing the receivables and any excess finance charges, yield-related and other fees, and interchange revenue on the receivables over and above the interest paid to the investors, net credit losses and servicing fees (collectively termed "the excess spread"). At the date of sale an interest-only strip is recorded on the balance sheet representing the estimated discounted excess spread earned on the assets sold over the life of underlying receivables.

The Corporation's continued involvement in the securitized assets includes the process of managing and servicing the transferred receivables, as well as maintaining an undivided, pro rata interest in all credit card receivables that have been securitized, referred to as seller's interest, which is generally equal to the pool of assets included in the securitization less the investors' portion of those assets. The Corporation's seller's interest ranks pari-passu with the investors' interests in the trusts. As the amount of the loans in the securitized pool fluctuates due to customer payments, purchases, cash advances, and credit losses, the carrying amount of the seller's interest will vary. However, the seller's interest is required to be maintained at a minimum level to ensure receivables are available for allocation to the investor's interest. This minimum level is generally between 4% and 7% of the QSPEs principal receivables. The Corporation's credit card seller's interests were in aggregate 45% and 38% of the QSPEs principal receivables at December 31, 2002, and 2001, respectively. Average credit card seller's interests were approximately 40% and 30% of the QSPEs average principal receivables for the years ended December 31, 2002, and 2001, respectively.

Investors in the beneficial interests of the securitized loans have no recourse against the Corporation if cash flows generated from the securitized loans are inadequate to service the obligations of the QSPE. To help ensure that adequate funds are available in the event of a shortfall, the Corporation is required to deposit funds into cash spread accounts if excess spread falls below certain minimum levels. Spread accounts are funded from excess spread that would normally be returned to the Corporation. In addition, various forms of other credit enhancements are provided to protect more senior investor interests from loss. Credit enhancements associated with credit card securitizations, such as cash collateral or spread accounts, totaled $145 million and $165 million at December 31, 2002, and 2001, respectively, and are classified on the balance sheet as other assets at amounts approximating fair value.

The following comprised the Corporation's managed credit card loans at December 31:

(In millions)	**2002**	2001
Owned credit card loans – held in portfolio	**$ 7,592**	$ 5,040
Owned credit card loans – held for future securitization	**3,989**	1,746
Seller's interest in credit card loans and accrued interest receivable	**28,526**	24,019
Total credit card loans reflected on balance sheet	**40,107**	30,805
Securities sold to investors and removed from balance sheet	**33,889**	37,350
Managed credit card loans	**$73,996**	$68,155

Off-Balance Sheet Activities

In the normal course of business, the Corporation is a party to a number of activities that contain credit, market and operational risk that are not reflected in whole or in part in the Corporation's consolidated financial statements. Such activities include: traditional off-balance sheet credit-related financial instruments; commitments under capital and operating leases and long-term debt; credit enhancement and liquidity facilities associated with the commercial paper conduit program; joint venture activities; and other contractual obligations.

Credit-Related Financial Instruments

The Corporation provides customers with off-balance sheet credit support through loan commitments, standby letters of credit and guarantees, as well as commercial letters of credit. Summarized credit-related financial instruments at December 31, 2002, are as follows:

		Amount of Commitment Expiration Per Period			
(In billions)	Total	Less Than 1 Year	1 – 3 Years	3 – 5 Years	Over 5 Years
Unused credit card lines	$337.5	$337.5	$ —	$ —	$ —
Unused loan commitments	134.8	103.1	22.1	9.3	0.3
Standby letters of credit and foreign office guarantees	24.0	16.3	5.9	1.4	0.4
Commercial letters of credit	0.5	0.5	—	—	—

Since many of the unused commitments are expected to expire unused or be only partially used, the total amount of unused commitments in the preceding table does not necessarily represent future cash requirements.

Lease Commitments, Long-Term Debt and Other

The Corporation has entered into a number of long-term leasing arrangements of banking facilities to support the ongoing activities of the Corporation. The required payments under such commitments and long-term debt at December 31, 2002 are as follows:

(In millions)	2003	2004	2005	2006	2007	2008 and After	Total
Long-term debt, including capital leases	$7,846	$6,291	$6,622	$6,896	$4,542	$7,722	$39,919
Trust preferred capital securities	—	—	—	—	—	3,315	3,315
Operating leases	239	228	205	187	160	843	1,862
Total	$8,085	$6,519	$6,827	$7,083	$4,702	$11,880	$45,096

Asset Backed Finance Programs

The Corporation is an active participant in the asset-backed securities business where it helps meet customers' financing needs by providing access to the commercial paper markets through special purpose entities, known as multi-seller conduits. These entities are separate bankruptcy-remote corporations in the business of purchasing interests in, and making loans secured by, receivable pools and other financial assets pursuant to agreements with customers. The entities fund their purchases and loans through the issuance of highly rated commercial paper. The primary source of repayment of the commercial paper is the cash flow from the pools of assets. Investors in the commercial paper have no recourse to the general assets of the Corporation. Customers benefit from such structured financing transactions as these transactions provide an ongoing source of asset liquidity, access to the capital markets, and a potentially favorable cost of financing.

As of December 31, 2002, the Corporation administered multi-seller conduits with a total program limit of $70.0 billion and with $39.3 billion in commercial paper outstanding. The multi-seller conduits were rated A-1 by S & P, P-1 by Moody's and F1 or higher by Fitch.

These multi-seller conduits are a type of variable interest entity ("VIE"), as defined by Financial Accounting Standards Board ("FASB") Interpretation No. 46, "Consolidation of Variable Interest Entities" ("FIN No. 46"). From the Corporation's perspective, these entities have historically met all of the requirements to be treated as independent entities, which have not been required to be consolidated. See pages 87–88 for additional discussion. Each of the multi-seller conduits administered by the Corporation has standalone financial statements, which are independently audited on an annual basis.

As administrator of the multi-seller conduits, the Corporation provides deal origination services, asset portfolio monitoring, treasury and financial administration services for these entities. The Corporation structures financing transactions for customers such that the receivables and other financial instruments financed through the multi-seller conduits are appropriately diversified and credit enhanced to support the conduits' commercial paper issuances. The Corporation does not service these assets and does not transfer its own receivables or other financial instruments into the multi-seller conduits it administers. Each conduit has program documents and investment policies, which govern the types of assets and structures permitted by the conduit. The mix of assets is principally trade receivables, auto loans and leases and credit card receivables. Under the program document, one conduit has publicly rated marketable investment securities.

The commercial paper issued by the conduits is supported by deal specific credit enhancement, which is generally structured to cover more than the expected losses on the pool of assets. The deal specific credit enhancement is typically in the form of overcollateralization, but may also include any combination of the following: recourse to the seller or originator, cash collateral accounts, letters of credit, excess spread, retention of subordinated interests or third-party guarantees. In a limited number of cases, the Corporation provides the deal specific credit enhancement as a financial arrangement for the customer. As of December 31, 2002 and 2001, the Corporation provided such deal specific credit enhancement to customers in the form of subordinated interests totaling $203 million and $132 million, respectively. These subordinated interest positions are included in loans on the Corporation's balance sheet.

In general, the commercial paper investors have access to a second loss credit protection in the form of program-wide credit enhancement. The program-wide credit enhancement consists of a subordinated term loan from the Corporation and a surety bond from an AAA rated monoline insurance company. The subordinated term loans from the Corporation to these entities totaled $1.0 billion and $1.1 billion as of December 31, 2002 and 2001, respectively. However, one conduit has only deal specific credit enhancements provided by other financial institutions.

As a means of ensuring timely repayment of the commercial paper, each asset pool financed by the conduits has a minimum of 100% deal specific liquidity facility associated with it. In the unlikely event of a disruption in the commercial paper market or in the event an asset pool is removed from the conduit, the administrator can draw on the liquidity facility to repay the maturing commercial paper. The liquidity facilities are typically in the form of asset purchase agreements and are generally structured such that the bank liquidity provider is purchasing, or lending against, a pool of non-defaulted, performing assets. Additionally, programwide liquidity facilities and lines of credit are provided by the Corporation to the multi-seller conduits to facilitate access to the commercial paper markets.

The following table summarizes the total amount of deal specific and programwide liquidity facilities, as well as the share of these facilities provided by the Corporation, for each of the multi-seller conduits as of December 31, 2002 and 2001:

	2002			2001		
(Dollars in billions)	Total Liquidity Facility	Liquidity Facility provided by the Corporation	Percent	Total Liquidity Facility	Liquidity Facility provided by the Corporation	Percent
Total multi-seller conduits	**$50.6**	**$41.3**	**82%**	$53.5	$41.3	77%

The Corporation also provides deal specific and program-wide liquidity facilities to conduits administered by other financial institutions totaling approximately $6.3 billion and $2.1 billion as of December 31, 2002 and 2001, respectively.

With the January 2003 issuance of FIN No. 46, the Corporation is currently in the process of evaluating what entities will be required to be consolidated. The Corporation believes it is reasonably possible that the multi-seller conduits and an investment vehicle as currently structured, for which it is the administrator will be consolidated. Investors in the multi-seller conduits have no recourse to the general assets of the Corporation.

Based on information as of December 31, 2002, the expected impact of FIN No. 46 to the Corporation's balance sheet would be to increase both assets and liabilities by approximately $42.8 billion for the multi-seller conduits and an investment vehicle. Management has estimated its maximum loss exposure to be $130 million. Based on capital ratios as of December 31, 2002, consolidation of these entities would affect regulatory risk-based capital by reducing the Tier 1 risked-based capital ratio from 9.9% to 8.6% and total risked-based capital ratio from 13.7% to 12.1%. The Corporation's actual capital ratios as of the date of adoption will depend on the actual level of risk based capital, which is subject to change from that of December 31, 2002.

Principal Investments and Joint Ventures

In the normal course of business, the Corporation invests in principal investments, comprised of indirect investments in private equity, venture capital, and other equity and debt assets. The investment strategy for the portfolio, primarily executed by One Equity Partners (a wholly-owned consolidated subsidiary), is to focus on direct investments in high potential entities. Investments made in the past year include stakes in Howaldtswekre-Deutsche Werft (HDW), the global leader in the design and manufacture of non-nuclear submarines, and Polaroid, a leader in the instant imaging industry. Commitments to fund such investments at December 31, 2002 totaled $1.1 billion.

Beginning January 1, 2002, Paymentech, Inc. and Anexsys, LLC were consolidated. At December 31, 2002, the Corporation is not party to any material joint venture arrangements which are not consolidated.

Loans Sold with Recourse

The Corporation occasionally sells or securitizes loans with limited recourse. The amount of outstanding loans sold with recourse totaled $4.7 billion and $8.3 billion at December 31, 2002, and 2001, respectively. The recourse provisions require the Corporation to repurchase loans at par plus accrued interest upon a credit-related triggering event. Exposure to credit losses from these arrangements has been reduced with the purchase of credit insurance contracts that cover the majority of expected losses.

CAPITAL MANAGEMENT

The capital position of the Corporation is managed to achieve management's external debt rating objectives, comply with regulatory requirements and reflect the underlying risks of the Corporation's business activities. The Corporation employs an economic capital framework (described further on page 79) to facilitate a standard measure of risk and return across all business units, as well as to provide a measure of capital adequacy consistent with internal risk evaluation practices. This serves as the basis for capital planning and related management activities.

Selected Capital Ratios

The Corporation aims to maintain regulatory capital ratios, including those of the principal banking subsidiaries, in excess of the well-capitalized guidelines under federal banking regulations. The Corporation maintains a well-capitalized regulatory position.

The Corporation's capital ratios are as follows:

	2002	2001	2000	1999	1998	Well-Capitalized Regulatory Guidelines
Risk-based capital ratios:						
Tier 1	**9.9%**	8.6%	7.3%	7.7%	7.9%	6.0%
Total	**13.7**	12.2	10.8	10.7	11.3	10.0
Leverage ratio [1]	**8.9**	8.2	7.3	7.7	8.0	N/A
Common equity/assets	**8.1**	7.5	6.8	7.4	7.8	—
Tangible common equity/tangible reported assets	**7.2**	6.8	6.3	6.6	6.8	—
Tangible common equity/tangible managed assets	**6.4**	5.9	5.5	5.7	5.8	—
Double leverage ratio	**103**	103	108	112	108	—
Dividend payout ratio	**30**	38	N/M	57	58	—

N/A Not applicable

(1) The minimum regulatory guideline is 3%.

The components of the Corporation's regulatory risk-based capital and risk-weighted assets are as follows at December 31:

(In millions)	**2002**	2001	2000	1999	1998
Regulatory risk-based capital:					
Tier 1 capital	**$ 23,918**	$ 21,749	$ 19,824	$ 20,247	$ 19,495
Tier 2 capital	**9,201**	9,091	9,316	7,967	8,295
Total capital	**33,119**	30,840	29,140	28,214	27,790
Total risk-weighted assets	**$241,468**	$253,330	$270,182	$263,169	$244,473

In deriving Tier 1 and total capital, goodwill and other nonqualifying intangible assets are deducted as indicated for the years ended December 31:

(In millions)	**2002**	2001	2000	1999	1998
Goodwill	**$1,882**	$1,560	$ 858	$ 934	$1,075
Other nonqualifying intangibles	**256**	207	375	669	637
Subtotal	**2,138**	1,767	1,233	1,603	1,712
Qualifying intangibles	**415**	414	214	583	984
Total intangibles	**$2,553**	$2,181	$1,447	$2,186	$2,696

See page 77 for a discussion of the possible impact of consolidation of certain multi-seller conduits to the Corporation's risk-based capital ratios under FIN No. 46.

Dividend Policy

The Corporation's common stock dividend policy reflects its earnings outlook, desired payout ratios, the need to maintain an adequate capital level, and alternative investment opportunities. The common stock dividend payout ratio is currently targeted in the range of 25% - 30% of earnings over time. Common stock dividends declared for 2002 and 2001 were $0.84 per share. On January 21, 2003, the Corporation declared its quarterly common cash dividend of $0.21 per share, payable on April 1, 2003.

Double Leverage

Double leverage is the extent to which the Corporation's resources are used to finance investments in subsidiaries. Double leverage was 103% at December 31, 2002, and 2001. Trust Preferred Capital Securities of $3.3 billion in 2002 and 2001 were included in capital for purposes of this calculation.

Stock Repurchase Program and Other Capital Activities

On July 16, 2002, the Corporation's Board of Directors approved the repurchase of up to $2 billion of the Corporation's common stock, replacing the two previous buyback programs announced in September 2001 and May 1999. The timing of the purchases and the exact number of shares to be repurchased will depend on market conditions. The share repurchase program does not include specific price targets or timetables and may be suspended at any time. In 2002, the Corporation purchased 16 million shares of common stock at an average price of $37.54 per share. There remains available $1.6 billion of common stock that may be repurchased under the Board authorization.

On November 1, 2001, the Corporation redeemed all outstanding preferred stock with cumulative and adjustable dividends, Series B and C, totaling $190 million. The redemption price for both of the Series B and C preferred stock was $100.00 per share, plus accrued and unpaid dividends totaling $1.00 per share and $1.083 per share, respectively.

During 2001, the Corporation added to its Tier 1 capital through the sponsorship of two trusts that issued $825 million in aggregate principal amount of trust preferred securities.

During 2001 the Corporation strengthened its capital position through the issuance of $750 million of subordinated debt.

Economic Capital

An important aspect of risk management and performance measurement is the ability to evaluate the risk and return of a business unit, product or customer consistently across all lines of business. The Corporation's economic capital framework facilitates this standard measure of risk and return. Business units are assigned capital consistent with the underlying risks of their product set, customer base and delivery channels.

The following principles are inherent in the capital allocation methodology employed:

- An equal amount of capital is assigned for each measured unit of risk.
- Risk is defined in terms of "unexpected" losses over the life of the exposure, measured at a confidence interval consistent with that level of capitalization necessary to achieve a targeted AA solvency standard. Unexpected losses are in excess of those normally incurred and for which reserves are maintained.
- Business units are assessed a uniform charge against allotted capital, representing a target hurdle rate on equity investments. Returns on capital in excess of the hurdle rate contribute to increases in shareholder value.

Four forms of risk are measured – credit, market, operational and lease residual. Credit risk capital is determined through an analysis of both historical loss experience and market expectations. Market risk capital is set consistent with value-at-risk limits established by the Corporation's risk oversight committees. Operational risk capital incorporates event and technology risks. The operational risk evaluation process involves an examination of various risk factors that contribute to a greater likelihood of loss due to such things as fraud or processing error. Finally, lease residual risk capital covers the potential for losses arising from the disposition of assets returned at the end of lease contracts. This price risk is analyzed based upon historical loss experiences and market factors, as well as by reviewing event-specific scenarios.

The economic capital process provides a valuable analytical tool that is critical to the understanding of business segment performance trends. The methodologies employed are subject to ongoing development and review. Over time, the Corporation's view of individual risks and associated capital will likely change given improvements in the Corporation's ability to quantify risks inherent in various business activities.

FORWARD-LOOKING STATEMENTS

This discussion of financial results contains forward-looking statements about the Corporation, including descriptions of plans or objectives of its management for future operations, products or services, and forecasts of its revenues, earnings or other measures of economic performance. Forward-looking statements can be identified by the fact that they do not relate strictly to historical or current facts. They often include the words "believe," "expect," "anticipate," "intend," "plan," "estimate" or words of similar meaning, or future or conditional verbs such as "will," "would," "should," "could" or "may."

Forward-looking statements, by their nature, are subject to risks and uncertainties. A number of factors – many of which are beyond the Corporation's control – could cause actual conditions, events or results to differ significantly from those described in the forward-looking statements. Some of these factors include certain credit, market, operational, liquidity and interest rate risks associated with the Corporation's business and operations. Other factors described in the Corporation's Form 10-K include changes in business and economic conditions, competition, fiscal and monetary policies and legislation.

Forward-looking statements speak only as of the date they are made. The Corporation does not undertake to update forward-looking statements to reflect circumstances or events that occur after the date the forward-looking statements are made or to reflect the occurrence of unanticipated events, such as further market deterioration that adversely affects credit quality, auto lease residuals and credit card asset values.

The accompanying notes are an integral part of this statement.

Note 1 – Summary of Significant Accounting Policies

BANK ONE CORPORATION, along with its subsidiaries ("Bank One" or the "Corporation"), is a financial holding company that offers a full range of financial services to commercial and business customers and consumers.

(a) Basis of Presentation

The consolidated financial statements have been prepared in conformity with generally accepted accounting principles in the United States of America. Certain prior-year financial statement information has been reclassified to conform to the current year's presentation. The preparation of the consolidated financial statements requires management to make estimates and assumptions that affect the amounts reported and disclosures of contingent assets and liabilities. Actual results could differ from those estimates.

Certain assets and liabilities, primarily derivative assets and liabilities as well as resale and repurchase agreements, are reported on a net basis by counterparty if legally enforceable master netting arrangements are in place.

(b) Principles of Consolidation

The Corporation's consolidated financial statements include all accounts of BANK ONE CORPORATION (the "Parent Company") and all significant majority-owned subsidiaries with principal investment subsidiaries following specialized industry accounting as described below. All significant intercompany accounts and transactions have been eliminated. Results of operations of acquired entities are included from the acquisition date, and assets and liabilities are stated at their estimated fair values at the acquisition date.

The Corporation is involved with Special Purpose Entities ("SPEs") as either a transferor or an administrator. The Corporation considers the underlying facts and circumstances of individual transactions when assessing the appropriateness of consolidating SPEs. The Corporation's assessment focuses on its ability to influence or control a SPE as well as the dispersion of risk and rewards attributable to a SPE. In cases where the Corporation transfers financial assets to a SPE, the SPE must represent a qualifying SPE ("QSPE") or the Corporation consolidates the transferred financial assets. QSPE status is achieved when all conditions specified in SFAS No. 140, "Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities" ("SFAS No. 140") are met. Those conditions focus on whether the SPE is demonstrably distinct from the Corporation, limited to only permitted activities, limited on what assets the QSPE may hold, and limited on sales or other dispositions of assets. The Corporation has determined that its credit card trusts are QSPEs, and has obtained supporting legal opinions as applicable.

As discussed on pages 75-77 the Corporation serves as an administrator of commercial paper multi-seller conduits. In determining whether to consolidate the financial assets held by these SPEs, the Corporation considered qualitative and quantitative factors of the SPEs that were deemed appropriate prior to the issuance of new and pending accounting pronouncements. Such factors included the purpose and nature of the SPE, the Corporation's continuing involvement, any fee arrangements, credit facilities and other relevant factors. Based on its evaluation of these factors, the Corporation has determined that none of these SPEs require consolidation. However, as described in Note 1(r) "New and Pending Accounting Pronouncements" it is reasonably possible that these SPEs will be consolidated effective July 1, 2003 under new accounting guidance.

The Corporation's principal investment subsidiaries, separate legal entities, have majority equity ownership in investees that are not consolidated because of specialized industry accounting for investment companies which requires fair value accounting.

(c) Resale and Repurchase Agreements

Securities purchased under resale agreements and securities sold under repurchase agreements are treated as collateralized financing transactions and carried at the amount at which the securities will be subsequently resold or repurchased, plus accrued interest.

(d) Trading Activities

The Corporation's trading activities are primarily customer oriented. Securities bought and sold and held principally for short-term appreciation or other trading purposes and to protect credit deterioration in the loan portfolio are classified as trading assets and other short-term borrowings and recorded on a trade date basis at fair value. Derivative contracts entered into for trading and economic hedging purposes which do not qualify for hedge accounting are classified as derivative product assets and derivative product liabilities, as appropriate. Trading income includes realized and unrealized gains and losses from trading positions, including interest income or expense on derivative instruments. Estimated fair values are based on quoted market prices or valuation models, which use current market information. Trading activities involve instruments with interest rate, exchange rate, equity price, credit and commodity price risk.

(e) Hedging Activities

Hedging derivatives that qualify for hedge accounting are recognized on the balance sheet at fair value as either derivative product assets or liabilities. Hedge ineffectiveness, if any, is calculated and recorded in current earnings. See "Derivative Financial Instruments" beginning on page 72 for detailed information on the Corporation's strategy in using derivative instruments in its asset and liability management and trading activities, as well as the accounting principles and disclosures for these instruments.

(f) Investment Securities

Debt and equity investment securities designated as available for sale are carried at fair value, with unrealized gains and losses, net of taxes, included in accumulated other adjustments to stockholders' equity. The estimated fair value of a security is determined based on market quotations when available or, if not available, by using a discounted cash flow approach. Realized gains and losses, including other than temporary impairments, are included in noninterest income as investment securities gains (losses). The specific identification method is used to calculate realized gains or losses.

In accordance with Emerging Issues Task Force (EITF) No. 99-20, "Recognition of Interest Income and Impairment on Purchased and Retained Beneficial Interests in Securitized Financial Assets," impairment of certain beneficial interests in securitized financial assets must be recognized when there has been an adverse change in estimated cash flows and the asset's fair value is below its carrying value. The Corporation recognizes interest income based on the amount of the excess of estimated cash flows over the recorded investment in the securitized financial assets. Changes in estimated cash flows are recognized on a prospective basis. The Corporation adopted EITF No. 99-20 effective April 1, 2001. The effect of adoption was a one-time, non-cash charge to earnings of $44 million after-tax ($69 million pre-tax).

Principal investments are carried at fair value, with unrealized and realized gains and losses included in noninterest income as investment securities gains (losses). The fair value of a publicly traded principal investment is determined using quoted market prices when the investment is unrestricted; otherwise fair value is estimated using quoted market prices adjusted for market liquidity, position size and sale restrictions other than time. The fair value of principal investments that are not publicly traded is estimated based on the investees' financial results, conditions and prospects, values of comparable public companies, market liquidity and sales restrictions.

(g) Equity and Cost Method Investments

The equity method of accounting is applied to investments that the Corporation has significant influence over, excluding principal investments, which typically represents ownership interests between 20-50% for investments in common stock or when ownership interests equals or exceeds 3% for investments in limited partnerships. The equity method of accounting results in recognition of the Corporation's pro-rata share of investment income or loss in other noninterest income.

The cost method of accounting is applied to investments that the Corporation does not have a significant influence over, excluding principal investments, which typically represent ownership interests less than 20% for investments in common stock or when ownership interests is less than 3% for investments in limited partnerships. The cost method recognizes income when dividends are received.

(h) Loans

Loans are recognized at the principal amount outstanding, net of unearned income and amounts charged off. The recorded investment in credit card loans also includes unpaid interest and fees. Unearned income includes deferred loan origination fees reduced by loan origination costs. Unearned income on loans, excluding credit card loans, is amortized to interest income over the life of the related loan using methods which approximate the effective interest rate method. Unearned income on credit card loans is typically amortized over one year using a straight-line method to noninterest income as credit card revenue.

Fees received for providing loan commitments and letters of credit that result in loans are typically deferred and amortized to interest income over the life of the related loan, beginning with the initial borrowing. Fees on commitments and letters of credit are amortized to noninterest income as banking fees and commissions over the commitment period when funding is not expected.

Other credit-related fees, including syndication management fees, are recorded to noninterest income as banking fees and commissions when received or over time to match the earnings process.

(i) Lease Financing Receivables

The Corporation typically provides lease financing to its customers through direct financing leases. Leveraged leases, which represent direct financing leases involving nonrecourse debt, also are provided to customers. Unearned income on a direct financing lease is amortized to income over the lease term so as to yield a constant rate of return on the net investment in the lease. Periodic recognition of lease income on leveraged leases is based on an analysis of cash flows using the original investment less deferred taxes arising from the difference between the pretax financial accounting income and taxable income. Residual values of leased assets are reviewed at least annually with periodic reviews performed as warranted by the underlying circumstances. In the case of automobiles, valuations are based upon various assumptions and estimates including the probability of the automobile being returned to the Corporation, estimated costs incurred to reduce the number of returned automobiles from the customer, estimated collectable fees for mileage and other wear and tear, reconditioning costs, and estimated used car sales prices. Declines in estimated residual values that are other than temporary are recognized in the period such determination is made in other noninterest income.

(j) Loan Sales and Securitizations

Loans held for sale are carried at the lower of cost or market value. When a loan is sold or transferred to held for sale, the loan's carrying value is compared to its fair value and any shortfall in value that is determined to be credit related is recorded as a charge-off, reducing the allowance for credit losses. Any shortfall in fair value other than credit related is recorded as a charge to other noninterest income. All subsequent net declines in market value of loans held for sale are recorded to other noninterest income.

With consumer loan portfolio sales, the allocable portion of the allowance for credit losses adjusts the carrying value of the loan portfolio and is treated as a transfer out of the allowance for credit losses. The difference between the portfolio's carrying value adjusted for the allocable credit reserves and the net sales proceeds is recorded as a component of other noninterest income.

The Corporation records a transfer of financial assets as a sale when it surrenders control over those financial assets to the extent that consideration other than beneficial interests in the transferred assets is received in exchange. The Corporation considers control surrendered when all conditions prescribed by SFAS No. 140 are met. Those conditions focus on whether the transferred financial assets are isolated beyond the reach of the Corporation and its creditors, the constraints on the transferee or beneficial interest holders, and the Corporation's rights or obligations to reacquire transferred financial assets. As appropriate, the Corporation obtains legal opinions supporting the conclusion that transferred financial assets are isolated beyond the reach of the Corporation and its creditors.

(k) Nonperforming Loans

A loan is considered nonperforming when placed on nonaccrual status, or when renegotiated at terms that represent an economic concession to the borrower because of a decline in the borrower's financial condition. For a more detailed discussion, see the "Nonperforming Assets" section beginning on page 66. The Corporation's charge-off policies are presented on page 67.

(l) Allowance for Credit Losses

Management maintains the allowance for credit losses at a level it believes is adequate to provide for estimated probable credit losses inherent in on- and off-balance sheet credit exposure. For a more detailed discussion, see the "Allowance for Credit Losses" section beginning on page 68.

(m) Premises and Equipment

Premises and equipment are carried at cost less accumulated depreciation and amortization. Depreciation and amortization is computed using the straight-line method over the estimated useful life of the owned asset and, for leasehold improvements, over the lesser of the remaining term of the leased facility or the estimated economic life of the improvement. For owned and capitalized assets, estimated useful lives range from three to 30 years. Maintenance and repairs are charged to expense as incurred, while major improvements are capitalized and amortized to operating expense over the identified useful life.

(n) Other Real Estate Owned ("OREO")

OREO includes real estate assets that have been received in satisfaction of debt. OREO is initially recorded and subsequently carried at the lower of cost or fair value less estimated selling costs. Any valuation adjustments required at the date of transfer are charged to the allowance for credit losses. Subsequently, unrealized losses and realized gains and losses on sale are included in other noninterest income. Operating results from OREO are recorded in other noninterest expense.

(o) Credit Card Award Programs

Costs associated with credit card award programs are accounted for on an accrual basis, and are charged against credit card revenue in the period in which the related benefits are earned by customers. See page 47 for a discussion of risks and uncertainty associated with an award program.

(p) Income Taxes

Deferred tax assets and liabilities are determined based on temporary differences between the carrying amounts of assets and liabilities in the consolidated financial statements and their related tax bases and are measured using the enacted tax rates and laws that are in effect. The effect on deferred tax assets and liabilities of a change in rates is recognized as income or expense in the period in which the change occurs.

(q) Cash Flow Reporting

Cash and cash equivalents consist of cash and due from banks, whether interest-bearing or not. Net reporting of cash transactions has been used when the balance sheet items consist predominantly of maturities of three months or less, or where otherwise permitted. Other items are reported on a gross basis.

(r) New and Pending Accounting Pronouncements

The Corporation adopted in 2002 the following new accounting pronouncements and will adopt in 2003 the following pending accounting pronouncements.

Goodwill and Other Intangible Assets

Effective January 1, 2002, the Corporation adopted SFAS No. 142, "Goodwill and Other Intangible Assets" ("SFAS No. 142"). Under SFAS No. 142, goodwill and intangible assets with indefinite lives are no longer amortized, but are subject to impairment tests at least annually. Intangible assets with finite lives continue to be amortized over the period the Corporation expects to benefit from such assets and are periodically reviewed for other than temporary impairment.

The impact of adopting SFAS No. 142 on net income and earnings per share adjusted to exclude amortization expense (net of taxes) related to goodwill is as follows:

(In millions, except per share data)	**2002**	2001	2000
Net income (loss) attributable to common stockholders' equity[1]	**$3,295**	$2,628	$ (523)
Goodwill amortization	**—**	44	44
Pro forma net income (loss) attributable to common stockholders' equity	**$3,295**	$2,672	$ (479)
Basic earnings (loss) per share:			
Reported earnings (loss) per share	**$ 2.83**	$ 2.25	$(0.45)
Goodwill amortization	**—**	0.04	0.04
Pro forma basic earnings (loss) per share	**$ 2.83**	$ 2.29	$(0.41)
Diluted earnings (loss) per share:			
Reported earnings (loss) per share	**$ 2.80**	$ 2.24	$(0.45)
Goodwill amortization	**—**	0.04	0.04
Pro forma diluted earnings (loss) per share	**$ 2.80**	$ 2.28	$(0.41)

(1) Includes the impact of preferred stock dividends of $10 million and $12 million in 2001 and 2000, respectively.

Stock Options

Effective January 1, 2002, the Corporation adopted the fair value recognition provisions of SFAS No. 123, "Accounting for Stock-based Compensation" ("SFAS No. 123"), as amended by SFAS No. 148, "Accounting for Stock-Based Compensation– Transition and Disclosure, an amendment to FASB Statement No. 123" ("SFAS No. 148"), and selected the prospective method of transition and began recognizing compensation expense based on the fair value method on newly granted stock awards. Under this method, compensation cost is measured at the grant date based on the fair value of the award and is recognized as expense over the vesting period of the grant. Pursuant to the requirements of SFAS No. 123, as amended by SFAS No. 148, options granted prior to January 1, 2002, continue to be accounted for under APB Opinion No. 25, "Accounting for Stock Issued to Employees" ("APB No. 25"). Under APB No. 25, no compensation expense is recognized when the exercise price is greater than or equal to the market price of the underlying common stock on the date of grant.

Awards under the Corporation's stock compensation plans vest over periods ranging from two to five years. Therefore, the expense related to stock option compensation included in the determination of net income for 2002 is less than that which would have been recognized if the fair value method had been applied to all awards since the original effective date of SFAS No. 123. The net income and earnings per share implications if the fair value method had been applied to all awards which vested during the years ended December 31, 2002, 2001 and 2000 would have been as follows:

(In millions, except per share data)	**2002**	2001[1]	2000[1]
Net income (loss) attributable to common stockholders' equity[2]	**$3,295**	$2,628	$ (523)
Add: Stock option employee compensation expense included in reported net income, net of related tax effects	**29**	—	—
Deduct: Total stock option employee compensation expense determined under the fair value method for all awards vested during the year, net of related tax effects [3]	**92**	222	151
Pro forma net income (loss) attributable to common stockholders' equity	**$3,232**	$2,406	$(674)
Earnings (loss) per share:			
Basic – as reported	**$ 2.83**	$ 2.25	$(0.45)
Basic – pro forma	**2.78**	2.06	(0.58)
Diluted – as reported	**2.80**	2.24	(0.45)
Diluted – pro forma	**2.76**	2.05	(0.58)

(1) In 2002, management refined its methodology in estimating pro forma compensation cost. Accordingly, the 2001 and 2000 pro forma compensation cost has been adjusted for comparability purposes.

(2) Includes the impact of preferred stock dividends of $10 million and $12 million in 2001 and 2000, respectively.

(3) Stock option awards granted in 1999 and 2000 were fully vested by early 2002.

Costs Associated with Exit or Disposal Activities

In 2002, the FASB issued SFAS No. 146, "Accounting for Costs Associated with Exit or Disposal Activities" ("SFAS No. 146") which supercedes EITF No. 94-3, "Liability Recognition for Certain Employee Termination Benefits and Other Costs to Exit an Activity (including Certain Costs Incurred in a Restructuring)." SFAS No. 146 requires that a liability for costs associated with an exit or disposal activity be recognized when the liability is incurred rather than when a company commits to such an activity and also establishes fair value as the objective for initial measurement of the liability. The Corporation will adopt SFAS No. 146 for exit or disposal activities that are initiated after December 31, 2002, and the impact of adoption is not expected to have a material impact on the Corporation's results of operations, financial position or cash flows.

Accounting and Disclosure Requirements for Guarantees

In 2002, the FASB issued Interpretation No. 45, "Guarantor's Accounting and Disclosure Requirements for Guarantees, Including Indirect Guarantees of Indebtedness of Others" ("FIN No. 45") which requires additional disclosures by a guarantor about its obligations under certain guarantees that it has issued. FIN No. 45 also clarifies that a guarantor is required to recognize, at the inception of a guarantee, a liability for the fair value of the obligation undertaken in issuing the guarantee. The most significant instruments impacted for the Corporation are financial and performance standby letters of credit. The required FIN No. 45 disclosures for 2002 have been incorporated into Note 22 "Financial Instruments with Off-Balance Sheet Risk" that appears on pages 102–103. The accounting requirements of FIN No. 45 are effective for the Corporation on January 1, 2003, on a prospective basis. The impact of adoption is not expected to have a material impact on the Corporation's results of operations, financial position or cash flows.

Consolidation of Variable Interest Entities

In 2003, the FASB issued Interpretation No. 46, "Consolidation of Variable Interest Entities" ("FIN No. 46") which provides new accounting guidance on when to consolidate a variable interest entity. A variable interest entity exists when either the total equity investment at risk is not sufficient to permit the entity to finance its activities by itself, or the equity investors lack one of three characteristics associated with owning a controlling financial interest. Those characteristics include the direct or indirect ability to make decisions about an entity's activities through voting rights or similar rights, the obligation to absorb the expected losses of an entity if they occur, and the right to receive the expected residual returns of the entity if they occur.

FIN No. 46 is effective immediately for new entities that were created or acquired after January 31, 2003, and will become effective on July 1, 2003, for entities in which the Corporation had a variable interest prior to February 1, 2003. The Corporation plans to adopt FIN No. 46 on a prospective basis and, accordingly, will not restate prior periods. FIN No. 46 affects the Corporation's accounting and reporting for certain SPEs in which the Corporation is involved.

The Corporation's retained interest in its credit card securitizations and its investments in commercial mortgage backed securities will not be consolidated since both transaction structures are exempt from the requirements of FIN No. 46.

As discussed on pages 75 – 77, the Corporation is an active participant in the asset-backed securities business where it helps meet customers' financing needs by providing access to the commercial paper markets through SPEs, known as multi-seller conduits. These multi-seller conduits are a type of variable interest entity ("VIE"), as defined by FIN No. 46. These entities have historically met the requirements to be treated as independent entities, which have not been required to be consolidated. With the January 2003 issuance of FIN No. 46, the Corporation believes it is reasonably possible that the multi-seller conduits and an investment vehicle as currently structured, for which it is the administrator, will be consolidated. Investors in the multi-seller conduits have no recourse to the general assets of the Corporation. The Corporation is currently evaluating all variable interests in variable interest entities.

Based on information as of December 31, 2002, the expected impact of FIN No. 46 to the Corporation's balance sheet would be to increase both assets and liabilities by approximately $42.8 billion. Any difference between the net amount added to the balance sheet and the amount of any previously recognized interest in the newly consolidated entities would be recognized as a cumulative effect of an accounting change. The Corporation is assessing the impact of adoption, if any. See page 77 for loss exposure and the potential impact on risk-based capital ratios.

Note 2 – Earnings Per Share

Basic EPS is computed by dividing income available to common stockholders by the average number of common shares outstanding for the period. Except when the effect would be antidilutive, the diluted EPS calculation includes shares that could be issued under outstanding stock options and the employee stock purchase plans. In addition, interest on convertible debentures (net of tax) is added to net income, since this interest would not be paid if the debentures were converted to common stock.

The computation of basic and diluted earnings per share follows:

For The Year Ended December 31,	**2002**	2001	2000
(In millions, except per share data)			
Income (loss) before cumulative effect of change in accounting principle	**$3,295**	$2,682	$ (511)
Cumulative effect of change in accounting principle, net of taxes of ($25)	**—**	(44)	—
Net income (loss)	**3,295**	2,638	(511)
Preferred stock dividends	**—**	(10)	(12)
Net income (loss) available to common stockholders for basic and diluted EPS	**$3,295**	$2,628	$ (523)
Average shares outstanding	**1,162**	1,166	1,154
Stock options	**10**	8	—
Average shares outstanding assuming full dilution	**1,172**	1,174	1,154
Earnings (loss) per share before cumulative effect of change in accounting principle:			
Basic	**$ 2.83**	$ 2.28	$ (0.45)
Diluted	**2.80**	2.28	(0.45)
Earnings (loss) per share:			
Basic	**2.83**	2.25	(0.45)
Diluted	**2.80**	2.24	(0.45)

Note 3 – Acquisitions

On July 27, 2001, the Corporation completed its acquisition of the Wachovia credit card business, including a credit card portfolio of approximately $7.5 billion consumer credit card receivables. The acquisition was accounted for under the provisions of SFAS No. 141 and SFAS No. 142. The first component of the transaction was the primary portfolio of $6.2 billion in receivables of credit card holders who are not customers of Wachovia's retail bank. The second component was the agent bank portfolio comprised of credit card holders that were Retail customers of Wachovia of $1.3 billion. Wachovia retained the right to purchase the agent bank receivables under certain conditions.

On September 7, 2001, the Corporation announced its agreement with Wachovia to end the agent bank relationship and sell back to Wachovia the approximately $1.3 billion of consumer credit card receivables of customers who also have a Wachovia retail banking relationship. Under the terms of the agreement, Wachovia paid a $350 million termination fee and reimbursed the Corporation for the premium paid on the repurchased receivables and conversion costs related to the repurchase. The Corporation accounted for these amounts received from Wachovia as a reduction of acquisition intangibles.

Note 4 – Restructuring-Related Activity

a) Fourth Quarter 2001 Restructuring-Related Charges

The Corporation recorded restructuring-related charges in the fourth quarter of 2001 for additional real estate and severance costs to accomplish more rapid expense reductions, accelerated systems conversions and other consolidations. Summarized below are the details of these restructuring-related charges:

(In millions)	Personnel-Related Costs	Contractual Obligations and Asset Writedowns	Total
December 31, 2001			
Reserve balance	$ 76	$ 278	$ 354
Amounts utilized	(36)	(168)	(204)
Reserve adjustments	(21)	(21)	(42)
December 31, 2002			
Reserve balance	**$ 19**	**$ 89**	**$ 108**

Personnel-related costs initially recorded consisted primarily of severance costs related to identified staff reductions in the lines of business totaling approximately 6,900 positions for: the consolidation of various telephone banking and related sites and loan processing locations for Retail; the consolidation of call centers by Card Services; the closing of certain international locations; the consolidation of credit processing activities to one primary loan system for middle market banking; and certain other consolidations. At December 31, 2002, approximately 2,700 of these identified employees have been terminated under these programs, including 600 of which have future payment obligations of approximately $10 million. During the 2002 second quarter, the reserve was adjusted for approximately 3,100 employees, primarily in the Retail and Card Services lines of business, due to changes in attrition and circumstances for elimination under these programs.

Contractual obligations included the estimated costs associated with lease and other contract termination costs incorporated in the business restructuring plans. Asset writedowns included leasehold improvement write-offs related to leased properties following the decision to abandon such facilities, as well as in the case of fixed assets and capitalized software for which similar decisions were made.

Actions remaining under this overall restructuring plan are expected to be completed within approximately six months or less. Certain contractual payments associated with these actions, as required, will extend beyond this six month time frame.

b) Second Quarter 2000 Restructuring-Related Activity

Actions under this restructuring plan have been completed, with only payments of identified obligations remaining, which consist primarily of lease obligations. Unpaid amounts totaled $41 million as of December 31, 2002, and will be paid as required over the remaining contractual periods.

Note 5 – Business Segments

In 2002, certain organizational changes were made involving the Corporate, Commercial Banking, and Retail lines of business. The dealer commercial services business was transferred from Retail to Commercial Banking. National retail lockbox operations and cash vault services were transferred from Commercial Banking to Corporate. Results for the prior periods have been adjusted to reflect these and other insignificant changes to conform to the current line of business structure.

The information below is consistent with the content of business segment data provided to the Corporation's management, which does not use product group revenues to assess consolidated results. Aside from investment management and insurance products, product offerings are tailored to specific customer segments. As a result, the aggregation of product revenues and related profit measures across lines of business is not available.

Aside from the United States of America, no single country or geographic region generates a significant portion of the Corporation's revenues or assets. In addition, there are no single customer concentrations of revenue or profitability.

For additional disclosures regarding the Corporation's segments see the "Business Segment Results" section beginning on page 38.

The following table summarizes certain financial information by line of business for the years indicated:

	Total Revenues-FTE [1]			Provision for Income Taxes [1]			Net Income (Loss)			Identifiable Assets at Period-End		
For The Year Ended December 31,	**2002**	2001	2000	**2002**	2001	2000	**2002**	2001	2000	**2002**	2001	2000
(In millions, except identifiable assets in billions)												
Retail	**$ 6,285**	$ 6,396	$ 5,445	**$ 754**	$ 657	$ 207	**$1,390**	$1,181	$ 367	**$ 71.4**	$ 73.6	$ 77.1
Commercial Banking	**4,111**	4,347	4,247	**162**	251	(181)	**617**	700	(92)	**93.7**	100.7	106.6
Card Services	**4,864**	4,021	3,245	**741**	542	(1)	**1,166**	907	(1)	**45.3**	35.3	30.7
Investment Management	**1,718**	1,686	1,570	**244**	215	186	**411**	362	322	**8.7**	8.6	8.1
Corporate	**(2)**	(458)	(442)	**(288)**	(416)	(643)	**(289)**	(468)	(1,107)	**58.3**	50.7	46.8

Total	**$16,976**	$15,992	$14,065	**$1,613**	$1,249	$(432)	**$3,295**	$2,638	$ (511)	**$277.4**	$268.9	$269.3

(1) Revenue and provision for income tax includes taxable equivalent adjustments of $145 million, $131 million and $138 million for the years ended December 31, 2002, 2001 and 2000, respectively.

Note 6 – Interest Income and Interest Expense

Details of interest income and expense are as follows:

For The Year Ended December 31,	2002	2001	2000
(In millions)			
Interest Income			
Loans, including fees	**$ 9,947**	$13,213	$15,214
Bank balances	**58**	145	503
Federal funds sold and securities purchased under resale agreements	**159**	418	577
Trading assets	**256**	309	440
Investment securities	**3,515**	3,219	3,344
Total interest income	**13,935**	17,304	20,078
Interest Expense			
Deposits	**2,719**	4,895	6,137
Federal funds purchased and securities sold under repurchase agreements	**271**	633	1,142
Other short-term borrowings	**262**	659	1,216
Long-term debt	**2,088**	2,479	2,747
Total interest expense	**5,340**	8,666	11,242
Net Interest Income	**8,595**	8,638	8,836
Provision for credit losses	**2,487**	2,510	3,398
Net Interest Income After Provison for Credit Losses	**$ 6,108**	$ 6,128	$ 5,438

Note 7 – Investment Securities

A summary of the Corporation's investment portfolio follows:

At December 31, 2002	Amortized Cost	Gross Unrealized Gains	Gross Unrealized Losses	Fair Value (Book Value)
(In millions)				
U.S. Treasury	**$ 1,310**	**$ 25**	**$ —**	**$ 1,335**
U.S. government agencies	**26,419**	**635**	**14**	**27,040**
States and political subdivisions	**1,116**	**54**	**1**	**1,169**
Interests in credit card securitized receivables	**28,202**	**147**	**—**	**28,349**
Other debt securities	**4,719**	**40**	**14**	**4,745**
Equity securities [1]	**3,406**	**4**	**1**	**3,409**
Total available for sale securities	**$65,172**	**$905**	**$ 30**	**$66,047**
Principal and other investments [2]				**1,596**
Total investment securities				**$67,643**
At December 31, 2001				
(In millions)				
U.S. Treasury	$ 1,424	$ 30	$ 4	$ 1,450
U.S. government agencies	25,265	113	132	25,246
States and political subdivisions	1,310	28	8	1,330
Interests in credit card securitized receivables	23,998	107	—	24,105
Other debt securities	4,397	24	18	4,403
Equity securities [1]	2,775	10	15	2,770
Total available for sale securities	$59,169	$312	$177	$59,304
Principal and other investments [2]				1,579
Total investment securities				$60,883

(1) The fair values of certain securities for which market quotations were not available were estimated.

(2) The fair values of certain securities reflect liquidity adjustments and other market-related factors, and include investments accounted for at fair value consistent with specialized industry practice.

For the year ended December 31, 2002, gross recognized gains and losses on the sale of investment securities were $1.3 billion and $1.1 billion, respectively. For the year ended December 31, 2001, gross recognized gains and losses on investment securities were $1.0 billion and $1.1 billion, respectively.

As of December 31, 2002, debt investment securities had the following maturity and yield characteristics:

	Due in less than 1 year		Due in 1 year through 5 years		Due in 5 years through 10 years		Due after 10 years		Total	
	Amortized Cost	Yield	Amortized Cost	Yield	Amortized Cost	Yield	Amortized Cost	Yield	Amortized Cost	Yield
(Dollars in millions)										
U.S. Treasury	$ 822	4.13%	$ 460	3.69%	$ 25	8.11%	$ 3	9.63%	$ 1,310	4.07%
U.S. government agencies	23	6.61	1,190	2.81	93	5.11	25,113	5.02	26,419	4.92
States and political subdivisions	124	4.88	253	5.12	280	4.40	459	4.84	1,116	4.80
Other debt securities	25,443	10.93	5,353	7.44	1,347	3.49	778	3.39	32,921	9.88
Total debt securities -at amortized cost	$26,412	10.69%	$7,256	6.36%	$1,745	3.79%	$26,353	4.97%	$61,766	7.54%
Total debt securities— -at fair value	$26,557		$7,309		$1,785		$26,987		$62,638	

The distribution of mortgage-backed securities and collateralized mortgage obligations is based on average expected maturities. Actual maturities could differ as issuers may have the right to call or prepay obligations.

Note 8 – Loans

Loan composition by line of business is as follows:

At December 31,	**2002**	2001
(In millions)		
Retail:		
Small business commercial	**$ 9,863**	$ 9,947
Home equity	**28,469**	25,143
Vehicles	**14,012**	13,481
Other personal	**8,491**	9,779
Core businesses	**60,835**	58,350
Brokered home equity discontinued	**3,242**	5,125
Vehicle leases	**3,596**	6,155
Home equity discontinued/ vehicle leases	**6,838**	11,280
Total consumer	**57,810**	59,683
Total Retail	**67,673**	69,630
Commercial Banking:		
Corporate banking:		
Commercial and industrial	**17,866**	22,268
Commercial real estate	**8,321**	8,975
Lease financing	**4,358**	4,669
Other	**1,014**	731
Total corporate banking	**31,559**	36,643
Middle market:		
Commercial and industrial	**26,983**	31,076
Commercial real estate	**2,318**	3,472
Lease financing	**1,008**	1,053
Other	**27**	294
Total middle market	**30,336**	35,895
Total Commercial Banking	**61,895**	72,538
Card Services	**11,581**	6,786
IMG and Corporate	**6,976**	7,779
Total loans	**148,125**	156,733
Less: Allowance for credit losses	**4,525**	4,528
Total loans, net	**$143,600**	$152,205

Loans are net of unearned income of $2.3 billion and $2.7 billion as of December 31, 2002, and 2001, respectively. Loans held for sale, which are carried at the lower of cost or market value, totaled $6.9 billion and $4.2 billion at December 31, 2002, and 2001, respectively.

The Corporation's primary goal in managing credit risk is to minimize the impact of default by an individual borrower or group of borrowers. As a result, the Corporation strives to maintain a loan portfolio that is diverse in terms of loan type, industry, borrower and geographic concentrations. As of December 31, 2002, and 2001, there were no significant loan concentrations with any single borrower, industry or geographic segment (see "Credit Portfolio Composition" on pages 63-66).

A loan is considered impaired when it is probable that all principal and interest amounts due will not be collected in accordance with the loan's contractual terms. Certain loans, such as loans carried at the lower of cost or fair value or small-balance homogeneous loans (e.g., credit card, home mortgages and installment credit) are exempt from impairment determinations for disclosure purposes. Impaired loans, accordingly, exclude commercial nonaccrual loans that are held for sale and consumer loans classified as nonaccrual. These loans totaled $1.1 billion at December 31, 2002 and 2001.

Impairment is recognized to the extent that the recorded investment of an impaired loan or pool of loans exceeds its value either based on the loan's underlying collateral or the calculated present value of projected cash flows discounted at the contractual interest rate. Loans having a significant recorded investment are measured on an individual basis, while loans not having a significant recorded investment are grouped and measured on a pool basis.

The Corporation's impaired loan information is as follows:

At December 31,	**2002**	2001
(In millions)		
Impaired loans with related allowance	**$2,183**	$2,487
Impaired loans with no related allowance [1]	**11**	—
Total impaired loans	**$2,194**	$2,487
Allowance on impaired loans [2]	**678**	731

At December 31,	**2002**	2001	2000
(In millions)			
Average balance of impaired loans	**$2,462**	$2,047	$1,335
Interest income recognized on impaired loans	**40**	41	31

(1) Impaired loans for which the discounted cash flows, collateral value or market price equals or exceeds the carrying value of the loan do not require an allowance under SFAS No. 114, "Accounting by Creditors for Impairement of a loan – an amendment of FASB Statements No. 5 and 15."

(2) The allowance for impaired loans is included in the Corporation's overall allowance for credit losses.

Maturity Distribution and Interest Rate Sensitivity of Loans

A distribution of the maturity of loans by line of business and, for those loans due after one year, a breakdown between those loans that have floating interest rates and those that have predetermined interest rates at December 31, 2002, follows:

(In millions)	One Year or Less	One to Five Years	Over Five Years	Total
Retail:				
Small business commercial	$ 2,865	$ 4,337	$ 2,661	$ 9,863
Home equity	449	827	27,193	28,469
Vehicle	301	9,267	4,444	14,012
Other personal	3,016	1,168	4,307	8,491
Core businesses	6,631	15,599	38,605	60,835
Brokered home equity discontinued	348	9	2,885	3,242
Vehicle leases	1,215	2,381	—	3,596
Brokered home equity discontinued/vehicle leases	1,563	2,390	2,885	6,838
Total Retail	8,194	17,989	41,490	67,673
Commercial Banking:				
Corporate banking:				
Commercial and industrial	5,167	11,660	1,039	17,866
Commercial real estate	3,920	4,271	130	8,321
Lease financing	217	443	3,698	4,358
Other	1,014	—	—	1,014
Middle market:				
Commercial and industrial	13,345	11,685	1,953	26,983
Commercial real estate	848	1,283	187	2,318
Lease financing	73	591	344	1,008
Other	27	—	—	27
Total Commercial Banking	24,611	29,933	7,351	61,895
Total [1]	$32,805	$47,922	$ 48,841	$129,568
Loans with floating interest rates		$24,612	$ 13,808	$ 38,420
Loans with predetermined interest rates		23,310	35,033	58,343
Total		$47,922	$ 48,841	$ 96,763

(1) Excludes Card Services, Investment Management Group and Corporate lines of business.

Foreign Outstandings

Foreign outstandings include loans, balances with banks, acceptances, securities, equity investments, accrued interest, other monetary assets and current credit exposure on derivative contracts. At year-end 2002, 2001 and 2000, there were no countries for which cross-border and net local country claims exceeded 1.0% of total assets.

At December 31, 2002, Japan and Germany were the only countries for which cross-border claims totaled between 0.75% and 1.0% of total assets. These outstandings totaled $4.5 billion in aggregate. At December 31, 2001, there were no countries for which cross-border and net local country claims totaled between 0.75% and 1.0% of total assets. At December 31, 2000, Germany was the only country for which cross-border and net local country claims totaled between 0.75% and 1.0% of total assets. These outstandings amounted to $2.5 billion.

Note 9 – Credit Card Securitizations

The Corporation transforms a substantial portion of its credit card receivables into securities, which are sold to investors – a process referred to as securitization. Securitization impacts the Corporation's consolidated balance sheet by removing those credit card receivables that have been sold and by reclassifying those credit card receivables whose nature has been transformed but retained in certificate form (referred to as "seller's interest") from loans to investments. Gain or loss on the sale of the credit card receivable depends in part on the previous carrying amount of the financial assets involved in the transfer, allocated between the assets sold and the retained interests based on their relative fair value at the date of transfer. Gain or loss on the sale of the credit card receivables, net of amortization of transaction costs and amortization from securitization repayments, is reported in securitization income. Securitization also impacts the Corporation's consolidated income statement by reclassifying interest income and fees, interchange income, credit losses and recoveries related to securitized receivables as securitization income. Credit card interest income and fees, interchange income, credit losses and recoveries related to credit card receivables whose nature has been retained but converted to certificate form (seller's interest) are reclassified as investment income.

During 2002, the Corporation securitized approximately $6.8 billion in credit card receivables. Maturities of credit card securitizations during 2002 were $10.2 billion, with an additional $8.2 billion scheduled for 2003. During 2002 and 2001, the Corporation recognized $50 million and $62 million, respectively, in net securitization amortization in the consolidated income statement, including amortization of transaction costs, as the gain on securitization from new transactions was offset by amortization as investors in individual series were repaid.

A servicing asset or liability is not recognized in a credit card securitization (and thus not considered in the gain or loss computation) since the Corporation receives adequate compensation relative to current market servicing prices to service the receivables sold. Transaction costs in credit card securitizations are deferred and amortized over the life of the security as a reduction of noninterest income.

At December 31, 2002, and 2001, the estimated fair value of the interest-only strip associated with credit card securitizations was $205 million and $219 million, respectively, and the estimated fair value of the seller's interest was $28.1 billion and $23.9 billion, respectively. The interest-only strip and seller's interest are both recorded as investment securities. The investor portion of accrued interest receivable is recorded in other assets in 2002 and was $685 million and $810 million at December 31, 2002 and 2001, respectively.

Certain estimates are used in determining the fair value of the interest-only strip at both the date of securitization and the balance sheet date, including the excess spread, average receivable lives and the discount rate. The components of excess spread, which are estimated, include finance charge and fee revenue (excluding interchange income) generated by the securitized loans in excess of interest paid to investors, related net credit losses and contractual servicing fees. The resulting expected cash flows over the average lives of the receivables are discounted at a rate commensurate with the risk of the cash flows to determine the fair value. Such estimates and assumptions are subject to change, and accordingly, the Corporation may not recover all of the recorded investment of the interest-only strip (and thus be measured for impairment). The receivables in each trust have unique attributes and therefore the interest-only strip related to each trust is evaluated separately. The seller's interest resulting from credit card securitizations is recorded at fair value using a present value approach, with assumptions that are consistent with the valuation of the interest-only strip

The following represents the Corporation's key weighted-average assumptions used to estimate the fair value of the retained interests relating to credit card securitizations at December 31, 2002, and the pretax sensitivity of the fair values to immediate 10% and 20% adverse changes in these assumptions:

(Dollars in millions)	Interest-Only Strip[1]	Sellers Interest[2]	Total Retained Interests
Receivable Lives:			**0.5 years**
10% Adverse Change	$ 22.1	$ 14.3	36.4
20% Adverse Change	44.2	28.8	73.0
Excess Spread:			**1.22%**
10% Adverse Change	22.6	14.7	37.3
20% Adverse Change	45.2	29.4	74.6
Expected Net Credit Losses: [3]			**5.97%**
10% Adverse Change	93.3	67.5	160.8
20% Adverse Change	183.9	119.3	303.2
Discount Rate:			**10.00%**
10% Adverse Change	0.7	0.4	1.1
20% Adverse Change	1.4	0.9	2.3

(1) The effect of adverse changes in key assumptions on the fair value of the interest-only strip would be recorded in noninterest income.

(2) The effect of adverse changes in key assumptions on the fair value of the seller's interest is recorded in accumulated other adjustments to stockholders' equity, net of tax, unless the decline in value is deemed to be other than temporary, which would result in a charge to noninterest income upon recognition.

(3) Certain trust legal documents include finance charge and fee revenue reversals in the definition of net credit losses, resulting in a higher net credit loss rate for Trust purposes.

The sensitivity analysis illustrates the potential magnitude of significant adverse changes in key assumptions used in valuing the retained interests, and thus the potential impact to the Corporation's financial position and results of operations. However, the sensitivities of the fair values of the retained interests to changes in each key assumption may not be linear. Furthermore, the sensitivities for each key variable are calculated independently of changes in the other key variables. Therefore, the sensitivity analysis does not purport to present the maximum impairment loss that would result from 10% and 20% adverse changes in these assumptions. Actual experience observed may result in changes in multiple key assumptions concurrently, the magnitude of which on the fair value of the retained interests would be dependent on the relative change and the direction of change. In addition, the sensitivity analysis does not give effect to corrective action that management could and would take to mitigate the impact of adverse changes in key assumptions. The asset values of the retained interests are periodically reviewed for other-than-temporary impairment.

The key weighted-average economic assumptions and ranges of assumptions used to estimate the fair value of retained interests at the date of securitization (including transfer of new balances

under revolving structures) for credit card securitizations occurring during 2002 were approximately the same as those used to value the retained interests at December 31, 2002.

Cash flows received from credit card securitization master trusts (i.e., QSPEs) during the years ended December 31 are as follows:

(In millions)	**2002**	2001	2000
Proceeds from reinvestment in revolving securitizations	**$60,633**	$72,206	$83,469
Proceeds from new securitizations	**6,775**	3,845	–
Servicing fees received	**505**	598	649
Cash flows received on retained interests [1]	**2,586**	2,577	2,224
Cash released from (used to fund) spread accounts	**13**	146	(32)

(1) Includes cash flows from interest-only strips as well as interchange fees received from securitized accounts.

For a detailed discussion of the Corporation's loan securitization process for credit card loans, see the "Loan Securitizations" section beginning on page 74.

Note 10 – Allowance for Credit Losses

Changes in the allowance for credit losses for the years ended December 31 are as follows:

(In millions)	**2002**	2001	2000
Balance, beginning of year	**$ 4,528**	$ 4,110	$ 2,285
Additions (deductions):			
Charge-offs	**(2,829)**	(2,630)	(1,667)
Recoveries	**364**	342	276
Net charge-offs	**(2,465)**	(2,288)	(1,391)
Provision for credit losses	**2,487**	2,510	3,398
Transfers [1]	**(25)**	196	(182)
Balance, end of year	**$ 4,525**	$ 4,528	$ 4,110

(1) Transfers to the allowance for credit losses in 2001 primarily represent the addition of the Wachovia credit card portfolio. Transfers from the allowance for credit losses for 2000 primarily represent allocable credit allowances associated with consumer loan sale transactions, including securitization transactions.

Note 11 – Long-Term Debt

Long-term debt consists of borrowings having an original maturity of greater than one year. Original issue discount and deferred issuance costs are amortized into interest expense over the terms of the related notes. Long-term debt at December 31, 2002 and 2001 is as follows:

(Dollars in millions)	Interest Rate	Maturities	**2002**	2001
Parent Company				
Senior debt:				
Medium-term notes	1.49–7.63%	2003–2008	**$11,973**	$14,387
Other	—	—	**6**	8
Subordinated debt:				
Notes	5.25–10.00%	2003–2027	**7,270**	6,920
Floating rate notes	Various	2003	**150**	150
Subsidiaries				
Bank notes	1.40–7.93%	2003–2007	**13,866**	12,933
Subordinated notes	6.00–8.25%	2003–2008	**1,590**	1,729
Capital leases	4.27–12.60%	2003–2011	**73**	66
Federal Home Loan Bank Advances	1.35–4.57%	2005–2007	**3,715**	2,000
Other	1.00–15.93%	2003–2018	**1,276**	1,910
Total long-term debt			**$39,919**	$40,103

Aggregate annual scheduled repayments of long-term debt at December 31, 2002 are as follows:

(In millions)	Total
2003	$ 7,846
2004	6,291
2005	6,622
2006	6,896
2007	4,542
Thereafter	7,722
Total	$39,919

Note 12 – Deposits and Short-Term Borrowings

Deposits

The maturity distribution of domestic time certificates of deposit of $100,000 and over and deposits in foreign offices, predominantly in amounts in excess of $100,000, at December 31, 2002 is as follows:

(Dollars in millions)	Amount	Percent
Domestic Time Certificates of Deposit of $100,000 and Over:		
Three months or less	$ 3,556	26%
Over three months to six months	2,317	18
Over six months to twelve months	1,352	10
Over twelve months	6,265	46
Total	$13,490	100%
Foreign Offices:		
Three months or less	$16,061	99%
Over three months to six months	63	—
Over six months to twelve months	82	1
Over twelve months	31	—
Total	$16,237	100%

The Corporation has an aggregate amount of domestic other time deposits of $100,000 and over of $255 million at December 31, 2002, which primarily mature within three months.

Short-Term Borrowings

Borrowings with original maturities of one year or less are classified as short-term. The following is a summary of short-term borrowings for the years ended December 31:

	At Year-End		For the Year		
(Dollars in millions)	**Outstanding**	**Weighted-Average Rate**	**Daily Average Outstandings**	**Weighted-Average Rate**	**Highest Outstandings at Month End**
2002:					
Federal funds purchased	**$ 3,833**	**1.02%**	**$ 4,400**	**1.63%**	**$ 6,086**
Securities sold under repurchase agreements	**10,745**	**1.11**	**10,548**	**1.55**	**12,730**
Bank notes	**8,519**	**1.57**	**4,960**	**2.11**	**9,733**
Commercial paper	**567**	**1.65**	**485**	**2.26**	**567**
Other short-term borrowings	**3,220**	**1.41**	**3,441**	**2.61**	**5,310**
Total short-term borrowings	**$26,884**	**1.28%**	**$23,834**	**1.85%** [1]	
2001:					
Federal funds purchased	$ 3,171	1.62%	$ 5,121	4.32%	$ 6,353
Securities sold under repurchase agreements	10,557	1.43	11,543	3.57	13,386
Bank notes	4,529	3.07	8,267	5.48	13,047
Commercial paper	828	1.58	1,968	4.75	2,634
Other short-term borrowings	4,898	1.60	3,273	3.68	4,629
Total short-term borrowings	$23,983	1.83%	$30,172	4.31% [1]	
2000:					
Federal funds purchased	$ 5,253	5.89%	$ 6,281	6.13%	$ 9,663
Securities sold under repurchase agreements	6,867	6.01	12,680	5.96	17,609
Bank notes	12,426	6.71	12,298	6.50	13,327
Commercial paper	3,048	6.62	3,137	5.94	3,303
Other short-term borrowings	2,529	6.22	3,543	6.27	6,861
Total short-term borrowings	$30,123	6.36%	$37,939	6.19% [1]	

(1) The Corporation uses interest rate swaps to hedge certain short-term borrowings in its asset and liability management activities. The overall weighted average rate, including the effects of derivative contracts was 2.24%, 4.28% and 6.26% at December 31, 2002, 2001 and 2000, respectively.

Note 13 – Guaranteed Preferred Beneficial Interest in the Corporation's Junior Subordinated Debt

The Corporation has sponsored ten trusts with a total aggregate issuance outstanding of $3.3 billion at December 31, 2002, in trust preferred securities as follows:

	Trust Preferred			Junior Subordinated Debt Owned by Trust		
(Dollars in millions)	**Issuance Date**	**Initial Liquidation Value**	**Distribution Rate**	**Initial Principal Amount**	**Maturity**	**Redeemable Beginning**
Capital VI	September 28, 2001	$525	7.20%	$541.2	October 15, 2031	October 15, 2006
Capital V	January 30, 2001	300	8.00%	309.3	January 30, 2031	January 30, 2006
Capital IV	August 30, 2000	160	3-mo LIBOR plus 1.50%	164.9	September 1, 2030	September 1, 2005
Capital III	August 30, 2000	475	8.75%	489.7	September 1, 2030	See (1) below.
Capital II	August 8, 2000	280	8.50%	288.7	August 15, 2030	August 15, 2005
Capital I	September 20, 1999	575	8.00%	592.8	September 15, 2029	September 20, 2004
First Chicago NBD Capital 1	January 31, 1997	250	3-mo LIBOR plus 0.55%	257.7	February 1, 2027	February 1, 2007
First USA Capital Trust I [2]	December 20, 1996	200	9.33%	206.2	January 15, 2027	January 15, 2007
First Chicago NBD Institutional Capital A	December 3, 1996	500	7.95%	515.5	December 1, 2026	December 1, 2006
First Chicago NBD Institutional Capital B	December 5, 1996	250	7.75%	257.7	December 1, 2026	December 1, 2006

(1) Redeemable at any time subject to approval by the Federal Reserve Board.

(2) The Corporation paid a premium of $36 million to repurchase $193 million of these securities in 1997.

These trust preferred securities are tax-advantaged issues that qualify for Tier 1 capital treatment. Distributions on these securities are included in interest expense on long-term debt. Each of the trusts is a statutory business trust organized for the sole purpose of issuing trust securities and investing the proceeds thereof in junior subordinated debentures of the Corporation, the sole asset of each trust. The preferred trust securities of each trust represent preferred beneficial interests in the assets of the respective trusts and are subject to mandatory redemption upon payment of the junior subordinated debentures held by the trust. The common securities of each trust are wholly-owned by the Corporation. Each trust's ability to pay amounts due on the trust preferred securities is solely dependent upon the Corporation making payment on the related junior subordinated debentures. The Corporation's obligations under the junior subordinated securities and other relevant trust agreements, in aggregate, constitute a full and unconditional guarantee by the Corporation of each respective trust's obligations under the trust securities issued by each respective trust. See Note 15 "Dividends and Capital Restrictions" for discussion of the restrictions on the ability of the Corporation to obtain funds from its subsidiaries.

Note 14 – Stock Dividends and Preferred Stock

The Corporation is authorized to issue 50 million shares of preferred stock with a par value of $0.01 per share. On November 1, 2001, the Corporation redeemed all outstanding preferred stock with cumulative and adjustable dividends, Series B and C, totaling $190 million. The redemption price for both the Series B and C preferred stock was $100 per share, plus accrued and unpaid dividends totaling $1.00 per share and $1.083 per share, respectively. At December 31, 2000, the Corporation had outstanding 1,191,000 and 713,800 shares of Series B and C preferred stock with a stated value of $100 per share and a carrying value of $119 million and $71 million, respectively. The dividend rate on each of the cumulative adjustable rate series was based on a stated value and adjusted quarterly, based on a formula that considers the interest rates for selected short- and long-term U.S. Treasury securities prevailing at the time the rate is set.

Note 15 – Dividends and Capital Restrictions

The Corporation's national bank subsidiaries are subject to statutory limitations on their ability to pay dividends. Dividends cannot exceed the level of undivided profits. In addition, a national bank cannot declare a dividend, without regulatory approval, in an amount in excess of its net income for the current year and the combined net profits for the preceding two years. State bank subsidiaries may also be subject to limitations on dividend payments.

Based on these statutory requirements, the bank affiliates could have declared aggregate additional dividends of up to approximately $4.0 billion without regulatory approval at January 1, 2003. The payment of dividends by any bank may also be affected by other factors, such as the maintenance of adequate capital.

The bank affiliates are subject to various regulatory capital requirements that require them to maintain minimum ratios of total and Tier 1 capital to risk-weighted assets and of Tier 1 capital to average assets. Failure to meet minimum capital requirements results in certain regulatory actions that could have a direct material effect on the bank affiliates' financial statements. As of December 31, 2002, management believed that each of the bank affiliates met all applicable capital adequacy requirements and are correctly categorized as "well capitalized" under the regulatory framework for prompt corrective action. There are no conditions or events since that categorization that management believes have changed the institution's category.

The actual and required capital amounts and ratios for the Corporation and its principal banking subsidiaries are presented as follows:

(Dollars in millions)	Tier 1 Capital	Total Capital	Risk-Weighted Assets	Adjusted Average Assets	Tier 1 Capital[1] Ratio	Total Capital[1] Ratio	Tier 1 Leverage[2] Ratio
December 31, 2002							
The Corporation (consolidated)	**$23,918**	**$33,119**	**$241,468**	**$267,321**	**9.9%**	**13.7%**	**8.9%**
Bank One, N.A. (Chicago)	**16,888**	**23,360**	**173,725**	**211,067**	**9.7**	**13.4**	**8.0**
Bank One, N.A. (Columbus)	**3,164**	**5,162**	**42,193**	**57,244**	**7.5**	**12.2**	**5.5**
Bank One, Delaware N.A. [3]	**2,630**	**2,756**	**17,748**	**16,213**	**14.8**	**15.5**	**16.2**
December 31, 2001							
The Corporation (consolidated)	$21,749	$30,840	$253,330	$264,720	8.6%	12.2%	8.2%
Bank One, N.A. (Chicago) [4]	15,407	22,971	181,450	207,017	8.5	12.7	7.4
Bank One, N.A. (Columbus)	2,915	4,594	42,165	45,286	6.9	10.9	6.4
Bank One, Delaware N.A. [3]	2,099	2,253	13,645	14,737	15.4	16.5	14.2
Well capitalized ratios [5]					6.0%	10.0%	5.0% [6]
Minimum capital ratios [5]					4.0	8.0	3.0

(1) Tier 1 Capital or Total Capital, as applicable, divided by risk-weighted assets. Risk-weighted assets include assets and off-balance sheet positions, weighted by the type of instruments and the risk weight of the counterparty, collateral, or guarantor.

(2) Tier 1 Capital divided by adjusted average quarterly assets (net of allowance for loan losses, goodwill and certain intangible assets).

(3) Formerly First USA Bank, N.A.

(4) Restated to show the effect of the 2002 mergers with Bank One, Michigan, Bank One, Indiana, N.A., Bank One, Wisconsin, Bank One, Colorado, N.A., Bank One, Illinois, N.A. and American National Bank & Trust.

(5) As defined by the regulations issued by the Federal Reserve Board, the FDIC and the OCC.

(6) Represents requirements for bank subsidiaries pursuant to regulations issued under the Federal Deposit Insurance Corporation Improvement Act. There is no Tier 1 Leverage component in the definition of a well-capitalized bank holding company.

Federal banking law restricts each bank subsidiary from extending credit to the Corporation in excess of 10% of the subsidiary's capital stock and surplus, as defined. Any such extensions of credit are subject to strict collateral requirements.

Note 16 – Supplemental Disclosures for Statements of Cash Flows

During 2000, the Corporation transferred $6.5 billion of investment securities available for sale to trading securities. This transfer was for capital management purposes.

Loans transferred to other real estate owned totaled $414 million, $162 million, and $131 million in 2002, 2001, and 2000, respectively. During 2000, the Corporation recognized several non-cash charges to earnings for significant items. Several of these items will not result in future cash outflows while other items represent future uses of cash. See tables 1 and 2 on pages 52–53 for a detailed listing of significant items.

Note 17 – Supplemental Disclosures for Accumulated Other Adjustments to Stockholders' Equity

Accumulated other adjustments to stockholders' equity are as follows:

(In millions)	**2002**	2001	2000
Fair value adjustment on investment securities–available for sale:			
Balance, beginning of year	**$ 78**	$ (15)	$(271)
Change in fair value, net of taxes of $323, $86 and $(6) for the year ended December 31, 2002, 2001 and 2000, respectively	**560**	158	(5)
Reclassification adjustment, net of taxes of $(50), $(38) and $151 for the year ended December 31, 2002, 2001 and 2000, respectively	**(86)**	(65)	261
Balance, end of year	**552**	78	(15)
Fair value adjustment on derivative instruments–cash flow type hedges:			
Balance, beginning of period	**(146)**	—	—
Transition adjustment at January 1, 2001, net of tax benefit of $56	**—**	(98)	—
Net change in fair value associated with current period hedging activities, net of tax benefits of $425 and $70 for the year ended December 31, 2002 and 2001, respectively	**(711)**	(139)	—
Net reclassification into earnings, net of taxes of $178 and $49 for the year ended December 31, 2002 and 2001, respectively [1]	**297**	91	—
Balance, end of year	**(560)**	(146)	—
Accumulated translation adjustment:			
Balance, beginning of period	**3**	10	8
Translation gain (loss), net of hedge results and taxes	**(3)**	(7)	2
Balance, end of year	**—**	3	10
Total accumulated other adjustments to stockholders' equity	**$ (8)**	$ (65)	$ (5)

(1) During 2001, $89 million after-tax of the transition adjustment recorded at January1, 2001, was reclassified into earnings.

Note 18 – Employee Benefits

(a) Pension Plans

The Corporation's qualified plans' change in benefit obligation, change in plan assets and funded status are as follows:

(In millions)	**2002**	2001
Change in benefit obligation:		
Benefit obligation, January 1	**$2,297**	$2,248
Service cost	**101**	92
Interest cost	**166**	168
EGTRRA adjustment [1]	**—**	7
Actuarial loss	**182**	108
Benefits paid	**(327)**	(326)
Benefit obligation, December 31	**$2,419**	$2,297
Change in plan assets:		
Fair value of plan assets, January 1	**$2,747**	$3,134
Actual loss on plan assets	**(219)**	(114)
Corporation contribution	**280**	53
Benefits paid	**(327)**	(326)
Fair value of plan assets, December 31	**$2,481**	$2,747
Funded status	**$ 62**	$ 450
Unrecognized net actuarial loss	**829**	156
Unrecognized prior service cost	**20**	24
Prepaid pension costs, December 31	**$ 911**	$ 630

(1) The Economic Growth and Tax Relief Reconciliation Act of 2001 (EGTRRA) contained various provisions relating to the operations of qualified pension plans. Increases to the benefit limits and the limit on pensionable earnings caused a shift in pension obligation from the non-qualified to the qualified plan.

Plan assets include approximately 1.0 million shares of the Corporation's common stock with a fair value of approximately $38 million and $40 million at December 31, 2002, and 2001, respectively.

The net periodic pension expense (benefit) for 2002, 2001 and 2000 for the Corporation's qualified and nonqualified pension plans is as follows:

(In millions)	**2002**	2001	2000
Service cost-benefits earned during the period	**$ 104**	$ 96	$ 110
Interest cost on benefit obligation	**173**	177	194
Expected return on plan assets	**(272)**	(287)	(300)
Amortization of prior service costs	**9**	8	9
Recognized actuarial (gain) loss	**5**	(1)	(11)
Amortization of transition assets	**—**	(7)	(13)
Net periodic pension expense (benefit)	**$ 19**	$ (14)	$ (11)

The accrued pension cost for the Corporation's nonqualified supplemental pension plans was $44 million and $39 million at December 31, 2002, and 2001, respectively. Such plans are unfunded.

The assumptions used in determining the Corporation's benefit obligation and net periodic pension cost for both qualified and nonqualified supplemental pension plans are as follows:

For The Year Ended December 31,	2003	**2002**	2001	2000
Actuarial assumptions:				
Weighted-average discount rate for benefit obligation	6.50% [1]	**6.50%**	7.00%	7.50%
Weighted-average rate of compensation increase	4.25%	**4.25%**	4.25%	4.25%
Expected long-term rate of return on plan assets	7.50%	**8.50%**	9.50%	9.50%

(1) Rate currently expected at December 31, 2003.

(b) Postretirement Benefits Other Than Pensions

The Corporation sponsors postretirement life insurance plans and provides health care benefits for certain retirees and grandfathered employees when they retire. The postretirement life insurance benefit is noncontributory, while the health care benefits are contributory.

The Corporation's postretirement benefit plans' change in benefit obligation, change in plan assets and funded status are as follows:

(In millions)	**2002**	2001
Change in benefit obligation:		
Benefit obligation, January 1	**$ 233**	$ 195
Interest cost	**15**	14
Actuarial loss	**24**	48
Benefits paid	**(20)**	(24)
Benefit obligation, December 31	**$ 252**	$ 233
Change in plan assets:		
Fair value of plan assets, January 1	**$ —**	$ —
Implementation of retiree VEBA	**76**	—
Actual return on plan assets	**6**	—
Employer contribution	**18**	24
Benefits paid	**(20)**	(24)
Fair value of plan assets, December 31	**$ 80**	$ —
Funded status	**$(172)**	$(233)
Unrecognized net actuarial loss	**85**	67
Unrecognized prior service cost	**(12)**	(25)
Accrued postretirement costs, December 31	**$ (99)**	$(191)

Net periodic cost for postretirement health care and life insurance benefits during 2002, 2001 and 2000 includes the following:

(In millions)	**2002**	2001	2000
Interest cost on accumulated postretirement benefit obligation	**$ 15**	$ 14	$ 13
Amortization of prior service costs	**(12)**	(12)	(12)
Expected return on plan assets	**(3)**	—	—
Recognized actuarial loss	**3**	—	—
Curtailment	**—**	—	1
Net periodic postretirement cost	**$ 3**	$ 2	$ 2

The weighted average discount rate used in determining the accumulated postretirement benefit obligation was 6.50% at December 31, 2002, and 7.00% at December 31, 2001.

The expected long-term rate of return on plan assets was 5.40% in 2002. For measurement purposes, an annual rate of increase of 10.00% was assumed for 2002 in the cost of covered health care benefits; this range was assumed to decrease to 5.00% in the years 2010 and thereafter. These assumptions have a significant effect on the amounts reported. Accordingly, the effect of a 1.00% change in the assumed health care cost trend rates is as follows:

(In millions)	1% increase	1% decrease
Effect on 2002 service and interest cost components	$ 1.0	$(0.9)
Effect on December 31, 2002, accumulated postretirement benefit obligation	$16.7	$(14.6)

(c) 401(k) Plan

The Corporation sponsored a 401(k) plan that covered substantially all of its employees. The expense related to this plan was $98 million in 2002, $95 million in 2001 and $137 million in 2000.

Note 19 – Stock-Based Compensation

The Corporation utilizes several types of stock-based awards as part of its overall compensation program. In addition, the Corporation provides employees the opportunity to purchase its shares through its Employee Stock Purchase Plan. The Corporation's stock-based compensation plans provide for granting of awards to purchase or receive common shares and include limits as to the aggregate number of shares available for grants and the total number of shares available for grants of stock awards in any one year. Compensation cost charged against income for the Corporation's stock-based compensation plans was $118 million for 2002, $70 million for 2001 and $59 million for 2000.

(a) Restricted Shares

Restricted shares granted to key officers of the Corporation require them to continue employment for a stated number of years from the grant date before restrictions on the shares lapse. The market value of the restricted shares as of the date of grant is amortized to compensation expense as earned over the restriction period. Holders of restricted stock receive dividends and have the right to vote the shares.

(b) Stock Options

The Corporation's stock option plans generally provide that the exercise price of any stock option may not be less than the closing price of the common stock on the trading day preceding the date of grant of the common stock.

Options granted under the Corporation's stock-based compensation program generally vest ratably over a five-year period and have a term of ten years. Certain option grants include the right to receive additional option grants ("reload" or "restorative" options) in an amount equal to the number of common shares used to satisfy the exercise price and applicable withholding taxes. Upon grant, reload options assume the same remaining term as the related original option and vest six months from the date of grant.

Summarized stock option activity for 2002, 2001 and 2000, respectively, and details of the Corporation's stock options outstanding at December 31, 2002, follows:

	2002		2001		2000	
(Shares in thousands)	**Shares**	**Wtd. Avg. Exercise Price**	Shares	Wtd. Avg. Exercise Price	Shares	Wtd. Avg. Exercise Price
Outstanding at January 1	**90,482**	**$35.72**	77,315	$34.17	44,630	$40.88
Granted	**20,063**	**40.95**	23,573	37.73	42,659	27.25
Exercised	**(10,223)**	**26.60**	(7,262)	25.09	(2,089)	19.66
Forfeited	**(4,210)**	**41.16**	(3,144)	36.72	(7,885)	38.56
Outstanding at December 31	**96,112**	**$37.57**	90,482	$35.72	77,315	$34.17
Exercisable at December 31	**58,037**	**$36.84**	45,525	$36.30	25,503	$36.41

	Options Outstanding			Options Exercisable	
(Shares in thousands) Range of Exercise Prices	**Number Outstanding Dec. 31, 2002**	Wtd. Avg. Exercise Price	Wtd. Avg. Remaining Contractual Life	**Number Exercisable Dec. 31, 2002**	Wtd. Avg. Exercise Price
Less than $20.00	**1,220**	$16.52	1.3 years	**1,220**	$16.52
$20.01 – $25.00	**2,597**	24.54	2.9	**2,597**	24.54
$25.01 – $30.00	**23,932**	26.67	12.2	**21,952**	26.51
$30.01 – $35.00	**4,785**	32.72	6.2	**3,008**	32.46
$35.01 – $40.00	**26,151**	37.88	7.6	**9,037**	37.87
$40.01 – $45.00	**18,385**	41.35	9.1	**1,181**	43.31
$45.01 – $55.00	**15,236**	49.63	8.9	**15,236**	49.63
Greater than $55.00	**3,806**	59.12	5.2	**3,806**	59.12
Total	**96,112**	$37.57	8.9 years	**58,037**	$36.84

(c) Employee Stock Purchase Plan

The Corporation sponsors an Employee Stock Purchase Plan designed to encourage employee stock ownership. This plan generally allows eligible employees to purchase shares of the Corporation's common stock at a 15% discount from the market price at the beginning of an offering or the market price at the end of such offering, whichever is lower. During the current two-year offering period, an employee is allowed to make deposits of up to 20% of their earnings (up to a designated maximum) on an annual basis to an interest-bearing savings account to purchase the number of shares permissible under the plan. The maximum number of shares each participant may purchase cannot exceed the contribution limit divided by the applicable purchase price on the offering date.

Shares purchased by the participant are subject to a one-year holding period and cannot be sold or transferred for one year after the purchase date. Upon adoption of SFAS No. 123 in 2002, the Corporation prospectively recognizes compensation expense over the offering period equal to the estimated fair value of the projected shares to be purchased by the employee.

(d) Fair Value of Stock-Based Compensation

The grant date fair values of stock options granted under the Corporation's various stock option plans and the Employee Stock Purchase Plan were estimated using the Black-Scholes option-pricing model. This model was developed to estimate the fair value of traded options, which have different characteristics than employee stock options. In addition, changes to the subjective input assumptions can result in materially different fair market value estimates. Therefore, the Black-Scholes model may not necessarily provide a reliable single measure of the fair value of employee stock options and purchase rights.

Summarized stock-based compensation grants and their related weighted-average grant-date fair values for the years ended December 31 follows:

	2002		2001		2000	
(Shares in thousands)	**Number of Shares**	**Wtd. Avg. Grant Date Fair Value Per Share**	Number of Shares	Wtd. Avg. Grant Date Fair Value Per Share	Number of Shares	Wtd. Avg. Grant Date Fair Value Per Share
Stock option plans	**20,063**	**$12.68**	23,573	$13.34	42,659	$ 9.80
Restricted shares	**3,488**	**37.68**	2,065	37.68	4,517	27.85
Employee Stock Purchase Plan	**3,300**(1)	**11.48**	2,483	9.68	2,122	3.27

(1) Estimated number of shares that employees would purchase under the 2002 plan.

The following assumptions were used to determine the Black-Scholes weighted-average grant date fair value of options granted during 2002, 2001 and 2000:

	Stock Option Plans			Employee Stock Purchase Plans		
Weighted-Average Assumptions:	**2002**	2001	2000	**2002**	2001	2000
Expected dividend yield	**1.97%**	2.29%	4.29%	**2.18%**	2.30%	2.58%
Expected volatility	**35.84**	36.85	42.29	**32.46**	33.80	39.63
Risk-free interest rate	**4.34**	5.02	6.43	**2.75**	2.61	6.22
Expected life (in years)	**4.88**	4.64	9.26	**1.98**	1.50	0.50

Note 20 – Income Taxes

The components of total applicable income tax expense (benefit) in the consolidated income statement for the years ended December 31 follows:

(In millions)	**2002**	2001	2000
Income tax expense:			
Current:			
Federal	**$1,208**	$ 797	$ 571
Foreign	**7**	11	32
State	**144**	115	26
Total	**1,359**	923	629
Deferred:			
Federal	**138**	194	(1,151)
Foreign	**1**	5	(7)
State	**(30)**	(4)	(40)
Total	**109**	195	(1,198)
Applicable income taxes (benefit)	**$1,468**	$1,118	$ (569)

The tax effects of fair value adjustments on securities available for sale, foreign currency translation adjustments and certain tax benefits related to stock options are recorded directly to stockholders' equity. The net tax (benefit) charge recorded directly to stockholders' equity was $(28) million in 2002, $(47) million in 2001 and $107 million in 2000.

A reconciliation of expected income tax expense at the federal statutory rate of 35% to the Corporation's applicable income tax expense (benefit) and effective tax rate follows:

(Dollars in millions)	**2002**		2001		2000	
Statutory tax rate	**$1,667**	**35.0%**	$1,330	35.0%	$(378)	35.0%
Increase (decrease) resulting from:						
State income taxes, net of federal income tax benefit	**74**	**1.6**	72	1.9	(4)	0.3
Tax-exempt interest	**(50)**	**(1.1)**	(56)	(1.5)	(57)	5.3
Tax credits	**(287)**	**(6.1)**	(231)	(6.1)	(179)	16.6

Other, net	**118**	**2.5**	37	1.0	80	(7.4)
Applicable income taxes (benefit)	**$1,468**	**30.8%**	$1,118	29.4%	$(569)	52.7%

A net deferred tax liability is included in other liabilities in the consolidated balance sheet as a result of temporary differences between the carrying amounts of assets and liabilities in the consolidated financial statements and their related tax bases. The components of the net deferred tax liability for the years ended December 31 follows:

(In millions)	**2002**	2001
Deferred tax liabilities:		
Deferred income on lease financing	**$4,042**	$4,242
Prepaid pension costs	**315**	216
Deferred fee income	**461**	333
Other	**176**	198
Gross deferred tax liabilities	**4,994**	4,989
Deferred tax assets:		
Allowance for credit losses	**1,691**	1,744
Purchased intangibles	**289**	227
Deferred compensation	**257**	302
Other	**678**	812
Gross deferred tax assets	**2,915**	3,085
Net deferred tax liability	**$2,079**	$1,904

As of December 31, 2002, the Corporation has foreign tax credit carryforwards totaling $33 million. These credits will expire after 2005 if not used. Management believes that it is more likely than not that these credits will be used within the carryforward period.

Note 21 – Lease Commitments

The Corporation has entered into a number of operating lease agreements for premises and equipment. The minimum annual rental commitments under these leases are as follows:

(In millions)	
2003	$ 239
2004	228
2005	205
2006	187
2007	160
2008 and thereafter	843
Total	$1,862

Rental income from premises leased to others in the amount of $78 million in 2002, $77 million in 2001, and $80 million in 2000 has reduced occupancy expense. Rental expense under operating leases approximated $328 million in 2002, $332 million in 2001, and $384 million in 2000.

Note 22 – Financial Instruments with Off-Balance Sheet Risk

In the normal course of business, the Corporation is a party to financial instruments containing credit and/or market risks that are not required to be reflected in the balance sheet. These financial instruments are primarily credit-related instruments. The Corporation has risk management policies to identify, monitor and limit exposure to credit, liquidity and market risks.

The following disclosures represent the Corporation's credit exposure, assuming that every counterparty to financial instruments with off-balance sheet credit risk fails to perform completely according to the terms of the contracts, and that the collateral and other security, if any, proves to be of no value to the Corporation.

This note does not address the amount of market losses the Corporation would incur if future changes in market prices make financial instruments with off-balance sheet market risk less valuable or more onerous. For a more detailed discussion of off-balance sheet activities see the "Off-Balance Sheet Activities" section beginning on page 75.

(a) Collateral and Other Security Arrangements

The credit risk of both on- and off-balance sheet financial instruments varies based on many factors, including the value of collateral held and other security arrangements. To mitigate credit risk, the Corporation generally determines the need for specific covenant, guarantee and collateral requirements on a case-by-case basis, depending on the nature of the financial instrument and the customer's creditworthiness. The Corporation may also receive comfort letters and oral assurances. The amount and type of collateral held to reduce credit risk varies but may include real estate, machinery, equipment, inventory and accounts receivable, as well as cash on deposit, stocks, bonds and other marketable securities that are generally held in the Corporation's possession or at another appropriate custodian or depository. This collateral is valued and inspected on a regular basis to ensure both its existence and adequacy. Additional collateral is requested when appropriate. Credit derivatives and credit insurance have also been purchased to further reduce the credit risk inherent in these contracts.

(b) Credit-Related Financial Instruments

Summarized credit-related financial instruments, including both commitments to extend credit and letters of credit are as follows:

For The Year Ended December 31,	**2002**	2001
(In billions)		
Unused credit card lines	**$337.5**	$299.3
Unused loan commitments	**134.8**	148.2
Commercial letters of credit	**0.5**	0.6

Since many of the unused commitments are expected to expire unused or be only partially used, the total amount of unused commitments in the preceding table does not necessarily represent future cash requirements.

Credit card lines allow customers to use a credit card to buy goods or services and to obtain cash advances. However, the Corporation has the right to change or terminate any terms or conditions of a customer's credit card account, upon notification to the customer. Loan commitments are agreements to make or acquire a loan or lease as long as the agreed-upon terms (e.g., expiry, covenants or notice) are met. The Corporation's commitments to purchase or extend loans help its customers meet their liquidity needs.

Commercial letters of credit are issued or confirmed to ensure payment of customers' payables or receivables in short-term international trade transactions. Generally, drafts will be drawn when the underlying transaction is consummated as intended. However, the short-term nature of this instrument serves to mitigate the risk associated with these contracts.

(c) Financial Guarantees

The following is a summary of instruments that are considered financial guarantees in accordance with FIN No. 45:

At December 31,	**2002**		2001	
(In billions)	**Contract Amount**	**Carrying Value**[3]	Contract Amount	Carrying Value[3]
Standby letters of credit and foreign office guarantees [1] [2]	**$24.0**	**$0.2**	$19.4	$0.2
Loans sold with recourse	**4.7**	**—**	8.3	—
Swap guarantees	**0.2**	**—**	0.2	—
Asset purchase agreements[4]	**2.5**	**—**	2.6	—

(1) The contract amount of financial standby letters of credit and foreign office guarantees and performance standby letters of credit and foreign office guarantees totaled $20.4 billion and $3.6 billion and $15.6 billion and $3.8 billion at December 31, 2002 and 2001, respectively.

(2) Includes $7.1 billion at December 31, 2002, and $3.4 billion at December 31, 2001, participated to other institutions.

(3) The carrying value of financial guarantees includes amounts deferred and recognized in income over the life of the contract and amounts accrued for inherent losses in accordance with FASB Statement No. 5, "Accounting for Contingencies" ("FAS No. 5"). These amounts are generally reported in other liabilities, except the FAS No. 5 component related to standby letters of credit that is reported in the allowance for credit losses. See page 68, "Allowance for Credit Losses", for more information.

(4) Certain asset purchase agreements entered into in conjunction with the Corporation's asset backed finance conduit programs qualify as financial guarantees under this new accounting guidance due to the specific structure of certain of these agreements. For additional discussion of the asset purchase agreements and the related off-balance sheet exposures, see pages 75–77.

Standby letters of credit and foreign office guarantees are issued in connection with agreements made by customers to counterparties. If the customer fails to comply with the agreement, the counterparty may enforce the standby letter of credit or foreign office guarantee as a remedy. Credit risk arises from the possibility that the customer may not be able to repay the Corporation for standby letters of credit or foreign office guarantees.

The Corporation occasionally sells or securitizes loans with limited recourse. The recourse provisions require the Corporation to repurchase loans at par plus accrued interest upon a credit-related triggering event. Exposure to credit losses from these arrangements has been reduced with the purchase of credit insurance contracts that cover the majority of expected losses. Although expected losses are covered by insurance, the maximum exposure to credit losses is approximately the contract amount stated above.

The Corporation also sells put options that are considered a form of financial guarantee when the counterparties that purchase the contracts actually own the reference financial instrument (generally loans, commodities and equities). A put option sold by the Corporation provides the counterparty the right to sell (i.e., "put") the reference asset to the Corporation at a pre-determined price. The following table summarizes the Corporation's inventory of sold put options as of December 31, 2002, in which it is probable that the counterparty owns the reference financial instrument:

(In millions)	Contract Amount	Carrying Value
Loans	$1,371	$ 0.7
Commodities	351	7.7
Equities	50	13.2
Other	23	—

In the ordinary course of its business, the Corporation enters into contracts that contain indemnification provisions. These provisions require the Corporation to make payments to another party in the event that certain events occur. Many of these provisions call for the Corporation to indemnify the other party against loss in the event that the Corporation fails to perform its own obligations under the contract. These performance guarantees are not subject to disclosure. Other types of indemnification agreements that function as financial guarantees are considered to have remote risk of loss, historical loss experience is negligible and maximum exposure to loss is not possible to estimate due to the pervasive, yet low risk, nature of these agreements.

Note 23 – Fair Value of Financial Instruments

The Corporation is required to disclose the estimated fair value of its financial instruments in accordance with SFAS No. 107, "Disclosures about Fair Value of Financial Instruments." These disclosures do not attempt to estimate or represent the Corporation's fair value as a whole. The disclosure excludes assets

and liabilities that are not financial instruments as well as the significant unrecognized value associated with core deposits and credit card relationships.

Fair value amounts disclosed represent point-in-time estimates that may change in subsequent reporting periods due to market conditions or other factors. Estimated fair value amounts in theory represent the amounts at which financial instruments could be exchanged or settled in a current transaction between willing parties. In practice, however, this may not be the case due to inherent limitations in the methodologies and assumptions used to estimate fair value. For example, quoted market prices may not be realized because the financial instrument may be traded in a market that lacks liquidity; or a fair value derived using a discounted cash flow approach may not be the amount realized because of the subjectivity involved in selecting the underlying assumptions, such as projecting cash flows or selecting a discount rate. The fair value amount also may not be realized because it ignores transaction costs and does not include potential tax effects. The Corporation does not plan to dispose of, either through sale or settlement, the majority of its financial instruments at these estimated fair values.

	2002		2001	
(In millions)	**Carrying Value**	**Estimated Fair Value**	Carrying Value	Estimated Fair Value
Financial assets:				
Cash and other short-term financial instruments (a)	**$ 37,001**	**$ 37,001**	$ 28,017	$ 28,017

Derivative product liabilities (f)	**3,838**	**3,838**	2,574	2,574
Financial instruments in other liabilities (a)	**930**	**930**	1,273	1,273

(1) Includes trust preferred capital securities.

Estimated fair values are determined as follows:

(a) Financial Instruments Whose Carrying Value Approximates Fair Value

A financial instrument's carrying value approximates its fair value when the financial instrument has an immediate or short-term maturity (generally one year or less), or is carried at fair value. Quoted market prices or dealer quotes typically are used to estimate fair values of trading securities and securities sold under repurchase agreements.

(b) Investment Securities

Quoted market prices typically are used to estimate the fair value of debt investment securities. Quoted market prices for similar securities are used to estimate fair value when a quoted market price is not available for a specific debt investment security. See Note 1(f) "Investment Securities" on pages 84–85 for the methodologies used to determine the fair value of equity investment securities.

(c) Loans

The loan portfolio was segmented based on loan type, credit quality and repricing characteristics. Carrying values are used to estimate fair values of certain variable rate loans with no significant credit concerns and frequent repricing. A discounted cash flow method was used to estimate the fair value of other loans. Discounting was based on the contractual cash flows, and discount rates typically are based on the year-end yield curve plus a spread that reflects pricing on loans with similar characteristics. If applicable, prepayment assumptions are factored into the fair value determination based on historical experience and current economic and lending conditions.

Commitments to extend credit and letters of credit typically result in loans with a market interest rate when funded. The recorded book value of deferred fee income approximates the fair value.

(d) Deposits

The amount payable on demand at the report date is used to estimate the fair value of demand and savings deposits with no defined maturity. A discounted cash flow method is used to estimate the fair value of fixed-rate time deposits. Discounting was based on the contractual cash flows and the current rates at which similar deposits with similar remaining maturities would be issued, adjusted for servicing costs. Typically, the carrying value is used to estimate the fair value of floating-rate time deposits.

(e) Long-Term Debt

Quoted market prices or the discounted cash flow method was used to estimate the fair value of the Corporation's fixed-rate long-term debt. Discounting was based on the contractual cash flows and the current rates at which debt with similar terms could be issued. Typically, the carrying value is used to estimate the fair value of floating-rate long-term debt.

(f) Derivative Product Assets and Liabilities

Quoted market prices or valuation models that incorporate current market data inputs are used to estimate the fair value of derivative product assets and liabilities.

Note 24 – Related Party Transactions

Certain executive officers, directors and their related interests are loan customers of the Corporation. These loans in the aggregate were less than 5% of stockholders' equity at December 31, 2002, and 2001.

Note 25 – Pledged Assets

Assets having a book value of $56.9 billion as of December 31, 2002, and $70.3 billion as of December 31, 2001, were pledged as collateral for repurchase agreements, certain derivative instrument transactions, governmental and trust department deposits in accordance with federal and state requirements, and for other purposes required by law. The assets pledged generally were comprised of investment securities and loans. Of the total collateral pledged as of December 31, 2002, $3.2 billion of collateral, which was comprised of securities posted as collateral for repurchase agreements, were permitted to be sold or repledged by the secured party. The Corporation does not issue equity puts.

The Corporation's bank affiliates are required to maintain average noninterest-bearing cash balances, in accordance with Federal Reserve Board regulations. The average required reserve balances were $2.5 billion in 2002 and $2.3 billion in 2001.

Note 26 – Collateral Policy Related to Certain Asset Transfer Activity

It is the Corporation's policy to take possession of securities purchased under agreements to resell in order to secure the risk of counterparty nonperformance on a transaction. The Corporation monitors the fair value of the underlying securities as compared to the related receivable, including accrued interest, and adjusts the level of collateral as necessary. With respect to securities lent, the Corporation receives collateral to secure the risk of counterparty nonperformance in the form of cash or other collateral, in an amount generally in excess of the fair value of the lent securities. The Corporation monitors the fair value of the securities lent on a daily basis, and additional cash or securities are obtained as necessary. At December 31, 2002, and 2001, the fair value of collateral accepted by the Corporation in connection with these activities was $7.0 billion and $6.3 billion, respectively, of which, $6.6 billion and $5.9 billion, respectively, had been sold or repledged as of the balance sheet date.

The maximum outstanding amount of securities under resale agreements at any month end during 2002 and 2001, was $8.1 billion and $8.5 billion, respectively. The average oustanding amount of securities under resale agreements during 2002 and 2001 was $6.5 billion and $7.1 billion, respectively.

Note 27 – Contingent Liabilities

The Corporation and certain of its subsidiaries have been named as defendants in various legal proceedings, including certain class actions, arising out of the normal course of business or operations. In certain of these proceedings, which are based on alleged violations of consumer protection, securities, banking, insurance and other laws, rules or principles, substantial money damages are asserted against the Corporation and its subsidiaries. Since the Corporation and certain of its subsidiaries, which are regulated by one or more federal and state regulatory authorities, are the subject of numerous examinations and reviews by such authorities, the Corporation also is and will be, from time to time, normally engaged in various disagreements with regulators, related primarily to its financial services businesses. The Corporation has also received certain tax deficiency assessments. In view of the inherent difficulty of predicting the outcome of such matters, the Corporation cannot state what the eventual outcome of pending matters will be; however, based on current knowledge and after consultation with counsel, management does not believe that liabilities arising from these matters, if any, will have a material adverse effect on the consolidated financial position or results of operations of the Corporation.

(1) Net interest income-FTE includes taxable equivalent adjustments of $36 million, $38 million, $36 million and $35 million for quarters ended December 31, 2002, September 30, 2002, June 30, 2002 and March 31, 2002, respectively. Net interest income-FTE includes taxable equivalent adjustments of $38 million, $30 million, $30 million and $33 million for quarters ended December 31, 2001, September 30, 2001, June 30, 2001 and March 31, 2001, respectively.

(2) Includes trust preferred capital securities.

(3) Related assets consist of loans outstanding, including loans held for sale, and other real estate owned.

(4) 2002 includes the addition of employees due to the consolidation of Paymentech, Inc. and Anexsys, LLC.

(5) Results include the effect of the consolidation of Paymentech, Inc. and Anexsys, LLC.

Management of BANK ONE CORPORATION and its subsidiaries (the "Corporation") is responsible for the preparation, integrity and fair presentation of its published financial reports. These reports include consolidated financial statements that have been prepared in accordance with generally accepted accounting principles in the United States of America, using management's best judgment and all information available.

The consolidated financial statements of the Corporation have been audited by KPMG LLP, independent public accountants. Their accompanying report is based upon an audit conducted in accordance with standards established by the American Institute of Certified Public Accountants, including the related review of internal accounting controls and financial reporting matters. The Audit and Risk Management Committee of the Board of Directors, which consists solely of outside directors, meets at least quarterly with the independent auditors, Corporate Audit and representatives of management to discuss, among other things, accounting and financial reporting matters.

Management of the Corporation is responsible for establishing and maintaining disclosure controls and procedures to ensure that information required to be disclosed in reports filed or submitted under Securities Exchange Act of 1934 (the "Exchange Act") is recorded, processed, summarized and reported, within the time periods specified in the Commission's rules and forms. In addition to disclosure controls and procedures, management of the Corporation is responsible for establishing and maintaining an effective internal control structure, which provides reasonable, but not absolute, assurance of the safeguarding of assets against unauthorized acquisition, use or disposition. The Corporation maintains systems of controls that it believes are reasonably designed to provide management with timely and accurate information about the operations of the Corporation. This process is supported by an internal audit function along with the ongoing appraisal of controls by the Audit and Risk Management Committee. Both the Corporation's independent auditors and the internal audit function directly provide reports on significant matters to the Audit and Risk Management Committee. The Corporation's independent auditors, the internal audit function and the Audit and Risk Management Committee have free access to each other. Disclosure controls and procedures, internal controls, systems and corporate-wide processes and procedures are continually evaluated and enhanced.

Management of the Corporation evaluated its disclosure controls and procedures as of December 31, 2002. Based on this evaluation, the Principal Executive Officer and Principal Financial Officer each concludes that as of December 31, 2002, the Corporation maintained effective disclosure controls and procedures in all material respects, including those to ensure that information required to be disclosed in reports filed or submitted under the Exchange Act is recorded, processed, summarized and reported, within the time periods specified in the Commission's rules and forms, and is accumulated and communicated to management, including the Principal Executive Officer and the Principal Financial Officer, as appropriate to allow for timely disclosure. There have been no significant changes in internal controls or in other factors that could significantly affect internal controls subsequent to our most recent evaluation.

The Corporation is dedicated to maintaining a culture that reflects the highest standards of integrity and ethical conduct when engaging in its business activities. Management of the Corporation is responsible for compliance with various federal and state laws and regulations, and the Corporation has established procedures that are designed to ensure that management's policies relating to conduct, ethics and business practices are followed on a uniform basis.

REPORT OF INDEPENDENT PUBLIC ACCOUNTANTS

The Board of Directors and Stockholders
BANK ONE CORPORATION:

We have audited the accompanying consolidated balance sheets of Bank One Corporation and subsidiaries ("the Corporation") as of December 31, 2002 and 2001, and the related consolidated statements of income, stockholders' equity, and cash flows for the years then ended. These consolidated financial statements are the responsibility of the Corporation's management. Our responsibility is to express an opinion on these consolidated financial statements based on our audits. The accompanying consolidated statements of income, stockholders' equity, and cash flows of the Corporation for the year ended December 31, 2000 have been audited by the Corporation's predecessor auditors, who have ceased operations. Those auditors expressed an unqualified opinion on those consolidated financial statements in their report dated January 17, 2001.

We conducted our audits in accordance with auditing standards generally accepted in the United States of America. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the financial position of the Corporation as of December 31, 2002 and 2001, and the results of their operations and their cash flows for the years then ended, in conformity with accounting principles generally accepted in the United States of America.

On January 14, 2004, J.P. Morgan Chase & Co. and Bank One entered into an agreement to merge Bank One into JPMorgan Chase. JPMorgan Chase has filed a Registration Statement on Form S-4 with the Securities and Exchange Commission containing a preliminary joint proxy statement/prospectus regarding the proposed merger. Shareholders are urged to read the definitive joint proxy statement/prospectus when it becomes available because it will contain important information. Shareholders will be able to obtain a free copy of the definitive joint proxy statement/prospectus, as well as other filings containing information about JPMorgan Chase and Bank One, without charge, at the SEC's Internet site (http://www.sec.gov). Copies of the definitive joint proxy statement/prospectus and the filings with the SEC that will be incorporated by reference in the definitive joint proxy statement/prospectus can also be obtained, without charge, by directing a request to J.P. Morgan Chase & Co., 270 Park Avenue, New York, New York 10017, Attention: Office of the Secretary (212-270-6000), or to Bank One Corporation, 1 Bank One Plaza, Suite 0738, Chicago, Illinois 60670, Attention: Investor Relations (312-336-3013).

The respective directors and executive officers of JPMorgan Chase and Bank One and other persons may be deemed to be participants in the solicitation of proxies in respect of the proposed merger. Information regarding JPMorgan Chase's and Bank One's directors and executive officers and a description of their direct and indirect interests, by security holdings or otherwise, is available in the preliminary joint proxy statement/prospectus contained in the above-referenced Registration Statement on Form S-4 filed with the SEC on February 20, 2004.

DEAR FELLOW SHAREHOLDER

This letter is the fourth I have written to you as Chairman and CEO of Bank One. Due to the proposed merger of Bank One with J. P. Morgan Chase & Co., it will likely be my last. I write it with some sadness, because we are closing an extraordinary chapter in the history of our company, but also with enormous excitement because we now have the opportunity to create one of the truly great financial institutions in the world.

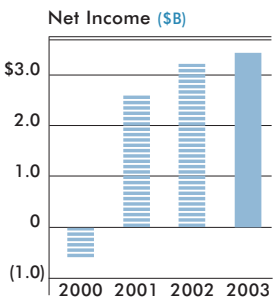
Without the tireless and incredible efforts of the thousands of employees at Bank One, we would not have been in a position to embark upon this new journey. Their exceptional talent and steadfast resolve to doing the right thing have transformed every aspect of Bank One – from customer service and systems to products and marketing.

Their hard work is reflected in our share price – an 85% increase in the stock price since we began on this journey together in March of 2000. This performance compares with a 25% decrease in the S&P 500 and a 24% increase in the Keefe Banking Index during the same period.

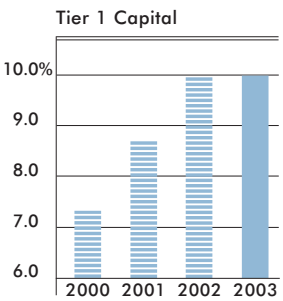
Our employees have created this remarkable opportunity. Our commitment to you in the days ahead is to realize its great promise.

Righting the Ship; Fixing the Bank

In 2000, we reported a net loss of $511 million; in 2003, we earned a record $3.5 billion. We achieved these results by instilling greater financial discipline, improving efficiency, upgrading systems, integrating technology, strengthening management and relentlessly attacking bureaucracy.



Instilling financial discipline Our first priority in 2000 was to create a fortress balance sheet. With this goal in mind, we evaluated each asset and liability to ensure that its value was accurately reflected and properly managed. We created thousands of profit and loss statements to help our managers better understand and raise performance in each component of their respective businesses. Providing this information helps ensure that we adhere to rigorous standards of fact-based decision making. Today, for example, each of our 1,841 banking centers has its own P&L, enabling each branch manager to make decisions based on her or his market's unique needs.



Additionally, we realized the need to prepare ourselves for what would become an enormously difficult period in the credit cycle. In 2000, we began a rigorous process to reduce and better manage both overall and individual credit risk across all lines of business. Today, we believe that our credit and risk management process is among the strongest in the industry. We exited unprofitable customer relationships and unprofitable business segments. We increased the amount of fee-based business we do with customers. Today, non-lending revenue accounts for 64% of our large corporate banking business, compared to approximately 45% in 2000.

As our financial strength improved, we strategically deployed excess capital. In 2003, we made two small but important acquisitions, increased the dividend by 19% and bought back more than 55 million shares of stock at an average price of $37.29 for a total cost of $2 billion – without weakening our capital position. In fact, we ended the year with our Tier 1 Capital among the strongest in the industry at 10.0%, up from 7.3% in 2000.

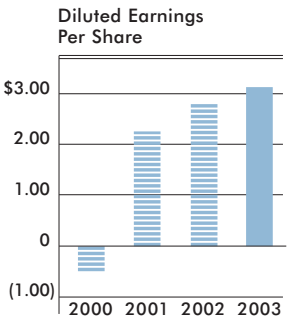
Improving efficiency During the past four years, we eliminated $1.8 billion from our cost structure. Each expense category – from the use of cell phones to vendor and real estate contracts – was painstakingly evaluated. The number of operating centers was reduced from 71 to 48 and more than 1,000 software applications were consolidated. In addition, we eliminated the unnecessary use of consultants and terminated executive perks, while putting additional stock into the 401(k) plans of 40,000 employees. We reduced headcount by 19%, despite increases in staff from acquisitions, in-sourcing thousands of technology jobs and hiring thousands of customer-focused professionals. As a result, we have not only improved efficiency, but we have improved customer service across all of our businesses.

Upgrading, integrating and consolidating systems and technology The task of integrating and upgrading our systems and technology was perhaps our most complex challenge. In

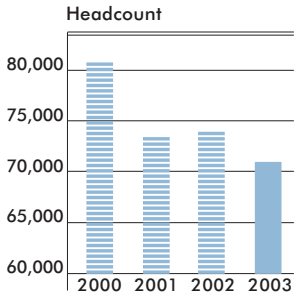
2000, we relied upon nine deposit systems and eleven lending systems, and had well over a thousand computer applications. There was virtually no form of standardization, and it was clear we could not properly run the bank – let alone go through another major merger or acquisition – until our systems were consolidated.

We spent $500 million and hundreds of thousands of hours converting our systems, which has already resulted in annual savings of $200 million and better productivity. Our bankers now operate on one deposit system, one consumer loan system, one corporate loan system, one middle market loan system and one check processing system – all significantly upgraded. In addition, we introduced a new standardized customer profitability system that provides our bankers with the user-friendly, sophisticated sales tools that they need to offer more value to our customers. Combined, these improvements enable our bankers to work smarter and faster to serve the best interests of Bank One customers.

Strengthening management Today, Bank One's culture focuses on executing with skill, precision and a sense of urgency. While we encourage constructive debate, we also recognize the importance of reaching a decision and working together as one team with one agenda. Each day, we endeavor to take responsibility for our mistakes; make good on our commitments; and do what's right for our customers, our company, our shareholders and each other.



Throughout this process, we have become more field- and customer-driven. In retail, small business, private banking, middle market and even philanthropy, our success depends on how well we understand the needs of customers in local communities. We realize that people sitting at headquarters don't have all the answers. That's why our senior leadership is spending increasingly more time outside their offices and in the front lines with those who have direct contact with customers and important knowledge about every community we serve.



And our people are becoming more efficient. Today, meetings are shorter and more productive, and unnecessary paperwork has been reduced. The effort is ongoing and we continue to be deliberate and unrelenting in our resolve to keep bureaucracy at bay.

Investing in the Future; Igniting Growth

Despite the extremely tough economic environment during the past four years and our need to significantly reduce expenses, we never stopped aggressively investing in our future. By 2003, our hard work, cost cutting and investments began to yield good, profitable, sustainable growth:

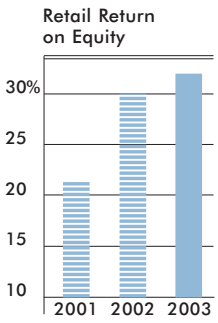
Retail In 2003, we strengthened marketing programs, extended banking hours by up to 20% in most of our markets and brought more than 1,000 new customer-focused sales staff into the branches. We added 58 new branches and 434 new ATMs, renovated more than 250 branches and converted 874 ATMs to the latest technology. We dropped the hated teller fee. We upgraded our products with free checking, free online bill payment and free e-mail

alerts. Bank One's online banking tools are now among the best in the industry. (This past year bankone.com received the International Academy of Digital Arts and Sciences "Webby Award" in the Financial Services category.)

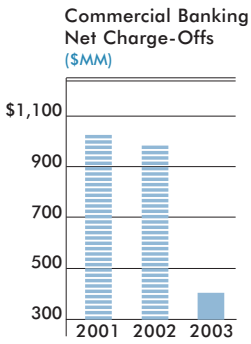
All of this work is clearly paying off. In 2003, we added 434,000 net new checking accounts. This compares to 2000 and 2001, when we were losing thousands of accounts, and to 2002, when we reported only 4,000 net new accounts. In addition to increased checking accounts, in-branch sales are improving dramatically through cross-selling efforts: credit card sales were up 84%; home equity loans increased 27%; and investment sales were up 10%.

Commercial Banking Our initial focus in Commercial Banking was on properly managing risk, navigating our businesses through the credit cycle and decreasing our reliance on lending revenue. Our investment in capital markets and global treasury services helped fuel our growth in fee-based revenue. In 2003, non-lending revenue accounted for 64% of our large corporate banking business, versus approximately 45% three years ago. In capital markets alone, revenue grew to $890 million, up more than 80% since 2000.

Today, Bank One ranks second in managing customer asset-backed commercial paper outstanding, and has become one of the top 10 originators of investment-grade debt. In 2003, global treasury services introduced a breakthrough product to help healthcare insurers and providers electronically process payments and remittance advices. In addition, an electronic payment product is now offered that allows large-scale companies and public entities to accept bill payments over the phone or through the Internet.



We also reduced our credit exposures by more than $63 billion since 2000. The smaller loan portfolio – along with the continued strong improvement in credit quality – allowed us to release $420 million in corporate banking loan loss reserves in 2003.



Return on equity for our large corporate banking business was 17% (excluding the benefit of the release of reserves). That is a significant increase from 8.4% in 2002, and, we believe, a sustainable one. In middle market, return on equity was 16%, versus 13% in the prior year. With a recovery in the economy, we expect solid returns and growth as we move forward.

Card Services Although profit was essentially flat in Card Services, overall customer spending on our cards grew by 7.5% to $167.1 billion, and loan balances outstanding increased to $76.3 billion from $74 billion in 2002.

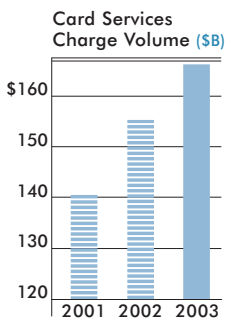
In 2003, Card Services led the industry in new card introductions and launched the first major card innovation in years. The year was off to a great start with the highly anticipated March launch of Disney's Visa® Credit Card. Avon, Volkswagen and Starbucks soon joined our list of great partner brands, each with its own rewards card.

We also developed successful new marketing channels that do not rely on direct mail, which is becoming increasingly more expensive and less effective. In 2003, for the first time, direct mail sales accounted for less than

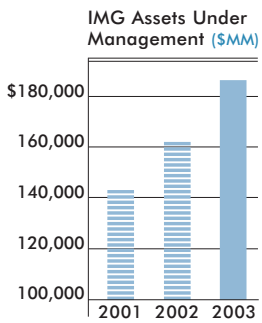
half of our new accounts. Several partners, including Disney, Starbucks and Amazon, are using their Internet sites to allow customers to apply for cards. Perhaps the most innovative distribution channel is Avon's 600,000 representatives who are now offering the Avon rewards card to their customers.

Our partnership with Starbucks led to the new Starbucks Card Duetto™ Visa, the first card to combine a stored-value card and credit card. Recognized by *Business Week* as one of the best new products of 2003, this card has exceeded our expectations.

Investment Management Group The Investment Management Group grew assets under management by 15% compared to 2002. This growth was buoyed by the equity market rebound and strong sales in our retail, institutional and third party channels. Assets under management increased 42% since year-end 2000, from $131 billion to $187 billion, an especially impressive performance considering the difficult market environment of the past three years.



In 2003, we significantly expanded our investment management capabilities with two strategic acquisitions: Zurich Life and Security Capital Research & Management Incorporated. Zurich Life provides us with the manufacturing and expanded distribution capabilities to offer high-quality life insurance and annuity products. Security Capital, a recognized expert in developing real estate investment products, complements our wide range of high-performing products for institutional clients.



Additionally, in 2003, we strengthened governance and control practices of the One Group Mutual Funds to better protect the interests of fund investors, and we continue to cooperate with our regulators, including the New York State Attorney General and the Securities and Exchange Commission, in reviewing our mutual fund practices. Details about these changes can be found on www.onegroup.com.

The Next Chapter: JPMorgan Chase

In 2003, for the first time, your company was strong enough to be in a position to consider multiple options as we contemplated the future. We could continue on our current path, purchase a franchise or merge with another company. (Although, I do not believe that JPMorgan Chase, or any other company for that matter, would have considered us an attractive merger candidate had we not fixed the company.) After looking at and weighing the risks and rewards of each option, we concluded – and are very confident – that the proposed merger with JPMorgan Chase provides us with a truly unique opportunity to build one of the world's great financial institutions.

We believe the combined enterprise will continue to deliver superior returns to our shareholders. We believe it will be great for our current and prospective customers because they will have access to a broader offering of better and more competitively priced products and services. We believe it will be great for employees because a stronger company ultimately results in expanded opportunities for

career growth and development (although in the beginning there will, unfortunately, be some painful staff reductions). And we believe it will be great for each of the communities in which we operate, because building a vibrant, healthy company is the prerequisite to responsible corporate citizenship, a value deeply held by both companies.

It will also be good for Chicago because, while the parent company will be headquartered in New York, the combined company's retail and middle market businesses will be headquartered here. There is strong business logic to support the dual headquarters structure. I have learned from firsthand experience that Chicago is a terrific place in which to build a company and raise a family. It offers a wonderful quality of life, a lower cost structure, a highly educated workforce and an involved civic community that is backed by supportive city leaders. Chicago also serves as an important gateway for reaching our significant Midwest customer base.

A compelling business-by-business rationale When the merger is complete, the company will operate in six major businesses:

- *Retail*, which includes branch banking, small business and consumer lending, such as mortgages and auto loans
- *Card Services*
- *Treasury & Securities Services*, including cash management and treasury services, institutional trust services, and investor services
- *Middle Market*, which includes mid-corporate banking
- *Global Investment Management and Private Banking*
- *Investment Banking*

Once combined, each and every one of these businesses will not only be strengthened, but will also be a top competitor in its field.

The business rationale is attractive from every perspective:

1. Most important, in each business our customers will benefit from broader, more complete and higher quality products and services.
2. Economically, each business will be strengthened by the benefits and efficiency that come with scale. During the next three years, we expect to realize annual savings of $2.2 billion, without having a negative impact on customer service.
3. Globally, we will gain immediate access to international capabilities in key areas such as all capital markets products, financial advisory services, asset management and treasury services (including trade finance, custody, trust and cash management).
4. And, finally – and we don't want to oversell but we do feel strongly about this point: the whole is greater than the sum of the parts. Each business fuels and complements the others, providing substantial competitive advantages such as distribution channels (e.g., providing retail banking customers with credit cards and mortgages; providing middle market and investment banking customers with treasury and securities services, just to name a few), and the benefit of great global brands.

A compelling overall fit for our company In addition to strengthening each line of business, this transaction provides

a more diversified earnings stream, a larger capital base, stronger capital generation capabilities, and increased capacity to invest in our businesses. (It is noteworthy that – on the day this merger was announced – the rating agencies took the unusual step of placing both Bank One and JPMorgan Chase on "positive watch.") All of the above should ultimately lead to a lower cost of capital and the ability to better withstand difficult times in the economic cycle.

Capable and compatible management teams and a proven ability to execute To succeed, companies cannot rely on business logic alone. They must be able to execute a game plan. Effective execution begins with a capable and compatible management team. I have known Bill Harrison, Chairman and CEO of JPMorgan Chase, for more than 10 years and have tremendous respect for him, both personally and professionally. Our faith in his character, integrity and ability gave us great confidence that this merger would be successful.

In addition to Bill and me, many of the members of our senior management teams have also worked together at other companies or sat across the table from each other as competitors. They have worked in and across all lines of business and, as a result, have mutual respect for and understanding of our various businesses. And both senior management teams have experience executing large-scale mergers. We are confident we can execute this merger successfully.

In closing The past four years have been transformative for all of us at Bank One. Together, we faced some tough challenges and have created a strong, healthy company. We are now positioned to achieve our goal of becoming one of the best financial institutions in the world.

The business rationale for this merger is extremely sound: If we do not succeed, we will have only ourselves to blame. We cannot promise you results, but having chosen this course of action, we therefore owe you – and will promise you – this: we will do all in our power to deliver on its extraordinary potential.

James Dimon
CHAIRMAN AND CHIEF EXECUTIVE OFFICER
FEBRUARY 17, 2004

"When it comes to banking, I'm a very needy person because I'm always traveling around the country. What's valuable to me is that my banker looks out for my family and me – and for our future – so I can sleep easy at night. It's a good situation to be in."

Pat Green

Country singer

Three-time Grammy nominee

New dad

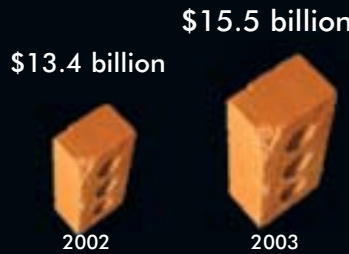
Bank One customer – 5 years

Creating Value for Customers

Customers – from large corporations to individual consumers – rely on us to understand their goals, provide solutions and demonstrate results. We take that responsibility seriously. After all, that's how we create value for the 60 million customers we work with. From home equity loans to high yield securities, we are dedicated to providing each customer with the best products and services in the industry.

Creating Value for Businesses

Whether it's a *Fortune 500* corporation, a family-run business, a government agency or a nonprofit, organizations large and small rely on us to listen, understand their businesses and provide solutions that address their needs. We recognize that each business is unique. At Bank One, we are dedicated to building deep relationships with our customers to help them leverage resources, save time and money, and compete more effectively.



Location, location, location

In addition to the capabilities of our proprietary branches and offices in 10 international cities, we maintain a co-operative arrangement with banks around the world. Bank One commercial customers have access to this network of banks in 32 countries.

3rd largest provider of cash management products in the United States

From implementing an electronic funds transfer solution to increase collection speed, to consolidating idle funds into one parent account for overnight investment, our cash management services provide businesses with the tools they need to monitor, manage and maintain their cash flows in today's global economy.

Commercial real estate commitments

We provide loans and a wide range of services to meet the commercial real estate financing needs of entrepreneurs, businesses, large corporations and institutional investors.

A card for every need

Whether they need a purchasing card, a single card solution that combines the procurement process with travel expense management, or a stored-value card to pay employees, our commercial card services group delivers streamlined financial management solutions to the more than 1,800 organizations that use a Bank One card.

Businesses bank on us

Each day 3,000 large corporations, 20,000 middle market companies and nearly 500,000 small businesses rely on us to help them meet their financial goals.

A host of options

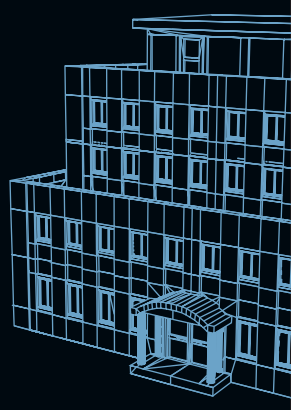
With average outstanding commercial loan balances of $67 billion, we offer a comprehensive array of financing solutions – ranging from basic working capital loans to highly structured debtor-in-possession transactions – to small business, middle market and large corporate borrowers.

Structuring innovative financing solutions

Whether they need a stand-alone bank loan syndication or a multi-product financing solution, our capital markets experts provide companies with structuring innovation and wide distribution to either public or private debt markets.

Institutional assets under management

$62 billion	$78 billion	$95 billion
2001	2002	2003



We combine a dedicated service team and a broad product line to provide tailored investment management solutions for companies large and small.

Small business is big business

With $10.2 billion in loans, we provide small businesses with the funds they need to expand their business, purchase capital goods or inventory, meet short-term cash requirements and consolidate business debt.

Expanding what we do

Our purchase of Security Capital Research & Management Incorporated – a respected advisor in providing real estate investment products to institutional investors – is an example of how we're expanding the services we provide commercial customers.

Bank One customer – 9 years

"Value means having a financial partner who is genuinely looking for ways for me to improve my business. As a small business owner, I have to wear a lot of hats – chef, consultant, company spokesperson, general manager. What's valuable to me is the fact that I don't have to wear the "financier" hat too – my banker does that for me."

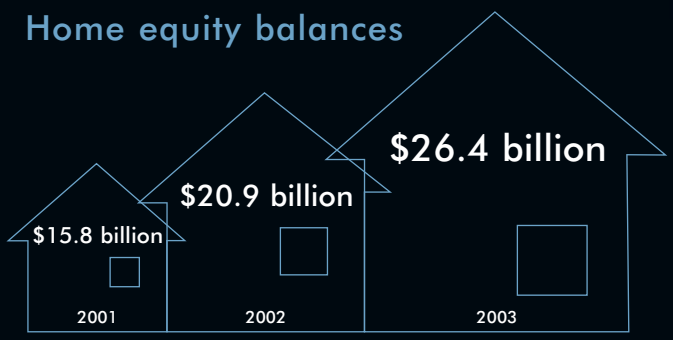
"My husband and I are busy – we both work and are fortunate to have a large extended family and great friends. Financial stability is important to us for our kids' sake, especially with a growing family. Having a financial partner to help achieve our financial goals – for our children and ourselves – is incredibly valuable."

Creating Value for Consumers



We understand that when it comes to money, each person has unique needs. That's why we've moved beyond the traditional branch bank to become a financial services company offering a wide range of products and services to help people meet their financial goals. Today, customers visiting our branches can meet with bankers to create a financial plan that includes everything from checking and savings accounts to college and retirement planning to life insurance, annuities and mutual funds. And with conveniences like free online bill payment, automatic e-mail alerts and digital check imaging, our customers spend less time worrying about doing the things they have to do, and more time focusing on the things they want to do.

2.3 million policyholders

As a leading underwriter of term life insurance, we serve consumers through both a national network of 40,000 licensed brokers/insurance agents and our One Life Direct marketing platform.

Home equity balances

People put a lot of work into their homes; we make it easy for them to convert that into cash.

Convenience

Bank One customers have access to 1,841 banking centers, 4,394 ATMs and 24/7 online and telephone banking.

BankOne.com Recognized for its clean, intuitive and fast user interface, BankOne.com was honored in 2003 by the Webby Business Awards as the top financial services Web site in the country.

Choices

Customers have more than 1,200 different kinds of Bank One credit cards to choose from, ranging from low-interest-rate cards, to those that earn rewards or cash back, to others that support a favorite nonprofit organization.

Smart

We provide more than $4.2 billion a year in education loans to students and parents across the nation.

Core deposits

$61.6 billion	$66.5 billion	$71.7 billion
2001	2002	2003

Our array of checking and savings account choices offers the flexibility and convenience to meet customers' individual banking needs.

$105 billion mutual fund assets under management

With 49 professionally managed funds to choose from, One Group mutual funds offer a fund for nearly every type of investor.

1.5 million acres managed

With more than 1,600 properties under our care, we assist clients in one of the largest farm and ranch management operations in America.

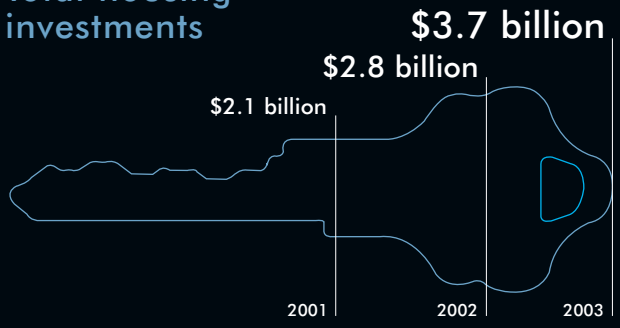
Creating Value for Communities



As a financial services company, we have a special connection to the communities we serve. Our philanthropic, community lending and employee volunteer programs are delivering much needed resources to the people in the communities in which we live and work. Whether it's providing financing to a construction company to build low-income housing units, sponsoring educational programs on basic banking or helping to teach entrepreneurial skills in an underserved community, we're developing and implementing effective solutions to support the development of communities and help people succeed in life.

With knowledge comes power

Recognizing that it's never too early to start developing good financial habits, we partnered with WTTW-TV, the PBS television station in Chicago, to create "Money Farm," a series of two-minute television vignettes for kids. Nominated for a local Emmy, the show features kids teaching kids how to save, spend, invest and donate money. "Money Farm" was just one of nearly 300 financial literacy grants we made during 2003.

Total housing investments

Banc One Capital Corporation's Housing Investments Group is a leading equity investor in affordable housing.

Revitalizing neighborhoods

We work to empower communities by providing the financial resources required to help build and revitalize neighborhoods. That's why in 2003 we made more than $895 million in Community Reinvestment Act-qualified community development loans and investments in the communities Bank One seeks to serve.

Turning dreams into reality

Our $12.5 billion five-year alliance with Fannie Mae will provide affordable mortgage financing for underserved people and communities, including minority families, women-headed households, immigrants and people with disabilities.

Helping one student at a time

In 2003 we donated more than $8.5 million to support programs that develop financial literacy skills in youth, help economically disadvantaged students prepare for or gain access to college, and promote partnerships among schools, parents and community agencies in low-income areas.

Employee involvement

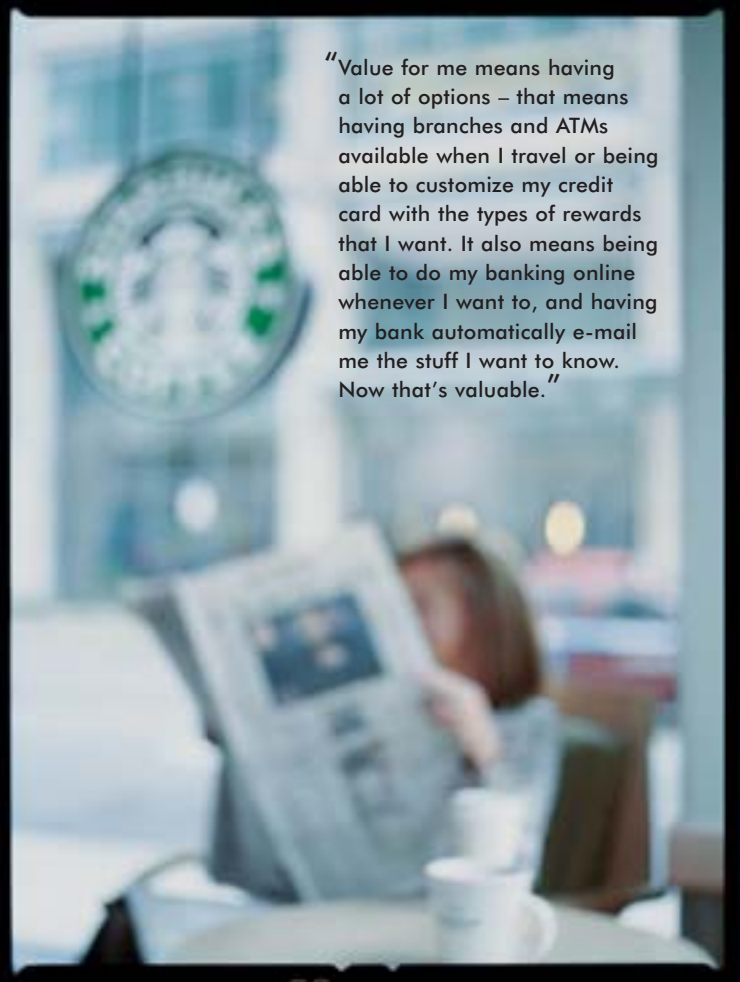
In 2003 the Bank One Employee Partnership Grant program, which contributes up to $5,000 to nonprofit organizations to fund the expenses for teams of Bank One volunteers, provided more than $240,000 to qualified nonprofits around the country.

Supporting business and employment growth

With nearly $200 million in new SBA loans in 2003, we're a significant participant in the Small Business Administration's loan programs, which provide small and middle market businesses with flexible financing options to start, expand and grow their companies.

Committed to inclusion in all that we do

For us, inclusion means creating an environment where everyone – customers, suppliers and employees – are welcome regardless of race, gender or sexual orientation. That's why we reach out to targeted audience segments with specialized marketing and supplier diversity programs, support employee networking groups, and sponsor and celebrate diversity programs in our communities. In 2003 alone, we provided nearly $9.5 million to support programs that address cultural enrichment and issues related to diversity.



$42 million in donations

Backed by a grant from Bank One, Little Black Pearl is helping young people living in Chicago's inner city create and sell their artwork, such as "Summer in the Hood," (above) by 13-year-old Nelson Gordon. In 2003 Bank One made contributions to more than 3,000 nonprofit organizations, with nearly 75% of the grants targeted to help meet needs in low- and moderate-income communities.

"Value for me means having a lot of options – that means having branches and ATMs available when I travel or being able to customize my credit card with the types of rewards that I want. It also means being able to do my banking online whenever I want to, and having my bank automatically e-mail me the stuff I want to know. Now that's valuable."

She: early education expert and advocate

He: pathology and genetics expert

Both: university professors

Married for 53 years – Bank One customers for all of them

"Our time is valuable. We can't afford to spend our days standing in line at the bank or waiting on the telephone trying to track the right person down. Value is when our banker returns our calls promptly and comes to us with suggestions about what we should be doing with our money. It gives us the sense that we're important."

2003 Business Results at a Glance

With net income of $3.5 billion, 2003 was a record year for us. Our Retail bank achieved growth in accounts, deposits and loans. Credit quality in the Commercial bank continued to improve. Assets under management increased, and Card volumes and balances grew. Each of our businesses began to perform better, and we are well positioned for the future.

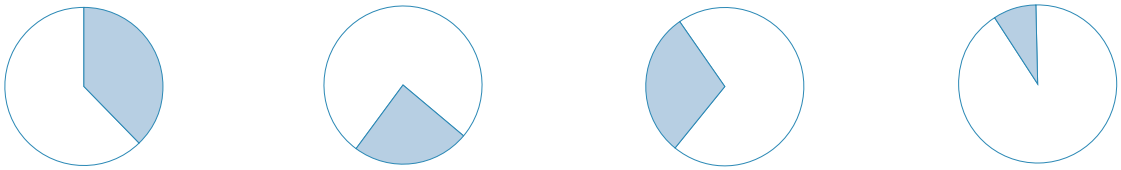
RETAIL

27%
increase from 2002 in home equity loans

$5.9
billion in retail investment sales

Financial Performance	2003	2002	2001
Revenue ($MM):	**$ 6,303**	$ 6,073	$ 5,837
Net income ($MM):	**1,558**	1,451	1,046
Return on equity:	**33%**	30%	22%
Core deposits ($MM):	**71,680**	66,495	61,610
Relationship bankers:	**3,600**	2,839	2,295
Checking accounts (000s):	**5,286**	4,852	4,844

Growing organically and improving the customer experience. Retail demonstrated solid results in 2003, showing growth in core deposits, investment sales and small business and home equity loans. Net checking account growth also showed strong improvement, increasing by 434,000. We continued to invest in marketing, enhance technology systems and improve our product offerings by providing free online bill payment and personalized e-mail alerts. We also made significant infrastructure improvements, opening 58 new banking centers, renovating more than 250 others, adding or upgrading more than 1,300 ATMs and extending hours in most of our locations. We increased our sales force by more than 1,000 people, while the overall headcount declined by nearly 1,700. We were also successful in several of our cross-sell initiatives, including credit card production in branches. We are confident that 2004 will bring continued growth for our franchise.



COMMERCIAL BANKING

$580
million increase in net income from 2002

60%
decrease in net charge-offs from 2002

Financial Performance	2003	2002	2001
Revenue ($MM):	**$ 4,014**	$ 4,111	$ 4,347
Net income ($MM):	**1,197**	617	700
Return on equity:	**16%**	8%	10%
Net charge-off ratio:	**0.70%**	1.51%	1.30%
Corporate banking loans ($MM):	**27,123**	31,559	36,643
Middle market loans ($MM):	**26,629**	30,336	35,935

Building relationships by enhancing product capabilities while managing risk. Commercial Banking made good progress in 2003. Excluding the impact of the loan loss reserve release, large corporate banking return on equity was 17.0%, a significant increase from 8.4% in 2002. In middle market, net charge-offs as a percentage of loans improved significantly from 1.08% in 2002 to 0.60%, and return on equity was up 3% from 2002 to 16%. Our capital markets group had another banner year, with double-digit revenue growth of 24% from 2002. Although growth in core cash management transactions was negatively impacted by the low-interest-rate environment and industry-wide decline in check volume, we launched significant new product capabilities in 2003 that capitalize on the trend from paper to electronic payments, technology and new industry regulations. In 2004 we will execute with quality and deliver new and enhanced products while maintaining our disciplined approach to credit and expenses.

Managed receivables ($MM):	**76,328**	73,996	68,155
Bank card volume ($B):	**155.0**	124.7	115.3

Satisfying customers while aligning for growth. At Card Services we did not achieve our growth targets in 2003, and we were disappointed that profitability was flat to the prior year. We opened 4.6 million net new accounts and saw outstandings grow to $76.3 billion – respectable numbers, but certainly not at levels matching our potential. We did have significant success in 2003, including new card launches from Avon, Disney, Starbucks and Volkswagen, as well as numerous renewed relationships with high-profile partners. Our Starbucks Card Duetto™ Visa, named by *Business Week* as one of the best products of 2003, outperformed all expectations. We also hit new highs for customer satisfaction, continued to drive down our operating costs, improved our segmenting capabilities and emerged as a leader in managing credit card fraud – reducing fraud losses by 18% in 2003. In 2004 we will continue to pursue growth by launching innovative and valuable card programs that appeal to millions of consumers.

INVESTMENT MANAGEMENT GROUP

22%
increase from 2002 in institutional assets under management

19%
increase from 2002 in mutual fund sales through external channels

Financial Performance	2003	2002	2001
Revenue ($MM):	**$1,480**	$1,298	$1,297
Net income ($MM):	**345**	324	293
Return on equity:	**30%**	34%	31%
Assets under management ($B):	**187**	162	143
Mutual fund assets under management ($B):	**105**	101	83
Insurance policies in-force (000s):	**2,306**	1,193	1,533

Tightening our focus on the core business. 2003 Investment Management Group highlights included a 15% increase in assets under management and strategic acquisitions of Zurich Life and Security Capital Research & Management Incorporated. With these acquisitions and the sale of our corporate trust business to JPMorgan Chase, we made considerable progress tightening our focus on the core business of asset management. We also took steps in 2003 to strengthen our equity management team, naming a new equity chief investment officer and hiring new equity leaders for our growth, value and international portfolio management teams. 2003 also brought about a challenge to our mutual fund business from concerns about market timing and industry practices. We are confident, however, that the actions we are taking in response to these concerns have strengthened the funds for our investors and the future of this business.

Return on common equity	**10%**	9%

(a) Results are presented in accordance with accounting principles generally accepted in the United States of America. 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. 2003 reflects the results of heritage JPMorgan Chase only.

The financial information provided on pages 1-15 is presented on a pro forma combined-operating basis. The unaudited pro forma combined historical results represent how the financial information of JPMorgan Chase & Co. and Bank One Corporation may have appeared on a combined basis had the two companies been merged as of the earliest date indicated. Additional information, including reconciliation of the pro forma numbers to GAAP, can be found on Form 8-K/A furnished to the Securities and Exchange Commission on January 19, 2005. For a description of operating basis, including management's reasons for its use of such measures, see page 25 of this Annual Report.

Right: Bill Harrison
Chairman and
Chief Executive Officer

Left: Jamie Dimon
President and
Chief Operating Officer

Dear fellow shareholder,

On January 14, 2004, we shared with you our plan to unite Bank One and JPMorgan Chase with the goal of creating the best financial services company in the world. Throughout the year, we have worked hard to execute one of the largest mergers in financial services history. As expected, the process has been challenging and rewarding. On a *pro forma combined* basis for the full year, net operating income was $10.3 billion with a 10% return on equity (ROE) or a 17% ROE less goodwill. While these results are not yet what we want them to be, we believe the progress we have made during the past year will ultimately be reflected in our performance.

In this, our first letter to you as a combined company, we will review our 2004 merger milestones, our business performance and our priorities going forward. After reading this letter, we hope you will believe, as we do, that we are doing all of the right things to win in the long run. Today, we are more confident than ever in our ability to build a great company.

I. 2004 MERGER MILESTONES

We have made substantial progress in merging our businesses. Since combining the holding companies on July 1, 2004, we have:

- Achieved merger-related cost saves of $400 million and decreased headcount by 6,500, or 4%, thereby staying on target to achieve a total expense reduction of $3 billion by 2007.
- Merged the lead banks, broker/dealers and credit card banks.
- Made all the key technology decisions, including the selection of our national deposit platform, general ledger, customer identification system and credit card processing system.
- Created a disciplined operating structure consisting of common reporting, risk management, talent management, monthly business reviews and performance-based compensation.
- Identified our top 1,000 leaders and brought them together with our senior management team to learn about the new firm's potential and plan for its future.

II. REVIEW OF 2004 BUSINESS PERFORMANCE

Most of our businesses performed adequately in 2004. However, the full advantages that will come from an increased number of distribution channels, coordinated branding and marketing efforts, and the efficiencies of scale are yet to be realized. For our customers, the added value of broader, more complete and higher-quality products and services will be substantial.

Below is a brief review by line of business. For more detail, please refer to management's discussion and analysis later in this report. To make meaningful comparisons in this letter, we will be discussing our results on a *pro forma combined* basis.

The Investment Bank reported net operating earnings of $3.7 billion with an ROE of 18%. A significant highlight for the year was the performance of our underwriting and advisory businesses. Already the leader in many league categories, including syndicated loans and interest rate and credit derivatives, we moved from 16th place to 4th in initial public offerings and ranked 2nd in global announced M&A, having advised on seven of the 10 largest global M&A deals. Our fixed income business, however, experienced a 13% drop in revenues. Overall, we should have done considerably better in an economic cycle that produced healthier credit results than anticipated. Over time, we are aiming for a 20% ROE through economic cycles. That means striving for a 30% return in the good times and, we hope, no less than a 10% return in the bad. In 2005, we will seek to maintain our global leadership positions by investing in infrastructure and business growth.

Retail Financial Services reported operating earnings of $3.3 billion with an ROE of 25%. These earnings reflect a 33% increase in consumer and small business banking that helped offset weak performance in home finance. In home finance, we were challenged by an industry downturn in mortgage originations driven largely by a dramatic drop-off of refinancing activity due to rising interest rates. Now that the era of historically low interest rates appears to be over, we are focused on running this business far more efficiently. Goals for 2005 include transitioning the Bank One branded business to the Chase brand, investing in our distribution network and creating a culture focused on productivity and sales.

Card Services reported operating earnings of $1.7 billion and an ROE of 14%. Card Services made outstanding progress toward meeting its merger targets, reducing headcount by 1,400, or 7%, and is on track to meet its target of $650 million in expense saves. In addition to completing the conversion of the heritage Chase card portfolio to our new processing platform in 2005, our drive toward market leadership will come from organic growth, economies of scale, superior customer service and an increased focus on innovation.

Commercial Banking reported operating earnings of $992 million and an ROE of 29%. The merger between Bank One and JPMorgan Chase presents a tremendous opportunity for us to meet the growing treasury, asset and wealth management, and investment banking needs of our more than 25,000 middle market, corporate banking and real estate clients. In 2005, we will take significant steps toward realizing that opportunity.

Asset & Wealth Management reported operating earnings of $879 million and an ROE of 37%. Improved equity markets and an emphasis on operating efficiencies helped us grow ROE from 25% in 2003. In 2005, we will focus on improving investment performance and add new bankers and officers to gather additional assets and grow our base of ultra high net worth and high net worth clients.

Treasury & Securities Services reported operating earnings of $437 million and an ROE of 23%. These earnings understate the business' importance, however, because much of our treasury services revenue is included in other business segment results. In 2004, Treasury & Securities Services delivered double-digit revenue growth while also completing the first phase of integrating international operations in 36 countries. In 2005, our goal will be to merge technology systems and leverage the broader set of product capabilities achieved through the merger.

III. OUR PRIORITIES

DEVELOP AND MAINTAIN STRONG FINANCIAL DISCIPLINE. Financial discipline is the bedrock upon which great companies are built. Great companies prevail through both good and bad economic times and consistently deliver solid performance relative to competitors. Our goal is to become one of those companies. Financial discipline requires:

Superior financial reporting and management information systems. In 2004, we created a new internal and external financial reporting architecture with high-quality and transparent accounting policies that cover capital allocation, revenue sharing, expense allocation and funds-transfer pricing. We then worked with our line of business leaders and their respective chief financial officers to develop comprehensive financial and operating metrics to use in building their businesses. Today, thousands of profit-and-loss statements – including one for each of our 2,500 branches, for example – help us allocate capital appropriately and drive performance. We strive to use one set of numbers inside and outside the company to bring consistency and clarity to how we view and measure performance. While we are satisfied with the progress we have made to date, the real benefit will come over time as our management teams increasingly use these tools.

A fortress balance sheet. A fortress balance sheet requires a thorough understanding and management of our assets and liabilities; the use of conservative, appropriate accounting; tight financial controls; strong loan loss reserves; and a commitment to solid credit ratings. We want a balance sheet of unquestioned strength.

With a fortress balance sheet, we can withstand – perhaps even benefit from – difficult times and be deliberate in our capital allocation decisions. Last year, we paid dividends of $1.36 per share and spent $738 million to repurchase stock while making key investments in our business and ended the year with a strong Tier 1 capital ratio of 8.7%.

Accountability for performance. Financial reports alone won't suffice. They are simply tools. Financial discipline also requires those in charge to have a deep understanding of their businesses and of what drives profitability and growth. Each month, the management team from each line of business meets with us to discuss financial performance, revenue growth, risk management, competitive threats, productivity, innovation, key initiatives and talent management.

In the beginning, these meetings were somewhat painful for most of us. Too often, they ended with more questions than answers. Many managers were asked to dive more deeply into the numbers and be more tough-minded about the reasons why certain initiatives were not on target. Although they aren't yet where they should be, our meetings are becoming more open, candid and focused.

In addition to placing more accountability for performance within each line of business, each business needs to increasingly give its field managers the clear and appropriate authority they need to be more accountable and responsive to customers and local market conditions.

Identifying, pricing and managing risk. All of our businesses must be properly paid for assuming risk. All forms of risk – interest, credit, market, liquidity, operational, technology and business – must be categorized, valued, measured and dynamically managed in the constantly changing economic and business environment. While we continue to set risk policy and manage overall risk centrally, we have established line of business risk committees that are accountable for risk performance within the business. By working directly with the businesses, we are creating an informed risk culture that responds more quickly to business and economic changes and strives to avoid surprises.

CUT WASTE AND IMPROVE EFFICIENCY THROUGH OUTSTANDING SYSTEMS AND OPERATIONS. A financial services company cannot win unless it is a low-cost provider. This requires eliminating waste and creating the most effective systems and most efficient operations in the business. We are well on our way. For example:

- We have completed the credit card industry's largest-ever systems conversion, moving 60% of our Visa and MasterCard cardmember base to a faster, more flexible and cost-effective processing system; the remaining 40% will be converted in 2005, at which point all 94 million credit cards will be serviced through a single technology platform.
- Already the leader in U.S. dollar funds transfers, we will finish our clearing systems integration in the second quarter of 2005. When we are done, our team will have invested 59,000 development hours on the project designed to ensure that the 285,000 transactions that move an average of $1.8 trillion every day are executed flawlessly.
- Within the Investment Bank, we are creating a global technology platform for institutional credit risk management as well as credit trading and derivatives processing.
- We will move the Texas banking franchise onto our common deposit platform in 2005. In 2006, we will complete our bank franchise integration with the conversion of New York, New Jersey and Connecticut, providing all customers with full access to banking services across state lines.
- We are consolidating operations centers, refreshing the networks of our 11 major processing centers and 22 large business hubs, expanding strategic data centers, significantly reducing the number of required software applications and centralizing our global help desks to provide consistent infrastructure.
- We believe that to assume more control of our destiny we must assume more control of our technology. On January 1, 2005, we welcomed 4,000 previously outsourced technologists to the firm. Together, we will strive to build the best, most efficient systems and operations in our industry.

By year-end 2006, we hope to have completed nearly 500 conversions and reduced our total number of systems by approximately 35%. It is an undertaking that will require more than 8.5 million "people hours" and at least 1.5 million hours of systems testing. When the process is complete, most of our systems will be on single and upgraded platforms. This will give us a distinct edge in providing our customers with products and services that are competitively superior in quality, innovation and price. During the next two years, our systems conversions will be one of our most difficult challenges, but we will do whatever it takes to get them right.

INVEST FOR GROWTH. Business cannot grow simply by improving efficiency. Growth requires a laser-like focus on execution, a consistent management of risk, a competitive product set and outstanding customer service. We are not interested in growth simply for the sake of growth. We are

looking for "good growth"; i.e., good products that meet customer needs and can be profitable over a sustained period of time.

Although we currently hold leadership positions in virtually every business we are in, there is room to grow in all of them. We intend to build these businesses by investing in organic growth and filling strategic gaps through acquisitions and partnerships.

Investing in organic growth. We will not grow short-term revenue at the expense of long-term success. For us, smart growth means doing a lot of little things right. Some key examples for 2005 include:

- Extending our reach in consumer banking by adding more than 1,000 sales people, 150 branches, and 1,000 ATMs to our 17-state retail bank network;
- Aggressively funding new business development in the Investment Bank, with a special focus on the energy sector and mortgage-backed securities business, as well as investing in fixed income and foreign exchange prime brokerage;
- Intensifying our marketing of Card Services by bringing the Chase brand to a broader customer base; maximizing our partnerships with many of the nation's best-known brands; innovating continuously; and expanding product breadth;
- Increasing our Private Bank's ultra high net worth client base by entering eight new markets globally and building our Private Client Services' client base by expanding our presence in the large and rapidly growing high net worth market in the northeast United States.

Filling the gaps through acquisitions and partnerships. In addition to fueling organic growth, we will pursue strategic acquisitions and partnerships to fill gaps in capabilities, geographies, product offerings and services. Although we are not prepared to make any large moves at this time, we will not pass up smaller acquisitions of strategic value. For example, we entered into two important partnerships and made one acquisition:

- In February 2005, JPMorgan and Cazenove Group formed JPMorgan Cazenove, a joint venture that will be one of the United Kingdom's foremost investment banks. This venture is a major step toward strengthening our global position.
- In December 2004, we formed a strategic partnership with and acquired a majority interest in Highbridge Capital Management, a hedge fund with $7 billion of assets under management and an extraordinary consistency of returns. Highbridge's talent, longevity and track record will be a tremendous addition to our investment offerings for institutional and high net worth clients.
- In January 2004, JPMorgan Chase acquired Electronic Financial Services, a leading provider of government-issued benefits payments and pre paid stored value cards used by state and federal government agencies and private institutions. This acquisition further advanced our leadership position in wholesale electronic payment services and immediately positioned us as a leader in the public sector segment.

BUILD GREAT BRANDS. Shortly after the merger was announced, we began formulating our brand strategy. At first, we thought we simply needed to decide whether to market our consumer products under the name of Bank One or Chase. Our research, however, produced intriguing results. Both Chase and Bank One tested well, but the research revealed that each has very different strengths. The Chase brand is associated with "a tradition of trust" that could extend to a broader array of products and services, such as insurance, retirement products and investments. The Bank One brand, however, is viewed as having "momentum."

Beginning in March 2005, you will see the emergence of a new Chase brand that combines the best of both: the trustworthiness of Chase with the energy of Bank One. Chase will be used to market products and services offered by Commercial Banking, Card Services and Retail Financial Services. The re-energized brand will be introduced with a nationwide marketing campaign focusing initially on the Chase family of credit cards.

By the end of 2006, our consumer business will be spending more than $1 billion annually in support of one brand: Chase. We intend to make Chase the best brand in the consumer financial services industry. We are on track to have all of our more than 2,500 bank branches operating under the Chase brand by the end of the third quarter 2006.

Our research also reaffirmed the power of the JPMorgan brand, which is associated with a long history of unsurpassed client service, high performance standards, integrity and commitment to relationships. The Investment Bank, our international services and Asset & Wealth Management businesses – which include investment management, the Private Bank and Private Client Services – will now be marketed solely under the JPMorgan brand.

CREATE A WINNING CULTURE. Over the course of our careers, we have completed many major mergers. They are always difficult. Mergers are about change, and change is hard. Our past experiences, however, have made us appreciate the enormous progress that the people of Bank One and JPMorgan Chase have achieved this year.

Since we announced the merger, a lot has been written about how the cultures of Bank One and JPMorgan Chase would interact and which one would survive. Today, a new culture is emerging that reflects the best of both firms. Every day, we are getting better, and the effects are taking hold. We are becoming more candid and open in the way we communicate and more disciplined in the way we run the firm. People are working together to tackle issues, and managers are leading their teams with a deeper understanding of the underlying dynamics of their businesses. There is greater buy-in for the vision, more passion about growing the business and a heightened sense of urgency.

A winning culture requires great leaders. In 2004, we identified our top 1,000 leaders from throughout the businesses and around the world. But that is just the beginning. In 2005, we will conduct in-depth talent reviews in all lines of business to identify our high-potential individuals and create development plans for all of them. Our LeadershipMorganChase program provides a unique forum for our senior managers to come together to learn more about our vision and plan for the firm and to develop the skills they need to become great managers and leaders. Our goal is to provide our people with everything they need to play an instrumental role in the future growth and success of this firm.

We are also working to create a more inclusive work environment by requiring our managers to be accountable for building diverse teams. As part of our effort to improve diversity at the executive level, we are now devoting much more attention to career planning and development for high-potential employees from under-represented groups.

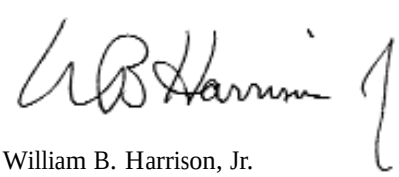
BUILD A GREAT COMPANY. Our firm has been built on a reputation of trust that spans more than two centuries and represents the coming together of more than 300 companies. Today, we stand on the shoulders of those who came before us. We honor this legacy by committing ourselves to the integrity and customer service that have long distinguished our firm. We intend to earn this reputation every day by doing the right thing, not necessarily the most expedient thing.

Our Board of Directors shares this commitment and is helping us accomplish it. We expect a lot from our Board, and they expect a lot from us. We appreciate their support and value their guidance.

We also would like to express special appreciation to the Directors who have retired since the merger was announced: Riley P. Bechtel; Frank A. Bennack, Jr.; John H. Bryan; M. Anthony Burns; Dr. Maureen A. Fay; John R. Hall; Helene L. Kaplan; John W. Rogers, Jr.; and Frederick P. Stratton, Jr.

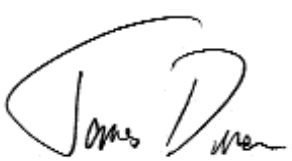
A great company gives its employees the opportunity to share in the success they have helped create. Two-thirds of our employees own our stock. They think like owners because they are. To help ensure that our senior management team always acts in the long-term best interests of the firm, we are required to hold 75% of the stock awarded.

A great company gives back to the community it serves. Our predecessor firms have long and distinguished traditions of active community involvement. Lending to build and rebuild communities, philanthropic giving and employee volunteerism are traditions that are very much alive today at JPMorgan Chase. In 2004, more than 18,000 JPMorgan Chase employees around the world dedicated 145,000 hours to 1,900 volunteer community service projects.



In 2004, we made an $800 billion, 10-year public commitment to provide loans and investments that will benefit the credit and capital needs of minority and lower-income households and communities. In 2004, we achieved the first $68 billion of that commitment.

Additionally, we contributed more than $140 million to thousands of not-for-profit organizations around the world. To help ensure we are meeting the specific needs of these communities, most of our philanthropic decisions are made locally. One of these community projects – our ON_DEC program in Brooklyn – received the 2004 "Ron Brown Award for Corporate Leadership," the only presidential award honoring companies for achievement in employee and community relations.



IN CLOSING, the past few years were transformative for both Bank One and JPMorgan Chase. In facing tough challenges we each have emerged better, stronger and healthier. Together, we are now equipped and determined to become the best financial institution in the world.

We asked a great deal of our employees during the past year, and they delivered. But we still have an enormous amount of work ahead. The coming year will be a crucial one for us. The potential is tremendous. We promise to do everything in our power to seize the opportunity and deliver on it for our customers, for our shareholders, for our employees and for all of the communities we serve throughout the United States and around the world.

Sincerely,

William B. Harrison, Jr.
Chairman and Chief Executive Officer

James Dimon
President and Chief Operating Officer

March 1, 2005

Investment Bank

Investment Bank

(In millions, except ratios)	Pro forma* 2004	2003
Total net revenue	$13,506	$14,254
Operating earnings	3,654	3,929
Return on common equity	18%	17%

Our businesses

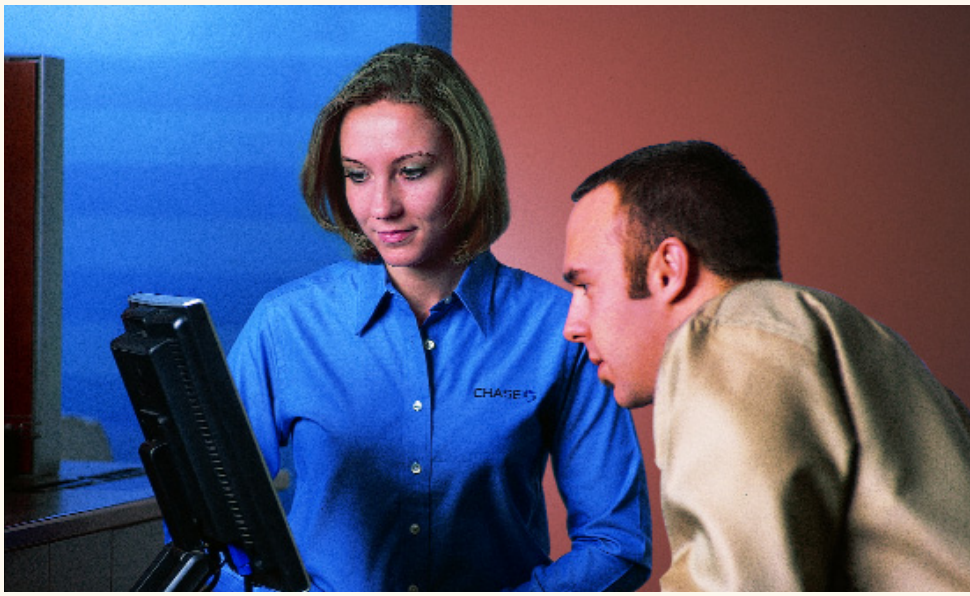
We are one of the world's leading investment banks with deep client relationships and product capabilities, serving 8,000 clients in more than 100 countries. Our clients are corporations, financial institutions, governments and institutional investors worldwide. Our broad client franchise is one of many features that differentiates us from our investment banking peers.

We provide a complete platform to our clients, including advising on corporate strategy and structure, equity and debt capital raising, sophisticated risk management, research, and market-making in cash securities and derivative instruments around the world. We also participate in proprietary investing and trading.

2004 accomplishments

- Grew Investment banking fees by 12%.
- Increased share of initial public offerings in the global markets by U.S. issuers to 9% from 1% – up to #4 from #16 in 2003.
- Pioneered a new hybrid offering: the credit equity target redemption note structure is the first product to integrate interest rate, credit and equity derivatives.
- Advised on seven of the 10 largest deals in announced global M&A and grew share to 26%, up from 16% in 2003.
- Developed significant economies of scale in derivatives technology and analytics, thereby achieving low-cost producer status.
- Strengthened our position in Europe by creating JPMorgan Cazenove, a joint venture that will provide investment banking services to clients in the United Kingdom and Ireland.

2005 execution focus



- Focus on the client; exceed expectations with each interaction.
- Deliver our full product base to clients; leverage partnerships with Commercial Banking's Middle Market segment, Treasury & Securities Services and Chase Home Finance.
- Focus on generating higher returns relative to our risk taking.
- Invest in growth businesses, including Energy and Commodities, Fixed Income and Foreign Exchange Prime Brokerage, Equities and Mortgage-Backed Securities.
- Maintain a talented, entrepreneurial and inclusive workforce.
- Streamline decision making, be nimble and efficient, and concentrate on fostering efficient processes and procedures.

Investment Bank highlights

- Structured Products Award for Innovation of the Year – JPMorgan credit equity target redemption note (*Risk* magazine, January 2005)
- #1 Interest Rate Options, Interest Rate Swaps, Equity Derivatives and Credit Derivatives (*Risk* End User Rankings, May 2004)
- #1 U.S. M&A (announced); #1 Global and U.S. Syndicated Loans; #1 Asia Pacific Equity Convertibles; #2 Global M&A (announced); #2 Europe Middle East Africa M&A (number of deals); #2 Europe Middle East Africa Equity Convertibles; #2 U.S. Investment Grade Bonds; and #3 Global Debt, Equity and Equity-Related Securities

Retail Financial Services

Retail Financial Services

(In millions, except ratios)	Pro forma* 2004	2003
Total net revenue	$15,076	$14,770
Operating earnings	3,279	2,633
Return on common equity	25%	21%

Our businesses

Retail Financial Services helps meet the financial needs of consumers and small businesses through more than 2,500 bank branches and 225 mortgage offices as well as through relationships with over 15,000 auto dealerships, 2,500 schools and universities, and 2,100 insurance agencies.

More than 5,000 personal bankers, 2,500 mortgage loan officers, 1,300 investment representatives and 1,000 small business bankers work with customers to provide checking and savings accounts, mortgage and home equity loans, small business loans, credit cards, investments and insurance.

We are the fourth-largest mortgage originator, the second-largest home equity originator, the largest bank originator of automobile loans and a top provider of loans for college students.

2004 accomplishments

- Increased consumer and small business banking relationships, resulting in a 9% increase in average core deposits and a 7% increase in checking accounts.
- Rolled out profit-and-loss statements as well as a consistent sales incentive program throughout the branch network.
- Implemented an integrated Small Business Banking model, aligning products, services and incentives with the branch network.
- Originated $146 billion of mortgages and grew mortgage servicing portfolio by 9% to $562.0 billion.
- Grew auto and education loans by 7% to $53.9 billion.
- Increased investment sales volume by 7% to $10.9 billion.

2005 execution focus

- Add more than 150 branches, 1,000 employees in new branches, 1,000 salespeople throughout our branch network and 1,000 ATMs to serve customers better.
- Continue to open new checking accounts and to build on these and existing relationships to include sales of investments, credit cards, and home equity and small business loans.
- Integrate mortgage lenders into bank branches to serve 9 million branch customers.
- Achieve incremental merger savings, freeing capital for investment in new branches, branch and ATM refurbishment, salesforce, marketing and technology.
- Begin to convert Bank One branches to Chase brand on a state-by-state basis, heightening local market visibility, generating new customers and expanding current relationships.

* All information is on a pro forma combined-operating basis. See inside front cover for details.

Retail Financial Services highlights

- Added 106 bank branches, bringing the total to 2,508 in one of the largest U.S. branch networks and added 325 ATMs, bringing the total to 6,650 in the second-largest U.S. ATM network
- Grew checking accounts by 563,000, bringing the total to 8.2 million accounts
- Increased home equity originations by 23% to $52 billion

Card Services

Card Services

(In millions, except ratios)	Pro forma* 2004	2003
Total net revenue	$15,001	$13,968
Operating earnings	1,681	1,368
Return on common equity	14%	12%

Our businesses

With 94 million cards in circulation and more than $135 billion in managed loans, Chase Card Services is the largest issuer of general-purpose credit cards in the United States and the largest merchant acquirer in the country. Our customers used our cards for over $282 billion worth of charge volume in 2004.

Chase offers a wide variety of cards to satisfy the individual needs of consumers and small businesses, including cards issued for AARP, Amazon.com, Continental Airlines, Marriott, Southwest Airlines, Starbucks, United Airlines, Universal Studios, Walt Disney Company and a range of other well-known brands and organizations.

2004 accomplishments

- Made quick merger integration decisions and took action by selecting the best people, practices and processes.
- Acquired 17.8 million net new Visa, MasterCard and private label accounts.
- Completed the industry's largest-ever systems conversion, moving millions of accounts in the heritage Bank One portfolio to a more flexible and cost-effective processing system.
- Increased merchant processing volume to $489 billion.
- Acquired the Circuit City portfolio, giving us a platform that will allow us to issue private label cards.

2005 execution focus

- Drive profitable growth in new customer acquisitions by leveraging best-in-class processes as well as our substantial credit card partnerships and by investing in new capabilities.
- Grow existing customer base profitably by keeping and activating more customers and increasing sales volume and fee-based revenue programs.
- Drive down operating cost per active account to industry-leading levels.
- Invest in marketing and technology initiatives designed to position the Chase brand for long-term growth.
- Complete card conversion by moving heritage Chase portfolio to new processing system.

* All information is on a pro forma combined-operating basis. See inside front cover for details.

Card Services highlights

- 94 million credit cards issued; over $282 billion in 2004 charge volume
- Largest general-purpose credit card issuer and merchant acquirer in the U.S.
- More than 850 credit card partnerships with well-known brands

Commercial Banking

Commercial Banking

(In millions, except ratios)	Pro forma* 2004	2003
Total net revenue	$3,417	$3,397
Operating earnings	992	832
Return on common equity	29%	20%

Our businesses

Commercial Banking serves more than 25,000 clients, including corporations, municipalities, financial institutions and not-for-profit entities with annual revenues generally ranging from $10 million to $2 billion.

A local market presence and a strong customer service model coupled with a focus on risk management provide a solid infrastructure for Commercial Banking to offer the complete product set of JPMorgan Chase, including lending, treasury services, investment banking and investment management.

Commercial Banking's clients benefit greatly from our extensive retail banking branch network and often use the capabilities of JPMorgan Chase exclusively to meet their financial services needs.

2004 accomplishments

- Engaged more than 4,500 employees across 22 states to communicate a consistent and timely message to clients regarding the merger and benefits to them.
- Delivered $1 billion of earnings and a 29% ROE through disciplined financial management.
- Grew deposits 16% to $66 billion.
- Launched a client coverage initiative to more effectively provide financial solutions to the companies in our markets.
- Began the integration of systems and products to enhance our ability to offer a full range of financial services.

2005 execution focus

- Demonstrate commitment to our clients through all stages of their growth with our industry expertise and extensive geographic reach.
- Provide consistent coverage to our clients offering them the best in local service.
- Accelerate business development through focused product and client coverage in the markets we serve.
- Continue integrating the systems and services to deliver the full range of capabilities more efficiently to our customers.

* All information is on a pro forma combined-operating basis. See inside front cover for details.

Commercial Banking highlights

- Businesses include Middle Market Banking, Corporate Banking, Commercial Real Estate Banking, Business Credit and Equipment Leasing
- Commercial Banking operates in 10 of the top 15 major metropolitan areas in the U.S.
- Leading commercial bank in the U.S., with $50 billion in average loans and $66 billion in average deposits

Treasury & Securities Services

Treasury & Securities Services

(In millions, except ratios)	Pro forma* 2004	2003
Total net revenue	$5,400	$4,772
Operating earnings	437	454
Return on common equity	23%	24%

Our businesses

Treasury & Securities Services is a global leader in providing transaction, investment and information services to support the needs of chief financial officers, treasurers, issuers and institutional investors worldwide through its three businesses – Treasury Services, Investor Services and Institutional Trust Services.

Treasury Services is a leading provider of cash management, trade and treasury services, processing an average of $1.8 trillion in U.S. dollar funds transfers daily. Investor Services is one of the top three custodians in the world, with $9.1 trillion in total assets under custody. Institutional Trust Services is the world's largest debt trustee and American Depositary Receipt bank (based on market capitalization under management), servicing $6.7 trillion in debt.

2004 accomplishments

- Delivered double-digit revenue growth.
- Created the world's largest cash management provider as a result of the merger.
- Executed the first phase of the merger successfully, which included integrating international operations in 36 countries.
- Increased assets under custody by 20%.
- Grew volume of Automated Clearing House (ACH) originations by 30%.
- Increased corporate trust securities under administration by 6%.
- Acquired two companies that expanded product depth and geographic reach: Tranaut, a recognized best-in-class hedge fund administrator; and TASC, the largest third-party asset administration service provider in South Africa.

2005 execution focus

- Leverage broad product capabilities from the merger to provide innovative solutions to clients.
- Expand in high-potential market segments and regions.
- Cross sell with business partners across JPMorgan Chase.
- Achieve market differentiation by delivering competitively superior customer service and product innovation.
- Continue to focus on cost efficiencies to fund investments in the business.
- Make strategic acquisitions to increase scale in traditional product areas, extend product lines and expand geographic reach.

* All information is on a pro forma combined-operating basis. See inside front cover for details.

Treasury & Securities Services highlights

- #1 U.S. Dollar Treasury Clearing and Commercial Payments; #1 ACH Originations, CHIPS and Fedwire
- #2 Global Custody; "Best Global Custodian Overall" *(Global Investor)*
- #1 Trustee U.S. Corporate Debt; #1 Global Trustee Collateralized Debt Obligations

Asset & Wealth Management

Asset & Wealth Management

(In millions, except ratios)	Pro forma* 2004	2003
Total net revenue	**$4,901**	$4,275
Operating earnings	**879**	629
Return on common equity	**37%**	25%

Our businesses

Asset & Wealth Management provides investment and wealth management services to investors and their advisors. With combined assets under supervision in excess of $1 trillion, we are one of the largest asset and wealth managers in the world. We manage our clients' assets through four key business segments: Institutional, Retail, Private Bank and Private Client Services.

JPMorgan Asset Management provides investment management for our institutional and retail clients through a broad range of separate accounts and funds. Our retail clients, who seek retirement and brokerage services, also are serviced through JPMorgan Retirement Plan Services and BrownCo. Our ultra high net worth and high net worth clients receive integrated wealth management services from JPMorgan Private Bank and JPMorgan Private Client Services, respectively.

2004 accomplishments

- Achieved strong earnings growth driven by asset inflows and improved markets globally.
- Surpassed $100 billion in European retail client assets, including mandates for diverse funds, sub-advisory and liquidity strategies.
- Delivered strong, consistent performance across a broad range of investment strategies. More than 90% of JPMorgan Asset Management's U.S. large-cap research-driven equity strategies and 95% of our broad market fixed income strategies outperformed industry benchmarks for 2004 and 2003.
- Produced record asset inflows for JPMorgan Private Bank.
- Formed a strategic partnership with and acquired a majority interest in Highbridge Capital Management, a $7 billion hedge fund firm with extraordinary consistency of returns and experienced business leadership.

2005 execution focus

- Meet client demand for absolute return by expanding our investment capabilities in alternative investment products.
- Continue to integrate our intellectual capital with the global resources required to deliver strong, consistent investment performance across our broad range of investment strategies.
- Continue to expand the geographic footprint of our wealth management businesses by investing in eight new Private Banking markets globally and building the Private Client Services markets in the northeastern U.S.
- Build our Retail franchise by expanding our third-party distribution, 401(k) and brokerage platforms.

* All information is on a pro forma combined-operating basis. See inside front cover for details.

Asset & Wealth Management highlights

- $1 trillion in assets under supervision; over $40 billion in alternative assets under management
- 2 million retail clients, plus institutional and high net worth clients
- #1 U.S. Private Bank; #2 Global Money Market Asset Manager; #2 Offshore Fund Manager; #3 Global Private Bank; #3 U.S. Active Asset Manager; #5 U.S. Mutual Fund Company

Corporate

Our businesses

The Corporate Sector is composed of the Private Equity business, Treasury, and corporate staff and other centrally managed expenses. The Private Equity business invests in leveraged buyouts, growth equity and venture capital for the Firm and third parties around the world. Treasury manages structural interest rate risk and the Firm's investment portfolio. The corporate staff areas support the lines of business to deliver superior financial services to businesses and consumers around the world.

The support areas include: Central Technology and Operations; Internal Audit; Executive Office; Finance; General Services; Human Resources; Marketing & Communications; Office of the General Counsel; Real Estate and Business Services; Risk Management; and Strategy and Development.

2004 accomplishments

- Generated strong Private Equity results while reducing the book value of the Private Equity portfolio to $7.5 billion at year-end 2004, from $9.6 billion at year-end 2003.
- Repositioned the Treasury investment portfolio in expectation of rising interest rates.
- Repurchased $738 million of common stock.
- Implemented financial reporting architecture.
- Finalized brand strategy.
- Began the insourcing of technology activities.
- Eliminated duplicate activities that resulted from the merger and reduced related headcount.
- Conformed our human resources and benefits policies.

2005 execution focus

- Reduce the Firm's overall exposure to Private Equity while continuing to invest in Private Equity as a strategic business.
- Invest in corporate technology initiatives: expand the strategic data centers; enhance the infrastructure that supports risk and finance activities; integrate the technology that supports human resources activities; refresh 11 major processing centers and 22 corporate business hubs; consolidate global help desks and provide consistent infrastructure; and consolidate operating centers.
- Advance technology initiatives within Card Services, Investment Bank and Treasury & Securities Services.

All information is on a pro forma combined-operating basis. See inside front cover for details.

Community Partnership

Our businesses

Central to our history and culture is the principle of working to improve the communities we serve. In 2004, JPMorgan Chase contributed over $140 million to thousands of not-for-profit organizations around the world and provided more than $3.0 billion just in community development lending and investing for housing and economic development in low- and moderate-income communities. As part of our global volunteer initiative, 27,500 employees, retirees, friends and family members participated in 1,900 volunteer projects. We also work to preserve the environment through policies and initiatives that are guided by our Office of Environmental Affairs.

We have experienced firsthand the benefits gained with a corporate culture that's actively inclusive, where colleagues are recognized based on their talent and skills and where diversity is used as a competitive advantage to benefit from the broadest possible pool of employee talent, experiences and perspectives.

These capabilities and programs support our interaction with communities and with each other and guide our efforts to be a responsible corporate citizen.

2004 accomplishments

- Achieved more than $68.0 billion in the first year of our $800 billion, 10-year public commitment.
- Contributed over $140 million to not-for-profits, including $18 million directed by employees through our matching gift and volunteer grants programs.
- Enriched communities with sponsorships and events focused on arts, culture and sports, including the JPMorgan Chase Corporate Challenge that raised more than $375,000 for local not-for-profit organizations globally.
- Relaunched the Corporate Diversity Council, chaired by Bill Harrison. The Council sets the overall vision for diversity within JPMorgan Chase and seeks to create a more inclusive workplace for all.
- Established the Office of Environmental Affairs and allocated dedicated resources to increase the company's focus on environmental issues related to the company.

2005 execution focus

- Continue to work with thousands of not-for-profits across the United States and in global markets to make an impact in three primary areas of need: community asset development, youth education and community life.
- Strengthen our partnerships with the communities by evaluating and addressing their needs based on our complete lending, investing, philanthropic and sponsorship capabilities.
- Continue to drive accountability for diversity through business metrics across the organization.
- Develop and implement a comprehensive environmental policy to promote environmentally responsible ways to conduct our internal and external business activities.

Community Partnership highlights

- Made an $800 billion, 10-year public commitment to provide loans and investments that will benefit the credit and capital needs of minority and lower-income households and communities
- Earned "The Ron Brown Award for Corporate Leadership," a U.S. presidential award that recognizes companies for outstanding achievement in employee and community relations, for our ON_DEC program which bridges the "digital divide" at one inner city middle school in New York
- Provided more than $5 million in corporate and employee donations to help with the Indian Ocean tsunami disaster relief efforts to several not-for-profit organizations, including, but not limited to, the International Red Cross, UNICEF and numerous Asia-based organizations

Management's discussion and analysis

JPMorgan Chase & Co..

This section of the Annual Report provides management's discussion and analysis ("MD&A") of the financial condition and results of operations for JPMorgan Chase. See the Glossary of terms on page 131 for a definition of terms used throughout this Annual Report. The MD&A included in this Annual Report contains statements that are forward-looking within the meaning of the Private Securities Litigation Reform Act of 1995. Such statements are based upon the current beliefs and expectations of JPMorgan Chase's management and are subject to significant risks and uncertainties. These risks and uncertainties could cause JPMorgan Chase's results to differ materially from those set forth in such forward-looking statements. Such risks and uncertainties are described herein and in Part I, Item 1: Business, Important factors that may affect future results, in the JPMorgan Chase Annual Report on Form 10-K for the year ended December 31, 2004, filed with the Securities and Exchange Commission and available at the Commission's website (www.sec.gov), to which reference is hereby made.

Introduction

JPMorgan Chase & Co. ("JPMorgan Chase" or the "Firm"), a financial holding company incorporated under Delaware law in 1968, is a leading global financial services firm and one of the largest banking institutions in the United States, with $1.2 trillion in assets, $106 billion in stockholders' equity and operations in more than 50 countries. The Firm is a leader in investment banking, financial services for consumers and businesses, financial transaction processing, investment management, private banking and private equity. JPMorgan Chase serves more than 90 million customers, including consumers nationwide and many of the world's most prominent wholesale clients.

JPMorgan Chase's principal bank subsidiaries are JPMorgan Chase Bank, National Association ("JPMorgan Chase Bank"), a national banking association with branches in 17 states; and Chase Bank USA, National Association, a national bank headquartered in Delaware that is the Firm's credit card issuing bank. JPMorgan Chase's principal nonbank subsidiary is J.P. Morgan Securities Inc. ("JPMSI"), its U.S. investment banking firm.

The headquarters for JPMorgan Chase is in New York City. The retail banking business, which includes the consumer banking, small business banking and consumer lending activities with the exception of credit card, is headquartered in Chicago. Chicago also serves as the headquarters for the commercial banking business.

JPMorgan Chase's activities are organized, for management reporting purposes, into six business segments, as well as Corporate. The Firm's wholesale businesses are comprised of the Investment Bank, Commercial Banking, Treasury & Securities Services, and Asset & Wealth Management. The Firm's consumer businesses are comprised of Retail Financial Services and Card Services. A description of the Firm's business segments, and the products and services they provide to their respective client bases, follows:

Investment Bank

JPMorgan Chase is one of the world's leading investment banks, as evidenced by the breadth of its client relationships and product capabilities. The Investment Bank ("IB") has extensive relationships with corporations, financial institutions, governments and institutional investors worldwide. The Firm provides a full range of investment banking products and services, including advising on corporate strategy and structure, capital raising in equity and debt markets, sophisticated risk management, and market-making in cash securities and derivative instruments in all major capital markets. The IB also commits the Firm's own capital to proprietary investing and trading activities.

Retail Financial Services

Retail Financial Services ("RFS") includes Home Finance, Consumer & Small Business Banking, Auto & Education Finance and Insurance. Through this group of businesses, the Firm provides consumers and small businesses with a broad range of financial products and services including deposits, investments, loans and insurance. Home Finance is a leading provider of consumer real estate loan products and is one of the largest originators and servicers of home mortgages. Consumer & Small Business Banking offers one of the largest branch networks in the United States, covering 17 states with 2,508 branches and 6,650 automated teller machines. Auto & Education Finance is the largest bank originator of automobile loans as well as a top provider of loans for college students. Through its Insurance operations, the Firm sells and underwrites an extensive range of financial protection products and investment alternatives, including life insurance, annuities and debt protection products.

Card Services

Card Services ("CS") is the largest issuer of general purpose credit cards in the United States, with approximately 94 million cards in circulation, and is the largest merchant acquirer. CS offers a wide variety of products to satisfy the needs of its cardmembers, including cards issued on behalf of many well-known partners, such as major airlines, hotels, universities, retailers and other financial institutions.

Commercial Banking

Commercial Banking ("CB") serves more than 25,000 corporations, municipalities, financial institutions and not-for-profit entities, with annual revenues generally ranging from $10 million to $2 billion. A local market presence and a strong customer service model, coupled with a focus on risk management, provide a solid infrastructure for CB to provide the Firm's complete product set – lending, treasury services, investment banking and investment management – for both corporate clients and their executives. CB's clients benefit greatly from the Firm's extensive branch network and often use the Firm exclusively to meet their financial services needs.

Treasury & Securities Services

Treasury & Securities Services ("TSS") is a global leader in providing transaction, investment and information services to support the needs of corporations, issuers and institutional investors worldwide. TSS is the largest cash management provider in the world and one of the top three global custodians. The Treasury Services business provides clients with a broad range of capabilities, including U.S. dollar and multi-currency clearing, ACH, trade, and short-term liquidity and working capital tools. The Investor Services business provides a wide range of capabilities, including custody, funds services, securities lending, and performance measurement and execution products. The Institutional Trust Services business provides trustee, depository and administrative services for debt and equity issuers. Treasury Services partners with the Commercial Banking, Consumer & Small Business Banking and Asset & Wealth Management segments to serve clients firmwide. As a result, certain Treasury Services revenues are included in other segments' results.

Asset & Wealth Management

Asset & Wealth Management ("AWM") provides investment management to retail and institutional investors, financial intermediaries and high-net-worth families and individuals globally. For retail investors, AWM provides investment management products and services, including a global mutual fund franchise, retirement plan administration, and consultation and brokerage

services. AWM delivers investment management to institutional investors across all asset classes. The Private bank and Private client services businesses provide integrated wealth management services to ultra-high-net-worth and high-net-worth clients, respectively.

Merger with Bank One Corporation

Effective July 1, 2004, Bank One Corporation ("Bank One") merged with and into JPMorgan Chase (the "Merger"), pursuant to an Agreement and Plan of Merger dated January 14, 2004. As a result of the Merger, each outstanding share of common stock of Bank One was converted in a stock-for-stock exchange into 1.32 shares of common stock of JPMorgan Chase. The Merger was accounted for using the purchase method of accounting. The purchase price to complete the Merger was $58.5 billion. Key objectives of the Merger were to provide the Firm with a more balanced business mix and greater geographic diversification.

Bank One's results of operations were included in the Firm's results beginning July 1, 2004. Therefore, the results of operations for the 12 months ended December 31, 2004, reflect six months of operations of the combined Firm and six months of heritage JPMorgan Chase; the results of operations for all other periods prior to 2004 reflect only the operations of heritage JPMorgan Chase.

It is expected that cost savings of approximately $3.0 billion (pre-tax) will be achieved by the end of 2007; approximately two-thirds of the savings are anticipated to be realized by the end of 2005. Total 2004 Merger savings were approximately $400 million. Merger costs to combine the operations of JPMorgan Chase and Bank One are expected to range from approximately $4.0 billion to $4.5 billion (pre-tax). Of these costs, approximately $1.0 billion, specifically related to Bank One, were accounted for as purchase accounting adjustments and were recorded as an increase to goodwill in 2004. Of the approximately $3.0 billion to $3.5 billion in remaining Merger-related costs, $1.4 billion (pre-tax) were incurred in 2004 and have been charged to income, $1.4 billion (pre-tax) are expected to be incurred in 2005, and the remaining costs are expected to be incurred in 2006. These estimated Merger-related charges will result from actions taken with respect to both JPMorgan Chase's and Bank One's operations, facilities and employees. The charges will be recorded based on the nature and timing of these integration actions.

As part of the Merger, certain accounting policies and practices were conformed, which resulted in $976 million (pre-tax) of charges in 2004. The significant components of the conformity charges were comprised of a $1.4 billion (pre-tax) charge related to the decertification of the seller's interest in credit card securitizations, and the benefit of a $584 million reduction in the allowance for credit losses as a result of conforming the wholesale and consumer credit provision methodologies.

Other business events

Electronic Financial Services

On January 5, 2004, JPMorgan Chase acquired Electronic Financial Services ("EFS"), a leading provider of government-issued benefits payments and prepaid stored value cards used by state and federal government agencies and private institutions. The acquisition further strengthened JPMorgan Chase's position as a leading provider of wholesale payment services.

Cazenove

On November 5, 2004, JPMorgan Chase and Cazenove Group plc ("Cazenove") announced an agreement to combine Cazenove's investment banking business and JPMorgan Chase's United Kingdom-based investment banking business into a new entity to be jointly owned. The partnership will provide investment banking services in the United Kingdom and Ireland. The transaction closed on February 28, 2005, and the new company is called JPMorgan Cazenove Holdings.

Highbridge

On December 13, 2004, JPMorgan Chase formed a strategic partnership with and acquired a majority interest in Highbridge Capital Management ("Highbridge"), a New York-based multi-strategy hedge fund manager, with seven discrete strategy groups and more than $7 billion of assets under management. Highbridge has offices in New York, London and Hong Kong. Including Highbridge, JPMorgan Chase now manages more than $40 billion of absolute-return products (e.g., hedge funds, private equity and real estate investments).

Vastera

On January 7, 2005, JPMorgan Chase agreed to acquire Vastera, a provider of global trade management solutions, for approximately $129 million. Vastera's business will be combined with the Logistics and Trade Services businesses of TSS's Treasury Services unit. The transaction is expected to close in the first half of 2005. Vastera automates trade management processes associated with the physical movement of goods internationally; the acquisition will enable Treasury Services to offer management of information and processes in support of physical goods movement, together with financial settlement.

Executive overview

This overview of management's discussion and analysis highlights selected information and may not contain all of the information that is important to readers of this Annual Report. This overview discusses the economic or industry-wide factors that affected JPMorgan Chase, the factors that drove business performance, and the factors that management monitors in setting policy. For a more complete understanding of trends, events, commitments, uncertainties, liquidity, capital resources and critical accounting estimates, this entire Annual Report should be read carefully.

Financial performance of JPMorgan Chase

As of or for the year ended December 31,[a] (in millions, except per share and ratio data)	2004	2003	Change
Total net revenue	$ 43,097	$ 33,384	29%
Provision for credit losses	2,544	1,540	65
Noninterest expense	34,359	21,816	57
Net income	4,466	6,719	(34)
Net income per share – diluted	1.55	3.24	(52)
Average common equity	75,641	42,988	76
Return on average common equity ("ROCE")	6%	16%	(1,000)bp
Loans	$ 402,114	$ 214,766	87%
Total assets	1,157,248	770,912	50
Deposits	521,456	326,492	60
Tier 1 capital ratio	8.7%	8.5%	20bp
Total capital ratio	12.2	11.8	40

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. 2003 reflects the results of heritage JPMorgan Chase only.

Business overview

The Firm's results in 2004 were affected by many factors, but the most significant of these were the Merger, the litigation charge taken in the second quarter of the year and global economic growth.

The Firm reported 2004 net income of $4.5 billion, or $1.55 per share, compared with net income of $6.7 billion, or $3.24 per share, for 2003. The return on common equity was 6%, compared with 16% in 2003. Results included $3.7 billion in after-tax charges, or $1.31 per share, comprised of: Merger costs of $846 million; charges to conform accounting policies as a result of the Merger of $605 million; and a charge of $2.3 billion to increase litigation reserves. Excluding these charges, operating earnings would have been $8.2 billion, or $2.86 per share, and return on common equity would have been 11%. Operating earnings represent business results without the merger-related costs and the significant litigation charges.

During the course of the year, the Firm developed a comprehensive plan of Merger integration and began to execute on the plan. Significant milestones during the year included: branding decisions for all businesses; merger of the holding companies, lead banks and credit card banks; conversion of the Bank One credit card portfolio to a new processing platform; announcement of insourcing of major technology operations; and consolidation and standardization of human resource policies and benefit plans. As part of the Merger, the Firm announced that it had targeted reducing operating expenses by $3.0 billion (pre-tax) by the end of 2007. In order to accomplish the cost reductions, the Firm announced that it expects to incur Merger costs of approximately $4.0 billion to $4.5 billion and reduce its workforce by approximately 12,000 over the same time period.

In 2004, both the U.S. and global economies continued to strengthen overall, even though momentum slowed during the second half of the year due to rising oil prices. Gross domestic product increased by 3.9% globally and 4.4% in the U.S., both up from 2003. The U.S. economy experienced rising short-term interest rates, driven by Federal Reserve Board ("FRB") actions during the course of the year. The federal funds rate increased from 1.00% to 2.25% during the year and the yield curve flattened, as long-term interest rates were relatively stable. Equity markets, both domestic and international, enjoyed strong results, with the S&P 500 up 9% and international indices increasing in similar fashion. Capital markets activity during 2004 was healthy, debt underwriting was consistent with the strong levels experienced in 2003, and equity underwriting enjoyed strong and consistent activity during the year. The U.S. consumer sector showed continued strength buoyed by the overall economic strength, despite slowing mortgage origination and refinance activity. Retail sales were up over the prior year, and bankruptcy filings were down significantly from 2003.

On an operating basis, net income in each of the Firm's lines of business was affected primarily by the Merger. The discussion that follows highlights other factors which affected operating results in each business.

Despite the relatively beneficial capital markets environment, results for the Investment Bank were under pressure during the year. This was primarily due to a decline in trading revenue related to lower fixed income trading, driven by weaker portfolio management results, and a reduction in net interest income, stemming primarily from lower loan balances. This was partially offset by increased investment banking fees, the result of continued strength in debt underwriting, and higher advisory fees. The Investment Bank benefited from a reduction in the allowance for credit losses, primarily due to the improved credit quality of the loan portfolio, as evidenced by the significant drop in nonperforming loans and, to a lesser extent, recoveries of previously charged-off loans. Expenses rose, primarily due to higher compensation expenses.

Retail Financial Services benefited from better spreads earned on deposits and growth in retained residential mortgage and home equity loan balances. Mortgage fees and related income was also up, reflecting higher mortgage servicing revenue, partially offset by significantly lower prime mortgage production income related to the slower mortgage origination activity. The Provision for credit losses benefited from improved credit quality in nearly all portfolios and a reduction in the allowance for credit losses related to the sale of a $4 billion manufactured home loan portfolio. Higher compensation expenses were due to continued expansion of the branch office network, including 130 new locations (106 net additional branches) opened during 2004 for the combined Firm, and expansion of the sales force, partially offset by ongoing efficiency improvements.

Card Services revenue benefited from higher loan balances and customer charge volume, which increased net interest income and higher net interchange income, respectively. Expenses increased due to higher marketing spending and higher volume-based processing expenses.

Commercial Banking revenues benefited from strong deposit growth and higher investment banking fees. These benefits were partially offset by lower service charges on deposits, which often decline when interest rates rise. Credit quality continued to improve, resulting in lower net charge-offs and nonperforming loans.

Treasury & Securities Services revenues benefited from strong growth in assets under custody and average deposits, along with deposit spreads, which improved due to the relatively low interest rate environment for deposits. These benefits were offset by lower service charges on deposits, which often decline when interest rates rise. Revenues and expenses also were affected by acquisitions, divestitures and growth in business volume. Expenses also increased due to software impairment charges, and legal and technology-related expenses.

Asset & Wealth Management results were positively affected by the strength of global equity markets, an improved product mix, better investment performance and net asset inflows. Results also benefited from deposit and loan growth.

The Corporate segment performance was negatively affected by a repositioning of the investment securities portfolio and tighter spreads. This was partially offset by improved Private Equity results due to an improved climate for investment sales.

The Firm's balance sheet was likewise significantly affected by the Merger. Aside from the Merger, the Firm took a number of actions during the year to strengthen the balance sheet. Notably, the Treasury investment portfolio was repositioned to reduce exposure to rising interest rates; auto leasing was de-emphasized, and lease receivables were reduced by 16% to $8 billion; the $4 billion manufactured home loan portfolio was sold; the $2 billion recreational vehicle portfolio was sold subsequent to year-end; a significant portion of third-party private equity investments have been sold; and the Firm increased its litigation reserves. The Firm's capital base was also significantly enhanced following the Merger. As of year-end, total stockholders' equity was $106 billion, and the Tier 1 capital ratio was 8.7%. The capital position allowed the Firm to begin repurchasing common stock during the second half of the year, with more than $700 million, or 19.3 million common shares, repurchased during the year.

2005 business outlook

JPMorgan Chase's outlook for 2005 should be viewed against the backdrop of the global economy, financial markets and the geopolitical environment, all of which are integrally linked together. While the Firm considers outcomes for, and has contingency plans to respond to, stress environments, its basic outlook for 2005 is predicated on the interest rate movements implied in the forward rate curve for U.S. Treasuries, the continuation of the favorable U.S. and international equity markets and continued expansion of the global economy.

The performance of the Firm's capital markets businesses is highly correlated to overall global economic growth. The Investment Bank enters 2005 with a strong pipeline for advisory and underwriting business, and it continues to focus on growing its client-driven trading business. Compared with 2004, the Investment Bank expects a reduction in credit portfolio revenues, as both net interest income on loans and gains from workouts are likely to decrease. Financial market movements and activity levels also affect Asset & Wealth Management and Treasury & Securities Services. Asset & Wealth Management anticipates revenue growth, driven by net inflows to Assets under supervision and by the Highbridge acquisition, as well as deposit and loan growth. Treasury & Securities Services anticipates modest revenue growth, due to wider spreads on deposits, as well as increased business volume and activity in the custody, trade, commercial card, American Depositary Receipt and Collateralized Debt Obligation businesses. Commercial Banking anticipates that net revenues will benefit from growth in treasury services and investment banking fees, offset by margin compression on loans.

The business outlook varies for the respective consumer businesses. Card Services anticipates modest growth in consumer spending and in card outstandings. For RFS, Home Finance earnings are likely to weaken given a market-driven decline in mortgage originations, neutralizing the expected earnings increase in Consumer & Small Business Banking. The drop in revenue at Home Finance should be mitigated by ongoing efforts to bring expenses in line with lower expected origination volumes. Growth is expected to continue in Consumer & Small Business Banking, with increases in core deposits and associated revenue partially offset by ongoing investments in the branch distribution network. New branch openings should continue at a pace consistent with or slightly above those of 2004. At the heritage Chase branches, expanded hours and realigned compensation plans that tie incentives to branch performance are expected to provide improvements in productivity and incremental net revenue growth. Earnings in Auto & Education Finance are expected to remain under pressure, given the current competitive operating environment. Across all RFS businesses, credit quality trends remain stable, with a slight increase in credit costs likely in 2005.

The Corporate sector includes Private Equity, Treasury and the corporate support units. The revenue outlook for the Private Equity business is directly related to the strength of equity market conditions in 2005. If current market conditions persist, the Firm anticipates continued realization of private equity gains; the Firm is not anticipating investment securities gains from the Treasury portfolio in 2005.

The Provision for credit losses in 2005 is anticipated to be higher than in 2004, driven primarily by a return to a more normal level of provisioning for credit losses in the wholesale businesses over time. The consumer Provision for credit losses in 2005 should reflect increased balances, with generally stable credit quality. The Firm plans to implement higher minimum-payment requirements in the Card Services business in the third quarter of 2005; it is anticipated that this will increase delinquency and net charge-off rates, but the magnitude of the impact is currently being assessed.

The Firm's 2005 expenses should reflect the realization of $1.5 billion in merger savings. These savings are expected to be offset by a projected $1.1 billion of incremental spending related to firmwide technology infrastructure, distribution enhancement, and product improvement and expansion in Retail Financial Services, the Investment Bank and Asset & Wealth Management. In addition, expenses will increase as a result of recent acquisitions, such as Highbridge and Cazenove.

Management will seek to continue to strengthen the Firm's balance sheet through rigorous financial and risk discipline. Any capital generated in excess of the Firm's capital targets, and beyond that required to support anticipated modest growth in assets and the underlying risks of the Firm's businesses, including litigation risk, will create capital flexibility in 2005 with respect to common stock repurchases and further investments in the Firm's businesses.

Consolidated results of operations

The following section provides a comparative discussion of JPMorgan Chase's consolidated results of operations on a reported basis for the three-year period ended December 31, 2004. Factors that are primarily related to a single business segment are discussed in more detail within that business segment than they are in this consolidated section. For a discussion of the Critical accounting estimates used by the Firm that affect the Consolidated results of operations, see pages 77–79 of this Annual Report.

Revenue

Year ended December 31,[a] (in millions)	2004	2003	2002
Investment banking fees	$ 3,537	$ 2,890	$ 2,763
Trading revenue	3,612	4,427	2,675
Lending & deposit related fees	2,672	1,727	1,674
Asset management, administration and commissions	7,967	5,906	5,754
Securities/private equity gains	1,874	1,479	817
Mortgage fees and related income	1,004	923	988
Credit card income	4,840	2,466	2,307
Other income	830	601	458
Noninterest revenue	26,336	20,419	17,436
Net interest income	16,761	12,965	12,178
Total net revenue	$ 43,097	$ 33,384	$ 29,614

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. All other periods reflect the results of heritage JPMorgan Chase only.

2004 compared with 2003

Total net revenues, at $43.1 billion, rose by $9.7 billion or 29%, primarily due to the Merger, which affected every category of Total net revenue. Additional factors contributing to the revenue growth were higher consumer demand for credit products and higher credit card charge volume, as well as strong retail and wholesale deposit growth. Investment banking revenues increased as a result of growth in global market volumes and market share gains. Revenue also benefited from acquisitions and growth in assets under custody, under management and under supervision, the result of global equity market appreciation and net asset inflows. Private equity gains were higher due to an improved climate for investment sales. The discussion that follows highlights factors other than the Merger that affected the 2004 versus 2003 comparison.

The increase in Investment banking fees was driven by significant gains in underwriting and advisory activities as a result of increased global market volumes and market share gains. Trading revenue declined by 18%, primarily due to lower portfolio management results in fixed income and equities. For a further discussion of Investment banking fees and Trading revenue, which are primarily recorded in the IB, see the IB segment results on pages 30–32 of this Annual Report.

Lending & deposit related fees were up from 2003 due to the Merger. The rise was partially offset by lower service charges on deposits, as clients paid for services with deposits, versus fees, due to rising interest rates. Throughout 2004, deposit balances grew in response to rising interest rates.

The increase in Asset management, administration and commissions was also driven by the full-year impact of other acquisitions – such as EFS in January 2004, Bank One's Corporate Trust business in November 2003 and JPMorgan Retirement Plan Services in June 2003 – as well as the effect of global equity market appreciation, net asset inflows and a better product mix. In addition, a more active market for trading activities in 2004 resulted in higher brokerage commissions. For additional information on these fees and commissions, see the segment discussions for AWM on pages 45–46, TSS on pages 43–44 and RFS on pages 33–38 of this Annual Report.

Securities/private equity gains for 2004 rose from the prior year, primarily fueled by the improvement in the Firm's private equity investment results. This was offset by lower securities gains on the Treasury investment portfolio as a result of lower volumes of securities sold, and lower gains realized on sales due to higher interest rates; additionally, RFS's Home Finance business reported losses in 2004 on available-for-sale ("AFS") securities, as compared with gains in 2003. For a further discussion of securities gains, see the RFS and Corporate segment discussions on pages 33–38 and 47–48, respectively, of this Annual Report. For a further discussion of Private equity gains, which are primarily recorded in the Firm's Private Equity business, see the Corporate segment discussion on pages 47–48 of this Annual Report.

Mortgage fees and related income rose as a result of higher servicing revenue; this improvement was partially offset by lower mortgage servicing rights ("MSRs") asset risk management results and prime mortgage production revenue, and lower gains from sales and securitizations of subprime loans as a result of management's decision in 2004 to retain these loans. Mortgage fees and related income excludes the impact of NII and securities gains related to home mortgage activities. For a discussion of Mortgage fees and related income, which is primarily recorded in RFS's Home Finance business, see the Home Finance discussion on pages 34–36 of this Annual Report.

Credit card income increased from 2003 as a result of higher customer charge volume, which resulted in increased interchange income, and higher credit card servicing fees associated with the increase of $19.4 billion in average securitized loans. The increases were partially offset by higher volume-driven payments to partners and rewards expense. For a further discussion of Credit card income, see CS's segment results on pages 39–40 of this Annual Report.

The increase in Other income from 2003 reflected gains on leveraged lease transactions and higher net results from corporate and bank-owned life insurance policies. These positive factors in 2004 were partially offset by gains on sales of several nonstrategic businesses and real estate properties in 2003.

Net interest income rose from 2003 as growth in volumes of consumer loans and deposits, as well as wider spreads on deposits, contributed to higher net interest income. These were partially offset by lower wholesale loan balances in the IB and tighter spreads on loans, investment securities and trading assets stemming from the rise in interest rates. The Firm's total average interest-earning assets for 2004 were $744.1 billion, up $154.2 billion from 2003. Growth was also driven by higher levels of consumer loans. The net interest yield on these assets, on a fully taxable-equivalent basis, was 2.27% in 2004, an increase of 6 basis points from the prior year.

2003 compared with 2002

Total revenue for 2003 was $33.4 billion, up 13% from 2002. All businesses benefited from improved economic conditions in 2003. In particular, the low–interest rate environment drove robust fixed income markets and an unprecedented mortgage refinancing boom, which drove the growth in revenue.

Investment banking fees increased by $127 million, primarily due to growth in IB's equity underwriting, which was up 49%, reflecting increases in market share and underwriting volumes. This increase was partially offset by lower advisory fees reflecting depressed levels of M&A activity. Trading revenue was up $1.8 billion, or 65%, primarily due to strong client and portfolio management revenue growth in fixed income and equity markets as a result of the low–interest rate environment, improvement in equity markets and volatility in credit markets. For a further discussion of Investment banking fees and Trading revenue, which are primarily recorded in the Investment Bank, see the IB segment results on pages 30-32 of this Annual Report.

Lending & deposit related fees rose, the result of higher fees on standby letters of credit, due to growth in transaction volume, and higher service charges on deposits. These charges were driven by an increase in the payment of services with fees, versus deposits, due to lower interest rates.

The increase in Asset management, administration and commissions was attributable to a more favorable environment for debt and equity activities, resulting in higher fees for the custody, institutional trust, brokerage and other processing-related businesses. Fees for investment management activities also increased as a result of acquisitions in AWM, but these increases were partially offset by institutional net fund outflows, which resulted in lower average assets under management.

Securities/private equity gains increased to $1.5 billion from $817 million in 2002, reflecting significant improvement in private equity gains. These gains were partially offset by lower gains realized from the sale of securities in Treasury and of AFS securities in RFS's Home Finance business, driven by increasing interest rates beginning in the third quarter of 2003. For a further discussion of private equity gains (losses), see the Corporate segment discussion on pages 47–48 of this Annual Report.

Mortgage fees and related income declined by 7% in 2003, primarily due to a decline in revenue associated with risk management of the MSR asset, mortgage pipeline and mortgage warehouse; these were partially offset by higher fees from origination and sales activity and other fees derived from volume and market-share growth. For a discussion of Mortgage fees and related income, which is primarily recorded in RFS's Home Finance business, see the Home Finance discussion on pages 34–36 of this Annual Report.

Credit card income rose as a result of higher credit card servicing fees associated with the $6.7 billion growth in average securitized credit card receivables. For a further discussion of Credit card income, see CS's segment results on pages 39–40 of this Annual Report.

Other income rose, primarily from $200 million in gains on sales of securities acquired in loan workouts (compared with $26 million in 2002), as well as gains on the sale of several nonstrategic businesses and real estate properties; these were partly offset by lower net results from corporate and bank-owned life insurance policies. In addition, 2002 included $73 million of write-downs for several Latin American investments.

The increase in Net interest income reflected the positive impact of lower interest rates on consumer loan originations, such as mortgages and automobile loans and leases and related funding costs. Net interest income was partially reduced by a lower volume of wholesale loans and lower spreads on investment securities. The Firm's total average interest-earning assets in 2003 were $590 billion, up 6% from the prior year. The net interest yield on these assets, on a fully taxable-equivalent basis, was 2.21%, the same as in the prior year.

Provision for credit losses

2004 compared with 2003

The Provision for credit losses of $2.5 billion was up $1.0 billion, or 65%, compared with the prior year. The impact of the Merger, and of accounting policy conformity charges of $858 million, were partially offset by releases in the allowance for credit losses related to the wholesale loan portfolio, primarily due to improved credit quality in the IB. Wholesale nonperforming loans decreased by 21% even after the inclusion of Bank One's loan portfolio. RFS's Provision for credit losses benefited from a reduction in the allowance for credit losses related to the sale of the $4 billion manufactured home loan portfolio and continued positive credit quality trends in the home and auto finance businesses. The provision related to the credit card portfolio grew by $919 million, principally due to the Merger. For further information about the Provision for credit losses and the Firm's management of credit risk, see the Credit risk management discussion on pages 57–69 of this Annual Report.

2003 compared with 2002

The 2003 Provision for credit losses was $2.8 billion lower than in 2002, primarily reflecting continued improvement in the quality of the wholesale loan portfolio and a higher volume of credit card securitizations.

Noninterest expense

Year ended December 31,[a] (in millions)	2004	2003	2002
Compensation expense	$ 14,506	$ 11,387	$ 10,693
Occupancy expense	2,084	1,912	1,606
Technology and communications expense	3,702	2,844	2,554
Professional & outside services	3,862	2,875	2,587
Marketing	1,335	710	689
Other expense	2,859	1,694	1,802
Amortization of intangibles	946	294	323
Total noninterest expense before merger costs and litigation reserve charge	29,294	21,716	20,254
Merger costs	1,365	—	1,210
Litigation reserve charge	3,700	100	1,300
Total noninterest expense	$ 34,359	$ 21,816	$ 22,764

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. All other periods reflect the results of heritage JPMorgan Chase only.

2004 compared with 2003

Noninterest expense was $34.4 billion in 2004, up $12.5 billion, or 57%, primarily due to the Merger. Excluding $1.4 billion of Merger costs, and litigation reserve charges, Noninterest expenses would have been $29.3 billion, up 35%. In addition to the Merger and litigation charges, expenses increased due to reinvestment in the lines of business, partially offset by merger-related savings throughout the Firm. Each category of Noninterest expense was affected by the Merger. The discussion that follows highlights other factors which affected the 2004 versus 2003 comparison.

Compensation expense was up from 2003, primarily due to strategic investments in the IB and continuing expansion in RFS. These factors were partially offset by ongoing efficiency improvements and merger-related savings throughout the Firm, and a reduction in pension costs. The decline in pension costs was mainly attributable to the increase in the expected return on plan assets from a discretionary $1.1 billion contribution to the Firm's pension

plan in April 2004, partially offset by changes in actuarial assumptions for 2004 compared with 2003. For a detailed discussion of pension and other postretirement benefit costs, see Note 6 on pages 92–95 of this Annual Report.

The increase in Occupancy expense was partly offset by lower charges for excess real estate, which were $103 million in 2004, compared with $270 million in 2003.

Technology and communications expense was higher than in the prior year as a result of higher costs associated with greater use of outside vendors, primarily IBM, to support the global infrastructure requirements of the Firm. After the Merger, JPMorgan Chase decided to terminate its outsourcing agreement with IBM, effective December 31, 2004. For a further discussion regarding the IBM outsourcing agreement, see the Corporate segment discussion on page 47 of this Annual Report.

Professional & outside services rose due to higher legal costs associated with pending litigation matters, as well as outside services stemming from recent acquisitions, primarily EFS, and growth in business at TSS and CS.

Marketing expense rose as CS initiated a more robust marketing campaign during 2004.

Other expense was up due to software impairment write-offs of $224 million, primarily in TSS and Corporate, compared with $60 million in 2003; higher accruals for non-Enron-related litigation cases; and the impact of growth in business volume. These were partly offset by a $57 million settlement related to the Enron surety bond litigation.

For a discussion of Amortization of intangibles and Merger costs, refer to Note 15 and Note 8 on pages 109–111 and 98, respectively.

In June of 2004, JPMorgan Chase recorded a $3.7 billion (pre-tax) addition to the Litigation reserve. While the outcome of litigation is inherently uncertain, the addition reflected management's assessment of the appropriate reserve level in light of all then-known information. By comparison, 2003 included a charge of $100 million for Enron-related litigation.

2003 compared with 2002

Total Noninterest expense was $21.8 billion, down 4% from the prior year. In 2002, the Firm recorded $1.3 billion of charges, principally for Enron-related litigation, and $1.2 billion for merger and restructuring costs related to programs announced prior to January 1, 2002. Excluding these costs, expenses rose by 8% in 2003, reflecting higher performance-related incentives, increased costs related to stock-based compensation and pension and other postretirement expenses; and higher occupancy expenses. The Firm began expensing stock options in 2003.

The increase in Compensation expense principally reflected higher performance-related incentives, as well as higher pension and other postretirement benefit costs, primarily as a result of changes in actuarial assumptions. The increase pertaining to incentives included $266 million as a result of adopting SFAS 123, and $120 million from the reversal in 2002 of previously accrued expenses for certain forfeitable key employee stock awards. Total compensation expenses declined as a result of the transfer, beginning April 1, 2003, of 2,800 employees to IBM in connection with the aforementioned technology outsourcing agreement.

The increase in Occupancy expense reflected costs of additional leased space in midtown Manhattan and in the South and Southwest regions of the United States, higher real estate taxes in New York City and the cost of enhanced safety measures. Also contributing to the increase were charges for unoccupied excess real estate of $270 million; this compared with $120 million in 2002.

Technology and communications expense increased primarily due to a shift in expenses: costs that were previously associated with Compensation and Other expenses shifted, upon the commencement of the IBM outsourcing agreement, to Technology and communications expense. Also contributing to the increase were higher costs related to software amortization. For a further discussion of the IBM outsourcing agreement, see Corporate on page 47 of this Annual Report.

Professional & outside services rose, reflecting greater utilization of third-party vendors for processing activities and higher legal costs associated with various litigation and business-related matters.

Higher Marketing expense was driven by more robust campaigns for the Home Finance business.

The decrease in Other expense was due partly to expense management initiatives, such as reduced allowances to expatriates and recruitment costs.

There were no Merger costs in 2003. In 2002, merger and restructuring costs of $1.2 billion were for programs announced prior to January 1, 2002.

The Firm added $100 million to the Enron-related litigation reserve in 2003 to supplement a $1.3 billion reserve initially recorded in 2002. The 2002 reserve was established to cover Enron-related matters, as well as certain other material litigation, proceedings and investigations in which the Firm is involved.

Income tax expense

The Firm's Income before income tax expense, Income tax expense and effective tax rate were as follows for each of the periods indicated:

Year ended December 31,[a] (in millions, except rate)	2004	2003	2002
Income before income tax expense	$6,194	$10,028	$2,519
Income tax expense	1,728	3,309	856
Effective tax rate	27.9%	33.0%	34.0%

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. All other periods reflect the results of heritage JPMorgan Chase only.

2004 compared with 2003

The reduction in the effective tax rate for 2004, as compared with 2003, was the result of various factors, including lower reported pre-tax income, a higher level of business tax credits, and changes in the proportion of income subject to federal, state and local taxes, partially offset by purchase accounting adjustments related to leveraged lease transactions. The Merger costs and accounting policy conformity adjustments recorded in 2004, and the Litigation reserve charge recorded in the second quarter of 2004, reflected a tax benefit at a 38% marginal tax rate, contributing to the reduction in the effective tax rate compared with 2003.

2003 compared with 2002

The effective tax rate decline was principally attributable to changes in the proportion of income subject to state and local taxes.

Explanation and reconciliation of the Firm's use of non-GAAP financial measures

The Firm prepares its Consolidated financial statements using accounting principles generally accepted in the United States of America ("U.S. GAAP"); these financial statements appear on pages 84–87 of this Annual Report. That presentation, which is referred to as "reported basis," provides the reader with an understanding of the Firm's results that can be consistently tracked from year to year and enables a comparison of the Firm's performance with other companies' U.S. GAAP financial statements.

In addition to analyzing the Firm's results on a reported basis, management reviews line-of-business results on an "operating basis," which is a non-GAAP financial measure. The definition of operating basis starts with the reported U.S. GAAP results. In the case of the IB, operating basis noninterest revenue includes, in Trading revenue, net interest income related to trading activities. Trading activities generate revenues, which are recorded for U.S. GAAP purposes in two line items on the income statement: Trading revenue, which includes the mark-to-market gains or losses on trading positions, and Net interest income, which includes the interest income or expense related to those positions. Combining both the trading revenue and related net interest income enables management to evaluate the IB's trading activities, by considering all revenue related to these activities, and facilitates operating comparisons to other competitors. The following table reclassifies the Firm's trading-related Net interest income to Trading revenue.

Trading-related Net interest income reclassification

Year ended December 31,[a] (in millions)	2004	2003	2002
Net interest income – reported	$ 16,761	$ 12,965	$ 12,178
Trading-related NII	(1,950)	(2,129)	(1,880)
Net interest income – adjusted	$ 14,811	$ 10,836	$ 10,298
Trading revenue – reported[b]	$ 3,612	$ 4,427	$ 2,675
Trading-related NII	1,950	2,129	1,880
Trading revenue – adjusted[b]	$ 5,562	$ 6,556	$ 4,555

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. All other periods reflect the results of heritage JPMorgan Chase only.

(b) Reflects Trading revenue at the Firm level. The majority of Trading revenue is recorded in the Investment Bank.

In addition, segment results reflect revenues on a tax-equivalent basis. The tax-equivalent gross-up for each business segment is based upon the level, type and tax jurisdiction of the earnings and assets within each business segment. Operating revenue for the Investment Bank includes tax-equivalent adjustments for income tax credits primarily related to affordable housing investments as well as tax-exempt income from municipal bond investments. Information prior to the Merger has not been restated to conform with this new presentation. The amount of the tax-equivalent gross-up for each business segment is eliminated within the Corporate segment. For a further discussion of trading-related revenue and tax-equivalent adjustments made to operating revenue, see the IB on pages 30–32 of this Annual Report.

In the case of Card Services, operating or managed basis excludes the impact of credit card securitizations on revenue, the Provision for credit losses, net charge-offs and loan receivables. Through securitization the Firm transforms a portion of its credit card receivables into securities, which are sold to investors. The credit card receivables are removed from the consolidated balance sheet through the transfer of principal credit card receivables to a trust, and the sale of undivided interests to investors that entitle the investors to specific cash flows generated from the credit card receivables. The Firm retains the remaining undivided interests as seller's interests, which are recorded in Loans on the Consolidated balance sheet. A gain or loss on the sale of credit card receivables to investors is recorded in Other income. Securitization also affects the Firm's consolidated income statement by reclassifying as credit card income, interest income, certain fee revenue, and recoveries in excess of interest paid to the investors, gross credit losses and other trust expenses related to the securitized receivables. For a reconciliation of reported to managed basis of Card Services results, see page 40 of this Annual Report. For information regarding loans and residual interests sold and securitized, see Note 13 on pages 103–106 of this Annual Report. JPMorgan Chase uses the concept of "managed receivables" to evaluate the credit performance and overall financial performance of the underlying credit card loans, both sold and not sold; as the same borrower is continuing to use the credit card for ongoing charges, a borrower's credit performance will affect both the loan receivables sold under SFAS 140 and those not sold. Thus, in its disclosures regarding managed loan receivables, JPMorgan Chase treats the sold receivables as if they were still on the balance sheet in order to disclose the credit performance (such as net charge-off rates) of the entire managed credit card portfolio. In addition, Card Services operations are funded, operating results are evaluated and decisions about allocating resources such as employees and capital are based on managed financial information.

Finally, operating basis excludes Merger costs, the Litigation reserve charge and accounting policy conformity adjustments related to the Merger, as management believes these items are not part of the Firm's normal daily business operations (and, therefore, are not indicative of trends) and do not provide meaningful comparisons with other periods.

Management uses certain non-GAAP financial measures at the segment level. Management believes these non-GAAP financial measures provide information to investors in understanding the underlying operational performance and trends of the particular business segment and facilitate a comparison of the business segment with the performance of competitors.

The following summary table provides a reconciliation from the Firm's reported GAAP results to operating results:

(Table continues on next page)

Special Items

The reconciliation of the Firm's reported results to operating results in the accompanying table sets forth the impact of several special items incurred by the Firm in 2002 and 2004. These special items are excluded from Operating earnings, as management believes these items are not part of the Firm's normal daily business operations and, therefore, are not indicative of trends and do not provide meaningful comparisons with other periods. These items include Merger costs, significant litigation charges, charges to conform accounting policies and other items, each of which is described below:

(1) Other income in 2004 reflects $118 million of other accounting policy conformity adjustments.

(2) The Provision for credit losses in 2004 reflects $858 million of accounting policy conformity adjustments, consisting of a $1.4 billion charge related to the decertification of the seller's interest in credit card securitizations, partially offset by a benefit of $584 million related to conforming wholesale and consumer credit provision methodologies for the combined Firm.

(3) Merger costs of $1.4 billion in 2004 reflect costs associated with the Merger; the $1.2 billion of charges in 2002 reflect merger and restructuring costs associated with programs announced prior to January 1, 2002.

(4) Significant litigation charges of $3.7 billion and $1.3 billion were taken in 2004 and 2002, respectively.

(5) All Other noninterest expense in 2002 reflects a $98 million charge for excess real estate capacity related to facilities in the West Coast region of the United States.

(6) Income tax expense in 2004 and 2002 of $2.3 billion and $887 million, respectively, represents the tax effect of the above items.

Formula Definitions for Non-GAAP Metrics

The table below reflects the formulas used to calculate both the following GAAP and non-GAAP measures:

Return on common equity

Reported — Net income* / Average common equity
Operating — Operating earnings* / Average common equity

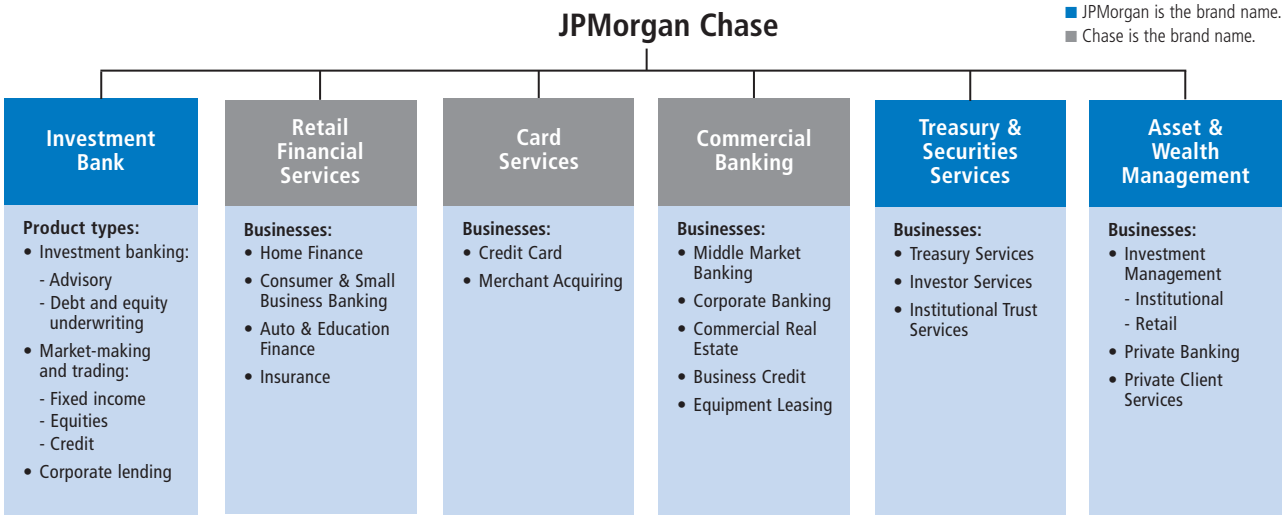
Return on equity - goodwill

Reported — Net income* / Average common equity less goodwill
Operating — Operating earnings* / Average common equity less goodwill

Return on assets

Reported — Net income / Average assets
Operating — Operating earnings / Average managed assets

Overhead ratio



Reported — Total noninterest expense / Total net revenue
Operating — Total noninterest expense / Total net revenue

* Represents earnings applicable to common stock

Business segment results

The Firm is managed on a line-of-business basis. The business segment financial results presented reflect the current organization of JPMorgan Chase. There are six major reportable business segments: the Investment Bank, Retail Financial Services, Card Services, Commercial Banking, Treasury & Securities Services and Asset & Wealth Management, as well as a Corporate segment.

The segments are based on the products and services provided, or the type of customer served, and they reflect the manner in which financial information is currently evaluated by management. Results of these lines of business are presented on an operating basis.

In connection with the Merger, business segment reporting was realigned to reflect the new business structure of the combined Firm. Treasury was transferred from the IB into Corporate. The segment formerly known as Chase Financial Services had been comprised of Chase Home Finance, Chase Cardmember Services, Chase Auto Finance, Chase Regional Banking and Chase Middle Market; as a result of the Merger, this segment is now called Retail Financial Services and is comprised of Home Finance, Auto & Education Finance, Consumer & Small Business Banking and Insurance. Chase Middle Market moved into Commercial Banking, and Chase Cardmember Services is now its own segment called Card Services. TSS remains unchanged. Investment Management & Private Banking has been renamed Asset & Wealth Management. JPMorgan Partners, which formerly was a stand-alone business segment, was moved into Corporate. Corporate is currently comprised of Private Equity (JPMorgan Partners and ONE Equity Partners), Treasury, as well as corporate support areas, which include Central Technology and Operations, Internal Audit, Executive Office, Finance, General Services, Human Resources, Marketing & Communications, Office of the General Counsel, Real Estate and Business Services, Risk Management and Strategy and Development.

Segment results for periods prior to July 1, 2004, reflect heritage JPMorgan Chase–only results and have been restated to reflect the current business segment organization and reporting classifications.

Segment results – Operating basis[a][b]

(a) Represents the reported results excluding the impact of credit card securitizations and, in 2004, Merger costs, the significant litigation reserve charges and accounting policy conformity adjustments related to the Merger.
(b) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. 2003 reflects the results of heritage JPMorgan Chase only.
(c) As a result of the Merger, new capital allocation methodologies were implemented during the third quarter of 2004. The capital allocated to each line of business considers several factors: stand-alone peer comparables, economic risk measures and regulatory capital requirements. In addition, effective with the third quarter of 2004, goodwill, as well as the associated capital, is only allocated to the Corporate line of business. Prior periods have not been revised to reflect these new methodologies and are not comparable to the presentation beginning in the third quarter of 2004.

Description of business segment reporting methodology

Results of the business segments are intended to reflect each segment as if it were essentially a stand-alone business. The management reporting process that derives these results allocates income and expense using market-based methodologies. At the time of the Merger, several of the allocation methodologies were revised, as noted below. The changes became effective July 1, 2004. As prior periods have not been revised to reflect these new methodologies, they are not comparable to the presentation of periods beginning with the third quarter of 2004. Further, the Firm intends to continue to assess the assumptions, methodologies and reporting reclassifications used for segment reporting, and it is anticipated that further refinements may be implemented in future periods.

Revenue sharing

When business segments join efforts to sell products and services to the Firm's clients, the participating business segments agree to share revenues from those transactions. These revenue sharing agreements were revised on the Merger date to provide consistency across the lines of businesses.

Funds transfer pricing

Funds transfer pricing ("FTP") is used to allocate interest income and interest expense to each line of business and also serves to transfer interest rate risk to Corporate. While business segments may periodically retain interest rate exposures related to customer pricing or other business-specific risks, the balance of the Firm's overall interest rate risk exposure is included and managed in Corporate. In the third quarter of 2004, FTP was revised to conform the policies of the combined firms.

Expense allocation

Where business segments use services provided by support units within the Firm, the costs of those support units are allocated to the business segments. Those expenses are allocated based on their actual cost, or the lower of actual cost or market cost, as well as upon usage of the services provided. Effective with the third quarter of 2004, the cost allocation methodologies of the heritage firms were aligned to provide consistency across the business segments. In addition, expenses related to certain corporate functions, technology and operations ceased to be allocated to the business segments and are retained in Corporate. These retained expenses include parent company costs that would not be incurred if the segments were stand-alone businesses; adjustments to align certain corporate staff, technology and operations allocations with market prices; and other one-time items not aligned with the business segments.

Capital allocation

Each business segment is allocated capital by taking into consideration stand-alone peer comparisons, economic risk measures and regulatory capital requirements. The amount of capital assigned to each business is referred to as equity. Effective with the third quarter of 2004, new methodologies were implemented to calculate the amount of capital allocated to each segment. As part of the new methodology, goodwill, as well as the associated capital, is allocated solely to Corporate. Although U.S. GAAP requires the allocation of goodwill to the business segments for impairment testing (see Note 15 on page 109 of this Annual Report), the Firm has elected not to include goodwill or the related capital in each of the business segments for management reporting purposes. See the Capital management section on page 50 of this Annual Report for a discussion of the equity framework.

Credit reimbursement

TSS reimburses the IB for credit portfolio exposures the IB manages on behalf of clients the segments share. At the time of the Merger, the reimbursement methodology was revised to be based on pre-tax earnings, net of the cost of capital related to those exposures. Prior to the Merger, the credit reimbursement was based on pre-tax earnings, plus the allocated capital associated with the shared clients.

Tax-equivalent adjustments

Segment results reflect revenues on a tax-equivalent basis for segment reporting purposes. Refer to page 25 of this Annual Report for additional details.

Segment results – Operating basis[a][b]

Investment Bank

JPMorgan Chase is one of the world's leading investment banks, as evidenced by the breadth of its client relationships and product capabilities. The Investment Bank has extensive relationships with corporations, financial institutions, governments and institutional investors worldwide. The Firm provides a full range of investment banking products and services, including advising on corporate strategy and structure, capital raising in equity and debt markets, sophisticated risk management, and market-making in cash securities and derivative instruments in all major capital markets. The Investment Bank also commits the Firm's own capital to proprietary investing and trading activities.

As a result of the Merger, the Treasury business has been transferred to the Corporate sector, and prior periods have been restated to reflect the reorganization.

Compensation expense as % of total net revenue	39	35	40

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. All other periods reflect the results of heritage JPMorgan Chase only.
(b) Trading revenue, on a reported basis, excludes the impact of Net interest income related to IB's trading activities; this income is recorded in Net interest income. However, in this presentation, to assess the profitability of IB's trading business, the Firm combines these revenues for segment reporting purposes. The amount reclassified from Net interest income to Trading revenue was $1.9 billion, $2.1 billion and $1.9 billion for 2004, 2003 and 2002, respectively.
(c) Total net revenue includes tax-equivalent adjustments, primarily due to tax-exempt income from municipal bond investments, and income tax credits related to affordable housing investments of $274 million, $117 million and $112 million for 2004, 2003, and 2002, respectively.
(d) TSS is charged a credit reimbursement related to certain exposures managed within the IB credit portfolio on behalf of clients shared with TSS. For a further discussion, see Credit reimbursement on page 29 of this Annual Report.

2004 compared with 2003

In 2004, Operating earnings of $2.9 billion were up 5% from the prior year. Increases in Investment banking fees, a reduction in the Provision for credit losses and the impact of the Merger were partially offset by decreases in trading revenues and net interest income. Return on equity was 17%.

Total net revenue of $12.6 billion was relatively flat from the prior year, primarily due to lower Fixed income markets revenues and total Credit portfolio revenues, offset by increases in Investment banking fees and the impact of the Merger. The decline in revenue from Fixed income markets was driven by weaker portfolio management trading results, mainly in the interest rate markets business. Total credit portfolio revenues were down due to lower net interest income and lending fees, primarily driven by lower loan balances; these were partially offset by higher trading revenue due to more severe credit spread tightening in 2003 relative to 2004. Investment banking fees increased by 24% over the prior year, driven by significant gains in advisory and debt underwriting. The advisory gains were a result of increased global market volumes and market share, while the higher underwriting fees were due to stronger client activity.

The Provision for credit losses was a benefit of $640 million, compared with a benefit of $181 million in 2003. The improvement in the provision was the result of a $633 million decline in net charge-offs, partially offset by lower reductions in the allowance for credit losses in 2004 relative to 2003. For additional information, see Credit risk management on pages 57–69 of this Annual Report.

For the year ended December 31, 2004, Noninterest expense was up 5% from the prior year. The increase from 2003 was driven by higher Compensation expense, including strategic investments and the impact of the Merger.

2003 compared with 2002

Operating earnings of $2.8 billion were up significantly over 2002. The increase in earnings was driven by a significant decline in the Provision for credit losses, coupled with strong growth in fixed income and equity markets revenues.

Total net revenue was $12.7 billion, an increase of $2.0 billion from the prior year. The low interest rate environment, improvement in equity markets and volatility in credit markets produced increased client and portfolio management revenue in fixed income and equities. Market share gains in equity underwriting contributed to the increase in Investment banking fees over 2002.

The Provision for credit losses was a benefit of $181 million in 2003, compared with a cost of $2.4 billion in 2002, reflecting improvement in the overall credit quality of the wholesale portfolio and the restructuring of several nonperforming wholesale loans.

Noninterest expense increased by 6% from 2002, reflecting higher incentives related to improved financial performance and the impact of expensing stock options. Noncompensation expenses were up 10% from the prior year due to increases in technology and occupancy costs.

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. All other periods reflect the results of heritage JPMorgan Chase only.

(b) The year-to-date average loans held for sale are $6.4 billion, $3.8 billion and $4.3 billion for 2004, 2003 and 2002, respectively. These amounts are not included in the allowance coverage ratios and net charge-off rates. The 2002 net charge-offs and net charge-off rate exclude charge-offs of $212 million taken on lending-related commitments.

(c) Adjusted assets equals total average assets minus (1) securities purchased under resale agreements and securities borrowed less securities sold, not yet purchased; (2) assets of variable interest entities (VIEs) consolidated under FIN 46R; (3) cash and securities segregated and on deposit for regulatory and other purposes; and (4) goodwill and intangibles. The amount of adjusted assets is presented to assist the reader in comparing the IB's asset and capital levels to other investment banks in the securities industry. Asset-to-equity leverage ratios are commonly used as one measure to assess a company's capital adequacy. The IB believes an adjusted asset amount, which excludes certain assets considered to have a low risk profile, provides a more meaningful measure of balance sheet leverage in the securities industry. See Capital management on pages 50–52 of this Annual Report for a discussion of the Firm's overall capital adequacy and capital management.

(d) Nonperforming loans include loans held for sale of $2 million, $30 million and $16 million as of December 31, 2004, 2003 and 2002, respectively. These amounts are not included in the allowance coverage ratios.

(e) Nonperforming loans exclude loans held for sale of $351 million, $22 million and $2 million as of December 31, 2004, 2003, and 2002, respectively, that were purchased as part of the IB's proprietary investing activities.

(f) Includes all mark-to-market trading activities, plus available-for-sale securities held for IB investing purposes.

(g) Includes VAR on derivative credit valuation adjustments, credit valuation adjustment hedges and mark-to-market loan hedges, which are reported in Trading revenue. This VAR does not include the accrual loan portfolio, which is not marked to market.

NA - Data for 2002 is not available on a comparable basis.

According to Thomson Financial, in 2004, the Firm improved its ranking in U.S. announced M&A from #8 to #1, and Global announced M&A from #4 to #2, while increasing its market share significantly. The Firm's U.S. initial public offerings ranking improved from #16 to #4, with the Firm moving to #6 from #4 in the U.S. Equity & Equity-related category. The Firm maintained its #1 ranking in U.S. syndicated loans, with a 32% market share, and its #3 position in Global Debt, Equity and Equity-related.

Market shares and rankings[a]

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. All other periods reflect the results of heritage JPMorgan Chase only.

IB's revenues are comprised of the following:

Investment banking fees includes advisory, equity underwriting, bond underwriting and loan syndication fees.

Fixed income markets includes client and portfolio management revenue related to both market-making and proprietary risk-taking across global fixed income markets, including government and corporate debt, foreign exchange, interest rate and commodities markets.

Equities markets includes client and portfolio management revenue related to market-making and proprietary risk-taking across global equity products, including cash instruments, derivatives and convertibles.

Credit portfolio revenue includes Net interest income, fees and loan sale activity for IB's credit portfolio. Credit portfolio revenue also includes gains or losses on securities received as part of a loan restructuring, and changes in the credit valuation adjustment ("CVA"), which is the component of the fair value of a derivative that reflects the credit quality of the counterparty. See page 63 of the Credit risk management section of this Annual Report for a further discussion of the CVA. Credit portfolio revenue also includes the results of risk management related to the Firm's lending and derivative activities. See pages 64–65 of the Credit risk management section of this Annual Report for a further discussion on credit derivatives.

Retail Financial Services

RFS includes Home Finance, Consumer & Small Business Banking, Auto & Education Finance and Insurance. Through this group of businesses, the Firm provides consumers and small businesses with a broad range of financial products and services including deposits, investments, loans and insurance. Home Finance is a leading provider of consumer real estate loan products and is one of the largest originators and servicers of home mortgages. Consumer & Small Business Banking offers one of the largest branch networks in the United States, covering 17 states with 2,508 branches and 6,650 automated teller machines ("ATMs"). Auto & Education Finance is the largest bank originator of automobile loans as well as a top provider of loans for college students. Through its Insurance operations, the Firm sells and underwrites an extensive range of financial protection products and investment alternatives, including life insurance, annuities and debt protection products.

2004 compared with 2003

Operating earnings were $2.2 billion, up from $1.5 billion a year ago. The increase was largely due to the Merger. Excluding the benefit of the Merger, earnings declined as lower MSR risk management results and reduced prime mortgage production revenue offset the benefits of growth in loan balances, wider spreads on deposit products and improvement in credit costs.

Total net revenue increased to $10.8 billion, up 45% from the prior year. Net interest income increased by 48% to $7.7 billion, primarily due to the Merger, growth in retained loan balances and wider spreads on deposit products. Noninterest revenue increased to $3.1 billion, up 39%, due to the Merger and higher mortgage servicing income. Both components of total revenue included declines associated with risk managing the MSR asset and lower prime mortgage originations.

The Provision for credit losses was down 14% to $449 million, despite the influence of the Merger. The effect of the Merger was offset by a reduction in the allowance for loan losses, resulting from the sale of the manufactured home loan portfolio, and continued positive credit quality trends in the consumer lending businesses.

Noninterest expense totaled $6.8 billion, up 53% from the prior year, primarily due to the Merger and continued investments to expand the branch network. Partially offsetting the increase were merger-related expense savings in all businesses.

2003 compared with 2002

Total net revenue was $7.4 billion in 2003, an increase of 17% over 2002. Net interest income increased by 37% to $5.2 billion, reflecting the positive impact of the low interest rate environment on consumer loan originations, particularly in Home Finance, and on spreads earned on retained loans.

The Provision for credit losses of $521 million increased by 56% compared with the prior year due to continued growth in the retained loan portfolios. Credit quality remained stable in 2003, as charge-offs decreased slightly, to $381 million.

Noninterest expense rose 20% to $4.5 billion. The increase reflected higher business volumes and compensation costs.

(e) Includes $406 million of charge-offs related to the manufactured home loan portfolio in the fourth quarter of 2004.
(f) Nonperforming loans include loans held for sale of $13 million, $45 million and $25 million at December 31, 2004, 2003 and 2002, respectively. These amounts are not included in the allowance coverage ratios.
NA – Data for 2002 is not available on a comparable basis.

Home Finance

Home Finance is comprised of two key business segments: Prime Production & Servicing and Consumer Real Estate Lending. The Prime Production & Servicing segment includes the operating results associated with the origination, sale and servicing of prime mortgages. Consumer Real Estate Lending reflects the operating results of consumer loans that are secured by real estate, retained by the Firm and held in the portfolio. This portfolio includes prime and subprime first mortgages, home equity lines and loans, and manufactured home loans. The Firm stopped originating manufactured home loans early in 2004 and sold substantially all of its remaining portfolio at the end of the year.

Provision for credit losses	74	240	191
Noninterest expense	2,037	1,730	1,338
Operating earnings	1,121	1,332	902

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. All other periods reflect the results of heritage JPMorgan Chase only.

2004 compared with 2003

Operating earnings in the Prime Production & Servicing segment dropped to $240 million from $918 million in the prior year. Results reflected a decrease in prime mortgage production revenue, to $728 million from $1.3 billion, due to a decline in mortgage originations. Operating earnings were also impacted by a drop in MSR risk management revenue, to $113 million from $784 million in the prior year. Results in 2004 included realized losses of $89 million on the sale of AFS securities associated with risk management of the MSR asset, compared with securities gains of $359 million in the prior year. Noninterest expense was relatively flat at $1.1 billion.

Operating earnings for the Consumer Real Estate Lending segment more than doubled to $881 million from $414 million in the prior year. The increase was largely due to the addition of the Bank One home equity lending business but also reflected growth in retained loan balances and a $95 million net benefit associated with the sale of the $4 billion manufactured home loan portfolio; partially offsetting these increases were lower subprime mortgage securitization gains. These factors contributed to total net revenue rising 61% to $2.4 billion. The provision for credit losses, at $74 million, decreased by 69% from a year ago. This was the result of an $87 million reduction in the allowance for loan losses associated with the manufactured home loan portfolio sale, improved credit quality and lower delinquencies, partially offset by the Merger. Noninterest expense totaled $922 million, up 52% from the year-ago period, largely due to the Merger.

2003 compared with 2002

Home Finance achieved record financial performance in 2003, as operating earnings of $1.3 billion increased by 48% from 2002.

Total net revenue of $4.0 billion increased by 39% over 2002, given record production revenue, improved margins and higher home equity revenue.

The provision for credit losses of $240 million for 2003 increased by 26% over 2002, primarily due to higher retained loan balances. Credit quality continued to be strong relative to 2002, as evidenced by a lower net charge-off ratio and reduced delinquencies.

Noninterest expense of $1.7 billion increased by 29% from 2002, primarily a result of growth in origination volume. The increase in expenses was also a result of higher performance-related incentives and strategic investments made to further expand certain distribution channels. These were partially offset by production-related expense reduction efforts initiated in the fourth quarter of 2003.

(b) Includes $406 million of charge-offs related to the manufactured home loan portfolio in the fourth quarter of 2004.
(c) Excludes mortgage loans held for sale.

Home Finance's origination channels are comprised of the following:

Retail – A mortgage banker employed by the Firm directly contacts borrowers who are buying or refinancing a home through a branch office, through the Internet or by phone. Borrowers are frequently referred to a mortgage banker by real estate brokers, home builders or other third parties.

Wholesale – A third-party mortgage broker refers loans to a mortgage banker at the Firm. Brokers are independent loan originators that specialize in finding and counseling borrowers but do not provide funding for loans.

Correspondent – Banks, thrifts, other mortgage banks and other financial institutions sell closed loans to the Firm.

Correspondent negotiated transactions ("CNT") – Mid- to large-sized mortgage lenders, banks and bank-owned mortgage companies sell servicing to the Firm on an as-originated basis. These transactions supplement traditional production channels and provide growth opportunities in the servicing portfolio in stable and rising-rate periods.

The table below reconciles management's disclosure of Home Finance's revenue into the reported U.S. GAAP line items shown on the Consolidated statement of income and in the related Notes to Consolidated financial statements:

Year ended December 31,[a]	Prime production and servicing			Consumer real estate lending			Total revenue		
(in millions)	**2004**	2003	2002	**2004**	2003	2002	**2004**	2003	2002
Net interest income	**$ 700**	$ 1,556	$ 727	**$ 2,245**	$ 1,226	$ 712	**$ 2,945**	$ 2,782	$ 1,439

(b) Includes activity reported elsewhere as Other income.

The following table details the MSR risk management results in the Home Finance business:

MSR risk management results

Year ended December 31,[a] (in millions)	**2004**	2003	2002
Reported amounts:			
MSR valuation adjustments[b]	**$ (248)**	$ (253)	$ (4,040)
Derivative valuation adjustments and other risk management gains (losses)[c]	**361**	1,037	4,710
MSR risk management results	**$ 113**	$ 784	$ 670

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. All other periods reflect the results of heritage JPMorgan Chase only.
(b) Excludes subprime loan MSR activity of $(2) million and $(13) million in 2004 and 2002, respectively. There was no subprime loan MSR activity in 2003.
(c) Includes gains, losses and interest income associated with derivatives both designated and not designated as a SFAS 133 hedge, and securities classified as both trading and available-for-sale.

Home Finance uses a combination of derivatives, AFS securities and trading securities to manage changes in the fair value of the MSR asset. These risk management activities are intended to protect the economic value of the MSR asset by providing offsetting changes in the fair value of related risk management instruments. The type and amount of hedging instruments used in this risk management activity change over time as market conditions and approach dictate.

During 2004, negative MSR valuation adjustments of $248 million were more than offset by $361 million of aggregate risk management gains, including net interest earned on AFS securities. In 2003, negative MSR valuation adjustments of $253 million were more than offset by $1.0 billion of aggregate risk management gains, including net interest earned on AFS securities. Unrealized gains/(losses) on AFS securities were $(3) million, $(144) million and $377 million at December 31, 2004, 2003 and 2002, respectively. For a further discussion of MSRs, see Critical accounting estimates on page 79 and Note 15 on pages 109–111 of this Annual Report.

Consumer & Small Business Banking

Consumer & Small Business Banking offers a full array of financial services through a branch network spanning 17 states as well as through the Internet. Product offerings include checking and savings accounts, mutual funds and annuities, credit cards, mortgages and home equity loans, and loans for small business customers (generally with annual sales less than $10 million). This segment also includes community development loans.

Selected income statement data

Year ended December 31,[a] (in millions)	**2004**	2003	2002
Total net revenue	**$ 5,385**	$ 2,422	$ 2,648
Provision for credit losses	**165**	76	(31)
Noninterest expense	**3,981**	2,358	2,055
Operating earnings	**760**	(4)	361

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. All other periods reflect the results of heritage JPMorgan Chase only.

2004 compared with 2003

Operating earnings totaled $760 million, up from a loss of $4 million in the prior-year period. The increase was largely due to the Merger but also reflected wider spreads on deposits and lower expenses. These benefits were partially offset by a higher Provision for credit losses.

Total net revenue was $5.4 billion, compared with $2.4 billion in the prior year. While the increase is primarily attributable to the Merger, total net revenue also benefited from wider spreads on deposits.

The Provision for credit losses increased to $165 million from $76 million in the prior year. The increase was in part due to the Merger but also reflected an increase in the Allowance for credit losses to cover high-risk portfolio segments.

The increase in noninterest expense to $4.0 billion was largely attributable to the Merger. Incremental expense from investments in the branch distribution network was also a contributing factor.

2003 compared with 2002

Total net revenue of $2.4 billion decreased by 9% compared with 2002. Net interest income declined by 10% to $1.6 billion, primarily due to the low–interest rate environment. Noninterest revenue decreased by 5% to $828 million given lower deposit fee income, decreased debit card fees and one-time gains in 2002.

Noninterest expense of $2.4 billion increased by 15% from 2002. The increase was largely due to investments in technology within the branch network and higher compensation expenses related to increased staff levels.

The Provision for credit losses of $76 million increased by $107 million compared with 2002. This reflected a reduction in the allowance for loan losses in 2002.

Auto & Education Finance

Auto & Education Finance provides automobile loans and leases to consumers and loans to commercial clients, primarily through a national network of automotive dealers. The segment also offers loans to students via colleges and universities across the United States.

Selected income statement data

Year ended December 31,[a] (in millions)	2004	2003	2002
Total net revenue	$ 1,145	$ 842	$ 683
Provision for credit losses	210	205	174
Noninterest expense	490	291	247
Operating earnings	270	206	166

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. All other periods reflect the results of heritage JPMorgan Chase only.

2004 compared with 2003

Operating earnings totaled $270 million, up 31% from the prior year. While the increase was reflective of the Merger, performance for the year was moderated by narrower spreads and reduced origination volumes arising from a competitive operating environment.

Total net revenue increased by 36% to $1.1 billion from the prior year. This increase reflected the Merger but included a decline in net interest income, given the competitive operating environment in 2004 and incremental charges associated with the Firm's lease residual exposure.

The Provision for credit losses totaled $210 million, up 2% from the prior year. The increase was due to the Merger but was largely offset by a lower provision for credit losses, reflecting favorable credit trends.

Noninterest expense increased by 68% to $490 million, largely due to the Merger.

The following is a brief description of selected business metrics within Consumer & Small Business Banking.

- **Personal bankers –** Retail branch office personnel who acquire, retain and expand new and existing customer relationships by assessing customer needs and recommending and selling appropriate banking products and services.
- **Investment sales representatives –** Licensed retail branch sales personnel, assigned to support several branches, who assist with the sale of investment products including college planning accounts, mutual funds, annuities and retirement accounts.

2003 compared with 2002

In 2003, operating earnings were $206 million, 24% higher than in 2002. Total net revenue grew by 23% to $842 million. Net interest income grew by 33% in comparison to 2002, driven by higher average loans and leases outstanding and wider spreads.

The Provision for credit losses increased by 18% to $205 million, primarily reflecting a 32% increase in average loan and lease receivables. Credit quality continued to be strong relative to 2002, as evidenced by a lower net charge-off ratio and a reduced delinquency rate.

Noninterest expense of $291 million increased by 18% compared with 2002. The increase in expenses was driven by higher origination volume and higher performance-based incentives.

Selected metrics

Insurance

Insurance is a provider of financial protection products and services, including life insurance, annuities and debt protection. Products and services are distributed through both internal lines of business and external markets.

Selected income statement data

Year ended December 31,[a] (in millions)	2004	2003	2002
Total net revenue	$ 393	$ 115	$ 97
Noninterest expense	317	92	93
Operating earnings	48	13	3
Memo: Consolidated gross insurance-related revenue[b]	1,191	611	536

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. All other periods reflect the results of heritage JPMorgan Chase only.
(b) Includes revenue reported in the results of other businesses.

2004 compared with 2003

Insurance operating earnings totaled $48 million on total net revenue of $393 million in 2004. The increases in total net revenue and noninterest expense over the prior year were almost entirely due to the Merger.

2003 compared with 2002

Operating earnings in 2003 reflected a 19% increase in Total net revenue, while expenses were essentially flat.

Selected metrics

Year ended December 31,[a] (in millions, except where otherwise noted)	2004	2003	2002

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. All other periods reflect the results of heritage JPMorgan Chase only.
NA - Data for 2002 is not available on a comparable basis.

The following is a brief description of selected business metrics within Insurance.

- **Proprietary annuity sales** represent annuity contracts marketed through and issued by subsidiaries of the Firm.
- **Insurance in force – direct/assumed** includes the aggregate face amount of insurance policies directly underwritten and assumed through reinsurance.
- **Insurance in force – retained** includes the aggregate face amounts of insurance policies directly underwritten and assumed through reinsurance, after reduction for face amounts ceded to reinsurers.

Card Services

Card Services is the largest issuer of general purpose credit cards in the United States, with approximately 94 million cards in circulation, and is the largest merchant acquirer. CS offers a wide variety of products to satisfy the needs of its cardmembers, including cards issued on behalf of many well-known partners, such as major airlines, hotels, universities, retailers and other financial institutions.

JPMorgan Chase uses the concept of "managed receivables" to evaluate the credit performance of the underlying credit card loans, both sold and not sold: as the same borrower is continuing to use the credit card for ongoing charges, a borrower's credit performance will affect both the receivables sold under SFAS 140 and those not sold. Thus, in its disclosures regarding managed receivables, JPMorgan Chase treats the sold receivables as if they were still on the balance sheet in order to disclose the credit performance (such as net charge-off rates) of the entire managed credit card portfolio. Operating results exclude the impact of credit card securitizations on revenue, the provision for credit losses, net charge-offs and receivables. Securitization does not change reported net income versus operating earnings; however, it does affect the classification of items on the Consolidated statements of income.

Selected income statement data – managed basis

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. All other periods reflect the results of heritage JPMorgan Chase only.

2004 compared with 2003

Operating earnings of $1.3 billion increased by $591 million compared with the prior year, primarily due to the Merger. In addition, earnings benefited from higher loan balances and charge volume, partially offset by a higher provision for credit losses and higher expenses.

Total net revenue of $10.7 billion increased by $4.6 billion. Net interest income of $8.4 billion increased by $3.3 billion, primarily due to the Merger and higher loan balances. Noninterest revenue of $2.4 billion increased by $1.3 billion, primarily due to the Merger and higher charge volume, which generated increased interchange income. This was partially offset by higher volume-driven payments to partners, reflecting the sharing of income and increased rewards expense.

The Provision for credit losses of $4.9 billion increased by $1.9 billion, primarily due to the Merger and growth in credit card receivables. Credit ratios remained strong, benefiting from reduced contractual and bankruptcy charge-offs. The net charge-off ratio was 5.27%. The 30-day delinquency ratio was 3.70%.

Noninterest expense of $3.9 billion increased by $1.7 billion, primarily related to the Merger. In addition, expenses increased due to higher marketing expenses and volume-based processing expenses, partially offset by lower compensation expenses.

2003 compared with 2002

Operating earnings of $683 million increased by $19 million or 3% compared with the prior year. Earnings benefited from higher revenue, partially offset by a higher provision for credit losses and expenses.

Total net revenue of $6.1 billion increased by 4%. Net interest income of $5.1 billion increased by 2% due to higher spread and loan balances. Noninterest revenue of $1.1 billion increased by 11% due to higher charge volume, which generated increased interchange income. This was partially offset by higher rewards expense.

The Provision for credit losses was $2.9 billion, an increase of 6%, primarily due to the higher provision for credit losses and higher losses due to loan growth. Conservative risk management and rigorous collection practices contributed to stable credit quality.

Noninterest expense was $2.2 billion, an increase of 2%, due to volume-based processing expenses, partially offset by disciplined expense management.

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. All other periods reflect the results of heritage JPMorgan Chase only.
(b) Includes Credit card income, Other income and Net interest income.

The following is a brief description of selected business metrics within Card Services.

- **Charge volume** – Represents the dollar amount of cardmember purchases, balance transfers and cash advance activity.
- **Net accounts opened** – Includes originations, purchases and sales.
- **Merchant acquiring business** – Represents an entity that processes payments for merchants. JPMorgan Chase is a majority owner of Paymentech, Inc. and a 50% owner of Chase Merchant Services.
- **Bank card volume** – Represents the dollar amount of transactions processed for the merchants.
- **Total transactions** – Represents the number of transactions and authorizations processed for the merchants.

Commercial Banking

Commercial Banking serves more than 25,000 corporations, municipalities, financial institutions and not-for-profit entities, with annual revenues generally ranging from $10 million to $2 billion. A local market presence and a strong customer service model, coupled with a focus on risk management, provide a solid infrastructure for Commercial Banking to provide the Firm's complete product set – lending, treasury services, investment banking and investment management – for both corporate clients and their executives. Commercial Banking's clients benefit greatly from the Firm's extensive branch network and often use the Firm exclusively to meet their financial services needs.

Commercial Banking operates in 10 of the top 15 major U.S. metropolitan areas. Within this network, Commercial Banking is divided into three customer coverage segments. General coverage for corporate clients is done by Middle Market Banking, which generally covers clients up to $500 million, and Corporate Banking, which generally covers clients over $500 million. Corporate Banking typically focuses on clients that have broader investment banking needs. The third segment, Commercial Real Estate, serves investors in and developers of for-sale housing, multifamily rental, retail, office and industrial properties. In addition to these three customer groupings, Commercial Banking offers several products to the Firm's entire customer base. Chase Business Credit is a leading national provider of highly structured asset-based financing, syndications and collateral analysis. Chase Equipment Leasing finances a variety of equipment types and offers vendor programs for leading capital and technology equipment manufacturers. Given this structure, Commercial Banking manages a customer base and loan portfolio that is highly diversified across a broad range of industries and geographic locations.

Commercial Banking was known prior to the Merger as Chase Middle Market and was a business within the former Chase Financial Services.

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. All other periods reflect the results of heritage JPMorgan Chase only.
(b) IB-related and commercial card revenues are included in Other income.

2004 compared with 2003

Operating earnings were $608 million, an increase of 98%, primarily due to the Merger.

Total net revenue was $2.4 billion, an increase of 76%, primarily due to the Merger. In addition to the overall increase related to the Merger, Net interest income of $1.7 billion was positively affected by higher deposit balances, partially offset by lower lending-related revenue. Noninterest revenue of $682 million was positively affected by higher investment banking fees and higher gains on the sale of loans and securities acquired in satisfaction of debt, partially offset by lower service charges on deposits, which often decline as interest rates rise.

The Provision for credit losses was $41 million, an increase of $35 million, primarily due to the Merger. Excluding the impact of the Merger, the provision was higher in 2004. Lower net charge-offs in 2004 were partially offset by lower reductions in the Allowance for credit losses in 2004 relative to 2003.

Noninterest expense was $1.3 billion, an increase of $521 million, or 63%, primarily related to the Merger.

2003 compared with 2002

Operating earnings were $307 million, an increase of 8% compared with 2002.

Total net revenue of $1.4 billion decreased by 1% compared with 2002. Net interest income of $1.0 billion decreased by 4% compared with the prior year, primarily due to lower deposit and loan spreads, partially offset by higher deposit and loan balances. Noninterest revenue was $393 million, an increase of 7%, primarily reflecting higher service charges on deposits and investment banking fees.

The Provision for credit losses was $6 million, a decrease of $66 million, which resulted from a larger reduction in the Allowance for credit losses and lower net charge-offs in 2003, reflecting an improvement in credit quality.

Noninterest expense was $822 million, an increase of 2% compared with 2002. The increase was the result of higher severance costs and performance-based incentives, partially offset by a decrease in other expenses.

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. All other periods reflect the results of heritage JPMorgan Chase only.
(b) In 2002, the Allowance for lending-related commitments was allocated to the IB. Had the amount been allocated to CB, the allowance would have been $24 million.

Commercial Banking revenues are comprised of the following:

Lending incorporates a variety of financing alternatives, such as term loans, revolving lines of credit and asset-based structures and leases, which are often secured by receivables, inventory, equipment or real estate.

Treasury services incorporates a broad range of products and services to help clients manage short-term liquidity through deposits and sweeps, and longer-term investment needs through money market accounts, certificates of deposit and mutual funds; manage working capital through lockbox, global trade, global clearing and commercial card products; and have ready access to information to manage their business through on-line reporting tools.

Investment banking products provide clients with more sophisticated capital-raising alternatives, through loan syndications, investment-grade debt, asset-backed securities, private placements, high-yield bonds and equity underwriting, and balance sheet and risk management tools through foreign exchange, derivatives, M&A and advisory services.

Treasury & Securities Services

Treasury & Securities Services is a global leader in providing transaction, investment and information services to support the needs of corporations, issuers and institutional investors worldwide. TSS is the largest cash management provider in the world and one of the top three global custodians. The Treasury Services business provides clients with a broad range of capabilities, including U.S. dollar and multi-currency clearing, ACH, trade, and short-term liquidity and working capital tools. The Investor Services business provides a wide range of capabilities, including custody, funds services, securities lending, and performance measurement and execution products. The Institutional Trust Services business provides trustee, depository and administrative services for debt and equity issuers. Treasury Services partners with the Commercial Banking, Consumer & Small Business Banking and Asset & Wealth Management segments to serve clients firmwide. As a result, certain Treasury Services revenues are included in other segments' results.

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. All other periods reflect the results of heritage JPMorgan Chase only.
(b) TSS is charged a credit reimbursement related to certain exposures managed within the IB credit portfolio on behalf of clients shared with TSS. For a further discussion, see Credit reimbursement on page 29 of this Annual Report.
(c) TSS and TS firmwide overhead ratios have been calculated based on the firmwide revenues described in footnote (b) on page 44 of this Annual Report and TSS or TS expenses, respectively, including those allocated to certain other lines of business.

2004 compared with 2003

Operating earnings for the year were $440 million, an increase of $18 million, or 4%. Results in 2004 include an after-tax gain of $10 million on the sale of an Investor Services business. Prior-year results include an after-tax gain of $22 million on the sale of an Institutional Trust Services business. Excluding these one-time gains, operating earnings increased by $30 million, or 8%. Both net revenue and Noninterest expense increased primarily as a result of the Merger, the acquisition of Bank One's Corporate Trust business in November 2003 and the acquisition of EFS in January 2004.

TSS net revenue improved by 35% to $4.9 billion. This revenue growth reflected the benefit of the Merger and the acquisitions noted above and improved product revenues across TSS. Net interest income grew to $1.4 billion from $947 million as a result of average deposit balance growth of 44%, to $128 billion, a change in the corporate deposit pricing methodology in 2004 and wider deposit spreads. Growth in fees and commissions was driven by a 20% increase in assets under custody to $9.1 trillion as well as new business growth in trade, commercial card, global equity products, securities lending, fund services, clearing and ACH. Partially offsetting these improvements were lower service charges on deposits, which often decline as interest rates rise, and a soft municipal bond market.

Treasury Services ("TS") net revenue grew to $2.0 billion, Investor Services ("IS") to $1.7 billion and Institutional Trust Services ("ITS") to $1.2 billion. TSS firmwide net revenue grew 41% to $6.5 billion. TSS firmwide net revenues include Treasury Services net revenues recorded in other lines of business.

Credit reimbursement to the Investment Bank was $90 million, compared with a credit from the Investment Bank of $36 million in the prior year, principally due to the Merger and a change in methodology. TSS is charged a credit reimbursement related to certain exposures managed within the Investment Bank credit portfolio on behalf of clients shared with TSS.

Noninterest expense totaled $4.1 billion, up from $3.0 billion, reflecting the Merger and the acquisitions noted above, $155 million of software impairment charges, upfront transition expenses related to on-boarding new custody and fund accounting clients, and legal and technology-related expenses.

On January 7, 2005, JPMorgan Chase agreed to acquire Vastera, a provider of global trade management solutions, for a total transaction value of approximately $129 million. Vastera's business will be combined with the Logistics and Trade Services businesses of the Treasury Services unit. The transaction is expected to close in the first half of 2005.

2003 compared with 2002

TSS operating earnings decreased by 23% from 2002 while delivering a return on allocated capital of 15%. A 9% increase in Noninterest expense and a lower credit reimbursement contributed to the lower earnings.

Total net revenue increased by 2%, with growth at ITS of 11%. ITS revenue growth was the result of debt product lines, increased volume in asset servicing, a pre-tax gain of $36 million on the sale of an Institutional Trust Services business in 2003, and the result of acquisitions which generated $29 million of new revenue in 2003. TS's revenue rose by 8% on higher trade and commercial payment card revenue and increased balance-related earnings, including

higher balance-deficiency fees resulting from the lower interest rate environment. IS's revenue contracted by 7%, the result of lower NII due to lower interest rates, lower foreign exchange and securities lending revenue, and a pre-tax gain of $50 million on the sale of the Firm's interest in a non-U.S. securities clearing firm in 2002.

Noninterest expense increased by 9%, attributable to higher severance, the impact of acquisitions, the cost associated with expensing of options, increased pension costs and charges to provide for losses on subletting unoccupied excess real estate.

TSS was assigned a credit reimbursement of pre-tax earnings and the associated capital related to certain credit exposures managed within IB's credit portfolio on behalf of clients shared with TSS. For 2003, the impact to TSS was to increase pre-tax operating earnings by $36 million and average allocated capital by $712 million.

Treasury & Securities Services firmwide metrics include certain TSS product revenues and deposits reported in other lines of business for customers who are also customers of those lines of business. In order to capture the firmwide impact of TS and TSS products and revenues, management reviews firmwide metrics such as firmwide deposits, firmwide revenue and firmwide overhead ratios in assessing financial performance for TSS. Firmwide metrics are necessary in order to understand the aggregate TSS business.

(b) TSS and Treasury Services firmwide revenues include TS revenues recorded in certain other lines of business. Revenue associated with Treasury Services customers who are also customers of the Commercial Banking, Consumer & Small Business Banking and Asset & Wealth Management lines of business are reported in these other lines of business and are excluded from Treasury Services, as follows:

(in millions)	2004	2003	2002
Treasury Services revenue reported in Commercial Banking	$ 1,467	$ 896	$ 925
Treasury Services revenue reported in other lines of business	204	118	89

Note: Foreign exchange revenues are apportioned between TSS and the IB, and only TSS's share is included in TSS firmwide revenue.

(c) Corporate trust securities under administration include debt held in trust on behalf of third parties and debt serviced as agent.

(d) TSS and TS firmwide deposits include TS's deposits recorded in certain other lines of business. Deposits associated with Treasury Services customers who are also customers of the Commercial Banking line of business are reported in that line of business and are excluded from Treasury Services.

NA - Data for 2002 is not available on a comparable basis.

Asset & Wealth Management

Asset & Wealth Management provides investment management to retail and institutional investors, financial intermediaries and high-net-worth families and individuals globally. For retail investors, AWM provides investment management products and services, including a global mutual fund franchise, retirement plan administration, and consultation and brokerage services. AWM delivers investment management to institutional investors across all asset classes. The Private bank and Private client services businesses provide integrated wealth management services to ultra-high-net-worth and high-net-worth clients, respectively.

Pre-tax margin ratio[b]	25	15	15

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. All other periods reflect the results of heritage JPMorgan Chase only.

(b) Pre-tax margin represents Operating earnings before income taxes / Total net revenue, which is a comprehensive measure of pre-tax performance and is another basis by which AWM management evaluates its performance and that of its competitors. Pre-tax margin is an effective measure of AWM's earnings, after all costs are taken into consideration.

2004 compared with 2003

Operating earnings were $681 million, up 137% from the prior year, due largely to the Merger but also driven by increased revenue and a decrease in the Provision for credit losses; these were partially offset by higher Compensation expense.

Total net revenue was $4.2 billion, up 41%, primarily due to the Merger. Additionally, fees and commissions increased due to global equity market appreciation, net asset inflows and the acquisition of JPMorgan Retirement Plan Services ("RPS") in the second quarter of 2003. Fees and commissions also increased due to an improved product mix, with an increased percentage of assets in higher-yielding products. Net interest income increased due to deposit and loan growth.

The Provision for credit losses was a benefit of $14 million, a decrease of $49 million, due to an improvement in credit quality.

Noninterest expense was $3.1 billion, up 26%, due to the Merger as well as increased Compensation expense and the impact of increased technology and marketing initiatives.

2003 compared with 2002

Operating earnings were $287 million, up 3% from the prior year, reflecting an improved credit portfolio, the benefit of slightly higher revenues. During the second quarter of 2003, the Firm acquired American Century Retirement Plan Services Inc., a provider of defined contribution recordkeeping services, as part of its strategy to grow its U.S. retail investment management business. The business was renamed JPMorgan Retirement Plan Services ("RPS").

Total net revenue was $3.0 billion, up 1% from the prior year. The increase in fees and commissions reflected the acquisition of RPS and increased average equity market valuations in client portfolios, partly offset by institutional net outflows. Net interest income increased due to higher brokerage account balances and spreads. The decline in Other income primarily reflected nonrecurring items in 2002.

The Provision for credit losses decreased by 59%, due to an improvement in credit quality and recoveries.

Noninterest expense was $2.5 billion, up $78 million from 2002, reflecting the acquisition of RPS, higher Compensation expense, and real estate and software write-offs, partly offset by the continued impact of expense-management programs.

AWM's client segments are comprised of the following:

The **Private bank** addresses every facet of wealth management for ultra-high-net-worth individuals and families worldwide, including investment management, capital markets and risk management, tax and estate planning, banking, capital raising and specialty wealth advisory services.

Retail provides more than 2 million customers worldwide with investment management, retirement planning and administration, and brokerage services through third-party and direct distribution channels.

Institutional serves more than 3,000 large and mid-size corporate and public institutions, endowments and foundations, and governments globally. AWM offers institutions comprehensive global investment services, including investment management across asset classes, pension analytics, asset-liability management, active risk budgeting and overlay strategies.

Private client services offers high-net-worth individuals, families and business owners comprehensive wealth management solutions that include financial planning, personal trust, investment and banking products and services.

Assets under supervision

2004 compared with 2003

Assets under supervision ("AUS") at December 31, 2004 were $1.3 trillion, up 66% from 2003, and Assets under management ("AUM") were $791 billion, up 41% from the prior year. The increases were primarily the result of the Merger, as well as market appreciation, net asset inflows and the acquisition of a majority interest in Highbridge Capital Management. The Firm also has a 43% interest in American Century Companies, Inc., whose AUM totaled $98 billion and $87 billion at December 31, 2004 and 2003, respectively. Custody, brokerage, administration, and deposits were $478 billion, up 135%, primarily due to the Merger, as well as market appreciation and net inflows across all products.

2003 compared with 2002

AUS at December 31, 2003, totaled $764 billion, up 19% from the prior year-end. AUM totaled $561 billion, up 9%, and custody, brokerage, administration and deposit accounts were $203 billion, up 54%. The increase in AUM was driven by higher equity market valuations in client portfolios, partly offset by institutional net outflows. Custody, brokerage, administration and deposits grew by $70 billion, driven by the acquisition of RPS ($41 billion), higher equity market valuations in client portfolios and net inflows from Private bank clients.

The diversification of AUS across product classes, client segments and geographic regions helped to mitigate the impact of market volatility on revenue. The Firm also had a 44% interest in American Century Companies, Inc., whose AUM totaled $87 billion and $72 billion at December 31, 2003 and 2002, respectively.

Corporate

The Corporate sector is comprised of Private Equity, Treasury, and corporate staff and other centrally managed expenses. Private Equity includes JPMorgan Partners and ONE Equity Partners businesses. Treasury manages the structural interest rate risk and investment portfolio for the Firm. The corporate staff areas include Central Technology and Operations, Internal Audit, Executive Office, Finance, General Services, Human Resources, Marketing & Communications, Office of the General Counsel, Real Estate and Business Services, Risk Management, and Strategy and Development. Other centrally managed expenses include items such as the Firm's occupancy and pension expense, net of allocations to the business.

Income tax expense (benefit)	(690)	(253)	(128)
Operating earnings	$ 61	$ 668	$ (235)

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. All other periods reflect the results of heritage JPMorgan Chase only.

2004 compared with 2003

Operating earnings were $61 million, down from earnings of $668 million in the prior year.

Noninterest revenue was $1.8 billion, up 43% from the prior year. The primary component of noninterest revenue is Securities/private equity gains, which totaled $1.8 billion, up 73% from the prior year. The increase was a result of net gains in the Private Equity portfolio of $1.4 billion in 2004, compared with $27 million in net gains in 2003. Partially offsetting these gains were lower investment securities gains in Treasury.

Net interest income was a negative $1.2 billion, compared with a negative $177 million in the prior year. The decline was driven primarily by actions and policies adopted in conjunction with the Merger.

Noninterest expense of $1.3 billion was up $772 million from the prior year due to the Merger. The Merger resulted in higher gross compensation and noncompensation expenses, which were partially offset by higher allocation of these expenses to the businesses. Incremental allocations to the businesses were lower than the gross expense increase due to certain policies adopted in conjunction with the Merger. These policies retain overhead costs that would not be incurred by the lines of business if operated on a stand-alone basis, as well as costs in excess of the market price for services provided by the corporate staff and technology and operations areas.

On September 15, 2004, JPMorgan Chase and IBM announced the Firm's plans to reintegrate the portions of its technology infrastructure – including data centers, help desks, distributed computing, data networks and voice networks – that were previously outsourced to IBM. In January 2005, approximately 3,100 employees and 800 contract employees were transferred to the Firm.

2003 compared with 2002

For 2003, Corporate had operating earnings of $668 million, compared with an operating loss of $235 million in 2002, driven primarily by higher gains in the Private Equity portfolio and income tax benefits not allocated to the business segments.

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. All other periods reflect the results of heritage JPMorgan Chase only.
(b) For further information on the Firm's policies regarding the valuation of the private equity portfolio, see Note 9 on pages 98–100 of this Annual Report.
(c) Unfunded commitments to private third-party equity funds were $563 million, $1.3 billion and $2.0 billion at December 31, 2004, 2003 and 2002, respectively.

2004 compared with 2003

Private Equity's operating earnings for the year totaled $602 million, compared with a loss of $290 million in 2003. This improvement reflected a $1.4 billion increase in total private equity gains. In 2004, markets improved for investment sales, resulting in $1.4 billion of realized gains on direct investments, compared with $535 million in 2003. Net write-downs on direct investments were $192 million in 2004, compared with $404 million in 2003, as valuations continued to stabilize amid positive market conditions.

The carrying value of the Private Equity portfolio at December 31, 2004, was $7.5 billion, an increase of $247 million from December 31, 2003. The increase was primarily the result of the Merger. Otherwise, the portfolio declined as a result of sales of investments, consistent with management's intention to reduce over time the capital committed to private equity. Sales of third-party fund investments resulted in a decrease in carrying value of $458 million, to $641 million at December 31, 2004, compared with $1.1 billion at December 31, 2003.

2003 compared with 2002

The private equity portfolio recognized negative Total net revenue of $190 million and operating losses of $290 million in 2003. Opportunities to realize value through sales, recapitalizations and initial public offerings ("IPOs") of investments, although limited, improved during the year as the M&A and IPO markets started to recover.

Private equity gains totaled $27 million in 2003, compared with losses of $733 million in 2002. Private equity recognized gains of $346 million on direct investments and losses of $319 million on sales and writedowns of private third-party fund investments.

(a) Heritage JPMorgan Chase only.

Balance sheet overview

At December 31, 2004, the Firm's total assets were $1.2 trillion, an increase of $386 billion, or 50%, from the prior year, primarily as a result of the Merger. Merger-related growth in assets was primarily in: Available-for-sale securities; interests in purchased receivables related to Bank One's conduit business; wholesale and consumer loans; and goodwill and other intangibles, which was primarily the result of the purchase accounting impact of the Merger. Nonmerger-related growth was primarily due to the IB's increased trading activity, which is reflected in securities purchased under resale agreements and securities borrowed, as well as trading assets.

At December 31, 2004, the Firm's total liabilities were $1.1 trillion, an increase of $327 billion, or 45%, from the prior year, again primarily as a result of the Merger. Merger-related growth in liabilities was primarily in interest-bearing U.S. deposits, long-term debt, trust preferred securities and beneficial interests issued by consolidated variable interest entities. Nonmerger-related growth in liabilities was primarily driven by increases in noninterest-bearing U.S. deposits and the IB's trading activity, which is reflected in securities sold under repurchase agreements, partially offset by reductions in federal funds purchased.

Trading assets – debt and equity instruments

The Firm's debt and equity trading assets consist primarily of fixed income (including government and corporate debt) and cash equity and convertible instruments used for both market-making and proprietary risk-taking activities. The increase over 2003 was primarily due to growth in client-driven market-making activities across interest rate, credit and equity markets, as well as an increase in proprietary trading activities.

Trading assets and liabilities – derivative receivables and payables

The Firm uses various interest rate, foreign exchange, equity, credit and commodity derivatives for market-making, proprietary risk-taking and risk management purposes. The decline from 2003 was primarily due to the Firm's election, effective January 1, 2004, to report the fair value of derivative assets and liabilities net of cash received and paid, respectively, under legally enforceable master netting agreements. For additional information, refer to Credit risk management and Note 3 on pages 57–69 and 90–91, respectively, of this Annual Report.

Securities

AFS securities include fixed income (e.g., U.S. Government agency and asset-backed securities, as well as non-U.S. government and corporate debt) and equity instruments. The Firm uses AFS securities primarily to manage interest rate risk. The AFS portfolio grew by $34.3 billion from the 2003 year-end primarily due to the Merger. Partially offsetting the increase were net sales in the Treasury portfolio since the second quarter of 2004. In anticipation of the Merger, both heritage firms reduced the level of their AFS securities to reposition the combined firm. For additional information related to securities, refer to Note 9 on pages 98–100 of this Annual Report.

Loans

Loans, net of allowance, were $394.8 billion at December 31, 2004, an increase of 88% from the prior year, primarily due to the Merger. Also contributing to the increase was growth in both the RFS and CS loan portfolios, partially offset by lower wholesale loans in the IB. For a more detailed discussion of the loan portfolio and allowance for credit losses, refer to Credit risk management on pages 57–69 of this Annual Report.

Goodwill and other intangible assets

The $42.9 billion increase in Goodwill and other intangible assets from the prior year was primarily the result of the Merger and, to a lesser extent, the Firm's other acquisitions, such as EFS and the majority stake in Highbridge. For additional information, see Note 15 on pages 109–111 of this Annual Report.

Deposits

Deposits are a key source of funding. The stability of this funding source is affected by such factors as returns available to customers on alternative investments, the quality of customer service levels and competitive forces. Deposits increased by 60% from December 31, 2003, primarily the result of the Merger and growth in deposits in TSS. For more information, refer to the TSS segment discussion and the Liquidity risk management discussion on pages 43–44 and 55–56, respectively, of this Annual Report.

Long-term debt

Long-term debt increased by 99% from the prior year, primarily due to the Merger and net new debt issuances. For additional information on the Firm's long-term debt activity, see the Liquidity risk management discussion on pages 55–56 of this Annual Report.

Stockholders' equity

Total stockholders' equity increased by 129% to $105.7 billion, primarily as a result of the Merger. For a further discussion of capital, see Capital management on pages 50–52 of this Annual Report.

Capital management

The Firm's capital management framework is intended to ensure that there is capital sufficient to support the underlying risks of the Firm's business activities, measured by economic risk capital, and to maintain "well-capitalized" status under regulatory requirements. In addition, the Firm holds capital above these requirements in amounts deemed appropriate to achieve management's debt rating objectives. The Firm's capital framework is integrated into the process of assigning equity to the lines of business. The Firm may refine its methodology for assigning equity to the lines of business as the merger integration process continues.

Line of business equity

The Firm's framework for allocating capital is based on the following objectives:

- Integrate firmwide capital management activities with capital management activities within each of the lines of business.
- Measure performance in each business segment consistently across all lines of business.
- Provide comparability with peer firms for each of the lines of business.

Equity for a line of business represents the amount the Firm believes the business would require if it were operating independently, incorporating sufficient capital to address economic risk measures, regulatory capital requirements, and capital levels for similarly rated peers. Return on equity is measured and internal targets for expected returns are established as a primary measure of a business segment's performance.

For performance management purposes, the Firm does not allocate goodwill to the lines of business because it believes that the accounting-driven allocation of goodwill could distort assessment of relative returns. In management's view, this approach fosters better comparison of line of business returns with other internal business segments, as well as with peers. The Firm assigns an amount of equity capital equal to the then current book value of its goodwill to the Corporate segment. The return on invested capital related to the Firm's goodwill assets is managed within this segment. In accordance with SFAS 142, the Firm allocates goodwill to the lines of business based on the underlying fair values of the businesses and then performs the required impairment testing. For a further discussion of goodwill and impairment testing, see Critical accounting estimates and Note 15 on pages 77–79 and 109–111 respectively, of this Annual Report.

This integrated approach to assigning equity to the lines of business is a new methodology resulting from the Merger. Therefore, current year line of business equity is not comparable to equity assigned to the lines of business in prior years. The increase in average common equity in the table below for 2004 was primarily attributable to the Merger.

(in billions)	Yearly Average	
Line of business equity[a]	**2004**	2003
Investment Bank	**$ 17.3**	$ 18.4
Retail Financial Services	**9.1**	4.2
Card Services	**7.6**	3.4
Commercial Banking	**2.1**	1.1
Treasury & Securities Services	**2.5**	2.7
Asset & Wealth Management	**3.9**	5.5
Corporate[b]	**33.1**	7.7
Total common stockholders' equity	**$ 75.6**	$ 43.0

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. 2003 reflects the results of heritage JPMorgan Chase only.
(b) 2004 includes $25.9 billion of equity to offset goodwill and $7.2 billion of equity primarily related to Treasury, Private Equity and the Corporate Pension Plan.

Economic risk capital

JPMorgan Chase assesses its capital adequacy relative to the underlying risks of the Firm's business activities, utilizing internal risk-assessment methodologies. The Firm assigns economic capital based primarily on five risk factors: credit risk, market risk, operational risk and business risk for each business; and private equity risk, principally for the Firm's private equity business.

(in billions)	Yearly Average	
Economic risk capital[a]	**2004**	2003
Credit risk	**$ 16.5**	$ 13.1
Market risk	**7.5**	4.5
Operational risk	**4.5**	3.5
Business risk	**1.9**	1.7
Private equity risk	**4.5**	5.4
Economic risk capital	**34.9**	28.2
Goodwill	**25.9**	8.1
Other[b]	**14.8**	6.7
Total common stockholders' equity	**$ 75.6**	$ 43.0

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. 2003 reflects the results of heritage JPMorgan Chase only.
(b) Additional capital required to meet internal regulatory/debt rating objectives.

Credit risk capital

Credit risk capital is estimated separately for the wholesale businesses (Investment Bank, Commercial Banking, Asset & Wealth Management and Treasury & Securities Services) and consumer businesses (Retail Financial Services and Card Services).

Credit risk capital for the overall wholesale credit portfolio is defined in terms of unexpected credit losses, from both defaults and declines in market value due to credit deterioration, measured over a one-year period at a confidence level consistent with the level of capitalization necessary to achieve a targeted 'AA' solvency standard. Unexpected losses are in excess of those for which provisions for credit losses are maintained. In addition to maturity and correlations, capital allocation is differentiated by several principal drivers of credit risk: exposure at default (or loan equivalent amount), likelihood of default, loss severity, and market credit spread.

- Loan equivalent amount for counterparty exposures in an over-the-counter derivative transaction is represented by the expected positive exposure based on potential movements of underlying market rates. Loan equivalents for unused revolving credit facilities represent the portion of an unused commitment likely, based on the Firm's average portfolio historical experience, to become outstanding in the event an obligor defaults.
- Default likelihood is closely aligned with current market conditions for all publicly traded names or investment banking clients, yielding a forward-looking measure of credit risk. This facilitates more active risk management by utilizing the growing market in credit derivatives and secondary market loan sales. For privately-held firms in the commercial banking portfolio, default likelihood is based on longer term averages over an entire credit cycle.
- Loss severity of exposure is based on the Firm's average historical experience during workouts, with adjustments to account for collateral or subordination.
- Market credit spreads are used in the evaluation of changes in exposure value due to credit deterioration.

Credit risk capital for the consumer portfolio is intended to represent a capital level sufficient to support an 'AA' rating, and its allocation is based on product and other relevant risk segmentation. Actual segment level default and severity experience are used to estimate unexpected losses for a one-year horizon at a confidence level equivalent to the 'AA' solvency standard. Statistical results for certain segments or portfolios are adjusted upward to ensure that capital is consistent with external benchmarks, including subordination levels on market transactions and capital held at representative monoline competitors, where appropriate.

Market risk capital

The Firm allocates market risk capital guided by the principle that capital should reflect the extent to which risks are present in businesses. Daily VAR, monthly stress-test results and other factors determine appropriate capital charges for major business segments. See Market risk management on pages 70–74 of this Annual Report for more information about these market risk measures. The Firm allocates market risk capital to each business segment according to a formula that weights that segment's VAR and stress test exposures.

Operational risk capital

Capital is allocated to the lines of business for operational risk using a risk-based capital allocation methodology which estimates operational risk on a bottoms-up basis. The operational risk capital model is based on actual losses and potential scenario-based stress losses, with adjustments to the capital calculation to reflect changes in the quality of the control environment and with a potential offset for the use of risk-transfer products. The Firm believes the model is consistent with the new Basel II Framework and expects to propose it eventually for qualification under the advanced measurement approach for operational risk.

Business risk capital

Business risk is defined as the risk associated with volatility in the Firm's earnings due to factors not captured by other parts of its economic-capital framework. Such volatility can arise from ineffective design or execution of business strategies, volatile economic or financial market activity, changing client expectations and demands, and restructuring to adjust for changes in the competitive environment. For business risk, capital is allocated to each business based on historical revenue volatility and measures of fixed and variable expenses. Earnings volatility arising from other risk factors, such as credit, market, or operational risk, is excluded from the measurement of business risk capital, as those factors are captured under their respective risk capital models.

Private equity risk capital

Capital is allocated to publicly- and privately-held securities and third party fund investments and commitments in the Private Equity portfolio to cover the potential loss associated with a decline in equity markets and related asset devaluations. In addition to negative market fluctuations, potential losses in private equity investment portfolios can be magnified by liquidity risk. The capital allocation for the Private Equity portfolio is based upon measurement of the loss experience suffered by the Firm and other market participants over a prolonged period of adverse equity market conditions.

Regulatory capital

The Firm's federal banking regulator, the FRB, establishes capital requirements, including well-capitalized standards for the consolidated financial holding company. The Office of the Comptroller of the Currency ("OCC") establishes similar capital requirements and standards for the Firm's national banks, including JPMorgan Chase Bank, National Association ("JPMorgan Chase Bank") and Chase Bank USA, National Association.

On March 1, 2005, the FRB issued a final rule that continues the inclusion of trust preferred securities in Tier 1 capital, subject to stricter quantitative limits. The rule provides for a five-year transition period. The Firm is currently assessing the impact of the final rule. The effective date of the final rule is dependent on the date of publication in the Federal Register.

On July 20, 2004, the federal banking regulatory agencies issued a final rule that excludes assets of asset-backed commercial paper programs that are consolidated as a result of FIN 46R from risk-weighted assets for purposes of computing Tier 1 and Total risk-based capital ratios. The final rule also requires that capital be held against short-term liquidity facilities supporting asset-backed commercial paper programs. The final rule became effective September 30, 2004. Adoption of the rule did not have a material effect on the capital ratios of the Firm. In addition, under the final rule, both short- and long-term liquidity facilities will be subject to certain asset quality tests effective September 30, 2005.

The following tables show that JPMorgan Chase maintained a well-capitalized position based on Tier 1 and Total capital ratios at December 31, 2004 and 2003.

Capital ratios

December 31,	2004	2003[a]	Well-capitalized ratios
Tier 1 capital ratio	**8.7%**	8.5%	6.0%
Total capital ratio	**12.2**	11.8	10.0
Tier 1 leverage ratio	**6.2**	5.6	NA
Total stockholders' equity to assets	**9.1**	6.0	NA

(a) Heritage JPMorgan Chase only.

Risk-based capital components and assets

December 31, (in millions)	2004	2003[a]
Total Tier 1 capital	**$ 68,621**	$ 43,167
Total Tier 2 capital	**28,186**	16,649
Total capital	**$ 96,807**	$ 59,816
Risk-weighted assets	**$ 791,373**	$ 507,456
Total adjusted average assets	**1,102,456**	765,910

(a) Heritage JPMorgan Chase only.

Tier 1 capital was $68.6 billion at December 31, 2004, compared with $43.2 billion at December 31, 2003, an increase of $25.4 billion. The increase was due to an increase in common stockholders' equity of $60.2 billion, primarily driven by stock issued in connection with the Merger of $57.3 billion and net income of $4.5 billion; these were partially offset by dividends paid of $3.9 billion and common share repurchases of $738 million. The Merger added Tier 1 components such as $3.0 billion of additional qualifying trust preferred securities and $493 million of minority interests in consolidated subsidiaries; Tier 1 deductions resulting from the Merger included $34.1 billion of merger-related goodwill, and $3.4 billion of nonqualifying intangibles.

Additional information regarding the Firm's capital ratios and the associated components and assets, and a more detailed discussion of federal regulatory capital standards are presented in Note 24 on pages 116–117 of this Annual Report.

Basel II

The Basel Committee on Banking Supervision published the new Basel II Framework in 2004 in an effort to update the original international bank capital accord ("Basel I"), in effect since 1988. The goal of the Basel II Framework is to improve the consistency of capital requirements internationally, make regulatory capital more risk sensitive, and promote enhanced risk management practices among large, internationally active banking organizations. JPMorgan Chase supports the overall objectives of the Basel II Framework.

U.S. banking regulators are in the process of incorporating the Basel II Framework into the existing risk-based capital requirements. JPMorgan Chase will be required to implement advanced measurement techniques employing its internal estimates of certain key risk drivers to derive capital requirements. Prior to implementation of the new Basel II Framework, JPMorgan Chase will be required to demonstrate to the FRB that its internal criteria meet the relevant supervisory standards. The Basel II Framework will be fully effective in January 2008. JPMorgan Chase expects to implement the Basel II Framework within this timeframe.

JPMorgan Chase is currently analyzing local Basel II requirements in major jurisdictions outside the U.S. where it operates. Based on the results of this analysis, different approaches may be implemented in various jurisdictions.

Dividends

The Firm's common stock dividend policy reflects its earnings outlook, desired payout ratios, the need to maintain an adequate capital level and alternative investment opportunities. In 2004, JPMorgan Chase declared a quarterly cash dividend on its common stock of $0.34 per share. The Firm anticipates a dividend payout ratio in 2005 of 30-40% of operating earnings.

Stock repurchases

On July 20, 2004, the Board of Directors approved an initial stock repurchase program in the aggregate amount of $6.0 billion. This amount includes shares to be repurchased to offset issuances under the Firm's employee equity-based plans. The actual amount of shares repurchased will be subject to various factors, including market conditions; legal considerations affecting the amount and timing of repurchase activity; the Firm's capital position (taking into account purchase accounting adjustments); internal capital generation; and alternative potential investment opportunities. During 2004, under the stock repurchase program, the Firm repurchased 19.3 million shares for $738 million at an average price per share of $38.27. The Firm did not repurchase any shares of its common stock during 2003.

Off–balance sheet arrangements and contractual cash obligations

Special-purpose entities

JPMorgan Chase is involved with several types of off-balance sheet arrangements including special purpose entities ("SPEs"), lines of credit and loan commitments. The principal uses of SPEs are to obtain sources of liquidity for JPMorgan Chase and its clients by securitizing their financial assets, and to create other investment products for clients. These arrangements are an important part of the financial markets, providing market liquidity by facilitating investors' access to specific portfolios of assets and risks. For example, SPEs are integral to the markets for mortgage-backed securities, commercial paper, and other asset-backed securities.

The basic SPE structure involves a company selling assets to the SPE. The SPE funds the purchase of those assets by issuing securities to investors. To insulate investors from creditors of other entities, including the seller of assets, SPEs are often structured to be bankruptcy-remote.

JPMorgan Chase is involved with SPEs in three broad categories of transactions: loan securitizations, multi-seller conduits and client intermediation. Capital is held, as appropriate, against all SPE-related transactions and related exposures, such as derivative transactions and lending-related commitments. For a further discussion of SPEs and the Firm's accounting for them, see Note 1 on page 88, Note 13 on pages 103–106 and Note 14 on pages 106–109 of this Annual Report.

The Firm has no commitments to issue its own stock to support any SPE transaction, and its policies require that transactions with SPEs be conducted at arm's length and reflect market pricing. Consistent with this policy, no JPMorgan Chase employee is permitted to invest in SPEs with which the Firm is involved where such investment would violate the Firm's Worldwide Rules of Conduct. These rules prohibit employees from self-dealing and prohibit employees from acting on behalf of the Firm in transactions with which they or their family have any significant financial interest.

For certain liquidity commitments to SPEs, the Firm could be required to provide funding if the credit rating of JPMorgan Chase Bank were downgraded below specific levels, primarily P-1, A-1 and F1 for Moody's, Standard & Poor's and Fitch, respectively. The amount of these liquidity commitments was $79.4 billion and $34.0 billion at December 31, 2004 and 2003, respectively. Alternatively, if JPMorgan Chase Bank were downgraded, the Firm could be replaced by another liquidity provider in lieu of funding under the liquidity commitment, or, in certain circumstances, could facilitate the sale or refinancing of the assets in the SPE in order to provide liquidity.

Of its $79.4 billion in liquidity commitments to SPEs at December 31, 2004, $47.7 billion is included in the Firm's total other unfunded commitments to extend credit, included in the table below (compared with $27.7 billion at December 31, 2003). As a result of the Firm's consolidation of multi-seller conduits in accordance with FIN 46R, $31.7 billion of these commitments are excluded from the table (compared with $6.3 billion at December 31, 2003), as the underlying assets of the SPEs have been included on the Firm's Consolidated balance sheets.

The revenue reported in the table below primarily represents servicing and custodial fee income. The Firm also has exposure to certain SPEs arising from derivative transactions; these transactions are recorded at fair value on the Firm's Consolidated balance sheets with changes in fair value (i.e., MTM gains and losses) recorded in Trading revenue. Such MTM gains and losses are not included in the revenue amounts reported in the table below.

The following table summarizes certain revenue information related to variable interest entities ("VIEs") with which the Firm has significant involvement, and qualifying SPEs ("QSPEs"). For a further discussion of VIEs and QSPEs, see Note 1 on page 88 of this Annual Report.

Revenue from VIEs and QSPEs

Year ended December 31,[a] (in millions)	VIEs[b]	QSPEs	Total
2004	**$154**	**$1,438**	**$1,592**
2003	79	979	1,058

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. 2003 reflects the results of heritage JPMorgan Chase only.
(b) Includes VIE-related revenue (i.e., revenue associated with consolidated and significant nonconsolidated VIEs).

Contractual cash obligations

In the normal course of business, the Firm enters into various contractual obligations that may require future cash payments. The accompanying table summarizes JPMorgan Chase's off–balance sheet lending-related financial instruments and significant contractual cash obligations, by remaining maturity, at December 31, 2004. For a discussion regarding Long-term debt and trust preferred capital securities, see Note 17 on pages 112–113 of this Annual Report. For a discussion regarding operating leases, see Note 25 on page 117 of this Annual Report.

Contractual purchases include commitments for future cash expenditures, primarily related to services. Capital expenditures primarily represent future cash payments for real estate–related obligations and equipment. Contractual purchases and capital expenditures at December 31, 2004, reflect the minimum contractual obligation under legally enforceable contracts with contract terms that are both fixed and determinable. Excluded from the following table are a number of obligations to be settled in cash, primarily in under one year. These obligations are reflected on the Firm's Consolidated balance sheets and include Federal funds purchased and securities sold under repurchase agreements; Other borrowed funds; purchases of Debt and equity instruments that settle within standard market timeframes (e.g., regular-way); Derivative payables that do not require physical delivery of the underlying instrument; and certain purchases of instruments that resulted in settlement failures.

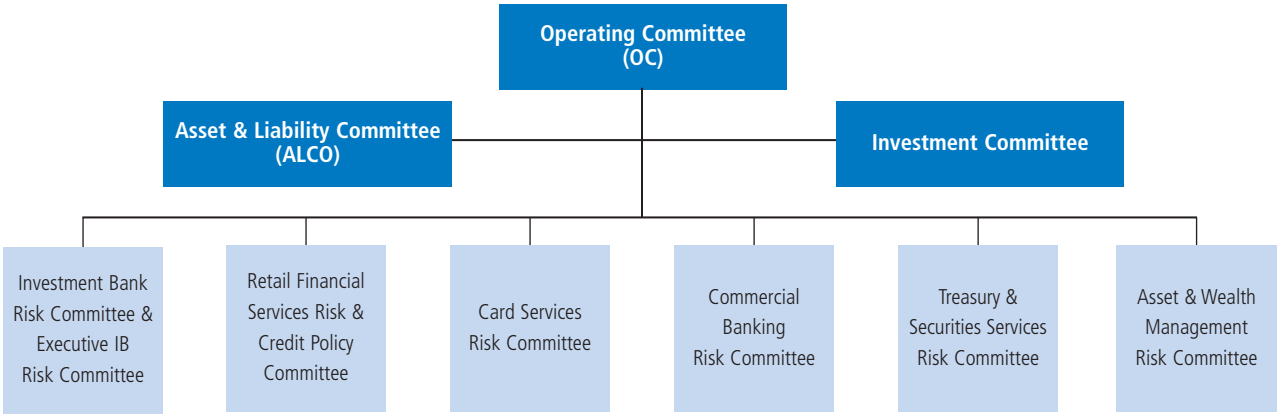
Off–balance sheet lending-related financial instruments

By remaining maturity at December 31, 2004 (in millions)	Under 1 year	1–3 years	3–5 years	After 5 years	Total
Consumer	**$552,748**	**$ 3,603**	**$ 2,799**	**$ 42,046**	**$601,196**
Wholesale:					
Other unfunded commitments to extend credit[a][b]	**114,555**	**57,183**	**48,987**	**4,427**	**225,152**
Standby letters of credit and guarantees[a]	**22,785**	**30,805**	**21,387**	**3,107**	**78,084**
Other letters of credit[a]	**4,631**	**1,297**	**190**	**45**	**6,163**
Total wholesale	**141,971**	**89,285**	**70,564**	**7,579**	**309,399**
Total lending-related commitments	**$694,719**	**$ 92,888**	**$ 73,363**	**$ 49,625**	**$910,595**
Contractual cash obligations					
By remaining maturity at December 31, 2004 (in millions)					
Certificates of deposit of $100,000 and over	**$ 38,946**	**$ 7,941**	**$ 1,176**	**$ 1,221**	**$ 49,284**
Long-term debt	**15,833**	**30,890**	**23,527**	**25,172**	**95,422**
Trust preferred capital securities	**—**	**—**	**—**	**10,296**	**10,296**
FIN 46R long-term beneficial interests[c]	**3,072**	**708**	**203**	**2,410**	**6,393**
Operating leases[d]	**1,060**	**1,878**	**1,614**	**5,301**	**9,853**
Contractual purchases and capital expenditures	**1,791**	**518**	**252**	**181**	**2,742**
Obligations under affinity and co-brand programs	**868**	**2,442**	**1,086**	**6**	**4,402**
Other liabilities[e]	**968**	**1,567**	**1,885**	**6,546**	**10,966**
Total	**$ 62,538**	**$ 45,944**	**$ 29,743**	**$ 51,133**	**$ 189,358**

(a) Represents contractual amount net of risk participations totaling $26 billion at December 31, 2004.
(b) Includes unused advised lines of credit totaling $23 billion at December 31, 2004, which are not legally binding. In regulatory filings with the FRB, unused advised lines are not reportable.
(c) Included on the Consolidated balance sheets in Beneficial interests issued by consolidated variable interest entities.
(d) Excludes benefit of noncancelable sublease rentals of $689 million at December 31, 2004.
(e) Includes deferred annuity contracts and expected funding for pension and other postretirement benefits for 2005. Funding requirements for pension and postretirement benefits after 2005 are excluded due to the significant variability in the assumptions required to project the timing of future cash payments.

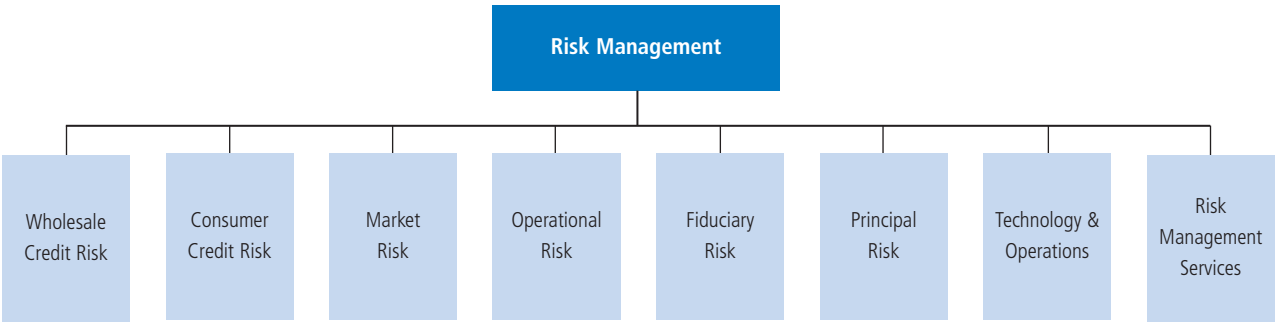
Risk management

Risk is an inherent part of JPMorgan Chase's business activities. The Firm's risk management framework and governance structure is intended to provide comprehensive controls and ongoing management of its major risks. In addition, this framework recognizes the diversity among the Firm's core businesses, which helps reduce the impact of volatility in any particular area on its operating results as a whole.



The Firm's ability to properly identify, measure, monitor and report risk is critical to its soundness and profitability.

- **Risk identification:** The Firm identifies risk by dynamically assessing the potential impact of internal and external factors on transactions and positions. Business and risk professionals develop appropriate mitigation strategies for the identified risks.
- **Risk measurement**: The Firm measures risk using a variety of methodologies, including calculating probable loss, unexpected loss and value-at-risk, and by conducting stress tests and making comparisons to external benchmarks. Measurement models and related assumptions are routinely reviewed to ensure that the Firm's risk estimates are reasonable and reflective of underlying positions.
- **Risk monitoring/Control:** The Firm establishes risk management policies and procedures. These policies contain approved limits by customer, product and business that are monitored on a daily, weekly and monthly basis as appropriate.
- **Risk reporting:** Risk reporting covers all lines of business and is provided to management on a daily, weekly and monthly basis as appropriate.



Risk governance

The Firm's risk governance structure is built upon the premise that each line of business is responsible for managing the risks inherent in its business activity. There are seven major risk types identified in the business activities of the Firm: liquidity risk, credit risk, market risk, operational risk, legal and reputation risk, fiduciary risk and principal risk. As part of the risk management structure, each line of business has a Risk Committee responsible for decisions relating to risk strategy, policies and control. Where appropriate, the Risk Committees escalate risk issues to the Firm's Operating Committee, comprised of senior officers of the Firm, or to the Risk Working Group, a subgroup of the Operating Committee.

In addition to the Risk Committees, there is an Asset & Liability Committee ("ALCO"), which oversees structural interest rate and liquidity risk as well as the Firm's funds transfer pricing policy, through which lines of business transfer market-hedgable interest rate risk to Treasury. Treasury also has responsibility for decisions relating to its risk strategy, policies and control. There is also an Investment Committee, which reviews key aspects of the Firm's global M&A activities that are undertaken for its own account and that fall outside the scope of established private equity and other principal finance activities.

Overlaying risk management within the lines of business is the corporate function of Risk Management which, under the direction of the Chief Risk Officer reporting to the President and Chief Operating Officer, provides an independent firmwide function for control and management of risk. Within Risk Management are those units responsible for credit risk, market risk, operational risk, fiduciary risk, principal risk, and risk technology and operations, as well as Risk Management Services, which is responsible for credit risk policy and methodology, risk reporting and risk education.

The Board of Directors exercises oversight of risk management as a whole and through the Board's Audit Committee and the Risk Policy Committee. The Audit Committee is responsible for oversight of guidelines and policies to govern the process by which risk assessment and management is undertaken. In addition, the Audit Committee reviews with management the system of internal controls and financial reporting that is relied upon to provide reasonable assurance of compliance with the Firm's operational risk management processes. The Risk Policy Committee is responsible for oversight of management's responsibilities to assess and manage the Firm's credit risk, market risk, interest rate risk, investment risk and liquidity risk, and is also responsible for review of the Firm's fiduciary and asset management activities. Both committees are responsible for oversight of reputational risk. The Chief Risk Officer and other management report on the risks of the Firm to the Board of Directors, particularly through the Board's Audit Committee and Risk Policy Committee.

The major risk types identified by the Firm are discussed in the following sections.

Liquidity risk management

Liquidity risk arises from the general funding needs of the Firm's activities and in the management of its assets and liabilities. JPMorgan Chase's liquidity management framework is intended to maximize liquidity access and minimize funding costs. Through active liquidity management, the Firm seeks to preserve stable, reliable and cost-effective sources of funding. This enables the Firm to replace maturing obligations when due and fund assets at appropriate maturities and rates in all market environments. To accomplish this, management uses a variety of liquidity risk measures that take into consideration market conditions, prevailing interest rates, liquidity needs and the desired maturity profile of liabilities.

Risk identification and measurement

Treasury is responsible for setting the Firm's liquidity strategy and targets, understanding the Firm's on- and off-balance sheet liquidity obligations, providing policy guidance, overseeing policy adherence, and maintaining contingency planning and stress testing. In addition, it identifies and measures internal and external liquidity warning signals, such as the unusual widening of spreads, to permit early detection of liquidity issues.

The Firm's three primary measures of liquidity are:

- Holding company short-term position: Measures the parent holding company's ability to repay all obligations with a maturity less than one year at a time when the ability of the Firm's banks to pay dividends to the parent holding company is constrained.
- Cash capital surplus: Measures the Firm's ability to fund assets on a fully collateralized basis, assuming access to unsecured funding is lost.
- Basic surplus: Measures JPMorgan Chase Bank's ability to sustain a 90-day stress event that is specific to the Firm where no new funding can be raised to meet obligations as they come due.

All three primary liquidity measures are managed to provide sufficient surplus in the Firm's liquidity position.

Risk monitoring and reporting

Treasury is responsible for measuring, monitoring, reporting and managing the liquidity profile of the Firm through both normal and stress periods. Treasury analyzes reports to monitor the diversity and maturity structure of the Firm's sources of funding, and to assess downgrade impact scenarios, contingent funding needs, and overall collateral availability and pledging status. A contingency funding plan is in place, intended to help the Firm manage through periods when access to funding is temporarily impaired. A downgrade analysis considers the potential impact of a one- and two-notch downgrade at both the parent and bank level, and calculates the estimated loss of funding as well as the increase in annual funding costs in both scenarios. A trigger-risk funding analysis considers the impact of a bank downgrade below A-1/P-1, including the funding requirements that would be required if such an event were to occur. These liquidity analytics rely on management's judgment about JPMorgan Chase's ability to liquidate assets or use them as collateral for borrowings and take into account credit risk management's historical data on the funding of loan commitments (e.g., commercial paper back-up facilities), liquidity commitments to SPEs, commitments with rating triggers and collateral posting requirements. For a further discussion of SPEs and other off–balance sheet arrangements, see Off–balance sheet arrangements and contractual cash obligations on pages 52–53, as well as Note 1, Note 13, Note 14 and Note 27 on pages 88, 103–106, 106–109, and 119–120, respectively, of this Annual Report.

Funding

Sources of funds

The diversity of the Firm's funding sources enhances financial flexibility and limits dependence on any one source, thereby minimizing the cost of funds. A major source of liquidity for JPMorgan Chase Bank is provided by its large core deposit base. Core deposits include all U.S. deposits insured by the FDIC, up to the legal limit of $100,000 per depositor. In 2004, core bank deposits grew approximately 116% from 2003 year-end levels, primarily the result of the Merger, as well as growth within RFS and TSS. In addition to core deposits, the Firm benefits from substantial, stable deposit balances originated by TSS, Commercial Banking and the IB through the normal course of their businesses.

Additional funding flexibility is provided by the Firm's ability to access the repurchase and asset securitization markets. At December 31, 2004, $72 billion of securities were available for repurchase agreements, and $36 billion of credit card, automobile and mortgage loans were available for securitizations. These alternatives are evaluated on an ongoing basis to achieve an appropriate balance of secured and unsecured funding. The ability to securitize loans, and the associated gains on those securitizations, are principally dependent on the credit quality and yields of the assets securitized and are generally not dependent on the credit ratings of the issuing entity. Transactions between the Firm and its securitization structures are reflected in JPMorgan Chase's consolidated financial statements; these relationships include retained interests in securitization trusts, liquidity facilities and derivative transactions. For further details, see Notes 13 and 14 on pages 103–106 and 106–109, respectively, of this Annual Report.

The Firm is an active participant in the global financial markets. These markets serve as a cost-effective source of funds and are a critical component of the Firm's liquidity management. Decisions concerning the timing and tenor of accessing these markets are based on relative costs, general market conditions, prospective views of balance sheet growth and a targeted liquidity profile.

Issuance

Corporate credit spreads narrowed in 2004 across most industries and sectors, reflecting the market perception that credit risks were improving, as the number of downgrades declined, corporate balance sheet cash positions increased, and corporate profits exceeded expectations. JPMorgan Chase's credit spreads performed in line with peer spreads in 2004. The Firm took advantage of narrowing credit spreads globally by opportunistically issuing long-term debt and capital securities throughout the year. Consistent with its liquidity management policy, the Firm has raised funds at the parent holding company sufficient to cover maturing obligations over the next 12 months and to support the less liquid assets on its balance sheet. High investor cash positions and increased foreign investor participation in the corporate markets allowed JPMorgan Chase to diversify further its funding across the global markets while decreasing funding costs and lengthening maturities.

During 2004, JPMorgan Chase issued approximately $25.3 billion of long-term debt and capital securities. These issuances were partially offset by $16.0 billion of long-term debt and capital securities that matured or were redeemed, and the Firm's redemption of $670 million of preferred stock. In addition, in 2004 the Firm securitized approximately $6.5 billion of residential mortgage loans, $8.9 billion of credit card loans and $1.6 billion of automobile loans, resulting in pre-tax gains (losses) on securitizations of $47 million, $52 million and $(3) million, respectively. For a further discussion of loan securitizations, see Note 13 on pages 103–106 of this Annual Report.

Credit ratings

The credit ratings of JPMorgan Chase's parent holding company and each of its significant banking subsidiaries, as of December 31, 2004, were as follows:

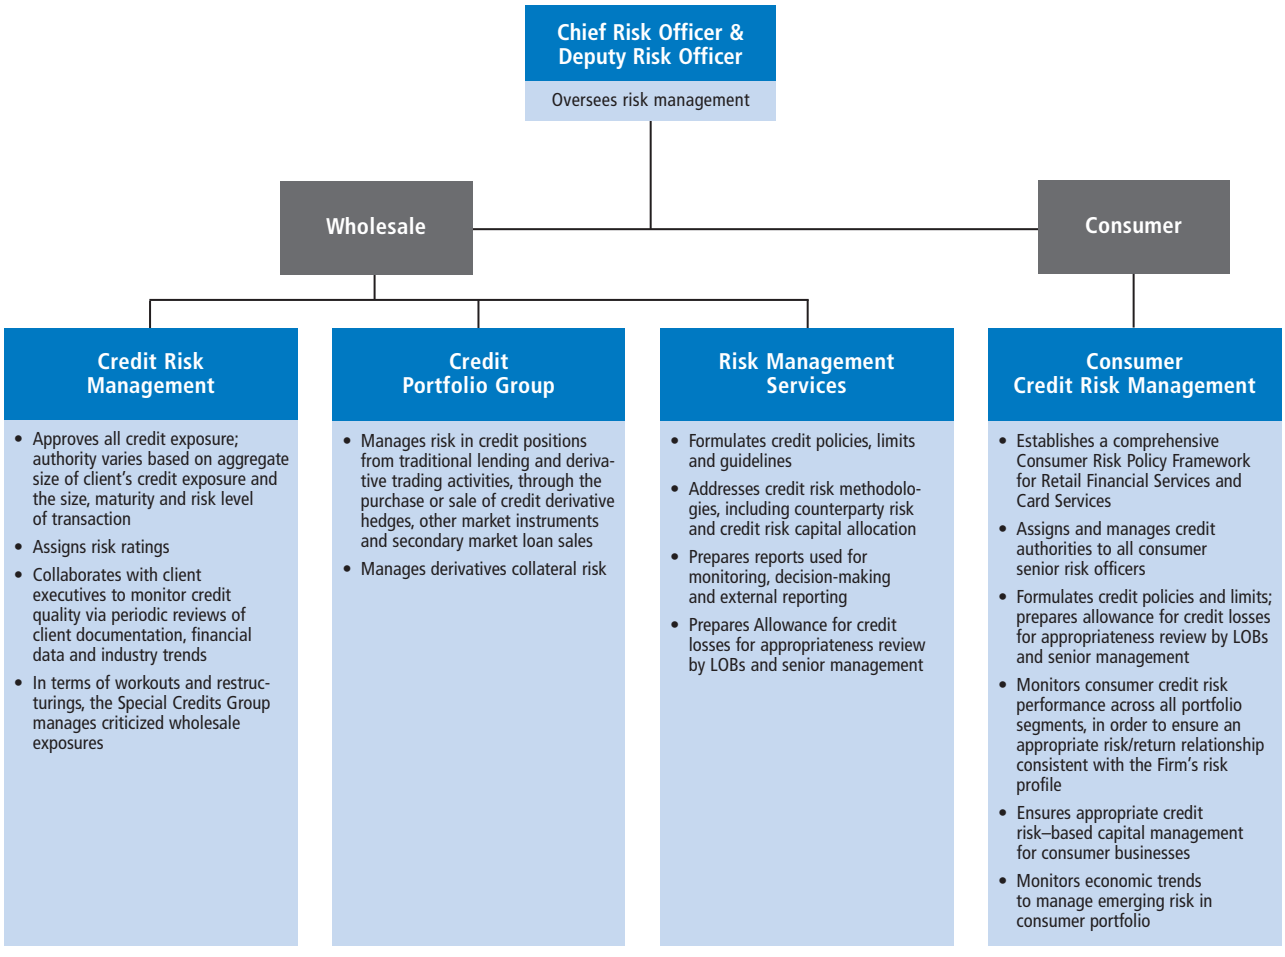
	Short-term debt			Senior long-term debt		
	Moody's	S&P	Fitch	Moody's	S&P	Fitch
JPMorgan Chase & Co.	P-1	A-1	F1	Aa3	A+	A+
JPMorgan Chase Bank, N.A.	P-1	A-1+	F1+	Aa2	AA-	A+
Chase Bank USA, N.A.	P-1	A-1+	F1+	Aa2	AA-	A+

The Firm's principal insurance subsidiaries had the following financial strength ratings as of December 31, 2004:

	Moody's	S&P	A.M. Best
Chase Insurance Life and Annuity Company	A2	A+	A
Chase Insurance Life Company	A2	A+	A

In connection with the Merger, Moody's upgraded the ratings of the Firm by one notch, moving the parent holding company's senior long-term debt rating to Aa3 and JPMorgan Chase Bank's senior long-term debt rating to Aa2; and changed its outlook to stable. Also at that time, Fitch affirmed its ratings and changed its outlook to positive, while S&P affirmed all its ratings and kept its outlook stable.

The cost and availability of unsecured financing are influenced by credit ratings. A reduction in these ratings could adversely affect the Firm's access to liquidity sources, increase the cost of funds, trigger additional collateral requirements and decrease the number of investors and counterparties willing to lend. Critical factors in maintaining high credit ratings include a stable and diverse earnings stream; strong capital ratios; strong credit quality and risk management controls; diverse funding sources; and strong liquidity monitoring procedures.



If the Firm's ratings were downgraded by one notch, the Firm estimates the incremental cost of funds and the potential loss of funding to be negligible. Additionally, the Firm estimates the additional funding requirements for VIEs and other third-party commitments would not be material. In the current environment, the Firm believes a downgrade is unlikely. For additional information on the impact of a credit ratings downgrade on funding requirements for VIEs, and on derivatives and collateral agreements, see Off–balance Sheet Arrangements on pages 52–53 and Ratings profile of derivative receivables mark-to-market ("MTM") on page 64, of this Annual Report.

Credit risk management

Credit risk is the risk of loss from obligor or counterparty default. The Firm provides credit to customers of all sizes, from large corporate clients to loans for the individual consumer. Management manages the risk/reward relationship of each portfolio, discouraging the retention of loan assets that do not generate a positive return above the cost of risk-adjusted capital. The Firm's business strategy for its large corporate wholesale loan portfolio remains primarily one of origination for distribution; the majority of the Firm's wholesale loan originations (primarily to IB clients) continue to be distributed into the marketplace, with residual holds by the Firm averaging less than 10%. With regard to the prime consumer credit market, the Firm focuses on creating a portfolio that is diversified from both a product and a geographical perspective.

The Firm's credit risk management governance structure consists of the primary functions as described in the organizational chart below.

Credit risk organization

In 2004, the Firm continued to enhance its risk management discipline, managing wholesale single-name and industry concentration through its threshold and limit structure and using credit derivatives and loan sales in its portfolio management activity. The Firm manages wholesale exposure concentrations by obligor, risk rating, industry and geography. In addition, the Firm continued to make progress under its multi-year initiative to reengineer specific components of the credit risk infrastructure. The goal is to enhance the Firm's ability to provide immediate and accurate risk and exposure information; actively manage credit risk in the retained portfolio; support client relationships; more quickly manage the allocation of economic capital; and comply with Basel II initiatives.

In 2004, the Firm continued to grow its consumer loan portfolio, focusing on businesses providing the most appropriate risk/reward relationship while keeping within the Firm's desired risk tolerance. During the past year, the Firm also completed a strategic review of all consumer lending portfolio segments. This action resulted in the sale of the $4 billion manufactured home loan portfolio, de-emphasizing vehicle leasing and, subsequent to year-end 2004, the sale of a $2 billion recreational vehicle portfolio. Continued growth in the core consumer lending product set (residential real estate, auto and education finance, credit cards and small business) reflected a focus on the prime credit quality segment of the market.

Risk identification

The Firm is exposed to credit risk through its lending (e.g., loans and lending-related commitments), derivatives trading and capital markets activities. Credit risk also arises due to country or sovereign exposure, as well as indirectly through the issuance of guarantees.

Risk measurement

To measure credit risk, the Firm employs several methodologies for estimating the likelihood of obligor or counterparty default. Losses generated by consumer loans are more predictable than wholesale losses but are subject to cyclical and seasonal factors. Although the frequency of loss is higher on consumer loans than on wholesale loans, the severity of loss is typically lower and more manageable. As a result of these differences, methodologies vary depending on certain factors, including type of asset (e.g., consumer installment versus wholesale loan), risk measurement parameters (e.g., delinquency status and credit bureau score versus wholesale risk rating) and risk management and collection processes (e.g., retail collection center versus centrally managed workout groups).

Credit risk measurement is based on the amount of exposure should the obligor or the counterparty default, and the loss severity given a default event. Based on these factors and related market-based inputs, the Firm estimates both probable and unexpected losses for the wholesale and consumer portfolios. Probable losses, reflected in the Provision for credit losses, are statistically-based estimates of credit losses over time, anticipated as a result of obligor or counterparty default. However, probable losses are not the sole indicators of risk. If losses were entirely predictable, the probable loss rate could be factored into pricing and covered as a normal and recurring cost of doing business. Unexpected losses, reflected in the allocation of credit risk capital, represent the potential volatility of actual losses relative to the probable level of losses (refer to Capital management on pages 50–51 of this Annual Report for a further discussion of the credit risk capital methodology). Risk measurement for the wholesale portfolio is primarily based on risk-rated exposure; and for the consumer portfolio it is based on credit-scored exposure.

Risk-rated exposure

For portfolios that are risk-rated, probable and unexpected loss calculations are based on estimates of probability of default and loss given default. Probability of default is expected default calculated on an obligor basis. Loss given default is an estimate of losses that are based on collateral and structural support for each credit facility. Calculations and assumptions are based on management information systems and methodologies under continual review. Risk ratings are assigned and reviewed on an ongoing basis by Credit Risk Management and revised, if needed, to reflect the borrowers' current risk profile and the related collateral and structural position.

Credit-scored exposure

For credit-scored portfolios (generally Retail Financial Services and Card Services), probable loss is based on a statistical analysis of inherent losses over discrete periods of time. Probable losses are estimated using sophisticated portfolio modeling, credit scoring and decision-support tools to project credit risks and establish underwriting standards. In addition, common measures of credit quality derived from historical loss experience are used to predict consumer losses. Other risk characteristics evaluated include recent loss experience in the portfolios, changes in origination sources, portfolio seasoning, loss severity and underlying credit practices, including charge-off policies. These analyses are applied to the Firm's current portfolios in order to forecast delinquencies and severity of losses, which determine the amount of probable losses. These factors and analyses are updated on a quarterly basis.

Risk monitoring

The Firm has developed policies and practices that are designed to preserve the independence and integrity of decision-making and ensure credit risks are accurately assessed, properly approved, continually monitored and actively managed at both the transaction and portfolio levels. The policy framework establishes credit approval authorities, credit limits, risk-rating methodologies, portfolio-review parameters and problem-loan management. Wholesale credit risk is continually monitored on both an aggregate portfolio level and on an individual customer basis. For consumer credit risk, the key focus items are trends and concentrations at the portfolio level, where potential problems can be remedied through changes in underwriting policies and portfolio guidelines. Consumer Credit Risk Management monitors trends against business expectations and industry benchmarks.

In order to meet its credit risk management objectives, the Firm seeks to maintain a risk profile that is diverse in terms of borrower, product type, industry and geographic concentration. Additional diversification of the Firm's exposure is accomplished through syndication of credits, participations, loan sales, securitizations, credit derivatives and other risk-reduction techniques.

Risk reporting

To enable monitoring of credit risk and decision-making, aggregate credit exposure, credit metric forecasts, hold-limit exceptions and risk profile changes are reported to senior credit risk management regularly. Detailed portfolio reporting of industry, customer and geographic concentrations occurs monthly, and the appropriateness of the allowance for credit losses is reviewed by senior management on a quarterly basis. Through the risk governance structure, credit risk trends and limit exceptions are regularly provided to, and discussed with, the Operating Committee.

Credit portfolio

The following table presents JPMorgan Chase's credit portfolio as of December 31, 2004 and 2003. Total wholesale credit exposure increased by $167 billion, and total consumer exposure increased by $584 billion, at year-end 2004 from year-end 2003. This increase in total exposure (including $71 billion of securitized credit cards) was primarily the result of the Merger.

Wholesale and consumer credit portfolio

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. 2003 reflects the results of heritage JPMorgan Chase only.
(b) Includes Investment Bank, Commercial Banking, Treasury & Securities Services and Asset & Wealth Management.
(c) Amounts are presented gross of the Allowance for loan losses.
(d) Net charge-off rates exclude year-to-date average wholesale loans HFS of $6.4 billion and $3.8 billion for 2004 and 2003, respectively.
(e) Wholesale loans past-due 90 days and over and accruing were $8 million and $42 million at December 31, 2004 and 2003, respectively.
(f) The 2004 amount includes the effect of legally enforceable master netting agreements. Effective January 1, 2004, the Firm elected to report the fair value of derivative assets and liabilities net of cash received and paid, respectively, under legally enforceable master netting agreements. As of December 31, 2004, derivative receivables were $98 billion before netting of $32 billion of cash collateral held.
(g) The Firm also views its credit exposure on an economic basis. For derivative receivables, economic credit exposure is the three-year averages of a measure known as Average exposure (which is the expected MTM value of derivative receivables at future time periods, including the benefit of collateral). Average exposure was $38 billion and $34 billion at December 31, 2004 and December 31, 2003, respectively. See pages 62–64 of this Annual Report for a further discussion of the Firm's derivative receivables.
(h) The Firm also views its credit exposure on an economic basis. For lending-related commitments, economic credit exposure is represented by a "loan equivalent," which is the portion of the unused commitments or other contingent exposure that is expected, based on average portfolio historical experience, to become outstanding in the event of a default by the obligor. Loan equivalents were $162 billion and $104 billion at December 31, 2004 and 2003, respectively. See page 65 of this Annual Report for a further discussion of this measure.
(i) Includes unused advised lines of credit totaling $23 billion and $19 billion at December 31, 2004 and 2003, respectively, which are not legally binding. In regulatory filings with the FRB, unused advised lines are not reportable.
(j) Represents Total wholesale loans, Derivative receivables, Interests in purchased receivables, Other receivables and Wholesale lending–related commitments.
(k) Net charge-off rates exclude year-to-date average HFS consumer loans (excluding Card) in the amount of $14.7 billion and $25.3 billion for 2004 and 2003, respectively.
(l) Includes Retail Financial Services and Card Services.
(m) Past-due loans 90 days and over and accruing includes credit card receivables of $998 million and $273 million, and related credit card securitizations of $1.3 billion and $879 million, at December 31, 2004 and 2003, respectively.
(n) Represents securitized credit cards. For a further discussion of credit card securitizations, see Card Services on pages 39–40 of this Annual Report.
(o) Represents Total consumer loans, Credit card securitizations and Consumer lending–related commitments.
(p) At December 31, 2004 and 2003, includes $23 million and $10 million, respectively, of wholesale assets acquired in loan satisfactions, and $224 million and $206 million, respectively, of consumer assets acquired in loan satisfactions.
(q) At December 31, 2004 and 2003, excludes $1.5 billion and $2.3 billion, respectively, of residential mortgage receivables in foreclosure status that are insured by government agencies. These amounts are excluded as reimbursement is proceeding normally.
(r) Represents distressed wholesale loans purchased as part of IB's proprietary investing activities.
(s) Represents the notional amount of single-name and portfolio credit derivatives used to manage the credit risk of wholesale credit exposure; these derivatives do not qualify for hedge accounting under SFAS 133.
(t) Excludes purchased held-for-sale ("HFS") wholesale loans.
(u) Nonperforming assets include wholesale HFS loans of $2 million and $30 million for 2004 and 2003, respectively, and consumer HFS loans of $13 million and $45 million for 2004 and 2003, respectively. HFS loans are carried at the lower of cost or market, and declines in value are recorded in Other income.

NA – Not applicable.

Wholesale credit portfolio

The increase in total wholesale exposure was almost entirely due to the Merger. Derivative receivables declined by $18 billion, primarily because, effective January 1, 2004, the Firm elected to report the fair value of derivative assets and liabilities net of cash received and paid, respectively, under legally enforceable master netting agreements. Loans, lending-related commitments and interests in purchased receivables increased by $60 billion, $98 billion and $27 billion, respectively, primarily as a result of the Merger.

Below are summaries of the maturity and ratings profiles of the wholesale portfolio as of December 31, 2004 and 2003. The ratings scale is based on the Firm's internal risk ratings and is presented on an S&P-equivalent basis.

Wholesale exposure

	Maturity profile[a]				Ratings profile						
					Investment-grade ("IG")			Noninvestment-grade			
At December 31, 2004 (in billions, except ratios)	<1 year	1–5 years	> 5 years	Total	AAA to AA-	A+ to A-	BBB+ to BBB-	BB+ to B-	CCC+ & below	Total	Total % of IG
Loans	43%	43%	14%	100%	$ 31	$ 20	$ 36	$ 43	$ 5	$ 135	64%

	Maturity profile[a]				Ratings profile						
					Investment-grade ("IG")			Noninvestment-grade			
At December 31, 2003[f] (in billions, except ratios)	<1 year	1–5 years	> 5 years	Total	AAA to AA-	A+ to A-	BBB+ to BBB-	BB+ to B-	CCC+ & below	Total	Total % of IG
Loans	50%	35%	15%	100%	$ 14	$ 13	$ 20	$ 22	$ 6	$ 75	63%
Derivative receivables[b]	20	41	39	100	47	15	12	9	1	84	88
Interests in purchased receivables	27	71	2	100	5	—	—	—	—	5	100
Lending-related commitments[b][c]	52	45	3	100	79	57	48	26	2	212	87
Total exposure[d]	44%	43%	13%	100%	$ 145	$ 85	$ 80	$ 57	$ 9	$ 376	83%
Credit derivative hedges notional[e]	16%	74%	10%	100%	$ (10)	$ (12)	$ (12)	$ (2)	$ (1)	$ (37)	92%

(a) The maturity profile of loans and lending-related commitments is based upon the remaining contractual maturity. The maturity profile of derivative receivables is based upon the maturity profile of Average exposure. See page 63 of this Annual Report for a further discussion of Average exposure.
(b) Based on economic credit exposure, the total percentage of Investment grade for derivative receivables was 92% and 91% as of December 31, 2004 and 2003, respectively, and for lending-related commitments was 85% and 88% as of December 31, 2004 and 2003, respectively. See footnotes (g) and (h) on page 59 of this Annual Report for a further discussion of economic credit exposure.
(c) Based on economic credit exposure, the maturity profile for the <1 year, 1–5 years and >5 years categories would have been 31%, 65% and 4%, respectively, as of December 31, 2004, and 38%, 58% and 4%, respectively, as of December 31, 2003. See footnote (h) on page 59 of this Annual Report for a further discussion of economic credit exposure.
(d) Based on economic credit exposure, the maturity profile for <1 year, 1–5 years and >5 years categories would have been 35%, 54% and 11%, respectively, as of December 31, 2004, and 36%, 46% and 18%, respectively, as of December 31, 2003. See footnotes (g) and (h) on page 59 of this Annual Report for a further discussion of economic credit exposure.
(e) Ratings are based on the underlying referenced assets.
(f) Heritage JPMorgan Chase only.

As of December 31, 2004, the wholesale exposure ratings profile remained relatively stable compared with December 31, 2003.

Wholesale credit exposure – selected industry concentration

The Firm actively manages the size and diversification of its industry concentrations, with particular attention paid to industries with actual or potential credit concerns. Following the Merger, the Firm commenced a thorough review of industry definitions and assignments in each of the heritage firm's portfolios. As a result of this review, the Firm's industry structure was modified, resulting in two new industry groups within the top-10 industry concentrations at December 31, 2004: Banks and finance companies (consists of the industries termed Commercial banks and Finance companies and lessors at year-end 2003) and Retail and consumer services (previously separate industries at December 31, 2003). The Merger resulted in increases in nearly every top 10 industry concentration. Exposures to Banks and finance companies and Asset managers declined, primarily as a result of the Firm's election to report fair value of derivative assets and liabilities net of cash received and paid, respectively, under legally enforceable master netting agreements, which affected derivative receivables. A significant portion of the Firm's derivatives portfolio is transacted with customers in these industries.

(a) Based on December 31, 2004, determination of Top 10 industries.
(b) Heritage JPMorgan Chase only.
(c) Credit exposure is net of risk participations and excludes the benefit of credit derivative hedges and collateral held against derivative receivables or loans. For 2004, collateral held against derivative receivables excludes $32 billion of cash collateral as a result of the Firm electing to report the fair value of derivative assets and liabilities net of cash received and paid, respectively, under legally enforceable master netting agreements.
(d) Excludes purchased nonaccrual loans held for sale of $351 million and $22 million at December 31, 2004 and 2003, respectively.
(e) Represents notional amounts only; these credit derivatives do not qualify for hedge accounting under SFAS 133.

Selected industry discussion

Presented below is a discussion of several industries to which the Firm has significant exposure and which it continues to monitor because of actual or potential credit concerns.

- **Banks and finance companies:** This industry group, primarily consisting of exposure to commercial banks, is the largest segment of the Firm's wholesale credit portfolio. Credit quality is high, as 90% of the exposure in this category is rated investment-grade.
- **Real estate:** Wholesale real estate grew considerably as a result of the Merger. The resulting exposure is diversified by transaction type, borrower base, geography and property type. In 2004, the portfolio continued to benefit from disciplined underwriting, low interest rates, high liquidity and increased capital demand.
- **All other:** All other at December 31, 2004, included $298 billion of credit exposure to 21 industry segments. Exposures related to SPEs and high-net-worth individuals totaled 45% of this category. SPEs provide secured financing (generally backed by receivables, loans or bonds on a bankruptcy-remote, non-recourse or limited-recourse basis) originated by companies in a diverse group of industries that are not highly correlated. The remaining All other exposure is well diversified across other industries, none of which comprises more than 3% of total exposure.

Wholesale criticized exposure

Exposures deemed criticized generally represent a ratings profile similar to a rating of CCC+/Caa1 and lower, as defined by Standard & Poor's/Moody's. Despite the Merger, the criticized component of the portfolio decreased to $8.3 billion at December 31, 2004, from $8.9 billion at year-end 2003. The portfolio continued to experience improvement due to debt repayments and

facility upgrades as a result of client recapitalizations; additional security and collateral taken in refinancings; client upgrades from improved financial performance; gross charge-offs; and a lack of migration of new exposures into the portfolio.

Criticized exposure – industry concentrations

As of December 31, 2004 (in millions)

Utilities	$ 890	10.7%
Real estate	765	9.2
Media	509	6.1
Chemicals/plastics	488	5.9
Consumer products	479	5.8
Machinery and equipment manufacturing	459	5.6
Airlines	450	5.4
Business services	444	5.4
Metals/mining	438	5.3
Building materials/construction	430	5.2
All other	2,932	35.4
Total	$ 8,284	100%

Wholesale nonperforming assets (excluding purchased held-for-sale wholesale loans) decreased from December 31, 2003, as a result of gross charge-offs of $543 million taken during 2004. Wholesale net charge-offs improved significantly compared with 2003, as a result of lower gross charge-offs and slightly higher recoveries. The 2004 wholesale net charge-off rate was 0.19%, compared with 0.97% in 2003.

Although future charge-offs in the wholesale portfolio and overall credit quality are subject to uncertainties, which may cause actual results to differ from historic performance, the Firm anticipates that the wholesale provision for credit losses will be higher in 2005 than it was in 2004, as the provision for credit losses moves to more normal levels over time.

Derivative contracts

In the normal course of business, the Firm utilizes derivative instruments to meet the needs of customers, to generate revenues through trading activities, to manage exposure to fluctuations in interest rates, currencies and other markets and to manage its own credit risk. The Firm uses the same credit risk management procedures as those used for traditional lending to assess and approve potential credit exposures when entering into derivative transactions.

The following table summarizes the aggregate notional amounts and the reported derivative receivables (i.e., the MTM or fair value of the derivative contracts after taking into account the effects of legally enforceable master netting agreements) at each of the dates indicated:

Notional amounts and derivative receivables marked to market ("MTM")

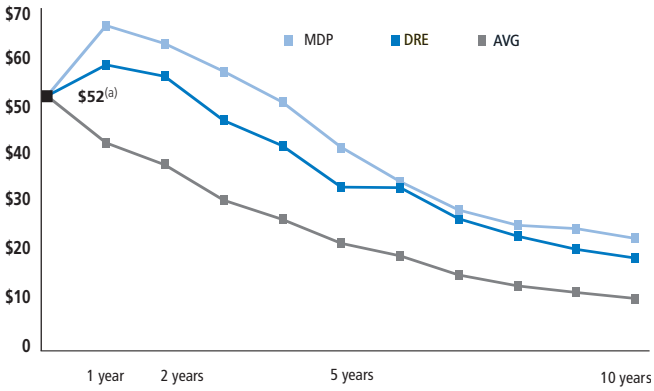
As of December 31, (in billions)	Notional amounts[a]		Derivative receivables MTM	
	2004	2003[b]	2004	2003[b]
Interest rate	$ 37,022	$ 31,252	$ 46	$ 60
Foreign exchange	1,886	1,545	8	10
Equity	434	328	6	9
Credit derivatives	1,071	578	3	3
Commodity	101	61	3	2
Total	40,514	33,764	66	84
Collateral held against derivative receivables	NA	NA	(9)[c]	(36)
Exposure net of collateral	NA	NA	$ 57	$ 48

(a) The notional amounts represent the gross sum of long and short third-party notional derivative contracts, excluding written options and foreign exchange spot contracts.
(b) Heritage JPMorgan Chase only.
(c) The Firm held $41 billion of collateral against derivative receivables as of December 31, 2004, consisting of $32 billion in net cash received under credit support annexes to legally enforceable master netting agreements, and $9 billion of other highly liquid collateral. The benefit of the $32 billion is reflected within the $66 billion of derivative receivables MTM. Excluded from the $41 billion of collateral is $10 billion of collateral delivered by clients at the initiation of transactions; this collateral secures exposure that could arise in the existing portfolio of derivatives should the MTM of the client's transactions move in the Firm's favor. Also excluded are credit enhancements in the form of letter-of-credit and surety receivables.

The $41 trillion of notional principal of the Firm's derivative contracts outstanding at December 31, 2004, significantly exceeds the possible credit losses that could arise from such transactions. For most derivative transactions, the notional principal amount does not change hands; it is simply used as a reference to calculate payments. The appropriate measure of current credit risk is, in the Firm's view, the MTM value of the contract, which represents the cost to replace the contracts at current market rates should the counterparty default. When JPMorgan Chase has more than one transaction outstanding with a counterparty, and a legally enforceable master netting agreement exists with that counterparty, the netted MTM exposure, less collateral held, represents, in the Firm's view, the appropriate measure of current credit risk. At December 31, 2004, the MTM value of derivative receivables (after taking into account the effects of legally enforceable master netting agreements and the impact of net cash received under credit support annexes to such legally enforceable master netting agreements) was $66 billion. Further, after taking into account $9 billion of other highly liquid collateral held by the Firm, the net current MTM credit exposure was $57 billion.

While useful as a current view of credit exposure, the net MTM value of the derivative receivables does not capture the potential future variability of that credit exposure. To capture the potential future variability of credit exposure, the Firm calculates, on a client-by-client basis, three measures of potential derivatives-related credit loss: Peak, Derivative Risk Equivalent ("DRE") and Average exposure ("AVG"). These measures all incorporate netting and collateral benefits, where applicable.

Peak exposure to a counterparty is an extreme measure of exposure calculated at a 97.5% confidence level. However, the total potential future credit risk embedded in the Firm's derivatives portfolio is not the simple sum of all Peak client credit risks. This is because, at the portfolio level, credit risk is reduced by the fact that when offsetting transactions are done with separate counterparties, only one of the two trades can generate a credit loss, even if both counterparties were to default simultaneously. The Firm refers to this effect as market diversification, and the Market-Diversified Peak ("MDP") measure is a portfolio aggregation of counterparty Peak measures, representing the maximum losses at the 97.5% confidence level that would occur if all counterparties defaulted under any one given market scenario and timeframe.



Derivative Risk Equivalent exposure is a measure that expresses the riskiness of derivative exposure on a basis intended to be equivalent to the riskiness of loan exposures. This is done by equating the unexpected loss in a derivative counterparty exposure (which takes into consideration both the loss volatility and the credit rating of the counterparty) with the unexpected loss in a loan exposure (which takes into consideration only the credit rating of the counterparty). DRE is a less extreme measure of potential credit loss than Peak and is the primary measure used by the Firm for credit approval of derivative transactions.

Finally, Average exposure is a measure of the expected MTM value of the Firm's derivative receivables at future time periods, including the benefit of collateral. AVG exposure over the total life of the derivative contract is used as the primary metric for pricing purposes and is used to calculate credit capital and the Credit Valuation Adjustment ("CVA"), as described further below.

The chart below shows the exposure profiles to derivatives over the next 10 years as calculated by the MDP, DRE and AVG metrics. All three measures generally show declining exposure after the first year, if no new trades were added to the portfolio.

Exposure profile of derivatives measures

December 31, 2004
(in billions)

(a) Excludes $5 billion from the $57 billion of reported derivative receivables MTM net of collateral. The exclusion reflects risk mitigation for exchange traded deals and equity option calls.

The MTM value of the Firm's derivative receivables incorporates an adjustment, the CVA, to reflect the credit quality of counterparties. The CVA is based on the Firm's AVG to a counterparty, and on the counterparty's credit spread in the credit derivatives market. The primary components of changes in CVA are credit spreads, new deal activity or unwinds, and changes in the underlying market environment. The Firm believes that active risk management is essential to controlling the dynamic credit risk in the derivatives portfolio. The Firm risk manages its exposure to changes in CVA by entering into credit derivative transactions, as well as interest rate, foreign exchange, equity and commodity derivatives transactions. The MTM value of the Firm's derivative payables does not incorporate a valuation adjustment to reflect JPMorgan Chase's credit quality.

The following table summarizes the ratings profile of the Firm's Consolidated balance sheet Derivative receivables MTM, net of cash and other highly liquid collateral, for the dates indicated:

Ratings profile of derivative receivables MTM

Rating equivalent	2004		2003[b]	
December 31, (in millions)	Exposure net of collateral[a]	% of exposure net of collateral	Exposure net of collateral	% of exposure net of collateral
AAA to AA-	$ 30,384	53%	$ 24,697	52%
A+ to A-	9,109	16	7,677	16
BBB+ to BBB-	9,522	17	7,564	16
BB+ to B-	7,271	13	6,777	14
CCC+ and below	395	1	822	2
Total	$ 56,681	100%	$ 47,537	100%

(a) The Firm held $41 billion of collateral against derivative receivables as of December 31, 2004, consisting of $32 billion in net cash received under credit support annexes to legally enforceable master netting agreements, and $9 billion of other highly liquid collateral. The benefit of the $32 billion is reflected within the $66 billion of derivative receivables MTM. Excluded from the $41 billion of collateral is $10 billion of collateral delivered by clients at the initiation of transactions; this collateral secures exposure that could arise in the existing portfolio of derivatives should the MTM of the client's transactions move in the Firm's favor. Also excluded are credit enhancements in the form of letter-of-credit and surety receivables.
(b) Heritage JPMorgan Chase only.

The Firm actively pursues the use of collateral agreements to mitigate counterparty credit risk in derivatives. The percentage of the Firm's derivatives transactions subject to collateral agreements increased slightly, to 79% as of December 31, 2004, from 78% at December 31, 2003. The Firm held $41 billion of collateral as of December 31, 2004 (including $32 billion of net cash received under credit support annexes to legally enforceable master netting agreements), compared with $36 billion as of December 31, 2003. The Firm posted $31 billion of collateral as of December 31, 2004, compared with $27 billion at the end of 2003.

Certain derivative and collateral agreements include provisions that require the counterparty and/or the Firm, upon specified downgrades in their respective credit ratings, to post collateral for the benefit of the other party. As of December 31, 2004, the impact of a single-notch ratings downgrade to JPMorgan Chase Bank, from its current rating of AA- to A+, would have been an additional $1.5 billion of collateral posted by the Firm; the impact of a six-notch ratings downgrade (from AA- to BBB-) would have been $3.9 billion of additional collateral. Certain derivative contracts also provide for termination of the contract, generally upon a downgrade of either the Firm or the counterparty, at the then-existing MTM value of the derivative contracts.

Use of credit derivatives

The following table presents the Firm's notional amounts of credit derivatives protection bought and sold by the respective businesses as of December 31, 2004 and 2003:

Credit derivatives positions

	Notional amount				
	Portfolio management		Dealer/client		
December 31, (in millions)	Protection bought[b]	Protection sold	Protection bought	Protection sold	Total
2004	$ 37,237	$ 37	$501,266	$ 532,335	$1,070,875
2003[a]	37,349	67	264,389	275,888	577,693

(a) Heritage JPMorgan Chase only.
(b) Includes $2 billion at both December 31, 2004 and 2003, of portfolio credit derivatives.

JPMorgan Chase has limited counterparty exposure as a result of credit derivatives transactions. Of the $66 billion of total Derivative receivables at December 31, 2004, approximately $3 billion, or 5%, was associated with credit derivatives, before the benefit of highly liquid collateral. The use of credit derivatives to manage exposures by the Credit Portfolio Group does not reduce the reported level of assets on the balance sheet or the level of reported off–balance sheet commitments.

Credit portfolio management activity

In managing its wholesale credit exposure, the Firm purchases single-name and portfolio credit derivatives. As of December 31, 2004, the notional outstanding amount of protection bought via single-name and portfolio credit derivatives was $35 billion and $2 billion, respectively. The Firm also diversifies its exposures by providing (i.e., selling) credit protection, which increases exposure to industries or clients where the Firm has little or no client-related exposure. This activity is not material to the Firm's overall credit exposure.

Use of single-name and portfolio credit derivatives

December 31, (in millions)	Notional amount of protection bought 2004	2003[a]
Credit derivative hedges of:		
Loans and lending-related commitments	$ 25,002	$ 22,471
Derivative receivables	12,235	14,878
Total	$ 37,237	$ 37,349

(a) Heritage JPMorgan Chase only.

The credit derivatives used by JPMorgan Chase for its portfolio management activities do not qualify for hedge accounting under SFAS 133, and therefore, effectiveness testing under SFAS 133 is not performed. These derivatives are reported at fair value, with gains and losses recognized as Trading revenue. The MTM value incorporates both the cost of credit derivative premiums and changes in value due to movement in spreads and credit events, whereas the loans and lending-related commitments being risk managed are accounted for on an accrual basis. Loan interest and fees are generally recognized in Net interest income, and impairment is recognized in the Provision for credit losses. This asymmetry in accounting treatment, between loans and lending-related commitments and the credit derivatives utilized in portfolio management

activities, causes earnings volatility that is not representative of the true changes in value of the Firm's overall credit exposure. The MTM treatment of both the Firm's credit derivatives used for managing credit exposure ("short" credit positions) and the CVA, which reflects the credit quality of derivatives counterparty exposure ("long" credit positions), provides some natural offset.

In 2004, there were $44 million of losses in Trading revenue from credit portfolio management activities. The losses consisted of $297 million related to credit derivatives used to manage the Firm's credit exposure; of this amount, $234 million was associated with credit derivatives used to manage accrual lending activities, and $63 million with credit derivatives used to manage the derivatives portfolio. The losses were largely due to the ongoing cost of buying credit protection and some additional impact due to the global tightening of credit spreads. These losses were partially offset by $253 million of gains from a decrease in the MTM value of the CVA, a result of the same factors.

The 2003 credit portfolio management activity resulted in $191 million of losses included in Trading revenue. These losses included $746 million related to credit derivatives that were used to risk manage the Firm's credit exposure; approximately $504 million of this amount was associated with credit derivatives used to manage accrual lending activities, and the remainder was primarily related to credit derivatives used to manage the credit risk of MTM derivative receivables. The losses were generally driven by an overall global tightening of credit spreads. The $746 million loss was partially offset by $555 million of trading revenue gains, primarily related to the decrease in the MTM value of the CVA due to credit spread tightening.

The Firm also actively manages its wholesale credit exposure through loan and commitment sales. During 2004 and 2003, the Firm sold $5.9 billion and $5.2 billion of loans and commitments, respectively, resulting in losses of $8 million and $54 million, respectively, in connection with the management of its wholesale credit exposure. These activities are not related to the Firm's securitization activities, which are undertaken for liquidity and balance sheet management purposes. For a further discussion of securitization activity, see Note 13 on pages 103–106 of this Annual Report.

Dealer/client activity

As of December 31, 2004, the total notional amounts of protection purchased and sold by the dealer business were $501 billion and $532 billion, respectively. The mismatch between these notional amounts is attributable to the Firm selling protection on large, diversified, predominantly investment-grade portfolios (including the most senior tranches) and then risk managing these positions by buying protection on the more subordinated tranches of the same portfolios. In addition, the Firm may use securities to risk manage certain derivative positions. Consequently, while there is a mismatch in notional amounts of credit derivatives, in the Firm's view, the risk positions are largely matched.

Lending-related commitments

The contractual amount of wholesale lending-related commitments was $309 billion at December 31, 2004, compared with $211 billion at December 31, 2003. The increase was primarily due to the Merger. In the Firm's view, the total contractual amount of these instruments is not representative of the Firm's actual credit risk exposure or funding requirements. In determining the amount of credit risk exposure the Firm has to wholesale lending-related commitments, which is used as the basis for allocating credit risk capital to these instruments, the Firm has established a "loan-equivalent" amount for each commitment; this represents the portion of the unused commitment or other contingent exposure that is expected, based on average portfolio historical experience, to become outstanding in the event of a default by an obligor. The amount of the loan equivalents as of December 31, 2004 and 2003, was $162 billion and $104 billion, respectively.

Country exposure

The Firm has a comprehensive process for measuring and managing its exposures and risk in emerging markets countries – defined as those countries potentially vulnerable to sovereign events. Exposures to a country include all credit-related lending, trading, and investment activities, whether cross-border or locally funded. Exposure amounts are adjusted for credit enhancements (e.g. guarantees and letters of credit) provided by third parties located outside the country, if the enhancements fully cover the country risk, as well as the business risk. As of December 31, 2004, the Firm's exposure to any individual country was not material. In addition to monitoring country exposures, the Firm uses stress tests to measure and manage the risk of extreme loss associated with sovereign crises.

Consumer credit portfolio

JPMorgan Chase's consumer portfolio consists primarily of residential mortgages and home equity loans, credit cards, auto and education financings and loans to small businesses. The domestic consumer portfolio reflects the benefit of diversification from both a product and a geographical perspective. The primary focus is on serving the prime consumer credit market.

The following table presents managed consumer credit–related information for the dates indicated:

Consumer portfolio

As of or for the year ended December 31, (in millions, except ratios)	Credit-related exposure		Nonperforming assets		Net charge-offs		Average annual net charge-off rate[e]

(a) Includes $406 million of charge-offs related to the manufactured home loan portfolio in the fourth quarter of 2004.
(b) Past-due loans 90 days and over and accruing includes credit card receivables of $998 million and $273 million, and related credit card securitizations of $1.3 billion and $879 million at December 31, 2004 and 2003, respectively.
(c) Represents securitized credit cards. For a further discussion of credit card securitizations, see Card Services on page 39 of this Annual Report.
(d) Heritage JPMorgan Chase only.
(e) Net charge-off rates exclude average loans HFS in the amount of $14.7 billion and $25.3 billion for 2004 and 2003, respectively.
NA – Not applicable.

Total managed consumer loans as of December 31, 2004, were $338 billion, up from $174 billion at year-end 2003, reflecting the addition of the Bank One consumer credit portfolios. Consumer lending–related commitments increased by 232% to $601 billion at December 31, 2004, reflecting the impact of the Merger. The following discussion relates to the specific loan and lending-related categories within the consumer portfolio:

Retail Financial Services

Average RFS loan balances for 2004 were $163 billion. New loans originated in 2004 reflect higher credit quality, consistent with management's focus on the prime credit market segment. The net charge-off rate for retail loans in 2004 was 0.67%, an increase of 27 basis points from 2003. This increase was primarily attributable to the Merger and to $406 million of charge-offs in the fourth quarter of 2004, which were associated with the sale of the $4 billion manufactured home loan portfolio.

Future RFS charge-offs and credit quality are subject to uncertainties which may cause actual results to differ from current anticipated performance, including the direction and level of loan delinquencies, changes in consumer behavior, bankruptcy trends, portfolio seasoning, interest rate movements and portfolio mix, among other factors.

The Firm proactively manages its retail credit operation. Ongoing efforts include continual review and enhancement of credit underwriting criteria and refinement of pricing and risk management models.

Home Finance: Home finance loans on the balance sheet as of December 31, 2004, were $125 billion. This consisted of $68 billion of home equity and other loans and $57 billion of mortgages, including mortgage loans held-for-sale. Home equity and other loans previously included manufactured home loans, a product the Firm stopped originating at mid-year 2004; the Firm sold substantially all of its manufactured home loan portfolio at the end of 2004. The $125 billion in Home Finance receivables as of December 31, 2004, reflects an increase of $50 billion from year-end 2003, driven by the addition of Bank One's home equity and mortgage portfolios. Home Finance provides real estate lending to the full spectrum of credit borrowers, which included $7 billion in sub-prime credits at December 31, 2004. The geographic distribution of outstanding consumer real estate loans is well diversified.

Consumer real estate loan portfolio by geographic location

December 31, (in billions)	2004 Outstanding	2004 %	2003[a] Outstanding	2003[a] %

Michigan	5.2	4	1.2	2
New Jersey	4.5	4	3.1	4
Colorado	3.2	3	1.5	2
Total Top 10	88.4	71	52.2	70
Other	36.3	29	22.4	30
Total	$ 124.7	100%	$ 74.6	100%

(a) Heritage JPMorgan Chase only.

Auto & Education Finance: As of December 31, 2004, Auto & education finance loans increased to $63 billion, up from $43 billion at year-end 2003. The acquisition of the Bank One portfolio was responsible for the increase. The Auto & education loan portfolio reflects a high concentration of prime quality credits. During the past year, the Firm completed a strategic review of all consumer lending portfolio segments. This review resulted in the Firm choosing to de-emphasize vehicle leasing, which, as of December 31, 2004, comprised $8 billion of outstandings. It is anticipated that over time vehicle leases will account for a smaller share of balance sheet receivables and exposure. The strategic review also resulted in the sale of a $2 billion recreational vehicle portfolio in early 2005.

Consumer & Small Business/Insurance: As of December 31, 2004, Small business & other consumer loans increased to $15 billion compared with 2003 year-end levels of $4 billion. This portfolio segment is primarily comprised of loans to small businesses, and the increase reflects the acquisition of the Bank One small business portfolio. The portfolio reflects highly collateralized loans, often with personal loan guarantees.

Card Services

JPMorgan Chase analyzes its credit card portfolio on a managed basis, which includes credit card receivables on the consolidated balance sheet and those receivables sold to investors through securitization. Managed credit card receivables were $135 billion at December 31, 2004, an increase of $83 billion from year-end 2003, reflecting the acquisition of the Bank One portfolio.

Consumer credit quality trends continue to improve overall, reflecting general economic conditions and reduced consumer bankruptcy filings versus the prior year. The decrease in the managed credit card net charge-off rate, to 5.27% in 2004 from 5.90% in 2003, reflected the impact of the Merger, as well as management's continued emphasis on prudent credit risk management, including disciplined underwriting and account management practices targeted to the prime and super-prime credit sectors. Credit Risk Management tools used to manage the level and volatility of losses for credit card accounts have been continually updated, and, where appropriate, these tools were adjusted to reduce credit risk. The managed credit card portfolio continues to reflect a well-seasoned portfolio that has good U.S. geographic diversification.

Future charge-offs in the credit card portfolio and overall credit quality are subject to uncertainties, which may cause actual results to differ from historic performance. This could include the direction and level of loan delinquencies, changes in consumer behavior, bankruptcy trends, portfolio seasoning, interest rate movements and portfolio mix, among other factors. While current economic and credit data suggest that consumer credit quality will not significantly deteriorate, significant deterioration in the general economy could materially change these expectations.

Allowance for credit losses

JPMorgan Chase's allowance for credit losses is intended to cover probable credit losses, including losses where the asset is not specifically identified or the size of the loss has not been fully determined. At least quarterly, the allowance for credit losses is reviewed by the Chief Risk Officer and the Deputy Chief Risk Officer of the Firm and is discussed with a risk subgroup of the Operating Committee, relative to the risk profile of the Firm's credit portfolio and current economic conditions. The allowance is adjusted based on that review if, in management's judgment, changes are warranted. The allowance includes an asset-specific component and a formula-based component, the latter of which consists of a statistical calculation and adjustments to the statistical calculation. For further discussion of the components of the Allowance for credit losses, see Critical accounting estimates used by the Firm on page 77 and Note 12 on pages 102–103 of this Annual Report. At December 31, 2004, management deemed the allowance for credit losses to be sufficient to absorb losses that are inherent in the portfolio, including losses that are not specifically identified or for which the size of the loss has not yet been fully determined.

Summary of changes in the allowance for credit losses

For the year ended December 31,[a]	2004			2003		
(in millions)	Wholesale	Consumer	Total	Wholesale	Consumer	Total
Loans:						
Beginning balance	$ 2,204	$ 2,319	$ 4,523	$ 2,936	$ 2,414	$ 5,350

Provision for lending-related commitments:						
Provision excluding accounting policy conformity	(111)	(1)	(112)	(40)	1	(39)
Accounting policy conformity	(227)	—	(227)	—	—	—
Total Provision for lending-related commitments	(338)	(1)	(339)	(40)	1	(39)
Other	(1)	—	(1)	(3)	3	—
Ending balance	$ 480	$ 12	$ 492[g]	$ 320	$ 4	$ 324

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase. 2003 reflects the results of heritage JPMorgan Chase only.
(b) Includes $469 million of asset-specific loss and approximately $2.6 billion of formula-based loss. Included within the formula-based loss is $1.6 billion related to a statistical calculation and adjustments to the statistical calculation of $990 million.
(c) Includes $406 million of charge-offs related to the sale of the $4 billion manufactured home loan portfolio in the fourth quarter of 2004.
(d) Consists of an increase of approximately $1.4 billion as a result of the decertification of heritage Bank One seller's interest in credit card securitizations, partially offset by a reduction of $254 million to conform provision methodologies.
(e) Includes $3.2 billion and $1.0 billion of consumer statistical and adjustments to statistical components, respectively, at December 31, 2004.
(f) Primarily represents the transfer of the allowance for accrued fees on reported credit card loans.
(g) Includes $130 million of asset-specific loss and $362 million of formula-based loss. Note: The formula-based loss for lending-related commitments is based on statistical calculation. There is no adjustment to the statistical calculation for lending-related commitments.

Overall: The Allowance for credit losses increased by $3.0 billion from December 31, 2003, to December 31, 2004, primarily driven by the Merger. Adjustments required to conform to the combined Firm's allowance methodology, and alignment of accounting practices related to the seller's interest in credit card securitizations, resulted in a net increase in the Provision for credit losses of $858 million. See Note 12 on pages 102–103 of this Annual Report.

Loans: The allowance has two components: asset-specific and formula-based. As of December 31, 2004, management deemed the allowance to be appropriate. Excluding loans held for sale, the allowance represented 1.94% of loans at December 31, 2004, compared with 2.33% at year-end 2003.

The wholesale component of the allowance was $3.1 billion as of December 31, 2004, an increase from year-end 2003, primarily due to the Merger. The wholesale allowance also reflected a reduction of $103 million in the provision as a result of conforming the combined Firm's allowance methodology.

The consumer component of the allowance was $4.2 billion as of December 31, 2004, an increase from December 31, 2003, primarily attributable to the Merger and the decertification of Bank One's seller's retained interest in credit card securitizations. Adjustments required to conform to the combined Firm's allowance methodology included a reduction of $192 million in the Allowance for loan losses within RFS. Conforming the methodology within Card Services reduced the Allowance for loan losses by $62 million.

Additionally, in Card Services, $128 million in allowance for accrued fees and finance charges was reclassified from the Allowance for loan losses to Loans.

At the time of the Merger, Bank One's seller's interest in credit card securitizations was in a certificated or security form and recorded at fair value. Subsequently, a decision was made to decertificate these assets, which resulted in a reclassification of the seller's interest from Available-for-sale securities to Loans, at fair value, with no allowance for credit losses. Generally, as the underlying credit card receivables represented by the seller's interest were paid off, customers continued to use their credit cards and originate new receivables, which were then recorded as Loans at historical cost. As these new loans aged, it was necessary to establish an Allowance for credit losses consistent with the Firm's credit policies. During the second half of 2004, approximately $1.4 billion of the Allowance for loan losses was established through the provision associated with newly originated receivables related to the seller's interest.

Lending-related commitments: To provide for the risk of loss inherent in the Firm's process of extending credit, management also computes an asset-specific component and a formula-based component for wholesale lending–related commitments. These are computed using a methodology similar to that used for the wholesale loan portfolio, modified for expected maturities and probabilities of drawdown. This allowance, which is reported in Other liabilities, was $492 million at December 31, 2004, and reflected the impact of the Merger, partially offset by a $227 million benefit as a result of conforming the combined Firm's allowance methodology. The allowance was $324 million at December 31, 2003.

Provision for credit losses

For a discussion of the reported Provision for credit losses, see page 23 of this Annual Report. The managed provision for credit losses, which reflects credit card securitizations, increased primarily due to the Merger.

For the year ended December 31,[a]	Provision for loan losses		Provision for lending-related commitments		Total provision for credit losses	
(in millions)	**2004**	2003	**2004**	2003	**2004**	2003
Investment Bank	**$ (525)**	$ (135)	**$ (115)**	$ (46)	**$ (640)**	$ (181)
Commercial Banking	**35**	8	**6**	(2)	**41**	6
Treasury & Securities Services	**7**	—	**—**	1	**7**	1
Asset & Wealth Management	**(12)**	36	**(2)**	(1)	**(14)**	35
Corporate	**(110)**	116	**—**	8	**(110)**	124
Total Wholesale	**(605)**	25	**(111)**	(40)	**(716)**	(15)
Retail Financial Services	**450**	520	**(1)**	1	**449**	521
Card Services	**1,953**	1,034	**—**	—	**1,953**	1,034

Accounting policy conformity[b]	**1,085**	—	**(227)**	—	**858**	—
Total provision for credit losses	**2,883**	1,579	**(339)**	(39)	**2,544**	1,540
Add: Securitized credit losses	**2,898**	1,870	**—**	—	**2,898**	1,870
Less: Accounting policy conformity	**(1,085)**	—	**227**	—	**(858)**	—
Total managed provision for credit losses	**$ 4,696**	$ 3,449	**$ (112)**	$ (39)	**$ 4,584**	$ 3,410

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. 2003 reflects the results of heritage JPMorgan Chase only.

(b) The provision for loan losses includes an increase of approximately $1.4 billion as a result of the decertification of heritage Bank One's seller's interest in credit card securitizations, partially offset by a reduction of $357 million to conform provision methodologies. The provision for lending-related commitments reflects a reduction of $227 million to conform provision methodologies in the wholesale portfolio.

Market risk management

Market risk represents the potential loss in value of portfolios and financial instruments caused by adverse movements in market variables, such as interest and foreign exchange rates, credit spreads, and equity and commodity prices.

Market risk management

Market Risk Management ("MRM") is a function independent of the businesses that identifies, measures, monitors, and controls market risk. It seeks to facilitate efficient risk/return decisions and to reduce volatility in operating performance. It strives to make the Firm's market risk profile transparent to senior management, the Board of Directors and regulators.

The chart below depicts the MRM organizational structure and describes the responsibilities of the groups within MRM.

There are also groups that report to the Chief Financial Officer with some responsibility for market risk-related activities. For example, within the Finance area, the valuation control functions are responsible for ensuring the accuracy of the valuations of positions that expose the Firm to market risk.

Risk identification and classification

MRM works in partnership with the business segments to identify market risks throughout the Firm, and to refine and monitor market risk policies and procedures. All business segments are responsible for comprehensive identification and verification of market risks within their units. Risk-taking businesses have Middle Office functions that act independently from trading personnel and are responsible for verifying risk exposures that the business takes. In addition to providing independent oversight for market risk arising from the business segments, MRM is also responsible for identifying exposures which may not be large within individual business segments, but which may be large for the Firm in aggregate. Weekly meetings are held between MRM and the heads of risk-taking businesses, to discuss and decide on risk exposures in the context of the market environment and client flows.

Positions that expose the Firm to market risk are classified into two categories: trading and nontrading risk. Trading risk includes positions that are held for trading purposes as a principal or as part of a business whose main business strategy is to trade or make markets. Unrealized gains and losses in these positions are generally reported in trading revenue. Nontrading risk includes securities held for longer term investment, and securities and derivatives used to manage the Firm's asset/liability exposures. In most cases, unrealized gains and losses in these positions are accounted for at fair value, with the gains and losses reported in Net income or Other comprehensive income.

Trading risk

Fixed income: Fixed income risk (which includes credit spread risk) involves the potential decline in Net income or financial condition due to adverse changes in market interest rates, which may result in changes to NII, securities valuations, and other interest-sensitive revenues and expenses.

Foreign exchange, equities, commodities and other: These risks involve the potential decline in Net income to the Firm due to adverse changes in foreign exchange, equities or commodities markets, whether due to proprietary positions taken by the Firm, or due to a decrease in the level of client activity. Other risks include passive long-term investments in numerous hedge funds that may have exposure to fixed income, foreign exchange, equity and commodity risk within their portfolio risk structures.

Nontrading risk

The execution of the Firm's core business strategies, the delivery of products and services to its customers, and the discretionary positions the Firm undertakes to risk-manage structural exposures give rise to interest rate risk in the nontrading activities of the Firm.

This exposure can result from a variety of factors, including differences in the timing among the maturity or re-pricing of assets, liabilities and off–balance sheet instruments. Changes in the level and shape of market interest rate curves may also create interest rate risk, since the re-pricing characteristics of the Firm's assets do not necessarily match those of its liabilities. The Firm is also exposed to basis risk, which is the difference in re-pricing characteristics of two floating rate indices, such as the prime rate and 3-month LIBOR. In addition, some of the Firm's products have embedded optionality that impact pricing and balance levels.

The Firm manages interest rate exposure related to its assets and liabilities on a consolidated, corporate-wide basis. Business units transfer their interest rate risk to Treasury through a transfer-pricing system, which takes into account the elements of interest rate exposure that can be risk managed in financial markets. These elements include asset and liability balances and contractual rates of interest, contractual principal payment schedules, expected prepayment experience, interest rate reset dates and maturities, rate indices used for re-pricing, and any interest rate ceilings or floors for adjustable rate products. All transfer-pricing assumptions are reviewed by Treasury.

The Firm's mortgage banking activities also give rise to complex interest rate risks. The interest rate exposure from the Firm's mortgage banking activities is a result of option and basis risks. Option risk arises primarily from prepayment options embedded in mortgages and changes in the probability of newly-originated mortgage commitments actually closing. Basis risk results from different relative movements between mortgage rates and other interest rates. These risks are managed through programs specific to the different mortgage banking activities. Potential impairment in the fair value of mortgage servicing rights ("MSRs") and increased amortization levels of MSRs are managed via a risk management program that attempts to offset changes in the fair value of MSRs with changes in the fair value of derivatives and investment securities. A similar approach is used to manage the interest rate risk associated with the Firm's mortgage origination business.

Risk measurement

Tools used to measure risk

Because no single measure can reflect all aspects of market risk, the Firm uses several measures, both statistical and nonstatistical, including:

- Statistical risk measures
  - Value-at-Risk ("VAR")
  - Risk identification for large exposures ("RIFLE")
- Nonstatistical risk measures
  - Economic value stress tests
  - Earnings-at-risk stress tests
  - Other measures of position size and sensitivity to market moves

Value-at-risk

JPMorgan Chase's statistical risk measure, VAR, gauges the potential loss from adverse market moves in an ordinary market environment and provides a consistent cross-business measure of risk profiles and levels of risk diversification. VAR is used to compare risks across businesses, to monitor limits and to allocate economic capital to the business segments. VAR provides risk transparency in a normal trading environment.

Each business day the Firm undertakes a comprehensive VAR calculation that includes both its trading and its nontrading activities. VAR for nontrading activities measures the amount of potential change in economic value; however, VAR for such activities is not a measure of reported revenue since nontrading activities are generally not marked to market through earnings. JPMorgan Chase's VAR calculation is highly granular, comprising more than 2.1 million positions and 240,000 pricing series (e.g., securities prices, interest rates, foreign exchange rates). For a substantial portion of its exposure, the Firm has implemented full-revaluation VAR, which, management believes, generates the most accurate results.

To calculate VAR, the Firm uses historical simulation, which measures risk across instruments and portfolios in a consistent, comparable way. This approach assumes that historical changes in market values are representative of future changes. The simulation is based on data for the previous 12 months.

The Firm calculates VAR using a one-day time horizon and a 99% confidence level. This means the Firm would expect to incur losses greater than that predicted by VAR estimates only once in every 100 trading days, or about 2.5 times a year.

All statistical models involve a degree of uncertainty, depending on the assumptions they employ. The Firm prefers historical simulation, because it involves fewer assumptions about the distribution of portfolio losses than parameter-based methodologies. In addition, the Firm regularly assesses the quality of the market data, since their accuracy is critical to computing VAR. Nevertheless, because VAR is based on historical market data, it may not accurately reflect future risk during environments in which market volatility is changing. In addition, the VAR measure on any particular day may not be indicative of future risk levels, since positions and market conditions may both change over time.

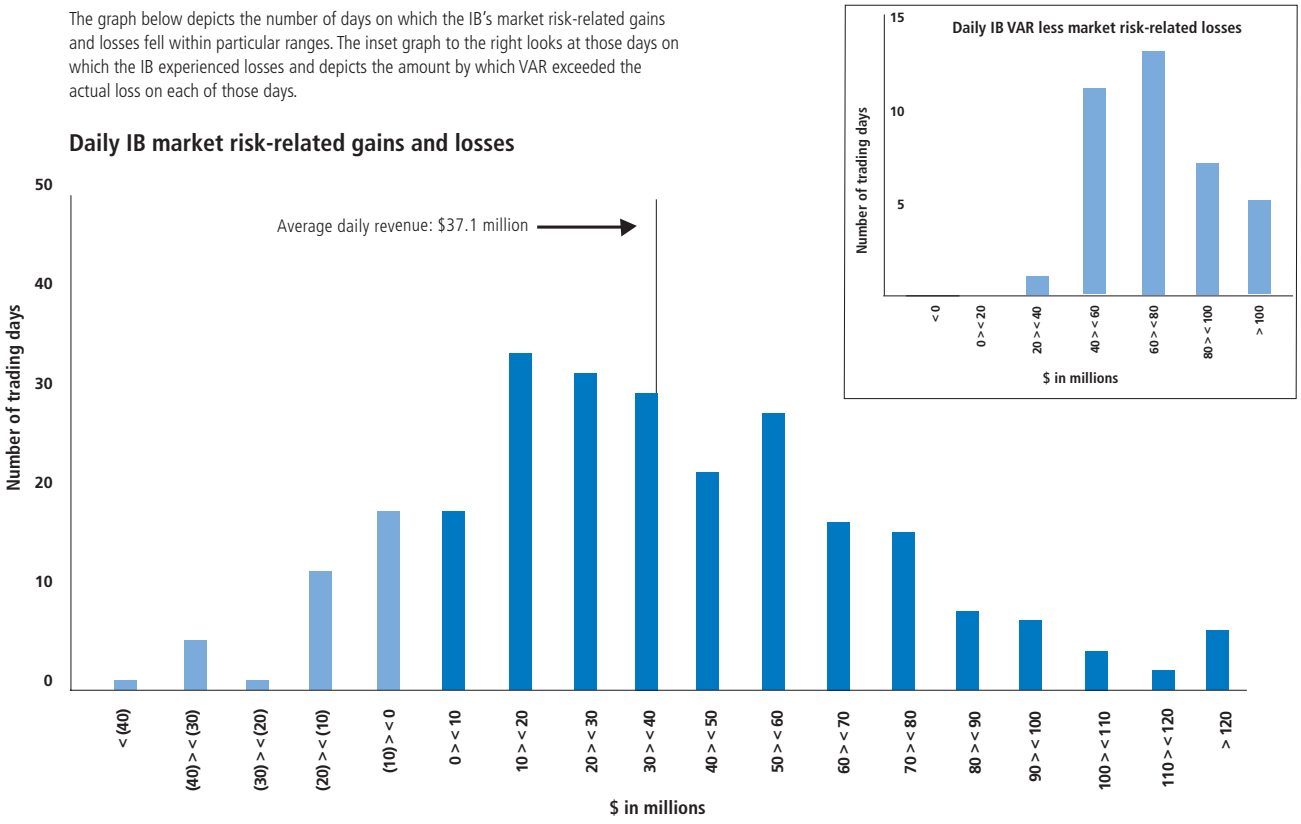
While VAR is a valuable tool for evaluating relative risks and aggregating risks across businesses, it only measures the potential volatility of daily revenues. Profitability and risk levels over longer time periods – a fiscal quarter or a year – may be only loosely related to the average value of VAR over those periods for several reasons. First, while VAR measures potential fluctuations around average daily revenue, the average itself could reflect significant gains or losses; for example, from client revenues that accompany risk-taking activities. Second, large trading revenues may result from positions taken over longer periods of time. For example, a business may maintain an exposure to rising or falling interest rates over a period of weeks or months. If the market exhibits a long-term trend over that time, the business could experience large gains or losses, even though revenue volatility on each individual day may have been small.

Trading VAR

IB trading VAR by risk type and credit portfolio VAR[a]

As of or for the year ended December 31, (in millions)[b]	2004 Average VAR	2004 Minimum VAR	2004 Maximum VAR	2004 At December 31,	2003[e] Average VAR	2003[e] Minimum VAR	2003[e] Maximum VAR	2003[e] At December 31,
By risk type:								
Fixed income	$ 74.4	$ 45.3	$117.5	$ 57.3	$ 61.4	$ 42.3	$ 104.3	$ 79.9
Foreign exchange	17.3	10.2	32.8	28.4	16.8	11.0	30.2	23.5
Equities	28.2	15.2	57.8	19.8	18.2	6.7	51.6	45.6
Commodities and other	8.7	6.5	17.9	8.4	7.7	4.9	12.6	8.7
Less: portfolio diversification	(43.6)	NM[d]	NM[d]	(41.8)	(39.4)	NM[d]	NM[d]	(61.7)
Total trading VAR	$ 85.0	$ 51.6	$125.2	$ 72.1	$ 64.7	$ 39.8	$ 116.3	$ 96.0
Credit portfolio VAR[c]	14.0	10.8	16.6	15.0	17.8	12.8	22.0	13.2
Less: portfolio diversification	(8.5)	NM[d]	NM[d]	(9.4)	(13.2)	NM[d]	NM[d]	(8.1)
Total trading and credit portfolio VAR	$ 90.5	$ 55.3	$131.6	$ 77.7	$ 69.3	$ 44.8	$ 119.8	$ 101.1

(a) Includes all mark-to-market trading activities in the IB, plus available for sale securities held for the IB's proprietary purposes. Amounts exclude VAR related to the Firm's private equity business. For a discussion of Private equity risk management, see page 76 of this Annual Report.
(b) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. 2003 reflects the results of heritage JPMorgan Chase only.
(c) Includes VAR on derivative credit valuation adjustments, credit valuation adjustment hedges and mark-to-market loan hedges which are all reported in Trading revenue. This VAR does not include the accrual loan portfolio, which is not marked to market.
(d) Designated as NM because the minimum and maximum may occur on different days for different risk components, and hence it is not meaningful to compute a portfolio diversification effect. In addition, JPMorgan Chase's average and period-end VARs are less than the sum of the VARs of its market risk components, due to risk offsets resulting from portfolio diversification.
(e) Amounts have been revised to reflect the reclassification of hedge fund investments, reclassification of Treasury positions to portfolios outside the IB, and the inclusion of available for sale securities held for the IB's proprietary purposes.



The largest contributors to the IB trading VAR in 2004 was fixed income risk. Before portfolio diversification, fixed income risk accounted for roughly 58% of the average IB Trading Portfolio VAR. The diversification effect, which on average reduced the daily average IB Trading Portfolio VAR by $43.6 million in 2004, reflects the fact that the largest losses for different positions and risks do not typically occur at the same time. The risk of a portfolio of positions is therefore usually less than the sum of the risks of the positions themselves. The degree of diversification is determined both by the extent to which different market variables tend to move together and by the extent to which different businesses have similar positions.

Average IB trading and Credit Portfolio VAR during 2004 rose to $90.5 million, compared with $69.3 million for the same period in 2003. Period-end VAR decreased over the same period, to $77.7 million from $101.1 million. The decrease was driven by a decline in fixed income and equities VAR, primarily due to decreased risk positions and lower market volatility. In general, over the course of a year, VAR exposures can vary significantly as trading positions change and market volatility fluctuates.

VAR backtesting

To evaluate the soundness of its VAR model, the Firm conducts daily backtesting of VAR against actual financial results, based on daily market risk-related revenue. Market risk-related revenue is defined as the daily change in value of the mark-to-market trading portfolios plus any trading-related net interest income, brokerage commissions, underwriting fees or other revenue. The Firm's definition of market risk-related revenue is consistent with the FRB's implementation of the Basel Committee's market risk capital rules. The histogram below illustrates the daily market risk-related gains and losses for the IB trading businesses for the year ended December 31, 2004. The chart shows that the IB posted market risk-related gains on 224 out of 261 days in this period, with 12 days exceeding $100 million. The inset graph looks at those days on which the IB experienced losses and depicts the amount by which VAR exceeded the actual loss on each of those days. Losses were sustained on 37 days, with no loss greater than $50 million, and with no loss exceeding the VAR measure.

The graph below depicts the number of days on which the IB's market risk-related gains and losses fell within particular ranges. The inset graph to the right looks at those days on which the IB experienced losses and depicts the amount by which VAR exceeded the actual loss on each of those days.

Economic value stress testing

While VAR reflects the risk of loss due to unlikely events in normal markets, stress testing captures the Firm's exposure to unlikely but plausible events in abnormal markets. Stress testing is equally important as VAR in measuring and controlling risk. Stress testing enhances the understanding of the Firm's risk profile and loss potential and is used for monitoring limits, cross-business risk measurement and economic capital allocation.

Economic-value stress tests measure the potential change in the value of the Firm's portfolios. Applying economic-value stress tests helps the Firm understand how the economic value of its balance sheet (i.e., not the amounts reported under U.S. GAAP) would change under certain scenarios. The Firm conducts economic-value stress tests for both its trading and its nontrading activities, using the same scenarios for both.

The Firm stress tests its portfolios at least once a month using multiple scenarios. Several macroeconomic event-related scenarios are evaluated across the Firm, with shocks to roughly 10,000 market prices specified for each scenario. Additional scenarios focus on the risks predominant in individual business segments, and include scenarios that focus on the potential for adverse moves in complex portfolios.

Scenarios are derived from either severe historical crises or forward assessment of developing market trends. They are continually reviewed and updated to reflect changes in the Firm's risk profile and economic events. Stress-test results, trends and explanations are provided each month to the Firm's executive management and to the lines of business to help them better measure and manage risks to understand event risk–sensitive positions.

The Firm's stress-test methodology assumes that, during an actual stress event, no management action would be taken to change the risk profile of portfolios. This captures the decreased liquidity that often occurs with abnormal markets and results, in the Firm's view, in a conservative stress-test result.

Based on the Firm's stress scenarios, the stress test loss (pre-tax) in the IB's trading portfolio ranged from $202 million to $1.2 billion, and $227 million to $895 million for the years ended December 31, 2004 and 2003, respectively. (The 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. In addition, the 2003 amounts have been revised to reflect the transfer of Treasury positions from the IB to the Corporate business segment.)

It is important to note that VAR results cannot be directly correlated to stress-test loss results for three reasons. First, stress-test losses are calculated at varying dates each month, while VAR is performed daily and reported for the period-end date. Second, VAR and stress tests are two distinct risk measurements yielding very different loss potentials. Thus, although the same trading portfolios are used for both tests, VAR is based on a distribution of one-day historical losses measured over the most recent one year; in contrast, stress testing subjects the portfolio to more extreme, larger moves over a longer time horizon (e.g., 2–3 weeks). Third, as VAR and stress tests are distinct risk measurements, the impact of portfolio diversification can vary greatly. For VAR, markets can change in patterns over a one-year time horizon, moving from highly correlated to less so; in stress testing, the focus is on a single event and the associated correlations in an extreme market situation. As a result, while VAR over a given time horizon can be lowered by a diversification benefit in the portfolio, this benefit would not necessarily manifest itself in stress-test scenarios, which assume large, coherent moves across all markets.

RIFLE

In addition to VAR, JPMorgan Chase employs the Risk Identification for Large Exposures ("RIFLE") methodology as another statistical risk measure. The Firm requires that all market risk–taking businesses self-assess their risks to unusual and specific events. Individuals who manage risk positions, particularly complex positions, identify potential worst-case losses that could arise from an unusual or specific event, such as a potential tax change, and estimate the probabilities of such losses. Through the Firm's RIFLE system, this information is then directed to the appropriate level of management, thereby permitting the Firm to identify further earnings vulnerabilities not adequately covered by VAR and stress testing.

Nonstatistical risk measures

Nonstatistical risk measures other than stress testing include net open positions, basis point values, option sensitivities, position concentrations and position turnover. These measures provide additional information on an exposure's size and the direction in which it is moving. Nonstatistical measures are used for monitoring limits, one-off approvals and tactical control.

Earnings-at-risk stress testing

The VAR and stress-test measures described above illustrate the total economic sensitivity of the Firm's balance sheet to changes in market variables. The effect of interest rate exposure on reported Net income is also critical. Interest rate risk exposure in the Firm's core nontrading business activities (i.e., asset/liability management positions) results from on- and off-balance sheet positions. The Firm conducts simulations of NII for its nontrading activities under a variety of interest rate scenarios, which are consistent with the scenarios used for economic-value stress testing. Earnings-at-risk tests measure the potential change in the Firm's Net interest income over the next 12 months. These tests highlight exposures to various rate-sensitive factors, such as the rates themselves (e.g., the prime lending rate), pricing strategies on deposits, optionality and changes in product mix. The tests included forecasted balance sheet changes, such as asset sales and securitizations, as well as prepayment and reinvestment behavior.

JPMorgan Chase's 12-month pre-tax earnings sensitivity profiles as of December 31, 2004, were as follows:

	Immediate change in rates		
(in millions)	+200bp	+100bp	-100bp
December 31, 2004	**$ (557)**	**$ (164)**	**$ (180)**

The Firm is exposed to both rising and falling rates. The Firm's risk to rising rates is largely the result of increased funding costs. In contrast, the exposure to falling rates is the result of potential compression in deposit spreads, coupled with higher anticipated levels of loan prepayments.

Immediate changes in interest rates present a limited view of risk, and so a number of alternative scenarios are also reviewed. These scenarios include the implied forward curve, nonparallel rate shifts and severe interest rate shocks on selected key rates. These scenarios are intended to provide a comprehensive view of JPMorgan Chase's earnings-at-risk over a wide range of outcomes.

Earnings-at-risk can also result from changes in the slope of the yield curve, because the Firm has the ability to lend at fixed rates and borrow at variable or short-term fixed rates. Based on these scenarios, the Firm's earnings would be negatively affected by a sudden and unanticipated increase in short-term rates without a corresponding increase in long-term rates. Conversely, higher long-term rates are generally beneficial to earnings, particularly when the increase is not accompanied by rising short-term rates.

Risk monitoring and control

Limits

Market risk is primarily controlled through a series of limits. The sizes of the limits reflect the Firm's risk appetite after extensive analysis of the market environment and business strategy. The analysis examines factors such as market volatility, product liquidity, business track record, and management experience and depth.

The Firm maintains different levels of limits. Corporate-level limits encompass VAR calculations and stress-test loss advisories. Similarly, business segment levels include limits based on VAR calculations and nonstatistical measurements, and P&L loss advisories. Businesses are responsible for adhering to established limits, against which exposures are monitored and reported daily. Exceeded limits are reported immediately to senior management, and the affected business unit must take appropriate action to reduce trading positions. If the business cannot do this within an acceptable timeframe, senior management is consulted on the appropriate action.

MRM regularly reviews and updates risk limits, and the Firm's Operating Committee reviews and approves risk limits at least twice a year. MRM further controls the Firm's exposure by specifically designating approved financial instruments for each business unit.

Qualitative review

MRM also performs periodic reviews of both businesses and products with exposure to market risk in order to assess the ability of the businesses to control market risk. The businesses' management strategies, market conditions, product details and effectiveness of risk controls are reviewed. Specific recommendations for improvements are made to management.

Model review

Many of the Firm's financial instruments cannot be valued based on quoted market prices but are instead valued using pricing models. Such models are used for management of risk positions, such as reporting risk against limits, as well as for valuation. A model review group, independent of the lines of business units and MRM, reviews the models the Firm uses, and assesses model appropriateness and consistency across businesses. The model reviews consider a number of issues: appropriateness of the model, assessing the extent to which it accurately reflects the characteristics of the transaction and captures its significant risks; independence and reliability of data sources; appropriateness and adequacy of numerical algorithms; and sensitivity to input parameters or other assumptions which cannot be priced from the market.

Reviews are conducted for new or changed models, as well as previously accepted models, and they assess whether there have been any material changes to the accepted models; whether there have been any changes in the product or market that may impact the model's validity; and whether there are theoretical or competitive developments that may require reassessment of the model's adequacy. For a summary of valuations based on models, see Critical accounting estimates used by the Firm on pages 77–79 of this Annual Report.

Risk reporting

Value-at-risk, nonstatistical exposures and dollar trading loss limit exceptions are reported daily for each trading and nontrading business. Market risk exposure trends, value-at-risk trends, profit and loss changes, and portfolio concentrations are reported weekly to business management and monthly to senior management. In addition, the results of comprehensive, monthly stress tests are presented to business and senior management.

Operational risk management

Operational risk is the risk of loss resulting from inadequate or failed processes or systems, human factors, or external events.

Overview

Operational risk is inherent in each of the Firm's businesses and support activities. Operational risk can manifest itself in various ways, including errors, business interruptions, inappropriate behavior of employees and vendors that do not perform in accordance with outsourcing arrangements. These events can potentially result in financial losses and other damage to the Firm, including reputational harm.

To monitor and control operational risk, the Firm maintains a system of comprehensive policies and a control framework designed to provide a sound and well-controlled operational environment. The goal is to keep operational risk at appropriate levels, in light of the Firm's financial strength, the characteristics of its businesses, the markets in which it operates, and the competitive and regulatory environment to which it is subject. Notwithstanding these control measures, the Firm incurs operational losses.

The Firm's approach to operational risk management is intended to mitigate such losses by supplementing the traditional control-based approach to operational risk with risk measures, tools and disciplines that are risk-specific, consistently applied and utilized firmwide. Key themes are transparency of information, escalation of key issues and accountability for issue resolution.

Risk identification and measurement

Risk identification is the recognition of the operational risk events that management believes may give rise to operational losses.

In 2004, JPMorgan Chase redesigned the underlying architecture of its firmwide self-assessment process, and began implementing the process throughout the heritage Bank One business units. The goal of the self-assessment process is for each business to identify the key operational risks specific to its environment and assess the degree to which it maintains appropriate controls. Action plans are developed for control issues identified, and businesses are held accountable for tracking and resolving these issues on a timely basis.

All businesses were required to perform semiannual self-assessments in 2004, which were completed by the businesses through the use of software applications developed by the Firm. Going forward, the Firm will utilize the self-assessment process as a dynamic risk management tool.

Risk monitoring

The Firm has a process for monitoring operational risk-event data, permitting analysis of errors and losses as well as trends. Such analysis, performed both at a line-of-business level and by risk event type, enables identification of the causes associated with risk events faced by the businesses. Where available, the internal data can be supplemented with external data for comparative analysis with industry patterns. The data reported will enable the Firm to back-test against self-assessment results.

Risk reporting and analysis

Operational risk management reports provide timely and accurate information to the lines of business and senior management, including information about actual operational loss levels and self-assessment results. The purpose of these reports is to enable management to maintain operational risk at appropriate levels within each line of business, to escalate issues and to provide consistent data aggregation across the Firm's business and support areas.

During 2004, the Firm implemented Phoenix, a new internally-designed operational risk architecture model. Phoenix integrates the individual components of the operational risk management framework into a unified, web-based tool. When fully implemented, Phoenix will enable the Firm to enhance its reporting and analysis of operational risk data, leading to improved risk management and financial performance. Phoenix will also facilitate the ability of businesses to leverage existing processes to comply with risk management-related regulatory requirements thereby leading to increased efficiencies in the Firm's management of operational risk.

For purposes of reporting and analysis, the Firm categorizes operational risk events as follows:

- Client service and selection
- Business practices
- Fraud, theft and malice
- Execution, delivery and process management
- Employee disputes
- Disasters and public safety
- Technology and infrastructure failures

Audit alignment

Internal Audit utilizes a risk-based program of audit coverage to provide an independent assessment of the design and effectiveness of key controls over the Firm's operations, regulatory compliance and reporting. Internal Audit partners with business management and members of the control community in providing guidance on the operational risk framework, and reviews the effectiveness and accuracy of the business self-assessment process as part of its business unit audits.

Reputation and fiduciary risk management

A firm's success depends not only on its prudent management of liquidity, credit, market, operational and business risks, but equally on the maintenance among many constituents – clients, investors, regulators, as well as the general public – of a reputation for business practices of the highest quality.

Attention to reputation has always been a key aspect of the Firm's practices, and maintenance of reputation is the responsibility of everyone at the Firm. JPMorgan Chase bolsters this individual responsibility in many ways: through the Code of Conduct, training, policies and oversight functions that approve transactions. These oversight functions include a Conflicts Office, which examines wholesale transactions with the potential to create conflicts of interest or role for the Firm.

Policy review office

The Firm has an additional structure to address certain transactions with clients, especially complex derivatives and structured finance transactions, that have the potential to adversely affect its reputation. This structure reinforces the Firm's procedures for examining transactions in terms of appropriateness, ethical issues and reputational risk, and it intensifies the Firm's scrutiny of the purpose and effect of its transactions from the client's point of view, with the goal that these transactions not be used to mislead investors or others. The structure operates at three levels: as part of every business's transaction approval process; through review by regional Policy Review Committees; and through oversight by the Policy Review Office.

Primary responsibility for adherence to the policies and procedures designed to address reputation risk lies with the business units conducting the transactions in question. The Firm's transaction approval process requires review and sign-off from, among others, internal legal/compliance, conflicts, tax and accounting groups. Transactions involving an SPE established by the Firm receive particular scrutiny to ensure that every such entity is properly approved, documented, monitored and controlled.

Business units are also required to submit to regional Policy Review Committees proposed transactions that may heighten reputation risk – particularly a client's motivation and its intended financial disclosure of the transaction. The committees approve, reject or require further clarification on or changes to the transactions. The members of these committees are senior representatives of the business and support units in the region. The committees may escalate transaction review to the Policy Review Office.

The Policy Review Office is the most senior approval level for client transactions involving reputation risk issues. The mandate of the Office is to opine on specific transactions brought by the Regional Committees and consider changes in policies or practices relating to reputation risk. The head of the office consults with the Firm's most senior executives on specific topics and provides regular updates. Aside from governance and guidance on specific transactions, the objective of the policy review process is to reinforce a culture, through a "case study" approach, that ensures that all employees, regardless of seniority, understand the basic principles of reputation risk control and can recognize and address issues as they arise.

Fiduciary risk management

The Firm maintains risk management committees within each of its lines of business that include in their mandate the oversight of legal, reputational and fiduciary-related risks in their businesses that may produce significant losses or reputational damage. The Fiduciary Risk Management function works with the line-of-business risk committees to ensure that businesses providing investment or risk management products or services perform at the appropriate standard relative to their relationship with a client, whether it be fiduciary or non-fiduciary in nature. Of particular focus are the policies and practices that address a business' responsibilities to a client including client suitability determination, disclosure obligations, disclosure communications and performance expectations with respect to the investment and risk management products or services being provided by the Firm. In this way, the line-of-business risk committees, together with the Fiduciary Risk Management function, provide oversight of the Firm's efforts to monitor, measure and control the risks that may arise in the delivery of such products or services to clients, as well as those stemming from the Firm's responsibilities undertaken on behalf of employees.

Private equity risk management

Risk management

The Firm's private equity business employs processes for risk measurement and control of private equity risk that are similar to those used for other businesses within the Firm. The processes are coordinated with the Firm's overall approach to market and concentration risk. Private equity risk is initially monitored through the use of industry and geographic limits. Additionally, to manage the pace of new investments, a ceiling on the amount of annual private equity investment activity has been established. At December 31, 2004, the carrying value of the private equity portfolio was $7.5 billion.

Private Equity's publicly-held securities create a significant exposure to general declines in the equity markets. Initially to gauge that risk, VAR and stress-test exposures are calculated in the same way as they are for the Firm's trading and nontrading portfolios. However, because VAR assumes that positions can be exited in a normal market, JPMorgan Chase believes that the VAR for publicly-held securities does not necessarily represent the true value-at-risk for these holdings nor is it indicative of the loss potential for these holdings, due to the fact that most of the positions are subject to sale restrictions and, often, represent significant concentration of ownership. Accordingly, Private Equity management undertakes frequent reviews of its publicly-held securities investments as part of a disciplined approach to sales and risk management issues. Risk management programs are limited but are considered when practical and as circumstances dictate. Over time, the Firm may change the nature and type of Private equity risk management programs it enters into.

Critical accounting estimates used by the Firm

JPMorgan Chase's accounting policies and use of estimates are integral to understanding its reported results. The Firm's most complex accounting estimates require management's judgment to ascertain the valuation of assets and liabilities. The Firm has established detailed policies and control procedures intended to ensure that valuation methods, including any judgments made as part of such methods, are well controlled, independently reviewed and applied consistently from period to period. In addition, the policies and procedures are intended to ensure that the process for changing methodologies occurs in an appropriate manner. The Firm believes its estimates for determining the valuation of its assets and liabilities are appropriate. The following is a brief description of the Firm's critical accounting estimates involving significant valuation judgments.

Allowance for credit losses

JPMorgan Chase's Allowance for credit losses covers the wholesale and consumer loan portfolios as well as the Firm's portfolio of wholesale lending-related commitments. The Allowance for loan losses is intended to adjust the value of the Firm's loan assets for probable credit losses as of the balance sheet date. For a further discussion of the methodologies used in establishing the Firm's Allowance for credit losses, see Note 12 on pages 102–103 of this Annual Report.

Wholesale loans and lending-related commitments

The methodology for calculating both the Allowance for loan losses and the Allowance for lending-related commitments involves significant judgment. First and foremost, it involves the early identification of credits that are deteriorating. Second, it involves management judgment to derive loss factors. Third, it involves management judgment to evaluate certain macroeconomic factors, underwriting standards, and other relevant internal and external factors affecting the credit quality of the current portfolio and to refine loss factors to better reflect these conditions.

The Firm uses a risk rating system to determine the credit quality of its wholesale loans. Wholesale loans are reviewed for information affecting the obligor's ability to fulfill its obligations. In assessing the risk rating of a particular loan, among the factors considered include the obligor's debt capacity and financial flexibility, the level of the obligor's earnings, the amount and sources for repayment, the level and nature of contingencies, management strength, and the industry and geography in which the obligor operates. These factors are based on an evaluation of historical and current information, and involve subjective assessment and interpretation. Emphasizing one factor over another, or considering additional factors that may be relevant in determining the risk rating of a particular loan, but which are not currently an explicit part of the Firm's methodology, could impact the risk rating assigned by the Firm to that loan.

Management applies its judgment to derive loss factors associated with each credit facility. These loss factors are determined by facility structure, collateral and type of obligor. Wherever possible, the Firm uses independent, verifiable data or the Firm's own historical loss experience in its models for estimating these loss factors. Many factors can affect management's estimates of loss, including volatility of loss given default, probability of default and rating migrations. Judgment is applied to determine whether the loss given default should be calculated as an average over the entire credit cycle or at a particular point in the credit cycle. The application of different loss given default factors would change the amount of the Allowance for credit losses determined appropriate by the Firm. Similarly, there are judgments as to which external data on probability of default should be used, and when they should be used. Choosing data that are not reflective of the Firm's specific loan portfolio characteristics could affect loss estimates.

Management also applies its judgment to adjust the loss factors derived taking into consideration model imprecision, external factors and economic events that have occurred but are not yet reflected in the loss factors. The resultant adjustments to the statistical calculation of losses on the performing portfolio are determined by creating estimated ranges using historical experience of both loss given default and probability of default. Factors related to concentrated and deteriorating industries are also incorporated where relevant. The estimated ranges and the determination of the appropriate point within the range are based upon management's view of uncertainties that relate to current macroeconomic and political conditions, quality of underwriting standards and other relevant internal and external factors affecting the credit quality of the current portfolio. The adjustment to the statistical calculation for the wholesale loan portfolio for the period ended December 31, 2004, was $990 million, the maximum amount within the range, based on management's assessment of current economic conditions.

Consumer loans

For scored loans (generally consumer lines of business), loss is primarily determined by applying statistical loss factors and other risk indicators to pools of loans by asset type. These loss estimates are sensitive to changes in delinquency status, credit bureau scores, the realizable value of collateral, and other risk factors.

Adjustments to the statistical calculation are accomplished in part by analyzing the historical loss experience for each major product segment. Management analyzes the range of credit loss experienced for each major portfolio segment taking into account economic cycles, portfolio seasoning, and underwriting criteria and then formulates a range that incorporates relevant risk factors that impact overall credit performance. The recorded adjustment to the statistical calculation for the period ended December 31, 2004 was $1.0 billion, based on management's assessment of current economic conditions.

Fair value of financial instruments

A portion of JPMorgan Chase's assets and liabilities are carried at fair value, including trading assets and liabilities, AFS securities and private equity investments. Held-for-sale loans and mortgage servicing rights ("MSRs") are carried at the lower of fair value or cost. At December 31, 2004, approximately $417 billion of the Firm's assets were recorded at fair value.

The fair value of a financial instrument is defined as the amount at which the instrument could be exchanged in a current transaction between willing parties, other than in a forced or liquidation sale. The majority of the Firm's assets reported at fair value are based on quoted market prices or on internally developed models that utilize independently sourced market parameters, including interest rate yield curves, option volatilities and currency rates.

The degree of management judgment involved in determining the fair value of a financial instrument is dependent upon the availability of quoted market prices or observable market parameters. For financial instruments that are actively traded and have quoted market prices or parameters readily available,

there is little to no subjectivity in determining fair value. When observable market prices and parameters do not exist, management judgment is necessary to estimate fair value. The valuation process takes into consideration factors such as liquidity and concentration concerns and, for the derivatives portfolio, counterparty credit risk (see the discussion of CVA on page 63 of this Annual Report). For example, there is often limited market data to rely on when estimating the fair value of a large or aged position. Similarly, judgment must be applied in estimating prices for less readily observable external parameters. Finally, other factors such as model assumptions, market dislocations and unexpected correlations can affect estimates of fair value. Imprecision in estimating these factors can impact the amount of revenue or loss recorded for a particular position.

Trading and available-for-sale portfolios

Substantially all of the Firm's securities held for trading and investment purposes ("long" positions) and securities that the Firm has sold to other parties but does not own ("short" positions) are valued based on quoted market prices. However, certain securities are less actively traded and, therefore, are not always able to be valued based on quoted market prices. The determination of their fair value requires management judgment, as this determination may require benchmarking to similar instruments or analyzing default and recovery rates. Examples include certain collateralized mortgage and debt obligations and high-yield debt securities.

As few derivative contracts are listed on an exchange, the majority of the Firm's derivative positions are valued using internally developed models that use as their basis readily observable market parameters – that is, parameters that are actively quoted and can be validated to external sources, including industry-pricing services. Certain derivatives, however, are valued based on models with significant unobservable market parameters – that is, parameters that may be estimated and are, therefore, subject to management judgment to substantiate the model valuation. These instruments are normally either less actively traded or trade activity is one-way. Examples include long-dated interest rate or currency swaps, where swap rates may be unobservable for longer maturities, and certain credit products, where correlation and recovery rates are unobservable. Due to the lack of observable market data, the Firm defers the initial trading profit for these financial instruments. The deferred profit is recognized in Trading revenue on a systematic basis and when observable market data becomes available. Management judgment includes recording fair value adjustments (i.e., reductions) to model valuations to account for parameter uncertainty when valuing complex or less actively traded derivative transactions. The following table summarizes the Firm's trading and available-for-sale portfolios by valuation methodology at December 31, 2004:

	Trading assets		Trading liabilities		
	Securities purchased[a]	Derivatives[b]	Securities sold[a]	Derivatives[b]	AFS securities
Fair value based on:					
Quoted market prices	92%	1%	99%	1%	94%
Internal models with significant observable market parameters	5	97	1	97	2
Internal models with significant unobservable market parameters	3	2	—	2	4
Total	100%	100%	100%	100%	100%

(a) Reflected as debt and equity instruments on the Firm's Consolidated balance sheets.
(b) Based on gross mark-to-market valuations of the Firm's derivatives portfolio prior to netting positions pursuant to FIN 39, as cross-product netting is not relevant to an analysis based upon valuation methodologies.

To ensure that the valuations are appropriate, the Firm has various controls in place. These include: an independent review and approval of valuation models; detailed review and explanation for profit and loss analyzed daily and over time; decomposing the model valuations for certain structured derivative instruments into their components and benchmarking valuations, where possible, to similar products; and validating valuation estimates through actual cash settlement. As markets and products develop and the pricing for certain derivative products becomes more transparent, the Firm refines its valuation methodologies. The Valuation Control Group within the Finance area, a group independent of the risk-taking function, is responsible for reviewing the accuracy of the valuations of positions taken within the Investment Bank.

For a discussion of market risk management, including the model review process, see Market risk management on pages 70–74 of this Annual Report. For further details regarding the Firm's valuation methodologies, see Note 29 on pages 121–124 of this Annual Report.

Loans held-for-sale

The fair value of loans in the held-for-sale portfolio is generally based on observable market prices of similar instruments, including bonds, credit derivatives and loans with similar characteristics. If market prices are not available, fair value is based on the estimated cash flows, adjusted for credit risk that is discounted using a rate appropriate for each maturity that incorporates the effects of interest rate changes.

Private equity investments

Valuation of private investments held primarily by the Private Equity business within Corporate requires significant management judgment due to the absence of quoted market prices, inherent lack of liquidity and the long-term nature of such assets. Private investments are initially valued based on cost. The carrying values of private investments are adjusted from cost to reflect both positive and negative changes evidenced by financing events with third-party capital providers. In addition, these investments are subject to ongoing

impairment reviews by Private Equity's senior investment professionals. A variety of factors are reviewed and monitored to assess impairment including, but not limited to, operating performance and future expectations, industry valuations of comparable public companies, changes in market outlook and the third-party financing environment over time. The Valuation Control Group within the Finance area is responsible for reviewing the accuracy of the carrying values of private investments held by Private Equity. For additional information about private equity investments, see the Private equity risk management discussion on page 76 and Note 9 on pages 98–100 of this Annual Report.

MSRs and certain other retained interests in securitizations

MSRs and certain other retained interests from securitization activities do not trade in an active, open market with readily observable prices. For example, sales of MSRs do occur, but the precise terms and conditions are typically not readily available. Accordingly, the Firm estimates the fair value of MSRs and certain other retained interests in securitizations using a discounted future cash flow model. For MSRs, the model considers portfolio characteristics, contractually specified servicing fees and prepayment assumptions, delinquency rates, late charges, other ancillary revenues, costs to service and other economic factors. For other retained interests in securitizations (such as interest-only strips), the model is generally based on projections of finance charges related to the securitized assets, net credit losses, average life, and contractual interest paid to the third-party investors. Changes in the assumptions used may have a significant impact on the Firm's valuation of retained interests. Management believes that the fair values and related assumptions utilized in the models are comparable to those used by other market participants. For a further discussion of the most significant assumptions used to value retained interests in securitizations and MSRs, as well as the applicable stress tests for those assumptions, see Notes 13 and 15 on pages 103–106 and 109–111, respectively, of this Annual Report.

Goodwill impairment

Under SFAS 142, goodwill must be allocated to reporting units and tested for impairment. The Firm tests goodwill for impairment at least annually or more frequently if events or circumstances, such as adverse changes in the business climate, indicate that there may be justification for conducting an interim test. Impairment testing is performed at the reporting-unit level (which is generally one level below the six major business segments identified in Note 31 on pages 126–127 of this Annual Report, plus Private Equity which is included in Corporate). The first part of the test is a comparison, at the reporting unit level, of the fair value of each reporting unit to its carrying amount, including goodwill. If the fair value is less than the carrying value, then the second part of the test is needed to measure the amount of potential goodwill impairment. The implied fair value of the reporting unit goodwill is calculated and compared to the carrying amount of goodwill recorded in the Firm's financial records. If the carrying value of reporting unit goodwill exceeds the implied fair value of that goodwill, then the Firm would recognize an impairment loss in the amount of the difference, which would be recorded as a charge against Net income.

The fair values of the reporting units are determined using discounted cash flow models based on each reporting unit's internal forecasts. In addition, analysis using market-based trading and transaction multiples, where available, are used to assess the reasonableness of the valuations derived from the discounted cash flow models.

Goodwill was not impaired as of December 31, 2004 or December 31, 2003, nor was any goodwill written off during the years ended December 31, 2004, 2003 and 2002. See Note 15 on page 109 of this Annual Report for additional information related to the nature and accounting for goodwill and the carrying values of goodwill by major business segment.

Nonexchange-traded commodity contracts at fair value

In the normal course of business, JPMorgan Chase trades nonexchange-traded commodity contracts. To determine the fair value of these contracts, the Firm uses various fair value estimation techniques, which are primarily based on internal models with significant observable market parameters. The Firm's nonexchange-traded commodity contracts are primarily energy-related contracts. The following table summarizes the changes in fair value for nonexchange-traded commodity contracts for the year ended December 31, 2004:

For the year ended December 31, 2004 (in millions)	Asset position	Liability position
Net fair value of contracts outstanding at January 1, 2004	$ 1,497	$ 751
Effect of legally enforceable master netting agreements	834	919
Gross fair value of contracts outstanding at January 1, 2004	2,331	1,670
Contracts realized or otherwise settled during the period	(5,486)	(4,139)
Fair value of new contracts	1,856	1,569
Changes in fair values attributable to changes in valuation techniques and assumptions	—	—
Other changes in fair value	5,052	4,132
Gross fair value of contracts outstanding at December 31, 2004	3,753	3,232
Effect of legally enforceable master netting agreements	(2,304)	(2,233)
Net fair value of contracts outstanding at December 31, 2004	$ 1,449	$ 999

The following table indicates the schedule of maturities of nonexchange-traded commodity contracts at December 31, 2004:

At December 31, 2004 (in millions)	Asset position	Liability position
Maturity less than 1 year	$ 1,999	$ 1,874
Maturity 1–3 years	1,266	1,056
Maturity 4–5 years	454	293
Maturity in excess of 5 years	34	9
Gross fair value of contracts outstanding at December 31, 2004	3,753	3,232
Effects of legally enforceable master netting agreements	(2,304)	(2,233)
Net fair value of contracts outstanding at December 31, 2004	$ 1,449	$ 999

Accounting and reporting developments

Accounting for income taxes – repatriation of foreign earnings under the American Jobs Creation Act of 2004

In December 2004, the FASB issued FSP SFAS 109-2, which provides accounting and disclosure guidance for the foreign earnings repatriation provision within the American Jobs Creation Act of 2004 (the "Act"). The Act was signed into law on October 22, 2004.

The Act creates a temporary incentive for U.S. companies to repatriate accumulated foreign earnings at a substantially reduced U.S. effective tax rate by providing a dividends received deduction on the repatriation of certain foreign earnings to the U.S. taxpayer (the "repatriation provision"). The new deduction is subject to a number of limitations and requirements.

Clarification to key elements of the repatriation provision from Congress or the U.S. Treasury Department may affect an enterprise's evaluation of the effect of the Act on its plan for repatriation or reinvestment of foreign earnings. The FSP provides a practical exception to the SFAS 109 requirement to reflect the effect of a new tax law in the period of enactment, because of the lack of clarification to certain provisions within the Act and the timing of the enactment. Thus, companies have additional time to assess the effect of the Act on its plan for reinvestment or repatriation of foreign earnings for purposes of applying SFAS 109. A company should apply the provisions of SFAS 109 (i.e., reflect the tax impact in the financial statements) in the period in which it makes the decision to repatriate or reinvest unremitted foreign earnings in accordance with the Act. Decisions can be made in stages (e.g., by foreign country). The repatriation provision is effective for either the 2004 or 2005 tax years for calendar year taxpayers.

The range of possible amounts that may be considered for repatriation under this provision is between zero and $1.9 billion. The Firm is currently assessing the impact of the repatriation provision and, at this time, cannot reasonably estimate the related range of income tax effects of such repatriation provision. Accordingly, the Firm has not reflected the tax effect of the repatriation provision in income tax expense or income tax liabilities.

Accounting for share-based payments

In December 2004, the FASB issued SFAS 123R, which revises SFAS 123 and supersedes APB 25. Accounting and reporting under SFAS 123R is generally similar to the SFAS 123 approach. However, SFAS 123R requires all share-based payments to employees, including grants of employee stock options, to be recognized in the income statement based on their fair values. Pro forma disclosure is no longer an alternative.

The Firm has continued to account for stock options that were outstanding as of December 31, 2002 under APB 25 using the intrinsic value method. Therefore, compensation expense for some previously granted awards that was not recognized under SFAS 123 will be recognized under SFAS 123R. Had the Firm adopted SFAS 123R in prior periods, the impact would have approximated the impact of SFAS 123 as described in the disclosure of pro forma net income and earnings per share as presented in Note 7 on page 97 of this Annual Report. SFAS 123R must be adopted no later than July 1, 2005. SFAS 123R permits adoption using one of two methods – modified prospective or modified retrospective. The Firm is currently evaluating both the timing and method of adopting the new standard.

Impairment of available-for-sale and held-to-maturity securities
In September 2004, the FASB issued FSP EITF 03-1-1, indefinitely delaying the measurement provisions of EITF 03-1. The disclosure requirements of EITF 03-1 remain effective and are included in Note 9 on pages 98–100 of this Annual Report. EITF 03-1 addresses issues related to other-than-temporary impairment for securities classified as either available-for-sale or held-to-maturity under SFAS 115 (including individual securities and investments in mutual funds) and for investments accounted for under the cost method. A proposed FSP addressing these issues was issued by the FASB and is expected to be finalized in 2005. The impact of EITF 03-1, if any, to the Firm's investment portfolios will not be known until the final consensus is issued.

Accounting for interest rate lock commitments ("IRLCs")
IRLCs associated with mortgages to be held for sale represent commitments to extend credit at specified interest rates. On March 9, 2004, the Securities and Exchange Commission issued SAB No. 105, which summarizes the views of the Securities and Exchange Commission staff regarding the application of U.S. GAAP to loan commitments accounted for as derivative instruments. SAB 105 states that the value of the servicing asset should not be included in the estimate of fair value of IRLCs. SAB 105 is applicable for all IRLCs accounted for as derivatives and entered into on or after April 1, 2004.

Prior to April 1, 2004, JPMorgan Chase recorded IRLCs at estimated fair value. The fair value of IRLCs included an estimate of the value of the loan servicing right inherent in the underlying loan, net of the estimated costs to close the loan. Effective April 1, 2004, and as a result of SAB 105, the Firm no longer assigns fair value to IRLCs on the date they are entered into, with any initial gain being recognized upon the sale of the resultant loan. Also in connection with SAB 105, the Firm records any changes in the value of the IRLCs, excluding the servicing asset component, due to changes in interest rates after they are locked. Adopting SAB 105 did not have a material impact on the Firm's 2004 Consolidated financial statements.

Accounting for certain loans or debt securities acquired in a transfer
In December 2003, the AICPA issued SOP 03-3, which requires that loans purchased at a discount due to poor credit quality be recorded at fair value and prohibits the recognition of a loss accrual or valuation allowance at the time of purchase. SOP 03-3 also limits the yield that may be accreted to the excess of the undiscounted expected cash flows over the initial investment in the loan. Subsequent increases in expected cash flows are recognized prospectively through an adjustment of yield over its remaining life and decreases in expected cash flows are recognized as an impairment. For JPMorgan Chase entities, SOP 03-3 became effective for loans or debt securities acquired after December 31, 2004.

Accounting for postretirement health care plans that provide prescription drug benefits
In December 2003, the Medicare Prescription Drug, Improvement and Modernization Act of 2003 (the "Act") was enacted. In May 2004, the FASB issued FSP SFAS 106-2, which provides guidance on accounting for the Act. For additional information, see Note 6 on page 92–95 of this Annual Report. In early 2005, the federal government issued additional guidance about how to apply certain provisions of the Act, which may lead to future accounting adjustments. Such adjustments, however, are not expected to be material.

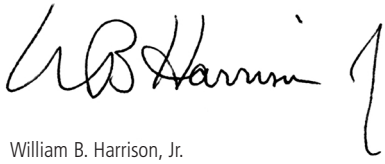
Accounting for variable interest entities
In December 2003, the FASB issued a revision to FIN 46 to address various technical corrections and implementation issues that had arisen since the issuance of FIN 46. Effective March 31, 2004, JPMorgan Chase implemented FIN 46R for all VIEs, excluding certain investments made by its private equity business. Implementation of FIN 46R did not have a material effect on the Firm's Consolidated financial statements.

The application of FIN 46R involved significant judgement and interpretations by management. The Firm is aware of differing interpretations being developed among accounting professionals and the EITF with regard to analyzing derivatives under FIN 46R. Management's current interpretation is that derivatives should be evaluated by focusing on an economic analysis of the rights and obligations of a VIE's assets, liabilities, equity, and other contracts, while considering: the entity's activities and design; the terms of the derivative contract and the role it has with entity; and whether the derivative contract creates and/or absorbs variability of the VIE. The Firm will continue to monitor developing interpretations.

Management's report on internal control over financial reporting

JPMorgan Chase & Co.

Management of JPMorgan Chase & Co. is responsible for establishing and maintaining adequate internal control over financial reporting. As defined in Rules 13a-15(f) or 15d-15(f) under the Securities Exchange Act of 1934, internal control over financial reporting is a process designed by, or under the supervision of, the Firm's principal executive, principal operating and principal financial officers, or persons performing similar functions, and effected by JPMorgan Chase's board of directors, management and other personnel, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with accounting principles generally accepted in the United States of America.



JPMorgan Chase's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records, that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the Firm's assets; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the Firm are being made only in accordance with authorizations of JPMorgan Chase's management and directors; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use or disposition of the Firm's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

Management has completed an assessment of the effectiveness of the Firm's internal control over financial reporting as of December 31, 2004. In making the assessment, management used the framework in "Internal Control – Integrated Framework" promulgated by the Committee of Sponsoring Organizations of the Treadway Commission, commonly referred to as the "COSO" criteria.

Based on the assessment performed, management concluded that as of December 31, 2004, JPMorgan Chase's internal control over financial reporting was effective based upon the COSO criteria. Additionally, based on management's assessment, the Firm determined that there were no material weaknesses in its internal control over financial reporting as of December 31, 2004.

Management's assessment of the effectiveness of the Firm's internal control over financial reporting as of December 31, 2004 has been audited by PricewaterhouseCoopers LLP, JPMorgan Chase's independent registered public accounting firm, who also audited the Firm's financial statements as of and for the year ended December 31, 2004, as stated in their report which is included herein.

Report of independent registered public accounting firm

JPMorgan Chase & Co.

PRICEWATERHOUSECOOPERS

PRICEWATERHOUSECOOPERS LLP • 300 MADISON AVENUE • NEW YORK, NY 10017

Report of Independent Registered Public Accounting Firm
To the Board of Directors and Stockholders of JPMorgan Chase & Co.:

We have completed an integrated audit of JPMorgan Chase & Co.'s 2004 consolidated financial statements and of its internal control over financial reporting as of December 31, 2004 and audits of its 2003 and 2002 consolidated financial statements in accordance with the standards of the Public Company Accounting Oversight Board (United States). Our opinions, based on our audits, are presented below.

Consolidated financial statements

In our opinion, the accompanying consolidated balance sheets and the related consolidated statements of income, changes in stockholders' equity and cash flows present fairly, in all material respects, the financial position of JPMorgan Chase & Co. and its subsidiaries (the "Company") at December 31, 2004 and 2003, and the results of their operations and their cash flows for each of the three years in the period ended December 31, 2004 in conformity with accounting principles generally accepted in the United States of America. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audits. We conducted our audits of these statements in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit of financial statements includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, and evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

Internal control over financial reporting

Also, in our opinion, management's assessment, included in the accompanying Management's report on internal control over financial reporting, that the Company maintained effective internal control over financial reporting as of December 31, 2004 based on criteria established in Internal Control – Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission ("COSO"), is fairly stated, in all material respects, based on those criteria. Furthermore, in our opinion, the Company maintained, in all material respects, effective internal control over financial reporting as of December 31, 2004, based on criteria established in Internal Control – Integrated Framework issued by COSO. The Company's management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting. Our responsibility is to express opinions on management's assessment and on the effectiveness of the Company's internal control over financial reporting based on our audit. We conducted our audit of internal control over financial reporting in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. An audit of internal control over financial reporting includes obtaining an understanding of internal control over financial reporting, evaluating management's assessment, testing and evaluating the design and operating effectiveness of internal control, and performing such other procedures as we consider necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinions.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (i) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (ii) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (iii) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

Note: The fair values of noncash assets acquired and liabilities assumed in the Merger with Bank One were $320.9 billion and $277.0 billion, respectively. Approximately 1,469 million shares of common stock, valued at approximately $57.3 billion, were issued in connection with the merger with Bank One.

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. All other periods reflect the results of heritage JPMorgan Chase only.

The Notes to consolidated financial statements are an integral part of these statements.

Note 1 – Basis of presentation

JPMorgan Chase & Co. ("JPMorgan Chase" or the "Firm"), a financial holding company incorporated under Delaware law in 1968, is a leading global financial services firm and one of the largest banking institutions in the United States, with operations in more than 50 countries. The Firm is a leader in investment banking, financial services for consumers and businesses, financial transaction processing, investment management, private banking and private equity. For a discussion of the Firm's business segment information, see Note 31 on pages 126–127 of this Annual Report.

The accounting and financial reporting policies of JPMorgan Chase and its subsidiaries conform to accounting principles generally accepted in the United States of America ("U.S. GAAP") and prevailing industry practices. Additionally, where applicable, the policies conform to the accounting and reporting guidelines prescribed by bank regulatory authorities.

Certain amounts in the prior periods have been reclassified to conform to the current presentation.

Consolidation

The consolidated financial statements include accounts of JPMorgan Chase and other entities in which the Firm has a controlling financial interest. All material intercompany balances and transactions have been eliminated.

The usual condition for a controlling financial interest is ownership of a majority of the voting interests of an entity. However, a controlling financial interest may also exist in entities, such as special purpose entities ("SPEs"), through arrangements that do not involve controlling voting interests.

SPEs are an important part of the financial markets, providing market liquidity by facilitating investors' access to specific portfolios of assets and risks. They are, for example, critical to the functioning of the mortgage- and asset-backed securities and commercial paper markets. SPEs may be organized as trusts, partnerships or corporations and are typically set up for a single, discrete purpose. SPEs are not typically operating entities and usually have a limited life and no employees. The basic SPE structure involves a company selling assets to the SPE. The SPE funds the purchase of those assets by issuing securities to investors. The legal documents that govern the transaction describe how the cash earned on the assets must be allocated to the SPE's investors and other parties that have rights to those cash flows. SPEs can be structured to be bankruptcy-remote, thereby insulating investors from the impact of the creditors of other entities, including the seller of the assets.

There are two different accounting frameworks applicable to SPEs; the qualifying SPE ("QSPE") framework under SFAS 140; and the variable interest entity ("VIE") framework under FIN 46R. The applicable framework depends on the nature of the entity and the Firm's relation to that entity. The QSPE framework is applicable when an entity transfers (sells) financial assets to an SPE meeting certain criteria as defined in SFAS 140. These criteria are designed to ensure that the activities of the entity are essentially predetermined in their entirety at the inception of the vehicle and that the transferor of the financial assets cannot exercise control over the entity and the assets therein. Entities meeting these criteria are not consolidated by the transferor or other counterparty, as long as the entity does not have the unilateral ability to liquidate or to cause it to no longer meet the QSPE criteria. The Firm primarily follows the QSPE model for securitizations of its residential and commercial mortgages, credit card loans and automobile loans. For further details, see Note 13 on pages 103–106 of this Annual Report.

When the SPE does not meet the QSPE criteria, consolidation is assessed pursuant to FIN 46R. Under FIN 46R, a VIE is defined as an entity that: (1) lacks enough equity investment at risk to permit the entity to finance its activities without additional subordinated financial support from other parties, (2) has equity owners that lack the right to make significant decisions affecting the entity's operations, and/or (3) has equity owners that do not have an obligation to absorb or the right to receive the entity's losses or returns.

FIN 46R requires a variable interest holder (i.e., a counterparty to a VIE) to consolidate the VIE if that party will absorb a majority of the expected losses of the VIE, receive a majority of the residual returns of the VIE, or both. This party is considered the primary beneficiary of the entity. The determination of whether the Firm meets the criteria to be considered the primary beneficiary of a VIE requires an evaluation of all transactions (such as investments, liquidity commitments, derivatives and fee arrangements) with the entity and an expected loss calculation when necessary. For further details, see Note 14 on pages 106–109 of this Annual Report.

Prior to the Firm's adoption of FIN 46 on July 1, 2003, the decision of whether or not to consolidate depended on the applicable accounting principles for non-QSPEs, including a determination regarding the nature and amount of investment made by third parties in the SPE. Consideration was given to, among other factors, whether a third party had made a substantive equity investment in the SPE; which party had voting rights, if any; who made decisions about the assets in the SPE; and who was at risk of loss. The SPE was consolidated if JPMorgan Chase retained or acquired control over the risks and rewards of the assets in the SPE.

Financial assets are derecognized when they meet the accounting sale criteria. Those criteria are: (1) the assets are legally isolated from the Firm's creditors; (2) the entity can pledge or exchange the financial assets or, if the entity is a QSPE, its investors can pledge or exchange their interests; and (3) the Firm does not maintain effective control via an agreement to repurchase the assets before their maturity or have the ability to unilaterally cause the holder to return the assets. All significant transactions and retained interests between the Firm, QSPEs and nonconsolidated VIEs are reflected on JPMorgan Chase's Consolidated balance sheets or in the Notes to consolidated financial statements.

Investments in companies that are considered to be voting-interest entities under FIN 46R, in which the Firm has significant influence over operating and financing decisions (generally defined as owning a voting or economic interest of 20% to 50%) are accounted for in accordance with the equity method of accounting. These investments are generally included in Other assets, and the Firm's share of income or loss is included in Other income. For a discussion of private equity investments, see Note 9 on pages 98–100 of this Annual Report.

Assets held for clients in an agency or fiduciary capacity by the Firm are not assets of JPMorgan Chase and are not included in the Consolidated balance sheets.

Use of estimates in the preparation of consolidated financial statements

The preparation of consolidated financial statements requires management to make estimates and assumptions that affect the reported amounts of assets, liabilities, revenue, expenses and disclosures of contingent assets and liabilities. Actual results could be different from these estimates.

Foreign currency translation

Assets and liabilities denominated in foreign currencies are translated into U.S. dollars using applicable rates of exchange. JPMorgan Chase translates revenues and expenses using exchange rates at the transaction date.

Gains and losses relating to translating functional currency financial statements for U.S. reporting are included in Other comprehensive income (loss) within Stockholders' equity. Gains and losses relating to nonfunctional currency transactions, including non-U.S. operations where the functional currency is the U.S. dollar and operations in highly inflationary environments, are reported in the Consolidated statements of income.

Statements of cash flows

For JPMorgan Chase's Consolidated statements of cash flows, cash and cash equivalents are defined as those amounts included in Cash and due from banks.

Significant accounting policies

The following table identifies JPMorgan Chase's significant accounting policies and the Note and page where a detailed description of each policy can be found:

Note 2 – Business changes and developments

Merger with Bank One Corporation

Bank One Corporation merged with and into JPMorgan Chase (the "Merger") on July 1, 2004. As a result of the Merger, each outstanding share of common stock of Bank One was converted in a stock-for-stock exchange into 1.32 shares of common stock of JPMorgan Chase; cash payments for fractional shares were approximately $3.1 million. JPMorgan Chase stockholders kept their shares, which remained outstanding and unchanged as shares of JPMorgan Chase following the Merger. Key objectives of the Merger were to provide the Firm with a more balanced business mix and greater geographic diversification. The Merger was accounted for using the purchase method of accounting, which requires that the assets and liabilities of Bank One be fair valued as of July 1, 2004. The purchase price to complete the Merger was $58.5 billion.

The purchase price of the Merger has been allocated to the assets acquired and liabilities assumed using their fair values at the merger date. The computation of the purchase price and the allocation of the purchase price to the net assets of Bank One – based on their respective fair values as of July 1, 2004 – and the resulting goodwill are presented below. The allocation of the purchase price may be modified through June 30, 2005, as more information is obtained about the fair value of assets acquired and liabilities assumed.

(in millions, except per share amounts)	July 1, 2004	
Purchase price		
Bank One common stock exchanged	1,113	
Exchange ratio	1.32	
JPMorgan Chase common stock issued	1,469	
Average purchase price per JPMorgan Chase common share[(a)]	$ 39.02	
		$ 57,336
Fair value of employee stock awards and direct acquisition costs		1,210
Total purchase price		$ 58,546
Net assets acquired:		
Bank One stockholders' equity	$ 24,156	
Bank One goodwill and other intangible assets	(2,754)	
Subtotal	21,402	
Adjustments to reflect assets acquired at fair value:		
Loans and leases	(2,261)	
Private equity investments	(75)	
Identified intangibles	8,665	
Pension plan assets	(778)	
Premises and equipment	(427)	
Other assets	(262)	
Amounts to reflect liabilities assumed at fair value:		
Deposits	(373)	
Deferred income taxes	767	
Postretirement plan liabilities	(49)	
Other liabilities	(975)	
Long-term debt	(1,234)	
		24,400
Goodwill resulting from Merger		$ 34,146

(a) The value of the Firm's common stock exchanged with Bank One shareholders was based on the average closing prices of the Firm's common stock for the two days prior to, and the two days following, the announcement of the Merger on January 14, 2004.

Unaudited condensed statement of net assets acquired

The following unaudited condensed statement of net assets acquired reflects the fair value of Bank One net assets as of July 1, 2004.

(in millions) July 1, 2004	
Assets	
Cash and cash equivalents	$ 14,669
Securities	70,512

Acquired, identifiable intangible assets

Components of the fair value of acquired, identifiable intangible assets as of July 1, 2004 were as follows:

(in millions)	Fair value	Weighted average life (in years)	Useful life (in years)
Core deposit intangibles	$ 3,650	5.1	Up to 10
Purchased credit card relationships	3,340	4.6	Up to 10
Other credit card–related intangibles	295	4.6	Up to 10
Other customer relationship intangibles	870	4.6–10.5	Up to 20
Subtotal	8,155	5.1	Up to 20
Indefinite-lived asset management intangibles	510	NA	NA
Total	$ 8,665	5.1	

Unaudited pro forma condensed combined financial information

The following unaudited pro forma condensed combined financial information presents the results of operations of the Firm had the Merger taken place at January 1, 2003.

Year ended December 31, (in millions)	2004	2003
Noninterest revenue	$ 31,175	$ 28,966
Net interest income	21,366	21,715
Total net revenue	52,541	50,681
Provision for credit losses	2,727	3,570
Noninterest expense	40,504	33,136
Income before income tax expense	9,310	13,975
Net income	$ 6,544	$ 9,330
Net income per common share:		
Basic	$ 1.85	$ 2.66
Diluted	1.81	2.61
Average common shares outstanding:		
Basic	3,510	3,495
Diluted	3,593	3,553

Other acquisitions

During 2004, JPMorgan Chase purchased the Electronic Financial Services ("EFS") business from Citigroup and acquired a majority interest in hedge fund manager Highbridge Capital Management ("Highbridge").

Note 3 – Trading activities

Trading assets include debt and equity securities held for trading purposes that JPMorgan Chase owns ("long" positions). Trading liabilities include debt and equity securities that the Firm has sold to other parties but does not own ("short" positions). The Firm is obligated to purchase securities at a future date to cover the short positions. Included in Trading assets and Trading liabilities are the reported receivables (unrealized gains) and payables (unrealized losses) related to derivatives. These amounts include the effect of master netting agreements as permitted under FIN 39. Effective January 1, 2004, the Firm elected to report the fair value of derivative assets and liabilities net of cash received and paid, respectively, under legally enforceable master netting agreements. At December 31, 2004, the amount of cash received and paid was approximately $32.2 billion and $22.0 billion, respectively. Trading positions are carried at fair value on the Consolidated balance sheets.

Trading revenue

Year ended December 31,[a] (in millions)	2004	2003	2002
Fixed income and other[b]	$ 2,976	$ 4,046	$ 2,527
Equities[c]	797	764	331
Credit portfolio[d]	(161)	(383)	(183)
Total	$ 3,612	$ 4,427	$ 2,675

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. All other periods reflect the results of heritage JPMorgan Chase only.
(b) Includes bonds and commercial paper and various types of interest rate derivatives as well as foreign exchange and commodities.
(c) Includes equity securities and equity derivatives.
(d) Includes credit derivatives

Trading assets and liabilities

The following table presents the fair value of Trading assets and Trading liabilities for the dates indicated:

December 31, (in millions)	2004	2003[a]
Trading assets		
Debt and equity instruments:		
U.S. government, federal agencies/corporations obligations and municipal securities	$ 43,866	$ 44,678
Certificates of deposit, bankers' acceptances and commercial paper	7,341	5,765
Debt securities issued by non-U.S. governments	50,699	36,243
Corporate securities and other	120,926	82,434
Total debt and equity instruments	222,832	169,120
Derivative receivables:		
Interest rate	45,892	60,176
Foreign exchange	7,939	9,760

Credit derivatives	2,945	3,025
Commodity	3,086	1,927
Total derivative receivables	65,982	83,751
Total trading assets	$ 288,814	$252,871
Trading liabilities		
Debt and equity instruments[b]	$ 87,942	$ 78,222
Derivative payables:		
Interest rate	41,075	49,189
Foreign exchange	8,969	10,129
Equity	9,096	8,203
Credit derivatives	2,499	2,672
Commodity	1,626	1,033
Total derivative payables	63,265	71,226
Total trading liabilities	$ 151,207	$ 149,448

(a) Heritage JPMorgan Chase only.
(b) Primarily represents securities sold, not yet purchased.

Average Trading assets and liabilities were as follows for the periods indicated:

Year ended December 31,[a] (in millions)	2004	2003	2002
Trading assets – debt and equity instruments	$200,467	$ 154,597	$ 149,173
Trading assets – derivative receivables	59,521	85,628	73,641
Trading liabilities – debt and equity instruments[b]	$ 82,204	$ 72,877	$ 64,725
Trading liabilities – derivative payables	52,761	67,783	57,607

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. All other periods reflect the results of heritage JPMorgan Chase only.
(b) Primarily represents securities sold, not yet purchased.

Note 4 – Other noninterest revenue

Investment banking fees

This revenue category includes advisory and equity and debt underwriting fees. Advisory fees are recognized as revenue when related services are performed. Underwriting fees are recognized as revenue when the Firm has rendered all services to the issuer and is entitled to collect the fee from the issuer, as long as there are no other contingencies associated with the fee (e.g., not contingent on the customer obtaining financing). Underwriting fees are net of syndicate expenses. In addition, the Firm recognizes credit arrangement and syndication fees as revenue after satisfying certain retention, timing and yield criteria.

The following table presents the components of Investment banking fees:

Year ended December 31, (in millions)[a]	2004	2003	2002
Underwriting:			
Equity	$ 780	$ 699	$ 464
Debt	1,859	1,549	1,543
Total Underwriting	2,639	2,248	2,007
Advisory	898	642	756
Total	$ 3,537	$ 2,890	$ 2,763

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. All other periods reflect the results of heritage JPMorgan Chase only.

Lending & deposit related fees

This revenue category includes fees from loan commitments, standby letters of credit, financial guarantees, deposit services in lieu of compensating balances, cash management-related activities or transactions, deposit accounts, and other loan servicing activities. These fees are recognized over the period in which the related service is provided.

Asset management, administration and commissions

This revenue category includes fees from investment management and related services, custody and institutional trust services, brokerage services, insurance premiums and commissions and other products. These fees are recognized over the period in which the related service is provided.

Mortgage fees and related income

This revenue category includes fees and income derived from mortgage origination, sales and servicing; and includes the effect of risk management activities associated with the mortgage pipeline, warehouse and the mortgage servicing rights ("MSRs") asset (excluding gains and losses on the sale of Available-for-sale ("AFS") securities). Origination fees and gains or losses on loan sales are recognized in income upon sale. Mortgage servicing fees are recognized over the period the related service is provided, net of amortization. Valuation changes in the mortgage pipeline, warehouse, MSR asset and corresponding risk management instruments are generally adjusted through earnings as these changes occur. Net interest income and securities gains and losses on AFS securities used in mortgage-related risk management activities are not included in Mortgage fees and related income. For a further discussion of MSRs, see Note 15 on pages 109–111 of this Annual Report.

Credit card income

This revenue category includes interchange income (i.e., transaction-processing fees) from credit and debit cards, annual fees, and servicing fees earned in connection with securitization activities. Also included in this category are volume-related payments to partners and rewards expense. Fee revenues are recognized as earned, except for annual fees, which are recognized over a 12-month period.

Credit card revenue sharing agreements

The Firm has contractual agreements with numerous affinity organizations and co-brand partners, which grant to the Firm exclusive rights to market to their members or customers. These organizations and partners provide to the Firm their endorsement of the credit card programs, mailing lists, and may also conduct marketing activities, and provide awards under the various credit card programs. The terms of these agreements generally range from 3 to 10 years. The economic incentives the Firm pays to the endorsing organizations and partners typically include payments based on new accounts, activation, charge volumes, and the cost of their marketing activities and awards.

The Firm recognizes the portion of its payments based on new accounts to the affinity organizations and co-brand partners as deferred loan origination costs. The Firm defers these costs and amortizes them over 12 months. The Firm expenses payments based on marketing efforts performed by the endorsing organization or partner to activate a new account after the account has been originated as incurred. Payments based on charge volumes and considered by the Firm as revenue sharing with the affinity organizations and co-brand partners, are deducted from Credit card income as the related revenue is earned.

Note 5 – Interest income and interest expense

Details of Interest income and Interest expense were as follows:

Year ended December 31, (in millions)[a]	2004	2003	2002
Interest Income			
Loans	$ 16,771	$ 11,812	$ 12,709
Securities	3,377	3,542	3,367
Trading assets	7,527	6,592	6,798
Federal funds sold and securities purchased under resale agreements	1,627	1,497	2,078
Securities borrowed	463	323	681
Deposits with banks	539	214	303
Interests in purchased receivables	291	64	—
Total interest income	30,595	24,044	25,936
Interest Expense			
Interest-bearing deposits	4,600	3,604	5,253
Short-term and other liabilities	6,290	5,871	7,038
Long-term debt	2,466	1,498	1,467
Beneficial interests issued by consolidated VIEs	478	106	—
Total interest expense	13,834	11,079	13,758
Net interest income	16,761	12,965	12,178
Provision for credit losses	2,544	1,540	4,331
Net interest income after provision for credit losses	$ 14,217	$ 11,425	$ 7,847

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. All other periods reflect the results of heritage JPMorgan Chase only.

Note 6 – Pension and other postretirement employee benefit plans

New U.S.-based postretirement plans were approved in 2004 and the prior plans of JPMorgan Chase and Bank One were merged as of December 31, 2004.

The Firm's defined benefit pension plans are accounted for in accordance with SFAS 87 and SFAS 88. Its postretirement medical and life insurance plans are accounted for in accordance with SFAS 106.

The Firm uses a measurement date of December 31 for its pension and other postretirement employee benefit plans. The fair value of plan assets is used to determine the expected return on plan assets for its U.S. and non-U.S. defined benefit pension plans. For the U.S. postretirement benefit plan, the market-related value, which recognizes changes in fair value over a five-year period, is used to determine the expected return on plan assets. Unrecognized net actuarial gains and losses are amortized over the average remaining service period of active plan participants, if required.

In December 2003, the Medicare Prescription Drug, Improvement and Modernization Act of 2003 (the "Act") was enacted. The Act established a prescription drug benefit under Medicare ("Medicare Part D") and a federal subsidy to sponsors of retiree health care benefit plans that provide a benefit that is at least actuarially equivalent to Medicare Part D. The Firm has determined that benefits provided to certain participants will be at least actuarially equivalent to Medicare Part D and has reflected the estimated effects of the subsidy in its financial statements and disclosures retroactive to the beginning of 2004 (July 1, 2004 for Bank One Plans) in accordance with FSP SFAS 106-2.

Defined benefit pension plans

The Firm has a qualified noncontributory U.S. defined benefit pension plan that provides benefits to substantially all U.S. employees. The U.S. plan employs a cash balance formula, in the form of salary and interest credits, to determine the benefits to be provided at retirement, based on eligible compensation and years of service. Employees begin to accrue plan benefits after completing one year of service, and benefits vest after five years of service. The Firm also offers benefits through defined benefit pension plans to qualifying employees in certain non-U.S. locations based on eligible compensation and years of service.

It is the Firm's policy to fund its pension plans in amounts sufficient to meet the requirements under applicable employee benefit and local tax laws. In 2004, the Firm made a cash contribution to its U.S. defined benefit pension plan of $1.1 billion on April 1, funding the plan to the maximum allowable amount under applicable tax law. Additionally, the Firm made cash contributions totaling $40 million to fully fund the accumulated benefit obligations of certain non-U.S. defined benefit pension plans as of December 31, 2004. Based on the current funded status of the U.S. and non-U.S. pension plans, the Firm does not expect to make significant contributions in 2005.

Postretirement medical and life insurance

JPMorgan Chase offers postretirement medical and life insurance benefits to certain retirees and qualifying U.S. employees. These benefits vary with length of service and date of hire and provide for limits on the Firm's share of covered medical benefits. The medical benefits are contributory, while the life insurance benefits are noncontributory. Postretirement medical benefits are also offered to qualifying U.K. employees.

JPMorgan Chase's U.S. postretirement benefit obligation is partially funded with corporate-owned life insurance ("COLI") purchased on the lives of eligible employees and retirees. While the Firm owns the COLI policies, COLI proceeds (death benefits, withdrawals and other distributions) may be used only to reimburse the Firm for its net postretirement benefit claim payments and related administrative expenses. The U.K. postretirement benefit plan is unfunded.

The following tables present the funded status and amounts reported on the Consolidated balance sheets, the accumulated benefit obligation and the components of net periodic benefit costs reported in the Consolidated statements of income for the Firm's U.S. and non-U.S. defined benefit pension and postretirement benefit plans.

December 31, (in millions)	Defined benefit pension plans U.S. 2004[a]	U.S. 2003[b]	Non-U.S. 2004[a]	Non-U.S. 2003[b]	Postretirement benefit plans[d] 2004[a][c]	Postretirement benefit plans[d] 2003[b]

Net periodic benefit costs reported in Compensation expense	$ 86	$ 190	$ 113	$ 69	$ 50	$ 6	$ 20[b]	$ (1)	$ 24

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. All other periods reflect the results of heritage JPMorgan Chase only.
(b) The effect of the Medicare Prescription Drug, Improvement and Modernization Act of 2003 resulted in a $5 million reduction in the Firm's net periodic benefit costs.

JPMorgan Chase has a number of other defined benefit pension plans (i.e., U.S. plans not subject to Title IV of the Employee Retirement Income Security Act). The most significant of these plans is the Excess Retirement Plan, pursuant to which certain employees earn service credits on compensation amounts above the maximum stipulated by law. This plan is a nonqualified, noncontributory U.S. pension plan with an unfunded liability at December 31, 2004 and 2003, in the amount of $292 million and $178 million, respectively. Compensation expense related to the Firm's other defined benefit pension plans totaled $28 million in 2004, $19 million in 2003 and $15 million in 2002.

Plan assumptions

JPMorgan Chase's expected long-term rate of return for U.S. pension and other postretirement plan assets is a blended average of its investment advisor's projected long-term (10 years or more) returns for the various asset classes, weighted by the portfolio allocation. Asset-class returns are developed using a forward-looking building-block approach and are not based strictly on historical returns. Equity returns are generally developed as the sum of inflation, expected real earnings growth and expected long-term dividend yield. Bond returns are generally developed as the sum of inflation, real bond yields and risk spreads (as appropriate), adjusted for the expected effect on returns from changing yields. Other asset-class returns are derived from their relationship to the equity and bond markets.

In the United Kingdom, which represents the most significant of the non-U.S. pension plans, procedures similar to those in the United States are used to develop the expected long-term rate of return on pension plan assets, taking into consideration local market conditions and the specific allocation of plan assets. The expected long-term rate of return on U.K. plan assets is an average of projected long-term returns for each asset class, selected by reference to the yield on long-term U.K. government bonds and AA-rated long-term corporate bonds, plus an equity risk premium above the risk-free rate.

The discount rate used in determining the benefit obligation under the U.S. pension and other postretirement employee benefit plans is selected by reference to the year-end Moody's corporate AA rate, as well as other high-quality indices with similar duration to that of the respective plan's benefit obligations. The discount rate for the U.K. postretirement plans is selected by reference to the year-end iBoxx £ corporate AA 15-year-plus bond rate.

The following tables present the weighted-average annualized actuarial assumptions for the projected and accumulated benefit obligations, and the components of net periodic benefit costs for the Firm's U.S. and non-U.S. defined benefit pension and postretirement benefit plans, as of year-end.

	U.S.		Non-U.S.	
For the year ended December 31,	**2004**	2003	**2004**	2003
Weighted-average assumptions used to determine benefit obligations				
Discount rate	**5.75%**	6.00%	**2.00-5.30%**	2.00-5.40%
Rate of compensation increase	**4.50**	4.50	**1.75-3.75**	1.75-3.75

	U.S.			Non-U.S.		
For the year ended December 31,	**2004**	2003	2002	**2004**	2003	2002
Weighted-average assumptions used to determine net periodic benefit costs						
Discount rate	**6.00%**	6.50%	7.25%	**2.00-5.75%**	1.50-5.60%	2.50-6.00%
Expected long-term rate of return on plan assets:						
Pension	**7.50-7.75**	8.00	9.25	**3.00-6.50**	2.70-6.50	3.25-7.25
Postretirement benefit	**4.75-7.00**	8.00	9.00	**NA**	NA	NA

The following tables present JPMorgan Chase's assumed weighted-average medical benefits cost trend rate, which is used to measure the expected cost of benefits at year-end, and the effect of a one-percentage-point change in the assumed medical benefits cost trend rate.

December 31,	**2004**	2003[a]	2002[a]
Health care cost trend rate assumed for next year	**10%**	10%	9%
Rate to which cost trend rate is assumed to decline (ultimate trend rate)	**5**	5	5
Year that rate reaches ultimate trend rate	**2012**	2010	2008

(in millions) For the year ended December 31,2004	1-Percentage-point increase	1-Percentage-point decrease
Effect on total service and interest costs	**$ 5**	$ (4)
Effect on postretirement benefit obligation	**71**	(62)

(a) Heritage JPMorgan Chase only.

At December 31, 2004, the Firm reduced the discount rate used to determine its U.S. benefit obligations to 5.75%. The Firm also reduced the 2005 expected long-term rate of return on its U.S. pension plan assets to 7.50%. The expected long-term rate of return on the Firm's COLI postretirement plan assets remained at 7%; however, with the merger of Bank One's other postretirement plan assets, the Firm's overall expected long-term rate of return on U.S. postretirement plan assets decreased to 6.80% to reflect a weighted average expected rate of return for the merged plan. The changes as of December 31, 2004, to the discount rate and the expected long-term rate of return on plan assets is expected to increase 2005 U.S. pension and other postretirement benefit expenses by approximately $41 million. The impact of any changes to the discount rate and the expected long-term rate of return on plan assets on non-U.S. pension and other postretirement benefit expenses is not expected to be material.

JPMorgan Chase's U.S. pension and other postretirement benefit expenses are most sensitive to the expected long-term rate of return on plan assets. With all other assumptions held constant, a 25–basis point decline in the expected long-term rate of return on U.S. plan assets would result in an increase of approximately $25 million in 2005 U.S. pension and other postretirement benefit expenses. Additionally, a 25–basis point decline in the discount rate for the U.S. plans would result in an increase in 2005 U.S. pension and other postretirement benefit expenses of approximately $16 million and an increase in the related projected benefit obligations of approximately $215 million.

Investment strategy and asset allocation

The investment policy for the Firm's postretirement employee benefit plan assets is to optimize the risk-return relationship as appropriate to the respective plan's needs and goals, using a global portfolio of various asset classes diversified by market segment, economic sector and issuer. Specifically, the goal is to optimize the asset mix for future benefit obligations, while managing various risk factors and each plan's investment return objectives. For example, long-duration fixed income securities are included in the U.S. qualified pension plan's asset allocation, in recognition of its long-duration obligations. Plan assets are managed by a combination of internal and external investment managers and, on a quarterly basis, are rebalanced to target, to the extent economically practical.

The Firm's U.S. pension plan assets are held in various trusts and are invested in well diversified portfolios of equity (including U.S. large and small capitalization and international equities), fixed income (including corporate and government bonds), Treasury inflation-indexed and high-yield securities, cash equivalents and other securities. Non-U.S. pension plan assets are similarly invested in well-diversified portfolios of equity, fixed income and other securities. Assets of the Firm's COLI policies, which are used to fund partially the U.S. postretirement benefit plan, are held in separate accounts with an insurance company and are invested in equity and fixed income index funds. In addition, tax-exempt municipal debt securities, held in a trust, are used to fund the U.S. postretirement benefit plan. Assets used to fund the Firm's U.S. and non-U.S. defined benefit pension plans include $53 million of JPMorgan Chase common stock in addition to JPMorgan Chase common stock held in connection with investments in third-party stock-index funds.

The following table presents the weighted-average asset allocation at December 31 for the years indicated, and the respective target allocation by asset category, for the Firm's U.S. and non-U.S. defined benefit pension and postretirement benefit plans.

	Defined benefit pension plans								
	U.S.			Non-U.S.[a]			Postretirement benefit plans[b]		
	Target	% of plan assets		Target	% of plan assets		Target	% of plan assets	
December 31,	Allocation	2004	2003[c]	Allocation	2004	2003[c]	Allocation	2004	2003[c]
Asset class									
Debt securities	40%	**38%**	41%	74%	**74%**	70%	50%	**46%**	50%
Equity securities	50	**53**	53	26	**26**	24	50	**54**	50

Other	5	**4**	1	—	**—**	6	—	**—**	—
Total	100%	**100%**	100%	100%	**100%**	100%	100%	**100%**	100%

(a) Represents the U.K. defined benefit pension plan only, as plans outside the U.K. are not significant.
(b) Represents the U.S. postretirement benefit plan only, as the U.K. plan is unfunded.
(c) Heritage JPMorgan Chase only.

Estimated future benefit payments

The following table presents benefit payments expected to be paid, which include the effect of expected future service for the years indicated. The postretirement medical and life insurance payments are net of expected retiree contributions and the estimated Medicare Part D subsidy.

Year ended December 31, (in millions)	U.S. pension benefits	Non-U.S. pension benefits	U.S. and U.K. postretirement benefits
2005	$ 619	$ 60	$ 113
2006	578	62	110
2007	592	65	112
2008	606	67	114
2009	621	70	116
Years 2010–2014	3,352	387	588

Defined contribution plans

JPMorgan Chase offers several defined contribution plans in the U.S. and in certain non-U.S. locations. The most significant of these is the JPMorgan Chase 401(k) Savings Plan, covering substantially all U.S. employees. This plan allows employees to make pre-tax contributions to tax-deferred investment portfolios. The Firm matches eligible employee contributions up to a certain percentage of benefits eligible compensation per pay period, subject to plan and legal limits. Employees begin to receive matching contributions after completing a specified service requirement and are immediately vested in such company contributions. The Firm's defined contribution plans are administered in accordance with applicable local laws and regulations. Compensation expense related to these plans totaled $317 million in 2004, $240 million in 2003 and $251 million in 2002.

Note 7 – Employee stock-based incentives

Effective January 1, 2003, JPMorgan Chase adopted SFAS 123 using the prospective transition method. SFAS 123 requires all stock-based compensation awards, including stock options and stock-settled stock appreciation rights ("SARs"), to be accounted for at fair value. Stock options that were outstanding as of December 31, 2002 continue to be accounted for under APB 25 using the intrinsic value method. Under this method, no expense is recognized for stock options or SARs granted at the stock price on grant date, since such options have no intrinsic value. The Firm currently uses the Black-Scholes valuation model to estimate the fair value of stock options and SARs. Compensation expense for restricted stock and restricted stock units ("RSUs") is measured based on the number of shares granted and the stock price at the grant date. Compensation expense is recognized in earnings over the required service period.

In connection with the Merger, JPMorgan Chase converted all outstanding Bank One employee stock-based awards at the merger date, and those awards became exercisable for or based upon JPMorgan Chase common stock. The number of awards converted, and the exercise prices of those awards, was adjusted to take into account the Merger exchange ratio of 1.32.

On December 16, 2004, the FASB issued SFAS 123R, which revises SFAS 123 and supersedes APB 25. Accounting and reporting under SFAS 123R is generally similar to the SFAS 123 approach except that SFAS 123R requires all share-based payments to employees, including grants of stock options and SARs, to be recognized in the income statement based on their fair values. SFAS 123R must be adopted no later than July 1, 2005. SFAS 123R permits adoption using one of two methods — modified prospective or modified retrospective. The Firm is currently evaluating both the timing and method of adopting the new standard.

Key employee stock-based awards

JPMorgan Chase grants long-term stock-based incentive awards to certain key employees under two plans (the "LTI Plans"): the 1996 Long-Term Incentive Plan (the "1996 Plan"), as amended and approved by shareholders in May 2000, provides for grants of stock options, SARs, restricted stock and RSU awards, and the Stock Option Plan, a nonshareholder-approved plan, provides for grants of stock options and SARs. In 2004, 14.5 million SARs settled only in shares and 2.2 million nonqualified stock options were granted under the 1996 Plan.

Under the LTI Plans, stock options and SARs are granted with an exercise price equal to JPMorgan Chase's common stock price on the grant date. Generally, options and SARs cannot be exercised until at least one year after the grant date and become exercisable over various periods as determined at the time of the grant. These awards generally expire 10 years after the grant date.

The following table presents a summary of JPMorgan Chase's option and SAR activity under the LTI Plans during the last three years:

	2004		2003		2002	
Year ended December 31,[a] (in thousands)	Number of options/SARs	Weighted-average exercise price	Number of options	Weighted-average exercise price	Number of options	Weighted-average exercise price
Outstanding, January 1	**294,026**	**$ 39.88**	298,731	$ 40.84	272,304	$ 41.23
Granted	**16,667**	**39.79**	26,751	22.15	53,230	36.41
Bank One Conversion, July 1	**111,287**	**29.63**	NA	NA	NA	NA
Exercised	**(27,763)**	**25.33**	(14,574)	17.47	(9,285)	16.85
Canceled	**(17,887)**	**46.68**	(16,882)	47.57	(17,518)	45.59
Outstanding, December 31	**376,330**	**$ 37.59**	294,026	$ 39.88	298,731	$ 40.84
Exercisable, December 31	**246,945**	**$ 36.82**	176,163	$ 37.88	144,421	$ 34.91

(a) 2004 includes six months of awards for the combined Firm and six months of awards for heritage JPMorgan Chase. All other periods reflect the awards for heritage JPMorgan Chase only.

The following table details the distribution of options and SARs outstanding under the LTI Plans at December 31, 2004:

	Options/SARs outstanding			Options/SARs exercisable	
(in thousands) Range of exercise prices	Outstanding	Weighted-average exercise price	Weighted-average remaining contractual life (in years)	Exercisable	Weighted-average exercise price
$3.41–$20.00	**9,715**	**$ 17.67**	**0.9**	**9,707**	**$ 17.66**
$20.01–$35.00	**131,767**	**26.99**	**6.1**	**77,537**	**27.02**
$35.01–$50.00	**144,521**	**40.05**	**5.7**	**123,585**	**40.23**
$50.01–$65.58	**90,327**	**51.27**	**5.8**	**36,116**	**51.34**
Total	**376,330**	**$ 37.59**	**5.8**	**246,945**	**$ 36.82**

The following table presents a summary of JPMorgan Chase's restricted stock and RSU activity under the 1996 Plan during the last three years:

(in thousands)	Number of restricted stock/RSUs		
Year ended December 31,[a]	2004	2003	2002
Outstanding, January 1	**85,527**	55,886	48,336
Granted	**32,514**	44,552	24,624
Bank One conversion	**15,116**	NA	NA
Lapsed[b]	**(43,349)**	(12,545)	(15,203)
Forfeited	**(4,709)**	(2,366)	(1,871)
Outstanding, December 31	**85,099**	85,527	55,886

(a) 2004 results include six months of awards for the combined Firm and six months of awards for heritage JPMorgan Chase. All other periods reflect the awards for heritage JPMorgan Chase only.
(b) Lapsed awards represent both restricted stock for which restrictions have lapsed and RSUs that have been converted into common stock.

Restricted stock and RSUs are granted by JPMorgan Chase under the 1996 Plan at no cost to the recipient. These awards are subject to forfeiture until certain restrictions have lapsed, including continued employment for a specified period. The recipient of a share of restricted stock is entitled to voting rights and dividends on the common stock. An RSU entitles the recipient to receive a share of common stock after the applicable restrictions lapse; the recipient is entitled to receive cash payments equivalent to any dividends paid on the underlying common stock during the period the RSU is outstanding.

The vesting of certain awards issued prior to 2002 is conditioned upon certain service requirements being met and JPMorgan Chase's common stock reaching and sustaining target prices within a five-year performance period. During 2002, it was determined that it was no longer probable that the target stock prices related to forfeitable awards granted in 1999, 2000, and 2001 would be achieved within their respective performance periods, and accordingly, previously accrued expenses were reversed. The target stock prices for these awards range from $73.33 to $85.00. Forfeitures of the 1999 awards in 2004 equaled 1.2 million shares; and 1.2 million shares of the 2000 award were forfeited in January 2005. The 2001 awards will be forfeited in January 2006 if their stock price targets are not achieved.

Broad-based employee stock options

In January 2004, JPMorgan Chase granted a total of 6.3 million options and SARs to all eligible full-time (75 options each) and part-time (38 options each) employees under the Value Sharing Plan, a nonshareholder-approved plan. The exercise price is equal to JPMorgan Chase's common stock price on the grant date. The options become exercisable over various periods and generally expire 10 years after the grant date.

The following table presents a summary of JPMorgan Chase's broad-based employee stock option plan and SAR activity during the past three years:

Year ended December 31,[a]	2004		2003		2002	
(in thousands)	Number of options/SARs	Weighted-average exercise price	Number of options	Weighted-average exercise price	Number of options	Weighted-average exercise price
Outstanding, January 1	**117,822**	**$ 39.11**	113,155	$ 40.62	87,393	$ 41.86
Granted	**6,321**	**39.96**	12,846	21.87	32,550	36.85
Exercised	**(5,960)**	**15.26**	(2,007)	13.67	(674)	15.01
Canceled	**(5,999)**	**39.18**	(6,172)	37.80	(6,114)	41.14
Outstanding, December 31	**112,184**	**$ 40.42**	117,822	$ 39.11	113,155	$ 40.62
Exercisable, December 31	**30,082**	**$ 36.33**	36,396	$ 32.88	38,864	$ 31.95

(a) All awards are for heritage JPMorgan Chase employees only.

The following table details the distribution of broad-based employee stock options and SARs outstanding at December 31, 2004:

	Options/SARs outstanding			Options/SARs exercisable	
(in thousands) Range of exercise prices	Outstanding	Weighted-average exercise price	Weighted-average remaining contractual life (in years)	Exercisable	Weighted-average exercise price
$ 20.01–$35.00	**17,750**	**$ 24.72**	**5.6**	**7,319**	**$ 28.79**
$ 35.01–$50.00	**73,298**	**41.11**	**5.6**	**22,763**	**38.76**
$ 50.01–$51.22	**21,136**	**51.22**	**6.1**	**—**	**—**
Total[a]	**112,184**	**$ 40.42**	**5.7**	**30,082**	**$ 36.33**

(a) All awards are for heritage JPMorgan Chase employees only.

Comparison of the fair and intrinsic value measurement methods

Pre-tax employee stock-based compensation expense related to these plans totaled $1.3 billion in 2004, $919 million in 2003 and $590 million in 2002. In response to the fact that the adoption of SFAS 123 eliminated the difference in the expense impact of issuing options and restricted stock, the Firm changed its incentive compensation policies upon the adoption of SFAS 123 to permit employees to elect to receive incentive awards in the form of options, restricted stock or a combination of both. The $266 million impact of the adoption of SFAS 123 in 2003 is comprised of (i) $86 million representing the value of stock options granted during 2003 and (ii) $180 million representing the value of restricted stock granted during 2003 that would have been issuable solely in the form of stock options prior to the adoption of SFAS 123.

The following table presents net income (after-tax) and basic and diluted earnings per share as reported, and as if all outstanding awards were accounted for at fair value:

Year ended December 31,[a] (in millions, except per share data)	2004	2003	2002
Net income as reported	**$ 4,466**	$ 6,719	$ 1,663
Add: Employee stock-based compensation expense originally included in reported net income	**778**	551	354
Deduct: Employee stock-based compensation expense determined under the fair value method for all awards	**(960)**	(863)	(1,232)
Pro forma net income	**$ 4,284**	$ 6,407	$ 785
Earnings per share:			
Basic: As reported	**$ 1.59**	$ 3.32	$ 0.81
Pro forma	**1.52**	3.16	0.37
Diluted: As reported	**$ 1.55**	$ 3.24	$ 0.80
Pro forma	**1.48**	3.09	0.37

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. All other periods reflect the results of heritage JPMorgan Chase only.

The following table presents JPMorgan Chase's weighted-average grant-date fair values for the employee stock-based compensation awards granted, and the assumptions used to value stock options and SARs under a Black-Scholes valuation model:

Year ended December 31,[a]	2004	2003	2002
Weighted-average grant-date fair value			
Stock options:			
Key employee	**$ 13.04**	$ 5.60	$ 11.57
Broad-based employee	**10.71**	4.98	13.01
Converted Bank One options	**14.05**	NA	NA
Restricted stock and RSUs (all payable solely in stock)	**39.58**	22.03	36.28
Weighted-average annualized stock option valuation assumptions			
Risk-free interest rate	**3.44%**	3.19%	4.61%
Expected dividend yield[b]	**3.59**	5.99	3.72
Expected common stock price volatility	**41**	44	39
Assumed weighted-average expected life of stock options (in years)			
Key employee	**6.8**	6.8	6.8
Broad-based employee	**3.8**	3.8	6.8

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. All other periods reflect the results of heritage JPMorgan Chase only.
(b) Based primarily on historical data at the grant dates.

Note 8 – Noninterest expense

Merger costs

Costs associated with the Bank One merger in 2004, and costs associated with various programs announced prior to January 1, 2002 and incurred as of December 31, 2002, were reflected in the Merger costs caption of the Consolidated statements of income. A summary of such costs, by expense category, is shown in the following table for 2004, 2003 and 2002.

Year ended December 31,[a] (in millions)	2004	2003	2002
Expense category			
Compensation	$ 467	$ —	$ 379
Occupancy	448	—	216
Technology and communications and other	450	—	615
Total[b]	$ 1,365	$ —	$ 1,210

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. All other periods reflect the results of heritage JPMorgan Chase only.
(b) With the exception of occupancy-related write-offs, all of the costs in the table require the expenditure of cash.

The table below shows the change in the liability balance related to the costs associated with the Bank One merger.

Year ended December 31,[a] (in millions)	2004	2003
Liability balance, beginning of period	$ —	$ —
Recorded as merger costs	1,365	—
Recorded as goodwill	1,028	—
Liability utilized	(1,441)	—
Total	$ 952	$ —

(a) 2004 activity includes six months of the combined Firm's activity and six months of heritage JPMorgan Chase activity, while 2003 activity includes heritage JPMorgan Chase only.

Note 9 – Securities and private equity investments

Securities are classified as AFS, Held-to-maturity ("HTM") or Trading. Trading securities are discussed in Note 3 on pages 90–91. Securities are classified as AFS when, in management's judgment, they may be sold in response to or in anticipation of changes in market conditions, or as part of the Firm's management of its structural interest rate risk. AFS securities are carried at fair value on the Consolidated balance sheets. Unrealized gains and losses after SFAS 133 valuation adjustments are reported as net increases or decreases to Accumulated other comprehensive income (loss). The specific identification method is used to determine realized gains and losses on AFS securities, which are included in Securities / private equity gains on the Consolidated statements of income. Securities that the Firm has the positive intent and ability to hold to maturity are classified as HTM and are carried at amortized cost on the Consolidated balance sheets.

The following table presents realized gains and losses from AFS securities and private equity gains (losses):

Year ended December 31,[a] (in millions)	2004	2003	2002
Realized gains	$ 576	$ 2,123	$ 1,904
Realized losses	(238)	(677)	(341)
Net realized securities gains	338	1,446	1,563
Private equity gains (losses)	1,536	33	(746)
Total Securities/private equity gains	$ 1,874	$ 1,479	$ 817

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. All other periods reflect the results of heritage JPMorgan Chase only.

The amortized cost and estimated fair value of AFS and held-to-maturity securities were as follows for the dates indicated:

	2004				2003[a]			
December 31, (in millions)	Amortized cost	Gross unrealized gains	Gross unrealized losses	Fair value	Amortized cost	Gross unrealized gains	Gross unrealized losses	Fair value
Available-for-sale securities								
U.S. government and federal agencies/ corporations obligations:								
Mortgage-backed securities	$ 46,577	$ 165	$ 601	$ 46,141	$ 32,248	$ 101	$ 417	$ 31,932

Total available-for-sale securities	$ 94,821	$ 570	$ 989	$ 94,402	$ 60,422	$ 445	$ 799	$ 60,068
Held-to-maturity securities[c]								
Total held-to-maturity securities	$ 110	$ 7	$ —	$ 117	$ 176	$ 10	$ —	$ 186

(a) Heritage JPMorgan Chase only.
(b) Includes collateralized mortgage obligations of private issuers, which generally have underlying collateral consisting of obligations of U.S. government and federal agencies and corporations.
(c) Consists primarily of mortgage-backed securities.

The following table presents the fair value and unrealized losses for AFS securities by aging category:

	Securities with unrealized losses					
	Less than 12 months		12 months or more		Total	
December 31, 2004 (in millions)	Fair value	Gross unrealized losses	Fair value	Gross unrealized losses	Total Fair value	Total Gross unrealized losses
Available-for-sale securities						
U.S. government and federal agencies/corporations obligations:						
Mortgage-backed securities	$ 33,806	$ 274	$ 11,884	$ 327	$ 45,690	$ 601
Collateralized mortgage obligations	278	4	2	—	280	4
U.S. treasuries	10,186	154	940	68	11,126	222
Agency obligations	1,303	9	3	—	1,306	9
Obligations of state and political subdivisions	678	6	96	2	774	8
Debt securities issued by non-U.S. governments	3,395	17	624	21	4,019	38
Corporate debt securities	1,103	13	125	5	1,228	18
Equity securities	1,804	14	23	—	1,827	14
Other, primarily asset-backed securities	1,896	41	321	34	2,217	75
Total securities with unrealized losses	$ 54,449	$ 532	$ 14,018	$ 457	$ 68,467	$ 989

Impairment is evaluated considering numerous factors, and their relative significance varies case to case. Factors considered include the length of time and extent to which the market value has been less than cost; the financial condition and near-term prospects of the issuer; and the intent and ability to retain the security in order to allow for an anticipated recovery in market value. If, based on the analysis, it is determined that the impairment is other-than-temporary, the security is written down to fair value, and a loss is recognized through earnings.

Included in the $989 million of gross unrealized losses on AFS securities at December 31, 2004, was $457 million of unrealized losses that have existed for a period greater than 12 months. These securities are predominately rated AAA and the unrealized losses are due to overall increases in market interest rates and not due to underlying credit concerns of the issuers. Substantially all of the securities with unrealized losses aged greater than 12 months have a market value at December 31, 2004, that is within 3% of their amortized cost basis.

The Firm believes that all aged unrealized losses, as described above, are expected to be recovered within a reasonable time through a typical interest rate cycle. Accordingly, the Firm has concluded that none of the securities in its investment portfolios are other-than-temporarily impaired at December 31, 2004.

In calculating the effective yield for mortgage-backed securities ("MBS") and collateralized mortgage obligations ("CMO"), JPMorgan Chase includes the effect of principal prepayments. Management regularly performs simulation testing to determine the impact that market conditions would have on its MBS and CMO portfolios. MBSs and CMOs that management believes have prepayment risk are included in the AFS portfolio and are reported at fair value.

The following table presents the amortized cost, estimated fair value and average yield at December 31, 2004, of JPMorgan Chase's AFS and HTM securities by contractual maturity:

	Available-for-sale securities			Held-to-maturity securities		
Maturity schedule of securities December 31, 2004 (in millions)	Amortized cost	Fair value	Average yield[a]	Amortized cost	Fair value	Average yield[a]
Due in one year or less	$ 8,641	$ 8,644	2.44%	$ —	$ —	—%
Due after one year through five years	19,640	19,600	3.18	—	—	—
Due after five years through 10 years	9,270	9,278	3.77	16	16	6.96
Due after 10 years[b]	57,270	56,880	4.48	94	101	6.88
Total securities	$ 94,821	$ 94,402	3.95%	$ 110	$ 117	6.89%

(a) The average yield is based on amortized cost balances at year-end. Yields are derived by dividing interest income by total amortized cost. Taxable-equivalent yields are used where applicable.
(b) Includes securities with no stated maturity. Substantially all of JPMorgan Chase's MBSs and CMOs are due in 10 years or more based on contractual maturity. The estimated duration, which reflects anticipated future prepayments based on a consensus of dealers in the market, is approximately four years for MBSs and CMOs.

Private equity investments are primarily held by the Private Equity business within Corporate (which includes JPMorgan Partners, reported as a stand-alone business segment prior to the Merger, and Bank One's ONE Equity Partners). The Private Equity business invests in buyouts, growth equity and venture opportunities in the normal course of business. These investments are accounted for under investment company guidelines. Accordingly, these investments, irrespective of the percentage of equity ownership interest held by Private Equity, are carried on the Consolidated balance sheets at fair value. Realized and unrealized gains and losses arising from changes in value are reported in Securities/private equity gains in the Consolidated statements of income in the period that the gains or losses occur.

Private investments are initially valued based on cost. The carrying values of private investments are adjusted from cost to reflect both positive and negative changes evidenced by financing events with third-party capital providers. In addition, these investments are subject to ongoing impairment reviews by Private Equity's senior investment professionals. A variety of factors are reviewed and monitored to assess impairment – including, but not limited to, operating performance and future expectations, comparable industry valuations of public companies, changes in market outlook and changes in the third-party financing environment. The Valuation Control Group within the Finance area is responsible for reviewing the accuracy of the carrying values of private investments held by Private Equity.

Private Equity also holds publicly-held equity investments, generally obtained through the initial public offering of private equity investments. These investments are marked to market at the quoted public value. To determine the carrying values of these investments, Private Equity incorporates the use of discounts to take into account the fact that it cannot immediately realize or risk manage the quoted public values as a result of regulatory, corporate and/or contractual sales restrictions imposed on these holdings.

The following table presents the carrying value and cost of the Private Equity investment portfolio for the dates indicated:

	2004		2003[a]	
December 31, (in millions)	Carrying value	Cost	Carrying value	Cost
Total private equity investments	**$ 7,735**	**$ 9,103**	$ 7,250	$ 9,147

(a) Heritage JPMorgan Chase only.

Note 10 – Securities financing activities

JPMorgan Chase enters into resale agreements, repurchase agreements, securities borrowed transactions and securities loaned transactions primarily to finance the Firm's inventory positions, acquire securities to cover short positions and settle other securities obligations. The Firm also enters into these transactions to accommodate customers' needs.

Securities purchased under resale agreements ("resale agreements") and securities sold under repurchase agreements ("repurchase agreements") are generally treated as collateralized financing transactions and are carried on the Consolidated balance sheets at the amounts the securities will be subsequently sold or repurchased, plus accrued interest. Where appropriate, resale and repurchase agreements with the same counterparty are reported on a net basis in accordance with FIN 41. JPMorgan Chase takes possession of securities purchased under resale agreements. On a daily basis, JPMorgan Chase monitors the market value of the underlying collateral received from its counterparties, consisting primarily of U.S. and non-U.S. government and agency securities, and requests additional collateral from its counterparties when necessary.

Transactions similar to financing activities that do not meet the SFAS 140 definition of a repurchase agreement are accounted for as "buys" and "sells" rather than financing transactions. These transactions are accounted for as a purchase (sale) of the underlying securities with a forward obligation to sell (purchase) the securities. The forward purchase (sale) obligation, a derivative, is recorded on the Consolidated balance sheets at its fair value, with changes in fair value recorded in Trading revenue. Notional amounts of transactions accounted for as purchases under SFAS 140 were $6 billion at December 31, 2004, and $15 billion at December 31, 2003, respectively. Notional amounts of transactions accounted for as sales under SFAS 140 were $20 billion and $8 billion at December 31, 2004, and December 31, 2003, respectively. Based on the short-term duration of these contracts, the unrealized gain or loss is insignificant.

Securities borrowed and securities lent are recorded at the amount of cash collateral advanced or received. Securities borrowed consist primarily of government and equity securities. JPMorgan Chase monitors the market value of the securities borrowed and lent on a daily basis and calls for additional collateral when appropriate. Fees received or paid are recorded in Interest income or Interest expense.

December 31, (in millions)	2004	2003[a]
Securities purchased under resale agreements	**$ 94,076**	$ 62,801
Securities borrowed	**47,428**	41,834
Securities sold under repurchase agreements	**$ 105,912**	$ 103,610
Securities loaned	**6,435**	4,260

(a) Heritage JPMorgan Chase only.

JPMorgan Chase pledges certain financial instruments it owns to collateralize repurchase agreements and other securities financings. Pledged securities that can be sold or repledged by the secured party are identified as financial instruments owned (pledged to various parties) on the Consolidated balance sheets.

At December 31, 2004, the Firm had received securities as collateral that can be repledged, delivered or otherwise used with a fair value of approximately $252 billion. This collateral was generally obtained under resale or securities borrowing agreements. Of these securities, approximately $238 billion were repledged, delivered or otherwise used, generally as collateral under repurchase agreements, securities lending agreements or to cover short sales.

Note 11 – Loans

Loans are reported at the principal amount outstanding, net of the Allowance for loan losses, unearned income and any net deferred loan fees. Loans held for sale are carried at the lower of cost or fair value, with valuation changes recorded in noninterest revenue. Loans are classified as "trading" where positions are bought and sold to make profits from short-term movements in price. Loans held for trading purposes are included in Trading assets and are carried at fair value, with the gains and losses included in Trading revenue. Interest income is recognized using the interest method, or on a basis approximating a level rate of return over the term of the loan.

Nonaccrual loans are those on which the accrual of interest is discontinued. Loans (other than certain consumer loans discussed below) are placed on nonaccrual status immediately if, in the opinion of management, full payment of principal or interest is in doubt, or when principal or interest is 90 days or more past due and collateral, if any, is insufficient to cover principal and interest. Interest accrued but not collected at the date a loan is placed on nonaccrual status is reversed against Interest income. In addition, the amortization of net deferred loan fees is suspended. Interest income on nonaccrual loans is recognized only to the extent it is received in cash. However, where there is doubt regarding the ultimate collectibility of loan principal, all cash thereafter received is applied to reduce the carrying value of the loan. Loans are restored to accrual status only when interest and principal payments are brought current and future payments are reasonably assured.

Consumer loans are generally charged to the Allowance for loan losses upon reaching specified stages of delinquency, in accordance with the Federal Financial Institutions Examination Council ("FFIEC") policy. For example, credit card loans are charged off by the end of the month in which the account becomes 180 days past due or within 60 days from receiving notification of the filing of bankruptcy, whichever is earlier. Residential mortgage products are generally charged off to net realizable value at 180 days past due. Other consumer products are generally charged off (to net realizable value if collateralized) at 120 days past due. Accrued interest on residential mortgage products, auto & education financings and certain other consumer loans are accounted for in accordance with the nonaccrual loan policy discussed above. Interest and fees related to credit card loans continue to accrue until the loan is charged-off or paid. Accrued interest on all other loans is generally reversed against interest income when the consumer loan is charged off. A collateralized loan is considered an in-substance foreclosure and is reclassified to assets acquired in loan satisfactions, within Other assets, only when JPMorgan Chase has taken physical possession of the collateral. This is regardless of whether formal foreclosure proceedings have taken place.

The composition of the loan portfolio at each of the dates indicated was as follows:

December 31, (in millions)	2004	2003[a]
U.S. wholesale loans:		
Commercial and industrial	$ 60,223	$ 30,748
Real estate	13,038	2,775
Financial institutions	14,060	8,346
Lease financing receivables	4,043	606
Other	8,504	1,850
Total U.S. wholesale loans	99,868	44,325
Non-U.S. wholesale loans:		
Commercial and industrial	25,115	22,916
Real estate	1,747	1,819
Financial institutions	7,269	6,269
Lease financing receivables	1,068	90
Total non-U.S. wholesale loans	35,199	31,094
Total wholesale loans:[b]		
Commercial and industrial	85,338	53,664
Real estate[c]	14,785	4,594
Financial institutions	21,329	14,615
Lease financing receivables	5,111	696
Other	8,504	1,850
Total wholesale loans	135,067	75,419
Total consumer loans:[d]		
Consumer real estate		
Home finance – home equity & other	67,837	24,179
Home finance – mortgage	56,816	50,381
Total Home finance	124,653	74,560
Auto & education finance	62,712	43,157
Consumer & small business and other	15,107	4,204
Credit card receivables[e]	64,575	17,426
Total consumer loans	267,047	139,347
Total loans[f][g][h]	$ 402,114	$ 214,766

(a) Heritage JPMorgan Chase only.
(b) Includes Investment Bank, Commercial Banking, Treasury & Securities Services and Asset & Wealth Management.
(c) Represents credits extended for real estate–related purposes to borrowers who are primarily in the real estate development or investment businesses and for which the primary repayment is from the sale, lease, management, operations or refinancing of the property.
(d) Includes Retail Financial Services and Card Services.
(e) Includes billed finance charges and fees net of an allowance for uncollectible amounts.
(f) Loans are presented net of unearned income of $4.1 billion and $1.3 billion at December 31, 2004, and December 31, 2003, respectively.
(g) Includes loans held for sale (principally mortgage-related loans) of $25.7 billion at December 31, 2004, and $20.8 billion at December 31, 2003.
(h) Amounts are presented gross of the Allowance for loan losses.

The following table reflects information about the Firm's loans held for sale, principally mortgage-related:

Year ended December 31, (in millions)[a]	2004	2003	2002
Net gains on sales of loans held for sale	$ 368	$ 933	$ 754
Lower of cost or market adjustments	39	26	(36)

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. All other periods reflect the results of heritage JPMorgan Chase only.

Impaired loans

JPMorgan Chase accounts for and discloses nonaccrual loans as impaired loans and recognizes their interest income as discussed previously for nonaccrual loans. The Firm excludes from impaired loans its small-balance, homogeneous consumer loans; loans carried at fair value or the lower of cost or fair value; debt securities; and leases.

The table below sets forth information about JPMorgan Chase's impaired loans. The Firm primarily uses the discounted cash flow method for valuing impaired loans:

December 31, (in millions)	2004	2003[a]
Impaired loans with an allowance	$ 1,496	$ 1,597
Impaired loans without an allowance[b]	284	406
Total impaired loans	$ 1,780	$ 2,003
Allowance for impaired loans under SFAS 114[c]	$ 521	$ 595
Average balance of impaired loans during the year	1,883	2,969
Interest income recognized on impaired loans during the year	8	4

(a) Heritage JPMorgan Chase only.
(b) When the discounted cash flows, collateral value or market price equals or exceeds the carrying value of the loan, then the loan does not require an allowance under SFAS 114.
(c) The allowance for impaired loans under SFAS 114 is included in JPMorgan Chase's Allowance for loan losses.

Note 12 – Allowance for credit losses

JPMorgan Chase's Allowance for loan losses covers the wholesale (primarily risk-rated) and consumer (primarily scored) loan portfolios and represents management's estimate of probable credit losses inherent in the Firm's loan portfolio. Management also computes an Allowance for wholesale lending-related commitments using a methodology similar to that used for the wholesale loans.

As a result of the Merger, management modified its methodology for determining the Provision for credit losses for the combined Firm. The effect of conforming methodologies in 2004 was a decrease in the consumer allowance of $254 million and a decrease in the wholesale allowance (including both funded loans and lending-related commitments) of $330 million. In addition, the Bank One seller's interest in credit card securitizations was decertificated; this resulted in an increase to the provision for loan losses of approximately $1.4 billion (pre-tax) in 2004.

The Allowance for loan losses consists of two components: asset-specific loss and formula-based loss. Within the formula-based loss is a statistical calculation and an adjustment to the statistical calculation.

The asset-specific loss component relates to provisions for losses on loans considered impaired and measured pursuant to SFAS 114. An allowance is established when the discounted cash flows (or collateral value or observable market price) of the loan are lower than the carrying value of that loan. To compute the asset-specific loss component of the allowance larger impaired loans are evaluated individually, and smaller impaired loans are evaluated as a pool using historical loss experience for the respective class of assets.

The formula-based loss component covers performing wholesale and consumer loans and is the product of a statistical calculation, as well as adjustments to such calculation. These adjustments take into consideration model imprecision, external factors and economic events that have occurred but are not yet reflected in the factors used to derive the statistical calculation.

The statistical calculation is the product of probability of default and loss given default. For risk-rated loans (generally loans originated by the wholesale lines of business), these factors are differentiated by risk rating and maturity. For scored loans (generally loans originated by the consumer lines of business), loss is primarily determined by applying statistical loss factors and other risk indicators to pools of loans by asset type. Adjustments to the statistical calculation for the risk-rated portfolios are determined by creating estimated ranges using historical experience of both loss given default and probability of default. Factors related to concentrated and deteriorating industries are also incorporated into the calculation where relevant. Adjustments to the statistical calculation for the scored loan portfolios are accomplished in part by analyzing the historical loss experience for each major product segment. The estimated ranges and the determination of the appropriate point within the range are based upon management's view of uncertainties that relate to current macroeconomic and political conditions, quality of underwriting standards, and other relevant internal and external factors affecting the credit quality of the portfolio.

The Allowance for lending-related commitments represents management's estimate of probable credit losses inherent in the Firm's process of extending credit. Management establishes an asset-specific allowance for lending-related commitments that are considered impaired and computes a formula-based allowance for performing wholesale lending-related commitments. These are computed using a methodology similar to that used for the wholesale loan portfolio, modified for expected maturities and probabilities of drawdown.

At least quarterly, the allowance for credit losses is reviewed by the Chief Risk Officer and the Deputy Chief Risk Officer of the Firm and is discussed with a risk subgroup of the Operating Committee, relative to the risk profile of the Firm's credit portfolio and current economic conditions. As of December 31, 2004, JPMorgan Chase deemed the allowance for credit losses to be appropriate (i.e., sufficient to absorb losses that are inherent in the portfolio, including those not yet identifiable).

JPMorgan Chase maintains an Allowance for credit losses as follows:

Allowance for credit losses on:	Reported in: Balance sheet	Income statement
Loans	Allowance for loan losses	Provision for credit losses
Lending-related commitments	Other liabilities	Provision for credit losses

The table below summarizes the changes in the Allowance for loan losses:

December 31,[a] (in millions)	2004	2003
Allowance for loan losses at January 1	$ 4,523	$ 5,350
Addition resulting from the Merger, July 1, 2004	3,123	—
Gross charge-offs[b]	(3,805)	(2,818)
Gross recoveries	706	546
Net charge-offs	(3,099)	(2,272)
Provision for loan losses:		
Provision excluding accounting policy conformity	1,798	1,579
Accounting policy conformity[c]	1,085	—
Total Provision for loan losses	2,883	1,579
Other[d]	(110)	(134)
Allowance for loan losses at December 31[e]	$ 7,320	$ 4,523

(a) 2004 activity includes six months of the combined Firm's activity and six months of heritage JPMorgan Chase activity, while 2003 activity includes heritage JPMorgan Chase only.
(b) Includes $406 million related to the Manufactured Home Loan portfolio in the fourth quarter of 2004.
(c) Represents an increase of approximately $1.4 billion as a result of the decertification of heritage Bank One's seller's interest in credit card securitizations, partially offset by a reduction of $357 million to conform provision methodologies.
(d) Primarily represents the transfer of the allowance for accrued interest and fees on reported credit card loans.
(e) 2004 includes $469 million of asset-specific loss and $6.8 billion of formula-based loss. Included within the formula-based loss is $4.8 billion related to statistical calculation and an adjustment to the statistical calculation of $2.0 billion.

The table below summarizes the changes in the Allowance for lending-related commitments:

December 31,[a] (in millions)	2004	2003
Allowance for lending-related commitments at January 1	$ 324	$ 363
Addition resulting from the Merger, July 1, 2004	508	—
Provision for lending-related commitments:		
Provision excluding accounting policy conformity	(112)	(39)
Accounting policy conformity[b]	(227)	—
Total Provision for lending-related commitments	(339)	(39)
Other	(1)	—
Allowance for lending-related commitments at December 31[c]	$ 492	$ 324

(a) 2004 activity includes six months of the combined Firm's activity and six months of heritage JPMorgan Chase activity, while 2003 activity includes heritage JPMorgan Chase only.
(b) Represents a reduction of $227 million to conform provision methodologies in the wholesale portfolio.
(c) 2004 includes $130 million of asset-specific loss and $362 million of formula-based loss. Note: The formula-based loss for lending-related commitments is based on statistical calculation. There is no adjustment to the statistical calculation for lending-related commitments.

Note 13 – Loan securitizations

JPMorgan Chase securitizes, sells and services various consumer loans, such as consumer real estate, credit card and automobile loans, as well as certain wholesale loans (primarily real estate) originated by the Investment Bank. In addition, the Investment Bank purchases, packages and securitizes commercial and consumer loans. All IB activity is collectively referred to as Wholesale activities below. Interests in the sold and securitized loans may be retained as described below.

The Firm records a loan securitization as a sale when the transferred loans are legally isolated from the Firm's creditors and the accounting criteria for a sale are met. Gains or losses recorded on loan securitizations depend, in part, on the carrying amount of the loans sold and are allocated between the loans sold and the retained interests, based on their relative fair values at the date of sale. Since quoted market prices are generally not available, the Firm usually estimates the fair value of these retained interests by determining the present value of future expected cash flows using modeling techniques. Such models incorporate management's best estimates of key variables, such as expected credit losses, prepayment speeds and the discount rates appropriate for the risks involved. Gains on securitizations are reported in noninterest revenue. Retained interests that are subject to prepayment risk, such that JPMorgan Chase may not recover substantially all of its investment, are recorded at fair value; subsequent adjustments are reflected in Other comprehensive income or in earnings, if the fair value of the retained interest has declined below its carrying amount and such decline has been determined to be other-than-temporary.

JPMorgan Chase–sponsored securitizations utilize SPEs as part of the securitization process. These SPEs are structured to meet the definition of a QSPE (as discussed in Note 1 on page 88 of this Annual Report); accordingly, the assets and liabilities of securitization-related QSPEs are not reflected in the Firm's Consolidated balance sheets (except for retained interests, as described below) but are included on the balance sheet of the QSPE purchasing the assets. Assets held by securitization-related SPEs as of December 31, 2004 and 2003, were as follows:

December 31, (in billions)	2004	2003[a]
Credit card receivables	$ 106.3	$ 42.6
Residential mortgage receivables	19.1	21.1
Wholesale activities	44.8	33.8
Automobile loans	4.9	6.5
Total	$ 175.1	$ 104.0

(a) Heritage JPMorgan Chase only.

Interests in the securitized loans are generally retained by the Firm in the form of senior or subordinated interest-only strips, subordinated tranches, escrow accounts and servicing rights, and they are primarily recorded in Other assets. In addition, credit card securitization trusts require the Firm to maintain a minimum undivided interest in the trusts, representing the Firm's interests in the receivables transferred to the trust that have not been securitized. These interests are not represented by security certificates. The Firm's undivided interests are carried at historical cost and are classified in Loans.

JPMorgan Chase retains servicing responsibilities for all residential mortgage, credit card and automobile loan securitizations and for certain wholesale activity securitizations it sponsors, and receives annual servicing fees based

on the securitized loan balance plus certain ancillary fees. The Firm also retains the right to service the residential mortgage loans it sells in connection with mortgage-backed securities transactions with the Government National Mortgage Association ("GNMA"), Federal National Mortgage Association ("FNMA") and Federal Home Loan Mortgage Corporation ("Freddie Mac"). For a discussion of mortgage servicing rights, see Note 15 on pages 109–111 of this Annual Report.

The following table summarizes new securitization transactions that were completed during 2004 and 2003, the resulting gains arising from such securitizations, certain cash flows received from such securitizations, and the key economic assumptions used in measuring the retained interests, as of the dates of such sales:

Year ended December 31,[a]	2004				2003			
(in millions)	Mortgage	Credit card	Automobile	Wholesale activities[d]	Mortgage	Credit card	Automobile	Wholesale activities
Principal securitized	$ 6,529	$ 8,850	$ 1,600	$ 8,756	$ 13,270	$ 8,823	$ 4,510	$ 5,386
Pre-tax gains (losses)	47	52	(3)	135	168	44	13	107
Cash flow information:								
Proceeds from securitizations	$ 6,608	$ 8,850	$ 1,597	$ 8,430	$ 13,540	$ 8,823	$ 4,503	$ 5,493
Servicing fees collected	12	69	1	3	20	79	15	2
Other cash flows received	25	225	—	16	2	216	12	8
Proceeds from collections reinvested in revolving securitizations	—	110,697	—	—	—	58,199	—	—
Key assumptions (rates per annum):								
Prepayment rate[b]	23.8–37.6% CPR	15.5–16.7% PPR	1.5% ABS	17.0–50.0%	10.1–36.2% CPR	8.1–16.5% PPR	1.5–1.6% ABS	50.0%
Weighted-average life (in years)	1.9–3.0	0.5–0.6	1.8	2.0–4.0	2.0–4.6	0.6–1.0	1.7–1.8	1.3–5.2
Expected credit losses	1.0–2.3%	5.5–5.8%	0.6%	0.0–3.0%[c]	0.0–2.5%[c]	5.5–8.0%	0.5–0.6%	0.0%[c]
Discount rate	15.0–30.0%	12.0%	4.1%	0.6–5.0%	13.0–30.0%	12.0%	3.9–4.5%	1.0–5.0%

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. All other periods reflect the results of heritage JPMorgan Chase only.
(b) CPR: constant prepayment rate; ABS: absolute prepayment speed; PPR: principal payment rate.
(c) Expected credit losses for prime residential mortgage and certain wholesale securitizations are minimal and are incorporated into other assumptions.
(d) Wholesale activities consist of wholesale loans (primarily real estate) originated by the Investment Bank as well as $1.8 billion of consumer loans purchased from the market, packaged and securitized by the Investment Bank.

In addition to securitization transactions, the Firm sold residential mortgage loans totaling $65.7 billion and $123.2 billion during 2004 and 2003, respectively, primarily as GNMA, FNMA and Freddie Mac mortgage-backed securities; these sales resulted in pre-tax gains of $58.1 million and $564.3 million, respectively.

At both December 31, 2004 and 2003, the Firm had, with respect to its credit card master trusts, $35.2 billion and $7.3 billion, respectively, related to its undivided interest, and $2.1 billion and $1.1 billion, respectively, related to its subordinated interest in accrued interest and fees on the securitized receivables, net of an allowance for uncollectible amounts. Credit card securitization trusts require the Firm to maintain a minimum undivided interest of 4% to 7% of the principal receivables in the trusts. The Firm maintained an average undivided interest in its principal receivables in the trusts of approximately 23% and 17% for 2004 and 2003, respectively.

The Firm also maintains escrow accounts up to predetermined limits for some of its credit card and automobile securitizations, in the unlikely event of deficiencies in cash flows owed to investors. The amounts available in such escrow accounts are recorded in Other assets and, as of December 31, 2004, amounted to $395 million and $132 million for credit card and automobile securitizations, respectively; as of December 31, 2003, these amounts were $456 million and $137 million for credit card and automobile securitizations, respectively.

The table below summarizes other retained securitization interests, which are primarily subordinated or residual interests and are carried at fair value on the Firm's Consolidated balance sheets:

December 31, (in millions)	2004	2003[a]
Residential mortgage[b]	$ 433	$ 570
Credit card[b]	494	193
Automobile[b]	85	151
Wholesale activities	23	34
Total	$ 1,035	$ 948

(a) Heritage JPMorgan Chase only.
(b) Pre-tax unrealized gains (losses) recorded in Stockholders' equity that relate to retained securitization interests totaled $118 million and $155 million for Residential mortgage; $(3) million and $11 million for Credit cards; and $11 million and $6 million for Automobile at December 31, 2004 and 2003, respectively.

The table below outlines the key economic assumptions used to determine the fair value of the remaining retained interests at December 31, 2004 and 2003, respectively; and the sensitivities to those fair values to immediate 10% and 20% adverse changes in those assumptions:

December 31, 2004 (in millions)	Mortgage	Credit card	Automobile	Wholesale activities
Weighted-average life (in years)	**0.8–3.4**	**0.5–1.0**	**1.3**	**0.2–4.0**
Prepayment rate	**15.1–37.1% CPR**	**8.3–16.7% PPR**	**1.4% ABS**	**0.0–50.0%[b]**
Impact of 10% adverse change	**$ (5)**	**$ (34)**	**$ (6)**	**$ (1)**
Impact of 20% adverse change	**(8)**	**(69)**	**(13)**	**(1)**
Loss assumption	**0.0–5.0%[c]**	**5.7–8.4%**	**0.7%**	**0.0–3.0%[c]**
Impact of 10% adverse change	**$ (17)**	**$ (144)**	**$ (4)**	**$ —**
Impact of 20% adverse change	**(34)**	**(280)**	**(8)**	**—**
Discount rate	**13.0–30.0%[d]**	**4.9–12.0%**	**5.5%**	**1.0–22.9%**
Impact of 10% adverse change	**$ (9)**	**$ (2)**	**$ (1)**	**$ —**
Impact of 20% adverse change	**(18)**	**(4)**	**(2)**	**—**

December 31, 2003 (in millions)[a]	Mortgage	Credit card	Automobile	Wholesale activities
Weighted-average life (in years)	1.4–2.7	0.4–1.3	1.5	0.6–5.9
Prepayment rate	29.0–31.7% CPR	8.1–15.1% PPR	1.5% ABS	0.0–50.0%[b]
Impact of 10% adverse change	$ (17)	$ (7)	$ (10)	$ (1)
Impact of 20% adverse change	(31)	(13)	(19)	(2)
Loss assumption	0.0–4.0%[c]	5.5–8.0%	0.6%	0.0%[c]
Impact of 10% adverse change	$ (28)	$ (21)	$ (6)	$ —
Impact of 20% adverse change	(57)	(41)	(12)	—
Discount rate	13.0–30.0%[d]	8.3–12.0%	4.4%	5.0–20.9%
Impact of 10% adverse change	$ (14)	$ (1)	$ (1)	$ (1)
Impact of 20% adverse change	(27)	(3)	(2)	(2)

(a) Heritage JPMorgan Chase only.
(b) Prepayment risk on certain wholesale retained interests are minimal and are incorporated into other assumptions.
(c) Expected credit losses for prime residential mortgage and certain wholesale securitizations are minimal and are incorporated into other assumptions.
(d) The Firm sells certain residual interests from sub-prime mortgage securitizations via Net Interest Margin ("NIM") securitizations and retains residuals interests in these NIM transactions, which are valued using a 30% discount rate.

The sensitivity analysis in the preceding table is hypothetical. Changes in fair value based on a 10% or 20% variation in assumptions generally cannot be extrapolated easily, because the relationship of the change in the assumptions to the change in fair value may not be linear. Also, in this table, the effect that a change in a particular assumption may have on the fair value is calculated without changing any other assumption. In reality, changes in one factor may result in changes in another assumption, which might counteract or magnify the sensitivities.

Expected static-pool net credit losses include actual incurred losses plus projected net credit losses, divided by the original balance of the outstandings comprising the securitization pool.

The table below displays the expected static-pool net credit losses for 2004, 2003 and 2002, based on securitizations occurring in that year:

	Loans securitized in:[a]					
	2004		2003[b]		2002[b]	
	Mortgage	Automobile	Mortgage	Automobile	Mortgage	Automobile
December 31, 2004	**0.0–3.3%**	**1.1%**	0.0–2.1%	0.9%	0.0–2.4%	0.8%
December 31, 2003	**NA**	**NA**	0.0–3.6	0.9	0.0–2.8	0.8
December 31, 2002	**NA**	**NA**	NA	NA	0.1–3.7	0.9

(a) Static-pool losses not applicable to credit card securitizations, due to their revolving structure.
(b) Heritage JPMorgan Chase only.

The table below presents information about delinquencies, net credit losses and components of reported and securitized financial assets at December 31, 2004 and 2003:

	Total Loans		Nonaccrual and 90 days or more past due		Net loan charge-offs[b] Year ended	
December 31, (in millions)	2004	2003[a]	2004	2003[a]	2004	2003
Home finance	$ 124,653	$ 74,560	$ 673	$ 374	$ 573	$ 135
Auto & education finance	62,712	43,157	193	123	263	171
Consumer & small business and other	15,107	4,204	295	72	154	75
Credit card receivables	64,575	17,426	1,006	284	1,923	1,126
Total consumer loans	267,047	139,347	2,167	853	2,913	1,507
Total wholesale loans	135,067	75,419	1,582	2,046	186	765
Total loans reported	402,114	214,766	3,749	2,899	3,099	2,272
Securitized loans:						
Residential mortgage[c]	11,533	15,564	460	594	150	191
Automobile	4,763	6,315	12	13	24	25
Credit card	70,795	34,856	1,337	879	2,898	1,870
Total consumer loans securitized	87,091	56,735	1,809	1,486	3,072	2,086
Securitized wholesale activities	1,401	2,108	—	9	—	—
Total loans securitized[d]	88,492	58,843	1,809	1,495	3,072	2,086
Total loans reported and securitized[e]	$ 490,606	$ 273,609	$ 5,558	$ 4,394	$ 6,171	$ 4,358

(a) Heritage JPMorgan Chase only.
(b) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. All other periods reflect the results of heritage JPMorgan Chase only.
(c) Includes $10.3 billion and $13.6 billion of outstanding principal balances on securitized sub-prime 1–4 family residential mortgage loans as of December 31, 2004 and 2003, respectively.
(d) Total assets held in securitization-related SPEs were $175.1 billion and $104.0 billion at December 31, 2004 and 2003, respectively. The $88.5 billion and $58.8 billion of loans securitized at December 31, 2004 and 2003, respectively, excludes: $50.8 billion and $37.1 billion of securitized loans, in which the Firm's only continuing involvement is the servicing of the assets; $35.2 billion and $7.3 billion of seller's interests in credit card master trusts; and $0.6 billion and $0.8 billion of escrow accounts and other assets, respectively.
(e) Represents both loans on the Consolidated balance sheets and loans that have been securitized, but excludes loans for which the Firm's only continuing involvement is servicing of the assets.

Note 14 – Variable interest entities

Refer to Note 1 on page 88 of this Annual Report for a further description of JPMorgan Chase's policies regarding consolidation of variable interest entities.

JPMorgan Chase's principal involvement with VIEs occurs in the following business segments:

- Investment Bank: Utilizes VIEs to assist clients in accessing the financial markets in a cost-efficient manner, by providing the structural flexibility to meet their needs pertaining to price, yield and desired risk. There are two broad categories of transactions involving VIEs in the IB: (1) multi-seller conduits and (2) client intermediation; both are discussed below. The IB also securitizes loans through QSPEs which are not considered VIEs, to create asset-backed securities, as further discussed in Note 13 on pages 103–106 of this Annual Report.
- Asset & Wealth Management: Provides investment management services to a limited number of the Firm's mutual funds deemed VIEs. AWM earns a fixed fee based on assets managed; the fee varies with each fund's investment objective and is competitively priced. For the limited number of funds that qualify as VIEs, the Firm's interest is not considered significant under FIN 46R.
- Treasury & Securities Services: Provides trustee and custodial services to a number of VIEs. These services are similar to those provided to non-VIEs. TSS earns market-based fees for services provided. Such relationships are not considered significant interests under FIN 46R.
- Commercial Banking: Utilizes VIEs as part of its middle markets business. This involvement includes: (1) structuring and administering independent, member-owned finance entities for companies with dedicated distribution systems, where the Firm may also provide some liquidity, letters of credit and/or derivative instruments; and (2) synthetic lease transactions, in which the Firm provides financing to a SPE; in turn, the SPE purchases assets, which are then leased by the SPE to the Firm's customer. The CB earns market-based fees for providing such services. These activities do not involve the Firm holding a significant interest in VIEs.
- The Firm's Private Equity business, now included in Corporate, is involved with entities that may be deemed VIEs. Private equity activities are accounted for in accordance with the Investment Company Audit Guide ("Audit Guide"). The FASB deferred adoption of FIN 46R for non-registered investment companies that apply the Audit Guide until the proposed Statement of Position on the clarification of the scope of the Audit Guide is finalized. The Firm continues to apply this deferral provision; had FIN 46R been applied to VIEs subject to this deferral, the impact would have had an insignificant impact on the Firm's Consolidated financial statements as of December 31, 2004.

As noted above, there are two broad categories of transactions involving VIEs with which the IB is involved: multi-seller conduits and client intermediation. These are discussed more fully below.

Multi-seller conduits

The Firm is an active participant in the asset-backed securities business, where it helps meet customers' financing needs by providing access to the commercial paper markets through VIEs known as multi-seller conduits. These entities are separate bankruptcy-remote corporations in the business of purchasing interests in, and making loans secured by, receivable pools and other financial assets pursuant to agreements with customers. The entities fund their purchases and loans through the issuance of highly-rated commercial paper. The primary source of repayment of the commercial paper is the cash flow from the pools of assets.

JPMorgan Chase serves as the administrator and provides contingent liquidity support and limited credit enhancement for several multi-seller conduits. The commercial paper issued by the conduits is backed by sufficient collateral, credit enhancements and commitments to provide liquidity to support receiving at least a liquidity rating of A-1, P-1 and, in certain cases, F1.

As a means of ensuring timely repayment of the commercial paper, each asset pool financed by the conduits has a minimum 100% deal-specific liquidity facility associated with it. In the unlikely event an asset pool is removed from the conduit, the administrator can draw on the liquidity facility to repay the maturing commercial paper. The liquidity facilities are typically in the form of asset purchase agreements and are generally structured such that the bank liquidity is provided by purchasing, or lending against, a pool of non-defaulted, performing assets. Deal-specific liquidity is the primary source of liquidity support for the conduits.

Program-wide liquidity in the form of revolving and short-term lending commitments is provided by the Firm to these vehicles in the event of short-term disruptions in the commercial paper market.

Deal-specific credit enhancement that supports the commercial paper issued by the conduits is generally structured to cover a multiple of historical losses expected on the pool of assets and is primarily provided by customers (i.e., sellers) or other third parties. The deal-specific credit enhancement is typically in the form of over-collateralization provided by the seller but may also include any combination of the following: recourse to the seller or originator, cash collateral accounts, letters of credit, excess spread, retention of subordinated interests or third-party guarantees. In certain instances, the Firm provides limited credit enhancement in the form of standby letters of credit.

The following table summarizes the Firm's involvement with Firm-administered multi-seller conduits:

	Consolidated		Nonconsolidated		Total	
December 31, (in billions)	**2004**[c]	2003[b]	**2004**[c]	2003[b][c]	**2004**[c]	2003[b][c]
Total commercial paper issued by conduits	**$ 35.8**	$ 6.3	**$ 9.3**	$ 5.4	**$ 45.1**	$ 11.7
Commitments						
Asset-purchase agreements	**$ 47.2**	$ 9.3	**$ 16.3**	$ 8.7	**$ 63.5**	$ 18.0
Program-wide liquidity commitments	**4.0**	1.6	**2.0**	1.0	**6.0**	2.6
Limited credit enhancements	**1.4**	0.9	**1.2**	1.0	**2.6**	1.9
Maximum exposure to loss[a]	**48.2**	9.7	**16.9**	9.0	**65.1**	18.7

(a) The Firm's maximum exposure to loss is limited to the amount of drawn commitments (i.e., sellers' assets held by the multi-seller conduits for which the Firm provides liquidity support) of $42.2 billion and $11.7 billion at December 31, 2004 and 2003, respectively, plus contractual but undrawn commitments of $22.9 billion and $7.0 billion at December 31, 2004 and 2003, respectively. Since the Firm provides credit enhancement and liquidity to these multi-seller conduits, the maximum exposure is not adjusted to exclude exposure absorbed by third-party liquidity providers.
(b) Heritage JPMorgan Chase only.
(c) In December 2003 and February 2004, two multi-seller conduits were restructured, with each conduit issuing preferred securities acquired by an independent third-party investor; the investor absorbs the majority of the expected losses of the conduit. In determining the primary beneficiary of the restructured conduits, the Firm leveraged an existing rating agency model – an independent market standard – to estimate the size of the expected losses, and considered the relative rights and obligations of each of the variable interest holders.

The Firm views its credit exposure to multi-seller conduit transactions as limited. This is because, for the most part, the Firm is not required to fund under the liquidity facilities if the assets in the VIE are in default. Additionally, the Firm's obligations under the letters of credit are secondary to the risk of first loss provided by the customer or other third parties – for example, by the overcollateralization of the VIE with the assets sold to it or notes subordinated to the Firm's liquidity facilities.

Additionally, the Firm is involved with a structured investment vehicle ("SIV") that funds a diversified portfolio of highly rated assets by issuing commercial paper, medium-term notes and capital. The assets and liabilities of this SIV were approximately $7.1 billion and are included in the Firm's Consolidated balance sheet at December 31, 2004.

Client intermediation

As a financial intermediary, the Firm is involved in structuring VIE transactions to meet investor and client needs. The Firm intermediates various types of risks (including fixed income, equity and credit), typically using derivative instruments as further discussed below. In certain circumstances, the Firm also provides liquidity and other support to the VIEs to facilitate the transaction. The Firm's current exposure to nonconsolidated VIEs is reflected in its Consolidated balance sheets or in the Notes to consolidated financial statements. The risks inherent in derivative instruments or liquidity commitments are managed similarly to other credit, market and liquidity risks to which the Firm is exposed. The Firm intermediates principally with the following types of VIEs: structured wholesale loan vehicles, credit-linked note vehicles, municipal bond vehicles and other client-intermediation vehicles, as discussed below. Following this discussion is a table summarizing the total assets held by these vehicles at December 31, 2004 and 2003.

The Firm has created structured wholesale loan vehicles managed by third parties, in which loans are purchased from third parties or through the Firm's syndication and trading functions and funded by issuing commercial paper. The amount of the commercial paper issued by these vehicles totaled $3.4 billion and $5.3 billion as of December 31, 2004 and 2003, respectively. Investors provide collateral and have a first risk of loss up to the amount of collateral pledged. The Firm retains a second-risk-of-loss position and does not absorb a majority of the expected losses of the vehicles. Documentation includes provisions intended, subject to certain conditions, to enable JPMorgan Chase to terminate the transactions related to a particular loan vehicle if the value of the relevant portfolio declines below a specified level. The Firm also provides liquidity support to these VIEs.

The Firm structures credit-linked notes in which the VIE purchases highly-rated assets (such as asset-backed securities) and enters into a credit derivative contract with the Firm to obtain exposure to a referenced credit not held by the VIE. Credit-linked notes are issued by the VIE to transfer the risk of the referenced credit to the investors in the VIE. Clients and investors often prefer a VIE structure, since the credit-linked notes generally carry a higher credit rating than they would if issued directly by JPMorgan Chase.

The Firm is involved with municipal bond vehicles for the purpose of creating a series of secondary market trusts that allow tax-exempt investors to finance their investments at short-term tax-exempt rates. The VIE purchases fixed-rate, longer-term highly rated municipal bonds by issuing puttable floating-rate certificates and inverse floating-rate certificates; the investors in the inverse floating-rate certificates are exposed to the residual losses of the VIE (the "residual interests"). For vehicles in which the Firm owns the residual interests, the Firm consolidates the VIE. In vehicles where third-party investors own the residual interests, the Firm's exposure is limited because of the high credit quality of the underlying municipal bonds, the unwind triggers based on the market value of the underlying collateral and the residual interests held by third parties. The Firm often serves as remarketing agent for the VIE and provides liquidity to support the remarketing.

Additionally, JPMorgan Chase structures, on behalf of clients, other client intermediation vehicles in which the Firm transfers the risks and returns of the assets held by the VIE, typically debt and equity instruments, to clients through derivative contracts.

Assets held by certain client intermediation–related VIEs at December 31, 2004 and 2003, were as follows:

December 31, (in billions)	2004	2003[e]
Structured wholesale loan vehicles[a]	$ 3.4	$ 5.3
Credit-linked note vehicles[b]	17.8	17.7
Municipal bond vehicles[c]	7.5	5.5
Other client intermediation vehicles[d]	4.0	5.8

(a) JPMorgan Chase was committed to provide liquidity to these VIEs of up to $5.2 billion and $8.0 billion at December 31, 2004 and 2003, respectively, of which $3.8 billion at December 31, 2004, and $6.3 billion at December 31, 2003, was in the form of asset purchase agreements. The Firm's maximum exposure to loss to these vehicles at December 31, 2004 and 2003, was $3.2 billion and $5.5 billion, respectively, which reflects the netting of collateral and other program limits.
(b) The fair value of the Firm's derivative contracts with credit-linked note vehicles was not material at December 31, 2004. Assets of $2.3 billion and $2.1 billion reported in the table above were recorded on the Firm's Consolidated balance sheets at December 31, 2004 and 2003, respectively, due to contractual relationships held by the Firm that relate to collateral held by the VIE.
(c) Total amounts consolidated due to the Firm owning residual interests were $2.6 billion at December 31, 2004 and $2.5 billion at December 31, 2003, and are reported in the table. Total liquidity commitments were $3.1 billion and $1.8 billion at December 31, 2004 and 2003, respectively. The Firm's maximum credit exposure to all municipal bond vehicles was $5.7 billion and $4.3 billion at December 31, 2004 and 2003, respectively.
(d) The Firm's net exposure arising from these intermediations is not significant.
(e) Heritage JPMorgan Chase only.

Finally, the Firm may enter into transactions with VIEs structured by other parties. These transactions can include, for example, acting as a derivative counterparty, liquidity provider, investor, underwriter, placement agent, trustee or custodian. These transactions are conducted at arm's length, and individual credit decisions are based upon the analysis of the specific VIE, taking into consideration the quality of the underlying assets. JPMorgan Chase records and reports these positions similarly to any other third-party transaction. These activities do not cause JPMorgan Chase to absorb a majority of the expected losses of the VIEs or to receive a majority of the residual returns of the VIE, and they are not considered significant for disclosure purposes.

Consolidated VIE assets

The following table summarizes the Firm's total consolidated VIE assets, by classification on the Consolidated balance sheets, as of December 31, 2004 and 2003:

December 31, (in billions)	2004	2003[c]
Consolidated VIE assets[a]		
Investment securities	$ 10.6	$ 3.8
Trading assets[b]	4.7	2.7
Loans	3.4	1.1
Interests in purchased receivables	31.6	4.7
Other assets	0.4	0.1
Total consolidated assets	$ 50.7	$ 12.4

(a) The Firm also holds $3.4 billion and $3.0 billion of assets, at December 31, 2004 and December 31, 2003, respectively, primarily as a seller's interest, in certain consumer securitizations in a segregated entity, as part of a two-step securitization transaction. This interest is included in the securitization activities disclosed in Note 13 on pages 103–106 of this Annual Report.
(b) Includes the fair value of securities and derivatives.
(c) Heritage JPMorgan Chase only.

Interests in purchased receivables include interests in receivables purchased by Firm-administered conduits, which have been consolidated in accordance with FIN 46R. Interests in purchased receivables are carried at cost and are reviewed to determine whether an other-than-temporary impairment exists. Based on the current level of credit protection specified in each transaction, primarily through overcollateralization, the Firm determined that no other-than-temporary impairment existed at December 31, 2004.

The interest-bearing beneficial interest liabilities issued by consolidated VIEs are classified in the line item titled "Beneficial interests issued by consolidated variable interest entities" on the Consolidated balance sheets. The holders of these beneficial interests do not have recourse to the general credit of JPMorgan Chase. See Note 17 on page 112 of this Annual Report for the maturity profile of FIN 46 long-term beneficial interests.

FIN 46 transition

Effective February 1, 2003, JPMorgan Chase implemented FIN 46 for VIEs created or modified after January 31, 2003, in which the Firm has an interest. Effective July 1, 2003, the Firm implemented FIN 46 for all VIEs originated prior to February 1, 2003, excluding certain investments made by its private equity business, as discussed above. The effect of adoption was an incremental increase in the Firm's assets and liabilities of approximately $17 billion at July 1, 2003. As a result of its adoption of FIN 46, the Firm also deconsolidated certain vehicles, primarily the wholly-owned Delaware statutory business trusts further discussed in Note 17 on pages 112–113 of this Annual Report.

Upon adoption of FIN 46, the assets, liabilities and noncontrolling interests of VIEs were generally measured at the amounts at which such interests would have been carried had FIN 46 been effective when the Firm first met the conditions to be considered the primary beneficiary. The difference between the net amount added to the balance sheet and the amount of any previously recognized interest in the newly consolidated entity was recognized as a cumulative effect of an accounting change at July 1, 2003, which resulted in a $2 million (after-tax) reduction to the Firm's consolidated earnings. The Firm also recorded a $34 million (after-tax) reduction in Other comprehensive income, related to AFS securities and derivative cash flow hedges; these were related to entities measured at the amount at which such interests would have been carried had FIN 46 been effective when the Firm first met the conditions of being the primary beneficiary.

FIN 46R transition

In December 2003, the FASB issued a revision to FIN 46 ("FIN 46R") to address various technical corrections and implementation issues that had arisen since the issuance of FIN 46. Effective March 31, 2004, JPMorgan Chase implemented FIN 46R for all VIEs, excluding certain investments made by its private equity business, as previously discussed. Implementation of FIN 46R did not have a significant effect on the Firm's Consolidated financial statements.

The application of FIN 46R involved significant judgments and interpretations by management. The Firm is aware of differing interpretations being developed among accounting professionals and the EITF with regard to analyzing derivatives under FIN 46R. Management's current interpretation is that derivatives should be evaluated by focusing on an economic analysis of the rights and obligations of a VIE's assets, liabilities, equity and other contracts, while considering the entity's activities and design; the terms of the derivative contract and the role it has with the entity; and whether the derivative contract creates and/or absorbs variability of the VIE. The Firm will continue to monitor developing interpretations.

Note 15 – Goodwill and other intangible assets

Effective January 1, 2002, the Firm adopted SFAS 142, reclassifying certain intangible assets from Goodwill to Other intangible assets. There was no impairment of goodwill upon adoption of SFAS 142.

Goodwill is not amortized but instead tested for impairment at the reporting-unit segment (which is generally one level below the six major reportable business segments as described in Note 31 on pages 126–127 of this Annual Report; plus Private Equity, which is included in Corporate). Goodwill is tested annually (during the fourth quarter) or more often if events or circumstances, such as adverse changes in the business climate, indicate there may be impairment. Intangible assets determined to have indefinite lives are not amortized but instead are tested for impairment at least annually, or more frequently if events or changes in circumstances indicate that the asset might be impaired. The impairment test compares the fair value of the indefinite lived intangible asset to its carrying amount. Other acquired intangible assets determined to have finite lives, such as core deposits and credit card relationships, are amortized over their estimated useful lives in a manner that best reflects the economic benefits of the intangible asset. In addition, impairment testing is performed periodically on these amortizing intangible assets.

Goodwill and Other intangible assets consist of the following:

December 31, (in millions)	2004	2003[a]
Goodwill	$ 43,203	$ 8,511
Mortgage servicing rights	5,080	4,781
Purchased credit card relationships	3,878	1,014
All other intangibles:		
Other credit card–related intangibles	$ 272	$ —
Core deposit intangibles	3,328	8
All other intangibles	2,126	677
Total other intangible assets	$ 5,726	$ 685

(a) Heritage JPMorgan Chase only.

Goodwill

As of December 31, 2004, goodwill increased by $34.7 billion compared with December 31, 2003, principally in connection with the Merger, but also due to the acquisitions of EFS and a majority stake in Highbridge. Goodwill was not impaired at December 31, 2004 or 2003, nor was any goodwill written off during the years ended December 31, 2004, 2003 or 2002.

Under SFAS 142, goodwill must be allocated to reporting units and tested for impairment. Goodwill attributed to the business segments was as follows:

(in millions)	Dec. 31, 2004	Dec. 31, 2003[a]	Goodwill resulting from the Merger, July 1, 2004
Investment Bank	$ 3,309	$ 2,084	$ 1,233
Retail Financial Services	15,022	446	14,559
Card Services	12,781	—	12,765
Commercial Banking	2,650	61	2,592
Treasury & Securities Services	2,044	1,390	461
Asset & Wealth Management	7,020	4,153	2,536
Corporate (Private Equity)	377	377	—
Total goodwill	$ 43,203	$ 8,511	$ 34,146

(a) Heritage JPMorgan Chase only.

Mortgage servicing rights

JPMorgan Chase recognizes as intangible assets mortgage servicing rights, which represent the right to perform specified residential mortgage servicing activities for others. MSRs are either purchased from third parties or retained upon sale or securitization of mortgage loans. Servicing activities include collecting principal, interest, and escrow payments from borrowers; making tax and insurance payments on behalf of the borrowers; monitoring delinquencies and executing foreclosure proceedings; and accounting for and remitting principal and interest payments to the investors of the mortgage-backed securities.

The amount capitalized as MSRs represents the amount paid to third parties to acquire MSRs or is based on fair value, if retained upon the sale or securitization of mortgage loans. The Firm estimates the fair value of MSRs using a discounted future cash flow model. The model considers portfolio characteristics, contractually specified servicing fees, prepayment assumptions, delinquency rates, late charges, other ancillary revenues, costs to service and other economic factors. The Firm compares its fair value estimates and assumptions to observable market data where available and to recent market activity and actual portfolio experience. Management believes that the assumptions used to estimate fair values are supportable and reasonable.

The Firm accounts for its MSRs at the lower of cost or market, in accordance with SFAS 140. MSRs are amortized as a reduction of the actual servicing income received in proportion to, and over the period of the estimated future net servicing income stream of, the underlying mortgage loans. For purposes of evaluating and measuring impairment of MSRs, the Firm stratifies its portfolio on the basis of the predominant risk characteristics, which are loan type and interest rate. Any indicated impairment is recognized as a reduction in revenue through a valuation allowance, to the extent that the carrying value of an individual stratum exceeds its estimated fair value.

The Firm evaluates other-than-temporary impairment by reviewing changes in mortgage and other market interest rates over historical periods and then determines an interest rate scenario to estimate the amounts of the MSRs' gross carrying value and the related valuation allowance that could be expected to be recovered in the foreseeable future. Any gross carrying value and related valuation allowance amount that are not expected to be recovered in the foreseeable future, based upon the interest rate scenario, are considered to be other-than-temporary.

The carrying value of MSRs is sensitive to changes in interest rates, including their effect on prepayment speeds. JPMorgan Chase uses a combination of derivatives, AFS securities and trading instruments to manage changes in the fair value of MSRs. The intent is to offset any changes in the fair value of MSRs with changes in the fair value of the related risk management instrument. MSRs decrease in value when interest rates decline. Conversely, securities (such as mortgage-backed securities), principal-only certificates and derivatives (when the Firm receives fixed-rate interest payments) decrease in value when interest rates increase. The Firm offsets the interest rate risk of its MSRs by designating certain derivatives (e.g., a combination of swaps, swaptions and floors that produces an interest rate profile opposite to the designated risk of the hedged MSRs) as fair value hedges of specified MSRs under SFAS 133. SFAS 133 hedge accounting allows the carrying value of the hedged MSRs to be adjusted through earnings in the same period that the change in value of the hedging derivatives is recognized through earnings. Both of these valuation adjustments are recorded in Mortgage fees and related income.

When applying SFAS 133, the loans underlying the MSRs being hedged are stratified into specific SFAS 133 asset groupings that possess similar interest rate and prepayment risk exposures. The documented hedge period for the Firm is daily. Daily adjustments are performed to incorporate new or terminated derivative contracts and to modify the amount of the corresponding similar asset grouping that is being hedged. The Firm has designated changes in the benchmark interest rate (LIBOR) as the hedged risk. In designating the benchmark interest rate, the Firm considers the impact that the change in the benchmark rate has on the prepayment speed estimates in determining the fair value of the MSRs. The Firm performs both prospective and retrospective hedge effectiveness evaluations, using a regression analysis, to determine whether the hedge relationship is expected to be highly effective. Hedge effectiveness is assessed by comparing the change in value of the MSRs, as a result of changes in benchmark interest rates, to the change in the value of the designated derivatives. For a further discussion on derivative instruments and hedging activities, see Note 26 on pages 118–119 of this Annual Report.

Securities (both AFS and Trading) are also used to manage the risk exposure of MSRs. Because these securities do not qualify as hedges under SFAS 133, they are accounted for under SFAS 115, with realized gains and losses and unrealized gains and losses on trading securities recognized in earnings in Securities/private equity gains, interest income on the AFS securities is recognized in earnings in Net interest income, and unrealized gains and losses on AFS securities are reported in Other comprehensive income. Finally, certain non-hedge derivatives, which have not been designated by management in SFAS 133 hedge relationships, are used to manage the economic risk exposure of MSRs and are recorded in Mortgage fees and related income.

The following table summarizes MSR activity and related amortization for the dates indicated. It also includes the key assumptions and the sensitivity of the fair value of MSRs at December 31, 2004, to immediate 10% and 20% adverse changes in each of those assumptions.

Year ended December 31, (in millions)[a]	2004	2003	2002
Balance at January 1	$ 6,159	$ 4,864	$ 7,749
Additions	1,757	3,201	2,071
Bank One merger	90	NA	NA

Less: valuation allowance	1,031	1,378	1,634
Balance at December 31, after valuation allowance	$ 5,080	$ 4,781	$ 3,230
Estimated fair value at December 31	$ 5,124	$ 4,781	$ 3,230
Weighted-average prepayment speed assumption (CPR)	17.29%	17.67%	28.50%
Weighted-average discount rate	7.93%	7.31%	7.70%

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. All other periods reflect the results of heritage JPMorgan Chase only.
CPR: Constant prepayment rate

	2004
Weighted-average prepayment speed assumption (CPR)	17.29%
Impact on fair value with 10% adverse change	$ (295)
Impact on fair value with 20% adverse change	(558)
Weighted-average discount rate	7.93%
Impact on fair value with 10% adverse change	$ (128)
Impact on fair value with 20% adverse change	(249)

CPR: Constant prepayment rate.

The sensitivity analysis in the preceding table is hypothetical and should be used with caution. As the figures indicate, changes in fair value based on a 10% and 20% variation in assumptions generally cannot be easily extrapolated because the relationship of the change in the assumptions to the change in fair value may not be linear. Also, in this table, the effect that a change in a particular assumption may have on the fair value is calculated without changing any other assumption. In reality, changes in one factor may result in changes in another, which might magnify or counteract the sensitivities.

The valuation allowance represents the extent to which the carrying value of MSRs exceeds its estimated fair value for its applicable SFAS 140 strata. Changes in the valuation allowance are the result of the recognition of impairment or the recovery of previously recognized impairment charges, due to changes in market conditions during the period. The changes in the valuation allowance for MSRs were as follows:

Year ended December 31, (in millions)[a]	2004	2003	2002
Balance at January 1	$ 1,378	$ 1,634	$ 1,170
Other-than-temporary impairment	(149)	(283)	—
SFAS 140 impairment (recovery) adjustment	(198)	27	464
Balance at December 31	$ 1,031	$ 1,378	$ 1,634

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results, while 2003 results include heritage JPMorgan Chase only.

During 2004 and 2003, the Firm recorded an other-than-temporary impairment of its MSRs of $149 million and $283 million, respectively, which permanently reduced the gross carrying value of the MSRs and the related valuation allowance. The permanent reduction precludes subsequent reversals. This write-down had no impact on the results of operations or financial condition of the Firm.

All other intangible assets

For 2004, All other intangible assets increased by approximately $7.9 billion, principally as a result of the Merger. This increase is net of amortization and includes $510 million of indefinite lived intangibles related to asset management advisory contracts. Indefinite-lived intangibles are not amortized, but instead are tested for impairment at least annually. The remainder of the Firm's other acquired intangible assets are subject to amortization.

The components of credit card relationships, core deposits and other intangible assets were as follows:

	2004			2003[b]		
December 31, (in millions)	Gross amount	Accumulated amortization	Net carrying value	Gross amount	Accumulated amortization	Net carrying value
Purchased credit card relationships	$ 5,225	$ 1,347	$ 3,878	$ 1,885	$ 871	$ 1,014
Other credit card–related intangibles	295	23	272	—	—	—
Core deposit intangibles	3,797	469	3,328	147	139	8
All other intangibles	2,528	402[a]	2,126	946	269	677

Amortization expense (in millions)[c]	2004	2003	2002
Purchased credit card relationships	$ 476	$ 256	$ 280
Other credit card–related intangibles	23	—	—
Core deposit intangibles	330	6	10
All other intangibles	117	32	33
Total amortization expense	$ 946	$ 294	$ 323

(a) Includes $16 million of amortization expense related to servicing assets on securitized automobile loans, which is recorded in Asset management, administration and commissions, for 2004.
(b) Heritage JPMorgan Chase only.
(c) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. All other periods reflect the results of heritage JPMorgan Chase only.

Future amortization expense

The following table presents estimated amortization expenses related to credit card relationships, core deposits and All other intangible assets at December 31, 2004:

(in millions) Year ended December 31,	Purchased credit card relationships	Other credit card-related intangibles	Core deposit intangibles	All other intangible assets	Total
2005	$ 701	$ 45	$ 622	$ 165	$ 1,533
2006	674	40	531	153	1,398
2007	606	35	403	136	1,180
2008	502	33	294	128	957
2009	360	29	239	124	752

Note 16 – Premises and equipment

Premises and equipment, including leasehold improvements, are carried at cost less accumulated depreciation and amortization. JPMorgan Chase computes depreciation using the straight-line method over the estimated useful life of an asset. For leasehold improvements, the Firm uses the straight-line method computed over the lesser of the remaining term of the leased facility or 10 years.

JPMorgan Chase capitalizes certain costs associated with the acquisition or development of internal-use software under SOP 98-1. Once the software is ready for its intended use, these costs are amortized on a straight-line basis over the software's expected useful life.

Note 17 – Long-term debt

JPMorgan Chase issues long-term debt denominated in various currencies, although predominantly U.S. dollars, with both fixed and variable interest rates. The following table is a summary of long-term debt (net of unamortized original issue debt discount and SFAS 133 valuation adjustments):

By remaining contractual maturity at December 31, 2004 (in millions)		Under 1 year	1–5 years	After 5 years	**2004 total**	2003 total[g]
Parent company						
Senior debt:[a]	Fixed rate	$ 2,864	$ 20,029	$ 2,670	**$ 25,563**	$ 15,044
	Variable rate	6,221	8,295	612	**15,128**	10,696
	Interest rates[b]	1.22–7.63%	0.20–6.88%	1.12–5.00%	**0.20–7.63%**	0.96–7.50%
Subordinated debt:	Fixed rate	$ 1,419	$ 7,536	$ 13,100	**$ 22,055**	$ 14,382

	Interest rates[b]	2.13–10.45%	1.71–11.74%	2.19–13.00%	**1.71–13.00%**	1.13–13.00%
Subordinated debt:	Fixed rate	$ 503	$ 831	$ 310	**$ 1,644**	$ 708
	Variable rate	—	—	—	**—**	—
	Interest rates[b]	6.00–7.00%	6.13–6.70%	8.25%	**6.00–8.25%**	6.13–7.00%
	Subtotal	$ 5,020	$ 18,511	$ 6,459	**$ 29,990**	$ 7,379
Total long-term debt		$ 15,833	$ 54,417	$ 25,172	**$ 95,422**[d][e][f]	$ 48,014
FIN 46R long-term beneficial interests:[c]						
	Fixed rate	$ —	$ 341	$ 434	**$ 775**	$ 353
	Variable rate	3,072	570	1,976	**5,618**	2,076
	Interest rates[b]	2.02–2.84%	0.54–7.35%	2.25–12.79%	**0.54–12.79%**	1.12–10.00%
Total FIN 46R long-term beneficial interests		$ 3,072	$ 911	$ 2,410	**$ 6,393**	$ 2,429

(a) Included are various equity-linked or other indexed instruments. Embedded derivatives separated from hybrid securities in accordance with SFAS 133 are reported at fair value and shown net with the host contract on the balance sheet. Changes in fair value of separated derivatives are recorded in Trading revenue.
(b) The interest rates shown are the range of contractual rates in effect at year-end, including non-U.S. dollar fixed and variable-rate issuances, which excludes the effects of related derivative instruments. The use of these derivative instruments modifies the Firm's exposure to the contractual interest rates disclosed in the table above. Including the effects of derivatives, the range of modified rates in effect at December 31, 2004, for total long-term debt was 0.14% to 11.74%, versus the contractual range of 0.20% to 13.00% presented in the table above.
(c) Included on the Consolidated balance sheets in Beneficial interests issued by consolidated variable interest entities.
(d) At December 31, 2004, long-term debt aggregating $23.3 billion was redeemable at the option of JPMorgan Chase, in whole or in part, prior to maturity, based on the terms specified in the respective notes.
(e) The aggregate principal amount of debt that matures in each of the five years subsequent to 2004 is $15.8 billion in 2005, $15.4 billion in 2006, $15.5 billion in 2007, $11.6 billion in 2008 and $11.9 billion in 2009.
(f) Includes $1.5 billion of outstanding zero-coupon notes at December 31, 2004. The aggregate principal amount of these notes at their respective maturities is $4.6 billion.
(g) Heritage JPMorgan Chase only.

The weighted-average contractual interest rate for total long-term debt was 4.50% and 4.71% as of December 31, 2004 and 2003, respectively. In order to modify exposure to interest rate and currency exchange rate movements, JPMorgan Chase utilizes derivative instruments, primarily interest rate and cross-currency interest rate swaps, in conjunction with some of its debt issues. The use of these instruments modifies the Firm's interest expense on the associated debt. The modified weighted-average interest rate for total long-term debt, including the effects of related derivative instruments, was 3.97% and 2.79% as of December 31, 2004 and 2003, respectively.

JPMorgan Chase has guaranteed certain debt of its subsidiaries, including both long-term debt and structured notes sold as part of the Firm's trading activities. These guarantees rank on a parity with all of the Firm's other unsecured and unsubordinated indebtedness. Guaranteed liabilities totaled $320 million and $509 million at December 31, 2004 and 2003, respectively.

Junior subordinated deferrable interest debentures held by trusts that issued guaranteed capital debt securities

At December 31, 2004, the Firm had 22 wholly-owned Delaware statutory business trusts ("issuer trusts") that issued guaranteed preferred beneficial interests in the Firm's junior subordinated deferrable interest debentures.

As a result of the adoption of FIN 46, JPMorgan Chase deconsolidated all the issuer trusts. Accordingly, the junior subordinated deferrable interest debentures issued by the Firm to the issuer trusts, totaling $10.3 billion and $6.8 billion at December 31, 2004 and 2003, respectively, were reflected in the Firm's Consolidated balance sheets in the Liabilities section under the caption "Junior subordinated deferrable interest debentures held by trusts that issued guaranteed capital debt securities." JPMorgan Chase records interest expenses on the corresponding junior subordinated debentures in its Consolidated statements of income. The Firm also records the common capital securities issued by the issuer trusts in Other assets in its Consolidated balance sheets at December 31, 2004 and 2003.

The debentures issued to the issuer trusts by the Firm, less the capital securities of the issuer trusts, qualify as Tier 1 capital. The following is a summary of the outstanding capital securities, net of discount, issued by each trust and the junior subordinated deferrable interest debenture issued by JPMorgan Chase to each trust as of December 31, 2004:

December 31, 2004 (in millions)	Amount of capital securities issued by trust[a]	Principal amount of debenture, held by trust[b]	Issue date	Stated maturity of capital securities and debentures	Earliest redemption date	Interest rate of capital securities and debentures	Interest payment/ distribution dates
Bank One Capital II	$ 280	$ 312	2000	2030	2005	8.50%	Quarterly

J.P. Morgan Chase Capital XI	1,075	1,022	2003	2033	2008	5.88%	Quarterly
J.P. Morgan Chase Capital XII	400	403	2003	2033	2008	6.25%	Quarterly
J.P. Morgan Chase Capital XIII	472	486	2004	2034	2014	LIBOR + 0.95%	Quarterly
JPMorgan Chase Capital XIV	600	607	2004	2034	2009	6.20%	Quarterly
Total	$ 9,823	$ 10,296					

(a) Represents the amount of capital securities issued to the public by each trust, net of unamortized discount.
(b) Represents the principal amount of JPMorgan Chase debentures held as assets by each trust, net of unamortized discount amounts. The principal amount of debentures held by the trusts includes the impact of hedging and purchase accounting fair value adjustments that are recorded on the Firm's financial statements.

Note 18 – Preferred stock

JPMorgan Chase is authorized to issue 200 million shares of preferred stock, in one or more series, with a par value of $1 per share. Outstanding preferred stock at December 31, 2004 and 2003, was 4 million and 18 million shares, respectively. On December 31, 2004, JPMorgan Chase redeemed a total of 14 million shares of its Series A, L and N variable cumulative preferred stocks.

Dividends on shares of each outstanding series of preferred stock are payable quarterly. All of the preferred stock outstanding takes precedence over JPMorgan Chase's common stock for the payment of dividends and the distribution of assets in the event of a liquidation or dissolution of the Firm.

The following is a summary of JPMorgan Chase's preferred stock outstanding:

(in millions, except per share amounts and rates)	Stated value and redemption price per share[a]	Shares		Outstanding at December 31,		Earliest redemption date	Rate in effect at December 31, 2004
		2004	2003	2004	2003		
Fixed/adjustable rate, noncumulative	$ 50.00	4.00	4.00	$ 200	$ 200	See Note[c]	5.46%[d]
6.63% Series H cumulative[b]	500.00	0.28	0.28	139	139	3/31/2006	6.63
Adjustable rate, Series A cumulative	100.00	—	2.42	—	242	—	—
Adjustable rate, Series L cumulative	100.00	—	2.00	—	200	—	—
Adjustable rate, Series N cumulative	25.00	—	9.10	—	228	—	—
Total preferred stock		4.28	17.80	$ 339	$ 1,009		

(a) Redemption price includes amount shown in the table plus any accrued but unpaid dividends.
(b) Represented by depositary shares.
(c) The shares are redeemable at any time with not less than 30 nor more than 60 days' notice.
(d) The fixed/adjustable rate preferred stock remained fixed at 4.96% through June 30, 2003; thereafter, the minimum and maximum rates are 5.46% and 11.46%, respectively.

Note 19 – Common stock

At December 31, 2004, JPMorgan Chase was authorized to issue 9.0 billion shares of common stock, with a $1 par value per share. In connection with the Merger, the shareholders approved an increase in the amount of authorized shares of 4.5 billion from the 4.5 billion that had been authorized as of December 31, 2003. Common shares issued (newly issued or distributed from treasury) by JPMorgan Chase during 2004, 2003 and 2002 were as follows:

December 31, (in millions)	2004	2003[a]	2002[a]
Issued – balance at January 1	2,044.4	2,023.6	1,996.9
Newly issued:			
Employee benefits and compensation plans	69.0	20.9	25.9
Employee stock purchase plans	3.1	0.7	0.8
Purchase accounting acquisitions and other	1,469.4	—	—
Total newly issued	1,541.5	21.6	26.7
Cancelled shares	(1.1)	(0.8)	—
Total issued – balance at December 31	3,584.8	2,044.4	2,023.6
Treasury – balance at January 1	(1.8)	(24.9)	(23.5)
Purchase of treasury stock	(19.3)	—	—
Share repurchases related to employee stock-based awards[b]	(7.5)	(3.0)	(3.9)
Issued from treasury:			
Employee benefits and compensation plans	—	25.8	2.1
Employee stock purchase plans	—	0.3	0.4
Total issued from treasury	—	26.1	2.5
Total treasury – balance at December 31	(28.6)	(1.8)	(24.9)
Outstanding	3,556.2	2,042.6	1,998.7

(a) Heritage JPMorgan Chase only.
(b) Participants in the 1996 Long-Term Incentive Plan and Stock Option Plan have shares withheld to cover income taxes. The shares withheld amounted to 5.7 million, 2.3 million and 2.9 million for 2004, 2003 and 2002, respectively.

During 2004, the Firm repurchased 19.3 million shares of common stock under a stock repurchase program which was approved by the Board of Directors on July 20, 2004. The Firm did not repurchase shares of its common stock during 2003 or 2002 under the prior stock repurchase program.

As of December 31, 2004, approximately 531 million unissued shares of common stock were reserved for issuance under various employee incentive, option and stock-purchase plans.

Note 20 – Earnings per share

SFAS 128 requires the presentation of basic and diluted earnings per share ("EPS") in the income statement. Basic EPS is computed by dividing net income applicable to common stock by the weighted-average number of common shares outstanding for the period. Diluted EPS is computed using the same method as basic EPS but, in the denominator, the number of common shares reflect, in addition to outstanding shares, the potential dilution that could occur if convertible securities or other contracts to issue common stock were converted or exercised into common stock. Net income available for common stock is the same for basic EPS and diluted EPS, as JPMorgan Chase had no convertible securities, and therefore, no adjustments to net income available for common stock were necessary. The following table presents the calculation of basic and diluted EPS for 2004, 2003 and 2002:

Year ended December 31, (in millions, except per share amounts)[a]	2004	2003	2002
Basic earnings per share			
Net income	$ 4,466	$ 6,719	$ 1,663
Less: preferred stock dividends	52	51	51
Net income applicable to common stock	$ 4,414	$ 6,668	$ 1,612
Weighted-average basic shares outstanding	2,779.9	2,008.6	1,984.3
Net income per share	$ 1.59	$ 3.32	$ 0.81
Diluted earnings per share			
Net income applicable to common stock	$ 4,414	$ 6,668	$ 1,612
Weighted-average basic shares outstanding	2,779.9	2,008.6	1,984.3
Add: Broad-based options	5.4	4.1	2.8
Key employee options	65.3	42.4	22.0
Weighted-average diluted shares outstanding	2,850.6	2,055.1	2,009.1
Net income per share[b]	$ 1.55	$ 3.24	$ 0.80

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. All other periods reflect the results of heritage JPMorgan Chase only.
(b) Options issued under employee benefit plans to purchase 300 million, 335 million and 362 million shares of common stock were outstanding for the years ended 2004, 2003 and 2002, respectively, but were not included in the computation of diluted EPS because the options' exercise prices were greater than the average market price of the common shares.

Note 21 – Accumulated other comprehensive income (loss)

Accumulated other comprehensive income includes the after-tax change in unrealized gains and losses on AFS securities, cash flow hedging activities and foreign currency translation adjustments (including the impact of related derivatives).

Year ended December 31,[a] (in millions)	Unrealized gains (losses) on AFS securities[b]	Translation adjustments	Cash flow hedges	Accumulated other comprehensive income (loss)
Balance at December 31, 2001	$ (135)	$ (2)	$ (305)	$ (442)
Net change	866	(4)	807	1,669
Balance at December 31, 2002	731	(6)	502	1,227
Net change	(712)	—	(545)	(1,257)
Balance at December 31, 2003	19	(6)	(43)	(30)
Net change	**(80)[c]**	**(2)[d]**	**(96)**	**(178)**
Balance at December 31, 2004	**$ (61)**	**$ (8)[e]**	**$ (139)**	**$ (208)**

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. All other periods reflect the results of heritage JPMorgan Chase only.
(b) Represents the after-tax difference between the fair value and amortized cost of the AFS securities portfolio and retained interests in securitizations recorded in Other assets.
(c) The net change during 2004 is primarily due to increasing rates and recognition of unrealized gains through securities sales.
(d) Includes $280 million of after-tax gains (losses) on foreign currency translation from operations for which the functional currency is other than the U.S. dollar, offset by $(282) million of after-tax gains (losses) on hedges.
(e) Includes after-tax gains and losses on foreign currency translation, including related hedge results from operations, for which the functional currency is other than the U.S. dollar.

The following table presents the after-tax changes in net unrealized holdings gains (losses) and the reclassification adjustments in unrealized gains and losses on AFS securities and cash flow hedges. Reclassification adjustments include amounts recognized in net income during the current year that had been previously recorded in Other comprehensive income.

Year ended December 31, (in millions)[a]	2004	2003	2002
Unrealized gains (losses) on AFS securities:			
Net unrealized holdings gains (losses) arising during the period, net of taxes[b]	$ 41	$ 149	$ 1,090
Reclassification adjustment for gains included in income, net of taxes[c]	(121)	(861)	(224)
Net change	$ (80)	$ (712)	$ 866
Cash flow hedges:			
Net unrealized holdings gains (losses) arising during the period, net of taxes[d]	$ 34	$ 86	$ 663
Reclassification adjustment for (gains) losses included in income, net of taxes[e]	(130)	(631)	144
Net change	$ (96)	$ (545)	$ 807

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. All other periods reflect the results of heritage JPMorgan Chase only.
(b) Net of tax expense of $27 million for 2004, $92 million for 2003 and $758 million for 2002.
(c) Net of tax expense of $79 million for 2004, $528 million for 2003 and $156 million for 2002.
(d) Net of tax expense of $23 million for 2004, $60 million for 2003 and $461 million for 2002.
(e) Net of tax expense of $86 million for 2004 and $438 million for 2003, and net of tax benefit of $100 million for 2002.

Note 22 – Income taxes

JPMorgan Chase and its eligible subsidiaries file a consolidated U.S. federal income tax return. JPMorgan Chase uses the asset-and-liability method required by SFAS 109 to provide income taxes on all transactions recorded in the Consolidated financial statements. This requires that income taxes reflect the expected future tax consequences of temporary differences between the carrying amounts of assets or liabilities for book and tax purposes. Accordingly, a deferred tax liability or asset for each temporary difference is determined based on the tax rates that the Firm expects to be in effect when the underlying items of income and expense are realized. JPMorgan Chase's expense for income taxes includes the current and deferred portions of that expense. A valuation allowance is established to reduce deferred tax assets to the amount the Firm expects to realize.

Due to the inherent complexities arising from the nature of the Firm's businesses, and from conducting business and being taxed in a substantial number of jurisdictions, significant judgments and estimates are required to be made. Thus, the Firm's final tax-related assets and liabilities may ultimately be different.

Deferred income tax expense (benefit) results from differences between assets and liabilities measured for financial reporting and for income-tax return purposes. The significant components of deferred tax assets and liabilities are reflected in the following table:

December 31, (in millions)	2004	2003[a]
Deferred tax assets		
Allowance for other than loan losses	$ 3,711	$ 1,152
Allowance for loan losses	2,739	1,410
Employee benefits	2,677	2,245
Non-U.S. operations	743	741
Gross deferred tax assets	$ 9,870	$ 5,548
Deferred tax liabilities		
Leasing transactions	$ 4,266	$ 3,703
Depreciation and amortization	3,558	1,037
Fee income	1,162	387
Non-U.S. operations	1,144	687
Fair value adjustments	186	538
Other, net	348	68
Gross deferred tax liabilities	$ 10,664	$ 6,420
Valuation allowance	$ 150	$ 200
Net deferred tax liability	$ (944)	$ (1,072)

(a) Heritage JPMorgan Chase only.

A valuation allowance has been recorded in accordance with SFAS 109, primarily relating to deferred tax assets associated with non-U.S. operations.

The components of income tax expense included in the Consolidated statements of income were as follows:

Year ended December 31, (in millions)[a]	2004	2003	2002
Current income tax expense (benefit)			
U.S. federal	$ 1,695	$ 965	$ (1,334)
Non-U.S.	679	741	461
U.S. state and local	181	175	93
Total current expense (benefit)	2,555	1,881	(780)
Deferred income tax (benefit) expense			
U.S. federal	(382)	1,341	1,630
Non-U.S.	(322)	14	(352)
U.S. state and local	(123)	73	358
Total deferred (benefit) expense	(827)	1,428	1,636
Total income tax expense	$ 1,728	$ 3,309	$ 856

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. All other periods reflect the results of heritage JPMorgan Chase only.

The preceding table does not reflect the tax effects of unrealized gains and losses on AFS securities, SFAS 133 hedge transactions and certain tax benefits associated with the Firm's employee stock plans. The tax effect of these items is recorded directly in Stockholders' equity. Stockholders' equity increased by $190 million and $898 million in 2004 and 2003, respectively, and decreased by $1.1 billion in 2002 as a result of these tax effects.

U.S. federal income taxes have not been provided on the undistributed earnings of certain non-U.S. subsidiaries, to the extent that such earnings have been reinvested abroad for an indefinite period of time. For 2004, such earnings approximated $369 million on a pre-tax basis. At December 31, 2004, the cumulative amount of undistributed earnings in these subsidiaries approximated $2.6 billion. It is not practicable at this time to determine the income tax liability that would result upon repatriation of these earnings.

On October 22, 2004, the American Jobs Creation Act of 2004 (the "Act") was signed into law. The Act creates a temporary incentive for U.S. companies to repatriate accumulated foreign earnings at a substantially reduced U.S. effective tax rate by providing a dividends received deduction on the repatriation of certain foreign earnings to the U.S. taxpayer (the "repatriation provision"). The new deduction is subject to a number of limitations and requirements and is effective for either the 2004 or 2005 tax years for calendar year taxpayers. The range of possible amounts that may be considered for repatriation under this provision is between zero and $1.9 billion. The Firm is currently assessing the impact of the repatriation provision and, at this time, cannot reasonably estimate the related range of income tax effects of such repatriation provision. Accordingly, the Firm has not reflected the tax effect of the repatriation provision in income tax expense or income tax liabilities.

The tax expense applicable to securities gains and losses for the years 2004, 2003 and 2002 was $126 million, $477 million and $531 million, respectively.

A reconciliation of the applicable statutory U.S. income tax rate to the effective tax rate for the past three years is shown in the following table:

Year ended December 31,[a]	2004	2003	2002
Statutory U.S. federal tax rate	35.0%	35.0%	35.0%
Increase (decrease) in tax rate resulting from:			
U.S. state and local income taxes, net of federal income tax benefit	0.6[b]	2.1	11.6
Tax-exempt income	(4.1)	(2.4)	(6.2)
Non-U.S. subsidiary earnings	(1.3)	(0.7)	(2.2)
Business tax credits	(4.1)	(0.9)	(3.5)
Other, net	1.8	(0.1)	(0.7)
Effective tax rate	27.9%	33.0%	34.0%

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. All other periods reflect the results of heritage JPMorgan Chase only.
(b) The decrease in 2004 is attributable to changes in the proportion of income subject to different state and local taxes.

The following table presents the U.S. and non-U.S. components of income before income tax expense:

Year ended December 31, (in millions)[a]	2004	2003	2002
U.S.	$ 3,817	$ 7,333	$ 1,834
Non-U.S.[b]	2,377	2,695	685
Income before income tax expense	$ 6,194	$ 10,028	$ 2,519

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. All other periods reflect the results of heritage JPMorgan Chase only.
(b) For purposes of this table, non-U.S. income is defined as income generated from operations located outside the United States.

Note 23 – Restrictions on cash and intercompany funds transfers

The Federal Reserve Board requires depository institutions to maintain cash reserves with a Federal Reserve Bank. The average amount of reserve balances deposited by the Firm's bank subsidiaries with various Federal Reserve Banks was approximately $3.8 billion in 2004 and $2.6 billion in 2003.

Restrictions imposed by federal law prohibit JPMorgan Chase and certain other affiliates from borrowing from banking subsidiaries unless the loans are secured in specified amounts. Such secured loans to the Firm or to other affiliates are generally limited to 10% of the banking subsidiary's total capital, as determined by the risk-based capital guidelines; the aggregate amount of all such loans is limited to 20% of the banking subsidiary's total capital.

The principal sources of JPMorgan Chase's income (on a parent company-only basis) are dividends and interest from JPMorgan Chase Bank and the other banking and nonbanking subsidiaries of JPMorgan Chase. In addition to dividend restrictions set forth in statutes and regulations, the FRB, the Office of the Comptroller of the Currency ("OCC") and the Federal Deposit Insurance Corporation ("FDIC") have authority under the Financial Institutions Supervisory Act to prohibit or to limit the payment of dividends by the banking organizations they supervise, including JPMorgan Chase and its subsidiaries that are banks or bank holding companies, if, in the banking regulator's opinion, payment of a dividend would constitute an unsafe or unsound practice in light of the financial condition of the banking organization.

At January 1, 2005 and 2004, JPMorgan Chase's bank subsidiaries could pay, in the aggregate, $6.2 billion and $4.4 billion, respectively, in dividends to their respective bank holding companies without prior approval of their relevant banking regulators. Dividend capacity in 2005 will be supplemented by the banks' earnings during the year.

In compliance with rules and regulations established by U.S. and non-U.S. regulators, as of December 31, 2004 and 2003, cash in the amount of $4.3 billion and $3.5 billion, respectively, and securities with a fair value of $3.6 billion and $3.1 billion, respectively, were segregated in special bank accounts for the benefit of securities and futures brokerage customers.

Note 24 – Capital

There are two categories of risk-based capital: Tier 1 capital and Tier 2 capital. Tier 1 capital includes common stockholders' equity, qualifying preferred stock and minority interest less goodwill and other adjustments. Tier 2 capital consists of preferred stock not qualifying as Tier 1, subordinated long-term debt and other instruments qualifying as Tier 2, and the aggregate allowance for credit losses up to a certain percentage of risk-weighted assets. Total regulatory capital is subject to deductions for investments in certain subsidiaries. Under the risk-based capital guidelines of the FRB, JPMorgan Chase is required to maintain minimum ratios of Tier 1 and total (Tier 1 plus Tier 2) capital to risk-weighted assets, as well as minimum leverage ratios (which are defined as Tier 1 capital to average adjusted on–balance sheet assets). Failure to meet these minimum requirements could cause the FRB to take action. Bank subsidiaries also are subject to these capital requirements by their respective primary regulators. As of December 31, 2004 and 2003, JPMorgan Chase and its primary banking subsidiaries met all capital requirements to which each was subject.

The following table presents the risk-based capital ratios for JPMorgan Chase and its significant banking subsidiaries at December 31, 2004 and 2003:

(in millions, except ratios)	Tier 1 capital	Total capital	Risk-weighted assets[b]	Adjusted average assets[c]	Tier 1 capital ratio	Total capital ratio	Tier 1 leverage ratio
December 31, 2004							
JPMorgan Chase & Co.[a]	**$ 68,621**	**$ 96,807**	**$ 791,373**	**$ 1,102,456**	**8.7%**	**12.2%**	**6.2%**
JPMorgan Chase Bank, N.A.	**55,489**	**78,478**	**670,295**	**922,877**	**8.3**	**11.7**	**6.0**
Chase Bank USA, N.A.	**8,726**	**11,186**	**86,955**	**71,797**	**10.0**	**12.9**	**12.2**
December 31, 2003[d]							
JPMorgan Chase & Co.[a]	$ 43,167	$ 59,816	$ 507,456	$ 765,910	8.5%	11.8%	5.6%
JPMorgan Chase Bank	34,972	45,290	434,218	628,076	8.1	10.4	5.6
Chase Manhattan Bank USA, N.A.	4,950	6,939	48,030	34,565	10.3	14.4	14.3
Well-capitalized ratios[e]					6.0%	10.0%	5.0%[f]
Minimum capital ratios[e]					4.0	8.0	3.0

(a) Asset and capital amounts for JPMorgan Chase's banking subsidiaries reflect intercompany transactions, whereas the respective amounts for JPMorgan Chase reflect the elimination of intercompany transactions.
(b) Includes off–balance sheet risk-weighted assets in the amounts of $250.3 billion, $229.6 billion and $15.5 billion, respectively, at December 31, 2004, and $174.2 billion, $152.1 billion and $13.3 billion, respectively, at December 31, 2003.
(c) Average adjusted assets for purposes of calculating the leverage ratio include total average assets adjusted for unrealized gains/losses on securities, less deductions for disallowed goodwill and other intangible assets, investments in subsidiaries and the total adjusted carrying value of nonfinancial equity investments that are subject to deductions from Tier 1 capital.
(d) Heritage JPMorgan Chase only.
(e) As defined by the regulations issued by the FRB, FDIC and OCC.
(f) Represents requirements for bank subsidiaries pursuant to regulations issued under the Federal Deposit Insurance Corporation Improvement Act. There is no Tier 1 leverage component in the definition of a well-capitalized bank holding company.

The following table shows the components of the Firm's Tier 1 and total capital:

December 31, (in millions)	2004	2003[a]
Tier 1 capital		
Total stockholders' equity	**$ 105,653**	$ 46,154
Effect of net unrealized losses on AFS securities and cash flow hedging activities	**200**	24
Adjusted stockholders' equity	**105,853**	46,178
Minority interest[b]	**11,050**	6,882
Less: Goodwill	**43,203**	8,511
Investments in certain subsidiaries	**370**	266
Nonqualifying intangible assets	**4,709**	1,116
Tier 1 capital	**$ 68,621**	$ 43,167
Tier 2 capital		
Long-term debt and other instruments qualifying as Tier 2	**$ 20,690**	$ 12,128
Qualifying allowance for credit losses	**7,798**	4,777
Less: Investments in certain subsidiaries and other	**302**	256
Tier 2 capital	**$ 28,186**	$ 16,649
Total qualifying capital	**$ 96,807**	$ 59,816

(a) Heritage JPMorgan Chase only.
(b) Primarily includes trust preferred securities of certain business trusts.

Note 25 – Commitments and contingencies

At December 31, 2004, JPMorgan Chase and its subsidiaries were obligated under a number of noncancelable operating leases for premises and equipment used primarily for banking purposes. Certain leases contain rent escalation clauses for real estate taxes; they may also contain other operating expenses and renewal-option clauses calling for increased rents. No lease agreement imposes restrictions on the Firm's ability to pay dividends, engage in debt or equity financing transactions, or enter into further lease agreements.

The following table shows required future minimum rental payments under operating leases with noncancelable lease terms that expire after December 31, 2004:

Year ended December 31, (in millions)	
2005	$ 1,060
2006	979
2007	899
2008	838
2009	776
After	5,301
Total minimum payments required	9,853
Less: Sublease rentals under noncancelable subleases	(689)
Net minimum payment required	$ 9,164

Total rental expense was as follows:

Year ended December 31, (in millions)[a]	2004	2003	2002
Gross rentals	**$ 1,187**	$ 1,061	$ 1,012
Sublease rentals	**(158)**	(106)	(134)
Net rental expense	**$ 1,029**	$ 955	$ 878

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. All other periods reflect the results of heritage JPMorgan Chase only.

At December 31, 2004, assets were pledged to secure public deposits and for other purposes. The significant components of the assets pledged were as follows:

December 31, (in billions)	2004	2003[b]
Reverse repurchase/securities borrowing agreements	**$ 238**	$ 197
Securities	**49**	45
Loans	**75**	48
Other[a]	**90**	96
Total assets pledged	**$ 452**	$ 386

(a) Primarily composed of trading assets.
(b) Heritage JPMorgan Chase only.

Litigation reserve

During 2004, JPMorgan Chase increased its Litigation reserve by $3.7 billion. While the outcome of litigation is inherently uncertain, the amount of the Firm's Litigation reserve at December 31, 2004, reflected management's assessment of the appropriate litigation reserve level in light of all information known as of that date. Management reviews litigation reserves periodically, and the reserve may be increased or decreased in the future to reflect further developments. The Firm believes it has meritorious defenses to claims asserted against it and intends to continue to defend itself vigorously, litigating or settling cases, according to management's judgment as to what is in the best interest of stockholders.

Note 26 – Accounting for derivative instruments and hedging activities

Derivative instruments enable end users to increase, reduce or alter exposure to credit or market risks. The value of a derivative is derived from its reference to an underlying variable or combination of variables such as equity, foreign exchange, credit, commodity or interest rate prices or indices. JPMorgan Chase makes markets in derivatives for its customers and also is an end-user of derivatives in order to manage the Firm's exposure to credit and market risks.

SFAS 133, as amended by SFAS 138 and SFAS 149, establishes accounting and reporting standards for derivative instruments, including those used for trading and hedging activities, and derivative instruments embedded in other contracts. All free-standing derivatives, whether designated for hedging relationships or not, are required to be recorded on the balance sheet at fair value. The accounting for changes in value of a derivative depends on whether the contract is for trading purposes or has been designated and qualifies for hedge accounting. The majority of the Firm's derivatives are entered into for trading purposes. The Firm also uses derivatives as an end user to hedge market exposures, modify the interest rate characteristics of related balance sheet instruments or meet longer-term investment objectives. Both trading and end-user derivatives are recorded at fair value in Trading assets and Trading liabilities as set forth in Note 3 on pages 90–91 of this Annual Report.

In order to qualify for hedge accounting, a derivative must be considered highly effective at reducing the risk associated with the exposure being hedged. Each derivative must be designated as a hedge, with documentation of the risk management objective and strategy, including identification of the hedging instrument, the hedged item and the risk exposure, and how effectiveness is to be assessed prospectively and retrospectively. The extent to which a hedging instrument is effective at achieving offsetting changes in fair value or cash flows must be assessed at least quarterly. Any ineffectiveness must be reported in current-period earnings. For certain types of hedge relationships meeting stringent criteria, SFAS 133's "shortcut" method provides for an assumption of zero ineffectiveness. Under the shortcut method, quarterly effectiveness assessment is not required, and the entire change in the fair value of the hedging derivative is considered to be effective at achieving offsetting changes in fair values or cash flows. Due to the strict criteria of the shortcut method, the Firm's use of this method is primarily limited to hedges of Long-term debt.

For qualifying fair value hedges, all changes in the fair value of the derivative and in the fair value of the item for the risk being hedged are recognized in earnings. If the hedge relationship is terminated, then the fair value adjustment to the hedged item continues to be reported as part of the basis of the item and is amortized to earnings as a yield adjustment. For qualifying cash flow hedges, the effective portion of the change in the fair value of the derivative is recorded in Other comprehensive income and recognized in the income statement when the hedged cash flows affect earnings. The ineffective portions of cash flow hedges are immediately recognized in earnings. If the hedge relationship is terminated, then the change in fair value of the derivative recorded in Other comprehensive income is recognized when the cash flows that were hedged occur, consistent with the original hedge strategy. For hedge relationships discontinued because the forecasted transaction is not expected to occur according to the original strategy, any related derivative amounts recorded in Other comprehensive income are immediately recognized in earnings. For qualifying net investment hedges, changes in the fair value of the derivative or the revaluation of the foreign currency–denominated debt instrument are recorded in the translation adjustments account within Other comprehensive income. Any ineffective portions of net investment hedges are immediately recognized in earnings.

JPMorgan Chase's fair value hedges primarily include hedges of fixed-rate long-term debt, loans, AFS securities and MSRs. Interest rate swaps are the most common type of derivative contract used to modify exposure to interest rate risk, converting fixed-rate assets and liabilities to a floating rate. Interest rate options, swaptions and forwards are also used in combination with interest rate swaps to hedge the fair value of the Firm's MSRs. For a further discussion of MSR risk management activities, see Note 15 on pages 109–111 of this Annual Report. All amounts have been included in earnings consistent with the classification of the hedged item, primarily Net interest income, Mortgage fees and related income, and Other income. The Firm did not recognize any gains or losses during 2004 on commitments that no longer qualify as fair value hedges.

JPMorgan Chase also enters into derivative contracts to hedge exposure to variability in cash flows from floating-rate financial instruments and forecasted transactions, primarily the rollover of short-term assets and liabilities, and foreign currency-denominated revenues and expenses. Interest rate swaps, futures and forward contracts are the most common instruments used to reduce the impact of interest rate and foreign exchange rate changes on future earnings. All amounts affecting earnings have been recognized consistent with the classification of the hedged item, primarily Net interest income.

The Firm uses forward foreign exchange contracts and foreign currency-denominated debt instruments to protect the value of its net investments in foreign currencies in its non-U.S. subsidiaries. The portion of the hedging instruments excluded from the assessment of hedge effectiveness (forward points) is recorded in Net interest income.

The following table presents derivative instrument hedging-related activities for the periods indicated:

Year ended December 31, (in millions)[a]	2004	2003
Fair value hedge ineffective net gains/(losses)[b]	$ 199	$ 731[c]
Cash flow hedge ineffective net gains/(losses)[b]	—	(5)
Cash flow hedging gains on forecasted transactions that failed to occur	1	—

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. 2003 reflects the results of heritage JPMorgan Chase only.
(b) Includes ineffectiveness and the components of hedging instruments that have been excluded from the assessment of hedge effectiveness.
(c) Amount restated to include the ineffectiveness and amounts excluded from the assessment of effectiveness associated with MSR hedging results.

Over the next 12 months, it is expected that $157 million (after-tax) of net gains recorded in Other comprehensive income at December 31, 2004, will be recognized in earnings. The maximum length of time over which forecasted transactions are hedged is 10 years, related to core lending and borrowing activities.

JPMorgan Chase does not seek to apply hedge accounting to all of its economic hedges. For example, the Firm does not apply hedge accounting to credit derivatives used to manage the credit risk of loans and commitments because of the difficulties in qualifying such contracts as hedges under SFAS 133. Similarly, the Firm does not apply hedge accounting to certain interest rate derivatives used as economic hedges.

Note 27 – Off-balance sheet lending-related financial instruments and guarantees

JPMorgan Chase utilizes lending-related financial instruments (e.g., commitments and guarantees) to meet the financing needs of its customers. The contractual amount of these financial instruments represents the maximum possible credit risk should the counterparty draw down the commitment or the Firm fulfill its obligation under the guarantee, and the counterparty subsequently failed to perform according to the terms of the contract. Most of these commitments and guarantees expire without a default occurring or without being drawn. As a result, the total contractual amount of these instruments is not, in the Firm's view, representative of its actual future credit exposure or funding requirements. Further, certain commitments, primarily related to consumer financings, are cancelable, upon notice, at the option of the Firm.

To provide for the risk of loss inherent in wholesale-related contracts, an allowance for credit losses on lending-related commitments is maintained. See Note 12 on pages 102–103 of this Annual Report for a further discussion on the allowance for credit losses on lending-related commitments.

The following table summarizes the contractual amounts of off–balance sheet lending-related financial instruments and guarantees and the related allowance for credit losses on lending-related commitments at December 31, 2004 and 2003:

Off–balance sheet lending-related financial instruments

	Contractual amount		Allowance for lending-related commitments	
December 31, (in millions)	**2004**	2003[a]	**2004**	2003[a]
Consumer	**$ 601,196**	$ 181,198	**$ 12**	$ 4
Wholesale:				
Other unfunded commitments to extend credit[b][c][d]	**$ 225,152**	$ 172,369	**$ 185**	$ 153
Standby letters of credit and guarantees[b]	**78,084**	34,922	**292**	165
Other letters of credit[b]	**6,163**	4,192	**3**	2
Total wholesale	**$ 309,399**	$ 211,483	**$ 480**	$ 320
Total	**$ 910,595**	$ 392,681	**$ 492**	$ 324
Customers' securities lent	**$ 215,972**	$ 143,143	**NA**	NA

(a) Heritage JPMorgan Chase only.
(b) Represents contractual amount net of risk participations totaling $26.4 billion and $16.5 billion at December 31, 2004 and 2003, respectively.
(c) Includes unused advised lines of credit totaling $22.8 billion and $19.4 billion at December 31, 2004 and 2003, respectively, which are not legally binding. In regulatory filings with the Federal Reserve Board, unused advised lines are not reportable.
(d) Includes certain asset purchase agreements to the Firm's administered multi-seller asset-backed commercial paper conduits of $31.8 billion and $11.7 billion at December 31, 2004 and 2003, respectively; excludes $31.7 billion and $6.3 billion at December 31, 2004 and 2003, respectively, of asset purchase agreements related to the Firm's administered multi-seller asset-backed commercial paper conduits consolidated in accordance with FIN 46R, as the underlying assets of the conduits are reported in the Firm's Consolidated balance sheets. It also includes $7.5 billion and $9.2 billion at December 31, 2004 and 2003, respectively, of asset purchase agreements to structured wholesale loan vehicles and other third-party entities. The allowance for credit losses on lending-related commitments related to these agreements was insignificant at December 31, 2004 and 2003.

FIN 45 establishes accounting and disclosure requirements for guarantees, requiring that a guarantor recognize, at the inception of a guarantee, a liability in an amount equal to the fair value of the obligation undertaken in issuing the guarantee. FIN 45 defines a guarantee as a contract that contingently requires the Firm to pay a guaranteed party, based on: (a) changes in an underlying asset, liability or equity security of the guaranteed party; or (b) a third party's failure to perform under a specified agreement. The Firm considers the following off–balance sheet lending arrangements to be guarantees under FIN 45: certain asset purchase agreements, standby letters of credit and financial guarantees, securities lending indemnifications, certain indemnification agreements included within third-party contractual arrangements and certain derivative contracts. These guarantees are described in further detail below.

As of January 1, 2003, newly issued or modified guarantees that are not derivative contracts have been recorded on the Firm's Consolidated balance sheets at their fair value at inception. The fair value of the obligation undertaken in issuing the guarantee at inception is typically equal to the net present value of the future amount of premium receivable under the contract. The Firm has recorded this amount in Other Liabilities with an offsetting entry recorded in Other Assets. As cash is received under the contract, it is applied to the premium receivable recorded in Other Assets, and the fair value of the liability recorded at inception is amortized into income as Lending & deposit related fees over the life of the guarantee contract. The amount of the liability related to guarantees recorded at December 31, 2004 and 2003, excluding the allowance for credit losses on lending-related commitments and derivative contracts discussed below, was approximately $341 million and $59 million, respectively.

Unfunded commitments to extend credit are agreements to lend only when a customer has complied with predetermined conditions, and they generally expire on fixed dates. The allowance for credit losses on wholesale lending-related commitments includes $185 million and $153 million at December 31, 2004 and 2003, respectively, related to unfunded commitments to extend credit. The majority of the Firm's unfunded commitments are not guarantees as defined in FIN 45, except for certain asset purchase agreements. These asset-purchase agreements are principally used as a mechanism to provide liquidity to SPEs, primarily multi-seller conduits, as described in Note 14 on pages 106–109 of this Annual Report.

Certain asset purchase agreements can be exercised at any time by the SPE's administrator, while others require a triggering event to occur. Triggering events include, but are not limited to, a need for liquidity, a market value decline of the assets or a downgrade in the rating of JPMorgan Chase Bank. These agreements may cause the Firm to purchase an asset from the SPE at an amount above the asset's fair value, in effect providing a guarantee of the initial value of the reference asset as of the date of the agreement. In most instances, third-party credit enhancements of the SPE mitigate the Firm's potential losses on these agreements. The allowance for credit losses on wholesale lending-related commitments related to these agreements was insignificant at December 31, 2004.

Standby letters of credit and financial guarantees are conditional lending commitments issued by JPMorgan Chase to guarantee the performance of a customer to a third party under certain arrangements, such as commercial paper facilities, bond financings, acquisition financings and similar transactions. Approximately 70% of these arrangements mature within three years. The Firm typically has recourse to recover from the customer any amounts paid under these guarantees; in addition, the Firm may hold cash or other highly liquid collateral to support these guarantees. At December 31, 2004 and 2003,

the Firm held collateral relating to $7.4 billion and $7.7 billion, respectively, of these arrangements. The allowance for credit losses on lending-related commitments at December 31, 2004 and 2003, included $292 million and $165 million, respectively, related to standby letters of credit and financial guarantees.

The Firm holds customers' securities under custodial arrangements. At times, these securities are loaned to third parties, and the Firm issues securities lending indemnification agreements to the customer that protect the customer against the risk of loss if the third party fails to return the securities. To support these indemnification agreements, the Firm obtains from the third party cash or other highly liquid collateral with a market value exceeding 100% of the value of the loaned securities. At December 31, 2004 and 2003, the Firm held $221.6 billion and $146.7 billion, respectively, in collateral in support of these agreements.

In connection with issuing securities to investors, the Firm may enter into contractual arrangements with third parties that may require the Firm to make a payment to them in the event of a change in tax law or an adverse interpretation of tax law. In certain cases, the contract may also include a termination clause, which would allow the Firm to settle the contract at its fair value; thus, such a clause would not require the Firm to make a payment under the indemnification agreement. Even without the termination clause, management does not expect such indemnification agreements to have a material adverse effect on the consolidated financial condition of JPMorgan Chase. The Firm may also enter into indemnification clauses when it sells a business or assets to a third party, pursuant to which it indemnifies that third party for losses it may incur due to actions taken by the Firm prior to the sale. See below for more information regarding the Firm's loan securitization activities. It is difficult to estimate the Firm's maximum exposure under these indemnification arrangements, since this would require an assessment of future changes in tax law and future claims that may be made against the Firm that have not yet occurred. However, based on historical experience, management expects the risk of loss to be remote.

As part of the Firm's loan securitization activities, as described in Note 13 on pages 103–106 of this Annual Report, the Firm provides representations and warranties that certain securitized loans meet specific requirements. The Firm may be required to repurchase the loans and/or indemnify the purchaser of the loans against losses due to any breaches of such representations or warranties. Generally, the maximum amount of future payments the Firm would be required to make under such repurchase and/or indemnification provisions would be equal to the current amount of assets held by such securitization-related SPEs as of December 31, 2004, plus, in certain circumstances, accrued and unpaid interest on such loans and certain expenses. The potential loss due to such repurchase and/or indemnity is mitigated by the due diligence the Firm performs to ensure that the assets comply with the requirements set forth in the representations and warranties. Historically, losses incurred on such repurchases and/or indemnifications have been insignificant, and therefore management expects the risk of material loss to be remote.

In connection with Card Services, the Firm is a partner with one of the leading companies in electronic payment services in two separate ventures, Chase Merchant Services and Paymentech (the "ventures"), the latter of which was acquired as a result of the Merger. These ventures provide merchant processing services in the United States and Canada. The ventures are each individually contingently liable for processed credit card sales transactions in the event of a dispute between the cardmember and a merchant. If a dispute is resolved in the cardmember's favor, the ventures will credit or refund the amount to the cardmember and charge back the transaction to the merchant. If the ventures are unable to collect the amount from the merchant, the ventures will bear the loss for the amount credited or refunded to the cardmember. The ventures mitigate this risk by withholding settlement, or by obtaining escrow deposits or letters of credit from certain merchants. However, in the unlikely event that: 1) a merchant ceases operations and is unable to deliver products, services or a refund; 2) the ventures do not have sufficient collateral from the merchants to provide customer refunds; and 3) the ventures do not have sufficient financial resources to provide customer refunds, the Firm would be liable to refund the cardholder in proportion to its approximate equity interest in the ventures. For the year ended December 31, 2004, the ventures incurred aggregate credit losses of $7.1 million on $396 billion of aggregate volume processed, of which the Firm shared liability only on $205 billion of aggregate volume processed. At December 31, 2004, the ventures held $620 million of collateral. In 2003, the Chase Merchant Services venture incurred aggregate credit losses of $2.0 million on $260 billion of aggregate volume processed, of which the Firm shared liability only on $77 billion of aggregate volume processed. At December 31, 2003, the Chase Merchant Services venture held $242 million of collateral. The Firm believes that, based on historical experience and the collateral held by the ventures, the fair value of the guarantee would not be materially different from the credit loss allowance recorded by the ventures; therefore, the Firm has not recorded any allowance for losses in excess of the allowance recorded by the ventures.

The Firm is a member of several securities and futures exchanges and clearinghouses both in the United States and overseas. Membership in some of these organizations requires the Firm to pay a pro rata share of the losses incurred by the organization as a result of the default of another member. Such obligation varies with different organizations. It may be limited to members who dealt with the defaulting member or to the amount (or a multiple of the amount) of the Firm's contribution to a members' guaranty fund, or, in a few cases, it may be unlimited. It is difficult to estimate the Firm's maximum exposure under these membership agreements, since this would require an assessment of future claims that may be made against the Firm that have not yet occurred. However, based on historical experience, management expects the risk of loss to be remote.

In addition to the contracts described above, there are certain derivative contracts to which the Firm is a counterparty that meet the characteristics of a guarantee under FIN 45. These derivatives are recorded on the Consolidated balance sheets at fair value. These contracts include written put options that require the Firm to purchase assets from the option holder at a specified price by a specified date in the future, as well as derivatives that effectively guarantee the return on a counterparty's reference portfolio of assets. The total notional value of the derivatives that the Firm deems to be guarantees was $53 billion and $50 billion at December 31, 2004 and 2003, respectively. The Firm reduces its exposures to these contracts by entering into offsetting transactions or by entering into contracts that hedge the market risk related to these contracts. The fair value related to these contracts was a derivative receivable of $180 million and $163 million, and a derivative payable of $622 million and $333 million at December 31, 2004 and 2003, respectively. Finally, certain written put options and credit derivatives permit cash settlement and do not require the option holder or the buyer of credit protection to own the reference asset. The Firm does not consider these contracts to be guarantees as described in FIN 45.

Note 28 – Credit risk concentrations

Concentrations of credit risk arise when a number of customers are engaged in similar business activities or activities in the same geographic region, or when they have similar economic features that would cause their ability to meet contractual obligations to be similarly affected by changes in economic conditions.

JPMorgan Chase regularly monitors various segments of its credit risk portfolio to assess potential concentration risks and to obtain collateral when deemed necessary. In the Firm's wholesale portfolio, risk concentrations are primarily evaluated by industry and by geographic region. In the consumer portfolio, concentrations are primarily evaluated by product and by U.S. geographic region.

For further information regarding on–balance sheet credit concentrations by major product and geography, see Note 11 on page 101 of this Annual Report. For information regarding concentrations of off–balance sheet lending-related financial instruments by major product, see Note 27 on page 119 of this Annual Report. More information about concentrations can be found in the following tables or discussion in the MD&A:

Wholesale exposure	Page 60
Wholesale selected industry concentrations	Page 61
Country exposure	Page 65
Consumer real estate by geographic location	Page 67

The table below presents both on-balance sheet and off-balance sheet wholesale- and consumer-related credit exposure as of December 31, 2004 and 2003:

	2004			2003[c]		
December 31, (in billions)	Credit exposure	On-balance sheet[a]	Off-balance sheet[b]	Credit exposure	On-balance sheet[a]	Off-balance sheet[b]
Wholesale-related:						
Banks and finance companies	**$ 56.2**	**$ 25.7**	**$ 30.5**	$ 62.7	$ 39.7	$ 23.0

Total exposure	**$ 1,410.4**	**$ 499.8**	**$ 910.6**	$ 696.0	$ 303.4	$ 392.6

(a) Represents loans, derivative receivables, interests in purchased receivables and other receivables.
(b) Represents lending-related financial instruments.
(c) Heritage JPMorgan Chase only.
(d) Excludes $70.8 billion and $34.9 billion of securitized credit card receivables at December 31, 2004 and 2003, respectively.

Note 29 – Fair value of financial instruments

The fair value of a financial instrument is the amount at which the instrument could be exchanged in a current transaction between willing parties, other than in a forced or liquidation sale.

The accounting for an asset or liability may differ based on the type of instrument and/or its use in a trading or investing strategy. Generally, the measurement framework in financial statements is one of the following:

- at fair value on the Consolidated balance sheets, with changes in fair value recorded each period in the Consolidated statements of income;
- at fair value on the Consolidated balance sheets, with changes in fair value recorded each period in a separate component of Stockholders' equity and as part of Other comprehensive income;
- at cost (less other-than-temporary impairments), with changes in fair value not recorded in the financial statements but disclosed in the notes thereto; or
- at the lower of cost or fair value.

The Firm has an established and well-documented process for determining fair values. Fair value is based on quoted market prices, where available. If listed prices or quotes are not available, fair value is based on internally-developed models that primarily use market-based or independent information as inputs to the valuation model. Valuation adjustments may be necessary to ensure that financial instruments are recorded at fair value. These adjustments include amounts to reflect counterparty credit quality, liquidity and concentration concerns and are based on defined methodologies that are applied consistently over time.

- Credit valuation adjustments are necessary when the market price (or parameter) is not indicative of the credit quality of the counterparty. As few derivative contracts are listed on an exchange, the majority of derivative positions are valued using internally developed models that use as their basis observable market parameters. Market practice is to quote parameters equivalent to a AA credit rating; thus, all counterparties are assumed to have the same credit quality. An adjustment is therefore necessary to reflect the credit quality of each derivative counterparty and to arrive at fair value. Without this adjustment, derivative positions would not be appropriately valued.
- Liquidity adjustments are necessary when the Firm may not be able to observe a recent market price for a financial instrument that trades in inactive (or less active) markets. Thus, valuation adjustments for risk of loss due to a lack of liquidity are applied to those positions to arrive at fair value. The Firm tries to ascertain the amount of uncertainty in the initial valuation based upon the liquidity or illiquidity, as the case may be, of the market in which the instrument trades and makes liquidity adjustments to the financial instruments. The Firm measures the liquidity adjustment based on the following factors: (1) the amount of time since the last relevant pricing point; (2) whether there was an actual trade or relevant external quote; and (3) the volatility of the principal component of the financial instrument.
- Concentration valuation adjustments are necessary to reflect the cost of unwinding larger-than-normal market-size risk positions. The cost is determined based on the size of the adverse market move that is likely to occur during the extended period required to bring a position down to a nonconcentrated level. An estimate of the period needed to reduce, without market disruption, a position to a nonconcentrated level is generally based on the relationship of the position to the average daily trading volume of that position. Without these adjustments, larger positions would be valued at a price greater than the price at which the Firm could exit the positions.

Valuation adjustments are determined based on established policies and are controlled by a price verification group independent of the risk-taking function. Economic substantiation of models, prices, market inputs and revenue through price/input testing, as well as backtesting, is done to validate the appropriateness of the valuation methodology. Any changes to the valuation methodology are reviewed by management to ensure the changes are justified.

The methods described above may produce a fair value calculation that may not be indicative of net realizable value or reflective of future fair values. Furthermore, the use of different methodologies to determine the fair value of certain financial instruments could result in a different estimate of fair value at the reporting date.

Certain financial instruments and all nonfinancial instruments are excluded from the scope of SFAS 107. Accordingly, the fair value disclosures required by SFAS 107 provide only a partial estimate of the fair value of JPMorgan Chase. For example, the Firm has developed long-term relationships with its customers through its deposit base and credit card accounts, commonly referred to as core deposit intangibles and credit card relationships. In the opinion of management, these items, in the aggregate, add significant value to JPMorgan Chase, but their fair value is not disclosed in this Note.

The following describes the methodologies and assumptions used, by financial instrument, to determine fair value.

Financial assets

Assets for which fair value approximates carrying value
The Firm considers fair values of certain financial assets carried at cost – including cash and due from banks, deposits with banks, securities borrowed, short-term receivables and accrued interest receivable – to approximate their respective carrying values, due to their short-term nature and generally negligible credit risk.

Assets where fair value differs from cost
The Firm's debt, equity and derivative trading instruments are carried at their estimated fair value. Quoted market prices, when available, are used to determine the fair value of trading instruments. If quoted market prices are not available, then fair values are estimated by using pricing models, quoted prices of instruments with similar characteristics, or discounted cash flows.

Federal funds sold and securities purchased under resale agreements
Federal funds sold and securities purchased under resale agreements are typically short-term in nature and, as such, for a significant majority of the Firm's transactions, cost approximates carrying value. This balance sheet item also includes structured resale agreements and similar products with long-dated maturities. To estimate the fair value of these instruments, cash flows are discounted using the appropriate market rates for the applicable maturity.

Securities
Fair values of actively traded securities are determined by the secondary market, while the fair values for nonactively traded securities are based on independent broker quotations.

Derivatives
Fair value for derivatives is determined based on the following:

- position valuation, principally based on liquid market pricing as evidenced by exchange-traded prices, broker-dealer quotations or related input parameters, which assume all counterparties have the same credit rating;
- credit valuation adjustments to the resulting portfolio valuation, to reflect the credit quality of individual counterparties; and
- other fair value adjustments to take into consideration liquidity, concentration and other factors.

For those derivatives valued based on models with significant unobservable market parameters, the Firm defers the initial trading profit for these financial instruments. The deferred profit is recognized in Trading revenue on a systematic basis and when observable market data becomes available.

The fair value of derivative payables does not incorporate a valuation adjustment to reflect JPMorgan Chase's credit quality.

Interests in purchased receivables
The fair value of variable-rate interests in purchased receivables approximate their respective carrying amounts due to their variable interest terms and negligible credit risk. The estimated fair values for fixed-rate interests in purchased receivables are determined using a discounted cash flow analysis using appropriate market rates for similar instruments.

Loans
Fair value for loans is determined using methodologies suitable for each type of loan:

- Fair value for the wholesale loan portfolio is estimated primarily using the cost of credit derivatives, which is adjusted to account for the differences in recovery rates between bonds, on which the cost of credit derivatives is based, and loans.
- Fair values for consumer installment loans (including automobile financings) and consumer real estate, for which market rates for comparable loans are readily available, are based on discounted cash flows, adjusted for prepayments. The discount rates used for consumer installment loans are current rates offered by commercial banks. For consumer real estate, secondary market yields for comparable mortgage-backed securities, adjusted for risk, are used.
- Fair value for credit card receivables is based on discounted expected cash flows. The discount rates used for credit card receivables incorporate only the effects of interest rate changes, since the expected cash flows already reflect an adjustment for credit risk.
- The fair value of loans in the held-for-sale and trading portfolios is generally based on observable market prices and on prices of similar instruments, including bonds, credit derivatives and loans with similar characteristics. If market prices are not available, the fair value is based on the estimated cash flows adjusted for credit risk; that risk is discounted, using a rate appropriate for each maturity that incorporates the effects of interest rate changes.

Other assets
This caption includes private equity investments and MSRs.

For a discussion of the fair value methodology for private equity investments, see Note 9 on page 100 of this Annual Report.

For a discussion of the fair value methodology for MSRs, see Note 15 on pages 109–111 of this Annual Report.

Financial liabilities

Liabilities for which fair value approximates carrying value
SFAS 107 requires that the fair value for deposit liabilities with no stated maturity (i.e., demand, savings and certain money market deposits) be equal to their carrying value. SFAS 107 does not allow for the recognition of the inherent funding value of these instruments.

Fair value of commercial paper, other borrowed funds, accounts payable and accrued liabilities is considered to approximate their respective carrying values due to their short-term nature.

Interest-bearing deposits
Fair values of interest-bearing deposits are estimated by discounting cash flows based on the remaining contractual maturities of funds having similar interest rates and similar maturities.

Federal funds purchased and securities sold under repurchase agreements
Federal funds purchased and securities sold under repurchase agreements are typically short-term in nature; as such, for a significant majority of these transactions, cost approximates carrying value. This balance sheet item also includes structured repurchase agreements and similar products with long-dated maturities. To estimate the fair value of these instruments, the cash flows are discounted using the appropriate market rates for the applicable maturity.

Beneficial interests issued by consolidated VIEs
Beneficial interests issued by consolidated VIEs ("beneficial interests") are generally short-term in nature and, as such, for a significant majority of the Firm's transactions, cost approximates carrying value. The Consolidated balance sheets also include beneficial interests with long-dated maturities. The fair value of these instruments is based on current market rates.

Long-term debt-related instruments
Fair value for long-term debt, including the junior subordinated deferrable interest debentures held by trusts that issued guaranteed capital debt securities, is based on current market rates and is adjusted for JPMorgan Chase's credit quality.

Lending-related commitments
Although there is no liquid secondary market for wholesale commitments, the Firm estimates the fair value of its wholesale lending-related commitments primarily using the cost of credit derivatives (which is adjusted to account for the difference in recovery rates between bonds, on which the cost of credit derivatives is based, and loans) and loan equivalents (which represent the portion of an unused commitment expected, based on the Firm's average portfolio historical experience, to become outstanding in the event an obligor defaults). The Firm estimates the fair value of its consumer commitments to extend credit based on the primary market prices to originate new commitments. It is the change in current primary market prices that provides the estimate of the fair value of these commitments.

On this basis, at December 31, 2004 and 2003, the fair value of the Firm's lending-related commitments approximated the Allowance for lending-related commitments of $492 million and $324 million, respectively.

The following table presents the carrying value and estimated fair value of financial assets and liabilities valued under SFAS 107; accordingly, certain assets and liabilities that are not considered financial instruments are excluded from the table.

	2004			2003[a][b]		
December 31, (in billions)	Carrying value	Estimated fair value	Appreciation/ (depreciation)	Carrying value	Estimated fair value	Appreciation/ (depreciation)

(a) Heritage JPMorgan Chase only.
(b) Amounts have been revised to reflect the current year's presentation.

Note 30 – International operations

The following table presents income statement information of JPMorgan Chase by major geographic area. The Firm defines international activities as business transactions that involve customers residing outside of the United States, and the information presented below is based primarily on the domicile of the customer. However, many of the Firm's U.S. operations serve international businesses.

As the Firm's operations are highly integrated, estimates and subjective assumptions have been made to apportion revenue and expense between U.S. and international operations. These estimates and assumptions are consistent with the allocations used for the Firm's segment reporting as set forth in Note 31 on pages 126–127 of this Annual Report.

The Firm's long-lived assets for the periods presented are not considered by management to be significant in relation to total assets. The majority of the Firm's long-lived assets are located in the United States.

For the year ended December 31, (in millions)[a]	Revenue[b]	Expense[c]	Income before income taxes	Net income
2004

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. All other periods reflect the results of heritage JPMorgan Chase only.
(b) Revenue is composed of Net interest income and noninterest revenue.
(c) Expense is composed of Noninterest expense and Provision for credit losses.

Note 31 – Business segments

JPMorgan Chase is organized into six major reportable business segments: the Investment Bank, Retail Financial Services, Card Services, Commercial Banking, Treasury & Securities Services and Asset & Wealth Management, as well as a Corporate segment. The segments are based on the products and services provided or the type of customer served, and they reflect the manner in which financial information is currently evaluated by management. Results of these lines of business are presented on an operating basis. For a definition of operating basis, see the footnotes to the table below. For a further discussion concerning JPMorgan Chase's business segments, see Business segment results on pages 28–29 of this Annual Report.

In connection with the Merger, business segment reporting was realigned to reflect the new business structure of the combined Firm. Treasury was transferred from the Investment Bank into Corporate. The segment formerly known as Chase Financial Services had been comprised of Chase Home Finance, Chase Cardmember Services, Chase Auto Finance, Chase Regional Banking and Chase Middle Market; as a result of the Merger, this segment is now called Retail Financial Services and is comprised of Home Finance, Auto & Education Finance, Consumer & Small Business Banking and Insurance. Chase Middle Market moved into Commercial Banking, and Chase Cardmember Services is now its own segment called Card Services. Treasury & Securities Services remains unchanged. Investment Management & Private Banking has been renamed Asset & Wealth Management. JPMorgan Partners, which formerly was a stand-alone business segment, was moved into Corporate. Lastly,

(a) In addition to analyzing the Firm's results on a reported basis, management looks at results on an "operating basis," which is a non-GAAP financial measure. Operating basis starts with the reported U.S. GAAP results. In the case of the Investment Bank, the operating basis includes the reclassification of net interest income related to trading activities to Trading revenue. In the case of Card Services, refer to footnote (f). These adjustments do not change JPMorgan Chase's reported net income. Finally, operating basis excludes the Merger costs, the Litigation reserve charge and accounting policy conformity adjustments related to the Merger, as management believes these items are not part of the Firm's normal daily business operations (and, therefore, not indicative of trends) and do not provide meaningful comparisons with other periods.

(b) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. All other periods reflect the results of heritage JPMorgan Chase only.

(c) Intersegment revenue includes intercompany revenue and revenue-sharing agreements, net of intersegment expenses. Transactions between business segments are primarily conducted at fair value.

(d) TSS reimburses the IB for credit portfolio exposures the IB manages on behalf of clients the segments share. At the time of the Merger, the reimbursement methodology was revised to be based on pre-tax earnings, net of the cost of capital related to those exposures. Prior to the Merger, the credit reimbursement was based on pre-tax earnings, plus the allocated capital associated with the shared clients.

(e) Segment operating results include the reclassification of Net interest income ("NII") related to trading activities to Trading revenue within Noninterest revenue, which primarily impacts the Investment Bank. Trading-related NII reclassified to Trading revenue was $2.0 billion, $2.1 billion and $1.9 billion for 2004, 2003 and 2002, respectively. These amounts are eliminated in Corporate/reconciling items to arrive at NII and Noninterest revenue on a reported GAAP basis for JPMorgan Chase.

(f) Operating results for Card Services exclude the impact of credit card securitizations on revenue, provision for credit losses and average assets, as JPMorgan Chase treats the sold receivables as if they were still on the balance sheet in evaluating the overall performance of the credit card portfolio. The related securitization adjustments for 2004, 2003 and 2002 were: $5.3 billion, $3.3 billion and $2.8 billion, respectively, in NII; $(2.4) billion, $(1.4) billion and $(1.4) billion, respectively, in Noninterest revenue; $2.9 billion, $1.9 billion and $1.4 billion, respectively, in Provision for credit losses; and $51.1 billion, $32.4 billion and $26.5 billion, respectively, in Average assets. These adjustments are eliminated in Corporate/reconciling items to arrive at the Firm's reported GAAP results.

(g) Includes $858 million of accounting policy conformity adjustments consisting of approximately $1.4 billion related to the decertification of the seller's retained interest in credit card securitizations, partially offset by a benefit of $584 million related to conforming wholesale and consumer provision methodologies for the combined Firm.

(h) Merger costs attributed to the lines of business for 2004 were as follows: $74 million, Investment Bank; $201 million, Retail Financial Services; $79 million, Card Services; $23 million, Commercial Banking; $68 million, Treasury & Securities Services; $31 million, Asset & Wealth Management; and $889 million, Corporate.

Corporate is currently comprised of Private Equity (JPMorgan Partners and ONE Equity Partners), Treasury, as well as corporate support areas, which include Central Technology and Operations, Internal Audit, Executive Office, Finance, General Services, Human Resources, Marketing & Communications, the Office of General Counsel, Real Estate and Business Services, Risk Management and Strategy and Development.

Segment results, which are presented on an operating basis, reflect revenues on a tax-equivalent basis. The tax-equivalent gross-up for each business segment is based upon the level, type and tax jurisdiction of the earnings and assets within each business segment. Operating revenue for the Investment Bank includes tax-equivalent adjustments for income tax credits primarily related to affordable housing investments as well as tax-exempt income from municipal bond investments. Information prior to the Merger has not been restated to conform with this new presentation. The amount of the tax-equivalent gross-up for each business segment is eliminated within the Corporate segment and was $(303) million, $(122) million and $(116) million for the years ended December 31, 2004, 2003 and 2002, respectively.

The following table provides a summary of the Firm's segment results for 2004, 2003 and 2002 on an operating basis. The impact of credit card securitizations, merger costs, litigation charges and accounting policy conformity adjustments have been included in Corporate/reconciling items so that the total Firm results are on a reported basis. Segment results for periods prior to July 1, 2004, reflect heritage JPMorgan Chase–only results and have been restated to reflect the current business segment organization and reporting classifications.

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. All other periods reflect the results of heritage JPMorgan Chase only. For a further discussion of the Merger, see Note 2 on pages 89–90 of this Annual Report.
(b) Dividends in 2002 include a stock dividend of $1.2 billion from the mortgage business, which was contributed to JPMorgan Chase Bank.
(c) Subsidiaries include trusts that issued guaranteed capital debt securities ("issuer trusts"). As a result of FIN 46, the Parent deconsolidated these trusts in 2003. The Parent received dividends of $15 million and $11 million from the issuer trusts in 2004 and 2003, respectively. For a further discussion on these issuer trusts, see Note 17 on pages 112–113 of this Annual Report.
(d) Heritage JPMorgan Chase only.
(e) At December 31, 2004, all debt that contractually matures in 2005 through 2009 totaled $10.8 billion, $10.5 billion, $9.4 billion, $6.8 billion and $9.2 billion, respectively.

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.
(b) Represents Net income / Total average assets.
(c) Excluded from this ratio were loans held for sale of $25.7 billion, $20.8 billion, $25.0 billion, $16.6 billion and $8.8 billion at December 31, 2004, 2003, 2002, 2001 and 2000, respectively.
(d) Excluded from the net charge-off rates were average loans held for sale of $21.1 billion, $29.1 billion, $17.8 billion, $12.7 billion and $7.1 billion as of December 31, 2004, 2003, 2002, 2001 and 2000, respectively.
(e) JPMorgan Chase's common stock is listed and traded on the New York Stock Exchange, the London Stock Exchange Limited and the Tokyo Stock Exchange. The high, low and closing prices of JPMorgan Chase's common stock are from The New York Stock Exchange Composite Transaction Tape.
(f) Basic and diluted earnings per share were each reduced by $0.01 in 2001 because of the impact of the adoption of SFAS 133 relating to the accounting for derivative instruments and hedging activities.
(g) Represents full-time equivalent employees, as headcount data is unavailable.

Glossary of terms

JPMorgan Chase & Co.

AICPA: American Institute of Certified Public Accountants.

APB: Accounting Principles Board Opinion.

APB 25: "Accounting for Stock Issued to Employees."

Assets under management: Represent assets actively managed by Asset & Wealth Management on behalf of institutional, private banking, private client services and retail clients.

Assets under supervision: Represent assets under management as well as custody, brokerage, administration and deposit accounts.

Average managed assets: Refers to total assets on the Firm's balance sheet plus credit card receivables that have been securitized.

bp: Denotes basis points; 100 bp equals 1%.

Contractual credit card charge-off: In accordance with the Federal Financial Institutions Examination Council policy, credit card loans are charged-off by the end of the month in which the account becomes 180 days past due or within 60 days from receiving notification of the filing of bankruptcy, whichever is earlier.

Core deposits: U.S. deposits insured by the Federal Deposit Insurance Corporation, up to the legal limit of $100,000 per depositor.

EITF: Emerging Issues Task Force.

EITF Issue 03-01: "The Meaning of Other-than-temporary Impairment and Its Application to Certain Investments."

FASB: Financial Accounting Standards Board.

FIN 39: FASB Interpretation No. 39, "Offsetting of Amounts Related to Certain Contracts."

FIN 41: FASB Interpretation No. 41, "Offsetting of Amounts Related to Certain Repurchase and Reverse Repurchase Agreements."

FIN 45: FASB Interpretation No. 45, "Guarantor's Accounting and Disclosure Requirement for Guarantees, including Indirect Guarantees of Indebtedness of Others."

FIN 46R: FASB Interpretation No. 46 (revised December 2003), "Consolidation of Variable Interest Entities, an interpretation of Accounting Research Bulletin No. 51."

FASB Staff Position ("FSP") EITF Issue 03-1-1: "Effective Date of Paragraphs 10–20 of EITF Issue No. 03-01, 'The Meaning of Other-than-temporary Impairment and Its Application to Certain Investments.' "

FSP SFAS 106-2: "Accounting and Disclosure Requirements Related to the Medicare Prescription Drug, Improvement and Modernization Act of 2003."

FSP SFAS 109-2: "Accounting and Disclosure Guidance for the Foreign Earnings Repatriation Provision within the American Jobs Creation Act of 2004."

Investment-grade: An indication of credit quality based on JPMorgan Chase's internal risk assessment system. "Investment-grade" generally represents a risk profile similar to a rating of a BBB-/Baa3 or better, as defined by independent rating agencies.

Mark-to-market exposure: A measure, at a point in time, of the value of a derivative or foreign exchange contract in the open market. When the mark-to-market value is positive, it indicates the counterparty owes JPMorgan Chase and, therefore, creates a repayment risk for the Firm. When the mark-to-market value is negative, JPMorgan Chase owes the counterparty. In this situation, the Firm does not have repayment risk.

Master netting agreement: An agreement between two counterparties that have multiple derivative contracts with each other that provides for the net settlement of all contracts through a single payment, in a single currency, in the event of default on or termination of any one contract. See FIN 39.

NA: Data is not applicable for the period presented.

Net yield on interest-earning assets: The average rate for interest-earning assets less the average rate paid for all sources of funds.

NM: Not meaningful.

Overhead ratio: Noninterest expense as a percentage of total net revenue.

SFAS: Statement of Financial Accounting Standards.

SFAS 87: "Employers' Accounting for Pensions."

SFAS 88: "Employers' Accounting for Settlements and Curtailments of Defined Benefit Pension Plans and for Termination Benefits."

SFAS 106: "Employers' Accounting for Postretirement Benefits Other Than Pensions."

SFAS 107: "Disclosures about Fair Value of Financial Instruments."

SFAS 109: "Accounting for Income Taxes."

SFAS 114: "Accounting by Creditors for Impairment of a Loan."

SFAS 115: "Accounting for Certain Investments in Debt and Equity Securities."

SFAS 123: "Accounting for Stock-Based Compensation."

SFAS 123R: "Share-Based Payment."

SFAS 128: "Earnings per Share."

SFAS 133: "Accounting for Derivative Instruments and Hedging Activities."

SFAS 138: "Accounting for Certain Derivative Instruments and Certain Hedging Activities – an amendment of FASB Statement No. 133."

SFAS 140: "Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities – a replacement of FASB Statement No. 125."

SFAS 142: "Goodwill and Other Intangible Assets."

SFAS 149: "Amendment of Statement No. 133 on Derivative Instruments and Hedging Activities."

Staff Accounting Bulletin ("SAB") 105: "Application of Accounting Principles to Loan Commitments."

Statement of Position ("SOP") 98-1: "Accounting for the Costs of Computer Software Developed or Obtained for Internal Use."

Statement of Position ("SOP") 03-3: "Accounting for Certain Loans or Debt Securities Acquired in a Transfer."

Stress testing: A scenario that measures market risk under unlikely but plausible events in abnormal markets.

U.S. GAAP: Accounting principles generally accepted in the United States of America.

Value-at-Risk ("VAR"): A measure of the dollar amount of potential loss from adverse market moves in an ordinary market environment.

This page has been amended since the Annual Report was printed and presents the International Committee of the Firm as of March 30, 2005.

Governance

Our merger with Bank One Corporation gave us the opportunity to examine the corporate governance practices of both companies. By corporate governance, we mean the system of checks and balances among the Board of Directors, management and stockholders designed to produce an efficiently functioning corporation that is directed to creating long-term stockholder value, maintaining the highest standards of ethical conduct, reporting financial results with accuracy and transparency, and fully complying with all applicable laws and regulations as we conduct the Firm's business. We believe we have brought the best of both predecessors to the combined Firm's governance practices.

The Board

The Board of Directors reflects strong continuity with both predecessors. It has a super-majority of non-management directors and only two management members, Mr. Harrison and Mr. Dimon. The Board has determined that all of the non-management directors are independent under the Board's independence standards.

After the merger became effective, the Board took a fresh look at its structure and practices in its efforts to integrate the practices and experience of each predecessor company.

- The Board determined to maintain the existing Board committee structure with the principal committees consisting of Audit, Compensation & Management Development, Corporate Governance & Nominating, Public Responsibility and Risk Policy. Each committee reviewed its charter, taking into consideration the charters of corresponding predecessor committees. The revised committee charters can be found on our website at www.jpmorganchase.com (Governance).
- New committee assignments provided for both continuity in oversight as well as the application of new perspectives to the functions of the committees.
- The Board reviewed and revised its Corporate Governance Principles, retaining best practices from the predecessor companies. Among the changes adopted, the Corporate Governance Principles specify limits on other board memberships and include a pledge by directors to retain, as long as they serve, all shares of the Firm's common stock purchased on the open market or received pursuant to their service as a Board member. The Corporate Governance Principles can be found at www.jpmorganchase.com (Governance).

Internal Governance

Connecting the oversight of the Board and the day-to-day functioning of our employees are mechanisms intended to ensure that we conduct our daily business in accordance with the Firm's objectives and policies and in compliance with the laws and regulations that govern our diverse businesses. JPMorgan Chase operates multiple lines of business through a number of subsidiaries throughout the world. The Firm as a whole manages by line of business, supported by global policies and standards that typically apply to all relevant units regardless of geography or legal structure.

At the top of our control structure is our risk management process. At JPMorgan Chase, we are all risk managers. Risk governance begins with creating the right risk culture, and that is done by ensuring that every employee understands that risk management and control is the responsibility of each and every individual of the Firm. The Firm's risk governance structure is built upon the premise that each line of business is responsible for managing the risks inherent in its business activity. As part of the risk management structure, each line of business has a Risk Committee responsible for decisions relating to risk strategy, policies and control. Where appropriate, the Risk Committees escalate risk issues to the Firm's Operating Committee or to the Risk Working Group, a subgroup of the Operating Committee. The Board of Directors exercises oversight of risk management as a whole and through the Board's Audit Committee and the Risk Policy Committee.

Code of Conduct

The Firm's Code of Conduct is an important part of our policies and procedures to maintain high standards of conduct and to reduce or avoid reputational risk. Our integrity and reputation depend on our ability to do the right thing, even when it is not the easy thing. Our commitment to responsible, honest and ethical behavior was at the heart of the codes of conduct of both heritage firms and it remains so at JPMorgan Chase today. Following a thorough review, the Firm adopted a new Code of Conduct to replace similar policies that existed in our predecessor firms. The Code of Conduct sets forth the guiding principles and rules of behavior by which we conduct our daily business with our customers, vendors, stockholders and with our fellow employees. The Code of Conduct also requires preclearance of outside business activities and, for certain units, preclearance of personal securities transactions. The Code of Conduct applies to all employees and directors, who must annually affirm that they are in compliance with it. The Code of Conduct is available on our website at www.jpmorganchase.com (Governance).

(a) Results are presented in accordance with accounting principles generally accepted in the United States of America. 2004 results include six months of the combined Firm's results and six month of heritage JPMorgan Chase results.

* The financial information provided on pages 2-20 is presented on a pro forma combined-operating basis. The unaudited pro forma combined historical results represent how the financial information of JPMorgan Chase & Co. and Bank One Corporation may have appeared on a combined basis had the two companies been merged as of the earliest date indicated. Additional information, including reconciliation of the pro forma numbers to GAAP, can be found on Form 8-K furnished to the Securities and Exchange Commission on January 18, 2006. For a description of operating basis, including management's reasons for its use of such measures, see page 31 of this Annual Report.

Dear fellow shareholder,

As of year-end 2005, I stepped down as CEO of JPMorgan Chase – turning the leadership of the firm over to my partner, Jamie Dimon, who I believe will prove to be one of the outstanding CEOs the financial services industry has had in a long time.

As Chairman, I look forward to contributing to our growth by leveraging my global relationships and contacts and by helping to further develop strategy.

As I look back on my 38 years in the industry, all with the same organization, I realize how fortunate I have been and what an exciting journey I have been on. When I left a small town in North Carolina to join Chemical Bank in 1967, my goal was to spend two years in New York and then return to North Carolina. Little did I know I would be part of an industry and a career that were as challenging and rewarding as these have been.

I step down as CEO believing that:

- JPMorgan Chase is very well positioned strategically to be one of the great financial institutions in the world.
- Size does matter in our industry – provided that size translates into operating and scale efficiencies, increased profit margins, stronger earnings and leadership positions. And the benefits of size can only be realized within a culture that values teamwork, partnership and execution.
- One should be a leader – not a follower – as our industry irreversibly consolidates in a globalizing world.
- A diversified model will prove to have competitive advantage in terms of creating shareholder value over time.
- Managements and boards have to manage with a longer-term outlook and resist the pressures of the quarter-to-quarter mindset of the market.
- Building the best performance culture in the industry will ensure that all of the inherent potential of size is harvested and maximized.
- Relationships matter – with clients and with each other internally – and without them, a firm will never reach its potential and be its best.
- Companies with the highest ethical values, which start at the top and cascade all the way down, will be the great companies – and we must keep raising the bar on how we achieve this in a large, complex corporation.
- Surrounding yourself with people who are smarter and better than you are is critical because your talent pool will be a key determinant of success.
- I have been one of the most fortunate people in the world to have had the experience and the success I have had, and there is not one day that goes by that I don't think about this.

So from a small town to a big city – from a small bank to a big bank, I learned much along the way – that you, in fact, never stop learning. You should always commit to be the best you can be, you should think big and dream big, and you should think about how you can win and what your strategic platform should be to create sustainable shareholder value. And you should do this by always, always having the right set of values and living by them.

You learn that the peaks and valleys, the successes and failures of your job and life need to be viewed with the proper perspective and balance, and only with that balance and perspective can you find true north.

You learn how important your family and friends are in enabling you to maintain the passion and commitment to be the CEO of a firm like JPMorgan Chase and how privileged you've been to have been the leader.

Thus, while my JPMorgan Chase career is nearing an end, a new chapter in our company's long history is beginning. It is time to pass the baton to a new group of leaders, led by Jamie Dimon, who will take this firm to the next level of performance, harvesting its vast potential and maximizing shareholder value through great execution.

Letter from James Dimon, *Chief Executive Officer*

Dear fellow shareholder,

William B. Harrison, Jr., *Chairman* James Dimon, *Chief Executive Officer*

This is my first letter to you as the CEO of JPMorgan Chase. From a personal standpoint, I want to share with you some feelings and thoughts. I feel a tremendous mix of emotions: excitement about our potential, and a great sense of obligation and responsibility both to you, our shareholder, and to those who have built our company over the years. They have given us an exceptional opportunity – and we owe them not only our gratitude, but also our commitment to deliver on our company's potential and make them proud of what they have helped to build.

We have accomplished a great deal over the last year, and we are excited about our progress in 2005 and our plans for 2006. The foundation for everything we are doing rests on a set of business principles that we believe, when executed properly, create great companies. These principles are described on our Web site: www.jpmorganchase.com. In essence, we strive to:

- Share with you the truth and offer honest assessments of our businesses and our prospects.
- Act with integrity and honor.
- Do the right thing, not necessarily the easy or expedient thing.
- Work hard and with fierce resolve to make this a company of which our shareholders, employees, customers and communities can be proud.
- Focus relentlessly on the execution of our business principles.

There are some specific issues that are integral to the success of our company. I would like to address them by answering the following questions:

I. Are we in the right businesses?

II. Can we achieve outstanding performance?

III. Are we properly managing our risks?

IV. Do we have the right people and the right compensation strategy?

V. Are we a good corporate citizen?

Let me close with a profound thanks to our shareholders who have had the faith to believe in the potential of this firm. Thanks to our outstanding Board of Directors for their support and wisdom, and I want to express my special gratitude to retiring directors Larry Bossidy and Hans Becherer whose advice and counsel over many years have been invaluable. Thanks to all of our clients and customers around the world for the opportunity to serve them.

And thanks – 168,000 thanks – to our talented and dedicated employees around the world for what they stand for and for what they contribute every day.

I could not be more excited and confident about our future.

Sincerely,

William B. Harrison, Jr.
Chairman

March 8, 2006

I. Are we in the right businesses?

Let me unequivocally answer this question with a resounding "yes," for three reasons: each business is already well positioned – in terms of size and scope – within its specific industry; there is exceptional value in the linkages among our businesses; and the company's size, scale and brands are a competitive strength.

Each business is already well positioned within its specific industry

Our six major lines of business – Investment Banking, Commercial Banking, Retail Financial Services, Card Services, Asset & Wealth Management, and Treasury & Securities Services – all compete in consolidating industries. Businesses consolidate when the vast economies of scale that can be achieved (in systems, operations, distribution, brand and R&D, to name a few) will benefit the customer.

We cannot underestimate the power of these economic forces. Nor can we ignore the inevitable impact they have on our businesses. But change is hard – and many who attempt it fail. The winners will be those who can provide their customers with more access to better financial products and services at a lower price. In this environment, size, scale and staying power matter, and all of our core businesses *already have* what it takes to succeed; but as I discuss later, we must continue to improve our execution skills to distinguish our company in the marketplace. Our businesses do not and will not want for capital or investment. They are well equipped to survive in good and bad times, and our customers will continually benefit from their stability and efficiency, as well as the investments we are able to make in technology and innovation.

Our businesses belong together, and there is exceptional value in the linkages among them

As separate entities, our businesses are currently well positioned; together they are even stronger. Putting our businesses together makes sense only if doing so creates value for customers and, ultimately, shareholders. It does not work because we want it to – it only works because it gives the customer more for less, sooner rather than later. We have no interest in selling our customers products that they do not want or need.

In this context, the term "cross-sell" can be misleading. "Cross-selling" often carries negative connotations – as if it is a forced and unnatural act. In fact, it should be described more appropriately as "natural product-line extensions," which businesses have been doing successfully for hundreds of years. Wal-Mart has continually expanded the types of products it sells. Twenty years ago, who would have thought that it would sell lettuce and tomatoes? These product-line extensions are true also for Home Depot, commercial banks, investment banks, stockbrokers and even manufacturers. GE Aircraft Engines now finances and services what it manufactures. The essence of what makes this successful is that the customer is the winner.

By extending our product lines, we are able to leverage the substantial investments we have made to build our distribution system (e.g., branches, technology and sales people), strengthen our brand and earn the trust of our customers. For example, today our branches, which are our retail stores, not only accept deposits and provide access to cash, but also sell investments, mortgages, home equity loans, debit and credit cards, and online bill paying services, as well as small business loans, international funds transfers, payroll services, annuities, etc.

Our clear "natural product" set is financial services, which is what individuals and businesses want and expect from us. Where the products are "manufactured" is of little interest to them. What is important to them and to us is our ability to provide a better product, or package of products, at a lower cost. Our challenge is to view this from their perspective and ensure that our collective resources are focused accordingly.

In addition to providing substantial potential for growth, our mix of businesses presents us with fertile ground for innovation. Here are a few examples of how our businesses are working together:

Retail and Card Services. The competitive advantage is formidable when our retail bank – which serves almost 10 million households – joins forces with our credit card company, with its 110 million cardholders. This collaboration should result in excellent new products that address specific consumer needs. For example, we may be able to

make life much simpler for our customers by linking credit and debit cards and by offering them other products. The results of recent efforts are promising: credit card sales in our retail branches are up nearly 100% from two years ago.

Commercial Banking and Retail. A strong connection already exists between our Commercial Bank and our retail branches. In fact, there are few successful commercial banks in America that do not have a retail bank – and for good reason. A large share of retail business comes from small businesses and mid-sized companies. Many use branches as their financial back offices for cash, payroll processing and wire transfer services. This interdependency is cost effective for us and beneficial to our customers. In addition, business accounts often lead to new personal accounts and vice versa.

Investment Banking and Commercial Banking. A natural connection exists between an investment bank, which essentially serves large public companies, and a commercial bank, which essentially serves mid-sized to small public and non-public companies. Our Commercial Bank already generates hundreds of millions of dollars in revenues from offering its clients traditional investment banking services (e.g., advisory, debt and equity underwriting). Over the next few years, we believe that we can double Commercial Banking's revenues from these activities. In cities like Indianapolis, Austin, Denver and Tucson – where our Investment Bank does not have a physical presence – local businesses have strong relationships with our commercial bankers. These bankers know when their clients are contemplating transactions and need access to investment banking expertise. The connection is valuable for clients and beneficial to us. It enables our Investment Bank to generate revenues from its product expertise that it could not have previously produced without the client relationship. And it enables the Commercial Bank to better serve its clients by providing them with the additional products that they need.

Treasury & Securities Services; Asset & Wealth Management. Another important connection exists between Treasury & Securities Services and our other businesses. Many of our major customers (institutional, middle market, small business and retail) use TSS for activities such as cash, checks, ACH payments, wire transfer and custody. TSS generates approximately $9 billion of annual revenue by serving these customers. Asset & Wealth Management also benefits from working with other businesses, including managing assets for corporate clients, helping them meet their complex pension and investment needs, and offering products from across the company to individual clients.

Plenty of other examples exist, but the critical point remains: while each business should do well on its own, it should also be able to capitalize on our company's extensive and unique set of products and services to more fully and profitably meet customer needs. There is certainly no reason why they should do worse because they are part of this institution. The key, of course, is that the customers must be the winners.

The size and scale of the company are a competitive strength

The size, scale and scope of JPMorgan Chase also offer huge advantages: economies of scale in operations and systems; diversification of capital, risk and earnings; a great global brand; and the capability to make large investments at a lower cost of capital. In particular, the benefits of size and scale in operations and systems are vast, and they are real. Our diversified earning streams lower our risk, increase our credit ratings and reduce the cost of our capital. And since one of our major costs is the cost of money, the ability to raise funds cheaper, better, faster and more effectively around the world than other companies is a major advantage.

But size alone is not enough to win. In fact, if not properly managed, it can bring many negatives. Huge companies operating in complex, consolidating and fiercely competitive industries like ours can only achieve and sustain their success by competing where the "rubber hits the road" – at the level of the store, the product and the banker – not at corporate headquarters. We must equip those employees on the front lines to be responsive and responsible. The way we manage our size will reflect how much we recognize and respect this imperative. Bureaucracy and waste are lethal. To remain healthy and vibrant, we must constantly and consistently minimize bureaucracy, eliminate waste and insist upon excellent execution.

II. Can we achieve outstanding performance?

"Yes," but we are not there yet. Good positioning does not assure great performance. Creating great performance is not mystical; it takes consistent effort, focus, hard work and discipline.

The starting point for us is to admit where we are. Any way one analyzes our businesses, for the most part our costs are too high, our returns on capital are too low and our growth is not what it could be.

We are underperforming financially in many areas. We need to understand the reasons and focus our energy on making improvements, not excuses. We cannot afford to waste time justifying mediocrity. Each line of business now assesses its performance in a rigorous and very detailed way. Each compares results to targets in a variety of areas, including sales force productivity, customer service and systems development.

It is not enough for the overall business to make its profit targets. It would be unacceptable to achieve good financial returns by reducing expenses that are critical investments for the future or by compromising the *quality* of business that we do. The best way to reach and sustain a higher level of performance is to get every part of the business to step up its game. For example, we have some businesses that, in general, achieve adequate returns. These results are often produced when a few exceptional business segments do the heavy lifting for the rest. We cannot use our strengths in one part of our business to subsidize our weaknesses in another part.

We spend a lot of time on capital and return on capital. How we allocate capital should reflect our understanding of how changes in the economy – and the likely length and intensity of the cycles they cause – will affect specific parts of our business. Where will the risks and growth opportunities be? For example, there *will* be another recession; we just do not know when. What we do know, however, is that when it happens, our annual credit costs will increase substantially. Therefore, when we talk about return on capital, we must look at it through the cycle, not just during the best parts of the cycle.

Many companies that compete in our businesses have been well managed and able to produce excellent results for decades. We have every reason to be among them. Time will tell if we are. We have made progress, but not enough. To get outstanding performance, we must instill the following disciplines deep into the fiber of our company.

Become lean and efficient

This is an imperative. One cannot achieve great performance in fiercely competitive industries without being lean and efficient. It is irresponsible to waste our critical resources on expenditures that have nothing to do with better serving our clients and building a great company. We need to use our resources to grow, innovate, market, hire productive people and build systems. It is not just about cutting costs. A company cannot become great just by cutting costs. It is about building better systems to better serve our customers. It is about paying our people not only fairly, but effectively, to help create the right behavior. It is about how we run meetings. It is about designing the right products that are also profitable. (Many companies design products that lose money, and they do not even know it.) It is about constantly improving productivity.

We must continually ask ourselves: Can the same investment in the same area be better spent? Does every business strive to get the most out of its resources? The Investment Bank, for example, has many businesses, depending upon how you measure it. Does each business spend its money efficiently and wisely? Are we spending the right amount in the right way and expecting the right results? Last year, we spent over $1 billion in marketing to get 11 million new credit card accounts. Can we spend more and get even better results? We probably can. This year, we want to both spend more and get more from every dollar we spend. When we determine that we can and are spending money wisely, we will want to spend *more, not less*.

Since the merger, we have realized $1.9 billion in merger savings. However, much more is needed to achieve what we would consider to be *real* efficiency. This past year, we launched and completed major projects aimed at increasing our efficiency and improving our customer service over the long run. They include:

- Completing the largest credit card conversion in history. This effort combined over 30 million heritage Chase and Bank One accounts onto a single platform and provided us with a single best-in-class system to better serve our customers (and at a lower cost).

- Integrating and upgrading all of our businesses in Texas – in terms of products, brand, systems and operations – where we have 20,000 employees serving 2 million customers.

- Converting all U.S. dollar clearing to one platform globally, an operation that processes an average of $3.2 trillion daily for 200,000 clients worldwide.

- Executing the largest merger of mutual fund families in U.S. history, affecting 1.1 million fund shareholders.

- Completing the first and second construction phases of our new Global Services Center in Bangalore, India, and hiring 8,700 employees to meet increased demand and deliver more services from India.

- Migrating much of the company's production, disaster recovery, and development and test systems into a new data center. The move increases our data storage capability, enhances our resiliency, reduces infrastructure points of failure and lowers overall cost to the firm.

Over this next year, we will continue to massively upgrade and streamline our systems and operations. Highlights include:

- Converting and upgrading all of our operations in the New York tri-state market, beginning in the second quarter. This will be one of the most visible bank conversions in our industry and will have an impact on all of our businesses – specifically, 4.8 million deposit accounts representing over $190 billion, and involves more than 400 heritage Chase branches and over 3,000 teller workstations.

- Providing our retail and wholesale customers with uniform Internet platforms, upgrading loan origination systems and implementing a new mortgage servicing system.

- Substantially improving infrastructure, including data centers, networks and financial management systems.

We cannot build a great company unless we are unrelenting in our efforts to be a lean and efficient company. This must become a permanent part of our mindset.

Remove barriers to success

As I mentioned before, excessive bureaucracy is lethal. It slows us down, distracts us from our clients and demoralizes good employees. We must act with more openness, passion and urgency. The process of busting bureaucracy never ends, but what is different now is that our employees are engaged in challenging the system and solving the problems.

We continue to attack bureaucracy and improve all aspects of our management practices, including:

- *Accountability and decision making:* Central to the changes we have undertaken is the realignment of corporate staff. Now embedded in the businesses are many of the staff functions – like finance and systems – that used to be concentrated at the corporate level. The realignment gives our businesses greater ability to manage their support functions. For staff, better access to the businesses they support provides them with more knowledge and control. The restructuring will lead to better accountability, transparency and reporting, which in turn will *improve* execution and overall corporate risk management.

- *Management information and discipline:* It is hard to act on the truth if you do not know what it is. We want managers to have the tools and information to run their businesses as if they owned them. With this goal in mind, we now produce thousands of increasingly accurate reports that provide managers with specific information on their performance. In addition, we give them tools to proactively eliminate waste and manage their resources. Better reporting has dramatically improved the effectiveness of our business review meetings. Without this information, these meetings are often a waste of time. They now are convened at many levels of the company and focus on where we are and need to be, relative to our own benchmarks and the best performers

in each business. As a result of these discussions, we are able to establish real targets for our businesses in terms of growth, margins, returns, market share, etc.

- *People practices:* We have rationalized human resource processes by eliminating several unnecessary procedures and personnel to place accountability for managing people squarely where it belongs – with line managers. For example, performance reviews have been revamped and simplified, training has been streamlined and executive coaches have been eliminated. (We think coaching is the manager's job.) Performance reviews should facilitate, not prevent, meaningful, honest and comprehensive results-oriented exchanges between managers and their direct reports. Yet over time, the process grew to take on a life of its own and became a hindrance. Now the barriers are being removed. In addition, we have created a forum for discussion of our talent and made people management generally, and diversity in particular, part of the agenda of senior manager meetings across the company. We remain devoted to our people and their development, but we will use management accountability, not bureaucratic processes, to prove it. We want our people to communicate openly, easily and constructively.

Focus resources where we can succeed and win

We have sold or liquidated several businesses that either did not fit our strategy or did not contribute significantly to our long-term success. For these reasons, we sold BrownCo, and businesses in manufactured housing and recreational vehicles. We also announced the sale of our insurance business and have dramatically reduced the size of our auto leasing business.

By discontinuing or reducing our commitment to ancillary businesses, we availed ourselves of billions of dollars in capital. We redeployed this capital in businesses where we can win. For example, we invested in JPMorgan Cazenove, an investment banking joint venture in the United Kingdom (which already shows promising results); expanded our global trade management operations with the purchase of Vastera; and acquired the Sears Canada private-label credit card portfolio. In addition, we have recently completed the purchase of a consumer educational loan business, Collegiate Funding Services, that both processes and underwrites loans. These are all transactions that position us for real growth.

We have also freed up and redirected our capital to support innovation. We want to make innovation part of our DNA. This does not mean spending hundreds of millions of dollars on failed ideas. It does mean, however, that we will take calculated risks, knowing that some will fail. Progressive thinking should be reflected in every conversation, every analysis, and every product and service we provide. We have many new products coming out this year that we think will fill this bill.

The ultimate goal: create organic growth

Profitable, sustainable, properly underwritten growth is not a vision. It is the result of excellent management discipline, an unrelenting focus on execution, consistent management of risk, a competitive product set and outstanding customer service.

The level of effort and expense associated with merger activities and systems consolidation has been predictably huge. So the fact that we were able to absorb the impact – and still cut costs *and materially increase* investment spending – is a source of pride to all of us. What is even more gratifying, however, is to see evidence of real growth in most businesses, something that is often a casualty in merger consolidations.

In 2005, real growth – albeit not always great growth – took place across the board. Retail increased its deposits, checking accounts and credit cards. Commercial Banking achieved growth in leasing, middle market lending and liability balances. Treasury & Securities Services produced more custody business and had growth in liability balances. Asset & Wealth Management increased the level of assets under management. Card Services had growth in new customers, partners, card receivables and spending. Revenues in the Investment Bank increased in M&A, asset-backed securities, high-yield bonds and energy trading.

Equally important, we materially increased investment in areas that will drive *future* growth. Specifics include: spending hundreds of millions of dollars to open 150 new branches (this will drive growth in 2007 and beyond); adding more retail loan officers; hiring additional private bankers; funding the build-out of our energy and mortgage trading capabilities in the Investment Bank; and investing in state-of-the-art "blink" credit card technology (which enables customers to use credit cards for small payments without having to sign anything). Now being piloted in six cities, blink is an investment that has put us at the forefront of changes in payment systems and card innovation.

In addition to making across-the-board investments to build our businesses, we are making investments in our infrastructure that anticipate growth and prepare us to successfully manage it for years to come. In 2005, we invested over $1 billion in platform conversions, including those for Texas and Card Services.

By consolidating and improving platforms, we are eliminating the inefficiencies and competitive disadvantages associated with multiple operating platforms. In the process, we will create best-in-class platforms in many areas, such as global cash clearing, credit card, retail branches and some of our trading business. We believe that long-term success is not possible without great systems and operations. They will drive efficiency, innovation and speed to market. Much of this will be accomplished by the end of 2006.

III. Are we properly managing our risks?

Almost all of our businesses are risk-taking businesses – and we spend a great deal of time thinking about all aspects and types of risk inherent in them, including:

- Consumer and wholesale credit risk
- Market and trading risk
- Interest rate and liquidity risk
- Reputation and legal risk
- Operational and catastrophic risk

The notable fact about the first three risk areas is that they are cyclical, and all of them have elements of unpredictability. This requires us to be prepared for inevitable cycles. A company that properly manages itself in bad times is often the winner. For us, sustaining our strength is a strategic imperative. If we are strong during tough times – when others are weak – then the opportunities can be limitless. Protecting the company is paramount. I will highlight the types of risks we focus on to give you a sense of the threat they pose and how we plan for it.

Consumer and wholesale credit risk

Over the years, our company has substantially reduced its wholesale credit exposure by using a disciplined process for extending credit and maximizing return on shareholder capital. In the consumer market, we have controlled our risk by limiting the amount of low-prime and sub-prime credit we issue in our card and other consumer businesses. In addition, we have decided, at the expense of losing some volume, not to offer higher-risk, less-tested loan products, such as negatively amortizing Option ARMs.

While we are taking the right steps, we estimate that in a recession, consumer and wholesale credit costs could possibly get worse by more than $5 billion. This daunting reality requires us to be prepared and well protected. Protection #1 is having larger and more durable profits to absorb the losses. We are accomplishing this by increasing our margins virtually across the board. Protection #2 is maintaining a fortress balance sheet. We try to understand and manage every asset and every liability and make sure that someone is accountable for each one. It also means maintaining, as much as possible, strong loan loss reserves.

Finally, having a well-capitalized firm is critical. With Tier 1 capital at 8.5% and total capital at 12%, we believe we are there. The important point is that we need to manage the business, the balance sheet and the investments to earn adequate returns through the cycles and to be prepared for surprises. We do not want to realize high returns at the top, only to give them all back at the worst part of the cycle.

Market and trading risk, and interest rate and liquidity risk

We need to manage our risk–return payoff better in 2006. In 2005, our trading volatilities were unacceptably high. The $6 billion in trading revenues (not a bad result on its own) was the result of two great quarters and two quarters where we underperformed. We think that is too much volatility, and reducing it is one of our priorities. I believe we can accomplish this by continuing to diversify our trading business, by being more disciplined and precise in the execution of our risk management practices, and by hiring and retaining the best talent. We intend to deliver better, more consistent results over time, while maintaining our aggregate risk-taking appetite.

The good news is that we *have aggressively invested* to generate more diversified and consistent returns. For example, we have added energy trading, and increased our activities in mortgage- and asset-backed securities, and principal investing. We have leadership positions in credit markets and in our derivatives franchises, and we will continue to invest in order to sustain them. And while in the short run, some of this has actually increased volatility, we are convinced that our efforts – consistently applied – will succeed. However, we caution our shareholders not to expect immediate results.

Interest rate exposure is another area in which financial services companies can assume excess risk – often at great peril. As with underwriting credit, good analysis of interest rate exposure is rooted in facts and evaluations that are based upon a variety of realistic assumptions and scenarios. We devote substantial resources to understanding how interest rate changes will affect our performance. This analysis should be – and will be – an ongoing process. We believe that our company has carefully managed its interest rate risk so that even dramatic moves in rates of several percentage points cannot alone damage the company.

A healthy liquidity profile is essential to the ongoing viability of any company, financial or otherwise. We use a variety of tools to maintain a strong liquidity position at the parent and subsidiary companies, including stress scenarios, collateral management and a conservative debt structure for the company overall. We engage in a continual dialogue with major rating agencies, and we are focused on maintaining and improving our strong credit ratings.

Reputation and legal risk

The litigation costs in business are well known. We are intensely focused on ways to safeguard the firm's reputation and exposure. They include:

- Senior management endorsement of a code of conduct that all employees must sign and adhere to, as well as a commitment to provide appropriate training.
- A strong and independent compliance program that encourages employees to assist in surfacing compliance and ethical issues, and identifying money laundering and terrorist financing activities.
- A more robust due diligence process focused on securities underwriting transactions, where we have established centralized oversight of our processes and standards.
- A disciplined governance process to address conflicts and review transactions that may present conflicts that could harm the firm now or in the future.
- A productive and open dialogue with our regulators and an ongoing emphasis on staying alert to changes in regulatory standards.

We believe that these actions will mitigate our exposure, but we recognize, unfortunately, that they will not eliminate it. We have also implemented a disciplined process to continually review our liabilities and establish appropriate litigation reserves. While we make every effort to properly manage the company to reduce litigation and legal costs, we believe that our shareholders should assume that high legal costs will continue for the foreseeable future. They should be viewed, unfortunately, as simply a higher, permanent cost of doing business than in the past.

Operational and catastrophic risk

This year, we also made progress in strengthening our operational risk management programs. We have a consistent approach across all businesses for defining and aggregating

our exposure to potential operational loss. This approach helps us determine whether we will be adequately capitalized in the event of such a loss. In addition to carefully managing operational risk, we need to be prepared for unforeseen disasters. Catastrophic risk can take a variety of forms and significantly impair the performance and the operations of the company. We have formal disaster recovery and contingency plans in place. They worked well during Hurricane Katrina and the bombings in London, but we must continue to refine them as new risks appear.

Whatever the type of risk, the key point is that we try to have a comprehensive approach to managing it. This requires that the right people be in the right jobs and that there be clear accountability in each business for managing risk in addition to rigorous corporate oversight.

IV. Do we have the right people and the right compensation strategy?

At the end of the day, it all comes down to people. We have great people in this company. As I travel across the United States and around the world, I have become increasingly impressed with the talent and potential of our employees. Rarely can a company assemble this level of creative firepower and professional competence.

To maximize the collective strength of our people, we will need to work better as a team. Great teams are not great because they have star athletes. Great teams are great because the players have learned how to work together and focus their collective energy and talent on winning. We are in the early stages of building a great team.

The compensation cycle was difficult but productive this year. We are getting better at relating pay to performance. But there is still room for improvement. Increasingly, we also must orient ourselves to *absolute performance* against best-in-class targets, not simply improvement in performance. We want to be clear and truthful when we rate ourselves, and fair as well as effective when evaluating performance. Good performance goes beyond individual productivity to include group, unit and company performance. Compensation is not an entitlement; it should reflect an individual's and a team's contribution to helping make this a great company. We want to be one of the best-paying companies – but only when we are one of the best-performing companies.

We also want our employees to feel and act like owners, which is why stock is an important part of our compensation plans. Today more than 120,000 employees own, or have an option to own, approximately 14% of shares in the company. Executive Committee members are required to retain 75% of their stock awards as long as they are with the company. And in general, stock options are awarded on a limited basis.

We continually review our benefits programs to assure that they are of value to employees and cost effective. For example, the company has excellent medical benefits programs, but we subsidize them more for lower-paid employees than we do for higher-paid employees. (I hope that this instills a sense of pride in our managers.)

In addition, we no longer match highly paid employees in their 401(k); they have adequate pensions. We do not offer perks to executives like club memberships, financial planning and leased cars. We are reducing excessive executive severance plans. But more importantly, we are paying our employees more. Our thinking is simple – less compensation through entitlements, more from performance. We *want* to pay more and let our employees spend what they earn as they see fit.

We need to constantly remind ourselves that the most important thing we can do for employees is to build a healthy, vibrant company that treats people with respect and creates opportunity. Morale is not based upon perks; morale builds from respect, growth, innovation and success; from establishing a true meritocracy; from the stock performing well; from customers liking to do business with us. A great company will provide people with competitive compensation, the opportunity to benefit as the company grows and a rewarding career path.

V. Are we a good corporate citizen?

JPMorgan Chase has been – and will continue to be – a good corporate citizen. It is vitally important and enormously gratifying to all of us. Our commitment to our communities is deep, broad and multifaceted. We strive to be a great place to work and do business, and our success allows us to give back to the neighborhoods and cities we serve.

In one sense, we view ourselves as a small business. If we were the neighborhood store, we would give kids summer jobs, sponsor local sports teams and support community-based organizations. We operate this way in many of our communities around the world, striving to be as supportive as we can in all the communities we serve.

We add value by focusing on issues that are universally important, including education and community development. We dedicate resources to develop signature programs that help communities overcome the challenges they face in these areas. We are morally, programmatically and institutionally committed to inclusiveness and diversity.

JPMorgan Chase contributes more than $100 million annually to support local, national and international initiatives. Examples include:

- **Chase Early Emergent Leaders** in Arizona, where we are funding a leadership and training program, and providing technological assistance and training in literacy skills.
- **Corporation for Supportive Housing** in Ohio, where we are helping the homeless as well as individuals recovering from drug and alcohol addiction by giving them access to 300 units of affordable housing and providing them with the support they need to live independent, responsible and healthy lives.
- **South Bank Centre** in London, where we are supporting music and technology education that will help bring artistic programs to thousands of young people.
- **DonorsChoose** in Chicago, where we are participating in an effort that uses the Internet to connect donors nationwide with underserved classrooms. We are helping to expand this program for public schools in states affected by Hurricane Katrina.
- **StreetSquash** in New York City's Harlem neighborhood, where we are funding a community youth facility that will serve over 1,000 students through academic and athletic programs.
- **Wilmington Housing Partnership** in Delaware, where our support is helping develop over 300 affordable housing units in our local communities.

Our commitment to community involvement goes well beyond philanthropy. Across the country and around the world, we bring this commitment to life through a broad range of initiatives:

- **Community reinvestment.** We have received outstanding ratings under the Community Reinvestment Act. In the past two years, we have fulfilled $140 billion of an $800 billion, 10-year commitment in the United States to provide community-development loans and investments, small business loans and consumer mortgages for lower-income and minority households.
- **Community schools.** We support community schools, which cost-effectively provide students in low-income communities with access to a broad range of services, including academic, health and extracurricular activities. In Chicago, we are partnering with the civic community, nonprofit groups and the Chicago Public School system to bring this model to scale. To date, 120 schools (20%) have been converted into community schools.
- **Youth opportunity.** We provide scholarships and internships to the underprivileged through our Smart Start program in New York City, and intend to expand the program to Louisiana in 2006. In both the United States and the United Kingdom, we work to place outstanding students of color in summer intern positions through Sponsors for Educational Opportunity. We are also a significant contributor to UNCF.

- **Volunteerism.** Around the globe, employees build homes for people in need, work with children living in homeless shelters, collect food and gifts at holiday time, offer companionship to seniors, maintain our parks and provide relief to victims of disasters.

- **Workforce development.** We help homeless people, welfare recipients, individuals with disabilities, and low-wage workers move toward economic and family stability by supporting organizations like Project Match and the hiring of individuals through the Chicago-based Cara program.

- **Hurricane relief.** When Katrina struck the U.S. Gulf Coast, we tracked down our employees, guaranteed their jobs and provided funds to help them rebuild their lives. We offered programs and services to customers and communities, and let our competitors operate out of our branches.

- **Supporting employees serving in the military.** We recognize the hardships employees face when called to active duty. We are doing whatever we can to support them by providing paid military leave, continuing most benefits and ensuring their jobs are waiting for them when they come home. We do not want to add financial hardship to their great sacrifice.

- **Protecting the environment.** We have adopted a comprehensive policy that makes environmental awareness part of our business model. We have tackled environmental risk management and taken a leadership role to reduce greenhouse gas emissions. We are looking for ways to make our facilities more energy efficient and reduce the amount of paper we use.

Of all these worthwhile efforts, the ones I find most personally inspiring come from our employees. All over the world, JPMorgan Chase employees of every nationality, race and socioeconomic background give their time and put their resources where their hearts are. They consistently stand ready to support disaster relief around the world, whether for victims of hurricanes in Louisiana, earthquakes in Pakistan, floods in Mumbai or bombings in London. We take our role as global corporate citizen seriously and personally, and I hope that all of our employees are proud of the work we collectively do around the world.

In closing, our progress would not have been possible without tremendous dedication and talent at every level. Firstly, I want to thank Bill Harrison for his vision, leadership and great partnership. It has been an honor to work with him throughout this complex merger. The experience has been a rewarding one for me personally. Bill's openness, honesty, maturity and experience are a great inspiration to me. I look forward to his counsel and support in the future.

In addition, I thank our Board. Like this merger, our Board has come together in a very effective way, and has provided great advice and guidance to me and the management team.

Finally, I thank the employees of JPMorgan Chase for their amazing efforts in 2005. We have come a long way and are well on the road to realizing the vast potential of this company. An enormous amount of work remains, but I am confident that by working together, we will build the best financial services company in the world.

James Dimon
Chief Executive Officer

March 8, 2006

Investment Bank

(In millions, except ratios)	2005	Pro forma 2004
Total net revenue	$14,578	$13,506
Operating earnings	3,658	3,654
Return on common equity	18%	18%

JPMorgan is one of the world's leading investment banks with deep client relationships and product capabilities. Our clients are corporations, financial institutions, governments and institutional investors.

We offer our clients a full platform that enables us to develop the most complete and innovative financial solutions in the industry. We have global leadership positions in all our key products – mergers and acquisitions advice, capital raising, restructuring, risk management and research. JPMorgan also participates in proprietary trading and investing and market-making in cash securities and derivative instruments around the world. We continue to add to the breadth of our platform through organic growth and selective acquisitions, and by developing new products to meet the evolving needs of our clients.

Major 2005 accomplishments

- Achieved a #1 ranking in both loans and high-yield bonds, globally and in the U.S. – the first investment bank to do so.[a]
- Achieved #1 bookrunner ranking in U.S. Commercial Mortgage-Backed Securities and #2 globally for the first time.[a]
- Expanded our energy business, adding power, coal and emissions to oil and gas capabilities to diversify risk and meet client needs.
- Integrated JPMorgan Cazenove, winning key mandates and helping to achieve #2 rankings for Equities and M&A in the Europe, Middle East & Africa region.[b]
- Acquired Neovest Holdings, Inc., a provider of high-performance trading technology and direct market access services to institutional investors, asset managers and hedge funds.
- Strengthened our offerings in fixed income and foreign exchange prime brokerage.

2006 and beyond

- Increase the consistency of our trading results and improve return on capital.
- Continue to build out our securitized products, fixed income and foreign exchange prime brokerage, principal investments and energy businesses, particularly in Europe.
- Expand distribution of structured products to retail clients through third parties.
- Invest in strategic opportunities in select emerging markets.
- Leverage global footprint – work across regions to deliver global solutions for clients.
- Leverage significant cross-selling opportunities with Commercial Banking, Asset & Wealth Management, Treasury & Securities Services and Chase Home Finance.
- Attract, develop and retain the best talent in the industry.

2005 highlights

- **#2 investment banking fee revenue globally[b]**
- **#3 ranking in Global Announced M&A – advised on seven of the 10 largest M&A transactions[a]**
- **Participant in five of the top 10 largest equity transactions globally**
- **Energy Derivatives House of the Year award (*Risk* magazine, January 2006)**
- **Loan House, U.S. High Yield Bond House, European Structured Equity House (*IFR*, January 2006)**
- **#1 Interest Rate Swaps, Forward Rate Agreements, Cross-Currency Swaps, Credit Derivatives, Interest Rate Options, Exotic Interest Rate Products, Exotic Currency Products (*Risk* End User Rankings, April 2005)**

Retail Financial Services

(In millions, except ratios)	2005	Pro forma 2004
Total net revenue	$14,830	$15,076
Operating earnings	3,427	3,279
Return on common equity	26%	25%
Overhead ratio (ex. CDI)	55%	57%

Retail Financial Services helps meet the financial needs of consumers and small businesses. We provide convenient consumer banking through the nation's second-largest ATM network and fourth-largest branch network. We are the second-largest home equity originator, the fourth-largest mortgage originator and servicer, the largest non-captive originator of automobile loans and a top provider of loans for college students.

We serve customers through more than 2,600 bank branches and 280 mortgage offices, and through relationships with 15,600 auto dealerships and 2,500 schools and universities. More than 11,000 branch salespeople assist customers with checking and savings accounts, mortgage and home equity loans, small business loans, investments and insurance across our 17-state footprint from New York to Arizona. An additional 1,500 mortgage officers provide home loans throughout the country.

Major 2005 accomplishments

- Increased branch sales force by 23%, boosting sales of credit cards by 62% and mortgages and home equity loan balances by 18%.
- Grew checking accounts by 8%, bringing the total to 8.8 million accounts.
- Expanded mortgage product offerings to appeal to broader market, including first-time and minority home buyers, and increased focus on construction markets.
- Invested in high-visibility, effective marketing to protect and enhance the Chase brand in the Northeast and the rebranded Bank One markets.
- Enhanced ATM network, putting the Chase brand on 270 ATMs in Duane Reade stores (New York) and installing 200 ATMs in Walgreens (Arizona). Replaced 900 ATMs and rebranded 3,400 others.

2006 and beyond

- Expand branch network and sales staff while maintaining expense discipline to achieve consistent and profitable growth.
- Increase mortgage origination market share by focusing on home buyers and by leveraging bank branches. Continue to add and integrate mortgage officers into the branch network.
- Expand our student loan business to meet the needs of this growing market. Integrate the recently acquired Collegiate Funding Services.
- Continue investing in state-of-the-art technology to improve the customer experience and sales process. Convert Retail platform in the Northeast in 2006.
- Rebrand the 560 remaining Bank One branches and retrofit 440 Chase branches in 2006.

2005 highlights

- **Rebranded 1,400 Bank One branches and 3,400 ATMs to Chase in 10 states, leveraging increased visibility to expand existing relationships and generate new customers**
- **Opened 150 bank branches and added 990 ATMs to make banking more convenient for our customers**
- **Completed technology conversion in Texas, uniting 400 bank branches, 850 ATMs and 2 million customers on the same platform**

2005 results reflect a special provision taken for Hurricane Katrina.

Card Services

(In millions, except ratios)	2005	Pro forma 2004
Total net revenue	$15,366	$15,001
Operating earnings	1,907	1,681
Return on common equity	16%	14%
Return on outstandings (pre-tax)	2.21%	2.08%

With more than 110 million cards in circulation and $142 billion in managed loans, Chase Card Services is one of the nation's largest credit card issuers. Customers used Chase cards for more than $300 billion worth of transactions in 2005.

Chase offers a wide variety of cards to satisfy the needs of individual consumers, small businesses and partner organizations, including cards issued with AARP, Amazon, America Online, Continental Airlines, Marriott, Southwest Airlines, Starbucks, Sony, United Airlines, Universal Studios, Walt Disney Company, and many other well-known brands and organizations. Chase also issues private-label and co-branded credit cards with Circuit City and Sears Canada.

Through Chase Paymentech Solutions, LLC, we are the largest processor of MasterCard and Visa payments in the world.

Major 2005 accomplishments

- Acquired 21 million net new Visa, MasterCard and private-label accounts.
- Increased our private-label business and gained ability to issue cards in Canada by acquiring the Sears Canada portfolio.
- Issued more than 5 million Chase cards with "blink" in several major metropolitan markets, giving cardmembers and merchants a faster, more convenient way to pay using contactless payment technology.
- Increased merchant processing volume to $563 billion.
- Moved heritage Chase accounts to a new, more flexible and cost-effective processing system.
- Completed rebranding efforts, changing more than 51 million cards to the new Chase brand. Launched high-profile "Your Choice. Your Chase." advertising initiative.

2006 and beyond

- Develop innovative products and services to create differentiated value for consumers and partners and drive growth in number of cardmembers, outstandings and sales.
- Expand the markets we serve to reach a broader base of customers.
- Invest in marketing and technology initiatives designed to position Chase for superior long-term growth.
- Cross-sell card products to the firm's customers.
- Continue to increase productivity by driving down operating cost per active account.
- Establish Chase as an iconic brand by continually delivering on our brand promise through our employees, products and innovative new products.

2005 highlights

- **One of the largest credit card issuers**
- **More than $300 billion in charge volume**
- **$142 billion in managed loans**
- **More than 110 million cards issued**
- **Largest merchant acquirer in the world through Chase Paymentech Solutions, LLC**
- **More than 850 credit card partnerships with some of the world's best-known brands**

2005 results reflect the impact of newly enacted bankruptcy legislation, as well as a special provision taken for Hurricane Katrina.

All 2004 information is on a pro forma combined-operating basis. See page 1 for details.

Commercial Banking

(In millions, except ratios)	2005	Pro forma 2004
Total net revenue	$3,596	$3,417
Operating earnings	1,007	992
Return on common equity	30%	29%
Overhead ratio	52%	54%

Commercial Banking serves more than 25,000 clients, including corporations, municipalities, financial institutions and not-for-profit entities, with annual revenues generally ranging from $10 million to $2 billion. While most of our Middle Market clients are within the Retail Financial Services footprint, Commercial Banking also covers larger corporations, as well as local governments and financial institutions on a national basis.

We are a market leader with superior client penetration across the businesses we serve. Local market presence, coupled with industry expertise and excellent client service and risk management, enables us to offer superior financial advice. Partnership with other JPMorgan Chase businesses positions us to deliver broad product capabilities – including lending, treasury services, investment banking, and asset and wealth management – and meet all our clients' financial needs.

All 2004 information is on a pro forma combined-operating basis. See page 1 for details.

Major 2005 accomplishments

- Achieved double-digit growth in treasury services by cross-selling liability balances, products and services.
- Increased significantly the penetration of investment banking capabilities to the entire client base.
- Enhanced the local coverage model by strengthening leadership through strategic hiring and talent management, and by promoting diversity and developing employees.
- Established a dedicated team to provide advice and financial solutions to clients with multinational needs.
- Converted more than 9,000 customer relationships to a single deposit system, providing access to Chase's extensive branch network.
- Created operating efficiencies by integrating the heritage firms' business credit and leasing business systems.

2006 and beyond

- Cross-sell the company's extensive product set to our existing client base while maintaining strong credit fundamentals.
- Expand market share through increased prospect conversion, while focusing on prudent client selection.
- Optimize our use of client and competitor information to drive best practices regarding the coverage model, product delivery and customer service. Direct investment resources and product capability to the highest-potential market sectors.
- Outperform our peers in managing credit and operational risk.
- Continue to leverage industry expertise, global capabilities and geographic presence as a competitive advantage.
- Strengthen workforce through targeted training on combined product and service capabilities. Continue to focus on diversity efforts and initiatives.

2005 highlights

- **#1 large middle-market lender in the United States (Loan Pricing Corporation, 2005)**
- **#1 asset-based lender in the United States (Loan Pricing Corporation, 2005)**
- **42% market penetration and 14% lead share in our 15-state footprint, nearly twice the lead share and penetration of our nearest competitor (2005 SRBI Footprint Study)**
- **Average liability balances increased by more than $5.2 billion (up 8%), and average loan volumes grew by more than $1.9 billion (up 4%)**
- **Aircraft and Municipal leasing specialties expanded by leveraging existing expertise**

Treasury & Securities Services

(In millions, except ratios)	2005	Pro forma 2004
Total net revenue	$6,241	$ 5,400
Operating earnings	1,037	437
Return on common equity	55%	23%
Pre-tax operating margin	26%	12%

Treasury & Securities Services (TSS) is a global leader in transaction, investment and information services that support the needs of chief financial officers, treasurers, issuers and investors worldwide. TSS operates through two divisions:

Treasury Services **(TS) moves, concentrates and invests client money, and provides trade finance and logistics solutions. The business ranks first in U.S. dollar clearing, processing an average of $3.2 trillion in wire transfers daily.**

Worldwide Securities Services **(WSS) safekeeps, values, clears and services securities and portfolios for investors and broker-dealers; provides trustee and agent services; and is a leading manager of American Depositary Receipt programs. WSS is the world's largest global custodian, with $11.2 trillion in total assets under custody and $6.8 trillion of trust securities under administration.**

Major 2005 accomplishments

- Delivered double-digit revenue growth and increased net earnings by 137%.
- Acquired Vastera to become the first financial institution to offer a complete, integrated global trade solution supporting both the movement of goods and financial settlements.
- Built out alternative investment services by launching JPMorgan Private Equity Fund Services, which provides administration services to global private equity firms and institutional limited partners.
- Accomplished 54 major merger milestones, contributing to the firm's largest systems upgrade and the integration of Texas operations, and creating a single processing platform for U.S. dollar funds transfers.
- Consolidated two securities processing organizations into one, Worldwide Securities Services, to leverage the client base and product offerings and to achieve efficiencies.

2006 and beyond

- Focus on product delivery by customer segment.
- Continue to expand alternative investment services.
- Leverage the full capabilities of the firm to develop innovative solutions and cross-sell products with the Investment Bank, Commercial Banking, Small Business and Asset & Wealth Management.
- Achieve market differentiation by delivering competitively superior client service.
- Continue to focus on productivity and expense control to maximize earnings and fund investments in the business.
- Invest in technology and people to improve productivity and ensure the reliability needed to support quality client service and future business growth.

2005 highlights

- **Double-digit year-over-year growth in assets under custody (up 21%), Automated Clearing House Originations (up 18%), International Electronic Funds Transfer volume (up 92%) and wholesale cards issued (up 12%)**
- **#1 in U.S. Dollar Treasury Clearing[(a)], Commercial Payments[(a)], Automated Clearing House Originations[(b)], CHIPS[(c)] and Fedwire[(d)]**
- **#1 Trustee for new U.S. Corporate Debt, excluding asset- and mortgage-backed securities (by number of issues), and Global Trustee of U.S. Collateralized Debt Obligations[(e)]**
- **#1 U.S. Commercial Paper Issuing & Paying Agent[(e)]**
- **Liability balances increased by $29.3 billion, to $164.3 billion**

Asset & Wealth Management

(In millions, except ratios)	2005	Pro forma 2004
Total net revenue	$5,664	$4,901
Operating earnings	1,216	879
Return on common equity	51%	37%
Pre-tax operating margin	33%	28%

Asset & Wealth Management provides investment advice and management for institutions and individuals. With assets under supervision of $1.1 trillion, we are one of the largest asset and wealth managers in the world. We serve four distinct client groups through three businesses: institutions through JPMorgan Asset Management; ultra-high-net-worth clients through the Private Bank; high-net-worth clients through Private Client Services; and retail clients through JPMorgan Asset Management. The majority of our client assets are in actively managed portfolios. We have global investment expertise in equities, fixed income, real estate, hedge funds, private equity and liquidity, including both money-market instruments and bank deposits. We also provide trust and estate services to ultra-high-net-worth and high-net-worth clients, and retirement services for corporations and individuals.

Major 2005 accomplishments

- Achieved record earnings, 16% revenue growth, 38% earnings growth and a 5% improvement in pre-tax margin to 33%.
- Completed the largest U.S. mutual fund merger in history.
- Surpassed $100 billion in Private Client Services assets under supervision.
- Reached the milestone of 1 million participants in our Retirement Plan Services business.
- Became the largest seller of mutual funds in Europe. Generated more than $25 billion of net flows, with $19 billion flowing into long-term funds and over $6 billion into liquidity funds.
- Delivered strong investment performance. Globally, 74% of our long-term mutual fund assets were ranked in first- or second-quartile funds for the five years ended December 31, 2005.

2006 and beyond

- Continue to deliver strong investment performance through rigorous review of investment strategies and diversification of investment processes.
- Expand third-party distribution of our investment management products and services, capitalizing on industry shifts toward open architecture and outsourcing of asset management.
- Respond to increasing demand for absolute-return investing by expanding our offering of alternative products globally and staying at the forefront of that move.
- Grow our 401(k) and IRA rollover retail channels through targeted marketing at both the corporate and participant levels and leveraging our connectivity with the rest of the firm.
- Extend our Private Bank and Private Client Services footprint, gain efficiencies and expand Private Client Services investment offerings.

2005 highlights

- **$1.1 trillion in total assets under supervision at year-end**
- **Grew assets under management by $56 billion to a total of $847 billion, including $32 billion of net flows**
- **Created shared-services organization to leverage economies of scale between Private Client Services and the Private Bank**
- **Sold BrownCo, a discount brokerage firm, for $1.6 billion**
- **Successfully completed first year of integration with Highbridge, with its assets under management increasing by 8%**

All 2004 information is on a pro forma combined-operating basis. See page 1 for details.

Community Partnership

JPMorgan Chase invests in organizations and programs that strengthen the neighborhoods, schools and the economic vitality of the communities we serve around the world. We also respond when disaster strikes. JPMorgan Chase provided programs and services to communities devastated by Hurricane Katrina. We donated millions of dollars to help relieve suffering caused by the Gulf Coast storms, and by the London bombings and the Pakistan earthquake, as well.

We expanded access to capital in low- and moderate-income communities, providing home mortgages, small business loans, investments, and innovative development programs and services. We took concrete action to protect the environment, adopting policies and practices to preserve our planet for future generations.

Within JPMorgan Chase, we are building an inclusive culture in which everyone has the opportunity to contribute, develop and succeed based on their talent and skills. In an increasingly global economy, the diverse experiences and perspectives of our people are a critical asset.

Major 2005 accomplishments

- Supported thousands of nonprofit organizations around the world.
- Invested $70 billion in the second year of our 10-year pledge to invest $800 billion in U.S. communities – the largest commitment by any financial services firm. Total investment to date is $140 billion.
- Expanded our Community Advisory Board to include 86 members representing communities throughout our footprint.
- Increased management accountability for creating a diverse senior leadership team.
- Implemented a comprehensive environmental policy by adopting the Equator Principles, guidelines that promote environmental and social risk management in project financing. The policy also addresses climate change, sustainable forestry, habitat protection, illegal logging and the concerns of indigenous peoples.

2006 and beyond

- Continue to work with not-for-profits around the world to effect positive change in the communities where we operate.
- Focus efforts on the credit and community-development needs of New Orleans and the Gulf Coast region.
- Support our communities in the third year of our $800 billion commitment.
- Continue to develop a diverse pool of talented employees at all levels to help us meet the unique financial needs of diverse individuals, families, businesses and communities.
- Increase the energy efficiency of our facilities and work toward reducing our U.S. greenhouse gas emissions over time.
- Continue to raise employees' awareness of environmental issues and their relevance to individuals' day-to-day work.

2005 highlights

- Contributed nearly $112 million to nonprofit organizations worldwide, including funds directed by employees through our matching-gift and volunteer programs
- Won $75 million New Markets Tax Credit; part of the Community Renewal Tax Relief Act, this program facilitates investment in low-income areas. Used funds to provide capital at favorable terms to low-income communities; will also support the work of community-development financial institutions
- Recognized as a "Low Carbon Leader" by *BusinessWeek* and the United Kingdom-based Climate Group for our leadership on climate change in financial services

Merger with Bank One Corporation

Effective July 1, 2004, Bank One Corporation ("Bank One") merged with and into JPMorgan Chase & Co. (the "Merger"). As a result of the Merger, each outstanding share of common stock of Bank One was converted in a stock-for-stock exchange into 1.32 shares of common stock of JPMorgan Chase & Co. ("JPMorgan Chase"). The Merger was accounted for using the purchase method of accounting. Accordingly, the Firm's results of operations for 2004 include six months of the combined Firm's results and six months of heritage JPMorgan Chase results only and 2003 results of operations reflect the results of heritage JPMorgan Chase only. For additional information regarding the Merger, see Note 2 on page 92 of this Annual Report.

(a) Represents Net income divided by Total average assets.
(b) Excludes wholesale purchased held-for-sale ("HFS") loans purchased as part of the Investment Bank's proprietary activities.
(c) Excluded from the allowance coverage ratios were end-of-period loans held-for-sale; and excluded from the net charge-off rates were average loans held-for-sale.
(d) JPMorgan Chase's common stock is listed and traded on the New York Stock Exchange, the London Stock Exchange Limited and the Tokyo Stock Exchange. The high, low and closing prices of JPMorgan Chase's common stock are from The New York Stock Exchange Composite Transaction Tape.
(e) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.
(f) Basic and diluted earnings per share were each reduced by $0.01 in 2001 because of the impact of the adoption of SFAS 133 relating to the accounting for derivative instruments and hedging activities.
(g) Represents full-time equivalent employees, as headcount data is unavailable.

Management's discussion and analysis

JPMorgan Chase & Co.

This section of the Annual Report provides management's discussion and analysis ("MD&A") of the financial condition and results of operations for JPMorgan Chase. See the Glossary of terms on pages 134–135 for definitions of terms used throughout this Annual Report. The MD&A included in this Annual Report contains statements that are forward-looking within the meaning of the Private Securities Litigation Reform Act of 1995. Such statements are based upon the current beliefs and expectations of JPMorgan Chase's management and are subject to significant risks and uncertainties. These risks and uncertainties could cause JPMorgan Chase's results to differ materially from those set forth in such forward-looking statements. Certain of such risks and uncertainties are described herein (see Forward-looking statements on page 135 of this Annual Report) and in the JPMorgan Chase Annual Report on Form 10–K ("Form 10–K") for the year ended December 31, 2005, in Part I, Item 1A: Risk factors, to which reference is hereby made.

Introduction

JPMorgan Chase & Co. ("JPMorgan Chase" or the "Firm"), a financial holding company incorporated under Delaware law in 1968, is a leading global financial services firm and one of the largest banking institutions in the United States, with $1.2 trillion in assets, $107 billion in stockholders' equity and operations worldwide. The Firm is a leader in investment banking, financial services for consumers and businesses, financial transaction processing, asset and wealth management and private equity. Under the JPMorgan, Chase and Bank One brands, the Firm serves millions of customers in the United States and many of the world's most prominent corporate, institutional and government clients.

JPMorgan Chase's principal bank subsidiaries are JPMorgan Chase Bank, National Association ("JPMorgan Chase Bank"), a national banking association with branches in 17 states; and Chase Bank USA, National Association, a national bank that is the Firm's credit card issuing bank. JPMorgan Chase's principal nonbank subsidiary is J.P. Morgan Securities Inc. ("JPMSI"), the Firm's U.S. investment banking firm.

JPMorgan Chase's activities are organized, for management reporting purposes, into six business segments, as well as Corporate. The Firm's wholesale businesses comprise the Investment Bank, Commercial Banking, Treasury & Securities Services, and Asset & Wealth Management. The Firm's consumer businesses comprise Retail Financial Services and Card Services. A description of the Firm's business segments, and the products and services they provide to their respective client bases, follows.

Investment Bank

JPMorgan Chase is one of the world's leading investment banks, as evidenced by the breadth of the Investment Bank client relationships and product capabilities. The Investment Bank ("IB") has extensive relationships with corporations, financial institutions, governments and institutional investors worldwide. The Firm provides a full range of investment banking products and services in all major capital markets, including advising on corporate strategy and structure, capital raising in equity and debt markets, sophisticated risk management, and market-making in cash securities and derivative instruments. The Investment Bank also commits the Firm's own capital to proprietary investing and trading activities.

Retail Financial Services

Retail Financial Services ("RFS") includes Home Finance, Consumer & Small Business Banking, Auto & Education Finance and Insurance. Through this group of businesses, the Firm provides consumers and small businesses with a broad range of financial products and services including deposits, investments, loans and insurance. Home Finance is a leading provider of consumer real estate loan products and is one of the largest originators and servicers of home mortgages. Consumer & Small Business Banking offers one of the largest branch networks in the United States, covering 17 states with 2,641 branches and 7,312 automated teller machines ("ATMs"). Auto & Education Finance is the largest noncaptive originator of automobile loans as well as a top provider of loans for college students. Through its Insurance operations, the Firm sells and underwrites an extensive range of financial protection products and investment alternatives, including life insurance, annuities and debt protection products.

Card Services

Card Services ("CS") is one of the largest issuers of credit cards in the United States, with more than 110 million cards in circulation, and is the largest merchant acquirer. CS offers a wide variety of products to satisfy the needs of its cardmembers, including cards issued on behalf of many well-known partners, such as major airlines, hotels, universities, retailers and other financial institutions.

Commercial Banking

Commercial Banking ("CB") serves more than 25,000 clients, including corporations, municipalities, financial institutions and not-for-profit entities with annual revenues generally ranging from $10 million to $2 billion. While most Middle Market clients are within the Retail Financial Services footprint, CB also covers larger corporations, as well as local governments and financial institutions on a national basis. CB is a market leader with superior client penetration across the businesses it serves. Local market presence, coupled with industry expertise and excellent client service and risk management, enable CB to offer superior financial advice. Partnership with other JPMorgan Chase businesses positions CB to deliver broad product capabilities – including lending, treasury services, investment banking, and asset and wealth management – and meet its clients' financial needs.

Treasury & Securities Services

Treasury & Securities Services ("TSS") is a global leader in providing transaction, investment and information services to support the needs of corporations, issuers and institutional investors worldwide. TSS is one of the largest cash management providers in the world and a leading global custodian. The Treasury Services ("TS") business provides a variety of cash management products, trade finance and logistics solutions, wholesale card products, and short-term liquidity management tools. The Investor Services ("IS") business provides custody, fund services, securities lending, and performance measurement and execution products. The Institutional Trust Services ("ITS") business provides trustee, depository and administrative services for debt and equity issuers. TS partners with the Commercial Banking, Consumer & Small Business Banking and Asset & Wealth Management businesses to serve clients firmwide. As a result, certain TS revenues are included in other segments' results. TSS combined the management of the IS and ITS businesses under the name Worldwide Securities Services ("WSS") to create an integrated franchise which provides custody and investor services as well as securities clearance and trust services to clients globally. Beginning January 1, 2006, TSS will report results for two divisions: TS and WSS.

Asset & Wealth Management
Asset & Wealth Management ("AWM") provides investment advice and management for institutions and individuals. With Assets under supervision of $1.1 trillion, AWM is one of the largest asset and wealth managers in the world. AWM serves four distinct client groups through three businesses: institutions through JPMorgan Asset Management; ultra-high-net-worth clients through the Private Bank; high-net-worth clients through Private Client Services; and retail clients through JPMorgan Asset Management. The majority of AWM's client assets are in actively managed portfolios. AWM has global investment expertise in equities, fixed income, real estate, hedge funds, private equity and liquidity, including both money market instruments and bank deposits. AWM also provides trust and estate services to ultra-high-net-worth and high-net-worth clients, and retirement services for corporations and individuals.

2005 Business events

Collegiate Funding Services
On March 1, 2006, JPMorgan Chase acquired, for approximately $663 million, Collegiate Funding Services, a leader in student loan servicing and consolidation. This acquisition will enable the Firm to create a comprehensive education finance business.

BrownCo
On November 30, 2005, JPMorgan Chase sold BrownCo, an on-line deep-discount brokerage business, to E*TRADE Financial for a cash purchase price of $1.6 billion. JPMorgan Chase recognized an after-tax gain of $752 million.

Sears Canada credit card business
On November 15, 2005, JPMorgan Chase purchased Sears Canada Inc.'s credit card operation, including both the private-label card accounts and the co-branded Sears MasterCard® accounts. The credit card operation includes approximately 10 million accounts with $2.2 billion (CAD$2.5 billion) in managed loans. Sears Canada and JPMorgan Chase entered into an ongoing arrangement under which JPMorgan Chase will offer private-label and co-branded credit cards to both new and existing customers of Sears Canada.

Chase Merchant Services, Paymentech integration
On October 5, 2005, JPMorgan Chase and First Data Corp. completed the integration of the companies' jointly owned Chase Merchant Services and Paymentech merchant businesses, to be operated under the name of Chase Paymentech Solutions, LLC. The joint venture is the largest financial transaction processor in the U.S. for businesses accepting credit card payments via traditional point of sale, Internet, catalog and recurring billing. As a result of the integration into a joint venture, Paymentech has been deconsolidated and JPMorgan Chase's ownership interest in this joint venture is accounted for in accordance with the equity method of accounting.

Neovest Holdings, Inc.
On September 1, 2005, JPMorgan Chase completed its acquisition of Neovest Holdings, Inc., a provider of high-performance trading technology and direct market access. This transaction will enable the Investment Bank to offer a leading, broker-neutral trading platform across asset classes to institutional investors, asset managers and hedge funds.

Enron litigation settlement
On June 14, 2005, JPMorgan Chase announced that it had reached an agreement in principle to settle, for $2.2 billion, the Enron class action litigation captioned Newby v. Enron Corp. The Firm also recorded a nonoperating charge of $1.9 billion (pre-tax) to cover the settlement and to increase its reserves for certain other remaining material legal matters.

Vastera
On April 1, 2005, JPMorgan Chase acquired Vastera, a provider of global trade management solutions, for approximately $129 million. Vastera's business was combined with the Logistics and Trade Services businesses of TSS' Treasury Services unit. Vastera automates trade management processes associated with the physical movement of goods internationally; the acquisition enables TS to offer management of information and processes in support of physical goods movement, together with financial settlement.

WorldCom litigation settlement
On March 17, 2005, JPMorgan Chase settled, for $2.0 billion, the WorldCom, Inc. class action litigation. In connection with the settlement, JPMorgan Chase increased the Firm's Litigation reserve by $900 million.

JPMorgan Partners
On March 1, 2005, the Firm announced that the management team of JPMorgan Partners, LLC, a private equity unit of the Firm, will become independent when it completes the investment of the current $6.5 billion Global Fund, which it advises. The buyout and growth equity professionals of JPMorgan Partners will form a new independent firm, CCMP Capital, LLC, and the venture professionals will separately form a new independent firm, Panorama Capital, LLC. JPMorgan Chase has committed to invest the lesser of $875 million or 24.9% of the limited partnership interests in the fund to be raised by CCMP Capital, and has committed to invest the lesser of $50 million or 24.9% of the limited partnership interests in the fund to be raised by Panorama Capital. The investment professionals of CCMP and Panorama will continue to manage the JPMP investments pursuant to a management agreement with the Firm.

Cazenove
On February 28, 2005, JPMorgan Chase and Cazenove Group plc ("Cazenove") formed a business partnership which combined Cazenove's investment banking business and JPMorgan Chase's U.K.-based investment banking business in order to provide investment banking services in the United Kingdom and Ireland. The new company is called JPMorgan Cazenove Holdings.

Subsequent events

Sale of insurance underwriting business
On February 7, 2006, JPMorgan Chase announced that the Firm has agreed to sell its life insurance and annuity underwriting businesses to Protective Life Corporation for a cash purchase price of approximately $1.2 billion. The sale, which includes both the heritage Chase insurance business and the life business that Bank One had bought from Zurich Insurance in 2003, is subject to normal regulatory approvals and is expected to close in the third quarter of 2006. JPMorgan Chase anticipates the transaction will have no material impact on earnings.

Executive overview

This overview of management's discussion and analysis highlights selected information and may not contain all of the information that is important to readers of this Annual Report. For a more complete understanding of events, trends and uncertainties, as well as the liquidity, capital, credit and market risks, and the critical accounting estimates, affecting the Firm and the lines of business, this Annual Report should be read in its entirety.

(a) Includes six months of the combined Firm's results and six months of heritage JPMorgan Chase results.

Business overview

2005 represented the Firm's first full year as a merged company; 2004 included six months of the combined Firm's results and six months of heritage JPMorgan Chase results. Therefore, comparisons between the two years are significantly affected by the Merger. In addition, other key factors affecting 2005 results included litigation charges to settle the Enron and Worldcom class actions, a special provision for credit losses related to Hurricane Katrina, the impact of the new bankruptcy legislation on credit card charge-offs and the sale of BrownCo, as well as the global economic and market environments.

In 2005, the Firm successfully completed a number of milestones in the execution of its Merger integration plan. Key accomplishments included: launching a national advertising campaign that introduced a modernized Chase brand; the conversion of 1,400 Bank One branches, 3,400 ATMs and millions of Bank One credit cards to the Chase brand; completing the operating platform conversion in Card Services; and executing a major systems conversion in Texas that united 400 Chase and Bank One branches and over 800 ATMs under common systems and branding. These accomplishments resulted in continued efficiencies from the Merger, and the Firm made significant progress toward reaching the merger-related savings target of approximately $3.0 billion by the end of 2007. The Firm realized approximately $1.5 billion of merger savings in 2005, bringing estimated cumulative savings to $1.9 billion, and the annualized run-rate of savings entering 2006 is approximately $2.2 billion. In order to achieve these savings, the Firm expensed merger-related costs of $722 million during the year, bringing the total cumulative amount expensed since the Merger announcement to $2.1 billion. Management continues to estimate remaining Merger costs of approximately $0.9 billion to $1.4 billion, which are expected to be expensed over the next two years.

The Board of Directors announced in the fourth quarter that James Dimon, President and Chief Operating Officer, would succeed Chairman and Chief Executive Officer William B. Harrison, Jr. as Chief Executive Officer on December 31, 2005. Mr. Harrison remains Chairman of the Board.

The Firm reported 2005 net income of $8.5 billion, or $2.38 per share, compared with net income of $4.5 billion, or $1.55 per share, for 2004. The return on common equity was 8% compared with 6% in 2004.

Results included $2.0 billion in after-tax charges, or $0.57 per share, which included nonoperating litigation charges of $1.6 billion and Merger costs of $448 million. Excluding these charges, operating earnings were $10.5 billion, or $2.95 per share, and return on common equity was 10%. Operating earnings represent business results without merger-related costs, nonoperating litigation-related charges and recoveries, and costs related to conformance of accounting policies.

In 2005, both the U.S. and global economies continued to expand. Gross domestic product increased by an estimated 3.0% globally with the U.S. economy growing at a slightly faster pace. The U.S. economy experienced continued rising short-term interest rates, which were driven by Federal Reserve Board actions during the course of the year. The federal funds rate increased from 2.25% to 4.25% during the year, and the yield curve flattened as long term interest rates remained broadly steady. Equity markets, both domestic and international, reflected positive performance, with the S&P 500 up 3% and international indices increasing over 20%. Capital markets activity was very strong during 2005, with debt and equity underwriting and merger and acquisition activity surpassing 2004 levels. The U.S. consumer sector showed continued strength buoyed by overall economic strength, which benefited from good levels of employment and retail sales that increased versus the prior year. This strength came despite slowing mortgage origination and refinance activity as well as significantly higher bankruptcy filings due to the new bankruptcy legislation which became effective in October 2005.

The 2005 economic environment was a contributing factor to the performance of the Firm and each of its businesses. The overall economic expansion and strong level of capital markets activity helped to drive new business volume and sales growth within each business. The interest rate environment negatively affected both wholesale and consumer loan spreads, though wholesale liability spreads widened over the course of the year, benefiting Treasury & Securities Services and Commercial Banking. Additionally, the credit quality of the loan portfolio continued to remain strong, reflecting the beneficial economic environment, despite the impacts of accelerated bankruptcy filings and Hurricane Katrina.

The discussion that follows highlights, on an operating basis and excluding the impact of the Merger, the performance of each of the Firm's lines of business.

Investment Bank operating earnings benefited from higher revenue and a continued benefit from the Provision for credit losses, which were offset by increased compensation expense. Revenue growth was driven by higher, although volatile, fixed income trading results, stronger equity commissions and improved investment banking fees, all of which benefited from strength in global capital markets activity. Investment banking fees had particular strength in advisory, reflecting in part the benefit of the business partnership with Cazenove, which was formed in February of 2005. As in 2004, the

Provision for credit losses in 2005 was a benefit to earnings, mainly due to continued improvement in the credit quality of the loan portfolio. The increase in expense was primarily the result of higher performance-based incentive compensation due to increased revenues.

Retail Financial Services operating earnings benefited from the overall strength of the U.S. economy, which led to increased deposit, home equity and mortgage balances. In addition to the benefit from higher balances, revenues increased due to improved mortgage servicing rights ("MSRs") risk management results. Expenses declined, reflecting ongoing efficiency improvements across all businesses even as investments continued in retail banking distribution and sales, with the net addition during the year of 133 branch offices, 662 ATMs and over 1,300 personal bankers. These benefits were offset partially by narrower spreads on loans due to the interest rate environment and net losses associated with loan portfolio sale activity. The provision for credit losses benefited from improved credit trends in most consumer lending portfolios and from loan portfolio sales, but was affected negatively by a special provision related to Hurricane Katrina.

Card Services operating earnings benefited from lower expenses driven by merger savings and greater efficiencies from the operating platform conversion, which resulted in lower processing and compensation costs. Revenue benefited from higher loan balances and customer charge volume resulting from marketing initiatives and increased consumer spending. Partially offsetting this growth were narrower spreads on loan balances due to an increase in accounts in their introductory rate period and higher interest rates. The managed provision for credit losses increased due to record levels of bankruptcy-related charge-offs related to the new bankruptcy legislation that became effective in October 2005 and a special provision related to Hurricane Katrina. Despite these events, underlying credit quality remained strong, with a managed net charge-off ratio of 5.21%, down from 5.27% in 2004.

Commercial Banking operating earnings benefited from wider spreads and higher volumes related to liability balances and increased loan balances. Partially offsetting these benefits were narrower loan spreads related to competitive pressures in some markets and lower deposit-related fees due to higher interest rates. The provision for credit losses increased due to a special provision related to Hurricane Katrina, increased loan balances and refinements in the data used to estimate the allowance for credit losses. However, the underlying credit quality in the portfolio was strong throughout the year, as evidenced by lower net charge-offs and nonperforming loans compared with 2004.

Treasury & Securities Services operating earnings grew significantly in 2005. Revenue growth resulted from business growth and widening spreads on, and growth in, liability balances, all of which benefited from global economic strength and capital market activity. Partially offsetting this growth were lower deposit-related fees due to higher interest rates. Expenses decreased due to lower software impairment charges, partially offset by higher compensation expense resulting from new business growth, the Vastera acquisition completed in April, and by charges taken in the second quarter to terminate a client contract.

Asset & Wealth Management operating earnings benefited from net asset inflows and asset appreciation, both the result of favorable capital markets and improved investment performance, which resulted in an increased level of Assets under management. Results also benefited from the acquisition of a majority interest in Highbridge Capital Management in the fourth quarter of 2004 and growth in deposit and loan balances. Expenses increased due primarily to the acquisition of Highbridge and higher performance-based incentive compensation related to increased revenue.

Corporate segment operating earnings were affected negatively by repositioning of the Treasury Investment portfolio. This decline was offset partially by the gain on the sale of BrownCo of $1.3 billion (pre-tax) and improved Private Equity results.

The Firm had, at year-end, total stockholders' equity of $107 billion, and a Tier 1 capital ratio of 8.5%. The Firm purchased $3.4 billion, or 93.5 million shares of common stock during the year.

2006 Business outlook

The following forward-looking statements are based upon the current beliefs and expectations of JPMorgan Chase's management and are subject to significant risks and uncertainties. These risks and uncertainties could cause JPMorgan Chase's results to differ materially from those set forth in such forward-looking statements.

JPMorgan Chase's outlook for 2006 should be viewed against the backdrop of the global economy, financial markets and the geopolitical environment, all of which are integrally linked. While the Firm considers outcomes for, and has contingency plans to respond to, stress environments, the basic outlook for 2006 is predicated on the interest rate movements implied in the forward rate curve for U.S. treasuries, the continuation of favorable U.S. and international equity markets and continued expansion of the global economy.

The performance of the Firm's capital markets and wholesale businesses are affected by overall global economic growth and by financial market movements and activity levels. The Investment Bank enters 2006 with a strong investment banking fee pipeline and continues to focus on new product expansion initiatives, such as commodities and securitized products, which are intended to benefit growth and reduce volatility in trading results over time. Compared with 2005, the Investment Bank anticipates lower credit portfolio revenues due to reduced gains from loan workouts. Asset & Wealth Management anticipates continued growth driven by continued net inflows to Assets under supervision. Treasury & Securities Services and Commercial Banking expect growth due to increased business activity and product sales.

Retail Financial Services anticipates benefiting from the expanded branch network and salesforce, and improved sales productivity and cross-selling in the branches, partially offset by pressure on loan and deposit spreads due to the higher interest rate environment. The acquisition of Collegiate Funding Services is expected to contribute modestly to earnings in 2006.

Card Services anticipates that managed receivables will grow in line with the overall credit card industry, benefiting from marketing initiatives, new partnerships and the acquisition of the Sears Canada credit card business. Revenues and expenses also will reflect the full-year impact of the Paymentech deconsolidation and the acquisition of the Sears Canada credit card business.

The Corporate segment includes Private Equity, Treasury and other corporate support units. The revenue outlook for the Private Equity business is directly related to the strength of the equity markets and the performance of the underlying portfolio investments. If current market conditions persist, the Firm anticipates continued realization of private equity gains in 2006, but results can be volatile from quarter to quarter. It is anticipated that Treasury net interest

income will gradually improve and that the net loss in Other Corporate will be reduced as merger savings and other expense reduction initiatives, such as less excess real estate, are realized.

The Provision for credit losses in 2006 is anticipated to be higher than in 2005, primarily driven by a trend toward a more normal level of provisioning for credit losses in the wholesale businesses. The consumer Provision for credit losses in 2006 should reflect generally stable underlying asset quality. However, it is anticipated that the first half of 2006 will experience lower credit card net charge-offs, as the record level of bankruptcy filings in the fourth quarter of 2005 are believed to have included bankruptcy filings that would otherwise have occurred in 2006. The second half of 2006 is expected to include increased credit card delinquencies and net charge-offs as a result of implementation of new FFIEC minimum payment rules.

Firmwide expenses are anticipated to benefit as the run rate of merger savings is expected to reach approximately $2.8 billion by the end of 2006 driven by activities such as the tri-state retail conversion and data center upgrades. Offsetting the merger savings will be continued investment in distribution enhancements and new product offerings; extensive merger integration activities and upgrading of technology; and expenses related to recent acquisitions, such as the Sears Canada credit card business and Collegiate Funding Services.

Consolidated results of operations

The following section provides a comparative discussion of JPMorgan Chase's consolidated results of operations on a reported basis for the three-year period ended December 31, 2005. Factors that are related primarily to a single business segment are discussed in more detail within that business segment than they are in this consolidated section. For a discussion of the Critical accounting estimates used by the Firm that affect the Consolidated results of operations, see pages 81–83 of this Annual Report.

Revenue

Year ended December 31,[a] (in millions)	2005	2004	2003
Investment banking fees	**$ 4,088**	$ 3,537	$ 2,890
Trading revenue	**5,860**	3,612	4,427
Lending & deposit related fees	**3,389**	2,672	1,727
Asset management, administration and commissions	**10,390**	8,165	6,039
Securities/private equity gains	**473**	1,874	1,479
Mortgage fees and related income	**1,054**	806	790
Credit card income	**6,754**	4,840	2,466
Other income	**2,694**	830	601
Noninterest revenue	**34,702**	26,336	20,419
Net interest income	**19,831**	16,761	12,965
Total net revenue	**$ 54,533**	$ 43,097	$ 33,384

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. 2003 reflects the results of heritage JPMorgan Chase only.

2005 compared with 2004

Total net revenue for 2005 was $54.5 billion, up 27% from 2004, primarily due to the Merger, which affected every revenue category. The increase from the prior year also was affected by a $1.3 billion gain on the sale of BrownCo; higher Trading revenue; and higher Asset management, administration and commissions, which benefited from several new investments and growth in Assets under management and assets under custody. These increases were offset partly by available-for-sale ("AFS") securities losses as a result of repositioning of the Firm's Treasury investment portfolio. The discussions that follow highlight factors other than the Merger that affected the 2005 versus 2004 comparison.

The increase in Investment banking fees reflected continued strength in advisory, equity and debt underwriting, with particular growth in Europe, which benefited from the business partnership with Cazenove. Trading revenue increased from 2004, reflecting strength in fixed income, equities and commodities. For a further discussion of Investment banking fees and Trading revenue, which are primarily recorded in the IB, see the IB segment results on pages 36–38 of this Annual Report.

The higher Lending & deposit-related fees were driven by the Merger; absent the effects of the Merger, the deposit-related fees would have been lower due to rising interest rates. In a higher interest-rate environment, the value of deposit balances to a customer is greater, resulting in a reduction of deposit-related fees. For a further discussion of liability balances (including deposits) see the CB and TSS segment discussions on pages 47–48 and 49–50, respectively, of this Annual Report.

The increase in Asset management, administration and commissions revenue was driven by incremental fees from several new investments, including a majority interest in Highbridge Capital Management, LLC, the business partnership with Cazenove and the acquisition of Vastera. Also contributing to the higher level of revenue was an increase in Assets under management, reflecting net asset inflows, mainly in equity-related products, and global equity market appreciation. In addition, Assets under custody were up due to market value appreciation and new business. Commissions rose as a result of a higher volume of brokerage transactions. For additional information on these fees and commissions, see the segment discussions for IB on pages 36–38, AWM on pages 51–52 and TSS on pages 49–50 of this Annual Report.

The decline in Securities/private equity gains reflected $1.3 billion of securities losses, as compared with $338 million of gains in 2004. The losses resulted primarily from repositioning the Firm's Treasury investment portfolio in response to rising interest rates. The securities losses were offset partly by higher private equity gains due to a continuation of favorable capital markets conditions. For a further discussion of Securities/private equity gains, which are recorded primarily in the Firm's Treasury and Private Equity businesses, see the Corporate segment discussion on pages 53–54 of this Annual Report.

Mortgage fees and related income increased due to improvements in risk management results related to MSR assets. Mortgage fees and related income exclude the impact of NII and AFS securities gains related to home mortgage activities. For a discussion of Mortgage fees and related income, which is recorded primarily in RFS's Home Finance business, see the segment discussion for RFS on pages 39–44 of this Annual Report.

Credit card income rose as a result of higher interchange income associated with the increase in charge volume. This increase was offset partially by higher volume-driven payments to partners; rewards expense; and the impact of the deconsolidation of Paymentech, which was deconsolidated upon completion of the integration of Chase Merchant Services and the Paymentech merchant processing businesses in 2005. For a further discussion of Credit card income, see CS segment results on pages 45–46 of this Annual Report.

The increase in Other income primarily reflected a $1.3 billion pre-tax gain on the sale of BrownCo to E*TRADE Financial; higher gains from loan workouts and loan sales; and higher revenues as a result of a shift from financing leases to operating leases in the auto business. These gains were offset partly by write-downs on auto loans that were transferred to held-for-sale and a one-time gain in 2004 on the sale of an investment.

Net interest income rose as a result of higher average volume of, and wider spreads on, liability balances. Also contributing to the increase was higher average volume of wholesale and consumer loans, in particular, home equity and credit card loans. These increases were offset partially by narrower spreads on consumer and wholesale loans and on trading assets, as well as reduced Treasury investment portfolio levels. The Firm's total average interest-earning assets in 2005 were $916 billion, up 23% from the prior year. The net interest yield on these assets, on a fully taxable-equivalent basis, was 2.19%, a decrease of six basis points from the prior year.

2004 compared with 2003

Total net revenues, at $43.1 billion, rose by $9.7 billion, or 29%, primarily due to the Merger, which affected every category of Total net revenue. The discussion that follows highlights factors other than the Merger that affected the 2004 versus 2003 comparison.

The increase in Investment banking fees was driven by significant gains in underwriting and advisory activities as a result of increased global market volumes and market share gains. Trading revenue declined by 18%, primarily due to lower portfolio management results in fixed income and equities.

Lending & deposit related fees were up from 2003 due to the Merger. The rise was offset partially by lower deposit-related fees, as clients paid for services with deposits versus fees due to rising interest rates. Throughout 2004, deposit balances grew in response to rising interest rates.

The increase in Asset management, administration and commissions was driven also by the full-year impact of other acquisitions – such as EFS in January 2004, Bank One's Corporate Trust business in November 2003 and JPMorgan Retirement Plan Services in June 2003 – as well as the effect of global equity market appreciation, net asset inflows and a better product mix. In addition, a more active market for trading activities in 2004 resulted in higher brokerage commissions.

Securities/private equity gains for 2004 rose from the prior year, primarily fueled by the improvement in the Firm's private equity investment results. This change was offset by lower securities gains on the Treasury investment portfolio as a result of lower volumes of securities sold, and lower gains realized on sales due to higher interest rates. Additionally, RFS's Home Finance business reported losses in 2004 on AFS securities, as compared with gains in 2003. For a further discussion of securities gains, see the RFS and Corporate segment discussions on pages 39–44 and 53–54, respectively, of this Annual Report.

Mortgage fees and related income rose as a result of higher servicing revenue; this improvement was offset partially by lower MSR risk management results and prime mortgage production revenue, and by lower gains from sales and securitizations of subprime loans as a result of management's decision in 2004 to retain these loans. Mortgage fees and related income exclude the impact of NII and securities gains related to home mortgage activities.

Credit card income increased from 2003 as a result of higher customer charge volume, which resulted in increased interchange income, and higher credit card servicing fees associated with an increase of $19.4 billion in average securitized loans. The increases were offset partially by higher volume-driven payments to partners and rewards expense.

The increase in Other income from 2003 reflected gains on leveraged lease transactions, the sale of an investment in 2004 and higher net results from corporate- and bank-owned life insurance policies. These positive factors in 2004 were offset partially by gains on sales of several nonstrategic businesses and real estate properties in 2003.

Net interest income rose from 2003 as growth in volumes of consumer loans and deposits, as well as wider spreads on deposits, contributed to higher net interest income. These positive factors were offset partially by lower wholesale loan balances in the IB and tighter spreads on loans, investment securities and trading assets stemming from the rise in interest rates. The Firm's total average interest-earning assets for 2004 were $744 billion, up $154 billion from 2003. The net interest yield on these assets, on a fully taxable-equivalent basis, was 2.25% in 2004, an increase of four basis points from the prior year.

Provision for credit losses

2005 compared with 2004

The Provision for credit losses was $3.5 billion, an increase of $939 million, or 37%, from 2004, reflecting the full-year impact of the Merger. The wholesale Provision for credit losses was a benefit of $811 million for the year compared with a benefit of $716 million in the prior year, reflecting continued strength in credit quality. The wholesale loan net recovery rate was 0.06% in 2005, an improvement from a net charge-off rate of 0.18% in the prior year. The total consumer Provision for credit losses was $4.3 billion, $1.9 billion higher than the prior year, primarily due to the Merger, higher bankruptcy-related net charge-offs in Card Services and a $350 million special provision for Hurricane Katrina. 2004 included accounting policy conformity adjustments as a result of the Merger. Excluding these items, the consumer portfolio continued to show strength in credit quality.

The Firm had total nonperforming assets of $2.6 billion at December 31, 2005, a decline of $641 million, or 20%, from the 2004 level of $3.2 billion. For further information about the Provision for credit losses and the Firm's management of credit risk, see the Credit risk management discussion on pages 63–74 of this Annual Report.

2004 compared with 2003

The Provision for credit losses of $2.5 billion was up $1.0 billion, or 65%, compared with 2003. The impact of the Merger and accounting policy conformity charges of $858 million were offset partially by releases in the allowance for credit losses related to the wholesale loan portfolio, primarily due to improved credit quality in the IB, and the sale of the manufactured home loan portfolio in RFS.

Noninterest expense

Year ended December 31,[a] (in millions)	**2005**	2004	2003
Compensation expense	**$ 18,255**	$ 14,506	$ 11,387
Occupancy expense	**2,299**	2,084	1,912
Technology and communications expense	**3,624**	3,702	2,844
Professional & outside services	**4,224**	3,862	2,875
Marketing	**1,917**	1,335	710
Other expense	**3,705**	2,859	1,694
Amortization of intangibles	**1,525**	946	294
Merger costs	**722**	1,365	—
Litigation reserve charge	**2,564**	3,700	100
Total noninterest expense	**$ 38,835**	$ 34,359	$ 21,816

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. 2003 reflects the results of heritage JPMorgan Chase only.

2005 compared with 2004

Noninterest expense was $38.8 billion, up 13% from the prior year, primarily due to the full-year impact of the Merger. Excluding Litigation reserve charges and Merger costs, Noninterest expense would have been $35.5 billion, up 21%. In addition to the Merger, expenses increased as a result of higher performance-based incentives, continued investment spending in the Firm's businesses and incremental marketing expenses related to launching the new Chase brand, partially offset by merger-related savings and other efficiencies throughout the Firm. Each category of Noninterest expense was affected by the Merger. The discussions that follow highlight factors other than the Merger that affected the 2005 versus 2004 comparison.

Compensation expense rose as a result of higher performance-based incentives; additional headcount due to the insourcing of the Firm's global technology infrastructure (effective December 31, 2004, when JPMorgan Chase terminated the Firm's outsourcing agreement with IBM); the impact of several investments, including Cazenove, Highbridge and Vastera; the accelerated vesting of certain employee stock options; and business growth. The effect of the termination of the IBM outsourcing agreement was to shift expenses from Technology and communications expense to Compensation expense. The increase in Compensation expense was offset partially by merger-related savings throughout the Firm. For a detailed discussion of employee stock-based incentives, see Note 7 on pages 100–102 of this Annual Report.

The increase in Occupancy expense was primarily due to the Merger, partially offset by lower charges for excess real estate and a net release of excess property tax accruals, compared with $103 million of charges for excess real estate in 2004.

Technology and communications expense was down only slightly. This reduction reflects the offset of six months of the combined Firm's results for 2004 against the full-year 2005 impact from termination of the JPMorgan Chase outsourcing agreement with IBM. The reduction in Technology and communications expense due to the outsourcing agreement termination is mostly offset by increases in Compensation expense related to additional headcount and investments in the Firm's hardware and software infrastructure.

Professional and outside services were higher compared with the prior year as a result of the insourcing of the Firm's global technology infrastructure, upgrades to the Firm's systems and technology, and business growth. These expenses were offset partially by expense-management initiatives.

Marketing expense was higher compared with the prior year, primarily as a result of the Merger and the cost of advertising campaigns to launch the new Chase brand.

The increase in Other expense reflected incremental expenses related to investments made in 2005, as well as an increase in operating charges for legal matters. Also contributing to the increase was a $93 million charge taken by TSS to terminate a client contract and a $40 million charge taken by RFS related to the dissolution of a student loan joint venture. These items were offset partially by lower software impairment write-offs, merger-related savings and other efficiencies.

For a discussion of Amortization of intangibles and Merger costs, refer to Note 15 and Note 8 on pages 114–116 and 103, respectively, of this Annual Report.

The 2005 nonoperating Litigation reserve charges that were recorded by the Firm were as follows: a $1.9 billion charge related to the settlement of the Enron class action litigation and for certain other material legal proceedings and a $900 million charge for the settlement costs of the WorldCom class action litigation; these were partially offset by a $208 million insurance recovery related to certain material litigation. In comparison, 2004 included a $3.7 billion nonoperating charge to increase litigation reserves. For a further discussion of litigation, refer to Note 25 on page 123 of this Annual Report.

2004 compared with 2003

Noninterest expense was $34.4 billion in 2004, up $12.5 billion, or 57%, primarily due to the Merger. Excluding $1.4 billion of Merger costs, and Litigation reserve charges, Noninterest expense would have been $29.3 billion, up 35%. The discussion that follows highlights other factors affecting the 2004 versus 2003 comparison.

Compensation expense was up from 2003, primarily due to strategic investments in the IB and continuing expansion in RFS. These factors were offset partially by ongoing efficiency improvements and merger-related savings throughout the Firm, and by a reduction in pension costs. The decline in pension costs was attributable mainly to the increase in the expected return on plan assets resulting from a discretionary $1.1 billion contribution to the Firm's pension plan in April 2004, partially offset by changes in actuarial assumptions for 2004 compared with 2003.

The increase in Occupancy expense was offset partly by lower charges for excess real estate, which were $103 million in 2004 compared with $270 million in 2003.

Technology and communications expense was higher than in the prior year as a result of higher costs associated with greater use of outside vendors, primarily IBM, to support the global infrastructure requirements of the Firm. For a further discussion regarding the IBM outsourcing agreement, see the Corporate segment discussion on page 53 of this Annual Report.

Professional & outside services rose due to higher legal costs associated with litigation matters, as well as outside services stemming from recent acquisitions — primarily Electronic Financial Services ("EFS"), and growth in business at TSS and CS.

Marketing expense rose as CS initiated a more robust marketing campaign during 2004.

Other expense was up due to software impairment write-offs of $224 million, primarily in TSS and Corporate, compared with $60 million in 2003; higher operating charges for legal matters; and growth in business volume. These expenses were offset partly by a $57 million settlement related to the Enron surety bond litigation.

For a discussion of Amortization of intangibles and Merger costs, refer to Note 15 and Note 8 on pages 114–116 and 103, respectively.

In June of 2004, JPMorgan Chase recorded a $3.7 billion addition to the Litigation reserve. By comparison, 2003 included a charge of $100 million for Enron-related litigation.

Income tax expense

The Firm's Income before income tax expense, Income tax expense and effective tax rate were as follows for each of the periods indicated:

Year ended December 31,[a] (in millions, except rate)	**2005**	2004	2003
Income before income tax expense	**$12,215**	$ 6,194	$10,028
Income tax expense	**3,732**	1,728	3,309
Effective tax rate	**30.6%**	27.9%	33.0%

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. 2003 reflects the results of heritage JPMorgan Chase only.

2005 compared with 2004

The increase in the effective tax rate was primarily the result of higher reported pre-tax income combined with changes in the proportion of income subject to federal, state and local taxes. Also contributing to the increase were lower 2005 nonoperating charges and a gain on the sale of BrownCo, which were taxed at marginal tax rates of 38% and 40%, respectively. These increases were offset partially by a tax benefit of $55 million recorded in connection with the repatriation of foreign earnings.

2004 compared with 2003

The reduction in the effective tax rate for 2004, as compared with 2003, was the result of various factors, including lower reported pre-tax income, a higher level of business tax credits, and changes in the proportion of income subject to federal, state and local taxes, partially offset by purchase accounting adjustments related to leveraged lease transactions. The Merger costs and accounting policy conformity adjustments recorded in 2004, and the Litigation reserve charge recorded in the second quarter of 2004, reflected a tax benefit at a 38% marginal tax rate, contributing to the reduction in the effective tax rate compared with 2003.

Explanation and reconciliation of the Firm's use of non-GAAP financial measures

The Firm prepares its Consolidated financial statements using accounting principles generally accepted in the United States of America ("U.S. GAAP"); these financial statements appear on pages 87–90 of this Annual Report. That presentation, which is referred to as "reported basis," provides the reader with an understanding of the Firm's results that can be tracked consistently from year to year and enables a comparison of the Firm's performance with other companies' U.S. GAAP financial statements.

In addition to analyzing the Firm's results on a reported basis, management reviews the Firm's and the lines' of business results on an operating basis, which is a non-GAAP financial measure. The Firm's definition of operating basis starts with the reported U.S. GAAP results. Operating basis excludes: (i) merger costs, (ii) the nonoperating litigation charges taken and insurance recoveries received with respect to certain of the Firm's material litigation; and (iii) costs related to the conformance of certain accounting policies as a result of the Merger. Management believes these items are not part of the Firm's normal daily business operations and, therefore, not indicative of trends, as they do not provide meaningful comparisons with other periods. For additional detail on nonoperating litigation charges, see the Glossary of terms on page 134 of this Annual Report.

In addition, the Firm manages its lines of business on an operating basis. In the case of the Investment Bank, noninterest revenue on an operating basis includes, in trading-related revenue, net interest income related to trading activities. Trading activities generate revenues, which are recorded for U.S. GAAP purposes in two line items on the income statement: trading revenue, which includes the mark-to-market gains or losses on trading positions; and net interest income, which includes the interest income or expense related to those positions. The impact of changes in market interest rates will either be recorded in Trading revenue or Net interest income depending on whether the trading position is a cash security or a derivative. Combining both the trading revenue and related net interest income allows management to evaluate the economic results of the Investment Bank's trading activities, which for GAAP purposes are reported in both Trading revenue and Net interest income. In management's view, this presentation also facilitates operating comparisons to competitors. For a discussion of trading-related revenue, see the IB on pages 36–38 of this Annual Report.

In the case of Card Services, operating basis is also referred to as "managed basis," and excludes the impact of credit card securitizations on total net revenue, the provision for credit losses, net charge-offs and loan receivables. This presentation is provided to facilitate operating comparisons to competitors. Through securitization, the Firm transforms a portion of its credit card receivables into securities, which are sold to investors. The credit card receivables are removed from the consolidated balance sheet through the transfer of the receivables to a trust, and the sale of undivided interests to investors that entitle the investors to specific cash flows generated from the credit card receivables. The Firm retains the remaining undivided interests as seller's interests, which are recorded in Loans on the Consolidated balance sheets. A gain or loss on the sale of credit card receivables to investors is recorded in Other income. Securitization also affects the Firm's Consolidated statements of income as interest income, certain fee revenue, recoveries in excess of interest paid to the investors, gross credit losses and other trust expenses related to the securitized receivables are all reclassified into credit card income. For a reconciliation of reported to managed basis of Card Services results, see page 46 of this Annual Report. For information regarding loans and residual interests sold and securitized, see Note 13 on pages 108–111 of this Annual Report. JPMorgan Chase uses the concept of "managed receivables" to evaluate the credit performance and overall financial performance of the underlying credit card loans, both sold and not sold: as the same borrower is continuing to use the credit card for ongoing charges, a borrower's credit performance will affect both the loan receivables sold under SFAS 140 and those not sold. Thus, in its disclosures regarding managed loan receivables, JPMorgan Chase treats the sold receivables as if they were still on the balance sheet in order to disclose the credit performance (such as net charge-off rates) of the entire managed credit card portfolio. In addition, Card Services operations are funded, operating results are evaluated, and decisions are made about allocating resources such as employees and capital based upon managed financial information.

Finally, commencing with the first quarter of 2005, operating revenue (noninterest revenue and net interest income) for each of the segments and the Firm is presented on a tax-equivalent basis. Accordingly, revenue from tax exempt securities and investments that receive tax credits are presented in the operating results on a basis comparable to taxable securities and investments. This non-GAAP financial measure allows management to assess the comparability of revenues arising from both taxable and tax-exempt sources. The corresponding income tax impact related to these items is recorded within income tax expense. The Corporate sector's and the Firm's operating revenue and income tax expense for the periods prior to the first quarter of 2005 have been restated to be similarly presented on a tax-equivalent basis. This restatement had no impact on the Corporate sector's or the Firm's operating earnings.

Management uses certain non-GAAP financial measures at the segment level because it believes these non-GAAP financial measures provide information to investors in understanding the underlying operational performance and trends of the particular business segment and facilitate a comparison of the business segment with the performance of competitors.

The following summary table provides a reconciliation from the Firm's reported GAAP results to operating results:

(Table continues on next page)

Year ended December 31,[a]	2005					2004				
(in millions, except per share and ratio data)	Reported results	Credit card[b]	Nonoperating items	Tax-equivalent adjustments	Operating basis	Reported results	Credit card[b]	Nonoperating items	Tax-equivalent adjustments	Operating basis
Revenue										
Investment banking fees	**$ 4,088**	**$ —**	**$ —**	**$ —**	**$ 4,088**	$ 3,537	$ —	$ —	$ —	$ 3,537

Nonoperating Items

The reconciliation of the Firm's reported results to operating results in the accompanying table sets forth the impact of several nonoperating items incurred by the Firm in 2005 and 2004. These nonoperating items are excluded from Operating earnings, as management believes these items are not part of the Firm's normal daily business operations and, therefore, not indicative of trends as they do not provide meaningful comparisons with other periods. These items include Merger costs, nonoperating litigation charges and insurance recoveries, and charges to conform accounting policies, each of which is described below:

(1) Merger costs of $722 million in 2005 and $1.4 billion in 2004 reflect costs associated with the Merger.

(2) Net nonoperating litigation charges of $2.6 billion and $3.7 billion were taken in 2005 and 2004, respectively.

(3) Other income in 2004 reflects $118 million of other accounting policy conformity adjustments.

(4) The Provision for credit losses in 2004 reflects $858 million of accounting policy conformity adjustments, consisting of a $1.4 billion charge related to the decertification of the seller's interest in credit card securitizations, partially offset by a benefit of $584 million related to conforming wholesale and consumer credit provision methodologies for the combined Firm.

Calculation of Certain GAAP and Non-GAAP Metrics

The table below reflects the formulas used to calculate both the following GAAP and non-GAAP measures:

Return on common equity

Reported	Net income* / Average common equity
Operating	Operating earnings* / Average common equity

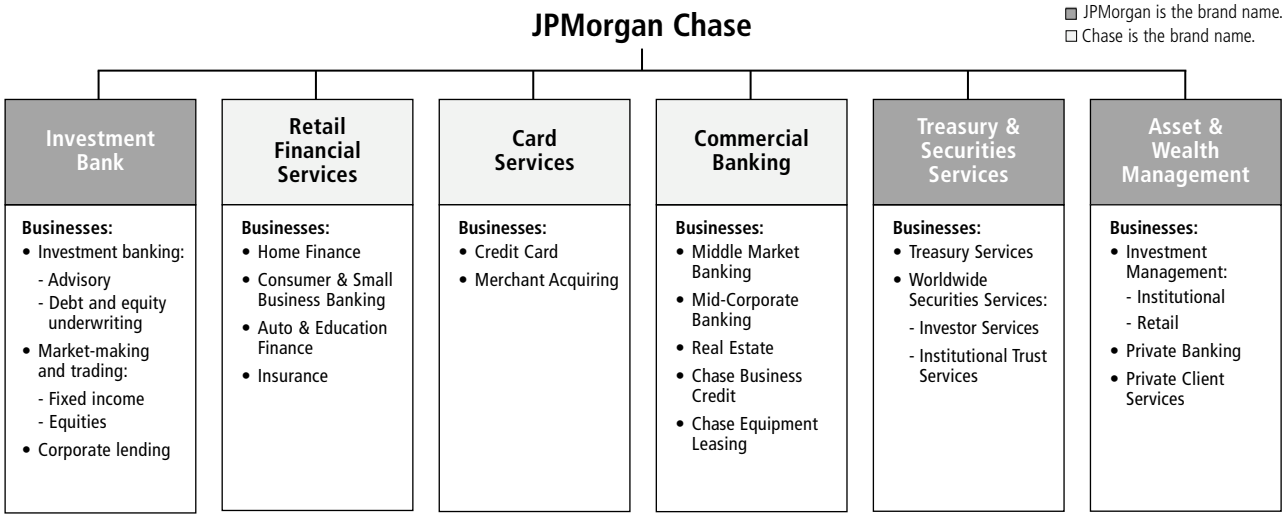
Return on equity less goodwill[a]

Reported	Net income* / Average common equity less goodwill
Operating	Operating earnings* / Average common equity less goodwill

Return on assets

Reported	Net income / Average assets
Operating	Operating earnings / Average managed assets

Overhead ratio



Reported	Total noninterest expense / Total net revenue
Operating	Total noninterest expense / Total net revenue

* Represents earnings applicable to common stock

(a) The Firm uses return on equity less goodwill, a non-GAAP financial measure, to evaluate the operating performance of the Firm. The Firm utilizes this measure to facilitate operating comparisons to competitors.

Business segment results

The Firm is managed on a line-of-business basis. The business segment financial results presented reflect the current organization of JPMorgan Chase. There are six major business segments: the Investment Bank, Retail Financial Services, Card Services, Commercial Banking, Treasury & Securities Services and Asset & Wealth Management, as well as a Corporate segment. The segments are based upon the products and services provided, or the type of customer served, and reflect the manner in which financial information is currently evaluated by management. Results of these lines of business are presented on an operating basis.

In connection with the Merger, business segment reporting was realigned to reflect the new business structure of the combined Firm. Treasury was transferred from the IB into Corporate. The segment formerly known as Chase Financial Services had been comprised of Chase Home Finance, Chase Cardmember Services, Chase Auto Finance, Chase Regional Banking and Chase Middle Market; as a result of the Merger, this segment is now called Retail Financial Services and is comprised of Home Finance, Auto & Education Finance, Consumer & Small Business Banking and Insurance. Chase Cardmember Services is now its own segment called Card Services, and Chase Middle Market moved into Commercial Banking. Investment Management & Private Banking was renamed Asset & Wealth Management. JPMorgan Partners, which formerly was a stand-alone business segment, was moved into Corporate. Corporate currently comprises Private Equity (JPMorgan Partners and ONE Equity Partners) and Treasury, and the corporate support areas, which include Central Technology and Operations, Audit, Executive Office, Finance, Human Resources, Marketing & Communications, Office of the General Counsel, Corporate Real Estate and General Services, Risk Management, and Strategy and Development. Beginning January 1, 2006, TSS will report results for two divisions: TS and WSS. WSS was formed by consolidating IS and ITS.

Segment results for periods prior to July 1, 2004, reflect heritage JPMorgan Chase-only results and have been restated to reflect the current business segment organization and reporting classifications.

Segment results – Operating basis[(a)(b)]

(Table continues on next page)

Year ended December 31, (in millions, except ratios)	Total net revenue			Noninterest expense		
	2005	2004	Change	**2005**	2004	Change

(a) Represents reported results on a tax-equivalent basis and excludes the impact of credit card securitizations; Merger costs, litigation reserve charges and insurance recoveries deemed nonoperating; and accounting policy conformity adjustments related to the Merger.
(b) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.
(c) As a result of the Merger, new capital allocation methodologies were implemented during the third quarter of 2004. The capital allocated to each line of business considers several factors: stand-alone peer comparables, economic risk measures and regulatory capital requirements. In addition, effective with the third quarter of 2004, goodwill, as well as the associated capital, is only allocated to the Corporate line of business. Prior periods have not been revised to reflect these new methodologies and are not comparable to the presentation beginning in the third quarter of 2004.

Description of business segment reporting methodology

Results of the business segments are intended to reflect each segment as if it were essentially a stand-alone business. The management reporting process that derives these results allocates income and expense using market-based methodologies. Effective with the Merger on July 1, 2004, several of the allocation methodologies were revised, as noted below. As prior periods have not been revised to reflect these new methodologies, they are not comparable to the presentation of periods beginning with the third quarter of 2004. Further, the Firm continues to assess the assumptions, methodologies and reporting reclassifications used for segment reporting, and further refinements may be implemented in future periods.

Revenue sharing

When business segments join efforts to sell products and services to the Firm's clients, the participating business segments agree to share revenues from those transactions. These revenue-sharing agreements were revised on the Merger date to provide consistency across the lines of business.

Funds transfer pricing

Funds transfer pricing ("FTP") is used to allocate interest income and expense to each business and transfer the primary interest rate risk exposures to Corporate. The allocation process is unique to each business and considers the interest rate risk, liquidity risk and regulatory requirements of its stand-alone peers. Business segments may retain certain interest rate exposures, subject to management approval, that would be expected in the normal operation of a similar peer business. In the third quarter of 2004, FTP was revised to conform the policies of the combined firms.

Expense allocation

Where business segments use services provided by support units within the Firm, the costs of those support units are allocated to the business segments. Those expenses are allocated based upon their actual cost, or the lower of actual cost or market cost, as well as upon usage of the services provided. Effective with the third quarter of 2004, the cost allocation methodologies of the heritage firms were aligned to provide consistency across the business segments. In addition, expenses related to certain corporate functions, technology and operations ceased to be allocated to the business segments and are retained in Corporate. These retained expenses include parent company costs that would not be incurred if the segments were stand-alone businesses; adjustments to align certain corporate staff, technology and operations allocations with market prices; and other one-time items not aligned with the business segments. During 2005, the Firm refined cost allocation methodologies related to certain corporate functions, technology and operations expenses in order to improve transparency, consistency and accountability with regard to costs allocated across business segments. Prior periods have not been revised to reflect these new cost allocation methodologies.

Capital allocation

Each business segment is allocated capital by taking into consideration stand-alone peer comparisons, economic risk measures and regulatory capital requirements. The amount of capital assigned to each business is referred to as equity. At the time of the Merger, goodwill, as well as the associated capital, was allocated solely to Corporate. Effective January 2006, the Firm expects to refine its methodology for allocating capital to the business segments to include any goodwill associated with line of business-directed acquisitions since the Merger. U.S. GAAP requires the allocation of goodwill to the business segments for impairment testing (see Critical accounting estimates used by the Firm and Note 15 on pages 81–83 and 114–116, respectively, of this Annual Report). See the Capital management section on page 56 of this Annual Report for a discussion of the equity framework.

Credit reimbursement

TSS reimburses the IB for credit portfolio exposures the IB manages on behalf of clients the segments share. At the time of the Merger, the reimbursement methodology was revised to be based upon pre-tax earnings, net of the cost of capital related to those exposures. Prior to the Merger, the credit reimbursement was based upon pre-tax earnings, plus the allocated capital associated with the shared clients.

Tax-equivalent adjustments

Segment and Firm results reflect revenues on a tax-equivalent basis for segment reporting purposes. Refer to Explanation and reconciliation of the Firm's non-GAAP financial measures on page 31 of this Annual Report for additional details.

Investment Bank

JPMorgan Chase is one of the world's leading investment banks, as evidenced by the breadth of its client relationships and product capabilities. The Investment Bank has extensive relationships with corporations, financial institutions, governments and institutional investors worldwide. The Firm provides a full range of investment banking products and services in all major capital markets, including advising on corporate strategy and structure, capital raising in equity and debt markets, sophisticated risk management, and market-making in cash securities and derivative instruments. The Investment Bank also commits the Firm's own capital to proprietary investing and trading activities.

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. 2003 reflects the results of heritage JPMorgan Chase only.
(b) Trading revenue, on a reported basis, excludes the impact of Net interest income related to IB's trading activities; this income is recorded in Net interest income. However, in this presentation, to assess the profitability of IB's trading business, the Firm combines these revenues for segment reporting purposes. The amount reclassified from Net interest income to Trading revenue was $0.2 billion, $1.9 billion and $2.1 billion for 2005, 2004 and 2003, respectively. The decline from prior years is due to tightening spreads as short-term funding rates have risen sharply and also, to a lesser extent, increased funding costs from growth in noninterest-bearing trading assets.
(c) Total net revenue includes tax-equivalent adjustments, primarily due to tax-exempt income from municipal bond investments and income tax credits related to affordable housing investments, of $752 million, $274 million and $117 million for 2005, 2004 and 2003, respectively.
(d) TSS is charged a credit reimbursement related to certain exposures managed within the IB credit portfolio on behalf of clients shared with TSS. For a further discussion, see Credit reimbursement on page 35 of this Annual Report.

The following table provides the IB's total net revenue by business segment:

Year ended December 31,[a] (in millions)	2005	2004	2003
Revenue by business			
Investment banking fees	**$ 4,096**	$ 3,572	$ 2,871
Fixed income markets	**7,242**	6,314	6,987
Equities markets	**1,799**	1,491	1,406
Credit portfolio	**1,441**	1,228	1,420
Total net revenue	**$ 14,578**	$ 12,605	$ 12,684

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. 2003 reflects the results of heritage JPMorgan Chase only.

2005 compared with 2004

Operating earnings of $3.7 billion were up 24%, or $710 million, from the prior year. The increase was driven by the Merger, higher revenues and an increased benefit from the Provision for credit losses. These factors were partially offset by higher compensation expense. Return on equity was 18%.

Net revenue of $14.6 billion was up $2.0 billion, or 16%, over the prior year, representing the IB's highest annual revenue since 2000, driven by strong Fixed Income and Equity Markets and Investment banking fees. Investment banking fees of $4.1 billion increased 15% from the prior year driven by strong growth in advisory fees resulting in part from the Cazenove business partnership. Advisory revenues of $1.3 billion were up 35% from the prior year, reflecting higher market volumes. Debt underwriting revenues of $2.0 billion increased by 6% driven by strong loan syndication fees. Equity underwriting fees of $864 million were up 11% from the prior year driven by improved market share. Fixed Income Markets revenue of $7.2 billion increased 15%, or $928 million, driven by stronger, although volatile, trading results across commodities, emerging markets, rate markets and currencies. Equities Markets revenues increased 21% to $1.8 billion, primarily due to increased commissions, which were offset partially by lower trading results, which also experienced a high level of volatility. Credit Portfolio revenues were $1.4 billion, up $213 million from the prior year due to higher gains from loan workouts and sales as well as higher trading revenue from credit risk management activities.

The Provision for credit losses was a benefit of $838 million compared with a benefit of $640 million in 2004. The increased benefit was due primarily to the improvement in the credit quality of the loan portfolio and reflected net recoveries. Nonperforming assets of $645 million decreased by 46% since the end of 2004.

Noninterest expense increased 12% to $9.7 billion, largely reflecting higher performance-based incentive compensation related to growth in revenue. Noncompensation expense was up 4% from the prior year primarily due to the impact of the Cazenove business partnership, while the overhead ratio declined to 67% for 2005, from 69% in 2004.

2004 compared with 2003

In 2004, Operating earnings of $2.9 billion were up 5% from the prior year. Increases in Investment banking fees, the improvement in the Provision for credit losses and the impact of the Merger were partially offset by decreases in trading revenues and net interest income. Return on equity was 17% for 2004.

Total net revenue of $12.6 billion was relatively flat from the prior year, primarily due to lower Fixed income markets revenues and Credit portfolio revenues, offset by increases in Investment banking fees and the impact of the Merger. The decline in revenue from Fixed income markets was driven by weaker portfolio management trading results, mainly in the interest rate markets business. Credit portfolio revenues were down due to lower net interest income,

primarily driven by lower loan balances; these factors were partially offset by higher trading revenue due to more severe credit spread tightening in 2003 relative to 2004. Investment banking fees increased by 24% over the prior year, driven by significant gains in advisory and debt underwriting. The advisory gains were a result of increased global market volumes and market share, while the higher underwriting fees were due to stronger client activity.

The Provision for credit losses was a benefit of $640 million, compared with a benefit of $181 million in 2003. The improvement in the provision was the result of a $633 million decline in net charge-offs, partially offset by lower reductions in the allowance for credit losses in 2004 relative to 2003.

For the year ended December 31, 2004, Noninterest expense was up 5% from the prior year. The increase from 2003 was driven by higher Compensation expense, resulting from strategic investments and the impact of the Merger.

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. 2003 reflects the results of heritage JPMorgan Chase only.
(b) Loans retained include Credit Portfolio, Conduit loans, leverage leases, bridge loans for underwriting and other accrual loans.
(c) Loans held-for-sale, which include warehouse loans held as part of the IB's mortgage-backed, asset-backed and other securitization businesses, are excluded from Total loans for the allowance coverage ratio and net charge-off rate.
(d) Adjusted assets, a non-GAAP financial measure, equals total average assets minus (1) securities purchased under resale agreements and securities borrowed less securities sold, not yet purchased; (2) assets of variable interest entities (VIEs) consolidated under FIN 46R; (3) cash and securities segregated and on deposit for regulatory and other purposes; and (4) goodwill and intangibles. The amount of adjusted assets is presented to assist the reader in comparing the IB's asset and capital levels to other investment banks in the securities industry. Asset-to-equity leverage ratios are commonly used as one measure to assess a company's capital adequacy. The IB believes an adjusted asset amount, which excludes certain assets considered to have a low risk profile, provides a more meaningful measure of balance sheet leverage in the securities industry.
(e) Equity includes $15.0 billion, $15.0 billion and $14.6 billion of economic risk capital assigned to the IB for the years ended 2005, 2004 and 2003 respectively.
(f) Nonperforming loans include loans held-for-sale of $109 million, $2 million and $30 million as of December 31, 2005, 2004 and 2003, respectively. These amounts are not included in the allowance coverage ratios.
(g) Includes all fixed income mark-to-market trading activities, plus available-for-sale securities held for proprietary purposes.
(h) Includes VAR on derivative credit valuation adjustments, credit valuation adjustment hedges and mark-to-market hedges of the accrual loan portfolio, which are all reported in Trading revenue. This VAR does not include the accrual loan portfolio, which is not marked to market.
(i) Average VARs are less than the sum of the VARs of its market risk components, due to risk offsets resulting from portfolio diversification. The diversification effect reflects the fact that the risks are not perfectly correlated. The risk of a portfolio of positions is therefore usually less than the sum of the risks of the positions themselves.

According to Thomson Financial, in 2005, the Firm improved its ranking in U.S. Debt, Equity and Equity-related from #5 in 2004 to #4 and in U.S. Equity and Equity-related from #6 in 2004 to #5. The Firm maintained its #3 position in Global Announced M&A with 24% market share and its #1 position in Global Syndicated Loans. The Firm maintained its #2 ranking in U.S. Long-Term Debt, but dropped from #2 to #4 in Global Long-Term Debt.

According to Dealogic, the Firm was ranked #2 in Investment Banking fees generated during 2005.

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. 2003 reflects the results of heritage JPMorgan Chase only.

IB revenues comprise the following:

Investment banking fees includes advisory, equity underwriting, bond underwriting and loan syndication fees.

Fixed income markets includes client and portfolio management revenue related to both market-making and proprietary risk-taking across global fixed income markets, including government and corporate debt, foreign exchange, interest rate and commodities markets.

Equities markets includes client and portfolio management revenue related to market-making and proprietary risk-taking across global equity products, including cash instruments, derivatives and convertibles.

Credit portfolio revenue includes Net interest income, fees and loan sale activity, as well as gains or losses on securities received as part of a loan restructuring, for IB's credit portfolio. Credit portfolio revenue also includes the results of risk management related to the Firm's lending and derivative activities, and changes in the credit valuation adjustment ("CVA"), which is the component of the fair value of a derivative that reflects the credit quality of the counterparty. See pages 69–70 of the Credit risk management section of this Annual Report for a further discussion.

Retail Financial Services

RFS includes Home Finance, Consumer & Small Business Banking, Auto & Education Finance and Insurance. Through this group of businesses, the Firm provides consumers and small businesses with a broad range of financial products and services including deposits, investments, loans and insurance. Home Finance is a leading provider of consumer real estate loan products and is one of the largest originators and servicers of home mortgages. Consumer & Small Business Banking offers one of the largest branch networks in the United States, covering 17 states with 2,641 branches and 7,312 automated teller machines ("ATMs"). Auto & Education Finance is the largest noncaptive originator of automobile loans as well as a top provider of loans for college students. Through its Insurance operations, the Firm sells and underwrites an extensive range of financial protection products and investment alternatives, including life insurance, annuities and debt protection products.

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. 2003 reflects the results of heritage JPMorgan Chase only.
(b) 2005 includes a $250 million special provision related to Hurricane Katrina allocated as follows: $140 million in Consumer Real Estate Lending, $90 million in Consumer & Small Business Banking and $20 million in Auto & Education Finance.

2005 compared with 2004

Operating earnings were $3.4 billion, up $1.2 billion from the prior year. The increase was due largely to the Merger but also reflected increased deposit balances and wider spreads, higher home equity and subprime mortgage balances, and expense savings in all businesses. These benefits were partially offset by narrower spreads on retained loan portfolios, the special provision for Hurricane Katrina and net losses associated with portfolio loan sales in the Home Finance and Auto businesses.

Net revenue increased to $14.8 billion, up $4.0 billion, or 37%, due primarily to the Merger. Net interest income of $10.2 billion increased by $2.5 billion as a result of the Merger, increased deposit balances and wider spreads, and growth in retained consumer real estate loans. These benefits were offset partially by narrower spreads on loan balances and the absence of loan portfolios sold in late 2004 and early 2005. Noninterest revenue of $4.6 billion increased by $1.5 billion due to the Merger, improved MSR risk management results, higher automobile operating lease income and increased banking fees. These benefits were offset in part by losses on portfolio loan sales in the Home Finance and Auto businesses.

The Provision for credit losses totaled $724 million, up $275 million, or 61%, from 2004. Results included a special provision in 2005 for Hurricane Katrina of $250 million and a release in 2004 of $87 million in the Allowance for loan losses related to the sale of the manufactured home loan portfolio. Excluding these items, the Provision for credit losses would have been down $62 million, or 12%. The decline reflected reductions in the Allowance for loan losses due to improved credit trends in most consumer lending portfolios and the benefit of certain portfolios in run-off. These reductions were partially offset by the Merger and higher provision expense related to the decision to retain subprime mortgage loans.

Noninterest expense rose to $8.6 billion, an increase of $1.8 billion from the prior year, due primarily to the Merger. The increase also reflected continued investment in retail banking distribution and sales, increased depreciation expense on owned automobiles subject to operating leases and a $40 million charge related to the dissolution of a student loan joint venture. Expense savings across all businesses provided a favorable offset.

2004 compared with 2003

Operating earnings were $2.2 billion, up from $1.5 billion a year ago. The increase was due largely to the Merger. Excluding the benefit of the Merger, earnings declined as lower MSR risk management results and reduced prime mortgage production revenue offset the benefits of growth in loan balances, wider spreads on deposit products and improvement in credit costs.

Total net revenue increased to $10.8 billion, up 45% from the prior year. Net interest income increased by 48% to $7.7 billion, primarily due to the Merger, growth in retained loan balances and wider spreads on deposit products. Noninterest revenue increased to $3.1 billion, up 39%, due to the Merger and higher mortgage servicing income. Both components of total revenue included declines associated with risk managing the MSR asset and lower prime mortgage originations.

The Provision for credit losses was down 14% to $449 million despite the impact of the Merger. The effect of the Merger was offset by a reduction in the Allowance for loan losses resulting from the sale of the manufactured home loan portfolio, and continued positive credit quality trends in the consumer lending businesses.

Noninterest expense totaled $6.8 billion, up 53% from the prior year, primarily due to the Merger and continued investment to expand the branch network. Partially offsetting the increase were merger-related expense savings in all businesses.

(d) Average loans include loans held for sale of $15,675 million, $14,736 million and $25,293 million for 2005, 2004 and 2003, respectively. These amounts are not included in the net charge-off rate.
(e) Includes $406 million of charge-offs related to the manufactured home loan portfolio in 2004.
(f) Nonperforming loans include loans held for sale of $27 million, $13 million and $45 million at December 31, 2005, 2004 and 2003, respectively. These amounts are not included in the allowance coverage ratios.

Home Finance

Home Finance is comprised of two key business segments: Prime Production & Servicing and Consumer Real Estate Lending. The Prime Production & Servicing segment includes the operating results associated with the origination, sale and servicing of prime mortgages. Consumer Real Estate Lending reflects the operating results of consumer loans that are secured by real estate, retained by the Firm and held in the portfolio. This portfolio includes prime and subprime first mortgages, home equity lines and loans, and manufactured home loans. The Firm stopped originating manufactured home loans early in 2004 and sold substantially all of its remaining portfolio in 2004.

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. 2003 reflects the results of heritage JPMorgan Chase only.
(b) For additional information, see page 42 of this Annual Report.

2005 compared with 2004

Operating earnings were $1.4 billion, up $236 million from the prior year, primarily due to the Merger, higher loan balances, reduced expenses and improved MSR risk management results.

Operating earnings for the Prime Production & Servicing segment totaled $422 million, up $182 million from the prior year. Net revenue of $1.6 billion increased by $118 million, reflecting improved MSR risk management results. The increase in MSR risk management results was due in part to the absence of prior-year securities losses on repositioning of the risk management asset. Decreased mortgage production revenue attributable to lower volume partially offset this benefit. Noninterest expense of $943 million decreased by $172 million, reflecting lower production volume and operating efficiencies.

Operating earnings for the Consumer Real Estate Lending segment increased by $54 million to $935 million. The current year included a loss of $120 million associated with the transfer of $3.3 billion of mortgage loans to held-for-sale, and a $140 million special provision related to Hurricane Katrina. Prior-year results included a $95 million net benefit associated with the sale of a $4.0 billion manufactured home loan portfolio and a $52 million charge related to a transfer of adjustable rate mortgage loans to held-for-sale. Excluding the after-tax impact of these items, earnings would have been up $242 million, reflecting the Merger, higher loan balances and lower expenses, partially offset by loan spread compression due to rising short-term interest rates and a flat yield curve, which contributed to accelerated home equity loan payoffs.

Home Finance uses a combination of derivatives, AFS securities and trading securities to manage changes in the fair value of the MSR asset. These risk management activities are intended to protect the economic value of the MSR asset by providing offsetting changes in the fair value of the related risk management instruments. The type and amount of instruments used in this risk management activity change over time as market conditions and approach dictate.

During 2005, positive MSR valuation adjustments of $777 million were partially offset by losses of $494 million on risk management instruments, including net interest earned on AFS securities. In 2004, negative MSR valuation adjustments of $248 million were more than offset by $361 million of aggregate risk management gains, including net interest earned on AFS securities. Unrealized losses on AFS securities were $174 million, $3 million and $144 million at December 31, 2005, 2004 and 2003, respectively. For a further discussion of MSRs, see Critical accounting estimates on page 83 and Note 15 on pages 114–116 of this Annual Report.

2004 compared with 2003

Operating earnings in the Prime Production & Servicing segment dropped to $240 million from $918 million in the prior year. Results reflected a decrease in prime mortgage production revenue, to $728 million from $1.3 billion, due to a decline in mortgage originations. Operating earnings were also adversely affected by a drop in MSR risk management revenue, to $113 million from $784 million in the prior year. Results in 2004 included realized losses of $89 million on the sale of AFS securities associated with the risk management of the MSR asset, compared with securities gains of $359 million in the prior year. Noninterest expense was relatively flat at $1.1 billion.

Operating earnings for the Consumer Real Estate Lending segment more than doubled to $881 million from $414 million in the prior year. The increase was largely due to the addition of the Bank One home equity lending business but also reflected growth in retained loan balances and a $95 million net benefit associated with the sale of the $4 billion manufactured home loan portfolio; partially offsetting these increases were lower subprime mortgage securitization gains as a result of management's decision in 2004 to retain these loans. These factors contributed to total net revenue rising 61% to $2.4 billion. The provision for credit losses, at $74 million, decreased by 69% from a year ago. This improvement was the result of an $87 million reduction in the allowance for loan losses associated with the manufactured home loan portfolio sale, improved credit quality and lower delinquencies, partially offset by the Merger. Noninterest expense totaled $922 million, up 52% from the year-ago period, largely due to the Merger.

Home Finance's origination channels are comprised of the following:

Retail – Borrowers who are buying or refinancing a home are directly contacted by a mortgage banker employed by the Firm using a branch office, the Internet or by phone. Borrowers are frequently referred to a mortgage banker by real estate brokers, home builders or other third parties.

Wholesale – A third-party mortgage broker refers loan applications to a mortgage banker at the Firm. Brokers are independent loan originators that specialize in finding and counseling borrowers but do not provide funding for loans.

Correspondent – Banks, thrifts, other mortgage banks and other financial institutions sell closed loans to the Firm.

Correspondent negotiated transactions ("CNT") – Mid- to large-sized mortgage lenders, banks and bank-owned mortgage companies sell servicing to the Firm on an as-originated basis. These transactions supplement traditional production channels and provide growth opportunities in the servicing portfolio in stable and rising-rate periods.

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. 2003 reflects the results of heritage JPMorgan Chase only.
(b) Includes prime first mortgage loans and subprime loans.
(c) Excludes delinquencies related to loans eligible for repurchase as well as loans repurchased from GNMA pools that are insured by government agencies of $0.9 billion, $0.9 billion and $0.1 billion, for December 31, 2005, 2004 and 2003, respectively. These amounts are excluded as reimbursement is proceeding normally.
(d) Includes $406 million of charge-offs related to the manufactured home loan portfolio in 2004.
(e) Excludes mortgage loans held for sale.
(f) Excludes nonperforming assets related to loans eligible for repurchase as well as loans repurchased from GNMA pools that are insured by government agencies of $1.1 billion, $1.5 billion and $2.3 billion for December 31, 2005, 2004 and 2003, respectively. These amounts are excluded as reimbursement is proceeding normally.

The table below reconciles management's disclosure of Home Finance's revenue into the reported U.S. GAAP line items shown on the Consolidated statements of income and in the related Notes to Consolidated financial statements:

Year ended December 31,[a] (in millions)	Prime production and servicing			Consumer real estate lending			Total revenue		
	2005	2004	2003	**2005**	2004	2003	**2005**	2004	2003
Net interest income	**$ 426**	$ 700	$ 1,556	**$ 2,672**	$ 2,245	$1,226	**$ 3,098**	$ 2,945	$ 2,782
Securities / private equity gains (losses)	**3**	(89)	359	**—**	—	—	**3**	(89)	359
Mortgage fees and related income[b]	**1,181**	881	661	**32**	131	247	**1,213**	1,012	908
Total	**$ 1,610**	$ 1,492	$ 2,576	**$ 2,704**	$ 2,376	$1,473	**$ 4,314**	$ 3,868	$ 4,049

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. 2003 reflects the results of heritage JPMorgan Chase only.
(b) Includes activity reported elsewhere as Other income.

The following table details the MSR risk management results in the Home Finance business:

MSR risk management results

Year ended December 31,[a] (in millions)	**2005**	2004	2003
Reported amounts:			
MSR valuation adjustments[b]	**$ 777**	$ (248)	$ (253)
Derivative valuation adjustments and other risk management gains (losses)[c]	**(494)**	361	1,037
MSR risk management results	**$ 283**	$ 113	$ 784

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. 2003 reflects the results of heritage JPMorgan Chase only.
(b) Excludes subprime loan MSR activity of $(7) million and $(2) million in 2005 and 2004, respectively. There was no subprime loan MSR activity in 2003.
(c) Includes gains, losses and interest income associated with derivatives, both designated and not designated, as a SFAS 133 hedge, and securities classified as both trading and available-for-sale.

Consumer & Small Business Banking

Consumer & Small Business Banking offers a full array of financial services through a branch network spanning 17 states as well as through the Internet. Product offerings include checking and savings accounts, mutual funds and annuities, credit cards, mortgages and home equity loans, and loans for small business customers (customers with annual sales generally less than $10 million).

Selected income statement data

Year ended December 31,[a] (in millions)	**2005**	2004	2003
Noninterest revenue	**$ 2,929**	$ 1,864	$ 828
Net interest income	**5,476**	3,521	1,594
Total net revenue	**8,405**	5,385	2,422
Provision for credit losses	**214**	165	76
Noninterest expense	**5,431**	3,981	2,358
Operating earnings (loss)	**1,684**	760	(4)

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. 2003 reflects the results of heritage JPMorgan Chase only.

2005 compared with 2004

Operating earnings totaled $1.7 billion, up $924 million from the prior year. While growth largely reflected the Merger, results also included increased deposit balances and wider spreads, as well as higher debit card and other banking fees. These factors contributed to net revenue increasing to $8.4 billion from $5.4 billion in the prior year. The Provision for credit losses of $214 million increased by $49 million; excluding the special provision of $90 million related to Hurricane Katrina, the Provision would have decreased by $41 million from the prior year, reflecting lower net charge-offs and improved credit quality trends. Noninterest expense increased by $1.5 billion to $5.4 billion, as a result of the Merger and continued investment in branch distribution and sales, partially offset by merger efficiencies.

2004 compared with 2003

Operating earnings totaled $760 million, up from a loss of $4 million in the prior-year period. The increase was largely due to the Merger but also reflected wider spreads on deposits and lower expenses. These benefits were partially offset by a higher Provision for credit losses.

Total net revenue was $5.4 billion, compared with $2.4 billion in the prior year. While the increase was primarily attributable to the Merger, total net revenue also benefited from wider spreads on deposits.

The Provision for credit losses increased to $165 million from $76 million in the prior year. The increase was in part due to the Merger but also reflected an increase in the allowance for credit losses to cover high-risk portfolio segments.

The increase in Noninterest expense to $4.0 billion was largely attributable to the Merger. Incremental expense from investment in the branch distribution network was also a contributing factor.

Auto & Education Finance

Auto & Education Finance provides automobile loans and leases to consumers and loans to commercial clients, primarily through a national network of automotive dealers. The segment is also a top provider of loans to students at colleges and universities across the United States.

Selected income statement data

Year ended December 31,[a] (in millions)	2005	2004	2003
Total net revenue	**$ 1,467**	$ 1,145	$ 842
Provision for credit losses	**212**	210	205
Noninterest expense	**751**	490	291
Operating earnings	**307**	270	206

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. 2003 reflects the results of heritage JPMorgan Chase only.

2005 compared with 2004

Operating earnings were $307 million, up $37 million from the prior year. The current year included a net loss of $83 million associated with a $2.3 billion auto loan securitization; a net loss of $42 million associated with a $1.5 billion auto loan securitization; a $40 million charge related to the dissolution of a student loan joint venture; a benefit of $34 million from the sale of a $2 billion recreational vehicle loan portfolio; and the $20 million special provision for credit losses related to Hurricane Katrina. The prior-year results included charges of $65 million related to auto lease residuals. Excluding the after-tax impact of these items, operating earnings would have increased by $90 million over the prior year, primarily due to the Merger and improved credit quality. Results continued to reflect lower production volumes and narrower spreads.

2004 compared with 2003

Operating earnings totaled $270 million, up 31% from the prior year. The increase was due to the Merger, offset by narrower spreads and reduced origination volumes reflecting a competitive operating environment.

Total net revenue increased by 36% to $1.1 billion from the prior year. This increase was due to the Merger, which more than offset a decline in net interest income, reflecting the competitive operating environment in 2004, and incremental charges associated with the Firm's auto lease residual exposure.

The following is a brief description of selected terms used by Consumer & Small Business Banking.

- **Personal bankers –** Retail branch office personnel who acquire, retain and expand new and existing customer relationships by assessing customer needs and recommending and selling appropriate banking products and services.
- **Investment sales representatives –** Licensed retail branch sales personnel, assigned to support several branches, who assist with the sale of investment products including college planning accounts, mutual funds, annuities and retirement accounts.

The Provision for credit losses totaled $210 million, up 2% from the prior year. The increase was due to the Merger but was largely offset by a lower Provision for credit losses, reflecting favorable credit trends.

Noninterest expense increased by 68% to $490 million, largely due to the Merger.

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. 2003 reflects the results of heritage JPMorgan Chase only.
(b) Includes operating lease-related assets of $0.9 billion for 2005. Balances prior to January 1, 2005, were insignificant.
(c) Average loans include loans held for sale of $3.5 billion, $2.3 billion and $1.8 billion for, 2005, 2004 and 2003, respectively. These are not included in the net charge-off rate.
(d) Includes operating lease-related assets of $0.4 billion for 2005. Balances prior to January 1, 2005, were insignificant. These are not included in the net charge-off rate.

Insurance

Insurance is a provider of financial protection products and services, including life insurance, annuities and debt protection. Products and services are distributed through both internal lines of business and external markets. On February 7, 2006, the Firm signed a definitive agreement to sell its life insurance and annuity underwriting business.

Selected income statement data

Year ended December 31,[a] (in millions)	2005	2004	2003
Total net revenue	**$ 644**	$ 393	$ 115
Noninterest expense	**520**	317	92
Operating earnings	**79**	48	13
Memo: Consolidated gross insurance-related revenue[b]	**1,642**	1,191	611

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. 2003 reflects the results of heritage JPMorgan Chase only.
(b) Includes revenue reported in the results of other businesses.

2005 compared with 2004

Operating earnings totaled $79 million, an increase of $31 million from the prior year, on net revenues of $644 million. The increase was due primarily to the Merger. Results also reflected an increase in proprietary annuity sales commissions paid and lower expenses from merger savings and other efficiencies.

2004 compared with 2003

Operating earnings totaled $48 million on Total net revenue of $393 million in 2004. The increases in Total net revenue and Noninterest expense over the prior year were due almost entirely to the Merger.

Selected metrics

Year ended December 31,[a] (in millions, except where otherwise noted)	2005	2004	2003
Business metrics – ending balances			
Invested assets	**$ 7,767**	$ 7,368	$ 1,559

A.M. Best rating	**A**	A	A

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. 2003 reflects the results of heritage JPMorgan Chase only.

The following is a brief description of selected business metrics within Insurance.

- **Proprietary annuity sales** represent annuity contracts marketed through and issued by subsidiaries of the Firm.
- **Insurance in force – direct/assumed** includes the aggregate face amount of insurance policies directly underwritten and assumed through reinsurance.
- **Insurance in force – retained** includes the aggregate face amounts of insurance policies directly underwritten and assumed through reinsurance, after reduction for face amounts ceded to reinsurers.

Card Services

Card Services is one of the largest issuers of credit cards in the United States, with more than 110 million cards in circulation, and is the largest merchant acquirer. CS offers a wide variety of products to satisfy the needs of its cardmembers, including cards issued on behalf of many well-known partners, such as major airlines, hotels, universities, retailers and other financial institutions.

JPMorgan Chase uses the concept of "managed receivables" to evaluate the credit performance of the underlying credit card loans, both sold and not sold: as the same borrower is continuing to use the credit card for ongoing charges, a borrower's credit performance will affect both the receivables sold under SFAS 140 and those not sold. Thus, in its disclosures regarding managed receivables, JPMorgan Chase treats the sold receivables as if they were still on the balance sheet in order to disclose the credit performance (such as net charge-off rates) of the entire managed credit card portfolio.

Operating results exclude the impact of credit card securitizations on revenue, the Provision for credit losses, net charge-offs and receivables. Securitization does not change reported Net income versus operating earnings; however, it does affect the classification of items on the Consolidated statements of income.

Selected income statement data – managed basis

Financial metrics			
ROE	**16%**	17%	20%
Overhead ratio	**33**	36	35

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. 2003 reflects the results of heritage JPMorgan Chase only.
(b) As a result of the integration of Chase Merchant Services and Paymentech merchant processing businesses into a joint venture, beginning in the fourth quarter of 2005, Total net revenue, Noninterest expense and pre-tax earnings have been reduced to reflect the deconsolidation of Paymentech. There is no impact to operating earnings.
(c) 2005 includes a $100 million special provision related to Hurricane Katrina.

2005 compared with 2004

Operating earnings of $1.9 billion were up $633 million, or 50%, from the prior year due to the Merger. In addition, lower expenses driven by merger savings, stronger underlying credit quality and higher revenue from increased loan balances and charge volume were partially offset by the impact of increased bankruptcies.

Net revenue was $15.4 billion, up $4.6 billion, or 43%. Net interest income was $11.8 billion, up $3.4 billion, or 41%, primarily due to the Merger, and the acquisition of a private label portfolio. In addition, higher loan balances were partially offset by narrower loan spreads and the reversal of revenue related to increased bankruptcies. Noninterest revenue of $3.6 billion was up $1.2 billion, or 50%, due to the Merger and higher interchange income from higher charge volume, partially offset by higher volume-driven payments to partners, higher expense related to rewards programs and the impact of the deconsolidation of Paymentech.

The Provision for credit losses was $7.3 billion, up $2.5 billion, or 51%, primarily due to the Merger, and included the acquisition of a private label portfolio. The provision also increased due to record bankruptcy-related net charge-offs resulting from the new bankruptcy legislation, which became effective on October 17, 2005. Finally, the Allowance for loan losses was increased in part by the special provision for credit losses related to Hurricane Katrina. These factors were partially offset by lower contractual net charge-offs. Despite a record level of bankruptcy losses, the net charge-off rate improved. The managed net charge-off rate was 5.21%, down from 5.27% in the prior year. The 30-day managed delinquency rate was 2.79%, down from 3.70% in the prior year, driven primarily by accelerated loss recognition of delinquent accounts as a result of the bankruptcy reform legislation and strong underlying credit quality.

Noninterest expense of $5.0 billion increased by $1.1 billion, or 29%, primarily due to the Merger, which included the acquisition of a private label portfolio. Merger savings, including lower processing and compensation costs and the impact of the deconsolidation of Paymentech, were partially offset by higher spending on marketing.

2004 compared with 2003

Operating earnings of $1.3 billion increased by $591 million compared with the prior year, primarily due to the Merger. In addition, earnings benefited from higher loan balances and charge volume, partially offset by a higher Provision for credit losses and higher expenses.

Total net revenue of $10.7 billion increased by $4.6 billion. Net interest income of $8.4 billion increased by $3.3 billion, primarily due to the Merger and higher loan balances. Noninterest revenue of $2.4 billion increased by $1.3 billion, primarily due to the Merger and increased interchange income resulting from higher charge-off volume. These factors were partially offset by higher volume-driven payments to partners, reflecting the sharing of income and increased rewards expense.

The Provision for credit losses of $4.9 billion increased by $1.9 billion, primarily due to the Merger and growth in credit card receivables. Credit ratios remained strong, benefiting from reduced contractual and bankruptcy charge-offs. The net charge-off ratio was 5.27%. The 30-day delinquency ratio was 3.70%.

Noninterest expense of $3.9 billion increased by $1.7 billion, primarily related to the Merger. In addition, expenses increased due to higher marketing expenses and volume-based processing expenses, partially offset by lower compensation expenses.
