(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. 2003 reflects the results of heritage JPMorgan Chase only.
(b) Includes noninterest revenue and Net interest income.
(c) 2005 includes a $100 million special provision related to Hurricane Katrina.

The following is a brief description of selected business metrics within Card Services.

- **Charge volume** – Represents the dollar amount of cardmember purchases, balance transfers and cash advance activity.
- **Net accounts opened** – Includes originations, portfolio purchases and sales.
- **Merchant acquiring business** – Represents an entity that processes payments for merchants. JPMorgan Chase is a partner in Chase Paymentech Solutions, LLC.
- **Bank card volume** – Represents the dollar amount of transactions processed for the merchants.
- **Total transactions** – Represents the number of transactions and authorizations processed for the merchants.

Commercial Banking

Commercial Banking serves more than 25,000 clients, including corporations, municipalities, financial institutions and not-for-profit entities with annual revenues generally ranging from $10 million to $2 billion. While most Middle Market clients are within the Retail Financial Services footprint, CB also covers larger corporations, as well as local governments and financial institutions on a national basis. CB is a market leader with superior client penetration across the businesses it serves. Local market presence, coupled with industry expertise and excellent client service and risk management, enable CB to offer superior financial advice. Partnership with other JPMorgan Chase businesses positions CB to deliver broad product capabilities – including lending, treasury services, investment banking, and asset and wealth management – and meet its clients' financial needs.

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. 2003 reflects the results of heritage JPMorgan Chase only.
(b) IB-related and commercial card revenues are included in Other income.
(c) 2005 includes a $35 million special provision related to Hurricane Katrina.

Commercial Banking operates in 10 of the top 15 major U.S. metropolitan areas and is divided into three customer segments: Middle Market Banking, Mid-Corporate Banking and Real Estate. General coverage for corporate clients is provided by Middle Market Banking, which covers clients with annual revenues generally up to $500 million. Mid-Corporate Banking covers clients with annual revenues generally ranging between $500 million and $2 billion and focuses on clients that have broader investment banking needs. The third segment, Real Estate, serves investors in, and developers of, for-sale housing, multifamily rental, retail, office, and industrial properties. In addition to these three customer segments, Commercial Banking offers several products to the Firm's entire customer base: Chase Business Credit, the #1 asset-based lender for 2005, provides asset-based financing, syndications, and collateral analysis, and Chase Equipment Leasing offers a variety of equipment finance and leasing products, with specialties in aircraft finance, public sector, and information technology. Given this structure, Commercial Banking manages a customer base and loan portfolio that is highly diversified across a broad range of industries and geographic locations.

2005 compared with 2004

Operating earnings of $1.0 billion were up $399 million from the prior year, primarily due to the Merger.

Net revenue of $3.6 billion increased by $1.2 billion, or 51%, primarily as a result of the Merger. In addition to the overall increase from the Merger, Net interest income of $2.6 billion was positively affected by wider spreads on higher volume related to liability balances and increased loans, partially offset by narrower loan spreads. Noninterest revenue of $986 million was lower due to a decline in deposit-related fees due to higher interest rates, partially offset by increased investment banking revenue.

Each business within Commercial Banking demonstrated revenue growth over the prior year, primarily due to the Merger. Middle Market revenue was $2.4 billion, an increase of $870 million over the prior year; Mid-Corporate Banking revenue was $548 million, an increase of $181 million; and Real Estate revenue was $534 million, up $166 million. In addition to the Merger, revenue was higher for each business due to wider spreads and higher volume related to liability balances and increased investment banking revenue, partially offset by narrower loan spreads.

Provision for credit losses of $73 million increased by $32 million, primarily due to a special provision related to Hurricane Katrina, increased loan balances and refinements in the data used to estimate the allowance for credit losses. The credit quality of the portfolio was strong with net charge-offs of $26 million, down $35 million from the prior year, and nonperforming loans of $272 million, down $255 million.

Noninterest expense of $1.9 billion increased by $529 million, or 39%, primarily due to the Merger and to an increase in allocated unit costs for Treasury Services products.

2004 compared with 2003

Operating earnings were $608 million, an increase of 98%, primarily due to the Merger.

Total net revenue was $2.4 billion, an increase of 76%, primarily due to the Merger. In addition to the overall increase related to the Merger, Net interest income of $1.7 billion was positively affected by higher liability balances, partially offset by lower lending-related revenue. Noninterest revenue of $682 million was positively affected by higher investment banking fees and higher gains on the sale of loans and securities acquired in satisfaction of debt, partially offset by lower deposit-related fees, which often decline as interest rates rise.

The Provision for credit losses was $41 million, an increase of $35 million, primarily due to the Merger. Excluding the impact of the Merger, the provision was higher in 2004. Lower net charge-offs in 2004 were partially offset by smaller reductions in the allowance for credit losses in 2004 relative to 2003.

Noninterest expense was $1.3 billion, an increase of $521 million, or 63%, primarily related to the Merger.

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. 2003 reflects the results of heritage JPMorgan Chase only.
(b) Liability balances include deposits and deposits swept to on-balance sheet liabilities.

Commercial Banking revenues are comprised of the following:

Lending includes a variety of financing alternatives, which are often provided on a basis secured by receivables, inventory, equipment, real estate or other assets. Products include:

- Term loans
- Revolving lines of credit
- Bridge financing
- Asset-based structures
- Leases

Treasury services includes a broad range of products and services enabling clients to transfer, invest and manage the receipt and disbursement of funds, while providing the related information reporting. These products and services include:

- U.S. dollar and multi-currency clearing
- ACH
- Lockbox
- Disbursement and reconciliation services
- Check deposits
- Other check and currency-related services
- Trade finance and logistics solutions
- Commercial card
- Deposit products, sweeps and money market mutual funds

Investment banking products provide clients with sophisticated capital-raising alternatives, as well as balance sheet and risk management tools, through:

- Loan syndications
- Investment-grade debt
- Asset-backed securities
- Private placements
- High-yield bonds
- Equity underwriting
- Advisory
- Interest rate derivatives
- Foreign exchange hedges

Treasury & Securities Services

Treasury & Securities Services is a global leader in providing transaction, investment and information services to support the needs of corporations, issuers and institutional investors worldwide. TSS is one of the largest cash management providers in the world and a leading global custodian. The TS business provides a variety of cash management products, trade finance and logistics solutions, wholesale card products, and short-term liquidity management tools. The IS business provides custody, fund services, securities lending, and performance measurement and execution products. The ITS business provides trustee, depository and administrative services for debt and equity issuers. TS partners with the Commercial Banking, Consumer & Small Business Banking and Asset & Wealth Management businesses to serve clients firmwide. As a result, certain TS revenues are included in other segments' results. TSS combined the management of the IS and ITS businesses under the name WSS to create an integrated franchise which provides custody and investor services as well as securities clearance and trust services to clients globally. Beginning January 1, 2006, TSS will report results for two divisions: TS and WSS.

Financial ratios			
ROE	**55%**	17%	15%
Overhead ratio	**72**	85	84
Pre-tax margin ratio[c]	**26**	13	17

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. 2003 reflects the results of heritage JPMorgan Chase only.

(b) TSS is charged a credit reimbursement related to certain exposures managed within the IB credit portfolio on behalf of clients shared with TSS. For a further discussion, see Credit reimbursement on page 35 of this Annual Report.

(c) Pre-tax margin represents Operating earnings before income tax expense divided by Total net revenue, which is a comprehensive measure of pre-tax performance and is another basis by which TSS management evaluates its performance and that of its competitors. Pre-tax margin is an effective measure of TSS' earnings, after all operating costs are taken into consideration.

2005 compared with 2004

Operating earnings were $1.0 billion, an increase of $597 million, or 136%. Primarily driving the improvement in revenue were the Merger, business growth, and widening spreads on and growth in average liability balances. Noninterest expense increased primarily due to the Merger and higher compensation expense. Results for 2005 also included charges of $58 million (after-tax) to terminate a client contract. Results for 2004 also included software-impairment charges of $97 million (after-tax) and a gain of $10 million (after-tax) on the sale of a business.

TSS net revenue of $6.2 billion increased $1.4 billion, or 28%. Net interest income grew to $2.1 billion, up $679 million, due to wider spreads on liability balances, a change in the corporate deposit pricing methodology in 2004 and growth in average liability balances. Noninterest revenue of $4.2 billion increased by $705 million, or 20%, due to product growth across TSS, the Merger and the acquisition of Vastera. Leading the product revenue growth was an increase in assets under custody to $11.2 trillion, primarily driven by market value appreciation and new business, along with growth in wholesale card, securities lending, foreign exchange, trust product, trade, clearing and ACH revenues. Partially offsetting this growth in noninterest revenue was a decline in deposit-related fees due to higher interest rates and the absence, in the current period, of a gain on the sale of a business.

TS net revenue of $2.6 billion grew by $628 million, Investor Services net revenue of $2.2 billion grew by $446 million, and Institutional Trust Services net revenue of $1.5 billion grew by $310 million. TSS firmwide net revenue, which includes TS net revenue recorded in other lines of business, grew to $8.8 billion, up $2.3 billion, or 35%. Treasury Services firmwide net revenue grew to $5.2 billion, up $1.6 billion, or 43%.

Credit reimbursement to the Investment Bank was $154 million, an increase of $64 million, primarily as a result of the Merger. TSS is charged a credit reimbursement related to certain exposures managed within the Investment Bank credit portfolio on behalf of clients shared with TSS.

Noninterest expense of $4.5 billion was up $357 million, or 9%, due to the Merger, increased compensation expense resulting from new business growth and the Vastera acquisition, and charges of $93 million to terminate a client contract. Partially offsetting these increases were higher product unit costs charged to other lines of business, primarily Commercial Banking, lower allocations of Corporate segment expenses, merger savings and business efficiencies. The prior year included software-impairment charges of $155 million.

2004 compared with 2003

Operating earnings for the year were $440 million, an increase of $18 million, or 4%. Results in 2004 include an after-tax gain of $10 million on the sale of an IS business. Prior-year results include an after-tax gain of $22 million on the sale of an ITS business. Excluding these one-time gains, operating earnings would have increased by $30 million, or 8%. Both net revenue and Noninterest expense increased primarily as a result of the Merger, the acquisition of Bank One's Corporate Trust business in November 2003 and the acquisition of Electronic Financial Services ("EFS") in January 2004.

TSS net revenue improved by 35% to $4.9 billion. This revenue growth reflected the benefit of the Merger, the acquisitions noted above, and improved product revenues across TSS. Net interest income grew to $1.4 billion from $947 million as a result of average liability balance growth of 46%, to $126 billion, a change in the corporate deposit pricing methodology in 2004 and wider deposit spreads. Growth in fees and commissions was driven by a 22% increase in assets under custody to $9.3 trillion as well as new business growth in trade, commercial card, global equity products, securities lending, fund services, clearing and ACH. Partially offsetting these improvements were lower deposit-related fees, which often decline as interest rates rise, and a soft municipal bond market.

TS net revenue grew to $2.0 billion, IS to $1.7 billion and ITS to $1.2 billion. TSS firmwide net revenue grew by 41% to $6.5 billion. TSS firmwide net revenues include TS net revenues recorded in other lines of business.

Credit reimbursement to the Investment Bank was $90 million, compared with a credit from the Investment Bank of $36 million in the prior year, principally due to the Merger and a change in methodology. TSS is charged a credit reimbursement related to certain exposures managed within the Investment Bank credit portfolio on behalf of clients shared with TSS.

Noninterest expense totaled $4.1 billion, up from $3.0 billion, reflecting the Merger, the acquisitions noted above, $155 million of software impairment charges, upfront transition expenses related to on-boarding new custody and fund accounting clients, and legal and technology-related expenses.

Treasury & Securities Services firmwide metrics include certain TSS product revenues and liability balances reported in other lines of business related to customers who are also customers of those other lines of business. In order to capture the firmwide impact of TS and TSS products and revenues, management reviews firmwide metrics such as liability balances, revenues and overhead ratios in assessing financial performance for TSS. Firmwide metrics are necessary, in management's view, in order to understand the aggregate TSS business.

Asset & Wealth Management

Asset & Wealth Management provides investment advice and management for institutions and individuals. With Assets under supervision of $1.1 trillion, AWM is one of the largest asset and wealth managers in the world. AWM serves four distinct client groups through three businesses: institutions through JPMorgan Asset Management; ultra-high-net-worth clients through the Private Bank; high-net-worth clients through Private Client Services; and retail clients through JPMorgan Asset Management. The majority of AWM's client assets are in actively managed portfolios. AWM has global investment expertise in equities, fixed income, real estate, hedge funds, private equity and liquidity, including both money market instruments and bank deposits. AWM also provides trust and estate services to ultra-high-net-worth and high-net-worth clients, and retirement services for corporations and individuals.

(c) Pre-tax margin represents Operating earnings before income tax expense divided by Total net revenue, which is a comprehensive measure of pre-tax performance and is another basis by which AWM management evaluates its performance and that of its competitors. Pre-tax margin is an effective measure of AWM's earnings, after all costs are taken into consideration.

2005 compared with 2004

Operating earnings of $1.2 billion were up $535 million from the prior year due to the Merger and increased revenue, partially offset by higher compensation expense.

Net revenue was $5.7 billion, up $1.5 billion, or 36%. Noninterest revenue, primarily fees and commissions, of $4.6 billion was up $1.2 billion, principally due to the Merger, the acquisition of a majority interest in Highbridge Capital Management in 2004, net asset inflows and global equity market appreciation. Net interest income of $1.1 billion was up $285 million, primarily due to the Merger, higher deposit and loan balances, partially offset by narrower deposit spreads.

Private Bank client segment revenue of $1.7 billion increased by $135 million. Retail client segment revenue of $1.5 billion increased by $360 million. Institutional client segment revenue was up $504 million to $1.4 billion due to the acquisition of a majority interest in Highbridge Capital Management. Private Client Services client segment revenue grew by $486 million, to $1.0 billion.

Provision for credit losses was a benefit of $56 million, compared with a benefit of $14 million in the prior year, due to lower net charge-offs and refinements in the data used to estimate the allowance for credit losses.

Noninterest expense of $3.9 billion increased by $727 million, or 23%, reflecting the Merger, the acquisition of Highbridge and increased compensation expense related primarily to higher performance-based incentives.

2004 compared with 2003

Operating earnings were $681 million, up 137% from the prior year, due largely to the Merger but also driven by increased revenue and a decrease in the Provision for credit losses; these were partially offset by higher Compensation expense.

Total net revenue was $4.2 billion, up 41%, primarily due to the Merger. Additionally, fees and commissions increased due to global equity market appreciation, net asset inflows and the acquisition of JPMorgan Retirement Plan Services ("RPS") in 2003. Fees and commissions also increased due to an improved product mix, with an increased percentage of assets in higher-yielding products. Net interest income increased due to deposit and loan growth.

The Provision for credit losses was a benefit of $14 million, a decrease of $49 million, due to an improvement in credit quality.

Noninterest expense was $3.1 billion, up 26%, due to the Merger, increased Compensation expense and increased technology and marketing initiatives.

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. 2003 reflects the results of heritage JPMorgan Chase only.
(b) Star rankings derived from Morningstar and Standard & Poor's.
(c) Quartile rankings sourced from Lipper and Standard & Poor's.
(d) Reflects the transfer in 2005 of certain consumer deposits from Retail Financial Services to Asset & Wealth Management.

AWM's client segments are comprised of the following:

Institutional serves large and mid-size corporate and public institutions, endowments and foundations, and governments globally. AWM offers these institutions comprehensive global investment services, including investment management across asset classes, pension analytics, asset-liability management, active risk budgeting and overlay strategies.

The **Private Bank** addresses every facet of wealth management for ultra-high-net-worth individuals and families worldwide, including investment management, capital markets and risk management, tax and estate planning, banking, capital raising and specialty wealth advisory services.

Retail provides worldwide investment management services and retirement planning and administration through third-party and direct distribution channels.

Private Client Services offers high-net-worth individuals, families and business owners comprehensive wealth management solutions that include financial planning, personal trust, investment and banking products and services.

Assets under supervision

2005 compared with 2004

Assets under supervision ("AUS") at December 31, 2005, were $1.1 trillion, up 4%, or $43 billion, from the prior year despite a $33 billion reduction due to the sale of BrownCo. Assets under management ("AUM") were $847 billion, up 7%. The increase was primarily the result of net asset inflows in equity-related products and global equity market appreciation. The Firm also has a 43% interest in American Century Companies, Inc., whose AUM totaled $101 billion and $98 billion at December 31, 2005 and 2004, respectively. Custody, brokerage, administration, and deposits were $302 billion, down $13 billion due to a $33 billion reduction from the sale of BrownCo.

2004 compared with 2003

Assets under supervision at December 31, 2004, were $1.1 trillion, up 45% from 2003, and Assets under management were $791 billion, up 41% from the prior year. The increases were primarily the result of the Merger, as well as market appreciation, net asset inflows and the acquisition of a majority interest in Highbridge Capital Management. The Firm also has a 43% interest in American Century Companies, Inc., whose AUM totaled $98 billion and $87 billion at December 31, 2004 and 2003, respectively. Custody, brokerage, administration, and deposits were $315 billion, up 55%, due to market appreciation, the Merger and net inflows across all products.

Corporate

The Corporate sector is comprised of Private Equity, Treasury, corporate staff units and expenses that are centrally managed. Private Equity includes the JPMorgan Partners and ONE Equity Partners businesses. Treasury manages the structural interest rate risk and investment portfolio for the Firm. The corporate staff units include Central Technology and Operations, Audit, Executive Office, Finance, Human Resources, Marketing & Communications, Office of the General Counsel, Corporate Real Estate and General Services, Risk Management, and Strategy and Development. Other centrally managed expenses include the Firm's occupancy and pension-related expenses, net of allocations to the business.

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. 2003 reflects the results of heritage JPMorgan Chase only.
(b) Includes $1.3 billion (pre-tax) gain on the sale of BrownCo in 2005.
(c) 2005 includes a $12 million special provision related to Hurricane Katrina.
(d) In 2005, the Corporate sector's and the Firm's operating results were presented on a tax-equivalent basis. Prior period results have been restated. This restatement had no impact on the Corporate sector's or the Firm's operating earnings.

2005 compared with 2004

Operating loss of $1.7 billion declined from earnings of $61 million in the prior year.

Net revenue was a loss of $1.1 billion compared with revenue of $885 million in the prior year. Noninterest revenue of $1.6 billion decreased by $491 million and included securities losses of $1.5 billion due to the repositioning of the Treasury investment portfolio, to manage exposure to interest rates, the gain on the sale of BrownCo of $1.3 billion and the increase in private equity gains of $262 million. For a further discussion on the sale of BrownCo, see Note 2 on page 93 of this Annual Report.

Net interest income was a loss of $2.7 billion compared with a loss of $1.2 billion in the prior year. Actions and policies adopted in conjunction with the Merger and the repositioning of the Treasury investment portfolio were the main drivers of the increased loss.

Noninterest expense was $2.0 billion, up $723 million, or 56%, from the prior year, primarily due to the Merger and the cost of the accelerated vesting of certain employee stock options. These increases were offset partially by merger-related savings and other expense efficiencies.

On September 15, 2004, JPMorgan Chase and IBM announced the Firm's plans to reintegrate the portions of its technology infrastructure – including data centers, help desks, distributed computing, data networks and voice networks – that were previously outsourced to IBM. In January 2005, approximately 3,100 employees and 800 contract employees were transferred to the Firm.

2004 compared with 2003

Operating earnings were $61 million, down from earnings of $668 million in the prior year.

Noninterest revenue was $2.1 billion, up 57% from the prior year. The primary component of noninterest revenue is Securities/private equity gains, which totaled $1.8 billion, up 73% from the prior year. The increase was a result of net gains in the Private Equity portfolio of $1.4 billion in 2004 compared with $27 million in net gains in 2003. Partially offsetting these gains were lower investment securities gains in Treasury.

Net interest income was a loss of $1.2 billion compared with a loss of $133 million in the prior year. The increased loss was driven primarily by actions and policies adopted in conjunction with the Merger.

Noninterest expense of $1.3 billion was up $772 million from the prior year due to the Merger. The Merger resulted in higher gross compensation and noncompensation expenses. Allocations of compensation and noncompensation expenses to the businesses were lower than the gross expense increase due to certain policies adopted in conjunction with the Merger, which retain in Corporate overhead costs that would not be incurred by the lines of business if operated on a stand-alone basis, and costs in excess of the market price for services provided by the corporate staff and technology and operations areas.

(b) Represents Federal funds sold, Securities borrowed, Trading assets – debt and equity instruments and Trading assets – derivative receivables.
(c) Represents Investment securities and private equity investments.
(d) As of July 1, 2004, the Firm revised the goodwill allocation methodology to retain all goodwill in Corporate. Effective with the first quarter of 2006, the Firm will refine its methodology to allocate goodwill to the lines of business.

Private equity

2005 compared with 2004

Private Equity's operating earnings for the year were $821 million compared with $602 million in the prior year. This improvement in earnings reflected an increase of $262 million in private equity gains to $1.7 billion, a 15% reduction in noninterest expenses and a $62 million decline in net funding costs of carrying portfolio investments. Private equity gains benefited from continued favorable markets for investment sales and recapitalizations, resulting in nearly $2 billion of realized gains. The carrying value of the private equity portfolio declined by $1.3 billion to $6.2 billion as of December 31, 2005. This decline was primarily the result of sales and recapitalizations of direct investments.

2004 compared with 2003

Private Equity's operating earnings for the year totaled $602 million compared with a loss of $290 million in 2003. This improvement reflected a $1.4 billion increase in total private equity gains. In 2004, markets improved for investment sales, resulting in $1.4 billion of realized gains on direct investments, compared with realized gains of $535 million in 2003. Net write-downs on direct investments were $192 million in 2004 compared with net write-downs of $404 million in 2003, as valuations continued to stabilize amid positive market conditions.

The carrying value of the Private Equity portfolio at December 31, 2004, was $7.5 billion, an increase of $247 million from December 31, 2003. The increase was primarily the result of the acquisition of ONE Equity Partners as a result of the Merger. Excluding ONE Equity Partners, the portfolio declined as a result of sales of investments, which was consistent with management's intention to reduce over time the capital committed to private equity. Sales of third-party fund investments resulted in a decrease in carrying value of $458 million, to $641 million at December 31, 2004, compared with $1.1 billion at December 31, 2003.

Total liabilities and stockholders' equity	**$ 1,198,942**	$ 1,157,248

Securities purchased under resale agreements and Securities sold under repurchase agreements

The increase in Securities purchased under resale agreements was due primarily to growth in client-driven financing activities in North America and Europe.

Trading assets and liabilities – debt and equity instruments

The Firm's debt and equity trading instruments consist primarily of fixed income securities (including government and corporate debt) and equity and convertible cash instruments used for both market-making and proprietary risk-taking activities. The increase over December 31, 2004, was primarily due to growth in client-driven market-making activities across interest rate, credit and equity markets. For additional information, refer to Note 3 on page 94 of this Annual Report.

Trading assets and liabilities – derivative receivables and payables

The Firm uses various interest rate, foreign exchange, equity, credit and commodity derivatives for market-making, proprietary risk-taking and risk management purposes. The decline from December 31, 2004, was primarily due to the appreciation of the U.S. dollar and, to a lesser extent, higher interest rates, partially offset by increased commodity trading activity and rising commodity prices. For additional information, refer to Credit risk management and Note 3 on pages 63–74 and 94, respectively, of this Annual Report.

Securities

The AFS portfolio declined by $46.9 billion from December 31, 2004, primarily due to securities sales (as a result of management's decision to reposition the Treasury investment portfolio to manage exposure to interest rates) and maturities, which more than offset purchases. For additional information related to securities, refer to the Corporate segment discussion and to Note 9 on pages 53–54 and 103–105, respectively, of this Annual Report.

Loans

The $17 billion increase in gross loans was due primarily to an increase of $15 billion in the wholesale portfolio, primarily from the IB, reflecting higher balances of loans held-for-sale ("HFS") related to securitization and syndication activities, and growth in the IB Credit Portfolio. Wholesale HFS loans were $18 billion as of December 31, 2005, compared with $6 billion as of December 31, 2004. For consumer loans, growth in consumer real estate (primarily home equity loans) and credit card loans was offset largely by a decline in the auto portfolio. The increase in credit card loans primarily reflected growth from new account originations and the acquisition of $1.5 billion of Sears Canada loans on the balance sheet. The decline in the auto portfolio primarily reflected a difficult auto lending market in 2005, $3.8 billion of securitizations and was also the result of a strategic review of the portfolio in 2004 that led to the decisions to de-emphasize vehicle leasing and sell a $2 billion recreational vehicle portfolio. For a more detailed discussion of the loan portfolio and the Allowance for loan losses, refer to Credit risk management on pages 63–74 of this Annual Report.

Goodwill and Other intangible assets

The $293 million increase in Goodwill and Other intangible assets primarily resulted from higher MSRs due to growth in the servicing portfolio as well as an overall increase in the valuation from improved market conditions; the business partnership with Cazenove; the acquisition of the Sears Canada credit card business; and the Neovest and Vastera acquisitions. Partially offsetting the increase were declines from the amortization of purchased credit card relationships and core deposit intangibles and the deconsolidation of Paymentech. For additional information, see Note 15 on pages 114–116 of this Annual Report.

Deposits

Deposits increased by 6% from December 31, 2004. Retail deposits increased, reflecting growth from new account acquisitions and the ongoing expansion of the retail branch distribution network. Wholesale deposits were higher, driven by growth in business volumes. For more information on deposits, refer to the RFS segment discussion and the Liquidity risk management discussion on pages 39–44 and 61–62, respectively, of this Annual Report. For more information on liability balances, refer to the CB and TSS segment discussions on pages 47–48 and 49–50, respectively, of this Annual Report.

Long-term debt and capital debt securities

Long-term debt and capital debt securities increased by $14.2 billion, or 13%, from December 31, 2004, primarily due to net new issuances of long-term debt and capital debt securities. The Firm took advantage of narrow credit spreads globally to issue opportunistically long-term debt and capital debt securities throughout 2005. Consistent with its liquidity management policy, the Firm raised funds sufficient to cover maturing obligations over the next 12 months and to support the less liquid assets on its balance sheet. Large investor cash positions and increased foreign investor participation in the corporate markets allowed JPMorgan Chase to diversify further its funding across the global markets while lengthening maturities. For additional information on the Firm's long-term debt activity, see the Liquidity risk management discussion on pages 61–62 of this Annual Report.

Stockholders' equity

Total stockholders' equity increased by $1.6 billion from year-end 2004 to $107.2 billion at December 31, 2005. The increase was the result of net income for 2005 and common stock issued under employee plans, partially offset by cash dividends, stock repurchases, the redemption of $200 million of preferred stock and net unrealized losses in Accumulated other comprehensive income. For a further discussion of capital, see the Capital management section that follows.

Capital management

The Firm's capital management framework is intended to ensure that there is capital sufficient to support the underlying risks of the Firm's business activities, as measured by economic risk capital, and to maintain "well-capitalized" status under regulatory requirements. In addition, the Firm holds capital above these requirements in amounts deemed appropriate to achieve management's regulatory and debt rating objectives. The Firm's capital framework is integrated into the process of assigning equity to the lines of business.

Line of business equity

The Firm's framework for allocating capital is based upon the following objectives:

- Integrate firmwide capital management activities with capital management activities within each of the lines of business.
- Measure performance consistently across all lines of business.
- Provide comparability with peer firms for each of the lines of business.

Equity for a line of business represents the amount the Firm believes the business would require if it were operating independently, incorporating sufficient capital to address economic risk measures, regulatory capital requirements, and capital levels for similarly rated peers. Return on equity is measured and internal targets for expected returns are established as a key measure of a business segment's performance.

For performance management purposes, the Firm initiated a methodology at the time of the Merger for allocating goodwill. Under this methodology, in the last half of 2004 and all of 2005, goodwill from the Merger and from any business acquisition by either heritage firm prior to the Merger was allocated to Corporate, as was any associated equity. Therefore, 2005 line of business equity is not comparable to equity assigned to the lines of business in prior years. The increase in average common equity in the following table for 2005 was attributable primarily to the Merger.

(in billions)	Yearly Average	
Line of business equity	**2005**	2004[a]
Investment Bank	**$ 20.0**	$ 17.3
Retail Financial Services	**13.4**	9.1
Card Services	**11.8**	7.6
Commercial Banking	**3.4**	2.1
Treasury & Securities Services	**1.9**	2.5
Asset & Wealth Management	**2.4**	3.9
Corporate[b]	**52.6**	33.1
Total common stockholders' equity	**$ 105.5**	$ 75.6

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.
(b) 2005 includes $43.5 billion of equity to offset goodwill and $9.1 billion of equity, primarily related to Treasury, Private Equity and the Corporate Pension Plan.

Effective January 1, 2006, the Firm expects to refine its methodology for allocating capital to the lines of business, and may continue to refine this methodology. The revised methodology, among other things, considers for each line of business goodwill associated with such line of business' acquisitions since the Merger. As a result of this refinement, Retail Financial Services, Card Services, Commercial Banking, Treasury & Securities Services and Asset & Wealth Management will have higher amounts of capital allocated in 2006, while the amount of capital allocated to the Investment Bank will remain unchanged. In management's view, the revised methodology assigns responsibility to the lines of business to generate returns on the amount of capital supporting acquisition-related goodwill. As part of this refinement in the capital allocation methodology, the Firm will assign to the Corporate segment an amount of equity capital equal to the then-current book value of goodwill from and prior to the Merger. In accordance with SFAS 142, the lines of business will continue to perform the required goodwill impairment testing. For a further discussion of goodwill and impairment testing, see Critical accounting estimates and Note 15 on pages 81–83 and 114–116, respectively, of this Annual Report.

Economic risk capital

JPMorgan Chase assesses its capital adequacy relative to the underlying risks of the Firm's business activities, utilizing internal risk-assessment methodologies. The Firm assigns economic capital based primarily upon five risk factors: credit risk, market risk, operational risk and business risk for each business; and private equity risk, principally for the Firm's private equity business.

(in billions)	Yearly Average	
Economic risk capital	**2005**	2004[a]
Credit risk	**$ 22.6**	$ 16.5
Market risk	**9.8**	7.5
Operational risk	**5.5**	4.5
Business risk	**2.1**	1.9
Private equity risk	**3.8**	4.5
Economic risk capital	**43.8**	34.9
Goodwill	**43.5**	25.9
Other[b]	**18.2**	14.8
Total common stockholders' equity	**$ 105.5**	$ 75.6

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.
(b) Additional capital required to meet internal debt and regulatory rating objectives.

Credit risk capital

Credit risk capital is estimated separately for the wholesale businesses (Investment Bank, Commercial Banking, Treasury & Securities Services and Asset & Wealth Management) and consumer businesses (Retail Financial Services and Card Services).

Credit risk capital for the overall wholesale credit portfolio is defined in terms of unexpected credit losses, both from defaults and declines in market value due to credit deterioration, measured over a one-year period at a confidence level consistent with the level of capitalization necessary to achieve a targeted 'AA' solvency standard. Unexpected losses are in excess of those for which provisions for credit losses are maintained. In addition to maturity and correlations, capital allocation is differentiated by several principal drivers of credit risk: exposure at default (or loan equivalent amount), likelihood of default, loss severity, and market credit spread.

- Loan equivalent amount for counterparty exposures in an over-the-counter derivative transaction is represented by the expected positive exposure based upon potential movements of underlying market rates. Loan equivalents for unused revolving credit facilities represent the portion of an unused commitment likely, based upon the Firm's average portfolio historical experience, to become outstanding in the event an obligor defaults.
- Default likelihood is based upon current market conditions for all publicly traded names and investment banking clients, by referencing the growing market in credit derivatives and secondary market loan sales. This methodology produces, in the Firm's view, more active risk management by utilizing a forward-looking measure of credit risk. This dynamic measure captures current market conditions and will change with the credit cycle over time impacting the level of credit risk capital. For privately-held firms in the commercial banking portfolio, default likelihood is based upon longer term averages over an entire credit cycle.

- Loss severity of exposure is based upon the Firm's average historical experience during workouts, with adjustments to account for collateral or subordination.
- Market credit spreads are used in the evaluation of changes in exposure value due to credit deterioration.

Credit risk capital for the consumer portfolio is intended to represent a capital level sufficient to support an 'AA' rating, and its allocation is based upon product and other relevant risk segmentation. Actual segment level default and severity experience are used to estimate unexpected losses for a one-year horizon at a confidence level equivalent to the 'AA' solvency standard. Statistical results for certain segments or portfolios are adjusted upward to ensure that capital is consistent with external benchmarks, including subordination levels on market transactions and capital held at representative monoline competitors, where appropriate.

Market risk capital

The Firm calculates market risk capital guided by the principle that capital should reflect the risk of loss in the value of portfolios and financial instruments caused by adverse movements in market variables, such as interest and foreign exchange rates, credit spreads, securities prices and commodities prices. Daily VAR, monthly stress-test results and other factors are used to determine appropriate capital levels. The Firm allocates market risk capital to each business segment according to a formula that weights that segment's VAR and stress test exposures. See Market risk management on pages 75–78 of this Annual Report for more information about these market risk measures.

Operational risk capital

Capital is allocated to the lines of business for operational risk using a risk-based capital allocation methodology which estimates operational risk on a bottom-up basis. The operational risk capital model is based upon actual losses and potential scenario-based stress losses, with adjustments to the capital calculation to reflect changes in the quality of the control environment or the potential offset as a result of the use of risk-transfer products. The Firm believes the model is consistent with the new Basel II Framework and expects to propose it eventually for qualification under the advanced measurement approach for operational risk.

Business risk capital

Business risk is defined as the risk associated with volatility in the Firm's earnings due to factors not captured by other parts of its economic-capital framework. Such volatility can arise from ineffective design or execution of business strategies, volatile economic or financial market activity, changing client expectations and demands, and restructuring to adjust for changes in the competitive environment. For business risk, capital is allocated to each business based upon historical revenue volatility and measures of fixed and variable expenses. Earnings volatility arising from other risk factors, such as credit, market, or operational risk, is excluded from the measurement of business risk capital, as those factors are captured under their respective risk capital models.

Private equity risk capital

Capital is allocated to privately- and publicly-held securities, third-party fund investments and commitments in the Private Equity portfolio to cover the potential loss associated with a decline in equity markets and related asset devaluations.

Regulatory capital

The Firm's federal banking regulator, the Federal Reserve Board ("FRB"), establishes capital requirements, including well-capitalized standards for the consolidated financial holding company. The Office of the Comptroller of the Currency ("OCC") establishes similar capital requirements and standards for the Firm's national banks, including JPMorgan Chase Bank and Chase Bank USA, National Association.

The federal banking regulatory agencies issued a final rule that makes permanent an interim rule issued in 2000 that provides regulatory capital relief for certain cash-collateralized securities borrowed transactions, effective February 22, 2006. The final rule also broadens the types of transactions qualifying for regulatory capital relief under the interim rule. Adoption of the rule is not expected to have a material effect on the Firm's capital ratios.

On March 1, 2005, the FRB issued a final rule, which became effective April 11, 2005, that continues the inclusion of trust preferred securities in Tier 1 capital, subject to stricter quantitative limits and revised qualitative standards, and broadens the definition of restricted core capital elements. The rule provides for a five-year transition period. As an internationally active bank holding company, JPMorgan Chase is subject to the rule's limitation on restricted core capital elements, including trust preferred securities, to 15% of total core capital elements, net of goodwill less any associated deferred tax liability. At December 31, 2005, JPMorgan Chase's restricted core capital elements were 16.5% of total core capital elements. JPMorgan Chase expects to be in compliance with the 15% limit by the March 31, 2009, implementation date.

On July 20, 2004, the federal banking regulatory agencies issued a final rule that excludes assets of asset-backed commercial paper programs that are consolidated as a result of FIN 46R from risk-weighted assets for purposes of computing Tier 1 and Total risk-based capital ratios. The final rule also requires that capital be held against short-term liquidity facilities supporting asset-backed commercial paper programs. The final rule became effective September 30, 2004. In addition, both short- and long-term liquidity facilities are subject to certain asset quality tests effective September 30, 2005. Adoption of the rule did not have a material effect on the capital ratios of the Firm.

The following tables show that JPMorgan Chase maintained a well-capitalized position based upon Tier 1 and Total capital ratios at December 31, 2005 and 2004.

Capital ratios

December 31,	**2005**	2004	Well-capitalized ratios
Tier 1 capital ratio	**8.5%**	8.7%	6.0%
Total capital ratio	**12.0**	12.2	10.0
Tier 1 leverage ratio	**6.3**	6.2	NA
Total stockholders' equity to assets	**8.9**	9.1	NA

Risk-based capital components and assets

December 31, (in millions)	**2005**	2004
Total Tier 1 capital	**$ 72,474**	$ 68,621
Total Tier 2 capital	**29,963**	28,186
Total capital	**$ 102,437**	$ 96,807
Risk-weighted assets	**$ 850,643**	$ 791,373
Total adjusted average assets	**1,152,546**	1,102,456

Tier 1 capital was $72.5 billion at December 31, 2005, compared with $68.6 billion at December 31, 2004, an increase of $3.9 billion. The increase was due primarily to net income of $8.5 billion, net common stock issued under employee plans of $1.9 billion, $1.3 billion of additional qualifying trust preferred securities and a decline of $716 million in the deduction for nonqualifying intangible assets as a result of amortization. Offsetting these increases were dividends declared of $4.8 billion, common share repurchases of $3.4 billion, an increase in the deduction for goodwill of $418 million and the redemption of $200 million of preferred stock. Additional information regarding the Firm's capital ratios and the federal regulatory capital standards to which it is subject is presented in Note 24 on pages 121–122 of this Annual Report.

Basel II

The Basel Committee on Banking Supervision published the new Basel II Framework in 2004 in an effort to update the original international bank capital

accord ("Basel I"), in effect since 1988. The goal of the Basel II Framework is to improve the consistency of capital requirements internationally, make regulatory capital more risk-sensitive, and promote enhanced risk management practices among large, internationally active banking organizations. JPMorgan Chase supports the overall objectives of the Basel II Framework.

U.S. banking regulators are in the process of incorporating the Basel II Framework into the existing risk-based capital requirements. JPMorgan Chase will be required to implement advanced measurement techniques in the U.S. by employing internal estimates of certain key risk drivers to derive capital requirements. Prior to implementation of the new Basel II Framework, JPMorgan Chase will be required to demonstrate to its U.S. bank supervisors that its internal criteria meet the relevant supervisory standards. JPMorgan Chase expects to be in compliance within the established timelines with all relevant Basel II rules.

Dividends

The Firm's common stock dividend policy reflects JPMorgan Chase's earnings outlook, desired payout ratios, need to maintain an adequate capital level and alternative investment opportunities. In 2005, JPMorgan Chase declared a quarterly cash dividend on its common stock of $0.34 per share. The Firm continues to target a dividend payout ratio of 30-40% of operating earnings over time.

Stock repurchases

On July 20, 2004, the Board of Directors approved an initial stock repurchase program in the aggregate amount of $6.0 billion. This amount includes shares to be repurchased to offset issuances under the Firm's employee stock-based plans. The actual amount of shares repurchased is subject to various factors, including market conditions; legal considerations affecting the amount and timing of repurchase activity; the Firm's capital position (taking into account goodwill and intangibles); internal capital generation; and alternative potential investment opportunities. Under the stock repurchase program, during 2005, the Firm repurchased 93.5 million shares for $3.4 billion at an average price per share of $36.46. During 2004, the Firm repurchased 19.3 million shares for $738 million at an average price per share of $38.27. As of December 31, 2005, $1.9 billion of authorized repurchase capacity remained.

The Firm has determined that it may, from time to time, enter into written trading plans under Rule 10b5-1 of the Securities Exchange Act of 1934 to facilitate the repurchase of common stock in accordance with the repurchase program. A Rule 10b5-1 repurchase plan would allow the Firm to repurchase shares during periods when it would not otherwise be repurchasing common stock – for example, during internal trading "black-out periods." All purchases under a Rule 10b5-1 plan must be made according to a predefined plan that is established when the Firm is not aware of material nonpublic information.

For additional information regarding repurchases of the Firm's equity securities, see Part II, Item 5, Market for registrant's common equity, related stockholder matters and issuer purchases of equity securities, on page 11 of JPMorgan Chase's 2005 Form 10–K.

Off–balance sheet arrangements and contractual cash obligations

Special-purpose entities

JPMorgan Chase is involved with several types of off-balance sheet arrangements, including special purpose entities ("SPEs"), lines of credit and loan commitments. The principal uses of SPEs are to obtain sources of liquidity for JPMorgan Chase and its clients by securitizing financial assets, and to create other investment products for clients. These arrangements are an important part of the financial markets, providing market liquidity by facilitating investors' access to specific portfolios of assets and risks. For example, SPEs are integral to the markets for mortgage-backed securities, commercial paper, and other asset-backed securities.

The basic SPE structure involves a company selling assets to the SPE. The SPE funds the purchase of those assets by issuing securities to investors. To insulate investors from creditors of other entities, including the seller of assets, SPEs can be structured to be bankruptcy-remote.

JPMorgan Chase is involved with SPEs in three broad categories: loan securitizations, multi-seller conduits and client intermediation. Capital is held, as deemed appropriate, against all SPE-related transactions and related exposures, such as derivative transactions and lending-related commitments. For a further discussion of SPEs and the Firm's accounting for them, see Note 1 on page 91, Note 13 on pages 108–111 and Note 14 on pages 111–113 of this Annual Report.

The Firm has no commitments to issue its own stock to support any SPE transaction, and its policies require that transactions with SPEs be conducted at arm's length and reflect market pricing. Consistent with this policy, no JPMorgan Chase employee is permitted to invest in SPEs with which the Firm is involved where such investment would violate the Firm's Code of Conduct. These rules prohibit employees from self-dealing and prohibit employees from acting on behalf of the Firm in transactions with which they or their family have any significant financial interest.

For certain liquidity commitments to SPEs, the Firm could be required to provide funding if the credit rating of JPMorgan Chase Bank were downgraded below specific levels, primarily P-1, A-1 and F1 for Moody's, Standard & Poor's and Fitch, respectively. The amount of these liquidity commitments was $71.3 billion and $79.4 billion at December 31, 2005 and 2004, respectively. Alternatively, if JPMorgan Chase Bank were downgraded, the Firm could be replaced by another liquidity provider in lieu of providing funding under the liquidity commitment, or, in certain circumstances, could facilitate the sale or refinancing of the assets in the SPE in order to provide liquidity.

Of its $71.3 billion in liquidity commitments to SPEs at December 31, 2005, $38.9 billion was included in the Firm's other unfunded commitments to extend credit and asset purchase agreements, included in the following table. Of the $79.4 billion of liquidity commitments to SPEs at December 31, 2004, $47.7 billion was included in the Firm's other unfunded commitments to extend credit and asset purchase agreements. As a result of the Firm's consolidation of multi-seller conduits in accordance with FIN 46R, $32.4 billion of these commitments, compared with $31.7 billion at December 31, 2004, are excluded from the following table, as the underlying assets of the SPEs have been included on the Firm's Consolidated balance sheets.

The Firm also has exposure to certain SPEs arising from derivative transactions; these transactions are recorded at fair value on the Firm's Consolidated balance sheets with changes in fair value (i.e., MTM gains and losses) recorded in Trading revenue. Such MTM gains and losses are not included in the revenue amounts reported in the table below.

The following table summarizes certain revenue information related to variable interest entities ("VIEs") with which the Firm has significant involvement, and qualifying SPEs ("QSPEs"). The revenue reported in the table below primarily represents servicing and custodial fee income. For a further discussion of VIEs and QSPEs, see Note 1, Note 13 and Note 14, on pages 91, 108–111 and 111–113, respectively, of this Annual Report.

Revenue from VIEs and QSPEs

Year ended December 31,[a] (in millions)	VIEs[b]	QSPEs	Total
2005	**$ 222**	**$ 1,645**	**$ 1,867**
2004	154	1,438	1,592
2003	79	979	1,058

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. 2003 reflects the results of heritage JPMorgan Chase only.
(b) Includes VIE-related revenue (i.e., revenue associated with consolidated and significant nonconsolidated VIEs).

Off-balance sheet lending-related financial instruments and guarantees

JPMorgan Chase utilizes lending-related financial instruments (e.g., commitments and guarantees) to meet the financing needs of its customers. The contractual amount of these financial instruments represents the maximum possible credit risk should the counterparty draw down the commitment or the Firm fulfill its obligation under the guarantee, and the counterparty subsequently fails to perform according to the terms of the contract. Most of these commitments and guarantees expire without a default occurring or without being drawn. As a result, the total contractual amount of these instruments is not, in the Firm's view, representative of its actual future credit exposure or funding requirements. Further, certain commitments, primarily related to consumer financings, are cancelable, upon notice, at the option of the Firm. For a further discussion of lending-related commitments and guarantees and the Firm's accounting for them, see Credit risk management on pages 63–72 and Note 27 on pages 124–125 of this Annual Report.

Contractual cash obligations

In the normal course of business, the Firm enters into various contractual obligations that may require future cash payments. Commitments for future cash expenditures primarily include contracts to purchase future services and capital expenditures related to real estate–related obligations and equipment.

The accompanying table summarizes, by remaining maturity, JPMorgan Chase's off–balance sheet lending-related financial instruments and significant contractual cash obligations at December 31, 2005. Contractual purchases and capital expenditures in the table below reflect the minimum contractual obligation under legally enforceable contracts with contract terms that are both fixed and determinable. Excluded from the following table are a number of obligations to be settled in cash, primarily in under one year. These obligations are reflected on the Firm's Consolidated balance sheets and include Federal funds purchased and securities sold under repurchase agreements; Other borrowed funds; purchases of Debt and equity instruments; Derivative payables; and certain purchases of instruments that resulted in settlement failures. For a discussion regarding Long-term debt and trust preferred capital securities, see Note 17 on pages 117–118 of this Annual Report. For a discussion regarding operating leases, see Note 25 on page 122 of this Annual Report.

Off–balance sheet lending-related financial instruments and guarantees

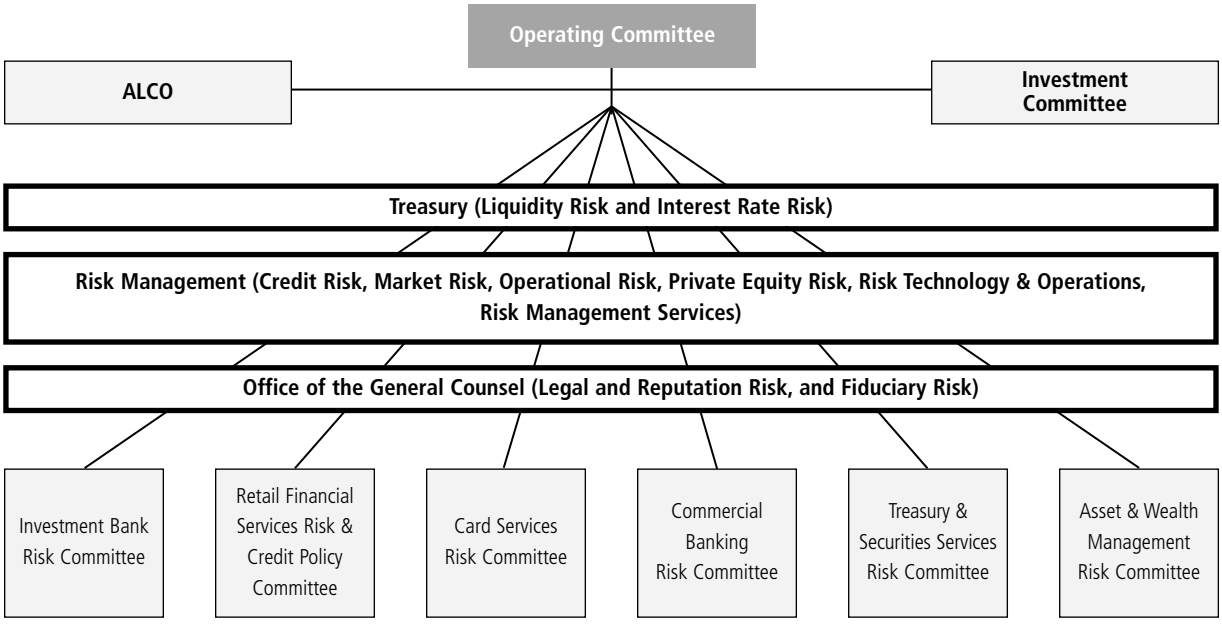
Other liabilities[i]	**762**	**1,636**	**1,172**	**8,076**	**11,646**	10,966
Total	**$131,852**	**$50,428**	**$ 24,812**	**$ 61,502**	**$ 268,594**	$ 255,417

(a) Represents contractual amount net of risk participations totaling $29.3 billion and $26.4 billion at December 31, 2005 and 2004, respectively.
(b) Includes unused advised lines of credit totaling $28.3 billion and $22.8 billion at December 31, 2005 and 2004, respectively, which are not legally binding. In regulatory filings with the FRB, unused advised lines are not reportable.
(c) The maturity is based upon the weighted average life of the underlying assets in the SPE, primarily multi-seller asset-backed commercial paper conduits.
(d) Includes unused commitments to issue standby letters of credit of $37.5 billion and $38.4 billion at December 31, 2005 and 2004, respectively.
(e) Collateral held by the Firm in support of securities lending indemnification agreements was $245.0 billion and $221.6 billion at December 31, 2005 and 2004, respectively.
(f) Represents notional amounts of derivative guarantees. For a further discussion of guarantees, see Note 27 on pages 124–125 of this Annual Report.
(g) Included on the Consolidated balance sheets in Beneficial interests issued by consolidated VIEs.
(h) Excludes benefit of noncancelable sublease rentals of $1.3 billion and $689 million at December 31, 2005 and 2004, respectively.
(i) Includes deferred annuity contracts and expected funding for pension and other postretirement benefits for 2006. Funding requirements for pension and postretirement benefits after 2006 are excluded due to the significant variability in the assumptions required to project the timing of future cash payments.

Risk management

Risk is an inherent part of JPMorgan Chase's business activities. The Firm's risk management framework and governance structure is intended to provide comprehensive controls and ongoing management of the major risks inherent in its business activities.

The Firm's ability to properly identify, measure, monitor and report risk is critical to both soundness and profitability.



- **Risk identification:** The Firm identifies risk by dynamically assessing the potential impact of internal and external factors on transactions and positions. Business and risk professionals develop appropriate mitigation strategies for the identified risks.
- **Risk measurement**: The Firm measures risk using a variety of methodologies, including calculating probable loss, unexpected loss and value-at-risk, and by conducting stress tests and making comparisons to external benchmarks. Measurement models and related assumptions are routinely reviewed with the goal of ensuring that the Firm's risk estimates are reasonable and reflective of underlying positions.
- **Risk monitoring/Control:** The Firm establishes risk management policies and procedures. These policies contain approved limits by customer, product and business that are monitored on a daily, weekly and monthly basis as appropriate.
- **Risk reporting:** Risk reporting covers all lines of business and is provided to management on a daily, weekly and monthly basis as appropriate.

Risk governance

The Firm's risk governance structure is built upon the premise that each line of business is responsible for managing the risks inherent in its business activity. There are eight major risk types identified in the business activities of the Firm: liquidity risk, credit risk, market risk, interest rate risk, operational risk, legal and reputation risk, fiduciary risk and private equity risk. As part of the risk management structure, each line of business has a Risk Committee responsible for decisions relating to risk strategy, policies and control. Where appropriate, the Risk Committees escalate risk issues to the Firm's Operating Committee, comprised of senior officers of the Firm, or to the Risk Working Group, a subgroup of the Operating Committee.

Overlaying risk management within the lines of business are three corporate functions: Treasury, Risk Management and Office of the General Counsel. Treasury is responsible for measuring, monitoring, reporting and managing the interest rate and liquidity risk profile of the Firm. Risk Management, under the direction of the Chief Risk Officer reporting to the Chief Executive Officer, provides an independent firmwide function of control and management of risk. Within Risk Management are those units responsible for credit risk, market risk, operational risk, private equity risk and risk technology and operations, as well as Risk Management Services, which is responsible for risk policy and methodology, risk reporting and risk education. The Office of the General Counsel has oversight function for legal, reputation and fiduciary risk.

In addition to the six lines of business risk committees and these corporate functions, the Firm maintains an Asset & Liability Committee ("ALCO"), which oversees interest rate and liquidity risk, and capital management, as well as the Firm's funds transfer pricing policy, through which lines of business transfer interest rate risk to Treasury. Treasury has responsibility for ALCO policies and control and transfers aggregate risk positions to the Chief Investment Office, which has responsibility for managing the risk. There is also an Investment Committee, which reviews key aspects of the Firm's global M&A activities that are undertaken for its own investment account and that fall outside the scope of the Firm's private equity and other principal finance activities.

The Board of Directors exercises its oversight of risk management as a whole and through the Board's Risk Policy Committee and Audit Committee. The Risk Policy Committee is responsible for oversight of management's responsibilities to assess and manage the Firm's risks as described above.

The Audit Committee is responsible for oversight of guidelines and policies that govern the process by which risk assessment and management is undertaken. In addition, the Audit Committee reviews with management the system of internal controls and financial reporting that is relied upon to provide reasonable assurance of compliance with the Firm's operational risk management processes. Both committees are responsible for oversight of reputation risk. The Chief Risk Officer and other management report on the risks of the Firm to the Board of Directors, particularly through the Board's Risk Policy Committee and Audit Committee. The major risk types identified by the Firm are discussed in the following sections.

Liquidity risk management

Liquidity risk arises from the general funding needs of the Firm's activities and in the management of its assets and liabilities. JPMorgan Chase's liquidity management framework is intended to maximize liquidity access and minimize funding costs. Through active liquidity management, the Firm seeks to preserve stable, reliable and cost-effective sources of funding. This enables the Firm to replace maturing obligations when due and fund assets at appropriate maturities and rates. To accomplish this task, management uses a variety of liquidity risk measures that take into consideration market conditions, prevailing interest rates, liquidity needs and the desired maturity profile of liabilities.

Governance

The Asset & Liability Committee ("ALCO") reviews the Firm's overall liquidity policy and oversees the contingency funding plan. The ALCO also provides oversight of the Firm's exposure to SPEs, with particular focus on the potential liquidity support requirements that the Firm may have to those SPEs.

Treasury is responsible for formulating the Firm's liquidity strategy and targets, understanding the Firm's on- and off-balance sheet liquidity obligations, providing policy guidance, overseeing policy adherence, and maintaining contingency planning and stress testing. In addition, it identifies and measures internal and external liquidity warning signals to permit early detection of liquidity issues.

An extension of the Firm's ongoing liquidity management is its contingency funding plan. The goals of the plan are to ensure maintenance of appropriate liquidity during normal and stress periods, measure and project funding requirements during periods of stress, and manage access to funding sources. The plan considers temporary and long-term stress scenarios where access to unsecured funding is severely limited or nonexistent. The plan forecasts potential funding needs, taking into account both on- and off-balance sheet exposures, separately evaluating access to funds by the parent holding company and JPMorgan Chase Bank.

The Firm's liquidity risk framework also incorporates tools to monitor three primary measures of liquidity:

- Holding company short-term position: Measures the parent holding company's ability to repay all obligations with a maturity of less than one year at a time when the ability of the Firm's subsidiaries to pay dividends to the parent company is constrained. Holding company short-term position is managed to a positive position over time.
- Cash capital surplus: Measures the Firm's ability to fund assets on a fully collateralized basis, assuming access to unsecured funding is lost. This measurement is intended to ensure that the illiquid portion of the balance sheet can be funded by equity, long-term debt, trust preferred securities and deposits the Firm believes to be core.
- Basic surplus: Measures the Bank's ability to sustain a 90-day stress event that is specific to the Firm where no new funding can be raised to meet obligations as they come due.

Each liquidity position is managed to provide sufficient surplus.

Risk monitoring and reporting

Treasury is responsible for measuring, monitoring, reporting and managing the liquidity profile of the Firm through both normal and stress periods. Treasury analyzes the diversity and maturity structure of the Firm's sources of funding; and assesses downgrade impact scenarios, contingent funding needs, and overall collateral availability and pledging status. A downgrade analysis considers the impact of both parent and bank level downgrades (one- and two-notch) and calculates the loss of funding and increase in annual funding costs for both scenarios. A trigger-risk funding analysis considers the impact of a bank level downgrade through A-1/P-1 as well as the increased contingent funding requirements that would be triggered. These liquidity analytics rely on management's judgment about JPMorgan Chase's ability to liquidate assets or use them as collateral for borrowings and take into account credit risk management's historical data on the funding of loan commitments (e.g., commercial paper back-up facilities), liquidity commitments to SPEs, commitments with rating triggers and collateral posting requirements. For a further discussion of SPEs and other off–balance sheet arrangements, see Off–balance sheet arrangements and contractual cash obligations on pages 58–59, as well as Note 1, Note 13, Note 14 and Note 27 on pages 91, 108–111, 111–113, and 124–125, respectively, of this Annual Report.

Funding

Sources of funds

Consistent with its liquidity management policy, the Firm has raised funds at the parent holding company sufficient to cover its obligations and those of its nonbank subsidiaries that mature over the next 12 months. Long-term funding needs for the parent holding company over the next several quarters are expected to be consistent with prior periods.

As of December 31, 2005, the Firm's liquidity position remained strong based upon its liquidity metrics. JPMorgan Chase's long-dated funding, including core deposits, exceeds illiquid assets, and the Firm believes its obligations can be met even if access to funding is impaired.

The diversity of the Firm's funding sources enhances financial flexibility and limits dependence on any one source, thereby minimizing the cost of funds. The deposits held by the RFS, CB and TSS lines of business are a stable and consistent source of funding for JPMorgan Chase Bank. As of December 31, 2005, total deposits for the Firm were $555 billion, which represented 67% of the Firm's funding liabilities. A significant portion of the Firm's retail deposits are "core" deposits, which are less sensitive to interest rate changes and therefore are considered more stable than market-based deposits. Core

deposits include all U.S. deposits insured by the FDIC, up to the legal limit of $100,000 per depositor. In 2005, core bank deposits increased approximately 8% from 2004 year-end. In addition to core retail deposits, the Firm benefits from substantial, geographically diverse corporate liability balances originated by TSS and CB through the normal course of business. These franchise-generated core liability balances are also a stable and consistent source of funding due to the nature of the businesses from which they are generated. For a further discussion of deposit and liability balance trends, see Business Segment Results and Balance Sheet Analysis on pages 34–35 and 55, respectively, of this Annual Report.

Additional sources of funds include a variety of both short- and long-term instruments, including federal funds purchased, commercial paper, bank notes, medium- and long-term debt, and capital debt securities. This funding is managed centrally, using regional expertise and local market access, to ensure active participation in the global financial markets while maintaining consistent global pricing. These markets serve as a cost-effective and diversified source of funds and are a critical component of the Firm's liquidity management. Decisions concerning the timing and tenor of accessing these markets are based upon relative costs, general market conditions, prospective views of balance sheet growth and a targeted liquidity profile.

Finally, funding flexibility is provided by the Firm's ability to access the repo and asset securitization markets. These markets are evaluated on an ongoing basis to achieve an appropriate balance of secured and unsecured funding. The ability to securitize loans, and the associated gains on those securitizations, are principally dependent upon the credit quality and yields of the assets securitized and are generally not dependent upon the credit ratings of the issuing entity. Transactions between the Firm and its securitization structures are reflected in JPMorgan Chase's consolidated financial statements; these relationships include retained interests in securitization trusts, liquidity facilities and derivative transactions. For further details, see Off-balance sheet arrangements and contractual cash obligations and Notes 13 and 27 on pages 58–59, 108–111 and 124–125, respectively, of this Annual Report.

Issuance

Corporate credit spreads widened modestly in 2005 across most industries and sectors. On an historical basis, credit spreads remain near historic tight levels as corporate balance sheet cash positions are strong and corporate profits generally healthy. JPMorgan Chase's credit spreads performed in line with peer spreads in 2005.

Continued strong foreign investor participation in the global corporate markets allowed JPMorgan Chase to identify attractive opportunities globally to further diversify its funding and capital sources while lengthening maturities. During 2005, JPMorgan Chase issued approximately $43.7 billion of long-term debt and capital debt securities. These issuances were offset partially by $26.9 billion of long-term debt and capital debt securities that matured or were redeemed and the Firm's redemption of $200 million of preferred stock. In addition, in 2005 the Firm securitized approximately $18.1 billion of residential mortgage loans, $15.1 billion of credit card loans and $3.8 billion of automobile loans, resulting in pre-tax gains on securitizations of $21 million, $101 million and $9 million, respectively. For a further discussion of loan securitizations, see Note 13 on pages 108–111 of this Annual Report.

Credit ratings

The credit ratings of JPMorgan Chase's parent holding company and each of its significant banking subsidiaries, as of December 31, 2005 and 2004, were as follows:

	Short-term debt			Senior long-term debt		
	Moody's	S&P	Fitch	Moody's	S&P	Fitch
JPMorgan Chase & Co.	P-1	A-1	F1	Aa3	A+	A+
JPMorgan Chase Bank, N.A.	P-1	A-1+	F1+	Aa2	AA-	A+
Chase Bank USA, N.A.	P-1	A-1+	F1+	Aa2	AA-	A+

The Firm's principal insurance subsidiaries had the following financial strength ratings as of December 31, 2005:

	Moody's	S&P	A.M. Best
Chase Insurance Life and Annuity Company	A2	A+	A
Chase Insurance Life Company	A2	A+	A

The cost and availability of unsecured financing are influenced by credit ratings. A reduction in these ratings could adversely affect the Firm's access to liquidity sources, increase the cost of funds, trigger additional collateral requirements and decrease the number of investors and counterparties willing to lend. Critical factors in maintaining high credit ratings include a stable and diverse earnings stream, strong capital ratios, strong credit quality and risk management controls, diverse funding sources and strong liquidity monitoring procedures.

If the Firm's ratings were downgraded by one notch, the Firm estimates the incremental cost of funds and the potential loss of funding to be negligible. Additionally, the Firm estimates the additional funding requirements for VIEs and other third-party commitments would not be material. In the current environment, the Firm believes a downgrade is unlikely. For additional information on the impact of a credit ratings downgrade on the funding requirements for VIEs, and on derivatives and collateral agreements, see Special-purpose entities on pages 58–59 and Ratings profile of derivative receivables mark-to-market ("MTM") on page 69, of this Annual Report.

Credit risk management

Credit risk is the risk of loss from obligor or counterparty default. The Firm provides credit to customers of all sizes, from large corporate clients to loans for the individual consumer. The Firm manages the risk/reward relationship of each portfolio and discourages the retention of loan assets that do not generate a positive return above the cost of risk-adjusted capital. The majority of the Firm's wholesale loan originations (primarily to IB clients) continues to be distributed into the marketplace, with residual holds by the Firm averaging less than 10%. Wholesale loans generated by CB and AWM are generally retained on the balance sheet. With regard to the prime consumer credit market, the Firm focuses on creating a portfolio that is diversified from both a product and a geographical perspective. Within the prime mortgage business, originated loans are retained on the balance sheet as well as selectively sold to government agencies; the latter category is routinely classified as held-for-sale.

Credit risk organization

Credit risk management is overseen by the Chief Risk Officer, a member of the Firm's Operating Committee. The Firm's credit risk management governance structure consists of the following primary functions:

- establishes a comprehensive credit risk policy framework
- calculates Allowance for credit losses and ensures appropriate credit risk-based capital management
- assigns and manages credit authorities to approve all credit exposure
- monitors and manages credit risk across all portfolio segments
- manages criticized exposures

Risk identification

The Firm is exposed to credit risk through lending (e.g., loans and lending-related commitments), derivatives trading and capital markets activities. The credit risk function works in partnership with the business segments in identifying and aggregating exposure across all lines of business.

Risk measurement

To measure credit risk, the Firm employs several methodologies for estimating the likelihood of obligor or counterparty default. Losses generated by consumer loans are more predictable than wholesale losses, but are subject to cyclical and seasonal factors. Although the frequency of loss is higher on consumer loans than on wholesale loans, the severity of loss is typically lower and more manageable. As a result of these differences, methodologies vary depending on certain factors, including type of asset (e.g., consumer installment versus wholesale loan), risk measurement parameters (e.g., delinquency status and credit bureau score versus wholesale risk rating) and risk management and collection processes (e.g., retail collection center versus centrally managed workout groups). Credit risk measurement is based upon the amount of exposure should the obligor or the counterparty default, the probability of default and the loss severity given a default event. Based upon these factors and related market-based inputs, the Firm estimates both probable and unexpected losses for the wholesale and consumer portfolios. Probable losses, reflected in the Provision for credit losses, are generally statistically-based estimates of credit losses over time, anticipated as a result of obligor or counterparty default. However, probable losses are not the sole indicators of risk. If losses were entirely predictable, the probable loss rate could be factored into pricing and covered as a normal and recurring cost of doing business. Unexpected losses, reflected in the allocation of credit risk capital, represent the potential volatility of actual losses relative to the probable level of losses. (Refer to Capital management on pages 56–58 of this Annual Report for a further discussion of the credit risk capital methodology.) Risk measurement for the wholesale portfolio is assessed primarily on a risk-rated basis; for the consumer portfolio, it is assessed primarily on a credit-scored basis.

Risk-rated exposure

For portfolios that are risk-rated, probable and unexpected loss calculations are based upon estimates of probability of default and loss given default. Probability of default is expected default calculated on an obligor basis. Loss given default is an estimate of losses that are based upon collateral and structural support for each credit facility. Calculations and assumptions are based upon management information systems and methodologies which are under continual review. Risk ratings are assigned and reviewed on an ongoing basis by Credit Risk Management and revised, if needed, to reflect the borrowers' current risk profiles and the related collateral and structural positions.

Credit-scored exposure

For credit-scored portfolios (generally held in RFS and CS), probable loss is based upon a statistical analysis of inherent losses over discrete periods of time. Probable losses are estimated using sophisticated portfolio modeling, credit scoring and decision-support tools to project credit risks and establish underwriting standards. In addition, common measures of credit quality derived from historical loss experience are used to predict consumer losses. Other risk characteristics evaluated include recent loss experience in the portfolios, changes in origination sources, portfolio seasoning, loss severity and underlying credit practices, including charge-off policies. These analyses are applied to the Firm's current portfolios in order to forecast delinquencies and severity of losses, which determine the amount of probable losses. These factors and analyses are updated on a quarterly basis.

Risk monitoring

The Firm has developed policies and practices that are designed to preserve the independence and integrity of decision-making and ensure credit risks are accurately assessed, properly approved, continually monitored and actively managed at both the transaction and portfolio levels. The policy framework establishes credit approval authorities, concentration limits, risk-rating methodologies, portfolio-review parameters and problem-loan management. Wholesale credit risk is continually monitored on both an aggregate portfolio level and on an individual customer basis. For consumer credit risk, the key focus items are trends and concentrations at the portfolio level, where potential problems can be remedied through changes in underwriting policies and portfolio guidelines. Consumer Credit Risk Management monitors trends against business expectations and industry benchmarks. In order to meet credit risk management objectives, the Firm seeks to maintain a risk profile that is diverse in terms of borrower, product type, industry and geographic concentration. Additional diversification of the Firm's exposure is accomplished through loan syndication and participations, loan sales, securitizations, credit derivatives and other risk-reduction techniques.

Risk reporting

To enable monitoring of credit risk and decision-making, aggregate credit exposure, credit metric forecasts, hold-limit exceptions and risk profile changes are reported regularly to senior credit risk management. Detailed portfolio reporting of industry, customer and geographic concentrations occurs monthly, and the appropriateness of the allowance for credit losses is reviewed by senior management at least on a quarterly basis. Through the risk reporting and governance structure, credit risk trends and limit exceptions are provided regularly to, and discussed with, the Operating Committee.

2005 Credit risk overview

The wholesale portfolio experienced continued credit strength during 2005. Wholesale nonperforming loans were down by $582 million, or 37%, from 2004; net recoveries were $77 million compared with net charge-offs of

$186 million in 2004; and the allowance for credit losses decreased by $740 million, or 21%, reflecting the quality of the portfolio at this time. The Firm anticipates a return to more normal provisioning for credit losses for the wholesale portfolio in 2006. In 2005, the Firm also made significant strides in the multi-year initiative to reengineer specific components of the wholesale credit risk infrastructure. The Firm is on target to meet the goals of enhancing the timeliness and accuracy of risk and exposure information and reporting; management of credit risk in the retained portfolio; support of client relationships; allocation of economic capital and compliance with Basel II initiatives.

Consumer credit was impacted in 2005 by two significant events, Hurricane Katrina and federal bankruptcy reform legislation. Hurricane Katrina impacted customers across all consumer businesses (and to a lesser extent CB and AWM). As a result, the consumer Allowance for loan losses was increased by $350 million ($250 million in RFS, and $100 million in CS). It is anticipated that the majority of charge-offs associated with the hurricane will be taken against the allowance in 2006. Bankruptcy reform legislation became effective on October 17, 2005. This legislation prompted a "rush to file" effect that resulted in a spike in bankruptcy filings and increased credit losses, predominantly in CS, where it is believed that $575 million in estimated bankruptcy legislation-related credit losses occurred in the fourth quarter of 2005. It is anticipated that the first half of 2006 will experience lower credit card net charge-offs, as the record levels of bankruptcy filings in the 2005 fourth quarter are believed to have included bankruptcy filings that would have occurred in 2006. With the exception of the events noted above, the 2005 underlying credit performance, which was driven by favorable loss severity performance in residential real estate, continued to be strong. CS continues to quantify and refine the impact associated with changes in the FFIEC minimum-payment requirements. Actual implementation of the new payment requirements began in late 2005 and will run through early 2006; CS anticipates higher net charge-offs during the second half of 2006 as a result.

In 2005, the Firm continued to grow the consumer loan portfolio, focusing on businesses providing the most appropriate risk/reward relationship while keeping within the Firm's desired risk tolerance. During the past year, the Firm continued a de-emphasis of vehicle leasing and sold its $2 billion recreational vehicle portfolio. Continued growth in most core consumer lending products (residential real estate, credit cards and small business) reflected a focus on the prime credit quality segment of the market.

Credit portfolio

The following table presents JPMorgan Chase's credit portfolio as of December 31, 2005 and 2004. Total credit exposure at December 31, 2005, increased by $67 billion from December 31, 2004, reflecting an increase of $11 billion in the wholesale credit portfolio and $56 billion in the consumer credit portfolio. The significant majority of the consumer portfolio increase, or $54 billion, was primarily from growth in lending-related commitments. In the table below, reported loans include all HFS loans, which are carried at the lower of cost or fair value with changes in value recorded in Other income. However, these HFS loans are excluded from the average loan balances used for the net charge-off rate calculations.

Total credit portfolio

As of or for the year ended December 31, (in millions, except ratios)	Credit exposure		Nonperforming assets[i]		Net charge-offs		Average annual net charge-off rate[k]

(a) Loans are presented net of unearned income of $3.0 billion and $4.1 billion at December 31, 2005 and 2004, respectively.
(b) Represents securitized credit card receivables. For a further discussion of credit card securitizations, see Card Services on pages 45–46 of this Annual Report.
(c) Past-due 90 days and over and accruing include loans of $1.1 billion and $998 million, and related credit card securitizations of $730 million and $1.3 billion at December 31, 2005 and 2004, respectively.
(d) Reflects net cash received under credit support annexes to legally enforceable master netting agreements of $27 billion and $32 billion as of December 31, 2005 and 2004, respectively.
(e) Includes wholesale unused advised lines of credit totaling $28.3 billion and $22.8 billion at December 31, 2005 and 2004, respectively, which are not legally binding. In regulatory filings with the Federal Reserve Board, unused advised lines are not reportable. Credit card lending-related commitments of $579 billion and $532 billion at December 31, 2005 and 2004, respectively, represents the total available credit to its cardholders; however, the Firm can reduce or cancel these commitments at any time as permitted by law.
(f) Represents the net notional amount of protection purchased and sold of single-name and portfolio credit derivatives used to manage the credit risk of credit exposures; these derivatives do not qualify for hedge accounting under SFAS 133.
(g) Represents distressed HFS wholesale loans purchased as part of IB's proprietary activities, which are excluded from nonperforming assets.
(h) Includes six months of the combined Firm's results and six months of heritage JPMorgan Chase results.
(i) Includes nonperforming HFS loans of $136 million and $15 million as of December 31, 2005 and 2004, respectively.
(j) Excludes nonperforming assets related to loans eligible for repurchase as well as loans repurchased from GNMA pools that are insured by government agencies of $1.1 billion and $1.5 billion for December 31, 2005 and 2004, respectively. These amounts are excluded, as reimbursement is proceeding normally.
(k) Net charge-off rates exclude average loans HFS.

Wholesale credit portfolio

As of December 31, 2005, wholesale exposure (IB, CB, TSS and AWM) increased by $11 billion from December 31, 2004. Increases in Loans and lending-related commitments were offset partially by reductions in Derivative receivables and Interests in purchased receivables. As described on pages 36–37 of this Annual Report, the increase in Loans was primarily in the IB, reflecting an increase in loans held-for-sale related to securitization and syndication activities and growth in the IB credit portfolio. The increase in lending-related commitments was mostly due to CB activity. The decrease in Derivative receivables was due primarily to the appreciation of the U.S. dollar and higher interest rates, partially offset by rising commodity prices.

Wholesale

As of or for the year ended December 31, (in millions, except ratios)	Credit exposure		Nonperforming assets[g]		Net charge-offs		Average annual net charge-off rate[i]

(a) Past-due 90 days and over and accruing include loans of $50 million and $8 million at December 31, 2005 and 2004, respectively.
(b) Reflects net cash received under credit support annexes to legally enforceable master netting agreements of $27 billion and $32 billion as of December 31, 2005 and 2004, respectively.
(c) Includes unused advised lines of credit totaling $28.3 billion and $22.8 billion at December 31, 2005 and 2004, respectively, which are not legally binding. In regulatory filings with the Federal Reserve Board, unused advised lines are not reportable.
(d) Represents the net notional amount of protection purchased and sold of single-name and portfolio credit derivatives used to manage the credit risk of credit exposures; these derivatives do not qualify for hedge accounting under SFAS 133.
(e) Represents distressed HFS loans purchased as part of IB's proprietary activities, which are excluded from nonperforming assets.
(f) Includes six months of the combined Firm's results and six months of heritage JPMorgan Chase results.
(g) Includes nonperforming HFS loans of $109 million and $2 million as of December 31, 2005 and 2004, respectively.
(h) Excludes $67 million in gains on sales of nonperforming loans in 2005; for additional information, see page 67 of this Annual Report.
(i) Net charge-off rates exclude average loans HFS.

Below are summaries of the maturity and ratings profiles of the wholesale portfolio as of December 31, 2005 and 2004. The ratings scale is based upon the Firm's internal risk ratings and is presented on an S&P-equivalent basis.

Wholesale exposure

At December 31, 2005 (in billions, except ratios)	Maturity profile[c]				Ratings profile			
					Investment-grade ("IG")[d]	Noninvestment-grade[d]		
	<1 year[d]	1–5 years[d]	> 5 years[d]	Total	AAA to BBB-	BB+ & below	Total	Total % of IG[d]
Loans	**43%**	**44%**	**13%**	**100%**	**$ 87**	**$ 45**	**$ 132**	**66%**
Derivative receivables	**2**	**42**	**56**	**100**	**42**	**8**	**50**	**84**
Interests in purchased receivables	**41**	**57**	**2**	**100**	**29**	**—**	**29**	**100**
Lending-related commitments	**37**	**56**	**7**	**100**	**276**	**48**	**324**	**85**
Total excluding HFS	**36%**	**52%**	**12%**	**100%**	**$ 434**	**$ 101**	**535**	**81%**
Held-for-sale[a]							**18**	
Total exposure							**$ 553**	
Credit derivative hedges notional[b]	**15%**	**74%**	**11%**	**100%**	**$ (27)**	**$ (3)**	**$ (30)**	**90%**

At December 31, 2004 (in billions, except ratios)	Maturity profile[c]				Ratings profile			
					Investment-grade ("IG")[d]	Noninvestment-grade[d]		
	<1 year[d]	1–5 years[d]	> 5 years[d]	Total	AAA to BBB-	BB+ & below	Total	Total % of IG[d]
Loans	44%	43%	13%	100%	$ 83	$ 46	$ 129	64%
Derivative receivables	19	39	42	100	57	9	66	86
Interests in purchased receivables	37	61	2	100	32	—	32	100
Lending-related commitments	46	52	2	100	266	43	309	86
Total excluding HFS	42%	49%	9%	100%	$ 438	$ 98	536	82%
Held-for-sale[a]							6	
Total exposure							$ 542	
Credit derivative hedges notional[b]	18%	77%	5%	100%	$ (35)	$ (2)	$ (37)	95%

(a) HFS loans primarily relate to securitization and syndication activities.
(b) Ratings are based upon the underlying referenced assets.
(c) The maturity profile of Loans and lending-related commitments is based upon the remaining contractual maturity. The maturity profile of Derivative receivables is based upon the maturity profile of Average exposure. See page 68 of this Annual Report for a further discussion of Average exposure.
(d) Excludes HFS loans.

At December 31, 2005, the percentage of the investment-grade wholesale exposure, excluding HFS, remained relatively unchanged from December 31, 2004. Derivative receivables of less than one year decreased as a result of the appreciation of the U.S. dollar on short-dated foreign exchange ("FX") contracts. The percentage of derivative exposure greater than 5 years increased from 42% to 56% at year-end 2005, primarily as a result of the reduction in shorter-dated exposure.

Wholesale credit exposure – selected industry concentration

The Firm continues to focus on the management and diversification of industry concentrations, with particular attention paid to industries with actual or potential credit concerns. As of December 31, 2005, the top 10 industries remained predominantly unchanged from year-end 2004, with the exception of Oil and gas, which replaced Media. Below are summaries of the top 10 industry concentrations as of December 31, 2005 and 2004.

As of December 31, 2005 (in millions, except ratios)	Credit exposure[d]	Investment grade	Noninvestment-grade		Net charge-offs/ (recoveries)	Credit derivative hedges[e]	Collateral held against derivative receivables[d]
			Noncriticized	Criticized			
Top 10 industries[a]							
Banks and finance companies	**$ 53,579**	**88%**	**$ 6,462**	**$ 232**	**$ (16)**	**$ (9,490)**	**$ (1,482)**

Total exposure	$ 542,170						

(a) Based upon December 31, 2005, determination of Top 10 industries.
(b) During the second quarter of 2005, the Firm revised its industry classification for educational institutions to better reflect risk correlations and enhance the Firm's management of industry risk, resulting in an increase to State and municipal governments and a decrease to Retail and consumer services.
(c) HFS loans primarily relate to securitization and syndication activities.
(d) Credit exposure is net of risk participations and excludes the benefit of credit derivative hedges and collateral held against derivative receivables or loans. At December 31, 2005 and 2004, collateral held against derivative receivables excludes $27 billion and $32 billion, respectively, of cash collateral as a result of the Firm electing to report the fair value of derivative assets and liabilities net of cash received and paid, respectively, under legally enforceable master netting agreements.
(e) Represents notional amounts only; these credit derivatives do not qualify for hedge accounting under SFAS 133.

Wholesale criticized exposure

Exposures deemed criticized generally represent a ratings profile similar to a rating of CCC+/Caa1 and lower, as defined by Standard & Poor's/Moody's. The criticized component of the portfolio decreased to $5.2 billion (excluding HFS) at December 31, 2005, from $8.3 billion at year-end 2004, reflecting strong credit quality, refinancings and gross charge-offs. Also contributing to the decline was a refinement in methodology in the first quarter of 2005 to align the ratings methodologies of the heritage firms.

At December 31, 2005, Automotive, Telecom services and Retail and consumer services moved into the top 10 of wholesale criticized exposure, replacing Chemicals/plastics, Business services and Metals/mining industries.

Wholesale nonperforming assets

Wholesale nonperforming assets (excluding purchased held-for-sale wholesale loans) decreased by $779 million from $1.8 billion at December 31, 2004, as a result of loan sales, repayments and gross charge-offs. For full year 2005, wholesale net recoveries were $77 million compared with net charge-offs of $186 million in 2004, primarily due to lower gross charge-offs. The net recovery rate for full year 2005 was 0.06% compared with a net charge-off rate of 0.18% for the prior year. Net charge-offs do not include $67 million of gains from sales of nonperforming loans that were sold during 2005 to a counterparty other than the original borrower. When it is determined that a loan will be sold it is transferred into a held-for-sale account. Held-for-sale loans are accounted for at lower of cost or fair value, with changes in value recorded in other revenue.

Wholesale criticized exposure – industry concentrations

	2005		2004	
As of December 31, (in millions)	Credit exposure	% of portfolio	Credit exposure	% of portfolio
Media	**$ 684**	13.2%	$ 509	6.1%
Automotive	**643**	12.4	359	4.4
Consumer products	**590**	11.4	479	5.8
Telecom services	**430**	8.3	275	3.3
Airlines	**333**	6.5	450	5.4
Utilities	**295**	5.7	890	10.7
Machinery and equipment manufacturing	**290**	5.6	459	5.6
Retail and consumer services	**288**	5.6	393	4.8

Building materials/construction	**266**	5.1	430	5.2
All other	**1,077**	20.8	3,273	39.5
Total excluding HFS	**$ 5,172**	100.0%	$ 8,282	100.0%
Held-for-sale[(a)]	**1,069**		2	
Total	**$ 6,241**		$ 8,284	

(a) HFS loans primarily relate to securitization and syndication activities; excludes purchased nonperforming HFS loans.

Wholesale selected industry discussion

Presented below is a discussion of several industries to which the Firm has significant exposure and which it continues to monitor because of actual or potential credit concerns. For additional information, refer to the tables above and on the preceding page.

- **Banks and finance companies:** This industry group, primarily consisting of exposure to commercial banks, is the largest segment of the Firm's wholesale credit portfolio. Credit quality is high, as 88% of the exposure in this category is rated investment-grade.
- **Real estate:** This industry, the second largest segment of the Firm's wholesale credit portfolio, grew modestly in 2005, as the portfolio continued to benefit from relatively low interest rates, high liquidity and increased capital demand. The exposure is well-diversified by client, transaction type, geography and property type.
- **Oil and gas:** During 2005, exposure to this industry group increased as a result of the rise in oil and gas prices; derivative receivables MTM increased on contracts that were executed at lower price levels. In addition, the Firm extended shorter term loans that were expected to be refinanced through capital market transactions and further syndications.
- **Media:** Criticized exposures within Media increased in 2005, and this industry now represents the largest percentage of the total criticized portfolio. The increase was attributable primarily to the extension of short-term financings to select borrowers. The remaining Media portfolio is stable, with the majority of the exposure rated investment-grade.
- **Automotive:** In 2005, Automotive original equipment manufacturers ("OEMs") and suppliers based in North America were negatively affected by a challenging operating environment. As a result, criticized exposures to the Automotive industry grew, primarily as a result of downgrades to select names within the portfolio. However, though larger in the aggregate, most of the criticized exposure remains undrawn and performing.
- **All other:** All other in the wholesale credit exposure concentration table at December 31, 2005, excluding HFS, included $283 billion of credit exposure to 21 industry segments. Exposures related to SPEs and high-net-worth individuals totaled 45% of this category. SPEs provide secured financing (generally backed by receivables, loans or bonds on a bankruptcy-remote, non-recourse or limited-recourse basis) originated by companies in a diverse group of industries that are not highly correlated. The remaining All other exposure is well diversified across other industries; none comprise more than 3% of total exposure.

Derivative contracts

In the normal course of business, the Firm utilizes derivative instruments to meet the needs of customers, to generate revenues through trading activities, to manage exposure to fluctuations in interest rates, currencies and other markets and to manage its own credit risk. The Firm uses the same credit risk management procedures as those used for its traditional lending activities to assess and approve potential credit exposures when entering into derivative transactions.

The following table summarizes the aggregate notional amounts and the reported derivative receivables (i.e., the MTM or fair value of the derivative contracts after taking into account the effects of legally enforceable master netting agreements) at each of the dates indicated:

Notional amounts and derivative receivables marked to market ("MTM")

As of December 31, (in billions)	Notional amounts[a]		Derivative receivables MTM	
	2005	2004	**2005**	2004
Interest rate	**$ 38,493**	$ 37,022	**$ 30**	$ 46
Foreign exchange	**2,136**	1,886	**3**	8
Equity	**458**	434	**6**	6
Credit derivatives	**2,241**	1,071	**4**	3
Commodity	**265**	101	**7**	3
Total	**$ 43,593**	$ 40,514	**50**	66
Collateral held against derivative receivables	**NA**	NA	**(6)**	(9)
Exposure net of collateral	**NA**	NA	**$ 44**[b]	$ 57[c]

(a) The notional amounts represent the gross sum of long and short third-party notional derivative contracts, excluding written options and foreign exchange spot contracts, which significantly exceed the possible credit losses that could arise from such transactions. For most derivative transactions, the notional principal amount does not change hands; it is used simply as a reference to calculate payments.

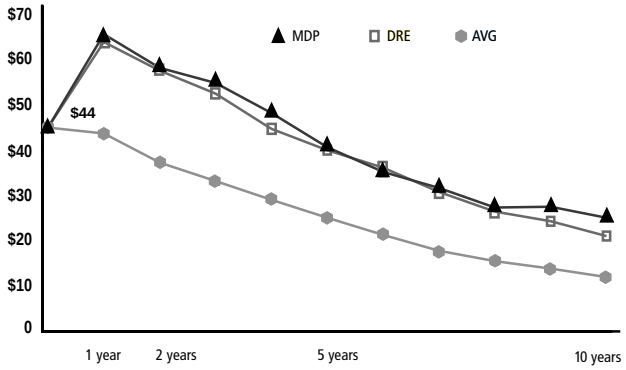
(b) The Firm held $33 billion of collateral against derivative receivables as of December 31, 2005, consisting of $27 billion in net cash received under credit support annexes to legally enforceable master netting agreements, and $6 billion of other liquid securities collateral. The benefit of the $27 billion is reflected within the $50 billion of derivative receivables MTM. Excluded from the $33 billion of collateral is $10 billion of collateral delivered by clients at the initiation of transactions; this collateral secures exposure that could arise in the derivatives portfolio should the MTM of the client's transactions move in the Firm's favor. Also excluded are credit enhancements in the form of letters of credit and surety receivables.

(c) The Firm held $41 billion of collateral against derivative receivables as of December 31, 2004, consisting of $32 billion in net cash received under credit support annexes to legally enforceable master netting agreements, and $9 billion of other liquid securities collateral. The benefit of the $32 billion is reflected within the $66 billion of derivative receivables MTM. Excluded from the $41 billion of collateral is $10 billion of collateral delivered by clients at the initiation of transactions; this collateral secures exposure that could arise in the derivatives portfolio should the MTM of the client's transactions move in the Firm's favor. Also excluded are credit enhancements in the form of letters of credit and surety receivables.

The MTM of derivative receivables contracts represents the cost to replace the contracts at current market rates should the counterparty default. When JPMorgan Chase has more than one transaction outstanding with a counterparty, and a legally enforceable master netting agreement exists with that counterparty, the netted MTM exposure, less collateral held, represents, in the Firm's view, the appropriate measure of current credit risk.

While useful as a current view of credit exposure, the net MTM value of the derivative receivables does not capture the potential future variability of that credit exposure. To capture the potential future variability of credit exposure, the Firm calculates, on a client-by-client basis, three measures of potential derivatives-related credit loss: Peak, Derivative Risk Equivalent ("DRE") and Average exposure ("AVG"). These measures all incorporate netting and collateral benefits, where applicable.

Peak exposure to a counterparty is an extreme measure of exposure calculated at a 97.5% confidence level. However, the total potential future credit risk embedded in the Firm's derivatives portfolio is not the simple sum of all Peak client credit risks. This is because, at the portfolio level, credit risk is reduced by the fact that when offsetting transactions are done with separate counterparties, only one of the two trades can generate a credit loss, even if both counterparties were to default simultaneously. The Firm refers to this effect as market diversification, and the Market-Diversified Peak ("MDP") measure is a portfolio aggregation of counterparty Peak measures, representing the maximum losses at the 97.5% confidence level that would occur if all counterparties defaulted under any one given market scenario and time frame.



Derivative Risk Equivalent ("DRE") exposure is a measure that expresses the riskiness of derivative exposure on a basis intended to be equivalent to the riskiness of loan exposures. The measurement is done by equating the unexpected loss in a derivative counterparty exposure (which takes into consideration both the loss volatility and the credit rating of the counterparty) with the unexpected loss in a loan exposure (which takes into consideration only the credit rating of the counterparty). DRE is a less extreme measure of potential credit loss than Peak and is the primary measure used by the Firm for credit approval of derivative transactions.

Finally, Average exposure ("AVG") is a measure of the expected MTM value of the Firm's derivative receivables at future time periods, including the benefit of collateral. AVG exposure over the total life of the derivative contract is used as the primary metric for pricing purposes and is used to calculate credit capital and the Credit Valuation Adjustment ("CVA"), as further described below. Average exposure was $36 billion and $38 billion at December 31, 2005 and 2004, respectively, compared with derivative receivables MTM net of other highly liquid collateral of $44 billion and $57 billion at December 31, 2005 and 2004, respectively.

The graph below shows exposure profiles to derivatives over the next 10 years as calculated by the MDP, DRE and AVG metrics. All three measures generally show declining exposure after the first year, if no new trades were added to the portfolio.

Exposure profile of derivatives measures

December 31, 2005
(in billions)

The MTM value of the Firm's derivative receivables incorporates an adjustment, the CVA, to reflect the credit quality of counterparties. The CVA is based upon the Firm's AVG exposure to a counterparty and the counterparty's credit spread in the credit derivatives market. The primary components of changes in CVA are credit spreads, new deal activity or unwinds, and changes in the underlying market environment. The Firm believes that active risk management is essential to controlling the dynamic credit risk in the derivatives portfolio. The Firm risk manages exposure to changes in CVA by entering into credit derivative transactions, as well as interest rate, foreign exchange, equity and commodity derivative transactions. The MTM value of the Firm's derivative payables does not incorporate a valuation adjustment to reflect JPMorgan Chase's credit quality.

The following table summarizes the ratings profile of the Firm's Consolidated balance sheets Derivative receivables MTM, net of cash and other liquid securities collateral, for the dates indicated:

Ratings profile of derivative receivables MTM

Rating equivalent	**2005**		2004	
December 31, (in millions)	Exposure net of collateral[(a)]	% of exposure net of collateral	Exposure net of collateral[(b)]	% of exposure net of collateral
AAA to AA-	**$ 20,735**	**48%**	$ 30,384	53%
A+ to A-	**8,074**	**18**	9,109	16
BBB+ to BBB-	**8,243**	**19**	9,522	17
BB+ to B-	**6,580**	**15**	7,271	13
CCC+ and below	**155**	**—**	395	1
Total	**$ 43,787**	**100%**	$ 56,681	100%

(a) The Firm held $33 billion of collateral against derivative receivables as of December 31, 2005, consisting of $27 billion in net cash received under credit support annexes to legally enforceable master netting agreements, and $6 billion of other liquid securities collateral. The benefit of the $27 billion is reflected within the $50 billion of derivative receivables MTM. Excluded from the $33 billion of collateral is $10 billion of collateral delivered by clients at the initiation of transactions; this collateral secures exposure that could arise in the derivatives portfolio should the MTM of the client's transactions move in the Firm's favor. Also excluded are credit enhancements in the form of letters of credit and surety receivables.

(b) The Firm held $41 billion of collateral against derivative receivables as of December 31, 2004, consisting of $32 billion in net cash received under credit support annexes to legally enforceable master netting agreements, and $9 billion of other liquid securities collateral. The benefit of the $32 billion is reflected within the $66 billion of derivative receivables MTM. Excluded from the $41 billion of collateral is $10 billion of collateral delivered by clients at the initiation of transactions; this collateral secures exposure that could arise in the derivatives portfolio should the MTM of the client's transactions move in the Firm's favor. Also excluded are credit enhancements in the form of letters of credit and surety receivables.

The Firm actively pursues the use of collateral agreements to mitigate counterparty credit risk in derivatives. The percentage of the Firm's derivatives transactions subject to collateral agreements increased slightly, to 81% as of December 31, 2005, from 79% at December 31, 2004. The Firm posted $27 billion and $31 billion of collateral as of December 31, 2005 and 2004, respectively.

Certain derivative and collateral agreements include provisions that require the counterparty and/or the Firm, upon specified downgrades in their respective credit ratings, to post collateral for the benefit of the other party. As of December 31, 2005, the impact of a single-notch ratings downgrade to JPMorgan Chase Bank, from its current rating of AA- to A+, would have been an additional $1.4 billion of collateral posted by the Firm; the impact of a six-notch ratings downgrade (from AA- to BBB-) would have been $3.8 billion of additional collateral. Certain derivative contracts also provide for termination of the contract, generally upon a downgrade of either the Firm or the counterparty, at the then-existing MTM value of the derivative contracts.

Credit derivatives

The following table presents the Firm's notional amounts of credit derivatives protection purchased and sold by the respective businesses as of December 31, 2005 and 2004:

Credit derivatives positions

	Notional amount				
	Portfolio management		Dealer/client		
December 31, (in billions)	Protection purchased[(a)]	Protection sold	Protection purchased	Protection sold	Total
2005	**$ 31**	**$ 1**	**$ 1,096**	**$ 1,113**	**$ 2,241**
2004	37	—	501	533	1,071

(a) Includes $848 million and $2 billion at December 31, 2005 and 2004, respectively, of portfolio credit derivatives.

In managing wholesale credit exposure, the Firm purchases single-name and portfolio credit derivatives; this activity does not reduce the reported level of assets on the balance sheet or the level of reported off-balance sheet commitments. The Firm also diversifies exposures by providing (i.e., selling) credit protection, which increases exposure to industries or clients where the Firm has little or no client-related exposure. This activity is not material to the Firm's overall credit exposure.

JPMorgan Chase has limited counterparty exposure as a result of credit derivatives transactions. Of the $50 billion of total Derivative receivables at December 31, 2005, approximately $4 billion, or 8%, was associated with credit derivatives, before the benefit of liquid securities collateral.

Dealer/client

At December 31, 2005, the total notional amount of protection purchased and sold in the dealer/client business increased $1.2 trillion from year-end 2004 as a result of increased trade volume in the market. This business has a mismatch between the total notional amounts of protection purchased and sold. However, in the Firm's view, the risk positions are largely matched when securities used to risk manage certain derivative positions are taken into consideration and the notional amounts are adjusted to a duration-based equivalent basis or to reflect different degrees of subordination in tranched structures.

Use of single-name and portfolio credit derivatives

December 31, (in millions)	Notional amount of protection purchased **2005**	2004
Credit derivatives used to manage:		
Loans and lending-related commitments	**$ 18,926**	$ 25,002
Derivative receivables	**12,088**	12,235
Total	**$ 31,014**	$ 37,237

Credit portfolio management activities

The credit derivatives used by JPMorgan Chase for portfolio management activities do not qualify for hedge accounting under SFAS 133, and therefore, effectiveness testing under SFAS 133 is not performed. These derivatives are reported at fair value, with gains and losses recognized as Trading revenue. The MTM value incorporates both the cost of credit derivative premiums and changes in value due to movement in spreads and credit events; in contrast, the loans and lending-related commitments being risk-managed are accounted for on an accrual basis. Loan interest and fees are generally recognized in Net interest income, and impairment is recognized in the Provision for credit losses. This asymmetry in accounting treatment, between loans and lending-related commitments and the credit derivatives utilized in portfolio management activities, causes earnings volatility that is not representative, in the Firm's view, of the true changes in value of the Firm's overall credit exposure. The MTM related to the Firm's credit derivatives used for managing credit exposure, as well as the mark related to the CVA, which reflects the credit quality of derivatives counterparty exposure, are included in the table below:

For the year ended December 31, (in millions)	**2005**	2004[c]
Hedges of lending-related commitments[a]	**$ 24**	$ (234)
CVA and hedges of CVA[a]	**84**	188
Net gains (losses)[b]	**$ 108**	$ (46)

(a) These hedges do not qualify for hedge accounting under SFAS 133.
(b) Excludes $8 million and $52 million in 2005 and 2004, respectively, of other credit portfolio trading results that are not associated with hedging activities.
(c) Includes six months of the combined Firm's results and six months of heritage JPMorgan Chase results.

The Firm also actively manages wholesale credit exposure through loan and commitment sales. During 2005 and 2004, the Firm sold $4.0 billion and $5.9 billion of loans and commitments, respectively, recognizing gains of $76 million and losses of $8 million in 2005 and 2004, respectively. These activities are not related to the Firm's securitization activities, which are undertaken for liquidity and balance sheet management purposes. For a further discussion of securitization activity, see Note 13 on pages 108–111 of this Annual Report.

Lending-related commitments

The contractual amount of wholesale lending-related commitments was $324 billion at December 31, 2005, compared with $309 billion at December 31, 2004. In the Firm's view, the total contractual amount of these instruments is not representative of the Firm's actual credit risk exposure or funding requirements. In determining the amount of credit risk exposure the Firm has to wholesale lending-related commitments, which is used as the basis for allocating credit risk capital to these instruments, the Firm has established a "loan-equivalent" amount for each commitment; this amount represents the portion of the unused commitment or other contingent exposure that is expected, based upon average portfolio historical experience, to become outstanding in the event of a default by an obligor. The loan equivalent amount of the Firm's lending-related commitments as of December 31, 2005 and 2004, was $178 billion and $162 billion, respectively.

Country exposure

The Firm has a comprehensive process for measuring and managing exposures and risk in emerging markets countries – defined as those countries potentially vulnerable to sovereign events. Exposures to a country include all credit-related lending, trading, and investment activities, whether cross-border or locally funded. Exposure amounts are adjusted for credit enhancements (e.g., guarantees and letters of credit) provided by third parties located outside the country, if the enhancements fully cover the country risk as well as the business risk. As of December 31, 2005, the Firm's exposure to any individual emerging markets country was not material.

Consumer credit portfolio

JPMorgan Chase's consumer portfolio consists primarily of residential mortgages and home equity loans, credit cards, auto and education financings and loans to small businesses. The domestic consumer portfolio reflects the benefit of diversification from both a product and a geographical perspective. The primary focus is on serving the prime consumer credit market.

The following table presents managed consumer credit–related information for the dates indicated:

Consumer portfolio

As of or for the year ended December 31, (in millions, except ratios)	Credit exposure		Nonperforming assets[g]		Net charge-offs		Average annual net charge-off rate[i]

(a) Includes $406 million of charge-offs related to the manufactured home loan portfolio in the fourth quarter of 2004.
(b) Excludes operating lease-related assets of $858 million for December 31, 2005. Balances at December 31, 2004, were insignificant.
(c) Past-due loans 90 days and over and accruing includes credit card receivables of $1.1 billion and $998 million, and related credit card securitizations of $730 million and $1.3 billion at December 31, 2005 and 2004, respectively.
(d) Represents securitized credit cards. For a further discussion of credit card securitizations, see Card Services on pages 45–46 of this Annual Report.
(e) The credit card lending-related commitments represent the total available credit to the Firm's cardholders. The Firm has not experienced, and does not anticipate, that all of its cardholders will exercise their entire available line of credit at any given point in time. The Firm can reduce or cancel a credit card commitment by providing the cardholder prior notice or without notice as permitted by law.
(f) Includes six months of the combined Firm's results and six months of heritage JPMorgan Chase results.
(g) Includes nonperforming HFS loans of $27 million and $13 million at December 31, 2005 and 2004, respectively.
(h) Excludes nonperforming assets related to loans eligible for repurchase as well as loans repurchased from GNMA pools that are insured by government agencies of $1.1 billion and $1.5 billion for December 31, 2005, and December 31, 2004, respectively. These amounts are excluded, as reimbursement is proceeding normally.
(i) Net charge-off rates exclude average loans HFS.

Total managed consumer loans at December 31, 2005, were $340 billion, up from $338 billion at year-end 2004. Consumer lending–related commitments increased by 9% to $656 billion at December 31, 2005, reflecting growth in credit cards and home equity lines of credit. The following discussion relates to the specific loan and lending-related categories within the consumer portfolio.

Retail Financial Services

Average RFS loan balances for 2005 were $198 billion. New loans originated in 2005 reflect high credit quality consistent with management's focus on the prime credit market segment. The net charge-off rate for retail loans in 2005 was 0.31%, a decrease of 36 basis points from 2004. This decrease was attributable primarily to $406 million of charge-offs in the fourth quarter of 2004 associated with the sale of the $4.0 billion manufactured home loan portfolio. Excluding these charge-offs, the net charge-off rate would have improved eight basis points.

Home Finance: Home finance loans on the balance sheet at December 31, 2005, were $133 billion. This amount consisted of $77 billion of home equity and other loans and $56 billion of mortgages, including mortgage loans held-for-sale. Home finance receivables as of December 31, 2005, reflect an increase of $9 billion from year-end 2004 driven by growth in the home equity portfolio. Home Finance provides consumer real estate lending to the full spectrum of credit borrowers, including $15 billion in sub-prime credits at December 31, 2005. Home Finance does not offer mortgage products that result in negative amortization but does offer mortgages with interest-only payment options to predominantly prime borrowers.

The geographic distribution of outstanding consumer real estate loans is well diversified as shown in the table below.

Consumer real estate loan portfolio by geographic location

December 31,	**2005**		2004	
(in billions)	Outstanding	%	Outstanding	%
Top 10 U.S. States				
California	**$ 24.4**	**18%**	$ 22.8	18%
New York	**19.5**	**15**	18.4	15
Florida	**10.3**	**8**	7.1	6
Illinois	**7.7**	**6**	8.0	6
Texas	**7.6**	**6**	7.9	6
Ohio	**6.1**	**5**	6.1	5
Arizona	**5.8**	**4**	5.2	4
New Jersey	**5.3**	**4**	4.5	4
Michigan	**5.2**	**4**	5.2	4
Colorado	**3.2**	**2**	3.2	3
Total Top 10	**95.1**	**72**	88.4	71
Other	**38.4**	**28**	36.3	29
Total	**$ 133.5**	**100%**	$ 124.7	100%

Auto & Education Finance: As of December 31, 2005, Auto & education finance loans decreased to $49 billion from $63 billion at year-end 2004. The decrease in outstanding loans was caused primarily by a difficult auto lending market in 2005, $3.8 billion in securitizations, the sale of the $2.0 billion recreational vehicle portfolio and the de-emphasis of vehicle leasing, which comprised $4.4 billion of outstanding loans as of December 31, 2005. It is anticipated that over time vehicle leases will account for a smaller share of balance sheet receivables and exposure. The Auto & Education loan portfolio reflects a high concentration of prime quality credits.

Consumer & Small Business and other: As of December 31, 2005, Small business & other consumer loans remained relatively stable at $14.8 billion compared with 2004 year-end levels of $15.1 billion. The portfolio reflects highly collateralized loans, often with personal loan guarantees.

Card Services

JPMorgan Chase analyzes the credit card portfolio on a managed basis, which includes credit card receivables on the consolidated balance sheet and those receivables sold to investors through securitization. Managed credit card receivables were $142 billion at December 31, 2005, an increase of $7 billion from year-end 2004, reflecting solid growth in the business as well as the addition of $2.2 billion of receivables as a result of the acquisition of the Sears Canada credit card business.

Consumer credit quality trends remained stable despite the effects of increased losses due to bankruptcy legislation, which became effective October 17, 2005. The managed credit card net charge-off rate decreased to 5.21% in 2005 from 5.27% in 2004. The 30-day delinquency rates declined significantly to 2.79% in 2005 from 3.70% in 2004, primarily driven by accelerated loss recognition of delinquent accounts as a result of the bankruptcy reform legislation and strong underlying credit quality. The managed credit card portfolio continues to reflect a well-seasoned portfolio that has good U.S. geographic diversification.

Allowance for credit losses

JPMorgan Chase's allowance for credit losses is intended to cover probable credit losses, including losses where the asset is not specifically identified or the size of the loss has not been fully determined. At least quarterly, the allowance for credit losses is reviewed by the Chief Risk Officer of the Firm, the Risk Policy Committee, a subgroup of the Operating Committee, and the Audit Committee of the Board of Directors of the Firm. The allowance is reviewed relative to the risk profile of the Firm's credit portfolio and current economic conditions and is adjusted if, in management's judgment, changes are warranted. The allowance includes an asset-specific component and a formula-based component, the latter of which consists of a statistical calculation and adjustments to the statistical calculation. For further discussion of the components of the Allowance for credit losses, see Critical accounting estimates used by the Firm on page 81 and Note 12 on pages 107–108 of this Annual Report. At December 31, 2005, management deemed the allowance for credit losses to be sufficient to absorb losses that are inherent in the portfolio, including losses that are not specifically identified or for which the size of the loss has not yet been fully determined.

Summary of changes in the allowance for credit losses

For the year ended December 31,	2005			2004[e]		
(in millions)	Wholesale	Consumer	Total	Wholesale	Consumer	Total
Loans:						
Beginning balance at January 1,	**$ 3,098**	**$ 4,222**	**$ 7,320**	$ 2,204	$ 2,319	$ 4,523
Addition resulting from the Merger, July 1, 2004	**—**	**—**	**—**	1,788	1,335	3,123

Other	**(6)**	**20**	**14**	—	(110)	(110)[g]
Ending balance	**$ 2,453**[a]	**$ 4,637**[b]	**$ 7,090**	$ 3,098[a]	$ 4,222[b]	$ 7,320
Components:						
Asset specific	**$ 203**	**$ —**	**$ 203**	$ 469	$ —	$ 469
Statistical component	**1,629**	**3,422**	**5,051**	1,639	3,169	4,808
Adjustment to statistical component	**621**	**1,215**	**1,836**	990	1,053	2,043
Total Allowance for loan losses	**$ 2,453**	**$ 4,637**	**$ 7,090**	$ 3,098	$ 4,222	$ 7,320
Lending-related commitments:						
Beginning balance at January 1,	**$ 480**	**$ 12**	**$ 492**	$ 320	$ 4	$ 324
Addition resulting from the Merger, July 1, 2004	**—**	**—**	**—**	499	9	508
Provision for lending-related commitments:						
Provision excluding accounting policy conformity	**(95)**	**3**	**(92)**	(111)	(1)	(112)
Accounting policy conformity	**—**	**—**	**—**	(227)	—	(227)
Total Provision for lending-related commitments	**(95)**	**3**	**(92)**	(338)	(1)	(339)
Other	**—**	**—**	**—**	(1)	—	(1)
Ending balance	**$ 385**	**$ 15**	**$ 400**[d]	$ 480	$ 12	$ 492[h]

(a) The wholesale allowance for loan losses to total wholesale loans was 1.85% and 2.41%, excluding wholesale HFS loans of $17.6 billion and $6.4 billion at December 31, 2005 and 2004, respectively.
(b) The consumer allowance for loan losses to total consumer loans was 1.84% and 1.70%, excluding consumer HFS loans of $16.6 billion and $18.0 billion at December 31, 2005 and 2004, respectively.
(c) 2005 includes a special provision related to Hurricane Katrina allocated as follows: Retail Financial Services $250 million, Card Services $100 million, Commercial Banking $35 million, Asset & Wealth Management $3 million and Corporate $12 million.
(d) Includes $60 million of asset-specific and $340 million of formula-based allowance at December 31, 2005. The formula-based allowance for lending-related commitments is based upon statistical calculation. There is no adjustment to the statistical calculation for lending-related commitments.
(e) Includes six months of the combined Firm's results and six months of heritage JPMorgan Chase results.
(f) Reflects an increase of $1.4 billion as a result of the decertification of heritage Bank One seller's interest in credit card securitizations, partially offset by a $254 million decrease in the allowance to conform methodologies in 2004.
(g) Primarily represents the transfer of the allowance for accrued interest and fees on reported and securitized credit card loans.
(h) Includes $130 million of asset-specific and $362 million of formula-based allowance at December 31, 2004. The formula-based allowance for lending-related commitments is based upon a statistical calculation. There is no adjustment to the statistical calculation for lending-related commitments.

The reduction in the allowance for credit losses of $322 million from December 31, 2004, was driven primarily by continued credit strength in the wholesale businesses, partially offset by an increase in the consumer allowance as a result of the special provision taken in the third quarter of 2005 due to Hurricane Katrina.

Excluding held-for-sale loans, the allowance for loan losses represented 1.84% of loans at December 31, 2005, compared with 1.94% at December 31, 2004. The wholesale component of the allowance decreased to $2.5 billion as of December 31, 2005, from $3.1 billion at year-end 2004, due to strong credit quality across all wholesale businesses. Excluding the special provision for Hurricane Katrina, the consumer component of the allowance would have been $4.3 billion as of December 31, 2005, a slight increase from December 31, 2004.

To provide for the risk of loss inherent in the Firm's process of extending credit, management also computes an asset-specific component and a formula-based component for wholesale lending–related commitments. These are computed using a methodology similar to that used for the wholesale loan portfolio, modified for expected maturities and probabilities of drawdown. This allowance, which is reported in Other liabilities, was $400 million and $492 million at December 31, 2005 and 2004, respectively.

Provision for credit losses

For a discussion of the reported Provision for credit losses, see page 29 of this Annual Report. The managed provision for credit losses reflects credit card securitizations. At December 31, 2005, securitized credit card outstandings were relatively flat compared with the prior year-end.

For the year ended December 31,[a]	Provision for loan losses		Provision for lending-related commitments		Total provision for credit losses	
(in millions)	**2005**	2004	**2005**	2004	**2005**[c]	2004
Investment Bank	**$ (757)**	$ (525)	**$ (81)**	$ (115)	**$ (838)**	$ (640)
Commercial Banking	**87**	35	**(14)**	6	**73**	41
Treasury & Securities Services	**(1)**	7	**1**	—	**—**	7
Asset & Wealth Management	**(55)**	(12)	**(1)**	(2)	**(56)**	(14)
Corporate	**10**	(110)	**—**	—	**10**	(110)
Total Wholesale	**(716)**	(605)	**(95)**	(111)	**(811)**	(716)
Retail Financial Services	**721**	450	**3**	(1)	**724**	449
Card Services	**3,570**	1,953	**—**	—	**3,570**	1,953
Total Consumer	**4,291**	2,403	**3**	(1)	**4,294**	2,402
Accounting policy conformity[b]	**—**	1,085	**—**	(227)	**—**	858
Total provision for credit losses	**3,575**	2,883	**(92)**	(339)	**3,483**	2,544
Credit card securitization	**3,776**	2,898	**—**	—	**3,776**	2,898
Accounting policy conformity	**—**	(1,085)	**—**	227	**—**	(858)
Total managed provision for credit losses	**$ 7,351**	$ 4,696	**$ (92)**	$ (112)	**$ 7,259**	$ 4,584

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.
(b) The 2004 provision for loan losses includes an increase of approximately $1.4 billion as a result of the decertification of heritage Bank One seller's interest in credit card securitizations, partially offset by a reduction of $357 million to conform provision methodologies. The 2004 provision for lending-related commitments reflects a reduction of $227 million to conform provision methodologies in the wholesale portfolio.
(c) 2005 includes a $400 million special provision related to Hurricane Katrina allocated as follows: Retail Financial Services $250 million, Card Services $100 million, Commercial Banking $35 million, Asset & Wealth Management $3 million and Corporate $12 million.

Market risk management

Market risk is the exposure to an adverse change in the market value of portfolios and financial instruments caused by a change in market prices or rates.

Market risk management

Market Risk Management ("MRM") is an independent corporate risk governance function that identifies, measures, monitors, and controls market risk. It seeks to facilitate efficient risk/return decisions and to reduce volatility in operating performance. It strives to make the Firm's market risk profile transparent to senior management, the Board of Directors and regulators. Market Risk Management is overseen by the Chief Risk Officer, a member of the Firm's Operating Committee. MRM's governance structure consists of the following primary functions:

- Establishment of a comprehensive market risk policy framework
- Independent measurement, monitoring and control of business segment market risk
- Definition, approval and monitoring of limits
- Performance of stress testing and qualitative risk assessments

In addition, the Firm's business segments have valuation control functions that are responsible for ensuring the accuracy of the valuations of positions that expose the Firm to market risk. These groups report primarily into Finance.

Risk identification and classification

MRM works in partnership with the business segments to identify market risks throughout the Firm and to refine and monitor market risk policies and procedures. All business segments are responsible for comprehensive identification and verification of market risks within their units. Risk-taking businesses have functions that act independently from trading personnel and are responsible for verifying risk exposures that the business takes. In addition to providing independent oversight for market risk arising from the business segments, MRM also is responsible for identifying exposures which may not be large within individual business segments, but which may be large for the Firm in aggregate. Regular meetings are held between MRM and the heads of risk-taking businesses to discuss and decide on risk exposures in the context of the market environment and client flows.

Positions that expose the Firm to market risk can be classified into two categories: trading and nontrading risk. Trading risk includes positions that are held by the Firm as part of a business segment or unit whose main business strategy is to trade or make markets. Unrealized gains and losses in these positions are generally reported in trading revenue. Nontrading risk includes securities held for longer term investment, mortgage servicing rights, and securities and derivatives used to manage the Firm's asset/liability exposures. Unrealized gains and losses in these positions are generally not reported in Trading revenue.

Trading risk

Fixed income risk (which includes interest rate risk and credit spread risk) involves the potential decline in net income or financial condition due to adverse changes in market rates, whether arising from client activities or proprietary positions taken by the Firm.

Foreign exchange, equities and commodities risks involve the potential decline in net income to the Firm due to adverse changes in foreign exchange, equities or commodities markets, whether arising from client activities or proprietary positions taken by the Firm.

Nontrading risk

Nontrading risk arises from execution of the Firm's core business strategies, the delivery of products and services to its customers, and the discretionary positions the Firm undertakes to risk-manage exposures.

These exposures can result from a variety of factors, including differences in the timing among the maturity or repricing of assets, liabilities and off–balance sheet instruments. Changes in the level and shape of market interest rate curves also may create interest rate risk, since the repricing characteristics of the Firm's assets do not necessarily match those of its liabilities. The Firm also is exposed to basis risk, which is the difference in re-pricing characteristics of two floating rate indices, such as the prime rate and 3-month LIBOR. In addition, some of the Firm's products have embedded optionality that impact pricing and balances.

The Firm's mortgage banking activities also give rise to complex interest rate risks. The interest rate exposure from the Firm's mortgage banking activities is a result of changes in the level of interest rates, option and basis risk. Option risk arises primarily from prepayment options embedded in mortgages and changes in the probability of newly-originated mortgage commitments actually closing. Basis risk results from different relative movements between mortgage rates and other interest rates.

Risk measurement

Tools used to measure risk

Because no single measure can reflect all aspects of market risk, the Firm uses various metrics, both statistical and nonstatistical, including:

- Nonstatistical risk measures
- Value-at-Risk ("VAR")
- Loss advisories
- Economic value stress testing
- Earnings-at-risk stress testing
- Risk identification for large exposures ("RIFLE")

Nonstatistical risk measures

Nonstatistical risk measures other than stress testing include net open positions, basis point values, option sensitivities, market values, position concentrations and position turnover. These measures provide granular information on the Firm's market risk exposure. They are aggregated by line of business and by risk type, and are used for monitoring limits, one-off approvals and tactical control.

Value-at-risk

JPMorgan Chase's primary statistical risk measure, VAR, estimates the potential loss from adverse market moves in an ordinary market environment and provides a consistent cross-business measure of risk profiles and levels of diversification. VAR is used for comparing risks across businesses, monitoring limits, one-off approvals, and as an input to economic capital calculations. VAR provides risk transparency in a normal trading environment.

Each business day the Firm undertakes a comprehensive VAR calculation that includes both its trading and its nontrading activities. VAR for nontrading activities measures the amount of potential change in fair value of the exposures related to these activities; however, VAR for such activities is not a measure of reported revenue since nontrading activities are generally not marked to market through earnings.

To calculate VAR, the Firm uses historical simulation, which measures risk across instruments and portfolios in a consistent and comparable way. This approach assumes that historical changes in market values are representative of future changes. The simulation is based upon data for the previous twelve months. The Firm calculates VAR using a one-day time horizon and an expected tail loss methodology, which approximates a 99% confidence level. This means the Firm would expect to incur losses greater than that predicted by VAR estimates only once in every 100 trading days, or about 2.5 times a year.

Trading VAR

IB trading VAR by risk type and credit portfolio VAR[a]

	2005				2004[e]			
As of or for the year ended December 31, (in millions)	Average VAR	Minimum VAR	Maximum VAR	At December 31,	Average VAR	Minimum VAR	Maximum VAR	At December 31,
By risk type:								
Fixed income	**$ 67**	**$ 37**	**$ 110**	**$ 89**	$ 74	$ 45	$ 118	$ 57
Foreign exchange	**23**	**16**	**32**	**19**	17	10	33	28
Equities	**34**	**15**	**65**	**24**	28	15	58	20
Commodities and other	**21**	**7**	**50**	**34**	9	7	18	8
Less: portfolio diversification	**(59)**[c]	**NM**[d]	**NM**[d]	**(63)**[c]	(43)[c]	NM[d]	NM[d]	(41)[c]
Total trading VAR	**$ 86**	**$ 53**	**$ 130**	**$ 103**	$ 85	$ 52	$ 125	$ 72
Credit portfolio VAR[b]	**14**	**11**	**17**	**15**	14	11	17	15
Less: portfolio diversification	**(12)**[c]	**NM**[d]	**NM**[d]	**(10)**[c]	(9)[c]	NM[d]	NM[d]	(9)[c]
Total trading and credit portfolio VAR	**$ 88**	**$ 57**	**$ 130**	**$ 108**	$ 90	$ 55	$ 132	$ 78

(a) Trading VAR excludes VAR related to the Firm's private equity business and certain exposures used to manage MSRs. For a discussion of Private equity risk management and MSRs, see page 80 and Note 15 on pages 114–116 of this Annual Report, respectively. Trading VAR includes substantially all mark-to-market trading activities in the IB, plus available-for-sale securities held for the IB's proprietary purposes (included within Fixed Income); however, particular risk parameters of certain products are not fully captured, for example, correlation risk.
(b) Includes VAR on derivative credit valuation adjustments, credit valuation adjustment hedges and mark-to-market hedges of the accrual loan portfolio, which are all reported in Trading revenue. This VAR does not include the accrual loan portfolio, which is not marked to market.
(c) Average and period-end VARs are less than the sum of the VARs of its market risk components, which is due to risk offsets resulting from portfolio diversification. The diversification effect reflects the fact that the risks are not perfectly correlated. The risk of a portfolio of positions is therefore usually less than the sum of the risks of the positions themselves.
(d) Designated as not meaningful ("NM") because the minimum and maximum may occur on different days for different risk components, and hence it is not meaningful to compute a portfolio diversification effect.
(e) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.

IB's Average Total Trading and Credit Portfolio VAR decreased to $88 million during 2005 compared with $90 million for the same period in 2004. Period-end VAR increased over the same period to $108 million from $78 million. Commodities and other VAR increased due to the expansion of the energy trading business. The decrease in average Total Trading and Credit Portfolio VAR was driven by increased portfolio diversification as fixed income risk decreased and foreign exchange, equities and commodities risk increased. Trading VAR diversification increased to $59 million, or 41% of the sum of the components, from $43 million, or 34% of the sum of the components. The diversification effect between the trading portfolio and the credit portfolio also increased to $12 million, or 12% of the sum of the components, from $9 million, or 9% of the sum of the components. In general, over the course of the year, VAR exposures can vary significantly as trading positions change, market volatility fluctuates and diversification benefits change.

VAR backtesting

To evaluate the soundness of its VAR model, the Firm conducts daily backtesting of VAR against daily financial results, based upon market risk-related revenue. Market risk-related revenue is defined as the change in value of the mark-to-market trading portfolios plus any trading-related net interest income, brokerage commissions, underwriting fees or other revenue. The following histogram illustrates the daily market risk-related gains and losses for the IB trading businesses for the year ended December 31, 2005. The chart shows that the IB posted market risk-related gains on 208 out of 260 days in this period, with 20 days exceeding $100 million. The inset graph looks at those days on which the IB experienced losses and depicts the amount by which VAR exceeded the actual loss on each of those days. Losses were sustained on 52 days, with no loss greater than $90 million, and with no loss exceeding the VAR measure.

Loss advisories

Loss advisories are tools used to highlight to senior management trading losses above certain levels and are used to initiate discussion of remedies.

Economic value stress testing

While VAR reflects the risk of loss due to unlikely events in normal markets, stress testing captures the Firm's exposure to unlikely but plausible events in abnormal markets. The Firm conducts economic-value stress tests for both its trading and its nontrading activities using multiple scenarios for both types of activities. Periodically, scenarios are reviewed and updated to reflect changes in the Firm's risk profile and economic events. Stress testing is as important as VAR in measuring and controlling risk. Stress testing enhances the understanding of the Firm's risk profile and loss potential, and is used for monitoring limits, one-off approvals and cross-business risk measurement, as well as an input to economic capital allocation.

Based upon the Firm's stress scenarios, the stress test loss (pre-tax) in the IB's trading portfolio ranged from $469 million to $1.4 billion, and $202 million to $1.2 billion, for the years ended December 31, 2005 and 2004, respectively. The 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.

Earnings-at-risk stress testing

The VAR and stress-test measures described above illustrate the total economic sensitivity of the Firm's balance sheet to changes in market variables. The effect of interest rate exposure on reported Net income also is critical. Interest rate risk exposure in the Firm's core nontrading business activities (i.e., asset/liability management positions) results from on– and off–balance sheet positions. The Firm conducts simulations of changes in NII from its nontrading activities under a variety of interest rate scenarios, which are consistent with the scenarios used for economic-value stress testing. Earnings-at-risk tests measure the potential change in the Firm's Net interest income over the next 12 months and highlight exposures to various rate-sensitive factors, such as the rates themselves (e.g., the prime lending rate), pricing strategies on deposits, optionality and changes in product mix. The tests include forecasted balance sheet changes, such as asset sales and securitizations, as well as prepayment and reinvestment behavior.

Earnings-at-risk also can result from changes in the slope of the yield curve, because the Firm has the ability to lend at fixed rates and borrow at variable or short-term fixed rates. Based upon these scenarios, the Firm's earnings would be affected negatively by a sudden and unanticipated increase in short-term rates without a corresponding increase in long-term rates. Conversely, higher long-term rates generally are beneficial to earnings, particularly when the increase is not accompanied by rising short-term rates.

Immediate changes in interest rates present a limited view of risk, and so a number of alternative scenarios also are reviewed. These scenarios include the implied forward curve, nonparallel rate shifts and severe interest rate shocks on selected key rates. These scenarios are intended to provide a comprehensive view of JPMorgan Chase's earnings-at-risk over a wide range of outcomes.

JPMorgan Chase's 12-month pre-tax earnings sensitivity profile as of December 31, 2005 and 2004, follows:

	Immediate change in rates		
(in millions)	+200bp	+100bp	-100bp
December 31, 2005	**$ 265**	**$ 172**	**$ (162)**
December 31, 2004	(557)	(164)	(180)

The Firm's risk to rising and falling interest rates is due primarily to corresponding increases and decreases in short-term funding costs.

RIFLE

Individuals who manage risk positions, particularly those that are complex, are responsible for identifying potential losses that could arise from specific unusual events, such as a potential tax change, and estimating the probabilities of losses arising from such events. This information is entered into the Firm's RIFLE system and directed to the appropriate level of management, thereby permitting the Firm to identify further earnings vulnerability not adequately covered by standard risk measures.

Risk monitoring and control

Limits

Market risk is controlled primarily through a series of limits. Limits reflect the Firm's risk appetite in the context of the market environment and business strategy. In setting limits, the Firm takes into consideration factors such as market volatility, product liquidity, business track record and management experience.

MRM regularly reviews and updates risk limits, and senior management reviews and approves risk limits at least once a year. MRM further controls the Firm's exposure by specifically designating approved financial instruments and tenors, known as instrument authorities, for each business segment.

The Firm maintains different levels of limits. Corporate-level limits include VAR, stress and loss advisories. Similarly, line of business limits include VAR, stress and loss advisories, and are supplemented by nonstatistical measurements and instrument authorities. Businesses are responsible for adhering to established limits, against which exposures are monitored and reported. Limit breaches are reported in a timely manner to senior management, and the affected business segment is required to take appropriate action to reduce trading positions. If the business cannot do this within an acceptable timeframe, senior management is consulted on the appropriate action.

Qualitative review

MRM also performs periodic reviews as necessary of both businesses and products with exposure to market risk in order to assess the ability of the businesses to control their market risk. Strategies, market conditions, product details and risk controls are reviewed, and specific recommendations for improvements are made to management.

Model review

Some of the Firm's financial instruments cannot be valued based upon quoted market prices but are instead valued using pricing models. Such models are used for management of risk positions, such as reporting against limits, as well as for valuation. The Model Risk Group, independent of the businesses and MRM, reviews the models the Firm uses and assesses model appropriateness and consistency. The model reviews consider a number of factors about the model's suitability for valuation and risk management of a particular product, including whether it accurately reflects the characteristics of the transaction and its significant risks, the suitability and convergence properties of numerical algorithms, reliability of data sources, consistency of the treatment with models for similar products, and sensitivity to input parameters and assumptions that cannot be priced from the market.

Reviews are conducted for new or changed models, as well as previously accepted models, to assess whether there have been any changes in the product or market that may impact the model's validity and whether there are theoretical or competitive developments that may require reassessment of the model's adequacy. For a summary of valuations based upon models, see Critical Accounting Estimates used by the Firm on pages 81–83 of this Annual Report.

Risk reporting

Nonstatistical exposures, value-at-risk, loss advisories and limit excesses are reported daily for each trading and nontrading business. Market risk exposure trends, value-at-risk trends, profit and loss changes, and portfolio concentrations are reported weekly. Stress test results are reported monthly to business and senior management.

Operational risk management

Operational risk is the risk of loss resulting from inadequate or failed processes or systems, human factors or external events.

Overview

Operational risk is inherent in each of the Firm's businesses and support activities. Operational risk can manifest itself in various ways, including errors, business interruptions, inappropriate behavior of employees and vendors that do not perform in accordance with outsourcing arrangements. These events can potentially result in financial losses and other damage to the Firm, including reputational harm.

To monitor and control operational risk, the Firm maintains a system of comprehensive policies and a control framework designed to provide a sound and well-controlled operational environment. The goal is to keep operational risk at appropriate levels, in light of the Firm's financial strength, the characteristics of its businesses, the markets in which it operates, and the competitive and regulatory environment to which it is subject. Notwithstanding these control measures, the Firm incurs operational losses.

The Firm's approach to operational risk management is intended to mitigate such losses by supplementing traditional control-based approaches to operational risk with risk measures, tools and disciplines that are risk-specific, consistently applied and utilized firmwide. Key themes are transparency of information, escalation of key issues and accountability for issue resolution.

During 2005, the Firm substantially completed the implementation of Phoenix, a new internally-designed operational risk software tool. Phoenix integrates the individual components of the operational risk management framework into a unified, web-based tool. Phoenix is intended to enable the Firm to enhance its reporting and analysis of operational risk data by enabling risk identification, measurement, monitoring, reporting and analysis to be done in an integrated manner, thereby enabling efficiencies in the Firm's management of its operational risk.

For purposes of identification, monitoring, reporting and analysis, the Firm categorizes operational risk events as follows:

- Client service and selection
- Business practices
- Fraud, theft and malice
- Execution, delivery and process management
- Employee disputes
- Disasters and public safety
- Technology and infrastructure failures

Risk identification and measurement

Risk identification is the recognition of the operational risk events that management believes may give rise to operational losses.

In 2005, JPMorgan Chase substantially completed a multi-year effort to redesign the underlying architecture of its firmwide self-assessment process. The goal of the self-assessment process is for each business to identify the key operational risks specific to its environment and assess the degree to which it maintains appropriate controls. Action plans are developed for control issues identified, and businesses are held accountable for tracking and resolving these issues on a timely basis.

All businesses were required to perform self-assessments in 2005. Going forward, the Firm will utilize the self-assessment process as a dynamic risk management tool.

Risk monitoring

The Firm has a process for monitoring operational risk-event data, permitting analysis of errors and losses as well as trends. Such analysis, performed both at a line of business level and by risk-event type, enables identification of the causes associated with risk events faced by the businesses. Where available, the internal data can be supplemented with external data for comparative analysis with industry patterns. The data reported will enable the Firm to back-test against self-assessment results.

Risk reporting and analysis

Operational risk management reports provide timely and accurate information, including information about actual operational loss levels and self-assessment results, to the lines of business and senior management. The purpose of these reports is to enable management to maintain operational risk at appropriate levels within each line of business, to escalate issues and to provide consistent data aggregation across the Firm's businesses and support areas.

Audit alignment

Internal Audit utilizes a risk-based program of audit coverage to provide an independent assessment of the design and effectiveness of key controls over the Firm's operations, regulatory compliance and reporting. Audit partners with business management and members of the control community in providing guidance on the operational risk framework and reviewing the effectiveness and accuracy of the business self-assessment process as part of its business unit audits.

Reputation and fiduciary risk management

A firm's success depends not only on its prudent management of liquidity, credit, market and operational risks that are part of its business risks, but equally on the maintenance among many constituents – clients, investors, regulators, as well as the general public – of a reputation for business practices of the highest quality. Attention to reputation has always been a key aspect of the Firm's practices, and maintenance of reputation is the responsibility of everyone at the Firm. JPMorgan Chase bolsters this individual responsibility in many ways, including through the Firm's Code of Conduct, training, maintaining adherence to policies and procedures and oversight functions that approve transactions. These oversight functions include a Conflicts Office, which examines wholesale transactions with the potential to create conflicts of interest for the Firm.

Policy review office

The Firm also has a specific structure to address certain transactions with clients, especially complex derivatives and structured finance transactions, that have the potential to adversely affect its reputation. This structure reinforces the Firm's procedures for examining transactions in terms of appropriateness, ethical issues and reputational risk, and it intensifies the Firm's scrutiny of the purpose and effect of its transactions from the client's point of view, with the goal that these transactions are not used to mislead investors or others. The structure operates at three levels: as part of every business' transaction approval process; through review by regional Reputation Risk Committees; and through oversight by the Policy Review Office.

Primary responsibility for adherence to the policies and procedures designed to address reputation risk lies with the business units conducting the transactions in question. The Firm's transaction approval process requires review from, among others, internal legal/compliance, conflicts, tax and accounting groups. Transactions involving an SPE established by the Firm receive particular scrutiny intended to ensure that every such entity is properly approved, documented, monitored and controlled.

Business units are also required to submit to regional Reputation Risk Committees proposed transactions that may give rise to heightened reputation risk – particularly a client's motivation and its intended financial disclosure of the transaction. The committees may approve, reject or require further clarification on or changes to the transactions. The members of these committees are senior representatives of the business and support units in the region. The committees may escalate transaction review to the Policy Review Office.

The Policy Review Office is the most senior approval level for client transactions involving reputation risk issues. The mandate of the Office is to opine on specific transactions brought by the Regional Committees and consider changes in policies or practices relating to reputation risk. The head of the Office consults with the Firm's most senior executives on specific topics and provides regular updates. Aside from governance and guidance on specific transactions, the objective of the policy review process is to reinforce a culture, through a "case study" approach, that ensures that all employees, regardless of seniority, understand the basic principles of reputation risk control and can recognize and address issues as they arise.

In 2006, this structure, which until now has been focused primarily on Investment Bank activities, will be expanded to include the activities of Commercial Banking and the Private Bank. These lines of business will implement training and review procedures similar to those in the Investment Bank and their activities also will be subject to the oversight of the Policy Review Office.

Fiduciary risk management

The risk management committees within each line of business include in their mandate the oversight of the legal, reputational and, where appropriate, fiduciary risks in their businesses that may produce significant losses or reputational damage. The Fiduciary Risk Management function works with the relevant line of business risk committees to ensure that businesses providing investment or risk management products or services that give rise to fiduciary duties to clients perform at the appropriate standard relative to their fiduciary relationship with a client. Of particular focus are the policies and practices that address a business' responsibilities to a client, including client suitability determination, disclosure obligations, disclosure communications and performance expectations with respect to such of the investment and risk management products or services being provided by the Firm that give rise to such fiduciary duties. In this way, the relevant line-of-business risk committees, together with the Fiduciary Risk Management function, provide oversight of the Firm's efforts to monitor, measure and control the risks that may arise in the delivery of the products or services to clients that give rise to such duties, as well as those stemming from any of the Firm's fiduciary responsibilities to employees under the Firm's various employee benefit plans.

Private equity risk management

Risk management

The Firm makes direct principal investments in private equity. The illiquid nature and long-term holding period associated with these investments differentiates private equity risk from the risk of positions held in the trading portfolios. The Firm's approach to managing private equity risk is consistent with the Firm's general risk governance structure. Controls are in place establishing target levels for total and annual investment in order to control the overall size of the portfolio. Industry and geographic concentration limits are in place intended to ensure diversification of the portfolio, and periodic reviews are performed on the portfolio to substantiate the valuations of the investments. The Valuation Control Group within the Finance area is responsible for reviewing the accuracy of the carrying values of private equity investments held by Private Equity. At December 31, 2005, the carrying value of the private equity portfolios of JPMorgan Partners and ONE Equity Partners businesses was $6.2 billion, of which $479 million represented positions traded in the public market.

Critical accounting estimates used by the Firm

JPMorgan Chase's accounting policies and use of estimates are integral to understanding its reported results. The Firm's most complex accounting estimates require management's judgment to ascertain the valuation of assets and liabilities. The Firm has established detailed policies and control procedures intended to ensure that valuation methods, including any judgments made as part of such methods, are well controlled, independently reviewed and applied consistently from period to period. In addition, the policies and procedures are intended to ensure that the process for changing methodologies occurs in a controlled and appropriate manner. The Firm believes its estimates for determining the valuation of its assets and liabilities are appropriate. The following is a brief description of the Firm's critical accounting estimates involving significant valuation judgments.

Allowance for credit losses

JPMorgan Chase's allowance for credit losses covers the wholesale and consumer loan portfolios as well as the Firm's portfolio of wholesale lending-related commitments. The Allowance for loan losses is intended to adjust the value of the Firm's loan assets for probable credit losses as of the balance sheet date. For a further discussion of the methodologies used in establishing the Firm's Allowance for credit losses, see Note 12 on pages 107–108 of this Annual Report.

Wholesale loans and lending-related commitments

The methodology for calculating both the Allowance for loan losses and the Allowance for lending-related commitments involves significant judgment. First and foremost, it involves the early identification of credits that are deteriorating. Second, it involves management judgment to derive loss factors. Third, it involves management judgment to evaluate certain macroeconomic factors, underwriting standards, and other relevant internal and external factors affecting the credit quality of the current portfolio and to refine loss factors to better reflect these conditions.

The Firm uses a risk rating system to determine the credit quality of its wholesale loans. Wholesale loans are reviewed for information affecting the obligor's ability to fulfill its obligations. In assessing the risk rating of a particular loan, among the factors considered include the obligor's debt capacity and financial flexibility, the level of the obligor's earnings, the amount and sources for repayment, the level and nature of contingencies, management strength, and the industry and geography in which the obligor operates. These factors are based upon an evaluation of historical and current information, and involve subjective assessment and interpretation. Emphasizing one factor over another, or considering additional factors that may be relevant in determining the risk rating of a particular loan but which are not currently an explicit part of the Firm's methodology, could impact the risk rating assigned by the Firm to that loan.

Management applies its judgment to derive loss factors associated with each credit facility. These loss factors are determined by facility structure, collateral and type of obligor. Wherever possible, the Firm uses independent, verifiable data or the Firm's own historical loss experience in its models for estimating these loss factors. Many factors can affect management's estimates of loss, including volatility of loss given default, probability of default and rating migrations. Judgment is applied to determine whether the loss given default should be calculated as an average over the entire credit cycle or at a particular point in the credit cycle. The application of different loss given default factors would change the amount of the Allowance for credit losses determined appropriate by the Firm. Similarly, there are judgments as to which external data on probability of default should be used and when they should be used. Choosing data that are not reflective of the Firm's specific loan portfolio characteristics could also affect loss estimates.

Management also applies its judgment to adjust the loss factors derived, taking into consideration model imprecision, external factors and economic events that have occurred but are not yet reflected in the loss factors. The resultant adjustments to the statistical calculation on the performing portfolio are determined by creating estimated ranges using historical experience of both loss given default and probability of default. Factors related to concentrated and deteriorating industries are also incorporated where relevant. The estimated ranges and the determination of the appropriate point within the range are based upon management's view of uncertainties that relate to current macroeconomic and political conditions, quality of underwriting standards and other relevant internal and external factors affecting the credit quality of the current portfolio. The adjustment to the statistical calculation for the wholesale loan portfolio for the period ended December 31, 2005, was $621 million, the higher-end within the range, based upon management's assessment of current economic conditions.

Consumer loans

For scored loans in the consumer lines of business, loss is primarily determined by applying statistical loss factors and other risk indicators to pools of loans by asset type. These loss estimates are sensitive to changes in delinquency status, credit bureau scores, the realizable value of collateral and other risk factors.

Adjustments to the statistical calculation are accomplished in part by analyzing the historical loss experience for each major product segment. Management analyzes the range of credit loss experienced for each major portfolio segment, taking into account economic cycles, portfolio seasoning and underwriting criteria, and then formulates a range that incorporates relevant risk factors that impact overall credit performance. The recorded adjustment to the statistical calculation for the period ended December 31, 2005, was $1.2 billion, based upon management's assessment of current economic conditions.

Fair value of financial instruments

A portion of JPMorgan Chase's assets and liabilities are carried at fair value, including trading assets and liabilities, AFS securities and private equity investments. Held-for-sale loans, mortgage servicing rights ("MSRs") and commodities inventory are carried at the lower of fair value or cost. At December 31, 2005, approximately $386 billion of the Firm's assets were recorded at fair value.

The fair value of a financial instrument is defined as the amount at which the instrument could be exchanged in a current transaction between willing parties, other than in a forced or liquidation sale. The majority of the Firm's assets reported at fair value are based upon quoted market prices or on internally developed models that utilize independently sourced market parameters, including interest rate yield curves, option volatilities and currency rates.

The degree of management judgment involved in determining the fair value of a financial instrument is dependent upon the availability of quoted market prices or observable market parameters. For financial instruments that are actively traded and have quoted market prices or parameters readily available, there is little-to-no subjectivity in determining fair value. When observable market prices and parameters do not exist, management judgment is necessary to estimate fair value. The valuation process takes into consideration

factors such as liquidity and concentration concerns and, for the derivatives portfolio, counterparty credit risk (see the discussion of CVA on page 70 of this Annual Report). For example, there is often limited market data to rely on when estimating the fair value of a large or aged position. Similarly, judgment must be applied in estimating prices for less readily observable external parameters. Finally, other factors such as model assumptions, market dislocations and unexpected correlations can affect estimates of fair value. Imprecision in estimating these factors can impact the amount of revenue or loss recorded for a particular position.

Trading and available-for-sale portfolios

Substantially all of the Firm's securities held for trading and investment purposes ("long" positions) and securities that the Firm has sold to other parties but does not own ("short" positions) are valued based upon quoted market prices. However, certain securities are less actively traded and, therefore, are not always able to be valued based upon quoted market prices. The determination of their fair value requires management judgment, as this determination may require benchmarking to similar instruments or analyzing default and recovery rates. Examples include certain collateralized mortgage and debt obligations and high-yield debt securities.

As few derivative contracts are listed on an exchange, the majority of the Firm's derivative positions are valued using internally developed models that use as their basis readily observable market parameters – that is, parameters that are actively quoted and can be validated to external sources, including industry-pricing services. Certain derivatives, however, are valued based upon models with significant unobservable market parameters – that is, parameters that must be estimated and are, therefore, subject to management judgment to substantiate the model valuation. These instruments are normally either less actively traded or trade activity is one-way. Examples include long-dated interest rate or currency swaps, where swap rates may be unobservable for longer maturities, and certain credit products, where correlation and recovery rates are unobservable. Due to the lack of observable market data, the Firm defers the initial trading profit for these financial instruments. The deferred profit is recognized in Trading revenue on a systematic basis and when observable market data becomes available. Management's judgment also includes recording fair value adjustments (i.e., reductions) to model valuations to account for parameter uncertainty when valuing complex or less actively traded derivative transactions. The following table summarizes the Firm's trading and available-for-sale portfolios by valuation methodology at December 31, 2005:

	Trading assets		Trading liabilities		
	Securities purchased[a]	Derivatives[b]	Securities sold[a]	Derivatives[b]	AFS securities
Fair value based upon:					
Quoted market prices	**86%**	**2%**	**97%**	**2%**	**91%**
Internal models with significant observable market parameters	**12**	**96**	**2**	**97**	**6**
Internal models with significant unobservable market parameters	**2**	**2**	**1**	**1**	**3**
Total	**100%**	**100%**	**100%**	**100%**	**100%**

(a) Reflected as debt and equity instruments on the Firm's Consolidated balance sheets.
(b) Based upon gross mark-to-market valuations of the Firm's derivatives portfolio prior to netting positions pursuant to FIN 39, as cross-product netting is not relevant to an analysis based upon valuation methodologies.

To ensure that the valuations are appropriate, the Firm has various controls in place. These include: an independent review and approval of valuation models; detailed review and explanation for profit and loss analyzed daily and over time; decomposing the model valuations for certain structured derivative instruments into their components and benchmarking valuations, where possible, to similar products; and validating valuation estimates through actual cash settlement. As markets and products develop and the pricing for certain derivative products becomes more transparent, the Firm refines its valuation methodologies. The Valuation Control Group within the Finance area, a group independent of the risk-taking function, is responsible for reviewing the accuracy of the valuations of positions taken within the Investment Bank.

For a discussion of market risk management, including the model review process, see Market risk management on pages 75–78 of this Annual Report. For further details regarding the Firm's valuation methodologies, see Note 29 on pages 126–128 of this Annual Report.

Loans held-for-sale

The fair value of loans in the held-for-sale portfolio is generally based upon observable market prices of similar instruments, including bonds, credit derivatives and loans with similar characteristics. If market prices are not available, fair value is based upon the estimated cash flows adjusted for credit risk that is discounted using a rate appropriate for each maturity that incorporates the effects of interest rate changes.

Commodities inventory

The majority of commodities inventory includes bullion and base metals where fair value is determined by reference to prices in highly active and liquid markets. The fair value of other commodities inventory is determined primarily using prices and data derived from less liquid and developing markets where the underlying commodities are traded.

Private equity investments

Valuation of private investments held primarily by the Private Equity business within Corporate requires significant management judgment due to the absence of quoted market prices, inherent lack of liquidity and the long-term nature of such assets. Private investments are initially valued based upon cost. The carrying values of private investments are adjusted from cost to reflect both positive and negative changes evidenced by financing events with third-party capital providers. In addition, these investments are subject to ongoing impairment reviews by Private Equity's senior investment professionals. A variety of factors are reviewed and monitored to assess impairment including, but not limited to, operating performance and future expectations of the particular portfolio investment, industry valuations of comparable public companies, changes in market outlook and the third-party financing environment over time. The Valuation Control Group within the Finance area is responsible for reviewing the accuracy of the carrying values of private investments held by Private Equity. For additional information about private equity investments,

see the Private equity risk management discussion on page 80 and Note 9 on pages 103–105 of this Annual Report.

MSRs and certain other retained interests in securitizations
MSRs and certain other retained interests from securitization activities do not trade in an active, open market with readily observable prices. For example, sales of MSRs do occur, but the precise terms and conditions are typically not readily available. Accordingly, the Firm estimates the fair value of MSRs and certain other retained interests in securitizations using discounted future cash flow (DCF) models.

For MSRs, the model considers portfolio characteristics, contractually specified servicing fees and prepayment assumptions, delinquency rates, late charges, other ancillary revenues, costs to service and other economic factors. During the fourth quarter of 2005, the Company began utilizing an option adjusted spread ("OAS") valuation approach when determining the fair value of MSRs. This approach, when used in conjunction with the Firm's proprietary prepayment model, projects MSR cash flows over multiple interest rate scenarios, which are then discounted at risk-adjusted rates, to estimate an expected fair value of the MSRs. The OAS valuation approach is expected to provide improved estimates of fair value. The initial valuation of MSRs under OAS did not have a material impact to the Firm's financial statements.

For certain other retained interests in securitizations (such as interest only strips), a single interest rate path DCF model is used and generally includes assumptions based upon projected finance charges related to the securitized assets, estimated net credit losses, prepayment assumptions, and contractual interest paid to the third-party investors. Changes in the assumptions used may have a significant impact on the Firm's valuation of retained interests.

For both MSRs and certain other retained interests in securitizations, the Firm compares its fair value estimates and assumptions to observable market data where available and to recent market activity and actual portfolio experience. Management believes that the assumptions used to estimate fair values are supportable and reasonable.

For a further discussion of the most significant assumptions used to value retained interests in securitizations and MSRs, as well as the applicable stress tests for those assumptions, see Notes 13 and 15 on pages 108–111 and 114–116, respectively, of this Annual Report.

Goodwill impairment
Under SFAS 142, goodwill must be allocated to reporting units and tested for impairment. The Firm tests goodwill for impairment at least annually or more frequently if events or circumstances, such as adverse changes in the business climate, indicate that there may be justification for conducting an interim test. Impairment testing is performed at the reporting-unit level (which is generally one level below the six major business segments identified in Note 31 on pages 130–131 of this Annual Report, plus Private Equity which is included in Corporate). The first part of the test is a comparison, at the reporting unit level, of the fair value of each reporting unit to its carrying amount, including goodwill. If the fair value is less than the carrying value, then the second part of the test is needed to measure the amount of potential goodwill impairment. The implied fair value of the reporting unit goodwill is calculated and compared to the carrying amount of goodwill recorded in the Firm's financial records. If the carrying value of reporting unit goodwill exceeds the implied fair value of that goodwill, then the Firm would recognize an impairment loss in the amount of the difference, which would be recorded as a charge against Net income.

The fair values of the reporting units are determined using discounted cash flow models based upon each reporting unit's internal forecasts. In addition, analysis using market-based trading and transaction multiples, where available, are used to assess the reasonableness of the valuations derived from the discounted cash flow models.

Goodwill was not impaired as of December 31, 2005 or 2004, nor was any goodwill written off due to impairment during the years ended December 31, 2005, 2004 and 2003. See Note 15 on page 114 of this Annual Report for additional information related to the nature and accounting for goodwill and the carrying values of goodwill by major business segment.

Accounting and reporting developments

Accounting for income taxes – repatriation of foreign earnings under the American Jobs Creation Act of 2004
On October 22, 2004, the American Jobs Creation Act of 2004 (the "Act") was signed into law. The Act creates a temporary incentive for U.S. companies to repatriate accumulated foreign earnings at a substantially reduced U.S. effective tax rate by providing a dividends received deduction on the repatriation of certain foreign earnings to the U.S. taxpayer (the "repatriation provision"). The new deduction is subject to a number of limitations and requirements.

In the fourth quarter of 2005, the Firm applied the repatriation provision to $1.9 billion of cash from foreign earnings, resulting in a net tax benefit of $55 million. The $1.9 billion of cash will be used in accordance with the Firm's domestic reinvestment plan pursuant to the guidelines set forth in the Act.

Accounting for share-based payments
In December 2004, the FASB issued SFAS 123R, which revises SFAS 123 and supersedes APB 25. In March 2005, the Securities and Exchange Commission ("SEC") issued SAB 107 which provides interpretive guidance on SFAS 123R. Accounting and reporting under SFAS 123R is generally similar to the SFAS 123 approach. However, SFAS 123R requires all share-based payments to employees, including grants of employee stock options, to be recognized in the income statement based upon their fair values. Pro forma disclosure is no longer an alternative. SFAS 123R permits adoption using one of two methods – modified prospective or modified retrospective. In April 2005, the SEC approved a new rule that, for public companies, delays the effective date of SFAS 123R to no later than January 1, 2006. The Firm adopted SFAS 123R on January 1, 2006, under the modified prospective method.

The Firm continued to account for certain stock options that were outstanding as of December 31, 2002, under APB 25 using the intrinsic value method. Therefore, compensation expense for some previously granted awards that was not recognized under SFAS 123 will be recognized commencing January 1, 2006, under SFAS 123R. Had the Firm adopted SFAS 123R in prior periods, the impact would have approximated that shown in the SFAS 123 pro forma disclosures in Note 7 on pages 100–102 of this Annual Report, which presents net income and earnings per share as if all outstanding awards were accounted for at fair value.

Prior to adopting SFAS 123R, the Firm's accounting policy for share-based payment awards granted to retirement-eligible employees was to recognize

compensation cost over the awards' stated service period. For awards granted to retirement-eligible employees in January 2006, which are subject to SFAS 123R, the Firm will recognize compensation expense on the grant date without giving consideration to the impact of post-employment restrictions. This will result in an increase in compensation expense for the fiscal quarter ended March 31, 2006 of approximately $300 million, as compared with the expense that would have been recognized under the Firm's prior accounting policy. The Firm will also accrue in 2006 the estimated cost of stock awards to be granted to retirement-eligible employees in January 2007.

Accounting for conditional asset retirement obligations
In March 2005, FASB issued FIN 47 to clarify the term "conditional asset retirement obligation" as used in SFAS 143. Conditional asset retirement obligations are legal obligations to perform an asset retirement activity in which the timing and/or method of settlement are conditional based upon a future event that may or may not be within the control of the company. The obligation to perform the asset retirement activity is unconditional even though uncertainty exists about the timing and/or method of settlement. FIN 47 clarifies that a company is required to recognize a liability for the fair value of the conditional asset retirement obligation if the fair value of the liability can be reasonably estimated and provides guidance for determining when a company would have sufficient information to reasonably estimate the fair value of the obligation. The Firm adopted FIN 47 on December 31, 2005. The implementation did not have a material impact on its financial position or results of operations.

Accounting for Certain Hybrid Financial Instruments – an Amendment of FASB Statements No. 133 and 140
In February 2006, the FASB issued SFAS 155, which applies to certain "hybrid financial instruments," which are instruments that contain embedded derivatives. The new standard establishes a requirement to evaluate beneficial interests in securitized financial assets to determine if the interests represent freestanding derivatives or are hybrid financial instruments containing embedded derivatives requiring bifurcation.

This new standard also permits an election for fair value remeasurement of any hybrid financial instrument containing an embedded derivative that otherwise would require bifurcation under SFAS 133. The fair value election can be applied on an instrument-by-instrument basis to existing instruments at the date of adoption and can be applied to new instruments on a prospective basis.

Currently, the Firm is planning to adopt this standard effective January 1, 2006. In addition, the Firm is assessing to which qualifying existing and newly issued instruments it will apply the fair value election. Implementation of this standard is not expected to have a material impact on the Firm's financial position or results of operations.

Nonexchange-traded commodity derivative contracts at fair value

In the normal course of business, JPMorgan Chase trades nonexchange-traded commodity derivative contracts. To determine the fair value of these contracts, the Firm uses various fair value estimation techniques, which are primarily based upon internal models with significant observable market parameters. The Firm's nonexchange-traded commodity derivative contracts are primarily energy-related contracts. The following table summarizes the changes in fair value for nonexchange-traded commodity derivative contracts for the year ended December 31, 2005:

For the year ended December 31, 2005 (in millions)	Asset position	Liability position
Net fair value of contracts outstanding at January 1, 2005	**$ 1,449**	**$ 999**
Effect of legally enforceable master netting agreements	**2,304**	**2,233**
Gross fair value of contracts outstanding at January 1, 2005	**3,753**	**3,232**
Contracts realized or otherwise settled during the period	**(12,589)**	**(10,886)**
Fair value of new contracts	**37,518**	**30,691**
Changes in fair values attributable to changes in valuation techniques and assumptions	**—**	**—**
Other changes in fair value	**(11,717)**	**(7,635)**
Gross fair value of contracts outstanding at December 31, 2005	**16,965**	**15,402**
Effect of legally enforceable master netting agreements	**(10,014)**	**(10,078)**
Net fair value of contracts outstanding at December 31, 2005	**$ 6,951**	**$ 5,324**

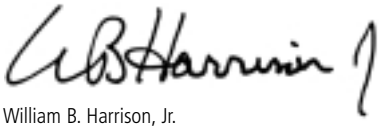
The following table indicates the schedule of maturities of nonexchange-traded commodity derivative contracts at December 31, 2005:

At December 31, 2005 (in millions)	Asset position	Liability position
Maturity less than 1 year	**$ 6,682**	**$ 6,254**
Maturity 1–3 years	**8,231**	**7,590**
Maturity 4–5 years	**1,616**	**1,246**
Maturity in excess of 5 years	**436**	**312**
Gross fair value of contracts outstanding at December 31, 2005	**16,965**	**15,402**
Effects of legally enforceable master netting agreements	**(10,014)**	**(10,078)**
Net fair value of contracts outstanding at December 31, 2005	**$ 6,951**	**$ 5,324**

Management's report on internal control over financial reporting

JPMorgan Chase & Co.

Management of JPMorgan Chase & Co. is responsible for establishing and maintaining adequate internal control over financial reporting. Internal control over financial reporting is a process designed by, or under the supervision of, the Firm's principal executive, principal operating and principal financial officers, or persons performing similar functions, and effected by JPMorgan Chase's board of directors, management and other personnel, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with accounting principles generally accepted in the United States of America.



JPMorgan Chase's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records, that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the Firm's assets; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the Firm are being made only in accordance with authorizations of JPMorgan Chase's management and directors; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use or disposition of the Firm's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

Management has completed an assessment of the effectiveness of the Firm's internal control over financial reporting as of December 31, 2005. In making the assessment, management used the framework in "Internal Control – Integrated Framework" promulgated by the Committee of Sponsoring Organizations of the Treadway Commission, commonly referred to as the "COSO" criteria.

Based upon the assessment performed, management concluded that as of December 31, 2005, JPMorgan Chase's internal control over financial reporting was effective based upon the COSO criteria. Additionally, based upon management's assessment, the Firm determined that there were no material weaknesses in its internal control over financial reporting as of December 31, 2005.

Management's assessment of the effectiveness of the Firm's internal control over financial reporting as of December 31, 2005 has been audited by PricewaterhouseCoopers LLP, JPMorgan Chase's independent registered public accounting firm, who also audited the Firm's financial statements as of and for the year ended December 31, 2005, as stated in their report which is included herein.

Report of independent registered public accounting firm

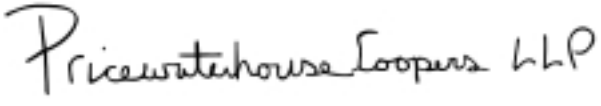
JPMorgan Chase & Co.

PricewaterhouseCoopers LLP • 300 Madison Avenue • New York, NY 10017

Report of Independent Registered Public Accounting Firm
To the Board of Directors and Stockholders of JPMorgan Chase & Co.:

We have completed integrated audits of JPMorgan Chase & Co.'s 2005 and 2004 consolidated financial statements and of its internal control over financial reporting as of December 31, 2005, and an audit of its 2003 consolidated financial statements in accordance with the standards of the Public Company Accounting Oversight Board (United States). Our opinions on JPMorgan Chase & Co.'s 2005, 2004, and 2003 consolidated financial statements and on its internal control over financial reporting as of December 31, 2005, based on our audits, are presented below.

Consolidated financial statements



In our opinion, the accompanying consolidated balance sheets and the related consolidated statements of income, changes in stockholders' equity and cash flows present fairly, in all material respects, the financial position of the JPMorgan Chase & Co. and its subsidiaries (the "Company") at December 31, 2005 and 2004, and the results of their operations and their cash flows for each of the three years in the period ended December 31, 2005 in conformity with accounting principles generally accepted in the United States of America. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audits. We conducted our audits of these statements in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit of financial statements includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, and evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

Internal control over financial reporting

Also, in our opinion, management's assessment, included in the accompanying Management's report on internal control over financial reporting, that the Company maintained effective internal control over financial reporting as of December 31, 2005 based on criteria established in Internal Control – Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO), is fairly stated, in all material respects, based on those criteria. Furthermore, in our opinion, the Company maintained, in all material respects, effective internal control over financial reporting as of December 31, 2005, based on criteria established in Internal Control – Integrated Framework issued by the COSO. The Company's management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting. Our responsibility is to express opinions on management's assessment and on the effectiveness of the Company's internal control over financial reporting based on our audit. We conducted our audit of internal control over financial reporting in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. An audit of internal control over financial reporting includes obtaining an understanding of internal control over financial reporting, evaluating management's assessment, testing and evaluating the design and operating effectiveness of internal control, and performing such other procedures as we consider necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinions.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (i) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (ii) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (iii) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. 2003 reflects the results of heritage JPMorgan Chase only.

The Notes to consolidated financial statements are an integral part of these statements.

Note 1 – Basis of presentation

JPMorgan Chase & Co. ("JPMorgan Chase" or the "Firm"), a financial holding company incorporated under Delaware law in 1968, is a leading global financial services firm and one of the largest banking institutions in the United States, with operations worldwide. The Firm is a leader in investment banking, financial services for consumers and businesses, financial transaction processing, investment management, private banking and private equity. For a discussion of the Firm's business segment information, see Note 31 on pages 130–131 of this Annual Report.

The accounting and financial reporting policies of JPMorgan Chase and its subsidiaries conform to accounting principles generally accepted in the United States of America ("U.S. GAAP") and prevailing industry practices. Additionally, where applicable, the policies conform to the accounting and reporting guidelines prescribed by bank regulatory authorities.

Certain amounts in the prior periods have been reclassified to conform to the current presentation.

Consolidation

The consolidated financial statements include accounts of JPMorgan Chase and other entities in which the Firm has a controlling financial interest. All material intercompany balances and transactions have been eliminated.

The usual condition for a controlling financial interest is ownership of a majority of the voting interests of an entity. However, a controlling financial interest may also exist in entities, such as special purpose entities ("SPEs"), through arrangements that do not involve controlling voting interests.

SPEs are an important part of the financial markets, providing market liquidity by facilitating investors' access to specific portfolios of assets and risks. They are, for example, critical to the functioning of the mortgage- and asset-backed securities and commercial paper markets. SPEs may be organized as trusts, partnerships or corporations and are typically set up for a single, discrete purpose. SPEs are not typically operating entities and usually have a limited life and no employees. The basic SPE structure involves a company selling assets to the SPE. The SPE funds the purchase of those assets by issuing securities to investors. The legal documents that govern the transaction describe how the cash earned on the assets must be allocated to the SPE's investors and other parties that have rights to those cash flows. SPEs can be structured to be bankruptcy-remote, thereby insulating investors from the impact of the creditors of other entities, including the seller of the assets.

There are two different accounting frameworks applicable to SPEs: the qualifying SPE ("QSPE") framework under SFAS 140; and the variable interest entity ("VIE") framework under FIN 46R. The applicable framework depends on the nature of the entity and the Firm's relation to that entity. The QSPE framework is applicable when an entity transfers (sells) financial assets to an SPE meeting certain criteria defined in SFAS 140. These criteria are designed to ensure that the activities of the entity are essentially predetermined at the inception of the vehicle and that the transferor of the financial assets cannot exercise control over the entity and the assets therein. Entities meeting these criteria are not consolidated by the transferor or other counterparties, as long as they do not have the unilateral ability to liquidate or to cause the entity to no longer meet the QSPE criteria. The Firm primarily follows the QSPE model for securitizations of its residential and commercial mortgages, credit card loans and automobile loans. For further details, see Note 13 on pages 108–111 of this Annual Report.

When the SPE does not meet the QSPE criteria, consolidation is assessed pursuant to FIN 46R. Under FIN 46R, a VIE is defined as an entity that: (1) lacks enough equity investment at risk to permit the entity to finance its activities without additional subordinated financial support from other parties; (2) has equity owners that lack the right to make significant decisions affecting the entity's operations; and/or (3) has equity owners that do not have an obligation to absorb or the right to receive the entity's losses or returns.

FIN 46R requires a variable interest holder (i.e., a counterparty to a VIE) to consolidate the VIE if that party will absorb a majority of the expected losses of the VIE, receive the majority of the expected residual returns of the VIE, or both. This party is considered the primary beneficiary. In making this determination, the Firm thoroughly evaluates the VIE's design, capital structure and relationships among variable interest holders. When the primary beneficiary cannot be identified through a qualitative analysis, the Firm performs a quantitative analysis, which computes and allocates expected losses or residual returns to variable interest holders. The allocation of expected cash flows in this analysis is based upon the relative contractual rights and preferences of each interest holder in the VIE's capital structure. For further details, see Note 14 on pages 111–113 of this Annual Report.

All retained interests and significant transactions between the Firm, QSPEs and nonconsolidated VIEs are reflected on JPMorgan Chase's Consolidated balance sheets or in the Notes to consolidated financial statements.

Investments in companies that are considered to be voting-interest entities under FIN 46R in which the Firm has significant influence over operating and financing decisions are accounted for in accordance with the equity method of accounting. These investments are generally included in Other assets, and the Firm's share of income or loss is included in Other income. For a discussion of private equity investments, see Note 9 on pages 103–105 of this Annual Report.

Assets held for clients in an agency or fiduciary capacity by the Firm are not assets of JPMorgan Chase and are not included in the Consolidated balance sheets.

Use of estimates in the preparation of consolidated financial statements

The preparation of consolidated financial statements requires management to make estimates and assumptions that affect the reported amounts of assets, liabilities, revenue, expenses and disclosures of contingent assets and liabilities. Actual results could be different from these estimates.

Foreign currency translation

JPMorgan Chase revalues assets, liabilities, revenues and expenses denominated in foreign currencies into U.S. dollars using applicable exchange rates.

Gains and losses relating to translating functional currency financial statements for U.S. reporting are included in Other comprehensive income (loss) within Stockholders' equity. Gains and losses relating to nonfunctional currency transactions, including non-U.S. operations where the functional currency is the U.S. dollar and operations in highly inflationary environments, are reported in the Consolidated statements of income.

Statements of cash flows

For JPMorgan Chase's Consolidated statements of cash flows, cash and cash equivalents are defined as those amounts included in Cash and due from banks.

Significant accounting policies

The following table identifies JPMorgan Chase's significant accounting policies and the Note and page where a detailed description of each policy can be found:

Note 2 – Business changes and developments

Merger with Bank One Corporation

Bank One Corporation merged with and into JPMorgan Chase (the "Merger") on July 1, 2004. As a result of the Merger, each outstanding share of common stock of Bank One was converted in a stock-for-stock exchange into 1.32 shares of common stock of JPMorgan Chase. JPMorgan Chase stockholders kept their shares, which remained outstanding and unchanged as shares of JPMorgan Chase following the Merger. Key objectives of the Merger were to provide the Firm with a more balanced business mix and greater geographic diversification. The Merger was accounted for using the purchase method of accounting, which requires that the assets and liabilities of Bank One be fair valued as of July 1, 2004. The purchase price to complete the Merger was $58.5 billion.

As part of the Merger, certain accounting policies and practices were conformed, which resulted in $976 million of charges in 2004. The significant components of the conformity charges comprised a $1.4 billion charge related to the decertification of the seller's interest in credit card securitizations, and the benefit of a $584 million reduction in the allowance for credit losses as a result of conforming the wholesale and consumer credit provision methodologies.

The final purchase price of the Merger has been allocated to the assets acquired and liabilities assumed using their fair values as of the merger date. The computation of the purchase price and the allocation of the purchase price to the net assets of Bank One – based on their respective fair values as of July 1, 2004 – and the resulting goodwill are presented below.

(in millions, except per share amounts)	July 1, 2004	
Purchase price		
Bank One common stock exchanged	1,113	
Exchange ratio	1.32	
JPMorgan Chase common stock issued	1,469	
Average purchase price per JPMorgan Chase common share[a]	$ 39.02	
		$ 57,336
Fair value of employee stock awards and direct acquisition costs		1,210
Total purchase price		$ 58,546
Net assets acquired:		
Bank One stockholders' equity	$ 24,156	
Bank One goodwill and other intangible assets	(2,754)	
Subtotal	21,402	
Adjustments to reflect assets acquired at fair value:		
Loans and leases	(2,261)	
Private equity investments	(72)	
Identified intangibles	8,665	
Pension plan assets	(778)	
Premises and equipment	(417)	
Other assets	(267)	
Amounts to reflect liabilities assumed at fair value:		
Deposits	(373)	
Deferred income taxes	932	
Other postretirement benefit plan liabilities	(49)	
Other liabilities	(1,162)	
Long-term debt	(1,234)	
		24,386
Goodwill resulting from Merger[b]		$ 34,160

(a) The value of the Firm's common stock exchanged with Bank One shareholders was based on the average closing prices of the Firm's common stock for the two days prior to, and the two days following, the announcement of the Merger on January 14, 2004.

(b) Goodwill resulting from the Merger reflects adjustments of the allocation of the purchase price to the net assets acquired through June 30, 2005. Minor adjustments subsequent to June 30, 2005, are reflected in the December 31, 2005 Goodwill balance in Note 15 on page 114 of this Annual Report.

Condensed statement of net assets acquired

The following condensed statement of net assets acquired reflects the fair value of Bank One net assets as of July 1, 2004.

(in millions)	July 1, 2004
Assets	
Cash and cash equivalents	**$ 14,669**
Securities	**70,512**
Interests in purchased receivables	**30,184**
Loans, net of allowance for loan losses	**129,650**
Goodwill and other intangible assets	**42,825**
All other assets	**47,739**
Total assets	**$ 335,579**
Liabilities	
Deposits	**$ 164,848**
Short-term borrowings	**9,811**
All other liabilities	**61,494**
Long-term debt	**40,880**
Total liabilities	**277,033**
Net assets acquired	**$ 58,546**

Acquired, identifiable intangible assets

Components of the fair value of acquired, identifiable intangible assets as of July 1, 2004, were as follows:

	Fair value (in millions)	Weighted average life (in years)	Useful life (in years)
Core deposit intangibles	$ 3,650	5.1	Up to 10
Purchased credit card relationships	3,340	4.6	Up to 10
Other credit card–related intangibles	295	4.6	Up to 10
Other customer relationship intangibles	870	4.6–10.5	Up to 20
Subtotal	8,155	5.1	Up to 20
Indefinite-lived asset management intangibles	510	NA	NA
Total	$ 8,665		

Unaudited pro forma condensed combined financial information

The following unaudited pro forma condensed combined financial information presents the results of operations of the Firm had the Merger taken place at January 1, 2003.

Year ended December 31, (in millions, except per share)	2004	2003
Noninterest revenue	$ 31,175	$ 28,966
Net interest income	21,366	21,715
Total net revenue	52,541	50,681
Provision for credit losses	2,727	3,570
Noninterest expense	40,504	33,136
Income before income tax expense	9,310	13,975
Net income	$ 6,544	$ 9,330
Net income per common share:		
Basic	$ 1.85	$ 2.66
Diluted	1.81	2.61
Average common shares outstanding:		
Basic	3,510	3,495
Diluted	3,593	3,553

Other business events

Collegiate Funding Services

On March 1, 2006, JPMorgan Chase acquired, for approximately $663 million, Collegiate Funding Services, a leader in student loan servicing and consolidation. This acquisition will enable the Firm to create a comprehensive education finance business.

BrownCo

On November 30, 2005, JPMorgan Chase sold BrownCo, an on-line deep-discount brokerage business, to E*TRADE Financial for a cash purchase price of $1.6 billion. JPMorgan Chase recognized an after-tax gain of $752 million. BrownCo's results of operations are reported in the Asset & Wealth Management business segment; however, the gain on the sale, which is recorded in Other income in the Consolidated statements of income, is reported in the Corporate business segment.

Sears Canada credit card business

On November 15, 2005, JPMorgan Chase purchased Sears Canada Inc.'s credit card operation, including both the private-label card accounts and the co-branded Sears MasterCard® accounts. The credit card operation includes approximately 10 million accounts with $2.2 billion (CAD$2.5 billion) in managed loans. Sears Canada and JPMorgan Chase entered into an ongoing arrangement under which JPMorgan Chase will offer private-label and co-branded credit cards to both new and existing customers of Sears Canada.

Chase Merchant Services, Paymentech integration

On October 5, 2005, JPMorgan Chase and First Data Corp. completed the integration of the companies' jointly owned Chase Merchant Services and Paymentech merchant businesses, to be operated under the name of Chase Paymentech Solutions, LLC. The joint venture is the largest financial transaction processor in the U.S. for businesses accepting credit card payments via traditional point of sale, Internet, catalog and recurring billing. As a result of the integration into a joint venture, Paymentech has been deconsolidated and JPMorgan Chase's ownership interest in this joint venture is accounted for in accordance with the equity method of accounting.

Neovest Holdings, Inc.

On September 1, 2005, JPMorgan Chase completed its acquisition of Neovest Holdings, Inc., a provider of high-performance trading technology and direct market access. This transaction will enable the Investment Bank to offer a leading, broker-neutral trading platform across asset classes to institutional investors, asset managers and hedge funds.

Vastera

On April 1, 2005, JPMorgan Chase acquired Vastera, a provider of global trade management solutions, for approximately $129 million. Vastera's business was combined with the Logistics and Trade Services businesses of TSS' Treasury Services unit. Vastera automates trade management processes associated with the physical movement of goods internationally; the acquisition enables TS to offer management of information and processes in support of physical goods movement, together with financial settlement.

JPMorgan Partners

On March 1, 2005, the Firm announced that the management team of JPMorgan Partners, LLC, a private equity unit of the Firm, will become independent when it completes the investment of the current $6.5 billion Global Fund, which it advises. The buyout and growth equity professionals of JPMorgan Partners will form a new independent firm, CCMP Capital, LLC, and the venture professionals will separately form a new independent firm, Panorama Capital, LLC. JPMorgan Chase has committed to invest the lesser of $875 million or 24.9% of the limited partnership interests in the fund to be raised by CCMP Capital, and has committed to invest the lesser of $50 million or 24.9% of the limited partnership interests in the fund to be raised by Panorama Capital. The investment professionals of CCMP and Panorama will continue to manage the JPMP investments pursuant to a management agreement with the Firm.

Cazenove

On February 28, 2005, JPMorgan Chase and Cazenove Group plc ("Cazenove") formed a business partnership which combined Cazenove's investment banking business and JPMorgan Chase's U.K.-based investment banking business in order to provide investment banking services in the United Kingdom and Ireland. The new company is called JPMorgan Cazenove Holdings.

Other acquisitions

During 2004, JPMorgan Chase purchased the Electronic Financial Services ("EFS") business from Citigroup and acquired a majority interest in hedge fund manager Highbridge Capital Management ("Highbridge").

Note 3 – Trading activities

Trading assets include debt and equity securities held for trading purposes that JPMorgan Chase owns ("long" positions). Trading liabilities include debt and equity securities that the Firm has sold to other parties but does not own ("short" positions). The Firm is obligated to purchase securities at a future date to cover the short positions. Included in Trading assets and Trading liabilities are the reported receivables (unrealized gains) and payables (unrealized losses) related to derivatives. These amounts include the derivative assets and liabilities net of cash received and paid, respectively, under legally enforceable master netting agreements. At December 31, 2005, the amount of cash received and paid was approximately $26.7 billion and $18.9 billion, respectively. At December 31, 2004, the amount of cash received and paid was approximately $32.2 billion and $22.0 billion, respectively. Trading positions are carried at fair value on the Consolidated balance sheets.

Trading revenue

Year ended December 31,[a] (in millions)	**2005**	2004	2003
Fixed income and other[b]	**$ 4,554**	$ 2,976	$ 4,046
Equities[c]	**1,271**	797	764
Credit portfolio[d]	**35**	(161)	(383)
Total	**$ 5,860**	$ 3,612	$ 4,427

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. 2003 reflects the results of heritage JPMorgan Chase only.
(b) Includes bonds and commercial paper and various types of interest rate derivatives as well as foreign exchange and commodities.
(c) Includes equity securities and equity derivatives.
(d) Includes credit derivatives.

Trading assets and liabilities

The following table presents the fair value of Trading assets and Trading liabilities for the dates indicated:

December 31, (in millions)	**2005**	2004
Trading assets		
Debt and equity instruments:		
U.S. government and federal agency obligations	**$ 16,283**	$ 16,867
U.S. government-sponsored enterprise obligations	**24,172**	23,513
Obligations of state and political subdivisions	**9,887**	3,486
Certificates of deposit, bankers' acceptances and commercial paper	**5,652**	7,341
Debt securities issued by non-U.S. governments	**48,671**	50,699
Corporate securities and other	**143,925**	120,926
Total debt and equity instruments	**248,590**	222,832
Derivative receivables:		
Interest rate	**30,416**	45,892
Foreign exchange	**2,855**	7,939
Equity	**5,575**	6,120
Credit derivatives	**3,464**	2,945
Commodity	**7,477**	3,086
Total derivative receivables	**49,787**	65,982
Total trading assets	**$ 298,377**	$ 288,814
Trading liabilities		
Debt and equity instruments[a]	**$ 94,157**	$ 87,942
Derivative payables:		
Interest rate	**28,488**	41,075
Foreign exchange	**3,453**	8,969
Equity	**11,539**	9,096
Credit derivatives	**2,445**	2,499
Commodity	**5,848**	1,626
Total derivative payables	**51,773**	63,265
Total trading liabilities	**$ 145,930**	$ 151,207

(a) Primarily represents securities sold, not yet purchased.

Average Trading assets and liabilities were as follows for the periods indicated:

Year ended December 31,[a] (in millions)	**2005**	2004	2003
Trading assets – debt and equity instruments	**$ 237,370**	$ 200,467	$ 154,597
Trading assets – derivative receivables	**57,365**	59,521	85,628
Trading liabilities – debt and equity instruments[b]	**$ 93,102**	$ 82,204	$ 72,877
Trading liabilities – derivative payables	**55,723**	52,761	67,783

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. 2003 reflects the results of heritage JPMorgan Chase only.
(b) Primarily represents securities sold, not yet purchased.

Note 4 – Other noninterest revenue

Investment banking fees

This revenue category includes advisory and equity and debt underwriting fees. Advisory fees are recognized as revenue when related services are performed. Underwriting fees are recognized as revenue when the Firm has rendered all services to the issuer and is entitled to collect the fee from the issuer, as long as there are no other contingencies associated with the fee (e.g., the fee is not contingent upon the customer obtaining financing). Underwriting fees are net of syndicate expenses. In addition, the Firm recognizes credit arrangement and syndication fees as revenue after satisfying certain retention, timing and yield criteria.

The following table presents the components of Investment banking fees:

Year ended December 31, (in millions)[a]	**2005**	2004	2003
Underwriting:			
Equity	**$ 864**	$ 780	$ 699
Debt	**1,969**	1,859	1,549
Total Underwriting	**2,833**	2,639	2,248
Advisory	**1,255**	898	642
Total	**$ 4,088**	$ 3,537	$ 2,890

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. 2003 reflects the results of heritage JPMorgan Chase only.

Lending & deposit related fees

This revenue category includes fees from loan commitments, standby letters of credit, financial guarantees, deposit-related fees in lieu of compensating balances, cash management-related activities or transactions, deposit accounts, and other loan servicing activities. These fees are recognized over the period in which the related service is provided.

Asset management, administration and commissions

This revenue category includes fees from investment management and related services, custody and institutional trust services, brokerage services, insurance premiums and commissions and other products. These fees are recognized over the period in which the related service is provided.

Mortgage fees and related income

This revenue category includes fees and income derived from mortgage origination, sales and servicing, and includes the effect of risk management activities associated with the mortgage pipeline, warehouse and the mortgage servicing rights ("MSRs") asset (excluding gains and losses on the sale of Available-for-sale ("AFS") securities). Origination fees and gains or losses on loan sales are recognized in income upon sale. Mortgage servicing fees are recognized over the period the related service is provided, net of amortization. Valuation changes in the mortgage pipeline, warehouse, MSR asset and corresponding risk management instruments are generally adjusted through earnings as these changes occur. Net interest income and securities gains and losses on AFS securities used in mortgage-related risk management activities are not included in Mortgage fees and related income. For a further discussion of MSRs, see Note 15 on pages 114–116 of this Annual Report.

Credit card income

This revenue category includes interchange income from credit and debit cards, annual fees, and servicing fees earned in connection with securitization activities. Volume-related payments to partners and expenses for rewards programs are also recorded within Credit card income. Fee revenues are recognized as earned, except for annual fees, which are recognized over a 12-month period. Expenses related to rewards programs are recorded when earned by the customer.

Credit card revenue sharing agreements

The Firm has contractual agreements with numerous affinity organizations and co-brand partners, which grant to the Firm exclusive rights to market to their members or customers. These organizations and partners provide to the Firm their endorsement of the credit card programs, mailing lists, and may also conduct marketing activities and provide awards under the various credit card programs. The terms of these agreements generally range from 3 to 10 years. The economic incentives the Firm pays to the endorsing organizations and partners typically include payments based upon new accounts, activation, charge volumes, and the cost of their marketing activities and awards.

The Firm recognizes the portion of payments based upon new accounts to the affinity organizations and co-brand partners, as deferred loan origination costs. The Firm defers these costs and amortizes them over 12 months. Payments based upon charge volumes and considered by the Firm as revenue sharing with the affinity organizations and co-brand partners are deducted from Credit card income as the related revenue is earned. The Firm expenses payments based upon marketing efforts performed by the endorsing organization or partner to activate a new account as incurred. These costs are recorded within Noninterest expense.

Note 5 – Interest income and interest expense

Details of Interest income and Interest expense were as follows:

Year ended December 31, (in millions)[a]	**2005**	2004	2003
Interest income			
Loans	**$ 26,062**	$ 16,771	$ 11,812
Securities	**3,129**	3,377	3,542
Trading assets	**9,117**	7,527	6,592
Federal funds sold and securities purchased under resale agreements	**4,125**	1,627	1,497
Securities borrowed	**1,154**	463	323
Deposits with banks	**680**	539	214
Interests in purchased receivables	**933**	291	64
Total interest income	**45,200**	30,595	24,044
Interest expense			
Interest-bearing deposits	**10,295**	4,630	3,604
Short-term and other liabilities	**9,542**	6,260	5,871
Long-term debt	**4,160**	2,466	1,498
Beneficial interests issued by consolidated VIEs	**1,372**	478	106
Total interest expense	**25,369**	13,834	11,079
Net interest income	**19,831**	16,761	12,965
Provision for credit losses	**3,483**	2,544	1,540
Net interest income after provision for credit losses	**$ 16,348**	$ 14,217	$ 11,425

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. 2003 reflects the results of heritage JPMorgan Chase only.

Note 6 – Pension and other postretirement employee benefit plans

New U.S.-based postretirement plans were introduced in 2005 after the Bank One plans were merged into the heritage JPMorgan Chase plans as of December 31, 2004.

The Firm's defined benefit pension plans are accounted for in accordance with SFAS 87 and SFAS 88. The postretirement medical and life insurance plans are accounted for in accordance with SFAS 106.

The Firm uses a measurement date of December 31 for pension and other postretirement employee benefit plans. In addition, as of August 1, 2005, the U.S. postretirement medical and life insurance plan was remeasured to reflect a mid-year plan amendment and the final Medicare Part D regulations that were issued on January 21, 2005. For the Firm's defined benefit pension plan assets, fair value is used to determine the expected return on pension plan assets. For the Firm's other postretirement employee benefit plan assets, a calculated value that recognizes changes in fair value over a five-year period is used to determine the expected return on other postretirement employee benefit plan assets. Unrecognized net actuarial gains and losses and prior service costs associated with the U.S. defined benefit pension plan are amortized over the average future service period of plan participants, which is currently 10 years. For other postretirement employee benefit plans, unrecognized gains and losses are also amortized over the average future service period, which is currently 8 years. However, prior service costs associated with other postretirement employee benefit plans are recognized over the average years of service remaining to full eligibility age, which is currently 6 years.

Defined Benefit Pension Plans

The Firm has a qualified noncontributory U.S. defined benefit pension plan that provides benefits to substantially all U.S. employees. The U.S. plan employs a cash balance formula, in the form of salary and interest credits, to determine the benefits to be provided at retirement, based upon eligible compensation and years of service. Employees begin to accrue plan benefits after completing one year of service, and benefits generally vest after five years of service. The Firm also offers benefits through defined benefit pension plans to qualifying employees in certain non-U.S. locations based upon eligible compensation and years of service.

It is the Firm's policy to fund the pension plans in amounts sufficient to meet the requirements under applicable employee benefit and local tax laws. The Firm did not make any U.S. pension plan contributions in 2005 and based upon the current funded status of this plan, the Firm does not expect to make significant contributions in 2006. In 2004, the Firm made a cash contribution to its U.S. defined benefit pension plan of $1.1 billion, funding the plan to the maximum allowable amount under applicable tax law. Additionally, the Firm made cash contributions totaling $78 million and $40 million to fully fund the accumulated benefit obligations of certain non-U.S. defined benefit pension plans as of December 31, 2005 and 2004, respectively.

Postretirement medical and life insurance

JPMorgan Chase offers postretirement medical and life insurance benefits to certain retirees and qualifying U.S. employees. These benefits vary with length of service and date of hire and provide for limits on the Firm's share of covered medical benefits. The medical benefits are contributory, while the life insurance benefits are noncontributory. As of August 1, 2005, the eligibility requirements for U.S. employees to qualify for subsidized retiree medical coverage were revised and life insurance coverage was eliminated for active employees retiring after 2005. Postretirement medical benefits also are offered to qualifying U.K. employees.

In December 2003, the Medicare Prescription Drug, Improvement and Modernization Act of 2003 (the "Act") was enacted. The Act established a prescription drug benefit under Medicare ("Medicare Part D") and a federal subsidy to sponsors of retiree health care benefit plans that provide a benefit that is at least actuarially equivalent to Medicare Part D. The Firm has determined that benefits provided to certain participants are at least actuarially equivalent to Medicare Part D and has reflected the effects of the subsidy in the financial statements and disclosures retroactive to the beginning of 2004 (July 1, 2004 for Bank One plans) in accordance with FSP SFAS 106-2.

JPMorgan Chase's U.S. postretirement benefit obligation is partially funded with corporate-owned life insurance ("COLI") purchased on the lives of eligible employees and retirees. While the Firm owns the COLI policies, COLI proceeds (death benefits, withdrawals and other distributions) may be used only to reimburse the Firm for net postretirement benefit claim payments and related administrative expenses. The U.K. postretirement benefit plan is unfunded.

The following tables present the funded status and amounts reported on the Consolidated balance sheets, the accumulated benefit obligation and the components of net periodic benefit costs reported in the Consolidated statements of income for the Firm's U.S. and non-U.S. defined benefit pension and postretirement benefit plans:

December 31, (in millions)	Defined benefit pension plans				Other postretirement benefit plans[c][d]	
	U.S.		Non-U.S.			
	2005	2004[b]	**2005**	2004[b]	**2005**	2004[b]

Fair value of plan assets at end of year	**$ 9,617**[e]	$ 9,637[e]	**$ 2,223**	$ 1,889	**$ 1,329**	$ 1,302
Reconciliation of funded status						
Funded status	**$ 1,941**	$ 2,043	**$ (155)**	$ (80)	**$ (66)**	$ (275)
Unrecognized amounts:[a]						
Net transition asset	**—**	—	**—**	(1)	**—**	—
Prior service cost	**40**	47	**3**	4	**(105)**	(23)
Net actuarial loss	**1,078**	997	**599**	590	**335**	321
Prepaid benefit cost reported in Other assets	**$ 3,059**	$ 3,087	**$ 447**[f]	$ 513[f]	**$ 164**	$ 23
Accumulated benefit obligation	**$ (7,274)**	$ (7,167)	**$ (2,303)**	$ (1,931)	**NA**	NA

(a) For pension benefit plans, the unrecognized net loss is primarily the result of declines in interest rates in recent years, as offset by recent asset gains and amounts recognized through amortization in expense. Other factors that contribute to this unrecognized amount include demographic experience, which differs from expected, and changes in other actuarial assumptions. For other postretirement benefit plans, the primary drivers of the cumulative unrecognized loss was the decline in the discount rate in recent years and the medical trend, which was higher than expected. These losses have been offset somewhat by the recognition of future savings attributable to Medicare Part D subsidy payments.
(b) Effective July 1, 2004, the Firm assumed the obligations of heritage Bank One's pension and postretirement plans. These plans were similar to those of JPMorgan Chase and were merged into the Firm's plans effective December 31, 2004.
(c) The Medicare Prescription Drug, Improvement and Modernization Act of 2003 resulted in a $35 million reduction in the Accumulated other postretirement benefit obligation as of January 1, 2004. During 2005, an additional $116 million reduction was reflected for recognition of the final Medicare Part D regulations issued on January 21, 2005.
(d) Includes postretirement benefit obligation of $44 million and $43 million and postretirement benefit liability (included in Accrued expenses) of $50 million and $57 million at December 31, 2005 and 2004, respectively, for the U.K. plan, which is unfunded.
(e) At December 31, 2005 and 2004, approximately $405 million and $358 million, respectively, of U.S. plan assets relate to surplus assets of group annuity contracts.
(f) At December 31, 2005 and 2004, Accrued expenses related to non-U.S. defined benefit pension plans that JPMorgan Chase elected not to prefund fully totaled $164 million and $124 million, respectively.

(a) Effective July 1, 2004, the Firm assumed the obligations of heritage Bank One's pension and postretirement plans. These plans were similar to those of JPMorgan Chase and were merged into the Firm's plans effective December 31, 2004.
(b) Heritage JPMorgan Chase results only for 2003.
(c) The Medicare Prescription Drug, Improvement and Modernization Act of 2003 resulted in a $15 million and $5 million reduction in 2005 and 2004, respectively, in net periodic benefit cost. The impact on 2005 cost was higher as a result of the final Medicare Part D regulations issued on January 21, 2005.

JPMorgan Chase has a number of other defined benefit pension plans (i.e., U.S. plans not subject to Title IV of the Employee Retirement Income Security Act). The most significant of these plans is the Excess Retirement Plan, pursuant to which certain employees earn service credits on compensation amounts above the maximum stipulated by law. This plan is a nonqualified, noncontributory U.S. pension plan with an unfunded liability at December 31, 2005 and 2004, in the amount of $273 million and $292 million, respectively. Compensation expense related to this pension plan totaled $21 million in 2005, $28 million in 2004 and $19 million in 2003.

Plan assumptions

JPMorgan Chase's expected long-term rate of return for U.S. pension and other postretirement employee benefit plan assets is a blended average of the investment advisor's projected long-term (10 years or more) returns for the various asset classes, weighted by the portfolio allocation. Asset-class returns are developed using a forward-looking building-block approach and are not based strictly upon historical returns. Equity returns are generally developed as the sum of inflation, expected real earnings growth and expected long-term dividend yield. Bond returns are generally developed as the sum of inflation, real bond yield and risk spread (as appropriate), adjusted for the expected effect on returns from changing yields. Other asset-class returns are derived from their relationship to the equity and bond markets.

In the U.K., which represents the most significant of the non-U.S. pension plans, procedures similar to those in the U.S. are used to develop the expected long-term rate of return on pension plan assets, taking into consideration local market conditions and the specific allocation of plan assets. The expected long-term rate of return on U.K. plan assets is an average of projected long-term returns for each asset class, selected by reference to the yield on long-term U.K. government bonds and AA-rated long-term corporate bonds, plus an equity risk premium above the risk-free rate.

In 2005, the discount rate used in determining the benefit obligation under the U.S. pension and other postretirement employee benefit plans was selected by reference to the yield on a portfolio of bonds whose redemptions and coupons closely match each of the plan's projected cash flows; such portfolio is derived from a broad-based universe of high quality corporate bonds as of the measurement date. In years in which this hypothetical bond portfolio generates excess cash, such excess is assumed to be reinvested at the one-year forward rates implied by the Citigroup Pension Discount Curve published as of the measurement date. Prior to 2005, discount rates were selected by reference to the year-end Moody's corporate AA rate, as well as other high-quality indices with a duration that was similar to that of the respective plan's benefit obligations. The discount rate for the U.K. pension and other postretirement employee benefit plans was determined by matching the duration of the Firm's obligations with the corresponding duration from the yield curve of the year-end iBoxx £ corporate AA 15-year-plus bond index.

The following tables present the weighted-average annualized actuarial assumptions for the projected and accumulated benefit obligations, and the components of net periodic benefit costs for the Firm's U.S. and non-U.S. defined benefit pension and postretirement benefit plans, as of year-end.

	U.S.		Non-U.S.	
For the year ended December 31,	**2005**	2004	**2005**	2004
Weighted-average assumptions used to determine benefit obligations				
Discount rate:				
Pension	**5.70%**	5.75%	**2.00-4.70%**	2.00-5.30%
Postretirement benefit	**5.65**	5.75	**4.7**	5.3
Rate of compensation increase	**4.00**	4.50	**3.00-3.75**	1.75-3.75

	U.S.			Non-U.S.

Discount rate	**5.75%**[a]	6.00%	6.50%	**2.00-5.30%**	2.00-5.75%	1.50-5.60%
Expected long-term rate of return on plan assets:						
Pension	**7.50**	7.50-7.75	8.00	**3.25-5.75**	3.00-6.50	2.70-6.50
Postretirement benefit	**4.75-7.00**	4.75-7.00	8.00	**NA**	NA	NA
Rate of compensation increase	**4.00**	4.25-4.50	4.50	**1.75-3.75**	1.75-3.75	1.25-3.00

(a) The postretirement plan was remeasured as of August 1, 2005, and a rate of 5.25% was used from the period of August 1, 2005, through December 31, 2005.
(b) Heritage JPMorgan Chase results only for 2003.

The following tables present JPMorgan Chase's assumed weighted-average medical benefits cost trend rate, which is used to measure the expected cost of benefits at year-end, and the effect of a one-percentage-point change in the assumed medical benefits cost trend rate.

December 31,	**2005**	2004[a]	2003[b]
Health care cost trend rate assumed for next year	**10%**	10%	10%
Rate to which cost trend rate is assumed to decline (ultimate trend rate)	**5**	5	5
Year that rate reaches ultimate trend rate	**2012**	2011	2010

(in millions) For the year ended December 31,2005	1-Percentage-point increase	1-Percentage-point decrease
Effect on total service and interest costs	**$ 4**	$ (3)
Effect on postretirement benefit obligation	**64**	(55)

(a) Effective July 1, 2004, the Firm assumed the obligations of heritage Bank One's pension and postretirement plans. These plans were similar to those of JPMorgan Chase and were merged into the Firm's plans effective December 31, 2004.
(b) 2003 reflects the results of heritage JPMorgan Chase only.

At December 31, 2005, the Firm reduced the discount rate used to determine its U.S. benefit obligations to 5.70% for the pension plan and to 5.65% for the postretirement benefits plans from the prior year rate of 5.75% for both plans. The Firm also changed the health care benefit obligation trend assumption to 10% for 2006, grading down to an ultimate rate of 5% in 2013. The 2006 expected long-term rate of return on its U.S. pension plan assets remained at 7.50%. The 2006 expected long-term rate of return on the Firm's COLI post-retirement plan assets remained at 7.00%; however, with the merger of Bank One's other postretirement plan assets, the Firm's overall expected long-term rate of return on U.S. postretirement employee benefit plan assets decreased to 6.84% and 6.80% in 2005 and 2004, respectively, to reflect a weighted average expected rate of return for the merged plan. The interest crediting rate assumption used to determine pension benefits changed to 5.00% from 4.75% in 2005, primarily due to changes in market interest rates which will result in additional expense of $18 million. The changes as of December 31, 2005, to the discount rates are expected to increase 2006 U.S. pension and other postretirement benefit expenses by approximately $5 million and to the non-U.S. pension and other postretirement benefit expenses by $23 million. The rate of compensation increase assumption of 4.00% at December 31, 2005, reflects the consolidation of the prior JPMorgan Chase and Bank One age-weighted increase assumptions; the impact to expense is not expected to be material.

JPMorgan Chase's U.S. pension and other postretirement benefit expenses are most sensitive to the expected long-term rate of return on plan assets. With all other assumptions held constant, a 25–basis point decline in the expected long-term rate of return on U.S. plan assets would result in an increase of approximately $26 million in 2006 U.S. pension and other postretirement benefit expenses. A 25–basis point decline in the discount rate for the U.S. plans would result in an increase in 2006 U.S. pension and other postretirement benefit expenses of approximately $20 million and an increase in the related projected benefit obligations of approximately $233 million. A 25-basis point decline in the discount rates for the non-U.S. plans would result in an increase in the 2006 non-U.S. pension and other postretirement benefit expenses of $12 million. A 25-basis point increase in the interest crediting rate would result in an increase in 2006 U.S. pension expense of approximately $18 million.

Investment strategy and asset allocation

The investment policy for the Firm's postretirement employee benefit plan assets is to optimize the risk-return relationship as appropriate to the respective plan's needs and goals, using a global portfolio of various asset classes diversified by market segment, economic sector, and issuer. Specifically, the goal is to optimize the asset mix for future benefit obligations, while managing various risk factors and each plan's investment return objectives. For example, long-duration fixed income securities are included in the U.S. qualified pension plan's asset allocation, in recognition of its long-duration obligations. Plan assets are managed by a combination of internal and external investment managers and, on a quarterly basis, are rebalanced to target, to the extent economically practical.

The Firm's U.S. pension plan assets are held in various trusts and are invested in well-diversified portfolios of equities (including U.S. large and small capitalization and international equities), fixed income (including corporate and government bonds), Treasury inflation-indexed and high-yield securities, cash equivalents, and other securities. Non-U.S. pension plan assets are held in various trusts and are similarly invested in well-diversified portfolios of equity, fixed income and other securities. Assets of the Firm's COLI policies, which are used to fund partially the U.S. postretirement benefit plan, are held in separate accounts with an insurance company and are invested in equity and fixed income index funds. In addition, tax-exempt municipal debt securities, held in a trust, are used to fund the U.S. postretirement benefit plan. As of December 31, 2005, the assets used to fund the Firm's U.S. and non-U.S. defined benefit pension and postretirement benefit plans do not include JPMorgan Chase common stock, except in connection with investments in third-party stock-index funds.

The following table presents the weighted-average asset allocation at December 31 for the years indicated, and the respective target allocation by asset category, for the Firm's U.S. and non-U.S. defined benefit pension and postretirement benefit plans.

	Defined benefit pension plans								
	U.S.			Non-U.S.[a]			Postretirement benefit plans[b]		
	Target	% of plan assets		Target	% of plan assets		Target	% of plan assets

Total	100%	**100%**	100%	100%	**100%**	100%	100%	**100%**	100%

(a) Represents the U.K. defined benefit pension plan only, as plans outside the U.K. are not significant.
(b) Represents the U.S. postretirement benefit plan only, as the U.K. plan is unfunded.

Estimated future benefit payments

The following table presents benefit payments expected to be paid, which include the effect of expected future service, for the years indicated. The postretirement medical and life insurance payments are net of expected retiree contributions.

Year ended December 31, (in millions)	U.S. pension benefits	Non-U.S. pension benefits	Other postretirement benefits before Medicare Part D subsidy	Medicare Part D subsidy
2006	$ 558	$ 67	$ 124	$ 14
2007	550	70	127	15
2008	565	74	127	16
2009	584	77	128	17
2010	600	81	129	19
Years 2011–2015	3,266	396	633	111

Defined contribution plans

JPMorgan Chase offers several defined contribution plans in the U.S. and certain non-U.S. locations. The most significant of these plans is the 401(k) Savings Plan, which covers substantially all U.S. employees. The 401(k) Savings Plan allows employees to make pre-tax contributions to tax-deferred investment portfolios. The JPMorgan Chase Common Stock Fund within the 401(k) Savings Plan is a nonleveraged employee stock ownership plan. The Firm matches eligible employee contributions up to a certain percentage of benefits-eligible compensation per pay period, subject to plan and legal limits. Employees begin to receive matching contributions after completing a specified service requirement and are immediately vested in such company contributions. The Firm's defined contribution plans are administered in accordance with applicable local laws and regulations. Compensation expense related to these plans totaled $392 million in 2005, $317 million in 2004 and $240 million in 2003.

Note 7 – Employee stock-based incentives

Effective January 1, 2003, JPMorgan Chase adopted SFAS 123 using the prospective transition method. SFAS 123 requires all stock-based compensation awards, including stock options and stock-settled stock appreciation rights ("SARs"), to be accounted for at fair value. The Firm currently uses the Black-Scholes valuation model to estimate the fair value of stock options and SARs. Stock options that were outstanding as of December 31, 2002, continue to be accounted for under APB 25 using the intrinsic value method. Under this method, no expense is recognized for stock options or SARs granted at the stock price on grant date, since such options have no intrinsic value. Compensation expense for restricted stock and restricted stock units ("RSUs") is measured based upon the number of shares granted and the stock price at the grant date. Compensation expense is recognized in earnings over the required service period.

In connection with the Merger in 2004, JPMorgan Chase converted all outstanding Bank One employee stock-based awards at the merger date, and those awards became exercisable for or based upon JPMorgan Chase common stock. The number of awards converted, and the exercise prices of those awards, was adjusted to take into account the Merger exchange ratio of 1.32.

On December 16, 2004, the FASB issued SFAS 123R, which revises SFAS 123 and supersedes APB 25. In March 2005, the SEC issued SAB 107, which provides interpretive guidance on SFAS 123R. Accounting and reporting under SFAS 123R is generally similar to the SFAS 123 approach. However, SFAS 123R requires all share-based payments to employees, including grants of employee stock options and SARs, to be recognized in the income statement based upon their fair values. Pro forma disclosure is no longer an alternative. SFAS 123R permits adoption using one of two methods — modified prospective or modified retrospective. In April 2005, the U.S. Securities and Exchange Commission approved a new rule that, for public companies, delayed the effective date of SFAS 123R to no later than January 1, 2006. The Firm adopted SFAS 123R on January 1, 2006, under the modified prospective method.

Key employee stock-based awards

In 2005, JPMorgan Chase granted long-term stock-based awards under the 1996 Long-Term Incentive Plan as amended ("the 1996 Plan") until May 2005 and under the 2005 Long-Term Incentive Plan ("the 2005 Plan") thereafter to certain key employees. These two plans, plus prior Firm plans and plans assumed as the result of acquisitions, constitute the Firm's plans ("LTI Plans"). The 2005 Plan was adopted by the Board of Directors on March 15, 2005, and became effective on May 17, 2005, after approval by shareholders at the annual meeting. The 2005 Plan replaces three existing stock compensation plans—the 1996 Plan and two non-shareholder approved plans—all of which expired in May 2005. Under the terms of the 2005 Plan, 275 million shares of common stock are available for issuance during its five-year term. The 2005 Plan is the only active plan under which the Firm is currently granting stock-based incentive awards.

In 2005, 15.5 million SARs settled only in shares and 1.7 million nonqualified stock options were granted. Under the LTI Plans, stock options and SARs are granted with an exercise price equal to JPMorgan Chase's common stock price on the grant date. Generally, options and SARs cannot be exercised until at least one year after the grant date and become exercisable over various periods as determined at the time of the grant. These awards generally expire 10 years after the grant date.

In December 2005, the Firm accelerated the vesting of approximately 41 million unvested, out-of-the-money employee stock options granted in 2001 under the Growth and Performance Incentive Program ("GPIP"), which were scheduled to vest in January 2007. These options were not modified other than to accelerate vesting. The related expense was approximately $145 million, and was recognized as compensation expense in the fourth quarter of 2005. The Firm believes that at the time the options were accelerated they had limited economic value since the exercise price of the accelerated options was $51.22 and the closing price of the Firm's common stock on the effective date of the acceleration was $39.69.

The following table presents a summary of JPMorgan Chase's option and SAR activity under the LTI Plans during the last three years:

Year ended December 31,[a] (Options/SARs in thousands)	2005 Number of options/SARs	2005 Weighted-average exercise price	2004 Number of options/SARs	2004 Weighted-average exercise price	2003 Number of options	2003 Weighted-average exercise price
Outstanding, January 1	**376,330**	**$ 37.59**	294,026	$ 39.88	298,731	$ 40.84
Granted	**17,248**	**35.55**	16,667	39.79	26,751	22.15

Exercised	**(26,731)**	**24.28**	(27,763)	25.33	(14,574)	17.47
Canceled	**(28,272)**	**44.77**	(17,887)	46.68	(16,882)	47.57
Outstanding, December 31	**338,575**	**$ 37.93**	376,330	$ 37.59	294,026	$ 39.88
Exercisable, December 31	**286,017**	**$ 38.89**	246,945	$ 36.82	176,163	$ 37.88

(a) 2004 includes six months of awards for the combined Firm and six months of awards for heritage JPMorgan Chase. 2003 reflects the awards for heritage JPMorgan Chase only.

The following table details the distribution of options and SARs outstanding under the LTI Plans at December 31, 2005:

(Options/SARs in thousands) Range of exercise prices	Options/SARs outstanding Outstanding	Weighted-average exercise price	Weighted-average remaining contractual life (in years)	Options/SARs exercisable Exercisable	Weighted-average exercise price
$7.27–$20.00	**2,504**	**$ 19.12**	**0.8**	**2,503**	**$ 19.12**
$20.01–$35.00	**125,422**	**28.02**	**5.8**	**88,418**	**27.22**
$35.01–$50.00	**135,263**	**40.04**	**4.9**	**119,710**	**40.13**
$50.01–$63.48	**75,386**	**51.27**	**4.8**	**75,386**	**51.27**
Total	**338,575**	**$ 37.93**	**5.2**	**286,017**	**$ 38.89**

The following table presents a summary of JPMorgan Chase's restricted stock and RSU activity under the LTI Plans during the last three years:

(in thousands) Year ended December 31,[a]	Number of restricted stock/RSUs 2005	2004	2003
Outstanding, January 1	**85,099**	85,527	55,886
Granted	**38,115**	32,514	44,552
Bank One conversion	**NA**	15,116	NA
Lapsed[b]	**(30,413)**	(43,349)	(12,545)
Forfeited	**(8,197)**	(4,709)	(2,366)
Outstanding, December 31	**84,604**	85,099	85,527

(a) 2004 includes six months of awards for the combined Firm and six months of awards for heritage JPMorgan Chase. 2003 reflects the awards for heritage JPMorgan Chase only.
(b) Lapsed awards represent both restricted stock for which restrictions have lapsed and RSUs that have been converted into common stock.

Restricted stock and RSUs are granted by JPMorgan Chase at no cost to the recipient. These awards are subject to forfeiture until certain restrictions have lapsed, including continued employment for a specified period. The recipient of a share of restricted stock is entitled to voting rights and dividends on the common stock. An RSU entitles the recipient to receive a share of common stock after the applicable restrictions lapse; the recipient is entitled to receive cash payments equivalent to any dividends paid on the underlying common stock during the period the RSU is outstanding. Effective January 2005, the equity portion of the Firm's annual incentive awards were granted primarily in the form of RSUs.

The vesting of certain awards issued prior to 2002 is conditioned upon certain service requirements being met and JPMorgan Chase's common stock reaching and sustaining target prices within a five-year performance period. During 2002, it was determined that it was no longer probable that the target stock prices related to forfeitable awards granted in 1999, 2000, and 2001 would be achieved within their respective performance periods, and accordingly, previously accrued expenses were reversed. The target stock prices for these awards range from $73.33 to $85.00. These awards were forfeited as follows: 1.2 million shares granted in 1999 were forfeited in January 2004; and 1.2 million shares granted in 2000 were forfeited in January 2005. Additionally, 1.2 million shares granted in 2001 were forfeited in January 2006.

Broad-based employee stock options

No broad-based employee stock option grants were made in 2005. Prior awards were granted by JPMorgan Chase under the Value Sharing Plan, a non-shareholder-approved plan. The exercise price is equal to JPMorgan Chase's common stock price on the grant date. The options become exercisable over various periods and generally expire 10 years after the grant date.

The following table presents a summary of JPMorgan Chase's broad-based employee stock option plans and SAR activity during the past three years:

Year ended December 31,	2005		2004		2003	
(Options/SARs in thousands)	Number of options/SARs	Weighted-average exercise price	Number of options/SARs	Weighted-average exercise price	Number of options	Weighted-average exercise price
Outstanding, January 1	**112,184**	**$ 40.42**	117,822	$ 39.11	113,155	$ 40.62
Granted	**—**	**—**	6,321	39.96	12,846	21.87
Exercised	**(2,000)**	**24.10**	(5,960)	15.26	(2,007)	13.67
Canceled	**(4,602)**	**39.27**	(5,999)	39.18	(6,172)	37.80
Outstanding, December 31	**105,582**	**$ 40.78**	112,184	$ 40.42	117,822	$ 39.11
Exercisable, December 31	**52,592**	**$ 40.29**	30,082	$ 36.33	36,396	$ 32.88

The following table details the distribution of broad-based employee stock options and SARs outstanding at December 31, 2005:

	Options/SARs outstanding			Options/SARs exercisable	
(Options/SARs in thousands) Range of exercise prices	Outstanding	Weighted-average exercise price	Weighted-average remaining contractual life (in years)	Exercisable	Weighted-average exercise price
$ 20.01–$35.00	**15,200**	**$ 25.01**	**4.3**	**10,490**	**$ 26.42**

Total	**105,582**	**$ 40.78**	**4.6**	**52,592**	**$ 40.29**

Comparison of the fair and intrinsic value measurement methods

Pre-tax employee stock-based compensation expense related to the LTI plans totaled $1.6 billion in 2005, $1.3 billion in 2004 and $919 million in 2003.

The following table presents net income (after-tax) and basic and diluted earnings per share as reported, and as if all outstanding awards were accounted for at fair value:

Year ended December 31,[a] (in millions, except per share data)	2005	2004	2003
Net income as reported	**$ 8,483**	$ 4,466	$ 6,719
Add: Employee stock-based compensation expense originally included in reported net income	**938**	778	551
Deduct: Employee stock-based compensation expense determined under the fair value method for all awards	**(1,015)**	(960)	(863)
Pro forma net income	**$ 8,406**	$ 4,284	$ 6,407
Earnings per share:			
Basic: As reported	**$ 2.43**	$ 1.59	$ 3.32
Pro forma	**2.40**	1.52	3.16
Diluted: As reported	**$ 2.38**	$ 1.55	$ 3.24
Pro forma	**2.36**	1.48	3.09

(a) 2004 results include six months of awards for the combined Firm's results and six months of heritage JPMorgan Chase results. 2003 reflects the results of heritage JPMorgan Chase only.

The following table presents JPMorgan Chase's weighted-average, grant-date fair values for the employee stock-based compensation awards granted, and the assumptions used to value stock options and SARs under the Black-Scholes valuation model:

Year ended December 31,[a]	2005	2004	2003
Weighted-average grant-date fair value			
Stock options:			
Key employee	**$ 10.44**	$ 13.04	$ 5.60
Broad-based employee	**NA**	10.71	4.98
Converted Bank One options	**NA**	14.05	NA
Restricted stock and RSUs (all payable solely in stock)	**37.35**	39.58	22.03
Weighted-average annualized stock option valuation assumptions			
Risk-free interest rate	**4.25%**	3.44%	3.19%
Expected dividend yield[b]	**3.79**	3.59	5.99
Expected common stock price volatility	**37**	41	44
Assumed weighted-average expected life of stock options (in years)			
Key employee	**6.8**	6.8	6.8
Broad-based employee	**NA**	3.8	3.8

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. 2003 reflects the results of heritage JPMorgan Chase only.
(b) Based primarily upon historical data at the grant dates.

Note 8 – Noninterest expense

Merger costs

Costs associated with the Merger were reflected in the Merger costs caption of the Consolidated statements of income. A summary of such costs, by expense category, is shown in the following table for 2005 and 2004. There were no such costs in 2003.

Year ended December 31, (in millions)	**2005**	2004[a]
Expense category		
Compensation	**$ 238**	$ 467
Occupancy	**(77)**	448
Technology and communications and other	**561**	450
Total[b]	**$ 722**	$ 1,365

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.
(b) With the exception of occupancy-related write-offs, all of the costs in the table require the expenditure of cash.

The table below shows the change in the liability balance related to the costs associated with the Merger.

Year ended December 31, (in millions)	**2005**	2004[a]
Liability balance, beginning of period	**$ 952**	$ —
Recorded as merger costs	**722**	1,365
Recorded as goodwill	**26**	1,028
Liability utilized	**(903)**	(1,441)
Total	**$ 797**	$ 952

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.

Note 9 – Securities and private equity investments

Securities are classified as AFS, Held-to-maturity ("HTM") or Trading. Trading securities are discussed in Note 3 on page 94 of this Annual Report. Securities are classified as AFS when, in management's judgment, they may be sold in response to or in anticipation of changes in market conditions, or as part of the Firm's management of its structural interest rate risk. AFS securities are carried at fair value on the Consolidated balance sheets. Unrealized gains and losses after SFAS 133 valuation adjustments are reported as net increases or decreases to Accumulated other comprehensive income (loss). The specific identification method is used to determine realized gains and losses on AFS securities, which are included in Securities / private equity gains on the Consolidated statements of income. Securities that the Firm has the positive intent and ability to hold to maturity are classified as HTM and are carried at amortized cost on the Consolidated balance sheets.

The following table presents realized gains and losses from AFS securities and private equity gains (losses):

Year ended December 31,[a] (in millions)	**2005**	2004	2003
Realized gains	**$ 302**	$ 576	$ 2,123
Realized losses	**(1,638)**	(238)	(677)
Net realized securities gains (losses)	**(1,336)**	338	1,446
Private equity gains	**1,809**	1,536	33
Total Securities/private equity gains	**$ 473**	$ 1,874	$ 1,479

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. 2003 reflects the results of heritage JPMorgan Chase only.

The amortized cost and estimated fair value of AFS and held-to-maturity securities were as follows for the dates indicated:

	2005				2004			
December 31, (in millions)	Amortized cost	Gross unrealized gains	Gross unrealized losses	Fair value	Amortized cost	Gross unrealized gains	Gross unrealized losses	Fair value

Corporate debt securities	1,103	13	125	5	1,228	18
Equity securities	1,804	14	23	—	1,827	14
Other, primarily asset-backed securities	1,896	41	321	34	2,217	75
Total securities with unrealized losses	$ 54,449	$ 532	$ 14,018	$ 457	$ 68,467	$ 989

Impairment is evaluated considering numerous factors, and their relative significance varies case to case. Factors considered include the length of time and extent to which the market value has been less than cost; the financial condition and near-term prospects of the issuer of the securities; and the Firm's intent and ability to retain the security in order to allow for an anticipated recovery in market value. If, based upon the analysis, it is determined that the impairment is other-than-temporary, the security is written down to fair value, and a loss is recognized through earnings.

Included in the $727 million of gross unrealized losses on AFS securities at December 31, 2005, was $391 million of unrealized losses that have existed for a period greater than 12 months. These securities are predominately rated AAA and the unrealized losses are due to overall increases in market interest rates and not due to underlying credit concerns of the issuers. Substantially all of the securities with unrealized losses aged greater than 12 months have a market value at December 31, 2005, that is within 4% of their amortized cost basis.

In calculating the effective yield for mortgage-backed securities ("MBS") and collateralized mortgage obligations ("CMO"), JPMorgan Chase includes the effect of principal prepayments. Management regularly performs simulation testing to determine the impact that market conditions would have on its MBS and CMO portfolios. MBSs and CMOs that management believes have prepayment risk are included in the AFS portfolio and are reported at fair value.

The following table presents the amortized cost, estimated fair value and average yield at December 31, 2005, of JPMorgan Chase's AFS and HTM securities by contractual maturity:

	Available-for-sale securities			Held-to-maturity securities		
Maturity schedule of securities December 31, 2005 (in millions)	Amortized cost	Fair value	Average yield[a]	Amortized cost	Fair value	Average yield[a]
Due in one year or less	**$ 6,723**	**$ 6,426**	**2.77%**	**$ —**	**$ —**	**—%**
Due after one year through five years	**7,740**	**8,009**	**3.72**	**—**	**—**	**—**
Due after five years through 10 years	**5,346**	**5,366**	**4.70**	**30**	**31**	**6.96**
Due after 10 years[b]	**28,184**	**27,722**	**4.69**	**47**	**49**	**6.73**
Total securities	**$ 47,993**	**$ 47,523**	**4.27%**	**$ 77**	**$ 80**	**6.82%**

(a) The average yield is based upon amortized cost balances at year-end. Yields are derived by dividing interest income by total amortized cost. Taxable-equivalent yields are used where applicable.
(b) Includes securities with no stated maturity. Substantially all of JPMorgan Chase's MBSs and CMOs are due in 10 years or more based upon contractual maturity. The estimated duration, which reflects anticipated future prepayments based upon a consensus of dealers in the market, is approximately four years for MBSs and CMOs.

Private equity investments are primarily held by the Private Equity business within Corporate (which includes JPMorgan Partners and ONE Equity Partners businesses). The Private Equity business invests in buyouts, growth equity and venture opportunities in the normal course of business. These investments are accounted for under investment company guidelines. Accordingly, these investments, irrespective of the percentage of equity ownership interest held by Private Equity, are carried on the Consolidated balance sheets at fair value. Realized and unrealized gains and losses arising from changes in value are reported in Securities/private equity gains in the Consolidated statements of income in the period that the gains or losses occur.

Privately-held investments are initially valued based upon cost. The carrying values of privately-held investments are adjusted from cost to reflect both positive and negative changes evidenced by financing events with third-party capital providers. In addition, these investments are subject to ongoing impairment reviews by Private Equity's senior investment professionals. A variety of factors are reviewed and monitored to assess impairment including, but not limited to, operating performance and future expectations of the particular portfolio investment, industry valuations of comparable public companies, changes in market outlook and the third-party financing environment over time. The Valuation Control Group within the Finance area is responsible for reviewing the accuracy of the carrying values of private investments held by Private Equity.

Private Equity also holds publicly-held equity investments, generally obtained through the initial public offering of privately-held equity investments. Publicly-held investments are marked to market at the quoted public value. To determine the carrying values of these investments, Private Equity incorporates the use of discounts to take into account the fact that it cannot immediately realize or risk-manage the quoted public values as a result of regulatory and/or contractual sales restrictions imposed on these holdings.

The following table presents the carrying value and cost of the Private Equity investment portfolio for the dates indicated:

	2005		2004	
December 31, (in millions)	Carrying value	Cost	Carrying value	Cost
Total private equity investments	**$ 6,374**	**$ 8,036**	$ 7,735	$ 9,103

Note 10 – Securities financing activities

JPMorgan Chase enters into resale agreements, repurchase agreements, securities borrowed transactions and securities loaned transactions primarily to finance the Firm's inventory positions, acquire securities to cover short positions and settle other securities obligations. The Firm also enters into these transactions to accommodate customers' needs.

Securities purchased under resale agreements ("resale agreements") and securities sold under repurchase agreements ("repurchase agreements") are generally treated as collateralized financing transactions and are carried on the Consolidated balance sheets at the amounts the securities will be subsequently sold or repurchased, plus accrued interest. Where appropriate, resale and repurchase agreements with the same counterparty are reported on a net basis in accordance with FIN 41. JPMorgan Chase takes possession of securities purchased under resale agreements. On a daily basis, JPMorgan Chase monitors the market value of the underlying collateral received from its counterparties, consisting primarily of U.S. and non-U.S. government and agency securities, and requests additional collateral from its counterparties when necessary.

Transactions similar to financing activities that do not meet the SFAS 140 definition of a repurchase agreement are accounted for as "buys" and "sells" rather than financing transactions. These transactions are accounted for as a purchase (sale) of the underlying securities with a forward obligation to sell (purchase) the securities. The forward purchase (sale) obligation, a derivative, is recorded on the Consolidated balance sheets at its fair value, with changes in fair value recorded in Trading revenue.

Securities borrowed and securities lent are recorded at the amount of cash collateral advanced or received. Securities borrowed consist primarily of government and equity securities. JPMorgan Chase monitors the market value of the securities borrowed and lent on a daily basis and calls for additional collateral when appropriate. Fees received or paid are recorded in Interest income or Interest expense.

December 31, (in millions)	2005	2004
Securities purchased under resale agreements	**$ 129,570**	$ 94,076
Securities borrowed	**74,604**	47,428
Securities sold under repurchase agreements	**$ 103,052**	$105,912
Securities loaned	**14,072**	6,435

JPMorgan Chase pledges certain financial instruments the Firm owns to collateralize repurchase agreements and other securities financings. Pledged securities that can be sold or repledged by the secured party are identified as financial instruments owned (pledged to various parties) on the Consolidated balance sheets.

At December 31, 2005, the Firm had received securities as collateral that can be repledged, delivered or otherwise used with a fair value of approximately $331 billion. This collateral was generally obtained under resale or securities borrowing agreements. Of these securities, approximately $320 billion were repledged, delivered or otherwise used, generally as collateral under repurchase agreements, securities lending agreements or to cover short sales.

Note 11 – Loans

Loans are reported at the principal amount outstanding, net of the Allowance for loan losses, unearned income and any net deferred loan fees. Loans held for sale are carried at the lower of cost or fair value, with valuation changes recorded in noninterest revenue. Loans are classified as "trading" where positions are bought and sold to make profits from short-term movements in price. Loans held for trading purposes are included in Trading assets and are carried at fair value, with gains and losses included in Trading revenue. Interest income is recognized using the interest method, or on a basis approximating a level rate of return over the term of the loan.

Nonaccrual loans are those on which the accrual of interest is discontinued. Loans (other than certain consumer loans discussed below) are placed on nonaccrual status immediately if, in the opinion of management, full payment of principal or interest is in doubt, or when principal or interest is 90 days or more past due and collateral, if any, is insufficient to cover principal and interest. Interest accrued but not collected at the date a loan is placed on nonaccrual status is reversed against Interest income. In addition, the amortization of net deferred loan fees is suspended. Interest income on nonaccrual loans is recognized only to the extent it is received in cash. However, where there is doubt regarding the ultimate collectibility of loan principal, all cash thereafter received is applied to reduce the carrying value of such loans. Loans are restored to accrual status only when interest and principal payments are brought current and future payments are reasonably assured.

Consumer loans are generally charged to the Allowance for loan losses upon reaching specified stages of delinquency, in accordance with the Federal Financial Institutions Examination Council ("FFIEC") policy. For example, credit card loans are charged off by the end of the month in which the account becomes 180 days past due or within 60 days from receiving notification of the filing of bankruptcy, whichever is earlier. Residential mortgage products are generally charged off to net realizable value at 180 days past due. Other consumer products are generally charged off (to net realizable value if collateralized) at 120 days past due. Accrued interest on residential mortgage products, and automobile and education financings and certain other consumer loans are accounted for in accordance with the nonaccrual loan policy discussed in the preceding paragraph. Interest and fees related to credit card loans continue to accrue until the loan is charged off or paid. Accrued interest on all other consumer loans is generally reversed against interest income when the loan is charged off. A collateralized loan is considered an in-substance foreclosure and is reclassified to assets acquired in loan satisfactions, within Other assets, only when JPMorgan Chase has taken physical possession of the collateral, but regardless of whether formal foreclosure proceedings have taken place.

The composition of the loan portfolio at each of the dates indicated was as follows:

December 31, (in millions)	2005	2004
U.S. wholesale loans:		
Commercial and industrial	**$ 70,233**	$ 61,033
Real estate	**13,612**	13,038
Financial institutions	**11,100**	14,195
Lease financing receivables	**2,621**	3,098
Other	**14,499**	8,504
Total U.S. wholesale loans	**112,065**	99,868
Non-U.S. wholesale loans:		
Commercial and industrial	**27,452**	25,120
Real estate	**1,475**	1,747
Financial institutions	**7,975**	7,280
Lease financing receivables	**1,144**	1,052
Total non-U.S. wholesale loans	**38,046**	35,199
Total wholesale loans:[a]		
Commercial and industrial	**97,685**	86,153
Real estate[b]	**15,087**	14,785
Financial institutions	**19,075**	21,475
Lease financing receivables	**3,765**	4,150
Other	**14,499**	8,504
Total wholesale loans	**150,111**	135,067
Total consumer loans:[c]		
Consumer real estate		
Home finance – home equity & other	**76,727**	67,837
Home finance – mortgage	**56,726**	56,816
Total Home finance	**133,453**	124,653
Auto & education finance	**49,047**	62,712
Consumer & small business and other	**14,799**	15,107
Credit card receivables[d]	**71,738**	64,575
Total consumer loans	**269,037**	267,047
Total loans[e][f][g]	**$ 419,148**	$ 402,114

(a) Includes Investment Bank, Commercial Banking, Treasury & Securities Services and Asset & Wealth Management.
(b) Represents credits extended for real estate–related purposes to borrowers who are primarily in the real estate development or investment businesses and for which the primary repayment is from the sale, lease, management, operations or refinancing of the property.
(c) Includes Retail Financial Services and Card Services.
(d) Includes billed finance charges and fees net of an allowance for uncollectible amounts.
(e) Loans are presented net of unearned income of $3.0 billion and $4.1 billion at December 31, 2005 and 2004, respectively.
(f) Includes loans held for sale (primarily related to securitization and syndication activities) of $34.2 billion and $24.5 billion at December 31, 2005 and 2004, respectively.
(g) Amounts are presented gross of the Allowance for loan losses.

The following table reflects information about the Firm's loans held for sale, principally mortgage-related:

Year ended December 31, (in millions)[a]	**2005**	2004	2003
Net gains on sales of loans held for sale	**$ 596**	$ 368	$ 933
Lower of cost or fair value adjustments	**(332)**	39	26

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. 2003 reflects the results of heritage JPMorgan Chase only.

Impaired loans

JPMorgan Chase accounts for and discloses nonaccrual loans as impaired loans and recognizes their interest income as discussed previously for nonaccrual loans. The Firm excludes from impaired loans its small-balance, homogeneous consumer loans; loans carried at fair value or the lower of cost or fair value; debt securities; and leases.

The table below sets forth information about JPMorgan Chase's impaired loans. The Firm primarily uses the discounted cash flow method for valuing impaired loans:

December 31, (in millions)[a]	**2005**	2004
Impaired loans with an allowance	**$ 1,095**	$ 1,496
Impaired loans without an allowance[b]	**80**	284
Total impaired loans	**$ 1,175**	$ 1,780
Allowance for impaired loans under SFAS 114[c]	**$ 257**	$ 521
Average balance of impaired loans during the year	**1,478**	1,883
Interest income recognized on impaired loans during the year	**5**	8

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.
(b) When the discounted cash flows, collateral value or market price equals or exceeds the carrying value of the loan, then the loan does not require an allowance under SFAS 114.
(c) The allowance for impaired loans under SFAS 114 is included in JPMorgan Chase's Allowance for loan losses.

Note 12 – Allowance for credit losses

JPMorgan Chase's Allowance for loan losses covers the wholesale (risk-rated) and consumer (scored) loan portfolios and represents management's estimate of probable credit losses inherent in the Firm's loan portfolio. Management also computes an Allowance for wholesale lending-related commitments using a methodology similar to that used for the wholesale loans.

The Allowance for loan losses includes an asset-specific component and a formula-based component. Within the formula-based component is a statistical calculation and an adjustment to the statistical calculation.

The asset-specific component relates to provisions for losses on loans considered impaired and measured pursuant to SFAS 114. An allowance is established when the discounted cash flows (or collateral value or observable market price) of the loan is lower than the carrying value of that loan. To compute the asset-specific component of the allowance, larger impaired loans are evaluated individually, and smaller impaired loans are evaluated as a pool using historical loss experience for the respective class of assets.

The formula-based component covers performing wholesale and consumer loans and is the product of a statistical calculation, as well as adjustments to such calculation. These adjustments take into consideration model imprecision, external factors and economic events that have occurred but are not yet reflected in the factors used to derive the statistical calculation.

The statistical calculation is the product of probability of default and loss given default. For risk-rated loans (generally loans originated by the wholesale lines of business), these factors are differentiated by risk rating and maturity. For scored loans (generally loans originated by the consumer lines of business), loss is primarily determined by applying statistical loss factors and other risk indicators to pools of loans by asset type. Adjustments to the statistical calculation for the risk-rated portfolios are determined by creating estimated ranges using historical experience of both loss given default and probability of default. Factors related to concentrated and deteriorating industries are also incorporated into the calculation where relevant. Adjustments to the statistical calculation for the scored loan portfolios are accomplished in part by analyzing the historical loss experience for each major product segment. The estimated ranges and the determination of the appropriate point within the range are based upon management's view of uncertainties that relate to current macroeconomic and political conditions, quality of underwriting standards, and other relevant internal and external factors affecting the credit quality of the portfolio.

The Allowance for lending-related commitments represents management's estimate of probable credit losses inherent in the Firm's process of extending credit. Management establishes an asset-specific allowance for lending-related commitments that are considered impaired and computes a formula-based allowance for performing wholesale lending-related commitments. These are computed using a methodology similar to that used for the wholesale loan portfolio, modified for expected maturities and probabilities of drawdown.

The allowance for credit losses is reviewed at least quarterly by the Chief Risk Officer of the Firm, the Risk Policy Committee, a risk subgroup of the Operating Committee, and the Audit Committee of the Board of Directors of the Firm relative to the risk profile of the Firm's credit portfolio and current economic conditions. As of December 31, 2005, JPMorgan Chase deemed the allowance for credit losses to be appropriate (i.e., sufficient to absorb losses that are inherent in the portfolio, including those not yet identifiable).

As a result of the Merger, management modified its methodology for determining the Provision for credit losses for the combined Firm. The effect of conforming methodologies in 2004 was a decrease in the consumer allowance of $254 million and a decrease in the wholesale allowance (including both funded loans and lending-related commitments) of $330 million. In addition, the Bank One seller's interest in credit card securitizations was decertificated; this resulted in an increase to the provision for loan losses of approximately $1.4 billion (pre-tax) in 2004.

JPMorgan Chase maintains an allowance for credit losses as follows:

Allowance for credit losses on:	Reported in: Balance sheet	Income statement
Loans	Allowance for loan losses	Provision for credit losses
Lending-related commitments	Other liabilities	Provision for credit losses

The table below summarizes the changes in the Allowance for loan losses:

December 31, (in millions)	2005	2004[c]
Allowance for loan losses at January 1	**$ 7,320**	$ 4,523
Addition resulting from the Merger, July 1, 2004	**—**	3,123
Gross charge-offs	**(4,869)**	(3,805)[d]
Gross recoveries	**1,050**	706
Net charge-offs	**(3,819)**	(3,099)
Provision for loan losses:		
Provision excluding accounting policy conformity	**3,575**	1,798
Accounting policy conformity[a]	**—**	1,085
Total Provision for loan losses	**3,575**	2,883
Other	**14**	(110)[e]
Allowance for loan losses at December 31	**$ 7,090**[b]	$ 7,320[f]

(a) Represents an increase of approximately $1.4 billion as a result of the decertification of heritage Bank One seller's interest in credit card securitizations, partially offset by a reduction of $357 million to conform provision methodologies.
(b) 2005 includes $203 million of asset-specific and $6.9 billion of formula-based allowance. Included within the formula-based allowance was $5.1 billion related to a statistical calculation (including $400 million related to Hurricane Katrina), and an adjustment to the statistical calculation of $1.8 billion.
(c) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.
(d) Includes $406 million related to the Manufactured Home Loan portfolio in the fourth quarter of 2004.
(e) Primarily represents the transfer of the allowance for accrued interest and fees on reported and securitized credit card loans.
(f) 2004 includes $469 million of asset-specific loss and $6.8 billion of formula-based loss. Included within the formula-based loss is $4.8 billion related to statistical calculation and an adjustment to the statistical calculation of $2.0 billion.

The table below summarizes the changes in the Allowance for lending-related commitments:

December 31, (in millions)	2005	2004[c]
Allowance for lending-related commitments at January 1	**$ 492**	$ 324
Addition resulting from the Merger, July 1, 2004	**—**	508
Provision for lending-related commitments:		
Provision excluding accounting policy conformity	**(92)**	(112)
Accounting policy conformity[a]	**—**	(227)
Total Provision for lending-related commitments	**(92)**	(339)
Other	**—**	(1)
Allowance for lending-related commitments at December 31[b]	**$ 400**	$ 492

(a) Represents a reduction of $227 million to conform provision methodologies in the wholesale portfolio.
(b) 2005 includes $60 million of asset-specific and $340 million of formula-based allowance. 2004 includes $130 million of asset-specific and $362 million of formula-based allowance. The formula-based allowance for lending-related commitments is based upon a statistical calculation. There is no adjustment to the statistical calculation for lending-related commitments.
(c) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.

Note 13 – Loan securitizations

JPMorgan Chase securitizes, sells and services various consumer loans, such as consumer real estate, credit card and automobile loans, as well as certain wholesale loans (primarily real estate) originated by the Investment Bank. In addition, the Investment Bank purchases, packages and securitizes commercial and consumer loans. All IB activity is collectively referred to below as Wholesale activities. Interests in the sold and securitized loans may be retained.

The Firm records a loan securitization as a sale when the transferred loans are legally isolated from the Firm's creditors and the accounting criteria for a sale are met. Those criteria are (1) the assets are legally isolated from the Firm's creditors; (2) the entity can pledge or exchange the financial assets or, if the entity is a QSPE, its investors can pledge or exchange their interests; and (3) the Firm does not maintain effective control via an agreement to repurchase the assets before their maturity or have the ability to unilaterally cause the holder to return the assets.

Gains or losses recorded on loan securitizations depend, in part, on the carrying amount of the loans sold and are allocated between the loans sold and the retained interests, based upon their relative fair values at the date of sale. Gains on securitizations are reported in noninterest revenue. Since quoted market prices are generally not available, the Firm usually estimates the fair value of these retained interests by determining the present value of future expected cash flows using modeling techniques. Such models incorporate management's best estimates of key variables, such as expected credit losses, prepayment speeds and the discount rates appropriate for the risks involved.

Retained interests that are subject to prepayment risk, such that JPMorgan Chase may not recover substantially all of its investment, are recorded at fair value; subsequent adjustments are reflected in Other comprehensive income or in earnings, if the fair value of the retained interest has declined below its carrying amount and such decline has been determined to be other-than-temporary.

Interests in the securitized loans are generally retained by the Firm in the form of senior or subordinated interest-only strips, subordinated tranches, escrow accounts and servicing rights, and they are generally recorded in Other assets. In addition, credit card securitization trusts require the Firm to maintain a minimum undivided interest in the trusts, representing the Firm's interests in the receivables transferred to the trust that have not been securitized. These interests are not represented by security certificates. The Firm's undivided interests are carried at historical cost and are classified in Loans. Retained interests from wholesale activities are reflected as trading assets.

JPMorgan Chase retains servicing responsibilities for all residential mortgage, credit card and automobile loan securitizations and for certain wholesale activity securitizations it sponsors, and receives servicing fees based on the securitized loan balance plus certain ancillary fees. The Firm also retains the right to service the residential mortgage loans it sells in connection with mortgage-backed securities transactions with the Government National Mortgage Association ("GNMA"), Federal National Mortgage Association ("FNMA") and Federal Home Loan Mortgage Corporation ("Freddie Mac"). For a discussion of mortgage servicing rights, see Note 15 on pages 114–116 of this Annual report.

JPMorgan Chase-sponsored securitizations utilize SPEs as part of the securitization process. These SPEs are structured to meet the definition of a QSPE (as discussed in Note 1 on page 91 of this Annual Report); accordingly, the assets and liabilities of securitization-related QSPEs are not reflected in the Firm's Consolidated balance sheets (except for retained interests, as described below) but are included on the balance sheet of the QSPE purchasing the

assets. Assets held by securitization-related SPEs as of December 31, 2005 and 2004, were as follows:

December 31, (in billions)	2005	2004
Credit card receivables	**$ 96.0**	$ 106.3
Residential mortgage receivables	**29.8**	19.1
Wholesale activities[a]	**72.9**	44.8
Automobile loans	**5.5**	4.9
Total	**$ 204.2**	$ 175.1

(a) Co-sponsored securitizations include non-JPMorgan Chase originated assets.

The following table summarizes new securitization transactions that were completed during 2005 and 2004, the resulting gains arising from such securitizations, certain cash flows received from such securitizations, and the key economic assumptions used in measuring the retained interests, as of the dates of such sales:

Year ended December 31,	2005				2004[a]			
(in millions)	Residential mortgage	Credit card	Automobile	Wholesale activities[e]	Residential mortgage	Credit card	Automobile	Wholesale activities[e]
Principal securitized	**$ 18,125**	**$ 15,145**	**$ 3,762**	**$ 22,691**	$ 6,529	$ 8,850	$ 1,600	$ 8,756
Pre-tax gains (losses)	**21**	**101**	**9**[c]	**131**	47	52	(3)	135
Cash flow information:								
Proceeds from securitizations	**$ 18,093**	**$ 14,844**	**$ 2,622**	**$ 22,892**	$ 6,608	$ 8,850	$ 1,597	$ 8,430
Servicing fees collected	**17**	**94**	**4**	**—**	12	69	1	3
Other cash flows received	**—**	**298**	**—**	**3**	25	225	—	16
Proceeds from collections reinvested in revolving securitizations	**—**	**129,696**	**—**	**—**	—	110,697	—	—
Key assumptions (rates per annum):								
Prepayment rate[b]	**9.1–12.1% CPR**	**16.7–20.0% PPR**	**1.5% ABS**	**0–50%**	23.8–37.6% CPR	15.5–16.7% PPR	1.5% ABS	17.0–50.0%
Weighted-average life (in years)	**5.6–6.7**	**0.4–0.5**	**1.4–1.5**	**1.0–4.4**	1.9–3.0	0.5–0.6	1.8	2.0–4.0
Expected credit losses	**—**[d]	**4.7–5.7%**	**0.6–0.7%**	**0–2.0%**[d]	1.0–2.3%	5.5–5.8%	0.6%	0.0–3.0%[d]
Discount rate	**13.0–13.3%**	**12.0%**	**6.3–7.3%**	**0.6–18.5%**	15.0–30.0%	12.0%	4.1%	0.6–5.0%

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.
(b) CPR: constant prepayment rate; ABS: absolute prepayment speed; PPR: principal payment rate.
(c) The auto securitization gain of $9 million does not include the write-down of loans transferred to held-for-sale in 2005 and risk management activities intended to protect the economic value of the loans while held-for-sale.
(d) Expected credit losses for prime residential mortgage and certain wholesale securitizations are minimal and are incorporated into other assumptions.
(e) Wholesale activities consist of wholesale loans (primarily commercial real estate) originated by the Investment Bank as well as $11.4 billion and $1.8 billion of consumer loans purchased from the market in 2005 and 2004, respectively, and then packaged and securitized by the Investment Bank.

In addition to securitization transactions, the Firm sold residential mortgage loans totaling $52.5 billion, $65.7 billion and $123.2 billion during 2005, 2004 and 2003, respectively, primarily as GNMA, FNMA and Freddie Mac mortgage-backed securities; these sales resulted in pre-tax gains of $293 million, $58.1 million and $564.3 million, respectively.

At both December 31, 2005 and 2004, the Firm had, with respect to its credit card master trusts, $24.8 billion and $35.2 billion, respectively, related to undivided interests, and $2.2 billion and $2.1 billion, respectively, related to subordinated interests in accrued interest and fees on the securitized receivables, net of an allowance for uncollectible amounts. Credit card securitization trusts require the Firm to maintain a minimum undivided interest of 4% to 12% of the principal receivables in the trusts. The Firm maintained an average undivided interest in principal receivables in the trusts of approximately 23% for both 2005 and 2004, respectively.

The Firm also maintains escrow accounts up to predetermined limits for some credit card and automobile securitizations, in the unlikely event of deficiencies in cash flows owed to investors. The amounts available in such escrow accounts are recorded in Other assets and, as of December 31, 2005, amounted to $754 million and $76 million for credit card and automobile securitizations, respectively; as of December 31, 2004, these amounts were $395 million and $132 million for credit card and automobile securitizations, respectively.

The table below summarizes other retained securitization interests, which are primarily subordinated or residual interests and are carried at fair value on the Firm's Consolidated balance sheets:

December 31, (in millions)	2005	2004
Residential mortgage[a]	**$ 182**	$ 433
Credit card[a]	**808**	494
Automobile[a][b]	**150**	85
Wholesale activities[c]	**265**	23
Total	**$ 1,405**	$ 1,035

(a) Pre-tax unrealized gains (losses) recorded in Stockholders' equity that relate to retained securitization interests totaled $60 million and $118 million for Residential mortgage; $6 million and $(3) million for Credit card; and $5 million and $11 million for Automobile at December 31, 2005 and 2004, respectively.
(b) In addition to the automobile retained interest amounts noted above, the Firm also retained senior securities totaling $490 million at December 31, 2005, from 2005 auto securitizations that are classified as AFS securities. These securities are valued using quoted market prices and are therefore not included in the key economic assumption and sensitivities table that follows.
(c) In addition to the wholesale retained interest amounts noted above, the Firm also retained subordinated securities totaling $51 million at December 31, 2005, from re-securitization activities. These securities are valued using quoted market prices and are therefore not included in the key assumptions and sensitivities table that follows.

The table below outlines the key economic assumptions used to determine the fair value of the other retained interests at December 31, 2005 and 2004, respectively; and it outlines the sensitivities of those fair values to immediate 10% and 20% adverse changes in those assumptions:

December 31, 2005 (in millions)	Residential mortgage	Credit card	Automobile	Wholesale activities
Weighted-average life (in years)	**0.5–3.5**	**0.4–0.7**	**1.2**	**0.2–4.1**
Prepayment rate	**20.1–43.7% CPR**	**11.9–20.8% PPR**	**1.5% ABS**	**0.0–50.0%**[a]
Impact of 10% adverse change	**$ (3)**	**$ (44)**	**$ —**	**$ (5)**
Impact of 20% adverse change	**(5)**	**(88)**	**(2)**	**(6)**
Loss assumption	**0.0–5.2%**[b]	**3.2–8.1%**	**0.7%**	**0.0–2.0%**[b]
Impact of 10% adverse change	**$ (10)**	**$ (77)**	**$ (4)**	**$ (6)**
Impact of 20% adverse change	**(19)**	**(153)**	**(9)**	**(11)**
Discount rate	**12.7–30.0%**[c]	**6.9–12.0%**	**7.2%**	**0.2–18.5%**
Impact of 10% adverse change	**$ (4)**	**$ (2)**	**$ (1)**	**$ (6)**
Impact of 20% adverse change	**(8)**	**(4)**	**(3)**	**(12)**

December 31, 2004 (in millions)	Residential mortgage	Credit card	Automobile	Wholesale activities
Weighted-average life (in years)	0.8–3.4	0.5–1.0	1.3	0.2–4.0
Prepayment rate	15.1–37.1% CPR	8.3–16.7% PPR	1.4% ABS	0.0–50.0%[a]
Impact of 10% adverse change	$ (5)	$ (34)	$ (6)	$ (1)
Impact of 20% adverse change	(8)	(69)	(13)	(1)
Loss assumption	0.0–5.0%[b]	5.7–8.4%	0.7%	0.0–3.0%[b]
Impact of 10% adverse change	$ (17)	$ (144)	$ (4)	$ —
Impact of 20% adverse change	(34)	(280)	(8)	—
Discount rate	13.0–30.0%[c]	4.9–12.0%	5.5%	1.0–22.9%
Impact of 10% adverse change	$ (9)	$ (2)	$ (1)	$ —
Impact of 20% adverse change	(18)	(4)	(2)	—

(a) Prepayment risk on certain wholesale retained interests are minimal and are incorporated into other assumptions.
(b) Expected credit losses for prime residential mortgage and certain wholesale securitizations are minimal and are incorporated into other assumptions.
(c) The Firm sold certain residual interests from sub-prime mortgage securitizations via Net Interest Margin ("NIM") securitizations and retains residual interests in these NIM transactions, which are valued using a 30% discount rate.

The sensitivity analysis in the preceding table is hypothetical. Changes in fair value based upon a 10% or 20% variation in assumptions generally cannot be extrapolated easily, because the relationship of the change in the assumptions to the change in fair value may not be linear. Also, in this table, the effect that a change in a particular assumption may have on the fair value is calculated without changing any other assumption. In reality, changes in one factor may result in changes in another assumption, which might counteract or magnify the sensitivities.

Expected static-pool net credit losses include actual incurred losses plus projected net credit losses, divided by the original balance of the outstandings comprising the securitization pool.

The table below displays the expected static-pool net credit losses for 2005, 2004 and 2003, based upon securitizations occurring in that year:

	Loans securitized in:[a]					
	2005		2004[b]		2003[b]	
	Residential mortgage[c]	Automobile	Residential mortgage	Automobile	Residential mortgage	Automobile
December 31, 2005	**0.0%**	**0.9%**	0.0–2.4%	0.8%	0.0–2.0%	0.5%
December 31, 2004	**NA**	**NA**	0.0–3.3	1.1	0.0–2.1	0.9
December 31, 2003	**NA**	**NA**	NA	NA	0.0–3.6	0.9

(a) Static-pool losses are not applicable to credit card securitizations due to their revolving structure.
(b) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. 2003 reflects the results of heritage JPMorgan Chase only.
(c) 2005 securitizations consist of prime-mortgage securitizations only. Expected losses are minimal and incorporated in other assumptions.

The table below presents information about delinquencies, net credit losses and components of reported and securitized financial assets at December 31, 2005 and 2004:

	Total Loans		Nonaccrual and 90 days or more past due		Net loan charge-offs[a] Year ended	
December 31, (in millions)	**2005**	2004	**2005**	2004	**2005**	2004
Home finance	**$ 133,453**	$ 124,653	**$ 863**	$ 673	**$ 154**	$ 573
Auto & education finance	**49,047**	62,712	**195**	193	**277**	263
Consumer & small business and other	**14,799**	15,107	**280**	295	**141**	154
Credit card receivables	**71,738**	64,575	**1,091**	1,006	**3,324**	1,923
Total consumer loans	**269,037**	267,047	**2,429**	2,167	**3,896**	2,913
Total wholesale loans	**150,111**	135,067	**1,042**	1,582	**(77)**	186
Total loans reported	**419,148**	402,114	**3,471**	3,749	**3,819**	3,099
Securitized loans:						
Residential mortgage[b]	**8,061**	11,533	**370**	460	**105**	150
Automobile	**5,439**	4,763	**11**	12	**15**	24
Credit card	**70,527**	70,795	**730**	1,337	**3,776**	2,898
Total consumer loans securitized	**84,027**	87,091	**1,111**	1,809	**3,896**	3,072
Securitized wholesale activities	**9,049**	1,401	**4**	—	**—**	—
Total loans securitized[c]	**93,076**	88,492	**1,115**	1,809	**3,896**	3,072
Total loans reported and securitized[d]	**$ 512,224**	$ 490,606	**$ 4,586**	$ 5,558	**$ 7,715**	$ 6,171

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.
(b) Includes $5.9 billion and $10.3 billion of outstanding principal balances on securitized sub-prime 1–4 family residential mortgage loans as of December 31, 2005 and 2004, respectively.
(c) Total assets held in securitization-related SPEs were $204.2 billion and $175.1 billion at December 31, 2005 and 2004, respectively. The $93.1 billion and $88.5 billion of loans securitized at December 31, 2005 and 2004, respectively, excludes: $85.6 billion and $50.8 billion of securitized loans, in which the Firm's only continuing involvement is the servicing of the assets; $24.8 billion and $35.2 billion of seller's interests in credit card master trusts; and $0.7 billion and $0.6 billion of escrow accounts and other assets, respectively.
(d) Represents both loans on the Consolidated balance sheets and loans that have been securitized, but excludes loans for which the Firm's only continuing involvement is servicing of the assets.

Note 14 – Variable interest entities

Refer to Note 1 on page 91 of this Annual Report for a further description of JPMorgan Chase's policies regarding consolidation of variable interest entities.

JPMorgan Chase's principal involvement with VIEs occurs in the following business segments:

- Investment Bank: Utilizes VIEs to assist clients in accessing the financial markets in a cost-efficient manner by providing the structural flexibility to meet their needs pertaining to price, yield and desired risk. There are two broad categories of transactions involving VIEs in the IB: (1) multi-seller conduits and (2) client intermediation; both are discussed below. The IB also securitizes loans through QSPEs which are not considered VIEs, to create asset-backed securities, as further discussed in Note 13 on pages 108–111 of this Annual Report.
- Asset & Wealth Management: Provides investment management services to a limited number of the Firm's mutual funds deemed VIEs. AWM earns a fixed fee based upon assets managed; the fee varies with each fund's investment objective and is competitively priced. For the limited number of funds that qualify as VIEs, AWM's relationships with such funds are not considered significant interests under FIN 46R.
- Treasury & Securities Services: Provides trustee and custodial services to a number of VIEs. These services are similar to those provided to non-VIEs. TSS earns market-based fees for services provided. Such relationships are not considered significant interests under FIN 46R.
- Commercial Banking: Utilizes VIEs to assist clients in accessing the financial markets in a cost-efficient manner. This is often accomplished through the use of products similar to those offered in the Investment Bank. Commercial Banking may assist in the structuring and/or on-going administration of these VIEs and may provide liquidity, letters of credit and/or derivative instruments in support of the VIE.
- The Firm's Private Equity business, included in Corporate, is involved with entities that may be deemed VIEs. Private equity activities are accounted for in accordance with the Investment Company Audit Guide ("Audit Guide"). The FASB deferred adoption of FIN 46R for non-registered investment companies that apply the Audit Guide until the proposed Statement of Position on the clarification of the scope of the Audit Guide is finalized. The Firm continues to apply this deferral provision; had FIN 46R been applied to VIEs subject to this deferral, the impact would have had an insignificant impact on the Firm's Consolidated financial statements as of December 31, 2005.

As noted above, there are two broad categories of transactions involving VIEs with which the IB is involved: multi-seller conduits and client intermediation. These categories are discussed more fully below.

Multi-seller conduits

The Firm is an active participant in the asset-backed securities business, helping meet customers' financing needs by providing access to the commercial paper markets through VIEs known as multi-seller conduits. These entities are separate bankruptcy-remote corporations in the business of purchasing interests in, and making loans secured by, receivable pools and other financial assets pursuant to agreements with customers. The entities fund their purchases and loans through the issuance of highly-rated commercial paper. The primary source of repayment of the commercial paper is the cash flow from the pools of assets.

JPMorgan Chase serves as the administrator and provides contingent liquidity support and limited credit enhancement for several multi-seller conduits. The commercial paper issued by the conduits is backed by collateral, credit enhancements and commitments to provide liquidity sufficient to support receiving at least a liquidity rating of A-1, P-1 and, in certain cases, F1.

As a means of ensuring timely repayment of the commercial paper, each asset pool financed by the conduits has a minimum 100% deal-specific liquidity facility associated with it. In the unlikely event an asset pool is removed from the conduit, the administrator can draw on the liquidity facility to repay the maturing commercial paper. The liquidity facilities are typically in the form of asset purchase agreements and are generally structured such that the bank liquidity is provided by purchasing, or lending against, a pool of non-defaulted, performing assets. Deal-specific liquidity is the primary source of liquidity support for the conduits.

Program-wide liquidity in the form of revolving and short-term lending commitments also is provided by the Firm to these vehicles in the event of short-term disruptions in the commercial paper market.

Deal-specific credit enhancement that supports the commercial paper issued by the conduits is generally structured to cover a multiple of historical losses expected on the pool of assets and is provided primarily by customers (i.e., sellers) or other third parties. The deal-specific credit enhancement is typically in the form of over-collateralization provided by the seller but also may include any combination of the following: recourse to the seller or originator, cash collateral accounts, letters of credit, excess spread, retention of subordinated interests or third-party guarantees. In certain instances, the Firm provides limited credit enhancement in the form of standby letters of credit.

The following table summarizes the Firm's involvement with Firm-administered multi-seller conduits:

	Consolidated		Nonconsolidated		Total	
December 31, (in billions)	**2005**	2004	**2005**	2004[b]	**2005**	2004[b]
Total commercial paper issued by conduits	**$ 35.2**	$ 35.8	**$ 8.9**	$ 9.3	**$ 44.1**	$ 45.1
Commitments						
Asset-purchase agreements	**$ 47.9**	$ 47.2	**$ 14.3**	$ 16.3	**$ 62.2**	$ 63.5
Program-wide liquidity commitments	**5.0**	4.0	**1.0**	2.0	**6.0**	6.0
Program-wide limited credit enhancements	**1.3**	1.4	**1.0**	1.2	**2.3**	2.6
Maximum exposure to loss[a]	**48.4**	48.2	**14.8**	16.9	**63.2**	65.1

(a) The Firm's maximum exposure to loss is limited to the amount of drawn commitments (i.e., sellers' assets held by the multi-seller conduits for which the Firm provides liquidity support) of $41.6 billion and $42.2 billion at December 31, 2005 and 2004, respectively, plus contractual but undrawn commitments of $21.6 billion and $22.9 billion at December 31, 2005 and 2004, respectively. Since the Firm provides credit enhancement and liquidity to these multi-seller conduits, the maximum exposure is not adjusted to exclude exposure absorbed by third-party liquidity providers.

(b) In December 2003 and February 2004, two multi-seller conduits were restructured, with each conduit issuing preferred securities acquired by an independent third-party investor; the investor absorbs the majority of the expected losses of the conduit. In determining the primary beneficiary of the restructured conduits, the Firm leveraged an existing rating agency model – an independent market standard – to estimate the size of the expected losses, and the Firm considered the relative rights and obligations of each of the variable interest holders.

The Firm views its credit exposure to multi-seller conduit transactions as limited. This is because, for the most part, the Firm is not required to fund under the liquidity facilities if the assets in the VIE are in default. Additionally, the Firm's obligations under the letters of credit are secondary to the risk of first loss provided by the customer or other third parties – for example, by the overcollateralization of the VIE with the assets sold to it or notes subordinated to the Firm's liquidity facilities.

Client intermediation

As a financial intermediary, the Firm is involved in structuring VIE transactions to meet investor and client needs. The Firm intermediates various types of risks (including fixed income, equity and credit), typically using derivative instruments as further discussed below. In certain circumstances, the Firm also provides liquidity and other support to the VIEs to facilitate the transaction. The Firm's current exposure to nonconsolidated VIEs is reflected in its Consolidated balance sheets or in the Notes to consolidated financial statements. The risks inherent in derivative instruments or liquidity commitments are managed similarly to other credit, market and liquidity risks to which the Firm is exposed. The Firm intermediates principally with the following types of VIEs: credit-linked note vehicles and municipal bond vehicles.

The Firm structures credit-linked notes in which the VIE purchases highly-rated assets (such as asset-backed securities) and enters into a credit derivative contract with the Firm to obtain exposure to a referenced credit not held by the VIE. Credit-linked notes are issued by the VIE to transfer the risk of the referenced credit to the investors in the VIE. Clients and investors often prefer a VIE structure, since the credit-linked notes generally carry a higher credit rating than they would if issued directly by JPMorgan Chase.

The Firm is involved with municipal bond vehicles for the purpose of creating a series of secondary market trusts that allow tax-exempt investors to finance their investments at short-term tax-exempt rates. The VIE purchases fixed-rate, longer-term highly-rated municipal bonds by issuing puttable floating-rate certificates and inverse floating-rate certificates; the investors in the inverse floating-rate certificates are exposed to the residual losses of the VIE (the "residual interests"). For vehicles in which the Firm owns the residual interests, the Firm consolidates the VIE. In vehicles where third-party investors own the residual interests, the Firm's exposure is limited because of the high credit quality of the underlying municipal bonds, the unwind triggers based upon the market value of the underlying collateral and the residual interests held by third parties. The Firm often serves as remarketing agent for the VIE and provides liquidity to support the remarketing.

Assets held by credit-linked and municipal bond vehicles at December 31, 2005 and 2004, were as follows:

December 31, (in billions)	**2005**	2004
Credit-linked note vehicles[(a)]	**$ 13.5**	$ 17.8
Municipal bond vehicles[(b)]	**13.7**	7.5

(a) Assets of $1.8 billion and $2.3 billion reported in the table above were recorded on the Firm's Consolidated balance sheets at December 31, 2005 and 2004, respectively, due to contractual relationships held by the Firm that relate to collateral held by the VIE.
(b) Total amounts consolidated due to the Firm owning residual interests were $4.9 billion and $2.6 billion at December 31, 2005 and 2004, respectively, and are reported in the table. Total liquidity commitments were $5.8 billion and $3.1 billion at December 31, 2005 and 2004, respectively. The Firm's maximum credit exposure to all municipal bond vehicles was $10.7 billion and $5.7 billion at December 31, 2005 and 2004, respectively.

Finally, the Firm may enter into transactions with VIEs structured by other parties. These transactions can include, for example, acting as a derivative counterparty, liquidity provider, investor, underwriter, placement agent, trustee or custodian. These transactions are conducted at arm's length, and individual credit decisions are based upon the analysis of the specific VIE, taking into consideration the quality of the underlying assets. JPMorgan Chase records and reports these positions similarly to any other third-party transaction. These activities do not cause JPMorgan Chase to absorb a majority of the expected losses of the VIEs or to receive a majority of the residual returns of the VIE, and they are not considered significant for disclosure purposes.

Consolidated VIE assets

The following table summarizes the Firm's total consolidated VIE assets, by classification on the Consolidated balance sheets, as of December 31, 2005 and 2004:

December 31, (in billions)	**2005**	2004
Consolidated VIE assets[(a)]		
Investment securities[(b)]	**$ 1.9**	$ 10.6
Trading assets[(c)]	**9.3**	4.7
Loans	**8.1**	3.4
Interests in purchased receivables	**29.6**	31.6
Other assets	**3.0**	0.4
Total consolidated assets	**$ 51.9**	$ 50.7

(a) The Firm also holds $3.9 billion and $3.4 billion of assets, at December 31, 2005 and December 31, 2004, respectively, primarily as a seller's interest, in certain consumer securitizations in a segregated entity, as part of a two-step securitization transaction. This interest is included in the securitization activities disclosed in Note 13 on pages 108–111 of this Annual Report.
(b) The decline in balance is primarily attributable to the sale of the Firm's interest in a structured investment vehicle's capital notes and resulting deconsolidation of this vehicle in 2005.
(c) Includes the fair value of securities and derivatives.

Interests in purchased receivables include interests in receivables purchased by Firm-administered conduits, which have been consolidated in accordance with FIN 46R. Interests in purchased receivables are carried at cost and are reviewed to determine whether an other-than-temporary impairment exists. Based upon the current level of credit protection specified in each transaction, primarily through overcollateralization, the Firm determined that no other-than-temporary impairment existed at December 31, 2005.

The interest-bearing beneficial interest liabilities issued by consolidated VIEs are classified in the line item titled, "Beneficial interests issued by consolidated variable interest entities" on the Consolidated balance sheets. The holders of these beneficial interests do not have recourse to the general credit of JPMorgan Chase. See Note 17 on page 117 of this Annual Report for the maturity profile of FIN 46 long-term beneficial interests.

FIN 46R transition

In December 2003, the FASB issued a revision to FIN 46 ("FIN 46R") to address various technical corrections and implementation issues that had arisen since the issuance of FIN 46. Effective March 31, 2004, JPMorgan Chase implemented FIN 46R for all VIEs, excluding certain investments made by its private equity business, as previously discussed. Implementation of FIN 46R did not have a significant effect on the Firm's Consolidated financial statements.

Note 15 – Goodwill and other intangible assets

Goodwill is not amortized but instead tested for impairment in accordance with SFAS 142 at the reporting-unit segment, which is generally one level below the six major reportable business segments (as described in Note 31 on pages 130–131 of this Annual Report); plus Private Equity (which is included in Corporate). Goodwill is tested annually (during the fourth quarter) or more often if events or circumstances, such as adverse changes in the business climate, indicate there may be impairment. Intangible assets determined to have indefinite lives are not amortized but instead are tested for impairment at least annually, or more frequently if events or changes in circumstances indicate that the asset might be impaired. The impairment test compares the fair value of the indefinite-lived intangible asset to its carrying amount. Other acquired intangible assets determined to have finite lives, such as core deposits and credit card relationships, are amortized over their estimated useful lives in a manner that best reflects the economic benefits of the intangible asset. In addition, impairment testing is performed periodically on these amortizing intangible assets.

Goodwill and other intangible assets consist of the following:

December 31, (in millions)	**2005**	2004
Goodwill	**$ 43,621**	$ 43,203
Mortgage servicing rights	**6,452**	5,080
Purchased credit card relationships	**3,275**	3,878

December 31, (in millions)	**2005**	2004
All other intangibles:		
Other credit card–related intangibles	**$ 124**	$ 272
Core deposit intangibles	**2,705**	3,328
All other intangibles	**2,003**	2,126
Total All other intangible assets	**$ 4,832**	$ 5,726

Goodwill

As of December 31, 2005, goodwill increased by $418 million compared with December 31, 2004, principally in connection with the establishment of the business partnership with Cazenove, as well as the acquisitions of Vastera, Neovest and the Sears Canada credit card business. These increases to Goodwill were partially offset by the deconsolidation of Paymentech. Goodwill was not impaired at December 31, 2005 or 2004, nor was any goodwill written off due to impairment during the years ended December 31, 2005, 2004 or 2003.

Goodwill attributed to the business segments was as follows:

(in millions)	**Dec. 31, 2005**	Dec. 31, 2004	Goodwill resulting from the Merger
Investment Bank	**$ 3,531**	$ 3,309	$ 1,179
Retail Financial Services	**14,991**	15,022	14,576
Card Services	**12,984**	12,781	12,802
Commercial Banking	**2,651**	2,650	2,599
Treasury & Securities Services	**2,062**	2,044	465
Asset & Wealth Management	**7,025**	7,020	2,539
Corporate (Private Equity)	**377**	377	—
Total goodwill	**$ 43,621**	$ 43,203	$ 34,160

Mortgage servicing rights

JPMorgan Chase recognizes as intangible assets mortgage servicing rights, which represent the right to perform specified residential mortgage servicing activities for others. MSRs are either purchased from third parties or retained upon sale or securitization of mortgage loans. Servicing activities include collecting principal, interest, and escrow payments from borrowers; making tax and insurance payments on behalf of the borrowers; monitoring delinquencies and executing foreclosure proceedings; and accounting for and remitting principal and interest payments to the investors of the mortgage-backed securities.

The amount capitalized as MSRs represents the amount paid to third parties to acquire MSRs or is based on fair value, if retained upon the sale or securitization of mortgage loans. The Firm estimates the fair value of MSRs using a discounted future cash flow model. The model considers portfolio characteristics, contractually specified servicing fees, prepayment assumptions, delinquency rates, late charges, other ancillary revenues and costs to service, as well as other economic factors.

During the fourth quarter of 2005, the Firm enhanced its valuation of MSRs by utilizing an option-adjusted spread ("OAS") valuation approach. An OAS approach projects MSR cash flows over multiple interest rate scenarios in conjunction with the Firm's proprietary prepayment model, and then discounts these cash flows at risk-adjusted rates. Prior to the fourth quarter of 2005, MSRs were valued using cash flows and discount rates determined by a "static" or single interest rate path valuation model. The initial valuation of MSRs under OAS did not have a material impact on the Firm's financial statements.

The Firm compares fair value estimates and assumptions to observable market data where available and to recent market activity and actual portfolio experience. Management believes that the assumptions used to estimate fair values are supportable and reasonable.

The Firm accounts for its MSRs at the lower of cost or fair value, in accordance with SFAS 140. MSRs are amortized as a reduction of the actual servicing income received in proportion to, and over the period of, the estimated future net servicing income stream of the underlying mortgage loans. For purposes of evaluating and measuring impairment of MSRs, the Firm stratifies the portfolio on the basis of the predominant risk characteristics, which are loan type and interest rate. Any indicated impairment is recognized as a reduction in revenue through a valuation allowance, which represents the extent that the carrying value of an individual stratum exceeds its estimated fair value.

The Firm evaluates other-than-temporary impairment by reviewing changes in mortgage and other market interest rates over historical periods and then determines an interest rate scenario to estimate the amounts of the MSRs' gross carrying value and the related valuation allowance that could be expected to be recovered in the foreseeable future. Any gross carrying value and related valuation allowance amounts that are not expected to be recovered in the foreseeable future, based upon the interest rate scenario, are considered to be other-than-temporary.

The carrying value of MSRs is sensitive to changes in interest rates, including their effect on prepayment speeds. JPMorgan Chase uses a combination of derivatives, AFS securities and trading instruments to manage changes in the fair value of MSRs. The intent is to offset any changes in the fair value of MSRs with changes in the fair value of the related risk management instrument. MSRs decrease in value when interest rates decline. Conversely, securities (such as mortgage-backed securities), principal-only certificates and derivatives (when the Firm receives fixed-rate interest payments) decrease in value when interest rates increase. The Firm offsets the interest rate risk of its MSRs by designating certain derivatives (e.g., a combination of swaps, swaptions and floors that produces an interest rate profile opposite to the designated risk of the hedged MSRs) as fair value hedges of specified MSRs under SFAS 133. SFAS 133 hedge accounting allows the carrying value of the hedged MSRs to be adjusted through earnings in the same period that the change in value of the hedging derivatives is recognized through earnings. Both of these valuation adjustments are recorded in Mortgage fees and related income.

When applying SFAS 133, the loans underlying the MSRs being hedged are stratified into specific SFAS 133 asset groupings that possess similar interest rate and prepayment risk exposures. The documented hedge period for the Firm is daily. Daily adjustments are performed to incorporate new or terminated derivative contracts and to modify the amount of the corresponding similar asset grouping that is being hedged. The Firm has designated changes in the benchmark interest rate (LIBOR) as the hedged risk. In designating the benchmark interest rate, the Firm considers the impact that the change in the benchmark rate has on the prepayment speed estimates in determining the fair value of the MSRs. The Firm performs both prospective and retrospective hedge-effectiveness evaluations, using a regression analysis, to determine whether the hedge relationship is expected to be highly effective. Hedge effectiveness is assessed by comparing the change in value of the MSRs as a result of changes in benchmark interest rates to the change in the value of the designated derivatives. For a further discussion on derivative instruments and hedging activities, see Note 26 on page 123 of this Annual Report.

Securities (both AFS and Trading) also are used to manage the risk exposure of MSRs. Because these securities do not qualify as hedges under SFAS 133, they are accounted for under SFAS 115. Realized and unrealized gains and losses on trading securities are recognized in earnings in Mortgage fees and related income; interest income on the AFS securities is recognized in earnings in Net interest income; and unrealized gains and losses on AFS securities are reported in Other comprehensive income. Finally, certain nonhedge derivatives, which have not been designated by management in SFAS 133 hedge relationships, are used to manage the economic risk exposure of MSRs and are recorded in Mortgage fees and related income.

Certain AFS securities purchased by the Firm to manage structural interest rate risk were designated in 2005 as risk management instruments of MSRs. At December 31, 2005 and 2004, the unrealized loss on AFS securities used to manage the risk exposure of MSRs was $174 million and $3 million, respectively.

The following table summarizes MSR activity and related amortization for the dates indicated. It also includes the key assumptions and the sensitivity of the fair value of MSRs at December 31, 2005, to immediate 10% and 20% adverse changes in each of those assumptions.

Year ended December 31, (in millions)[a]	**2005**	2004	2003
Balance at January 1	**$ 6,111**	$ 6,159	$ 4,864
Additions	**1,897**	1,757	3,201
Bank One merger	**NA**	90	NA
Sales	**—**	(3)	—
Other-than-temporary impairment	**(1)**	(149)	(283)
Amortization	**(1,295)**	(1,297)	(1,397)
SFAS 133 hedge valuation adjustments	**90**	(446)	(226)
Balance at December 31	**6,802**	6,111	6,159
Less: valuation allowance	**350**	1,031	1,378
Balance at December 31, after valuation allowance	**$ 6,452**	$ 5,080	$ 4,781
Estimated fair value at December 31	**$ 6,668**	$ 5,124	$ 4,781
Weighted-average prepayment speed assumption (CPR)	**17.56%**	17.29%	17.67%
Weighted-average discount rate	**9.68%**	7.93%	7.31%

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. 2003 reflects the results of heritage JPMorgan Chase only.
CPR: Constant prepayment rate

	2005
Weighted-average prepayment speed assumption (CPR)	**17.56%**
Impact on fair value with 10% adverse change	**$ (340)**
Impact on fair value with 20% adverse change	**(654)**
Weighted-average discount rate	**9.68%**
Impact on fair value with 10% adverse change	**$ (231)**
Impact on fair value with 20% adverse change	**(446)**

CPR: Constant prepayment rate.

The sensitivity analysis in the preceding table is hypothetical and should be used with caution. As the figures indicate, changes in fair value based upon a 10% and 20% variation in assumptions generally cannot be easily extrapolated because the relationship of the change in the assumptions to the change in fair value may not be linear. Also, in this table, the effect that a change in a particular assumption may have on the fair value is calculated without changing any other assumption. In reality, changes in one factor may result in changes in another, which might magnify or counteract the sensitivities.

The valuation allowance represents the extent to which the carrying value of MSRs exceeds its estimated fair value for its applicable SFAS 140 strata. Changes in the valuation allowance are the result of the recognition of impairment or the recovery of previously recognized impairment charges due to changes in market conditions during the period. The changes in the valuation allowance for MSRs were as follows:

Year ended December 31, (in millions)[a]	**2005**	2004	2003
Balance at January 1	**$ 1,031**	$ 1,378	$ 1,634
Other-than-temporary impairment	**(1)**	(149)	(283)
SFAS 140 impairment (recovery) adjustment	**(680)**	(198)	27
Balance at December 31	**$ 350**	$ 1,031	$ 1,378

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results, while 2003 results include heritage JPMorgan Chase only.

The Firm recorded an other-than-temporary impairment of its MSRs of $1 million, $149 million and $283 million, in 2005, 2004 and 2003, respectively, which permanently reduced the gross carrying value of the MSRs and the related valuation allowance. The permanent reduction precludes subsequent reversals. This write-down had no impact on the results of operations or financial condition of the Firm.

Purchased credit card relationships and All other intangible assets
During 2005, purchased credit card relationship intangibles decreased by $603 million as a result of $703 million in amortization expense, partially offset by the purchase of the Sears Canada credit card business. All other intangible assets decreased by $894 million in 2005 primarily as a result of $836 million in amortization expense and the impact of the deconsolidation of Paymentech. Except for $513 million of indefinite-lived intangibles related to asset management advisory contracts which are not amortized but instead are tested for impairment at least annually, the remainder of the Firm's other acquired intangible assets are subject to amortization.

The components of credit card relationships, core deposits and other intangible assets were as follows:

	2005			2004		
December 31, (in millions)	Gross amount	Accumulated amortization	Net carrying value	Gross amount	Accumulated amortization	Net carrying value
Purchased credit card relationships	**$ 5,325**	**$ 2,050**	**$ 3,275**	$ 5,225	$ 1,347	$ 3,878
All other intangibles:						
Other credit card–related intangibles	**183**	**59**	**124**	295	23	272
Core deposit intangibles	**3,797**	**1,092**	**2,705**	3,797	469	3,328
Other intangibles	**2,582**	**579**[a]	**2,003**	2,528	402[a]	2,126

Amortization expense (in millions)[b]	**2005**	2004	2003
Purchased credit card relationships	**$ 703**	$ 476	$ 256
Other credit card–related intangibles	**36**	23	—
Core deposit intangibles	**623**	330	6
All other intangibles	**163**	117	32
Total amortization expense	**$ 1,525**	$ 946	$ 294

(a) Includes $14 million and $16 million for 2005 and 2004, respectively, of amortization expense related to servicing assets on securitized automobile loans, which is recorded in Asset management, administration and commissions.
(b) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. 2003 reflects the results of heritage JPMorgan Chase only.

Future amortization expense

The following table presents estimated amortization expenses related to credit card relationships, core deposits and All other intangible assets at December 31, 2005:

(in millions) Year ended December 31,	Purchased credit card relationships	Other credit card-related intangibles	Core deposit intangibles	All other intangible assets	Total
2006	$ 688	$ 16	$ 547	$ 163	$ 1,414
2007	620	15	469	145	1,249
2008	515	15	402	132	1,064
2009	372	15	329	123	839
2010	312	13	276	110	711

Note 16 – Premises and equipment

Premises and equipment, including leasehold improvements, are carried at cost less accumulated depreciation and amortization. JPMorgan Chase computes depreciation using the straight-line method over the estimated useful life of an asset. For leasehold improvements, the Firm uses the straight-line method computed over the lesser of the remaining term of the leased facility or 10 years. JPMorgan Chase has recorded immaterial asset retirement obligations related to asbestos remediation under SFAS 143 and FIN 47 in those cases where it has sufficient information to estimate the obligations' fair value.

JPMorgan Chase capitalizes certain costs associated with the acquisition or development of internal-use software under SOP 98-1. Once the software is ready for its intended use, these costs are amortized on a straight-line basis over the software's expected useful life, and reviewed for impairment on an ongoing basis.

Note 17 – Long-term debt

JPMorgan Chase issues long-term debt denominated in various currencies, although predominantly U.S. dollars, with both fixed and variable interest rates. The following table is a summary of long-term debt (including unamortized original issue debt discount and SFAS 133 valuation adjustments):

By remaining contractual maturity at December 31, 2005 (in millions)		Under 1 year	1–5 years	After 5 years	**2005 total**	2004 total
Parent company						
Senior debt:[a]	Fixed rate	$ 5,991	$ 14,705	$ 4,224	**$ 24,920**	$ 25,563
	Variable rate	3,574	11,049	2,291	**16,914**	15,128
	Interest rates[b]	2.80–6.88%	0.22–6.63%	1.12–8.85%	**0.22–8.85%**	0.20–7.63%
Subordinated debt:	Fixed rate	$ 758	$ 8,241	$ 15,818	**$ 24,817**	$ 22,055
	Variable rate	—	26	1,797	**1,823**	2,686
	Interest rates[b]	6.13–7.88%	4.80–10.00%	1.92–9.88%	**1.92–10.00%**	1.92–10.00%
	Subtotal	$ 10,323	$ 34,021	$ 24,130	**$ 68,474**	$ 65,432
Subsidiaries						
Senior debt:[a]	Fixed rate	$ 636	$ 3,746	$ 2,362	**$ 6,744**	$ 6,249
	Variable rate	5,364	21,632	5,013	**32,009**	22,097
	Interest rates[b]	3.00–10.95%	1.71–17.00%	1.76–13.00%	**1.71–17.00%**	1.71–13.00%
Subordinated debt:	Fixed rate	$ —	$ 845	$ 285	**$ 1,130**	$ 1,644
	Variable rate	—	—	—	**—**	—
	Interest rates[b]	—	6.13–6.70%	8.25%	**6.13–8.25%**	6.00–8.25%
	Subtotal	$ 6,000	$ 26,223	$ 7,660	**$ 39,883**	$ 29,990
Total long-term debt		$ 16,323	$ 60,244	$ 31,790	**$ 108,357**[d][e][f]	$ 95,422
FIN 46R long-term beneficial interests:[c]						
	Fixed rate	$ 80	$ 9	$ 376	**$ 465**	$ 775
	Variable rate	26	95	1,768	**1,889**	5,618
	Interest rates[b]	3.39–7.35%	0.51–7.00%	2.42–12.79%	**0.51–12.79%**	0.54–12.79%
Total FIN 46R long-term beneficial interests		$ 106	$ 104	$ 2,144	**$ 2,354**	$ 6,393

(a) Included are various equity-linked or other indexed instruments. Embedded derivatives separated from hybrid securities in accordance with SFAS 133 are reported at fair value and shown net with the host contract on the balance sheet. Changes in fair value of separated derivatives are recorded in Trading revenue.

(b) The interest rates shown are the range of contractual rates in effect at year-end, including non-U.S. dollar fixed and variable-rate issuances, which excludes the effects of related derivative instruments. The use of these derivative instruments modifies the Firm's exposure to the contractual interest rates disclosed in the table above. Including the effects of derivatives, the range of modified rates in effect at December 31, 2005, for total long-term debt was 0.49% to 17.00%, versus the contractual range of 0.22% to 17.00% presented in the table above.

(c) Included on the Consolidated balance sheets in Beneficial interests issued by consolidated variable interest entities.

(d) At December 31, 2005, long-term debt aggregating $27.7 billion was redeemable at the option of JPMorgan Chase, in whole or in part, prior to maturity, based upon the terms specified in the respective notes.

(e) The aggregate principal amount of debt that matures in each of the five years subsequent to 2005 is $16.3 billion in 2006, $17.8 billion in 2007, $23.4 billion in 2008, $11.1 billion in 2009, and $8.0 billion in 2010.

(f) Includes $2.3 billion of outstanding zero-coupon notes at December 31, 2005. The aggregate principal amount of these notes at their respective maturities is $5.9 billion.

The weighted-average contractual interest rate for total long-term debt was 4.62% and 4.50% as of December 31, 2005 and 2004, respectively. In order to modify exposure to interest rate and currency exchange rate movements, JPMorgan Chase utilizes derivative instruments, primarily interest rate and cross-currency interest rate swaps, in conjunction with some of its debt issues. The use of these instruments modifies the Firm's interest expense on the associated debt. The modified weighted-average interest rate for total long-term debt, including the effects of related derivative instruments, was 4.65% and 3.97% as of December 31, 2005 and 2004, respectively.

JPMorgan Chase & Co. (Parent Company) has guaranteed certain debt of its subsidiaries, including both long-term debt and structured notes sold as part of the Firm's trading activities. These guarantees rank on a parity with all of the Firm's other unsecured and unsubordinated indebtedness. Guaranteed liabilities totaled $170 million and $320 million at December 31, 2005 and 2004, respectively.

Junior subordinated deferrable interest debentures held by trusts that issued guaranteed capital debt securities

At December 31, 2005, the Firm had 22 wholly-owned Delaware statutory business trusts ("issuer trusts") that issued guaranteed preferred beneficial interests in the Firm's junior subordinated deferrable interest debentures.

The junior subordinated deferrable interest debentures issued by the Firm to the issuer trusts, totaling $11.5 billion and $10.3 billion at December 31, 2005 and 2004, respectively, were reflected in the Firm's Consolidated balance sheets in the Liabilities section under the caption "Junior subordinated deferrable interest debentures held by trusts that issued guaranteed capital debt securities." The Firm also records the common capital securities issued by the issuer trusts in Other assets in its Consolidated balance sheets at December 31, 2005 and 2004.

The debentures issued to the issuer trusts by the Firm, less the capital securities of the issuer trusts, qualify as Tier 1 capital. The following is a summary of the outstanding capital securities, net of discount, issued by each trust and the junior subordinated deferrable interest debenture issued by JPMorgan Chase to each trust as of December 31, 2005:

December 31, 2005 (in millions)	Amount of capital securities issued by trust[a]	Principal amount of debenture held by trust[b]	Issue date	Stated maturity of capital securities and debentures	Earliest redemption date	Interest rate of capital securities and debentures	Interest payment/ distribution dates
Bank One Capital III	$ 474	$ 616	2000	2030	Any time	8.75%	Semiannually
Bank One Capital V	300	335	2001	2031	2006	8.00%	Quarterly
Bank One Capital VI	525	556	2001	2031	2006	7.20%	Quarterly
Chase Capital I	600	619	1996	2026	2006	7.67%	Semiannually
Chase Capital II	495	511	1997	2027	2007	LIBOR + 0.50%	Quarterly
Chase Capital III	296	306	1997	2027	2007	LIBOR + 0.55%	Quarterly
Chase Capital VI	249	256	1998	2028	Any time	LIBOR + 0.625%	Quarterly
First Chicago NBD Capital I	248	256	1997	2027	2007	LIBOR + 0.55%	Quarterly
First Chicago NBD Institutional Capital A	499	551	1996	2026	2006	7.95%	Semiannually
First Chicago NBD Institutional Capital B	250	273	1996	2026	2006	7.75%	Semiannually
First USA Capital Trust I	3	3	1996	2027	2007	9.33%	Semiannually
JPM Capital Trust I	750	773	1996	2027	2007	7.54%	Semiannually
JPM Capital Trust II	400	412	1997	2027	2007	7.95%	Semiannually
J.P. Morgan Chase Capital IX	500	509	2001	2031	2006	7.50%	Quarterly
J.P. Morgan Chase Capital X	1,000	1,022	2002	2032	2007	7.00%	Quarterly
J.P. Morgan Chase Capital XI	1,075	1,009	2003	2033	2008	5.88%	Quarterly
J.P. Morgan Chase Capital XII	400	393	2003	2033	2008	6.25%	Quarterly
JPMorgan Chase Capital XIII	472	487	2004	2034	2014	LIBOR + 0.95%	Quarterly
JPMorgan Chase Capital XIV	600	593	2004	2034	2009	6.20%	Quarterly
JPMorgan Chase Capital XV	994	1,049	2005	2035	Any time	5.88%	Semiannually
JPMorgan Chase Capital XVI	500	501	2005	2035	2010	6.35%	Quarterly
JPMorgan Chase Capital XVII	496	499	2005	2035	Any time	5.85%	Semiannually
Total	$ 11,126	$ 11,529					

(a) Represents the amount of capital securities issued to the public by each trust, net of unamortized discount.
(b) Represents the principal amount of JPMorgan Chase debentures held as assets by each trust, net of unamortized discount amounts. The principal amount of debentures held by the trusts includes the impact of hedging and purchase accounting fair value adjustments that are recorded on the Firm's financial statements.

Note 18 – Preferred stock

JPMorgan Chase is authorized to issue 200 million shares of preferred stock, in one or more series, with a par value of $1 per share. Outstanding preferred stock at December 31, 2005 and 2004, was 280,433 and 4.28 million shares, respectively. On May 6, 2005, JPMorgan Chase redeemed a total of 4.0 million shares of its Fixed/adjustable rate, noncumulative preferred stock.

Dividends on shares of the outstanding series of preferred stock are payable quarterly. The preferred stock outstanding takes precedence over JPMorgan Chase's common stock for the payment of dividends and the distribution of assets in the event of a liquidation or dissolution of the Firm.

The following is a summary of JPMorgan Chase's preferred stock outstanding as of December 31:

(in millions, except per share amounts and rates)	Stated value and redemption price per share[b]	Shares		Outstanding at December 31,		Earliest redemption date	Rate in effect at December 31, 2005
		2005	2004	**2005**	2004		
6.63% Series H cumulative[a]	$ 500.00	**0.28**	0.28	**$ 139**	$ 139	3/31/2006	**6.63%**
Fixed/adjustable rate, noncumulative	50.00	**—**	4.00	**—**	200	—	**—**
Total preferred stock		**0.28**	4.28	**$ 139**	$ 339		

(a) Represented by depositary shares.
(b) Redemption price includes amount shown in the table plus any accrued but unpaid dividends.

Note 19 – Common stock

At December 31, 2005, JPMorgan Chase was authorized to issue 9.0 billion shares of common stock with a $1 par value per share. In connection with the Merger, the shareholders approved an increase in the amount of authorized shares of 4.5 billion from the 4.5 billion that had been authorized as of December 31, 2003. Common shares issued (newly issued or distributed from treasury) by JPMorgan Chase during 2005, 2004 and 2003 were as follows:

December 31,[a] (in millions)	**2005**	2004	2003
Issued – balance at January 1	**3,584.8**	2,044.4	2,023.6
Newly issued:			
Employee benefits and compensation plans	**34.0**	69.0	20.9
Employee stock purchase plans	**1.4**	3.1	0.7
Purchase accounting acquisitions and other	**—**	1,469.4	—
Total newly issued	**35.4**	1,541.5	21.6
Cancelled shares	**(2.0)**	(1.1)	(0.8)
Total issued – balance at December 31	**3,618.2**	3,584.8	2,044.4
Treasury – balance at January 1	**(28.6)**	(1.8)	(24.9)
Purchase of treasury stock	**(93.5)**	(19.3)	—
Share repurchases related to employee stock-based awards[b]	**(9.4)**	(7.5)	(3.0)
Issued from treasury:			
Employee benefits and compensation plans	**—**	—	25.8
Employee stock purchase plans	**—**	—	0.3
Total issued from treasury	**—**	—	26.1
Total treasury – balance at December 31	**(131.5)**	(28.6)	(1.8)
Outstanding	**3,486.7**	3,556.2	2,042.6

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. 2003 reflects the results of heritage JPMorgan Chase only.
(b) Participants in the Firm's stock-based incentive plans may have shares withheld to cover income taxes. The shares withheld amounted to 8.2 million, 5.7 million and 2.3 million for 2005, 2004 and 2003, respectively.

During 2005 and 2004, the Firm repurchased 93.5 million shares and 19.3 million shares, respectively, of common stock under a stock repurchase program that was approved by the Board of Directors on July 20, 2004. The Firm did not repurchase shares of its common stock during 2003 under a prior stock repurchase program.

As of December 31, 2005, approximately 507 million unissued shares of common stock were reserved for issuance under various employee or director incentive, compensation, option and stock purchase plans.

Note 20 – Earnings per share

SFAS 128 requires the presentation of basic and diluted earnings per share ("EPS") in the income statement. Basic EPS is computed by dividing net income applicable to common stock by the weighted-average number of common shares outstanding for the period. Diluted EPS is computed using the same method as basic EPS but, in the denominator, the number of common shares reflect, in addition to outstanding shares, the potential dilution that could occur if convertible securities or other contracts to issue common stock were converted or exercised into common stock. Net income available for common stock is the same for basic EPS and diluted EPS, as JPMorgan Chase had no convertible securities, and therefore, no adjustments to net income available for common stock were necessary. The following table presents the calculation of basic and diluted EPS for 2005, 2004 and 2003:

Year ended December 31, (in millions, except per share amounts)[a]	**2005**	2004	2003
Basic earnings per share			
Net income	**$ 8,483**	$ 4,466	$ 6,719
Less: preferred stock dividends	**13**	52	51
Net income applicable to common stock	**$ 8,470**	$ 4,414	$ 6,668
Weighted-average basic shares outstanding	**3,491.7**	2,779.9	2,008.6
Net income per share	**$ 2.43**	$ 1.59	$ 3.32
Diluted earnings per share			
Net income applicable to common stock	**$ 8,470**	$ 4,414	$ 6,668
Weighted-average basic shares outstanding	**3,491.7**	2,779.9	2,008.6
Add: Broad-based options	**3.6**	5.4	4.1
Restricted stock, restricted stock units and key employee options	**62.0**	65.3	42.4
Weighted-average diluted shares outstanding	**3,557.3**	2,850.6	2,055.1
Net income per share[b]	**$ 2.38**	$ 1.55	$ 3.24

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. 2003 reflects the results of heritage JPMorgan Chase only.
(b) Options issued under employee benefit plans to purchase 280 million, 300 million and 335 million shares of common stock were outstanding for the years ended 2005, 2004 and 2003, respectively, but were not included in the computation of diluted EPS because the options' exercise prices were greater than the average market price of the common shares.

Note 21 – Accumulated other comprehensive income (loss)

Accumulated other comprehensive income (loss) includes the after-tax change in unrealized gains and losses on AFS securities, cash flow hedging activities and foreign currency translation adjustments (including the impact of related derivatives).

Year ended December 31,[a] (in millions)	Unrealized gains (losses) on AFS securities[b]	Translation adjustments	Cash flow hedges	Accumulated other comprehensive income (loss)
Balance at December 31, 2002	$ 731	$ (6)	$ 502	$ 1,227
Net change	(712)	—	(545)	(1,257)
Balance at December 31, 2003	19	(6)	(43)	(30)
Net change	(80)[c]	(2)[d]	(96)	(178)
Balance at December 31, 2004	(61)	(8)	(139)	(208)
Net change	**(163)**[e]	**—**[f]	**(255)**	**(418)**
Balance at December 31, 2005	**$ (224)**	**$ (8)**	**$ (394)**	**$ (626)**

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. 2003 reflects the results of heritage JPMorgan Chase only.
(b) Represents the after-tax difference between the fair value and amortized cost of the AFS securities portfolio and retained interests in securitizations recorded in Other assets.
(c) The net change during 2004 was due primarily to rising interest rates and recognition of unrealized gains through securities sales.
(d) Includes $280 million of after-tax gains (losses) on foreign currency translation from operations for which the functional currency is other than the U.S. dollar offset by $(282) million of after-tax gains (losses) on hedges.
(e) The net change during 2005 was due primarily to higher interest rates, partially offset by the reversal of unrealized losses through securities sales.
(f) Includes $(351) million of after-tax gains (losses) on foreign currency translation from operations for which the functional currency is other than the U.S. dollar offset by $351 million of after-tax gains (losses) on hedges.

The following table presents the after-tax changes in net unrealized holdings gains (losses) and the reclassification adjustments in unrealized gains and losses on AFS securities and cash flow hedges. Reclassification adjustments include amounts recognized in net income during the current year that had been previously recorded in Other comprehensive income.

Year ended December 31, (in millions)[a]	2005	2004	2003
Unrealized gains (losses) on AFS securities:			
Net unrealized holdings gains (losses) arising during the period, net of taxes[b]	**$ (1,058)**	$ 41	$ 149
Reclassification adjustment for (gains) losses included in income, net of taxes[c]	**895**	(121)	(861)
Net change	**$ (163)**	$ (80)	$ (712)
Cash flow hedges:			
Net unrealized holdings gains (losses) arising during the period, net of taxes[d]	**$ (283)**	$ 34	$ 86
Reclassification adjustment for (gains) losses included in income, net of taxes[e]	**28**	(130)	(631)
Net change	**$ (255)**	$ (96)	$ (545)

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. 2003 reflects the results of heritage JPMorgan Chase only.
(b) Net of income tax expense (benefit) of $(648) million for 2005, $27 million for 2004 and $92 million for 2003.
(c) Net of income tax expense (benefit) of $(548) million for 2005, $79 million for 2004 and $528 million for 2003.
(d) Net of income tax expense (benefit) of $(187) million for 2005, $23 million for 2004 and $60 million for 2003.
(e) Net of income tax expense (benefit) of $(18) million for 2005 and $86 million for 2004 and $438 million for 2003.

Note 22 – Income taxes

JPMorgan Chase and eligible subsidiaries file a consolidated U.S. federal income tax return. JPMorgan Chase uses the asset-and-liability method required by SFAS 109 to provide income taxes on all transactions recorded in the Consolidated financial statements. This method requires that income taxes reflect the expected future tax consequences of temporary differences between the carrying amounts of assets or liabilities for book and tax purposes. Accordingly, a deferred tax liability or asset for each temporary difference is determined based upon the tax rates that the Firm expects to be in effect when the underlying items of income and expense are realized. JPMorgan Chase's expense for income taxes includes the current and deferred portions of that expense. A valuation allowance is established to reduce deferred tax assets to the amount the Firm expects to realize.

Due to the inherent complexities arising from the nature of the Firm's businesses, and from conducting business and being taxed in a substantial number of jurisdictions, significant judgments and estimates are required to be made. Agreement of tax liabilities between JPMorgan Chase and the many tax jurisdictions in which the Firm files tax returns may not be finalized for several years. Thus, the Firm's final tax-related assets and liabilities may ultimately be different.

Deferred income tax expense (benefit) results from differences between assets and liabilities measured for financial reporting and for income-tax return purposes. The significant components of deferred tax assets and liabilities are reflected in the following table:

December 31, (in millions)	2005	2004
Deferred tax assets		
Allowance for other than loan losses	**$ 3,554**	$ 3,711
Employee benefits	**3,381**	2,677
Allowance for loan losses	**2,745**	2,739
Non-U.S. operations	**807**	743
Fair value adjustments	**531**	—
Gross deferred tax assets	**$ 11,018**	$ 9,870
Deferred tax liabilities		
Depreciation and amortization	**$ 3,683**	$ 3,558
Leasing transactions	**3,158**	4,266
Fee income	**1,396**	1,162
Non-U.S. operations	**1,297**	1,144
Fair value adjustments	**—**	186
Other, net	**149**	348
Gross deferred tax liabilities	**$ 9,683**	$ 10,664
Valuation allowance	**$ 110**	$ 150
Net deferred tax asset (liability)	**$ 1,225**	$ (944)

A valuation allowance has been recorded in accordance with SFAS 109, primarily relating to deferred tax assets associated with certain portfolio investments.

The components of income tax expense included in the Consolidated statements of income were as follows:

Year ended December 31, (in millions)[a]	2005	2004	2003
Current income tax expense			
U.S. federal	**$ 4,269**	$ 1,695	$ 965
Non-U.S.	**917**	679	741
U.S. state and local	**337**	181	175
Total current expense	**5,523**	2,555	1,881
Deferred income tax (benefit) expense			
U.S. federal	**(2,063)**	(382)	1,341
Non-U.S.	**316**	(322)	14
U.S. state and local	**(44)**	(123)	73
Total deferred (benefit) expense	**(1,791)**	(827)	1,428
Total income tax expense	**$ 3,732**	$ 1,728	$ 3,309

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. 2003 reflects the results of heritage JPMorgan Chase only.

The preceding table does not reflect the tax effects of unrealized gains and losses on AFS securities, SFAS 133 hedge transactions and certain tax benefits associated with the Firm's employee stock plans. The tax effect of these items is recorded directly in Stockholders' equity. Stockholders' equity increased by $425 million, $431 million and $898 million in 2005, 2004 and 2003, respectively, as a result of these tax effects.

U.S. federal income taxes have not been provided on the undistributed earnings of certain non-U.S. subsidiaries, to the extent that such earnings have been reinvested abroad for an indefinite period of time. For 2005, such earnings approximated $333 million on a pre-tax basis. At December 31, 2005, the cumulative amount of undistributed pre-tax earnings in these subsidiaries approximated $1.5 billion. It is not practicable at this time to determine the income tax liability that would result upon repatriation of these earnings.

On October 22, 2004, the American Jobs Creation Act of 2004 (the "Act") was signed into law. The Act creates a temporary incentive for U.S. companies to repatriate accumulated foreign earnings at a substantially reduced U.S. effective tax rate by providing a dividends received deduction on the repatriation of certain foreign earnings to the U.S. taxpayer (the "repatriation provision"). The new deduction is subject to a number of limitations and requirements.

In the fourth quarter of 2005, the Firm applied the repatriation provision to $1.9 billion of cash from foreign earnings, resulting in a net tax benefit of $55 million. The $1.9 billion of cash will be used in accordance with the Firm's domestic reinvestment plan pursuant to the guidelines set forth in the Act.

The tax expense (benefit) applicable to securities gains and losses for the years 2005, 2004 and 2003 was $(536) million, $126 million and $477 million, respectively.

A reconciliation of the applicable statutory U.S. income tax rate to the effective tax rate for the past three years is shown in the following table:

Year ended December 31,[a]	**2005**	2004	2003
Statutory U.S. federal tax rate	**35.0%**	35.0%	35.0%
Increase (decrease) in tax rate resulting from:			
U.S. state and local income taxes, net of federal income tax benefit	**1.6**	0.6[b]	2.1
Tax-exempt income	**(3.0)**	(4.1)	(2.4)
Non-U.S. subsidiary earnings	**(1.4)**	(1.3)	(0.7)
Business tax credits	**(3.6)**	(4.1)	(0.9)
Other, net	**2.0**	1.8	(0.1)
Effective tax rate	**30.6%**	27.9%	33.0%

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. 2003 reflects the results of heritage JPMorgan Chase only.
(b) The lower rate in 2004 was attributable to changes in the proportion of income subject to different state and local taxes.

The following table presents the U.S. and non-U.S. components of income before income tax expense:

Year ended December 31, (in millions)[a]	**2005**	2004	2003
U.S.	**$ 8,959**	$ 3,817	$ 7,333
Non-U.S.[b]	**3,256**	2,377	2,695
Income before income tax expense	**$ 12,215**	$ 6,194	$ 10,028

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. 2003 reflects the results of heritage JPMorgan Chase only.
(b) For purposes of this table, non-U.S. income is defined as income generated from operations located outside the United States of America.

Note 23 – Restrictions on cash and intercompany funds transfers

JPMorgan Chase Bank's business is subject to examination and regulation by the Office of the Comptroller of the Currency ("OCC"). The Bank is a member of the Federal Reserve System and its deposits are insured by the Federal Deposit Insurance Corporation ("FDIC").

The Federal Reserve Board requires depository institutions to maintain cash reserves with a Federal Reserve Bank. The average amount of reserve balances deposited by the Firm's bank subsidiaries with various Federal Reserve Banks was approximately $2.7 billion in 2005 and $3.8 billion in 2004.

Restrictions imposed by federal law prohibit JPMorgan Chase and certain other affiliates from borrowing from banking subsidiaries unless the loans are secured in specified amounts. Such secured loans to the Firm or to other affiliates are generally limited to 10% of the banking subsidiary's total capital, as determined by the risk-based capital guidelines; the aggregate amount of all such loans is limited to 20% of the banking subsidiary's total capital.

The principal sources of JPMorgan Chase's income (on a parent company-only basis) are dividends and interest from JPMorgan Chase Bank and the other banking and nonbanking subsidiaries of JPMorgan Chase. In addition to dividend restrictions set forth in statutes and regulations, the FRB, the OCC and the FDIC have authority under the Financial Institutions Supervisory Act to prohibit or to limit the payment of dividends by the banking organizations they supervise, including JPMorgan Chase and its subsidiaries that are banks or bank holding companies, if, in the banking regulator's opinion, payment of a dividend would constitute an unsafe or unsound practice in light of the financial condition of the banking organization.

At January 1, 2006 and 2005, JPMorgan Chase's bank subsidiaries could pay, in the aggregate, $7.4 billion and $6.2 billion, respectively, in dividends to their respective bank holding companies without prior approval of their relevant banking regulators. Dividend capacity in 2006 will be supplemented by the banks' earnings during the year.

In compliance with rules and regulations established by U.S. and non-U.S. regulators, as of December 31, 2005 and 2004, cash in the amount of $6.4 billion and $4.3 billion, respectively, and securities with a fair value of $2.1 billion and $2.7 billion, respectively, were segregated in special bank accounts for the benefit of securities and futures brokerage customers.

Note 24 – Capital

There are two categories of risk-based capital: Tier 1 capital and Tier 2 capital. Tier 1 capital includes common stockholders' equity, qualifying preferred stock and minority interest less goodwill and other adjustments. Tier 2 capital consists of preferred stock not qualifying as Tier 1, subordinated long-term debt and other instruments qualifying as Tier 2, and the aggregate allowance for credit losses up to a certain percentage of risk-weighted assets. Total regulatory capital is subject to deductions for investments in certain subsidiaries. Under the risk-based capital guidelines of the FRB, JPMorgan Chase is required to maintain minimum ratios of Tier 1 and Total (Tier 1 plus Tier 2) capital to risk-weighted assets, as well as minimum leverage ratios (which are defined as Tier 1 capital to average adjusted on–balance sheet assets). Failure to meet these minimum requirements could cause the FRB to take action. Bank subsidiaries also are subject to these capital requirements by their respective primary regulators. As of December 31, 2005 and 2004, JPMorgan Chase and all of its banking subsidiaries were well-capitalized and met all capital requirements to which each was subject.

The following table presents the risk-based capital ratios for JPMorgan Chase and the Firm's significant banking subsidiaries at December 31, 2005 and 2004:

(in millions, except ratios)	Tier 1 capital	Total capital	Risk-weighted assets[c]	Adjusted average assets[d]	Tier 1 capital ratio	Total capital ratio	Tier 1 leverage ratio
December 31, 2005							
JPMorgan Chase & Co.[a]	**$ 72,474**	**$ 102,437**	**$ 850,643**	**$ 1,152,546**	**8.5%**	**12.0%**	**6.3%**
JPMorgan Chase Bank, N.A.	**61,050**	**84,227**	**750,397**	**995,095**	**8.1**	**11.2**	**6.1**
Chase Bank USA, N.A.	**8,608**	**10,941**	**72,229**	**59,882**	**11.9**	**15.2**	**14.4**
December 31, 2004							
JPMorgan Chase & Co.[a]	$ 68,621	$ 96,807	$ 791,373	$ 1,102,456	8.7%	12.2%	6.2%
JPMorgan Chase Bank, N.A.	55,489	78,478	670,295	922,877	8.3	11.7	6.0
Chase Bank USA, N.A.	8,726	11,186	86,955	71,797	10.0	12.9	12.2
Well-capitalized ratios[b]					6.0%	10.0%	5.0%[e]
Minimum capital ratios[b]					4.0	8.0	3.0[f]

(a) Asset and capital amounts for JPMorgan Chase's banking subsidiaries reflect intercompany transactions, whereas the respective amounts for JPMorgan Chase reflect the elimination of intercompany transactions.
(b) As defined by the regulations issued by the FRB, FDIC and OCC.
(c) Includes off–balance sheet risk-weighted assets in the amounts of $279.2 billion, $260.0 billion and $15.5 billion, respectively, at December 31, 2005, and $250.3 billion, $229.6 billion and $15.5 billion, respectively, at December 31, 2004.
(d) Average adjusted assets for purposes of calculating the leverage ratio include total average assets adjusted for unrealized gains/losses on securities, less deductions for disallowed goodwill and other intangible assets, investments in subsidiaries and the total adjusted carrying value of nonfinancial equity investments that are subject to deductions from Tier 1 capital.
(e) Represents requirements for bank subsidiaries pursuant to regulations issued under the Federal Deposit Insurance Corporation Improvement Act. There is no Tier 1 leverage component in the definition of a well-capitalized bank holding company.
(f) The minimum Tier 1 leverage ratio for bank holding companies and banks is 3% or 4% depending on factors specified in regulations issued by the FRB and OCC.

The following table shows the components of the Firm's Tier 1 and Total capital:

December 31, (in millions)	2005	2004
Tier 1 capital		
Total stockholders' equity	**$ 107,211**	$ 105,653
Effect of net unrealized losses on AFS securities and cash flow hedging activities	**618**	200
Adjusted stockholders' equity	**107,829**	105,853
Minority interest[a]	**12,660**	11,050
Less: Goodwill	**43,621**	43,203
Investments in certain subsidiaries	**401**	370
Nonqualifying intangible assets	**3,993**	4,709
Tier 1 capital	**$ 72,474**	$ 68,621
Tier 2 capital		
Long-term debt and other instruments qualifying as Tier 2	**$ 22,733**	$ 20,690
Qualifying allowance for credit losses	**7,490**	7,798
Less: Investments in certain subsidiaries and other	**260**	302
Tier 2 capital	**$ 29,963**	$ 28,186
Total qualifying capital	**$ 102,437**	$ 96,807

(a) Primarily includes trust preferred securities of certain business trusts.

Note 25 – Commitments and contingencies

At December 31, 2005, JPMorgan Chase and its subsidiaries were obligated under a number of noncancelable operating leases for premises and equipment used primarily for banking purposes. Certain leases contain renewal options or escalation clauses providing for increased rental payments based upon maintenance, utility and tax increases or require the Firm to perform restoration work on leased premises. No lease agreement imposes restrictions on the Firm's ability to pay dividends, engage in debt or equity financing transactions, or enter into further lease agreements.

The following table shows required future minimum rental payments under operating leases with noncancelable lease terms that expire after December 31, 2005:

Year ended December 31, (in millions)	
2006	$ 993
2007	948
2008	901
2009	834
2010	724
After	5,334
Total minimum payments required[a]	9,734
Less: Sublease rentals under noncancelable subleases	(1,323)
Net minimum payment required	$ 8,411

(a) Lease restoration obligations are accrued in accordance with SFAS 13, and are not reported as a required minimum lease payment.

Total rental expense was as follows:

Year ended December 31, (in millions)[a]	2005	2004	2003
Gross rental expense	**$ 1,269**	$ 1,187	$ 1,061
Sublease rental income	**(192)**	(158)	(106)
Net rental expense	**$ 1,077**	$ 1,029	$ 955

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. 2003 reflects the results of heritage JPMorgan Chase only.

At December 31, 2005, assets were pledged to secure public deposits and for other purposes. The significant components of the assets pledged were as follows:

December 31, (in billions)	2005	2004
Reverse repurchase/securities borrowing agreements	**$ 320**	$ 238
Securities	**24**	49
Loans	**74**	75
Other[a]	**99**	90
Total assets pledged	**$ 517**	$ 452

(a) Primarily composed of trading assets.

Litigation reserve

The Firm maintains litigation reserves for certain of its litigations, including its material legal proceedings. While the outcome of litigation is inherently uncertain, management believes, in light of all information known to it at December 31, 2005, that the Firm's litigation reserves were adequate at such date. Management reviews litigation reserves periodically, and the reserves may be increased or decreased in the future to reflect further litigation developments. The Firm believes it has meritorious defenses to claims asserted against it in its currently outstanding litigation and, with respect to such litigation, intends to continue to defend itself vigorously, litigating or settling cases according to management's judgment as to what is in the best interest of stockholders.

Note 26 – Accounting for derivative instruments and hedging activities

Derivative instruments enable end users to increase, reduce or alter exposure to credit or market risks. The value of a derivative is derived from its reference to an underlying variable or combination of variables such as equity, foreign exchange, credit, commodity or interest rate prices or indices. JPMorgan Chase makes markets in derivatives for customers and also is an end-user of derivatives in order to manage the Firm's exposure to credit and market risks.

SFAS 133, as amended by SFAS 138 and SFAS 149, establishes accounting and reporting standards for derivative instruments, including those used for trading and hedging activities, and derivative instruments embedded in other contracts. All free-standing derivatives, whether designated for hedging relationships or not, are required to be recorded on the balance sheet at fair value. The accounting for changes in value of a derivative depends on whether the contract is for trading purposes or has been designated and qualifies for hedge accounting. The majority of the Firm's derivatives are entered into for trading purposes. The Firm also uses derivatives as an end user to hedge market exposures, modify the interest rate characteristics of related balance sheet instruments or meet longer-term investment objectives. Both trading and end-user derivatives are recorded at fair value in Trading assets and Trading liabilities as set forth in Note 3 on page 94 of this Annual Report.

In order to qualify for hedge accounting, a derivative must be considered highly effective at reducing the risk associated with the exposure being hedged. Each derivative must be designated as a hedge, with documentation of the risk management objective and strategy, including identification of the hedging instrument, the hedged item and the risk exposure, and how effectiveness is to be assessed prospectively and retrospectively. The extent to which a hedging instrument is effective at achieving offsetting changes in fair value or cash flows must be assessed at least quarterly. Any ineffectiveness must be reported in current-period earnings.

For qualifying fair value hedges, all changes in the fair value of the derivative and in the fair value of the item for the risk being hedged are recognized in earnings. If the hedge relationship is terminated, then the fair value adjustment to the hedged item continues to be reported as part of the basis of the item and is amortized to earnings as a yield adjustment. For qualifying cash flow hedges, the effective portion of the change in the fair value of the derivative is recorded in Other comprehensive income and recognized in the income statement when the hedged cash flows affect earnings. The ineffective portions of cash flow hedges are immediately recognized in earnings. If the hedge relationship is terminated, then the change in fair value of the derivative recorded in Other comprehensive income is recognized when the cash flows that were hedged occur, consistent with the original hedge strategy. For hedge relationships discontinued because the forecasted transaction is not expected to occur according to the original strategy, any related derivative amounts recorded in Other comprehensive income are immediately recognized in earnings. For qualifying net investment hedges, changes in the fair value of the derivative or the revaluation of the foreign currency–denominated debt instrument are recorded in the translation adjustments account within Other comprehensive income. Any ineffective portions of net investment hedges are immediately recognized in earnings.

JPMorgan Chase's fair value hedges primarily include hedges of fixed-rate long-term debt, loans, AFS securities and MSRs. Interest rate swaps are the most common type of derivative contract used to modify exposure to interest rate risk, converting fixed-rate assets and liabilities to a floating rate. Interest rate options, swaptions and forwards are also used in combination with interest rate swaps to hedge the fair value of the Firm's MSRs. For a further discussion of MSR risk management activities, see Note 15 on pages 114–116 of this Annual Report. All amounts have been included in earnings consistent with the classification of the hedged item, primarily Net interest income, Mortgage fees and related income, and Other income. The Firm did not recognize any gains or losses during 2005 on firm commitments that no longer qualify as fair value hedges.

JPMorgan Chase also enters into derivative contracts to hedge exposure to variability in cash flows from floating-rate financial instruments and forecasted transactions, primarily the rollover of short-term assets and liabilities, and foreign currency-denominated revenues and expenses. Interest rate swaps, futures and forward contracts are the most common instruments used to reduce the impact of interest rate and foreign exchange rate changes on future earnings. All amounts affecting earnings have been recognized consistent with the classification of the hedged item, primarily Net interest income.

The Firm uses forward foreign exchange contracts and foreign currency-denominated debt instruments to protect the value of net investments in foreign currencies in non-U.S. subsidiaries. The portion of the hedging instruments excluded from the assessment of hedge effectiveness (forward points) is recorded in Net interest income.

The following table presents derivative instrument hedging-related activities for the periods indicated:

Year ended December 31, (in millions)[a]	**2005**	2004
Fair value hedge ineffective net gains/(losses)[b]	**$ (58)**	$ 199
Cash flow hedge ineffective net gains/(losses)[b]	**(2)**	—
Cash flow hedging gains on forecasted transactions that failed to occur	**—**	1

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.
(b) Includes ineffectiveness and the components of hedging instruments that have been excluded from the assessment of hedge effectiveness.

Over the next 12 months, it is expected that $44 million (after-tax) of net gains recorded in Other comprehensive income at December 31, 2005, will be recognized in earnings. The maximum length of time over which forecasted transactions are hedged is 10 years, and such transactions primarily relate to core lending and borrowing activities.

JPMorgan Chase does not seek to apply hedge accounting to all of the Firm's economic hedges. For example, the Firm does not apply hedge accounting to standard credit derivatives used to manage the credit risk of loans and commitments because of the difficulties in qualifying such contracts as hedges under SFAS 133. Similarly, the Firm does not apply hedge accounting to certain interest rate derivatives used as economic hedges.

Note 27 – Off-balance sheet lending-related financial instruments and guarantees

JPMorgan Chase utilizes lending-related financial instruments (e.g., commitments and guarantees) to meet the financing needs of its customers. The contractual amount of these financial instruments represents the maximum possible credit risk should the counterparty draw down the commitment or the Firm fulfills its obligation under the guarantee, and the counterparty subsequently fails to perform according to the terms of the contract. Most of these commitments and guarantees expire without a default occurring or without being drawn. As a result, the total contractual amount of these instruments is not, in the Firm's view, representative of its actual future credit exposure or funding requirements. Further, certain commitments, primarily related to consumer financings, are cancelable, upon notice, at the option of the Firm.

To provide for the risk of loss inherent in wholesale-related contracts, an allowance for credit losses on lending-related commitments is maintained. See Note 12 on pages 107–108 of this Annual Report for a further discussion on the allowance for credit losses on lending-related commitments.

The following table summarizes the contractual amounts of off–balance sheet lending-related financial instruments and guarantees and the related allowance for credit losses on lending-related commitments at December 31, 2005 and 2004:

Off–balance sheet lending-related financial instruments and guarantees

	Contractual amount		Allowance for lending-related commitments	
December 31, (in millions)	**2005**	2004	**2005**	2004
Lending-related				
Consumer	**$ 655,596**	$ 601,196	**$ 15**	$ 12
Wholesale:				
Other unfunded commitments to extend credit[a][b][c]	**208,469**	185,822	**208**	183
Asset purchase agreements[d]	**31,095**	39,330	**3**	2
Standby letters of credit and guarantees[a][e]	**77,199**	78,084	**173**	292
Other letters of credit[a]	**7,001**	6,163	**1**	3
Total wholesale	**323,764**	309,399	**385**	480
Total lending-related	**$ 979,360**	$ 910,595	**$ 400**	$ 492
Other guarantees				
Securities lending guarantees[f]	**$ 244,316**	$ 220,783	**NA**	NA
Derivatives qualifying as guarantees	**61,759**	53,312	**NA**	NA

(a) Represents contractual amount net of risk participations totaling $29.3 billion and $26.4 billion at December 31, 2005 and 2004, respectively.
(b) Includes unused advised lines of credit totaling $28.3 billion and $22.8 billion at December 31, 2005 and 2004, respectively, which are not legally binding. In regulatory filings with the FRB, unused advised lines are not reportable.
(c) Excludes unfunded commitments to private third-party equity funds of $242 million and $563 million at December 31, 2005 and 2004, respectively.
(d) Represents asset purchase agreements to the Firm's administered multi-seller asset-backed commercial paper conduits, which excludes $32.4 billion and $31.7 billion at December 31, 2005 and 2004, respectively, related to conduits that were consolidated in accordance with FIN 46R, as the underlying assets of the conduits are reported in the Firm's Consolidated balance sheets. It also includes $1.3 billion of asset purchase agreements to other third-party entities at December 31, 2005 and $7.5 billion of asset purchase agreements to structured wholesale loan vehicles and other third-party entities at December 31, 2004.
(e) Includes unused commitments to issue standby letters of credit of $37.5 billion and $38.4 billion at December 31, 2005 and 2004, respectively.
(f) Collateral held by the Firm in support of securities lending indemnification agreements was $245.0 billion and $221.6 billion at December 31, 2005 and 2004, respectively.

FIN 45 establishes accounting and disclosure requirements for guarantees, requiring that a guarantor recognize, at the inception of a guarantee, a liability in an amount equal to the fair value of the obligation undertaken in issuing the guarantee. FIN 45 defines a guarantee as a contract that contingently requires the Firm to pay a guaranteed party, based upon: (a) changes in an underlying asset, liability or equity security of the guaranteed party; or (b) a third party's failure to perform under a specified agreement. The Firm considers the following off–balance sheet lending arrangements to be guarantees under FIN 45: certain asset purchase agreements, standby letters of credit and financial guarantees, securities lending indemnifications, certain indemnification agreements included within third-party contractual arrangements and certain derivative contracts. These guarantees are described in further detail below.

The fair value at inception of the obligation undertaken when issuing the guarantees and commitments that qualify under FIN 45 is typically equal to the net present value of the future amount of premium receivable under the contract. The Firm has recorded this amount in Other Liabilities with an offsetting entry recorded in Other Assets. As cash is received under the contract, it is applied to the premium receivable recorded in Other Assets, and the fair value of the liability recorded at inception is amortized into income as Lending & deposit related fees over the life of the guarantee contract. The amount of the liability related to FIN 45 guarantees recorded at December 31, 2005 and 2004, excluding the allowance for credit losses on lending-related commitments and derivative contracts discussed below, was approximately $313 million and $341 million, respectively.

Unfunded commitments to extend credit are agreements to lend only when a customer has complied with predetermined conditions, and they generally expire on fixed dates.

The majority of the Firm's unfunded commitments are not guarantees as defined in FIN 45, except for certain asset purchase agreements that are principally used as a mechanism to provide liquidity to SPEs, primarily multi-seller conduits, as described in Note 14 on pages 111–113 of this Annual Report. Some of these asset purchase agreements can be exercised at any time by the SPE's administrator, while others require a triggering event to occur. Triggering events include, but are not limited to, a need for liquidity, a market value decline of the assets or a downgrade in the rating of JPMorgan Chase Bank. These agreements may cause the Firm to purchase an asset from the SPE at an amount above the asset's fair value, in effect providing a guarantee of the initial value of the reference asset as of the date of the agreement. In most instances, third-party credit enhancements of the SPE mitigate the Firm's potential losses on these agreements.

Standby letters of credit and financial guarantees are conditional lending commitments issued by JPMorgan Chase to guarantee the performance of a customer to a third party under certain arrangements, such as commercial paper facilities, bond financings, acquisition financings, trade and similar transactions. Approximately 58% of these arrangements mature within three years. The Firm typically has recourse to recover from the customer any amounts paid under these guarantees; in addition, the Firm may hold cash or other highly liquid collateral to support these guarantees. At December 31, 2005 and 2004, the Firm held collateral relating to $9.0 billion and $7.4 billion, respectively, of these arrangements.

The Firm holds customers' securities under custodial arrangements. At times, these securities are loaned to third parties, and the Firm issues securities lending indemnification agreements to the customer that protect the customer against the risk of loss if the third party fails to return the securities. To support these indemnification agreements, the Firm obtains from the third party cash or other highly liquid collateral with a market value exceeding 100% of the value of the loaned securities. If the third-party borrower fails to return the securities, the Firm would use the collateral to purchase the securities in the market and would be exposed if the value of the collateral fell below 100%. The Firm invests third-party cash collateral received in support of the indemnification agreements. In a few cases where the cash collateral is invested in resale agreements, the Firm indemnifies the third party against reinvestment risk. At December 31, 2005 and 2004, the Firm held $245.0 billion and $221.6 billion, respectively, in collateral in support of securities lending indemnification arrangements. Based upon historical experience, management expects the risk of loss to be remote.

In connection with issuing securities to investors, the Firm may enter into contractual arrangements with third parties that may require the Firm to make a payment to them in the event of a change in tax law or an adverse interpretation of tax law. In certain cases, the contract may also include a termination clause, which would allow the Firm to settle the contract at its fair value; thus, such a clause would not require the Firm to make a payment under the indemnification agreement. Even without the termination clause, management does not expect such indemnification agreements to have a material adverse effect on the consolidated financial condition of JPMorgan Chase. The Firm may also enter into indemnification clauses when it sells a business or assets to a third party, pursuant to which it indemnifies that third party for losses it may incur due to actions taken by the Firm prior to the sale. See below for more information regarding the Firm's loan securitization activities. It is difficult to estimate the Firm's maximum exposure under these indemnification arrangements, since this would require an assessment of future changes in tax law and future claims that may be made against the Firm that have not yet occurred. However, based upon historical experience, management expects the risk of loss to be remote.

As part of the Firm's loan securitization activities, as described in Note 13 on pages 108–111 of this Annual Report, the Firm provides representations and warranties that certain securitized loans meet specific requirements. The Firm may be required to repurchase the loans and/or indemnify the purchaser of the loans against losses due to any breaches of such representations or warranties. Generally, the maximum amount of future payments the Firm would be required to make under such repurchase and/or indemnification provisions would be equal to the current amount of assets held by such securitization-related SPEs as of December 31, 2005, plus, in certain circumstances, accrued and unpaid interest on such loans and certain expenses. The potential loss due to such repurchase and/or indemnity is mitigated by the due diligence the Firm performs before the sale to ensure that the assets comply with the requirements set forth in the representations and warranties. Historically, losses incurred on such repurchases and/or indemnifications have been insignificant, and therefore management expects the risk of material loss to be remote.

The Firm is a partner with one of the leading companies in electronic payment services in a joint venture operating under the name of Chase Paymentech Solutions, LLC (the "joint venture"). The joint venture was formed in October 2005 as a result of an agreement to integrate the Firm's jointly-owned Chase Merchant Services ("CMS") and Paymentech merchant businesses, the latter of which was acquired as a result of the Merger. The joint venture provides merchant processing services in the United States and Canada. The joint venture is liable contingently for processed credit card sales transactions in the event of a dispute between the cardmember and a merchant. If a dispute is resolved in the cardmember's favor, the joint venture will credit or refund the amount to the cardmember and charge back the transaction to the merchant. If the joint venture is unable to collect the amount from the merchant, the joint venture will bear the loss for the amount credited or refunded to the cardmember. The joint venture mitigates this risk by withholding settlement, or by obtaining escrow deposits or letters of credit from certain merchants. However, in the unlikely event that: 1) a merchant ceases operations and is unable to deliver products, services or a refund; 2) the joint venture does not have sufficient collateral from the merchants to provide customer refunds; and 3) the joint venture does not have sufficient financial resources to provide customer refunds, the Firm would be liable to refund the cardholder in proportion to its approximate equity interest in the joint venture. For the year ended December 31, 2005, the joint venture, along with the integrated businesses of CMS and Paymentech, incurred aggregate credit losses of $11 million on $563 billion of aggregate volume processed, of which the Firm shared liability only on $200 billion of aggregate volume processed. At December 31, 2005, the joint venture held $909 million of collateral. In 2004, the CMS and Paymentech ventures incurred aggregate credit losses of $7.1 million on $396 billion of aggregate volume processed, of which the Firm shared liability only on $205 billion of aggregate volume processed. At December 31, 2004, the CMS and Paymentech ventures held $620 million of collateral. The Firm believes that, based upon historical experience and the collateral held by the joint venture, the fair value of the guarantee would not be different materially from the credit loss allowance recorded by the joint venture; therefore, the Firm has not recorded any allowance for losses in excess of the allowance recorded by the joint venture.

The Firm is a member of several securities and futures exchanges and clearinghouses both in the United States and overseas. Membership in some of these organizations requires the Firm to pay a pro rata share of the losses incurred by the organization as a result of the default of another member. Such obligation varies with different organizations. It may be limited to members who dealt with the defaulting member or to the amount (or a multiple of the amount) of the Firm's contribution to a members' guaranty fund, or, in a few cases, it may be unlimited. It is difficult to estimate the Firm's maximum exposure under these membership agreements, since this would require an assessment of future claims that may be made against the Firm that have not yet occurred. However, based upon historical experience, management expects the risk of loss to be remote.

In addition to the contracts described above, there are certain derivative contracts to which the Firm is a counterparty that meet the characteristics of a guarantee under FIN 45. These derivatives are recorded on the Consolidated balance sheets at fair value. These contracts include written put options that require the Firm to purchase assets from the option holder at a specified price by a specified date in the future, as well as derivatives that effectively guarantee the return on a counterparty's reference portfolio of assets. The total notional value of the derivatives that the Firm deems to be guarantees was $62 billion and $53 billion at December 31, 2005 and 2004, respectively. The Firm reduces exposures to these contracts by entering into offsetting transactions or by entering into contracts that hedge the market risk related to these contracts. The fair value related to these contracts was a derivative receivable of $198 million and $180 million, and a derivative payable of $767 million and $622 million at December 31, 2005 and 2004, respectively. Finally, certain written put options and credit derivatives permit cash settlement and do not require the option holder or the buyer of credit protection to own the reference asset. The Firm does not consider these contracts to be guarantees as described in FIN 45.

Note 28 – Credit risk concentrations

Concentrations of credit risk arise when a number of customers are engaged in similar business activities or activities in the same geographic region, or when they have similar economic features that would cause their ability to meet contractual obligations to be similarly affected by changes in economic conditions.

JPMorgan Chase regularly monitors various segments of the credit risk portfolio to assess potential concentration risks and to obtain collateral when deemed necessary. In the Firm's wholesale portfolio, risk concentrations are evaluated primarily by industry and by geographic region. In the consumer portfolio, concentrations are evaluated primarily by product and by U.S. geographic region.

The Firm does not believe exposure to any one loan product with varying terms (e.g., interest-only payments for an introductory period) or exposure to loans with high loan-to-value ratios would result in a significant concentration of credit risk. Terms of loan products and collateral coverage are included in the Firm's assessment when extending credit and establishing its allowance for loan losses.

For further information regarding on–balance sheet credit concentrations by major product and geography, see Note 11 on page 106 of this Annual Report. For information regarding concentrations of off–balance sheet lending-related financial instruments by major product, see Note 27 on page 124 of this Annual Report. More information about concentrations can be found in the following tables or discussion in the MD&A:

Wholesale exposure	Page 65
Wholesale selected industry concentrations	Page 66
Country exposure	Page 70
Consumer real estate loan portfolio by geographic location	Page 72

The table below presents both on-balance sheet and off-balance sheet wholesale- and consumer-related credit exposure as of December 31, 2005 and 2004:

	2005			2004		
December 31, (in billions)	Credit exposure[b]	On-balance sheet[b][c]	Off-balance sheet[d]	Credit exposure[b]	On-balance sheet[b][c]	Off-balance sheet[d]
Wholesale-related:						
Banks and finance companies	**$ 53.7**	**$ 20.3**	**$ 33.4**	$ 56.2	$ 25.7	$ 30.5
Real estate	**32.5**	**19.0**	**13.5**	28.2	16.7	11.5
Consumer products	**26.7**	**10.0**	**16.7**	21.4	7.1	14.3
Healthcare	**25.5**	**4.7**	**20.8**	22.0	4.5	17.5
State and municipal governments	**25.3**	**6.1**	**19.2**	19.8	4.1	15.7
All other wholesale	**389.7**	**169.5**	**220.2**	394.6	174.7	219.9
Total wholesale-related	**553.4**	**229.6**	**323.8**	542.2	232.8	309.4
Consumer-related:						
Home finance	**198.6**	**133.5**	**65.1**	177.9	124.7	53.2
Auto & education finance	**54.7**	**49.0**	**5.7**	67.9	62.7	5.2
Consumer & small business and other	**20.3**	**14.8**	**5.5**	25.4	15.1	10.3
Credit card receivables[a]	**651.0**	**71.7**	**579.3**	597.0	64.5	532.5
Total consumer-related	**924.6**	**269.0**	**655.6**	868.2	267.0	601.2
Total exposure	**$ 1,478.0**	**$ 498.6**	**$ 979.4**	$ 1,410.4	$ 499.8	$ 910.6

(a) Excludes $70.5 billion and $70.8 billion of securitized credit card receivables at December 31, 2005 and 2004, respectively.
(b) Includes HFS loans.
(c) Represents loans, derivative receivables and interests in purchased receivables.
(d) Represents lending-related financial instruments.

Note 29 – Fair value of financial instruments

The fair value of a financial instrument is the amount at which the instrument could be exchanged in a current transaction between willing parties, other than in a forced or liquidation sale.

The accounting for an asset or liability may differ based upon the type of instrument and/or its use in a trading or investing strategy. Generally, the measurement framework in the consolidated financial statements is one of the following:

- at fair value on the Consolidated balance sheets, with changes in fair value recorded each period in the Consolidated statements of income;
- at fair value on the Consolidated balance sheets, with changes in fair value recorded each period in a separate component of Stockholders' equity and as part of Other comprehensive income;
- at cost (less other-than-temporary impairments), with changes in fair value not recorded in the consolidated financial statements but disclosed in the notes thereto; or
- at the lower of cost or fair value.

The Firm has an established and well-documented process for determining fair values. Fair value is based upon quoted market prices, where available. If listed prices or quotes are not available, fair value is based upon internally-developed models that primarily use market-based or independent information as inputs to the valuation model. Valuation adjustments may be necessary to ensure that financial instruments are recorded at fair value. These adjustments include amounts to reflect counterparty credit quality, liquidity and concentration concerns and are based upon defined methodologies that are applied consistently over time.

- Credit valuation adjustments are necessary when the market price (or parameter) is not indicative of the credit quality of the counterparty. As few derivative contracts are listed on an exchange, the majority of derivative positions are valued using internally developed models that use as their basis observable market parameters. Market practice is to quote parameters equivalent to a AA credit rating; thus, all counterparties are assumed to have the same credit quality. An adjustment is therefore necessary to reflect the credit quality of each derivative counterparty and to arrive at fair value. Without this adjustment, derivative positions would not be appropriately valued.

- Liquidity adjustments are necessary when the Firm may not be able to observe a recent market price for a financial instrument that trades in inactive (or less active) markets. Thus, valuation adjustments for risk of loss due to a lack of liquidity are applied to those positions to arrive at fair value. The Firm tries to ascertain the amount of uncertainty in the initial valuation based upon the liquidity or illiquidity, as the case may be, of the market in which the instrument trades and makes liquidity adjustments to the financial instruments. The Firm measures the liquidity adjustment based upon the following factors: (1) the amount of time since the last relevant pricing point; (2) whether there was an actual trade or relevant external quote; and (3) the volatility of the principal component of the financial instrument.
- Concentration valuation adjustments are necessary to reflect the cost of unwinding larger-than-normal market-size risk positions. The cost is determined based upon the size of the adverse market move that is likely to occur during the extended period required to bring a position down to a nonconcentrated level. An estimate of the period needed to reduce, without market disruption, a position to a nonconcentrated level is generally based upon the relationship of the position to the average daily trading volume of that position. Without these adjustments, larger positions would be valued at a price greater than the price at which the Firm could exit the positions.

Valuation adjustments are determined based upon established policies and are controlled by a price verification group independent of the risk-taking function. Economic substantiation of models, prices, market inputs and revenue through price/input testing, as well as backtesting, is done to validate the appropriateness of the valuation methodology. Any changes to the valuation methodology are reviewed by management to ensure the changes are justified.

The methods described above may produce a fair value calculation that may not be indicative of net realizable value or reflective of future fair values. Furthermore, the use of different methodologies to determine the fair value of certain financial instruments could result in a different estimate of fair value at the reporting date.

Certain financial instruments and all nonfinancial instruments are excluded from the scope of SFAS 107. Accordingly, the fair value disclosures required by SFAS 107 provide only a partial estimate of the fair value of JPMorgan Chase. For example, the Firm has developed long-term relationships with its customers through its deposit base and credit card accounts, commonly referred to as core deposit intangibles and credit card relationships. In the opinion of management, these items, in the aggregate, add significant value to JPMorgan Chase, but their fair value is not disclosed in this Note.

The following items describe the methodologies and assumptions used, by financial instrument, to determine fair value.

Financial assets

Assets for which fair value approximates carrying value
The Firm considers fair values of certain financial assets carried at cost – including cash and due from banks, deposits with banks, securities borrowed, short-term receivables and accrued interest receivable – to approximate their respective carrying values, due to their short-term nature and generally negligible credit risk.

Assets where fair value differs from cost
The Firm's debt, equity and derivative trading instruments are carried at their estimated fair value. Quoted market prices, when available, are used to determine the fair value of trading instruments. If quoted market prices are not available, then fair values are estimated by using pricing models, quoted prices of instruments with similar characteristics, or discounted cash flows.

Federal funds sold and securities purchased under resale agreements
Federal funds sold and securities purchased under resale agreements are typically short-term in nature and, as such, for a significant majority of the Firm's transactions, cost approximates carrying value. This balance sheet item also includes structured resale agreements and similar products with long-dated maturities. To estimate the fair value of these instruments, cash flows are discounted using the appropriate market rates for the applicable maturity.

Securities
Fair values of actively traded securities are determined by the secondary market, while the fair values for nonactively traded securities are based upon independent broker quotations.

Derivatives
Fair value for derivatives is determined based upon the following:

- position valuation, principally based upon liquid market pricing as evidenced by exchange-traded prices, broker-dealer quotations or related input parameters, which assume all counterparties have the same credit rating;
- credit valuation adjustments to the resulting portfolio valuation, to reflect the credit quality of individual counterparties; and
- other fair value adjustments to take into consideration liquidity, concentration and other factors.

For those derivatives valued based upon models with significant unobservable market parameters, the Firm defers the initial trading profit for these financial instruments. The deferred profit is recognized in Trading revenue on a systematic basis (typically straight-line amortization over the life of the instruments) and when observable market data becomes available.

The fair value of derivative payables does not incorporate a valuation adjustment to reflect JPMorgan Chase's credit quality.

Interests in purchased receivables
The fair value of variable-rate interests in purchased receivables approximate their respective carrying amounts due to their variable interest terms and negligible credit risk. The estimated fair values for fixed-rate interests in purchased receivables are determined using a discounted cash flow analysis using appropriate market rates for similar instruments.

Loans
Fair value for loans is determined using methodologies suitable for each type of loan:

- Fair value for the wholesale loan portfolio is estimated primarily, using the cost of credit derivatives, which is adjusted to account for the differences in recovery rates between bonds, upon which the cost of credit derivatives is based, and loans.
- Fair values for consumer installment loans (including automobile financings) and consumer real estate, for which market rates for comparable loans are readily available, are based upon discounted cash flows adjusted for prepayments. The discount rates used for consumer installment loans are current rates offered by commercial banks. For consumer real estate, secondary market yields for comparable mortgage-backed securities, adjusted for risk, are used.
- Fair value for credit card receivables is based upon discounted expected cash flows. The discount rates used for credit card receivables incorporate only the effects of interest rate changes, since the expected cash flows already reflect an adjustment for credit risk.

- The fair value of loans in the held-for-sale and trading portfolios is generally based upon observable market prices and upon prices of similar instruments, including bonds, credit derivatives and loans with similar characteristics. If market prices are not available, the fair value is based upon the estimated cash flows adjusted for credit risk; that risk is discounted, using a rate appropriate for each maturity that incorporates the effects of interest rate changes.

Other assets

Commodities inventory is carried at the lower of cost or fair value. For the majority of commodities inventory, fair value is determined by reference to prices in highly active and liquid markets. The fair value for other commodities inventory is determined primarily using pricing and other data derived from less liquid and developing markets where the underlying commodities are traded. This caption also includes private equity investments and MSRs. For a discussion of the fair value methodology for private equity investments, see Note 9 on page 105 of this Annual Report.

For a discussion of the fair value methodology for MSRs, see Note 15 on pages 114–116 of this Annual Report.

Financial liabilities

Liabilities for which fair value approximates carrying value

SFAS 107 requires that the fair value for deposit liabilities with no stated maturity (i.e., demand, savings and certain money market deposits) be equal to their carrying value. SFAS 107 does not allow for the recognition of the inherent funding value of these instruments.

Fair value of commercial paper, other borrowed funds, accounts payable and accrued liabilities is considered to approximate their respective carrying values due to their short-term nature.

Interest-bearing deposits

Fair values of interest-bearing deposits are estimated by discounting cash flows based upon the remaining contractual maturities of funds having similar interest rates and similar maturities.

Federal funds purchased and securities sold under repurchase agreements

Federal funds purchased and securities sold under repurchase agreements are typically short-term in nature; as such, for a significant majority of these transactions, cost approximates carrying value. This balance sheet item also includes structured repurchase agreements and similar products with long-dated maturities. To estimate the fair value of these instruments, the cash flows are discounted using the appropriate market rates for the applicable maturity.

Beneficial interests issued by consolidated VIEs

Beneficial interests issued by consolidated VIEs ("beneficial interests") are generally short-term in nature and, as such, for a significant majority of the Firm's transactions, cost approximates carrying value. The Consolidated balance sheets also include beneficial interests with long-dated maturities. The fair value of these instruments is based upon current market rates.

Long-term debt-related instruments

Fair value for long-term debt, including the junior subordinated deferrable interest debentures held by trusts that issued guaranteed capital debt securities, is based upon current market rates and is adjusted for JPMorgan Chase's credit quality.

Lending-related commitments

Although there is no liquid secondary market for wholesale commitments, the Firm estimates the fair value of its wholesale lending-related commitments primarily using the cost of credit derivatives (which is adjusted to account for the difference in recovery rates between bonds, upon which the cost of credit derivatives is based, and loans) and loan equivalents (which represent the portion of an unused commitment expected, based upon the Firm's average portfolio historical experience, to become outstanding in the event an obligor defaults). The Firm estimates the fair value of its consumer commitments to extend credit based upon the primary market prices to originate new commitments. It is the change in current primary market prices that provides the estimate of the fair value of these commitments. On this basis, at December 31, 2005, the estimated fair value of the Firm's lending-related commitments was a liability of $0.5 billion, compared with $0.1 billion at December 31, 2004.

The following table presents the carrying value and estimated fair value of financial assets and liabilities valued under SFAS 107; accordingly, certain assets and liabilities that are not considered financial instruments are excluded from the table.

	2005			2004		
December 31, (in billions)	Carrying value	Estimated fair value	Appreciation/ (depreciation)	Carrying value	Estimated fair value	Appreciation/ (depreciation)

Note 30 – International operations

The following table presents income statement information of JPMorgan Chase by major geographic area. The Firm defines international activities as business transactions that involve customers residing outside of the United States, and the information presented below is based primarily upon the domicile of the customer. However, many of the Firm's U.S. operations serve international businesses.

As the Firm's operations are highly integrated, estimates and subjective assumptions have been made to apportion revenue and expense between U.S. and international operations. These estimates and assumptions are consistent with the allocations used for the Firm's segment reporting as set forth in Note 31 on pages 130–131 of this Annual Report.

The Firm's long-lived assets for the periods presented are not considered by management to be significant in relation to total assets. The majority of the Firm's long-lived assets are located in the United States.

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. 2003 reflects the results of heritage JPMorgan Chase only.
(b) Revenue is composed of Net interest income and noninterest revenue.
(c) Expense is composed of Noninterest expense and Provision for credit losses.

Note 31 – Business segments

JPMorgan Chase is organized into six major reportable business segments (the Investment Bank, Retail Financial Services, Card Services, Commercial Banking, Treasury & Securities Services and Asset & Wealth Management), as well as a Corporate segment. The segments are based upon the products and services provided or the type of customer served, and they reflect the manner in which financial information is currently evaluated by management. Results of these lines of business are presented on an operating basis. For a definition of operating basis, see the footnotes to the table below. For a further discussion concerning JPMorgan Chase's business segments, see Business segment results on pages 34–35 of this Annual Report.

In the third quarter of 2004, in connection with the Merger, business segment reporting was realigned to reflect the new business structure of the combined Firm. Treasury was transferred from the Investment Bank into Corporate. The segment formerly known as Chase Financial Services had been comprised of Chase Home Finance, Chase Cardmember Services, Chase Auto Finance, Chase Regional Banking and Chase Middle Market; as a result of the Merger, this segment is now called Retail Financial Services and is comprised of Home Finance, Auto & Education Finance, Consumer & Small Business Banking and Insurance. Chase Cardmember Services is now its own segment called Card Services, and Chase Middle Market moved into Commercial Banking. Investment Management & Private Banking was renamed Asset & Wealth Management. JPMorgan Partners, which formerly was a stand-alone business segment, was moved into Corporate. Corporate currently comprises Private Equity (JPMorgan Partners and ONE Equity Partners) and Treasury, and the

(a) In addition to analyzing the Firm's results on a reported basis, management reviews the line of business results on an "operating basis," which is a non-GAAP financial measure. The definition of operating basis starts with the reported U.S. GAAP results. In the case of the Investment Bank, operating basis noninterest revenue includes, in Trading revenue, Net interest income ("NII") related to trading activities. In the case of Card Services, refer to footnote (e). These adjustments do not change JPMorgan Chase's reported net income. Operating basis also excludes Merger costs, nonoperating Litigation reserve charges and accounting policy conformity adjustments, as management believes these items are not part of the Firm's normal daily business operations (and, therefore, not indicative of trends) and do not provide meaningful comparisons with other periods. Finally, operating results reflect revenues (Noninterest revenue and NII) on a tax-equivalent basis. Refer to footnote (f) for the impact of these adjustments.

(b) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. 2003 reflects the results of heritage JPMorgan Chase only.

(c) TSS reimburses the IB for credit portfolio exposures the IB manages on behalf of clients the segments share. At the time of the Merger, the reimbursement methodology was revised to be based upon pre-tax earnings, net of the cost of capital related to those exposures. Prior to the Merger, the credit reimbursement was based upon pre-tax earnings, plus the allocated capital associated with the shared clients.

(d) Segment operating results include the reclassification of NII related to trading activities to Trading revenue within Noninterest revenue, which impacts primarily the Investment Bank. Trading-related NII reclassified to Trading revenue was $159 million, $2.0 billion and $2.1 billion in 2005, 2004 and 2003, respectively. These amounts are eliminated in Corporate/reconciling items to arrive at NII and Noninterest revenue on a reported GAAP basis for JPMorgan Chase.

(e) Operating results for Card Services exclude the impact of credit card securitizations on revenue, provision for credit losses and average assets, as JPMorgan Chase treats the sold receivables as if they were still on the balance sheet in evaluating the overall performance of the credit card portfolio. These adjustments are eliminated in Corporate/reconciling items to arrive at the Firm's reported GAAP results. The related securitization adjustments were as follows:

Year ended December 31, (in millions)[b]	**2005**	2004	2003
Net interest income	**$ 6,494**	$ 5,251	$ 3,320
Noninterest revenue	**(2,718)**	(2,353)	(1,450)
Provision for credit losses	**3,776**	2,898	1,870
Average assets	**67,180**	51,084	32,365

corporate support areas, which include Central Technology and Operations, Audit, Executive Office, Finance, Human Resources, Marketing & Communications, Office of the General Counsel, Corporate Real Estate and General Services, Risk Management, and Strategy and Development. Beginning January 1, 2006, TSS will report results for two divisions: TS and WSS. WSS was formed by consolidating IS and ITS.

The following table provides a summary of the Firm's segment results for 2005, 2004 and 2003 on an operating basis. The impact of credit card securitizations, Merger costs, nonoperating Litigation reserve charges and accounting policy conformity adjustments have been included in Corporate/reconciling items so that the total Firm results are on a reported basis. Finally, commencing with the first quarter of 2005, operating revenue (noninterest revenue and net interest income) for each of the segments and the Firm is presented on a tax-equivalent basis. Accordingly, revenue from tax exempt securities and investments that receive tax credits are presented in the operating results on a basis comparable to taxable securities and investments. This approach allows management to assess the comparability of revenues arising from both taxable and tax-exempt sources. The corresponding income tax impact related to these items is recorded within income tax expense. The Corporate sector's and the Firm's operating revenue and income tax expense for the periods prior to the first quarter of 2005 have been restated to be presented similarly on a tax-equivalent basis. This restatement had no impact on the Corporate sector's or the Firm's operating earnings. Segment results for periods prior to July 1, 2004, reflect heritage JPMorgan Chase–only results and have been restated to reflect the current business segment organization and reporting classifications.

72	85	84	**68**	75	84	**NM**	NM	NM	**71**	80	65

(f) Segment operating results reflect revenues on a tax-equivalent basis with the corresponding income tax impact recorded within income tax expense. Tax-equivalent adjustments were as follows:

Year ended December 31, (in millions)[b]	**2005**	2004	2003
Net interest income	**$ 269**	$ 6	$ 44
Noninterest revenue	**571**	317	89
Income tax expense	**840**	323	133

These adjustments are eliminated in Corporate/reconciling items to arrive at the Firm's reported GAAP results.

(g) Includes $858 million of accounting policy conformity adjustments consisting of approximately $1.4 billion related to the decertification of the seller's retained interest in credit card securitizations, partially offset by a benefit of $584 million related to conforming wholesale and consumer provision methodologies for the combined Firm.

(h) Merger costs attributed to the lines of business for 2005 and 2004 were as follows (there were no merger costs in 2003):

Year ended December 31, (in millions)[b]	**2005**	2004

Net increase (decrease) in cash with banks	**(52)**	365	40
Cash with banks at the beginning of the year	**513**	148	108
Cash with banks at the end of the year, primarily with bank subsidiaries	**$ 461**	$ 513	$ 148
Cash interest paid	**$ 3,838**	$ 2,383	$ 1,918
Cash income taxes paid	**$ 3,426**	$ 701	$ 754

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. 2003 reflects the results of heritage JPMorgan Chase only. For a further discussion of the Merger, see Note 2 on pages 92–93 of this Annual Report.

(b) Subsidiaries include trusts that issued guaranteed capital debt securities ("issuer trusts"). As a result of FIN 46, the Parent deconsolidated these trusts in 2003. The Parent received dividends of $21 million and $15 million from the issuer trusts in 2005 and 2004, respectively. For a further discussion on these issuer trusts, see Note 17 on pages 117–118 of this Annual Report.

(c) At December 31, 2005, debt that contractually matures in 2006 through 2010 totaled $10.3 billion, $9.5 billion, $11.9 billion, $8.8 billion and $3.8 billion, respectively.

(a) Based upon annualized amounts.
(b) Represents Net income divided by Total average assets.
(c) Excludes wholesale purchased held-for-sale ("HFS") loans purchased as part of the Investment Bank's proprietary activities.
(d) Excluded from the allowance coverage ratios were end-of-period loans held-for-sale; and excluded from the net charge-off rates were average loans held-for-sale.
(e) JPMorgan Chase's common stock is listed and traded on the New York Stock Exchange, the London Stock Exchange Limited and the Tokyo Stock Exchange. The high, low and closing prices of JPMorgan Chase's common stock are from The New York Stock Exchange Composite Transaction Tape.
(f) Quarterly results include three months of the combined Firm's results.
(g) Includes a $400 million special provision related to Hurricane Katrina allocated as follows: Retail Financial Services $250 million, Card Services $100 million, Commercial Banking $35 million, Asset & Wealth Management $3 million and Corporate $12 million.
(h) Heritage JPMorgan Chase results only.
NM – Not meaningful due to net loss.

Glossary of terms

JPMorgan Chase & Co.

ACH: Automated Clearing House.

APB: Accounting Principles Board Opinion.

APB 25: "Accounting for Stock Issued to Employees."

Assets under management: Represent assets actively managed by Asset & Wealth Management on behalf of institutional, private banking, private client services and retail clients. Excludes assets managed by American Century Companies, Inc., in which the Firm has a 43% ownership interest.

Assets under supervision: Represent assets under management as well as custody, brokerage, administration and deposit accounts.

Average managed assets: Refers to total assets on the Firm's balance sheet plus credit card receivables that have been securitized.

Contractual credit card charge-off: In accordance with the Federal Financial Institutions Examination Council policy, credit card loans are charged off by the end of the month in which the account becomes 180 days past due or within 60 days from receiving notification of the filing of bankruptcy, whichever is earlier.

Core deposits: U.S. deposits insured by the Federal Deposit Insurance Corporation, up to the legal limit of $100,000 per depositor.

Credit derivatives are contractual agreements that provide protection against a credit event of one or more referenced credits. The nature of a credit event is established by the protection buyer and protection seller at the inception of a transaction, and such events include bankruptcy, insolvency and failure to meet payment obligations when due. The buyer of the credit derivative pays a periodic fee in return for a payment by the protection seller upon the occurrence, if any, of a credit event.

Credit cycle: a period of time over which credit quality improves, deteriorates and then improves again. While portfolios may differ in terms of risk, the credit cycle is typically driven by many factors, including market events and the economy. The duration of a credit cycle can vary from a couple of years to several years.

FASB: Financial Accounting Standards Board.

FIN 39: FASB Interpretation No. 39, "Offsetting of Amounts Related to Certain Contracts."

FIN 41: FASB Interpretation No. 41, "Offsetting of Amounts Related to Certain Repurchase and Reverse Repurchase Agreements."

FIN 45: FASB Interpretation No. 45, "Guarantor's Accounting and Disclosure Requirement for Guarantees, including Indirect Guarantees of Indebtedness of Others."

FIN 46R: FASB Interpretation No. 46 (revised December 2003), "Consolidation of Variable Interest Entities, an interpretation of Accounting Research Bulletin No. 51."

FIN 47: FASB Interpretation No. 47, "Accounting for Conditional Asset Retirement Obligations – an interpretation of FASB Statement No. 143."

FSP SFAS 106-2: "Accounting and Disclosure Requirements Related to the Medicare Prescription Drug, Improvement and Modernization Act of 2003."

Interests in Purchased Receivables: Represent an ownership interest in a percentage of cash flows of an underlying pool of receivables transferred by a third-party seller into a bankruptcy remote entity, generally a trust, and then financed through a commercial paper conduit.

Investment-grade: An indication of credit quality based upon JPMorgan Chase's internal risk assessment system. "Investment-grade" generally represents a risk profile similar to a rating of a BBB-/Baa3 or better, as defined by independent rating agencies.

Mark-to-market exposure: A measure, at a point in time, of the value of a derivative or foreign exchange contract in the open market. When the mark-to-market value is positive, it indicates the counterparty owes JPMorgan Chase and, therefore, creates a repayment risk for the Firm. When the mark-to-market value is negative, JPMorgan Chase owes the counterparty. In this situation, the Firm does not have repayment risk.

Master netting agreement: An agreement between two counterparties that have multiple derivative contracts with each other that provides for the net settlement of all contracts through a single payment, in a single currency, in the event of default on or termination of any one contract. See FIN 39.

NA: Data is not applicable or available for the period presented.

Net yield on interest-earning assets: The average rate for interest-earning assets less the average rate paid for all sources of funds.

NM: Not meaningful.

Nonoperating litigation reserve charges and recoveries are the $208 million insurance recovery in the fourth quarter of 2005; the $1.9 billion charge taken in the second quarter of 2005; the $900 million charge taken in the first quarter of 2005; and the $3.7 billion charge taken in the second quarter of 2004; all of which relate to the legal cases named in the JPMorgan Chase Quarterly Report on Form 10–Q for the quarter ended September 30, 2004.

Overhead ratio: Noninterest expense as a percentage of total net revenue.

Return on common equity-goodwill: Represents net income applicable to common stock divided by total average common equity (net of goodwill). The Firm uses return on equity less goodwill, a non-GAAP financial measure, to evaluate the operating performance of the Firm. The Firm also utilizes this measure to facilitate operating comparisons to other competitors.

SFAS: Statement of Financial Accounting Standards.

SFAS 13: "Accounting for Leases."

SFAS 87: "Employers' Accounting for Pensions."

SFAS 88: "Employers' Accounting for Settlements and Curtailments of Defined Benefit Pension Plans and for Termination Benefits."

SFAS 106: "Employers' Accounting for Postretirement Benefits Other Than Pensions."

SFAS 107: "Disclosures about Fair Value of Financial Instruments."

SFAS 109: "Accounting for Income Taxes."

SFAS 114: "Accounting by Creditors for Impairment of a Loan."

SFAS 115: "Accounting for Certain Investments in Debt and Equity Securities."

SFAS 123: "Accounting for Stock-Based Compensation."

SFAS 123R: "Share-Based Payment."

SFAS 128: "Earnings per Share."

SFAS 133: "Accounting for Derivative Instruments and Hedging Activities."

SFAS 138: "Accounting for Certain Derivative Instruments and Certain Hedging Activities – an amendment of FASB Statement No. 133."

Glossary of terms

JPMorgan Chase & Co.

SFAS 140: "Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities – a replacement of FASB Statement No. 125."

SFAS 142: "Goodwill and Other Intangible Assets."

SFAS 143: "Accounting for Asset Retirement Obligations."

SFAS 149: "Amendment of Statement No. 133 on Derivative Instruments and Hedging Activities."

SFAS 155: "Accounting for Certain Hybrid Financial Instruments – an amendment of FASB Statements No. 133 and 140."

Staff Accounting Bulletin ("SAB") 107: "Application of Statement of Financial Accounting Standards No. 123 (revised 2004), Share-Based Payment."

Statement of Position ("SOP") 98-1: "Accounting for the Costs of Computer Software Developed or Obtained for Internal Use."

Stress testing: A scenario that measures market risk under unlikely but plausible events in abnormal markets.

U.S. GAAP: Accounting principles generally accepted in the United States of America.

U.S. government and federal agency obligations: Obligations of the U.S. government or an instrumentality of the U.S. government whose obligations are fully and explicitly guaranteed as to the timely payment of principal and interest by the full faith and credit of the U.S. government.

U.S. government-sponsored enterprise obligations: Obligations of agencies originally established or chartered by the U.S. government to serve public purposes as specified by the U.S. Congress; these obligations are not explicitly guaranteed as to the timely payment of principal and interest by the full faith and credit of the U.S. government.

Value-at-Risk ("VAR"): A measure of the dollar amount of potential loss from adverse market moves in an ordinary market environment.

Forward-looking statements

From time to time, the Firm has made and will make forward-looking statements. These statements can be identified by the fact that they do not relate strictly to historical or current facts. Forward-looking statements often use words such as "anticipate," "target," "expect," "estimate," "intend," "plan," "goal," "believe," "anticipate" or other words of similar meaning. Forward-looking statements provide JPMorgan Chase's current expectations or forecasts of future events, circumstances, results or aspirations. JPMorgan Chase's disclosures in this report contain forward-looking statements within the meaning of the Private Securities Litigation Reform Act of 1995. The Firm also may make forward-looking statements in its other documents filed or furnished with the Securities and Exchange Commission ("SEC"). In addition, the Firm's senior management may make forward-looking statements orally to analysts, investors, representatives of the media and others.

All forward-looking statements, by their nature, are subject to risks and uncertainties. JPMorgan Chase's actual future results may differ materially from those set forth in its forward-looking statements. Factors that could cause this difference—many of which are beyond the Firm's control—include the following: local, regional and international business, political or economic conditions; changes in trade, monetary and fiscal policies and laws; technological changes instituted by the Firm and by other entities which may affect the Firm's business; mergers and acquisitions, including the Firm's ability to integrate acquisitions; ability of the Firm to develop new products and services; acceptance of new products and services and the ability of the Firm to increase market share; ability of the Firm to control expenses; competitive pressures; changes in laws and regulatory requirements; changes in applicable accounting policies; costs, outcomes and effects of litigation and regulatory investigations; changes in the credit quality of the Firm's customers; and adequacy of the Firm's risk management framework.

Additional factors that may cause future results to differ materially from forward-looking statements are discussed in Part I, Item 1A: Risk Factors in the Firm's Annual Report on Form 10–K for the year ended December 31, 2005, to which reference is hereby made. There is no assurance that any list of risks and uncertainties or risk factors is complete.

Any forward-looking statements made by or on behalf of the Firm speak only as of the date they are made and JPMorgan Chase does not undertake to update forward-looking statements to reflect the impact of circumstances or events that arise after the date the forward-looking statement was made. The reader should, however, consult any further disclosures of a forward-looking nature the Firm may make in any subsequent Annual Reports on Form 10–K, its Quarterly Reports on Form 10-Q and its Current Reports on Form 8-K.

*Board membership as of January 2006

Corporate Governance

Governance is a continuing focus at JPMorgan Chase, starting with the board of directors and continuing throughout the Firm. There are three pillars of good governance:

- An independent board, accountable to shareholders
- Strong internal governance
- Alignment with shareholders

Board governance

JPMorgan Chase's board is experienced, independent and accountable to shareholders. The board's structure and practices include *the following, and more information on board governance can be found on the Firm's website (www.jpmorganchase.com):*

- *effective size:* The board's preference is to maintain a smaller size for efficiency and to encourage active dialogue. As retirements occur, the board will actively seek to increase diversity among its membership.
- *a super-majority of non-management directors:* There are only two full-time management members on the board, Bill Harrison and Jamie Dimon. During 2005, Bob Lipp became a part-time member of management to share his special skills in developing talent within the firm. All other members of the board are non-management directors that the board has determined to be independent.
- *director independence:*
  independent directors – Each of the non-management directors of JPMorgan Chase was determined by the board to be independent in accordance with board standards that consider past and current employment relationships; any business relationships with or charitable contributions to entities at which a director serves as an officer; and personal banking and other financial relationships, which must be on an arm's-length basis.

  executive sessions of directors – In 2005, the board adopted the practice of meeting without management at each regularly scheduled board meeting.

  access to outside resources – Although the main responsibility for providing assistance to the board rests with management, the board and board committees can engage outside expert advice from sources independent of management at the expense of the Firm.
- *director accountability:*
  majority voting for directors – In 2005 the board adopted a policy providing that in uncontested elections, any director nominee who receives more withheld than for votes will tender his or her resignation. Absent a compelling reason, the board will accept the resignation.
- *director compensation:* The board believes it is desirable that a significant portion of overall director compensation be linked to JPMorgan Chase stock, and the board's total compensation includes approximately one-third cash and two-thirds stock-based compensation in the form of share equivalents that must be held until a director's termination of service.

Internal governance

While governance begins with the board of directors, managing the enterprise requires effective governance structures and practices throughout the organization. The firm as a whole manages by line of business, supported by global policies and standards that typically apply to all relevant units regardless of geography or legal structure. The strength of these global control processes is the foundation of regional and individual subsidiary governance. Three examples of the Firm's global processes and standards are its risk management structure, policy review process and codes of conduct.

Defined risk governance is a principle of risk management at JPMorgan Chase. The board of directors exercises oversight of risk management through the board as a whole and through the board's Audit and Risk Policy committees. The charters of these and other board committees are available at the Firm's website. The board delegates the formulation of policy and day-to-day risk oversight to management. The Firm's risk governance structure is built upon the premise that each line of business is responsible for managing the risks inherent in its business activity, including liquidity risk, credit risk, market risk, interest rate risk, operational risk, legal and reputation risk, fiduciary risk and private equity risk. Each line of business has a risk committee responsible for decisions relating to risk strategy, policies and control. Where appropriate, risk committees escalate risk issues to the Firm's Operating Committee, comprised of senior officers of the Firm, or to the Risk Working Group, a subgroup of the Operating Committee. Overlaying risk management within the lines of business are three corporate functions: Treasury, Risk Management and Office of the General Counsel. Treasury is responsible for managing the interest rate and liquidity profile of the Firm. Risk Management provides an independent firmwide function of control and management of risk. The Office of the General Counsel has oversight of legal, reputation and fiduciary risk. A discussion of risk management begins at page 60 of this Annual Report.

The policy review process is based on the recognition that a firm's success requires maintenance of a reputation for business practices of the highest quality. The Firm has a specific structure to address transactions with clients that have the potential to adversely affect the Firm's reputation. Primary responsibility for adherence to the policies and procedures designed to address reputation risk lies with business units, which are also required to submit to regional Reputation Risk Committees proposed transactions that may heighten reputation risk. The committees may approve, reject or require further clarification on or changes to the transaction, or they may escalate the review to the most senior level of review, the Policy Review Office. The objective of the policy review process is to reinforce a culture that ensures that all employees understand the basic principles of reputation risk control and can recognize and address issues as they arise. For a further description of the policy review process, see the discussion of reputation and fiduciary risk starting at page 80 of this Annual Report.

The Firm has two codes of conduct, one applying to all employees and a supplementary code that applies to senior executive and senior financial officers. The Code of Conduct is applicable to all employees and the Firm requires each employee to certify annually his or her compliance with the Code. The Firm also has a Code of Ethics for Finance Professionals to underscore the importance of ethical conduct and compliance with law, particularly as it relates to the maintenance of the Firm's financial books and records and the preparation of its financial statements. Both codes are available at the Firm's website.

Alignment with shareholders

Good corporate governance requires that compensation policies align with shareholder interests. JPMorgan Chase's compensation policy for executive officers emphasizes performance-based, variable compensation over fixed salary and uses equity-based awards to align the interests of executive officers with shareholders. Members of the Firm's Operating Committee are required to retain 75% of the net shares received from equity-based awards, after deduction for taxes and exercise costs.

Growth rates shown as compound annual growth rates (CAGRs).

(a) Excludes Corporate segment

(b) Presented on an unaudited pro forma combined basis that represents how the financial information of JPMorgan Chase & Co. and Bank One Corporation may have appeared on a combined basis had the two companies been merged for the full year.

DEAR FELLOW SHAREHOLDER,

JPMorgan Chase made very good progress in 2006. We earned $13.6 billion from continuing operations, up significantly from the year before; we grew our major businesses – and the growth was high quality; and we positioned ourselves extremely well for 2007 and beyond.

In this letter, I will review and assess our 2006 performance and describe key initiatives and issues we are focusing on this year and in the future to make our company even better. I hope, after reading this letter, that you will share my enthusiasm about the emerging power and enormous potential of the JPMorgan Chase franchise.

First, let's look at 2006:

I. OUR PERFORMANCE IN 2006: PROGRESS AND RENEWED FOCUS

At JPMorgan Chase, we analyze our performance against a broad spectrum of measures, including growth, quality, risk management, marketing, collaboration, operations, controls and compliance. We continue to make significant progress on all these fronts. Although our absolute performance is not yet where it should be, the pace and level of improvement are extremely good and make us more confident than ever about our future.

Starting with "financial performance," we believe there are six key aspects of our overall 2006 performance that illustrate the progress we have made.

Strengthened financial performance

Our earnings from continuing operations for the year were **$13.6 billion**, up from **$8.3 billion** in 2005. Return on equity (excluding goodwill) was 20% versus 13%. Revenue growth – almost all organic – was 14%. These results, produced with the support of a still-favorable credit environment, are good, but not excellent. And in some cases, we still trail our major competitors.

While we're not yet top-tier in financial performance, we feel particularly good about a number of major issues. We essentially completed a huge, complex merger while staying focused on business and pursuing growth; we dramatically cut expenses and waste; and we increased investment spending. Integration risk – the potential to suffer major setbacks because of merger-related issues – is always a big challenge and source of concern. But superb execution throughout 2005 and 2006 has enabled us to put that risk mostly behind us.

Increased management discipline and collaboration

Ultimately, we will succeed or fail based upon the talent, dedication and diligence of our management team and the people who work with them. On this measure, you, our shareholders, should be extremely pleased. Your management team regularly reviews all aspects of our business in an open and honest way, assessing our strengths and weaknesses, and our opportunities and risks. The level of collaboration among business units is higher than ever and still getting better. Our top managers work well together, respect each other and take pride in each other's successes. As I have stressed in prior shareholder letters, getting people to work together across all business units is critical to our success.

Here are some examples of what we can achieve by working well together. In all of these cases, the management team came together – to review facts and critically analyze and reanalyze issues – in order to find the right answers for our clients and our company. We developed and executed a game plan without the destructive politics, silly game-playing and selfish arguments about revenue-sharing that can destroy healthy collaboration and undermine progress.

Establishing the Corporate Bank

Previously, our investment bankers played the lead role in managing our firm's relationships with large clients, even when a client might require non-investment-banking products and services, such as cash management, custody, asset management, certain credit and derivatives products, and others. The product salespeople outside our Investment Bank operated somewhat independently from the investment bankers. As a result, we were not managing our relationships with many of our largest clients in an integrated and coordinated way. Too many people were selling their own products without feeling accountable for JPMorgan Chase's overall relationship with the client.

Now, we have addressed this issue with dedicated corporate bankers who cover the treasurer's offices of our largest, longest-standing and most important clients. These corporate bankers, in partnership with our investment bankers, are focused on developing our entire relationship with our clients – orchestrating the coverage effort with regular account planning, client reviews and coordinated calling. This effort ultimately should add hundreds of millions of dollars to revenue and create happier clients.

Building the mortgage business – in Home Lending and the Investment Bank

Home Lending is one of the largest originators and servicers of mortgages in the United States. Separately, our Investment Bank has been working hard to build out its mortgage capabilities as the mortgage business overall has been undergoing fundamental change, i.e., mortgages are increasingly being packaged and sold to institutional investors rather than being held by the company that originates them.

Historically, our two businesses, Home Lending and the Investment Bank, barely worked together. In 2004, almost no Home Lending mortgages were sold through our Investment Bank. This past year, however, our Investment Bank sold 95% of the non-agency mortgages (approximately $25 billion worth) originated by Home Lending. As a result, Home Lending materially increased its product breadth and volume because it could distribute and price more competitively. This arrangement obviously helped our sales efforts, and the Investment Bank was able to build a better business with a clear, competitive advantage. In 2006, our Investment Bank moved up several places in the league-table rankings for mortgages. (Importantly, Home Lending maintained its high underwriting standards; more on this later.) We believe that we now have the opportunity to become one of America's best mortgage companies.

Growing credit card sales through retail branches

In 2006, we opened more than one million credit card accounts through our retail branches, up 74% over 2005. Retail and Card Services teams drove this progress by working together and analyzing every facet of the business, including product design, marketing, credit reporting, systems and staffing. It started slowly, but as we've learned together and innovated, we've been able to add increasingly more profitable new accounts. We have the ability to provide – almost instantaneously – preapproved credit to customers while they are opening other banking accounts with us. And, while respecting customer privacy, we now can offer better pricing because we can underwrite using both credit card and retail customer information. Over time, this competitive advantage will enable us to add more value and produce better results for customers and for JPMorgan Chase.

Approaching Asia holistically

Our Operating Committee members traveled to Asia late last year and reviewed how we were doing, country-by-country. The reviews spanned all lines of business. This process shed new light on our businesses, sharpened our focus on ways we could work together to improve performance and strengthened our resolve to execute aggressively. This year, the business plans in each country are not only appropriately more ambitious, but also better coordinated and fully supported by the rest of the company. As this effort is replicated in other parts of the world, we are confident it will strengthen our operations and opportunities.

Working better together

There are plenty of other examples where good collaboration has made us better. Our Commercial Banking clients last year generated over $700 million of investment banking revenue, up 30% from 2005. The merger made this possible by bringing top-tier Investment Bank products to an extensive Commercial Banking customer base. In addition, our Treasury & Securities Services group does a significant amount of business with our Commercial Banking client base. Our Asset Management group calls on Commercial Banking and Investment Bank customers, and works with investment bankers to identify clients who can benefit from our private banking services. Clients across all of our businesses use our branches. We can use this kind of disciplined and collaborative approach across our businesses to continue to build on the distinctive strength of our extensive capabilities and relationships.

Achieved quality growth, driving future growth

It's easy to grow short-term earnings: just stop investing in your company's future and compromise your standards on accepting new clients and business. We won't do that.

Virtually all of our businesses achieved real, healthy growth. You can see this described more fully in the pages ahead, so I'll just reflect on a few key items.

- Our goal is to accomplish real, sustainable growth, but not growth at any cost. In the financial services world, it is easy to stretch for growth by reducing underwriting standards or taking on increasingly higher levels of risk. But such an approach is foolish longer term. For example, last year we declined to underwrite negative amortization mortgage loans and option adjustable-rate mortgages. That may have hurt our 2006 earnings a bit, but we believe it was the right decision for the company.
- We're growing our earnings, but not at the expense of smart, longer-term investments. We continue to invest in the areas that drive future growth, such as 125 new retail branches last year, 900 additional salespeople in branches, 65 new private bankers to serve our ultra-high-net-worth clients and stronger trading businesses in mortgages, energy and other commodities.
- Where it made sense, we went outside our company and acquired great assets and businesses, such as the swap of our Corporate Trust business for 339 Bank of New York retail branches and the bank's commercial banking business. We also did smaller deals to supplement our student loan, hedge fund processing, asset management, trading and credit card businesses.
- These investments are not confined to the front office. We've invested hundreds of millions of dollars in new and improved systems, which I will discuss next. While there's a short-term cost for these investments, there's a long-term benefit of increased efficiency and improved quality.

Materially improved infrastructure and cost structure

We continued a massive investment plan in our systems and operating infrastructure while simultaneously reducing expenses.

- We completed major consolidations and mergers of our platforms: retail (deposit and teller), wholesale loan and Internet.

- We have built or are building six new data centers, and are upgrading and consolidating the more than 20 centers that we had three years ago. Through this effort, we're significantly enhancing our data networks storage and information technology risk capabilities.

- Virtually all of our businesses improved their margins while investing for the future. The single-most salient cost reduction came in our Corporate line. You may recall that in 2004 we said we would maintain at Corporate all of what we deemed to be "inefficient costs," i.e., costs borne by the businesses without receiving commensurate benefits and costs that were dramatically higher than they should have been. Examples included vacant real estate, outdated data centers, information technology costs that were sometimes two to three times what they should have been, or staff support costs that were simply too high.

  We moved these costs to Corporate so we could: a) see what the businesses were really earning; b) bring into sharp relief these Corporate expenses and put pressure on ourselves to reduce them; and c) hold the businesses accountable for clearly defined costs that they could control.

  Well, it worked. "Unallocated Corporate Overhead" was $2.4 billion in 2005, was $750 million in 2006 and is expected to be $200 million to $400 million in 2007.

Improved risk management

To be a great company, we must excel at risk management across all of our businesses – consumer, commercial and wholesale. We understand that some risks, or correlations of risks, are often unknowable, or when knowable, unpredictable as to timing. Later, I will talk about some of these risks we face going forward, but here I will simply review 2006. We think we did a fairly good job overall, though there are some areas – especially related to mortgage servicing rights – where we are working to do significantly better.

- Both consumer and wholesale credit performed well. More important, we stuck to certain disciplines that now are serving us well. We made judgment calls that reduced revenue and often appeared very conservative. And where we chose to underwrite subprime mortgages, we adhered to strict underwriting standards. We sold almost all of our 2006 subprime mortgage originations, but retained our capacity to hold such mortgages when we believe that it is more financially prudent to do so.

- Our Private Equity investments are now about $6 billion, a very comfortable 9% of tangible equity, down from more than 20% in 2003. We think our teams in this business are doing an outstanding job and believe we have many good opportunities to grow our Private Equity business.

- We successfully managed the interest-rate cycle to minimize its impact on results. We took action based upon constant analysis and back-testing of interest-rate moves in each and every product. More important, we have tried (and continue to try) to balance our exposures so that extreme rate moves (which didn't happen in 2006) don't hurt us significantly. So while flat or slightly inverted yield curves may squeeze margins for us (as they do for our competitors), we are not that concerned about it. Our big concern is to protect our company from major rate changes.

- We materially improved the quality, consistency and level of our trading results – a major focus in 2006. And we specifically mean results versus trading volatility. We want to earn a better average return on capital with growing revenue. We will accept more volatility, but we must be paid for the risk we're taking through increased revenue. In 2006 we did a bit of both. Volatility was down while trading revenue was up substantially, by almost $3 billion.

Our Investment Bank management team accomplished this improved risk management by: a) successfully building out new trading capabilities, such as mortgage and energy, which helped diversify trading risk; b) regular reporting and reviews, particularly of large risk positions; c) increasing focus and accountability on specific trading risk; and d) more actively managing overall exposures.

- We clearly can do better on Mortgage Servicing Rights (MSRs) than we did in 2006. MSRs are the present value of net revenue estimated to be received for servicing mortgages, i.e., billing and collecting. We service over $525 billion of mortgages, and our MSR is valued on our balance sheet at about $7.5 billion. It is a volatile, assumption-based asset that can swing in value from quarter to quarter, even when fully hedged.

  As we previously reported, our MSR asset and related hedges posted losses of almost $400 million in 2006, which is unacceptable. As a result, we've spent a lot of time improving our models to make them far more sophisticated and drilling down to examine repayment issues and other factors – state-by-state and product-by-product. We've worked closely with our Investment Bank to incorporate the best from all the models.

  It is essential we get this right, and we've made good progress. We think we're about 80% there. How we value and manage this asset will be either a competitive strength or weakness. Our degree of success is a key economic variable that can help us originate and distribute loans more inexpensively. Companies that manage MSRs incorrectly will give back a lot of previously booked profits. But companies that get it right – and we intend to be one of them – will have a huge competitive advantage in an extremely price-competitive business.

Picked up the pace

All in all, we feel that we've made about as much progress as we could have in 2006. As we move toward our final major merger-related integration – the conversion of our New York wholesale platform later this year – we are declaring the merger of JPMorgan Chase and Bank One to be essentially complete. So we are – in the best sense of the phrase – back to business as usual. And that is where you want us to be.

Back to business as usual means we are moving beyond working on major, one-off integration projects, and we are looking more and more to the future. We'll continue to focus on all the basics, like people and systems and compliance and audit, as well as waste-cutting and bureaucracy-busting. But we can also look clearly to the future and focus on initiatives that will set us apart by accelerating growth and helping us achieve excellent financial results. Our confidence is strong in our ability to do this because the teams that have already accomplished so much are simply updating their mission.

We are striving for sustained financial performance, including revenue growth, better margins and returns on capital that compare favorably with the best of our competitors.

Finally, back to business as usual means that while we are running our businesses better and generating good organic growth, we are also receptive to the mergers and acquisitions that make sense for shareholders. To be viable, these opportunities must clear three important hurdles: the price must be right, the business logic must be compelling and our ability to execute must be strong. It is on this last point that many deals fail, and it is on this last point that we now have confidence, earned by what we have already accomplished.

The ability to execute a merger is a key strength that we do not want to squander on a bad transaction. We do not intend to do anything that is not in our shareholders' interest. We are patient, our internal opportunities abound and our prospects are good without any acquisitions.

II. LOOKING AHEAD: KEY INITIATIVES AND ISSUES

There are six important initiatives or issues we are tackling to help us become what we truly want to be – a consistently high-performing, highly respected financial services company.

Improving quality and service

Now that our merger work and consolidations are mainly done, we are turning more attention to improving quality and service – from front to back. We mean this in an all-encompassing way, whether it's a customer's experience with a teller, straight-through processing, improved operations, call center performance, better automated cross-selling or dozens of other areas. This applies to anything that affects the customer – and anything that makes it easier or better for our people servicing the customer. It includes cutting down on errors, which cost our company money, slow us down and annoy the customer.

The outcome, we are convinced, will be happier customers and lower attrition, more cross-selling and lower costs associated with more automation and fewer problems. The good news is that we have the focus, the will and the people to do this. They're the same ones who already have delivered so much throughout our merger work and consolidations.

Raising productivity

While over the past few years we have devoted significant attention to waste-cutting and cost reduction, we are now focusing more broadly on productivity overall. An example would be how we assess the effectiveness of a sales force. A sales force might have the right number of salespeople and the right products, but productivity could still be enhanced in multiple ways: more sales per salesperson; more sales from new products or old products; same sales but higher profitability per sale; or same sales and same profits, but deeper relationships with customers.

To achieve consistently high margins and returns relative to the competition, we need to achieve high levels of productivity everywhere and every step of the way – at every business unit, in every branch, with every sales force, in all of our systems programming units and across all our product marketing. Any company, including ours, can lose focus or be sloppy in managing productivity at these levels. Here are a few examples of how we have improved productivity:

- *Investment Bank:* We determined that our bankers in the United States were covering too many clients, and it is expensive simply to cover a client. While revenue per banker was adequate, our product penetration per client was too low. So we reduced the number of clients each banker covers, and the results should be very positive: the client should end up getting more attention, the banker should do more business with the client, and our revenue should go up. Since we already had a complete product set for bankers to sell, and because there are increasingly more companies that need our services, it was a no-brainer to add bankers.

  The Investment Bank this year is also intensifying its focus on reducing middle-office and back-office support costs. Our non-compensation expenses are too high, and as the Investment Bank has developed better financial management tools, we're better equipped to attack these excessive support costs. We believe that these excess costs could be as much as $500 million.

- *Credit card marketing:* Last year we did a good job reducing our costs of attracting, opening and servicing new credit card accounts. But to maximize opportunities, we need to become better at matching products to customers; differentiating between the profitability of

new branch-generated accounts versus those generated across other channels, such as the Internet; determining what other business we should be doing with the new card holder; and ensuring that our current card holders have the right products and rewards programs. We already have made good strides: Cards with rewards programs are now 53% of our card outstandings, up from 32% in 2003. And accounts generated from direct-mail solicitations, which often come with low introductory rates (and higher attrition rates), are down to 32% from 55% in 2003. We have much more work to do to continue this progress.

- *Commercial Banking sales force management:* Now Commercial Banking rigorously tracks results and profitability by banker and by client. We have our bankers work with their clients to ensure that all clients are profitable to the firm and that all clients benefit from their relationship with the firm.
- *New products in Commercial Banking:* This past year Commercial Banking continued to expand its product offering. It added subordinated debt, mezzanine financing and even equity investing. We already had the clients. They just were going elsewhere for these products.
- *Private Bank:* We're making it easier for qualified individuals to do business with us, beginning with how they open new Private Bank accounts. In the past, they had to review at least six different documents and sign multiple times just to start working with us. Now, a new customer usually fills out only a one-page form and signs it only once. Everyone's happier, and we save some trees.

Increasing marketing creativity and focus

Our company needs to become better at marketing. And by marketing we don't mean more television ads or direct mail solicitations. We mean taking a sophisticated approach to identifying a group of customers, figuring out what they need and then delivering it to them better than anyone else. The opportunities are significant. We have multiple efforts under way, and we want to give you a few examples of them.

Develop a better offering for affluent clients

We believe we do a very good job serving our ultra-high-net-worth clients – those with more than $25 million of investable assets. But we can do a lot more for the hundreds of thousands of affluent households that fall below that ultra-high threshold.

Whether through our retail branches, our card business or our Private Client Services unit, we interact with tens of thousands of very wealthy individuals every day. But in many cases, we haven't identified them as affluent, or we haven't focused on providing them with the right set of products that is tailored to meet their unique needs. In 2007, we intend to do a comprehensive analysis of this affluent market, and then develop and begin to execute a game plan. The likely result will be better identification of affluent clients, solutions and rewards programs that cut across multiple products, more tailored products, and specialized marketing and servicing.

Use customer knowledge to refine products, upgrade service

Our customers trust us and give us a lot of information so we can know them better. While respecting a customer's privacy, we can use this information to make better-informed decisions about what to offer customers and how to evaluate them.

We've already mentioned how we can instantaneously offer an approved credit card to customers while they are opening a checking account. We can also underwrite the

credit better, i.e., offer more competitive pricing based upon our proprietary knowledge of the customer. We're working on many other similar initiatives where our knowledge of the customer pre-emptively positions us in businesses such as home equity, mortgage, auto, credit card, retail branches and small business.

Coordinate outreach to specific groups

There are many different subsets of customers we serve who would appreciate and benefit from a coordinated approach to their specific needs.

One clear example involves universities. Surprisingly, we had not coordinated our outreach to this lucrative market. Retail opened student checking accounts; Education Finance made student loans; Card Services issued credit cards to students and alumni; Commercial Banking financed schools and serviced cash management needs; and our Asset Management group managed university funds. We're fixing this by working on a synchronized effort where a specialized sales team can offer a fully coordinated package more effectively and more efficiently.

Expanding to serve consumers outside the United States

International consumer expansion is not without risk. So one of our first objectives has been to add senior individuals to our talent pool who are knowledgeable and experienced in the international consumer area. In addition, we are now analyzing and developing country-specific strategies so that we can focus our efforts on the most important opportunities. We are fortunate to have developed strong relationships and partnerships over the years, so we have people and companies we trust and can rely upon for advice and access to investment opportunities around the world.

There are some essential principles supporting this effort that we want our shareholders to understand.

- Because restrictions on acquisitions – and other laws and regulations – differ by country, our approach must differ by country. In some areas, we may acquire partial interests or controlling stakes in companies, while in others we may start de novo.
- We will not stretch excessively to make investments. We believe that in many parts of the world, it is not necessary to feel desperate, as if the opportunities will exist only for a fleeting moment. We believe that as JPMorgan Chase grows and strengthens, its opportunities will increase. We also believe that in five to 10 years, as some countries develop and change, new and exciting opportunities will emerge. For example, to the extent that we would consider a merger or acquisition in Europe, there are likely to be many more pan-European banks to choose from in the future. In China or India, we might be allowed to buy a controlling interest in a bank. The set of options available to my successor will be dramatically different from and possibly superior to the current set of options. With that in mind, the best thing I can do for her or him is pass on a strong JPMorgan Chase.

Managing critical risks

The first half of this letter mentions that we were fairly pleased with how we managed risk in 2006. But managing risk is a constant challenge. We never stop worrying about it. Before discussing some specific risk issues, we believe you should be able to take some comfort from these key facts:

- Our profit margins have increased substantially, creating our best cushion for risk.
- Our balance sheet is strong and getting stronger. Tier I Capital at the end of 2006 was 8.7%, and even with stock buybacks, it should stay strong because of our improving capital generation.
- Our loan loss reserves are strong, at 1.7% for both consumer and wholesale at the end of 2006.

Here are some specific risk issues:

Challenges in the credit world

We continuously analyze and measure our risk. In fact, during budget planning, we ask our management teams to prepare – on all levels – for difficult operating environments. While the risk comes in many forms, such as recession, market turmoil and geopolitical turbulence, one of our largest risks is still the credit cycle. Credit losses, both consumer and wholesale, have been extremely low, perhaps among the best we'll see in our lifetimes. We must be prepared for a return to the norm in the credit cycle.

The chart below shows a rough estimate of what could happen to credit costs over the business cycle – provided we do a good and disciplined job underwriting credit.

Annual potential net charge-off rates by business

	ACTUAL 2006	ESTIMATED THROUGH CYCLE
Investment Bank	(0.05%)	1.00%
Commercial Banking	0.05%	0.50%
Card Services	3.33%	5.00%
Retail Financial Services		
Home Equity	0.18%	0.30%
Home Lending	0.12%	0.42%
Prime Mortgage	0.04%	0.08%
Subprime Mortgage	0.31%	1.00%
Auto Finance	0.56%	0.75%
Business Banking	0.69%	1.30%

In a tougher credit environment, credit losses could rise significantly, by as much as $5 billion over time, which may require increases in loan loss reserves. Investment Bank revenue could drop, and the yield curve could sharply invert. This could have a significant negative effect on JPMorgan Chase's earnings. That said, these events generally do not occur simultaneously, and there would be normal mitigating factors for our earnings (e.g., compensation pools likely would go down, some customer fees and spreads would probably go up, and funding costs could decrease).

It's important to share these numbers with you, not to worry you, but to be as transparent as possible about the potential impact of these negative scenarios and to let you know how we are preparing for them. We do not know exactly what will occur or when, but we do know that bad things happen. There is no question that our company's earnings could go down substantially. But if we are prepared, we can both minimize the damage to our company and capitalize on opportunities in the marketplace.

Subprime mortgages: the good, the bad and possibly the ugly

THE GOOD

We did a lot of things right:

- We did not originate option ARMs or other negative amortization loans.
- We applied the same underwriting standards to all of our subprime loans, whether originated by us or purchased from third parties.
- We sold substantially all of our 2006 subprime originations. (We underwrite all of our subprime loans to be held; in fact, we prefer to hold and service these mortgages, but prices at the time of sale were too good to pass up.)
- We were very careful in certain parts of the United States and were especially careful to seek accurate property appraisals.

THE BAD

- Default rates were still higher than we had predicted.
- In hindsight, when underwriting subprime, we could have been even more conservative and less sensitive to market and competitor practices. We've now materially tightened certain underwriting standards on subprime mortgages.
- We don't expect that losses on our subprime loans would go up by more than about $150 million – not so bad, but we prefer it weren't so.

POSSIBLY THE UGLY

We do not yet know the ultimate impact of recent industry excesses and mismanagement in the subprime market. Bad underwriting practices probably extended into many mortgage categories. As government officials investigate the market and losses mount, the industry is tightening underwriting standards by reducing loan-to-value ratios and using more conservative property values. There will be more due diligence on incomes and credit quality. More rigid standards increase foreclosures and make it more difficult to buy homes. This will lead to a lower number of sales and a reduction in home values.

The good news is this is happening in a healthy job environment, which is still the most important determinant of good consumer credit. The subprime business is a great example of what happens when something good (the ability to help a lot more people buy homes) is taken to excess. Even so, we still believe that subprime mortgages could be a very good business, and that when it all sorts out, we will be well-positioned.

Enhancing our corporate social responsibility standards

Last year we wrote to you about how our company is a caring and generous institution. We try to help all of the communities in which we operate. We do this in multiple ways, ranging from charitable giving and diversity initiatives to the promotion of economic opportunity and development. This year, we are working to make these efforts more meaningful and to become more socially responsible in a variety of ways, including several described below:

We strive to be fair and ethical in our business practices

- A strong set of principles guides our actions and informs our decisions. We demand that our executives behave in accordance with these principles.
- We are dedicated to high-quality, responsibly marketed products and services.
- We continually innovate and work to improve the quality of life for our clients and communities.

We are helping to protect the environment

Last year, we took a number of important steps in this critical area:

- We raised $1.5 billion of equity for the wind power market, with approximately $650 million allocated to our own portfolio. Since its inception in 2003, our renewable energy portfolio has invested in 26 wind farms, now totaling approximately $1 billion.
- We published a series of corporate research reports concerning business and environmental linkages, including legal and regulatory risks related to climate change, and issues and opportunities in biofuels and the ethanol market.
- We trained more than 100 bankers globally to better implement our environmental and social risk policy.
- We completed our U.S. greenhouse gas emissions baseline, increased our investments in energy-efficient projects, and purchased renewable energy credits (green energy).
- We began building several green bank branches and are seeking Leadership in Energy and Environmental Design certification for the renovation of our world headquarters.

We plan to continue the momentum with the following steps:

- We are strengthening our team to better manage the environmental and social risks within our deal flow.
- We are increasing our investments in energy-efficient projects as part of our commitment to reduce our greenhouse gas emissions.
- We are strengthening our efforts to offer clients products and services that help them reduce their greenhouse gas emissions.
- We are continuing to advance the public policy debate on the environmental effectiveness and economic efficiency of greenhouse gas emission reductions.

We are deepening our community involvement

- We intend to work more closely with government officials, regulators, communities and responsible third parties to improve both public policy and our company.
- Our philanthropic investment program is strategically focused on enhancing life in the communities we serve. In 2006, JPMorgan Chase invested more than $110 million in nearly 500 cities across 33 nations. In addition, we reinvigorated our strategic focus toward funding organizations and programs that are addressing the most pressing needs in our communities.
- In 2007, the JPMorgan Chase Foundation is taking a disciplined approach to helping our customers, employees, shareholders and neighbors in three critical need areas we call Live, Learn, and Thrive. In "Live," we focus on basic needs, such as housing, job training, financial literacy and social inclusion. The area we call "Learn" focuses on helping young people succeed in the education process, from birth through higher education, especially in impoverished areas. To help our communities "Thrive," we support vital environmental, arts and cultural institutions and initiatives. This year, we are launching our "Community Renaissance Initiative" in eight key U.S. markets, dedicating a large percentage of our philanthropic funding, energy and expertise to substantially strengthen high-need neighborhoods.

III. A FEW CLOSING COMMENTS

Corporate governance: Board of Directors

I believe your Board is functioning extremely well. Its members are totally engaged in and dedicated to setting – and meeting – the highest standards of governance. Discussions about our people, our strategies, our opportunities, our priorities and our obligations are open and substantive. The quality and productivity of these conversations should be even better as we reduce the size of the Board to about 12 members.

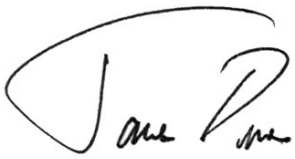
Compensation and ownership

While our Proxy Statement describes our philosophy in detail, I'd like to note here the key underpinnings of our compensation system: a) we believe a substantial portion of compensation should be tied to *performance*, particularly for senior employees; b) an ownership stake in the firm best *aligns our employees' and shareholders' interests*; c) compensation should be *market-based*; and d) we strive for *long-term orientation* both in the way we assess performance and in the way we structure compensation.

In addition, it's important to note some specifics:

- Your senior executive team received 50% of their incentive compensation in restricted stock units that vest over time.
- Your senior management team must keep 75% of all the stock they acquire from restricted stock units and option exercises until they leave the firm. I have held all of my stock compensation and plan to continue doing so.

- We have minimized personal perquisites, and have been particularly vigilant when it comes to club dues, car allowances and financial planning services.
- We believe pay should relate to building a company with sustained good performance. There is no magic in a single quarter or year, and we try to recognize when a friendly market, rather than excellent performance, lifts results.
- We provide senior managers limited pension and deferred-compensation programs. Also, we do not match the 401(k) plan contributions of our highest-paid employees, while we provide that benefit for most other U.S. employees.
- To recognize their hard work and to make them owners of the company, we made a special contribution worth $400 in stock to the 401(k) accounts of eligible lower-paid employees (and a comparable cash grant to similar employees outside the United States). This grant created about 12,100 new 401(k) participants and about 17,400 new JPMorgan Chase shareholders. I hope they will become regular 401(k) contributors and long-term investors. In all, more than 115,000 of our colleagues are now JPMorgan Chase shareholders.



A fond farewell to our dedicated directors and Bill Harrison

I would like to thank retiring Board members John Biggs, Jack Kessler and Richard Manoogian for their long and distinguished service to our company.

And finally, I would like to thank Bill Harrison, my friend and partner, who retired as Chairman last year. We – and I – were blessed to have such a great, thoughtful leader. To Bill and his many great predecessors, we owe thanks for bequeathing to us this extraordinary opportunity.

One last, optimistic thought

We have an outstanding strategic position, a great brand, strong character, fantastic employees and a remarkable future. I am privileged to lead this company. I don't think we know yet how good we can be.

James Dimon
Chairman and Chief Executive Officer

INVESTMENT BANK

JPMorgan is one of the world's leading investment banks, with deep client relationships and broad product capabilities. Our clients are corporations, financial institutions, governments and institutional investors.

We offer our clients a full range of investment banking products and services in all major capital markets, including advising on corporate strategy and structure, capital raising in equity and debt markets, sophisticated risk management, market-making in cash securities and derivative instruments, and research. We have global leadership positions in all our key products, and our full platform enables us to develop some of the most complete and innovative financial solutions in the industry. We also commit the firm's own capital to proprietary investing and trading activities. We continue to strengthen our platform through organic growth and selective acquisitions, and by developing new products to meet the evolving needs of our clients.

2006 HIGHLIGHTS

- **#1 in Investment Banking fees[(a)].**
- **#2 in Global Debt, Equity and Equity-related[(b)].**
- **#1 in both global loan syndications and global high yield bonds for the second year in a row[(b)].**
- **#1 provider of financial products to sponsor clients[(a)].**
- **IFR's "Global Interest Rate and Commodities Derivatives House of the Year."**
- **Risk's "Energy Derivatives House of the Year."**
- **Named in BusinessWeek's Top 10 "Best Places to Launch Your Career."**

MAJOR 2006 ACCOMPLISHMENTS

- Record annual revenue, with record performance in IB fees, Fixed Income and Equity Markets.
- Reduced trading volatility through disciplined management and increased diversification, while achieving a record level of markets-related revenue.
- Strong progress on growth initiatives:
  - Energy and Securitized Products platforms largely built out in the U.S;
  - Added over 100 distributors, including Fidelity in the United States, for our Retail Structured Products business; and,
  - Strong Emerging Markets performance locally in the Europe, Middle East & Africa region; and in Latin America.
- Continued leverage of the firmwide platform through cross-selling products with Home Lending, Commercial Banking, Asset Management and Treasury & Securities Services.
- Strong expense discipline, with noncompensation expense up 4%, while revenue grew 25%.

2007 AND BEYOND

- Continue build-out of Energy and Securitized Products platforms, particularly in Europe and Asia.
- Capitalize on market opportunity in Pension Advisory and Risk Management.
- Expand manufacturing and distribution of Structured Products to retail clients.
- Build emerging markets presence through organic growth and through the pursuit of joint ventures and partnerships in select countries, particularly in Asia.
- Selectively expand principal investing capabilities.
- Continue to enhance discipline around risk, capital allocation and expenses.
- Fund investments in revenue growth through continued productivity savings.
- Attract, develop and retain the best talent in the industry.

RETAIL FINANCIAL SERVICES

Retail Financial Services helps meet the financial needs of consumers and businesses. We provide convenient consumer banking through the nation's fourth-largest branch network and third-largest ATM network. We are a top-five mortgage originator and servicer, the second-largest home equity originator, the largest noncaptive originator of automobile loans and one of the largest student loan originators.

We serve customers through more than 3,000 bank branches, 8,500 ATMs and 270 mortgage offices; and through relationships with more than 15,000 auto dealerships and 4,300 schools and universities. More than 11,000 branch salespeople assist customers with checking and savings accounts; mortgage, home equity and business loans; investments; and insurance across our 17-state footprint from New York to Arizona. More than 1,200 additional mortgage officers provide home loans throughout the country.

2006 HIGHLIGHTS

- Increased branch sales force 9%; and increased branch sales production, including credit cards 74% and investments 34%.
- Increased checking accounts 14%, to 10 million, and deposits 12%, to $204 billion.
- Increased Business Banking loan originations 22%, to $5.7 billion.
- Increased active online customer base 35%; generated 187 million online transactions, including bill payment and electronic payment, up 35%.
- Added 438 net new branches, including 339 acquired from The Bank of New York; and 1,194 ATMs, including 400 acquired from The Bank of New York and 500 placed in Walgreens stores throughout Florida, Colorado and Louisiana.

MAJOR 2006 ACCOMPLISHMENTS

- Expanded our leadership position in the highly attractive New York metropolitan area through the acquisition of The Bank of New York's consumer banking business, which added $12 billion in deposits.
- Purchased and integrated Collegiate Funding Services to expand the education lending business.
- Completed technology conversion in the New York Tri-state area; now serving all Chase-branded branches on the same state-of-the-art platform.
- Completed the Chase rebranding of remaining Bank One branches and ATMs.
- Expanded originations of alternative mortgage products – leveraging distribution capabilities in the Investment Bank – to serve changing consumer needs, while maintaining disciplined underwriting practices.

2007 AND BEYOND

- Improve customer cross-selling through continued expansion of the sales force and achieve double-digit growth in branch sales of mortgages, investments and credit cards.
- Invest in 125 to 150 additional branch locations annually, using disciplined and analytical approach to select markets and sites within markets.
- Convert The Bank of New York branches to the Chase technology platform in first half of 2007, refurbish those branches, and upgrade the sales process and customer experience.
- Continue to respond to changing residential lending environment; upgrade and consolidate mortgage origination and servicing technology by year-end 2008 to improve customer experience and increase operating efficiencies.

CARD SERVICES

With more than 154 million cards in circulation and $153 billion in managed loans, Chase Card Services is one of the nation's largest credit card issuers. Customers used Chase cards for more than $339 billion worth of transactions in 2006.

We offer a wide variety of general-purpose cards to satisfy the needs of individual consumers, small businesses and partner organizations, including cards issued with AARP, Amazon, Continental Airlines, Marriott, Southwest Airlines, Sony, United Airlines, Walt Disney Company and many other well-known brands and organizations. We also issue private-label cards with Circuit City, Kohl's, Sears Canada and BP.

Chase Paymentech Solutions, LLC, a joint venture with JPMorgan Chase and First Data Corporation, is the largest processor of MasterCard and Visa payments in the world, handling over 18 billion transactions in 2006.

2006 HIGHLIGHTS

- **Second-largest MasterCard/Visa credit card issuer in the United States[(a)].**
- **Largest merchant acquirer in the world through Chase Paymentech Solutions, LLC[(a)].**
- **Fourth-largest private-label credit card issuer in the United States[(a)].**
- **Increased overall profitability and grew managed loans while investing in activities to attract new customers and further engage current cardmembers.**
- **The Chase Home Improvement, Borders and BP Visa rewards card programs were included on list of 10 best cards of 2006 by IndexCreditCards.com.**

MAJOR 2006 ACCOMPLISHMENTS

- Added 15.9 million new Visa, MasterCard and private-label accounts.
- Launched innovative Chase Freedom[sm] program, the first card to give cardmembers the choice of earning either cash or points and changing back without leaving any rewards behind.
- Continued to build our private-label business through new partnerships with BP, Kohl's and Pier 1 Imports, Inc.
- Increased merchant processing volume to $661 billion, up 17% from 2005.
- Expanded judgmental lending and instant-credit decision-making capabilities.
- Continued to be market leader in contactless technology, with more than 7 million "blink" enabled Chase cards issued.
- Increased sales on the Sears Canada portfolio and launched our first new Canadian Visa product, the Chase Marriott Rewards Visa Card.

2007 AND BEYOND

- Establish Chase as an iconic brand by continually delivering on our brand promise through our employees, advertising and innovative products and services.
- Drive superior long-term growth in profits, customers, managed loans and sales by building customer value and reducing operating cost per account through investments in marketing and technology initiatives.
- Expand the markets we serve to reach a broader base of consumers, including the small-business, student, Hispanic and private-label segments.
- More effectively cross-sell credit card and bank products to the firm's customers, offering superior product sets and customer service.

COMMERCIAL BANKING

Commercial Banking serves more than 30,000 clients, including corporations, municipalities, financial institutions and not-for-profit entities. These clients generally have annual revenues ranging from $10 million to $2 billion. Commercial bankers serve clients nationally throughout the retail branch footprint and in offices located in other major markets. We are the #1 commercial bank in our retail branch footprint.

Commercial Banking offers its clients industry knowledge, experience, a dedicated service model, comprehensive solutions and local expertise. The firm's broad platform positions us to deliver extensive product capabilities – including lending, treasury services, investment banking and asset management – to meet our clients' U.S. and international financial needs.

2006 HIGHLIGHTS

- **#1 commercial bank in market penetration in Chase's retail branch footprint, almost double that of the next leading competitor[a].**
- **#1 in overall customer satisfaction among large bank providers – 93% of clients surveyed are highly satisfied with our bankers[b].**
- **#2 asset-based lender in the United States[c].**
- **Generated record gross investment banking revenues of $716 million.**

MAJOR 2006 ACCOMPLISHMENTS

- Significantly increased cross-selling efforts with 30% growth in gross investment banking revenues and 9% growth in Treasury Services revenues.
- Completed both a major loan conversion, which impacted more than 14,000 clients with approximately $25 billion in loan balances, and several treasury services migrations to target platforms.
- Enhanced discipline in and accountability for the sales process through improved monthly metrics reports, business reviews and coaching.
- Added approximately 2,000 banking relationships, $2.3 billion in loans and $1.2 billion in liability balances from the acquisition of The Bank of New York's middle-market business.
- Created Chase Capital Corporation, which provides our clients with additional financing alternatives including mezzanine and second-lien loans as well as preferred equity.
- Opened five new offices to expand coverage in Des Moines (IA), Charlotte (NC), Orlando (FL), Denver (CO) and Princeton (NJ).

2007 AND BEYOND

- Increase prospect conversion through accelerated calling efforts and targeted marketing initiatives.
- Grow U.S. and international revenue by providing clients with more comprehensive solutions leveraging our Treasury & Securities Services, Asset Management and Investment Bank platforms.
- Continue to improve product and service offerings to clients through additional cash management tools, technology enhancements and alternative capital solutions.
- Outperform peers in credit through active portfolio management and superior underwriting standards, while effectively using capital and resources.
- Strengthen our workforce through key talent development, training and diversity initiatives.
- Convert our wholesale New York Tri-state customer base to the target deposit system; complete the migration of customers acquired in The Bank of New York transaction to the firm's platforms.

TREASURY & SECURITIES SERVICES

Treasury & Securities Services is a global leader in transaction, investment and information services that support the needs of institutional clients worldwide. We are one of the world's largest cash management providers and a leading global custodian, operating through two divisions:

Treasury Services provides cash management products, trade finance and logistics solutions, wholesale card products, and short-term liquidity management capabilities to small and mid-sized companies, multinational corporations, financial institutions and government entities.

Worldwide Securities Services stores, values, clears and services securities and alternative investments for investors and broker-dealers; and manages depositary receipts programs globally.

2006 HIGHLIGHTS

- **Increased assets under custody 30%, to $13.9 trillion; and liability balances 22%, to $190 billion.**
- **Double-digit growth in Automated Clearing House Originations (up 18%), International Electronic Funds Transfer volume (up 62%) and U.S. Dollar Clearing volume (up 10%).**
- **#1 in Same Day U.S. Dollar Funds Transfers[a], Automated Clearing House Originations[b], CHIPS[c] and Fedwire[d].**
- **Industry awards included Best Overall Bank for Cash Management in North America (Global Finance), Securities Services Provider of the Year (The Banker) and #1 Global Liquidity Capabilities (Euromoney).**

MAJOR 2006 ACCOMPLISHMENTS

- Completed the purchase of the middle- and back-office operations of Paloma Partners Management Company, an investment funds management group, and closed the sale of select corporate trust businesses to The Bank of New York.
- Achieved all 2006 merger goals, including completion of the largest U.S. dollar clearing conversion in banking history.
- Introduced innovative products for automating healthcare claims reimbursement, for simplifying electronic payments for large corporations and government agencies, and for international check imaging.
- Built out the global investment operations outsourcing platform, securing two key deals and completing two major client conversions.
- Enhanced partnerships with businesses across JPMorgan Chase, increasing the number of Investment Bank referrals 13% and Business Banking transactions 10%.

2007 AND BEYOND

- Complete merger- and efficiency-related platform retirements and client migrations, including conversions to target billing, liquidity, sweep and deposit platforms.
- Expand alternative investment services, the global investment operations outsourcing platform, depositary receipts, liquidity management, foreign exchange and securities lending.
- Focus on international growth, particularly in Europe, the Middle East, Latin America, China and India.
- Leverage the Investment Bank, Commercial Banking and Asset Management to deliver a broad range of offerings in meeting client needs.
- Achieve market differentiation by delivering client service that is superior to that of our competition.
- Focus on productivity and expense control to maximize net income and fund investments in the business, including investments in technology and people.

ASSET MANAGEMENT

With assets under supervision of $1.3 trillion, Asset Management is a global leader in investment and wealth management. Our clients include institutions, retail investors and high-net-worth individuals in every major market throughout the world.

We offer global investment management in equities, fixed income, real estate, hedge funds, private equity and liquidity, including both money market instruments and bank deposits. We also provide trust and estate and banking services to high-net-worth clients, and retirement services for corporations and individuals. The majority of our client assets are in actively managed portfolios.

2006 HIGHLIGHTS

- **Assets under management reached $1.0 trillion, with a total of $1.3 trillion assets under supervision.**
- **Largest global hedge fund manager with assets under management of $34 billion[a].**
- **JPMorgan Prime Money Market Fund became the first money market fund to reach $100 billion.**
- **Reached $100 billion in retirement assets.**
- **Became one of the largest Sino-foreign fund houses in China within two years of launching a joint venture with Shanghai International Trust & Investment Corporation (SITICO).**

MAJOR 2006 ACCOMPLISHMENTS

- Continued to deliver strong investment performance. Globally, 79% of our long-term mutual fund assets were ranked in first- or second-quartile funds for the five years ended December 31, 2006.
- Continued significant growth in our European business. Ranked second for net sales of all retail long-term mutual funds, with 2006 net sales of $19.7 billion[b].
- Achieved record performance with 20% revenue growth and 16% earnings growth.
- Net assets under management inflows were at a record level of $89 billion.
- Experienced record growth of net new clients in the Private Bank.
- Grew alternative assets under management including hedge funds, real estate, private equity and currency, by 35%, to $100 billion. Continued to experience strong investor interest in Highbridge funds with 97% growth in assets under management during 2006.
- Acquired CCA Strategies, an employee benefits and compensation consulting firm that will extend our retirement services capabilities to better respond to the needs of our clients.

2007 AND BEYOND

- Deliver strong investment performance through rigorous review of investment strategies and diversification of investment processes, and by attracting and retaining the best investment talent in the world.
- Expand third-party distribution of our investment management products and services, capitalizing on industry shifts toward open architecture and outsourcing of asset management.
- Respond to increasing demand for absolute-return investing by expanding our offering of alternative products globally and staying at the forefront of that move.
- Grow our 401(k) business and IRA rollover retail channels, at both the corporate and participant levels, as we leverage our connectivity with the rest of the firm.
- Extend our Private Bank and Private Client Services footprint, gain efficiencies and expand Private Client Services investment offerings.

CORPORATE CITIZENSHIP

JPMorgan Chase is committed to building vibrant communities, preserving our environment and promoting an inclusive culture that benefits our shareholders, customers, employees, neighbors and future generations. Corporate citizenship is fundamental to our success as a firm.

Our investment in programs that enable people to live, learn and thrive helps enhance the quality of the communities we serve. We contribute our leadership guidance, expertise and financial resources to help strengthen neighborhoods across the globe.

Inside our firm, we are building an inclusive culture in which everyone has the opportunity to contribute, develop and succeed based upon their talents and skills. In an increasingly global economy, we view the diverse experiences and perspectives of our people as a critical asset.

MAJOR 2006 ACCOMPLISHMENTS

- Invested more than $110 million in the communities we serve by supporting in excess of 2,800 not-for-profit organizations globally. We carefully select partners that promote economic stability, improve access to quality education and inspire communities through the celebration of arts and culture. Our investments span the globe, positively impacting communities in nearly 500 cities across 33 countries.
- Achieved significant progress toward our 10-year pledge to invest $800 billion in low- and moderate-income communities in the U.S. – the largest commitment by any bank focused on mortgages, small-business lending and community development. In 2006, we committed $87 billion, with total investment to date of $241 billion in the third year of the program.
- Played a leadership role in the creation of The New York Acquisition Fund, along with 15 lenders and in conjunction with six foundations and the City of New York. The Fund is a $230 million initiative to finance the acquisition of land and buildings to be developed and/or preserved for affordable housing.
- Led the effort to raise $1.5 billion of equity for the wind power market in 2006, with approximately $650 million allocated to our own portfolio. The firm's renewable energy portfolio now comprises approximately $1 billion of equity investments in 26 wind farms since its inception in 2003.
- Trained more than 100 bankers globally to better implement our environmental and social risk policy as part of our environmental risk management efforts.
- Completed our U.S. greenhouse gas emissions baseline, increased our investments in energy efficiency projects and purchased renewable energy credits (green energy).
- Built upon our commitment to supplier diversity, having spent in 2006 in excess of $500 million with minority- and women-owned business enterprises – expenditures that increased even in light of an overall decrease in provider spending.

2007 AND BEYOND

- Focus on increasing the social return, reach and impact of each dollar we invest in the community.
- Build and leverage employee volunteerism to improve our overall effectiveness and impact across the many neighborhoods we serve.
- Continue seeking out partners that are best positioned to help us deliver our mission of building vibrant communities that enable its members to live, learn and thrive.
- Maintain momentum toward our 10-year, $800 billion commitment to invest in communities across the U.S.
- Deepen our commitment to environmental awareness and continue developing financial products that will help our clients reduce their greenhouse gas emissions.
- Continue our leadership in the area of supplier diversity while expanding our efforts to do business with other disadvantaged groups.
- Continue developing at all levels a global pool of diverse talent to help us serve the unique and diverse needs of our customer base.

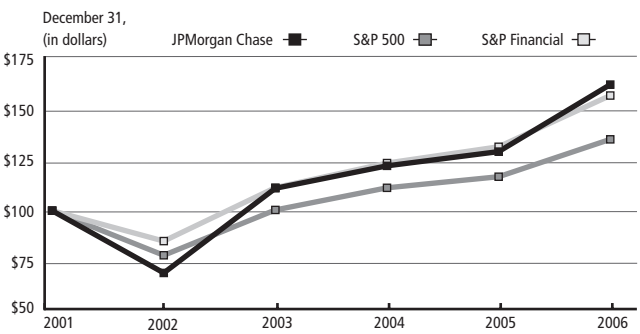
(a) On October 1, 2006, JPMorgan Chase & Co. completed the exchange of selected corporate trust businesses for the consumer, business banking and middle-market banking businesses of The Bank of New York Company Inc. The results of operations of these corporate trust businesses are being reported as discontinued operations for each of the periods presented.

(b) JPMorgan Chase's common stock is listed and traded on the New York Stock Exchange, the London Stock Exchange Limited and the Tokyo Stock Exchange. The high, low and closing prices of JPMorgan Chase's common stock are from The New York Stock Exchange Composite Transaction Tape.

(c) Represents Net income divided by Total average assets.



(d) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.

FIVE-YEAR STOCK PERFORMANCE

The following table and graph compare the five-year cumulative total return for JPMorgan Chase & Co. ("JPMorgan Chase" or the "Firm") common stock with the cumulative return of the S&P 500 Stock Index and the S&P Financial Index. The S&P 500 Index is a commonly referenced U.S. equity benchmark consisting of leading companies from different economic sectors. The S&P Financial Index is an index of 88 financial companies, all of which are within the S&P 500. The Firm is a component of both published industry indices.

The following table and graph assume $100 invested on December 31, 2001, in JPMorgan Chase common stock and $100 invested at that same time in each of the S&P indices. The comparison assumes that all dividends are reinvested.

	2001	2002	2003	2004	2005	**2006**
JPMorgan Chase	$ 100.00	$ 69.29	$ 111.06	$ 122.13	$ 129.15	**$ 162.21**
S&P Financial Index	100.00	85.00	111.38	123.50	131.53	**156.82**
S&P 500	100.00	78.00	100.37	111.29	116.76	**135.20**

This section of the Annual Report provides management's discussion and analysis ("MD&A") of the financial condition and results of operations for JPMorgan Chase. See the Glossary of terms on pages 145–146 for definitions of terms used throughout this Annual Report. The MD&A included in this Annual Report contains statements that are forward-looking within the meaning of the Private Securities Litigation Reform Act of 1995. Such statements are based upon the current beliefs and expectations of JPMorgan Chase's management and are subject to significant risks and uncertainties. These risks and uncertainties could cause JPMorgan Chase's results to differ materially from those set forth in such forward-looking statements. Certain of such risks and uncertainties are described herein (see Forward-looking statements on page 147 of this Annual Report) and in the JPMorgan Chase Annual Report on Form 10-K for the year ended December 31, 2006 ("2006 Form 10-K"), in Part I, Item 1A: Risk factors, to which reference is hereby made.

INTRODUCTION

JPMorgan Chase & Co., a financial holding company incorporated under Delaware law in 1968, is a leading global financial services firm and one of the largest banking institutions in the United States, with $1.4 trillion in assets, $115.8 billion in stockholders' equity and operations worldwide. The Firm is a leader in investment banking, financial services for consumers and businesses, financial transaction processing, asset management and private equity. Under the JPMorgan and Chase brands, the Firm serves millions of customers in the United States and many of the world's most prominent corporate, institutional and government clients.

JPMorgan Chase's principal bank subsidiaries are JPMorgan Chase Bank, National Association ("JPMorgan Chase Bank, N.A."), a national banking association with branches in 17 states; and Chase Bank USA, National Association ("Chase Bank USA, N.A."), a national bank that is the Firm's credit card issuing bank. JPMorgan Chase's principal nonbank subsidiary is J.P. Morgan Securities Inc., the Firm's U.S. investment banking firm.

JPMorgan Chase's activities are organized, for management reporting purposes, into six business segments, as well as Corporate. The Firm's wholesale businesses comprise the Investment Bank, Commercial Banking, Treasury & Securities Services and Asset Management segments. The Firm's consumer businesses comprise the Retail Financial Services and Card Services segments. A description of the Firm's business segments, and the products and services they provide to their respective client bases, follows.

Investment Bank
JPMorgan is one of the world's leading investment banks, with deep client relationships and broad product capabilities. The Investment Bank's clients are corporations, financial institutions, governments and institutional investors. The Firm offers a full range of investment banking products and services in all major capital markets, including advising on corporate strategy and structure, capital raising in equity and debt markets, sophisticated risk management, market-making in cash securities and derivative instruments, and research. The Investment Bank ("IB") also commits the Firm's own capital to proprietary investing and trading activities.

Retail Financial Services
Retail Financial Services ("RFS"), which includes Regional Banking, Mortgage Banking and Auto Finance reporting segments, helps meet the financial needs of consumers and businesses. RFS provides convenient consumer banking through the nation's fourth-largest branch network and third-largest ATM network. RFS is a top-five mortgage originator and servicer, the second-largest home equity originator, the largest noncaptive originator of automobile loans and one of the largest student loan originators.

RFS serves customers through more than 3,000 bank branches, 8,500 ATMs and 270 mortgage offices, and through relationships with more than 15,000 auto dealerships and 4,300 schools and universities. More than 11,000 branch salespeople assist customers, across a 17-state footprint from New York to Arizona, with checking and savings accounts, mortgage, home equity and business loans, investments and insurance. Over 1,200 additional mortgage officers provide home loans throughout the country.

Card Services
With more than 154 million cards in circulation and $152.8 billion in managed loans, Chase Card Services ("CS") is one of the nation's largest credit card issuers. Customers used Chase cards for over $339 billion worth of transactions in 2006.

Chase offers a wide variety of general-purpose cards to satisfy the needs of individual consumers, small businesses and partner organizations, including cards issued with AARP, Amazon, Continental Airlines, Marriott, Southwest Airlines, Sony, United Airlines, Walt Disney Company and many other well-known brands and organizations. Chase also issues private-label cards with Circuit City, Kohl's, Sears Canada and BP.

Chase Paymentech Solutions, LLC, a joint venture with JPMorgan Chase and First Data Corporation, is the largest processor of MasterCard and Visa payments in the world, having handled over 18 billion transactions in 2006.

Commercial Banking
Commercial Banking ("CB") serves more than 30,000 clients, including corporations, municipalities, financial institutions and not-for-profit entities. These clients generally have annual revenues ranging from $10 million to $2 billion. Commercial bankers serve clients nationally throughout the RFS footprint and in offices located in other major markets.

Commercial Banking offers its clients industry knowledge, experience, a dedicated service model, comprehensive solutions and local expertise. The Firm's broad platform positions CB to deliver extensive product capabilities – including lending, treasury services, investment banking and asset management – to meet its clients' U.S. and international financial needs.

Treasury & Securities Services
Treasury & Securities Services ("TSS") is a global leader in providing transaction, investment and information services to support the needs of institutional clients worldwide. TSS is one of the largest cash management providers in the world and a leading global custodian. Treasury Services ("TS") provides a variety of cash management products, trade finance and logistics solutions, wholesale card products, and liquidity management capabilities to small and midsized companies, multinational corporations, financial institutions and government entities. TS partners with the Commercial Banking, Retail Financial Services and Asset Management businesses to serve clients firmwide. As a result, certain TS revenues are included in other segments' results. Worldwide Securities Services ("WSS") stores, values, clears and services securities and alternative investments for investors and broker-dealers; and manages Depositary Receipt programs globally.

Asset Management
With assets under supervision of $1.3 trillion, Asset Management ("AM") is a global leader in investment and wealth management. AM clients include institutions, retail investors and high-net-worth individuals in every major market throughout the world. AM offers global investment management in equities, fixed income, real estate, hedge funds, private equity and liquidity, including both money market instruments and bank deposits. AM also provides trust and estate and banking services to high-net-worth clients, and retirement services for corporations and individuals. The majority of AM's client assets are in actively managed portfolios.

Merger with Bank One Corporation

Effective July 1, 2004, Bank One Corporation ("Bank One") merged with and into JPMorgan Chase & Co. (the "Merger"). As a result of the Merger, each outstanding share of common stock of Bank One was converted in a stock-for-stock exchange into 1.32 shares of common stock of JPMorgan Chase & Co. The Merger was accounted for using the purchase method of accounting. Accordingly, the Firm's results of operations for 2004 include six months of heritage JPMorgan Chase results and six months of the combined Firm's results. For additional information regarding the Merger, see Note 2 on pages 95–96 of this Annual Report.

2006 Business events

Acquisition of the consumer, business banking and middle-market banking businesses of The Bank of New York in exchange for selected corporate trust businesses, including trustee, paying agent, loan agency and document management services
On October 1, 2006, JPMorgan Chase completed the acquisition of The Bank of New York Company, Inc.'s ("The Bank of New York") consumer, business banking and middle-market banking businesses in exchange for selected corporate trust businesses plus a cash payment of $150 million. This acquisition added 339 branches and more than 400 ATMs, and it significantly strengthens RFS's distribution network in the New York Tri-state area. The Bank of New York businesses acquired were valued at a premium of $2.3 billion; the Firm's corporate trust businesses that were transferred (i.e., trustee, paying agent, loan agency and document management services) were valued at a premium of $2.2 billion. The Firm also may make a future payment to The Bank of New York of up to $50 million depending on certain new account openings. This transaction included the acquisition of approximately $7.7 billion in loans and $12.9 billion in deposits from The Bank of New York. The Firm also recognized core deposit intangibles of $485 million which will be amortized using an accelerated method over a 10 year period. JPMorgan Chase recorded an after-tax gain of $622 million related to this transaction in the fourth quarter of 2006.

JPMorgan Partners management
On August 1, 2006, the buyout and growth equity professionals of JPMorgan Partners ("JPMP") formed an independent firm, CCMP Capital, LLC ("CCMP"), and the venture professionals separately formed an independent firm, Panorama Capital, LLC ("Panorama"). The investment professionals of CCMP and Panorama continue to manage the former JPMP investments pursuant to a management agreement with the Firm.

Sale of insurance underwriting business
On July 1, 2006, JPMorgan Chase completed the sale of its life insurance and annuity underwriting businesses to Protective Life Corporation for cash proceeds of approximately $1.2 billion, consisting of $900 million of cash received from Protective Life Corporation and approximately $300 million of preclosing dividends received from the entities sold. The after-tax impact of this transaction was negligible. The sale included both the heritage Chase insurance business and the insurance business that Bank One had bought from Zurich Insurance in 2003.

Acquisition of private-label credit card portfolio from Kohl's Corporation
On April 21, 2006, JPMorgan Chase completed the acquisition of $1.6 billion of private-label credit card receivables and approximately 21 million accounts from Kohl's Corporation ("Kohl's"). JPMorgan Chase and Kohl's have also entered into an agreement under which JPMorgan Chase will offer private-label credit cards to both new and existing Kohl's customers.

Collegiate Funding Services
On March 1, 2006, JPMorgan Chase acquired, for approximately $663 million, Collegiate Funding Services, a leader in education loan servicing and consolidation. This acquisition included $6 billion of education loans and will enable the Firm to create a comprehensive education finance business.

Acquisition of certain operations from Paloma Partners
On March 1, 2006, JPMorgan Chase acquired the middle and back office operations of Paloma Partners Management Company ("Paloma"), which was part of a privately owned investment fund management group. The parties also entered into a multiyear contract under which JPMorgan Chase will provide daily operational services to Paloma. The acquired operations have been combined with JPMorgan Chase's current hedge fund administration unit, JPMorgan Tranaut.

JPMorgan and Fidelity Brokerage Company
On February 28, 2006, the Firm announced a strategic alliance with Fidelity Brokerage to become the exclusive provider of new issue equity securities and the primary provider of fixed income products to Fidelity's brokerage clients and retail customers, effectively expanding the Firm's existing distribution platform.

EXECUTIVE OVERVIEW

This overview of management's discussion and analysis highlights selected information and may not contain all of the information that is important to readers of this Annual Report. For a more complete understanding of events, trends and uncertainties, as well as the capital, liquidity, credit and market risks, and the Critical accounting estimates, affecting the Firm and and its various lines of business, this Annual Report should be read in its entirety.

Financial performance of JPMorgan Chase

Year ended December 31, (in millions, except per share and ratio data)	2006	2005	Change
Selected income statement data			
Net revenue	**$ 61,437**	$ 53,748	14%

Income from continuing operations	**$ 3.82**	$ 2.32	65%
Net income	**4.04**	2.38	70
Return on common equity ("ROE")			
Income from continuing operations	**12%**	8%	
Net income	**13**	8	

Business overview

The Firm reported record 2006 net income of $14.4 billion, or $4.04 per share, compared with net income of $8.5 billion, or $2.38 per share, for 2005. The return on common equity was 13% compared with 8% in 2005. Reported results include discontinued operations related to the exchange of selected corporate trust businesses for the consumer, business banking and middle-market banking businesses of The Bank of New York. Discontinued operations produced $795 million of net income in 2006 compared with $229 million in the prior year. The primary driver of the increase was a one-time gain of $622 million related to the sale of the corporate trust business (for further information on discontinued operations see Note 3 on page 97 of this Annual Report). Income from continuing operations was a record $13.6 billion, or $3.82 per share, compared with $8.3 billion, or $2.32 per share, for 2005. For a detailed discussion of the Firm's consolidated results of operations, see pages 28–31 of this Annual Report.

Effective December 31, 2006, William B. Harrison, Jr. retired as Chairman of the Board and was succeeded as Chairman by Chief Executive Officer James Dimon.

The Firm's record 2006 results were affected positively by global economic conditions, investment in each line of business and the successful completion of milestones in the execution of its Merger integration plan. A key milestone related to the Merger integration was the New York Tri-state consumer conversion, which linked the Firm's more than 2,600 branches in 17 states on a common systems platform (excluding 339 branches acquired from The Bank of New York on October 1, 2006). The Tri-state conversion, along with many other merger integration activities, resulted in continued efficiencies. As a result the Firm made significant progress toward reaching its annual merger-related savings target of approximately $3.0 billion by the end of 2007. The Firm realized approximately $675 million of incremental merger savings in 2006, bringing estimated cumulative savings for 2006 to $2.5 billion, and the annualized run-rate of savings entering 2007 is approximately $2.8 billion. In order to achieve these savings, the Firm expensed Merger costs of $305 million during the year (including a modest amount of costs related to The Bank of New York transaction), bringing the total cumulative amount expensed since the Merger announcement to approximately $3.4 billion (including capitalized costs). Management currently estimates remaining Merger costs of approximately $400 million, which are expected to be incurred during 2007 and will include a modest amount of expense related to the acquisition of The Bank of New York's consumer, business banking and middle-market banking businesses.

The Firm also continued active management of its portfolio of businesses during 2006. Actions included: exchanging selected corporate trust businesses for the consumer, business banking and middle-market banking businesses of The Bank of New York; divesting the insurance underwriting business; purchasing Collegiate Funding Services to develop further the education finance business; acquiring Kohl's private-label credit card portfolio; acquiring the middle and back office operations of Paloma Partners to expand the Firm's hedge fund administration capabilities; and announcing a strategic alliance with Fidelity Brokerage to provide new issue equity and fixed income products.

In 2006, the global economy continued to expand, which supported continued rapid growth in the emerging market economies. Global gross domestic product increased by an estimated 5%, with the European economy gaining momentum, Japan making steady progress and emerging Asian economies expanding approximately 8%. The U.S. economy rebounded early in the year from the prior-year hurricane disruptions, but weakened in the second half of the year as home construction declined, automobile manufacturing weakened and the benefit of reconstruction from hurricane disruptions dissipated. The U.S. experienced rising interest rates during the first half of the year, as the Federal Reserve Board increased the federal funds rate from 4.25% to 5.25%. With an anticipated slowing of economic growth, lower inflation and stabilizing energy prices, the federal funds rate was held steady during the second half of the year. The yield curve subsequently inverted as receding inflation expectations pushed long-term interest rates below the federal funds rate. Equity markets, both domestic and international, reflected positive performance, with the S&P 500 up 13% on average and international indices increasing 16% on average during 2006. Global capital markets activity was strong during 2006, with debt and equity underwriting and merger and acquisition activity surpassing 2005 levels. Demand for wholesale loans in the U.S. was strong with growth of approximately 14%, while U.S. consumer loans grew an estimated 4% during 2006. U.S. consumer spending grew at a solid pace, supported by strong equity markets, low unemployment and income growth, and lower energy prices in the second half of the year. This strength came despite a significant decline in real estate appreciation.

The 2006 economic environment was a contributing factor to the performance of the Firm and each of its businesses. The overall economic expansion, strong level of capital markets activity and positive performance in equity markets helped to drive new business volume and organic growth within each of the Firm's businesses while also contributing to the stable credit quality within the loan portfolio. However, the interest rate environment affected negatively wholesale loan spread and consumer loan and deposit spreads. Spreads related to wholesale liabilities widened compared with the prior year, but this benefit declined over the course of 2006.

The discussion that follows highlights the performance of each business segment compared with the prior year, and discusses results on a managed basis unless otherwise noted. For more information about managed basis, See Explanation and reconciliation of the Firm's use of non-GAAP financial measures on pages 32–33 of this Annual Report.

Investment Bank net income was flat compared with the prior year, as record revenue was offset by higher compensation expense and a provision for credit losses compared with a benefit in the prior year. Revenue benefited from investments in key business initiatives, increased market share and higher global capital markets activity. Record investment banking fees were driven by record debt and equity underwriting fees and strong advisory fees. Fixed income markets revenue set a new record with strength in credit markets, emerging markets and currencies. Equity markets revenue was also at a record level, reflecting strength in cash equities and equity derivatives. The current-year Provision for credit losses reflects portfolio activity; credit quality remained stable. The increase in expense was primarily the result of higher performance-based compensation including the impact of a higher ratio of compensation expense to revenue and the adoption of SFAS 123R.

Retail Financial Services net income was down from the prior year as lower results in Mortgage Banking were offset partially by improved performance in Regional Banking and Auto Finance. Revenue declined due to lower revenue in Mortgage Banking, narrower loan and deposit spreads in Regional Banking and the sale of the insurance business on July 1, 2006. Deposit and loan spreads reflected the current interest rate and competitive environments. These factors were offset partially by increases in average deposit and loan balances and higher deposit-related and branch production fees in Regional Banking, which benefited from the continued investment in the retail banking distribution network and the overall strength of the U.S. economy. The provision for credit losses declined from the prior year due to the absence of a special provision related to Hurricane Katrina in 2005, partially offset by the establishment of additional allowance for loan losses related to loans acquired from The Bank of New York. Expense increased, reflecting the purchase of Collegiate Funding Services in the first quarter of 2006 and ongoing investments in the retail banking distribution network, with the net addition during the year of 438 branch offices (including 339 from The Bank of New York), 1,194 ATMs and over 500 personal bankers. Partially offsetting these increases were the sale of the insurance business and merger-related and other operating efficiencies.

Card Services net income was a record, increasing significantly compared with the prior year, primarily the result of a lower provision for credit losses. Net revenue (excluding the impact of the deconsolidation of Paymentech) declined slightly from the prior year. Net interest income was flat as the benefit of an increase in average managed loan balances, partially due to portfolio acquisitions as well as marketing initiatives, was offset by the challenging interest rate and competitive environments. Noninterest revenue declined as increased interchange income related to higher charge volume from increased consumer spending was more than offset by higher volume-driven payments to partners, including Kohl's, and increased rewards expense. The managed provision for credit losses benefited from significantly lower bankruptcy-related credit losses following the new bankruptcy legislation that became effective in October 2005. Underlying credit quality remained strong. Expense (excluding the impact of the deconsolidation of Paymentech) increased driven by higher marketing spending and acquisitions, partially offset by merger savings.

Commercial Banking net income was a record in 2006. Record revenue benefited from higher liability balances, higher loan volumes and increased investment banking revenue, all of which benefited from increased sales efforts and U.S. economic growth. Partially offsetting these benefits were loan spread compression and a shift to narrower-spread liability products. The provision for credit losses increased compared with the prior year reflecting portfolio activity and the establishment of additional allowances for loan losses related to loans acquired from The Bank of New York, partially offset by a release of the unused portion of the special reserve established in 2005 for Hurricane Katrina. Credit quality remained stable. Expense increased due to higher compensation expense related to the adoption of SFAS 123R and increased expense related to higher client usage of Treasury Services' products.

Treasury & Securities Services net income was a record and increased significantly over the prior year. Revenue was at a record level driven by higher average liability balances, business growth, increased product usage by clients and higher assets under custody, all of which benefited from global economic growth and capital markets activity. This growth was offset partially by a shift to narrower-spread liability products. Expense increased due to higher compensation related to business growth, investments in new products and the adoption of SFAS 123R. The expense increase was offset partially by the absence of a prior-year charge to terminate a client contract.

Asset Management net income was a record in 2006. Record revenue benefited from increased assets under management driven by net asset inflows and strength in global equity markets, and higher performance and placement fees. The Provision for credit losses was a benefit reflecting net loan recoveries. Expense increased due primarily to higher performance-based compensation, incremental expense from the adoption of SFAS 123R, and increased minority interest expense related to Highbridge Capital Management, LLC ("Highbridge"), offset partially by the absence of BrownCo.

Corporate segment reported significantly improved results (excluding the impact of discontinued operations, as discussed further, below) driven by lower expense, improved revenue and the benefit of tax audit resolutions. Revenue benefited from lower securities losses, improved net interest spread and a higher level of available-for-sale securities partially offset by the absence of the gain on the sale of BrownCo and lower Private Equity results. Expense benefited from the absence of prior-year litigation reserve charges, higher insurance recoveries relating to certain material litigation, lower merger-related costs and other operating efficiencies. These benefits were offset partially by incremental expense related to the adoption of SFAS 123R.

On October 1, 2006, the Firm completed the exchange of selected corporate trust businesses, including trustee, paying agent, loan agency and document management services, for the consumer, business banking and middle-market banking businesses of The Bank of New York. The corporate trust businesses, which were previously reported in TSS, were reported as discontinued operations. The related balance sheet and income statement activity is reflected in the Corporate segment for all periods presented. During 2006, these businesses produced $795 million of net income compared with net income of $229 million in the prior year. Net income from discontinued operations was significantly higher in 2006 due to a one-time after-tax gain of $622 million related to the sale of these businesses. A modest amount of costs associated with the acquisition side of this transaction are included in Merger costs.

Credit costs for the Firm were $5.5 billion compared with $7.3 billion in the prior year. The $1.8 billion decrease was due primarily to lower bankruptcy-related losses in Card Services and the release in the current year of a portion of the $400 million special provision related to Hurricane Katrina that was taken in 2005. The decline was offset partially by an increase in the wholesale provision. The wholesale provision was $321 million compared with a benefit of $811 million in the prior year. The increase was due primarily to portfolio activity, partly offset by a decrease in nonperforming loans. Credit quality in the wholesale portfolio was stable. The benefit in 2005 was due to improvement in credit quality, reflected by significant reductions in criticized exposures and nonperforming loans. Consumer provision for credit losses was $5.2 billion compared with $8.1 billion in the prior year. The reduction primarily reflected the impact of significantly lower bankruptcy-related credit losses and a special provision for credit losses in 2005 related to Hurricane Katrina.

The Firm had, at year end, total stockholders' equity of $115.8 billion, and a Tier 1 capital ratio of 8.7%. The Firm purchased $3.9 billion, or 91 million shares of common stock during the year.

2007 Business outlook

The following forward-looking statements are based upon the current beliefs and expectations of JPMorgan Chase's management and are subject to significant risks and uncertainties. These risks and uncertainties could cause JPMorgan Chase's results to differ materially from those set forth in such forward-looking statements.

JPMorgan Chase's outlook for 2007 should be viewed against the backdrop of the global economy, financial markets activity and the geopolitical environment, all of which are linked integrally. While the Firm considers outcomes for, and has contingency plans to respond to, stress environments, the basic outlook for 2007 is predicated on the interest rate movements implied in the forward rate curve for U.S. Treasury securities, the continuation of favorable U.S. and international equity markets and continued expansion of the global economy.

The Investment Bank enters 2007 with a strong investment banking fee pipeline and remains focused on developing new products and capabilities. Asset Management anticipates growth driven by continued net asset inflows. Commercial Banking and Treasury & Securities Services expect growth due to increased business activity and product sales with some competitive and rate pressures. However, the performance of the Firm's wholesale businesses will be affected by overall global economic growth and by financial market movements and activity levels in any given period.

Retail Financial Services anticipates benefiting from the continued expansion of the branch network and sales force, including the addition of The Bank of New York's 339 branches, and improved sales productivity and cross-selling in the branches. Loan and deposit spreads are expected to experience continued compression due to the interest rate and competitive environments.

Card Services anticipates growth in managed receivables and sales volume, both of which are expected to benefit from marketing initiatives and new partnerships. Expenditures on marketing are expected to be lower than the 2006 level.

In the Corporate segment, the revenue outlook for the Private Equity business is directly related to the strength of the equity markets and the performance of the underlying portfolio investments. If current market conditions persist, the Firm anticipates continued realization of private equity gains in 2007, but results can be volatile from quarter to quarter. Management believes that the net loss in Treasury and Other Corporate, on a combined basis, will be approximately $50 to $100 million per quarter in 2007, reflecting merger savings and other expense efficiency initiatives, such as less excess real estate.

The Provision for credit losses in 2007 is anticipated to be higher than in 2006, primarily driven by a trend toward a more normal level of provisioning for credit losses in both the wholesale and consumer businesses. The consumer Provision for credit losses should reflect a higher level of net charge-offs as bankruptcy filings continue to increase from the significantly lower than normal levels experienced in 2006 related to the change in bankruptcy law in 2005.

Firmwide expenses are anticipated to reflect investments in each business, continued merger savings and other operating efficiencies. Annual Merger savings are expected to reach approximately $3.0 billion by the end of 2007, upon the completion of the last significant conversion activity, the wholesale deposit conversion scheduled for the second half of 2007. Offsetting merger savings will be continued investment in distribution enhancements and new product offerings, and expenses related to recent acquisitions including The Bank of New York transaction. Merger costs of approximately $400 million are expected to be incurred during 2007 (including a modest amount related to The Bank of New York transaction). These additions are expected to bring total cumulative merger costs to $3.8 billion by the end of 2007.

CONSOLIDATED RESULTS OF OPERATIONS

The following section provides a comparative discussion of JPMorgan Chase's consolidated results of operations on a reported basis for the three-year period ended December 31, 2006. Factors that are related primarily to a single business segment are discussed in more detail within that business segment than they are in this consolidated section. Total net revenue, Noninterest expense and Income tax expense have been revised to reflect the impact of discontinued operations. For a discussion of the Critical accounting estimates used by the Firm that affect the Consolidated results of operations, see pages 83–85 of this Annual Report.

Revenue

Year ended December 31, (in millions)	2006	2005	2004[a]
Investment banking fees	**$ 5,520**	$ 4,088	$ 3,536
Principal transactions	**10,346**	7,669	5,148
Lending & deposit related fees	**3,468**	3,389	2,672
Asset management, administration and commissions	**11,725**	9,891	7,682
Securities gains (losses)	**(543)**	(1,336)	338
Mortgage fees and related income	**591**	1,054	803
Credit card income	**6,913**	6,754	4,840
Other income	**2,175**	2,684	826
Noninterest revenue	**40,195**	34,193	25,845
Net interest income	**21,242**	19,555	16,527
Total net revenue	**$ 61,437**	$ 53,748	$ 42,372

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.

2006 compared with 2005

Total net revenue for 2006 was $61.4 billion, up by $7.7 billion, or 14%, from the prior year. The increase was due to higher Principal transactions, primarily from strong trading revenue results, record Asset management, administration and commissions revenue, and record Investment banking fees. Also contributing to the increase was higher Net interest income and lower securities portfolio losses. These improvements were offset partially by a decline in Other income partly as a result of the gain recognized in 2005 on the sale of BrownCo, and lower Mortgage fees and related income.

The increase in Investment banking fees was driven by record debt and equity underwriting as well as strong advisory fees. For a further discussion of Investment banking fees, which are recorded primarily in the IB, see the IB segment results on pages 36–37 of this Annual Report.

Principal transactions revenue consists of realized and unrealized gains and losses from trading activities, including physical commodities inventories that are accounted for at the lower of cost or fair value, primarily in the IB, and Private equity gains and losses, primarily in the private equity business of Corporate. Trading revenue increased compared with 2005 due to record performance in Equity and Fixed income markets. For a further discussion of Principal transactions revenue, see the IB and Corporate segment results on pages 36–37 and 53–54, respectively, of this Annual Report.

Lending & deposit related fees rose slightly in comparison with 2005 as a result of higher fee income on deposit-related fees and, in part, from The Bank of New York transaction. For a further discussion of the change in Lending & deposit related fees, which are recorded in RFS, see the RFS segment results on pages 38–42 of this Annual Report.

The increase in Asset management, administration and commissions revenue in 2006 was driven by growth in assets under management in AM, which exceeded $1 trillion at the end of 2006, higher equity-related commissions in IB and higher performance and placement fees. The growth in assets under management reflected net asset inflows in the institutional and retail segments. Also contributing to the increase were higher assets under custody in TSS driven by market value appreciation and new business; and growth in depositary receipts, securities lending and global clearing, all of which were driven by a combination of increased product usage by existing clients and new business. In addition, commissions in the IB rose as a result of strength across regions, partly offset by the sale of the insurance business and BrownCo. For additional information on these fees and commissions, see the segment discussions for AM on pages 50–52, TSS on pages 48–49 and RFS on pages 38–42, of this Annual Report.

The favorable variance in Securities gains (losses) was due primarily to lower Securities losses in Treasury in 2006 from portfolio repositioning activities in connection with the management of the Firm's assets and liabilities. For a further discussion of Securities gains (losses), which are mostly recorded in the Firm's Treasury business, see the Corporate segment discussion on pages 53–54 of this Annual Report.

Mortgage fees and related income declined in comparison with 2005 reflecting a reduction in net mortgage servicing revenue and higher losses on mortgage loans transferred to held-for-sale. These declines were offset partly by growth in production revenue as a result of higher volume of loans sales and wider gain on sale margins. Mortgage fees and related income exclude the impact of NII and AFS securities gains related to mortgage activities. For a discussion of Mortgage fees and related income, which is recorded primarily in RFS's Mortgage Banking business, see the Mortgage Banking discussion on page 41 of this Annual Report.

Credit card income increased from 2005, primarily from higher customer charge volume that favorably impacted interchange income and servicing fees earned in connection with securitization activities, which benefited from lower credit losses incurred on securitized credit card loans. These increases were offset partially by increases in volume-driven payments to partners, expenses related to reward programs, and interest paid to investors in the securitized loans. Credit card income also was impacted negatively by the deconsolidation of Paymentech in the fourth quarter of 2005.

The decrease in Other income compared with the prior year was due to a $1.3 billion pretax gain recognized in 2005 on the sale of BrownCo and lower gains from loan workouts. Partially offsetting these two items were higher automobile operating lease revenue; an increase in equity investment income, in particular, from Chase Paymentech Solutions, LLC; and a pretax gain of $103 million on the sale of MasterCard shares in its initial public offering.

Net interest income rose due largely to improvement in Treasury's net interest spread and increases in wholesale liability balances, wholesale and consumer loans, available-for-sale securities, and consumer deposits. Increases in consumer and wholesale loans and deposits included the impact of The Bank of New York transaction. These increases were offset partially by narrower spreads on both trading-related assets and loans, a shift to narrower-spread deposit products, RFS's sale of the insurance business and the absence of BrownCo in AM. The Firm's total average interest-earning assets for 2006 were $995.5 billion, up 11% from the prior year, primarily as a result of an increase in loans and other liquid earning assets, partially offset by a decline in interests in purchased receivables as a result of the restructuring and deconsolidation during the second quarter of 2006 of certain multi-seller con-

duits that the Firm administered. The net yield on interest-earning assets, on a fully taxable-equivalent basis, was 2.16%, a decrease of four basis points from the prior year. For a further discussion of Net interest income, see the Business Segment Results section on pages 34–35 of this Annual Report.

2005 compared with 2004

Total net revenue for 2005 was $53.7 billion, up 27% from 2004, primarily due to the Merger, which affected every revenue category. The increase from 2004 also was affected by a $1.3 billion gain on the sale of BrownCo; higher Principal transactions revenue; and higher Asset management, administration and commissions, which benefited from several new investments and growth in Assets under management and Assets under custody. These increases were offset partly by available-for-sale ("AFS") securities losses as a result of repositioning of the Firm's Treasury investment portfolio. The discussions that follow highlight factors other than the Merger that affected the 2005 versus 2004 comparison.

The increase in Investment banking fees was driven by strong growth in advisory fees resulting in part from the Cazenove business partnership. For a further discussion of Investment banking fees, which are primarily recorded in the IB, see the IB segment results on pages 36–37 and Note 2 on page 97 of this Annual Report.

Revenue from Principal transactions increased compared with 2004, driven by stronger, although volatile, trading results across commodities, emerging markets, rate markets and currencies. Private equity gains were higher due to a continuation of favorable capital markets conditions. For a further discussion of Principal transactions revenue, see the IB and Corporate segment results on pages 36–37 and 53–54, respectively, of this Annual Report.

The higher Lending & deposit related fees were driven by the Merger; absent the effects of the Merger, the deposit-related fees would have been lower due to rising interest rates. In a higher interest rate environment, the value of deposit balances to a customer is greater, resulting in a reduction of deposit-related fees. For a further discussion of liability balances (including deposits) see the CB and TSS segment discussions on pages 46–47 and 48–49, respectively, of this Annual Report.

The increase in Asset management, administration and commissions revenue was driven by incremental fees from several new investments, including the acquisition of a majority interest in Highbridge, the Cazenove business partnership and the acquisition of Vastera. Also contributing to the higher level of revenue was an increase in Assets under management, reflecting net asset inflows in equity-related products and global equity market appreciation. In addition, Assets under custody were up due to market value appreciation and new business. Commissions rose as a result of a higher volume of brokerage transactions. For additional information on these fees and commissions, see the segment discussions for IB on pages 36–37, AM on pages 50–52 and TSS on pages 48–49 of this Annual Report.

The decline in Securities gains (losses) reflected $1.3 billion of securities losses, as compared with $338 million of gains in 2004. The losses were due to repositioning of the Firm's Treasury investment portfolio, to manage exposure to interest rates. For a further discussion of Securities gains (losses), which are recorded primarily in the Firm's Treasury business, see the Corporate segment discussion on pages 53–54 of this Annual Report.

Mortgage fees and related income increased due to improved MSR risk-management results. For a discussion of Mortgage fees and related income, which is recorded primarily in RFS's Mortgage Banking business, see the segment discussion for RFS on pages 38–42 of this Annual Report.

Credit card income rose as a result of higher interchange income associated with the increase in charge volume. This increase was offset partially by higher volume-driven payments to partners and rewards expense. For a further discussion of Credit card income, see CS segment results on pages 43–45 of this Annual Report.

The increase in Other income primarily reflected a $1.3 billion pretax gain on the sale of BrownCo; higher gains from loan workouts and loan sales; and higher automobile operating lease income.

Net interest income rose as a result of higher average volume of, and wider spreads on, liability balances. Also contributing to the increase was higher average volume of wholesale and consumer loans, in particular, real estate and credit card loans, which partly reflected a private label portfolio acquisition by CS. These increases were offset partially by narrower spreads on consumer and wholesale loans and on trading-related assets, as well as the impact of the repositioning of the Treasury investment portfolio, and the reversal of revenue related to increased bankruptcies in CS. The Firm's total average interest-earning assets in 2005 were $899.1 billion, up 23% from the prior year. The net interest yield on these assets, on a fully taxable-equivalent basis, was 2.20%, a decrease of seven basis points from the prior year.

Provision for credit losses

Year ended December 31, (in millions)	**2006**	2005	2004[a]
Provision for credit losses	**$ 3,270**	$ 3,483	$ 2,544

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.

2006 compared with 2005

The Provision for credit losses in 2006 declined $213 million from the prior year due to a $1.3 billion decrease in the consumer Provision for credit losses, partly offset by a $1.1 billion increase in wholesale Provision for credit losses. The decrease in the consumer provision was driven by CS, reflecting lower bankruptcy-related losses, partly offset by higher contractual net charge-offs. The 2005 consumer provision also reflected $350 million of a special provision related to Hurricane Katrina, a portion of which was released in the current year. The increase in the wholesale provision was due primarily to portfolio activity, partly offset by a decrease in nonperforming loans. The benefit in 2005 was due to strong credit quality, reflected in significant reductions in criticized exposure and nonperforming loans. Credit quality in the wholesale portfolio was stable. For a more detailed discussion of the loan portfolio and the Allowance for loan losses, refer to Credit risk management on pages 64–76 of this Annual Report.

2005 compared with 2004

The Provision for credit losses was $3.5 billion, an increase of $939 million, or 37%, from 2004, reflecting the full-year impact of the Merger. The wholesale Provision for credit losses was a benefit of $811 million for the year compared with a benefit of $716 million in the prior year, reflecting continued strength in credit quality. The wholesale loan net recovery rate was 0.06% in 2005, an improvement from a net charge-off rate of 0.18% in the prior year. The total consumer Provision for credit losses was $4.3 billion, $1.9 billion higher than the prior year, primarily due to the Merger, higher bankruptcy-related net charge-offs in Card Services and a $350 million special provision for Hurricane Katrina. Also included in 2004 were accounting policy conformity adjustments as a result of the Merger. Excluding these items, the consumer portfolio continued to show strength in credit quality.

Noninterest expense

Year ended December 31, (in millions)	2006	2005	2004[a]
Compensation expense	**$ 21,191**	$ 18,065	$ 14,291
Occupancy expense	**2,335**	2,269	2,058
Technology, communications and equipment expense	**3,653**	3,602	3,687
Professional & outside services	**3,888**	4,162	3,788
Marketing	**2,209**	1,917	1,335
Other expense	**3,272**	6,199	6,537
Amortization of intangibles	**1,428**	1,490	911
Merger costs	**305**	722	1,365
Total noninterest expense	**$ 38,281**	$ 38,426	$ 33,972

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.

2006 compared with 2005

Total noninterest expense for 2006 was $38.3 billion, down slightly from the prior year. The decrease was due to material litigation-related insurance recoveries of $512 million in 2006 compared with a net charge of $2.6 billion (includes $208 million material litigation-related insurance recoveries) in 2005, primarily associated with the settlement of the Enron and WorldCom class action litigations and for certain other material legal proceedings. Also contributing to the decrease were lower Merger costs, the deconsolidation of Paymentech, the sale of the insurance business, and merger-related savings and operating efficiencies. These items were offset mostly by higher performance-based compensation and incremental expense of $712 million related to SFAS 123R, the impact of acquisitions and investments in businesses, as well as higher Marketing expenditures.

The increase in Compensation expense from 2005 was primarily a result of higher performance-based incentives, incremental expense related to SFAS 123R of $712 million for 2006, and additional headcount in connection with growth in business volume, acquisitions, and investments in the businesses. These increases were offset partially by merger-related savings and other expense efficiencies throughout the Firm. For a detailed discussion of the adoption of SFAS 123R and employee stock-based incentives see Note 8 on pages 105–107 of this Annual Report.

The increase in Occupancy expense from 2005 was due to ongoing investments in the retail distribution network, which included the incremental expense from The Bank of New York branches, partially offset by merger-related savings and other operating efficiencies.

The slight increase in Technology, communications and equipment expense for 2006 was due primarily to higher depreciation expense on owned automobiles subject to operating leases and higher technology investments to support business growth, partially offset by merger-related savings and operating efficiencies.

Professional & outside services decreased from 2005 due to merger-related savings and operating efficiencies, lower legal fees associated with several legal matters settled in 2005 and the Paymentech deconsolidation. The decrease was offset partly by acquisitions and business growth.

Marketing expense was higher compared with 2005, reflecting the costs of campaigns for credit cards.

Other expense was lower due to significant litigation-related charges of $2.8 billion in 2005, associated with the settlement of the Enron and WorldCom class action litigations and certain other material legal proceedings. In addition, the Firm recognized insurance recoveries of $512 million and $208 million, in 2006 and 2005, respectively, pertaining to certain material litigation matters. For a further discussion of litigation, refer to Note 27 on pages 130–131 of this Annual Report. Also contributing to the decline from the prior year were charges of $93 million in connection with the termination of a client contract in TSS in 2005; and in RFS, the sale of the insurance business in the third quarter of 2006. These items were offset partially by higher charges related to other litigation, and the impact of growth in business volume, acquisitions and investments in the businesses.

For discussion of Amortization of intangibles and Merger costs, refer to Note 16 and Note 9 on pages 121–123 and 108, respectively, of this Annual Report.

2005 compared with 2004

Noninterest expense for 2005 was $38.4 billion, up 13% from 2004, primarily due to the full-year impact of the Merger. Excluding Litigation reserve charges and Merger costs, Noninterest expense would have been $35.1 billion, up 22%. In addition to the Merger, expenses increased as a result of higher performance-based incentives, continued investment spending in the Firm's businesses and incremental marketing expenses related to launching the new Chase brand, partially offset by merger-related savings and operating efficiencies throughout the Firm. Each category of Noninterest expense was affected by the Merger. The discussions that follow highlight factors other than the Merger that affected the 2005 versus 2004 comparison.

Compensation expense rose as a result of higher performance-based incentives; additional headcount due to the insourcing of the Firm's global technology infrastructure (effective December 31, 2004, when JPMorgan Chase terminated the Firm's outsourcing agreement with IBM); the impact of several investments, including Cazenove, Highbridge and Vastera; the accelerated vesting of certain employee stock options; and business growth. The effect of the termination of the IBM outsourcing agreement was to shift expenses from Technology and communications expense to Compensation expense. The increase in Compensation expense was offset partially by merger-related savings throughout the Firm. For a detailed discussion of employee stock-based incentives, see Note 8 on pages 105–107 of this Annual Report.

The increase in Occupancy expense was due primarily to the Merger, partially offset by lower charges for excess real estate and a net release of excess property tax accruals, as compared with $103 million of charges for excess real estate in 2004.

Technology and communications expense was down slightly. This reduction reflects the offset of six months of the combined Firm's results for 2004 against the full-year 2005 impact from termination of the JPMorgan Chase outsourcing agreement with IBM. The reduction in Technology and communications expense due to the outsourcing agreement termination is offset mostly by increases in Compensation expense related to additional headcount and investments in the Firm's hardware and software infrastructure.

Professional and outside services were higher compared with the prior year as a result of the insourcing of the Firm's global technology infrastructure, upgrades to the Firm's systems and technology, and business growth. These expenses were offset partially by operating efficiencies.

Marketing expense was higher compared with the prior year, primarily as a result of the Merger and the cost of advertising campaigns to launch the new Chase brand.

The decrease in Other expense reflected lower litigation reserve charges for certain material legal proceedings in 2005: $1.9 billion related to the settlement of the Enron class action litigation and for certain other material legal proceedings, and $900 million for the settlement of the WorldCom class action litigation; and in 2004, $3.7 billion to increase litigation reserves. Also contributing to the decrease were a $208 million insurance recovery related to certain material litigation, lower software impairment write-offs, merger-related savings and operating efficiencies. These were offset partially by $93 million in charges taken by TSS to terminate a client contract and a $40 million charge taken by RFS related to the dissolution of a student loan joint venture.

For a discussion of Amortization of intangibles and Merger costs, refer to Note 16 and Note 9 on pages 121–123 and 108, respectively, of this Annual Report.

Income tax expense

The Firm's Income from continuing operations before income tax expense, Income tax expense and Effective tax rate were as follows for each of the periods indicated:

Year ended December 31, (in millions, except rate)	**2006**	2005	2004[a]
Income from continuing operations before income tax expense	**$19,886**	$ 11,839	$ 5,856
Income tax expense	**6,237**	3,585	1,596
Effective tax rate	**31.4%**	30.3%	27.3%

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.

2006 compared with 2005

The increase in the effective tax rate for 2006, as compared with the prior year, was primarily the result of higher reported pretax income combined with changes in the proportion of income subject to federal, state and local taxes. Also contributing to the increase in the effective tax rate were the litigation charges in 2005 and lower Merger costs, reflecting a tax benefit at a 38% marginal tax rate, partially offset by benefits related to tax audit resolutions of $367 million in 2006.

2005 compared with 2004

The increase in the effective tax rate was primarily the result of higher reported pretax income combined with changes in the proportion of income subject to federal, state and local taxes. Also contributing to the increase were lower 2005 litigation charges and a gain on the sale of BrownCo, which were taxed at marginal tax rates of 38% and 40%, respectively. These increases were offset partially by a tax benefit in 2005 of $55 million recorded in connection with the repatriation of foreign earnings.

Income from discontinued operations

As a result of the transaction with The Bank of New York on October 1, 2006, the results of operations of the selected corporate trust businesses (i.e., trustee, paying agent, loan agency and document management services) were reported as discontinued operations.

The Firm's Income from discontinued operations (after-tax) were as follows for each of the periods indicated:

Year ended December 31, (in millions)	**2006**	2005	2004[a]
Income from discontinued operations	**$ 795**	$ 229	$ 206

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.

The increases from the prior two periods in Income from discontinued operations were due primarily to a gain of $622 million from exiting the corporate trust business in the fourth quarter of 2006.

EXPLANATION AND RECONCILIATION OF THE FIRM'S USE OF NON-GAAP FINANCIAL MEASURES

The Firm prepares its Consolidated financial statements using accounting principles generally accepted in the United States of America ("U.S. GAAP"); these financial statements appear on pages 90–93 of this Annual Report. That presentation, which is referred to as "reported basis," provides the reader with an understanding of the Firm's results that can be tracked consistently from year to year and enables a comparison of the Firm's performance with other companies' U.S. GAAP financial statements.

Effective January 1, 2006, JPMorgan Chase's presentation of "operating earnings," which excluded merger costs and material litigation reserve charges and recoveries from reported results, was eliminated. These items had been excluded previously from operating results because they were deemed nonrecurring; they are included now in the Corporate segment's results. In addition, trading-related net interest income no longer is reclassified from Net interest income to Principal transactions.

In addition to analyzing the Firm's results on a reported basis, management reviews the Firm's and the lines' of business results on a "managed" basis, which is a non-GAAP financial measure. The Firm's definition of managed basis starts with the reported U.S. GAAP results and includes certain reclassifications that assumes credit card loans securitized by CS remain on the balance sheet and presents revenue on a fully taxable-equivalent ("FTE") basis. These adjustments do not have any impact on Net income as reported by the lines of business or by the Firm as a whole.

The presentation of CS results on a managed basis assumes that credit card loans that have been securitized and sold in accordance with SFAS 140 still remain on the balance sheet and that the earnings on the securitized loans are classified in the same manner as the earnings on retained loans recorded on the balance sheet. JPMorgan Chase uses the concept of managed basis to evaluate the credit performance and overall financial performance of the entire

The following summary table provides a reconciliation from the Firm's reported U.S. GAAP results to managed basis:

(Table continues on next page)

(a) Based on Income from continuing operations.
(b) The impact of credit card securitizations affects CS. See pages 43–45 of this Annual Report for further information.
(c) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.

managed credit card portfolio. Operations are funded and decisions are made about allocating resources, such as employees and capital, based upon managed financial information. In addition, the same underwriting standards and ongoing risk monitoring are used for both loans on the balance sheet and securitized loans. Although securitizations result in the sale of credit card receivables to a trust, JPMorgan Chase retains the ongoing customer relationships, as the customers may continue to use their credit cards; accordingly, the customer's credit performance will affect both the securitized loans and the loans retained on the balance sheet. JPMorgan Chase believes managed basis information is useful to investors, enabling them to understand both the credit risks associated with the loans reported on the balance sheet and the Firm's retained interests in securitized loans. For a reconciliation of reported to managed basis of CS results, see Card Services segment results on pages 43–45 of this Annual Report. For information regarding the securitization process, and loans and residual interests sold and securitized, see Note 14 on pages 114–118 of this Annual Report.

Total net revenue for each of the business segments and the Firm is presented on an FTE basis. Accordingly, revenue from tax-exempt securities and investments that receive tax credits is presented in the managed results on a basis comparable to taxable securities and investments. This non-GAAP financial measure allows management to assess the comparability of revenues arising from both taxable and tax-exempt sources. The corresponding income tax impact related to these items is recorded within Income tax expense.

Management also uses certain non-GAAP financial measures at the segment level because it believes these non-GAAP financial measures provide information to investors about the underlying operational performance and trends of the particular business segment and therefore facilitate a comparison of the business segment with the performance of its competitors.

(Table continued from previous page)

Calculation of Certain GAAP and Non-GAAP Metrics

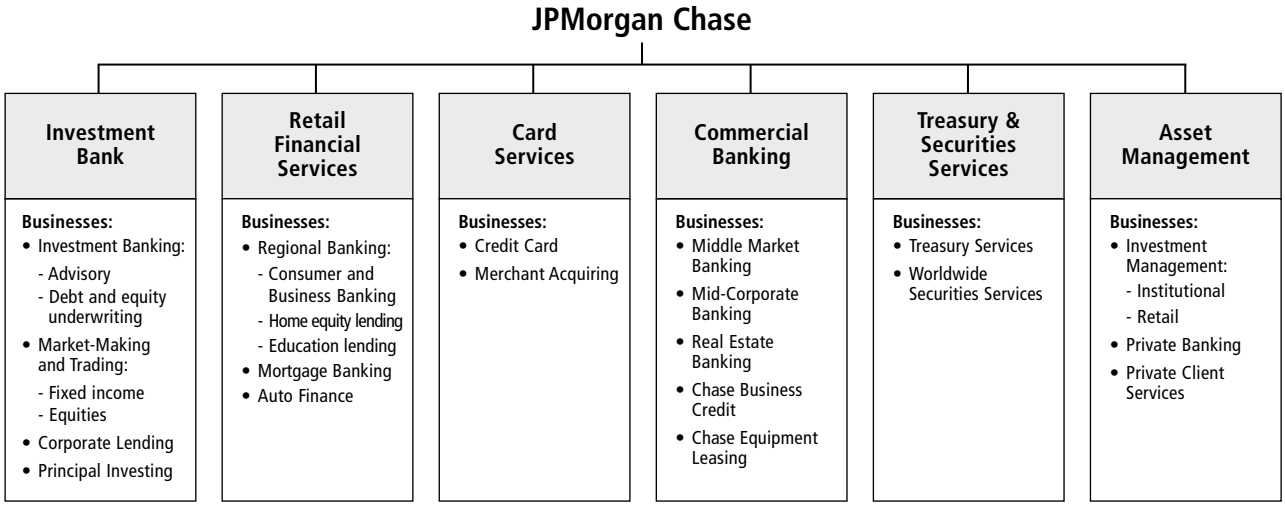
The table below reflects the formulas used to calculate both the following GAAP and non-GAAP measures:

Return on common equity
Net income* / Average common stockholders' equity

Return on common equity less goodwill[a]
Net income* / Average common stockholders' equity less goodwill

Return on assets

Reported	Net income / Total average assets
Managed	Net income / Total average managed assets[b] (including average securitized credit card receivables)



Overhead ratio
Total noninterest expense / Total net revenue

* Represents Net income applicable to common stock

(a) The Firm uses Return on common equity less goodwill, a non-GAAP financial measure, to evaluate the operating performance of the Firm and to facilitate comparisons to competitors.
(b) The Firm uses Return on managed assets, a non-GAAP financial measure, to evaluate the overall performance of the managed credit card portfolio, including securitized credit card loans.

BUSINESS SEGMENT RESULTS

The Firm is managed on a line-of-business basis. The business segment financial results presented reflect the current organization of JPMorgan Chase. There are six major reportable business segments: the Investment Bank, Retail Financial Services, Card Services, Commercial Banking, Treasury & Securities Services and Asset Management, as well as a Corporate segment. The segments are based upon the products and services provided, or the type of customer served, and they reflect the manner in which financial information is currently evaluated by management. Results of these lines of business are presented on a managed basis. Segment results for 2004 include six months of the combined Firm's results and six months of heritage JPMorgan Chase only.

Description of business segment reporting methodology

Results of the business segments are intended to reflect each segment as if it were essentially a stand-alone business. During 2006, JPMorgan Chase modified certain of its segment disclosures to reflect more closely the manner in which the Firm's business segments are managed and to provide improved comparability with competitors. These financial disclosure modifications are reflected in this Annual Report and, except as indicated, the financial information for prior periods has been revised to reflect the changes as if they had been in effect throughout all periods reported. A summary of the changes follows:

- The presentation of operating earnings in 2005 and 2004 that excluded from reported results merger costs and material litigation reserve charges and recoveries was eliminated effective January 1, 2006. These items had been excluded previously from operating results because they were deemed nonrecurring; they are included now in the Corporate business segment's results.
- Trading-related net interest income is no longer reclassified from Net interest income to Principal transactions.
- Various wholesale banking clients, together with the related balance sheet and income statement items, were transferred among CB, the IB and TSS. The primary client transfer was corporate mortgage finance from CB to the IB and TSS.
- TSS firmwide disclosures have been adjusted to reflect a refined set of TSS products as well as a revised allocation of liability balances and lending-related revenue related to certain client transfers.
- As a result of the transaction with The Bank of New York, selected corporate trust businesses have been transferred from TSS to the Corporate segment and reported in discontinued operations for all periods reported.

The management reporting process that derives business segment results allocates income and expense using market-based methodologies. The Firm continues to assess the assumptions, methodologies and reporting classifications used for segment reporting, and further refinements may be implemented in future periods. Segment reporting methodologies used by the Firm are discussed below.

Revenue sharing

When business segments join efforts to sell products and services to the Firm's clients, the participating business segments agree to share revenues from those transactions. The segment results reflect these revenue-sharing agreements.

Funds transfer pricing

Funds transfer pricing ("FTP") is used to allocate interest income and expense to each business and transfer the primary interest rate risk exposures to the Corporate business segment. The allocation process is unique to each business segment and considers the interest rate risk, liquidity risk and regulatory requirements of that segment's stand-alone peers. This process is overseen by the Firm's Asset-Liability Committee ("ALCO"). Business segments may retain certain interest rate exposures, subject to management approval, that would be expected in the normal operation of a similar peer business.

Capital allocation

Each business segment is allocated capital by taking into consideration stand-alone peer comparisons, economic risk measures and regulatory capital requirements. The amount of capital assigned to each business is referred to as equity. Effective January 1, 2006, the Firm refined its methodology for allocating capital to the business segments. As prior periods have not been revised to reflect the new capital allocations, certain business metrics, such as ROE, are not comparable to the current presentations. For a further discussion of this change, see Capital management–Line of business equity on page 57 of this Annual Report.

Expense allocation

Where business segments use services provided by support units within the Firm, the costs of those support units are allocated to the business segments. Those expenses are allocated based upon their actual cost or the lower of actual cost or market, as well as upon usage of the services provided. In contrast, certain other expenses related to certain corporate functions, or to certain technology and operations, are not allocated to the business segments and are retained in Corporate. These retained expenses include: parent company costs that would not be incurred if the segments were stand-alone businesses; adjustments to align certain corporate staff, technology and operations allocations with market prices; and other one-time items not aligned with the business segments.

During 2005, the Firm refined cost allocation methodologies related to certain corporate, technology and operations expenses in order to improve transparency, consistency and accountability with regard to costs allocated across business segments. Prior periods were not revised to reflect this methodology change.

Credit reimbursement

TSS reimburses the IB for credit portfolio exposures managed by the IB on behalf of clients that the segments share. At the time of the Merger, the reimbursement methodology was revised to be based upon pretax earnings, net of the cost of capital related to those exposures.

Segment results – Managed basis[a]

The following table summarizes the business segment results for the periods indicated:

Year ended December 31, (in millions, except ratios)	Total net revenue			Noninterest expense		
	2006	2005	2004[c]	**2006**	2005	2004[c]
Investment Bank	**$ 18,277**	$ 14,613	$ 12,633	**$ 12,304**	$ 9,749	$ 8,709
Retail Financial Services	**14,825**	14,830	10,791	**8,927**	8,585	6,825

(a) Represents reported results on a tax-equivalent basis and excludes the impact of credit card securitizations.
(b) Net income includes Income from discontinued operations (after-tax) of $795 million, $229 million and $206 million for 2006, 2005 and 2004, respectively.
(c) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.

INVESTMENT BANK

JPMorgan is one of the world's leading investment banks, with deep client relationships and broad product capabilities. The Investment Bank's clients are corporations, financial institutions, governments and institutional investors. The Firm offers a full range of investment banking products and services in all major capital markets, including advising on corporate strategy and structure, capital raising in equity and debt markets, sophisticated risk management, market-making in cash securities and derivative instruments, and research. The IB also commits the Firm's own capital to proprietary investing and trading activities.

Selected income statement data

Year ended December 31, (in millions, except ratios)	2006	2005	2004[e]
Revenue			
Investment banking fees	**$ 5,537**	$ 4,096	$ 3,572
Principal transactions	**9,086**	6,059	3,548
Lending & deposit related fees	**517**	594	539
Asset management, administration and commissions	**2,110**	1,727	1,401
All other income	**528**	534	277
Noninterest revenue	**17,778**	13,010	9,337
Net interest income[a]	**499**	1,603	3,296
Total net revenue[b]	**18,277**	14,613	12,633
Provision for credit losses	**191**	(838)	(640)
Credit reimbursement from TSS[c]	**121**	154	90
Noninterest expense			
Compensation expense	**8,190**	5,792	4,896
Noncompensation expense	**4,114**	3,957	3,813
Total noninterest expense	**12,304**	9,749	8,709
Income before income tax expense	**5,903**	5,856	4,654
Income tax expense	**2,229**	2,183	1,698
Net income	**$ 3,674**	$ 3,673	$ 2,956
Financial ratios			
ROE	**18%**	18%	17%
ROA	**0.57**	0.61	0.62
Overhead ratio	**67**	67	69
Compensation expense as % of total net revenue[d]	**43**	40	39

(a) The decline in net interest income for the periods shown is largely driven by a decline in trading-related net interest income caused by a higher proportion of noninterest-bearing net trading assets to total net trading assets, higher funding costs compared with prior-year periods, and spread compression due to the inverted yield curve in place for most of the current year.
(b) Total Net revenue includes tax-equivalent adjustments, primarily due to tax-exempt income from municipal bond investments and income tax credits related to affordable housing investments, of $802 million, $752 million and $274 million for 2006, 2005 and 2004, respectively.
(c) TSS is charged a credit reimbursement related to certain exposures managed within the IB credit portfolio on behalf of clients shared with TSS. For a further discussion, see Credit reimbursement on page 35 of this Annual Report.
(d) Beginning in 2006, the Compensation expense to Total net revenue ratio is adjusted to present this ratio as if SFAS 123R had always been in effect. IB management believes that adjusting the Compensation expense to Total net revenue ratio for the incremental impact of adopting SFAS 123R provides a more meaningful measure of IB's Compensation expense to Total net revenue ratio.
(e) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.

2006 compared with 2005

Net income of $3.7 billion was flat, as record revenue of $18.3 billion was offset largely by higher compensation expense, including the impact of SFAS 123R, and a provision for credit losses compared with a benefit in the prior year.

Total net revenue of $18.3 billion was up $3.7 billion, or 25%, from the prior year. Investment banking fees of $5.5 billion were a record, up 35% from the prior year, driven by record debt and equity underwriting as well as strong advisory fees, which were the highest since 2000. Advisory fees of $1.7 billion were up 31% over the prior year driven primarily by strong performance in the Americas. Debt underwriting fees of $2.7 billion were up 37% from the prior year driven by record performance in both loan syndications and bond underwriting. Equity underwriting fees of $1.2 billion were up 36% from the prior year driven by global equity markets. Fixed Income Markets revenue of $8.4 billion was also a record, up 15% from the prior year driven by strength in credit markets, emerging markets and currencies. Record Equity Markets revenue of $3.3 billion increased 81%, and was driven by strength in cash equities and equity derivatives. Credit Portfolio revenue of $1.1 billion was down 23%, primarily reflecting lower gains from loan workouts.

The following table provides the IB's total Net revenue by business segment:

Year ended December 31, (in millions)	2006	2005	2004[d]
Revenue by business			
Investment banking fees:			
Advisory	**$ 1,659**	$ 1,263	$ 938
Equity underwriting	**1,178**	864	781
Debt underwriting	**2,700**	1,969	1,853
Total investment banking fees	**5,537**	4,096	3,572
Fixed income markets[a]	**8,369**	7,277	6,342
Equity markets[b]	**3,264**	1,799	1,491
Credit portfolio[c]	**1,107**	1,441	1,228
Total net revenue	**$ 18,277**	$ 14,613	$ 12,633

(a) Fixed income markets includes client and portfolio management revenue related to both market-making and proprietary risk-taking across global fixed income markets, including foreign exchange, interest rate, credit and commodities markets.
(b) Equities markets includes client and portfolio management revenue related to market-making and proprietary risk-taking across global equity products, including cash instruments, derivatives and convertibles.
(c) Credit portfolio revenue includes Net interest income, fees and loan sale activity, as well as gains or losses on securities received as part of a loan restructuring, for the IB's credit portfolio. Credit portfolio revenue also includes the results of risk management related to the Firm's lending and derivative activities, and changes in the credit valuation adjustment ("CVA"), which is the component of the fair value of a derivative that reflects the credit quality of the counterparty. See pages 70–72 of the Credit risk management section of this Annual Report for further discussion.
(d) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.

Provision for credit losses was $191 million compared with a benefit of $838 million in the prior year. The current-year provision reflects portfolio activity; credit quality remained stable. The prior-year benefit reflected strong credit quality, a decline in criticized and nonperforming loans, and a higher level of recoveries.

Total noninterest expense of $12.3 billion was up by $2.6 billion, or 26%, from the prior year. This increase was due primarily to higher performance-based compensation, including the impact of an increase in the ratio of compensation expense to total net revenue, as well as the incremental expense related to SFAS 123R.

Return on equity was 18% on $20.8 billion of allocated capital compared with 18% on $20.0 billion in 2005.

2005 compared with 2004

Net income of $3.7 billion was up 24%, or $717 million, from the prior year. The increase was driven by the Merger, higher revenues and an increased benefit from the Provision for credit losses. These factors were offset partially by higher compensation expense. Return on equity was 18%.

Total net revenue of $14.6 billion was up $2.0 billion, or 16%, over the prior year, driven by strong Fixed Income and Equity Markets and Investment banking fees. Investment banking fees of $4.1 billion increased 15% from the prior year driven by strong growth in advisory fees resulting in part from the Cazenove business partnership. Advisory revenues of $1.3 billion were up 35% from the prior year, reflecting higher market volumes. Debt underwriting revenues of

$2.0 billion increased by 6% driven by strong loan syndication fees. Equity underwriting fees of $864 million were up 11% from the prior year driven by improved market share. Fixed Income Markets revenue of $7.3 billion increased 15%, or $935 million, driven by stronger, although volatile, trading results across commodities, emerging markets, rate markets and currencies. Equity Markets revenues increased 21% to $1.8 billion, primarily due to increased commissions, which were offset partially by lower trading results, which also experienced a high level of volatility. Credit Portfolio revenues were $1.4 billion, up $213 million from the prior year due to higher gains from loan workouts and sales as well as higher trading revenue from credit risk management activities.

The Provision for credit losses was a benefit of $838 million compared with a benefit of $640 million in 2004. The increased benefit was due primarily to the improvement in the credit quality of the loan portfolio and reflected net recoveries. Nonperforming assets of $645 million decreased by 46% since the end of 2004.

Total noninterest expense increased 12% to $9.7 billion, largely reflecting higher performance-based incentive compensation related to growth in revenue. Noncompensation expense was up 4% from the prior year primarily due to the impact of the Cazenove business partnership, while the overhead ratio declined to 67% for 2005, from 69% in 2004.

Total trading and credit portfolio VAR	**$ 88**	$ 88	$ 90

(a) Loans retained include Credit Portfolio, conduit loans, leveraged leases, bridge loans for underwriting and other accrual loans.
(b) Loans held-for-sale, which include loan syndications, and warehouse loans held as part of the IB's mortgage-backed, asset-backed and other securitization businesses, are excluded from Total loans for the allowance coverage ratio and net charge-off rate.
(c) Adjusted assets, a non-GAAP financial measure, equals total average assets minus (1) securities purchased under resale agreements and securities borrowed less securities sold, not yet purchased; (2) assets of variable interest entities (VIEs) consolidated under FIN 46R; (3) cash and securities segregated and on deposit for regulatory and other purposes; and (4) goodwill and intangibles. The amount of adjusted assets is presented to assist the reader in comparing the IB's asset and capital levels to other investment banks in the securities industry. Asset-to-equity leverage ratios are commonly used as one measure to assess a company's capital adequacy. The IB believes an adjusted asset amount that excludes the assets discussed above, which are considered to have a low risk profile, provides a more meaningful measure of balance sheet leverage in the securities industry.
(d) Nonperforming loans include loans held-for-sale of $3 million, $109 million and $2 million as of December 31, 2006, 2005 and 2004, respectively, which are excluded from the allowance coverage ratios. Nonperforming loans exclude distressed HFS loans purchased as part of IB's proprietary activities.
(e) For a more complete description of VAR, see page 77 of this Annual Report.
(f) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.

Total average loans of $80.6 billion increased by $24.0 billion, or 42%, from the prior year. Average loans retained of $58.8 billion increased by $14.0 billion, or 31%, from the prior year driven by higher levels of capital markets activity. Average loans held-for-sale of $21.7 billion were up by $10.0 billion, or 85%, from the prior year driven primarily by growth in the IB securitization businesses.

IB's average Total trading and credit portfolio VAR was $88 million for both 2006 and 2005. The Commodities and other VAR category has increased from $21 million on average for 2005 to $45 million on average for 2006, reflecting the build-out of the IB energy business, which has also increased the effect of portfolio diversification such that Total IB Trading VAR was down slightly compared with the prior year.

According to Thomson Financial, in 2006, the Firm maintained its #2 position in Global Debt, Equity and Equity-related, its #1 position in Global Syndicated Loans, and its #6 position in Global Equity & Equity-related transactions. The Firm improved its position in Global Long-term Debt to #3 from #4.

According to Dealogic, the Firm was ranked #1 in Investment Banking fees generated during 2006, based upon revenue.

RETAIL FINANCIAL SERVICES

Retail Financial Services, which includes Regional Banking, Mortgage Banking and Auto Finance reporting segments, helps meet the financial needs of consumers and businesses. RFS provides convenient consumer banking through the nation's fourth-largest branch network and third-largest ATM network. RFS is a top-five mortgage originator and servicer, the second-largest home equity originator, the largest noncaptive originator of automobile loans and one of the largest student loan originators.

RFS serves customers through more than 3,000 bank branches, 8,500 ATMs and 270 mortgage offices, and through relationships with more than 15,000 auto dealerships and 4,300 schools and universities. More than 11,000 branch salespeople assist customers, across a 17-state footprint from New York to Arizona, with checking and savings accounts, mortgage, home equity and business loans, investments and insurance. Over 1,200 additional mortgage officers provide home loans throughout the country.

During the first quarter of 2006, RFS completed the purchase of Collegiate Funding Services, which contributed an education loan servicing capability and provided an entry into the Federal Family Education Loan Program consolidation market. On July 1, 2006, RFS sold its life insurance and annuity underwriting businesses to Protective Life Corporation. On October 1, 2006, JPMorgan Chase completed The Bank of New York transaction, significantly strengthening RFS's distribution network in the New York Tri-state area.

ROA	**1.39**	1.51	1.18
Overhead ratio	**60**	58	63
Overhead ratio excluding core deposit intangibles[a]	**57**	55	61

(a) Retail Financial Services uses the overhead ratio (excluding the amortization of core deposit intangibles ("CDI")), a non-GAAP financial measure, to evaluate the underlying expense trends of the business. Including CDI amortization expense in the overhead ratio calculation results in a higher overhead ratio in the earlier years and a lower overhead ratio in later years; this method would result in an improving overhead ratio over time, all things remaining equal. This non-GAAP ratio excludes Regional Banking's core deposit intangible amortization expense related to The Bank of New York transaction and the Bank One merger of $458 million, $496 million and $264 million for the years ended December 31, 2006, 2005 and 2004, respectively.

(b) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.

2006 compared with 2005

Net income of $3.2 billion was down by $214 million, or 6%, from the prior year. A decline in Mortgage Banking was offset partially by improved results in Regional Banking and Auto Finance.

Total net revenue of $14.8 billion was flat compared with the prior year. Net interest income of $10.2 billion was down slightly due to narrower spreads on loans and deposits in Regional Banking, lower auto loan and lease balances and the sale of the insurance business. These declines were offset by the benefit of higher deposit and loan balances in Regional Banking, wider loan spreads in Auto Finance and The Bank of New York transaction. Noninterest revenue of $4.7 billion was up $35 million, or 1%, from the prior year. Results benefited from increases in deposit-related and branch production fees, higher automobile operating lease revenue and The Bank of New York transaction. This benefit was offset by lower net mortgage servicing revenue, the sale of the insurance business and losses related to loans transferred to held-for-sale. In 2006, losses of $233 million, compared with losses of $120 million in 2005, were recognized in Regional Banking related to mortgage loans transferred to held-for-sale; and losses of $50 million, compared with losses of $136 million in the prior year, were recognized in Auto Finance related to automobile loans transferred to held-for-sale.

The provision for credit losses of $561 million was down by $163 million from the prior-year provision due to the absence of a $250 million special provision for credit losses related to Hurricane Katrina in the prior year, partially offset by the establishment of additional allowance for loan losses related to loans acquired from The Bank of New York.

Noninterest expense of $8.9 billion was up by $342 million, or 4%, primarily due to The Bank of New York transaction, the acquisition of Collegiate Funding Services, investments in the retail distribution network and higher depreciation expense on owned automobiles subject to operating leases. These increases were offset partially by the sale of the insurance business and merger-related and other operating efficiencies and the absence of a $40 million prior-year charge related to the dissolution of a student loan joint venture.

2005 compared with 2004

Net income was $3.4 billion, up $1.2 billion from the prior year. The increase was due largely to the Merger but also reflected increased deposit balances and wider spreads, higher home equity and subprime mortgage balances, and expense savings in all businesses. These benefits were offset partially by narrower spreads on retained loan portfolios, the special provision for Hurricane Katrina and net losses associated with portfolio loan sales in Regional Banking and Auto Finance.

Total net revenue increased to $14.8 billion, up $4.0 billion, or 37%, due primarily to the Merger. Net interest income of $10.2 billion increased by $2.5 billion as a result of the Merger, increased deposit balances and wider spreads, and growth in retained consumer real estate loans. These benefits were offset partially by narrower spreads on loan balances and the absence of loan portfolios sold in late 2004 and early 2005. Noninterest revenue of $4.6 billion increased by $1.5 billion due to the Merger, improved MSR risk management results, higher automobile operating lease income and increased

deposit-related fees. These benefits were offset in part by losses on portfolio loan sales in Regional Banking and Auto Finance.

The Provision for credit losses totaled $724 million, up $275 million, or 61%, from 2004. Results included a special provision in 2005 for Hurricane Katrina of $250 million and a release in 2004 of $87 million in the Allowance for loan losses related to the sale of the manufactured home loan portfolio. Excluding these items, the Provision for credit losses would have been down $62 million, or 12%. The decline reflected reductions in the Allowance for loan losses due to improved credit trends in most consumer lending portfolios and the benefit of certain portfolios in run-off. These reductions were offset partially by the Merger and higher provision expense related to subprime mortgage loans retained on the balance sheet.

Total noninterest expense rose to $8.6 billion, an increase of $1.8 billion from the prior year, due primarily to the Merger. The increase also reflected continued investment in retail banking distribution and sales, increased depreciation expense on owned automobiles subject to operating leases and a $40 million charge related to the dissolution of a student loan joint venture. Expense savings across all businesses provided a favorable offset.

Regional Banking

Selected income statement data

Year ended December 31, (in millions, except ratios)	2006	2005	2004[b]
Noninterest revenue	**$ 3,204**	$ 3,138	$1,975
Net interest income	**8,768**	8,531	5,949
Total net revenue	**11,972**	11,669	7,924
Provision for credit losses	**354**	512	239
Noninterest expense	**6,825**	6,675	4,978
Income before income tax expense	**4,793**	4,482	2,707
Net income	**$ 2,884**	$ 2,780	$1,697
ROE	**27%**	31%	34%
ROA	**1.79**	1.84	1.53
Overhead ratio	**57**	57	63
Overhead ratio excluding core deposit intangibles[a]	**53**	53	59

(a) Regional Banking uses the overhead ratio (excluding the amortization of core deposit intangibles ("CDI")), a non-GAAP financial measure, to evaluate the underlying expense trends of the business. Including CDI amortization expense in the overhead ratio calculation results in a higher overhead ratio in the earlier years and a lower overhead ratio in later years; this inclusion would result in an improving overhead ratio over time, all things remaining equal. This non-GAAP ratio excludes Regional Banking's core deposit intangible amortization expense related to The Bank of New York transaction and the Bank One merger of $458 million, $496 million and $264 million for the years ended December 31, 2006, 2005 and 2004, respectively.
(b) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.

2006 compared with 2005

Regional Banking Net income of $2.9 billion was up by $104 million from the prior year. Total net revenue of $12.0 billion was up by $303 million, or 3%, including the impact of a $233 million current-year loss resulting from $13.3 billion of mortgage loans transferred to held-for-sale and a prior-year loss of $120 million resulting from $3.3 billion of mortgage loans transferred to held-for-sale. Results benefited from The Bank of New York transaction; the acquisition of Collegiate Funding Services; growth in deposits and home equity loans; and increases in deposit-related fees and credit card sales. These benefits were offset partially by the sale of the insurance business, narrower spreads on loans, and a shift to narrower-spread deposit products. The Provision for credit losses decreased by $158 million, primarily the result of a $230 million special provision in the prior year related to Hurricane Katrina, which was offset partially by additional Allowance for loan losses related to the acquisition of loans from The Bank of New York and increased net charge-offs due to portfolio seasoning and deterioration in subprime mortgages. Noninterest expense of $6.8 billion was up by $150 million, or 2%, from the prior year. The increase was due to investments in the retail distribution network, The Bank of New York transaction and the acquisition of Collegiate Funding Services, partially offset by the sale of the insurance business, merger savings and operating efficiencies, and the absence of a $40 million prior-year charge related to the dissolution of a student loan joint venture.

2005 compared with 2004

Regional Banking Net income of $2.8 billion was up by $1.1 billion from the prior year, including the impact of the Merger, and a current-year loss of $120 million resulting from $3.3 billion of mortgage loans transferred to held-for-sale compared with a prior-year loss of $52 million resulting from $5.2 billion of mortgage loans transferred to held-for-sale. Growth related to the Merger was offset partially by the impact of a $230 million special provision for credit losses related to Hurricane Katrina. Total net revenue of $11.7 billion was up by $3.7 billion, benefiting from the Merger, wider spreads on increased deposit balances, higher deposit-related fees and increased loan balances. These benefits were offset partially by mortgage loan spread compression due

to rising short-term interest rates and a flat yield curve, which contributed to accelerated home equity loan payoffs. The Provision for credit losses increased by $273 million, primarily the result of the $230 million special provision related to Hurricane Katrina, a prior-year $87 million benefit associated with the Firm's exit of the manufactured home loan business and the Merger. These increases were offset partially by the impact of lower net charge-offs and improved credit trends. Noninterest expense of $6.7 billion was up by $1.7 billion as a result of the Merger, the continued investment in branch distribution and sales, and a $40 million charge related to the dissolution of a student loan joint venture, partially offset by merger savings and operating efficiencies.

(a) 2004 results include six months of the combined Firm's results and six months heritage JPMorgan Chase results.

2006 compared with 2005

Mortgage Banking Net loss was $17 million compared with net income of $379 million in the prior year. Total net revenue of $1.3 billion was down by $526 million from the prior year due to a decline in net mortgage servicing revenue offset partially by an increase in production revenue. Production revenue was $833 million, up by $89 million, reflecting increased loan sales and wider gain on sale margins that benefited from a shift in the sales mix. Net mortgage servicing revenue, which includes loan servicing revenue, MSR risk management results and other changes in fair value, was $481 million compared with $1.1 billion in the prior year. Loan servicing revenue of $2.3 billion increased by $185 million on a 13% increase in third-party loans serviced. MSR risk management revenue of negative $379 million was down by $655 million from the prior year, including the impact of a $235 million negative valuation adjustment to the MSR asset in the third quarter of 2006 due to changes and refinements to assumptions used in the MSR valuation model. This result also reflected a fully hedged position in the current year. Other changes in fair value of the MSR asset, representing runoff of the asset against the realization of servicing cash flows, were negative $1.4 billion. Noninterest expense was $1.3 billion, up by $102 million, or 8%, due primarily to higher compensation expense related to an increase in the number of loan officers.

2005 compared with 2004

Mortgage Banking Net income was $379 million compared with $269 million in the prior year. Net revenue of $1.8 billion was up by $50 million from the prior year. Revenue comprises production revenue and net mortgage servicing revenue. Production revenue was $744 million, down by $172 million, due to an 11% decrease in mortgage originations. Net mortgage servicing revenue, which includes loan servicing revenue, MSR risk management results and other changes in fair value, was $1.1 billion compared with $874 million in the prior year. Loan servicing revenue of $2.1 billion increased by $45 million on an 8% increase in third-party loans serviced. MSR risk management revenue of $276 million was up by $163 million from the prior year, reflecting positive risk management results. Other changes in fair value of the MSR asset, representing runoff of the asset against the realization of servicing cash flows, were negative $1.3 billion. Noninterest expense of $1.2 billion was down by $125 million, or 9%, reflecting lower production volume and operating efficiencies.

Mortgage Banking origination channels comprise the following:

Retail – Borrowers who are buying or refinancing a home work directly with a mortgage banker employed by the Firm using a branch office, the Internet or by phone. Borrowers are frequently referred to a mortgage banker by real estate brokers, home builders or other third parties.

Wholesale – A third-party mortgage broker refers loan applications to a mortgage banker at the Firm. Brokers are independent loan originators that specialize in finding and counseling borrowers but do not provide funding for loans.

Correspondent – Banks, thrifts, other mortgage banks and other financial institutions sell closed loans to the Firm.

Correspondent negotiated transactions ("CNT") – Mid- to large-sized mortgage lenders, banks and bank-owned mortgage companies sell servicing to the Firm on an as-originated basis. These transactions supplement traditional production channels and provide growth opportunities in the servicing portfolio in stable and rising rate periods.

Net Mortgage servicing revenue components:

Production income – Includes net gain or loss on sales of mortgage loans, and other production related fees.

Servicing revenue – Represents all revenues earned from servicing mortgage loans for third parties, including stated service fees, excess service fees, late fees, and other ancillary fees.

Changes in MSR asset fair value due to inputs or assumptions in model – Represents MSR asset fair value adjustments due to changes in market-based inputs, such as interest rates and volatility, as well as updates to valuation assumptions used in the valuation model.

Changes in MSR asset fair value due to other changes – Includes changes in the MSR value due to servicing portfolio runoff (or time decay). Effective January 1, 2006, the Firm implemented SFAS 156, adopting fair value for the MSR asset. For the years ended December 31, 2005 and 2004, this amount represents MSR asset amortization expense calculated in accordance with SFAS 140.

Derivative valuation adjustments and other – Changes in the fair value of derivative instruments used to offset the impact of changes in market-based inputs to the MSR valuation model.

MSR risk management results – Includes "Changes in MSR asset fair value due to inputs or assumptions in model" and "Derivative valuation adjustments and other."

(a) Average loans include loans held-for-sale of $0.5 billion, $0.7 billion and $0.2 billion for 2006, 2005 and 2004, respectively. These amounts are not included in the net charge-off rate.
(b) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.

2006 compared with 2005

Total net income of $346 million was up by $78 million from the prior year, including the impact of a $50 million current-year loss and a $136 million prior-year loss related to loans transferred to held-for-sale. Total net revenue of $1.5 billion was up by $218 million, or 17%, reflecting higher automobile operating lease revenue and wider loan spreads on lower loan and direct finance lease balances. The provision for credit losses of $207 million decreased by $5 million from the prior year. Noninterest expense of $761 million increased by $90 million, or 13%, driven by increased depreciation expense on owned automobiles subject to operating leases, partially offset by operating efficiencies.

2005 compared with 2004

Total net income of $268 million was up by $35 million from the prior year, including the impact of a $136 million current-year loss related to loans transferred to held-for-sale. Total net revenue of $1.3 billion was up by $244 million, or 23%, reflecting higher automobile operating lease revenue and a benefit of $34 million from the sale of the $2 billion recreational vehicle loan portfolio. These increases were offset partially by narrower spreads. Noninterest expense of $671 million increased by $188, or 39%, driven by increased depreciation expense on owned automobiles subject to operating leases, offset partially by operating efficiencies.

CARD SERVICES

With more than 154 million cards in circulation and $153 billion in managed loans, Chase Card Services is one of the nation's largest credit card issuers. Customers used Chase cards for over $339 billion worth of transactions in 2006.

Chase offers a wide variety of general-purpose cards to satisfy the needs of individual consumers, small businesses and partner organizations, including cards issued with AARP, Amazon, Continental Airlines, Marriott, Southwest Airlines, Sony, United Airlines, Walt Disney Company and many other well-known brands and organizations. Chase also issues private-label cards with Circuit City, Kohl's, Sears Canada and BP.

Chase Paymentech Solutions, LLC, a joint venture with JPMorgan Chase and First Data Corporation, is the largest processor of MasterCard and Visa payments in the world, having handled over 18 billion transactions in 2006.

JPMorgan Chase uses the concept of "managed receivables" to evaluate the credit performance of its credit card loans, both loans on the balance sheet and loans that have been securitized. For further information, see Explanation and reconciliation of the Firm's use of non-GAAP financial measures on pages 32–33 of this Annual Report. Managed results exclude the impact of credit card securitizations on Total net revenue, the Provision for credit losses, net charge-offs and loan receivables. Securitization does not change reported Net income; however, it does affect the classification of items on the Consolidated statements of income and Consolidated balance sheets.

(a) As a result of the integration of Chase Merchant Services and Paymentech merchant processing businesses into a joint venture, beginning in the fourth quarter of 2005, Total net revenue, Total noninterest expense and Income before income tax expense have been reduced to reflect the deconsolidation of Paymentech. There was no impact to Net income.
(b) 2005 includes a $100 million special provision related to Hurricane Katrina; the remaining unused portion was released in 2006.
(c) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.

To illustrate underlying business trends, the following discussion of CS' performance assumes that the deconsolidation of Paymentech had occurred as of the beginning of 2004. The effect of the deconsolidation would have reduced Total net revenue, primarily in Noninterest revenue, and Total noninterest expense, but would not have had any impact on Net income for each period. The following table presents a reconciliation of CS' managed basis to an adjusted basis to disclose the effect of the deconsolidation of Paymentech on CS' results for the periods presented.

Reconciliation of Card Services' managed results to an adjusted basis to disclose the effect of the Paymentech deconsolidation

Year ended December 31, (in millions)	2006	2005	2004[a]
Noninterest revenue			
Managed for the period	**$ 2,944**	$ 3,563	$ 2,371
Adjustment for Paymentech	**—**	(422)	(276)
Adjusted Noninterest revenue	**$ 2,944**	$ 3,141	$ 2,095
Total net revenue			
Managed for the period	**$14,745**	$15,366	$10,745
Adjustment for Paymentech	**—**	(435)	(283)
Adjusted Total net revenue	**$14,745**	$14,931	$10,462
Total noninterest expense			
Managed for the period	**$ 5,086**	$ 4,999	$ 3,883
Adjustment for Paymentech	**—**	(389)	(252)
Adjusted Total noninterest expense	**$ 5,086**	$ 4,610	$ 3,631

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.

2006 compared with 2005

Net income of $3.2 billion was up by $1.3 billion, or 68%, from the prior year. Results were driven by a lower provision for credit losses due to significantly lower bankruptcy filings.

End-of-period managed loans of $152.8 billion increased by $10.6 billion, or 7%, from the prior year. Average managed loans of $141.1 billion increased by $4.7 billion, or 3%, from the prior year. Compared with the prior year, both average managed and end-of-period managed loans continued to be affected negatively by higher customer payment rates. Management believes that contributing to the higher payment rates are the new minimum payment rules and a higher proportion of customers in rewards-based programs.

The current year benefited from organic growth and reflected acquisitions of two loan portfolios. The first portfolio was the Sears Canada credit card business, which closed in the fourth quarter of 2005. The Sears Canada portfolio's average managed loan balances were $2.1 billion in the current year and $291 million in the prior year. The second purchase was the Kohl's private label portfolio, which closed in the second quarter of 2006. The Kohl's portfolio average and period-end managed loan balances for 2006 were $1.2 billion and $2.5 billion, respectively.

Total net managed revenue of $14.7 billion was down by $186 million, or 1% from the prior year. Net interest income of $11.8 billion was flat to the prior year. Net interest income benefited from an increase in average managed loan balances and lower revenue reversals associated with lower charge-offs. These increases were offset by attrition of mature, higher spread balances as a result of higher payment rates and higher cost of funds on balance growth in promotional, introductory and transactor loan balances, which increased due to continued investment in marketing. Noninterest revenue of $2.9 billion was down

by $197 million, or 6%. Interchange income increased, benefiting from 12% higher charge volume, but was more than offset by higher volume-driven payments to partners, including Kohl's, and increased rewards expense (both of which are netted against interchange income).

The managed provision for credit losses was $4.6 billion, down by $2.7 billion, or 37%, from the prior year. This benefit was due to a significant decrease in net charge-offs of $2.4 billion, reflecting the continued low level of bankruptcy losses, partially offset by an increase in contractual net charge-offs. The provision also benefited from a release in the Allowance for loan losses in the current year of unused reserves related to Hurricane Katrina, compared with an increase in the Allowance for loan losses in the prior year. The managed net charge-off rate decreased to 3.33%, down from 5.21% in the prior year. The 30-day managed delinquency rate was 3.13%, up from 2.79% in the prior year.

Noninterest expense of $5.1 billion was up $476 million, or 10%, from the prior year due largely to higher marketing spending and acquisitions offset partially by merger savings.

2005 compared with 2004

Net income of $1.9 billion was up $633 million, or 50%, from the prior year due to the Merger. In addition, lower expenses driven by merger savings, stronger underlying credit quality and higher revenue from increased loan balances and charge volume were offset partially by the impact of increased bankruptcies.

Net managed revenue was $14.9 billion, up $4.5 billion, or 43%. Net interest income was $11.8 billion, up $3.4 billion, or 41%, primarily due to the Merger, and the acquisition of a private label portfolio. In addition, higher loan balances were offset partially by narrower loan spreads and the reversal of revenue related to increased bankruptcy losses. Noninterest revenue of $3.1 billion was up $1.0 billion, or 50%, due to the Merger and higher interchange income from higher charge volume, partially offset by higher volume-driven payments to partners and higher expense related to rewards programs.

The Provision for credit losses was $7.3 billion, up $2.5 billion, or 51%, primarily due to the Merger, and included the acquisition of a private label portfolio. The provision also increased due to record bankruptcy-related net charge-offs resulting from bankruptcy legislation which became effective on October 17, 2005. Finally, the Allowance for loan losses was increased in part by the special Provision for credit losses related to Hurricane Katrina. These factors were offset partially by lower contractual net charge-offs. Despite a record level of bankruptcy losses, the net charge-off rate improved. The managed net charge-off rate was 5.21%, down from 5.27% in the prior year. The 30-day managed delinquency rate was 2.79%, down from 3.70% in the prior year, driven primarily by accelerated loss recognition of delinquent accounts as a result of the bankruptcy reform legislation and strong underlying credit quality.

Noninterest expense of $4.6 billion increased by $1.0 billion, or 27%, primarily due to the Merger, which included the acquisition of a private label portfolio. Merger savings, including lower processing and compensation costs were offset partially by higher spending on marketing.

(a) Represents Total net revenue less Provision for credit losses.
(b) 2006 includes approximately 21 million accounts from the acquisition of the Kohl's private label portfolio in the second quarter of 2006 and approximately 9 million accounts from the acquisition of the BP and Pier 1 Imports, Inc. private label portfolios in the fourth quarter of 2006. Fourth quarter of 2005 includes approximately 10 million accounts from the acquisition of the Sears Canada portfolio.
(c) Represents 100% of the merchant acquiring business.
(d) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.

The following is a brief description of selected business metrics within Card Services.

- **Charge volume** – Represents the dollar amount of cardmember purchases, balance transfers and cash advance activity.
- **Net accounts opened** – Includes originations, purchases and sales.
- **Merchant acquiring business** – Represents an entity that processes payments for merchants. JPMorgan Chase is a partner in Chase Paymentech Solutions, LLC.
  - **Bank card volume** – Represents the dollar amount of transactions processed for merchants.
  - **Total transactions** – Represents the number of transactions and authorizations processed for merchants.

The financial information presented below reconciles reported basis and managed basis to disclose the effect of securitizations.

COMMERCIAL BANKING

Commercial Banking serves more than 30,000 clients, including corporations, municipalities, financial institutions and not-for-profit entities. These clients generally have annual revenues ranging from $10 million to $2 billion. Commercial bankers serve clients nationally throughout the RFS footprint and in offices located in other major markets.

Commercial Banking offers its clients industry knowledge, experience, a dedicated service model, comprehensive solutions and local expertise. The Firm's broad platform positions CB to deliver extensive product capabilities – including lending, treasury services, investment banking and asset management – to meet its clients' U.S. and international financial needs.

On October 1, 2006, JPMorgan Chase completed the acquisition of The Bank of New York's consumer, business banking and middle-market banking businesses, adding approximately $2.3 billion in loans and $1.2 billion in deposits.

(a) IB-related and commercial card revenues are included in All other income.
(b) 2005 includes a $35 million special provision related to Hurricane Katrina.
(c) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.

Commercial Banking operates in 14 of the top 15 U.S. metropolitan areas and is divided into three businesses: Middle Market Banking, Mid-Corporate Banking and Real Estate Banking. General coverage for corporate clients is provided by Middle Market Banking, which covers clients with annual revenues generally ranging between $10 million and $500 million. Mid-Corporate Banking covers clients with annual revenues generally ranging between $500 million and $2 billion and focuses on clients that have broader investment-banking needs. The third segment, Real Estate Banking, serves large regional and national real estate customers across the United States. In addition to these three customer segments, CB offers several products to the Firm's entire customer base:

- Asset-based financing, syndications and collateral analysis through Chase Business Credit.
- A variety of equipment finance and leasing products, with specialties in aircraft finance, public sector, healthcare and information technology through Chase Equipment Leasing.
- Alternative capital strategies that provide a broader range of financing options, such as mezzanine and second lien loans and preferred equity, through Chase Capital Corporation.

With a large customer base across these segments and products, management believes the CB loan portfolio is highly diversified across a broad range of industries and geographic locations.

2006 compared with 2005

Net income of $1.0 billion increased by $59 million, or 6%, from the prior year due to higher revenue, partially offset by higher expense and provision for credit losses.

Record net revenue of $3.8 billion increased 9%, or $312 million. Net interest income increased to $2.7 billion, primarily driven by higher liability balances and loan volumes, partially offset by loan spread compression and a shift to narrower-spread liability products. Noninterest revenue was $1.1 billion, up $87 million, or 9%, due to record IB-related revenue and higher commercial card revenue.

Revenue grew for each CB business compared with the prior year, driven by increased treasury services, investment banking and lending revenue. Compared with the prior year, Middle Market Banking revenue of $2.5 billion increased by $177 million, or 8%. Mid-Corporate Banking revenue of $656 million increased by $105 million, or 19%, and Real Estate Banking revenue of $458 million increased by $24 million, or 6%.

Provision for credit losses was $160 million, up from $73 million in the prior year, reflecting portfolio activity and the establishment of additional allowance for loan losses related to loans acquired from The Bank of New York, partially offset by a release of the unused portion of the special reserve established in 2005 for Hurricane Katrina. Net charge-offs were flat compared with the prior year. Nonperforming loans declined 56%, to $121 million.

Total noninterest expense of $2.0 billion increased by $123 million, or 7%, from last year, primarily related to incremental Compensation expense related to SFAS 123R and increased expense resulting from higher client usage of Treasury Services' products.

2005 compared with 2004

Net income of $951 million was up $390 million, or 70%, from the prior year, primarily due to the Merger.

Total net revenue of $3.5 billion increased by $1.2 billion, or 53%, primarily as a result of the Merger. In addition to the overall increase from the Merger, Net interest income of $2.5 billion was positively affected by wider spreads on higher volume related to liability balances and increased loan volumes, partially offset by narrower loan spreads. Noninterest revenue of $986 million was positively impacted by the Merger and higher IB revenue, partially offset by lower deposit-related fees due to higher interest rates.

Each business within CB demonstrated revenue growth over the prior year, primarily due to the Merger. Middle Market Banking revenue was $2.4 billion, an increase of $861 million, or 58%, over the prior year; Mid-Corporate Banking revenue was $551 million, an increase of $183 million, or 50%; and

Real Estate Banking revenue was $434 million, up $162 million, or 60%. In addition to the Merger, revenue was higher for each business due to wider spreads and higher volume related to liability balances and increased investment banking revenue, partially offset by narrower loan spreads.

Provision for credit losses of $73 million increased by $32 million, primarily due to a special provision related to Hurricane Katrina, increased loan balances and refinements in the data used to estimate the allowance for credit losses. The credit quality of the portfolio was strong with net charge-offs of $26 million, down $35 million from the prior year, and nonperforming loans of $272 million were down $255 million, or 48%.

Total noninterest expense of $1.9 billion increased by $530 million, or 40%, primarily due to the Merger and to an increase in allocated unit costs for Treasury Services' products.

(a) Represents the total revenue related to investment banking products sold to CB clients.
(b) Average loans include loans held-for-sale of $442 million and $283 million for 2006 and 2005, respectively. This information is not available for 2004. Loans held-for-sale amounts are not included in the net charge-off rate or allowance coverage ratios.
(c) Liability balances include deposits and deposits swept to on–balance sheet liabilities.
(d) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.

Commercial Banking revenues comprise the following:

Lending includes a variety of financing alternatives, which are often provided on a basis secured by receivables, inventory, equipment, real estate or other assets. Products include:

- Term loans
- Revolving lines of credit
- Bridge financing
- Asset-based structures
- Leases

Treasury services includes a broad range of products and services enabling clients to transfer, invest and manage the receipt and disbursement of funds, while providing the related information reporting. These products and services include:

- U.S. dollar and multi-currency clearing
- ACH
- Lockbox
- Disbursement and reconciliation services
- Check deposits
- Other check and currency-related services
- Trade finance and logistics solutions
- Commercial card
- Deposit products, sweeps and money market mutual funds

Investment banking provides clients with sophisticated capital-raising alternatives, as well as balance sheet and risk management tools, through:

- Advisory
- Equity underwriting
- Loan syndications
- Investment-grade debt
- Asset-backed securities
- Private placements
- High-yield bonds
- Derivatives
- Foreign exchange hedges
- Securities sales

TREASURY & SECURITIES SERVICES

Treasury & Securities Services is a global leader in providing transaction, investment and information services to support the needs of institutional clients worldwide. TSS is one of the largest cash management providers in the world and a leading global custodian. Treasury Services provides a variety of cash management products, trade finance and logistics solutions, wholesale card products, and short-term liquidity management capabilities to small and mid-sized companies, multinational corporations, financial institutions and government entities. TS partners with the Commercial Banking, Retail Financial Services and Asset Management businesses to serve clients firmwide. As a result, certain TS revenues are included in other segments' results. Worldwide Securities Services stores, values, clears and services securities and alternative investments for investors and broker-dealers; and manages Depositary Receipt programs globally.

As a result of the transaction with The Bank of New York on October 1, 2006, selected corporate trust businesses were transferred from TSS to the Corporate segment and are reported in discontinued operations for all periods presented.

(a) TSS is charged a credit reimbursement related to certain exposures managed within the IB credit portfolio on behalf of clients shared with TSS. For a further discussion, see Credit reimbursement on page 35 of this Annual Report.
(b) Pretax margin represents Income before income tax expense divided by Total net revenue, which is a measure of pretax performance and another basis by which management evaluates its performance and that of its competitors.
(c) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.

2006 compared with 2005

Net income was $1.1 billion, an increase of $227 million, or 26%, from the prior year. Earnings benefited from increased revenue, and was offset by higher compensation expense and the absence of prior-year charges of $58 million (after-tax) related to the termination of a client contract.

Total net revenue was $6.1 billion, an increase of $570 million, or 10%. Noninterest revenue was $4.0 billion, up by $380 million, or 10%. The improvement was due primarily to an increase in assets under custody to $13.9 trillion, which was driven by market value appreciation and new business. Also contributing to the improvement was growth in depositary receipts, securities lending, and global clearing, all of which were driven by a combination of increased product usage by existing clients and new business. Net interest income was $2.1 billion, an increase of $190 million, or 10%, benefiting from a 22% increase in average liability balances, partially offset by the impact of growth in narrower-spread liability products.

Treasury Services Total net revenue of $2.8 billion was up 4%. Worldwide Securities Services Total net revenue of $3.3 billion grew by $473 million, or 17%. TSS firmwide Total net revenue, which includes Treasury Services Total net revenue recorded in other lines of business, grew to $8.6 billion, up by $778 million, or 10%. Treasury Services firmwide Total net revenue grew to $5.2 billion, an increase of $305 million, or 6%.

Total noninterest expense was $4.3 billion, up $216 million, or 5%. The increase was due to higher compensation expense related to increased client activity, business growth, investment in new product platforms and incremental expense related to SFAS 123R, partially offset by the absence of prior-year charges of $93 million related to the termination of a client contract.

2005 compared with 2004

Net income was $863 million, an increase of $586 million, or 212%. Primarily driving the improvement in revenue were the Merger, business growth, and widening spreads on and growth in average liability balances. Noninterest expense increased primarily due to the Merger and higher compensation expense. Results for 2005 also included charges of $58 million (after-tax) to terminate a client contract. Results for 2004 also included software-impairment charges of $97 million (after-tax) and a gain of $10 million (after-tax) on the sale of a business.

Total net revenue of $5.5 billion increased $1.3 billion, or 32%. Net interest income grew to $1.9 billion, up $655 million, due to wider spreads on liability balances, a change in the corporate deposit pricing methodology in 2004 and growth in average liability balances. Noninterest revenue of $3.7 billion increased by $686 million, or 23%, due to product growth across TSS, the Merger and the acquisition of Vastera. Leading the product revenue growth was an increase in assets under custody to $10.7 trillion, primarily driven by market value appreciation and new business, along with growth in wholesale card, securities lending, foreign exchange, trade, clearing and ACH revenues. Partially offsetting this growth in noninterest revenue was a decline in deposit-related fees due to higher interest rates and the absence, in the current period, of a gain on the sale of a business.

TS Total net revenue of $2.7 billion grew by $635 million, and WSS Total net revenue of $2.8 billion grew by $706 million. TSS firmwide Total net revenue, which includes TS Total net revenue recorded in other lines of business, grew to $7.8 billion, up $2.1 billion, or 38%. Treasury Services firmwide Total net revenue grew to $4.9 billion, up $1.4 billion, or 41%.

Credit reimbursement to the Investment Bank was $154 million, an increase of $64 million, primarily as a result of the Merger. TSS is charged a credit reimbursement related to certain exposures managed within the Investment Bank credit portfolio on behalf of clients shared with TSS.

Total noninterest expense of $4.1 billion was up $324 million, or 9%, due to the Merger, increased compensation expense resulting from new business growth and the Vastera acquisition, and charges of $93 million to terminate a client contract. Partially offsetting these increases were higher product unit costs charged to other lines of business, primarily Commercial Banking, lower allocations of Corporate segment expenses, merger savings and business efficiencies. The prior year included software-impairment charges of $155 million.

Treasury & Securities Services firmwide metrics include certain TSS product revenues and liability balances reported in other lines of business for customers who are also customers of those lines of business. Management reviews firmwide metrics such as liability balances, revenues and overhead ratios in assessing financial performance for TSS as such firmwide metrics capture the firmwide impact of TS' and TSS' products and services. Management believes such firmwide metrics are necessary in order to understand the aggregate TSS business.

Treasury & Securities Services firmwide liability balances[f]	**262,678**	220,781	163,169

(a) International electronic funds transfer includes non-US$ ACH and clearing volume.
(b) Wholesale cards issued include domestic commercial card, stored value card, prepaid card, and government electronic benefit card products.
(c) Liability balances include deposits and deposits swept to on-balance sheet liabilities.
(d) Firmwide revenue includes TS revenue recorded in the CB, Regional Banking and AM lines of business (see below) and excludes FX revenues recorded in the IB for TSS-related FX activity.

(in millions)	2006	2005	2004[g]
Treasury Services revenue reported in CB	**$ 2,243**	$ 2,062	$ 1,335
Treasury Services revenue reported in other lines of business	**207**	180	113

TSS firmwide FX revenue, which includes FX revenue recorded in TSS and FX revenue associated with TSS customers who are FX customers of the IB, was $445 million, $382 million and $320 million for the years ended December 31, 2006, 2005 and 2004, respectively.

(e) Overhead ratios have been calculated based upon firmwide revenues and TSS and TS expenses, respectively, including those allocated to certain other lines of business. FX revenues and expenses recorded in the IB for TSS-related FX activity are not included in this ratio.
(f) Firmwide liability balances include TS' liability balances recorded in certain other lines of business. Liability balances associated with TS customers who are also customers of the CB line of business are not included in TS liability balances.
(g) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.

ASSET MANAGEMENT

With assets under supervision of $1.3 trillion, AM is a global leader in investment and wealth management. AM clients include institutions, retail investors and high-net-worth individuals in every major market throughout the world. AM offers global investment management in equities, fixed income, real estate, hedge funds, private equity and liquidity, including both money-market instruments and bank deposits. AM also provides trust and estate and banking services to high-net-worth clients, and retirement services for corporations and individuals. The majority of AM's client assets are in actively managed portfolios.

Financial ratios			
ROE	**40%**	51%	17%
Overhead ratio	**67**	68	75
Pretax margin ratio[a]	**33**	33	25

(a) Pretax margin represents Income before income tax expense divided by Total net revenue, which is a measure of pretax performance and another basis by which management evaluates its performance and that of its competitors.
(b) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.

2006 compared with 2005

Net income was a record $1.4 billion, up by $193 million, or 16%, from the prior year. Improved results were driven by increased revenue offset partially by higher performance-based compensation expense, incremental expense from the adoption of SFAS 123R and the absence of a tax credit recognized in the prior year.

Total net revenue was a record $6.8 billion, up by $1.1 billion, or 20%, from the prior year. Noninterest revenue, principally fees and commissions, of $5.8 billion was up by $1.2 billion, or 27%. This increase was due largely to increased assets under management and higher performance and placement fees. Net interest income was $971 million, down by $110 million, or 10%, from the prior year. The decline was due primarily to narrower spreads on deposit products and the absence of BrownCo, partially offset by higher deposit and loan balances.

Institutional revenue grew 41%, to $2.0 billion, due to net asset inflows and higher performance fees. Private Bank revenue grew 13%, to $1.9 billion, due to increased placement activity, higher asset management fees and higher deposit balances, partially offset by narrower average spreads on deposits. Retail revenue grew 22%, to $1.9 billion, primarily due to net asset inflows, partially offset by the sale of BrownCo. Private Client Services revenue decreased 1%, to $1.0 billion, as higher deposit and loan balances were more than offset by narrower average deposit and loan spreads.

Provision for credit losses was a benefit of $28 million compared with a benefit of $56 million in the prior year. The current-year benefit reflects a high level of recoveries and stable credit quality.

Total noninterest expense of $4.6 billion was up by $718 million, or 19%, from the prior year. The increase was due to higher performance-based compensation, incremental expense related to SFAS 123R, increased salaries and benefits related to business growth, and higher minority interest expense related to Highbridge, partially offset by the absence of BrownCo.

2005 compared with 2004

Net income of $1.2 billion was up $535 million from the prior year due to the Merger and increased revenue, partially offset by higher compensation expense.

Total net revenue was $5.7 billion, up $1.5 billion, or 36%. Noninterest revenue, primarily fees and commissions, of $4.6 billion was up $1.2 billion, principally due to the Merger, the acquisition of a majority interest in Highbridge in 2004, net asset inflows and global equity market appreciation. Net interest income of $1.1 billion was up $285 million, primarily due to the Merger, higher deposit and loan balances, partially offset by narrower deposit spreads.

Private Bank revenue grew 9%, to $1.7 billion. Retail revenue grew 30%, to $1.5 billion. Institutional revenue grew 57%, to $1.4 billion, due to the acquisition of a majority interest in Highbridge. Private Client Services revenue grew 88%, to $1.0 billion.

Provision for credit losses was a benefit of $56 million, compared with a benefit of $14 million in the prior year, due to lower net charge-offs and refinements in the data used to estimate the allowance for credit losses.

Total noninterest expense of $3.9 billion increased by $727 million, or 23%, reflecting the Merger, the acquisition of Highbridge and increased compensation expense related primarily to higher performance-based incentives.

AM's client segments comprise the following:

Institutional brings comprehensive global investment services – including asset management, pension analytics, asset-liability management and active risk budgeting strategies – to corporate and public institutions, endowments, foundations, not-for-profit organizations and governments worldwide.

Retail provides worldwide investment management services and retirement planning and administration through third-party and direct distribution of a full range of investment vehicles.

The **Private Bank** addresses every facet of wealth management for ultra-high-net-worth individuals and families worldwide, including investment management, capital markets and risk management, tax and estate planning, banking, capital raising and specialty-wealth advisory services.

Private Client Services offers high-net-worth individuals, families and business owners in the United States comprehensive wealth management solutions, including investment management, capital markets and risk management, tax and estate planning, banking, and specialty-wealth advisory services.

Assets under supervision

2006 compared with 2005

Assets under supervision ("AUS") were $1.3 trillion, up 17%, or $198 billion, from the prior year. Assets under management ("AUM") were $1.0 trillion, up 20%, or $166 billion, from the prior year. The increase was the result of net asset inflows in the Retail segment, primarily in equity-related products, Institutional segment flows, primarily in liquidity products, and market appreciation. Custody, brokerage, administration and deposit balances were $334 billion, up by $32 billion. The Firm also has a 43% interest in American Century Companies, Inc., whose AUM totaled $103 billion and $101 billion at December 31, 2006 and 2005, respectively.

2005 compared with 2004

AUS at December 31, 2005, were $1.1 trillion, up 4%, or $43 billion, from the prior year despite a $33 billion reduction due to the sale of BrownCo. AUM were $847 billion, up 7%. The increase was primarily the result of net asset inflows in equity-related products and global equity market appreciation. Custody, brokerage, administration, and deposits were $302 billion, down $13 billion due to a $33 billion reduction from the sale of BrownCo. The Firm also has a 43% interest in American Century Companies, Inc., whose AUM totaled $101 billion and $98 billion at December 31, 2005 and 2004, respectively.

(f) Reflects the sale of BrownCo ($33 billion) in 2005, and the Merger with Bank One ($214 billion) and the acquisition of a majority interest in Highbridge ($7 billion) in 2004.

CORPORATE

The Corporate sector comprises Private Equity, Treasury, corporate staff units and expenses that are centrally managed. Private Equity includes the JPMorgan Partners and ONE Equity Partners businesses. Treasury manages the structural interest rate risk and investment portfolio for the Firm. The corporate staff units include Central Technology and Operations, Internal Audit, Executive Office, Finance, Human Resources, Marketing & Communications, Office of the General Counsel, Corporate Real Estate and General Services, Risk Management, and Strategy and Development. Other centrally managed expenses include the Firm's occupancy and pension-related expenses, net of allocations to the business.

On August 1, 2006, the buyout and growth equity professionals of JPMorgan Partners ("JPMP") formed an independent firm, CCMP Capital, LLC ("CCMP"), and the venture professionals separately formed an independent firm, Panorama Capital, LLC ("Panorama"). The investment professionals of CCMP and Panorama continue to manage the former JPMP investments pursuant to a management agreement with the Firm.

On October 1, 2006, the Firm completed the exchange of selected corporate trust businesses, including trustee, paying agent, loan agency and document management services, for the consumer, business banking and middle-market banking businesses of The Bank of New York. These corporate trust businesses, which were previously reported in TSS, are now reported as discontinued operations for all periods presented within Corporate. The related balance sheet and income statement activity were transferred to the Corporate segment commencing with the second quarter of 2006. Periods prior to the second quarter of 2006 have been revised to reflect this transfer.

(a) Includes a gain of $103 million in 2006 related to the initial public offering of Mastercard, and a gain of $1.3 billion on the sale of BrownCo in 2005.
(b) 2004 includes $858 million related to accounting policy conformity adjustments in connection with the Merger.
(c) Includes insurance recoveries related to material legal proceedings of $512 million and $208 million in 2006 and 2005, respectively. Includes litigation reserve charges of $2.8 billion and $3.7 billion in 2005 and 2004, respectively.
(d) Includes tax benefits recognized upon resolution of tax audits.
(e) Includes a $622 million gain from exiting the corporate trust business in the fourth quarter of 2006.
(f) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.

2006 compared with 2005

Net income was $842 million compared with a net loss of $3.6 billion in the prior year. In comparison with the prior year, Private Equity earnings was $627 million, down from $821 million; Treasury net loss was $560 million compared with a net loss of $2.0 billion; the net loss in Other Corporate (including Merger costs) was $20 million compared with a net loss of $2.6 billion; and the Net income from discontinued operations was $795 million compared with $229 million.

Total net revenue was $8 million, as compared with a negative $1.1 billion in the prior year. Net interest income was a negative $1.0 billion compared with negative $2.8 billion in the prior year. Treasury was the primary driver of the improvement, with Net interest income of negative $140 million compared with negative $1.7 billion in the prior year, benefiting primarily from an improvement in Treasury's net interest spread and an increase in available-for-sale securities. Noninterest revenue was $1.1 billion compared with $1.6 billion, reflecting the absence of the $1.3 billion gain on the sale of BrownCo last year and lower Private Equity gains of $1.3 billion compared with gains of $1.7 billion in the prior year. These declines were offset by $619 million in securities losses in Treasury compared with securities losses of $1.5 billion in the prior year and a gain of $103 million related to the sale of Mastercard shares in its initial public offering in the current year.

Total noninterest expense was $1.1 billion, down by $4.2 billion from $5.3 billion in the prior year. Insurance recoveries relating to certain material litigation were $512 million in the current year, while the prior-year results included a material litigation charge of $2.8 billion, and related insurance recoveries of $208 million. Prior-year expense included a $145 million cost due to the accelerated vesting of stock options. Merger costs were $305 million compared with $722 million in the prior year.

Discontinued operations include the results of operations of selected corporate trust businesses sold to The Bank of New York on October 1, 2006. Prior to the sale, the selected corporate trust businesses produced $173 million of Net income in the current year compared with Net income of $229 million in the prior year. Net income from discontinued operations for 2006 also included a one-time gain of $622 million related to the sale of these businesses.

2005 compared with 2004

Total net revenue was a negative $1.1 billion compared with Total net revenue of $769 million in the prior year. Noninterest revenue of $1.6 billion decreased by $363 million and included securities losses of $1.5 billion due to the following: repositioning of the Treasury investment portfolio to manage exposure to interest rates; the gain on the sale of BrownCo of $1.3 billion; and the increase in private equity gains of $262 million. For further discussion on the sale of BrownCo, see Note 2 on page 97 of this Annual Report.

Net interest income was a loss of $2.8 billion compared with a loss of $1.2 billion in the prior year. Actions and policies adopted in conjunction with the Merger and the repositioning of the Treasury investment portfolio were the main drivers of the increased loss.

Total noninterest expense was $5.3 billion, down $1.1 billion from $6.4 billion in the prior year. Material litigation charges were $2.8 billion compared with $3.7 billion in the prior year. Merger costs were $722 million compared with $1.4 billion in the prior year. These decreases were offset primarily by the cost of accelerated vesting of certain employee stock options.

On September 15, 2004, JPMorgan Chase and IBM announced the Firm's plans to reintegrate the portions of its technology infrastructure – including data centers, help desks, distributed computing, data networks and voice networks – that were previously outsourced to IBM. In January 2005, approximately 3,100 employees and 800 contract employees were transferred to the Firm.

(a) Includes a gain of $64 million ($103 million pretax) in 2006 related to the initial public offering of Mastercard, and a gain of $752 million ($1.3 billion pretax) on the sale of BrownCo in 2005.
(b) Includes insurance recoveries (after-tax) related to material legal proceedings of $317 million and $129 million in 2006 and 2005, respectively. Includes litigation reserve charges (after-tax) of $1.7 billion and $2.3 billion in 2005 and 2004, respectively.
(c) Includes tax benefits recognized upon resolution of tax audits.
(d) Includes a $622 million gain from exiting the corporate trust business in the fourth quarter of 2006.
(e) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.

Private equity portfolio

2006 compared with 2005

The carrying value of the private equity portfolio declined by $95 million to $6.1 billion as of December 31, 2006. This decline was due primarily to sales offset partially by new investment activity. The portfolio represented 8.6% of the Firm's stockholders' equity less goodwill at December 31, 2006, down from 9.7% at December 31, 2005.

2005 compared with 2004

The carrying value of the private equity portfolio declined by $1.3 billion to $6.2 billion as of December 31, 2005. This decline was primarily the result of sales and recapitalizations of direct investments. The portfolio represented 9.7% and 12% of JPMorgan Chase's stockholders' equity less goodwill at December 31, 2005 and 2004, respectively.

Balance sheet overview

At December 31, 2006, the Firm's total assets were $1.4 trillion, an increase of $152.6 billion, or 13%, from December 31, 2005. Total liabilities were $1.2 trillion, an increase of $144.0 billion, or 13%, from December 31, 2005. Stockholders' equity was $115.8 billion, an increase of $8.6 billion, or 8% from December 31, 2005. The following is a discussion of the significant changes in balance sheet items during 2006.

Federal funds sold and securities purchased under resale agreements; Securities borrowed; Federal funds purchased and securities sold under repurchase agreements; and Commercial paper and Other borrowed funds

The Firm utilizes Federal funds sold and securities purchased under resale agreements, Securities borrowed, Federal funds purchased and securities sold under repurchase agreements and Commercial paper and other borrowed funds as part of its liquidity management activities, in order to manage the Firm's cash positions, risk-based capital requirements, and to maximize liquidity access and minimize funding costs. In 2006, Federal funds sold increased in connection with higher levels of funds that were available for short-term investments. Securities sold under repurchase agreements and Commercial paper and other borrowed funds increased primarily due to short-term requirements to fund trading positions and AFS securities inventory levels, as well as the result of growth in volume related to sweeps and other cash management products. For additional information on the Firm's Liquidity risk management, see pages 62–63 of this Annual Report.

Trading assets and liabilities – debt and equity instruments

The Firm uses debt and equity trading instruments for both market-making and proprietary risk-taking activities. These instruments consist primarily of fixed income securities (including government and corporate debt), equity securities and convertible cash instruments, as well as physical commodities. The increase in trading assets over December 31, 2005, was due primarily to the more favorable capital markets environment, with growth in client-driven market-making activities across both products (such as interest rate, credit and equity markets) and regions. For additional information, refer to Note 4 on page 98 of this Annual Report.

Trading assets and liabilities – derivative receivables and payables

The Firm utilizes various interest rate, foreign exchange, equity, credit and commodity derivatives for market-making, proprietary risk-taking and risk-management purposes. The increases in derivative receivables and payables from December 31, 2005, primarily stemmed from an increase in credit derivatives and equity contracts. For additional information, refer to Derivative contracts and Note 4 on pages 69–72 and 98, respectively, of this Annual Report.

Securities

The Firm's securities portfolio, almost all of which is classified as AFS, is used primarily to manage the Firm's exposure to interest rate movements. The AFS portfolio increased by $44.4 billion from the 2005 year end, primarily due to net purchases in the Treasury investment securities portfolio, in connection with repositioning the Firm's portfolio to manage exposure to interest rates. For additional information related to securities, refer to the Corporate segment discussion and to Note 10 on pages 53–54 and 108–111, respectively, of this Annual Report.

Interests in purchased receivables and Beneficial interests issued by consolidated VIEs

Interests in purchased receivables and Beneficial interests issued by consolidated VIEs declined from December 2005, as a result of the restructuring during the second quarter of 2006 of Firm-administered multi-seller conduits. The restructuring resulted in the deconsolidation of $29 billion of Interests in purchased receivables, $3 billion of Loans and $1 billion of AFS securities, as well as a corresponding decrease in Beneficial interests issued by consolidated VIEs. For additional information related to multi-seller conduits, refer to Off–balance sheet arrangements and contractual cash obligations on pages 59–60 and Note 15 on pages 118–120 of this Annual Report.

Loans

The Firm provides loans to customers of all sizes, from large corporate clients to individual consumers. The Firm manages the risk/reward relationship of each portfolio and discourages the retention of loan assets that do not generate a positive return above the cost of risk-adjusted capital. The $63.8 billion increase in loans, net of the Allowance for loan losses, from December 31, 2005, was due primarily to an increase of $33.6 billion in the wholesale portfolio, mainly in the IB, reflecting an increase in capital markets activity, including financings associated with client acquisitions, securitizations and loan syndications. CB loans also increased as a result of organic growth and The Bank of New York transaction. The $30.3 billion increase in consumer loans was due largely to increases in CS (reflecting strong organic growth, a reduction in credit card securitization activity, and the acquisitions of private-label credit card portfolios), increases in education loans resulting from the 2006 first-quarter acquisition of Collegiate Funding Services, and as a result of The Bank of New York transaction. These increases were offset partially by a decline in auto loans and leases. The Allowance for loan losses increased $189 million, or 3%, from December 31, 2005. For a more detailed discussion of the loan portfolio and the Allowance for loan losses, refer to Credit risk management on pages 64–76 of this Annual Report.

Goodwill

Goodwill arises from business combinations and represents the excess of the cost of an acquired entity over the net fair value amounts assigned to assets acquired and liabilities assumed. The $1.6 billion increase in Goodwill primarily resulted from the addition of $1.8 billion of goodwill from The Bank of New York transaction in the 2006 fourth quarter and from the 2006 first-quarter acquisition of Collegiate Funding Services. Partially offsetting the increase in Goodwill were reductions of $402 million resulting from the sale of selected corporate trust businesses to The Bank of New York; purchase accounting adjustments associated with the 2005 fourth-quarter acquisition of the Sears Canada credit card business; the 2006 second quarter sale of the insurance business; and a reduction related to reclassifying net assets of a subsidiary as held-for-sale. For additional information, see Notes 3 and 16 on pages 97 and 121–123 of this Annual Report.

Other intangible assets

The Firm's other intangible assets consist of mortgage servicing rights ("MSRs"), purchased credit card relationships, other credit card–related intangibles, core deposit intangibles, and all other intangibles. The $293 million increase in Other intangible assets primarily reflects higher MSRs due to growth in the servicing portfolio, the addition of core deposit intangibles from The Bank of New York transaction and purchase accounting adjustments related to the Sears Canada credit card business. Partially offsetting these increases were the amortization of intangibles and a $436 million reduction in Other intangible assets as a result of the sale of selected corporate trust businesses to The Bank of New York. For additional information on MSRs and other intangible assets, see Notes 3 and 16 on pages 97 and 121–123 of this Annual Report.

Deposits

The Firm's deposits represent a liability to customers, both retail and wholesale, for funds held on their behalf. Deposits are generally classified by location (U.S. and non-U.S.), whether they are interest- or noninterest-bearing, and by type (demand, money market deposit accounts ("MMDAs"), savings, time, negotiable order of withdrawal ("NOW") accounts), and help provide a stable and consistent source of funding to the Firm. Deposits increased by 15% from December 31, 2005. Growth in retail deposits reflected The Bank of New York transaction, new account acquisitions, and the ongoing expansion of the retail branch distribution network. Wholesale deposits increased driven by growth in business volumes. Partially offsetting the growth in wholesale deposits was a $24.0 billion decline as a result of the sale of selected corporate trust businesses to The Bank of New York. For more information on deposits, refer to the RFS segment discussion and the Liquidity risk management discussion on pages 38–42 and 62–63, respectively, of this Annual Report. For more information on wholesale liability balances, including deposits, refer to the CB and TSS segment discussions on pages 46–47 and 48–49, respectively, of this Annual Report.

Long-term debt and trust preferred capital debt securities

The Firm utilizes Long-term debt and trust preferred capital debt securities as part of its liquidity and capital management activities. Long-term debt and trust preferred capital debt securities increased by $25.7 billion, or 21%, from December 31, 2005, primarily due to net new issuances. Continued strong foreign investor participation in the global corporate markets allowed JPMorgan Chase to identify attractive opportunities globally to further diversify its funding and capital sources. During 2006, JPMorgan Chase issued approximately $56.7 billion of long-term debt and trust preferred capital debt securities. These issuances were offset partially by $34.3 billion of long-term debt and trust preferred capital debt securities that matured or were redeemed. For additional information on the Firm's long-term debt activities, see the Liquidity risk management discussion on pages 62–63 and Note 19 on pages 124–125 of this Annual Report.

Stockholders' equity

Total stockholders' equity increased by $8.6 billion, or 8%, from year-end 2005 to $115.8 billion at December 31, 2006. The increase was primarily the result of Net income for 2006 and net shares issued under the Firm's employee stock-based compensation plans, offset partially by the declaration of cash dividends, stock repurchases, a charge of $1.1 billion to Accumulated other comprehensive income (loss) related to the prospective adoption, as required on December 31, 2006, of SFAS 158 for the Firm's defined benefit pension and OPEB plans, and the redemption of preferred stock. For a further discussion of capital, see the Capital management section that follows. For a further discussion of SFAS 158, see Note 7 on pages 100–105 of this Annual Report.

The Firm's capital management framework is intended to ensure that there is capital sufficient to support the underlying risks of the Firm's business activities, as measured by economic risk capital, and to maintain "well-capitalized" status under regulatory requirements. In addition, the Firm holds capital above these requirements in amounts deemed appropriate to achieve management's regulatory and debt rating objectives. The process of assigning equity to the lines of business is integrated into the Firm's capital framework and is overseen by ALCO.

Line of business equity

The Firm's framework for allocating capital is based upon the following objectives:

- integrate firmwide capital management activities with capital management activities within each of the lines of business;
- measure performance consistently across all lines of business; and
- provide comparability with peer firms for each of the lines of business.

Equity for a line of business represents the amount the Firm believes the business would require if it were operating independently, incorporating sufficient capital to address economic risk measures, regulatory capital requirements and capital levels for similarly rated peers. Return on equity is measured and internal targets for expected returns are established as a key measure of a business segment's performance.

Effective January 1, 2006, the Firm refined its methodology for allocating capital to the lines of business. As a result of this refinement, RFS, CS, CB, TSS and AM had higher amounts of capital allocated to them commencing in the first quarter of 2006. The revised methodology considers for each line of business, among other things, goodwill associated with such line of business' acquisitions since the Merger. In management's view, the revised methodology assigns responsibility to the lines of business to generate returns on the amount of capital supporting acquisition-related goodwill. As part of this refinement in the capital allocation methodology, the Firm assigned to the Corporate segment an amount of equity capital equal to the then-current book value of goodwill from and prior to the Merger. As prior periods have not been revised to reflect the new capital allocations, capital allocated to the respective lines of business for 2006 is not comparable to prior periods; and certain business metrics, such as ROE, are not comparable to the current presentation. The Firm may revise its equity capital-allocation methodology again in the future.

In accordance with SFAS 142, the lines of business perform the required goodwill impairment testing. For a further discussion of goodwill and impairment testing, see Critical accounting estimates and Note 16 on pages 83–85 and 121–123, respectively, of this Annual Report.

Line of business equity	Yearly Average	
(in billions)	**2006**	2005
Investment Bank	**$ 20.8**	$ 20.0
Retail Financial Services	**14.6**	13.4
Card Services	**14.1**	11.8
Commercial Banking	**5.7**	3.4
Treasury & Securities Services	**2.3**	1.5
Asset Management	**3.5**	2.4
Corporate[a]	**49.7**	53.0
Total common stockholders' equity	**$110.7**	$105.5

(a) 2006 and 2005 include $41.7 billion and $43.1 billion, respectively, of equity to offset goodwill and $8.0 billion and $9.9 billion, respectively, of equity, primarily related to Treasury, Private Equity and the Corporate Pension Plan.

Economic risk capital

JPMorgan Chase assesses its capital adequacy relative to the risks underlying the Firm's business activities, utilizing internal risk-assessment methodologies. The Firm assigns economic capital primarily based upon four risk factors: credit risk, market risk, operational risk and private equity risk, principally for the Firm's private equity business.

Economic risk capital	Yearly Average	
(in billions)	**2006**	2005
Credit risk	**$ 22.1**	$ 22.6
Market risk	**9.9**	9.8
Operational risk	**5.7**	5.5
Private equity risk	**3.4**	3.8
Economic risk capital	**41.1**	41.7
Goodwill	**43.9**	43.1
Other[a]	**25.7**	20.7[b]
Total common stockholders' equity	**$ 110.7**	$ 105.5

(a) Reflects additional capital required, in management's view, to meet its regulatory and debt rating objectives.
(b) Includes $2.1 billion of capital previously reported as business risk capital.

Credit risk capital

Credit risk capital is estimated separately for the wholesale businesses (IB, CB, TSS and AM) and consumer businesses (RFS and CS).

Credit risk capital for the overall wholesale credit portfolio is defined in terms of unexpected credit losses, both from defaults and declines in market value due to credit deterioration, measured over a one-year period at a confidence level consistent with the level of capitalization necessary to achieve a targeted 'AA' solvency standard. Unexpected losses are in excess of those for which provisions for credit losses are maintained. In addition to maturity and correlations, capital allocation is based upon several principal drivers of credit risk: exposure at default (or loan-equivalent amount), likelihood of default, loss severity and market credit spread.

- Loan-equivalent amount for counterparty exposure in an over-the-counter derivative transaction is represented by the expected positive exposure based upon potential movements of underlying market rates. The loan-equivalent amount for unused revolving credit facilities represents the portion of the unused commitment or other contingent exposure that is expected, based upon average portfolio historical experience, to become outstanding in the event of a default by an obligor.
- Default likelihood is based upon current market conditions for all Investment Bank clients by referencing equity and credit derivatives markets, as well as certain other publicly traded entities that are not IB clients. This methodology facilitates, in the Firm's view, more active risk management by utilizing a dynamic, forward-looking measure of credit. This measure changes with the credit cycle over time, impacting the level of credit risk capital. For privately held firms and individuals in the Commercial Bank and Asset Management, default likelihood is based upon longer-term averages through the credit cycles.
- Loss severity of exposure is based upon the Firm's average historical experience during workouts, with adjustments to account for collateral or subordination.

Credit risk capital for the consumer portfolio is based upon product and other relevant risk segmentation. Actual segment level default and severity experience are used to estimate unexpected losses for a one-year horizon at a confidence level equivalent to the 'AA' solvency standard. Statistical results for certain segments or

portfolios are adjusted to ensure that capital is consistent with external benchmarks, such as subordination levels on market transactions or capital held at representative monoline competitors, where appropriate.

Market risk capital

The Firm calculates market risk capital guided by the principle that capital should reflect the risk of loss in the value of portfolios and financial instruments caused by adverse movements in market variables, such as interest and foreign exchange rates, credit spreads, securities prices and commodities prices. Daily Value-at-Risk ("VAR"), monthly stress-test results and other factors are used to determine appropriate capital levels. The Firm allocates market risk capital to each business segment according to a formula that weights that segment's VAR and stress-test exposures. See Market risk management on pages 77–80 of this Annual Report for more information about these market risk measures.

Operational risk capital

Capital is allocated to the lines of business for operational risk using a risk-based capital allocation methodology which estimates operational risk on a bottom-up basis. The operational risk capital model is based upon actual losses and potential scenario-based stress losses, with adjustments to the capital calculation to reflect changes in the quality of the control environment or the use of risk-transfer products. The Firm believes the model is consistent with the new Basel II Framework and expects to propose it eventually for qualification under the advanced measurement approach for operational risk.

Private equity risk capital

Capital is allocated to privately- and publicly-held securities, third-party fund investments and commitments in the Private Equity portfolio to cover the potential loss associated with a decline in equity markets and related asset devaluations.

Regulatory capital

The Firm's federal banking regulator, the Federal Reserve Board, establishes capital requirements, including well-capitalized standards for the consolidated financial holding company. The Office of the Comptroller of the Currency ("OCC") establishes similar capital requirements and standards for the Firm's national banks, including JPMorgan Chase Bank, N.A. and Chase Bank USA, N.A.

On December 14, 2006, the federal banking regulatory agencies announced an interim decision that SFAS 158 will not impact regulatory capital. Until further guidance is issued, any amounts included in Accumulated other comprehensive income (loss) within Stockholders' equity related to the adoption of SFAS 158 will be excluded from regulatory capital. For further discussion of SFAS 158, refer to Note 7 on pages 100–105 of this Annual Report.

In the first quarter of 2006, the federal banking regulatory agencies issued a final rule that provides regulatory capital relief for certain cash-collateralized, securities-borrowed transactions. The final rule, which became effective February 22, 2006, also broadens the types of transactions qualifying for regulatory capital relief under the interim rule. Adoption of the rule did not have a material effect on the Firm's capital ratios.

On March 1, 2005, the Federal Reserve Board issued a final rule, which became effective April 11, 2005, that continues the inclusion of trust preferred capital debt securities in Tier 1 capital, subject to stricter quantitative limits and revised qualitative standards, and broadens the definition of restricted core capital elements. The rule provides for a five-year transition period. As an internationally active bank holding company, JPMorgan Chase is subject to the rule's limitation on restricted core capital elements, including trust preferred capital debt securities, to 15% of total core capital elements, net of goodwill less any associated deferred tax liability. At December 31, 2006, JPMorgan Chase's restricted core capital elements were 15.1% of total core capital elements.

The following tables show that JPMorgan Chase maintained a well-capitalized position based upon Tier 1 and Total capital ratios at December 31, 2006 and 2005.

Capital ratios

December 31,	**2006**	2005	Well-capitalized ratios
Tier 1 capital ratio	**8.7%**	8.5%	6.0%
Total capital ratio	**12.3**	12.0	10.0
Tier 1 leverage ratio	**6.2**	6.3	NA
Total stockholders' equity to assets	**8.6**	8.9	NA

Risk-based capital components and assets

December 31, (in millions)	**2006**	2005
Total Tier 1 capital	**$ 81,055**	$ 72,474
Total Tier 2 capital	**34,210**	29,963
Total capital	**$ 115,265**	$ 102,437
Risk-weighted assets	**$ 935,909**	$ 850,643
Total adjusted average assets	**1,308,699**	1,152,546

Tier 1 capital was $81.1 billion at December 31, 2006, compared with $72.5 billion at December 31, 2005, an increase of $8.6 billion. The increase was due primarily to net income of $14.4 billion, net issuances of common stock under the Firm's employee stock based compensation plans of $3.8 billion and $873 million of additional qualifying trust preferred capital debt securities. Partially offsetting these increases were changes in stockholders' equity net of Accumulated other comprehensive income (loss) due to dividends declared of $4.9 billion, common share repurchases of $3.9 billion, the redemption of preferred stock of $139 million, a $1.2 billion increase in the deduction for goodwill and other nonqualifying intangibles and a $563 million reduction in qualifying minority interests. Additional information regarding the Firm's capital ratios and the federal regulatory capital standards to which it is subject is presented in Note 26 on pages 129–130 of this Annual Report.

Basel II

The Basel Committee on Banking Supervision published the new Basel II Framework in 2004 in an effort to update the original international bank capital accord ("Basel I"), which has been in effect since 1988. The goal of the Basel II Framework is to make regulatory capital more risk-sensitive, and promote enhanced risk management practices among large, internationally active banking organizations.

U.S. banking regulators are in the process of incorporating the Basel II Framework into the existing risk-based capital requirements. JPMorgan Chase will be required to implement advanced measurement techniques in the U.S., commencing in 2009, by employing internal estimates of certain key risk drivers to derive capital requirements. Prior to its implementation of the new Basel II Framework, JPMorgan Chase will be required to demonstrate to its U.S. bank supervisors that its internal criteria meet the relevant supervisory standards. JPMorgan Chase expects to be in compliance within the established timelines with all relevant Basel II rules. During 2007 and 2008, the Firm will adopt Basel II rules in certain non-U.S. jurisdictions, as required.

Dividends

The Firm's common stock dividend policy reflects JPMorgan Chase's earnings outlook, desired dividend payout ratios, need to maintain an adequate capital level and alternative investment opportunities. In 2006, JPMorgan Chase declared quarterly cash dividends on its common stock of $0.34 per share. The Firm continues to target a dividend payout ratio of 30-40% of net income over time.

The following table shows the common dividend payout ratio based upon reported Net income:

Common dividend payout ratio

Year ended December 31,	**2006**	2005	2004
Common dividend payout ratio	**34%**	57%	88%

For information regarding restrictions on JPMorgan Chase's ability to pay dividends, see Note 25 on page 129 of this Annual Report.

Stock repurchases

On March 21, 2006, the Board of Directors approved a stock repurchase program that authorizes the repurchase of up to $8 billion of the Firm's common shares, which supercedes a $6 billion stock repurchase program approved in 2004. The $8 billion authorization includes shares to be repurchased to offset issuances under the Firm's employee stock-based plans. The actual number of shares repurchased is subject to various factors, including: market conditions; legal considerations affecting the amount and timing of repurchase activity; the Firm's capital position (taking into account goodwill and intangibles); internal capital generation; and alternative potential investment opportunities. The repurchase program does not include specific price targets or timetables; may be executed through open market purchases or privately negotiated transactions, or utilizing Rule 10b5-1 programs; and may be suspended at any time.

For the year ended December 31, 2006, under the respective stock repurchase programs then in effect, the Firm repurchased a total of 91 million shares for $3.9 billion at an average price per share of $43.41. Under the original $6 billion stock repurchase program, during 2005, the Firm repurchased 94 million shares for $3.4 billion at an average price per share of $36.46.

As of December 31, 2006, $5.2 billion of authorized repurchase capacity remained under the current stock repurchase program.

The Firm has determined that it may, from time to time, enter into written trading plans under Rule 10b5-1 of the Securities Exchange Act of 1934 to facilitate the repurchase of common stock in accordance with the repurchase program. A Rule 10b5-1 repurchase plan would allow the Firm to repurchase shares during periods when it would not otherwise be repurchasing common stock – for example, during internal trading "black-out periods." All purchases under a Rule 10b5-1 plan must be made according to a predefined plan that is established when the Firm is not aware of material nonpublic information.

For additional information regarding repurchases of the Firm's equity securities, see Part II, Item 5, Market for registrant's common equity, related stockholder matters and issuer purchases of equity securities, on page 11 of JPMorgan Chase's 2006 Form 10-K.

OFF–BALANCE SHEET ARRANGEMENTS AND CONTRACTUAL CASH OBLIGATIONS

Special-purpose entities

JPMorgan Chase is involved with several types of off–balance sheet arrangements, including special purpose entities ("SPEs"), lines of credit and loan commitments. The principal uses of SPEs are to obtain sources of liquidity for JPMorgan Chase and its clients by securitizing financial assets, and to create other investment products for clients. These arrangements are an important part of the financial markets, providing market liquidity by facilitating investors' access to specific portfolios of assets and risks. For example, SPEs are integral to the markets for mortgage-backed securities, commercial paper and other asset-backed securities.

The basic SPE structure involves a company selling assets to the SPE. The SPE funds the purchase of those assets by issuing securities to investors. To insulate investors from creditors of other entities, including the seller of assets, SPEs are generally structured to be bankruptcy-remote.

JPMorgan Chase is involved with SPEs in three broad categories: loan securitizations, multi-seller conduits and client intermediation. Capital is held, as deemed appropriate, against all SPE-related transactions and related exposures, such as derivative transactions and lending-related commitments. For further discussion of SPEs and the Firm's accounting for these types of exposures, see Note 1 on page 94, Note 14 on pages 114–118 and Note 15 on pages 118–120 of this Annual Report.

The Firm has no commitments to issue its own stock to support any SPE transaction, and its policies require that transactions with SPEs be conducted at arm's length and reflect market pricing. Consistent with this policy, no JPMorgan Chase employee is permitted to invest in SPEs with which the Firm is involved where such investment would violate the Firm's Code of Conduct. These rules prohibit employees from self-dealing and acting on behalf of the Firm in transactions with which they or their family have any significant financial interest.

For certain liquidity commitments to SPEs, the Firm could be required to provide funding if the short-term credit rating of JPMorgan Chase Bank, N.A. were downgraded below specific levels, primarily P-1, A-1 and F1 for Moody's, Standard & Poor's and Fitch, respectively. The amount of these liquidity commitments was $74.4 billion and $71.3 billion at December 31, 2006 and 2005, respectively. Alternatively, if JPMorgan Chase Bank, N.A. were downgraded, the Firm could be replaced by another liquidity provider in lieu of providing funding under the liquidity commitment, or, in certain circumstances, could facilitate the sale or refinancing of the assets in the SPE in order to provide liquidity.

Of the $74.4 billion in liquidity commitments to SPEs at December 31, 2006, $74.0 billion was included in the Firm's other unfunded commitments to extend credit and asset purchase agreements, as shown in the table on the following page. Of the $71.3 billion of liquidity commitments to SPEs at December 31, 2005, $38.9 billion was included in the Firm's other unfunded commitments to extend credit and asset purchase agreements. Of these commitments, $356 million and $32.4 billion have been excluded from the table at December 31, 2006 and 2005, respectively, as the underlying assets of the SPEs have been included on the Firm's Consolidated balance sheets due to the consolidation of certain multi-seller conduits as required under FIN 46R. The decrease from the 2005 year end is due to the deconsolidation during the 2006 second quarter of several multi-seller conduits administrated by the Firm. For further information, refer to Note 15 on pages 118–120 of this Annual Report.

The Firm also has exposure to certain SPEs arising from derivative transactions; these transactions are recorded at fair value on the Firm's Consolidated balance sheets with changes in fair value (i.e., mark-to-market ("MTM") gains and losses) recorded in Principal transactions. Such MTM gains and losses are not included in the revenue amounts reported in the following table.

The following table summarizes certain revenue information related to consolidated and nonconsolidated variable interest entities ("VIEs") with which the Firm has significant involvement, and qualifying SPEs ("QSPEs"). The revenue reported in the table below primarily represents servicing and credit fee income. For further discussion of VIEs and QSPEs, see Note 1, Note 14 and Note 15, on pages 94, 114–118 and 118–120, respectively, of this Annual Report.

Revenue from VIEs and QSPEs

Year ended December 31, (in millions)	VIEs[c]	QSPEs	Total
2006	**$ 209**	**$ 3,183**	**$ 3,392**
2005[a]	222	2,940	3,162
2004[a][b]	154	2,732	2,886

(a) Prior-period results have been restated to reflect current methodology.
(b) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.
(c) Includes VIE-related revenue (i.e., revenue associated with consolidated and significant nonconsolidated VIEs).

Off–balance sheet lending-related financial instruments and guarantees

JPMorgan Chase utilizes lending-related financial instruments (e.g., commitments and guarantees) to meet the financing needs of its customers. The contractual amount of these financial instruments represents the maximum possible credit risk should the counterparty draw down the commitment or the Firm be required to fulfill its obligation under the guarantee, and the counterparty subsequently fail to perform according to the terms of the contract. Most of these commitments and guarantees expire without a default occurring or without being drawn. As a result, the total contractual amount of these instruments is not, in the Firm's view, representative of its actual future credit exposure or funding requirements. Further, certain commitments, primarily related to consumer financings, are cancelable, upon notice, at the option of the Firm. For further discussion of lending-related commitments and guarantees and the Firm's accounting for them, see Credit risk management on pages 64–76 and Note 29 on pages 132–134 of this Annual Report.

Contractual cash obligations

In the normal course of business, the Firm enters into various contractual obligations that may require future cash payments. Commitments for future cash expenditures primarily include contracts to purchase future services and capital expenditures related to real estate–related obligations and equipment.

The accompanying table summarizes, by remaining maturity, JPMorgan Chase's off–balance sheet lending-related financial instruments and significant contractual cash obligations at December 31, 2006. Contractual purchases and capital expenditures in the table below reflect the minimum contractual obligation under legally enforceable contracts with terms that are both fixed and determinable. Excluded from the following table are a number of obligations to be settled in cash, primarily in under one year. These obligations are reflected on the Firm's Consolidated balance sheets and include Federal funds purchased and securities sold under repurchase agreements; Other borrowed funds; purchases of Debt and equity instruments; Derivative payables; and certain purchases of instruments that resulted in settlement failures. For discussion regarding Long-term debt and trust preferred capital securities, see Note 19 on pages 124–125 of this Annual Report. For discussion regarding operating leases, see Note 27 on page 130 of this Annual Report.

Off–balance sheet lending-related financial instruments and guarantees

	2006					
By remaining maturity at December 31, (in millions)	Under 1 year	1–<3 years	3–5 years	Over 5 years	**Total**	2005 Total

Other liabilities[l]	**638**	**718**	**769**	**3,177**	**5,302**	11,646
Total	**$ 227,257**	**$ 51,679**	**$ 35,416**	**$ 67,993**	**$ 382,345**	$ 300,202

(a) Includes Credit card lending-related commitments of $657 billion and $579 billion at December 31, 2006 and 2005, respectively, that represent the total available credit to the Firm's cardholders. The Firm has not experienced, and does not anticipate, that all of its cardholders will utilize their entire available lines of credit at the same time. The Firm can reduce or cancel a credit card commitment by providing the cardholder prior notice or, in some cases, without notice as permitted by law.
(b) Includes unused advised lines of credit totaling $39.0 billion and $28.3 billion at December 31, 2006 and 2005, respectively, which are not legally binding. In regulatory filings with the Federal Reserve Board, unused advised lines are not reportable.
(c) Represents contractual amount net of risk participations totaling $32.8 billion and $29.3 billion at December 31, 2006 and 2005, respectively.
(d) Excludes unfunded commitments to private third-party equity funds of $589 million and $242 million at December 31, 2006 and 2005, respectively.
(e) The maturity is based upon the weighted-average life of the underlying assets in the SPE, which are primarily multi-seller asset-backed commercial paper conduits. Represents asset purchase agreements with the Firm's administered multi-seller asset-backed commercial paper conduits, which excludes $356 million and $32.4 billion at December 31, 2006 and 2005, respectively, related to conduits that were consolidated in accordance with FIN 46R, as the underlying assets of the conduits are reported in the Firm's Consolidated balance sheets. It also includes $1.4 billion and $1.3 billion of asset purchase agreements to other third-party entities at December 31, 2006 and 2005, respectively. Certain of the Firm's administered multi-seller conduits were deconsolidated as of June 2006; the assets deconsolidated were approximately $33 billion.
(f) JPMorgan Chase held collateral relating to $13.5 billion and $9.0 billion of these arrangements at December 31, 2006 and 2005, respectively.
(g) Includes unused commitments to issue standby letters of credit of $45.7 billion and $37.5 billion at December 31, 2006 and 2005, respectively.
(h) Collateral held by the Firm in support of securities lending indemnification agreements was $317.9 billion and $245.0 billion at December 31, 2006 and 2005, respectively.
(i) Represents notional amounts of derivatives qualifying as guarantees. For further discussion of guarantees, see Note 29 on pages 132–134 of this Annual Report.
(j) Included on the Consolidated balance sheets in Beneficial interests issued by consolidated VIEs.
(k) Excludes benefit of noncancelable sublease rentals of $1.2 billion and $1.3 billion at December 31, 2006 and 2005, respectively.
(l) Includes deferred annuity contracts. Excludes contributions for pension and other postretirement benefits plans, if any, as these contributions are not reasonably estimatable at this time.

Risk is an inherent part of JPMorgan Chase's business activities. The Firm's risk management framework and governance structure are intended to provide comprehensive controls and ongoing management of the major risks inherent in its business activities. The Firm's ability to properly identify, measure, monitor and report risk is critical to both its soundness and profitability.

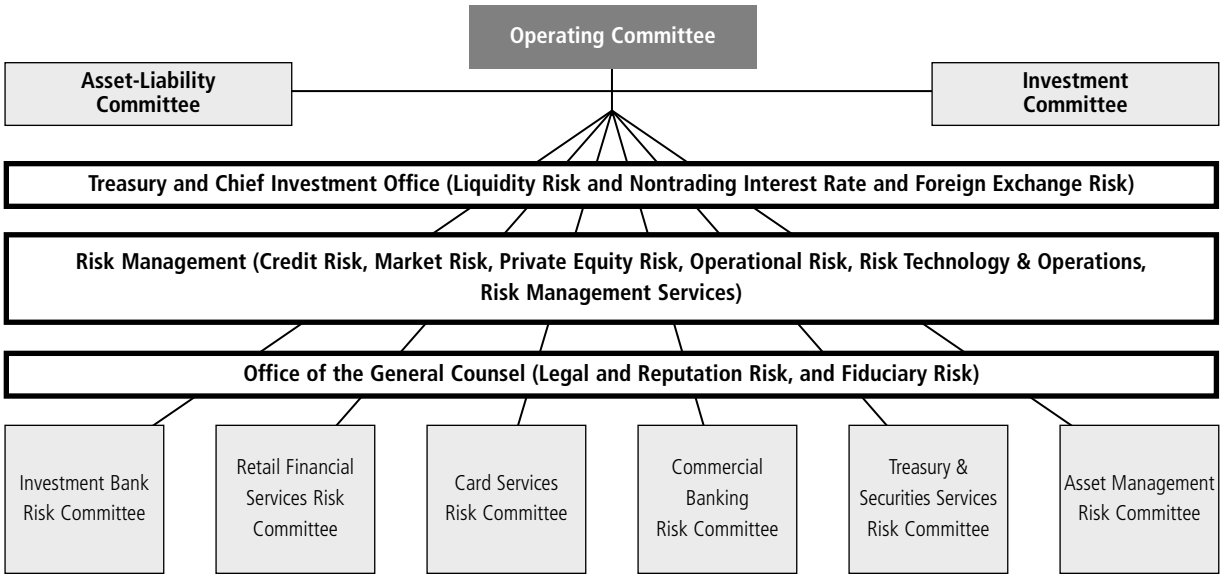
- **Risk identification:** The Firm's exposure to risk through its daily business dealings, including lending, trading and capital markets activities, is identified and aggregated through the Firm's risk management infrastructure.
- **Risk measurement:** The Firm measures risk using a variety of methodologies, including calculating probable loss, unexpected loss and value-at-risk, and by conducting stress tests and making comparisons to external benchmarks. Measurement models and related assumptions are routinely reviewed with the goal of ensuring that the Firm's risk estimates are reasonable and reflect underlying positions.
- **Risk monitoring/control:** The Firm's risk management policies and procedures incorporate risk mitigation strategies and include approval limits by customer, product, industry, country and business. These limits are monitored on a daily, weekly and monthly basis, as appropriate.
- **Risk reporting:** Risk reporting is executed on a line of business and consolidated basis. This information is reported to management on a daily, weekly and monthly basis, as appropriate.

There are eight major risk types identified in the business activities of the Firm: liquidity risk, credit risk, market risk, interest rate risk, private equity risk, operational risk, legal and reputation risk, and fiduciary risk.

Risk governance

The Firm's risk governance structure starts with each line of business being responsible for managing its own risk. Each line of business works closely with Risk Management of the Firm, through its own risk committee and, in most cases, its own chief risk officer. Each risk committee is responsible for decisions regarding the business' risk strategy, policies and controls.

Overlaying the line of business risk management are five corporate functions with risk management–related responsibilities, including the Asset-Liability Committee, Treasury, Chief Investment Office, Office of the General Counsel and Risk Management.



The Asset-Liability Committee is responsible for approving the Firm's liquidity policy, including contingency funding planning and exposure to SPEs (and any required liquidity support by the Firm of such SPEs). The committee also oversees the Firm's capital management and funds transfer pricing policy (through which lines of business "transfer" interest and foreign exchange risk to Treasury in the Corporate segment). The Committee is composed of the Firm's Chief Financial Officer, Chief Risk Officer, Chief Investment Officer, Corporate Treasurer and the Chief Financial Officers of each line of business.

Treasury and the Chief Investment Office are responsible for measuring, monitoring, reporting and managing the Firm's liquidity, interest rate and foreign exchange risk.

The Office of the General Counsel has oversight for legal and reputation and fiduciary risks.

Risk Management is responsible for providing a firmwide function of risk management and controls. Within Risk Management are units responsible for credit risk, market risk, operational risk and private equity risk, as well as Risk Management Services and Risk Technology and Operations. Risk Management Services is responsible for risk policy and methodology, risk reporting and risk education; and Risk Technology and Operations is responsible for building the information technology infrastructure used to monitor and manage risk. Risk Management is headed by the Firm's Chief Risk Officer, who is a member of the Operating Committee and reports to the Chief Executive Officer and the Board of Directors, primarily through the Board's Risk Policy Committee and Audit Committee. The person who filled the position of Chief Risk Officer during 2006 retired at the end of the year. Until his replacement is named, the Firm's Chief Executive Officer is acting as the interim Chief Risk Officer.

In addition to the risk committees of the lines of business and the above-referenced corporate functions, the Firm also has an Investment Committee, which oversees global merger and acquisition activities undertaken by JPMorgan Chase for its own investment account, that fall outside the scope of the Firm's private equity and other principal finance activities.

The Board of Directors exercises its oversight of risk management, principally through the Board's Risk Policy Committee and Audit Committee. The Risk Policy Committee oversees senior management risk-related responsibilities, including reviewing management policies and performance against these policies and related benchmarks. The Audit Committee is responsible for oversight of guidelines and policies that govern the process by which risk assessment and management is undertaken. In addition, the Audit Committee reviews with management the system of internal controls and financial reporting that is relied upon to provide reasonable assurance of compliance with the Firm's operational risk management processes.

LIQUIDITY RISK MANAGEMENT

Liquidity risk arises from the general funding needs of the Firm's activities and in the management of its assets and liabilities. JPMorgan Chase's liquidity management framework is intended to maximize liquidity access and minimize funding costs. Through active liquidity management the Firm seeks to preserve stable, reliable and cost-effective sources of funding. This access enables the Firm to replace maturing obligations when due and fund assets at appropriate maturities and rates. To accomplish this, management uses a variety of measures to mitigate liquidity and related risks, taking into consideration market conditions, prevailing interest rates, liquidity needs and the desired maturity profile of liabilities, among other factors.

The three primary measures of the Firm's liquidity position include the following:

- **Holding company short-term position:** Holding company short-term position measures the parent holding company's ability to repay all obligations with a maturity of less than one year at a time when the ability of the Firm's subsidiaries to pay dividends to the parent company is constrained.
- **Cash capital position:** Cash capital position is a measure intended to ensure the illiquid portion of the balance sheet can be funded by equity, long-term debt, trust preferred capital debt securities and deposits the Firm believes to be core.
- **Basic surplus:** Basic surplus measures the Bank's ability to sustain a 90-day stress event that is specific to the Firm where no new funding can be raised to meet obligations as they come due.

Liquidity is managed so that, based upon the measures described above, management believes there is sufficient surplus liquidity.

An extension of liquidity management is the Firm's contingency funding plan. The goal of the plan is to ensure appropriate liquidity during normal and stress periods. The plan considers numerous temporary and long-term stress scenarios where access to unsecured funding is severely limited or nonexistent, taking into account both on– and off–balance sheet exposures, separately evaluating access to funds by the parent holding company, JPMorgan Chase Bank, N.A. and Chase Bank USA, N.A.

Part of the Firm's contingency funding plan is its ratings downgrade analysis. For this analysis, the impact of numerous rating agency downgrade scenarios are considered.

The various analytics used to manage the Firm's liquidity and related risks rely on management's judgment regarding JPMorgan Chase's ability to liquidate assets or use assets as collateral for borrowings and take into account historical data on the funding of loan commitments (for example, commercial paper back-up facilities), liquidity commitments to SPEs, commitments with rating triggers and collateral posting requirements.

Governance

The Firm's Asset-Liability Committee approves the Firm's liquidity policy and oversees the policy's execution. Treasury is responsible for measuring, monitoring, reporting and managing the Firm's liquidity risk profile. Treasury formulates the Firm's liquidity targets and strategies; monitors the Firm's on– and off–balance sheet liquidity obligations; maintains contingency planning, including ratings downgrade stress testing; and identifies and measures internal and external liquidity warning signals to permit early detection of liquidity issues.

Funding

Sources of funds

Consistent with its liquidity management policy, the Firm has raised funds at the parent holding company sufficient to cover its obligations and those of its nonbank subsidiaries that mature over the next 12 months.

As of December 31, 2006, the Firm's liquidity position remained strong based upon its liquidity metrics. JPMorgan Chase's long-dated funding, including core liabilities, exceeded illiquid assets, and the Firm believes its obligations can be met even if access to funding is impaired.

The diversity of the Firm's funding sources enhances financial flexibility and limits dependence on any one source, thereby minimizing the cost of funds. The deposits held by the RFS, CB, TSS and AM lines of business are generally a stable and consistent source of funding for JPMorgan Chase Bank, N.A. As of December 31, 2006, total deposits for the Firm were $639 billion. A significant portion of the Firm's deposits are retail deposits, which are less sensitive to interest rate changes and therefore are considered more stable than market-based (i.e., wholesale) deposits. In addition to these deposits, the Firm benefits from substantial liability balances originated by RFS, CB, TSS and AM through the normal course of business. These franchise-generated liability balances are also a stable and consistent source of funding due to the nature of the businesses from which they are generated. For a further discussion of deposit and liability balance trends, see Business Segment Results and Balance Sheet Analysis on pages 36–52 and 55–56, respectively, of this Annual Report.

Additional sources of funds include a variety of both short- and long-term instruments, including federal funds purchased, commercial paper, bank notes, long-term debt, and trust preferred capital debt securities. This funding is managed centrally, using regional expertise and local market access, to ensure active participation by the Firm in the global financial markets while maintaining consistent global pricing. These markets serve as a cost-effective and diversified source of funds and are a critical component of the Firm's liquidity management. Decisions concerning the timing and tenor of accessing these markets are based upon relative costs, general market conditions, prospective views of balance sheet growth and a targeted liquidity profile.

Finally, funding flexibility is provided by the Firm's ability to access the repurchase and asset securitization markets. These markets are evaluated on an ongoing basis to achieve an appropriate balance of secured and unsecured funding. The ability to securitize loans, and the associated gains on those securitizations, are principally dependent upon the credit quality and yields of the assets securitized and are generally not dependent upon the credit ratings of the issuing entity. Transactions between the Firm and its securitization structures are reflected in JPMorgan Chase's consolidated financial statements and notes to the consolidated financial statements; these relationships include retained interests in securitization trusts, liquidity facilities and derivative transactions. For further details, see Off–balance sheet arrangements and contractual cash obligations and Notes 14 and 29 on pages 59–60, 114–118 and 132–134, respectively, of this Annual Report.

Issuance

Continued strong foreign investor participation in the global corporate markets allowed JPMorgan Chase to identify attractive opportunities globally to further diversify its funding and capital sources. During 2006, JPMorgan Chase issued approximately $56.7 billion of long-term debt and trust preferred capital debt securities. These issuances were offset partially by $34.3 billion of long-term debt and trust preferred capital debt securities that matured or were redeemed, and by the Firm's redemption of $139 million of preferred stock. In addition, in 2006 the Firm securitized approximately $16.8 billion of residential mortgage loans and $9.7 billion of credit card loans, resulting in pretax gains on securitizations of $85 million and $67 million, respectively. In addition, the Firm securitized approximately $2.4 billion of automobile loans resulting in an insignificant gain. For a further discussion of loan securitizations, see Note 14 on pages 114–118 of this Annual Report.

In connection with the issuance of certain of its trust preferred capital debt securities, the Firm has entered into Replacement Capital Covenants ("RCCs") granting certain rights to the holder of "covered debt," as defined in the RCCs, that prohibit the repayment, redemption or purchase of the trust preferred capital debt securities except, with limited exceptions, to the extent that JPMorgan Chase has received specified amounts of proceeds from the sale of certain qualifying securities. Currently the Firm's covered debt is its 5.875% Junior Subordinated Deferrable Interest Debentures, Series O, due 2035. For more information regarding these covenants, see the Forms 8-K filed by the Firm on August 17, 2006, September 28, 2006 and February 2, 2007.

Cash Flows

Cash Flows from Operating Activities

For the years ended December 31, 2006 and 2005, net cash used in operating activities was $49.6 billion and $30.2 billion, respectively. Net cash was used to support the Firm's lending and capital markets activities, as well as to support loans originated or purchased with an initial intent to sell. JPMorgan Chase's operating assets and liabilities vary significantly in the normal course of business due to the amount and timing of cash flows. Management believes cash flows from operations, available cash balances and short- and long-term borrowings will be sufficient to fund the Firm's operating liquidity needs.

Cash Flows from Investing Activities

The Firm's investing activities primarily include originating loans to be held to maturity, other receivables, and the available-for-sale investment portfolio. For the year ended December 31, 2006, net cash of $99.6 billion was used in investing activities, primarily due to increased loans in the wholesale portfolio, mainly in the IB, reflecting an increase in capital markets activity, as well as organic growth in CB. On the consumer side, increases in CS loans reflected strong organic growth, the acquisitions of private-label credit card portfolios and the 2006 first-quarter acquisition of Collegiate Funding Services, offset partially by credit card securitization activity and a decline in auto loans and leases. Cash also was used to fund the increase in the Treasury investment securities portfolio, primarily in connection with repositioning of the Firm's portfolio to manage exposure to interest rates.

For the year ended December 31, 2005, net cash of $12.9 billion was used in investing activities, primarily attributable to growth in consumer loans, primarily home equity and in CS, reflecting growth in new account originations and the acquisition of the Sears Canada credit card business, offset partially by securitization activity and a decline in auto loans reflecting a difficult auto lending market. Net cash was generated by the Treasury investment securities portfolio primarily from maturities of securities, as purchases and sales of securities essentially offset each other.

Cash Flows from Financing Activities

The Firm's financing activities primarily include the issuance of debt and receipt of customer deposits. JPMorgan Chase pays quarterly dividends on its common stock and has an ongoing stock repurchase program. In 2006, net cash provided by financing activities was $152.7 billion due to growth in deposits, reflecting the ongoing expansion of the retail branch distribution network and higher wholesale business volumes; and net new issuances of Long-term debt and trust preferred capital debt securities, offset partially by the payment of cash dividends and stock repurchases.

In 2005, net cash provided by financing activities was $45.1 billion due to growth in deposits, reflecting, on the retail side, new account acquisitions and the ongoing expansion of the branch distribution network, and higher wholesale business volumes; and net new issuances of Long-term debt and trust preferred capital debt securities, offset partially by the payment of cash dividends and stock repurchases.

Credit ratings

The credit ratings of JPMorgan Chase's parent holding company and each of its significant banking subsidiaries, as of December 31, 2006, were as follows:

	Short-term debt			Senior long-term debt		
	Moody's	S&P	Fitch	Moody's	S&P	Fitch
JPMorgan Chase & Co.	P-1	A-1	F1	Aa3	A+	A+
JPMorgan Chase Bank, N.A.	P-1	A-1+	F1+	Aa2	AA-	A+
Chase Bank USA, N.A.	P-1	A-1+	F1+	Aa2	AA-	A+

On February 14, 2007, S&P raised the senior long-term debt ratings on JPMorgan Chase & Co. and the operating bank subsidiaries to AA- and AA, respectively. Additionally, S&P raised the short-term debt rating of JPMorgan Chase & Co. to A-1+. Similarly, on February 16, 2007, Fitch raised the senior long-term debt rating on JPMorgan Chase & Co. and operating bank subsidiaries to AA-. Fitch also raised the short-term debt rating of JPMorgan Chase & Co. to F1+. The cost and availability of unsecured financing are influenced by credit ratings. A reduction in these ratings could have an adverse affect on the Firm's access to liquidity sources, increase the cost of funds, trigger additional collateral requirements and decrease the number of investors and counterparties willing to lend. Critical factors in maintaining high credit ratings include a stable and diverse earnings stream, strong capital ratios, strong credit quality and risk management controls, diverse funding sources and disciplined liquidity monitoring procedures.

If the Firm's ratings were downgraded by one notch, the Firm estimates the incremental cost of funds and the potential loss of funding to be negligible. Additionally, the Firm estimates the additional funding requirements for VIEs and other third-party commitments would not be material. In the current environment, the Firm believes a downgrade is unlikely. For additional information on the impact of a credit ratings downgrade on the funding requirements for VIEs, and on derivatives and collateral agreements, see Special-purpose entities on page 59 and Ratings profile of derivative receivables mark-to-market ("MTM") on page 71, of this Annual Report.

CREDIT RISK MANAGEMENT

Credit risk is the risk of loss from obligor or counterparty default. The Firm provides credit (for example, through loans, lending-related commitments and derivatives) to customers of all sizes, from large corporate clients to the individual consumer. The Firm manages the risk/reward relationship of each credit and discourages the retention of assets that do not generate a positive return above the cost of risk-adjusted capital. The majority of the Firm's wholesale syndicated loan originations (primarily to IB clients) continues to be distributed into the marketplace, with residual holds by the Firm averaging less than 10%. Wholesale loans generated by CB and AM are generally retained on the balance sheet. With regard to the consumer credit market, the Firm focuses on creating a portfolio that is diversified from both a product and a geographic perspective. Within the mortgage business, originated loans are retained on the balance sheet as well as securitized and sold selectively to U.S. government agencies and U.S. government-sponsored enterprises; the latter category of loans is routinely classified as held-for-sale.

Credit risk organization

Credit risk management is overseen by the Chief Risk Officer. The Firm's credit risk management governance consists of the following primary functions:

- establishing a comprehensive credit risk policy framework
- calculating the allowance for credit losses and ensuring appropriate credit risk-based capital management
- assigning and managing credit authorities in connection with the approval of all credit exposure
- monitoring and managing credit risk across all portfolio segments
- managing criticized exposures

Risk identification

The Firm is exposed to credit risk through lending and capital markets activities. Credit risk management works in partnership with the business segments in identifying and aggregating exposures across all lines of business.

Risk measurement

To measure credit risk, the Firm employs several methodologies for estimating the likelihood of obligor or counterparty default. Losses generated by consumer loans are more predictable than wholesale losses, but are subject to cyclical and seasonal factors. Although the frequency of loss is higher on consumer loans than on wholesale loans, the severity of loss is typically lower and more manageable on a portfolio basis. As a result of these differences, methodologies vary depending on certain factors, including type of asset (e.g., consumer installment versus wholesale loan), risk measurement parameters (e.g., delinquency status and credit bureau score versus wholesale risk rating) and risk management and collection processes (e.g., retail collection center versus centrally managed workout groups). Credit risk measurement is based upon the amount of exposure should the obligor or the counterparty default, the probability of default and the loss severity given a default event. Based upon these factors and related market-based inputs, the Firm estimates both probable and unexpected losses for the wholesale and consumer portfolios. Probable losses, reflected in the Provision for credit losses, primarily are based upon statistical estimates of credit losses over time, anticipated as a result of obligor or counterparty default. However, probable losses are not the sole indicators of risk. If losses were entirely predictable, the probable loss rate could be factored into pricing and covered as a normal and recurring cost of doing business. Unexpected losses, reflected in the allocation of credit risk capital, represent the potential volatility of actual losses relative to the probable level of losses. (Refer to Capital management on pages 57–59 of this Annual Report for a further discussion of the credit risk capital methodology.) Risk measurement for the wholesale portfolio is assessed primarily on a risk-rated basis; for the consumer portfolio, it is assessed primarily on a credit-scored basis.

Risk-rated exposure

For portfolios that are risk-rated, probable and unexpected loss calculations are based upon estimates of probability of default and loss given default. Probability of default is the expected default calculated on an obligor basis. Loss given default is an estimate of losses that are based upon collateral and structural support for each credit facility. Calculations and assumptions are based upon management information systems and methodologies which are under continual review. Risk ratings are assigned and reviewed on an ongoing basis by Credit Risk Management and revised, if needed, to reflect the borrowers' current risk profiles and the related collateral and structural positions.

Credit-scored exposure

For credit-scored portfolios (generally held in RFS and CS), probable loss is based upon a statistical analysis of inherent losses over discrete periods of time. Probable losses are estimated using sophisticated portfolio modeling, credit scoring and decision-support tools to project credit risks and establish underwriting standards. In addition, common measures of credit quality derived from historical loss experience are used to predict consumer losses. Other risk characteristics evaluated include recent loss experience in the portfolios, changes in origination sources, portfolio seasoning, loss severity and underlying credit practices, including charge-off policies. These analyses are applied to the Firm's current portfolios in order to forecast delinquencies and severity of losses, which determine the amount of probable losses. These factors and analyses are updated on a quarterly basis.

Risk monitoring

The Firm has developed policies and practices that are designed to preserve the independence and integrity of decision-making and ensure credit risks are assessed accurately, approved properly, monitored regularly and managed actively at both the transaction and portfolio levels. The policy framework establishes credit approval authorities, concentration limits, risk-rating methodologies, portfolio-review parameters and guidelines for management of distressed exposure. Wholesale credit risk is monitored regularly on both an aggregate portfolio level and on an individual customer basis. For consumer credit risk, the key focus items are trends and concentrations at the portfolio level, where potential problems can be remedied through changes in underwriting policies and portfolio guidelines. Consumer Credit Risk Management monitors trends against business expectations and industry benchmarks. In order to meet credit risk management objectives, the Firm seeks to maintain a risk profile that is diverse in terms of borrower, product type, industry and geographic concentration. Additional management of the Firm's exposure is accomplished through loan syndication and participations, loan sales, securitizations, credit derivatives, use of master netting agreements and collateral and other risk-reduction techniques.

Risk reporting

To enable monitoring of credit risk and decision-making, aggregate credit exposure, credit metric forecasts, hold-limit exceptions and risk profile changes are reported regularly to senior credit risk management. Detailed portfolio reporting of industry, customer and geographic concentrations occurs monthly, and the appropriateness of the allowance for credit losses is reviewed by senior management at least on a quarterly basis. Through the risk reporting and governance structure, credit risk trends and limit exceptions are provided regularly to, and discussed with, the Operating Committee.

2006 Credit risk overview

The wholesale portfolio exhibited credit stability during 2006. There was substantial growth in wholesale lending as a result of increased capital markets–related activity, offset by decreases in nonperforming loans and criticized exposure of $601 million and $591 million, respectively. In 2006, the Firm also made significant strides in its multiyear initiative to reengineer its wholesale credit risk systems infrastructure. Several enhancements were incorporated into the Firm's operating infrastructure in 2006. Overall, the initiative has enhanced management of credit risk; timeliness and accuracy of reporting; support of client relationships; allocation of economic capital; and compliance with Basel II initiatives. The Firm is on target to substantially complete the initiative by year-end 2007.

Consumer credit performance generally was stable in 2006. CS adopted the FFIEC higher minimum payment requirements, which initially resulted in higher payment rates than historically experienced, albeit with losses less severe than initially anticipated. Loans impacted by Hurricane Katrina generally have performed better than initially projected, but have experienced longer resolution timeframes, especially where real estate and business banking assets are involved. The Allowance for loan losses related to Hurricane Katrina was reduced by $121 million in 2006 as a result of the better than anticipated performance. Bankruptcy reform legislation became effective on October 17, 2005. This legislation prompted a "rush to file" effect that resulted in a spike in bankruptcy filings and increased 2005 credit losses, predominantly in CS. As expected, following this spike in filings the Firm experienced lower credit card net charge-offs in 2006, as the record levels of bankruptcy filings in the fourth quarter of 2005 are believed to have included bankruptcy filings that would have occurred in 2006.

In 2006, management of the consumer segment continued to focus on portfolios providing the most appropriate risk/reward relationship while keeping within the Firm's desired risk tolerance. During the past year, the majority of the new subprime mortgage production was sold or classified as held-for-sale. In addition, a portion of the subprime mortgage portfolio was transferred into the held-for-sale account. The Firm also continued a de-emphasis of vehicle finance leasing. The Firm experienced growth in many core consumer lending products including home equity, credit cards, education, and business banking reflecting a focus on the prime credit quality segment of the market.

CREDIT PORTFOLIO

The following table presents JPMorgan Chase's credit portfolio as of December 31, 2006 and 2005. Total credit exposure at December 31, 2006, increased by $198.7 billion from December 31, 2005, reflecting an increase of $80.0 billion in the wholesale credit portfolio and $118.7 billion in the consumer credit portfolio as further described in the following pages.

In the table below, reported loans include all HFS loans, which are carried at the lower of cost or fair value with changes in value recorded in Noninterest revenue. However, these HFS loans are excluded from the average loan balances used for the net charge-off rate calculations.

Total credit portfolio

As of or for the year ended December 31, (in millions, except ratios)	Credit exposure		Nonperforming assets[i]		Net charge-offs		Average annual net charge-off rate

Nonperforming – purchased[h]	**251**	341	**NA**	NA	**NA**	NA	**NA**	NA

(a) Loans are presented net of unearned income and net deferred loan fees of $2.3 billion and $3.0 billion at December 31, 2006 and 2005, respectively.
(b) Represents securitized credit card receivables. For further discussion of credit card securitizations, see Card Services on pages 43–45 of this Annual Report.
(c) Past-due 90 days and over and accruing includes credit card receivables of $1.3 billion and $1.1 billion, and related credit card securitizations of $962 million and $730 million at December 31, 2006 and 2005, respectively.
(d) As a result of restructuring certain multi-seller conduits the Firm administers, JPMorgan Chase deconsolidated $29 billion of Interests in purchased receivables, $3 billion of Loans and $1 billion of Securities, and recorded a related increase of $33 billion of lending-related commitments during the second quarter of 2006.
(e) Includes wholesale unused advised lines of credit totaling $39.0 billion and $28.3 billion at December 31, 2006 and 2005, respectively, which are not legally binding. In regulatory filings with the Federal Reserve Board, unused advised lines are not reportable. Credit card lending-related commitments of $657 billion and $579 billion at December 31, 2006 and 2005, respectively, represent the total available credit to its cardholders. The Firm has not experienced, and does not anticipate, that all of its cardholders will utilize their entire available lines of credit at the same time. The Firm can reduce or cancel a credit card commitment by providing the cardholder prior notice or, in some cases, without notice as permitted by law.
(f) Represents the net notional amount of protection purchased and sold of single-name and portfolio credit derivatives used to manage the credit exposures; these derivatives do not qualify for hedge accounting under SFAS 133.
(g) Represents other liquid securities collateral held by the Firm as of December 31, 2006 and 2005, respectively.
(h) Represents distressed HFS wholesale loans purchased as part of IB's proprietary activities, which are excluded from nonperforming assets.
(i) Includes nonperforming HFS loans of $120 million and $136 million as of December 31, 2006 and 2005, respectively.
(j) Excludes nonperforming assets related to (1) loans eligible for repurchase as well as loans repurchased from GNMA pools that are insured by U.S. government agencies and U.S. government sponsored enterprises of $1.2 billion and $1.1 billion at December 31, 2006 and 2005, respectively, and (2) education loans that are 90 days past due and still accruing, which are insured by government agencies under the Federal Family Education Loan Program, of $0.2 billion at December 31, 2006. These amounts for GNMA and education loans are excluded, as reimbursement is proceeding normally.

WHOLESALE CREDIT PORTFOLIO

As of December 31, 2006, wholesale exposure (IB, CB, TSS and AM) increased by $80.0 billion from December 31, 2005, due to increases in lending-related commitments of $70.3 billion, Loans of $33.6 billion, and Derivative receivables of $5.8 billion, partially offset by a decrease of $29.7 billion in Interests in purchased receivables. During the second quarter of 2006, certain multi-seller conduits that the Firm administers were deconsolidated, resulting in a decrease of $29 billion in Interests in purchased receivables, offset by a related increase of $33 billion in lending-related commitments. For a more detailed discussion of the deconsolidation, refer to Note 15 on pages 118–120 of this Annual Report. The remainder of the increase in Loans and lending-related commitments was primarily in the IB, reflecting an increase in capital markets–related activity, including financings associated with client acquisitions, securitizations and loan syndications.

Wholesale

As of or for the year ended December 31, (in millions)	Credit exposure		Nonperforming assets[f]	
	2006	2005	**2006**	2005

Assets acquired in loan satisfactions	**NA**	NA	**3**	17
Total wholesale credit exposure	**$ 630,767**	$ 550,747	**$ 430**	$ 1,059
Net credit derivative hedges notional[c]	**$ (50,733)**	$ (29,882)	**$ (16)**	$ (17)
Collateral held against derivatives[d]	**(6,591)**	(6,000)	**NA**	NA
Held-for-sale				
Total average HFS loans	**$ 22,187**	$ 12,038	**$ 58**	$ 74
Nonperforming – purchased[e]	**251**	341	**NA**	NA

(a) Includes loans greater or equal to 90 days past due that continue to accrue interest. The principal balance of these loans totaled $29 million and $50 million at December 31, 2006 and 2005, respectively. Also see Note 12 on pages 112–113 of this Annual Report.
(b) Includes unused advised lines of credit totaling $39.0 billion and $28.3 billion at December 31, 2006 and 2005, respectively, which are not legally binding. In regulatory filings with the Federal Reserve Board, unused advised lines are not reportable.
(c) Represents the net notional amount of protection purchased and sold of single-name and portfolio credit derivatives used to manage the credit risk of credit exposures; these derivatives do not qualify for hedge accounting under SFAS 133. Also see Credit derivative positions on page 71 of this Annual Report.
(d) Represents other liquid securities collateral held by the Firm as of December 31, 2006 and 2005, respectively.
(e) Represents distressed HFS loans purchased as part of IB's proprietary activities, which are excluded from nonperforming assets.
(f) Includes nonperforming HFS loans of $4 million and $109 million as of December 31, 2006 and 2005, respectively.

Net charge-offs/recoveries

Wholesale

Year ended December 31, (in millions, except ratios)	2006	2005
Loans – reported		
Net recoveries	**$ 22**	$ 77
Average annual net recovery rate[a]	**0.01%**	0.06%

(a) Excludes average loans HFS of $22 billion and $12 billion for the years ended December 31, 2006 and 2005, respectively.

During both 2006 and 2005, there were no net charge-offs for Derivative receivables, Interests in purchased receivables or lending-related commitments.

Net recoveries do not include gains from sales of nonperforming loans that were sold from the credit portfolio (as shown in the following table). Gains from these sales during 2006 and 2005 were $72 million and $67 million, respectively, and are reflected in Noninterest revenue.

Nonperforming loan activity

Wholesale

Year ended December 31, (in millions)	2006	2005
Beginning balance	**$ 992**	$ 1,574
Additions	**480**	581

	Maturity profile[d]				Ratings profile			
					Investment-grade ("IG")	Noninvestment-grade		
December 31, 2005 (in billions, except ratios)	Under 1 year	1–5 years	Over 5 years	Total	AAA to BBB-	BB+ & below	Total	Total % of IG
Loans	43%	44%	13%	100%	$ 87	$ 45	$ 132	66%
Derivative receivables	2	42	56	100	42	8	50	84
Interests in purchased receivables	41	57	2	100	30	—	30	100
Lending-related commitments	36	57	7	100	273	48	321	85
Total excluding HFS	35%	52%	13%	100%	$ 432	$ 101	533	81%
Loans held-for-sale[b]							18	
Total exposure							$ 551	
Net credit derivative hedges notional[c]	15%	74%	11%	100%	$ (27)	$ (3)	$ (30)	90%

(a) As a result of restructuring certain multi-seller conduits the Firm administers, JPMorgan Chase deconsolidated $29 billion of Interests in purchased receivables, $3 billion of Loans and $1 billion of Securities, and recorded a related increase of $33 billion of lending-related commitments during the second quarter of 2006.
(b) HFS loans relate primarily to securitization and syndication activities.
(c) Ratings are based upon the underlying referenced assets.
(d) The maturity profile of Loans and lending-related commitments is based upon the remaining contractual maturity. The maturity profile of Derivative receivables is based upon the maturity profile of Average exposure. See page 70 of this Annual Report for a further discussion of Average exposure.

Wholesale credit exposure – selected industry concentration

The Firm focuses on the management and the diversification of its industry concentrations. At December 31, 2006, the top 10 industries remained unchanged from December 31, 2005. The increase in Banks and finance companies, Utilities, Asset managers, and Securities firms and exchanges reflects the overall growth in wholesale exposure. Below are summaries of the top 10 industry concentrations as of December 31, 2006 and 2005.

Wholesale credit exposure – selected industry concentration

December 31, 2006 (in millions, except ratios)	Credit exposure[c]	Investment grade	Noninvestment-grade: Noncriticized	Noninvestment-grade: Criticized	Net charge-offs/ (recoveries)	Credit derivative hedges[d]	Collateral held against derivative receivables[e]

All other	282,802	82	47,966	3,081	(82)	(12,073)	(1,996)
Total excluding HFS	$ 533,195	81%	$ 95,375	$ 5,172	$ (77)	$ (29,882)	$ (6,000)
Held-for-sale[b]	17,552						
Total exposure	$ 550,747						

(a) Rankings are based upon exposure at December 31, 2006.
(b) HFS loans primarily relate to securitization and syndication activities.
(c) Credit exposure is net of risk participations and excludes the benefit of credit derivative hedges and collateral held against Derivative receivables or Loans.
(d) Represents notional amounts only; these credit derivatives do not qualify for hedge accounting under SFAS 133.
(e) Represents other liquid securities collateral held by the Firm as of December 31, 2006 and 2005, respectively.

Wholesale criticized exposure

Exposures deemed criticized generally represent a ratings profile similar to a rating of CCC+/Caa1 and lower, as defined by Standard & Poor's/Moody's. The criticized component of the portfolio decreased to $5.7 billion at December 31, 2006, from $6.2 billion at year-end 2005. The decline resulted from upgrades, repayments and reductions in wholesale nonperforming loans as shown on page 67 of this Annual Report.

At December 31, 2006, Healthcare, Agriculture/paper manufacturing, Business services, and Chemicals/plastics moved into the top 10 of wholesale criticized exposure, replacing Telecom services, Airlines, Machinery and equipment manufacturing, and Building materials/construction.

Wholesale criticized exposure – industry concentrations

	2006		2005	
December 31, (in millions, except ratios)	Credit exposure	% of portfolio	Credit exposure	% of portfolio
Automotive	**$ 1,442**	**29%**	$ 643	12%
Media	**392**	**8**	684	13

Healthcare	**284**	**6**	243	5
Retail and consumer services	**278**	**5**	288	6
Real estate	**243**	**5**	276	5
Agriculture/paper manufacturing	**239**	**5**	178	3
Business services	**222**	**4**	250	5
Utilities	**183**	**4**	295	6
Chemicals/plastics	**159**	**3**	188	4
All other	**1,201**	**24**	1,537	30
Total excluding HFS	**$ 5,026**	**100%**	$ 5,172	100%
Held-for-sale[(a)]	**624**		1,069	
Total	**$ 5,650**		$ 6,241	

(a) HFS loans primarily relate to securitization and syndication activities; excludes purchased nonperforming HFS loans.

Wholesale selected industry discussion

Presented below is a discussion of several industries to which the Firm has significant exposure, as well as industries the Firm continues to monitor because of actual or potential credit concerns. For additional information, refer to the tables above and on the preceding page.

- Banks and finance companies: This industry group, primarily consisting of exposure to commercial banks, is the largest segment of the Firm's wholesale credit portfolio. Credit quality is high, as 84% of the exposure in this category is rated investment-grade.
- Real estate: This industry, as the second largest segment of the Firm's wholesale credit portfolio, continued to grow in 2006, primarily due to improving market fundamentals and increased capital demand for the asset class supported by the relatively low interest rate environment. Real estate exposure is well-diversified by client, transaction type, geography, and property type. Approximately half of this exposure is to large public and rated real estate companies and institutions (e.g., REITS), as well as real estate loans originated for sale into the commercial mortgage-backed securities market. The remaining exposure is primarily to professional real estate developers, owners, or service providers and generally involves real estate leased to third-party tenants.
- Automotive: Automotive Original Equipment Manufacturers and suppliers based in North America continued to be impacted negatively by a challenging operating environment in 2006. As a result, criticized exposures grew in 2006, primarily as a result of downgrades to select names within the portfolio. Though larger in the aggregate, most of the criticized exposure remained undrawn, was performing and substantially secured.
- Media: Media no longer represents the largest percentage of criticized exposure since its criticized exposures decreased significantly in 2006. This decrease was due primarily to the maturation of short-term financing arrangements, repayments, and the planned sale to reduce select exposures.
- All other: All other in the wholesale credit exposure concentration table on page 68 of this Annual Report at December 31, 2006, excluding HFS, included $317.5 billion of credit exposure to 22 industry segments. Exposures related to SPEs and high-net-worth individuals were 31% and 13%, respectively, of this category. SPEs provide secured financing (generally backed by receivables, loans or bonds on a bankruptcy-remote, nonrecourse or limited-recourse basis) originated by a diverse group of companies in industries that are not highly correlated. The remaining All other exposure is well-diversified across industries other than those related to SPEs and high-net-worth individuals; none comprise more than 3% of total exposure.

Derivative contracts

In the normal course of business, the Firm uses derivative instruments to meet the needs of customers; to generate revenues through trading activities; to manage exposure to fluctuations in interest rates, currencies and other markets; and to manage the Firm's credit exposure. For further discussion of derivative contracts, see Note 28 on pages 131–132 of this Annual Report.

The following table summarizes the aggregate notional amounts and the net derivative receivables MTM for the periods presented.

Notional amounts and derivative receivables marked to market ("MTM")

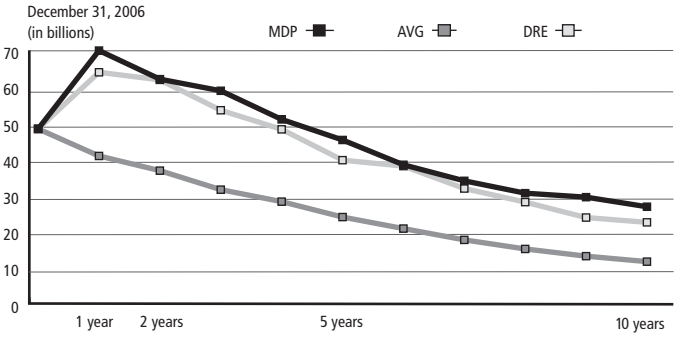
	Notional amounts[b]		Derivative receivables MTM[c]	
December 31, (in billions)	**2006**	2005	**2006**	2005
Interest rate	**$ 50,201**	$ 38,493	**$ 29**	$ 28
Foreign exchange	**2,520**	2,136	**4**	3
Equity	**809**	458	**6**	6
Credit derivatives	**4,619**	2,241	**6**	3
Commodity	**507**	265	**11**	10
Total, net of cash collateral[a]	**$ 58,656**	$ 43,593	**56**	50
Liquid securities collateral held against derivative receivables	**NA**	NA	**(7)**	(6)
Total, net of all collateral	**NA**	NA	**$ 49**	$ 44

(a) Collateral is only applicable to Derivative receivables MTM amounts.
(b) Represents the sum of gross long and gross short third-party notional derivative contracts, excluding written options and foreign exchange spot contracts.
(c) 2005 has been adjusted to reflect more appropriate product classification of certain balances.

The amount of Derivative receivables reported on the Consolidated balance sheets of $56 billion and $50 billion at December 31, 2006 and 2005, respectively, is the amount of the mark-to-market ("MTM") or fair value of the derivative contracts after giving effect to legally enforceable master netting agreements and cash collateral held by the Firm and represents the cost to the Firm to replace the contracts at current market rates should the counterparty default. However, in Management's view, the appropriate measure of current credit risk should also reflect additional liquid securities held as collateral by the Firm of $7 billion and $6 billion at December 31, 2006 and 2005, respectively, resulting in total exposure, net of all collateral, of $49 billion and $44 billion at December 31, 2006 and 2005, respectively.

The Firm also holds additional collateral delivered by clients at the initiation of transactions, but this collateral does not reduce the credit risk of the derivative receivables in the table above. This additional collateral secures potential exposure that could arise in the derivatives portfolio should the MTM of the client's transactions move in the Firm's favor. As of December 31, 2006 and 2005, the Firm held $12 billion and $10 billion, respectively, of this additional collateral. The derivative receivables MTM, net of all collateral, also does not include other credit enhancements in the forms of letters of credit and surety receivables.

While useful as a current view of credit exposure, the net MTM value of the derivative receivables does not capture the potential future variability of that credit exposure. To capture the potential future variability of credit exposure, the Firm calculates, on a client-by-client basis, three measures of potential derivatives-related credit loss: Peak, Derivative Risk Equivalent ("DRE") and Average exposure ("AVG"). These measures all incorporate netting and collateral benefits, where applicable.



Peak exposure to a counterparty is an extreme measure of exposure calculated at a 97.5% confidence level. However, the total potential future credit risk embedded in the Firm's derivatives portfolio is not the simple sum of all Peak client credit risks. This is because, at the portfolio level, credit risk is reduced by the fact that when offsetting transactions are done with separate counterparties, only one of the two trades can generate a credit loss, even if both counterparties were to default simultaneously. The Firm refers to this effect as market diversification, and the Market-Diversified Peak ("MDP") measure is a portfolio aggregation of counterparty Peak measures, representing the maximum losses at the 97.5% confidence level that would occur if all counterparties defaulted under any one given market scenario and time frame.

Derivative Risk Equivalent exposure is a measure that expresses the riskiness of derivative exposure on a basis intended to be equivalent to the riskiness of loan exposures. The measurement is done by equating the unexpected loss in a derivative counterparty exposure (which takes into consideration both the loss volatility and the credit rating of the counterparty) with the unexpected loss in a loan exposure (which takes into consideration only the credit rating of the counterparty). DRE is a less extreme measure of potential credit loss than Peak and is the primary measure used by the Firm for credit approval of derivative transactions.

Finally, AVG is a measure of the expected MTM value of the Firm's derivative receivables at future time periods, including the benefit of collateral. AVG exposure over the total life of the derivative contract is used as the primary metric for pricing purposes and is used to calculate credit capital and the Credit Valuation Adjustment ("CVA"), as further described below. Average exposure was $36 billion at both December 31, 2006 and 2005, compared with derivative receivables MTM, net of all collateral, of $49 billion and $44 billion at December 31, 2006 and 2005, respectively.

The graph below shows exposure profiles to derivatives over the next 10 years as calculated by the MDP, DRE and AVG metrics. All three measures generally show declining exposure after the first year, if no new trades were added to the portfolio.

Exposure profile of derivatives measures

The MTM value of the Firm's derivative receivables incorporates an adjustment, the CVA, to reflect the credit quality of counterparties. The CVA is based upon the Firm's AVG to a counterparty and the counterparty's credit spread in the credit derivatives market. The primary components of changes in CVA are credit spreads, new deal activity or unwinds, and changes in the underlying market environment. The Firm believes that active risk management is essential to controlling the dynamic credit risk in the derivatives portfolio. The Firm risk manages exposure to changes in CVA by entering into credit derivative transactions, as well as interest rate, foreign exchange, equity and commodity derivative transactions.

The following table summarizes the ratings profile of the Firm's Derivative receivables MTM, net of other liquid securities collateral, for the dates indicated:

Ratings profile of derivative receivables MTM

Rating equivalent	**2006**		2005	
December 31, (in millions, except ratios)	Exposure net of all collateral	% of exposure net of all collateral	Exposure net of all collateral	% of exposure net of all collateral
AAA to AA-[a]	**$ 28,150**	**58%**	$ 20,735	48%
A+ to A-	**7,588**	**15**	8,074	18
BBB+ to BBB-	**8,044**	**16**	8,243	19
BB+ to B-	**5,150**	**11**	6,580	15
CCC+ and below	**78**	**—**	155	—
Total	**$ 49,010**	**100%**	$ 43,787	100%

(a) The increase in AAA to AA- was due primarily to exchange-traded commodity activities.

The Firm actively pursues the use of collateral agreements to mitigate counterparty credit risk in derivatives. The percentage of the Firm's derivatives transactions subject to collateral agreements decreased slightly, to 80% as of December 31, 2006, from 81% at December 31, 2005.

The Firm posted $27 billion of collateral as of both December 31, 2006 and 2005. Certain derivative and collateral agreements include provisions that require the counterparty and/or the Firm, upon specified downgrades in their respective credit ratings, to post collateral for the benefit of the other party. As of December 31, 2006, the impact of a single-notch ratings downgrade to JPMorgan Chase Bank, N.A., from its rating of AA- to A+ at December 31, 2006, would have required $1.1 billion of additional collateral to be posted by the Firm; the impact of a six-notch ratings downgrade (from AA- to BBB-) would have required $3.1 billion of additional collateral. Certain derivative contracts also provide for termination of the contract, generally upon a downgrade of either the Firm or the counterparty, at the then-existing MTM value of the derivative contracts.

Credit derivatives

The following table presents the Firm's notional amounts of credit derivatives protection purchased and sold by the respective businesses as of December 31, 2006 and 2005:

Credit derivatives positions

	Notional amount				
	Credit portfolio		Dealer/client		
December 31, (in billions)	Protection purchased	Protection sold	Protection purchased	Protection sold	**Total**
2006	**$ 52**[a]	**$ 1**	**$ 2,277**	**$ 2,289**	**$ 4,619**
2005	31	1	1,096	1,113	2,241

(a) Includes $23 billion which represents the notional amount for structured portfolio protection; the Firm retains the first risk of loss on this portfolio.

In managing wholesale credit exposure, the Firm purchases single-name and portfolio credit derivatives; this activity does not reduce the reported level of assets on the balance sheet or the level of reported off–balance sheet commitments. The Firm also diversifies exposures by providing (i.e., selling) credit protection, which increases exposure to industries or clients where the Firm has little or no client-related exposure. This activity is not material to the Firm's overall credit exposure.

JPMorgan Chase has limited counterparty exposure as a result of credit derivatives transactions. Of the $55.6 billion of total Derivative receivables MTM at December 31, 2006, approximately $5.7 billion, or 10%, was associated with credit derivatives, before the benefit of liquid securities collateral.

Dealer/client

At December 31, 2006, the total notional amount of protection purchased and sold in the dealer/client business increased $2.4 trillion from year-end 2005 as a result of increased trade volume in the market. This business has a mismatch between the total notional amounts of protection purchased and sold. However, in the Firm's view, the risk positions are largely matched when securities used to risk-manage certain derivative positions are taken into consideration and the notional amounts are adjusted to a duration-based equivalent basis or to reflect different degrees of subordination in tranched structures.

Credit portfolio management activities

Use of single-name and portfolio credit derivatives

December 31, (in millions)	Notional amount of protection purchased 2006	2005
Credit derivatives used to manage:		
Loans and lending-related commitments	**$ 40,755**	$ 18,926
Derivative receivables	**11,229**	12,088
Total	**$ 51,984**[a]	$ 31,014

(a) Includes $23 billion which represents the notional amount for structured portfolio protection; the Firm retains the first loss on this portfolio.

The credit derivatives used by JPMorgan Chase for credit portfolio management activities do not qualify for hedge accounting under SFAS 133, and therefore, effectiveness testing under SFAS 133 is not performed. These derivatives are reported at fair value, with gains and losses recognized in Principal transactions. The MTM value incorporates both the cost of credit derivative premiums and changes in value due to movement in spreads and credit events; in contrast, the loans and lending-related commitments being risk-managed are accounted for on an accrual basis. Loan interest and fees are generally recognized in Net interest income, and impairment is recognized in the Provision for credit losses. This asymmetry in accounting treatment, between loans and lending-related commitments and the credit derivatives utilized in portfolio management activities, causes earnings volatility that is not representative, in the Firm's view, of the true changes in value of the Firm's overall credit exposure. The MTM related to the Firm's credit derivatives used for managing credit exposure, as well as the MTM related to the CVA, which reflects the credit quality of derivatives counterparty exposure, are included in the table below. These results can vary from year to year due to market conditions that impact specific positions in the portfolio.

Year ended December 31, (in millions)	2006	2005	2004[c]
Hedges of lending-related commitments[a]	**$ (246)**	$ 24	$ (234)
CVA and hedges of CVA[a]	**133**	84	188
Net gains (losses)[b]	**$ (113)**	$ 108	$ (46)

(a) These hedges do not qualify for hedge accounting under SFAS 133.
(b) Excludes gains of $56 million, $8 million and $52 million for the years ended December 31, 2006, 2005 and 2004, respectively, of other Principal transactions revenues that are not associated with hedging activities.
(c) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.

The Firm also actively manages wholesale credit exposure through loan and commitment sales. During 2006, 2005 and 2004, the Firm sold $3.1 billion, $4.0 billion and $5.9 billion of loans and commitments, respectively, recognizing gains (losses) of $73 million, $76 million and ($8) million in 2006, 2005 and 2004, respectively. The gains include gains on sales of nonperforming loans as discussed on page 67 of this Annual Report. These activities are not related to the Firm's securitization activities, which are undertaken for liquidity and balance sheet management purposes. For a further discussion of securitization activity, see Liquidity Risk Management and Note 14 on pages 62–63 and 114–118, respectively, of this Annual Report.

Lending-related commitments

The contractual amount of wholesale lending-related commitments was $391.4 billion at December 31, 2006, compared with $321.1 billion at December 31, 2005. See page 66 of this Annual Report for an explanation of the increase in exposure. In the Firm's view, the total contractual amount of these instruments is not representative of the Firm's actual credit risk exposure or funding requirements. In determining the amount of credit risk exposure the Firm has to wholesale lending-related commitments, which is used as the basis for allocating credit risk capital to these instruments, the Firm has established a "loan-equivalent" amount for each commitment; this amount represents the portion of the unused commitment or other contingent exposure that is expected, based upon average portfolio historical experience, to become outstanding in the event of a default by an obligor. The loan-equivalent amount of the Firm's lending-related commitments was $212 billion and $178 billion as of December 31, 2006 and 2005, respectively.

Emerging markets country exposure

The Firm has a comprehensive internal process for measuring and managing exposures and risk in emerging markets countries – defined as those countries potentially vulnerable to sovereign events. As of December 31, 2006, based upon its internal methodology, the Firm's exposure to any individual emerging-markets country was not significant, in that total exposure to any such country did not exceed 0.75% of the Firm's total assets. In evaluating and managing its exposures to emerging markets countries, the Firm takes into consideration all credit-related lending, trading, and investment activities, whether cross-border or locally funded. Exposure amounts are then adjusted for credit enhancements (e.g., guarantees and letters of credit) provided by third parties located outside the country, if the enhancements fully cover the country risk as well as the credit risk. For information regarding the Firm's cross-border exposure, based upon guidelines of the Federal Financial Institutions Examination Council ("FFIEC"), see Part 1, Item 1, "Loan portfolio, Cross-border outstandings," on page 155, of the Firm's Annual Report on Form 10-K for the year ended December 31,2006.

CONSUMER CREDIT PORTFOLIO

JPMorgan Chase's consumer portfolio consists primarily of residential mortgages, home equity loans, credit cards, auto loans and leases, education loans and business banking loans and reflects the benefit of diversification from both a product and a geographic perspective. The primary focus is serving the prime consumer credit market. There are no products in the real estate portfolios that result in negative amortization. However, RFS offers Home Equity lines of credit and Mortgage loans with interest-only payment options to predominantly prime borrowers. The Firm actively manages its consumer credit operation. Ongoing efforts include continual review and enhancement of credit underwriting criteria and refinement of pricing and risk management models.

The following table presents managed consumer credit–related information for the dates indicated:

Consumer portfolio

As of or for the year ended December 31, (in millions, except ratios)	Credit exposure		Nonperforming assets[e]		Net charge-offs		Average annual net charge-off rate[g]	
	2006	2005	**2006**	2005	**2006**	2005	**2006**	2005
Retail Financial Services								
Home equity	**$ 85,730**	$ 73,866	**$ 454**	$ 422	**$ 143**	$ 141	**0.18%**	0.20%

Total lending-related commitments	**747,535**	655,596	**NA**	NA	**NA**	NA	**NA**	NA
Total consumer credit portfolio	**$ 1,113,870**	$ 995,160	**$1,911**	$ 1,531	**$ 5,274**	$ 7,672	**1.60%**	2.41%
Total average HFS loans	**$ 16,129**	$ 15,675	**$ 29**	$ 21	**NA**	NA	**NA**	NA
Memo: Credit card – managed	**152,831**	142,265	**9**	13	**$ 4,698**	$ 7,100	**3.33%**	5.21%

(a) Excludes operating lease–related assets of $1.6 billion and $858 million at December 31, 2006 and 2005, respectively.
(b) Past-due loans 90 days and over and accruing includes credit card receivables of $1.3 billion and $1.1 billion at December 31, 2006 and 2005, and related credit card securitizations of $962 million and $730 million at December 31, 2006 and 2005, respectively.
(c) Represents securitized credit card receivables. For a further discussion of credit card securitizations, see Card Services on pages 43–45 of this Annual Report.
(d) The credit card lending–related commitments represent the total available credit to the Firm's cardholders. The Firm has not experienced, and does not anticipate, that all of its cardholders will utilize their entire available lines of credit at the same time. The Firm can reduce or cancel a credit card commitment by providing the cardholder prior notice or, in some cases, without notice as permitted by law.
(e) Includes nonperforming HFS loans of $116 million and $27 million at December 31, 2006 and 2005, respectively.
(f) Excludes nonperforming assets related to (1) loans eligible for repurchase as well as loans repurchased from GNMA pools that are insured by U.S. government agencies and U.S. government-sponsored enterprises of $1.2 billion and $1.1 billion for December 31, 2006 and 2005, respectively, and (2) education loans that are 90 days past due and still accruing, which are insured by U.S. government agencies under the Federal Family Education Loan Program of $0.2 billion at December 31, 2006. These amounts for GNMA and education loans are excluded, as reimbursement is proceeding normally.
(g) Net charge-off rates exclude average loans HFS of $16 billion for the years ended December 31, 2006 and 2005.

Total managed consumer loans as of December 31, 2006, were $366.3 billion, up from $339.6 billion at year-end 2005 reflecting growth in most consumer portfolios. Consumer lending-related commitments increased by 14%, to $747.5 billion at December 31, 2006, primarily reflecting growth in credit cards and home equity lines of credit. The following discussion relates to the specific loan and lending-related categories within the consumer portfolio.

Retail Financial Services:

Average RFS loan balances for 2006 were $203.9 billion. The net charge-off rate for retail loans in 2006 was 0.31%, which was flat compared with the prior year, reflecting stable credit trends in most consumer lending portfolios. New loans originated in 2006 primarily reflect high credit quality consistent with management's focus on prime and near-prime credit market segmentation. The Firm regularly evaluates market conditions and the overall economic returns of new originations and makes an initial determination of whether to classify specific new originations as held-for-investment or held-for-sale. The Firm also periodically evaluates the overall economic returns of its held-for-investment loan portfolio under prevailing market conditions to determine whether to retain or sell loans in the portfolio. When it is determined that a loan that was previously classified as held-for-investment will be sold it is transferred into a held-for-sale account. Held-for-sale loans are accounted for at the lower of cost or fair value, with changes in value recorded in Noninterest revenue.

Home equity: Home equity loans at December 31, 2006, were $85.7 billion, an increase of $11.9 billion from year-end 2005. Growth in the portfolio reflected organic growth, as well as The Bank of New York transaction. The geographic distribution is well-diversified as shown in the table below.

Mortgage: Mortgage loans at December 31, 2006, were $59.7 billion. Mortgage receivables as of December 31, 2006, reflected an increase of $709 million from the prior year. Although the Firm provides mortgage loans to the full spectrum of credit borrowers, more than 75% of RFS' mortgage loans on the balance sheet are to prime borrowers. In addition, the Firm sells or securitizes virtually all fixed-rate mortgage originations, as well as a portion of its adjustable rate originations. As a result, the portfolio of residential mortgage loans held-for-investment consists primarily of adjustable rate products. The geographic distribution is well-diversified as shown in the table below.

Consumer real estate loans by geographic location

Year ended December 31, (in billions, except ratios)	Home equity			
	2006		2005	
California	**$ 12.9**	**15%**	$ 10.5	14%
New York	**12.2**	**14**	10.2	14
Illinois	**6.2**	**7**	5.5	7
Texas	**5.8**	**7**	5.3	7
Arizona	**5.4**	**6**	4.5	6
Ohio	**5.3**	**6**	5.2	7
Florida	**4.4**	**5**	3.5	5
Michigan	**3.8**	**4**	3.7	5
New Jersey	**3.5**	**4**	2.6	4
Indiana	**2.6**	**3**	2.6	4
All other	**23.6**	**29**	20.3	27
Total	**$ 85.7**	**100%**	$ 73.9	100%

Year ended December 31, (in billions, except ratios)	Mortgage			
	2006		2005	
California	**$ 14.5**	**24%**	$ 13.8	23%
New York	**8.9**	**15**	9.2	16
Florida	**7.1**	**12**	6.8	12
New Jersey	**2.6**	**4**	2.6	4
Illinois	**2.4**	**4**	2.2	4
Texas	**2.1**	**4**	2.3	4
Virginia	**1.5**	**3**	1.7	3
Michigan	**1.5**	**3**	1.5	3
Arizona	**1.5**	**3**	1.2	2
Maryland	**1.4**	**2**	1.5	3
All other	**16.2**	**26**	16.2	26
Total	**$ 59.7**	**100%**	$ 59.0	100%

Auto loans and leases: As of December 31, 2006, Auto loans and leases decreased to $41.0 billion from $46.1 billion at year-end 2005. The decrease in outstanding loans was caused primarily by the de-emphasis of vehicle finance leasing, which comprised $2 billion of outstanding loans as of December 31, 2006, down from $4 billion in the prior year. The Auto loan portfolio reflects a high concentration of prime and near-prime quality credits.

All other loans: All other loans primarily include business banking loans (which are highly collateralized loans, often with personal loan guarantees), Education loans and community development loans. As of December 31, 2006, Other loans increased to $27.1 billion compared with $18.4 billion at year-end 2005. This increase is due primarily to an increase in education loans as a result of the acquisition of Collegiate Funding Services. Loan balances also increased in Business banking primarily as a result of The Bank of New York transaction.

Card Services

JPMorgan Chase analyzes its credit card portfolio on a managed basis, which includes credit card receivables on the consolidated balance sheet and those receivables sold to investors through securitization. Managed credit card receivables were $152.8 billion at December 31, 2006, an increase of $10.6 billion from year-end 2005, reflecting organic growth and acquisitions, partially offset by higher customer payment rates.

The managed credit card net charge-off rate decreased to 3.33% for 2006, from 5.21% in 2005. This decrease was due primarily to lower bankruptcy-related net charge-offs. The 30-day delinquency rates increased to 3.13% at December 31, 2006, from 2.79% at December 31, 2005, primarily driven by accelerated loss recognition of delinquent accounts in 2005, as a result of the 2005 bankruptcy reform legislation. The managed credit card portfolio continues to reflect a well-seasoned portfolio that has good U.S. geographic diversification.

ALLOWANCE FOR CREDIT LOSSES

JPMorgan Chase's allowance for credit losses is intended to cover probable credit losses, including losses where the asset is not specifically identified or the size of the loss has not been fully determined. At least quarterly, the allowance for credit losses is reviewed by the Chief Risk Officer, the Chief Financial Officer and the Controller of the Firm, and discussed with the Risk Policy and Audit Committees of the Board of Directors of the Firm. The allowance is reviewed relative to the risk profile of the Firm's credit portfolio and current economic conditions and is adjusted if, in management's judgment, changes are warranted. The allowance includes an asset-specific component and a formula-based component, the latter of which consists of a statistical calculation and adjustments to the statistical calculation. For further discussion of the components of the allowance for credit losses, see Critical accounting estimates used by the Firm on page 83 and Note 13 on pages 113–114 of this Annual Report. At December 31, 2006, management deemed the allowance for credit losses to be appropriate (i.e., sufficient to absorb losses that are inherent in the portfolio, including losses that are not specifically identified or for which the size of the loss has not yet been fully determined).

Summary of changes in the allowance for credit losses

Year ended December 31,	2006			2005		
(in millions)	Wholesale	Consumer	Total	Wholesale	Consumer	Total
Loans:						
Beginning balance at January 1,	**$ 2,453**	**$ 4,637**	**$ 7,090**	$ 3,098	$ 4,222	$ 7,320
Gross charge-offs	**(186)**	**(3,698)**	**(3,884)**	(255)	(4,614)	(4,869)
Gross recoveries	**208**	**634**	**842**	332	718	1,050
Net (charge-offs) recoveries	**22**	**(3,064)**	**(3,042)**	77	(3,896)	(3,819)
Provision for loan losses[a]	**213**	**2,940**	**3,153**	(716)	4,291	3,575
Other	**23**	**55**	**78**[d]	(6)	20	14
Ending balance at December 31	**$ 2,711**[b]	**$ 4,568**[c]	**$ 7,279**	$ 2,453[b]	$ 4,637[c]	$ 7,090
Components:						
Asset specific	**$ 51**	**$ —**	**$ 51**	$ 203	$ —	$ 203
Statistical component	**1,757**	**3,398**	**5,155**	1,629	3,422	5,051
Adjustment to statistical component	**903**	**1,170**	**2,073**	621	1,215	1,836
Total Allowance for loan losses	**$ 2,711**	**$ 4,568**	**$ 7,279**	$ 2,453	$ 4,637	$ 7,090
Lending-related commitments:						
Beginning balance at January 1,	**$ 385**	**$ 15**	**$ 400**	$ 480	$ 12	$ 492
Provision for lending-related commitments	**108**	**9**	**117**	(95)	3	(92)
Other	**6**	**1**	**7**[d]	—	—	—
Ending balance at December 31	**$ 499**	**$ 25**	**$ 524**	$ 385	$ 15	$ 400
Components:						
Asset specific	**$ 33**	**$ —**	**$ 33**	$ 60	$ —	$ 60
Statistical component	**466**	**25**	**491**	325	15	340
Total allowance for lending-related commitments	**$ 499**	**$ 25**	**$ 524**	$ 385	$ 15	$ 400

(a) 2006 includes a $157 million release of Allowance for loan losses related to Hurricane Katrina. 2005 includes $400 million of allowance related to Hurricane Katrina.
(b) The ratio of the wholesale allowance for loan losses to total wholesale loans was 1.68% and 1.85%, excluding wholesale HFS loans of $22.5 billion and $17.6 billion at December 31, 2006 and 2005, respectively.
(c) The ratio of the consumer allowance for loan losses to total consumer loans was 1.71% and 1.84%, excluding consumer HFS loans of $32.7 billion and $16.6 billion at December 31, 2006 and 2005, respectively.
(d) Primarily relates to loans acquired in The Bank of New York transaction in the fourth quarter of 2006.

The Allowance for credit losses increased by $313 million from December 31, 2005, primarily due to activity in the wholesale portfolio. New lending activity in IB and CB was offset partially by lower wholesale nonperforming loans. Additionally, there was a release of $157 million of Allowance for loan losses related to Hurricane Katrina in the consumer and wholesale portfolios.

Excluding held-for-sale loans, the Allowance for loan losses represented 1.70% of loans at December 31, 2006, compared with 1.84% at December 31, 2005. The wholesale component of the allowance increased to $2.7 billion as of December 31, 2006, from $2.5 billion at year-end 2005, due to loan growth in the IB and CB, including the acquisition of The Bank of New York loan portfolio. The consumer allowance decreased $69 million, which included a release of $98 million in CS, partially offset by a $29 million build in RFS. The Allowance release by CS was primarily the result of releasing the remaining Allowance for loan loss related to Hurricane Katrina established in 2005. Excluding the allowance release for Hurricane Katrina, CS' Allowance for loan losses remained constant as improved credit quality offset the increase of $14.1 billion in loan receivables subject to the Allowance. The RFS build was primarily the result of loans acquired in The Bank of New York transaction.

To provide for the risk of loss inherent in the Firm's process of extending credit, management also computes an asset-specific component and a formula-based component for wholesale lending-related commitments. These components are computed using a methodology similar to that used for the wholesale loan portfolio, modified for expected maturities and probabilities of drawdown. This allowance, which is reported in Other liabilities, was $524 million and $400 million at December 31, 2006 and 2005, respectively. The increase reflected increased lending-related commitments and updates to inputs used in the calculation.

Provision for credit losses

For a discussion of the reported Provision for credit losses, see page 29 of this Annual Report. The managed provision for credit losses includes credit card securitizations. For the year ended December 31, 2006, securitized credit card losses were lower compared with the prior-year periods, primarily as a result of lower bankruptcy-related charge-offs. At December 31, 2006, securitized credit card outstandings were $3.6 billion lower compared with the prior year end.

Year ended December 31,	Provision for loan losses			Provision for lending-related commitments			Total provision for credit losses[c]		
(in millions)	**2006**	2005	2004[b]	**2006**	2005	2004[b]	**2006**[a]	2005[a]	2004[b]
Investment Bank	**$ 112**	$ (757)	$ (525)	**$ 79**	$ (81)	$ (115)	**$ 191**	$ (838)	$ (640)

Total provision for credit losses	**3,153**[a]	3,575[a]	2,883	**117**	(92)	(339)	**3,270**	3,483	2,544
Credit card securitization	**2,210**	3,776	2,898	**—**	—	—	**2,210**	3,776	2,898
Total managed provision for credit losses	**$ 5,363**	$ 7,351	$ 5,781	**$ 117**	$ (92)	$ (339)	**$5,480**	$ 7,259	$ 5,442

(a) 2006 includes a $157 million release of Allowance for loan losses related to Hurricane Katrina. 2005 includes $400 million of allowance related to Hurricane Katrina.
(b) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.
(c) The 2004 provision for loan losses includes an increase of approximately $1.4 billion as a result of the decertification of heritage Bank One seller's interest in credit card securitizations, partially offset by a reduction of $357 million to conform provision methodologies. The 2004 provision for lending-related commitments reflects a reduction of $227 million to conform provision methodologies in the wholesale portfolio.

Market risk is the exposure to an adverse change in the market value of portfolios and financial instruments caused by a change in market prices or rates.

Market risk management

Market risk is identified, measured, monitored, and controlled by an independent corporate risk governance function. Market risk management seeks to facilitate efficient risk/return decisions, reduce volatility in operating performance and make the Firm's market risk profile transparent to senior management, the Board of Directors and regulators. Market risk management is overseen by the Chief Risk Officer and performs the following primary functions:

- Establishment of a comprehensive market risk policy framework
- Independent measurement, monitoring and control of business segment market risk
- Definition, approval and monitoring of limits
- Performance of stress testing and qualitative risk assessments

The Firm's business segments also have valuation teams whose functions are to provide independent oversight of the accuracy of the valuations of positions that expose the Firm to market risk. These valuation functions reside within the market risk management area and have a reporting line into Finance.

Risk identification and classification

The market risk management group works in partnership with the business segments to identify market risks throughout the Firm and to refine and monitor market risk policies and procedures. All business segments are responsible for comprehensive identification and verification of market risks within their units. Risk-taking businesses have functions that act independently from trading personnel and are responsible for verifying risk exposures that the business takes. In addition to providing independent oversight for market risk arising from the business segments, Market risk management also is responsible for identifying exposures which may not be large within individual business segments, but which may be large for the Firm in aggregate. Regular meetings are held between Market risk management and the heads of risk-taking businesses to discuss and decide on risk exposures in the context of the market environment and client flows.

Positions that expose the Firm to market risk can be classified into two categories: trading and nontrading risk. Trading risk includes positions that are held by the Firm as part of a business segment or unit whose main business strategy is to trade or make markets. Unrealized gains and losses in these positions are generally reported in Principal transactions revenue. Nontrading risk includes securities and other assets held for longer-term investment, mortgage servicing rights, and securities and derivatives used to manage the Firm's asset/liability exposures. Unrealized gains and losses in these positions are generally not reported in Principal transactions revenue.

Trading risk

Fixed income risk (which includes interest rate risk and credit spread risk), foreign exchange, equities and commodities and other trading risks involve the potential decline in Net income or financial condition due to adverse changes in market rates, whether arising from client activities or proprietary positions taken by the Firm.

Nontrading risk

Nontrading risk arises from execution of the Firm's core business strategies, the delivery of products and services to its customers, and the discretionary positions the Firm undertakes to risk-manage exposures.

These exposures can result from a variety of factors, including differences in the timing among the maturity or repricing of assets, liabilities and off–balance sheet instruments. Changes in the level and shape of market interest rate curves also may create interest rate risk, since the repricing characteristics of the Firm's assets do not necessarily match those of its liabilities. The Firm also is exposed to basis risk, which is the difference in repricing characteristics of two floating-rate indices, such as the prime rate and 3-month LIBOR. In addition, some of the Firm's products have embedded optionality that impact pricing and balances.

The Firm's mortgage banking activities also give rise to complex interest rate risks. The interest rate exposure from the Firm's mortgage banking activities is a result of changes in the level of interest rates, as well as option and basis risk. Option risk arises primarily from prepayment options embedded in mortgages and changes in the probability of newly originated mortgage commitments actually closing. Basis risk results from different relative movements between mortgage rates and other interest rates.

Risk measurement

Tools used to measure risk

Because no single measure can reflect all aspects of market risk, the Firm uses various metrics, both statistical and nonstatistical, including:

- Nonstatistical risk measures
- Value-at-risk ("VAR")
- Loss advisories
- Economic value stress testing
- Earnings-at-risk stress testing
- Risk identification for large exposures ("RIFLE")

Nonstatistical risk measures

Nonstatistical risk measures other than stress testing include net open positions, basis point values, option sensitivities, market values, position concentrations and position turnover. These measures provide granular information on the Firm's market risk exposure. They are aggregated by line of business and by risk type, and are used for monitoring limits, one-off approvals and tactical control.

Value-at-risk

JPMorgan Chase's primary statistical risk measure, VAR, estimates the potential loss from adverse market moves in an ordinary market environment and provides a consistent cross-business measure of risk profiles and levels of diversification. VAR is used for comparing risks across businesses, monitoring limits, one-off approvals, and as an input to economic capital calculations. VAR provides risk transparency in a normal trading environment. Each business day the Firm undertakes a comprehensive VAR calculation that includes both its trading and its nontrading risks. VAR for nontrading risk measures the amount of potential change in the fair values of the exposures related to these risks; however, for such risks, VAR is not a measure of reported revenue since nontrading activities are generally not marked to market through earnings.

To calculate VAR, the Firm uses historical simulation, which measures risk across instruments and portfolios in a consistent and comparable way. This approach assumes that historical changes in market values are representative of future changes. The simulation is based upon data for the previous twelve months. The Firm calculates VAR using a one-day time horizon and an expected tail-loss methodology, which approximates a 99% confidence level. This means the Firm would expect to incur losses greater than that predicted by VAR estimates only once in every 100 trading days, or about two to three times a year.

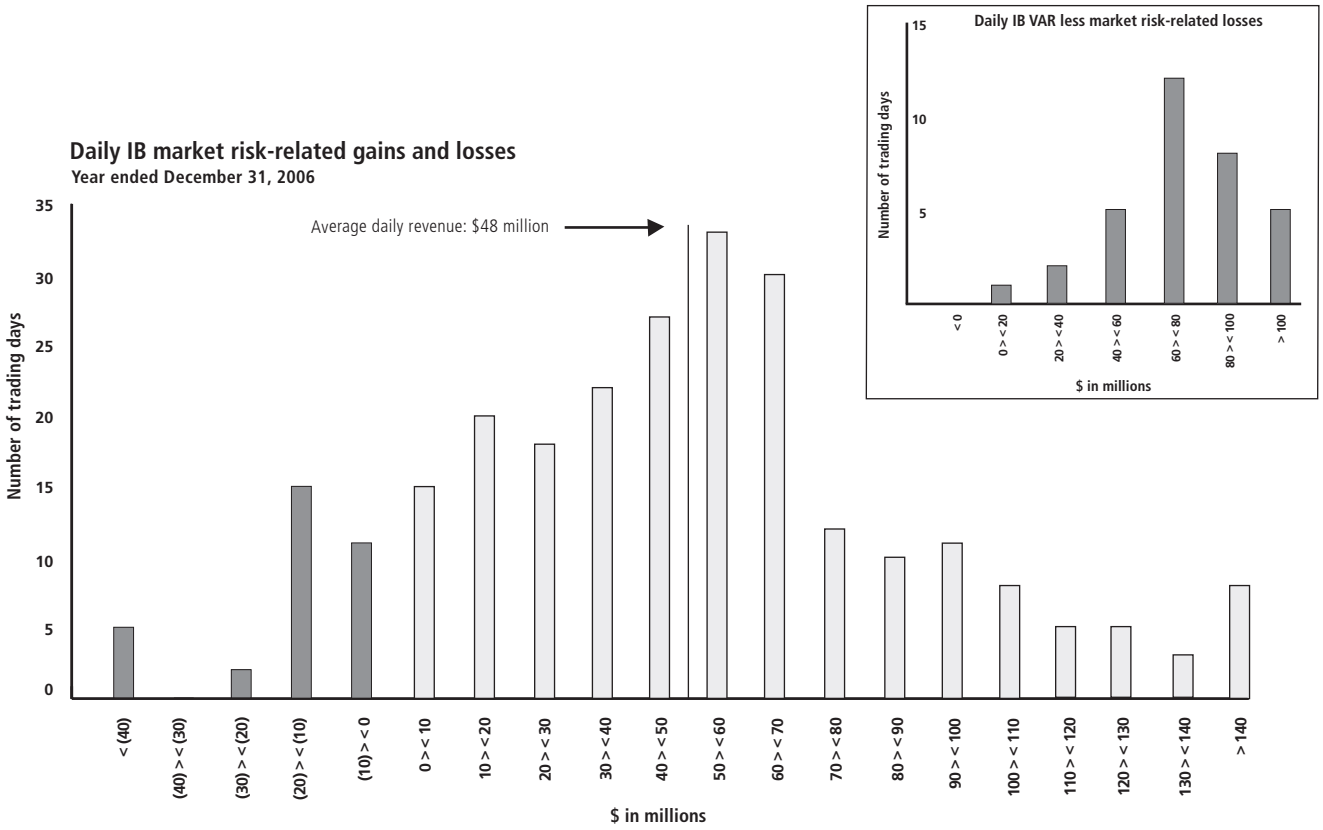
IB Trading and Credit Portfolio VAR

IB trading VAR by risk type and credit portfolio VAR

	2006			2005				
As of or for the year ended December 31, (in millions)	Average VAR	Minimum VAR	Maximum VAR	Average VAR	Minimum VAR	Maximum VAR	At December 31, **2006**	At December 31, 2005
By risk type:								
Fixed income	**$ 56**	**$ 35**	**$ 94**	$ 67	$ 37	$ 110	**$ 44**	$ 89
Foreign exchange	**22**	**14**	**42**	23	16	32	**27**	19
Equities	**31**	**18**	**50**	34	15	65	**49**	24
Commodities and other	**45**	**22**	**128**	21	7	50	**41**	34
Less: portfolio diversification	**(70)**[c]	**NM**[d]	**NM**[d]	(59)[c]	NM[d]	NM[d]	**(62)**[c]	(63)[c]
Trading VAR[a]	**84**	**55**	**137**	86	53	130	**99**	103
Credit portfolio VAR[b]	**15**	**12**	**19**	14	11	17	**15**	15
Less: portfolio diversification	**(11)**[c]	**NM**[d]	**NM**[d]	(12)[c]	NM[d]	NM[d]	**(10)**[c]	(10)[c]
Total trading and credit portfolio VAR	**$ 88**	**$ 61**	**$ 138**	$ 88	$ 57	$ 130	**$ 104**	$ 108

(a) Trading VAR does not include VAR related to the MSR portfolio or VAR related to other corporate functions, such as Treasury and Private Equity. For a discussion of MSRs and the corporate functions, see pages 53–54 and Note 16 on pages 121–122 of this Annual Report, respectively. Trading VAR includes substantially all trading activities in IB; however, particular risk parameters of certain products are not fully captured, for example, correlation risk.

(b) Includes VAR on derivative credit valuation adjustments, hedges of the credit valuation adjustment and mark-to-market hedges of the accrual loan portfolio, which are all reported in Principal transactions revenue. This VAR does not include the accrual loan portfolio, which is not marked to market.



(c) Average and period-end VARs are less than the sum of the VARs of its market risk components, which is due to risk offsets resulting from portfolio diversification. The diversification effect reflects the fact that the risks are not perfectly correlated. The risk of a portfolio of positions is therefore usually less than the sum of the risks of the positions themselves.

(d) Designated as not meaningful ("NM") because the minimum and maximum may occur on different days for different risk components, and hence it is not meaningful to compute a portfolio diversification effect.

Investment Bank's average Total Trading and Credit Portfolio VAR was $88 million for both 2006 and 2005. Commodities and other VAR increased due to continued expansion of the energy trading business, while Fixed income VAR decreased due to reduced risk positions, as well as to lower market volatility compared with 2005. These changes also led to an increase in portfolio diversification, as Average Trading VAR diversification increased to $70 million, or 45% of the sum of the components, during 2006; from $59 million, or 41% of the sum of the components, during 2005. In general, over the course of the year, VAR exposures can vary significantly as positions change, market volatility fluctuates and diversification benefits change.

VAR back-testing

To evaluate the soundness of its VAR model, the Firm conducts daily back-testing of VAR against daily IB market risk-related revenue, which is defined as the change in value of Principal transactions revenue less Private Equity gains/losses plus any trading-related net interest income, brokerage commissions, underwriting fees or other revenue. The following histogram illustrates the daily market risk-related gains and losses for IB trading businesses for the year ended December 31, 2006. The chart shows that IB posted market risk-related gains on 227 out of 260 days in this period, with 29 days exceeding $100 million. The inset graph looks at those days on which IB experienced losses and depicts the amount by which VAR exceeded the actual loss on each of those days. Losses were sustained on 33 days, with no loss greater than $100 million, and with no loss exceeding the VAR measure.

Loss advisories

Loss advisories are tools used to highlight to senior management trading losses above certain levels and are used to initiate discussion of remedies.

Economic value stress testing

While VAR reflects the risk of loss due to adverse changes in normal markets, stress testing captures the Firm's exposure to unlikely but plausible events in abnormal markets. The Firm conducts economic-value stress tests for both its trading and its nontrading activities at least once a month using multiple scenarios that assume credit spreads widen significantly, equity prices decline and interest rates rise in the major currencies. Additional scenarios focus on the risks predominant in individual business segments and include scenarios that focus on the potential for adverse moves in complex portfolios. Periodically, scenarios are reviewed and updated to reflect changes in the Firm's risk profile and economic events. Along with VAR, stress testing is important in measuring and controlling risk. Stress testing enhances the understanding of the Firm's risk profile and loss potential, and stress losses are monitored against limits. Stress testing is also utilized in one-off approvals and cross-business risk measurement, as well as an input to economic capital allocation. Stress-test results, trends and explanations are provided each month to the Firm's senior management and to the lines of business to help them better measure and manage risks and to understand event risk-sensitive positions.

Earnings-at-risk stress testing

The VAR and stress-test measures described above illustrate the total economic sensitivity of the Firm's balance sheet to changes in market variables. The effect of interest rate exposure on reported Net income also is critical. Interest rate risk exposure in the Firm's core nontrading business activities (i.e., asset/liability management positions) results from on– and off–balance sheet positions. The Firm conducts simulations of changes in NII from its nontrading activities under a variety of interest rate scenarios. Earnings-at-risk tests measure the potential change in the Firm's Net interest income over the next 12 months and highlight exposures to various rate-sensitive factors, such as the rates themselves (e.g., the prime lending rate), pricing strategies on deposits, optionality and changes in product mix. The tests include forecasted balance sheet changes, such as asset sales and securitizations, as well as prepayment and reinvestment behavior.

Earnings-at-risk also can result from changes in the slope of the yield curve, because the Firm has the ability to lend at fixed rates and borrow at variable or short-term fixed rates. Based upon these scenarios, the Firm's earnings would be affected negatively by a sudden and unanticipated increase in short-term rates without a corresponding increase in long-term rates. Conversely, higher long-term rates generally are beneficial to earnings, particularly when the increase is not accompanied by rising short-term rates.

Immediate changes in interest rates present a limited view of risk, and so a number of alternative scenarios also are reviewed. These scenarios include the implied forward curve, nonparallel rate shifts and severe interest rate shocks on selected key rates. These scenarios are intended to provide a comprehensive view of JPMorgan Chase's earnings-at-risk over a wide range of outcomes.

JPMorgan Chase's 12-month pretax earnings sensitivity profile as of December 31, 2006 and 2005, were as follows:

	Immediate change in rates			
(in millions)	+200bp	+100bp	-100bp	-200bp
December 31, 2006	**$ (101)**	**$ 28**	**$ (21)**	**$(182)**
December 31, 2005	265	172	(162)	(559)

The primary change in earnings-at-risk from December 31, 2005, reflects a higher level of AFS securities and other repositioning. The Firm is exposed to both rising and falling rates. The Firm's risk to rising rates is largely the result of increased funding costs. In contrast, the exposure to falling rates is the result of higher anticipated levels of loan and securities prepayments.

Risk identification for large exposures ("RIFLE")

Individuals who manage risk positions, particularly those that are complex, are responsible for identifying potential losses that could arise from specific, unusual events, such as a potential tax change, and estimating the probabilities of losses arising from such events. This information is entered into the Firm's RIFLE database. Trading management has access to RIFLE, thereby permitting the Firm to monitor further earnings vulnerability not adequately covered by standard risk measures.

Risk monitoring and control

Limits

Market risk is controlled primarily through a series of limits. Limits reflect the Firm's risk appetite in the context of the market environment and business strategy. In setting limits, the Firm takes into consideration factors such as market volatility, product liquidity, business trends and management experience.

Market risk management regularly reviews and updates risk limits. Senior management, including the Firm's Chief Executive Officer and Chief Risk Officer, is responsible for reviewing and approving risk limits at least once a year. Market risk management further controls the Firm's exposure by specifically designating approved financial instruments and tenors, known as instrument authorities, for each business segment.

The Firm maintains different levels of limits. Corporate-level limits include VAR and stress. Similarly, line-of-business limits include VAR and stress limits and may be supplemented by loss advisories, nonstatistical measurements and instrument authorities. Businesses are responsible for adhering to established limits, against which exposures are monitored and reported. Limit breaches are reported in a timely manner to senior management, and the affected business segment is required either to reduce trading positions or consult with senior management on the appropriate action.

Qualitative review

The market risk management group also performs periodic reviews as necessary of both businesses and products with exposure to market risk in order to assess the ability of the businesses to control their market risk. Strategies, market conditions, product details and risk controls are reviewed, and specific recommendations for improvements are made to management.

Model review

Some of the Firm's financial instruments cannot be valued based upon quoted market prices but are instead valued using pricing models. Such models are used for management of risk positions, such as reporting against limits, as well as for valuation. The Model Risk Group, independent of the businesses and market risk management, reviews the models the Firm uses and assesses model appropriateness and consistency. The model reviews consider a number of factors about the model's suitability for valuation and risk management of a particular product, including whether it accurately reflects the characteristics of the transaction and its significant risks, the suitability and convergence properties of numerical algorithms, reliability of data sources, consistency of the treatment with models for similar products, and sensitivity to input parameters and assumptions that cannot be priced from the market.

Reviews are conducted of new or changed models, as well as previously accepted models, to assess whether there have been any changes in the product or market that may impact the model's validity and whether there are theoretical or competitive developments that may require reassessment of the model's adequacy. For a summary of valuations based upon models, see Critical Accounting Estimates used by the Firm on pages 83–85 of this Annual Report.

Risk reporting

Nonstatistical exposures, value-at-risk, loss advisories and limit excesses are reported daily for each trading and nontrading business. Market risk exposure trends, value-at-risk trends, profit and loss changes, and portfolio concentrations are reported weekly. Stress-test results are reported monthly to business and senior management.

PRIVATE EQUITY RISK MANAGEMENT

Risk management

The Firm makes direct principal investments in private equity. The illiquid nature and long-term holding period associated with these investments differentiates private equity risk from the risk of positions held in the trading portfolios. The Firm's approach to managing private equity risk is consistent with the Firm's general risk governance structure. Controls are in place establishing target levels for total and annual investment in order to control the overall size of the portfolio. Industry and geographic concentration limits are in place and intended to ensure diversification of the portfolio; and periodic reviews are performed on the portfolio to substantiate the valuations of the investments. The valuation function within Market risk management that reports into Finance is responsible for reviewing the accuracy of the carrying values of private equity investments held by Private Equity. At December 31, 2006, the carrying value of the private equity businesses was $6.1 billion, of which $587 million represented positions traded in the public market.

OPERATIONAL RISK MANAGEMENT

Operational risk is the risk of loss resulting from inadequate or failed processes or systems, human factors or external events.

Overview

Operational risk is inherent in each of the Firm's businesses and support activities. Operational risk can manifest itself in various ways, including errors, fraudulent acts, business interruptions, inappropriate behavior of employees or vendors that do not perform in accordance with outsourcing arrangements. These events could result in financial losses and other damage to the Firm, including reputational harm.

To monitor and control operational risk, the Firm maintains a system of comprehensive policies and a control framework designed to provide a sound and well-controlled operational environment. The goal is to keep operational risk at appropriate levels, in light of the Firm's financial strength, the characteristics of its businesses, the markets in which it operates, and the competitive and regulatory environment to which it is subject. Notwithstanding these control measures, the Firm incurs operational losses.

The Firm's approach to operational risk management is intended to mitigate such losses by supplementing traditional control-based approaches to operational risk with risk measures, tools and disciplines that are risk-specific, consistently applied and utilized firmwide. Key themes are transparency of information, escalation of key issues and accountability for issue resolution.

The Firm's operational risk framework is supported by Phoenix, an internally designed operational risk software tool. Phoenix integrates the individual components of the operational risk management framework into a unified, web-based tool. Phoenix enhances the capture, reporting and analysis of operational risk data by enabling risk identification, measurement, monitoring, reporting and analysis to be done in an integrated manner, thereby enabling efficiencies in the Firm's monitoring and management of its operational risk.

For purposes of identification, monitoring, reporting and analysis, the Firm categorizes operational risk events as follows:

- Client service and selection
- Business practices
- Fraud, theft and malice
- Execution, delivery and process management
- Employee disputes
- Disasters and public safety
- Technology and infrastructure failures

Risk identification and measurement

Risk identification is the recognition of the operational risk events that management believes may give rise to operational losses.

All businesses utilize the Firm's newly redesigned firmwide self-assessment process and supporting architecture as a dynamic risk management tool. The goal of the self-assessment process is for each business to identify the key operational risks specific to its environment and assess the degree to which it maintains appropriate controls. Action plans are developed for control issues identified, and businesses are held accountable for tracking and resolving these issues on a timely basis.

Risk monitoring

The Firm has a process for monitoring operational risk-event data, permitting analysis of errors and losses as well as trends. Such analysis, performed both at a line-of-business level and by risk-event type, enables identification of the causes associated with risk events faced by the businesses. Where available, the internal data can be supplemented with external data for comparative analysis with industry patterns. The data reported enables the Firm to back-test against self-assessment results. The Firm is a founding member of the Operational Risk Data Exchange, a not-for-profit industry association formed for the purpose of collecting operational loss data and sharing data in an anonymous form and benchmarking results back to members. Such information supplements the Firm's ongoing operational risk analysis.

Risk reporting and analysis

Operational risk management reports provide timely and accurate information, including information about actual operational loss levels and self-assessment results, to the lines of business and senior management. The purpose of these reports is to enable management to maintain operational risk at appropriate levels within each line of business, to escalate issues and to provide consistent data aggregation across the Firm's businesses and support areas.

Audit alignment

Internal Audit utilizes a risk-based program of audit coverage to provide an independent assessment of the design and effectiveness of key controls over the Firm's operations, regulatory compliance and reporting. Audit partners with business management and members of the control community in providing guidance on the operational risk framework and reviewing the effectiveness and accuracy of the business self-assessment process as part of its business unit audits.

REPUTATION AND FIDUCIARY RISK MANAGEMENT

A firm's success depends not only on its prudent management of the liquidity, credit, market and operational risks that are part of its business risks, but equally on the maintenance among many constituents – clients, investors, regulators, as well as the general public – of a reputation for business practices of the highest quality. Attention to reputation always has been a key aspect of the Firm's practices, and maintenance of reputation is the responsibility of everyone at the Firm. JPMorgan Chase bolsters this individual responsibility in many ways, including through the Firm's Code of Conduct, training, maintaining adherence to policies and procedures, and oversight functions that approve transactions. These oversight functions include a Conflicts Office, which examines wholesale transactions with the potential to create conflicts of interest for the Firm, and a Policy Review Office that reviews certain transactions with clients, especially complex derivatives and structured finance transactions that have the potential to affect adversely the Firm's reputation.

Policy Review Office

The Policy Review Office is the most senior approval level for client transactions involving reputation risk issues. The mandate of the Policy Review Office is to opine on specific transactions brought by the Regional Reputation Risk Review Committees and consider changes in policies or practices relating to reputation risk. The head of the Policy Review Office consults with the Firm's most senior executives on specific topics and provides regular updates. The Policy Review Office reinforces the Firm's procedures for examining transactions in terms of appropriateness, ethical issues and reputation risk. It focuses on the purpose and effect of its transactions from the client's point of view, with the goal that these transactions are not used to mislead investors or others.

Primary responsibility for adherence to the policies and procedures designed to address reputation risk lies with the business units conducting the transactions in question. The Firm's transaction approval process requires review from, among others, internal legal/compliance, conflicts, tax and accounting groups. Transactions involving an SPE established by the Firm receive particular scrutiny intended to ensure that every such entity is properly approved, documented, monitored and controlled.

Business units also are required to submit to regional Reputation Risk Review Committees proposed transactions that may give rise to heightened reputation risk. The committees may approve, reject or require further clarification on or changes to the transactions. The members of these committees are senior representatives of the business and support units in the region. The committees may escalate transaction review to the Policy Review Office.

Fiduciary risk management

The risk management committees within each line of business include in their mandate the oversight of the legal, reputational and, where appropriate, fiduciary risks in their businesses that may produce significant losses or reputational damage. The Fiduciary Risk Management function works with the relevant line-of-business risk committees with the goal of ensuring that businesses providing investment or risk management products or services that give rise to fiduciary duties to clients perform at the appropriate standard relative to their fiduciary relationship with a client. Of particular focus are the policies and practices that address a business' responsibilities to a client, including client suitability determination, disclosure obligations and communications, and performance expectations with respect to risk management products or services being provided by the Firm, that give rise to such fiduciary duties. In this way, the relevant line-of-business risk committees, together with the Fiduciary Risk Management function, provide oversight of the Firm's efforts to monitor, measure and control the risks that may arise in the delivery of the products or services to clients that give rise to such duties, as well as those stemming from any of the Firm's fiduciary responsibilities to employees under the Firm's various employee benefit plans.

CRITICAL ACCOUNTING ESTIMATES USED BY THE FIRM

JPMorgan Chase's accounting policies and use of estimates are integral to understanding its reported results. The Firm's most complex accounting estimates require management's judgment to ascertain the valuation of assets and liabilities. The Firm has established detailed policies and control procedures intended to ensure that valuation methods, including any judgments made as part of such methods, are well-controlled, independently reviewed and applied consistently from period to period. In addition, the policies and procedures are intended to ensure that the process for changing methodologies occurs in an appropriate manner. The Firm believes its estimates for determining the valuation of its assets and liabilities are appropriate. The following is a brief description of the Firm's critical accounting estimates involving significant valuation judgments.

Allowance for credit losses

JPMorgan Chase's allowance for credit losses covers the wholesale and consumer loan portfolios as well as the Firm's portfolio of wholesale lending-related commitments. The Allowance for credit losses is intended to adjust the value of the Firm's loan assets for probable credit losses as of the balance sheet date. For further discussion of the methodologies used in establishing the Firm's Allowance for credit losses, see Note 13 on pages 113–114 of this Annual Report.

Wholesale loans and lending-related commitments

The methodology for calculating both the Allowance for loan losses and the Allowance for lending-related commitments involves significant judgment. First and foremost, it involves the early identification of credits that are deteriorating. Second, it involves judgment in establishing the inputs used to estimate the allowances. Third, it involves management judgment to evaluate certain macroeconomic factors, underwriting standards, and other relevant internal and external factors affecting the credit quality of the current portfolio and to refine loss factors to better reflect these conditions.

The Firm uses a risk rating system to determine the credit quality of its wholesale loans. Wholesale loans are reviewed for information affecting the obligor's ability to fulfill its obligations. In assessing the risk rating of a particular loan, among the factors considered are the obligor's debt capacity and financial flexibility, the level of the obligor's earnings, the amount and sources for repayment, the level and nature of contingencies, management strength, and the industry and geography in which the obligor operates. These factors are based upon an evaluation of historical and current information, and involve subjective assessment and interpretation. Emphasizing one factor over another or considering additional factors could impact the risk rating assigned by the Firm to that loan.

The Firm applies its judgment to establish loss factors used in calculating the allowances. Wherever possible, the Firm uses independent, verifiable data or the Firm's own historical loss experience in its models for estimating the allowances. Many factors can affect estimates of loss, including volatility of loss given default, probability of default and rating migrations. Consideration is given as to whether the loss estimates should be calculated as an average over the entire credit cycle or at a particular point in the credit cycle, as well as to which external data should be used and when they should be used. Choosing data that are not reflective of the Firm's specific loan portfolio characteristics could also affect loss estimates. The application of different inputs would change the amount of the allowance for credit losses determined appropriate by the Firm.

Management also applies its judgment to adjust the loss factors derived, taking into consideration model imprecision, external factors and economic events that have occurred but are not yet reflected in the loss factors. The resultant adjustments to the statistical calculation on the performing portfolio are determined by creating estimated ranges using historical experience of both loss given default and probability of default. Factors related to concentrated and deteriorating industries also are incorporated where relevant. The estimated ranges and the determination of the appropriate point within the range are based upon management's view of uncertainties that relate to current macroeconomic and political conditions, quality of underwriting standards and other relevant internal and external factors affecting the credit quality of the current portfolio. The adjustment to the statistical calculation for the wholesale loan portfolio for the period ended December 31, 2006, was $903 million based upon management's assessment of current economic conditions.

Consumer loans

For scored loans in the consumer lines of business, loss is determined primarily by applying statistical loss factors and other risk indicators to pools of loans by asset type. These loss estimates are sensitive to changes in delinquency status, credit bureau scores, the realizable value of collateral and other risk factors.

Adjustments to the statistical calculation are accomplished in part by analyzing the historical loss experience for each major product segment. Management analyzes the range of credit loss experienced for each major portfolio segment, taking into account economic cycles, portfolio seasoning and underwriting criteria, and then formulates a range that incorporates relevant risk factors that impact overall credit performance. The recorded adjustment to the statistical calculation for the period ended December 31, 2006, was $1.2 billion based upon management's assessment of current economic conditions.

Fair value of financial instruments, MSRs and commodities inventory

A portion of JPMorgan Chase's assets and liabilities are carried at fair value, including trading assets and liabilities, AFS securities, private equity investments and mortgage servicing rights ("MSRs"). Held-for-sale loans and physical commodities are carried at the lower of fair value or cost. At December 31, 2006, approximately $526.8 billion of the Firm's assets were recorded at fair value.

The fair value of a financial instrument is defined as the amount at which the instrument could be exchanged in a current transaction between willing parties, other than in a forced or liquidation sale. The majority of the Firm's assets reported at fair value are based upon quoted market prices or upon internally developed models that utilize independently sourced market parameters, including interest rate yield curves, option volatilities and currency rates.

The degree of management judgment involved in determining the fair value of a financial instrument is dependent upon the availability of quoted market prices or observable market parameters. For financial instruments that are traded actively and have quoted market prices or parameters readily available, there is little-to-no subjectivity in determining fair value. When observable market prices and parameters do not exist, management judgment is necessary to estimate fair value. The valuation process takes into consideration

factors such as liquidity and concentration concerns and, for the derivatives portfolio, counterparty credit risk (For a discussion of CVA, see Derivative contracts on pages 69–72 of this Annual Report). For example, there is often limited market data to rely on when estimating the fair value of a large or aged position. Similarly, judgment must be applied in estimating prices for less readily observable external parameters. Finally, other factors such as model assumptions, market dislocations and unexpected correlations can affect estimates of fair value. Imprecision in estimating these factors can impact the amount of revenue or loss recorded for a particular position.

Trading and available-for-sale portfolios

The majority of the Firm's securities held for trading and investment purposes ("long" positions) and securities that the Firm has sold to other parties but does not own ("short" positions) are valued based upon quoted market prices. However, certain securities are traded less actively and, therefore, are not always able to be valued based upon quoted market prices. The determination of their fair value requires management judgment, as this determination may require benchmarking to similar instruments or analyzing default and recovery rates. Examples include certain collateralized mortgage and debt obligations and high-yield debt securities.

As few derivative contracts are listed on an exchange, the majority of the Firm's derivative positions are valued using internally developed models that use as their basis readily observable market parameters – that is, parameters that are actively quoted and can be validated to external sources, including industry-pricing services. Certain derivatives, however, are valued based upon models with significant unobservable market parameters – that is, parameters that must be estimated and are, therefore, subject to management judgment to substantiate the model valuation. These instruments are normally either traded less actively or trade activity is one way. Examples include long-dated interest rate or currency swaps, where swap rates may be unobservable for longer maturities, and certain credit products, where correlation and recovery rates are unobservable. Due to the lack of observable market data, the Firm defers the initial trading profit for these financial instruments. The deferred profit is recognized in Principal transactions revenue on a systematic basis (typically straight-line amortization over the life of the instruments) when observable market data becomes available. Management's judgment includes recording fair value adjustments (i.e., reductions) to model valuations to account for parameter uncertainty when valuing complex or less actively traded derivative transactions. The following table summarizes the Firm's trading and available-for-sale portfolios by valuation methodology at December 31, 2006:

	Trading assets		Trading liabilities		
December 31, 2006	Securities purchased[a]	Derivatives[b]	Securities sold[a]	Derivatives[b]	AFS securities
Fair value based upon:					
Quoted market prices	**83%**	**3%**	**97%**	**3%**	**97%**
Internal models with significant observable market parameters	**13**	**96**	**3**	**95**	**3**
Internal models with significant unobservable market parameters	**4**	**1**	**—**	**2**	**—**
Total	**100%**	**100%**	**100%**	**100%**	**100%**

(a) Reflected as debt and equity instruments on the Firm's Consolidated balance sheets.
(b) Based upon gross mark-to-market valuations of the Firm's derivatives portfolio prior to netting positions pursuant to FIN 39, as cross-product netting is not relevant to an analysis based upon valuation methodologies.

To ensure that the valuations are appropriate, the Firm has various controls in place. These include: an independent review and approval of valuation models; detailed review and explanation for profit and loss analyzed daily and over time; decomposing the model valuations for certain structured derivative instruments into their components and benchmarking valuations, where possible, to similar products; and validating valuation estimates through actual cash settlement. As markets and products develop and the pricing for certain derivative products becomes more transparent, the Firm continues to refine its valuation methodologies.

For further discussion of market risk management, including the model review process, see Market risk management on pages 77–80 of this Annual Report. For further details regarding the Firm's valuation methodologies, see Note 31 on pages 135–137 of this Annual Report.

Loans held-for-sale

The fair value of loans in the held-for-sale portfolio generally is based upon observable market prices of similar instruments, including bonds, credit derivatives and loans with similar characteristics. If market prices are not available, fair value is based upon the estimated cash flows adjusted for credit risk that is discounted using an interest rate appropriate for the maturity of the applicable loans.

Commodities inventory

The majority of commodities inventory includes bullion and base metals where fair value is determined by reference to prices in highly active and liquid markets. The fair value of other commodities inventory is determined primarily using prices and data derived from the markets on which the underlying commodities are traded. Market prices used may be adjusted for liquidity.

Private equity investments

Valuation of private investments held primarily by the Private Equity business within Corporate requires significant management judgment due to the absence of quoted market prices, inherent lack of liquidity and the long-term nature of such assets. Private equity investments are valued initially based upon cost. The carrying values of private equity investments are adjusted from cost to reflect both positive and negative changes evidenced by financing events with third-party capital providers. In addition, these investments are subject to ongoing impairment reviews by Private Equity's senior investment professionals. A variety of factors are reviewed and monitored to assess impairment including, but not limited to, operating performance and future expectations of the particular portfolio investment, industry valuations of comparable public companies, changes in market outlook and the third-party financing environment over time.

For a discussion of the accounting for Private equity investments, see Note 4 on pages 98–99 of this Annual Report.

MSRs and certain other retained interests in securitizations

MSRs and certain other retained interests from securitization activities do not trade in an active, open market with readily observable prices. For example, sales of MSRs do occur, but the precise terms and conditions typically are not readily available. Accordingly, the Firm estimates the fair value of MSRs and certain other retained interests in securitizations using discounted future cash flow (DCF) models.

For MSRs, the Firm uses an option adjusted spread ("OAS") valuation model in conjunction with the Firm's proprietary prepayment model to project MSR cash flows over multiple interest rate scenarios, which are then discounted at risk-adjusted rates to estimate an expected fair value of the MSRs. The OAS model considers portfolio characteristics, contractually specified servicing fees, prepayment assumptions, delinquency rates, late charges, other ancillary revenues, costs to service and other economic factors.

For certain other retained interests in securitizations (such as interest-only strips), a single interest rate path DCF model is used and generally includes assumptions based upon projected finance charges related to the securitized assets, estimated net credit losses, prepayment assumptions, and contractual interest paid to third-party investors. Changes in the assumptions used may have a significant impact on the Firm's valuation of retained interests.

For both MSRs and certain other retained interests in securitizations, the Firm compares its fair value estimates and assumptions to observable market data where available and to recent market activity and actual portfolio experience.

For further discussion of the most significant assumptions used to value retained interests in securitizations and MSRs, as well as the applicable stress tests for those assumptions, see Notes 14 and 16 on pages 114–118 and 121–122, respectively, of this Annual Report.

Goodwill impairment

Under SFAS 142, goodwill must be allocated to reporting units and tested for impairment. The Firm tests goodwill for impairment at least annually, and more frequently if events or circumstances, such as adverse changes in the business climate, indicate that there may be justification for conducting an interim test. Impairment testing is performed at the reporting-unit level (which is generally one level below the six major business segments identified in Note 33 on pages 139–141 of this Annual Report, plus Private Equity which is included in Corporate). The first part of the test is a comparison, at the reporting unit level, of the fair value of each reporting unit to its carrying amount, including goodwill. If the fair value is less than the carrying value, then the second part of the test is needed to measure the amount of potential goodwill impairment. The implied fair value of the reporting unit goodwill is calculated and compared with the carrying amount of goodwill recorded in the Firm's financial records. If the carrying value of reporting unit goodwill exceeds the implied fair value of that goodwill, then the Firm would recognize an impairment loss in the amount of the difference, which would be recorded as a charge against Net income.

The fair values of the reporting units are determined using discounted cash flow models based upon each reporting unit's internal forecasts. In addition, analysis using market-based trading and transaction multiples, where available, are used to assess the reasonableness of the valuations derived from the discounted cash flow models.

ACCOUNTING AND REPORTING DEVELOPMENTS

Accounting for share-based payments

Effective January 1, 2006, the Firm adopted SFAS 123R and all related interpretations using the modified prospective transition method. SFAS 123R requires all share-based payments to employees, including employee stock options and stock-settled stock appreciation right ("SARs"), to be measured at their grant date fair values. For additional information related to SFAS 123R, see Note 8 on pages 105–107 of this Annual Report.

Accounting for certain hybrid financial instruments – an amendment of FASB Statements No. 133 and 140

In February 2006, the FASB issued SFAS 155, which applies to certain "hybrid financial instruments" which are defined as financial instruments that contain embedded derivatives. The new standard establishes a requirement to evaluate beneficial interests in securitized financial assets to determine if the interests represent freestanding derivatives or are hybrid financial instruments containing embedded derivatives requiring bifurcation. It also permits an irrevocable election for fair value remeasurement of any hybrid financial instrument containing an embedded derivative that otherwise would require bifurcation under SFAS 133. The Firm adopted this standard effective January 1, 2006. For additional information related to SFAS 155, see Note 1 on page 95 of this Annual Report.

Accounting for servicing of financial assets

In March 2006, the FASB issued SFAS 156, which is effective as of the beginning of the first fiscal year beginning after September 15, 2006, with early adoption permitted. JPMorgan Chase elected to adopt the standard effective January 1, 2006. The standard permits an entity a one-time irrevocable election to adopt fair value accounting for a class of servicing assets. The Firm has defined MSRs as one class of servicing assets for this election. For additional information related to the Firm's adoption of SFAS 156 with respect to MSRs, see Note 16 on pages 121–122 of this Annual Report.

Postretirement benefit plans

In September 2006, the FASB issued SFAS 158, which requires recognition in the Consolidated balance sheets of the overfunded or underfunded status of defined benefit postretirement plans, measured as the difference between the fair value of plan assets and the amount of the benefit obligation. The Firm adopted SFAS 158 on a prospective basis on December 31, 2006. SFAS 158 has no impact either on the measurement of the Firm's plan assets or benefit obligations, or on how the Firm determines its net periodic benefit costs. For additional information related to SFAS 158, see Note 7 on pages 100–105 of this Annual Report.

Accounting for uncertainty in income taxes and changes in timing of cash flows related to income taxes generated by a leveraged lease

In July 2006, the FASB issued two pronouncements: FIN 48, which clarifies the accounting for uncertainty in income taxes recognized under SFAS 109, and the related FSP FAS 13-2. FIN 48 addresses the recognition and measurement of tax positions taken or expected to be taken, and also provides guidance on derecognition, classification, interest and penalties, accounting in interim periods, and disclosure. FSP FAS 13-2 requires the recalculation of returns on leveraged leases if there is a change or projected change in the timing of cash flows relating to income taxes generated by a leveraged lease. The Firm will apply FIN 48 to all of its income tax positions at the required effective date of January 1, 2007 under the transition provisions of the Interpretation. JPMorgan Chase currently estimates that the cumulative effect adjustment to implement FIN 48 will increase the January 1, 2007 balance of Retained earnings by approximately $400 million. However, the standard continues to be interpreted and the FASB is expected to issue additional guidance on FIN 48, which could affect this estimate. Accordingly, JPMorgan Chase will continue its assessment of the impact of FIN 48 on its financial condition and results of operations. The guidance in FSP FAS 13-2 will also be effective for the Firm on January 1, 2007. Implementation of FSP FAS 13-2 is expected to result in immaterial adjustments.

Fair value measurements

In September 2006, the FASB issued SFAS 157, which is effective for fiscal years beginning after November 15, 2007, with early adoption permitted. SFAS 157 defines fair value, establishes a framework for measuring fair value, and expands disclosures about assets and liabilities measured at fair value. The new standard provides a consistent definition of fair value which focuses on exit price and prioritizes, within a measurement of fair value, the use of market-based inputs over entity-specific inputs. The standard also establishes a three-level hierarchy for fair value measurements based on the transparency of inputs to the valuation of an asset or liability as of the measurement date. SFAS 157 nullifies the guidance in EITF 02-3 which required the deferral of profit at inception of a transaction involving a derivative financial instrument in the absence of observable data supporting the valuation technique. The standard also eliminates large position discounts for financial instruments quoted in active markets and requires consideration of nonperformance risk when valuing liabilities. Currently, the fair value of the Firm's derivative payables does not incorporate a valuation adjustment to reflect JPMorgan Chase's credit quality.

The Firm intends to early adopt SFAS 157 effective January 1, 2007, and expects to record a cumulative effect after-tax increase to retained earnings of approximately $250 million related to the release of profit previously deferred in accordance with EITF 02-3. In order to determine the amount of this transition adjustment and to confirm that the Firm's valuation policies are consistent with exit price as prescribed by SFAS 157, the Firm reviewed its derivative valuations in consideration of all available evidence including recent transactions in the marketplace, indicative pricing services and the results of back-testing similar transaction types. In addition, the Firm expects to record adjustments to earnings related to the incorporation of the Firm's nonperformance risk in the valuation of liabilities recorded at fair value and for private equity investments where there is significant market evidence to support an increase in value but there has been no third-party market transaction related to the capital structure of the investment. The application of SFAS 157 involves judgement and interpretation. The Firm continues to monitor and evaluate the developing interpretations.

Fair value option for financial assets and financial liabilities

In February 2007, the FASB issued SFAS 159, which is effective for fiscal years beginning after November 15, 2007, with early adoption permitted. SFAS 159 provides an option for companies to elect fair value as an alternative measurement for selected financial assets, financial liabilities, unrecognized firm commitments, and written loan commitments. Under SFAS 159, fair value would be used for both the initial and subsequent measurement of the designated assets, liabilities and commitments, with the changes in value recognized in earnings. The Firm is reviewing the recently released standard and assessing what elections it may make as part of an early adoption effective January 1, 2007.

NONEXCHANGE-TRADED COMMODITY DERIVATIVE CONTRACTS AT FAIR VALUE

In the normal course of business, JPMorgan Chase trades nonexchange-traded commodity derivative contracts. To determine the fair value of these contracts, the Firm uses various fair value estimation techniques, which are primarily based upon internal models with significant observable market parameters. The Firm's nonexchange-traded commodity derivative contracts are primarily energy-related contracts. The following table summarizes the changes in fair value for nonexchange-traded commodity derivative contracts for the year ended December 31, 2006:

For the year ended December 31, 2006 (in millions)	Asset position	Liability position
Net fair value of contracts outstanding at January 1, 2006	**$ 6,951**	**$ 5,324**
Effect of legally enforceable master netting agreements	**10,014**	**10,078**
Gross fair value of contracts outstanding at January 1, 2006	**16,965**	**15,402**
Contracts realized or otherwise settled during the period	**(12,417)**	**(12,206)**
Fair value of new contracts	**21,554**	**21,007**
Changes in fair values attributable to changes in valuation techniques and assumptions	**—**	**—**
Other changes in fair value	**(601)**	**(317)**
Gross fair value of contracts outstanding at December 31, 2006	**25,501**	**23,886**
Effect of legally enforceable master netting agreements	**(19,671)**	**(19,980)**
Net fair value of contracts outstanding at December 31, 2006	**$ 5,830**	**$ 3,906**

The following table indicates the schedule of maturities of nonexchange-traded commodity derivative contracts at December 31, 2006:

December 31, 2006 (in millions)	Asset position	Liability position
Maturity less than 1 year	**$ 10,897**	**$ 11,039**
Maturity 1–3 years	**10,784**	**9,666**
Maturity 4–5 years	**2,630**	**1,838**
Maturity in excess of 5 years	**1,190**	**1,343**
Gross fair value of contracts outstanding at December 31, 2006	**25,501**	**23,886**
Effects of legally enforceable master netting agreements	**(19,671)**	**(19,980)**
Net fair value of contracts outstanding at December 31, 2006	**$ 5,830**	**$ 3,906**

MANAGEMENT'S REPORT ON INTERNAL CONTROL OVER FINANCIAL REPORTING

JPMorgan Chase & Co.

Management of JPMorgan Chase & Co. is responsible for establishing and maintaining adequate internal control over financial reporting. Internal control over financial reporting is a process designed by, or under the supervision of, the Firm's principal executive and principal financial officers, or persons performing similar functions, and effected by JPMorgan Chase's Board of Directors, management and other personnel, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with accounting principles generally accepted in the United States of America.

JPMorgan Chase's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records, that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the Firm's assets; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the Firm are being made only in accordance with authorizations of JPMorgan Chase's management and directors; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use or disposition of the Firm's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

Management has completed an assessment of the effectiveness of the Firm's internal control over financial reporting as of December 31, 2006. In making the assessment, management used the framework in "Internal Control – Integrated Framework" promulgated by the Committee of Sponsoring Organizations of the Treadway Commission, commonly referred to as the "COSO" criteria.

Based upon the assessment performed, management concluded that as of December 31, 2006, JPMorgan Chase's internal control over financial reporting was effective based upon the COSO criteria. Additionally, based upon management's assessment, the Firm determined that there were no material weaknesses in its internal control over financial reporting as of December 31, 2006.

Management's assessment of the effectiveness of the Firm's internal control over financial reporting as of December 31, 2006, has been audited by PricewaterhouseCoopers LLP, JPMorgan Chase's independent registered public accounting firm, who also audited the Firm's financial statements as of and for the year ended December 31, 2006, as stated in their report which is included herein.

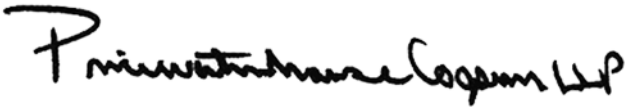
PRICEWATERHOUSECOOPERS LLP • 300 MADISON AVENUE • NEW YORK, NY 10017

Report of Independent Registered Public Accounting Firm
To the Board of Directors and Stockholders of JPMorgan Chase & Co.:



We have completed integrated audits of JPMorgan Chase & Co.'s consolidated financial statements and of its internal control over financial reporting as of December 31, 2006, in accordance with the standards of the Public Company Accounting Oversight Board (United States). Our opinions, based on our audits, are presented below.

Consolidated financial statements
In our opinion, the accompanying consolidated balance sheets and the related consolidated statements of income, changes in stockholders' equity and comprehensive income, and cash flows present fairly, in all material respects, the financial position of JPMorgan Chase & Co. and its subsidiaries (the "Company") at December 31, 2006 and 2005, and the results of their operations and their cash flows for each of the three years in the period ended December 31, 2006 in conformity with accounting principles generally accepted in the United States of America. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audits. We conducted our audits of these statements in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit of financial statements includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, and evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

Internal control over financial reporting
Also, in our opinion, management's assessment, included in the accompanying "Management's report on internal control over financial reporting", that the Company maintained effective internal control over financial reporting as of December 31, 2006 based on criteria established in Internal Control - Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO), is fairly stated, in all material respects, based on those criteria. Furthermore, in our opinion, the Company maintained, in all material respects, effective internal control over financial reporting as of December 31, 2006, based on criteria established in Internal Control - Integrated Framework issued by the COSO. The Company's management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting. Our responsibility is to express opinions on management's assessment and on the effectiveness of the Company's internal control over financial reporting based on our audit. We conducted our audit of internal control over financial reporting in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. An audit of internal control over financial reporting includes obtaining an understanding of internal control over financial reporting, evaluating management's assessment, testing and evaluating the design and operating effectiveness of internal control, and performing such other procedures as we consider necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinions.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (i) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (ii) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (iii) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

Note: In 2006, the Firm exchanged selected corporate trust businesses for The Bank of New York's consumer, business banking and middle-market banking businesses. The fair values of the noncash assets exchanged was $2.15 billion. In 2004, the fair values of noncash assets acquired and liabilities assumed in the merger with Bank One were $320.9 billion and $277.0 billion, respectively, and approximately 1,469 million shares of common stock, valued at approximately $57.3 billion, were issued in connection with the merger with Bank One.

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.

The Notes to consolidated financial statements are an integral part of these statements.

Note 1 – Basis of presentation

JPMorgan Chase & Co. ("JPMorgan Chase" or the "Firm"), a financial holding company incorporated under Delaware law in 1968, is a leading global financial services firm and one of the largest banking institutions in the United States, with operations worldwide. The Firm is a leader in investment banking, financial services for consumers and businesses, financial transaction processing, asset management and private equity. For a discussion of the Firm's business segment information, see Note 33 on pages 139–141 of this Annual Report.

The accounting and financial reporting policies of JPMorgan Chase and its subsidiaries conform to accounting principles generally accepted in the United States of America ("U.S. GAAP"). Additionally, where applicable, the policies conform to the accounting and reporting guidelines prescribed by bank regulatory authorities.

Certain amounts in the prior periods have been reclassified to conform to the current presentation.

Consolidation

The consolidated financial statements include the accounts of JPMorgan Chase and other entities in which the Firm has a controlling financial interest. All material intercompany balances and transactions have been eliminated.

The most usual condition for a controlling financial interest is the ownership of a majority of the voting interests of the entity. However, a controlling financial interest also may be deemed to exist with respect to entities, such as special purpose entities ("SPEs"), through arrangements that do not involve controlling voting interests.

SPEs are an important part of the financial markets, providing market liquidity by facilitating investors' access to specific portfolios of assets and risks. For example, they are critical to the functioning of the mortgage- and asset-backed securities and commercial paper markets. SPEs may be organized as trusts, partnerships or corporations and are typically set up for a single, discrete purpose. SPEs are not typically operating entities and usually have a limited life and no employees. The basic SPE structure involves a company selling assets to the SPE. The SPE funds the purchase of those assets by issuing securities to investors. The legal documents that govern the transaction describe how the cash earned on the assets must be allocated to the SPE's investors and other parties that have rights to those cash flows. SPEs can be structured to be bankruptcy-remote, thereby insulating investors from the impact of the creditors of other entities, including the seller of the assets.

There are two different accounting frameworks applicable to SPEs: the qualifying SPE ("QSPE") framework under SFAS 140; and the variable interest entity ("VIE") framework under FIN 46R. The applicable framework depends on the nature of the entity and the Firm's relation to that entity. The QSPE framework is applicable when an entity transfers (sells) financial assets to an SPE meeting certain criteria defined in SFAS 140. These criteria are designed to ensure that the activities of the entity are essentially predetermined at the inception of the vehicle and that the transferor of the financial assets cannot exercise control over the entity and the assets therein. Entities meeting these criteria are not consolidated by the transferor or other counterparties, as long as they do not have the unilateral ability to liquidate or to cause the entity no longer to meet the QSPE criteria. The Firm primarily follows the QSPE model for securitizations of its residential and commercial mortgages, credit card loans and automobile loans. For further details, see Note 14 on pages 114–118 of this Annual Report.

When the SPE does not meet the QSPE criteria, consolidation is assessed pursuant to FIN 46R. Under FIN 46R, a VIE is defined as an entity that: (1) lacks enough equity investment at risk to permit the entity to finance its activities without additional subordinated financial support from other parties; (2) has equity owners that lack the right to make significant decisions affecting the entity's operations; and/or (3) has equity owners that do not have an obligation to absorb the entity's losses or the right to receive the entity's returns.

FIN 46R requires a variable interest holder (i.e., a counterparty to a VIE) to consolidate the VIE if that party will absorb a majority of the expected losses of the VIE, receive the majority of the expected residual returns of the VIE, or both. This party is considered the primary beneficiary. In making this determination, the Firm thoroughly evaluates the VIE's design, capital structure and relationships among variable interest holders. When the primary beneficiary cannot be identified through a qualitative analysis, the Firm performs a quantitative analysis, which computes and allocates expected losses or residual returns to variable interest holders. The allocation of expected cash flows in this analysis is based upon the relative contractual rights and preferences of each interest holder in the VIE's capital structure. For further details, see Note 15 on pages 118–120 of this Annual Report.

Investments in companies that are considered to be voting-interest entities under FIN 46R in which the Firm has significant influence over operating and financing decisions are accounted for in accordance with the equity method of accounting. These investments are generally included in Other assets, and the Firm's share of income or loss is included in Other income.

All retained interests and significant transactions between the Firm, QSPEs and nonconsolidated VIEs are reflected on JPMorgan Chase's Consolidated balance sheets or in the Notes to consolidated financial statements.

For a discussion of the accounting for private equity investments, see Note 4 on pages 98–99 of this Annual Report.

Assets held for clients in an agency or fiduciary capacity by the Firm are not assets of JPMorgan Chase and are not included in the Consolidated balance sheets.

Use of estimates in the preparation of consolidated financial statements

The preparation of consolidated financial statements requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities, of revenue and expenses, and of disclosures of contingent assets and liabilities. Actual results could be different from these estimates. For discussion of critical accounting estimates used by the Firm, see pages 83–85 of this Annual Report.

Foreign currency translation

JPMorgan Chase revalues assets, liabilities, revenues and expenses denominated in foreign (i.e., non-U.S.) currencies into U.S. dollars using applicable exchange rates.

Gains and losses relating to translating functional currency financial statements for U.S. reporting are included in Other comprehensive income (loss) within Stockholders' equity. Gains and losses relating to nonfunctional currency transactions, including non-U.S. operations where the functional currency is the U.S. dollar, are reported in the Consolidated statements of income.

Statements of cash flows

For JPMorgan Chase's Consolidated statements of cash flows, cash is defined as those amounts included in Cash and due from banks.

Accounting for certain hybrid financial instruments

SFAS 155 applies to certain "hybrid financial instruments" which are financial instruments that contain embedded derivatives. The standard establishes a requirement to evaluate beneficial interests in securitized financial assets to determine if the interests represent freestanding derivatives or are hybrid financial instruments containing embedded derivatives requiring bifurcation. SFAS 155 also permits an irrevocable election for fair value measurement of any hybrid financial instrument containing an embedded derivative that otherwise would require bifurcation under SFAS 133. The fair value election can be applied to existing instruments on an instrument-by-instrument basis at the date of adoption and can be applied to new instruments on a prospective basis.

The Firm adopted SFAS 155 effective January 1, 2006. The Firm has elected to fair value all instruments issued, acquired or modified after December 31, 2005, that are required to be bifurcated under SFAS 133, as amended by SFAS 138, SFAS 149 and SFAS 155. In addition, the Firm elected to fair value certain structured notes existing as of December 31, 2005, resulting in a $22 million cumulative effect increase to Retained earnings. The cumulative effect adjustment includes gross unrealized gains of $29 million and gross unrealized losses of $7 million.

The substantial majority of the structured notes to which the fair-value election has been applied are classified in Long-term debt on the Consolidated balance sheets. The change in fair value associated with structured notes is classified within Principal transactions revenue on the Consolidated statements of income. For a discussion of Principal transactions and Long-term debt, see Notes 4 and 19 on pages 98–99 and 124–125, respectively, of this Annual Report.

Significant accounting policies

Note 2 – Business changes and developments

Merger with Bank One Corporation

Bank One Corporation merged with and into JPMorgan Chase (the "Merger") on July 1, 2004. As a result of the Merger, each outstanding share of common stock of Bank One was converted in a stock-for-stock exchange into 1.32 shares of common stock of JPMorgan Chase. JPMorgan Chase stockholders kept their shares, which remained outstanding and unchanged as shares of JPMorgan Chase following the Merger. Key objectives of the Merger were to provide the Firm with a more balanced business mix and greater geographic diversification. The Merger was accounted for using the purchase method of accounting, which requires that the assets and liabilities of Bank One be fair valued as of July 1, 2004. The purchase price to complete the Merger was $58.5 billion.

As part of the Merger, certain accounting policies and practices were conformed, which resulted in $976 million of charges in 2004. The significant components of the conformity charges were a $1.4 billion charge related to the decertification of the seller's interest in credit card securitizations, and the benefit of a $584 million reduction in the allowance for credit losses as a result of conforming the wholesale and consumer credit provision methodologies.

The final purchase price of the Merger was allocated to the assets acquired and liabilities assumed using their fair values as of the Merger date. The computation of the purchase price and the allocation of the purchase price to the net assets of Bank One – based upon their respective fair values as of July 1, 2004 – and the resulting goodwill are presented below.

(in millions, except per share amounts)		July 1, 2004
Purchase price		
Bank One common stock exchanged	1,113	
Exchange ratio	1.32	
JPMorgan Chase common stock issued	1,469	
Average purchase price per JPMorgan Chase common share[a]	$ 39.02	
		$ 57,336
Fair value of employee stock awards and direct acquisition costs		1,210
Total purchase price		58,546
Net assets acquired:		
Bank One stockholders' equity	$ 24,156	
Bank One goodwill and other intangible assets	(2,754)	
Subtotal	21,402	
Adjustments to reflect assets acquired at fair value:		
Loans and leases	(2,261)	
Private equity investments	(72)	
Identified intangible assets	8,665	
Pension plan assets	(778)	
Premises and equipment	(417)	
Other assets	(267)

Goodwill resulting from Merger[b]		$ 34,160

(a) The value of the Firm's common stock exchanged with Bank One shareholders was based upon the average closing prices of the Firm's common stock for the two days prior to, and the two days following, the announcement of the Merger on January 14, 2004.
(b) Goodwill resulting from the Merger reflects adjustments of the allocation of the purchase price to the net assets acquired through June 30, 2005.

Condensed statement of net assets acquired

The following condensed statement of net assets acquired reflects the fair value of Bank One net assets as of July 1, 2004.

(in millions)	July 1, 2004
Assets	
Cash and cash equivalents	$ 14,669
Securities	70,512
Interests in purchased receivables	30,184
Loans, net of allowance for loan losses	129,650
Goodwill and other intangible assets	42,825
All other assets	47,739
Total assets	$ 335,579
Liabilities	
Deposits	$ 164,848
Short-term borrowings	9,811
All other liabilities	61,494
Long-term debt	40,880
Total liabilities	277,033
Net assets acquired	$ 58,546

Acquired, identified intangible assets

Components of the fair value of acquired, identified intangible assets as of July 1, 2004, were as follows:

	Fair value (in millions)	Weighted-average life (in years)	Useful life (in years)
Core deposit intangibles	$ 3,650	5.1	Up to 10
Purchased credit card relationships	3,340	4.6	Up to 10
Other credit card–related intangibles	295	4.6	Up to 10
Other customer relationship intangibles	870	4.6–10.5	Up to 20
Subtotal	8,155	5.1	Up to 20
Indefinite-lived asset management intangibles	510	NA	NA
Total	$ 8,665		

Unaudited pro forma condensed combined financial information

The following unaudited pro forma condensed combined financial information presents the results of operations of the Firm had the Merger taken place at January 1, 2004.

Year ended December 31, (in millions, except per share data)	2004
Noninterest revenue	$ 30,684
Net interest income	21,132
Total net revenue	51,816
Provision for credit losses	2,727

Income from continuing operations	$ 1.79
Net income	1.85
Diluted	
Income from continuing operations	1.75
Net income	1.81
Average common shares outstanding:	
Basic	3,510
Diluted	3,593

Other business events

Acquisition of the consumer, business banking and middle-market banking businesses of The Bank of New York in exchange for selected corporate trust businesses, including trustee, paying agent, loan agency and document management services

On October 1, 2006, JPMorgan Chase completed the acquisition of The Bank of New York Company, Inc.'s ("The Bank of New York") consumer, business banking and middle-market banking businesses in exchange for selected corporate trust businesses plus a cash payment of $150 million. This acquisition added 339 branches and more than 400 ATMs, and it significantly strengthens Retail Financial Services distribution network in the New York Tri-state area. The Bank of New York businesses acquired were valued at a premium of $2.3 billion; the Firm's corporate trust businesses that were transferred (i.e., trustee, paying agent, loan agency and document management services) were valued at a premium of $2.2 billion. The Firm also may make a future payment to The Bank of New York of up to $50 million depending on certain new account openings. This transaction included the acquisition of approximately $7.7 billion in loans net of Allowance for loan losses and $12.9 billion in deposits from The Bank of New York. The Firm also recognized core deposit

intangibles of $485 million which will be amortized using an accelerated method over a 10 year period. JPMorgan Chase recorded an after-tax gain of $622 million related to this transaction in the fourth quarter of 2006.

JPMorgan Partners management

On August 1, 2006, the buyout and growth equity professionals of JPMorgan Partners ("JPMP") formed an independent firm, CCMP Capital, LLC ("CCMP"), and the venture professionals separately formed an independent firm, Panorama Capital, LLC ("Panorama"). The investment professionals of CCMP and Panorama continue to manage the former JPMP investments pursuant to a management agreement with the Firm.

Sale of insurance underwriting business

On July 1, 2006, JPMorgan Chase completed the sale of its life insurance and annuity underwriting businesses to Protective Life Corporation for cash proceeds of approximately $1.2 billion, consisting of $900 million of cash received from Protective Life Corporation and approximately $300 million of preclosing dividends received from the entities sold. The after-tax impact of this transaction was negligible. The sale included both the heritage Chase insurance business and the insurance business that Bank One had bought from Zurich Insurance in 2003.

Acquisition of private-label credit card portfolio from Kohl's Corporation

On April 21, 2006, JPMorgan Chase completed the acquisition of $1.6 billion of private-label credit card receivables and approximately 21 million accounts from Kohl's Corporation ("Kohl's"). JPMorgan Chase and Kohl's have also entered into an agreement under which JPMorgan Chase will offer private-label credit cards to both new and existing Kohl's customers.

Collegiate Funding Services

On March 1, 2006, JPMorgan Chase acquired, for approximately $663 million, Collegiate Funding Services, a leader in education loan servicing and consolidation. This acquisition included $6 billion of education loans and will enable the Firm to create a comprehensive education finance business.

BrownCo

On November 30, 2005, JPMorgan Chase sold BrownCo, an on-line deep-discount brokerage business, to E*TRADE Financial for a cash purchase price of $1.6 billion. JPMorgan Chase recognized an after-tax gain of $752 million on the sale. BrownCo's results of operations were reported in the Asset Management business segment; however, the gain on the sale, which was recorded in Other income in the Consolidated statements of income, was reported in the Corporate business segment.

Sears Canada credit card business

On November 15, 2005, JPMorgan Chase purchased Sears Canada Inc.'s credit card operation, including both private-label card accounts and co-branded Sears MasterCard® accounts, aggregating approximately 10 million accounts with $2.2 billion (CAD$2.5 billion) in managed loans. Sears Canada and JPMorgan Chase entered into an ongoing arrangement under which JPMorgan Chase will offer private-label and co-branded credit cards to both new and existing customers of Sears Canada.

Chase Merchant Services, Paymentech integration

On October 5, 2005, JPMorgan Chase and First Data Corp. completed the integration of the companies' jointly owned Chase Merchant Services and Paymentech merchant businesses, to be operated under the name Chase Paymentech Solutions, LLC. The joint venture is the largest financial transaction processor in the U.S. for businesses accepting credit card payments via traditional point of sale, Internet, catalog and recurring billing. As a result of the integration into a joint venture, Paymentech has been deconsolidated and JPMorgan Chase's ownership interest in this joint venture is accounted for in accordance with the equity method of accounting.

Cazenove

On February 28, 2005, JPMorgan Chase and Cazenove Group plc ("Cazenove") formed a business partnership which combined Cazenove's investment banking business and JPMorgan Chase's U.K.-based investment banking business in order to provide investment banking services in the United Kingdom and Ireland. The new company is called JPMorgan Cazenove Holdings.

Other acquisitions

During 2004, JPMorgan Chase purchased the Electronic Financial Services ("EFS") business from Citigroup and acquired a majority interest in hedge fund manager Highbridge Capital Management, LLC ("Highbridge").

Note 3 – Discontinued operations

The transfer of selected corporate trust businesses to The Bank of New York (see Note 2 above) includes the trustee, paying agent, loan agency and document management services businesses. JPMorgan Chase recognized an after-tax gain of $622 million on this transaction. The results of operations of these corporate trust businesses were transferred from the Treasury & Securities Services ("TSS") segment to the Corporate segment effective with the second quarter of 2006, and reported as discontinued operations. Condensed financial information of the corporate trust business follows:

Selected income statements data

Year ended December 31, (in millions)	**2006**	2005	2004[a]
Other noninterest revenue	**$ 407**	$ 509	$ 491
Net interest income	**264**	276	234
Gain on sale of discontinued operations	**1,081**	—	—
Total net revenue	**1,752**	785	725
Noninterest expense	**385**	409	387
Income from discontinued operations before income taxes	**1,367**	376	338
Income tax expense	**572**	147	132
Income from discontinued operations	**$ 795**	$ 229	$ 206

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.

The following is a summary of the assets and liabilities associated with the selected corporate trust businesses related to The Bank of New York transaction that closed on October 1, 2006.

Selected balance sheet data (in millions)	October 1, 2006
Goodwill and other intangibles	$ 838
Other assets	547
Total assets	$ 1,385
Deposits	$ 24,011
Other liabilities	547
Total liabilities	$ 24,558

JPMorgan Chase will provide certain transitional services to The Bank of New York for a defined period of time after the closing date. The Bank of New York will compensate JPMorgan Chase for these transitional services.

Note 4 – Principal transactions

Principal transactions is a new caption, effective January 1, 2006, in the Consolidated statements of income. Principal transactions revenue consists of: realized and unrealized gains and losses from trading activities (including physical commodities inventories that are accounted for at the lower of cost or fair value); changes in fair value associated with structured notes to which the SFAS 155 fair value election has been applied, and Private equity gains and losses. The prior-period presentation of Trading revenue and Private equity gains (losses) has been reclassified to this new caption. The following table presents Principal transactions revenue:

Year ended December 31, (in millions)	**2006**	2005	2004[a]
Trading revenue	**$ 8,986**	$ 5,860	$ 3,612
Private equity gains	**1,360**	1,809	1,536
Principal transactions	**$10,346**	$ 7,669	$ 5,148

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.

Trading assets and liabilities

Trading assets include debt and equity securities held for trading purposes that JPMorgan Chase owns ("long" positions). Trading liabilities include debt and equity securities that the Firm has sold to other parties but does not own ("short" positions). The Firm is obligated to purchase securities at a future date to cover the short positions. Included in Trading assets and Trading liabilities are the reported receivables (unrealized gains) and payables (unrealized losses) related to derivatives. Loans are classified as trading where positions are bought and sold to make profits from short-term movements in price. Trading positions are carried at fair value on the Consolidated balance sheets.

The following table presents the fair value of Trading assets and Trading liabilities for the dates indicated:

December 31, (in millions)	**2006**	2005
Trading assets		
Debt and equity instruments:		
U.S. government and federal agency obligations	**$ 17,358**	$ 16,283
U.S. government-sponsored enterprise obligations	**28,544**	24,172
Obligations of state and political subdivisions	**9,569**	9,887
Certificates of deposit, bankers' acceptances and commercial paper	**8,204**	5,652
Debt securities issued by non-U.S. governments	**58,387**	48,671
Corporate securities and other	**188,075**	143,925
Total debt and equity instruments	**310,137**	248,590
Derivative receivables:[a][b]		
Interest rate	**28,932**	28,113
Foreign exchange	**4,260**	2,855
Equity	**6,246**	5,575
Credit derivatives	**5,732**	3,464
Commodity	**10,431**	9,780
Total derivative receivables	**55,601**	49,787
Total trading assets	**$ 365,738**	$ 298,377
Trading liabilities		
Debt and equity instruments[c]	**$ 90,488**	$ 94,157
Derivative payables:[a][b]		
Interest rate	**22,738**	26,930
Foreign exchange	**4,820**	3,453
Equity	**16,579**	11,539
Credit derivatives	**6,003**	2,445
Commodity	**7,329**	7,406
Total derivative payables	**57,469**	51,773
Total trading liabilities	**$ 147,957**	$ 145,930

(a) 2005 has been adjusted to reflect more appropriate product classifications of certain balances.
(b) Included in Trading assets and Trading liabilities are the reported receivables (unrealized gains) and payables (unrealized losses) related to derivatives. These amounts are reported net of cash received and paid of $23.0 billion and $18.8 billion, respectively, at December 31, 2006, and $26.7 billion and $18.9 billion, respectively, at December 31, 2005, under legally enforceable master netting agreements.
(c) Primarily represents securities sold, not yet purchased.

Average Trading assets and liabilities were as follows for the periods indicated:

Year ended December 31, (in millions)	**2006**	2005	2004[b]
Trading assets – debt and equity instruments	**$280,079**	$ 237,073	$ 200,389
Trading assets – derivative receivables	**57,368**	57,365	59,522
Trading liabilities – debt and equity instruments[a]	**$102,794**	$ 93,102	$ 82,204
Trading liabilities – derivative payables	**57,938**	55,723	52,761

(a) Primarily represents securities sold, not yet purchased.
(b) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.

Private equity

The following table presents the carrying value and cost of the Private equity investment portfolio for the dates indicated:

December 31,	**2006**		2005	
(in millions)	Carrying value	Cost	Carrying value	Cost
Total private equity investments	**$ 6,359**	**$ 7,560**	$ 6,374	$ 8,036

Private equity investments are held primarily by the Private equity business within Corporate (which includes investments made by JPMorgan Partners and ONE Equity Partners). The Private Equity business invests in buyouts, growth equity and venture opportunities. These investments are accounted for under investment company guidelines. Accordingly, these investments, irrespective of the percentage of equity ownership interest held by Private equity, are carried on the Consolidated balance sheets at fair value. Realized and unrealized gains and losses arising from changes in value are reported in Principal transactions revenue in the Consolidated statements of income in the period that the gains or losses occur.

Privately held investments are initially valued based upon cost. The carrying values of privately held investments are adjusted from cost to reflect both positive and negative changes evidenced by financing events with third-party capital providers. In addition, these investments are subject to ongoing impairment reviews by Private equity senior investment professionals. A variety of factors are reviewed and monitored to assess impairment including, but not limited to, operating performance of, and future expectations regarding, the particular portfolio investment; industry valuations of comparable public companies; changes in market outlook; and the third-party financing environment over time.

Private equity also holds publicly held equity investments, generally obtained through the initial public offering of privately held equity investments. Publicly held investments are marked-to-market at the quoted public value. To determine the carrying values of these investments, Private equity incorporates the use of discounts to take into account the fact that it cannot immediately realize the quoted public values as a result of regulatory and/or contractual sales restrictions imposed on these holdings.

Note 5 – Other noninterest revenue

Investment banking fees

This revenue category includes advisory and equity and debt underwriting fees. Advisory fees are recognized as revenue when the related services have been performed. Underwriting fees are recognized as revenue when the Firm has rendered all services to the issuer and is entitled to collect the fee from the issuer, as long as there are no other contingencies associated with the fee (e.g., the fee is not contingent upon the customer obtaining financing). Underwriting fees are net of syndicate expenses. The Firm recognizes credit arrangement and syndication fees as revenue after satisfying certain retention, timing and yield criteria.

The following table presents the components of Investment banking fees:

Year ended December 31, (in millions)	**2006**	2005	2004[a]
Underwriting:			
Equity	**$ 1,179**	$ 864	$ 780
Debt	**2,703**	1,969	1,858
Total Underwriting	**3,882**	2,833	2,638
Advisory	**1,638**	1,255	898
Total	**$ 5,520**	$ 4,088	$ 3,536

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.

Lending & deposit related fees

This revenue category includes fees from loan commitments, standby letters of credit, financial guarantees, deposit-related fees in lieu of compensating balances, cash management-related activities or transactions, deposit accounts, and other loan servicing activities. These fees are recognized over the period in which the related service is provided.

Asset management, administration and commissions

This revenue category includes fees from investment management and related services, custody, brokerage services, insurance premiums and commissions and other products. These fees are recognized over the period in which the related service is provided. Performance-based fees, which are earned based upon exceeding certain benchmarks or other performance targets, are accrued and recognized at the end of the performance period in which the target is met.

Mortgage fees and related income

This revenue category includes fees and income derived from mortgage origination, sales and servicing, and includes the effect of risk management activities associated with the mortgage pipeline, warehouse and the mortgage servicing rights ("MSRs") asset (excluding gains and losses on the sale of Available-for-sale ("AFS") securities). Origination fees and gains or losses on loan sales are recognized in income upon sale. Mortgage servicing fees are recognized over the period the related service is provided. Valuation changes in the mortgage pipeline, warehouse, MSR asset and corresponding risk management instruments are recognized in earnings as these changes occur. Net interest income and securities gains and losses on AFS securities used in mortgage-related risk management activities are not included in Mortgage fees and related income. For a further discussion of MSRs, see Note 16 on pages 121–122 of this Annual Report.

Credit card income

This revenue category includes interchange income from credit and debit cards and servicing fees earned in connection with securitization activities. Volume-related payments to partners and expenses for rewards programs are netted against interchange income. Expenses related to rewards programs are recorded when the rewards are earned by the customer. Other Fee revenues are recognized as earned, except for annual fees, which are deferred with direct loan origination costs and recognized on a straight-line basis over the 12-month period to which they pertain.

Credit card revenue sharing agreements

The Firm has contractual agreements with numerous affinity organizations and co-brand partners, which grant to the Firm exclusive rights to market to their members or customers. These organizations and partners endorse the credit card programs and provide their mailing lists to the Firm, and they may also conduct marketing activities and provide awards under the various credit card programs. The terms of these agreements generally range from 3 to 10 years. The economic incentives the Firm pays to the endorsing organizations and partners typically include payments based upon new account originations, charge volumes, and the cost of the endorsing organizations' or partners' marketing activities and awards.

The Firm recognizes the payments made to the affinity organizations and co-brand partners based upon new account originations as direct loan origination costs. Payments based upon charge volumes are considered by the Firm as revenue sharing with the affinity organizations and co-brand partners, which are deducted from Credit card income as the related revenue is earned. Payments based upon marketing efforts undertaken by the endorsing organization or partner are expensed by the Firm as incurred. These costs are recorded within Noninterest expense.

Note 6 – Interest income and Interest expense

Details of Interest income and Interest expense were as follows:

Year ended December 31, (in millions)	**2006**	2005[b]	2004[b][c]
Interest income			
Loans	**$ 33,121**	$ 26,056	$ 16,768
Securities	**4,147**	3,129	3,377
Trading assets	**10,942**	9,117	7,527
Federal funds sold and securities purchased under resale agreements	**5,578**	3,562	1,380
Securities borrowed	**3,402**	1,618	578
Deposits with banks	**1,265**	660	539
Interests in purchased receivables[a]	**652**	933	291
Total interest income	**59,107**	45,075	30,460
Interest expense			
Interest-bearing deposits	**17,042**	9,986	4,515
Short-term and other liabilities	**14,086**	10,002	6,474
Long-term debt	**5,503**	4,160	2,466
Beneficial interests issued by consolidated VIEs	**1,234**	1,372	478
Total interest expense	**37,865**	25,520	13,933
Net interest income	**21,242**	19,555	16,527
Provision for credit losses	**3,270**	3,483	2,544
Net interest income after Provision for credit losses	**$ 17,972**	$ 16,072	$ 13,983

(a) As a result of restructuring certain multi-seller conduits the Firm administers, JPMorgan Chase deconsolidated $29 billion of Interests in purchased receivables, $3 billion of Loans and $1 billion of Securities, and recorded $33 billion of lending-related commitments during the second quarter of 2006.
(b) Prior periods have been adjusted to reflect the reclassification of certain amounts to more appropriate Interest income and Interest expense lines.
(c) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.

Note 7 – Pension and other postretirement employee benefit plans

The Firm's defined benefit pension plans are accounted for in accordance with SFAS 87 and SFAS 88, and its other postretirement employee benefit ("OPEB") plans are accounted for in accordance with SFAS 106. In September 2006, the FASB issued SFAS 158, which requires companies to recognize on their Consolidated balance sheets the overfunded or underfunded status of their defined benefit postretirement plans, measured as the difference between the fair value of plan assets and the benefit obligation. SFAS 158 requires unrecognized amounts (e.g., net actuarial loss and prior service costs) to be recognized in Accumulated other comprehensive income ("AOCI") and that these amounts be adjusted as they are subsequently recognized as components of net periodic benefit cost based upon the current amortization and recognition requirements of SFAS 87 and SFAS 106. The Firm prospectively adopted SFAS 158 as required on December 31, 2006, which resulted in a charge to AOCI of $1.1 billion.

SFAS 158 also eliminates the provisions of SFAS 87 and SFAS 106 that allow plan assets and obligations to be measured as of a date not more than three months prior to the reporting entity's balance sheet date. The Firm uses a measurement date of December 31 for its defined benefit pension and OPEB plans; therefore, this provision of SFAS 158 will have no effect on the Firm's financial statements.

For the Firm's defined benefit pension plans, fair value is used to determine the expected return on plan assets. For the Firm's OPEB plans, a calculated value that recognizes changes in fair value over a five-year period is used to determine the expected return on plan assets. Amortization of net actuarial gains and losses is included in annual net periodic benefit cost if, as of the beginning of the year, the net actuarial gain or loss exceeds 10 percent of the greater of the projected benefit obligation or the fair value of the plan assets. Any excess, as well as prior service costs, are amortized over the average future service period of defined benefit pension plan participants, which for the U.S. defined benefit pension plan is currently 10 years. For OPEB plans, any excess net actuarial gains and losses also are amortized over the average future service period, which is currently seven years; however, prior service costs are amortized over the average years of service remaining to full eligibility age, which is currently five years.

Defined benefit pension plans

The Firm has a qualified noncontributory U.S. defined benefit pension plan that provides benefits to substantially all U.S. employees. The U.S. plan employs a cash balance formula, in the form of pay and interest credits, to determine the benefits to be provided at retirement, based upon eligible compensation and years of service. Employees begin to accrue plan benefits after completing one year of service, and benefits generally vest after five years of service. The Firm also offers benefits through defined benefit pension plans to qualifying employees in certain non-U.S. locations based upon factors such as eligible compensation, age and/or years of service.

It is the Firm's policy to fund the pension plans in amounts sufficient to meet the requirements under applicable employee benefit and local tax laws. As a result of the enactment of the Pension Protection Act in August 2006, which increased the maximum amount allowable for tax deduction, the Firm is reviewing 2007 U.S. and non-U.S. defined benefit pension plan contribution alternatives. The amount of potential 2007 contributions, if any, is not reasonably estimable at this time.

JPMorgan Chase has a number of other defined benefit pension plans (i.e., U.S. plans not subject to Title IV of the Employee Retirement Income Security Act). The most significant of these plans is the Excess Retirement Plan, pursuant to which certain employees earn pay and interest credits on compensation amounts above the maximum stipulated by law under a qualified plan. The Excess Retirement Plan is a nonqualified, noncontributory U.S. pension plan with an unfunded projected benefit obligation at December 31, 2006 and 2005, in the amount of $301 million and $273 million, respectively. In the current year, this plan has been incorporated into certain of this Note's tables for which it had not been included in prior years.

Defined contribution plans

JPMorgan Chase offers several defined contribution plans in the U.S. and in certain non-U.S. locations, all of which are administered in accordance with applicable local laws and regulations. The most significant of these plans is The JPMorgan Chase 401(k) Savings Plan (the "401(k) Savings Plan"), which covers substantially all U.S. employees. The 401(k) Savings Plan allows employees to make pretax contributions to tax-deferred investment portfolios. The JPMorgan Chase Common Stock Fund, which is an investment option under the 401(k) Savings Plan, is a nonleveraged employee stock ownership plan. The Firm matches eligible employee contributions up to a certain percentage of benefits-eligible compensation per pay period, subject to plan and legal limits. Employees begin to receive matching contributions after completing a one-year service requirement and are immediately vested in the Firm's contributions when made. Employees with total annual cash compensation of $250,000 or more are not eligible for matching contributions. The 401(k) Savings Plan also permits discretionary profit-sharing contributions by participating companies for certain employees, subject to a specified vesting schedule.

OPEB plans

JPMorgan Chase offers postretirement medical and life insurance benefits to certain retirees and qualifying U.S. employees. These benefits vary with length of service and date of hire and provide for limits on the Firm's share of covered medical benefits. The medical benefits are contributory, while the life insurance benefits are noncontributory. As of August 1, 2005, the eligibility requirements for U.S. employees to qualify for subsidized retiree medical coverage were revised, and life insurance coverage was eliminated for active employees retiring after 2005. Postretirement medical benefits also are offered to qualifying U.K. employees.

JPMorgan Chase's U.S. OPEB obligation is funded with corporate-owned life insurance ("COLI") purchased on the lives of eligible employees and retirees. While the Firm owns the COLI policies, COLI proceeds (death benefits, withdrawals and other distributions) may be used only to reimburse the Firm for its net postretirement benefit claim payments and related administrative expenses. The U.K. OPEB plan is unfunded.

The following tables present the funded status, changes in the benefit obligations and plan assets, accumulated benefit obligations, and AOCI amounts reported on the Consolidated balance sheets for the Firm's U.S. and non-U.S. defined benefit pension and OPEB plans:

As of or for the year ended December 31, (in millions)	Defined benefit pension plans				OPEB plans[g]	
	U.S.		Non-U.S.

(a) Reflects adjustments related to pension plans in Germany and Switzerland, which have defined benefit pension obligations that were not previously measured under SFAS 87 due to immateriality.
(b) Net amount recognized is recorded in Other assets for prepaid pension costs or in Accounts payable, accrued expenses and other liabilities for accrued pension costs.
(c) At December 31, 2006 and 2005, approximately $282 million and $405 million, respectively, of U.S. plan assets related to participation rights under participating annuity contracts.
(d) Under SFAS 158, and as noted in the following table, amounts that were previously reported as part of prepaid or accrued pension costs are now reported within AOCI.
(e) Revised primarily to incorporate amounts related to the U.S. defined benefit pension plans not subject to Title IV of the Employee Retirement Income Security Act of 1974 (e.g., Excess Retirement Plan).
(f) At December 31, 2005, Accrued pension costs related to non-U.S. defined benefit pension plans that JPMorgan Chase elected not to prefund fully totaled $164 million.
(g) Includes accumulated postretirement benefit obligation of $52 million and $44 million and postretirement benefit liability (included in Accrued expenses) of $52 million and $50 million, at December 31, 2006 and 2005, respectively, for the U.K. plan, which is unfunded.
(h) The U.S. OPEB plan was remeasured as of August 1, 2005, to reflect a midyear plan amendment and the final Medicare Part D regulations that were issued on January 21, 2005; as a result, the benefit obligation was reduced by $116 million.

Amounts recognized in Accumulated other comprehensive income

December 31, 2006 (in millions)	Defined benefit pension plans						OPEB plans		
	U.S.			Non-U.S.					
	Before tax	Tax effect	After tax	Before tax	Tax effect	After tax	Before tax	Tax effect	After tax
Net actuarial loss[a]	**$ 783**	**$ 311**	**$ 472**	**$ 669**	**$ 266**	**$ 403**	**$ 335**	**$ 84**	**$ 251**
Prior service cost (credit)	**36**	**14**	**22**	**—**	**—**	**—**	**(77)**	**(31)**	**(46)**
Total recognized in Accumulated other comprehensive income	**$ 819**	**$ 325**	**$ 494**	**$ 669**	**$ 266**	**$ 403**	**$ 258**	**$ 53**	**$ 205**

(a) For defined benefit pension plans, the net actuarial loss is primarily the result of declines in discount rates in recent years, partially offset by asset gains. Other factors that contribute to this net actuarial loss include demographic experience, which differs from expectations, and changes in other actuarial assumptions. For OPEB plans, the primary drivers of the cumulative actuarial loss were the decline in the discount rate in recent years and in the medical cost trend rate, which was higher than expected. These losses have been offset partially by the recognition of future savings attributable to Medicare Part D subsidy receipts.

The following table presents the incremental effect of applying SFAS 158 on individual line items on the Consolidated balance sheets:

December 31, 2006 (in millions)	Before application of SFAS 158	SFAS 158 adjustments	After application of SFAS 158
Line item			
Other assets	$ 53,328	$ (1,563)	$ 51,765[a]
Total assets	1,353,083	(1,563)	1,351,520
Accounts payable, accrued expenses and other liabilities	88,557	(461)	88,096[b]

(a) Includes immaterial non-U.S. defined benefit pension plans.
(b) Revised primarily to incorporate amounts related to the U.S. defined benefit pension plans not subject to Title IV of the Employee Retirement Income Security Act of 1974 (e.g., Excess Retirement Plan).
(c) Effective July 1, 2004, the Firm assumed the obligations of heritage Bank One's pension and OPEB plans. These plans were similar to those of heritage JPMorgan Chase. The heritage Bank One plans were merged into the JPMorgan Chase plans effective December 31, 2004.
(d) 2004 results include six months of the combined Firm's results and six months of the heritage JPMorgan Chase results.
(e) The Medicare Prescription Drug, Improvement and Modernization Act of 2003 resulted in a reduction of $32 million, $15 million and $5 million in 2006, 2005 and 2004, respectively, in net periodic benefit cost. The impact on 2006 and 2005 costs were higher as a result of the final Medicare Part D regulations issued on January 21, 2005, which were reflected beginning as of August 1, 2005, the next measurement date for the plan.

The estimated amounts that will be amortized from AOCI into net periodic benefit cost, before tax, in 2007 are as follows:

	Defined benefit pension plans		OPEB plans	
Year ended December 31, 2007 (in millions)	U.S.	Non-U.S.	U.S.	Non-U.S.
Net actuarial loss	$ —	$ 52	$ 34	$ —
Prior service cost (credit)	5	—	(16)	—
Total	$ 5	$ 52	$ 18	$ —

Plan assumptions

JPMorgan Chase's expected long-term rate of return for U.S. defined benefit pension and OPEB plan assets is a blended average of the investment advisor's projected long-term (10 years or more) returns for the various asset classes, weighted by the portfolio allocation. Returns on asset classes are developed using a forward-looking building-block approach and are not strictly based upon historical returns. Equity returns are generally developed as the sum of inflation, expected real earnings growth and expected long-term dividend yield. Bond returns are generally developed as the sum of inflation, real bond yield and risk spread (as appropriate), adjusted for the expected effect on returns from changing yields. Other asset-class returns are derived from their relationship to the equity and bond markets.

For the U.K. defined benefit pension plan, which represents the most significant of the non-U.S. defined benefit pension plans, procedures similar to those in the U.S. are used to develop the expected long-term rate of return on defined benefit pension plan assets, taking into consideration local market conditions and the specific allocation of plan assets. The expected long-term rate of return on U.K. plan assets is an average of projected long-term returns for each asset class, selected by reference to the yield on long-term U.K. government bonds and AA-rated long-term corporate bonds, plus an equity risk premium above the risk-free rate.

In 2006 and 2005, the discount rate used in determining the benefit obligation under the U.S. defined benefit pension and OPEB plans was selected by reference to the yield on a portfolio of bonds with redemption dates and coupons that closely match each of the plan's projected cash flows; such portfolio is derived from a broad-based universe of high-quality corporate bonds as of the measurement date. In years in which this hypothetical bond portfolio generates excess cash, such excess is assumed to be reinvested at the one-year forward rates implied by the Citigroup Pension Discount Curve published as of the measurement date. Prior to 2005, discount rates were selected by reference to the year-end Moody's corporate AA rate, as well as other high-quality indices with a duration that was similar to that of the respective plan's benefit obligations. The discount rates for the U.K. defined benefit pension and OPEB plans represent rates from the yield curve of the year-end iBoxx £ corporate AA 15-year-plus bond index with durations corresponding to those of the underlying benefit obligations.

The following tables present the weighted-average annualized actuarial assumptions for the projected and accumulated benefit obligations and the components of net periodic benefit costs for the Firm's U.S. and non-U.S. defined benefit pension and OPEB plans, as of and for the periods indicated:

	U.S.		Non-U.S.

(a) The OPEB plan was remeasured as of August 1, 2005, and a rate of 5.25% was used from the period of August 1, 2005, through December 31, 2005.
(b) In 2005 the expected long-term rate of return on plan assets for the Firm's OPEB plan was revised to show the aggregate expected return for the heritage Bank One and JPMorgan Chase plans.

The following table presents the effect of a one-percentage-point change in the assumed health care cost trend rate on JPMorgan Chase's total service and interest cost and accumulated postretirement benefit obligation:

For the year ended December 31, 2006 (in millions)	1-Percentage-point increase	1-Percentage-point decrease
Effect on total service and interest costs	**$ 4**	**$ (3)**
Effect on postretirement obligation	**63**	**(54)**

At December 31, 2006, the Firm increased the discount rates used to determine its benefit obligations for the U.S. defined benefit pension and OPEB plans based upon current market interest rates, which will result in a decrease in expense of approximately $23 million for 2007. The 2007 expected long-term rate of return on U.S. pension plan assets remained at 7.50%. The 2007 expected long-term rate of return on the Firm's U.S. OPEB plan assets increased from 6.84% to 7.00%. The Firm maintained the health care benefit obligation trend assumption at 10% for 2007, declining to an ultimate rate of 5% in 2014. The interest crediting rate assumption at December 31, 2006, used to determine pension benefits changed primarily due to changes in market interest rates, which will result in additional expense of $10 million for 2007. The assumed rate of compensation increase remained at 4.00% as of December 31, 2006. The most significant change to the assumptions used to determine net periodic benefit costs in 2006 from the prior year were lower discount rates for the Firm's non-U.S. plans, both defined benefit pension and OPEB, due to lower market interest rates, resulting in $23 million higher compensation expense in 2006 compared with 2005.

JPMorgan Chase's U.S. defined benefit pension and OPEB plan expenses are most sensitive to the expected long-term rate of return on plan assets. With all other assumptions held constant, a 25–basis point decline in the expected long-term rate of return on U.S. plan assets would result in an increase of approximately $27 million in 2007 U.S. defined benefit pension and OPEB plan expenses. A 25–basis point decline in the discount rate for the U.S. plans would result in an increase in 2007 U.S. defined benefit pension and OPEB plan expenses of approximately $3 million and an increase in the related projected benefit obligations of approximately $217 million. A 25–basis point decline in the discount rates for the non-U.S. plans would result in an increase in the 2007 non-U.S. defined benefit pension and OPEB plan expenses of approximately $19 million. A 25–basis point increase in the interest crediting rate for the U.S. defined benefit pension plan would result in an increase in 2007 U.S. defined benefit pension expense of approximately $10 million and an increase in the related projected benefit obligations of approximately $82 million.

Investment strategy and asset allocation

The investment policy for the Firm's postretirement employee benefit plan assets is to optimize the risk-return relationship as appropriate to the respective plan's needs and goals, using a global portfolio of various asset classes diversified by market segment, economic sector, and issuer. Specifically, the goal is to optimize the asset mix for future benefit obligations, while managing various risk factors and each plan's investment return objectives. For example, long-duration fixed income securities are included in the U.S. qualified pension plan's asset allocation, in recognition of its long-duration obligations. Plan assets are managed by a combination of internal and external investment managers and are rebalanced to within approved ranges, to the extent economically practical.

The Firm's U.S. defined benefit pension plan assets are held in various trusts and are invested in a well-diversified portfolio of equities (including U.S. large and small capitalization and international equities), fixed income (including corporate and government bonds), Treasury inflation-indexed and high-yield securities, real estate, cash equivalents, and alternative investments. Non-U.S. defined benefit pension plan assets are held in various trusts and are similarly invested in well-diversified portfolios of equity, fixed income and other securities. Assets of the Firm's COLI policies, which are used to fund partially the U.S. OPEB plan, are held in separate accounts with an insurance company and are invested in equity and fixed income index funds. In addition, tax-exempt municipal debt securities, held in a trust, were used to fund the U.S. OPEB plan in prior periods; as of December 31, 2006, there are no remaining assets in the trust. As of December 31, 2006, the assets used to fund the Firm's U.S. and non-U.S. defined benefit pension and OPEB plans do not include JPMorgan Chase common stock, except in connection with investments in third-party stock-index funds.

The following table presents the weighted-average asset allocation at December 31 for the years indicated, and the respective approved range/target allocation by asset category, for the Firm's U.S. and non-U.S. defined benefit pension and OPEB plans:

	Defined benefit pension plans								
	U.S.			Non-U.S.[a]			OPEB plans[b]		
	Target	% of plan assets		Target	% of plan assets		Target	% of plan assets	
December 31,	Allocation	**2006**	2005	Allocation	**2006**	2005	Allocation	**2006**	2005

Total	100%	**100%**	100%	100%	**100%**	100%	100%	**100%**	100%

(a) Represents the U.K. defined benefit pension plan only, as plans outside the U.K. are not significant.
(b) Represents the U.S. OPEB plan only, as the U.K. OPEB plan is unfunded.

The following table presents JPMorgan Chase's actual rate of return on plan assets for the U.S. and non-U.S. defined benefit pension and OPEB plans:

	U.S.			Non-U.S.		
December 31,	**2006**	2005	2004	**2006**	2005	2004
Actual rate of return:						
Defined benefit pension plans	**13.40%**	7.50%	12.50%	**2.80-7.30%**	2.70-15.90%	2.30-10.50%
OPEB plans	**9.30**	3.30	7.10	**NA**	NA	NA

Estimated future benefit payments

The following table presents benefit payments expected to be paid, which include the effect of expected future service, for the years indicated. The OPEB medical and life insurance payments are net of expected retiree contributions:

Year ended December 31, (in millions)	U.S. defined benefit pension plans	Non-U.S. defined benefit pension plans	OPEB before Medicare Part D subsidy	Medicare Part D subsidy
2007	$ 561	$ 83	$ 130	$ 15
2008	563	81	132	16
2009	583	88	133	18
2010	602	93	135	19
2011	623	97	137	20
Years 2012–2016	3,417	533	657	121

Note 8 – Employee stock-based incentives

Effective January 1, 2006, the Firm adopted SFAS 123R and all related interpretations using the modified prospective transition method. SFAS 123R requires all share-based payments to employees, including employee stock options and stock appreciation rights ("SARs"), to be measured at their grant date fair values. Results for prior periods have not been restated. The Firm also adopted the transition election provided by FSP FAS 123(R)-3.

JPMorgan Chase had previously adopted SFAS 123, effective January 1, 2003, using the prospective transition method. Under SFAS 123, the Firm accounted for its stock-based compensation awards at fair value, similar to the SFAS 123R requirements. However, under the prospective transition method, JPMorgan Chase continued to account for unmodified stock options that were outstanding as of December 31, 2002, using the APB 25 intrinsic value method. Under this method, no expense was recognized for stock options granted at an exercise price equal to the stock price on the grant date, since such options have no intrinsic value.

Upon adopting SFAS 123R, the Firm began to recognize in the Consolidated statements of income compensation expense for unvested stock options previously accounted for under APB 25. Additionally, JPMorgan Chase recognized as compensation expense an immaterial cumulative effect adjustment resulting from the SFAS 123R requirement to estimate forfeitures at the grant date instead of recognizing them as incurred. Finally, the Firm revised its accounting policies for share-based payments granted to retirement-eligible employees under SFAS 123R. Prior to adopting SFAS 123R, the Firm's accounting policy for share-based payment awards granted to retirement-eligible employees was to recognize compensation cost over the award's stated service period. For awards granted to retirement-eligible employees in 2006, JPMorgan Chase recognized compensation expense on the grant date without giving consideration to the impact of post employment restrictions. In the first quarter of 2006, the Firm also began to accrue the estimated cost of stock awards granted to retirement-eligible employees in January 2007.

Employee stock-based awards

The Firm has granted restricted stock, restricted stock units ("RSUs"), stock options, and stock-settled SARs to certain of its employees.

In 2006, JPMorgan Chase granted long-term stock-based awards under the 2005 Long-Term Incentive Plan (the "2005 Plan"). In 2005, JPMorgan Chase granted long-term stock-based awards under the 1996 Long-Term Incentive Plan as amended (the "1996 plan") until May 2005 and under the 2005 Plan thereafter to certain key employees. These two plans, plus prior Firm plans and plans assumed as the result of acquisitions, constitute the Firm's stock-based compensation plans ("LTI Plans"). The 2005 Plan became effective on May 17, 2005, after approval by shareholders at the 2005 annual meeting. The 2005 Plan replaced three existing stock-based compensation plans – the 1996 Plan and two nonshareholder-approved plans – all of which expired in May 2005. Under the terms of the 2005 Plan, 275 million shares of common stock are available for issuance during its five-year term. The 2005 Plan is the only active plan under which the Firm is currently granting stock-based incentive awards.

Restricted stock and RSUs are granted by JPMorgan Chase at no cost to the recipient. These awards are subject to forfeiture until certain restrictions have lapsed, including continued employment for a specified period. The recipient of a share of restricted stock is entitled to voting rights and dividends on the common stock. An RSU entitles the recipient to receive a share of common stock after the applicable restrictions lapse; the recipient is entitled to receive cash payments equivalent to any dividends paid on the underlying common stock during the period the RSU is outstanding. Effective January 2005, the equity portion of the Firm's annual incentive awards were granted primarily in the form of RSUs. The Firm also periodically grants discretionary share-based payment awards, primarily in the form of both employee stock options and SARs.

Under the LTI Plans, stock options and SARs have been granted with an exercise price equal to JPMorgan Chase's common stock price on the grant date. Generally, options and SARs cannot be exercised until at least one year after the grant date and become exercisable over various periods as determined at the time of the grant. These awards generally expire 10 years after the grant date. The Firm's share-based compensation awards generally vest in multiple tranches.

The Firm separately recognizes compensation expense for each tranche of each award as if it were a separate award with its own vesting date. For each tranche granted (other than grants to employees who are retirement eligible at the grant date), compensation expense is recognized on a straight-line basis from the grant date until the vesting date of the respective tranche, provided that the employees will not become retirement eligible during the vesting period. For each tranche granted to employees who will become retirement eligible during the vesting period, compensation expense is recognized on a straight-line basis from the grant date until the earlier of the employee's retirement eligibility date or the vesting date of the respective tranche.

The Firm's policy for issuing shares upon settlement of employee share-based payment awards is to issue either new shares of common stock or treasury shares. During 2006, the Firm issued new shares of common stock from January 1 through May 31, 2006, and treasury shares from June 1 through December 31, 2006.

On March 21, 2006, the Board of Directors approved a stock repurchase program that authorizes the repurchase of up to $8 billion of the Firm's common shares, which supersedes a $6 billion stock repurchase program approved in 2004. The $8 billion authorization includes shares to be repurchased to offset issuances under the Firm's employee stock-based plans. The actual number of shares repurchased is subject to various factors, including: market conditions; legal considerations affecting the amount and timing of repurchase activity; the Firm's capital position (taking into account goodwill and intangibles); internal capital generation; and alternative potential investment opportunities. The repurchase program does not include specific price targets or timetables; may be executed through open market purchases or privately negotiated transactions, or utilizing Rule 10b5-1 programs; and may be suspended at any time.

In December 2005, the Firm accelerated the vesting of approximately 41 million unvested, out-of-the-money employee stock options granted in 2001 under the Growth and Performance Incentive Program ("GPIP"), which were scheduled to vest in January 2007. These options were not modified other than to accelerate vesting. The related expense was approximately $145 million, and was recognized as compensation expense in the fourth quarter of 2005. The Firm believed that at the time the options were accelerated they had limited economic value since the exercise price of the accelerated options was $51.22 and the closing price of the Firm's common stock on the effective date of the acceleration was $39.69.

Restricted stock and RSU activity

Compensation expense for restricted stock and RSUs is measured based upon the number of shares granted multiplied by the stock price at the grant date, and is recognized in Net income as previously described. The following table summarizes JPMorgan Chase's restricted stock and RSU activity for 2006:

Restricted stock and RSU activity

Year ended December 31, 2006 (in thousands, except weighted average data)	Number of Shares	Weighted-average grant date fair value
Outstanding, January 1	**84,604**	**$ 35.22**
Granted	**44,553**	**39.43**
Lapsed[(a)]	**(33,327)**	**31.00**
Forfeited	**(7,374)**	**40.28**
Restricted stock/RSUs outstanding December 31	**88,456**	**$ 38.50**

(a) Lapsed awards represent awards granted in prior years for which, in the case of restricted stock, restrictions have lapsed; and, in the case of RSUs, the awards have been converted into common stock.

The total fair value of shares that vested during the years ended December 31, 2006, 2005 and 2004, was $1.3 billion, $1.1 billion and $1.7 billion, respectively.

The vesting of certain restricted stock and RSU awards issued prior to 2002 was conditioned upon certain service requirements being met and JPMorgan Chase's common stock reaching and sustaining target prices within a five-year performance period. During 2002, it was determined that it was no longer probable that the target stock prices related to forfeitable awards granted in 1999, 2000, and 2001 would be achieved within their respective performance periods, and accordingly, previously accrued expenses were reversed. The target stock prices for these awards ranged from $73.33 to $85.00. These awards were forfeited as follows: 1.2 million shares granted in 1999 were forfeited in January 2004; 1.2 million shares granted in 2000 were forfeited in January 2005; and 1.2 million shares granted in 2001 were forfeited in January 2006.

Employee stock option and SARs activity

Compensation expense, which is measured at the grant date as the fair value of employee stock options and SARs, is recognized in Net income as described above. The following table summarizes JPMorgan Chase's employee stock option and SARs activity for the year ended December 31, 2006, including awards granted to key employees and awards granted in prior years under broad-based plans:

Year ended December 31, 2006 (in thousands, except weighted-average data)	Number of options/SARs	Weighted-average exercise price	Weighted-average remaining contractual life (in years)	Aggregate intrinsic value
Outstanding, January 1	**444,157**	**$ 38.61**		
Granted	**15,229**	**45.85**		
Exercised	**(70,446)**	**29.93**		
Forfeited	**(3,365)**	**36.14**		
Canceled	**(9,348)**	**47.88**		
Outstanding, December 31	**376,227**	**$ 40.31**	4.3	$ 3,384,553
Exercisable, December 31	**317,174**	**40.63**	3.8	2,794,461

The weighted-average grant date per share fair value of stock options and SARs granted during the years ended December 31, 2006, 2005 and 2004, was $10.99, $10.44 and $13.77, respectively. The total intrinsic value of options exercised during the years ended December 31, 2006, 2005 and 2004 was $994 million, $364 million and $520 million, respectively.

Impact of adoption of SFAS 123R

During 2006, the incremental expense related to the Firm's adoption of SFAS 123R was $712 million. This amount represents an accelerated noncash recognition of costs that would otherwise have been incurred in future periods. Also as a result of adopting SFAS 123R, the Firm's Income from continuing operations (pretax) for the year ended December 31, 2006, was lower by $712 million, and Income from continuing operations (after-tax), as well as Net income, for the year ended December 31, 2006, was lower by $442 million, than if the Firm had continued to account for share-based compensation under APB 25 and SFAS 123. Basic and diluted earnings per share from continuing operations, as well as basic and diluted Net income per share, for the year ended December 31, 2006 were $0.13 and $0.12 lower, respectively, than if the Firm had not adopted SFAS 123R.

The Firm recognized noncash compensation expense related to its various employee stock-based incentive awards of $2.4 billion (including the $712 million incremental impact of adopting SFAS 123R), $1.6 billion and $1.3 billion for the years ended December 31, 2006, 2005 and 2004, respectively, in its Consolidated statements of income. At December 31, 2006, approximately $1.0 billion (pretax) of compensation cost related to unvested awards has not yet been charged to Net income. That cost is expected to be amortized into compensation expense over a weighted-average period of 1.2 years. The Firm does not capitalize any compensation cost related to share-based compensation awards to employees.

Cash flows and tax benefits

The total income tax benefit related to stock-based compensation arrangements recognized in the Firm's Consolidated statements of income for the years ended December 31, 2006, 2005 and 2004, was $947 million, $625 million and $519 million, respectively.

Prior to adopting SFAS 123R, the Firm presented all tax benefits of deductions resulting from share-based compensation awards as operating cash flows in its Consolidated statements of cash flows. SFAS 123R requires the cash flows resulting from the tax benefits of tax deductions in excess of the compensation expense recognized for those share-based compensation awards (i.e., excess tax benefits) to be classified as financing cash flows. The $302 million of excess tax benefits classified as a financing cash inflow during 2006 would have been classified as an operating cash inflow if the Firm had not adopted SFAS 123R.

The following table sets forth the cash received from the exercise of stock options under all share-based compensation arrangements and the actual tax benefit realized related to the tax deduction from the exercise of stock options.

Year ended December 31, (in millions)	**2006**	2005	2004
Cash received for options exercised	**$ 1,924**	$ 635	$ 764
Tax benefit realized	**211**	65	204

Comparison of the fair and intrinsic value measurement methods

The following table presents Net income and basic and diluted earnings per share as reported, and as if all 2005 and 2004 share-based payment awards were accounted for at fair value. All 2006 awards were accounted for at fair value.

Year ended December 31, (in millions, except per share data)	2005	2004[(a)]
Net income as reported	$ 8,483	$ 4,466
Add: Employee stock-based compensation expense included in reported Net income, net of related tax effects	938	778
Deduct: Employee stock-based compensation expense determined under the fair value method for all awards, net of related tax effects	(1,015)	(960)
Pro forma Net income	$ 8,406	$ 4,284
Earnings per share:		
Basic: As reported	$ 2.43	$ 1.59
Pro forma	2.40	1.52
Diluted: As reported	$ 2.38	$ 1.55
Pro forma	2.36	1.48

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.

The following table presents the assumptions used to value employee stock options and SARs granted during the period under the Black-Scholes valuation model:

Year ended December 31,	**2006**	2005	2004
Weighted-average annualized valuation assumptions			
Risk-free interest rate	**5.11%**	4.25%	3.44%
Expected dividend yield	**2.89**	3.79	3.59
Expected common stock price volatility	**23**	37	41
Expected life (in years)	**6.8**	6.8	6.7

Prior to the adoption of SFAS 123R, the Firm used the historical volatility of its common stock price as the expected volatility assumption in valuing options. The Firm completed a review of its expected volatility assumption in 2006. Effective October 1, 2006, JPMorgan Chase began to value its employee stock options granted or modified after that date using an expected volatility assumption derived from the implied volatility of its publicly traded stock options.

The expected life assumption is an estimate of the length of time that an employee might hold an option or SAR before it is exercised or cancelled. The expected life assumption was developed using historic experience.

Note 9 – Noninterest expense

Merger costs

Costs associated with the Merger and The Bank of New York transaction are reflected in the Merger costs caption of the Consolidated statements of income. A summary of such costs, by expense category, is shown in the following table for 2006, 2005 and 2004.

Year ended December 31, (in millions)	2006	2005	2004[c]
Expense category			
Compensation	**$ 26**	$ 238	$ 467
Occupancy	**25**	(77)	448
Technology and communications and other	**239**	561	450
Bank of New York transaction[a]	**15**	—	—
Total[b]	**$ 305**	$ 722	$ 1,365

(a) Represents Compensation and Technology and communications and other.
(b) With the exception of occupancy-related write-offs, all of the costs in the table require the expenditure of cash.
(c) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.

The table below shows the change in the liability balance related to the costs associated with the Merger.

Year ended December 31, (in millions)	2006	2005[b]	2004[c]
Liability balance, beginning of period	**$ 311**	$ 952	$ —
Recorded as merger costs	**290**	722	1,365
Recorded as goodwill	**—**	(460)	1,028
Liability utilized	**(446)**	(903)	(1,441)
Liability balance, end of period	**$ 155**[a]	$ 311	$ 952

(a) Excludes $21 million related to The Bank of New York transaction.
(b) 2005 has been revised to reflect the current presentation.
(c) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.

Note 10 – Securities

Securities are classified as AFS, Held-to-maturity ("HTM") or Trading. Trading securities are discussed in Note 4 on page 98 of this Annual Report. Securities are classified primarily as AFS when purchased as part of the Firm's management of its structural interest rate risk. AFS securities are carried at fair value on the Consolidated balance sheets. Unrealized gains and losses after SFAS 133 valuation adjustments are reported as net increases or decreases to Accumulated other comprehensive income (loss). The specific identification method is used to determine realized gains and losses on AFS securities, which are included in Securities gains (losses) on the Consolidated statements of income. Securities that the Firm has the positive intent and ability to hold to maturity are classified as HTM and are carried at amortized cost on the Consolidated balance sheets. The Firm has not classified new purchases of securities as HTM for the past several years.

The following table presents realized gains and losses from AFS securities:

Year ended December 31, (in millions)	2006	2005	2004[b]
Realized gains	**$ 399**	$ 302	$ 576
Realized losses	**(942)**	(1,638)	(238)
Net realized Securities gains (losses)[a]	**$ (543)**	$(1,336)	$ 338

(a) Proceeds from securities sold were generally within 2% of amortized cost.
(b) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.

The amortized cost and estimated fair value of AFS and HTM securities were as follows for the dates indicated:

	2006				2005			
December 31, (in millions)	Amortized cost	Gross unrealized gains	Gross unrealized losses	Fair value	Amortized cost	Gross unrealized gains	Gross unrealized losses	Fair value
Available-for-sale securities								
U.S. government and federal agency obligations:								
U.S. treasuries	**$ 2,398**	**$ —**	**$ 23**	**$ 2,375**	$ 4,245	$ 24	$ 2	$ 4,267

U.S. government-sponsored enterprise obligations	10,607	242	11,007	354	21,614	596
Obligations of state and political subdivisions	237	3	107	4	344	7
Debt securities issued by non-U.S. governments	2,380	17	71	1	2,451	18
Corporate debt securities	3,076	52	678	22	3,754	74
Equity securities	1,838	7	2	—	1,840	7
Other, primarily asset-backed securities	778	14	370	9	1,148	23
Total securities with gross unrealized losses	$ 22,727	$ 336	$ 12,410	$ 391	$ 35,137	$ 727

Impairment of AFS securities is evaluated considering numerous factors, and their relative significance varies case-by-case. Factors considered include the length of time and extent to which the market value has been less than cost; the financial condition and near-term prospects of the issuer of a security; and the Firm's intent and ability to retain the security in order to allow for an anticipated recovery in fair value. If, based upon an analysis of each of the above factors, it is determined that the impairment is other-than-temporary, the carrying value of the security is written down to fair value, and a loss is recognized through earnings.

Included in the $546 million of gross unrealized losses on AFS securities at December 31, 2006, was $242 million of unrealized losses that have existed for a period greater than 12 months. These securities are predominately rated AAA and the unrealized losses primarily are due to overall increases in market interest rates and not concerns regarding the underlying credit of the issuers. The majority of the securities with unrealized losses aged greater than 12 months are obligations of U.S. government-sponsored enterprises and have a fair value at December 31, 2006, that is within 3% of their amortized cost basis.

The following table presents the amortized cost, estimated fair value and average yield at December 31, 2006, of JPMorgan Chase's AFS and HTM securities by contractual maturity:

	Available-for-sale securities			Held-to-maturity securities		
By remaining maturity at December 31, 2006 (in millions, except rates)	Amortized cost	Fair value	Average yield[(b)]	Amortized cost	Fair value	Average yield[(b)]
Due in one year or less	**$ 7,067**	**$ 7,063**	**2.81%**	**$ —**	**$ —**	**—%**
Due after one year through five years	**4,007**	**4,007**	**3.95**	**—**	**—**	**—**
Due after five years through 10 years	**1,224**	**1,211**	**4.73**	**44**	**46**	**6.91**
Due after 10 years[(a)]	**79,621**	**79,636**	**5.58**	**14**	**14**	**6.61**
Total securities	**$ 91,919**	**$ 91,917**	**5.28%**	**$ 58**	**$ 60**	**6.84%**

(a) Includes securities with no stated maturity. Substantially all of the Firm's MBSs and CMOs are due in 10 years or more based upon contractual maturity. The estimated duration, which reflects anticipated future prepayments based upon a consensus of dealers in the market, is approximately four years for MBSs and CMOs.
(b) The average yield is based upon amortized cost balances at year end. Yields are derived by dividing interest income by total amortized cost. Taxable-equivalent yields are used where applicable.

Note 11 – Securities financing activities

JPMorgan Chase enters into resale agreements, repurchase agreements, securities borrowed transactions and securities loaned transactions, primarily to finance the Firm's inventory positions, acquire securities to cover short positions and settle other securities obligations. The Firm also enters into these transactions to accommodate customers' needs.

Securities purchased under resale agreements ("resale agreements") and securities sold under repurchase agreements ("repurchase agreements") are generally treated as collateralized financing transactions and are carried on the Consolidated balance sheets at the amounts the securities will be subsequently sold or repurchased, plus accrued interest. Where appropriate, resale and repurchase agreements with the same counterparty are reported on a net basis in accordance with FIN 41. JPMorgan Chase takes possession of securities purchased under resale agreements. On a daily basis, JPMorgan Chase monitors the market value of the underlying collateral, primarily U.S. and non-U.S. government and agency securities that it has received from its counterparties, and requests additional collateral when necessary.

Transactions similar to financing activities that do not meet the SFAS 140 definition of a repurchase agreement are accounted for as "buys" and "sells" rather than financing transactions. These transactions are accounted for as a purchase (sale) of the underlying securities with a forward obligation to sell (purchase) the securities. The forward purchase (sale) obligation, a derivative, is recorded on the Consolidated balance sheets at its fair value, with changes in fair value recorded in Principal transactions revenue.

Securities borrowed and securities lent are recorded at the amount of cash collateral advanced or received. Securities borrowed consist primarily of government and equity securities. JPMorgan Chase monitors the market value of the securities borrowed and lent on a daily basis and calls for additional collateral when appropriate. Fees received or paid are recorded in Interest income or Interest expense.

December 31, (in millions)	**2006**	2005
Securities purchased under resale agreements	**$ 122,479**	$ 129,570
Securities borrowed	**73,688**	74,604
Securities sold under repurchase agreements	**$ 143,253**	$ 103,052
Securities loaned	**8,637**	14,072

JPMorgan Chase pledges certain financial instruments it owns to collateralize repurchase agreements and other securities financings. Pledged securities that can be sold or repledged by the secured party are identified as financial instruments owned (pledged to various parties) on the Consolidated balance sheets.

At December 31, 2006, the Firm had received securities as collateral that could be repledged, delivered or otherwise used with a fair value of approximately $317 billion. This collateral was generally obtained under resale or securities-borrowing agreements. Of these securities, approximately $291 billion were repledged, delivered or otherwise used, generally as collateral under repurchase agreements, securities lending agreements or to cover short sales.

Note 12 – Loans

Loans that are originated or purchased by the Firm and that management has the intent and ability to hold for the foreseeable future are reported at the principal amount outstanding, net of the Allowance for loan losses, unearned income and any net deferred loan fees. Loans that are either originated or purchased by the Firm and that management intends to sell or to securitize are classified as held-for-sale and are carried at the lower of cost or fair value, with valuation changes recorded in Noninterest revenue. Gains or losses on held-for-sale loans are also recorded in Noninterest revenue. Interest income is recognized using the interest method, or on a basis approximating a level rate of return over the term of the loan.

Loans are transferred from the retained portfolio to the held-for-sale portfolio when management decides to sell the loan. Transfers to held-for-sale are recorded at the lower of cost or fair value on the date of transfer; losses attributed to credit losses are charged off to the Allowance for loan losses and losses due to interest rates, or exchange rates, are recognized in Noninterest revenue.

Nonaccrual loans are those on which the accrual of interest is discontinued. Loans (other than certain consumer loans discussed below) are placed on nonaccrual status immediately if, in the opinion of management, full payment of principal or interest is in doubt, or when principal or interest is 90 days or more past due and collateral, if any, is insufficient to cover principal and interest. Interest accrued but not collected at the date a loan is placed on nonaccrual status is reversed against Interest income. In addition, the amortization of net deferred loan fees is suspended. Interest income on nonaccrual loans is recognized only to the extent it is received in cash. However, where there is doubt regarding the ultimate collectibility of loan principal, all cash thereafter received is applied to reduce the carrying value of such loans. Loans are restored to accrual status only when interest and principal payments are brought current and future payments are reasonably assured. Loans are charged off to the Allowance for loan losses when it is highly certain that a loss has been realized.

Consumer loans are generally charged to the Allowance for loan losses upon reaching specified stages of delinquency, in accordance with the Federal Financial Institutions Examination Council ("FFIEC") policy. For example, credit card loans are charged off by the end of the month in which the account becomes 180 days past due or within 60 days from receiving notification of the filing of bankruptcy, whichever is earlier. Residential mortgage products are generally charged off to net realizable value at 180 days past due. Other consumer products, if collateralized, are generally charged off to net realizable value at 120 days past due. Accrued interest on residential mortgage products, automobile financings, education financings and certain other consumer loans are accounted for in accordance with the nonaccrual loan policy discussed in the preceding paragraph. Interest and fees related to credit card loans continue to accrue until the loan is charged off or paid in full. Accrued interest on all other consumer loans is generally reversed against Interest income when the loan is charged off. A collateralized loan is considered an in-substance foreclosure and is reclassified to assets acquired in loan satisfactions, within Other assets, only when JPMorgan Chase has taken physical possession of the collateral, regardless of whether formal foreclosure proceedings have taken place.

The composition of the loan portfolio at each of the dates indicated was as follows:

December 31, (in millions)	**2006**	2005
U.S. wholesale loans:		
Commercial and industrial	**$ 77,788**	$ 70,233

Home equity	**85,730**	73,866
Mortgage	**59,668**	58,959
Auto loans and leases	**41,009**	46,081
All other loans	**27,097**	18,393
Credit card receivables[d]	**85,881**	71,738
Total consumer loans	**299,385**	269,037
Total loans[e][f]	**$ 483,127**	$ 419,148

(a) Includes Investment Bank, Commercial Banking, Treasury & Securities Services and Asset Management.
(b) Represents credits extended for real estate–related purposes to borrowers who are primarily in the real estate development or investment businesses and for which the primary repayment is from the sale, lease, management, operations or refinancing of the property.
(c) Includes Retail Financial Services and Card Services.
(d) Includes billed finance charges and fees net of an allowance for uncollectible amounts.
(e) Loans are presented net of unearned income and net deferred loan fees of $2.3 billion and $3.0 billion at December 31, 2006 and 2005, respectively.
(f) Includes loans held-for-sale (primarily related to securitization and syndication activities) of $55.2 billion and $34.2 billion at December 31, 2006 and 2005, respectively.

The following table reflects information about the Firm's loan sales:

Year ended December 31, (in millions)	**2006**	2005[a]	2004[a][b]
Net gains on sales of loans (including lower of cost or fair value adjustments)	**$ 568**	$ 365	$ 459

(a) Prior periods have been revised to reflect the current presentation.
(b) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.

Impaired loans

JPMorgan Chase accounts for and discloses nonaccrual loans as impaired loans and recognizes their interest income as discussed previously for nonaccrual loans. The following are excluded from impaired loans: small-balance, homogeneous consumer loans; loans carried at fair value or the lower of cost or fair value; debt securities; and leases.

The table below sets forth information about JPMorgan Chase's impaired loans. The Firm primarily uses the discounted cash flow method for valuing impaired loans:

December 31, (in millions)	**2006**	2005
Impaired loans with an allowance	**$ 623**	$ 1,095
Impaired loans without an allowance[a]	**66**	80
Total impaired loans	**$ 689**	$ 1,175
Allowance for impaired loans under SFAS 114[b]	**153**	257

(a) When the discounted cash flows, collateral value or market price equals or exceeds the carrying value of the loan, then the loan does not require an allowance under SFAS 114.
(b) The allowance for impaired loans under SFAS 114 is included in JPMorgan Chase's Allowance for loan losses.

Year ended December 31, (in millions)	**2006**	2005	2004
Average balance of impaired loans during the year	**$ 990**	$ 1,478	$ 1,883
Interest income recognized on impaired loans during the year	**2**	5	8

Note 13 – Allowance for credit losses

JPMorgan Chase's Allowance for loan losses covers the wholesale (risk-rated) and consumer (scored) loan portfolios and represents management's estimate of probable credit losses inherent in the Firm's loan portfolio as of December 31, 2006, 2005 and 2004. Management also computes an allowance for wholesale lending-related commitments using a methodology similar to that used for the wholesale loans.

The table below summarizes the Firm's reporting of its allowance for credit losses:

		Reported in:
Allowance for credit losses on:	Balance sheet	Income statement
Loans	Allowance for loan losses	Provision for credit losses
Lending-related commitments	Other liabilities	Provision for credit losses

The Allowance for loan losses includes an asset-specific component and a formula-based component. Within the formula-based component is a statistical calculation and an adjustment to the statistical calculation.

The asset-specific component relates to provisions for losses on loans considered impaired and measured pursuant to SFAS 114. An allowance is established when the discounted cash flows (or collateral value or observable market price) of the loan is lower than the carrying value of that loan. To compute the asset-specific component of the allowance, larger impaired loans are evaluated individually, and smaller impaired loans are evaluated as a pool using historical loss experience for the respective class of assets.

The formula-based component covers performing wholesale and consumer loans and is the product of a statistical calculation, as well as adjustments to such calculation. These adjustments take into consideration model imprecision, external factors and economic events that have occurred but are not yet reflected in the factors used to derive the statistical calculation.

The statistical calculation is the product of probability of default and loss given default. For risk-rated loans (generally loans originated by the wholesale lines of business), these factors are differentiated by risk rating and maturity. For scored loans (generally loans originated by the consumer lines of business), loss is primarily determined by applying statistical loss factors and other risk indicators to pools of loans by asset type. Adjustments to the statistical calculation for the risk-rated portfolios are determined by creating estimated ranges using historical experience of both probability of default and loss given default. Factors related to concentrated and deteriorating industries are also incorporated into the calculation where relevant. Adjustments to the statistical calculation for the scored loan portfolios are accomplished in part by analyzing the historical loss experience for each major product segment. The estimated ranges and the determination of the appropriate point within the range are based upon management's view of uncertainties that relate to current macroeconomic and political conditions, quality of underwriting standards, and other relevant internal and external factors affecting the credit quality of the portfolio.

The Allowance for lending-related commitments represents management's estimate of probable credit losses inherent in the Firm's process of extending credit as of December 31, 2006, 2005 and 2004. Management establishes an asset-specific allowance for lending-related commitments that are considered impaired and computes a formula-based allowance for performing wholesale lending-related commitments. These are computed using a methodology similar to that used for the wholesale loan portfolio, modified for expected maturities and probabilities of drawdown.

At least quarterly, the allowance for credit losses is reviewed by the Chief Risk Officer, the Chief Financial Officer and the Controller of the Firm, and discussed with the Risk Policy and Audit Committees of the Board of Directors of the Firm. As of December 31, 2006, JPMorgan Chase deemed the allowance for credit losses to be appropriate (i.e., sufficient to absorb losses that are inherent in the portfolio, including those not yet identifiable).

The table below summarizes the changes in the Allowance for loan losses:

Year ended December 31, (in millions)	**2006**	2005	2004[d]
Allowance for loan losses at January 1	**$ 7,090**	$ 7,320	$ 4,523
Addition resulting from the Merger, July 1, 2004	**—**	—	3,123
Gross charge-offs	**(3,884)**	(4,869)	(3,805)[e]
Gross recoveries	**842**	1,050	706
Net charge-offs	**(3,042)**	(3,819)	(3,099)
Provision for loan losses:			
Provision excluding accounting policy conformity	**3,153**	3,575	1,798
Accounting policy conformity	**—**	—	1,085
Total Provision for loan losses	**3,153**	3,575	2,883
Other	**78**[a]	14	(110)[f]
Allowance for loan losses at December 31	**$ 7,279**[b]	$ 7,090[c]	$ 7,320[g]

(a) Primarily relates to loans acquired in The Bank of New York transaction in the fourth quarter of 2006.
(b) Includes $51 million of asset-specific and $7.2 billion of formula-based allowance. Included within the formula-based allowance was $5.1 billion related to a statistical calculation and an adjustment to the statistical calculation of $2.1 billion.
(c) Includes $203 million of asset-specific and $6.9 billion of formula-based allowance. Included within the formula-based allowance was $5.1 billion related to a statistical calculation (including $400 million related to Hurricane Katrina), and an adjustment to a statistical calculation of $1.8 billion.
(d) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.
(e) Includes $406 million related to the Manufactured Home Loan portfolio in the fourth quarter of 2004.
(f) Primarily represents the transfer of the allowance for accrued interest and fees on reported and securitized credit card loans.
(g) Includes $469 million of asset-specific and $6.8 billion of formula-based allowance. Included within the formula-based allowance was $4.8 billion related to a statistical calculation and an adjustment to the statistical calculation of $2.0 billion.

The table below summarizes the changes in the Allowance for lending-related commitments:

Year ended December 31, (in millions)	2006	2005	2004[c]
Allowance for lending-related commitments at January 1	**$ 400**	$ 492	$ 324
Addition resulting from the Merger, July 1, 2004	**—**	—	508
Provision for lending-related commitments:			
Provision excluding accounting policy conformity	**117**	(92)	(112)
Accounting policy conformity	**—**	—	(227)[d]
Total Provision for lending-related commitments	**117**	(92)	(339)
Other[a]	**7**	—	(1)
Allowance for lending-related commitments at December 31[b]	**$ 524**	$ 400	$ 492

(a) 2006 amount relates to The Bank of New York transaction.
(b) 2006 includes $33 million of asset-specific and $491 million of formula-based allowance. 2005 includes $60 million of asset-specific and $340 million of formula-based allowance. 2004 includes $130 million of asset-specific and $362 million of formula-based allowance. The formula-based allowance for lending-related commitments is based upon a statistical calculation. There is no adjustment to the statistical calculation for lending-related commitments.
(c) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.
(d) Represents a reduction of $227 million to conform provision methodologies in the wholesale portfolio.

Note 14 – Loan securitizations

JPMorgan Chase securitizes and sells a variety of its consumer and wholesale loans. Consumer activities include securitizations of residential real estate, credit card and automobile loans that are originated or purchased by Retail Financial Services ("RFS"), and Card Services ("CS"). Wholesale activities include securitizations of purchased residential real estate loans and commercial loans (primarily real estate–related) originated by the Investment Bank ("IB").

JPMorgan Chase–sponsored securitizations utilize SPEs as part of the securitization process. These SPEs are structured to meet the definition of a QSPE (as discussed in Note 1 on page 94 of this Annual Report); accordingly, the assets and liabilities of securitization-related QSPEs are not reflected in the Firm's Consolidated balance sheets (except for retained interests, as described below) but are included on the balance sheet of the QSPE purchasing the assets. Assets held by securitization-related QSPEs as of December 31, 2006 and 2005, were as follows:

December 31, (in billions)	2006	2005
Consumer activities		
Credit card receivables	**$ 86.4**	$ 96.0
Automobile loans	**4.9**	5.5
Residential mortgage receivables	**40.7**	29.8
Wholesale activities		
Residential mortgages	**43.8**	11.1
Commercial and other[a][b]	**87.1**	61.8
Total	**$ 262.9**	$ 204.2

(a) Cosponsored securitizations include non-JPMorgan originated assets
(b) Commercial and other consists of commercial loans (primarily real estate) and non-mortgage consumer receivables purchased from third parties.

The Firm records a loan securitization as a sale when the accounting criteria for a sale are met. Those criteria are: (1) the transferred assets are legally isolated from the Firm's creditors; (2) the entity can pledge or exchange the financial assets or, if the entity is a QSPE, its investors can pledge or exchange their interests; and (3) the Firm does not maintain effective control via an agreement to repurchase the transferred assets before their maturity or have the ability to unilaterally cause the holder to return the transferred assets.

For loan securitizations that meet the accounting sales criteria, the gains or losses recorded depend, in part, on the carrying amount of the loans sold and are allocated between the loans sold and the retained interests, based upon their relative fair values at the date of sale. Gains on securitizations are reported in Noninterest revenue. When quoted market prices for the retained interests are not available, the Firm estimates the fair value for these retained interests by determining the present value of future expected cash flows using modeling techniques. Such models incorporate management's best estimates of key variables, such as expected credit losses, prepayment speeds and the discount rates appropriate for the risks involved.

Interests in the securitized loans may be retained by the Firm in the form of senior or subordinated interest-only strips, senior and subordinated tranches, and escrow accounts. The classification of retained interests is dependent upon several factors, including the type of interest (e.g., whether the retained interest is represented by a security certificate) and when it was retained, due to the adoption of SFAS 155. The Firm has elected to fair value all interests in securitized loans retained after December 31, 2005, that have an embedded derivative required to be bifurcated under SFAS 155; these retained interests are classified primarily as Trading assets. Retained interests from wholesale activities are classified as Trading assets. For consumer activities, senior and subordinated retained interests represented by a security certificate are classified as AFS. Retained interests not represented by a security certificate are classified in Other assets. For those retained interests that are subject to prepayment risk (such that JPMorgan Chase may not recover substantially all of its investment) but are not required to be bifurcated under SFAS 155, the retained interests are recorded at fair value; subsequent adjustments are reflected in earnings or in Other comprehensive income (loss). Retained interests classified as AFS are subject to the impairment provisions of EITF 99-20.

Credit card securitization trusts require the Firm to maintain a minimum undivided interest in the trusts, representing the Firm's interests in the receivables transferred to the trust that have not been securitized. These seller's interests are not represented by security certificates. The Firm's undivided interests are carried at historical cost and are classified in Loans.

2006, 2005 and 2004 Securitization activity

The following table summarizes new securitization transactions that were completed during 2006, 2005 and 2004; the resulting gains arising from such securitizations; certain cash flows received from such securitizations; and the key economic assumptions used in measuring the retained interests, as of the dates of such sales:

	Consumer activities			Wholesale activities	
Year ended December 31, 2006 (in millions, except rates and where otherwise noted)	Credit card	Automobile	Residential mortgage	Residential mortgage	Commercial and other
Principal securitized	**$ 9,735**	**$ 2,405**	**$ 16,803**	**$ 30,810**	**$ 13,858**
Pretax gains (losses)	**67**	**—**	**85**	**161**	**129**
Cash flow information:					
Proceeds from securitizations	**$ 9,735**	**$ 1,745**	**$ 16,754**	**$ 31,048**	**$ 14,248**

	Consumer activities			Wholesale activities	
Year ended December 31, 2005 (in millions, except rates and where otherwise noted)	Credit card	Automobile	Residential mortgage	Residential mortgage	Commercial and other
Principal securitized	$ 15,145	$ 3,762	$ 18,125	$ 11,399	$ 11,292
Pretax gains (losses)	101	9[c]	21	(3)	134
Cash flow information:					
Proceeds from securitizations	$ 14,844	$ 2,622	$ 18,093	$ 11,494	$ 11,398
Servicing fees collected	94	4	17	—	—
Other cash flows received	298	—	—	—	3
Proceeds from collections reinvested in revolving securitizations	129,696	—	—	—	—
Key assumptions (rates per annum):					
Prepayment rate[a]	16.7–20.0% PPR	1.5% ABS	9.1–12.1% CPR	22.0–43.0% CPR	0.0–50.0% CPR
Weighted-average life (in years)	0.4–0.5	1.4–1.5	5.6–6.7	1.4–2.6	1.0–4.4
Expected credit losses[b]	4.7–5.7%	0.6–0.7%	—%	0.6–2.0%	—%
Discount rate	12.0%	6.3–7.3%	13.0–13.3%	16.0–18.5%	0.6–0.9%

	Consumer activities			
Year ended December 31, 2004[d] (in millions, except rates and where otherwise noted)	Credit card	Automobile	Residential mortgage	Wholesale activities[e]
Principal securitized	$ 8,850	$ 1,600	$ 6,529	$ 8,756
Pretax gains (losses)	52	(3)	47	135
Cash flow information:				
Proceeds from securitizations	$ 8,850	$ 1,597	$ 6,608	$ 8,430
Servicing fees collected	69	1	12	3
Other cash flows received	225	—	25	16
Proceeds from collections reinvested in revolving securitizations	110,697	—	—	—
Key assumptions (rates per annum):				
Prepayment rate[a]	15.5–16.7% PPR	1.5% ABS	23.8–37.6% CPR	17.0–50.0% CPR
Weighted-average life (in years)	0.5–0.6	1.8	1.9–3.0	2.0–4.0
Expected credit losses[b]	5.5–5.8%	0.6%	1.0–2.3%	0.0–3.0%
Discount rate	12.0%	4.1%	15.0–30.0%	0.6–5.0%

(a) CPR: constant prepayment rate; PPR: principal payment rate; ABS: absolute prepayment speed.
(b) Expected credit losses for prime residential mortgage and certain wholesale securitizations are minimal and are incorporated into other assumptions.
(c) The auto securitization gain of $9 million does not include the write-down of loans transferred to held-for-sale in 2005 and risk management activities intended to protect the economic value of the loans while held-for-sale.
(d) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.
(e) Delineation between Residential mortgage and Commercial and other is not available for 2004.

At both December 31, 2006 and 2005, the Firm had, with respect to its credit card master trusts, $19.3 billion and $24.8 billion, respectively, related to undivided interests, and $2.5 billion and $2.2 billion, respectively, related to subordinated interests in accrued interest and fees on the securitized receivables, net of an allowance for uncollectible amounts. Credit card securitization trusts require the Firm to maintain a minimum undivided interest of 4% to 12% of the principal receivables in the trusts. The Firm maintained an average undivided interest in principal receivables in the trusts of approximately 21% for 2006 and 23% for 2005.

The Firm also maintains escrow accounts up to predetermined limits for some credit card and automobile securitizations, to cover the unlikely event of deficiencies in cash flows owed to investors. The amounts available in such escrow accounts are recorded in Other assets and, as of December 31, 2006, amounted to $153 million and $56 million for credit card and automobile securitizations, respectively; as of December 31, 2005, these amounts were $754 million and $76 million for credit card and automobile securitizations, respectively.

JPMorgan Chase retains servicing responsibilities for all originated and for certain purchased residential mortgage, credit card and automobile loan securitizations and for certain commercial activity securitizations it sponsors, and receives servicing fees based upon the securitized loan balance plus certain ancillary fees. The Firm also retains the right to service the residential mortgage loans it sells in connection with mortgage-backed securities transactions with the Government National Mortgage Association ("GNMA"), Federal National Mortgage Association ("FNMA") and Federal Home Loan Mortgage Corporation ("Freddie Mac"). For a discussion of mortgage servicing rights, see Note 16 on pages 121–122 of this Annual report.

In addition to the amounts reported for securitization activity on the previous page, the Firm sold residential mortgage loans totaling $53.7 billion, $52.5 billion and $65.7 billion during 2006, 2005 and 2004, respectively, primarily as GNMA, FNMA and Freddie Mac mortgage-backed securities; these sales resulted in pretax gains of $251 million, $293 million and $58 million, respectively.

The table below summarizes other retained securitization interests, which are primarily subordinated or residual interests, and are carried at fair value on the Firm's Consolidated balance sheets:

December 31, (in millions)	**2006**	2005
Consumer activities		
Credit card[a][b]	**$ 833**	$ 808
Automobile[a][c]	**168**	150
Residential mortgage[a]	**155**	182
Wholesale activities[d]		
Residential mortgages	**1,032**	245
Commercial and other	**117**	20
Total	**$ 2,305**	$ 1,405

(a) Pretax unrealized gains recorded in Stockholders' equity that relate to retained securitization interests on consumer activities totaled $3 million and $6 million for credit card; $4 million and $5 million for automobile and $51 million and $60 million for residential mortgage at December 31, 2006 and 2005, respectively.
(b) The credit card retained interest amount noted above includes subordinated securities retained by the Firm totaling $301 million and $357 million at December 31, 2006 and 2005, respectively, that are classified as AFS securities. The securities are valued using quoted market prices and therefore are not included in the key economic assumptions and sensitivities table that follows.
(c) In addition to the automobile retained interest amounts noted above, the Firm also retained senior securities totaling $188 million and $490 million at December 31, 2006 and 2005, respectively, that are classified as AFS securities. These securities are valued using quoted market prices and therefore are not included in the key economic assumption and sensitivities table that follows.
(d) In addition to the wholesale retained interest amounts noted above, the Firm also retained subordinated securities totaling $23 million and $51 million at December 31, 2006 and 2005, respectively, predominately from resecuritizations activities that are classified as Trading assets. These securities are valued using quoted market prices and therefore are not included in the key assumptions and sensitivities table that follows.

The table below outlines the key economic assumptions used to determine the fair value of the Firm's retained interests in its securitizations at December 31, 2006 and 2005, respectively; and it outlines the sensitivities of those fair values to immediate 10% and 20% adverse changes in those assumptions:

	Consumer activities			Wholesale activities	
December 31, 2006 (in millions, except rates and where otherwise noted)	Credit card	Automobile	Residential mortgage	Residential mortgage	Commercial and other
Weighted-average life (in years)	**0.4–0.5**	**1.1**	**0.2-3.4**	**1.9–2.5**	**0.2–5.9**
Prepayment rate	**17.5–20.4% PPR**	**1.4% ABS**	**19.3-41.8% CPR**	**10.0–42.9% CPR**	**0.0–50.0%[c] CPR**
Impact of 10% adverse change	**$ (52)**	**$ (1)**	**$ (4)**	**$ (44)**	**$ (1)**
Impact of 20% adverse change	**(104)**	**(3)**	**(7)**	**(62)**	**(2)**
Loss assumption	**3.5–4.1%**	**0.7%**	**0.0-5.1%[a]**	**0.1–2.2%**	**0.0–1.3%**
Impact of 10% adverse change	**$ (87)**	**$ (4)**	**$ (4)**	**$ (45)**	**$ (1)**
Impact of 20% adverse change	**(175)**	**(7)**	**(8)**	**(89)**	**(1)**
Discount rate	**12.0%**	**7.6%**	**8.4–30.0%[b]**	**16.0-20.0%**	**0.5–14.0%**
Impact of 10% adverse change	**$ (2)**	**$ (1)**	**$ (3)**	**$ (25)**	**$ (1)**
Impact of 20% adverse change	**(3)**	**(2)**	**(7)**	**(48)**	**(2)**

December 31, 2005 (in millions, except rates and where otherwise noted)	Consumer activities			Wholesale activities	
	Credit card	Automobile	Residential Mortgage	Residential mortgage	Commercial and other
Weighted-average life (in years)	0.4–0.7	1.2	0.5-3.5	2.6	0.2–4.1
Prepayment rate	11.9–20.8% PPR	1.5% ABS	20.1-43.7% CPR	22.0–46.6% CPR	0.0–50.0%[c] CPR
Impact of 10% adverse change	$ (44)	$ —	$ (3)	$ (4)	$ (1)
Impact of 20% adverse change	(88)	(2)	(5)	(4)	(2)
Loss assumption	3.2–8.1%	0.7%	0.0–5.2%[a]	0.6–2.0%	0.0%
Impact of 10% adverse change	$ (77)	$ (4)	$ (10)	$ (6)	$ —
Impact of 20% adverse change	(153)	(9)	(19)	(11)	—
Discount rate	6.9–12.0%	7.2%	12.7-30.0%[b]	16.0–18.5%	0.2–4.7%
Impact of 10% adverse change	$ (2)	$ (1)	$ (4)	$ (6)	$ —
Impact of 20% adverse change	(4)	(3)	(8)	(12)	—

(a) Expected credit losses for prime residential mortgage are minimal and are incorporated into other assumptions.
(b) The Firm sold certain residual interests from subprime mortgage securitizations via Net Interest Margin ("NIM") securitizations and retains residual interests in these NIM transactions, which are valued using a 30% discount rate.
(c) Prepayment risk on certain wholesale retained interests for commercial and other are minimal and are incorporated into other assumptions.

The sensitivity analysis in the preceding table is hypothetical. Changes in fair value based upon a 10% or 20% variation in assumptions generally cannot be extrapolated easily because the relationship of the change in the assumptions to the change in fair value may not be linear. Also, in the table, the effect that a change in a particular assumption may have on the fair value is calculated without changing any other assumption. In reality, changes in one factor may result in changes in another, which might counteract or magnify the sensitivities.

Expected static-pool net credit losses include actual incurred losses plus projected net credit losses, divided by the original balance of the outstandings comprising the securitization pool. The table below displays the expected static-pool net credit losses for 2006, 2005 and 2004, based upon securitizations occurring in that year:

	Loans securitized in:[a]					
	2006		2005		2004[c]	
	Residential mortgage[b]	Automobile	Residential mortgage[b]	Automobile	Residential mortgage	Automobile
December 31, 2006	**4.4%**	**0.6%**	3.5%	0.7%	0.0–3.1%	0.7%
December 31, 2005	**NA**	**NA**	3.3	0.9	0.0–2.4	0.8
December 31, 2004	**NA**	**NA**	NA	NA	0.0–3.3	1.1

(a) Static-pool losses are not applicable to credit card securitizations due to their revolving nature.
(b) Primarily includes subprime residential mortgages securitized in 2006 and 2005 as part of wholesale activities. Expected losses for prime residential mortgage securitizations are minimal for consumer activities.
(c) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.

The table below presents information about delinquencies, net charge-offs (recoveries) and components of reported and securitized financial assets at December 31, 2006 and 2005:

	Total Loans		Nonaccrual and 90 days or more past due[d]		Net loan charge-offs (recoveries) Year ended	
December 31, (in millions)	**2006**	2005	**2006**	2005	**2006**	2005
Home Equity	**$ 85,730**	$ 73,866	**$ 454**	$ 422	**$ 143**	$ 141
Mortgage	**59,668**	58,959	**769**	442	**56**	25
Auto loans and leases	**41,009**	46,081	**132**	193	**238**	277
All other loans	**27,097**	18,393	**322**	281	**139**	129
Credit card receivables	**85,881**	71,738	**1,344**	1,091	**2,488**	3,324
Total consumer loans	**299,385**	269,037	**3,021**[e]	2,429[e]	**3,064**	3,896
Total wholesale loans	**183,742**	150,111	**420**	1,042	**(22)**	(77)
Total loans reported	**483,127**	419,148	**3,441**	3,471	**3,042**	3,819
Securitized consumer loans:						
Residential mortgage[a]	**7,995**	8,061	**191**	370	**57**	105
Automobile	**4,878**	5,439	**10**	11	**15**	15
Credit card	**66,950**	70,527	**962**	730	**2,210**	3,776
Total consumer loans securitized	**79,823**	84,027	**1,163**	1,111	**2,282**	3,896
Securitized wholesale activities						
Residential mortgage[a]	**27,275**	4,787	**544**	4	**13**	—
Commercial and other	**13,756**	4,262	**6**	—	**3**	—
Total securitized wholesale activities	**41,031**	9,049	**550**	4	**16**	—
Total loans securitized[b]	**120,854**	93,076	**1,713**	1,115	**2,298**	3,896
Total loans reported and securitized[c]	**$ 603,981**	$ 512,224	**$ 5,154**	$ 4,586	**$ 5,340**	$ 7,715

(a) Includes $18.6 billion and $11.9 billion of outstanding principal balances on securitized subprime 1–4 family residential mortgage loans as of December 31, 2006 and 2005, respectively.
(b) Total assets held in securitization-related SPEs were $262.9 billion and $204.2 billion at December 31, 2006 and 2005, respectively. The $120.9 billion and $93.1 billion of loans securitized at December 31, 2006 and 2005, respectively, excludes: $122.5 billion and $85.6 billion of securitized loans, in which the Firm's only continuing involvement is the servicing of the assets; $19.3 billion and $24.8 billion of seller's interests in credit card master trusts; and $0.2 billion and $0.7 billion of escrow accounts and other assets, respectively.
(c) Represents both loans on the Consolidated balance sheets and loans that have been securitized, but excludes loans for which the Firm's only continuing involvement is servicing of the assets.
(d) Includes nonperforming HFS loans of $120 million and $136 million at December 31, 2006 and 2005, respectively.
(e) Excludes nonperforming assets related to (i) loans eligible for repurchase as well as loans repurchased from GNMA pools that are insured by U.S. government agencies and U.S. government-sponsored enterprises of $1.2 billion and $1.1 billion for December 31, 2006 and 2005, respectively, and (ii) education loans that are 90 days past due and still accruing, which are insured by U.S. government agencies under the Federal Family Education Loan Program of $0.2 billion at December 31, 2006. These amounts for GNMA and education loans are excluded, as reimbursement is proceeding normally.

Note 15 – Variable interest entities

Refer to Note 1 on page 94 of this Annual Report for a further description of JPMorgan Chase's policies regarding consolidation of variable interest entities.

JPMorgan Chase's principal involvement with VIEs occurs in the following business segments:

- Investment Bank: Utilizes VIEs to assist clients in accessing the financial markets in a cost-efficient manner by providing flexibility relating to price, yield and desired risk. There are two broad categories of transactions involving VIEs in the IB: (1) multi-seller conduits and (2) client intermediation; both are discussed below. The IB also securitizes loans through QSPEs, to create asset-backed securities, as further discussed in Note 14 on pages 114–118 of this Annual Report.
- Asset Management ("AM"): Provides investment management services to a limited number of the Firm's mutual funds deemed VIEs. AM earns a fixed fee based upon assets managed; the fee varies with each fund's investment objective and is competitively priced. For the limited number of funds that qualify as VIEs, AM's relationships with such funds are not considered significant variable interests under FIN 46R.
- Treasury & Securities Services: Provides services to a number of VIEs. These services are similar to those provided to non-VIEs. TSS earns market-based fees for services provided. Such relationships are not considered significant variable interests under FIN 46R.
- Commercial Banking: Utilizes VIEs to assist clients in accessing the financial markets in a cost-efficient manner. This is often accomplished through the use of products similar to those offered in the Investment Bank. Commercial Banking may assist in the structuring and/or on-going administration of these VIEs and may provide liquidity, letters of credit and/or derivative instruments in support of the VIE. Such relationships are not considered significant variable interests under FIN 46R.
- The Private Equity business, included in Corporate, may be involved with entities that could be deemed VIEs. Private equity activities are accounted for in accordance with the Investment Company Audit Guide ("Audit Guide"). The FASB deferred adoption of FIN 46R for nonregistered investment companies that apply the Audit Guide until the proposed Statement of Position on the clarification of the scope of the Audit Guide is finalized. The Firm continues to apply this deferral provision; had FIN 46R been applied to VIEs subject to this deferral, the impact would have had an insignificant impact on the Firm's Consolidated financial statements as of December 31, 2006.

As noted above, there are two broad categories of transactions involving VIEs with which the IB is involved: multi-seller conduits and client intermediation.

Multi-seller conduits

The Firm is an active participant in the asset-backed securities business, helping meet customers' financing needs by providing access to the commercial paper markets through VIEs known as multi-seller conduits. These companies are separate bankruptcy-remote companies in the business of purchasing interests in, and making loans secured by, receivable pools and other financial assets pursuant to agreements with customers. The companies fund their purchases and loans through the issuance of highly rated commercial paper. The primary source of repayment of the commercial paper is the cash flow from the pools of assets.

JPMorgan Chase serves as the administrator and provides contingent liquidity support and limited credit enhancement for several multi-seller conduits. The commercial paper issued by the conduits is backed by collateral, credit enhancements and commitments to provide liquidity sufficient to enable the conduit to receive a liquidity rating of at least A-1, P-1 and, in certain cases, F1.

As a means of ensuring timely repayment of the commercial paper, each asset pool financed by the conduits has a minimum 100% deal-specific liquidity facility associated with it. The liquidity facilities are typically in the form of asset purchase agreements and are generally structured such that the liquidity is provided by the Firm purchasing, or lending against, a pool of nondefaulted, performing assets. Deal-specific liquidity facilities are the primary source of liquidity support for the conduits.

The Firm also provides vehicles with program-wide liquidity, in the form of revolving and short-term lending commitments, in the event of short-term disruptions in the commercial paper market.

Deal-specific credit enhancement that supports the commercial paper issued by the conduits is generally structured to cover a multiple of historical losses expected on the pool of assets and is provided primarily by customers (i.e., sellers) or other third parties. The deal-specific credit enhancement is typically in the form of overcollateralization provided by the seller but also may include any combination of the following: recourse to the seller or originator, cash collateral accounts, letters of credit, excess spread, retention of subordinated interests or third-party guarantees. In certain instances, the Firm provides limited credit enhancement in the form of standby letters of credit.

In June 2006, the Firm restructured four multi-seller conduits that it administers: each conduit issued a capital note that was acquired by an independent third-party investor who absorbs the majority of the expected losses of the respective conduit whose note it had purchased. In determining the primary beneficiary of the conduits, the Firm used a Monte Carlo–based model to size the expected losses and considered the relative rights and obligations of each of the variable interest holders. As a result of the restructuring, the Firm deconsolidated approximately $33 billion of assets and liabilities as of June 30, 2006. The following table summarizes the Firm's involvement with Firm-administered multi-seller conduits:

	Consolidated		Nonconsolidated		**Total**	
December 31, (in billions)	**2006**	2005	**2006**	2005	**2006**	2005
Total commercial paper issued by conduits	**$ 3.4**	$ 35.2	**$ 44.1**	$ 8.9	**$ 47.5**	$ 44.1
Commitments						
Asset-purchase agreements	**$ 0.5**	$ 47.9	**$ 66.0**	$ 14.3	**$ 66.5**	$ 62.2
Program-wide liquidity commitments	**1.0**	5.0	**4.0**	1.0	**5.0**	6.0
Program-wide limited credit enhancements	**—**	1.3	**1.6**	1.0	**1.6**	2.3
Maximum exposure to loss[(a)]	**1.0**	48.4	**67.0**	14.8	**68.0**	63.2

(a) The Firm's maximum exposure to loss is limited to the amount of drawn commitments (i.e., sellers' assets held by the multi-seller conduits for which the Firm provides liquidity support) of $43.9 billion and $41.6 billion at December 31, 2006 and 2005, respectively, plus contractual but undrawn commitments of $24.1 billion and $21.6 billion at December 31, 2006 and 2005, respectively. Certain of the Firm's administered multi-seller conduits were deconsolidated as of June 30, 2006; the assets deconsolidated were approximately $33 billion. Since the Firm provides credit enhancement and liquidity to Firm administered multi-seller conduits, the maximum exposure is not adjusted to exclude exposure that would be absorbed by third-party liquidity providers.

The Firm views its credit exposure to multi-seller conduit transactions as limited. This is because, for the most part, the Firm is not required to fund under the liquidity facilities if the assets in the VIE are in default. Additionally, the Firm's obligations under the letters of credit are secondary to the risk of first loss provided by the customer or other third parties – for example, by the overcollateralization of the VIE with the assets sold to it or notes subordinated to the Firm's liquidity facilities.

Client intermediation

As a financial intermediary, the Firm is involved in structuring VIE transactions to meet investor and client needs. The Firm intermediates various types of risks (including fixed income, equity and credit), typically using derivative instruments as further discussed below. In certain circumstances, the Firm also provides liquidity and other support to the VIEs to facilitate the transaction. The Firm's current exposure to nonconsolidated VIEs is reflected in its Consolidated balance sheets or in the Notes to consolidated financial statements. The risks inherent in derivative instruments or liquidity commitments are managed similarly to other credit, market and liquidity risks to which the Firm is exposed. The Firm intermediates principally with the following types of VIEs: credit-linked note vehicles and municipal bond vehicles.

The Firm structures credit-linked notes in which the VIE purchases highly rated assets (such as asset-backed securities) and enters into a credit derivative contract with the Firm to obtain exposure to a referenced credit not held by the VIE. Credit-linked notes are issued by the VIE to transfer the risk of the referenced credit to the investors in the VIE. Clients and investors often prefer a VIE structure, since the credit-linked notes generally carry a higher credit rating than they would if issued directly by JPMorgan Chase.

The Firm is involved with municipal bond vehicles for the purpose of creating a series of secondary market trusts that allow tax-exempt investors to finance their investments at short-term tax-exempt rates. The VIE purchases fixed-rate, longer-term highly rated municipal bonds by issuing puttable floating-rate certificates and inverse floating-rate certificates; the investors that purchase the inverse floating-rate certificates are exposed to the residual losses of the VIE (the "residual interests"). For vehicles in which the Firm owns the residual interests, the Firm consolidates the VIE. In vehicles in which third-party investors own the residual interests, the Firm's exposure is limited because of the high credit quality of the underlying municipal bonds, the unwind triggers based upon the market value of the underlying collateral and the residual interests held by third parties. The Firm often serves as remarketing agent for the VIE and provides liquidity to support the remarketing.

Assets held by credit-linked and municipal bond vehicles at December 31, 2006 and 2005, were as follows:

December 31, (in billions)	**2006**	2005
Credit-linked note vehicles[a]	**$ 20.2**	$ 13.5
Municipal bond vehicles[b]	**16.9**	13.7

(a) Assets of $1.8 billion reported in the table above were recorded on the Firm's Consolidated balance sheets at December 31, 2006 and 2005, due to contractual relationships held by the Firm that relate to collateral held by the VIE.
(b) Total amounts consolidated due to the Firm owning residual interests were $4.7 billion and $4.9 billion at December 31, 2006 and 2005, respectively, and are reported in the table. Total liquidity commitments were $10.2 billion and $5.8 billion at December 31, 2006 and 2005, respectively. The Firm's maximum credit exposure to all municipal bond vehicles was $14.9 billion and $10.7 billion at December 31, 2006 and 2005, respectively.

The Firm may enter into transactions with VIEs structured by other parties. These transactions can include, for example, acting as a derivative counterparty, liquidity provider, investor, underwriter, placement agent, trustee or custodian. These transactions are conducted at arm's length, and individual credit decisions are based upon the analysis of the specific VIE, taking into consideration the quality of the underlying assets. Where these activities do not cause JPMorgan Chase to absorb a majority of the expected losses of the VIEs or to receive a majority of the residual returns of the VIE, JPMorgan Chase records and reports these positions similarly to any other third-party transaction. These transactions are not considered significant for disclosure purposes.

Consolidated VIE assets

The following table summarizes the Firm's total consolidated VIE assets, by classification, on the Consolidated balance sheets, as of December 31, 2006 and 2005:

December 31, (in billions)	**2006**[d]	2005
Consolidated VIE assets[a]		
Securities purchased under resale agreements[b]	**$ 8.0**	$ 2.6
Trading assets[c]	**9.8**	9.3
Investment securities	**0.2**	1.9
Interests in purchased receivables	**—**	29.6
Loans[b]	**15.9**	8.1
Other assets	**2.9**	0.4
Total consolidated assets	**$ 36.8**	$ 51.9

(a) The Firm also holds $3.5 billion and $3.9 billion of assets, at December 31, 2006 and 2005, respectively, primarily as a seller's interest, in certain consumer securitizations in a segregated entity, as part of a two-step securitization transaction. This interest is included in the securitization activities disclosed in Note 14 on pages 114–118 of this Annual Report.
(b) Includes activity conducted by the Firm in a principal capacity, primarily in the IB.
(c) Includes the fair value of securities and derivative receivables.
(d) Certain multi-seller conduits administered by the Firm were deconsolidated as of June 30, 2006; the assets deconsolidated consisted of $29 billion of Interests in purchased receivables, $3 billion of Loans and $1 billion of investment securities.

Interests in purchased receivables included interests in receivables purchased by Firm-administered conduits, which had been consolidated in accordance with FIN 46R. Interests in purchased receivables were carried at cost and reviewed to determine whether an other-than-temporary impairment existed.

The interest-bearing beneficial interest liabilities issued by consolidated VIEs are classified in the line item titled, "Beneficial interests issued by consolidated variable interest entities" on the Consolidated balance sheets. The holders of these beneficial interests do not have recourse to the general credit of JPMorgan Chase. See Note 19 on page 124 of this Annual Report for the maturity profile of FIN 46 long-term beneficial interests.

FIN 46(R)-6 Transition

In April 2006, the FASB issued FSP FIN 46(R)-6, which requires an analysis of the design of a VIE in determining the variability to be considered in the application of FIN 46(R). The Firm adopted the guidance in FSP FIN 46(R)-6 prospectively on July 1, 2006. The adoption of FSP FIN 46(R)-6 did not significantly change the way in which the Firm evaluated its interests in VIEs under FIN 46(R); thus, it had an immaterial impact on the Firm's consolidated financial statements.

Note 16 – Goodwill and other intangible assets

Goodwill is not amortized. It is instead tested for impairment in accordance with SFAS 142 at the reporting-unit segment, which is generally one level below the six major reportable business segments (as described in Note 33 on pages 139–141 of this Annual Report); plus Private Equity (which is included in Corporate). Goodwill is tested annually (during the fourth quarter) or more often if events or circumstances, such as adverse changes in the business climate, indicate there may be impairment. Intangible assets determined to have indefinite lives are not amortized but instead are tested for impairment at least annually, or more frequently if events or changes in circumstances indicate that the asset might be impaired. The impairment test compares the fair value of the indefinite-lived intangible asset to its carrying amount. Other acquired intangible assets determined to have finite lives, such as core deposits and credit card relationships, are amortized over their estimated useful lives in a manner that best reflects the economic benefits of the intangible asset. In addition, impairment testing is performed periodically on these amortizing intangible assets.

Goodwill and other intangible assets consist of the following:

December 31, (in millions)	2006	2005
Goodwill	**$ 45,186**	$ 43,621
Mortgage servicing rights	**7,546**	6,452
Purchased credit card relationships	**2,935**	3,275
All other intangibles:		
Other credit card–related intangibles	**$ 302**	$ 124
Core deposit intangibles	**2,623**	2,705
Other intangibles	**1,446**	2,003
Total All other intangible assets	**$ 4,371**	$ 4,832

Goodwill

As of December 31, 2006, Goodwill increased by $1.6 billion compared with December 31, 2005. The increase is due principally to the $1.8 billion of goodwill resulting from the acquisition of the consumer, business banking and middle-market banking businesses of The Bank of New York, as well as $510 million of goodwill resulting from the acquisition of Collegiate Funding Services. The increase from acquisitions was offset partially by a reduction to Goodwill: of $402 million due to the sale of selected corporate trust businesses to The Bank of New York; resulting from purchase accounting adjustments related to the acquisition of the Sears Canada credit card business; of $111 million due to the sale of the insurance business; and of $70 million related to reclassifying net assets of a subsidiary as held-for-sale.

Goodwill attributed to the business segments was as follows:

December 31, (in millions)	2006	2005
Investment Bank	**$ 3,526**	$ 3,531
Retail Financial Services	**16,955**	14,991
Card Services	**12,712**	12,984
Commercial Banking	**2,901**	2,651
Treasury & Securities Services	**1,605**	2,062
Asset Management	**7,110**	7,025
Corporate (Private Equity)	**377**	377
Total Goodwill	**$ 45,186**	$ 43,621

Mortgage servicing rights

JPMorgan Chase recognizes as intangible assets mortgage servicing rights, which represent the right to perform specified residential mortgage servicing activities for others. MSRs are either purchased from third parties or retained upon sale or securitization of mortgage loans. Servicing activities include collecting principal, interest, and escrow payments from borrowers; making tax and insurance payments on behalf of the borrowers; monitoring delinquencies and executing foreclosure proceedings; and accounting for and remitting principal and interest payments to the investors of the mortgage-backed securities.

The amount initially capitalized as MSRs represents the amount paid to third parties to acquire MSRs or is the estimate of fair value, if retained upon the sale or securitization of mortgage loans. The Firm estimates the fair value of MSRs for initial capitalization and ongoing valuation using an option-adjusted spread ("OAS") model, which projects MSR cash flows over multiple interest rate scenarios in conjunction with the Firm's proprietary prepayment model, and then discounts these cash flows at risk-adjusted rates. The model considers portfolio characteristics, contractually specified servicing fees, prepayment assumptions, delinquency rates, late charges, other ancillary revenues, and costs to service, and other economic factors. The Firm compares fair value estimates and assumptions to observable market data where available and to recent market activity and actual portfolio experience.

The fair value of MSRs is sensitive to changes in interest rates, including their effect on prepayment speeds. JPMorgan Chase uses or has used combinations of derivatives, AFS securities and trading instruments to manage changes in the fair value of MSRs. The intent is to offset any changes in the fair value of MSRs with changes in the fair value of the related risk management instruments. MSRs decrease in value when interest rates decline. Conversely, securities (such as mortgage-backed securities), principal-only certificates and certain derivatives (when the Firm receives fixed-rate interest payments) increase in value when interest rates decline.

In March 2006, the FASB issued SFAS 156, which permits an entity a one-time irrevocable election to adopt fair value accounting for a class of servicing assets. JPMorgan Chase elected to adopt the standard effective January 1, 2006, and defined MSRs as one class of servicing assets for this election. At the transition date, the fair value of the MSRs exceeded their carrying amount, net of any related valuation allowance, by $150 million net of taxes. This amount was recorded as a cumulative-effect adjustment to retained earnings as of January 1, 2006. MSRs are recognized in the Consolidated balance sheet at fair value, and changes in their fair value are recorded in current-period earnings. During 2006, as in prior years, revenue amounts related to MSRs and the financial instruments used to manage the risk of MSRs are recorded in Mortgage fees and related income.

For the years ended December 31, 2005 and 2004, MSRs were accounted for under SFAS 140, using a lower of cost or fair value approach. Under this approach, MSRs were amortized as a reduction of the actual servicing income received in proportion to, and over the period of, the estimated future net servicing income stream of the underlying mortgage loans. For purposes of evaluating and measuring impairment of MSRs, the Firm stratified the portfolio on the basis of the predominant risk characteristics, which are loan type and interest rate. Any indicated impairment was recognized as a reduction in revenue through a valuation allowance, which represented the extent to which the carrying value of an individual stratum exceeded its estimated fair value. Any gross carrying value and related valuation allowance amounts which were not expected to be recovered in the foreseeable future, based upon the interest rate scenario, were considered to be other-than-temporary.

Prior to the adoption of SFAS 156, the Firm designated certain derivatives used to risk manage MSRs (e.g., a combination of swaps, swaptions and floors) as SFAS 133 fair value hedges of benchmark interest rate risk. SFAS 133 hedge accounting allowed the carrying value of the hedged MSRs to be adjusted through earnings in the same period that the change in value of the hedging derivatives was recognized through earnings. The designated hedge period was daily. In designating the benchmark interest rate, the Firm considered the impact that the change in the benchmark rate had on the prepayment speed estimates in determining the fair value of the MSRs. Hedge effectiveness was assessed using a regression analysis of the change in fair value of the MSRs as a result of changes in benchmark interest rates and of the change in the fair value of the designated derivatives. The valuation adjustments to both the MSRs and SFAS 133 derivatives were recorded in Mortgage fees and related income. With the election to apply fair value accounting to the MSRs under SFAS 156, SFAS 133 hedge accounting is no longer necessary. For a further discussion on derivative instruments and hedging activities, see Note 28 on pages 131–132 of this Annual Report.

The following table summarizes MSR activity, certain key assumptions, and the sensitivity of the fair value of MSRs to adverse changes in those key assumptions for the year ended December 31, 2006, during which MSRs were accounted for under SFAS 156.

Year ended December 31, (in millions, except rates and where otherwise noted)	2006
Balance at beginning of period after valuation allowance	$ 6,452
Cumulative effect of change in accounting principle	230
Fair value at beginning of period	6,682
Originations of MSRs	1,512
Purchase of MSRs	627
Total additions	2,139
Sales	—
Change in valuation due to inputs and assumptions[a]	165
Other changes in fair value[b]	(1,440)
Fair value at December 31	$ 7,546
Weighted-average prepayment speed assumption (CPR)	17.02%
Impact on fair value of 10% adverse change	$ (381)
Impact on fair value of 20% adverse change	(726)
Weighted-average discount rate	9.32%
Impact on fair value of 10% adverse change	$ (254)
Impact on fair value of 20% adverse change	(491)
Contractual service fees, late fees and other ancillary fees included in Mortgage fees and related income	$ 2,038
Third-party Mortgage loans serviced at December 31 (in billions)	$ 527

CPR: Constant prepayment rate.

(a) Represents MSR asset fair value adjustments due to changes in inputs, such as interest rates and volatility, as well as updates to assumptions used in the valuation model.
(b) Includes changes in the MSR value due to servicing portfolio runoff (or time decay).

The sensitivity analysis in the preceding table is hypothetical and should be used with caution. Changes in fair value based upon a 10% and 20% variation in assumptions generally cannot be easily extrapolated because the relationship of the change in the assumptions to the change in fair value may not be linear. Also, in this table, the effect that a change in a particular assumption may have on the fair value is calculated without changing any other assumption. In reality, changes in one factor may result in changes in another, which might magnify or counteract the sensitivities.

The following table summarizes MSR activity for the years ended December 31, 2005 and 2004, during which MSRs were accounted for under SFAS 140.

Year ended December 31, (in millions, except rates and where otherwise noted)	2005[c]	2004[d]
Balance at January 1	$ 6,111	$ 6,159
Originations of MSRs	1,301	1,089
Purchase of MSRs	596	668
Total additions	1,897	1,757
Bank One merger	NA	90
Sales	—	(3)
Other-than-temporary impairment	(1)	(149)
Amortization	(1,295)	(1,297)
SFAS 133 hedge valuation adjustments	90	(446)
Balance at December 31	6,802	6,111
Less: valuation allowance[a]	350	1,031
Balance at December 31, after valuation allowance	$ 6,452	$ 5,080
Estimated fair value at December 31	$ 6,682	$ 5,124
Weighted-average prepayment speed assumption (CPR)	17.56%	17.29%
Weighted-average discount rate	9.68%	7.93%
Valuation allowance at January 1	$ 1,031	$ 1,378
Other-than-temporary impairment[b]	(1)	(149)
SFAS 140 impairment (recovery) adjustment	(680)	(198)
Valuation allowance at December 31	$ 350	$ 1,031
Contractual service fees, late fees and other ancillary fees included in Mortgage fees and related income	$ 1,769	$ 1,721
Third-party Mortgage loans serviced at December 31 (in billions)	$ 468	$ 431

(a) The valuation allowance in the preceding table at December 31, 2005 and 2004, represented the extent to which the carrying value of MSRs exceeded the estimated fair value for its applicable SFAS 140 strata. Changes in the valuation allowance were the result of the recognition of impairment or the recovery of previously recognized impairment charges due to changes in market conditions during the period.
(b) The Firm recorded an other-than-temporary impairment of its MSRs of $1 million and $149 million in 2005 and 2004, respectively, which permanently reduced the gross carrying value of the MSRs and the related valuation allowance. The permanent reduction precluded subsequent reversals. This write-down had no impact on the results of operations or financial condition of the Firm.
(c) During the fourth quarter of 2005, the Firm began valuing MSRs using an option-adjusted spread ("OAS") valuation model. Prior to the fourth quarter of 2005, MSRs were valued using cash flows and discount rates determined by a "static" or single interest rate path valuation model.
(d) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.
CPR: Constant prepayment rate

Purchased credit card relationships and All other intangible assets
During 2006, Purchased credit card relationship intangibles decreased by $340 million as a result of $731 million in amortization expense, partially offset by increases from various acquisitions of private-label portfolios and purchase accounting adjustments related to the November 2005 acquisition of the Sears Canada credit card business. During 2006, all other intangible assets declined $461 million, primarily as a result of amortization expense and a reduction of $436 million related to the transfer of selected corporate trust businesses to The Bank of New York, partially offset by an increase in core deposit intangibles of $485 million resulting from the acquisition of The Bank of New York's consumer, business banking and middle-market banking businesses, and further purchase accounting adjustments related to the acquisition of the Sears Canada credit card business. Except for $513 million of indefinite-lived intangibles related to asset management advisory contracts that are not amortized but instead are tested for impairment at least annually, the remainder of the Firm's other acquired intangible assets are subject to amortization.

The components of credit card relationships, core deposits and other intangible assets were as follows:

	2006			2005		
December 31, (in millions)	Gross amount	Accumulated amortization	Net carrying value	Gross amount	Accumulated amortization	Net carrying value
Purchased credit card relationships	**$ 5,716**	**$ 2,781**	**$ 2,935**	$ 5,325	$ 2,050	$ 3,275
All other intangibles:						
Other credit card–related intangibles	**367**	**65**	**302**	183	59	124
Core deposit intangibles	**4,283**	**1,660**	**2,623**	3,797	1,092	2,705
Other intangibles[a]	**1,961**	**515**[b]	**1,446**	2,582	579[b]	2,003

(a) Amounts at December 31, 2006, exclude, and amounts at December 31,2005, include, other intangibles and related accumulated amortization of selected corporate trust businesses related to the transaction with The Bank of New York.
(b) Includes $11 million and $14 million of amortization expense related to servicing assets on securitized automobile loans for the years ended December 31, 2006 and 2005, respectively.

Amortization expense
The following table presents amortization expense related to credit card relationships, core deposits and All other intangible assets.

Year ended December 31, (in millions)	**2006**	2005	2004[b]
Purchased credit card relationships	**$ 731**	$ 703	$ 476
All other intangibles:			
Other credit card–related intangibles	**6**	36	23
Core deposit intangibles	**568**	623	330
Other intangibles[a]	**123**	128	82
Total amortization expense	**$ 1,428**	$ 1,490	$ 911

(a) Amortization expense related to the aforementioned selected corporate trust businesses were reported in Income from discontinued operations for all periods presented.
(b) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.

Future amortization expense
The following table presents estimated future amortization expense related to credit card relationships, core deposits and All other intangible assets at December 31, 2006:

Year ended December 31, (in millions)	Purchased credit card relationships	Other credit card-related intangibles	Core deposit intangibles	All other intangible assets	**Total**
2007	$ 700	$ 10	$ 555	$ 109	$ 1,374
2008	580	17	479	100	1,176
2009	428	23	397	92	940
2010	358	30	336	81	805
2011	289	35	293	73	690

Note 17 – Premises and equipment

Premises and equipment, including leasehold improvements, are carried at cost less accumulated depreciation and amortization. JPMorgan Chase computes depreciation using the straight-line method over the estimated useful life of an asset. For leasehold improvements, the Firm uses the straight-line method computed over the lesser of the remaining term of the leased facility or 10 years. JPMorgan Chase has recorded immaterial asset retirement obligations related to asbestos remediation under SFAS 143 and FIN 47 in those cases where it has sufficient information to estimate the obligations' fair value.

JPMorgan Chase capitalizes certain costs associated with the acquisition or development of internal-use software under SOP 98-1. Once the software is ready for its intended use, these costs are amortized on a straight-line basis over the software's expected useful life, and reviewed for impairment on an ongoing basis.

Note 18 – Deposits

At December 31, 2006 and 2005, time deposits in denominations of $100,000 or more were as follows:

December 31, (in millions)	**2006**	2005
U.S.	**$ 110,812**	$ 80,861
Non-U.S.	**51,138**	34,912
Total	**$ 161,950**	$ 115,773

At December 31, 2006, the maturities of time deposits were as follows:

December 31, 2006 (in millions)	U.S.	Non-U.S.	**Total**
2007	$ 132,313	$ 62,874	$195,187
2008	2,692	769	3,461
2009	1,200	653	1,853
2010	617	605	1,222
2011	621	486	1,107
After 5 years	735	784	1,519
Total	$ 138,178	$ 66,171	$204,349

Note 19 – Long-term debt

JPMorgan Chase issues long-term debt denominated in various currencies, although predominantly U.S. dollars, with both fixed and variable interest rates. The following table is a summary of long-term debt carrying values (including unamortized original issue discount, SFAS 133 valuation adjustments and fair value adjustments, where applicable) by contractual maturity for the current year.

		2006				
By remaining maturity at December 31, 2006 (in millions, except rates)		Under 1 year	1–5 years	After 5 years	**Total**	2005 Total
Parent company						
Senior debt:[a]	Fixed rate	**$ 5,468**	**$ 12,162**	**$ 2,686**	**$ 20,316**	$ 24,920
	Variable rate	**3,299**	**22,506**	**2,459**	**28,264**	16,914
	Interest rates[b]	**4.13–5.50%**	**0.75–12.48%**	**1.25–10.37%**	**0.75–12.48%**	0.22–8.85%
Subordinated debt:	Fixed rate	**$ 1,858**	**$ 9,145**	**$ 15,009**	**$ 26,012**	$ 24,817
	Variable rate	**—**	**24**	**1,965**	**1,989**	1,823

	Interest rates[b]	**—%**	**6.13–6.70%**	**4.38–8.25%**	**4.38–8.25%**	6.13–8.25%
	Subtotal	**$ 17,647**	**$ 25,367**	**$ 13,826**	**$ 56,840**	$ 39,883
Total long-term debt		**$ 28,272**	**$ 69,204**	**$ 35,945**	**$ 133,421**[d][e][f][g]	$ 108,357
FIN 46R long-term beneficial interests:[c]						
	Fixed rate	**$ 7**	**$ 347**	**$ 423**	**$ 777**	$ 465
	Variable rate	**63**	**129**	**7,367**	**7,559**	1,889
	Interest rates[b]	**5.85–7.12%**	**1.73–8.75%**	**3.26–12.79%**	**1.73–12.79%**	0.51–12.79%
Total FIN 46R long-term beneficial interests		**$ 70**	**$ 476**	**$ 7,790**	**$ 8,336**	$ 2,354

(a) Included are various equity-linked or other indexed instruments. Embedded derivatives separated from hybrid securities in accordance with SFAS 133 are reported at fair value and shown net with the host contract on the Consolidated balance sheets. Changes in fair value of separated derivatives are recorded in Principal transactions revenue. Hybrid securities which the Firm has elected to measure at fair value in accordance with SFAS 155 are classified in the line item of the host contract on the Consolidated balance sheets; changes in fair values are recorded in Principal transactions revenue in the Consolidated statements of income.

(b) The interest rates shown are the range of contractual rates in effect at year end, including non-U.S. dollar-fixed- and variable-rate issuances, which excludes the effects of the associated derivative instruments used in SFAS 133 hedge accounting relationships if applicable. The use of these derivative instruments modifies the Firm's exposure to the contractual interest rates disclosed in the table above. Including the effects of the SFAS 133 hedge accounting derivatives, the range of modified rates in effect at December 31, 2006, for total long-term debt was 0.11% to 17.00%, versus the contractual range of 0.75% to 17.00% presented in the table above.

(c) Included on the Consolidated balance sheets in Beneficial interests issued by consolidated variable interest entities.

(d) At December 31, 2006, long-term debt aggregating $27.3 billion was redeemable at the option of JPMorgan Chase, in whole or in part, prior to maturity, based upon the terms specified in the respective notes.

(e) The aggregate principal amount of debt that matures in each of the five years subsequent to 2006 is $28.3 billion in 2007, $22.9 billion in 2008, $18.1 billion in 2009, $10.6 billion in 2010 and $17.6 billion in 2011.

(f) Includes $3.0 billion of outstanding zero-coupon notes at December 31, 2006. The aggregate principal amount of these notes at their respective maturities was $6.8 billion.

(g) Includes $25.4 billion of outstanding structured notes accounted for at fair value under SFAS 155.

The weighted-average contractual interest rate for total Long-term debt was 4.89% and 4.62% as of December 31, 2006 and 2005, respectively. In order to modify exposure to interest rate and currency exchange rate movements, JPMorgan Chase utilizes derivative instruments, primarily interest rate and cross-currency interest rate swaps, in conjunction with some of its debt issues. The use of these instruments modifies the Firm's interest expense on the associated debt. The modified weighted-average interest rate for total long-term debt, including the effects of related derivative instruments, was 4.99% and 4.65% as of December 31, 2006 and 2005, respectively.

JPMorgan Chase & Co. (Parent Company) has guaranteed certain debt of its subsidiaries, including both long-term debt and structured notes sold as part of the Firm's trading activities. These guarantees rank on a parity with all of the Firm's other unsecured and unsubordinated indebtedness. Guaranteed liabilities totaled $30 million and $170 million at December 31, 2006 and 2005, respectively.

Junior subordinated deferrable interest debentures held by trusts that issued guaranteed capital debt securities

At December 31, 2006, the Firm had established 22 wholly owned Delaware statutory business trusts ("issuer trusts") that had issued guaranteed capital debt securities.

The junior subordinated deferrable interest debentures issued by the Firm to the issuer trusts, totaling $12.2 billion and $11.5 billion at December 31, 2006 and 2005, respectively, were reflected in the Firm's Consolidated balance sheets in the Liabilities section under the caption "Junior subordinated deferrable interest debentures held by trusts that issued guaranteed capital debt securities" (i.e., trust preferred capital debt securities). The Firm also records the common capital securities issued by the issuer trusts in Other assets in its Consolidated balance sheets at December 31, 2006 and 2005.

The debentures issued to the issuer trusts by the Firm, less the common capital securities of the issuer trusts, qualify as Tier 1 capital. The following is a summary of the outstanding capital debt securities, including unamortized original issue discount, issued by each trust and the junior subordinated deferrable interest debenture issued by JPMorgan Chase to each trust as of December 31, 2006:

December 31, 2006 (in millions)	Amount of capital debt securities issued by trust[a]	Principal amount of debenture issued to trust[b]	Issue date	Stated maturity of capital securities and debentures	Earliest redemption date	Interest rate of capital securities and debentures	Interest payment/ distribution dates
Bank One Capital III	$ 474	$ 623	2000	2030	Any time	8.75%	Semiannually

JPMorgan Chase Capital XVI	500	488	2005	2035	2010	6.35%	Quarterly
JPMorgan Chase Capital XVII	496	467	2005	2035	Any time	5.85%	Semiannually
JPMorgan Chase Capital XVIII	748	749	2006	2036	Any time	6.95%	Semiannually
JPMorgan Chase Capital XIX	562	563	2006	2036	2011	6.63%	Quarterly
JPMorgan Chase Capital XX	995	996	2006	2036	Any time	6.55%	Semiannually
Total	$ 12,032	$ 12,209					

(a) Represents the amount of capital securities issued to the public by each trust, including unamortized original issue discount.
(b) Represents the principal amount of JPMorgan Chase debentures issued to each trust, including unamortized original issue discount. The principal amount of debentures issued to the trusts includes the impact of hedging and purchase accounting fair value adjustments that were recorded on the Firm's Consolidated financial statements.

Note 20 – Preferred stock

JPMorgan Chase is authorized to issue 200 million shares of preferred stock, in one or more series, with a par value of $1 per share. There was no outstanding preferred stock at December 31, 2006. Outstanding preferred stock at December 31, 2005, was 280,433 shares. On March 31, 2006, JPMorgan Chase redeemed all 280,433 shares of its 6.63% Series H cumulative preferred stock. Dividends on shares of the Series H preferred stock were payable quarterly.

The following is a summary of JPMorgan Chase's preferred stock outstanding as of December 31:

(in millions, except per share amounts and rates)	Stated value and redemption price per share[b]	Shares		Outstanding at December 31,		Earliest redemption date	Rate in effect at December 31, 2006
		2006	2005	**2006**	2005		
6.63% Series H cumulative[a]	$ 500.00	**—**	0.28	**$ —**	$ 139	NA	**NA**
Total preferred stock		**—**	0.28	**$ —**	$ 139		

(a) Represented by depositary shares.
(b) Redemption price includes amount shown in the table plus any accrued but unpaid dividends.

Note 21 – Common stock

At December 31, 2006, JPMorgan Chase was authorized to issue 9.0 billion shares of common stock with a $1 par value per share. Common shares issued (newly issued or distributed from treasury) by JPMorgan Chase during 2006, 2005 and 2004 were as follows:

December 31, (in millions)	**2006**	2005	2004[b]
Issued – balance at January 1	**3,618.2**	3,584.8	2,044.4
Newly issued:			
Employee benefits and compensation plans	**39.3**	34.0	69.0
Employee stock purchase plans	**0.6**	1.4	3.1
Purchase accounting acquisitions and other	**—**	—	1,469.4
Total newly issued	**39.9**	35.4	1,541.5
Cancelled shares	**(0.3)**	(2.0)	(1.1)
Total issued – balance at December 31	**3,657.8**	3,618.2	3,584.8
Treasury – balance at January 1	**(131.5)**	(28.6)	(1.8)
Purchase of treasury stock	**(90.7)**	(93.5)	(19.3)
Share repurchases related to employee stock-based awards[a]	**(8.8)**	(9.4)	(7.5)
Issued from treasury:			
Employee benefits and compensation plans	**34.4**	—	—
Employee stock purchase plans	**0.5**	—	—
Total issued from treasury	**34.9**	—	—
Total treasury – balance at December 31	**(196.1)**	(131.5)	(28.6)
Outstanding	**3,461.7**	3,486.7	3,556.2

(a) Participants in the Firm's stock-based incentive plans may have shares withheld to cover income taxes. The shares withheld amounted to 8.1 million, 8.2 million and 5.7 million for 2006, 2005 and 2004, respectively.
(b) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.

During 2006, 2005 and 2004, the Firm repurchased 91 million shares, 94 million shares and 19 million shares, respectively, of common stock under stock repurchase programs approved by the Board of Directors.

As of December 31, 2006, approximately 464 million unissued shares of common stock were reserved for issuance under various employee or director incentive, compensation, option and stock purchase plans.

Note 22 – Earnings per share

SFAS 128 requires the presentation of basic and diluted earnings per share ("EPS") in the Consolidated statement of income. Basic EPS is computed by dividing net income applicable to common stock by the weighted-average number of common shares outstanding for the period. Diluted EPS is computed using the same method as basic EPS but, in the denominator, the number of common shares reflect, in addition to outstanding shares, the potential dilution that could occur if convertible securities or other contracts to issue common stock were converted or exercised into common stock. Net income available for common stock is the same for basic EPS and diluted EPS, as JPMorgan Chase had no convertible securities, and therefore, no adjustments to Net income available for common stock were necessary. The following table presents the calculation of basic and diluted EPS for 2006, 2005 and 2004:

Year ended December 31, (in millions, except per share amounts)	**2006**	2005	2004[b]
Basic earnings per share			
Income from continuing operations	**$ 13,649**	$ 8,254	$ 4,260
Discontinued operations	**795**	229	206
Net income	**14,444**	8,483	4,466
Less: preferred stock dividends	**4**	13	52
Net income applicable to common stock	**$ 14,440**	$ 8,470	$ 4,414
Weighted-average basic shares outstanding	**3,470.1**	3,491.7	2,779.9
Income from continuing operations per share	**$ 3.93**	$ 2.36	$ 1.51
Discontinued operations per share	**0.23**	0.07	0.08
Net income per share	**$ 4.16**	$ 2.43	$ 1.59
Diluted earnings per share			
Net income applicable to common stock	**$ 14,440**	$ 8,470	$ 4,414
Weighted-average basic shares outstanding	**3,470.1**	3,491.7	2,779.9
Add: Employee restricted stock, RSUs, stock options and SARs	**103.8**	65.6	70.7
Weighted-average diluted shares outstanding[a]	**3,573.9**	3,557.3	2,850.6
Income from continuing operations per share	**$ 3.82**	$ 2.32	$ 1.48
Discontinued operations per share	**0.22**	0.06	0.07
Net income per share	**$ 4.04**	$ 2.38	$ 1.55

(a) Options issued under employee stock-based incentive plans to purchase 150 million, 280 million and 300 million shares of common stock were outstanding for the years ended 2006, 2005 and 2004, respectively, but were not included in the computation of diluted EPS because the options were antidilutive.
(b) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.

Note 23 – Accumulated other comprehensive income (loss)

Accumulated other comprehensive income (loss) includes the after-tax change in unrealized gains and losses on AFS securities, foreign currency translation adjustments (including the impact of related derivatives), cash flow hedging activities and the net actuarial loss and prior service cost related to the Firm's defined benefit pension and OPEB plans.

(in millions)	Unrealized gains (losses) on AFS securities[b]	Translation adjustments, net of hedges	Cash flow hedges	Net actuarial loss and prior service (credit) of defined benefit pension and OPEB plans[f]	Accumulated other comprehensive income (loss)
Balance at December 31, 2003[a]	$ 19	$ (6)	$ (43)	$ —	$ (30)
Net change[a]	(80)[c]	(2)	(96)	—	(178)
Balance at December 31, 2004	(61)	(8)	(139)	—	(208)
Net change	(163)[d]	—	(255)	—	(418)
Balance at December 31, 2005	(224)	(8)	(394)	—	(626)
Net change	**253**[e]	**13**	**(95)**	**—**	**171**
Adjustment to initially apply SFAS 158, net of taxes	**—**	**—**	**—**	**(1,102)**	**(1,102)**
Balance at December 31, 2006	**$ 29**	**$ 5**	**$ (489)**	**$ (1,102)**	**$ (1,557)**

(a) Balance at December 31, 2003 reflects heritage JPMorgan Chase only. 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.
(b) Represents the after-tax difference between the fair value and amortized cost of the AFS securities portfolio and retained interests in securitizations recorded in Other assets.
(c) The net change during 2004 was due primarily to higher interest rates and recognition of unrealized gains from securities sales.
(d) The net change during 2005 was due primarily to higher interest rates, partially offset by the reversal of unrealized losses from securities sales.
(e) The net change during 2006 was due primarily to the reversal of unrealized losses from securities sales.
(f) For further discussion of SFAS 158, see Note 7 on pages 100–105 of this Annual Report.

The following table presents the after-tax changes in net unrealized holdings gains (losses), reclassification adjustments for realized gains and losses on AFS securities and cash flow hedges, and changes resulting from foreign currency translation adjustments (including the impact of related derivatives). The table also reflects the adjustment to Accumulated other comprehensive income (loss) resulting from the initial application of SFAS 158 to the Firm's defined benefit pension and OPEB plans. Reclassification adjustments include amounts recognized in Net income during the current year that had been recorded previously in Other comprehensive income (loss).

	2006			2005			2004[b]		
Year ended December 31, (in millions)	Before tax	Tax effect	After tax	Before tax	Tax effect	After tax	Before tax	Tax effect	After tax

(a) For further discussion of SFAS 158, see Note 7 on pages 100–105 of this Annual Report.
(b) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.

Note 24 – Income taxes

JPMorgan Chase and eligible subsidiaries file a consolidated U.S. federal income tax return. JPMorgan Chase uses the asset-and-liability method required by SFAS 109 to provide income taxes on all transactions recorded in the Consolidated financial statements. This method requires that income taxes reflect the expected future tax consequences of temporary differences between the carrying amounts of assets or liabilities for book and tax purposes. Accordingly, a deferred tax liability or asset for each temporary difference is determined based upon the tax rates that the Firm expects to be in effect when the underlying items of income and expense are realized. JPMorgan Chase's expense for income taxes includes the current and deferred portions of that expense. A valuation allowance is established to reduce deferred tax assets to the amount the Firm expects to realize.

Due to the inherent complexities arising from the nature of the Firm's businesses, and from conducting business and being taxed in a substantial number of jurisdictions, significant judgments and estimates are required to be made. Agreement of tax liabilities between JPMorgan Chase and the many tax jurisdictions in which the Firm files tax returns may not be finalized for several years. Thus, the Firm's final tax-related assets and liabilities may ultimately be different than those currently reported.

Deferred income tax expense (benefit) results from differences between assets and liabilities measured for financial reporting and for income-tax return purposes. The significant components of deferred tax assets and liabilities are reflected in the following table:

December 31, (in millions)	2006	2005
Deferred tax assets		
Employee benefits	**$ 5,175**	$ 3,381
Allowance for other than loan losses	**3,533**	3,554
Allowance for loan losses	**2,910**	2,745
Non-U.S. operations	**566**	807
Fair value adjustments	**427**	531
Gross deferred tax assets	**$ 12,611**	$11,018
Deferred tax liabilities		
Depreciation and amortization	**$ 3,668**	$ 3,683
Leasing transactions	**2,675**	3,158
Non-U.S. operations	**1,435**	1,297
Fee income	**1,216**	1,396
Other, net	**78**	149
Gross deferred tax liabilities	**$ 9,072**	$ 9,683
Valuation allowance	**$ 210**	$ 110
Net deferred tax asset	**$ 3,329**	$ 1,225

A valuation allowance has been recorded in accordance with SFAS 109, primarily relating to capital losses associated with certain portfolio investments.

The components of income tax expense included in the Consolidated statements of income were as follows:

Year ended December 31, (in millions)	2006	2005	2004[a]
Current income tax expense			
U.S. federal	**$ 5,512**	$ 4,178	$ 1,613
Non-U.S.	**1,656**	887	653
U.S. state and local	**879**	311	157
Total current income tax expense	**8,047**	5,376	2,423
Deferred income tax (benefit) expense			
U.S. federal	**(1,628)**	(2,063)	(382)
Non-U.S.	**194**	316	(322)
U.S. state and local	**(376)**	(44)	(123)
Total deferred income tax (benefit) expense	**(1,810)**	(1,791)	(827)
Total income tax expense from continuing operations	**6,237**	3,585	1,596
Total income tax expense from discontinued operations	**572**	147	132
Total income tax expense	**$ 6,809**	$ 3,732	$ 1,728

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.

Total income tax expense includes $367 million of tax benefits recorded in 2006 as a result of tax audit resolutions.

The preceding table does not reflect the tax effects of SFAS 52 foreign currency translation adjustments, SFAS 115 unrealized gains and losses on AFS securities, SFAS 133 hedge transactions and certain tax benefits associated with the Firm's employee stock-based compensation plans. Also not reflected are the cumulative tax effects of implementing in 2006, SFAS 155, which applies to certain hybrid financial instruments; SFAS 156, which accounts for servicing financial assets; and SFAS 158, which applies to defined benefit pension and OPEB plans. The tax effect of all items recorded directly in Stockholders' equity was an increase of $885 million, $425 million and $431 million in 2006, 2005 and 2004, respectively.

U.S. federal income taxes have not been provided on the undistributed earnings of certain non-U.S. subsidiaries, to the extent that such earnings have been reinvested abroad for an indefinite period of time. For 2006, such earnings approximated $423 million on a pretax basis. At December 31, 2006, the cumulative amount of undistributed pretax earnings in these subsidiaries approximated $1.9 billion. It is not practicable at this time to determine the income tax liability that would result upon repatriation of these earnings.

On October 22, 2004, the American Jobs Creation Act of 2004 (the "Act") was signed into law. The Act created a temporary incentive for U.S. companies to repatriate accumulated foreign earnings at a substantially reduced U.S. effective tax rate by providing a dividends received deduction on the repatriation of certain foreign earnings to the U.S. taxpayer (the "repatriation provision"). The deduction was subject to a number of limitations and requirements. In the fourth quarter of 2005, the Firm applied the repatriation provision to $1.9 billion of cash from foreign earnings, resulting in a net tax benefit of $55 million. The $1.9 billion of cash was invested in accordance with the Firm's domestic reinvestment plan pursuant to the guidelines set forth in the Act.

The tax expense (benefit) applicable to securities gains and losses for the years 2006, 2005 and 2004 was $(219) million, $(536) million and $126 million, respectively.

A reconciliation of the applicable statutory U.S. income tax rate to the effective tax rate for continuing operations for the past three years is shown in the following table:

Year ended December 31,	**2006**	2005	2004[a]
Statutory U.S. federal tax rate	**35.0%**	35.0%	35.0%
Increase (decrease) in tax rate resulting from:			
U.S. state and local income taxes, net of federal income tax benefit	**2.1**	1.4	0.2
Tax-exempt income	**(2.2)**	(3.1)	(4.2)
Non-U.S. subsidiary earnings	**(0.5)**	(1.4)	(1.4)
Business tax credits	**(2.5)**	(3.7)	(4.3)
Other, net	**(0.5)**	2.1	2.0
Effective tax rate	**31.4%**	30.3%	27.3%

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.

The following table presents the U.S. and non-U.S. components of Income from continuing operations before income tax expense:

Year ended December 31, (in millions)	**2006**	2005	2004[b]
U.S.	**$ 12,934**	$ 8,683	$ 3,566
Non-U.S.[a]	**6,952**	3,156	2,290
Income from continuing operations before income tax expense	**$ 19,886**	$ 11,839	$ 5,856

(a) For purposes of this table, non-U.S. income is defined as income generated from operations located outside the United States of America.
(b) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.

Note 25 – Restrictions on cash and intercompany funds transfers

JPMorgan Chase Bank, N.A.'s business is subject to examination and regulation by the Office of the Comptroller of the Currency ("OCC"). The Bank is a member of the U.S. Federal Reserve System and its deposits are insured by the Federal Deposit Insurance Corporation ("FDIC").

The Federal Reserve Board requires depository institutions to maintain cash reserves with a Federal Reserve Bank. The average amount of reserve balances deposited by the Firm's bank subsidiaries with various Federal Reserve Banks was approximately $2.2 billion in 2006 and $2.7 billion in 2005.

Restrictions imposed by U.S. federal law prohibit JPMorgan Chase and certain of its affiliates from borrowing from banking subsidiaries unless the loans are secured in specified amounts. Such secured loans to the Firm or to other affiliates are generally limited to 10% of the banking subsidiary's total capital, as determined by the risk-based capital guidelines; the aggregate amount of all such loans is limited to 20% of the banking subsidiary's total capital.

The principal sources of JPMorgan Chase's income (on a parent company–only basis) are dividends and interest from JPMorgan Chase Bank, N.A. and the other banking and nonbanking subsidiaries of JPMorgan Chase. In addition to dividend restrictions set forth in statutes and regulations, the Federal Reserve Board, the OCC and the FDIC have authority under the Financial Institutions Supervisory Act to prohibit or to limit the payment of dividends by the banking organizations they supervise, including JPMorgan Chase and its subsidiaries that are banks or bank holding companies, if, in the banking regulator's opinion, payment of a dividend would constitute an unsafe or unsound practice in light of the financial condition of the banking organization.

At January 1, 2007 and 2006, JPMorgan Chase's banking subsidiaries could pay, in the aggregate, $14.3 billion and $7.4 billion, respectively, in dividends to their respective bank holding companies without prior approval of their relevant banking regulators. The capacity to pay dividends in 2007 will be supplemented by the banking subsidiaries' earnings during the year.

In compliance with rules and regulations established by U.S. and non-U.S. regulators, as of December 31, 2006 and 2005, cash in the amount of $8.6 billion and $6.4 billion, respectively, and securities with a fair value of $2.1 billion and $2.1 billion, respectively, were segregated in special bank accounts for the benefit of securities and futures brokerage customers.

Note 26 – Capital

There are two categories of risk-based capital: Tier 1 capital and Tier 2 capital. Tier 1 capital includes common stockholders' equity, qualifying preferred stock and minority interest less goodwill and other adjustments. Tier 2 capital consists of preferred stock not qualifying as Tier 1, subordinated long-term debt and other instruments qualifying as Tier 2, and the aggregate allowance for credit losses up to a certain percentage of risk-weighted assets. Total regulatory capital is subject to deductions for investments in certain subsidiaries. Under the risk-based capital guidelines of the Federal Reserve Board, JPMorgan Chase is required to maintain minimum ratios of Tier 1 and Total (Tier 1 plus Tier 2) capital to risk weighted assets, as well as minimum leverage ratios (which are defined as Tier 1 capital to average adjusted on–balance sheet assets). Failure to meet these minimum requirements could cause the Federal Reserve Board to take action. Banking subsidiaries also are subject to these capital requirements by their respective primary regulators. As of December 31, 2006 and 2005, JPMorgan Chase and all of its banking subsidiaries were well-capitalized and met all capital requirements to which each was subject.

The following table presents the risk-based capital ratios for JPMorgan Chase and its significant banking subsidiaries at December 31, 2006, and December 31, 2005:

(in millions, except ratios)	Tier 1 capital	Total capital	Risk-weighted assets[c]	Adjusted average assets[d]	Tier 1 capital ratio	Total capital ratio	Tier 1 leverage ratio
December 31, 2006							
JPMorgan Chase & Co.[a]	**$ 81,055**	**$ 115,265**	**$ 935,909**	**$ 1,308,699**	**8.7%**	**12.3%**	**6.2%**
JPMorgan Chase Bank, N.A.	**68,726**	**96,103**	**840,057**	**1,157,449**	**8.2**	**11.4**	**5.9**
Chase Bank USA, N.A.	**9,242**	**11,506**	**77,638**	**66,202**	**11.9**	**14.8**	**14.0**
December 31, 2005							
JPMorgan Chase & Co.[a]	$ 72,474	$ 102,437	$ 850,643	$ 1,152,546	8.5%	12.0%	6.3%
JPMorgan Chase Bank, N.A.	61,050	84,227	750,397	995,095	8.1	11.2	6.1
Chase Bank USA, N.A.	8,608	10,941	72,229	59,882	11.9	15.2	14.4
Well-capitalized ratios[b]					6.0%	10.0%	5.0%[e]
Minimum capital ratios[b]					4.0	8.0	3.0[f]

(a) Asset and capital amounts for JPMorgan Chase's banking subsidiaries reflect intercompany transactions, whereas the respective amounts for JPMorgan Chase reflect the elimination of intercompany transactions.
(b) As defined by the regulations issued by the Federal Reserve Board, OCC and FDIC.
(c) Includes off–balance sheet risk-weighted assets in the amounts of $305.3 billion, $290.1 billion and $12.7 billion, respectively, at December 31, 2006, and $279.2 billion, $260.0 billion and $15.5 billion, respectively, at December 31, 2005, for JPMorgan Chase and its significant banking subsidiaries.
(d) Average adjusted assets for purposes of calculating the leverage ratio include total average assets adjusted for unrealized gains/losses on securities, less deductions for disallowed goodwill and other intangible assets, investments in subsidiaries and the total adjusted carrying value of nonfinancial equity investments that are subject to deductions from Tier 1 capital.
(e) Represents requirements for banking subsidiaries pursuant to regulations issued under the Federal Deposit Insurance Corporation Improvement Act. There is no Tier 1 leverage component in the definition of a well-capitalized bank holding company.
(f) The minimum Tier 1 leverage ratio for bank holding companies and banks is 3% or 4% depending on factors specified in regulations issued by the Federal Reserve Board and OCC.

The following table shows the components of the Firm's Tier 1 and Total capital:

December 31, (in millions)	2006	2005
Tier 1 capital		
Total stockholders' equity	**$ 115,790**	$ 107,211
Effect of certain items in Accumulated other comprehensive income (loss) excluded from Tier 1 capital[a]	**1,562**	618
Adjusted stockholders' equity	**117,352**	107,829
Minority interest[b]	**12,970**	12,660
Less: Goodwill	**45,186**	43,621
Investments in certain subsidiaries	**420**	401
Nonqualifying intangible assets	**3,661**	3,993
Tier 1 capital	**$ 81,055**	$ 72,474
Tier 2 capital		
Long-term debt and other instruments qualifying as Tier 2	**$ 26,613**	$ 22,733
Qualifying allowance for credit losses	**7,803**	7,490
Less: Investments in certain subsidiaries and other	**206**	260
Tier 2 capital	**$ 34,210**	$ 29,963
Total qualifying capital	**$ 115,265**	$ 102,437

(a) Includes the effect of net unrealized gains (losses) on AFS securities, cash flow hedging activities and, at December 31, 2006, unrecognized amounts related to the Firm's pension and OPEB plans.
(b) Primarily includes trust preferred securities of certain business trusts.

Note 27 – Commitments and contingencies

At December 31, 2006, JPMorgan Chase and its subsidiaries were obligated under a number of noncancelable operating leases for premises and equipment used primarily for banking purposes. Certain leases contain renewal options or escalation clauses providing for increased rental payments based upon maintenance, utility and tax increases or require the Firm to perform restoration work on leased premises. No lease agreement imposes restrictions on the Firm's ability to pay dividends, engage in debt or equity financing transactions or enter into further lease agreements.

The following table presents required future minimum rental payments under operating leases with noncancelable lease terms that expire after December 31, 2006:

Year ended December 31, (in millions)	
2007	$ 1,058
2008	1,033
2009	962
2010	865
2011	791
After 2011	6,320
Total minimum payments required[a]	11,029
Less: Sublease rentals under noncancelable subleases	(1,177)
Net minimum payment required	$ 9,852

(a) Lease restoration obligations are accrued in accordance with SFAS 13, and are not reported as a required minimum lease payment.

Total rental expense was as follows:

Year ended December 31, (in millions)	2006	2005	2004[a]
Gross rental expense	**$ 1,266**	$ 1,239	$ 1,161
Sublease rental income	**(194)**	(192)	(158)
Net rental expense	**$ 1,072**	$ 1,047	$ 1,003

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.

At December 31, 2006, assets were pledged to secure public deposits and for other purposes. The significant components of the assets pledged were as follows:

December 31, (in billions)	2006	2005
Reverse repurchase/securities borrowing agreements	**$ 291**	$ 320
Securities	**40**	24
Loans	**117**	74
Trading assets and other	**108**	99
Total assets pledged	**$ 556**	$ 517

Litigation reserve

The Firm maintains litigation reserves for certain of its outstanding litigation. In accordance with the provisions of SFAS 5, JPMorgan Chase accrues for a litigation-related liability when it is probable that such a liability has been incurred and the amount of the loss can be reasonably estimated. While the outcome of litigation is inherently uncertain, management believes, in light of all information known to it at December 31, 2006, the Firm's litigation reserves were adequate at such date. Management reviews litigation reserves periodically, and the reserves may be increased or decreased in the future to reflect further litigation developments. The Firm believes it has meritorious defenses to claims asserted against it in its currently outstanding litigation and, with respect to such litigation, intends to continue to defend itself vigorously, litigating or settling cases according to management's judgment as to what is in the best interests of stockholders.

Insurance recoveries related to certain material legal proceedings were $512 million and $208 million in 2006 and 2005, respectively. Charges related to certain material legal proceedings were $2.8 billion and $3.7 billion in 2005 and 2004, respectively. There were no charges in 2006 related to material legal proceedings.

Note 28 – Accounting for derivative instruments and hedging activities

Derivative instruments enable end users to increase, reduce or alter exposure to credit or market risks. The value of a derivative is derived from its reference to an underlying variable or combination of variables such as equity, foreign exchange, credit, commodity or interest rate prices or indices. JPMorgan Chase makes markets in derivatives for customers and also is an end-user of derivatives in order to hedge market exposures, modify the interest rate characteristics of related balance sheet instruments or meet longer-term investment objectives. The majority of the Firm's derivatives are entered into for trading purposes. Both trading and end-user derivatives are recorded at fair value in Trading assets and Trading liabilities as set forth in Note 4 on pages 98–99 of this Annual Report.

SFAS 133, as amended by SFAS 138, SFAS 149, and SFAS 155, establishes accounting and reporting standards for derivative instruments, including those used for trading and hedging activities, and derivative instruments embedded in other contracts. All free-standing derivatives, whether designated for hedging relationships or not, are required to be recorded on the Consolidated balance sheets at fair value. The accounting for changes in value of a derivative depends on whether the contract is for trading purposes or has been designated and qualifies for hedge accounting.

In order to qualify for hedge accounting, a derivative must be considered highly effective at reducing the risk associated with the exposure being hedged. In order for a derivative to be designated as a hedge, there must be documentation of the risk management objective and strategy, including identification of the hedging instrument, the hedged item and the risk exposure, and how effectiveness is to be assessed prospectively and retrospectively. To assess effectiveness, the Firm uses statistical methods such as regression analysis, as well as nonstatistical methods including dollar value comparisons of the change in the fair value of the derivative to the change in the fair value or cash flows of the hedged item. The extent to which a hedging instrument has been and is expected to continue to be effective at achieving offsetting changes in fair value or cash flows must be assessed and documented at least quarterly. Any ineffectiveness must be reported in current-period earnings. If it is determined that a derivative is not highly effective at hedging the designated exposure, hedge accounting is discontinued.

For qualifying fair value hedges, all changes in the fair value of the derivative and in the fair value of the hedged item for the risk being hedged are recognized in earnings. If the hedge relationship is terminated, then the fair value adjustment to the hedged item continues to be reported as part of the basis of the item and continues to be amortized to earnings as a yield adjustment. For qualifying cash flow hedges, the effective portion of the change in the fair value of the derivative is recorded in Other comprehensive income and recognized in the Consolidated statement of income when the hedged cash flows affect earnings. The ineffective portions of cash flow hedges are immediately recognized in earnings. If the hedge relationship is terminated, then the change in fair value of the derivative recorded in Other comprehensive income is recognized when the cash flows that were hedged occur, consistent with the original hedge strategy. For hedge relationships discontinued because the forecasted transaction is not expected to occur according to the original strategy, any related derivative amounts recorded in Other comprehensive income are immediately recognized in earnings. For qualifying net investment hedges, changes in the fair value of the derivative or the revaluation of the foreign currency–denominated debt instrument are recorded in the translation adjustments account within Other comprehensive income.

JPMorgan Chase's fair value hedges primarily include hedges of fixed-rate long-term debt, loans, AFS securities and MSRs. Interest rate swaps are the most common type of derivative contract used to modify exposure to interest rate risk, converting fixed-rate assets and liabilities to a floating rate. Prior to the adoption of SFAS 156, interest rate options, swaptions and forwards were also used in combination with interest rate swaps to hedge the fair value of the Firm's MSRs in SFAS 133 hedge relationships. For a further discussion of MSR risk management activities, see Note 16 on pages 121–122 of this Annual Report. All amounts have been included in earnings consistent with the classification of the hedged item, primarily Net interest income, Mortgage fees and related income, and Other income. The Firm did not recognize any gains or losses during 2006, 2005 or 2004 on firm commitments that no longer qualify as fair value hedges.

JPMorgan Chase also enters into derivative contracts to hedge exposure to variability in cash flows from floating-rate financial instruments and forecasted transactions, primarily the rollover of short-term assets and liabilities, and foreign currency–denominated revenues and expenses. Interest rate swaps, futures and forward contracts are the most common instruments used to reduce the impact of interest rate and foreign exchange rate changes on future earnings. All amounts affecting earnings have been recognized consistent with the classification of the hedged item, primarily Net interest income.

The Firm uses forward foreign exchange contracts and foreign currency–denominated debt instruments to protect the value of net investments in subsidiaries whose functional currency is not the U.S. dollar. The portion of the hedging instruments excluded from the assessment of hedge effectiveness (forward points) is recorded in Net interest income.

The following table presents derivative instrument hedging-related activities for the periods indicated:

Year ended December 31, (in millions)	**2006**	2005	2004[b]
Fair value hedge ineffective net gains/(losses)[a]	**$ 51**	$ (58)	$ 199
Cash flow hedge ineffective net gains/(losses)[a]	**2**	(2)	—
Cash flow hedging gains/(losses) on forecasted transactions that failed to occur	**—**	—	1

(a) Includes ineffectiveness and the components of hedging instruments that have been excluded from the assessment of hedge effectiveness.
(b) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.

Over the next 12 months, it is expected that $67 million (after-tax) of net losses recorded in Other comprehensive income at December 31, 2006, will be recognized in earnings. The maximum length of time over which forecasted transactions are hedged is 10 years, and such transactions primarily relate to core lending and borrowing activities.

JPMorgan Chase does not seek to apply hedge accounting to all of the Firm's economic hedges. For example, the Firm does not apply hedge accounting to standard credit derivatives used to manage the credit risk of loans and commitments because of the difficulties in qualifying such contracts as hedges under SFAS 133. Similarly, the Firm does not apply hedge accounting to certain interest rate derivatives used as economic hedges.

Note 29 – Off-balance sheet lending-related financial instruments and guarantees

JPMorgan Chase utilizes lending-related financial instruments (e.g., commitments and guarantees) to meet the financing needs of its customers. The contractual amount of these financial instruments represents the maximum possible credit risk should the counterparty draw down the commitment or the Firm fulfill its obligation under the guarantee, and the counterparty subsequently fail to perform according to the terms of the contract. Most of these commitments and guarantees expire without a default occurring or without being drawn. As a result, the total contractual amount of these instruments is not, in the Firm's view, representative of its actual future credit exposure or funding requirements. Further, certain commitments, primarily related to consumer financings, are cancelable, upon notice, at the option of the Firm.

To provide for the risk of loss inherent in wholesale-related contracts, an allowance for credit losses on lending-related commitments is maintained. See Note 13 on pages 113–114 of this Annual Report for further discussion of the allowance for credit losses on lending-related commitments.

The following table summarizes the contractual amounts of off–balance sheet lending-related financial instruments and guarantees and the related allowance for credit losses on lending-related commitments at December 31, 2006 and 2005:

Off–balance sheet lending-related financial instruments and guarantees

	Contractual amount		Allowance for lending-related commitments	
December 31, (in millions)	**2006**	2005	**2006**	2005
Lending-related				
Consumer[a]	**$ 747,535**	$ 655,596	**$ 25**	$ 15
Wholesale:				
Other unfunded commitments to extend credit[b][c][d]	**229,204**	208,469	**305**	208
Asset purchase agreements[e]	**67,529**	31,095	**6**	3
Standby letters of credit and guarantees[c][f][g]	**89,132**	77,199	**187**	173
Other letters of credit[c]	**5,559**	4,346	**1**	1
Total wholesale	**391,424**	321,109	**499**	385
Total lending-related	**$1,138,959**	$ 976,705	**$ 524**	$ 400
Other guarantees				
Securities lending guarantees[h]	**$ 318,095**	$ 244,316	**NA**	NA
Derivatives qualifying as guarantees	**71,531**	61,759	**NA**	NA

(a) Includes Credit card lending-related commitments of $657 billion at December 31, 2006, and $579 billion at December 31, 2005, which represent the total available credit to the Firm's cardholders. The Firm has not experienced, and does not anticipate, that all of its cardholders will utilize their entire available lines of credit at the same time. The Firm can reduce or cancel a credit card commitment by providing the cardholder prior notice or, in some cases, without notice as permitted by law.
(b) Includes unused advised lines of credit totaling $39.0 billion and $28.3 billion at December 31, 2006 and 2005, respectively, which are not legally binding. In regulatory filings with the Federal Reserve Board, unused advised lines are not reportable.
(c) Represents contractual amount net of risk participations totaling $32.8 billion and $29.3 billion at December 31, 2006 and 2005, respectively.
(d) Excludes unfunded commitments to private third-party equity funds of $589 million and $242 million at December 31, 2006, and December 31, 2005, respectively.
(e) Represents asset purchase agreements with the Firm's administered multi-seller asset-backed commercial paper conduits, which excludes $356 million and $32.4 billion at December 31, 2006 and 2005, respectively, related to conduits that were consolidated in accordance with FIN 46R, as the underlying assets of the conduits are reported in the Firm's Consolidated balance sheets. It also includes $1.4 billion and $1.3 billion of asset purchase agreements to other third-party entities at December 31, 2006 and 2005, respectively. Certain of the Firm's administered multi-seller conduits were deconsolidated as of June 2006; the assets deconsolidated were approximately $33 billion.
(f) JPMorgan Chase held collateral relating to $13.5 billion and $9.0 billion of these arrangements at December 31, 2006 and 2005, respectively.
(g) Includes unused commitments to issue standby letters of credit of $45.7 billion and $37.5 billion at December 31, 2006 and 2005, respectively.
(h) Collateral held by the Firm in support of securities lending indemnification agreements was $317.9 billion and $245.0 billion at December 31, 2006 and 2005, respectively.

Other unfunded commitments to extend credit

Unfunded commitments to extend credit are agreements to lend only when a customer has complied with predetermined conditions, and they generally expire on fixed dates.

FIN 45 establishes accounting and disclosure requirements for guarantees, requiring that a guarantor recognize, at the inception of a guarantee, a liability in an amount equal to the fair value of the obligation undertaken in issuing the guarantee. FIN 45 defines a guarantee as a contract that contingently requires the guarantor to pay a guaranteed party, based upon: (a) changes in an underlying asset, liability or equity security of the guaranteed party; or (b) a third party's failure to perform under a specified agreement. The Firm considers the following off–balance sheet lending arrangements to be guarantees under FIN 45: certain asset purchase agreements, standby letters of credit and financial guarantees, securities lending indemnifications, certain indemnification agreements included within third-party contractual arrangements and certain derivative contracts. These guarantees are described in further detail below.

The fair value at inception of the obligation undertaken when issuing the guarantees and commitments that qualify under FIN 45 is typically equal to the net present value of the future amount of premium receivable under the contract. The Firm has recorded this amount in Other Liabilities with an offsetting entry recorded in Other Assets. As cash is received under the contract, it is applied to the premium receivable recorded in Other Assets, and the fair value of the liability recorded at inception is amortized into income as Lending & deposit related fees over the life of the guarantee contract. The amount of the liability related to FIN 45 guarantees recorded at December 31, 2006 and 2005, excluding the allowance for credit losses on lending-related commitments and derivative contracts discussed below, was approximately $297 million and $313 million, respectively.

Asset purchase agreements

The majority of the Firm's unfunded commitments are not guarantees as defined in FIN 45, except for certain asset purchase agreements that are principally used as a mechanism to provide liquidity to SPEs, primarily multi-seller conduits, as described in Note 15 on pages 118–120 of this Annual Report. Some of these asset purchase agreements can be exercised at any time by the SPE's administrator, while others require a triggering event to occur. Triggering events include, but are not limited to, a need for liquidity, a decline

in market value of the assets or a downgrade in the rating of JPMorgan Chase Bank, N.A. These agreements may cause the Firm to purchase an asset from the SPE at an amount above the asset's fair value, in effect providing a guarantee of the initial value of the reference asset as of the date of the agreement. In most instances, third-party credit enhancements of the SPE mitigate the Firm's potential losses on these agreements.

Standby letters of credit and financial guarantees

Standby letters of credit and financial guarantees are conditional lending commitments issued by JPMorgan Chase to guarantee the performance of a customer to a third party under certain arrangements, such as commercial paper facilities, bond financings, acquisition financings, trade and similar transactions. Approximately 50% of these arrangements mature within three years. The Firm typically has recourse to recover from the customer any amounts paid under these guarantees; in addition, the Firm may hold cash or other highly liquid collateral to support these guarantees.

Securities lending indemnification

Through the Firm's securities lending program, customers' securities, via custodial and non-custodial arrangements, may be lent to third parties. As part of this program, the Firm issues securities lending indemnification agreements to the lender which protects it principally against the failure of the third-party borrower to return the lent securities. To support these indemnification agreements, the Firm obtains cash or other highly liquid collateral with a market value exceeding 100% of the value of the securities on loan from the borrower. Collateral is marked to market daily to help assure that collateralization is adequate. Additional collateral is called from the borrower if a shortfall exists or released to the borrower in the event of overcollateralization. If an indemnifiable default by a borrower occurs, the Firm would expect to use the collateral held to purchase replacement securities in the market or to credit the lending customer with the cash equivalent thereof.

Also, as part of this program, the Firm invests cash collateral received from the borrower in accordance with approved guidelines. On an exceptional basis the Firm may indemnify the lender against this investment risk when certain types of investments are made.

Based upon historical experience, management believes that these risks of loss are remote.

Indemnification agreements – general

In connection with issuing securities to investors, the Firm may enter into contractual arrangements with third parties that may require the Firm to make a payment to them in the event of a change in tax law or an adverse interpretation of tax law. In certain cases, the contract also may include a termination clause, which would allow the Firm to settle the contract at its fair value; thus, such a clause would not require the Firm to make a payment under the indemnification agreement. Even without the termination clause, management does not expect such indemnification agreements to have a material adverse effect on the consolidated financial condition of JPMorgan Chase. The Firm may also enter into indemnification clauses when it sells a business or assets to a third party, pursuant to which it indemnifies that third party for losses it may incur due to actions taken by the Firm prior to the sale. See below for more information regarding the Firm's loan securitization activities. It is difficult to estimate the Firm's maximum exposure under these indemnification arrangements, since this would require an assessment of future changes in tax law and future claims that may be made against the Firm that have not yet occurred. However, based upon historical experience, management expects the risk of loss to be remote.

Securitization-related indemnifications

As part of the Firm's loan securitization activities, as described in Note 14 on pages 114–118 of this Annual Report, the Firm provides representations and warranties that certain securitized loans meet specific requirements. The Firm may be required to repurchase the loans and/or indemnify the purchaser of the loans against losses due to any breaches of such representations or warranties. Generally, the maximum amount of future payments the Firm would be required to make under such repurchase and/or indemnification provisions would be equal to the current amount of assets held by such securitization-related SPEs as of December 31, 2006, plus, in certain circumstances, accrued and unpaid interest on such loans and certain expenses. The potential loss due to such repurchase and/or indemnity is mitigated by the due diligence the Firm performs before the sale to ensure that the assets comply with the requirements set forth in the representations and warranties. Historically, losses incurred on such repurchases and/or indemnifications have been insignificant, and therefore management expects the risk of material loss to be remote.

Credit card charge-backs

The Firm is a partner with one of the leading companies in electronic payment services in a joint venture operating under the name of Chase Paymentech Solutions, LLC (the "joint venture"). The joint venture was formed in October 2005, as a result of an agreement by the Firm and First Data Corporation, its joint venture partner, to integrate the companies' jointly owned Chase Merchant Services ("CMS") and Paymentech merchant businesses. The joint venture provides merchant processing services in the United States and Canada. Under the rules of Visa USA, Inc. and Mastercard International, JPMorgan Chase Bank, N.A., is liable primarily for the amount of each processed credit card sales transaction that is the subject of a dispute between a cardmember and a merchant. The joint venture is contractually liable to JPMorgan Chase Bank, N.A. for these disputed transactions. If a dispute is resolved in the cardmember's favor, the joint venture will (through the cardmember's issuing bank) credit or refund the amount to the cardmember and will charge back the transaction to the merchant. If the joint venture is unable to collect the amount from the merchant, the joint venture will bear the loss for the amount credited or refunded to the cardmember. The joint venture mitigates this risk by withholding future settlements, retaining cash reserve accounts or by obtaining other security. However, in the unlikely event that: (1) a merchant ceases operations and is unable to deliver products, services or a refund; (2) the joint venture does not have sufficient collateral from the merchant to provide customer refunds; and (3) the joint venture does not have sufficient financial resources to provide customer refunds, JPMorgan Chase Bank, N.A. would be liable for the amount of the transaction, although it would have a contractual right to recover from its joint venture partner an amount proportionate to such partner's equity interest in the joint venture. For the year ended December 31, 2006, the joint venture incurred aggregate credit losses of $9 million on $661 billion of aggregate volume processed. At December 31, 2006, the joint venture held $893 million of collateral. For the year ended December 31, 2005, the CMS and Paymentech ventures incurred aggregate credit losses of $11 million on $563 billion of aggregate volume processed. At December 31, 2005, the joint venture held $909 million of collateral. The Firm believes that, based upon historical experience and the collateral held by the joint venture, the fair value of the Firm's chargeback-related obligations would not be different materially from the credit loss allowance recorded by the joint venture; therefore, the Firm has not recorded any allowance for losses in excess of the allowance recorded by the joint venture.

Exchange and clearinghouse guarantees

The Firm is a member of several securities and futures exchanges and clearinghouses, both in the United States and other countries. Membership in some of these organizations requires the Firm to pay a pro rata share of the losses incurred by the organization as a result of the default of another member. Such obligations vary with different organizations. These obligations may be limited to members who dealt with the defaulting member or to the amount (or a multiple of the amount) of the Firm's contribution to a members' guaranty fund, or, in a few cases, it may be unlimited. It is difficult to estimate the Firm's maximum exposure under these membership agreements, since this would require an assessment of future claims that may be made against the Firm that have not yet occurred. However, based upon historical experience, management expects the risk of loss to be remote.

Derivative guarantees

In addition to the contracts described above, there are certain derivative contracts to which the Firm is a counterparty that meet the characteristics of a guarantee under FIN 45. These derivatives are recorded on the Consolidated balance sheets at fair value. These contracts include written put options that require the Firm to purchase assets from the option holder at a specified price by a specified date in the future, as well as derivatives that effectively guarantee the return on a counterparty's reference portfolio of assets. The total notional value of the derivatives that the Firm deems to be guarantees was $72 billion and $62 billion at December 31, 2006 and 2005, respectively. The Firm reduces exposures to these contracts by entering into offsetting transactions or by entering into contracts that hedge the market risk related to these contracts. The fair value related to these contracts was a derivative receivable of $230 million and $198 million, and a derivative payable of $987 million and $767 million at December 31, 2006 and 2005, respectively. Finally, certain written put options and credit derivatives permit cash settlement and do not require the option holder or the buyer of credit protection to own the reference asset. The Firm does not consider these contracts to be guarantees under FIN 45.

Note 30 – Credit risk concentrations

Concentrations of credit risk arise when a number of customers are engaged in similar business activities or activities in the same geographic region, or when they have similar economic features that would cause their ability to meet contractual obligations to be similarly affected by changes in economic conditions.

JPMorgan Chase regularly monitors various segments of the credit risk portfolio to assess potential concentration risks and to obtain collateral when deemed necessary. In the Firm's wholesale portfolio, risk concentrations are evaluated primarily by industry and by geographic region. In the consumer portfolio, concentrations are evaluated primarily by product and by U.S. geographic region.

The Firm does not believe exposure to any one loan product with varying terms (e.g., interest-only payments for an introductory period) or exposure to loans with high loan-to-value ratios would result in a significant concentration of credit risk. Terms of loan products and collateral coverage are included in the Firm's assessment when extending credit and establishing its Allowance for loan losses.

For further information regarding on–balance sheet credit concentrations by major product and geography, see Note 12 on pages 112–113 of this Annual Report. For information regarding concentrations of off–balance sheet lending-related financial instruments by major product, see Note 29 on page 132 of this Annual Report. More information about concentrations can be found in the following tables or discussion in the MD&A:

Credit risk management – risk monitoring	Page 64
Wholesale exposure	Page 67
Wholesale selected industry concentrations	Page 68
Emerging markets country exposure	Page 72
Consumer real estate loan portfolio by geographic location	Page 74

The table below presents both on–balance sheet and off–balance sheet wholesale- and consumer-related credit exposure as of December 31, 2006 and 2005:

	2006			2005		
December 31, (in billions)	Credit exposure[b]	On-balance sheet[b][c]	Off-balance sheet[d]	Credit exposure[b]	On-balance sheet[b][c]	Off-balance sheet[d]
Wholesale-related:						
Banks and finance companies	**$ 63.6**	**$ 28.1**	**$ 35.5**	$ 51.1	$ 20.3	$ 30.8
Real estate	**35.9**	**21.6**	**14.3**	32.5	19.0	13.5
Healthcare	**30.1**	**6.1**	**24.0**	25.5	4.7	20.8
State and municipal governments	**27.5**	**6.9**	**20.6**	25.3	6.1	19.2
Consumer products	**27.1**	**9.1**	**18.0**	26.7	10.0	16.7
All other wholesale	**446.6**	**167.6**	**279.0**	389.6	169.5	220.1
Total wholesale-related	**630.8**	**239.4**	**391.4**	550.7	229.6	321.1
Consumer-related:						
Home equity	**155.2**	**85.7**	**69.5**	132.2	73.9	58.3
Mortgage	**66.3**	**59.7**	**6.6**	64.8	58.9	5.9
Auto loans and leases	**48.9**	**41.0**	**7.9**	51.8	46.1	5.7
All other loans	**33.5**	**27.1**	**6.4**	24.8	18.4	6.4
Card Services-reported[a]	**743.0**	**85.9**	**657.1**	651.0	71.7	579.3
Total consumer–related	**1,046.9**	**299.4**	**747.5**	924.6	269.0	655.6
Total exposure	**$ 1,677.7**	**$ 538.8**	**$ 1,138.9**	$ 1,475.3	$ 498.6	$ 976.7

(a) Excludes $67.0 billion and $70.5 billion of securitized credit card receivables at December 31, 2006 and 2005, respectively.
(b) Includes HFS loans.
(c) Represents loans, derivative receivables and interests in purchased receivables.
(d) Represents lending-related financial instruments.

Note 31 – Fair value of financial instruments

The fair value of a financial instrument is the amount at which the instrument could be exchanged in a current transaction between willing parties, other than in a forced or liquidation sale.

The accounting for an asset or liability may differ based upon the type of instrument and/or its use in a trading or investing strategy. Generally, the measurement framework in the consolidated financial statements is one of the following:

- at fair value on the Consolidated balance sheets, with changes in fair value recorded each period in the Consolidated statements of income;
- at fair value on the Consolidated balance sheets, with changes in fair value recorded each period in the Accumulated other comprehensive income component of Stockholders' equity and as part of Other comprehensive income;
- at cost (less other-than-temporary impairments), with changes in fair value not recorded in the consolidated financial statements but disclosed in the notes thereto; or
- at the lower of cost or fair value.

Determination of fair value

The Firm has an established and well-documented process for determining fair values. Fair value is based upon quoted market prices, where available. If listed prices or quotes are not available, fair value is based upon internally developed models that primarily use market-based or independent information as inputs to the valuation model. Valuation adjustments may be necessary to ensure that financial instruments are recorded at fair value. These adjustments include amounts to reflect counterparty credit quality, liquidity and concentration concerns and are based upon defined methodologies that are applied consistently over time.

- Credit valuation adjustments are necessary when the market price (or parameter) is not indicative of the credit quality of the counterparty. As few derivative contracts are listed on an exchange, the majority of derivative positions are valued using internally developed models that use as their basis observable market parameters. Market practice is to quote parameters equivalent to a AA credit rating; thus, all counterparties are assumed to have the same credit quality. An adjustment is therefore necessary to reflect the credit quality of each derivative counterparty and to arrive at fair value.
- Liquidity adjustments are necessary when the Firm may not be able to observe a recent market price for a financial instrument that trades in inactive (or less active) markets. Thus, valuation adjustments for the risk of loss due to a lack of liquidity are applied to those positions to arrive at fair value. The Firm tries to ascertain the amount of uncertainty in the initial valuation based upon the degree of liquidity or illiquidity, as the case may be, of the market in which the instrument trades and makes liquidity adjustments to the financial instruments. The Firm measures the liquidity adjustment based upon the following factors: (1) the amount of time since the last relevant pricing point; (2) whether there was an actual trade or relevant external quote; and (3) the volatility of the principal component of the financial instrument.
- Concentration valuation adjustments are necessary to reflect the cost of unwinding larger-than-normal market-size risk positions. The cost is determined based upon the size of the adverse market move that is likely to occur during the extended period required to bring a position down to a nonconcentrated level. An estimate of the period needed to reduce, without market disruption, a position to a nonconcentrated level is generally based upon the relationship of the position to the average daily trading volume of that position. Without these adjustments, larger positions would be valued at a price greater than the price at which the Firm could exit the positions.

Valuation adjustments are determined based upon established policies and are controlled by a price verification group, which is independent of the risk-taking function. Economic substantiation of models, prices, market inputs and revenue through price/input testing, as well as back-testing, is done to validate the appropriateness of the valuation methodology. Any changes to the valuation methodology are reviewed by management to ensure the changes are justified.

The methods described above may produce a fair value calculation that may not be indicative of net realizable value or reflective of future fair values. Furthermore, the use of different methodologies to determine the fair value of certain financial instruments could result in a different estimate of fair value at the reporting date.

Certain financial instruments and all nonfinancial instruments are excluded from the scope of SFAS 107. Accordingly, the fair value disclosures required by SFAS 107 provide only a partial estimate of the fair value of JPMorgan Chase. For example, the Firm has developed long-term relationships with its customers through its deposit base and credit card accounts, commonly referred to as core deposit intangibles and credit card relationships. In the opinion of management, these items, in the aggregate, add significant value to JPMorgan Chase, but their fair value is not disclosed in this Note.

The following items describe the methodologies and assumptions used, by financial instrument, to determine fair value.

Financial assets

Assets for which fair value approximates carrying value

The Firm considers fair values of certain financial assets carried at cost – including cash and due from banks, deposits with banks, securities borrowed, short-term receivables and accrued interest receivable – to approximate their respective carrying values, due to their short-term nature and generally negligible credit risk.

Federal funds sold and securities purchased under resale agreements

Federal funds sold and securities purchased under resale agreements are typically short-term in nature and, as such, for a significant majority of the Firm's transactions, cost approximates carrying value. This balance sheet item also includes structured resale agreements and similar products with long-dated maturities. To estimate the fair value of these instruments, cash flows are discounted using the appropriate market rates for the applicable maturity.

Trading debt and equity instruments

The Firm's debt and equity trading instruments are carried at their estimated fair value. Quoted market prices, when available, are used to determine the fair value of trading instruments. If quoted market prices are not available, then fair values are estimated by using pricing models, quoted prices of instruments with similar characteristics, or discounted cash flows.

Securities

Fair values of actively traded securities are determined by quoted external dealer prices, while the fair values for nonactively traded securities are based upon independent broker quotations.

Derivatives
Fair value for derivatives is determined based upon the following:

- position valuation, principally based upon liquid market pricing as evidenced by exchange-traded prices, broker-dealer quotations or related input parameters, which assume all counterparties have the same credit rating;
- credit valuation adjustments to the resulting portfolio valuation, to reflect the credit quality of individual counterparties; and
- other fair value adjustments to take into consideration liquidity, concentration and other factors.

For those derivatives valued based upon models with significant unobservable market parameters, the Firm defers the initial trading profit for these financial instruments. The deferred profit is recognized in Trading revenue on a systematic basis (typically straight-line amortization over the life of the instruments) and when observable market data becomes available.

The fair value of derivative payables does not incorporate a valuation adjustment to reflect JPMorgan Chase's credit quality.

Interests in purchased receivables
The fair value of variable-rate interests in purchased receivables approximate their respective carrying amounts due to their variable interest terms and negligible credit risk. The estimated fair values for fixed-rate interests in purchased receivables are determined using a discounted cash flow analysis using appropriate market rates for similar instruments.

Loans
Fair value for loans is determined using methodologies suitable for each type of loan:

- Fair value for the wholesale loan portfolio is estimated, primarily using the cost of credit derivatives, which is adjusted to account for the differences in recovery rates between bonds, upon which the cost of credit derivatives is based, and loans.
- Fair values for consumer installment loans (including automobile financings) and consumer real estate, for which market rates for comparable loans are readily available, are based upon discounted cash flows adjusted for prepayments. The discount rates used for consumer installment loans are current rates offered by commercial banks. For consumer real estate, secondary market yields for comparable mortgage-backed securities, adjusted for risk, are used.
- Fair value for credit card receivables is based upon discounted expected cash flows. The discount rates used for credit card receivables incorporate only the effects of interest rate changes, since the expected cash flows already reflect an adjustment for credit risk.
- The fair value of loans in the held-for-sale and trading portfolios is generally based upon observable market prices and upon prices of similar instruments, including bonds, credit derivatives and loans with similar characteristics. If market prices are not available, the fair value is based upon the estimated cash flows adjusted for credit risk; that risk is discounted, using a rate appropriate for each maturity.

Other
Commodities inventory is carried at the lower of cost or fair value. For the majority of commodities inventory, fair value is determined by reference to prices in highly active and liquid markets. The fair value for other commodities inventory is determined primarily using pricing and data derived from the markets on which the underlying commodities are traded. Market prices used may be adjusted for liquidity. This caption also includes Private equity investments and MSRs. For discussion of the fair value methodology for Private equity investments, see Note 4 on pages 98–99 of this Annual Report.

For discussion of the fair value methodology for retained interests related to securitizations, see Note 14 on pages 114–118 of this Annual Report.

For discussion of the fair value methodology for MSRs, see Note 16 on pages 121–122 of this Annual Report.

Financial liabilities

Liabilities for which fair value approximates carrying value
SFAS 107 requires that the fair value for deposit liabilities with no stated maturity (i.e., demand, savings and certain money market deposits) be equal to their carrying value. SFAS 107 does not allow for the recognition of the inherent funding value of these instruments.

Fair value of commercial paper, other borrowed funds, accounts payable and accrued liabilities is considered to approximate their respective carrying values due to their short-term nature.

Interest-bearing deposits
Fair values of interest-bearing deposits are estimated by discounting cash flows using the appropriate market rates for the applicable maturity.

Federal funds purchased and securities sold under repurchase agreements
Federal funds purchased and securities sold under repurchase agreements are typically short-term in nature; as such, for a significant majority of these transactions, cost approximates carrying value. This balance sheet item also includes structured repurchase agreements and similar products with long-dated maturities. To estimate the fair value of these instruments, the cash flows are discounted using the appropriate market rates for the applicable maturity.

Trading liabilities
For a discussion of the fair value methodology for trading debt and equity instruments and derivatives, see the related discussions in the Financial assets section of this Note.

Beneficial interests issued by consolidated VIEs
Beneficial interests issued by consolidated VIEs ("beneficial interests") are generally short-term in nature and, as such, for a significant majority of the Firm's transactions, cost approximates carrying value. The Consolidated balance sheets also include beneficial interests with long-dated maturities. The fair value of these instruments is based upon current market rates.

Long-term debt-related instruments
Fair value for long-term debt, including the junior subordinated deferrable interest debentures held by trusts that issued guaranteed capital debt securities, is based upon current market rates and is adjusted for JPMorgan Chase's credit quality.

Lending-related commitments
Although there is no liquid secondary market for wholesale commitments, the Firm estimates the fair value of its wholesale lending-related commitments primarily using the cost of credit derivatives (which is adjusted to account for the difference in recovery rates between bonds, upon which the cost of credit derivatives is based, and loans) and loan equivalents (which represent the portion of an unused commitment expected, based upon the Firm's average portfolio historical experience, to become outstanding in the event an obligor defaults). The Firm estimates the fair value of its consumer commitments to extend credit based upon the primary market prices to originate new commitments. It is the change in current primary market prices that provides the estimate of the fair value of these commitments. On this basis, at December 31, 2006, the estimated fair value of the Firm's lending-related commitments was a liability of $0.2 billion, compared with $0.5 billion at December 31, 2005.

The following table presents the carrying value and estimated fair value of financial assets and liabilities valued under SFAS 107; accordingly, certain assets and liabilities that are not considered financial instruments are excluded from the table.

	2006			2005		
December 31, (in billions)	Carrying value	Estimated fair value	Appreciation/ (depreciation)	Carrying value	Estimated fair value	Appreciation/ (depreciation)

Net appreciation			**$ 2.6**			$ 2.0

Note 32 – International operations

The following table presents income statement information of JPMorgan Chase by major geographic area. The Firm defines international activities as business transactions that involve customers residing outside of the U.S., and the information presented below is based primarily upon the domicile of the customer or the location from which the customer relationship is managed. However, many of the Firm's U.S. operations serve international businesses.

As the Firm's operations are highly integrated, estimates and subjective assumptions have been made to apportion revenue and expense between U.S. and international operations. These estimates and assumptions are consistent with the allocations used for the Firm's segment reporting as set forth in Note 33 on pages 139–141 of this Annual Report.

The Firm's long-lived assets for the periods presented are not considered by management to be significant in relation to total assets. The majority of the Firm's long-lived assets are located in the U.S.

Year ended December 31, (in millions)	Revenue[b]	Expense[c]	Income from continuing operations before income taxes	Net income

(a) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.
(b) Revenue is composed of Net interest income and Noninterest revenue.
(c) Expense is composed of Noninterest expense and Provision for credit losses.

Note 33 – Business segments

JPMorgan Chase is organized into six major reportable business segments — Investment Bank, Retail Financial Services, Card Services, Commercial Banking ("CB"), Treasury & Securities Services and Asset Management, as well as a Corporate segment. The segments are based upon the products and services provided or the type of customer served, and they reflect the manner in which financial information is currently evaluated by management. Results of these lines of business are presented on a managed basis. For a definition of managed basis, see Explanation and Reconciliation of the Firm's use of non-GAAP financial measures, on pages 32–33 of this Annual Report. For a further discussion concerning JPMorgan Chase's business segments, see Business segment results on pages 34–35 of this Annual Report.

Business segment financial disclosures

Effective January 1, 2006, JPMorgan Chase modified certain of its financial disclosures to reflect more closely the manner in which the Firm's business segments are managed and to provide improved comparability with competitors. These financial disclosure revisions are reflected in this Annual Report, and the financial information for prior periods has been revised to reflect the disclosure changes as if they had been in effect throughout all periods reported. A summary of the changes are described below.

Reported versus Operating Basis Changes

The presentation of operating earnings that excluded merger costs and material litigation reserve charges and recoveries from reported results has been eliminated. These items had been excluded previously from operating results because they were deemed nonrecurring; they are now included in the Corporate business segment's results. In addition, trading-related net interest income is no longer reclassified from Net interest income to trading revenue. As a result of these changes, effective January 1, 2006, management has discontinued reporting on an "operating" basis.

Business Segment Disclosures

Various wholesale banking clients, together with the related balance sheet and income statement items, were transferred among CB, IB and TSS. The primary client transfer was corporate mortgage finance from CB to IB and TSS.

Capital allocation changes

Effective January 1, 2006, the Firm refined its methodology for allocating capital (i.e., equity) to the business segments. As a result of this refinement, RFS, CS, CB, TSS and AM have higher amounts of capital allocated to them, commencing in the first quarter of 2006. The revised methodology considers for each line of business, among other things, goodwill associated with such business segment's acquisitions since the Merger. In management's view, the revised methodology assigns responsibility to the lines of business to generate returns on the amount of capital supporting acquisition-related goodwill. As part of this refinement in the capital allocation methodology, the Firm assigned to the Corporate segment an amount of equity capital equal to the then-current book value of goodwill from and prior to the Merger. As prior periods have not been revised to reflect the new capital allocations, capital allocated to the respective lines of business for 2006 is not comparable to prior periods and certain business metrics, such as ROE, are not comparable to the current presentation. The Firm may revise its equity capital allocation methodology again in the future.

Discontinued operations

As a result of the transaction with The Bank of New York, selected corporate trust businesses have been transferred from TSS to the Corporate segment and reported in discontinued operations for all periods reported.

Segment results

The following table provides a summary of the Firm's segment results for 2006, 2005 and 2004 on a managed basis. The impact of credit card securitizations and tax-equivalent adjustments have been included in Reconciling items so that the total Firm results are on a reported basis. The first six months of 2004 reflect heritage JPMorgan Chase–only results and have been restated to reflect the current business segment organization and reporting classifications.

(a) In addition to analyzing the Firm's results on a reported basis, management reviews the Firm's lines' of business results on a "managed basis," which is a non-GAAP financial measure. The Firm's definition of managed basis starts with the reported U.S. GAAP results and includes certain reclassifications that do not have any impact on Net income as reported by the lines of business or by the Firm as a whole.

(b) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.

(c) TSS reimburses the IB for credit portfolio exposures the IB manages on behalf of clients the segments share. At the time of the Merger, the reimbursement methodology was revised to be based upon pretax earnings, net of the cost of capital related to those exposures. Prior to the Merger, the credit reimbursement was based upon pretax earnings, plus the allocated capital associated with the shared clients.

(d) Includes Merger costs which are reported in the Corporate segment. Merger costs attributed to the business segments for 2006, 2005 and 2004 were as follows:

Year ended December 31, (in millions)	**2006**	2005	2004[b]
Investment Bank	**$ 2**	$ 32	$ 74
Retail Financial Services	**24**	133	201
Card Services	**29**	222	79
Commercial Banking	**1**	3	23
Treasury & Securities Services	**117**	95	68
Asset Management	**23**	60	31
Corporate	**109**	177	889

(e) Effective January 1, 2006, RFS was reorganized into three businesses: Regional Banking, Mortgage Banking and Auto Finance.

(f) Managed results for CS exclude the impact of credit card securitizations on Total net revenue, Provision for credit losses and Average assets, as JPMorgan Chase treats the sold receivables as if they were still on the balance sheet in evaluating credit performance and the overall performance of CS' entire managed credit card portfolio as operations are funded, and decisions are made about allocating resources such as employees and capital, based upon managed information. These adjustments are eliminated in Reconciling items to arrive at the Firm's reported U.S. GAAP results. The related securitization adjustments were as follows:

Year ended December 31, (in millions)	**2006**	2005	2004[b]
Noninterest revenue	**$ (3,509)**	$ (2,718)	$ (2,353)

(g) Includes $858 million of accounting policy conformity adjustments consisting of approximately $1.4 billion related to the decertification of the seller's retained interest in credit card securitizations, partially offset by a benefit of $584 million related to conforming wholesale and consumer provision methodologies for the combined Firm.

(h) Segment managed results reflect revenues on a tax-equivalent basis with the corresponding income tax impact recorded within Income tax expense. These adjustments are eliminated in Reconciling items to arrive at the Firm's reported U.S. GAAP results.Tax-equivalent adjustments were as follows for the years ended December 31, 2006, 2005 and 2004:

Year ended December 31, (in millions)	**2006**	2005	2004[b]

(a) Subsidiaries include trusts that issued guaranteed capital debt securities ("issuer trusts"). As a result of FIN 46R, the Parent deconsolidated these trusts in 2003. The Parent received dividends of $23 million, $21 million and $15 million from the issuer trusts in 2006, 2005 and 2004, respectively. For further discussion on these issuer trusts, see Note 19 on page 125 of this Annual Report.

(b) At December 31, 2006, debt that contractually matures in 2007 through 2011 totaled $10.6 billion, $12.4 billion, $13.7 billion, $4.3 billion and $13.5 billion, respectively.

(c) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results. For further discussion of the Merger, see Note 2 on pages 95–96 of this Annual Report.

(a) On October 1, 2006, the Firm completed the exchange of selected corporate trust businesses including trustee, paying agent, loan agency and document management services for the consumer, business banking and middle-market banking businesses of The Bank of New York. The results of operations of these corporate trust businesses are being reported as discontinued operations for each of the periods presented.

(b) Excludes wholesale held-for-sale ("HFS") loans purchased as part of the Investment Bank's proprietary activities.

(c) Excluded from the allowance coverage ratios were end-of-period loans held-for-sale; and excluded from the net charge-off rates were average loans held-for-sale.

(d) JPMorgan Chase's common stock is listed and traded on the New York Stock Exchange, the London Stock Exchange Limited and the Tokyo Stock Exchange. The high, low and closing prices of JPMorgan Chase's common stock are from The New York Stock Exchange Composite Transaction Tape.

(d) JPMorgan Chase's common stock is listed and traded on the New York Stock Exchange, the London Stock Exchange Limited and the Tokyo Stock Exchange. The high, low and closing prices of JPMorgan Chase's common stock are from The New York Stock Exchange Composite Transaction Tape.

(e) 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.

NA – Data for 2002 is not available on a comparable basis.

ACH: Automated Clearing House.

APB 25: Accounting Principles Board Opinion No. 25. "Accounting for Stock Issued to Employees."

Assets under management: Represent assets actively managed by Asset Management on behalf of institutional, private banking, private client services and retail clients. Excludes assets managed by American Century Companies, Inc., in which the Firm has a 43% ownership interest.

Assets under supervision: Represent assets under management as well as custody, brokerage, administration and deposit accounts.

Average managed assets: Refers to total assets on the Firm's balance sheet plus credit card receivables that have been securitized.

Beneficial interest issued by consolidated VIEs: Represents the interest of third-party holders of debt/equity securities, or other obligations, issued by VIEs that JPMorgan Chase consolidates under FIN 46R. The underlying obligations of the VIEs consist of short-term borrowings, commercial paper and long-term debt. The related assets consist of trading assets, available-for-sale securities, loans and other assets.

Benefit obligation: Refers to the projected benefit obligation for pension plans and the accumulated postretirement benefit obligation for OPEB plans.

Contractual credit card charge-off: In accordance with the Federal Financial Institutions Examination Council policy, credit card loans are charged off by the end of the month in which the account becomes 180 days past due or within 60 days from receiving notification of the filing of bankruptcy, whichever is earlier.

Credit derivatives: Contractual agreements that provide protection against a credit event of one or more referenced credits. The nature of a credit event is established by the protection buyer and protection seller at the inception of a transaction, and such events include bankruptcy, insolvency or failure to meet payment obligations when due. The buyer of the credit derivative pays a periodic fee in return for a payment by the protection seller upon the occurrence, if any, of a credit event.

Credit cycle: A period of time over which credit quality improves, deteriorates and then improves again. The duration of a credit cycle can vary from a couple of years to several years.

Discontinued operations: A component of an entity that is classified as held-for-sale or that has been disposed of from ongoing operations in its entirety or piecemeal, and for which the entity will not have any significant, continuing involvement. A discontinued operation may be a separate major business segment, a component of a major business segment or a geographical area of operations of the entity that can be separately distinguished operationally and for financial reporting purposes.

EITF: Emerging Issues Task Force.

EITF Issue 02-3: "Issues Involved in Accounting for Derivative Contracts Held for Trading Purposes and Contracts Involved in Energy Trading and Risk Management Activities."

EITF Issue 99-20: "Recognition of Interest Income and Impairment on Purchased and Retained Beneficial Interests in Securitized Financial Assets."

FASB: Financial Accounting Standards Board.

FIN 39: FASB Interpretation No. 39, "Offsetting of Amounts Related to Certain Contracts – an interpretation of APB Opinion No. 10 and FASB Statement No. 105."

FIN 41: FASB Interpretation No. 41, "Offsetting of Amounts Related to Certain Repurchase and Reverse Repurchase Agreements – an interpretation of APB Opinion No. 10 and a Modification of FASB Interpretation No. 39."

FIN 45: FASB Interpretation No. 45, "Guarantor's Accounting and Disclosure Requirements for Guarantees, including Indirect Guarantees of Indebtedness of Others – an interpretation of FASB Statements No. 5, 57 and 107 and a rescission of FASB Interpretation No. 34."

FIN 46R: FASB Interpretation No. 46 (revised December 2003), "Consolidation of Variable Interest Entities – an interpretation of ARB No. 51."

FIN 47: FASB Interpretation No. 47, "Accounting for Conditional Asset Retirement Obligations – an interpretation of FASB Statement No. 143."

FIN 48: FASB Interpretation No. 48, "Accounting for Uncertainty in Income Taxes – an interpretation of FASB Statement No. 109."

Forward points: Represents the interest rate differential between two currencies, which is either added to or subtracted from the current exchange rate (i.e., "spot rate") to determine the forward exchange rate.

FSP: FASB Staff Position.

FSP FIN 46(R)-6: "Determining the Variability to Be Considered in Applying FASB Interpretation No. 46(R)."

FSP FAS 123(R)-3: "Transition Election Related to Accounting for the Tax Effects of Share-Based Payment Awards."

FSP FAS 13-2: "Accounting for a Change or Projected Change in the Timing of Cash Flows Relating to Income Taxes Generated by a Leveraged Lease Transaction."

Interchange income: A fee that is paid to a credit card issuer in the clearing and settlement of a sales or cash advance transaction.

Interests in purchased receivables: Represent an ownership interest in cash flows of an underlying pool of receivables transferred by a third-party seller into a bankruptcy-remote entity, generally a trust.

Investment-grade: An indication of credit quality based upon JPMorgan Chase's internal risk assessment system. "Investment-grade" generally represents a risk profile similar to a rating of a BBB-/Baa3 or better, as defined by independent rating agencies.

Managed basis: A non-GAAP presentation of financial results that includes reclassifications related to credit card securitizations and taxable equivalents. Management uses this non-GAAP financial measure at the segment level because it believes this provides information to investors in understanding the underlying operational performance and trends of the particular business segment and facilitates a comparison of the business segment with the performance of competitors.

Managed credit card receivables: Refers to credit card receivables on the Firm's balance sheet plus credit card receivables that have been securitized.

Mark-to-market exposure: A measure, at a point in time, of the value of a derivative or foreign exchange contract in the open market. When the mark-to-market value is positive, it indicates the counterparty owes JPMorgan Chase and, therefore, creates a repayment risk for the Firm. When the mark-to-market value is negative, JPMorgan Chase owes the counterparty. In this situation, the Firm does not have repayment risk.

Master netting agreement: An agreement between two counterparties that have multiple derivative contracts with each other that provides for the net settlement of all contracts through a single payment, in a single currency, in the event of default on or termination of any one contract. See FIN 39.

MSR risk management revenue: Includes changes in MSR asset fair value due to inputs or assumptions in model and derivative valuation adjustments.

Material legal proceedings: Refers to certain specific litigation originally discussed in the section "Legal Proceedings" in the Firm's Annual Report on Form 10-K for the year ended December 31, 2002. Of such legal proceedings, some lawsuits related to Enron, WorldCom and the IPO allocation allegations remain outstanding as of the date of this Annual Report, as discussed in Part I, Item 3, Legal proceedings in the Firm's Annual Report on Form 10-K for the year ended December 31, 2006, to which reference is hereby made; other such legal proceedings have been resolved.

NA: Data is not applicable or available for the period presented.

Net yield on interest-earning assets: The average rate for interest-earning assets less the average rate paid for all sources of funds.

NM: Not meaningful.

OPEB: Other postretirement employee benefits.

Overhead ratio: Noninterest expense as a percentage of Total net revenue.

Principal transactions: Represents Trading revenue (which includes physical commodities carried at the lower of cost or fair value), primarily in the IB, plus Private equity gains (losses), primarily in the Private Equity business of Corporate.

Reported basis: Financial statements prepared under accounting principles generally accepted in the United States of America ("U.S. GAAP"). The reported basis includes the impact of credit card securitizations, but excludes the impact of taxable-equivalent adjustments.

Return on common equity less goodwill: Represents net income applicable to common stock divided by total average common equity (net of goodwill). The Firm uses return on equity less goodwill, a non-GAAP financial measure, to evaluate the operating performance of the Firm. The Firm also utilizes this measure to facilitate operating comparisons to other competitors.

SFAS: Statement of Financial Accounting Standards.

SFAS 5: "Accounting for Contingencies."

SFAS 13: "Accounting for Leases."

SFAS 52: "Foreign Currency Translation."

SFAS 87: "Employers' Accounting for Pensions."

SFAS 88: "Employers' Accounting for Settlements and Curtailments of Defined Benefit Pension Plans and for Termination Benefits."

SFAS 106: "Employers' Accounting for Postretirement Benefits Other Than Pensions."

SFAS 155: "Accounting for Certain Hybrid Financial Instruments – an amendment of FASB Statements No. 133 and 140."

SFAS 156: "Accounting for Servicing of Financial Assets – an amendment of FASB Statement No. 140."

SFAS 157: "Fair Value Measurements."

SFAS 158: "Employers' Accounting for Defined Benefit Pension and Other Postretirement Plans – an amendment of FASB Statements No. 87, 88, 106, and 132(R)."

SFAS 159: "The Fair Value Option for Financial Assets and Financial Liabilities – Including an amendment of FASB Statement No. 115."

Staff Accounting Bulletin ("SAB") 107: "Application of Statement of Financial Accounting Standards No. 123 (revised 2004), Share-Based Payment."

Statement of Position ("SOP") 98-1: "Accounting for the Costs of Computer Software Developed or Obtained for Internal Use."

Stress testing: A scenario that measures market risk under unlikely but plausible events in abnormal markets.

Transactor loan: Loan in which the outstanding balance is paid in full by payment due date.

Unaudited: The financial statements and information included throughout this document, which are labeled unaudited, have not been subjected to auditing procedures sufficient to permit an independent certified public accountant to express an opinion thereon.

U.S. GAAP: Accounting principles generally accepted in the United States of America.

U.S. government and federal agency obligations: Obligations of the U.S. government or an instrumentality of the U.S. government whose obligations are fully and explicitly guaranteed as to the timely payment of principal and interest by the full faith and credit of the U.S. government.

U.S. government-sponsored enterprise obligations: Obligations of agencies originally established or chartered by the U.S. government to serve public purposes as specified by the U.S. Congress; these obligations are not explicitly guaranteed as to the timely payment of principal and interest by the full faith and credit of the U.S. government.

Value-at-risk ("VAR"): A measure of the dollar amount of potential loss from adverse market moves in an ordinary market environment.

From time to time, the Firm has made and will make forward-looking statements. These statements can be identified by the fact that they do not relate strictly to historical or current facts. Forward-looking statements often use words such as "anticipate," "target," "expect," "estimate," "intend," "plan," "goal," "believe," or other words of similar meaning. Forward-looking statements provide JPMorgan Chase's current expectations or forecasts of future events, circumstances, results or aspirations. JPMorgan Chase's disclosures in this report contain forward-looking statements within the meaning of the Private Securities Litigation Reform Act of 1995. The Firm also may make forward-looking statements in its other documents filed or furnished with the Securities and Exchange Commission ("SEC"). In addition, the Firm's senior management may make forward-looking statements orally to analysts, investors, representatives of the media and others.

All forward-looking statements are, by their nature, subject to risks and uncertainties. JPMorgan Chase's actual future results may differ materially from those set forth in its forward-looking statements. Factors that could cause this difference – many of which are beyond the Firm's control – include the following: local, regional and international business, political or economic conditions; changes in trade, monetary and fiscal policies and laws; technological changes instituted by the Firm and by other entities which may affect the Firm's business; mergers and acquisitions, including the Firm's ability to integrate acquisitions; ability of the Firm to develop new products and services; acceptance of new products and services and the ability of the Firm to increase market share; the ability of the Firm to control expenses; competitive pressures; changes in laws and regulatory requirements; changes in applicable accounting policies; costs, outcomes and effects of litigation and regulatory investigations; changes in the credit quality of the Firm's customers; and adequacy of the Firm's risk management framework.

Additional factors that may cause future results to differ materially from forward-looking statements are discussed in Part I, Item 1A: Risk Factors in the Firm's Annual Report on Form 10-K for the year ended December 31, 2006, to which reference is hereby made. There is no assurance that any list of risks and uncertainties or risk factors is complete.

Any forward-looking statements made by or on behalf of the Firm speak only as of the date they are made and JPMorgan Chase does not undertake to update forward-looking statements to reflect the impact of circumstances or events that arise after the date the forward-looking statement was made. Dear Fellow Shareholders,

As I write this letter, the turbulence that began in the second half of 2007 continues to wreak havoc on the financial markets today. Given the magnitude and unprecedented nature of events as they continue to unfold, it is a year that will be written about for a long time. We do not know when this cycle will end or the extent of the damage it will cause. But we do know that no financial company operating under these conditions will emerge from them unchanged. And, while we are long-term optimists about the future of the U.S. economy and our company, we remain focused on the current crisis. In this context, I will review how we performed in 2007 and how we are preparing to weather the ongoing storm.

I would like to start by saying how gratifying it is that JPMorgan Chase was able to report record revenue and earnings for 2007 despite the intense credit and capital markets issues we faced during the second half of the year. These issues continue to confront us today, particularly in both our Investment Bank and home lending businesses. That said, we must be prepared for a severe economic downturn that could affect all of our businesses. We intend to navigate through the turbulence, protect our company and capitalize on any opportunities that present themselves. It is during these tough times that we can distinguish ourselves with our clients. As a firm, we have a history of showing leadership during times of financial crisis, and we will continue to build on that legacy.

As you read this letter, I hope you will agree that our expectations are rational, our approach is consistent and measured, and our operating philosophy is sound. I also hope you will feel as I do – that while our company still faces many risks in these challenging times, we will continue to grow our franchise, outperform many of our competitors and win where it matters most: with customers in the marketplace.

Jamie Dimon
Chairman and Chief Executive Officer

I. REVIEW OF 2007

Over the past few years, we have not only worked hard to instill management discipline, but we have also spent considerable time and resources developing a strong foundation for long-term growth. So when we measure our performance, we not only review financial results – by line of business and for the company overall – but we also look at multiple indicators of health. These measures help us gauge the progress we have made by expanding and extending our capabilities, geographic reach, client coverage, product offerings and technology and by attracting, training and retaining talented people. Meaningful progress in any of the areas mentioned above takes a considerable investment of time and money. We generate both by operating efficiently and maintaining a fortress balance sheet. So, there are three intrinsically linked imperatives that are fundamental to our success: **strong financial results**, **quality growth** and **capital strength**. I will focus on each in the following review of our 2007 results.

A. Financial Results by Line of Business

We delivered record 2007 full-year earnings of $15.4 billion on record revenue of $71.4 billion. This represented total revenue growth of 15%, most of which was organic. Earnings per share – also a record at $4.38 – were up 15% from 2006. Our return on tangible common equity was 23%. Record or near-record earnings in many of our businesses and the diversified nature of our company helped offset areas of cyclical weakness. Our results – by line of business – are reviewed below.

The Investment Bank reported net income of $3.1 billion with an ROE of 15%

The Investment Bank delivered a record first half of the year, with a return on equity (ROE) averaging about 26%. Difficult market conditions reduced our ROE to about 4% for the second half of 2007. Given the natural volatility of this business, these results are not surprising. That said, our goal remains to earn 20% ROE through a business cycle. Ideally, this means we'll produce ROE of 30% or higher in good years, 10% in tougher years and no worse than 0% in a particularly bad quarter. Our subjective assessment of how we performed in 2007 is that the 26% ROE in the beginning of the year was a solid result. However, our 4% ROE in the second half of the year could have been better, e.g., perhaps a 7%-10% ROE.

Even though we had hoped to do better, relative to the performance of most of our competitors, many of whom sustained large losses, our Investment Bank's results were rather good. Most of the adverse results in the second half were confined to the sales and trading areas of the Investment Bank. Within sales and trading, the majority of the issues were in mortgage-related trading and leveraged finance (which we will cover in a later section). Equities, rates and currencies had excellent full-year results.

We are particularly pleased to have ended the year ranked No. 1 in investment banking fees and with an increased market share in global equities and global debt. This performance is a testament to our capital raising capabilities and the quality of the coverage, support and advice we provide to corporations, institutions and investors around the world. JPMorgan is now a top-ranked player in virtually every major investment banking product. We are proud of this progress and are pleased to see it noted in several independent client surveys and reports (e.g., *Institutional Investor,* which rated JPMorgan the No. 1 Investment Bank, Greenwich Research and *Risk* magazine). We believe by working hard to earn our clients' trust, we will sustain our leadership position and build the best investment bank in the world.

Retail Financial Services (RFS) reported net income of $3 billion with an ROE of 19%

RFS, our retail bank, offers consumers and small businesses checking and savings accounts, credit cards, mortgages, home equity and business loans, and investments across our 17-state footprint from New York to Arizona. We also provide home lending products nationally through our 5,200 loan officers and our network of brokers and correspondents. Additionally, we work with more than 14,500 car dealerships to provide their customers with auto loans and with more than 5,200 colleges and universities to loan students the funds they need to complete their education. RFS had a good year and showed strong organic growth.

For example, in 2007:

- Total checking accounts grew 8% to almost 11 million accounts.
- Business banking loans grew 9% to more than $15 billion.
- Credit card and investment sales in the branches both increased 23%, while mortgage loans in the branches increased by 31%.
- Mortgage loan originations grew 34% overall (even with much tighter underwriting standards).
- Use of electronic payments rose, with more than a 20% increase in our online customer base. Nearly 6 million customers now use our electronic services to bank with us – anytime, anywhere.

Despite this progress, however, overall RFS earnings were down 6% year-over-year. This was largely a function of increased credit costs in our home equity business and in subprime home loans (which we will describe in detail later). However, unlike other lenders that are pulling back or closing down, we have not abandoned this business. To the contrary, while we have materially tightened our underwriting standards, we have also nearly doubled our home lending market share to 11% in the fourth quarter (up from 6% a year ago). We have done this because we believe it is a strong, sustainable business that continues to meet an important financial priority for many people throughout this country.

Card Services reported net income of $2.9 billion with an ROE of 21%

We are the second-largest credit card issuer in the United States, with approximately 155 million credit cards in circulation. In 2007, while growth in outstanding balances was relatively low at 4%, merchandise spending on our cards increased nicely, by 9%, particularly in our co-branded partner and small business card portfolios. We added more than 16 million new accounts and raised the level of charge volume by $15 billion. In addition, to drive growth and better serve cardmembers, the new CEO of Card Services reorganized the business into five units: the mass affluent segment, individuals of high net worth, small businesses, and co-brand and retail/private label partners. This customer-focused approach will enable us to specifically tailor products and services to meet the financial needs of these important customer groups.

While we're pleased with our 2007 performance in Card Services, we are preparing for the impact of a weakening economy on loan losses. We expect losses to increase by about 4.5%-5% of outstanding balances from about 3.7% in 2007. (In a prolonged recession, the losses could be considerably worse.)

Commercial Banking reported net income of $1.1 billion with an ROE of 17%

Commercial Banking serves more than 30,000 customers across America, including corporations, municipalities, financial institutions and not-for-profit entities. Commercial Banking produced record revenue, up 8%, and record profits, up 12%, from a year ago. Loans grew 14%, liability balances grew 19% and we added more than 2,200 new banking relationships.

Over the past few years – in addition to providing cash management products to its customers – Commercial Banking has been able to better meet our customers' needs by increasingly making investment banking products and

Earnings by Line of Business (in millions)

	2004[b]	2005	2006	2007
Investment Bank	$ 3,654	$ 3,673	$ 3,674	$ 3,139
Retail Financial Services	3,279	3,427	3,213	3,035
Card Services	1,681	1,907	3,206	2,919
Commercial Banking	992	951	1,010	1,134
Treasury & Securities Services	231	863	1,090	1,397
Asset Management	879	1,216	1,409	1,966
Corporate[a]	(4,378)	(3,783)	47	1,775
JPMorgan Chase[a]	$ 6,338	$ 8,254	$ 13,649	$ 15,365

(a) On a continuing operations basis

(b) 2004 data are pro forma combined, reflecting the merger of JPMorgan Chase and Bank One

services available to them. This includes M&A advisory and equity and debt underwriting, which are made possible by a strong collaboration between Commercial Banking and the Investment Bank. This capability is a competitive advantage for us. In 2005 – the year after the merger with Bank One – we generated about $550 million in Investment Bank-related revenue through this cross-sell opportunity. By the end of 2007, Commercial Banking had achieved record Investment Bank-related revenue of about $890 million. We also launched Chase Capital to provide equity and mezzanine debt financing to our customers to eliminate the need for them to seek such capital elsewhere. It is important to note that of the total revenue Commercial Banking generated in 2007, only 35% now relates to the lending product.

While we recognize the value of cross selling, we are also keenly aware of the risks associated with trying to drive growth in certain product areas. As such, we have resisted growth in areas where we felt inadequately compensated for that risk. For example, our real estate lending has actually shrunk over the past few years and currently represents only 12% of our total loans. Commercial Banking also increased loan loss reserves by $225 million, bringing total reserves to a very strong 2.8% of average loans at year-end.

Treasury & Securities Services (TSS) reported net income of $1.4 billion with an ROE of 47%

TSS is a business that holds, values, clears and services securities and provides cash management, corporate card and liquidity products and trade finance services to the world's leading companies and institutional investors. TSS delivered exceptional financial results, with record revenue, up 14%, and record profits, up 28%. This business has generated higher volume across all of its products, grown consistently over time, produced good margins, and maintained great global scale and long-standing client relationships. It is a business that would be extremely hard to duplicate. Notably, TSS assets under custody increased by 15% to $15.9 trillion, and average liability balances were up 21% to about $230 billion. The group grew its revenue from countries outside the U.S. by more than 26% over the past year. The ability to make significant progress on this important priority reflects the strong foundation we are building abroad. Highlights include receiving regulatory approval to connect to China's electronic clearing system, establishing a staff presence in 41 countries and branches in 25 countries worldwide, and extending our international capabilities for clients around the globe.

Asset Management reported net income of $2 billion with an ROE of 51%

Asset Management provides our institutional, high-net-worth and individual investor clients with global investment management in equities, fixed income, real estate, hedge funds, private equity and liquidity. The headline numbers for Asset Management were terrific. The business delivered strong growth in 2007, with profits up 40% and revenue up 27% – both record levels. Assets under management were up 18% (or $180 billion), driven mainly by $115 billion of new flows, and were further fueled by market growth during the year. We increased alternative assets (hedge funds, private equity, etc.) by more than 20%, to end the year with $121 billion in alternative assets under management.

As the world's largest manager of hedge funds, we grew our total hedge funds by 30% last year, including increasing assets under management in our Highbridge funds by 68% in 2007. Since late 2004, when JPMorgan acquired a majority interest in Highbridge, its assets under management have grown from $7 billion to about $28 billion in early 2008. In addition, the Private Bank and Private Client Services set a record by increasing assets under

supervision for clients by $80 billion in 2007. A note of caution, however: The earnings momentum of this business has slowed in 2008 and will continue to lag rates of growth produced in prior years. Investment performance, particularly in certain fixed income and statistical arbitrage funds, was affected by the extreme conditions of the latter half of the year. Last summer, when the five-year bull market ended, we began to see a shift in our clients' portfolios from higher-yielding assets (equities and alternative assets) to lower-yielding assets (fixed income and cash). We believe it is reasonable to assume that current market conditions will impede Asset Management's ability to deliver another year of record earnings in 2008.

In Private Equity, we had an outstanding year with pre-tax gains of more than $4 billion

One Equity Partners (OEP) delivered stellar results in 2007. I hope you all join me in giving them our gratitude for this banner-year performance, in which OEP contributed two-thirds of total private equity gains. OEP has now generated a life-to-date realized internal rate of return of more than 50% on its investments. We are thrilled with this achievement and happy to report the high returns of last year, but we also appreciate that this level of performance is exceptional. As such, we do not expect it to be repeated this year.

B. Leading Indicators of Real Growth

We are committed to achieving high quality of earnings. This means consistently investing in our businesses. This does not mean increasing short-term earnings by reducing investments for the future. So even while our margins went up, we continued to invest in geographic expansion, client coverage, product extensions, technology enhancements, employee development and corporate responsibility. These are areas we believe will drive good, strong growth in our businesses for decades to come. They are discussed in more detail below.

We expanded our footprint both internationally and domestically

Internationally, our growth strategy connects the wholesale businesses of the Investment Bank, Asset Management, Commercial Banking and TSS to deliver the right products and services in the right way to our customers. Because we look at the world from the point of view of the customer, we rely upon a local presence and regional operating models to develop, bundle and provide an appropriate level of financial support to our clients. So while one line of business can bring us into a market, our growth over time is intended to cut across all of these businesses.

In Japan, Korea, India and China, we are using this strategy to develop and tailor our wholesale platform of products and services across the region. From four branch locations in China – Beijing, Shanghai, Tianjin and Shenzhen – our 260 employees provide Investment Bank, TSS and Asset Management services. Commercial Banking opened new offices in Mumbai and Singapore in 2007. Our total headcount in Asia increased by 26% to more than 19,000 employees, and our overall revenue in the region increased by 47%. Three years ago, in mainland China, Asset Management had no clients and no assets under management. Today, our joint venture is a top-10 asset manager in China, with more than 5 million customers and $13 billion in assets under management. Our first Qualified Domestic Institutional Investor product (which allowed residents in mainland China to invest overseas), launched last year, was oversubscribed by almost four times. On the first day of the initial public offering (IPO), it raised a record $15.4 billion from 1.9 million customers. We were granted licenses and launched businesses in Korea and India and ended the year there with onshore assets under management of $700 million and $600 million, respectively.

On the domestic front, Commercial Banking opened new offices in North America, extending our presence to Atlanta, Nashville, Philadelphia, Seattle and Vancouver. We also opened 127 retail bank branches and added 680 ATMs and 2,568 in-branch salespeople to help our customers.

We increased client coverage

Over the years, the Investment Bank has invested hundreds of millions of dollars in Asia and in other emerging markets to increase our client coverage, particularly in countries like China, India and Russia. We will now be supporting more than 500 companies in those three countries, which will mean more research coverage, sales and trading capability, and, we anticipate, more revenue. Outside the emerging markets, we added experienced traders to our energy business. It is an important sector that continues to be a priority in 2008. We also added more than 200 new client advisors within the Private Bank and Private Client Services, a substantial increase of staff over prior years.

We extended products and expanded services to better meet our customers' needs

TSS completed various bolt-on acquisitions to expand parts of the business, including our healthcare electronic payment services and our U.S. fund services business, which provides fund accounting and reporting to mutual funds of various sizes. As asset managers and pension funds are increasingly investing in private equity and

hedge fund assets, TSS continues to build product capabilities to support the processing of these alternative investments for our clients. Over the past year, TSS has increased its alternative assets under administration by more than 80%, and we will be expanding these services internationally to support clients in Hong Kong, Australia, Luxembourg and the United Kingdom.

Card Services continues to increase its annual spending on credit card marketing and reward programs to build out its slate of innovative card products and refine the reward options (particularly on the Chase Freedom credit card). And we continue to improve our electronic systems, payments and services that offer 24/7 access. For example, we introduced Chase Mobile, a new text messaging service that gives U.S. customers easy access through their phones to account balances, payment histories and due dates.

We focused on technology to improve customer service, sales, marketing and innovation

In addition to increasing the number of new bankers, branches and salespeople and as part of our commitment to expand our products, services and international reach, we will continue to invest in technology. We believe this investment will be a key driver of growth over the next decade. Our first step was to operate from one platform. After a tremendous amount of work on our technology, systems and data centers, we can now essentially do that. This was an enormous accomplishment. Highlights this year include:

- Flawlessly completing a highly complex wholesale deposit conversion (the largest in the firm's history); in one weekend, we converted more than 250,000 corporate clients on all continents, representing $10 trillion a day in global deposit transactions, to a single deposit platform supporting both retail and wholesale clients with 19 million accounts and $393 billion in balances.
- Insourcing our credit card processing platform (another "biggest" in banking history) to improve flexibility and lower our cost structure.
- Seamlessly converting, in one weekend in the first quarter of 2007, all 339 Bank of New York branches, adding 1.2 million deposit accounts to our platform.
- Upgrading and consolidating our banking data centers over the last three years, from 109 to 67. Our goal is to continue to reduce our data centers to 39 by 2010.

Having accomplished the above, we can now refocus our technology and operational expertise and abilities to the important and complex process of improving customer service and quality.

We continued to get the most out of our model

We are a global bank with scale, diversification and collaboration across our six lines of business – all of which deliver financial services to individuals and institutions. That's our model. We have described this in detail in prior letters and will not repeat it here. But what really matters is how well we are able to leverage our collective strength to create the most value for our customers and shareholders. We invest in all of our businesses to ensure that each is a leader in its specific industry and is able to grow organically. While these businesses do well individually, we believe they all create great competitive advantage for each other, too. Over the course of 2007, we've clearly seen how each of our businesses benefits from the links across our product set and how every business gains from being a part of a strong, respected JPMorgan Chase. It is not about cross selling for the sake of cross selling. Rather, it is about focusing our resources and expertise on pursuing natural product extensions that make things easier and more cost-effective **for our customers**.

Below are a few of the tangible examples of how this approach has benefited our company and, more importantly, our clients:

- Asset Management's partnership with our other businesses reached record levels in 2007. Referrals from the Investment Bank and Commercial Banking resulted in new clients with $19 billion in assets, representing $48 million in annualized new revenue, an increase of 20% in new revenue and 46% in new assets from referrals in 2006.
- TSS continues to capitalize on the Investment Bank's IPO underwriting relationships to secure depositary receipt mandates worldwide. TSS also leverages the Investment Bank's advisory relationships to generate cash management and escrow business. On the other side of the ledger, TSS clients with sweep accounts have that money invested in money market funds with JPMorgan Asset Management (accounting for more than 20% of Asset Management's global money market fund assets).
- Our broad consumer businesses are collaboratively building our brand and investing in joint sales and marketing efforts. We launched a single new brand campaign across Retail Financial Services and Card Services under the "Chase What Matters" message. This unified message aligns our values with those of our customers – by focusing on what matters to them (e.g., access, protection, advocacy, rewards and value). Our goal is to make Chase the best brand in consumer financial services.

We advanced our ongoing efforts to recruit, train and retain top talent and enrich the diversity of our company

Our business, people and reputation are critically important assets. We are absolutely committed to attracting and retaining outstanding individuals. Today, throughout our company and at every level, you will find exceptionally talented people. This requires an ongoing commitment – not a stop-and-start approach. A strong pipeline of talent produces great managers. Over the past three years, we have been improving our recruiting efforts on campuses around the world. Our efforts are paying off. We have significantly increased the number of students who accept our full-time employment offers in the Investment Bank and have been recognized by *BusinessWeek* for the quality of our internship and training programs. Increasingly, outstanding students with considerable options agree that JPMorgan is "the place you want to be."

We have also continued to build on solid gains in 2007 to enhance the diversity of our employee base. To step up our employment efforts, we have asked one of our top executives to work directly with me and the human resources team to focus 100% of his time on recruiting and retaining outstanding minorities. And as a result, last year, our company was fortunate to hire more exceptional minority executives in senior positions than ever before. We have also increased supplier diversity spending by 32%. Last year, we did more than $700 million of business with diversely owned companies.

We intensified our corporate responsibility efforts

We believe an integral part of our growth strategy is to focus our resources where they will do the most good by supporting the organizations that can make a meaningful difference to the people who live in communities in which we operate. Our Foundation now provides more than $110 million in grants annually, more than doubling the amount from $45 million in 2000. Investments range from building affordable housing in Dallas and New Orleans to training New York City public school principals.

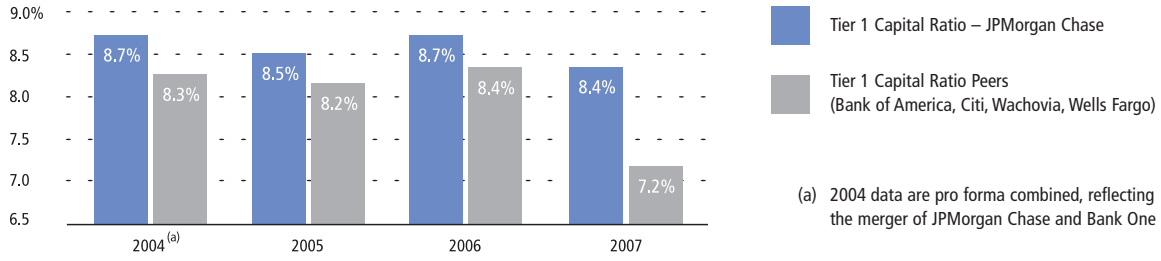
We are also committed to the environment. In developing our environmental footprint, we adhere to the most stringent guidelines. We also do our part to contribute innovative solutions to environmental issues. 2007 highlights include: creating several conservation programs in-house, piloting green branches, building a "LEED" platinum certificate building in London, and renovating our world headquarters in New York to meet the highest environmental standards.

We have also worked closely with the U.S. government and with a number of other institutions to create programs to help keep borrowers in their homes. Through our charitable support and in helping to develop strong public policies, we are determined to materially enhance our efforts in this area – whether it's through working with governments, not-for-profits or other community organizations. We have much more to say about the work we are doing in this area, which we will express in a detailed report on corporate responsibility over the coming months.

C. Operating Efficiency and Capital Strength

Our 2007 progress with regard to these two priorities is reviewed below.

We continued to boost efforts to increase operating efficiency and reinvest in the business



Many of the investments described in the previous section were funded by cost savings. By eliminating waste, we were not only able to run a more efficient and effective company, but we were also able to invest more where it counts most. For example, over the course of 2007, we shed 4.3 million square feet of excess real estate globally; since 2003, we have shed 13 million square feet of excess space. Eliminating this excess real estate has enabled us to become more, not less, accessible to our customers. In 2007, these redeployed savings were used to develop new branches, international presence and electronic capabilities. We will stay vigilant to reduce unnecessary expenses and invest in areas that will also make us stronger down the road.

We remained disciplined and committed to preserving a fortress balance sheet

We operate in risky businesses, and having a fortress balance sheet is a strategic imperative, not a philosophical bent. It is also a critical differentiator for us – especially in uncertain times. We achieved it through the following elements:

- Appropriately conservative accounting.
- Strong loan loss reserves.
- Diligent review of all assets and liabilities (on and off our balance sheet).
- Disciplined reporting and regular reviews across our businesses.
- A detailed and deep understanding of – and constant focus on – the margins and returns of each business (often at the product level).
- Recognition of market cyclicality and continuous analysis of our own businesses so that we deliver solid returns through the cycle – not just in good times.

Peer Comparison of Tier 1 Capital Ratios

We maintained strength to operate in any environment by:

- Sustaining a strong capital ratio, whether measured by Tier 1 capital (we had 8.4%) or tangible common equity to assets (we had a ratio of 5%). Under the new Basel II capital rules, we expect our Tier 1 capital ratio would be even stronger than we report today.
- Capitalizing on favorable market conditions early in 2007 to pre-fund a substantial amount of our company's need for capital and long-term debt. This gave us flexibility when evaluating financing alternatives during the second half of the year.
- Maintaining (and continuing to maintain) extremely high liquidity. This means that your company currently has on average a range of $20 billion to $50 billion in overnight investments. This has served us well under the current market conditions.
- Increasing our dividend by 12% from the previous year – for the first time in six years. We believe that paying out 30%-40% of earnings as dividends is generally the appropriate amount.
- Repurchasing approximately $8 billion of our stock because we believe it is a good investment and is consistent with our capital needs. To give us more flexibility as we entered a turbulent time, however, we essentially stopped buying back stock in the third and fourth quarters of last year.

We avoided seeking expensive capital from outside sources

We continually stress test our capital and liquidity needs. To simplify, what we essentially try to do is stay properly capitalized, at current levels, even if called to fund up to $100 billion of cash needs for our clients or for the corporation. We think these are conservative (if not worst-case) assumptions, but if the environment trends more negative, we think our Tier 1 ratio would remain very strong (particularly relative to our peers in this type of scenario). Our goal is to continue serving our clients and building our business without being pressured to seek expensive equity or debt capital elsewhere.

We used our strong foundation to further our objectives

Not only did our strong balance sheet and liquidity allow us to sleep better at night, but it also made it possible for us to:

- Support our clients by fulfilling their capital requirements prudently with credit – especially as the markets began to deteriorate in the latter half of 2007.
- Build our business. For example, we took advantage of what we believed was an opportune time to strengthen our presence in the mortgage business.
- Prepare ourselves to take advantage of emerging opportunities, which could include buying good assets at a reasonable price or evaluating other strategic acquisitions that make sense for our shareholders.

II. KEY ISSUES AND LESSONS OF 2007

In the fall of 2007, my daughter called and asked me, "Dad, what is a financial crisis?" I answered her by saying, without intending to be funny, "It's something that happens every five to 10 years." She then asked, "So why is everyone so surprised?"

The United States and the world have, in fact, had various financial crises every five to seven years, probably for as long as financial history has been recorded. In recent times, there was the recession of 1982; the stock market crash of 1987; the savings-and-loan and commercial real estate crisis of 1990-1991; the market panic of 1997-1998, brought about by the Long Term Capital Management and emerging-market crises. Finally, in 2001, the Internet bubble burst, knocking the stock market down 40%.

Looking at all of these crises, some attributes were different, but many were the same. The triggering event in 2007 was the bursting of the housing bubble and the related bad mortgage underwriting standards. In the 10 years from 1995-2005, housing prices in the U.S. rose

135%, far exceeding normal home price increases and outstripping traditional measures of affordability. While some thought the gains were justifiable, it is clear now that they were not. As of today, housing prices nationally are down on average almost 10% since the end of 2006, and it looks as if they will continue to deteriorate. It is also clear, in hindsight, that increasingly poor underwriting standards (e.g., loan-to-value ratios up to 100%, lax verification of income and inflated appraisals) added fuel to the speculation and froth in the markets. Many of these poor mortgage products were also repackaged and dispersed widely through various securities, thus distributing the problems more broadly.

As Warren Buffett says, "When the tide goes out, you can see who's swimming naked." In this crisis, as the tide went out, we saw subprime concerns first, then mortgage-related collateralized debt obligations (CDOs), structured investment vehicles (SIVs), Alt-A mortgages, mortgage real estate investment trusts (REITs), the impact on monolines and, finally, very unfortunately for us, home equity loans. And the tide is still going out.

As this chapter of history continues to be written, we cannot have the full benefit of hindsight. However, there are some lessons we have already learned and others we can draw upon from past crises. In the context of today's crisis, they are worth revisiting.

A. Issues and Insights Specific to the 2007 Financial Crisis

We generally avoided many – but not all – of the issues associated with the storm of 2007. Let's talk about some of them in detail.

SIVs served no business purpose

We deliberately steered clear of most SIVs because we viewed them as arbitrage vehicles with plenty of risk, a limited business purpose and a flawed design (we sold a small SIV back in 2005). We also minimized our financing to SIVs for the same reasons. SIVs will probably disappear – except for the few that demonstrate a sustainable business purpose – and the world will not miss them. That said, there were two things related to SIVs that did catch us by surprise:

- *Their growth and its impact.* SIVs had grown to a very large size as an industry segment – to approximately $500 billion. And they owned a substantial amount of mortgage securities, CDOs and bank securities.
- *Their propensity to fund long-dated and sometimes illiquid assets with short-term commercial paper.* When people started questioning the viability of SIVs, the markets became unwilling to refinance their commercial paper, and, therefore, many of the SIVs were forced to liquidate their assets. The banks and money market funds that were holding SIVs' commercial paper began to experience stress of their own. Fortunately, our Investment Bank was not directly affected by this issue because we provided almost no backup credit facilities to SIVs, and our Asset Management group contained its exposure to SIVs by limiting its investment to only the few high-quality, well-structured SIVs.

Subprime mortgages and subprime CDOs were more dangerous than we thought

In 2006, we thought we focused early on the subprime issue – and, in fact, we addressed the subject at length in last year's Shareholder letter. We became increasingly vigilant in our underwriting and avoided underwriting loans we were not comfortable holding to maturity. Even so, we still found ourselves having to tighten our underwriting of subprime mortgage loans six times through the end of 2007. (Yes, this means our standards were not tough enough the first five times.) In last year's letter, we thought our losses could increase substantially from 2006 levels. In fact, we saw them go up from $47 million in 2006 to $157 million in 2007. And we think they could significantly elevate in 2008 if economic conditions worsen.

Within our Investment Bank, we avoided large exposure to subprime loans, mostly by reducing our positions or actively hedging them. We also chose not to become a major player in subprime-related CDOs. Even so, we did lose substantially more than we expected: $1.4 billion on subprime mortgage and subprime-related CDOs. Although we generally treat off-balance sheet obligations like on-balance sheet obligations, a large share of our losses came in certain off-balance sheet transactions. We will redouble our efforts to ensure that this does not happen again.

Keeping the above in mind, we still believe that subprime mortgages are a good product. When subprime loans are properly underwritten, they serve a meaningful purpose. They can make a real difference to young families, to those who experienced financial problems earlier in life, to immigrants with little credit history and to the self-employed. These loans have helped many people achieve the American dream by buying homes they can afford. While tighter underwriting standards have now materially reduced our production of subprime mortgage loans, we will continue to find a prudent way to be in this business.

Home equity deteriorated dramatically

Home equity is important to our company. We retain all of our home equity production on our balance sheet, and, at the end of 2007, we had about $95 billion in our home

equity portfolio. The losses in this portfolio are increasing rapidly and rising at a higher rate than we ever could have expected, even in a severe recession. In 2007, our net charge-offs were $564 million, and we added $1.0 billion to reserves. In 2008, we think charge-offs in the first quarter could reach $450 million and possibly double by the fourth quarter (as a function of the level of home price depreciation). Since loan loss reserves reflect expected losses, this will require us to significantly increase these reserves.

There will undoubtedly be more lessons to come as the deterioration of the home equity business continues, but there are three lessons we have already learned the hard way:

- *We underestimated the size of the housing bubble and the rapid rate of depreciation.* While we recognized the existence of a housing bubble, the rate and severity of the housing price depreciation surprised us. We also missed the impact of increasingly aggressive underwriting standards on housing price appreciation and increased speculation and froth in the market. Finally, we did not see that the ever rising housing prices over the 10-year period were masking potential losses. When these losses came into clear view, as a result of the increasingly aggressive underwriting standards, much of the damage had already been done.

- *We misjudged the impact of more aggressive underwriting standards.* Over many years, loan-to-value (LTV) ratios had increased from 80% to 85% to 90%, etc.; income verification became a less important part of the process; and appraisals became overly optimistic. These trends led to far more aggressive underwriting. While each individual change seemed reasonable at the time and losses seemed to be contained, we now know that was a mirage. Multiple changes occurring over many years have essentially altered the nature of the product.

  We should have acted sooner and more substantially to reduce the LTV rates at which we lent, given the increased risk of falling prices in a market of highly inflated housing values. We also should have tightened all other standards (e.g., income verification) in response to growing speculation in the market and the increasing propensity of people to respond to aggressive lending standards by buying houses they could barely afford.

- *We would have been better off had we imposed tighter controls on the outside mortgage broker business.* We used the same underwriting guidelines for outside mortgage brokers as we did for our own mortgage bankers. In hindsight, this was a mistake. We wish we had applied tighter standards to outside brokers. Losses attributable to outside brokers have always been two to three times greater than losses on mortgages we produce internally. That is the reason we closed the broker business at Bank One. We have now materially tightened standards across the board, and our standards for outside brokers are even tighter. Although home equity production through the broker channel decreased by as much as 60% by the fourth quarter of 2007, we believe the quality of underwriting has improved significantly.

The home equity business seems to have fundamentally changed from the way it was meant to be: a means of conservatively giving people access to cash from equity in their house. It has since evolved into a business that has allowed people to take leveraged bets on the assumption that the value of their home will increase. When home equity returns to its original purpose and practice, it will be a very good business again. For that reason, we intend not only to stay in it but to become the best in the business.

Leveraged lending had a tough year, but it will continue to be part of our core business

In 2007, we continued to hold the No.1 market position in global syndicated finance and high-yield debt, and we intend to maintain these top rankings. Leveraged lending is an activity that has long been – and will continue to be – a critically important way for us to serve our clients. In total, over the last five years, our syndicated leveraged finance business has generated average annual revenue of $1.2 billion. In 2007, after taking losses of $1.3 billion, net of fees (which makes us very unhappy), this business still generated $475 million in revenue. We made some mistakes this past year, and we've learned the following:

- *We should have been more diligent when negotiating and structuring commitment letters.* A few years ago, commitments to fund future transactions were not reflected on our balance sheet until the details were finalized and the final, binding letter was signed. In the event of a material change in market conditions, this practice provided lenders with the ability to make important amendments to the letter and/or to the price at which it could be sold. Over time, however, this flexibility disappeared, but we were still held to the original terms of the commitment letters. This meant that when the market deteriorated, we still had to fund the transaction. Upon funding, instead of making an average fee of 2% to 3%, we lost 5%. These commitment letters had essentially become puts on the market. That is, if the markets were strong, things were fine, but if the markets collapsed (as they did), we would be stuck with the original price and could lose a substantial amount of money. This is a one-sided bet and one that subjects us to losses every time the markets crash – an occurrence that is as inevitable as it is painful. Now, having recognized the value of these puts, we fully acknowledge the risks we are taking when we sign these letters.

- *We cannot allow ourselves to be pushed into positions that are too risky.* We simply cannot follow the market like lemmings or allow ourselves to succumb to demands or pressures that compromise our credit standards and lead to bad decisions. In every deal we do, we must insist on fair treatment and adequate compensation for the risk we are asked to assume. A lot of people with whom we do business in leveraged finance are among the most sophisticated, creative and tough businesspeople we know. But true long-term partners understand that a healthy business relationship is a two-way street that must work for both parties over a long period of time. Bad financial practices, like equity bridges or excessive leverage, are not good for us or, ultimately, for our partners.

B. Lessons Learned: Some Old, Some New

Different triggering events ignite each financial crisis. Once under way, however, these crises have much in common. As they say, history may not repeat, but it rhymes. Hard lessons learned from past crises have relevance for us today. Let's revisit a number of them as follows:

Markets can get very volatile

For years, the financial industry had been the beneficiary of relatively stable financial conditions. From 2001 through the first half of 2007, markets were fairly benign, making it easier to get lulled into a false sense of security and to lose sight of how risky the financial environment can be. We must always remind ourselves that markets can become volatile very quickly and when least expected. For those traders who began their careers after the crisis of 1998, it was especially hard to accept that spreads and prices could widen by 250 basis points in a matter of days. Our responsibility as managers is to ensure, at every level of trading, there exists a consistency in our approach and a deep respect for unpredictability of markets.

There is no substitute for good judgment and strong oversight

Risk models are valuable tools, but they have limitations. Because they are backward-looking by design, they tend to miss certain factors. The value of stress testing is also a function of time frame. For example, scenarios may be compromised because the data may not go back far enough. We use value-at-risk (VAR) and stress testing, but they are only part of what we consider good risk management. Good, sound, old-fashioned human judgment is critical. Strong risk management entails constant reporting and review, exposure by exposure, and the ability to size up exposures instantly with the right systems. Managers must know the tough questions to ask – especially with regard to stress-test loss scenarios – and have the ability to stay on top of all the important issues. Intense oversight by and information-sharing with managers is absolutely key, as is access to the expertise of independent pricing and valuation groups. Finally, assumptions need to be tested constantly. That said, we all know even when everything is done right, there still will be volatile results and mistakes. But if things are not done correctly, then the outcomes can be disastrous.

When markets get volatile, almost all risky assets reprice

This is not a surprise – it has happened almost every time markets get volatile.

In difficult market conditions, liquid assets become illiquid

What happened to jumbo mortgages, commercial mortgage-backed securities, leveraged loans and CDOs are examples of this phenomenon. And because financial companies have assets that are no longer easily sold, they are less willing to take additional risk in the marketplace. This not only compounds the problem, but it also creates a new problem: skepticism about whether or not a company with illiquid assets can meet its short-term obligations.

Problems occur when there is too much short-term financing funding long-term assets

There is one financial commandment that cannot be violated: Do not borrow short to invest long – particularly against illiquid, long-term assets. As it turns out, some hedge funds, REITs, SIVs, CDOs and certain financial institutions did exactly that. In these kinds of markets, when the value of short-term investments is questioned, such as money market funds or commercial paper, a crisis can easily ensue. Individuals, acting rationally to protect their own interests, race to sell securities; but, in aggregate, this process by market participants can easily take on a life of its own and escalate into a panic.

A fortress balance sheet protects the franchise

As I mentioned earlier, a fortress balance sheet is a strategic imperative – especially in turbulent market conditions like these. No matter what conditions are, we always want to have the capital, liquidity, reserves and overall strength to be there for our clients and to continue investing wisely in the business.

Irrational expectations impede quality growth

Sometimes there's so much pressure on companies to expand their businesses that they end up pushing their own people to grow, grow, grow. Often people feel this

pressure most when market conditions are good. But it is when markets turn bad that such pressure can lead to dangerous outcomes for all businesses – and especially for volatile businesses like investment banking that take risks. Standards are reduced, too many compromises are made and there's a lack of focus on what is in the best interest of clients. It is easy to grow a business when taking on additional risk – but that is often the worst thing to do. Growth expectations need to be rational. We know there are times when we should not strive to grow certain areas of the business. This is an operating philosophy that protects us from the costly consequences of bad growth.

Risk models that rationalize a lower level of capital contribute to poor judgment

To maximize the size of a potential risk position, models are often designed to justify *as little capital* as possible. For example, numerous triple-A, super-senior CDOs drew little regulatory capital and, therefore, looked safe with good returns. That safety and those returns turned out to be an illusion. This is why it is important for us to understand our risks inside and out and to maintain sufficient economic capital against that risk. We measure risk by how bad things could be – not how good they are.

Financial turmoil increases the chance of recession – and the specter of recession weighs heavily on the market

It is important to note that the turbulence we've experienced occurred in a good economy. And while financial conditions have a serious impact on the global economy, they do not – in and of themselves – necessarily cause a recession. In fact, many severe financial crises have not resulted in recessions. That said, the weaker the economy gets, the greater the impact could be across all our lines of business. Tight financial conditions (e.g., the reduction of credit, the outright removal of credit in certain markets and the higher costs of credit) make it harder and more costly for individuals and companies to borrow money and, therefore, weaken the economy.

As these conditions worsen, the possibility of a deep recession increases. As the specter of a recession weighs more heavily on the normal functioning of capital markets, so too does the fear about the possibility of a recession. Why take additional risk when we might be in a recession? Investors decide they don't want to take the risk so they may remove money from banks, commercial paper and money market funds in order to buy treasuries. Such a reaction isn't necessarily unwise or inappropriate, but it does help to create a self-fulfilling prophesy.

III. ON TO 2008 (AND LOOKING FORWARD TO 2009)

In the summer of 2007, we began to prepare for a downturn in the market. While we have successfully weathered the storm thus far, we face new uncertainties every day. Despite the continued turmoil, we are encouraged to see many of the problems resolving at a fairly decent pace. Yet, while we hope the remaining issues will be sorted out expeditiously and a lengthy recession will be averted, we cannot count on this being the case. We need to confront the possibility that today's upheaval could result in serious market deterioration that the U.S. has not experienced since 1982. To prepare for this possibility, we need to have a clear sense of our risks.

A. Key Potential Risks

What follows is a discussion of the risks that concern us most and some of our thoughts about how to address them.

There is still substantial risk on our balance sheet

We are generally comfortable with the values, the hedging and the loan reserves on our balance sheet. But we also recognize that many of our positions, while somewhat hedged, are still quite risky. Hedges, by their very nature, are imperfect. We focus on this risk by viewing our assets on a gross basis. Relying solely upon a net basis implies that it is not possible to lose money on both sides of a complex trade. We know, however, that this is quite possible.

Some of our largest exposures in the Investment Bank as of year-end are listed below:

- $26.4 billion in funded and unfunded leveraged loans: We have written these loans down by more than 6% but acknowledge that they could easily deteriorate more in value. However, at current levels, we believe they represent a good long-term value. So, in early 2008, we decided to add $4.9 billion to the $3.2 billion of leveraged loans we were already holding as long-term investments.
- $15.5 billion in commercial mortgage-backed exposure: The majority of this exposure is securities and loans, actively credit-hedged and risk-managed; 64% is triple-A rated.
- $2.7 billion in subprime mortgage and subprime CDO-related exposure: Approximately $200 million of this exposure is subprime CDO; the remainder is comprised of subprime loans, residuals and bonds.
- $5.5 billion in CDO warehouse and unsold positions: 92% are corporate loan underlying; subprime is negligible.
- $6.4 billion in Alt-A mortgage exposure: Most are triple-A securities and first-lien mortgages.

Most of these exposures are marked-to-market daily. While they can fluctuate considerably in value on a single day and can dramatically affect any one quarter's results, we believe many of them now have decent long-term value. It is also worth noting that our gross exposures are, in general, lower than those of most of our competitors.

I have already discussed our subprime and home equity exposures. With regard to our Commercial Bank, an exposure worth bringing to your attention is the $16.5 billion in commercial real estate exposure. This position is well-diversified and represents only 12% of our total Commercial Bank credit portfolio. We have been very conservative in growing this exposure in recent years. On a percentage and absolute basis, it represents less than half the average exposure of our Commercial Bank peers.

The financial stability of some monoline bond insurers remains an issue

Some market analysts believe there could be a downgrading of the monoline bond insurers – from their triple-A rating status to double-A status or worse – and possibly one or more defaults. Our gross exposures to monolines are significant and cut across multiple product lines and businesses. However, in spite of the market talk around this issue, we do not regard a downgrade to double-A as a major event. While no one could know all of the ramifications of a worst-case default scenario, we believe the impact – while costly for JPMorgan Chase – would be manageable.

New products often will have problems

We need to keep a close eye on the design, trading and operational aspects of new financial products. Almost all new products go through periods of stress and market-testing, which, in turn, causes problems of one sort or another. At one time, even basic equity trading nearly brought Wall Street to its knees when the volume of trades exceeded the systems' processing capacity. There have been similar problems with exotic mortgage products, options, foreign exchange, high-yield bonds, hybrid derivatives and so on. In many cases, these issues were eventually resolved through the creation of standardized contracts and standard industry exchanges and clearinghouses. These, in turn, facilitated more efficiency in the clearing and netting of risk, provided better regulatory controls and led to stronger management oversight.

Many market participants expected derivatives to be at the heart of the next financial crisis. So far, most derivatives markets have averted the storm, and derivatives have served as an essential tool for some companies to use in shedding or hedging risk That said, there are some legitimate concerns. A severe economic downturn could put extreme pressure on the settlement and clearance functions in some of the derivatives markets. With this and other concerns in mind, we can assure you that we are paying close attention to our derivatives positions and exposure. In addition, we are strongly in favor of regulatory and industry efforts to coordinate and improve the control environment.

A recession will have a significant impact on credit

Our business is cyclical, and one of the largest risks we face is the impact of a recession on credit in general. In last year's letter, we addressed the recession and credit issue, and what we said then bears repeating now:

> *We continuously analyze and measure our risk. In fact, during budget planning, we ask our management teams to prepare – on all levels – for difficult operating environments. While the risk comes in many forms, such as recession, market turmoil and geopolitical turbulence, one of our largest risks is still the credit cycle. Credit losses, both consumer and wholesale, have been extremely low, perhaps among the best we'll see in our lifetimes. We must be prepared for a return to the norm in the credit cycle.*
>
> *In a tougher credit environment, credit losses could rise significantly, by as much as $5 billion over time, which may require increases in loan loss reserves. Investment Bank revenue could drop, and the yield curve could sharply invert. This could have a significant negative effect on JPMorgan Chase's earnings. That said, these events generally do not occur simultaneously, and there would likely be mitigating factors to lift our earnings (e.g., compensation pools would probably go down, some customer fees and spreads would probably go up, and funding costs could decrease).*
>
> *It's important to share these scenarios with you, not to worry you but to be as transparent as possible about the potential impact of these negative scenarios and to let you know how we are preparing for them. We do not know exactly what will occur or when, but we do know that bad things happen. There is no question that our company's earnings could go down substantially in a recessionary environment. But if we are prepared, we can both minimize the damage to our company and capitalize on opportunities in the marketplace.*
> (Shareholder letter, 2006)

Because of the extreme drop in home equity and subprime loan value, the losses I referred to last year could be even greater in 2008. However, we believe our strong capital and the increase of our loan loss reserves have put us in good shape. In 2007, we added $2 billion to loan loss reserves, and we expect to continue adding to those reserves in 2008. Our reserve positions across all of our businesses are among the best in the industry.

Managing in a downturn requires a different strategy

The impact of a downturn – and its effect on earnings – varies considerably by line of business. Therefore, it requires each of our businesses to develop its own strategy for dealing with the unique set of risks and mitigating factors it could face. In some cases, returns could actually increase (because of higher spreads), while in other cases they could decrease (because of lower volumes). In any case, however, we will remain committed to building the business. As such, we will not sacrifice long-term value and meaningful customer service to get better quarterly earnings. In fact, in certain situations, we may actually trade off near-term earnings to gain customers and build market share in businesses that are financially viable and of strategic importance. In those instances, we are also confident that healthy earnings will return. We believe the only time to sacrifice good growth is to protect the financial standing of the company. Fortunately, we are not in that position.

B. Looking Forward

We believe the mortgage business will rebound

In spite of all the difficulties in the mortgage markets, we remain committed to building the country's best mortgage company. The mortgage product is, and will continue to be, the largest and arguably one of the single most important financial products in the world. With our brand, scale, systems, retail branches and our ability to trade, hedge and underwrite mortgages (which include prime, subprime, Alt-A, jumbo and home equity loans), we have what it takes to be a winner in this business. During the latter part of 2007, we set out to increase our home lending market share and have, so far, succeeded. By the end of the fourth quarter of 2007, our share had grown to 11% from 6% a year earlier. As a result of our liquidity and capital strength, we were able to underwrite these loans when others could not. Although we may pay for probably starting this expansion a little too early, we remain committed to the goal.

The risks and rewards of highly structured products will be re-evaluated and changed, but "securitization" will remain viable

JPMorgan is a large participant in the asset-backed securities market (which includes CDOs), and we try to focus on products we believe are transparent and offer reasonable risks and rewards to investors. We deliberately chose to avoid the more structured CDO products because we believed the inherent risks were too high. Additionally, our knowledge of the subprime business informed our decision to remain very cautious about any subprime CDOs, where the bulk of the problems has occurred. We think there's a place for structured CDOs but not in their most complicated forms, such as "CDO-squared." Standards will be materially enhanced (in terms of accounting, operations and ratings guidelines), and many overly complex products will go the way of the dinosaur.

We also believe that while there will likely be changes to the securitization markets, securitization of assets will not go away. Securitization is a highly effective way to finance assets. In fact, many securitized products, like credit cards, have been tested through the market cycle and have not had significant problems. Securitization of subprime assets will probably reopen, too – but the standards will be more conservative, and there will be far more clarity (e.g., better underwriting standards, more capital, etc.). Market discipline, in some form, will also come to bear at each stage of the production chain – from the originator to the packager to the seller – and require each to have the right amount of skin in the game. We are not sure how it will change, but, between regulation and the market, we know it will – and probably for the better.

Accounting can be abused and misused

There's been a lot of discussion about the pros and cons of the mark-to-model versus the mark-to-market approach. We believe it is critically important to trust the value of the assets and liabilities on (and off) one's balance sheet. Regardless of the method one uses (mark-to-market, mark-to-model, etc.), accounting can be abused. This letter is not the right place in which to carry on this debate, but suffice it to say, accounting has become increasingly complex. Much of this complexity is unnecessary and leads to questionable results, adds to earnings volatility and creates **more** room for shenanigans, not less. More work needs to be done to fix this.

Many of our accounting and regulatory capital requirements are pro-cyclical

Many of the methods we use to calculate capital and loan loss reserves are pro-cyclical. In fact, loan loss reserves and capital are often at their lowest levels at precisely the point at which a cyclical downturn begins. In addition, I would argue that fair value accounting rules, margining requirements, rating agencies and regulatory rules add to pro-cyclical behavior. Thoughtful policy changes could provide a substantial cushion to the pro-cyclical forces that make a financial crisis worse. A comprehensive effort between all parties involved (regulators, government and financial institutions) is needed to develop and drive forward these important policy changes.

More assets on the books of banks or financial companies are illiquid (or can quickly become illiquid)

Given this trend, regulators and rating agencies will probably insist that the rise of illiquid assets requires higher levels of capital and proper funding with longer-term debt.

There will be a recovery

We simply cannot know how long this slowdown (or recession) will last or the extent of the damage it will cause. Today's most brilliant economists have various strong, well-argued current views on the subject – they just don't all agree. In any case, our goal is to be prepared.

In reality, our financial system has fairly rapidly and successfully, if not painfully, been dealing with most of the issues I've discussed in this letter. Losses have been taken, substantial capital has been raised and massive deleveraging has already taken place in hedge funds, SIVs, financial companies, REITs, collateralized loan obligations (CLOs) and CDOs. While all losses may not be recognized yet, our sense is that a lot have been (at least for U.S. companies). Importantly, the creation of new potential-problem assets (leveraged loans, subprime assets, CLOs, CDOs and commercial mortgage-backed securities) has virtually ceased.

So, demand will eventually catch up with an ever-diminishing supply of increasingly attractively priced assets. It is unlikely that the pace of deleveraging will intensify. Therefore, it is probable that the financial crisis will mitigate by year-end. In addition, fairly large fiscal and monetary stimulation and the new mortgage rules for Fannie Mae, Freddie Mac and the Federal Housing Authority (which will bring more capital to the mortgage market) could have a positive effect on the markets overall.

Yet, even if financial conditions improve, the economy could continue to erode, causing us to remain in a recessionary environment for a while. And it may sound peculiar (if, in fact, we are going into a recession) that we are also preparing for interest rates that may trend a lot higher over the next several years (we won't go into the reasons now).

We would also like to assure you, all of our shareholders, that while we are preparing for an extended financial crisis, we will never lose sight of our primary purpose to build a strong company and great franchise for the long term.

IV. IN CLOSING

Finally, I would like to make a few comments about your management team. You don't get to see these professionals in action as I do, but if you did, you would be extremely proud of them. Not only are they ethical, disciplined and thoughtful, but the tougher conditions became, the more they stepped up to support the firm. People canceled time off and worked or flew through the night to quickly respond to the extraordinary circumstances of the past year. Everyone shared information, offered to help and actively demonstrated how much they care about the work they do and the customers they serve. I am privileged to be part of this great team.

Our senior managers are all shareholders – they retain 75% of any restricted stock and options they receive as compensation. In this and countless other ways, the management team sets a stellar example for all employees of what it means to be invested in the company's long-term success. Currently, 140,000 out of 180,000 employees own stock in the company.

All of us are dedicated to building a great company of which you, our shareholders, our customers and all of our employees can be proud … and we are well on our way.

2007 Highlights and Accomplishments

- *Institutional Investor*'s America's Investment Bank of the Year.
- *Risk* magazine's:
  - Derivatives House of the Year;
  - Best Derivatives House of the Past 20 Years; and
  - Best Credit Derivatives House – Pioneer and Modern Great.
- #1 in global investment banking fees.[(a)]
- #1 in global loan syndications and global high-yield bonds for the third year in a row.[(b)]
- #2 in equity underwriting, up from #6 in 2006.[(b)]
- Revenue of more than $5 billion in equity underwriting and equity markets.
- Record year-over-year revenue performance in:
  - Investment banking fees, 19% growth;
  - M&A advisory fees, 37% growth;
  - Equity underwriting fees, 45% growth; and
  - Equity markets revenue, 13% growth.
- Gross investment banking revenue from Commercial Banking clients up 24% from 2006.
- Strong progress on growth initiatives, including energy, emerging markets and retail structured products.
- Low subprime exposure relative to the financial industry.
- Outstanding first half offset by more difficult second half with leveraged loan and credit-related writedowns.

"Despite the industry-wide challenges we faced during the second half of 2007, we still produced record full-year revenue in several areas. Looking ahead to 2008, we believe having a fortress balance sheet will prove a sizable advantage at a time when capital is at a premium."

Steve Black (left)
co-CEO Investment Bank

"The risk management lessons we learned from the past paid dividends this year and helped us avoid some of the pitfalls that affected the industry. While we remain cautious about the near-term outlook, we believe we are extremely well-positioned for the long term with strong client relationships, global leadership positions and high capital ratios."

Bill Winters (right)
co-CEO Investment Bank

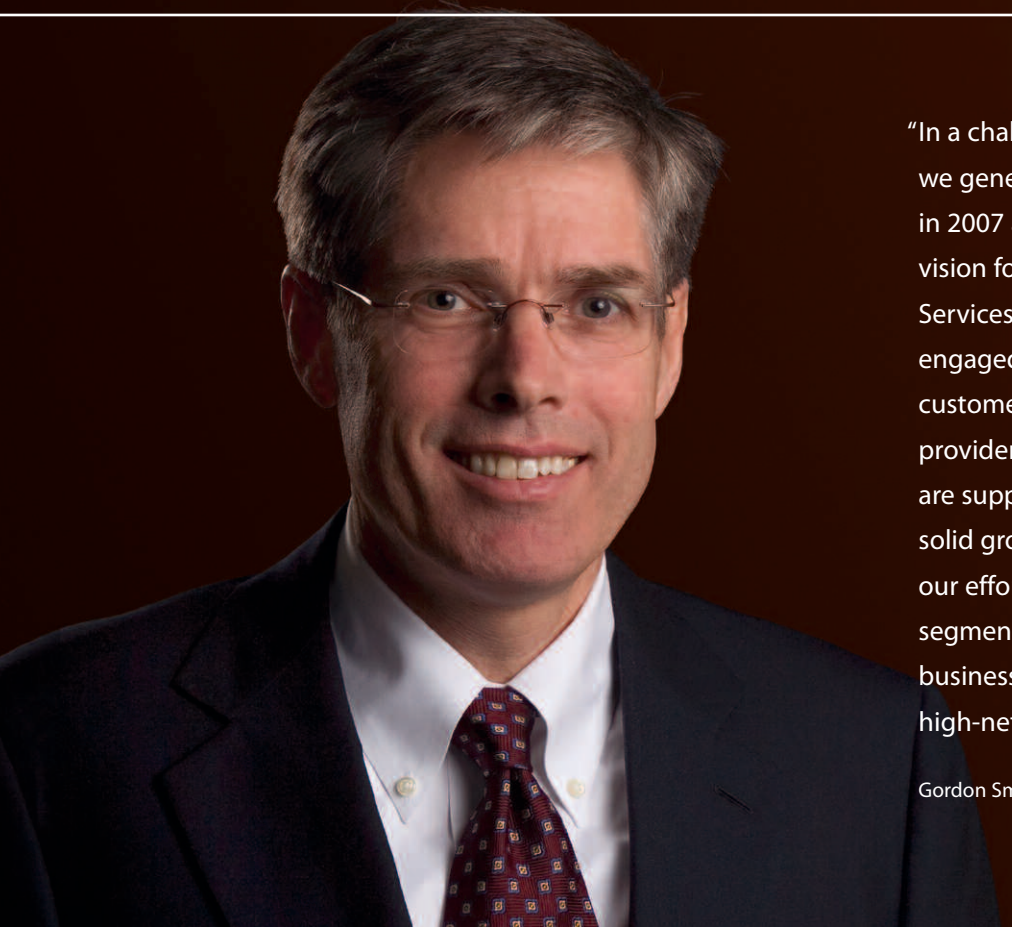
Retail Financial Services

"Capitalizing on the strength of the Chase brand, we'll continue to expand our branch and ATM network to increase convenience for our customers. We will strengthen our team of well-trained bankers and mortgage officers and improve our products to help customers handle their money, finance their homes, run their businesses and manage their investments, deepening their relationship with Chase.

"We have tightened our underwriting standards and are using our financial strength during this period of economic uncertainty to expand relationships, gain new customers and position ourselves for long-term growth across our businesses."

Charlie Scharf – CEO Retail Financial Services

Retail Financial Services serves consumers and businesses through personal service at bank branches and through ATMs, online banking and telephone banking as well as through loan offices, auto dealerships and school financial aid offices.



Customers can use more than 3,100 bank branches (fourth-largest nationally), 9,100 ATMs (#3) and 290 mortgage offices. More than 13,700 branch salespeople assist customers with checking and savings accounts, mortgages, home equity and business loans, and investments across the 17-state footprint from New York to Arizona. Consumers also can obtain loans through more than 14,500 auto dealerships and 5,200 schools and universities nationwide.

2007 Highlights and Accomplishments

- Opened 127 new branches (and a total of 528 since 2004) and added 680 ATMs (2,536 since 2004) in major Chase markets.
- Increased in-branch personal bankers, business bankers, mortgage officers and investment specialists by a combined 2,568, or 23%, including additions from the 2006 acquisition of The Bank of New York branches.
- Increased in-branch sales of credit cards 23%, mortgages 31% and investments 23%.
- Increased checking accounts by 844,000, or 8%, and deposits 3% to $221 billion.
- Increased number of households with core retail relationships 12% to 10.3 million.
- Increased business banking loan originations 20% to $6.8 billion.
- Expanded market share in mortgages and home equity to 11% in the fourth quarter, up from 6% a year earlier.[(a)] Originated $208 billion in home loans during the year even as we tightened our underwriting standards.
- Increased third-party mortgage servicing portfolio 17% to $615 billion.
- Increased active online customer base 21%; generated 258 million online transactions, including bill payment and electronic payment, an increase of 38%.
- Improved customer experience and sales through refurbishment, rebranding, technology conversion and sales process enhancements at former Bank of New York branches.

Card Services

"In a challenging environment, we generated solid momentum in 2007 and established a clear vision for the future. Chase Card Services aims to create lifelong, engaged relationships with our customers by being a trusted provider of financial services. We are supporting our vision with a solid growth strategy – focusing our efforts on key marketplace segments, including the small business, mass affluent and high-net-worth markets."

Gordon Smith – CEO Card Services

With 155 million cards in circulation and more than $157 billion in managed loans, Chase Card Services is one of the nation's largest credit card issuers. Customers used Chase cards to meet more than $354 billion worth of their spending needs in 2007.

With hundreds of partnerships, Chase has a market leadership position in building loyalty programs with many of the world's most respected brands.

2007 Highlights and Accomplishments

- Added 16 million new Visa, MasterCard and private label accounts.
- Maintained Chase's position as the second-leading issuer of MasterCard and Visa cards in the U.S.
- Moved core processing platform in-house, allowing for greater technological innovation, more flexibility and reduced costs.
- Further enhanced the innovative Chase Freedom program, which gives cardmembers the choice of earning either cash or points and changing back and forth without leaving any rewards behind. The Chase Freedom program has generated more than one million new customers since its 2006 launch.
- Better leveraged the JPMorgan Chase franchise by increasing the number of credit cards sold through the Retail Financial Services network by 23% from 2006.
- Increased charge volume by $15 billion from 2006.
- Increased net revenue 3% and grew managed loans 3% while investing in activities to attract new customers and further engage current cardmembers.
- Increased merchant processing volume to $719 billion, up 9% from 2006, through Chase Paymentech Solutions, LLC, the nation's largest merchant processor.

Commercial Banking

Commercial Banking serves more than 30,000 clients nationally, including corporations, municipalities, financial institutions and not-for-profit entities with annual revenue generally ranging from $10 million to $2 billion. It is the #1 commercial bank in market penetration within Chase's retail branch footprint.[(a)]

Commercial Banking delivers extensive industry knowledge, local expertise and a dedicated service model. In partnership with the firm's other businesses, it provides comprehensive solutions, including lending, treasury services, investment banking and asset management to meet its clients' domestic and international financial needs.

2007 Highlights and Accomplishments

- Increased net income 12% to a record $1.1 billion and net revenue 8% to a record $4.1 billion.
- Achieved record results in gross investment banking revenue of $888 million, treasury services revenue of $2.4 billion, loan balances of $61.1 billion and liability balances of $87.7 billion.
- #1 commercial bank in market penetration within Chase's retail branch footprint.[(a)]
- #2 large middle-market lender in the U.S.[(b)]
- #2 asset-based lender in the U.S.[(b)]
- Launched seven new offices, expanding coverage in Atlanta, Nashville, Philadelphia and Seattle, including three international locations in Vancouver, Mumbai and Singapore.
- Added in excess of 2,200 new banking relationships through accelerated calling efforts and targeted marketing initiatives.
- Maintained favorable market position relative to the industry through conservative credit underwriting and strong credit reserves.
- Converted the wholesale New York Tri-State customer base of more than 332,000 deposit accounts, representing almost $28 billion, and migrated customers acquired from The Bank of New York to the firm's platforms.
- Delivered focused leadership training to more than 500 managers and enhanced employee diversity and performance initiatives.

(a) Barlow Footprint Study, 2007
(b) Loan Pricing Corporation, 2007

"Commercial Banking performed exceptionally well in a volatile and challenging economic environment, retaining a position of strength in our markets and resulting in record growth consistent with our 2007 plan.

"In 2008, we will redouble our prospecting efforts to broaden our market coverage, maintain a strong and well-managed loan portfolio, and continue to make smart credit decisions. We will also practice diligent expense control and remain vigilant over market conditions to provide insightful and disciplined advice to our clients."

Todd Maclin – CEO Commercial Banking

Treasury & Securities Services

Treasury & Securities Services is a global leader in transaction, investment and information services. We are one of the world's largest cash management providers and a leading global custodian, operating through two divisions:

Treasury Services provides cash management, trade, wholesale card and liquidity products and services to small- and mid-sized companies, multinational corporations, financial institutions and government entities.

Worldwide Securities Services holds, values, clears and services securities, cash and alternative investments for investors and broker-dealers and manages depositary receipt programs globally.

(a) Ernst & Young
(b) NACHA
(c) The Clearing House
(d) Federal Reserve

2007 Highlights and Accomplishments

- Increased net income 28% year-over-year to a record $1.4 billion on the strength of record net revenue of $6.9 billion.
- Increased assets under custody 15% to $15.9 trillion and liability balances 21% to $228.9 billion.
- #1 in Sameday U.S. Dollar Funds Transfers[(a)], Automated Clearing House Originations[(b)], CHIPS[(c)] and Fedwire.[(d)]
- Grew revenue 26% outside the U.S. and strengthened our international presence, securing regulatory approval to connect to China's electronic clearing system and growing our hedge fund, image deposit, euro payment, private equity, commercial card and other capabilities in targeted markets.
- Migrated to a single U.S. dollar deposit platform in JPMorgan Chase's largest conversion, involving almost $180 billion in balances and nearly $10 trillion in daily transactions.
- Completed acquisitions of Xign Corporation, a leading provider of business-to-business on-demand financial settlement solutions; of FisaCure, Inc., a leading provider of electronic remittance services to the healthcare industry; and of the U.S. transfer agency services business of Integrated Investment Services.
- Introduced new offerings to support comprehensive financial supply chain and border logistics management; card-based invoice settlement for accounts payable; and the securities processing and fund administration needs of financial institutions.
- Industry awards included Best Overall Bank for Payments and Collections in North America (*Global Finance*), Best Investor Services (*Waters* magazine) and Best Liquidity Solution Provider (*The Asset*).

"Our businesses posted record results in 2007. Going forward, we see our most promising opportunities emerging in key markets outside the U.S., and we're confident we'll continue to effectively grow our businesses around the world.

"In 2008, we will expand on our success by enhancing our products and delivery of services to our clients – not only to improve efficiency and reduce costs but also to ensure we can adequately support the tremendous growth in business we continue to experience."

Heidi Miller
CEO Treasury & Securities Services

Asset Management

"Looking ahead, we see tremendous opportunity to build upon the momentum in our business. We will continue to expand our alternative asset class business, delivering innovative, best-in-class investment products to our clients. Our industry-leading Private Bank will capitalize on its strength, while we increase our focus on growth in Private Client Services. In Asia, we will broaden and deepen our reach, building on our unique leadership position in the region.

"Through our commitment to our values and our dedication to outstanding investment performance, we will continue to deliver the best of JPMorgan Asset Management to our clients."

Jes Staley – CEO Asset Management

With assets under supervision of $1.6 trillion, Asset Management is a global leader in investment and wealth management. Our clients include institutions, retail investors and high-net-worth individuals in every major market throughout the world.

We offer global investment management in equities, fixed income, real estate, hedge funds, private equity and liquidity. We provide trust and estate and banking services to high-net-worth clients and retirement services for corporations and individuals. The majority of our client assets are in actively managed portfolios.

(d) In conjunction with our joint venture partner, Shanghai International Trust and Investment Co., Ltd. (SITCO); quota of $4 billion

2007 Highlights and Accomplishments

- Record financial performance of 27% revenue growth and 40% earnings growth.
- Reached $1.2 trillion in assets under management and $1.6 trillion in assets under supervision. Net assets under management inflows were at a record level of $115 billion.
- JPMorgan Asset Management is the largest manager of AAA-rated global liquidity funds with more than $294 billion under management. Grew global liquidity balances 29%.[(a)]
- Experienced record growth in assets under supervision for the Private Bank and Private Client Services with an increase of $80 billion. Achieved second consecutive year of record growth in net new Private Bank clients.
- Retained position as largest manager of hedge funds with assets under management of $45 billion.[(b)]
- Grew alternative assets under management, including hedge funds, real estate and private equity 21% to $121 billion. Continued to experience strong investor interest in Highbridge funds with 68% growth in assets under management.
- Despite challenging markets throughout the second half of the year, maintained strong three- and five-year investment performance. Globally, the ranking of long-term mutual fund assets in the first or second quartiles was 76% for the five years and 75% for the three years ended December 31, 2007. One-year performance declined from 83% to 57%.[(c)]
- Launched our first Qualified Domestic Institutional Investor (QDII) product in China, raising a record $15.4 billion on the first day of IPO from 1.9 million clients.[(d)]

Corporate Responsibility

"Corporate responsibility is something that we all, as business leaders, ought to be thinking about every day. We need to continually review and ensure that we act in a way that focuses on the impact our businesses can and should have. Taking this seriously is a winning strategy for our consumers and clients, our company and the community."

Bill Daley –
Head of Corporate Responsibility

At JPMorgan Chase, corporate responsibility goes beyond philanthropy. It's about what we do every day in our businesses and how we do it. We are committed to managing our businesses to create value for our consumer and corporate clients, as well as our shareholders, communities and employees and to being a responsible corporate citizen.

From left to right:
Thelma Dye – *Director of Northside Center for Child Development,*
Bill Daley – *Corporate Responsibility, JPMorgan Chase,*
Kim Davis – *Philanthropy, JPMorgan Chase*

2007 Highlights and Accomplishments

- Established the Office of Corporate Responsibility to develop a comprehensive and identifiable platform driven by our business activities.
- Strengthened our focus on the environment by investing in alternative energy projects, helping our clients reduce carbon emissions and taking the lead in developing The Carbon Principles.
- Began the renovation of our NYC headquarters with the goal of Platinum LEED certification and opened pilot LEED-certified bank branches in Colorado and Texas.
- Helped shape federal legislation to protect homeowners and to serve a broader range of families through expanded mortgage-loan limits.
- Helped consumers understand our products' terms and fees through programs such as "Mortgage Nutrition Labels" in Home Lending and "Clear and Simple" in Card Services.
- Modified or refinanced $3 billion in subprime adjustable-rate mortgages to keep families in their homes. Shared expertise in helping lead national initiatives to prevent foreclosure (including HOPE NOW) and trained more than 1,300 non-profit counselors to assist struggling homeowners.
- Created a dedicated investment banking unit to support microfinance and social enterprises around the world.
- Invested $114 million in more than 2,400 not-for-profit organizations globally in nearly 500 cities across 33 countries.
- Invested more than $338 billion in low- and moderate-income communities across the U.S. in the first four years of our 10-year, $800 billion commitment. Will invest the additional $60 million allocation of New Markets Tax Credit in low-income communities.
- Increased supplier diversity spending, with more than $700 million going to minority- and women-owned businesses.

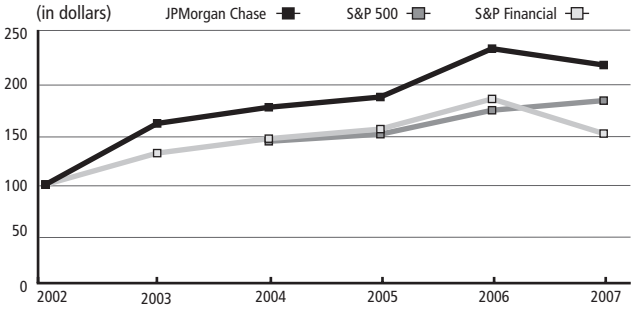
(a) On October 1, 2006, JPMorgan Chase & Co. completed the exchange of selected corporate trust businesses for the consumer, business banking and middle-market banking businesses of The Bank of New York Company Inc. The results of operations of these corporate trust businesses are being reported as discontinued operations for each of the periods presented.

(b) JPMorgan Chase's common stock is listed and traded on the New York Stock Exchange, the London Stock Exchange Limited and the Tokyo Stock Exchange. The high, low and closing prices of JPMorgan Chase's common stock are from The New York Stock Exchange Composite Transaction Tape.



(c) On July 1, 2004, Bank One Corporation merged with and into JPMorgan Chase. Accordingly, 2004 results include six months of the combined Firm's results and six months of heritage JPMorgan Chase results.

FIVE-YEAR STOCK PERFORMANCE

The following table and graph compare the five-year cumulative total return for JPMorgan Chase & Co. ("JPMorgan Chase" or the "Firm") common stock with the cumulative return of the S&P 500 Stock Index and the S&P Financial Index. The S&P 500 Index is a commonly referenced U.S. equity benchmark consisting of leading companies from different economic sectors. The S&P Financial Index is an index of 92 financial companies, all of which are within the S&P 500. The Firm is a component of both industry indices.

The following table and graph assumes simultaneous investments of $100 on December 31, 2002, in JPMorgan Chase common stock and in each of the above S&P indices. The comparison assumes that all dividends are reinvested.

December 31, (in dollars)	2002	2003	2004	2005	2006	2007

This section of the Annual Report provides management's discussion and analysis ("MD&A") of the financial condition and results of operations of JPMorgan Chase. See the Glossary of terms on pages 181–183 of definitions of terms used throughout this Annual Report. The MD&A included in this Annual Report contains statements that are forward-looking within the meaning of the Private Securities Litigation Reform Act of 1995. Such statements are based upon the current beliefs and expectations of JPMorgan Chase's management and are subject to significant risks and uncertainties. These risks and uncertainties could cause JPMorgan Chase's results to differ materially from those set forth in such forward-looking statements. Certain of such risks and uncertainties are described herein (see Forward-looking statements on page 101 of this Annual Report) and in the JPMorgan Chase Annual Report on Form 10-K for the year ended December 31, 2007 ("2007 Form 10-K"), in Part I, Item 1A: Risk factors, to which reference is hereby made.

INTRODUCTION

JPMorgan Chase & Co., a financial holding company incorporated under Delaware law in 1968, is a leading global financial services firm and one of the largest banking institutions in the United States of America ("U.S."), with $1.6 trillion in assets, $123.2 billion in stockholders' equity and operations worldwide. The Firm is a leader in investment banking, financial services for consumers and businesses, financial transaction processing and asset management. Under the JPMorgan and Chase brands, the Firm serves millions of customers in the U.S. and many of the world's most prominent corporate, institutional and government clients.

JPMorgan Chase's principal bank subsidiaries are JPMorgan Chase Bank, National Association ("JPMorgan Chase Bank, N.A."), a national banking association with branches in 17 states; and Chase Bank USA, National Association ("Chase Bank USA, N.A."), a national bank that is the Firm's credit card issuing bank. JPMorgan Chase's principal nonbank subsidiary is J.P. Morgan Securities Inc., the Firm's U.S. primary investment banking firm.

JPMorgan Chase's activities are organized, for management reporting purposes, into six business segments, as well as Corporate. The Firm's wholesale businesses comprise the Investment Bank, Commercial Banking, Treasury & Securities Services and Asset Management segments. The Firm's consumer businesses comprise the Retail Financial Services and Card Services segments. A description of the Firm's business segments, and the products and services they provide to their respective client bases, follows.

Investment Bank
JPMorgan is one of the world's leading investment banks, with deep client relationships and broad product capabilities. The Investment Bank's clients are corporations, financial institutions, governments and institutional investors. The Firm offers a full range of investment banking products and services in all major capital markets, including advising on corporate strategy and structure, capital raising in equity and debt markets, sophisticated risk management, market-making in cash securities and derivative instruments and research. The Investment Bank ("IB") also commits the Firm's own capital to proprietary investing and trading activities.

Retail Financial Services
Retail Financial Services ("RFS"), which includes the Regional Banking, Mortgage Banking and Auto Finance reporting segments, serves consumers and businesses through bank branches, ATMs, online banking and telephone banking. Customers can use more than 3,100 bank branches (fourth-largest nationally), 9,100 ATMs (third-largest nationally) and 290 mortgage offices. More than 13,700 branch salespeople assist customers with checking and savings accounts, mortgages, home equity and business loans and investments across the 17-state footprint from New York to Arizona. Consumers also can obtain loans through more than 14,500 auto dealerships and 5,200 schools and universities nationwide.

Card Services
With 155 million cards in circulation and more than $157 billion in managed loans, Card Services ("CS") is one of the nation's largest credit card issuers. Customers used Chase cards to meet more than $354 billion worth of their spending needs in 2007.

With hundreds of partnerships, Chase has a market leadership position in building loyalty programs with many of the world's most respected brands. The Chase-branded product line was strengthened in 2007 with enhancements to the popular Chase Freedom Program, which has generated more than one million new customers since its launch in 2006.

Chase Paymentech Solutions, LLC, a joint venture between JPMorgan Chase and First Data Corporation, is a processor of MasterCard and Visa payments, which handled more than 19 billion transactions in 2007.

Commercial Banking
Commercial Banking ("CB") serves more than 30,000 clients nationally, including corporations, municipalities, financial institutions and not-for-profit entities with annual revenue generally ranging from $10 million to $2 billion. Commercial Banking delivers extensive industry knowledge, local expertise and a dedicated service model. In partnership with the Firm's other businesses, it provides comprehensive solutions including lending, treasury services, investment banking and asset management to meet its clients' domestic and international financial needs.

Treasury & Securities Services
Treasury & Securities Services ("TSS") is a global leader in transaction, investment and information services. TSS is one of the world's largest cash management providers and a leading global custodian. Treasury Services ("TS") provides cash management, trade, wholesale card and liquidity products and services to small and mid-sized companies, multinational corporations, financial institutions and government entities. TS partners with the Commercial Banking, Retail Financial Services and Asset Management businesses to serve clients firmwide. As a result, certain TS revenue is included in other segments' results. Worldwide Securities Services ("WSS") holds, values, clears and services securities, cash and alternative investments for investors and broker-dealers, and manages depositary receipt programs globally.

Asset Management
With assets under supervision of $1.6 trillion, Asset Management ("AM") is a global leader in investment and wealth management. AM clients include institutions, retail investors and high-net-worth individuals in every major market throughout the world. AM offers global investment management in equities, fixed income, real estate, hedge funds, private equity and liquidity, including both money market instruments and bank deposits. AM also provides trust and estate and banking services to high-net-worth clients, and retirement services for corporations and individuals. The majority of AM's client assets are in actively managed portfolios.

EXECUTIVE OVERVIEW

This overview of management's discussion and analysis highlights selected information and may not contain all of the information that is important to readers of this Annual Report. For a more complete understanding of events, trends and uncertainties, as well as the capital, liquidity, credit and market risks, and the Critical accounting estimates, affecting the Firm and its various lines of business, this Annual Report should be read in its entirety.

Business overview

JPMorgan Chase reported record Net income and record Total net revenue in 2007, exceeding the record levels achieved in 2006. Net income in 2007 was $15.4 billion, or $4.38 per share, and Total net revenue was $71.4 billion, compared with Net income of $14.4 billion, or $4.04 per share, and Total net revenue of $62.0 billion for 2006. The return on common equity was 13% in both years. Reported results in 2006 included $795 million of income from discontinued operations related to the exchange of selected corporate trust businesses for the consumer, business banking and middle-market banking businesses of The Bank of New York. Income from continuing operations in 2006 was $13.6 billion, or $3.82 per share. For a detailed discussion of the Firm's consolidated results of operations, see pages 31–35 of this Annual Report.

The Firm's results over the past several years have benefited from growth in the global economy and, most importantly, from the management team's focus on driving organic revenue growth and improving operating margins by investing in each line of business, reducing waste, efficiently using the Firm's balance sheet and successfully completing the integration plan for the merger of Bank One Corporation with and into JPMorgan Chase on July 1, 2004 ("the Merger"). The success in executing on this agenda in 2007 is reflected in the strong organic growth experienced by all of our businesses including: record levels of advisory fees, equity underwriting fees and equity markets revenue; double-digit revenue growth in Retail Financial Services, Treasury & Securities Services and Asset Management; and improved operating margins in most businesses. This improved performance was driven by growth in key business metrics including: double-digit growth in deposit and loan balances; 127 new branches and 680 additional ATMs; 15% growth in assets under custody; $115 billion of net assets under management inflows; 16 million new credit card accounts with 1.4 million sold in branches; and nearly doubling real estate mortgage origination market share to 11% during the fourth quarter of 2007. At the same time the Firm increased loan loss reserve levels, and maintained strong capital ratios and ample levels of liquidity as part of its commitment to maintaining a strong balance sheet.

During 2007, the Firm also continued to create a stronger infrastructure. The Firm successfully completed the in-sourcing of its credit card processing platform, which will allow for faster introduction of new and enhanced products and services. In addition, with the successful completion of the systems conversion and rebranding for 339 former Bank of New York branches and the conversion of the wholesale deposit system (the last significant Merger event which affected more than $180 billion in customer balances), the Firm's consumer and wholesale customers throughout the U.S. now have access to over 3,100 branches and 9,100 ATMs in 17 states, all of which are on common computer systems. With Merger integration activity completed by the end of 2007, the Firm fully realized its established merger-related expense savings target of $3.0 billion. To achieve these merger-related savings, the Firm expensed Merger costs of $209 million during 2007, bringing the total cumulative amount expensed since the Merger announcement to approximately $3.6 billion (including costs associated with the Bank of New York transaction and capitalized costs). With the completion of all Merger integration activity, no further Merger costs will be incurred.

In 2007, the global economy continued to expand and inflation remained well-contained despite ongoing price pressures on energy and agricultural commodities. Developing economies maintained strong momentum throughout the year, but the industrial economies slowed in the second half of the year in response to weak housing conditions, monetary tightening by several central banks, rising petroleum prices and tightening credit conditions. The U.S. housing market for the first time in decades experienced a decline in average home prices with some specific markets declining by double-digit percentages. Despite the slowdown in the industrial economies, labor markets remained relatively healthy, supporting ongoing solid, though slowing consumer spending. Substantial financial losses related to U.S. subprime mortgage loans triggered a flight to quality in global financial markets late in the summer. In addition, during the second half of the year, pressures in interbank funding markets increased, credit spreads widened significantly and credit was difficult to obtain for some less creditworthy wholesale and consumer borrowers. Central banks took a number of actions to counter pressures in funding markets, including reducing interest rates and suspending further tightening actions. Capital markets activity increased significantly in the first half of 2007, but declined over the second half of the year amid difficult mortgage and credit market conditions. Despite the volatility in capital markets activity, U.S. and international equity markets performance was strong, with the U.S. stock market reaching an all-time record in October; however, the stock market pulled back from the record level by the end of the year. The S&P 500 and international indices were up, on average, approximately 8% during 2007.

The Firm's improved performance in 2007 benefited both from the investments made in each business and the overall global economic environment. The continued overall expansion of the U.S. and global economies, overall increased level of capital markets activity and positive performance in equity markets helped to drive new business volume and organic growth within each of the Firm's businesses. These

benefits were tempered by the capital markets environment in the second half of the year and the continued weakness in the U.S. housing market. The Investment Bank's lower results were significantly affected by the uncertain and extremely volatile capital markets environment, which resulted in significant markdowns on leveraged lending, subprime positions and securitized products. Retail Financial Services reported lower earnings, reflecting an increase in the Provision for credit losses and higher net charge-offs for the home equity and subprime mortgage loan portfolios related to the weak housing market. Card Services earnings also decreased driven by an increased Provision for credit losses, reflecting a higher level of net charge-offs. The other lines of business each posted improved results versus 2006. Asset Management, Treasury & Securities Services and Commercial Banking reported record revenue and earnings in 2007, and Private Equity posted very strong results.

The discussion that follows highlights the performance of each business segment compared with the prior year, and discusses results on a managed basis unless otherwise noted. For more information about managed basis, see Explanation and reconciliation of the Firm's use of non-GAAP financial measures on pages 36–37 of this Annual Report.

Investment Bank net income decreased from the prior year, driven by lower Total net revenue and a higher Provision for credit losses. The decline in Total net revenue was driven by lower Fixed Income Markets revenue due to markdowns on subprime positions, including subprime collateralized debt obligations ("CDOs"); markdowns on leverage lending funded loans and unfunded commitments; markdowns in securitized products on nonsubprime mortgages and weak credit trading performance. Partially offsetting the decline in revenue were strong investment banking fees, driven by record advisory and record equity underwriting fees; record Equity Markets revenue, which benefited from strong client activity and record trading results; and record revenue in currencies and strong revenue in rates. The Provision for credit losses rose due to an increase in the Allowance for credit losses, primarily resulting from portfolio activity, which included the effect of the weakening credit environment, and portfolio growth.

Retail Financial Services net income declined compared with the prior year. Growth in Total net revenue was more than offset by a significant increase in the Provision for credit losses and higher Total noninterest expense. The increase in Total net revenue was due to higher net mortgage servicing revenue; higher deposit-related fees; the absence of prior-year losses related to mortgage loans transferred to held-for-sale; wider spreads on loans; and higher deposit balances. Revenue also benefited from the Bank of New York transaction and the classification of certain mortgage loan origination costs as expense due to the adoption of SFAS 159. The increase in the Provision for credit losses was due primarily to an increase in the Allowance for loan losses related to home equity loans and subprime mortgage loans, as weak housing prices throughout the year resulted in an increase in estimated losses for both categories of loans. Total noninterest expense increased due to the Bank of New York transaction, the classification of certain loan origination costs as expense due to the adoption of SFAS 159 ("Fair Value Option"), investments in the retail distribution network and higher mortgage production and servicing expense. These increases were offset partially by the sale of the insurance business.

Card Services net income declined compared with the prior year due to an increase in the Provision for credit losses, partially offset by Total net managed revenue growth and a reduction in Total noninterest expense. The growth in Total net managed revenue reflected a higher level of fees, growth in average loan balances and increased net interchange income. These benefits were offset partially by narrower loan spreads, the discontinuation of certain billing practices (including the elimination of certain over-limit fees and the two-cycle billing method for calculating finance charges) and the effect of higher revenue reversals associated with higher charge-offs. The Managed provision for credit losses increased primarily due to a higher level of net charge-offs (the prior year benefited from the change in bankruptcy legislation in the fourth quarter of 2005) and an increase in the allowance for loan losses driven by higher estimated net charge-offs in the portfolio. Total noninterest expense declined from 2006, primarily due to lower marketing expense and lower fraud-related expense, partially offset by higher volume-related expense.

Commercial Banking posted record net income as record Total net revenue was offset partially by a higher Provision for credit losses. Total net revenue reflected growth in liability balances and loans, increased deposit-related fees and higher investment banking revenue. These benefits were offset partially by a continued shift to narrower-spread liability products and spread compression in the loan and liability portfolios. The Provision for credit losses increased from the prior year, reflecting portfolio activity, including slightly lower credit quality, as well as growth in loan balances. Total noninterest expense decreased slightly, as lower compensation expense was offset by higher volume-related expense related to the Bank of New York transaction.

Treasury & Securities Services generated record net income driven by record Total net revenue, partially offset by higher Total noninterest expense. Total net revenue benefited from increased product usage by new and existing clients, market appreciation, wider spreads in securities lending, growth in electronic volumes and higher liability balances. These benefits were offset partially by spread compression and a shift to narrower-spread liability products. Total noninterest expense increased due primarily to higher expense related to business and volume growth, as well as investment in new product platforms.

Asset Management produced record net income, which benefited from record Total net revenue, partially offset by higher Total noninterest expense. Total net revenue grew as a result of increased assets under management, higher performance and placement fees, and higher deposit and loan balances. Total noninterest expense was up, largely due to higher performance-based compensation expense and investments in all business segments.

Corporate net income increased from the prior year due primarily to increased Total net revenue. Total net revenue growth was driven by significantly higher Private Equity gains compared with the prior year, reflecting a higher level of gains and the change in classification of carried interest to compensation expense. Revenue also benefited from a higher level of security gains and an improved net interest spread. Total noninterest expense increased due primarily to higher net litigation expense driven by credit card-related litigation and higher compensation expense.

Income from discontinued operations was $795 million in 2006, which included a one-time gain of $622 million from the sale of selected corporate trust businesses. Discontinued operations (included in the Corporate segment results) included the income statement activity of selected corporate trust businesses sold to The Bank of New York in October 2006.

The Firm's Managed provision for credit losses was $9.2 billion compared with $5.5 billion in the prior year, reflecting increases in both the wholesale and consumer provisions. The total consumer Managed provision for credit losses was $8.3 billion, compared with $5.2 billion in the prior year. The higher provision primarily reflected increases in the Allowance for credit losses largely related to home equity, credit card and subprime mortgage loans and higher net charge-offs. Consumer managed net charge-offs were $6.8 billion in 2007, compared with $5.3 billion in 2006, resulting in managed net charge-off rates of 1.97% and 1.60%, respectively. The wholesale Provision for credit losses was $934 million, compared with $321 million in the prior year. The increase was due primarily to a higher Allowance for credit losses, resulting primarily from portfolio activity, including the effect of the weakening credit environment, and portfolio growth. Wholesale net charge-offs were $72 million in 2007 (net charge-off rate of 0.04%), compared with net recoveries of $22 million in 2006 (net recovery rate of 0.01%). In total, the Firm increased its Allowance for credit losses in 2007 by $2.3 billion, bringing the balance of the allowance to $10.1 billion at December 31, 2007.

The Firm had, at year end, Total stockholders' equity of $123.2 billion and a Tier 1 capital ratio of 8.4%. The Firm purchased $8.2 billion, or 168 million shares, of its common stock during the year.

2008 Business outlook

The following forward-looking statements are based upon the current beliefs and expectations of JPMorgan Chase's management and are subject to significant risks and uncertainties. These risks and uncertainties could cause JPMorgan Chase's results to differ materially from those set forth in such forward-looking statements.

JPMorgan Chase's outlook for 2008 should be viewed against the backdrop of the global and U.S. economies (which currently are extremely volatile), financial markets activity (including interest rate movements), the geopolitical environment, the competitive environment and client activity levels. Each of these linked factors will affect the performance of the Firm's lines of business. The Firm currently anticipates a lower level of growth globally and in the U.S. during 2008 and increased credit costs in all businesses. The slower the growth is, or the weaker the economic conditions are, compared with current forecasts, the more the Firm's financial results could be adversely affected.

The consumer Provision for credit losses could increase substantially as a result of a higher level of losses in Retail Financial Services' $94.8 billion home equity loan portfolio and growth and increased losses in the $15.5 billion retained subprime mortgage loan portfolio. Given the potential stress on the consumer from continued downward pressure on housing prices and the elevated inventory of unsold houses nationally, management remains extremely cautious with respect to the home equity and subprime mortgage portfolios. Economic data released in early 2008, including continued declines in housing prices and increasing unemployment, indicate that losses will likely continue to rise in the home equity portfolio. In addition, the consumer provision could increase due to a higher level of net charge-offs in Card Services. Based on management's current economic outlook, home equity losses for the first quarter of 2008 could be approximately $450 million and net charge-offs could potentially double from this level by the fourth quarter of 2008, and the net charge-off rate for Card Services could potentially increase to approximately 4.50% of managed loans in the first half of 2008 and to approximately 5.00% by the end of 2008. Net charge-offs for home equity and card services could be higher than management's current expectations depending on such factors as changes in housing prices, unemployment levels and consumer behavior. The wholesale Provision for credit losses may also increase over time as a result of loan growth, portfolio activity and changes in underlying credit conditions.

The Investment Bank enters 2008 with the capital markets still being affected by the disruption in the credit and mortgage markets, as well as by overall lower levels of liquidity and wider credit spreads, all of which could potentially lead to reduced levels of client activity, difficulty in syndicating leveraged loans, lower investment banking fees and lower trading revenue. While some leveraged finance loans were sold during the fourth quarter of 2007, the Firm held $26.4 billion of leveraged loans and unfunded commitments as held-for-sale as of December 31, 2007. Markdowns in excess of 6% have been taken on the leveraged lending positions as of year-end 2007. These positions are difficult to hedge effectively and as market conditions have continued to deteriorate in the first quarter of 2008, it is likely there will be further markdowns on this asset class. In January 2008, the Firm decided, based on its view of potential relative returns, to retain for investment $4.9 billion of the leveraged lending portfolio that had been previously held-for-sale. The Investment Bank also held, at year end, an aggregate $2.7 billion of subprime CDOs and other subprime-related exposures which could also be negatively affected by market conditions during 2008. While these positions are substantially hedged (none of the hedges include insurance from monoline insurance companies), there can be no assurance that the Firm will not incur additional losses on these positions, as these markets are illiquid and further writedowns may be necessary. Other exposures as of December 31, 2007 that have higher levels of risk given the current market environment include CDO warehouse and trading positions of $5.5 billion (over 90% corporate loans and bonds); Commercial Mortgage-Backed Securities ("CMBS") exposure of $15.5 billion; and $6.4 billion of Alt-A mortgage positions.

A weaker economy and lower equity markets in 2008 would also adversely affect business volumes, assets under custody and assets under management in Asset Management and Treasury & Securities Services. Management continues to believe that the net loss in Treasury and Other Corporate on a combined basis will be approximately $50 million to $100 million per quarter over time. Private equity results, which are dependent upon the capital markets, could continue to be volatile and may be significantly lower in 2008 than in 2007. For the first quarter of 2008, private equity gains are expected to be minimal.

The following section provides a comparative discussion of JPMorgan Chase's Consolidated results of operations on a reported basis for the three-year period ended December 31, 2007. Factors that relate primarily to a single business segment are discussed in more detail within that business segment than they are in this consolidated section. For a discussion of the Critical accounting estimates used by the Firm that affect the Consolidated results of operations, see pages 96–98 of this Annual Report.

Revenue

Year ended December 31, (in millions)	**2007**	2006	2005
Investment banking fees	**$ 6,635**	$ 5,520	$ 4,088
Principal transactions	**9,015**	10,778	8,072
Lending & deposit-related fees	**3,938**	3,468	3,389
Asset management, administration and commissions	**14,356**	11,855	9,988
Securities gains (losses)	**164**	(543)	(1,336)
Mortgage fees and related income	**2,118**	591	1,054
Credit card income	**6,911**	6,913	6,754
Other income	**1,829**	2,175	2,684
Noninterest revenue	**44,966**	40,757	34,693
Net interest income	**26,406**	21,242	19,555
Total net revenue	**$71,372**	$61,999	$54,248

2007 compared with 2006

Total net revenue of $71.4 billion was up $9.4 billion, or 15%, from the prior year. Higher Net interest income, very strong private equity gains, record Asset management, administration and commissions revenue, higher Mortgage fees and related income and record Investment banking fees contributed to the revenue growth. These increases were offset partially by lower trading revenue.

Investment banking fees grew in 2007 to a level higher than the previous record set in 2006. Record advisory and equity underwriting fees drove the results, partially offset by lower debt underwriting fees. For a further discussion of Investment banking fees, which are primarily recorded in IB, see the IB segment results on pages 40–42 of this Annual Report.

Principal transactions revenue consists of trading revenue and private equity gains. Trading revenue declined significantly from the 2006 level, primarily due to markdowns in IB of $1.4 billion (net of hedges) on subprime positions, including subprime CDOs, and $1.3 billion (net of fees) on leveraged lending funded loans and unfunded commitments. Also in IB, markdowns in securitized products on nonsubprime mortgages and weak credit trading performance more than offset record revenue in currencies and strong revenue in both rates and equities. Equities benefited from strong client activity and record trading results across all products. IB's Credit Portfolio results increased compared with the prior year, primarily driven by higher revenue from risk management activities. The increase in private equity gains from 2006 reflected a significantly higher level of gains, the classification of certain private equity carried interest as Compensation expense and a fair value adjustment in the first quarter of 2007 on nonpublic private equity investments resulting from the adoption of SFAS 157 ("Fair Value Measurements"). For a further discussion of Principal transactions revenue, see the IB and Corporate segment results on pages 40–42 and 59–60, respectively, and Note 6 on page 122 of this Annual Report.

Lending & deposit-related fees rose from the 2006 level, driven primarily by higher deposit-related fees and the Bank of New York transaction. For a further discussion of Lending & deposit-related fees, which are mostly recorded in RFS, TSS and CB, see the RFS segment results on pages 43–48, the TSS segment results on pages 54–55, and the CB segment results on pages 52–53 of this Annual Report.

Asset management, administration and commissions revenue reached a level higher than the previous record set in 2006. Increased assets under management and higher performance and placement fees in AM drove the record results. The 18% growth in assets under management from year-end 2006 came from net asset inflows and market appreciation across all segments: Institutional, Retail, Private Bank and Private Client Services. TSS also contributed to the rise in Asset management, administration and commissions revenue, driven by increased product usage by new and existing clients and market appreciation on assets under custody. Finally, commissions revenue increased, due mainly to higher brokerage transaction volume (primarily included within Fixed Income and Equity Markets revenue of IB), which more than offset the sale of the insurance business by RFS in the third quarter of 2006 and a charge in the first quarter of 2007 resulting from accelerated surrenders of customer annuities. For additional information on these fees and commissions, see the segment discussions for IB on pages 40–42, RFS on pages 43–48, TSS on pages 54–55, and AM on pages 56–58, of this Annual Report.

The favorable variance resulting from Securities gains in 2007 compared with Securities losses in 2006 was primarily driven by improvements in the results of repositioning of the Treasury investment securities portfolio. Also contributing to the positive variance was a $234 million gain from the sale of MasterCard shares. For a further discussion of Securities gains (losses), which are mostly recorded in the Firm's Treasury business, see the Corporate segment discussion on pages 59–60 of this Annual Report.

Mortgage fees and related income increased from the prior year as mortgage servicing rights ("MSRs") asset valuation adjustments and growth in third-party mortgage loans serviced drove an increase in net mortgage servicing revenue. Production revenue also grew, as an increase in mortgage loan originations and the classification of certain loan origination costs as expense (loan origination costs previously netted against revenue commenced being recorded as an expense in the first quarter of 2007 due to the adoption of SFAS 159) more than offset markdowns on the mortgage warehouse and pipeline. For a discussion of Mortgage fees and related income, which is recorded primarily in RFS's Mortgage Banking business, see the Mortgage Banking discussion on pages 46–47 of this Annual Report.

Credit card income remained relatively unchanged from the 2006 level, as lower servicing fees earned in connection with securitization activities, which were affected unfavorably by higher net credit losses and narrower loan margins, were offset by increases in net interchange income earned on the Firm's credit and debit cards. For further discussion of Credit card income, see CS's segment results on pages 49–51 of this Annual Report.

Other income declined compared with the prior year, driven by lower gains from loan sales and workouts, and the absence of a $103 million gain in the second quarter of 2006 related to the sale of MasterCard shares in its initial public offering. (The 2007 gain on the sale of MasterCard shares was recorded in Securities gains (losses) as the shares were transferred to the available-for-sale ("AFS") portfolio subsequent to the IPO.) Increased income from automobile operating leases and higher gains on the sale of leveraged leases and education loans partially offset the decline.

Net interest income rose from the prior year, primarily due to the following: higher trading-related Net interest income, due to a shift of Interest expense to Principal transactions revenue (related to certain IB structured notes to which fair value accounting was elected in connection with the adoption of SFAS 159); growth in liability and deposit balances in the wholesale and consumer businesses; a higher level of credit card loans; the impact of the Bank of New York transaction; and an improvement in Treasury's net interest spread. These benefits were offset partly by a shift to narrower-spread deposit and liability products. The Firm's total average interest-earning assets for 2007 were $1.1 trillion, up 12% from the prior year. The increase was primarily driven by higher Trading assets – debt instruments, Loans, and AFS securities, partially offset by a decline in Interests in purchased receivables as a result of the restructuring and deconsolidation during the second quarter of 2006 of certain multi-seller conduits that the Firm administered. The net interest yield on these assets, on a fully taxable equivalent basis, was 2.39%, an increase of 23 basis points from the prior year, due in part to the adoption of SFAS 159.

2006 compared with 2005

Total net revenue for 2006 was $62.0 billion, up $7.8 billion, or 14%, from the prior year. The increase was due to higher Principal transactions revenue, primarily from strong trading results, higher Asset management, administration and commission revenue and growth in Investment banking fees. Also contributing to the increase was higher Net interest income and lower securities portfolio losses. These improvements were offset partially by a decline in Other income partly as a result of the gain recognized in 2005 on the sale of BrownCo, the on-line deep discount brokerage business, and lower Mortgage fees and related income.

The increase in Investment banking fees was driven by strong growth in debt and equity underwriting, as well as advisory fees. For further discussion of Investment banking fees, which are primarily recorded in IB, see the IB segment results on pages 40–42 of this Annual Report.

Revenue from Principal transactions activities increased compared with the prior year, partly driven by strong trading revenue results due to improved performance in IB Equity and Fixed income markets, partially offset by lower private equity gains. For a further discussion of Principal transactions revenue, see the IB and Corporate segment results on pages 40–42 and 59–60, respectively, and Note 6 on page 122 of this Annual Report.

Lending & deposit-related fees rose slightly in comparison with the prior year as a result of higher fee income on deposit-related fees and, in part, from the Bank of New York transaction. For a further discussion of Lending & deposit-related fees, which are mostly recorded in RFS, TSS and CB, see the RFS segment results on pages 43–48, the TSS segment results on pages 54–55, and the CB segment results on pages 52–53 of this Annual Report.

The increase in Asset management, administration and commissions revenue in 2006 was driven by growth in assets under management in AM, which exceeded $1 trillion at the end of 2006, higher equity-related commissions in IB and higher performance and placement fees. The growth in assets under management reflected new asset inflows in the Institutional and Retail segments. TSS also contributed to the rise in Asset management, administration and commissions revenue, driven by increased product usage by new and existing clients and market appreciation on assets under custody. In addition, commissions in the IB rose as a result of strength across regions, partly offset by the sale of the insurance business and BrownCo. For additional information on these fees and commissions, see the segment discussions for IB on pages 40–42, RFS on pages 43–48, TSS on pages 54–55, and AM on pages 56–58, of this Annual Report.

The favorable variance in Securities gains (losses) was due primarily to lower Securities losses in Treasury in 2006 from portfolio repositioning

activities in connection with the management of the Firm's assets and liabilities. For a further discussion of Securities gains (losses), which are mostly recorded in the Firm's Treasury business, see the Corporate segment discussion on pages 59–60 of this Annual Report.

Mortgage fees and related income declined in comparison with the prior year, reflecting a reduction in net mortgage servicing revenue and higher losses on mortgage loans transferred to held-for-sale. These declines were offset partly by growth in production revenue as a result of a higher volume of loan sales and wider gain on sale margins. For a discussion of Mortgage fees and related income, which is recorded primarily in RFS's Mortgage Banking business, see the Mortgage Banking discussion on pages 46–47 of this Annual Report.

Credit card income increased from the prior year, primarily from higher customer charge volume that favorably affected interchange income and servicing fees earned in connection with securitization activities, which benefited from lower credit losses incurred on securitized credit card loans. These increases were offset partially by increases in volume-driven payments to partners, expense related to reward programs, and interest paid to investors in securitized loans. Credit card income also was affected negatively by the deconsolidation of Paymentech in the fourth quarter of 2005.

The decrease in Other income compared with the prior year was due to a $1.3 billion pretax gain recognized in 2005 on the sale of BrownCo and lower gains from loan workouts. Partially offsetting these two items were higher automobile operating lease revenue; an increase in equity investment income, in particular, from Chase Paymentech Solutions, LLC; and a pretax gain of $103 million on the sale of MasterCard shares in its initial public offering.

Net interest income rose compared with the prior year due largely to improvement in Treasury's net interest spread and increases in wholesale liability balances, wholesale and consumer loans, AFS securities and consumer deposits. Increases in consumer and wholesale loans and deposits included the impact of the Bank of New York transaction. These increases were offset partially by narrower spreads on both trading-related assets and loans, a shift to narrower-spread deposits products, RFS's sale of the insurance business and the absence of BrownCo in AM. The Firm's total average interest-earning assets in 2006 were $995.5 billion, up 11% from the prior year, primarily as a result of an increase in loans and other liquid earning assets, partially offset by a decline in Interests in purchased receivables as a result of the restructuring and deconsolidation during the second quarter of 2006 of certain multi-seller conduits that the Firm administered. The net yield on interest-earning assets, on a fully taxable-equivalent basis, was 2.16%, a decrease of four basis points from the prior year.

Provision for credit losses

Year ended December 31, (in millions)	**2007**	2006	2005
Provision for credit losses	**$ 6,864**	$ 3,270	$ 3,483

2007 compared with 2006

The Provision for credit losses in 2007 rose $3.6 billion from the prior year due to increases in both the consumer and wholesale provisions. The increase in the consumer provision from the prior year was largely due to an increase in estimated losses related to home equity, credit card and subprime mortgage loans. Credit card net charge-offs in 2006 benefited following the change in bankruptcy legislation in the fourth quarter of 2005. The increase in the wholesale provision from the prior year primarily reflected an increase in the Allowance for credit losses due to portfolio activity, which included the effect of the weakening credit environment and portfolio growth. For a more detailed discussion of the loan portfolio and the Allowance for loan losses, see the segment discussions for RFS on pages 43–48, CS on pages 49–51, IB on pages 40–42, CB on pages 52–53 and Credit risk management on pages 73–89 of this Annual Report.

2006 compared with 2005

The Provision for credit losses in 2006 declined $213 million from the prior year due to a $1.3 billion decrease in the consumer Provision for credit losses, partly offset by a $1.1 billion increase in the wholesale Provision for credit losses. The decrease in the consumer provision was driven by CS, reflecting lower bankruptcy-related losses, partly offset by higher contractual net charge-offs. The 2005 consumer provision also reflected a $350 million special provision related to Hurricane Katrina, a portion of which was released in 2006. The increase in the wholesale provision was due primarily to portfolio activity, partly offset by a decrease in nonperforming loans. The benefit in 2005 was due to strong credit quality, reflected in significant reductions in criticized exposure and nonperforming loans. Credit quality in the wholesale portfolio was stable.

Noninterest expense

Year ended December 31, (in millions)	**2007**	2006	2005
Compensation expense	**$ 22,689**	$ 21,191	$ 18,065
Occupancy expense	**2,608**	2,335	2,269
Technology, communications and equipment expense	**3,779**	3,653	3,602
Professional & outside services	**5,140**	4,450	4,662
Marketing	**2,070**	2,209	1,917
Other expense	**3,814**	3,272	6,199
Amortization of intangibles	**1,394**	1,428	1,490
Merger costs[(a)]	**209**	305	722
Total noninterest expense	**$ 41,703**	$ 38,843	$ 38,926

(a) On July 1, 2004, Bank One Corporation merged with and into JPMorgan Chase.

2007 compared with 2006

Total noninterest expense for 2007 was $41.7 billion, up $2.9 billion, or 7%, from the prior year. The increase was driven by higher Compensation expense, as well as investments across the business segments and acquisitions.

The increase in Compensation expense from 2006 was primarily the result of investments and acquisitions in the businesses, including additional headcount from the Bank of New York transaction; the classification of certain private equity carried interest from Principal transactions revenue; the classification of certain loan origination costs (loan origination costs previously netted against revenue commenced being recorded as an expense in the first quarter of 2007 due to the adoption of SFAS 159); and higher performance-based incentives. Partially offsetting these increases were business divestitures and continuing business efficiencies.

The increase in Occupancy expense from 2006 was driven by ongoing investments in the businesses; in particular, the retail distribution network and the Bank of New York transaction.

Technology, communications and equipment expense increased compared with 2006, due primarily to higher depreciation expense on owned automobiles subject to operating leases in the Auto Finance business in RFS and technology investments to support business growth. Continuing business efficiencies partially offset these increases.

Professional & outside services rose from the prior year, primarily reflecting higher brokerage expense and credit card processing costs resulting from growth in transaction volume. Investments in the businesses and acquisitions also contributed to the increased expense.

Marketing expense declined compared with 2006 due largely to lower credit card marketing expense.

The increase in Other expense from the 2006 level was driven by increased net legal-related costs reflecting a lower level of insurance recoveries and higher expense, which included the cost of credit card-related litigation. Also contributing to the increase were business growth and investments in the businesses, offset partially by the sale of the insurance business at the beginning of the third quarter of 2006, lower credit card fraud-related losses and continuing business efficiencies.

For a discussion of Amortization of intangibles and Merger costs, refer to Note 18 and Note 11 on pages 154–157 and 134, respectively, of this Annual Report.

2006 compared with 2005

Total noninterest expense for 2006 was $38.8 billion, down slightly from the prior year. The decrease was due to material litigation-related insurance recoveries of $512 million in 2006 compared with a net charge of $2.6 billion (includes $208 million of material litigation-related insurance recoveries) in 2005, primarily associated with the settlement of the Enron Corp. and its subsidiaries ("Enron") and WorldCom class action litigations and for certain other material legal proceedings. Also contributing to the decrease were lower Merger costs, the deconsolidation of Paymentech, the sale of the insurance business, and merger-related savings and operating efficiencies. These items were offset mostly by higher performance-based compensation and incremental expense of $712 million related to the adoption of SFAS 123R, the impact of acquisitions and investments in the businesses, and higher marketing expenditures.

The increase in Compensation expense from the prior year was primarily a result of higher performance-based incentives, incremental expense related to SFAS 123R of $712 million for 2006, and additional headcount in connection with growth in business volume, acquisitions, and investments in the businesses. These increases were offset partially by merger-related savings and other expense efficiencies throughout the Firm. For a detailed discussion of the adoption of SFAS 123R and employee stock-based incentives, see Note 10 on pages 131–133 of this Annual Report.

The increase in Occupancy expense from the prior year was due to ongoing investments in the retail distribution network, which included the incremental expense from The Bank of New York branches, partially offset by merger-related savings and other operating efficiencies.

The slight increase in Technology, communications and equipment expense for 2006 was due primarily to higher depreciation expense on owned automobiles subject to operating leases and higher technology investments to support business growth, partially offset by merger-related savings and continuing business efficiencies.

Professional & outside services decreased from the prior year due to merger-related savings and continuing business efficiencies, lower legal fees associated with several legal matters settled in 2005 and the Paymentech deconsolidation. The decrease was offset partly by acquisitions and investments in the businesses.

Marketing expense was higher compared with the prior year, reflecting the costs of credit card campaigns.

Other expense was lower due to significant litigation-related charges of $2.8 billion in the prior year, associated with the settlement of the Enron and WorldCom class action litigations and certain other material legal proceedings. In addition, the Firm recognized insurance recoveries of $512 million and $208 million, in 2006 and 2005, respectively, pertaining to certain material litigation matters. For further discussion of litigation, refer to Note 29 on pages 167–168 of this Annual Report. Also contributing to the decline from the prior year were charges of $93 million in connection with the termination of a client contract in TSS in 2005; and in RFS, the sale of the insurance business in the third quarter of 2006. These items were offset partially by higher charges related to other litigation, and the impact of growth in business volume, acquisitions and investments in the businesses.

For a discussion of Amortization of intangibles and Merger costs, refer to Note 18 and Note 11 on pages 154–157 and 134, respectively, of this Annual Report.

Income tax expense

The Firm's Income from continuing operations before income tax expense, Income tax expense and effective tax rate were as follows for each of the periods indicated.

Year ended December 31, (in millions, except rate)	**2007**	2006	2005
Income from continuing operations before income tax expense	**$22,805**	$19,886	$11,839
Income tax expense	**7,440**	6,237	3,585
Effective tax rate	**32.6%**	31.4%	30.3%

2007 compared with 2006

The increase in the effective tax rate for 2007, as compared with the prior year, was primarily the result of higher reported pretax income combined with changes in the proportion of income subject to federal, state and local taxes. Also contributing to the increase in the effective tax rate was the recognition in 2006 of $367 million of benefits related to the resolution of tax audits.

For further discussion of income taxes, see Critical accounting estimates and Note 26 on pages 96–98 and 164–165, respectively, of this Annual Report.

2006 compared with 2005

The increase in the effective tax rate for 2006, as compared with the prior year, was primarily the result of higher reported pretax income combined with changes in the proportion of income subject to federal, state and local taxes. Also contributing to the increase in the effective tax rate were the litigation charges in 2005 and lower Merger costs, reflecting a tax benefit at a 38% marginal tax rate, partially offset by benefits related to tax audit resolutions of $367 million in 2006.

Income from discontinued operations

As a result of the transaction with The Bank of New York on October 1, 2006, the results of operations of the selected corporate trust businesses (i.e., trustee, paying agent, loan agency and document management services) were reported as discontinued operations.

The Firm's Income from discontinued operations was as follows for each of the periods indicated.

Year ended December 31, (in millions)	**2007**	2006	2005
Income from discontinued operations	**$ —**	$ 795	$ 229

The increase in 2006 was due primarily to a gain of $622 million from exiting selected corporate trust businesses in the fourth quarter of 2006.

EXPLANATION AND RECONCILIATION OF THE FIRM'S USE OF NON-GAAP FINANCIAL MEASURES

The Firm prepares its Consolidated financial statements using accounting principles generally accepted in the United States of America ("U.S. GAAP"); these financial statements appear on pages 104–107 of this Annual Report. That presentation, which is referred to as "reported basis," provides the reader with an understanding of the Firm's results that can be tracked consistently from year to year and enables a comparison of the Firm's performance with other companies' U.S. GAAP financial statements.

In addition to analyzing the Firm's results on a reported basis, management reviews the Firm's and the lines' of business results on a "managed" basis, which is a non-GAAP financial measure. The Firm's definition of managed basis starts with the reported U.S. GAAP results and includes certain reclassifications that assume credit card loans securitized by CS remain on the balance sheet and presents revenue on a fully taxable-equivalent ("FTE") basis. These adjustments do not have any impact on Net income as reported by the lines of business or by the Firm as a whole.

The presentation of CS results on a managed basis assumes that credit card loans that have been securitized and sold in accordance with SFAS 140 still remain on the Consolidated balance sheets and that the earnings on the securitized loans are classified in the same manner as the earnings on retained loans recorded on the Consolidated balance sheets. JPMorgan Chase uses the concept of managed basis to evaluate the credit performance and overall financial performance of the entire managed credit card portfolio. Operations are funded and decisions are made about allocating resources, such as employees and capital, based upon managed financial information. In addition, the same underwriting standards

The following summary table provides a reconciliation from the Firm's reported U.S. GAAP results to managed basis.

(Table continues on next page)

(a) Based on Income from continuing operations.
(b) The impact of credit card securitizations affects CS. See the segment discussion for CS on pages 49–51 of this Annual Report for further information.

and ongoing risk monitoring are used for both loans on the Consolidated balance sheets and securitized loans. Although securitizations result in the sale of credit card receivables to a trust, JPMorgan Chase retains the ongoing customer relationships, as the customers may continue to use their credit cards; accordingly, the customer's credit performance will affect both the securitized loans and the loans retained on the Consolidated balance sheets. JPMorgan Chase believes managed basis information is useful to investors, enabling them to understand both the credit risks associated with the loans reported on the Consolidated balance sheets and the Firm's retained interests in securitized loans. For a reconciliation of reported to managed basis results for CS, see CS segment results on pages 49–51 of this Annual Report. For information regarding the securitization process, and loans and residual interests sold and securitized, see Note 16 on pages 139–145 of this Annual Report.

Total net revenue for each of the business segments and the Firm is presented on an FTE basis. Accordingly, revenue from tax-exempt securities and investments that receive tax credits is presented in the managed results on a basis comparable to taxable securities and investments. This non-GAAP financial measure allows management to assess the comparability of revenue arising from both taxable and tax-exempt sources. The corresponding income tax impact related to these items is recorded within Income tax expense.

Management also uses certain other non-GAAP financial measures at the business segment level because it believes these other non-GAAP financial measures provide information to investors about the underlying operational performance and trends of the particular business segment and therefore facilitate a comparison of the business segment with the performance of its competitors.

Calculation of certain U.S. GAAP and non-GAAP metrics

The table below reflects the formulas used to calculate both the following U.S. GAAP and non-GAAP measures:

Return on common equity

Net income* / Average common stockholders' equity

Return on common equity less goodwill[a]

Net income* / Average common stockholders' equity less goodwill

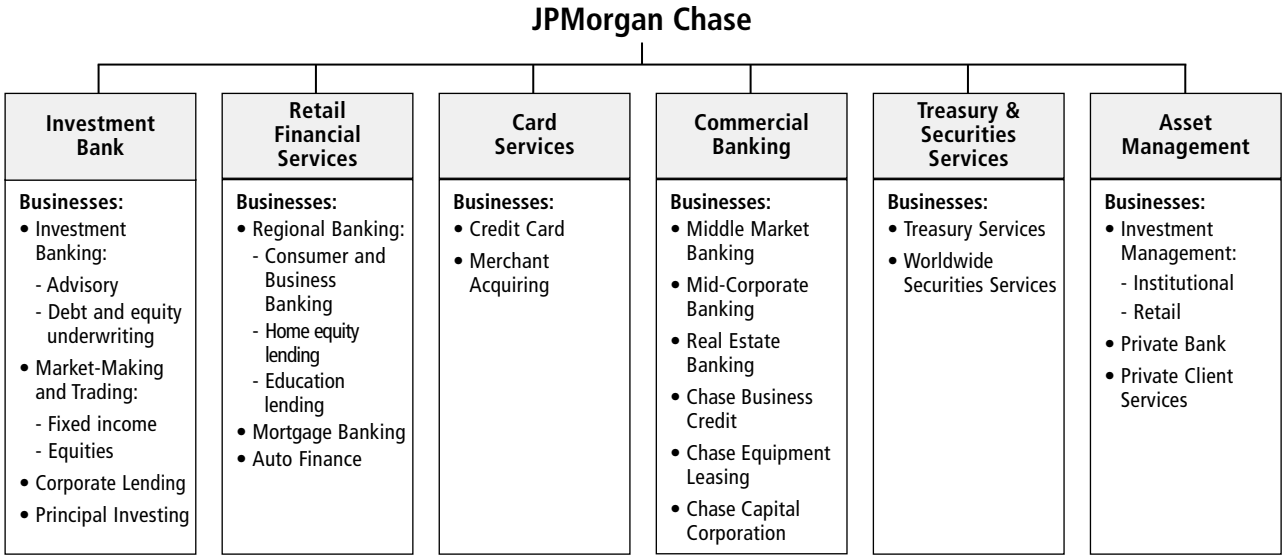
Return on assets

Reported — Net income / Total average assets

Managed — Net income / Total average managed assets[b] (including average securitized credit card receivables)

Overhead ratio

Total noninterest expense / Total net revenue



* Represents Net income applicable to common stock

(a) The Firm uses Return on common equity less goodwill, a non-GAAP financial measure, to evaluate the operating performance of the Firm and to facilitate comparisons to competitors.

(b) The Firm uses Return on managed assets, a non-GAAP financial measure, to evaluate the overall performance of the managed credit card portfolio, including securitized credit card loans.

BUSINESS SEGMENT RESULTS

The Firm is managed on a line-of-business basis. The business segment financial results presented reflect the current organization of JPMorgan Chase. There are six major reportable business segments: the Investment Bank, Retail Financial Services, Card Services, Commercial Banking, Treasury & Securities Services and Asset Management, as well as a Corporate segment. The business segments are determined based upon the products and services provided, or the type of customer served, and they reflect the manner in which financial information is currently evaluated by management. Results of these lines of business are presented on a managed basis.

Description of business segment reporting methodology
Results of the business segments are intended to reflect each segment as if it were essentially a stand-alone business.

The management reporting process that derives business segment results allocates income and expense using market-based methodologies. The Firm continues to assess the assumptions, methodologies and reporting classifications used for segment reporting, and further refinements may be implemented in future periods. Business segment reporting methodologies used by the Firm are discussed below.

Revenue sharing
When business segments join efforts to sell products and services to the Firm's clients, the participating business segments agree to share revenue from those transactions. The segment results reflect these revenue-sharing agreements.

Funds transfer pricing
Funds transfer pricing is used to allocate interest income and expense to each business and transfer the primary interest rate risk exposures to Treasury within the Corporate business segment. The allocation process is unique to each business segment and considers the interest rate risk, liquidity risk and regulatory requirements of that segment's stand-alone peers. This process is overseen by the Firm's Asset-Liability Committee ("ALCO"). Business segments may retain certain interest rate exposures, subject to management approval, that would be expected in the normal operation of a similar peer business.

Capital allocation
Each business segment is allocated capital by taking into consideration stand-alone peer comparisons, economic risk measures and regulatory capital requirements. The amount of capital assigned to each business is referred to as equity. Effective January 1, 2006, the Firm refined its methodology for allocating capital to the business segments. As the 2005 period was not revised to reflect the new capital allocations, certain business metrics, such as ROE, are not comparable to the presentations in 2007 and 2006. For a further discussion of this change, see Capital management–Line of business equity on page 63 of this Annual Report.

Expense allocation
Where business segments use services provided by support units within the Firm, the costs of those support units are allocated to the business segments. The expense is allocated based upon their actual cost or the lower of actual cost or market, as well as upon usage of the services provided. In contrast, certain other expense related to certain corporate functions, or to certain technology and operations,

are not allocated to the business segments and are retained in Corporate. Retained expense includes: parent company costs that would not be incurred if the segments were stand-alone businesses; adjustments to align certain corporate staff, technology and operations allocations with market prices; and other one-time items not aligned with the business segments.

Segment results – Managed basis[a]

The following table summarizes the business segment results for the periods indicated.

Year ended December 31, (in millions, except ratios)	Total net revenue			Noninterest expense		
	2007	2006	2005	**2007**	2006	2005
Investment Bank	**$ 18,170**	$ 18,833	$ 15,110	**$ 13,074**	$ 12,860	$ 10,246

Total	**$ 15,365**	$ 14,444	$ 8,483	**13%**	13%	8%

(a) Represents reported results on a tax-equivalent basis and excludes the impact of credit card securitizations.
(b) Net income included Income from discontinued operations of zero, $795 million and $229 million for 2007, 2006 and 2005, respectively.

INVESTMENT BANK

JPMorgan is one of the world's leading investment banks, with deep client relationships and broad product capabilities. The Investment Bank's clients are corporations, financial institutions, governments and institutional investors. The Firm offers a full range of investment banking products and services in all major capital markets, including advising on corporate strategy and structure, capital raising in equity and debt markets, sophisticated risk management, market-making in cash securities and derivative instruments and research. The IB also commits the Firm's own capital to proprietary investing and trading activities.

Year ended December 31, (in millions, except ratios)	2007	2006	2005
Revenue			
Investment banking fees	**$ 6,616**	$ 5,537	$ 4,096
Principal transactions[a]	**4,409**	9,512	6,459
Lending & deposit-related fees	**446**	517	594
Asset management, administration and commissions	**2,701**	2,240	1,824
All other income[b]	**(78)**	528	534
Noninterest revenue	**14,094**	18,334	13,507
Net interest income[c]	**4,076**	499	1,603
Total net revenue[d]	**18,170**	18,833	15,110
Provision for credit losses	**654**	191	(838)
Credit reimbursement from TSS[e]	**121**	121	154
Noninterest expense			
Compensation expense	**7,965**	8,190	5,792
Noncompensation expense	**5,109**	4,670	4,454
Total noninterest expense	**13,074**	12,860	10,246
Income before income tax expense	**4,563**	5,903	5,856
Income tax expense	**1,424**	2,229	2,183
Net income	**$ 3,139**	$ 3,674	$ 3,673
Financial ratios			
ROE	**15%**	18%	18%
ROA	**0.45**	0.57	0.61
Overhead ratio	**72**	68	68
Compensation expense as % of total net revenue[f]	**44**	41	38

(a) In 2007, as a result of adopting SFAS 157, IB recognized a benefit of $1.3 billion in Principal transactions revenue from the widening of the Firm's credit spread for liabilities carried at fair value.
(b) All other income for 2007 decreased from the prior year due mainly to losses on loan sales and lower gains on sales of assets.
(c) Net interest income for 2007 increased from the prior year due primarily to an increase in interest earnings assets. The decline in net interest income in 2006 is largely driven by a decline in trading-related net interest income caused by a higher proportion of noninterest-bearing net trading assets to total net trading assets, higher funding costs compared with the prior year, and spread compression due to the inverted yield curve in place for most of 2006.
(d) Total Net revenue includes tax-equivalent adjustments, primarily due to tax-exempt income from municipal bond investments and income tax credits related to affordable housing investments, of $927 million, $802 million and $752 million for 2007, 2006 and 2005, respectively.
(e) TSS was charged a credit reimbursement related to certain exposures managed within the IB credit portfolio on behalf of clients shared with TSS.
(f) For 2006, the Compensation expense to Total net revenue ratio is adjusted to present this ratio as if SFAS 123R had always been in effect. IB management believes that adjusting the Compensation expense to Total net revenue ratio for the incremental impact of adopting SFAS 123R provides a more meaningful measure of IB's Compensation expense to Total net revenue ratio.

The following table provides the IB's Total net revenue by business segment.

Year ended December 31, (in millions)	2007	2006	2005
Revenue by business			
Investment banking fees:			
Advisory	**$ 2,273**	$ 1,659	$ 1,263
Equity underwriting	**1,713**	1,178	864
Debt underwriting	**2,630**	2,700	1,969
Total investment banking fees	**6,616**	5,537	4,096
Fixed income markets[a][b]	**6,339**	8,736	7,570
Equity markets[a][c]	**3,903**	3,458	1,998
Credit portfolio[a][d]	**1,312**	1,102	1,446
Total net revenue	**$ 18,170**	$18,833	$15,110

(a) In 2007, as a result of adopting SFAS 157, Fixed income markets, Equity markets and Credit portfolio had a benefit of $541 million, $346 million and $433 million, respectively, from the widening of the Firm's credit spread for liabilities carried at fair value.
(b) Fixed income markets include client and portfolio management revenue related to both market-making and proprietary risk-taking across global fixed income markets, including foreign exchange, interest rate, credit and commodities markets.
(c) Equities markets include client and portfolio management revenue related to market-making and proprietary risk-taking across global equity products, including cash instruments, derivatives and convertibles.
(d) Credit portfolio revenue includes Net interest income, fees and loan sale activity, as well as gains or losses on securities received as part of a loan restructuring, for the IB's credit portfolio. Credit portfolio revenue also includes the results of risk management related to the Firm's lending and derivative activities, and changes in the credit valuation adjustment, which is the component of the fair value of a derivative that reflects the credit quality of the counterparty. See pages 80–82 of the Credit risk management section of this Annual Report for further discussion.

2007 compared with 2006

Net income was $3.1 billion, a decrease of $535 million, or 15%, from the prior year. The decrease reflected lower fixed income revenue, a higher provision for credit losses and increased noninterest expense, partially offset by record investment banking fees and equity markets revenue.

Total net revenue was $18.2 billion, down $663 million, or 4%, from the prior year. Investment banking fees were $6.6 billion, up 19% from the prior year, driven by record fees across advisory and equity underwriting, partially offset by lower debt underwriting fees. Advisory fees were $2.3 billion, up 37%, and equity underwriting fees were $1.7 billion, up 45%; both were driven by record performance across all regions. Debt underwriting fees of $2.6 billion declined 3%, reflecting lower loan syndication and bond underwriting fees, which were negatively affected by market conditions in the second half of the year. Fixed Income Markets revenue decreased 27% from the prior year. The decrease was due to markdowns of $1.4 billion (net of hedges) on subprime positions, including subprime CDOs and markdowns of $1.3 billion (net of fees) on leverage lending funded loans and unfunded commitments. Fixed Income Markets revenue also decreased due to markdowns in securitized products on non-subprime mortgages and weak credit trading performance. These lower results were offset partially by record revenue in currencies and strong revenue in rates. Equity Markets revenue was $3.9 billion, up 13%, benefiting from strong client activity and record trading results across all

products. Credit Portfolio revenue was $1.3 billion, up 19%, primarily due to higher revenue from risk management activities, partially offset by lower gains from loan sales and workouts.

The Provision for credit losses was $654 million, an increase of $463 million from the prior year. The change was due to a net increase of $532 million in the Allowance for credit losses, primarily due to portfolio activity, which included the effect of the weakening credit environment, and an increase in allowance for unfunded leveraged lending commitments, as well as portfolio growth. In addition, there were $36 million of net charge-offs in the current year, compared with $31 million of net recoveries in the prior year. The Allowance for loan losses to average loans was 2.14% for 2007, compared with a ratio of 1.79% in the prior year.

Noninterest expense was $13.1 billion, up $214 million, or 2%, from the prior year.

Return on equity was 15% on $21.0 billion of allocated capital compared with 18% on $20.8 billion in 2006.

2006 compared with 2005

Net income of $3.7 billion was flat, as record revenue of $18.8 billion was offset largely by higher compensation expense, including the impact of SFAS 123R, and Provision for credit losses compared with a benefit in the prior year.

Total net revenue of $18.8 billion was up $3.7 billion, or 25%, from the prior year. Investment banking fees of $5.5 billion were a record, up 35% from the prior year, driven by record debt and equity underwriting as well as strong advisory fees, which were the highest since 2000. Advisory fees of $1.7 billion were up 31% over the prior year driven primarily by strong performance in the Americas. Debt underwriting fees of $2.7 billion were up 37% from the prior year driven by record performance in both loan syndications and bond underwriting. Equity underwriting fees of $1.2 billion were up 36% from the prior year driven by global equity markets. Fixed Income Markets revenue of $8.7 billion was also a record, up 15% from the prior year driven by strength in credit markets, emerging markets and currencies. Record Equity Markets revenue of $3.5 billion increased 73%, and was driven by strength in cash equities and equity derivatives. Credit Portfolio revenue of $1.1 billion was down 24%, primarily reflecting lower gains from loan workouts.

Provision for credit losses was $191 million compared with a benefit of $838 million in the prior year. The 2006 provision reflects portfolio activity; credit quality remained stable. The prior-year benefit reflected strong credit quality, a decline in criticized and nonperforming loans and a higher level of recoveries.

Total noninterest expense of $12.9 billion was up $2.6 billion, or 26%, from the prior year. This increase was due primarily to higher performance-based compensation, including the impact of an increase in the ratio of compensation expense to total net revenue, as well as the incremental expense related to SFAS 123R.

Return on equity was 18% on $20.8 billion of allocated capital compared with 18% on $20.0 billion in 2005.

(a) As a result of the adoption of SFAS 159 in the first quarter of 2007, $11.7 billion of loans were reclassified to trading assets. Loans held-for-sale and loans at fair value were excluded when calculating the allowance coverage ratio and net charge-off (recovery) rate.

(b) Loans retained included credit portfolio loans, leveraged leases and other accrual loans, and excluded loans at fair value.

(c) Adjusted assets, a non-GAAP financial measure, equals Total assets minus (1) Securities purchased under resale agreements and Securities borrowed less Securities sold, not yet purchased; (2) assets of variable interest entities ("VIEs") consolidated under FIN 46R; (3) cash and securities segregated and on deposit for regulatory and other purposes; and (4) goodwill and intangibles. The amount of adjusted assets is presented to assist the reader in comparing IB's asset and capital levels to other investment banks in the securities industry. Asset-to-equity leverage ratios are commonly used as one measure to assess a company's capital adequacy. IB believes an adjusted asset amount that excludes the assets discussed above, which were considered to have a low risk profile, provide a more meaningful measure of balance sheet leverage in the securities industry.

Because of joint assignments, market share of all participants will add up to more than 100%; Global and U.S. announced M&A market share and ranking for 2006 include transactions withdrawn since December 31, 2006.
(b) References U.S domiciled equity and equity-related transactions, per Thomson Financial.

According to Thomson Financial, in 2007, the Firm maintained its #2 position in Global Debt, Equity and Equity-related, its #1 position in Global Syndicated Loans and its #4 position in Global Announced M&A. The Firm improved its position to #2 in Global Equity & Equity-related transactions and Global Long-term Debt.

According to Dealogic, the Firm was ranked #1 in Investment Banking fees generated during 2007, based upon revenue.

Retail Financial Services, which includes the Regional Banking, Mortgage Banking and Auto Finance reporting segments, serves consumers and businesses through bank branches, ATMs, online banking and telephone banking. Customers can use more than 3,100 bank branches (fourth-largest nationally), 9,100 ATMs (third-largest nationally) and 290 mortgage offices. More than 13,700 branch salespeople assist customers with checking and savings accounts, mortgages, home equity and business loans and investments across the 17-state footprint from New York to Arizona. Consumers also can obtain loans through more than 14,500 auto dealerships and 5,200 schools and universities nationwide.

During the first quarter of 2006, RFS completed the purchase of Collegiate Funding Services, which contributed an education loan servicing capability and provided an entry into the Federal Family Education Loan Program consolidation market. On July 1, 2006, RFS sold its life insurance and annuity underwriting businesses to Protective Life Corporation. On October 1, 2006, JPMorgan Chase completed the Bank of New York transaction, significantly strengthening RFS's distribution network in the New York tri-state area.

Financial ratios			
ROE	**19%**	22%	26%
Overhead ratio[a]	**57**	60	58
Overhead ratio excluding core deposit intangibles[a][b]	**54**	57	55

(a) The Firm adopted SFAS 159 in the first quarter of 2007. As a result, certain loan-origination costs have been classified as expense (previously netted against revenue) for the year ended December 31, 2007.

(b) Retail Financial Services uses the overhead ratio (excluding the amortization of core deposit intangibles ("CDI")), a non-GAAP financial measure, to evaluate the underlying expense trends of the business. Including CDI amortization expense in the overhead ratio calculation results in a higher overhead ratio in the earlier years and a lower overhead ratio in later years; this method would result in an improving overhead ratio over time, all things remaining equal. This non-GAAP ratio excludes Regional Banking's core deposit intangible amortization expense related to The Bank of New York transaction and the Bank One merger of $460 million, $458 million and $496 million for the years ended December 31, 2007, 2006 and 2005, respectively.

2007 compared with 2006

Net income was $3.0 billion, a decrease of $178 million, or 6%, from the prior year, as declines in Regional Banking and Auto Finance were offset partially by improved results in Mortgage Banking.

Total net revenue was $17.5 billion, an increase of $2.7 billion, or 18%, from the prior year. Net interest income was $10.7 billion, up $511 million, or 5%, due to the Bank of New York transaction, wider loan spreads and higher deposit balances. These benefits were offset partially by the sale of the insurance business and a shift to narrower–spread deposit products. Noninterest revenue was $6.8 billion, up $2.1 billion, benefiting from valuation adjustments to the MSR asset; an increase in deposit-related fees; the absence of a prior-year $233 million loss related to $13.3 billion of mortgage loans transferred to held-for-sale; and increased mortgage loan servicing revenue. Noninterest revenue also benefited from the classification of certain mortgage loan origination costs as expense (loan origination costs previously netted against revenue commenced being recorded as an expense in the first quarter of 2007 due to the adoption of SFAS 159).

The Provision for credit losses was $2.6 billion, compared with $561 million in the prior year. The current-year provision includes a net increase of $1.0 billion in the Allowance for loan losses related to home equity loans as continued weak housing prices have resulted in an increase in estimated losses for high loan-to-value loans. Home equity net charge-offs were $564 million (0.62% net charge-off rate), compared with $143 million (0.18% net charge-off rate) in the prior year. In addition, the current-year provision includes a $166 million increase in the allowance for loan losses related to subprime mortgage loans, reflecting an increase in estimated losses and growth in the portfolio. Subprime mortgage net charge-offs were $157 million (1.55% net charge-off rate), compared with $47 million (0.34% net charge-off rate) in the prior year.

Noninterest expense was $9.9 billion, an increase of $973 million, or 11%, from the prior year due to the Bank of New York transaction; the classification of certain loan origination costs as expense due to the adoption of SFAS 159; investments in the retail distribution network; and higher mortgage production and servicing expense. These increases were offset partially by the sale of the insurance business.

2006 compared with 2005

Net income of $3.2 billion was down $214 million, or 6%, from the prior year. A decline in Mortgage Banking was offset partially by improved results in Regional Banking and Auto Finance.

Total net revenue of $14.8 billion was flat compared with the prior year. Net interest income of $10.2 billion was down slightly due to narrower spreads on loans and deposits in Regional Banking, lower auto

loan and lease balances and the sale of the insurance business. These declines were offset by the benefit of higher deposit and loan balances in Regional Banking, wider loan spreads in Auto Finance and the Bank of New York transaction. Noninterest revenue of $4.7 billion was up $35 million, or 1%, from the prior year. Results benefited from increases in deposit-related and branch production fees, higher automobile operating lease revenue and the Bank of New York transaction. This benefit was offset by lower net mortgage servicing revenue, the sale of the insurance business and losses related to loans transferred to held-for-sale. In 2006, losses of $233 million, compared with losses of $120 million in 2005, were recognized in Regional Banking related to mortgage loans transferred to held-for-sale; and losses of $50 million, compared with losses of $136 million in the prior year, were recognized in Auto Finance related to automobile loans transferred to held-for-sale.

The Provision for credit losses of $561 million was down $163 million from the prior-year provision due to the absence of a $250 million special provision for credit losses related to Hurricane Katrina in the prior year, partially offset by the establishment of additional allowance for loan losses related to loans acquired from The Bank of New York.

Total noninterest expense of $8.9 billion was up $342 million, or 4%, primarily due to the Bank of New York transaction, the acquisition of Collegiate Funding Services, investments in the retail distribution network and higher depreciation expense on owned automobiles subject to operating leases. These increases were offset partially by the sale of the insurance business and merger-related and other operating efficiencies and the absence of a $40 million prior-year charge related to the dissolution of an education loan joint venture.

(a) Loans included prime mortgage loans originated with the intent to sell, which, for new originations on or after January 1, 2007, were accounted for at fair value under SFAS 159. These loans, classified as Trading assets on the Consolidated balance sheets, totaled $12.6 billion at December 31, 2007. Average Loans included prime mortgage loans, classified as Trading assets on the Consolidated balance sheets, of $11.9 billion for the year ended December 31, 2007.

(b) Nonperforming loans included Loans held-for-sale and Loans accounted for at fair value under SFAS 159 of $69 million, $116 million and $27 million at December 31, 2007, 2006 and 2005, respectively. Certain of these loans are classified as Trading assets on the Consolidated balance sheet.

(c) Nonperforming loans and assets excluded (1) loans eligible for repurchase as well as loans repurchased from Governmental National Mortgage Association ("GNMA") pools that are insured by U.S. government agencies of $1.5 billion, $1.2 billion and $1.1 billion at December 31, 2007, 2006 and 2005, respectively, and (2) education loans that are 90 days past due and still accruing, which are insured by U.S. government agencies under the Federal Family Education Loan Program of $279 million and $219 million at December 31, 2007 and 2006, respectively. The education loans past due 90 days were insignificant at December 31, 2005. These amounts for GNMA and education loans were excluded, as reimbursement is proceeding normally.

(d) Loans held-for-sale and Loans accounted for at fair value under SFAS 159 were excluded when calculating the allowance coverage ratio and the Net charge-off rate.

Regional Banking

Selected income statement data

Year ended December 31, (in millions, except ratios)	2007	2006	2005
Noninterest revenue	**$ 3,723**	$ 3,204	$ 3,138
Net interest income	**9,283**	8,768	8,531
Total net revenue	**13,006**	11,972	11,669
Provision for credit losses	**2,216**	354	512
Noninterest expense	**7,023**	6,825	6,675
Income before income tax expense	**3,767**	4,793	4,482
Net income	**$ 2,301**	$ 2,884	$ 2,780
ROE	**20%**	27%	31%
Overhead ratio	**54**	57	57
Overhead ratio excluding core deposit intangibles[a]	**50**	53	53

(a) Regional Banking uses the overhead ratio (excluding the amortization of CDI), a non-GAAP financial measure, to evaluate the underlying expense trends of the business. Including CDI amortization expense in the overhead ratio calculation results in a higher overhead ratio in the earlier years and a lower overhead ratio in later years; this method would result in an improving overhead ratio over time, all things remaining equal. This non-GAAP ratio excludes Regional Banking's core deposit intangible amortization expense related to the Bank of New York transaction and the Bank One merger of $460 million, $458 million and $496 million for the years ended December 31, 2007, 2006 and 2005, respectively.

2007 compared with 2006

Regional Banking net income was $2.3 billion, a decrease of $583 million, or 20%, from the prior year. Total net revenue was $13.0 billion, up $1.0 billion, or 9%, benefiting from the following: the Bank of New York transaction; increased deposit-related fees; the absence of a prior-year $233 million loss related to $13.3 billion of mortgage loans transferred to held-for-sale; growth in deposits; and wider loan spreads. These benefits were offset partially by the sale of the insurance business and a shift to narrower–spread deposit products. The Provision for credit losses was $2.2 billion, compared with $354 million in the prior year. The increase in the provision was due to the home equity and subprime mortgage portfolios (see Retail Financial Services discussion of the Provision for credit losses for further detail). Noninterest expense was $7.0 billion, up $198 million, or 3%, from the prior year, as the Bank of New York transaction and investments in the retail distribution network were offset partially by the sale of the insurance business.

2006 compared with 2005

Regional Banking Net income of $2.9 billion was up $104 million from the prior year. Total net revenue of $12.0 billion was up $303 million, or 3%, including the impact of a $233 million 2006 loss resulting from $13.3 billion of mortgage loans transferred to held-for-sale and a prior-year loss of $120 million resulting from $3.3 billion of mortgage loans transferred to held-for-sale. Results benefited from the Bank of New York transaction; the acquisition of Collegiate Funding Services; growth in deposits and home equity loans; and increases in deposit-related fees and credit card sales. These benefits were offset partially by the sale of the insurance business, narrower spreads on loans, and a shift to narrower-spread deposit products. The Provision for credit losses decreased $158 million, primarily the result of a $230 million special provision in the prior year related to Hurricane Katrina, which was offset partially by additional Allowance for loan losses related to the acquisition of loans from The Bank of New York and increased net charge-offs due to portfolio seasoning and deterioration in subprime mortgages. Noninterest expense of $6.8 billion was up $150 million, or 2%, from the prior year. The increase was due to investments in the retail distribution network, the Bank of New York transaction and the acquisition of Collegiate Funding Services, partially offset by the sale of the insurance business, merger savings and operating efficiencies, and the absence of a $40 million prior-year charge related to the dissolution of an education loan joint venture.

(a) As of January 1, 2007, $19.4 billion of held-for-investment prime mortgage loans were transferred from RFS to Treasury within the Corporate segment for risk man-

agement and reporting purposes. The transfer had no impact on the financial results of Regional Banking. Balances reported at December 31, 2007 primarily reflected subprime mortgage loans owned.
(b) Included commercial loans derived from community development activities and, prior to July 1, 2006, insurance policy loans.
(c) Average loans included loans held-for-sale of $3.8 billion, $2.8 billion and $2.9 billion for the years ended December 31, 2007, 2006 and 2005, respectively. These amounts were excluded when calculating in the Net charge-off rate.
(d) Excluded loans eligible for repurchase as well as loans repurchased from GNMA pools that are insured by U.S. government agencies of $1.2 billion, $960 million, and $896 million at December 31, 2007, 2006 and 2005, respectively. These amounts are excluded as reimbursement is proceeding normally.
(e) Excluded loans that are 30 days past due and still accruing, which are insured by U.S. government agencies under the Federal Family Education Loan Program of $663 million and $464 million at December 31, 2007 and 2006, respectively. The education loans past due 30 days were insignificant at December 31, 2005. These amounts are excluded as reimbursement is proceeding normally.
(f) The Mortgage and Total net charge-off rate for 2007, excluded $2 million of charge-offs related to prime mortgage loans held by Treasury in the Corporate sector.
(g) Excluded nonperforming assets related to education loans that are 90 days past due and still accruing, which are insured by U.S. government agencies under the Federal Family Education Loan Program of $279 million and $219 million at December 31, 2007 and 2006, respectively. The Education loans past due 90 days were insignificant at December 31, 2005. These amounts were excluded as reimbursement is proceeding normally.

Retail branch business metrics

Year ended December 31, (in millions, except where otherwise noted)	**2007**	2006	2005
Investment sales volume	**$18,360**	$14,882	$11,144
Number of:			
Branches	**3,152#**	3,079#	2,641#
ATMs	**9,186**	8,506	7,312
Personal bankers[a]	**9,650**	7,573	7,067
Sales specialists[a]	**4,105**	3,614	3,214
Active online customers (in thousands)[b]	**5,918**	4,909	3,756
Checking accounts (in thousands)	**10,839**	9,995	8,793

(a) Employees acquired as part of the Bank of New York transaction are included beginning in 2007.
(b) During 2007, RFS changed the methodology for determining active online customers to include all individual RFS customers with one or more online accounts who have been active within 90 days of period end, including customers who also have online accounts with Card Services. Prior periods have been revised to conform to this new methodology.

The following is a brief description of selected terms used by Regional Banking.

- **Personal bankers –** Retail branch office personnel who acquire, retain and expand new and existing customer relationships by assessing customer needs and recommending and selling appropriate banking products and services.
- **Sales specialists –** Retail branch office personnel who specialize in the marketing of a single product, including mortgages, investments, and business banking, by partnering with the personal bankers.

Total	**$ 159.4**	$ 119.2	$ 129.0

(a) The Firm adopted SFAS 159 in the first quarter of 2007. As a result, certain loan origination costs have been classified as expense (previously netted against revenue) for the year ended December 31, 2007.
(b) Included $11.9 billion of prime mortgage loans at fair value for the year ended December 31, 2007. These loans are classified as Trading assets on the Consolidated balance sheet for 2007.
(c) During the second quarter of 2007, RFS changed its definition of mortgage originations to include all newly originated mortgage loans sourced through RFS channels, and to exclude all mortgage loan originations sourced through IB channels. Prior periods have been revised to conform to this new definition.

2007 compared with 2006

Mortgage Banking Net income was $439 million, compared with a net loss of $17 million in the prior year. Total net revenue was $2.7 billion, up $1.4 billion. Total net revenue comprises production revenue and net mortgage servicing revenue. Production revenue was $1.4 billion, up $527 million, benefiting from an increase in mortgage loan originations and the classification of certain loan origination costs as expense (loan origination costs previously netted against revenue commenced being recorded as an expense in the first quarter of 2007 due to the adoption of SFAS 159). These bene-

fits were offset partially by markdowns of $241 million on the mortgage warehouse and pipeline. Net mortgage servicing revenue, which includes loan servicing revenue, MSR risk management results and other changes in fair value, was $1.3 billion, compared with $481 million in the prior year. Loan servicing revenue of $2.5 billion increased $210 million on 17% growth in third-party loans serviced. MSR risk management revenue of $363 million improved $742 million from the prior year, reflecting a $499 million current-year positive valuation adjustment to the MSR asset due to a decrease in estimated future mortgage prepayments; and the absence of a $235 million prior-year negative valuation adjustment to the MSR asset. Other changes in fair value of the MSR asset were negative $1.5 billion compared with negative $1.4 billion in the prior year. Noninterest expense was $2.0 billion, an increase of $646 million, or 48%. The increase reflected the classification of certain loan origination costs due to the adoption of SFAS 159, higher servicing costs due to increased delinquencies and defaults, and higher production expense due partly to growth in originations.

2006 compared with 2005

Mortgage Banking Net loss was $17 million compared with net income of $379 million in the prior year. Total net revenue of $1.3 billion was down $526 million from the prior year due to a decline in net mortgage servicing revenue offset partially by an increase in production revenue. Production revenue was $833 million, up $89 million, reflecting increased loan sales and wider gain on sale margins that benefited from a shift in the sales mix. Net mortgage servicing revenue, which includes loan servicing revenue, MSR risk management results and other changes in fair value, was $481 million compared with $1.1 billion in the prior year. Loan servicing revenue of $2.3 billion increased $185 million on a 13% increase in third-party loans serviced. MSR risk management revenue of negative $379 million was down $655 million from the prior year, including the impact of a $235 million negative valuation adjustment to the MSR asset in the third quarter of 2006 due to changes and refinements to assumptions used in the MSR valuation model. Other changes in fair value of the MSR asset, representing runoff of the asset against the realization of servicing cash flows, were negative $1.4 billion. Noninterest expense was $1.3 billion, up $102 million, or 8%, due primarily to higher compensation expense related to an increase in loan officers.

Mortgage Banking origination channels comprise the following:

Retail – Borrowers who are buying or refinancing a home through direct contact with a mortgage banker employed by the Firm using a branch office, the Internet or by phone. Borrowers are frequently referred to a mortgage banker by real estate brokers, home builders or other third parties.

Wholesale – A third-party mortgage broker refers loan applications to a mortgage banker at the Firm. Brokers are independent loan originators that specialize in finding and counseling borrowers but do not provide funding for loans.

Correspondent – Banks, thrifts, other mortgage banks and other financial institutions that sell closed loans to the Firm.

Correspondent negotiated transactions ("CNT") – Mid- to large-sized mortgage lenders, banks and bank-owned companies that sell loans or servicing to the Firm on an as-originated basis, excluding bulk servicing transactions.

Production revenue – Includes net gains or losses on originations and sales of prime and subprime mortgage loans and other production-related fees.

Net Mortgage servicing revenue components:

Servicing revenue – Represents all gross income earned from servicing third-party mortgage loans, including stated service fees, excess service fees, late fees and other ancillary fees.

Changes in MSR asset fair value due to inputs or assumptions in model – Represents MSR asset fair value adjustments due to changes in market-based inputs, such as interest rates and volatility, as well as updates to valuation assumptions used in the valuation model.

Changes in MSR asset fair value due to other changes – Includes changes in the MSR value due to modeled servicing portfolio runoff (or time decay). Effective January 1, 2006, the Firm implemented SFAS 156, adopting fair value for the MSR asset. For the year ended December 31, 2005, this amount represents MSR asset amortization expense calculated in accordance with SFAS 140.

Derivative valuation adjustments and other – Changes in the fair value of derivative instruments used to offset the impact of changes in market-based inputs to the MSR valuation model.

MSR risk management results – Includes changes in MSR asset fair value due to inputs or assumptions and derivative valuation adjustments and other.

Nonperforming assets	**$ 188**	$ 177	$ 236

(a) Average Loans held-for-sale were $530 million and $744 million for 2006 and 2005, respectively. Average Loans held-for-sale for 2007 were insignificant. These amounts are excluded when calculating the net charge-off rate.

2007 compared with 2006

Auto Finance Net income was $295 million, a decrease of $51 million, or 15%, from the prior year. Net revenue was $1.8 billion, up $218 million, or 14%, reflecting wider loan spreads and higher automobile operating lease revenue. The Provision for credit losses was $380 million, up $173 million, reflecting an increase in estimated losses. The net charge-off rate was 0.86% compared with 0.56% in the prior year. Noninterest expense of $890 million increased $129 million, or 17%, driven by increased depreciation expense on owned automobiles subject to operating leases.

2006 compared with 2005

Net income of $346 million was up $78 million from the prior year, including the impact of a $50 million 2006 loss and a $136 million prior-year loss related to loans transferred to held-for-sale. Total net revenue of $1.5 billion was up $218 million, or 17%, reflecting higher automobile operating lease revenue and wider loan spreads on lower loan and direct finance lease balances. The Provision for credit losses of $207 million decreased $5 million from the prior year. Noninterest expense of $761 million increased $90 million, or 13%, driven by increased depreciation expense on owned automobiles subject to operating leases, partially offset by operating efficiencies.

With 155 million cards in circulation and more than $157 billion in managed loans, Card Services is one of the nation's largest credit card issuers. Customers used Chase cards to meet more than $354 billion worth of their spending needs in 2007.

With hundreds of partnerships, Chase has a market leadership position in building loyalty programs with many of the world's most respected brands. The Chase-branded product line was strengthened in 2007 with enhancements to the popular Chase Freedom Program, which has generated more than one million new customers since its launch in 2006.

Chase Paymentech Solutions, LLC, a joint venture between JPMorgan Chase and First Data Corporation, is a processor of MasterCard and Visa payments, which handled more than 19 billion transactions in 2007.

JPMorgan Chase uses the concept of "managed basis" to evaluate the credit performance of its credit card loans, both loans on the balance sheet and loans that have been securitized. For further information, see Explanation and reconciliation of the Firm's use of non-GAAP financial measures on pages 36–37 of this Annual Report. Managed results exclude the impact of credit card securitizations on Total net revenue, the Provision for credit losses, net charge-offs and loan receivables. Securitization does not change reported Net income; however, it does affect the classification of items on the Consolidated statements of income and Consolidated balance sheets.

As a result of the integration of Chase Merchant Services and Paymentech merchant processing businesses into a joint venture, beginning in the fourth quarter of 2005, Total net revenue, Total noninterest expense and Income before income tax expense were reduced to reflect the deconsolidation of Paymentech. There was no impact to Net income. To illustrate underlying business trends, the following discussion of CS' performance assumes that the deconsolidation of Paymentech had occurred as of the beginning of 2005. For a further discussion of the deconsolidation of Paymentech, see Note 2 on pages 109–110, and Note 31 on pages 170–173, respectively, of this Annual Report. The following table presents a reconciliation of CS' managed basis to an adjusted basis to disclose the effect of the deconsolidation of Paymentech on CS' results for the periods presented.

Reconciliation of Card Services' managed results to an adjusted basis to disclose the effect of the Paymentech deconsolidation.

Adjustment for Paymentech	**—**	—	(435)
Adjusted Total net revenue	**$ 15,235**	$14,745	$14,931
Total noninterest expense			
Managed	**$ 4,914**	$ 5,086	$ 4,999
Adjustment for Paymentech	**—**	—	(389)
Adjusted Total noninterest expense	**$ 4,914**	$ 5,086	$ 4,610

2007 compared with 2006

Net income of $2.9 billion was down $287 million, or 9%, from the prior year. Prior-year results benefited from significantly lower net charge-offs following the change in bankruptcy legislation in the fourth quarter of 2005. The increase in net charge-offs was offset partially by higher revenue.

End-of-period managed loans of $157.1 billion increased $4.2 billion, or 3%, from the prior year. Average managed loans of $149.3 billion increased $8.2 billion, or 6%, from the prior year. The increases in both end-of-period and average managed loans resulted from organic growth.

Managed Total net revenue was $15.2 billion, an increase of $490 million, or 3%, from the prior year. Net interest income was $12.2 billion, up $388 million, or 3%, from the prior year. The increase in Net interest income was driven by a higher level of fees and higher average loan balances. These benefits were offset partially by narrower loan spreads, the discontinuation of certain billing practices (including the elimination of certain over-limit fees and the two-cycle billing method for calculating finance charges beginning in the second quarter of 2007) and the effect of higher revenue reversals associated with higher charge-offs. Noninterest revenue was $3.0 billion, an increase of $102 million, or 3%, from the prior year. The increase reflects a higher level of fee-based revenue and increased net interchange income, which benefited from higher charge volume. Charge volume growth of 4% reflected a 9% increase in sales volume, offset primarily by a lower level of balance transfers, the result of more targeted marketing efforts.

The managed Provision for credit losses was $5.7 billion, an increase of $1.1 billion, or 24%, from the prior year. The increase was primarily due to a higher level of net charge-offs (the prior year benefited from the change in bankruptcy legislation in the fourth quarter of 2005) and an increase in the Allowance for loan losses driven by higher estimated net charge-offs in the portfolio. The managed net charge-off rate was 3.68%, up from 3.33% in the prior year. The 30-day managed delinquency rate was 3.48%, up from 3.13% in the prior year.

Noninterest expense was $4.9 billion, a decrease of $172 million, or 3%, compared with the prior year, primarily due to lower marketing expense and lower fraud-related expense, partially offset by higher volume-related expense.

2006 compared with 2005

Net income of $3.2 billion was up $1.3 billion, or 68%, from the prior year. Results were driven by a lower Provision for credit losses due to significantly lower bankruptcy filings.

End-of-period managed loans of $152.8 billion increased $10.6 billion, or 7%, from the prior year. Average managed loans of $141.1 billion increased $4.7 billion, or 3%, from the prior year. Compared with the prior year, both average managed and end-of-period managed loans continued to be affected negatively by higher customer payment rates. Management believes that contributing to the higher payment rates are the new minimum payment rules and a higher proportion of customers in rewards-based programs.

2006 benefited from organic growth and reflected acquisitions of two loan portfolios. The first portfolio was the Sears Canada credit card business, which closed in the fourth quarter of 2005. The Sears Canada portfolio's average managed loan balances were $2.1 billion in 2006 and $291 million in the prior year. The second purchase was the Kohl's Corporation ("Kohl's") private label portfolio, which closed in the second quarter of 2006. The Kohl's portfolio average and period-end managed loan balances for 2006 were $1.2 billion and $2.5 billion, respectively.

Managed Total net revenue of $14.7 billion was down $186 million, or 1%, from the prior year. Net interest income of $11.8 billion was flat to the prior year. Net interest income benefited from an increase in average managed loan balances and lower revenue reversals associated with lower charge-offs. These increases were offset by attrition of mature, higher spread balances as a result of higher payment rates and higher cost of funds on balance growth in promotional, introductory and transactor loan balances, which increased due to continued investment in marketing. Noninterest revenue of $2.9 billion was down $197 million, or 6%. Interchange income increased, benefiting from 12% higher charge volume, but was more than offset by higher volume-driven payments to partners, including Kohl's, and increased rewards expense (both of which are netted against interchange income).

The managed Provision for credit losses was $4.6 billion, down $2.7 billion, or 37%, from the prior year. This benefit was due to a significant decrease in net charge-offs of $2.4 billion, reflecting the continued low level of bankruptcy losses, partially offset by an increase in contractual net charge-offs. The provision also benefited from a release in the Allowance for loan losses in 2006 of unused reserves related to Hurricane Katrina, compared with an increase in the Allowance for loan losses in the prior year. The managed net charge-off rate decreased to 3.33%, from 5.21% in the prior year. The 30-day managed delinquency rate was 3.13%, up from 2.79% in the prior year.

Noninterest expense of $5.1 billion was up $476 million, or 10%, from the prior year due largely to higher marketing spending and acquisitions offset partially by merger savings.

The following is a brief description of selected business metrics within Card Services.

- **Charge volume** – Represents the dollar amount of cardmember purchases, balance transfers and cash advance activity.
- **Net accounts opened** – Includes originations, purchases and sales.
- **Merchant acquiring business** – Represents an entity that processes bank card transactions for merchants. JPMorgan Chase is a partner in Chase Paymentech Solutions, LLC, a merchant acquiring business.
  - **Bank card volume** – Represents the dollar amount of transactions processed for merchants.
  - **Total transactions** – Represents the number of transactions and authorizations processed for merchants.

Overhead ratio	**48**	52	53

(a) Investment banking-related and commercial card revenue is included in all other income.
(b) 2005 includes a $35 million special provision related to Hurricane Katrina.

On October 1, 2006, JPMorgan Chase completed the acquisition of The Bank of New York's consumer, business banking and middle-market banking businesses, adding approximately $2.3 billion in loans and $1.2 billion in deposits to the Commercial Bank.

2007 compared with 2006

Net income was $1.1 billion, an increase of $124 million, or 12%, from the prior year due primarily to growth in total net revenue, partially offset by higher Provision for credit losses.

Record total net revenue of $4.1 billion increased $303 million, or 8%. Net interest income of $2.8 billion increased $113 million, or 4%, driven by double-digit growth in liability balances and loans, which reflected organic growth and the Bank of New York transaction, largely offset by the continued shift to narrower–spread liability products and spread compression in the loan and liability portfolios.

Noninterest revenue was $1.3 billion, up $190 million, or 18%, due to increased deposit-related fees, higher investment banking revenue, and gains on sales of securities acquired in the satisfaction of debt.

On a segment basis, Middle Market Banking revenue was $2.7 billion, an increase of $154 million, or 6%, primarily due to the Bank of New York transaction, higher deposit-related fees and growth in investment banking revenue. Mid-Corporate Banking revenue was $815 million, an increase of $159 million, or 24%, reflecting higher lending revenue, investment banking revenue, and gains on sales of securities acquired in the satisfaction of debt. Real Estate Banking revenue of $421 million decreased $37 million, or 8%.

Provision for credit losses was $279 million, compared with $160 million in the prior year. The increase in the allowance for credit losses reflected portfolio activity including slightly lower credit quality as well as growth in loan balances. The Allowance for loan losses to average loans retained was 2.81%, compared with 2.86% in the prior year.

Noninterest expense was $2.0 billion, a decrease of $21 million, or 1%, largely due to lower Compensation expense driven by the absence of prior-year expense from the adoption of SFAS 123R, partially offset by expense growth related to the Bank of New York transaction.

2006 compared with 2005

Net income of $1.0 billion increased $59 million, or 6%, from the prior year due to higher revenue, partially offset by higher expense and Provision for credit losses.

Record total net revenue of $3.8 billion increased 9%, or $312 million. Net interest income increased to $2.7 billion, primarily driven by higher liability balances and loan volumes, partially offset by loan spread compression and a shift to narrower-spread liability products. Noninterest revenue was $1.1 billion, up $87 million, or 9%, due to record Investment banking revenue and higher commercial card revenue.

Revenue grew for each CB business compared with the prior year, driven by increased treasury services, investment banking and lending revenue. Compared with the prior year, Middle Market Banking revenue of $2.5 billion increased $177 million, or 8%. Mid-Corporate Banking revenue of $656 million increased $105 million, or 19%, and Real Estate Banking revenue of $458 million increased $24 million, or 6%.

Provision for credit losses was $160 million, up from $73 million in the prior year, reflecting portfolio activity and the establishment of additional Allowance for loan losses related to loans acquired from The Bank of New York, partially offset by a release of the unused portion of the special reserve established in 2005 for Hurricane Katrina. Net charge-offs were flat compared with the prior year. Nonperforming loans declined 56%, to $121 million.

Total noninterest expense of $2.0 billion increased $123 million, or 7%, from last year, primarily related to incremental compensation expense related to SFAS 123R and increased expense resulting from higher client usage of Treasury Services' products.

(a) Represents the total revenue related to investment banking products sold to CB clients.
(b) Loans held-for-sale and loans accounted for at fair value under SFAS 159 were excluded when calculating the allowance coverage ratio and the net charge-off rate.
(c) Liability balances include deposits and deposits swept to on–balance sheet liabilities such as Commercial paper, Federal funds purchased and repurchase agreements.

Commercial Banking revenue comprises the following:

Lending includes a variety of financing alternatives, which are primarily provided on a basis secured by receivables, inventory, equipment, real estate or other assets. Products include:

- Term loans
- Revolving lines of credit
- Bridge financing
- Asset-based structures
- Leases

Treasury services includes a broad range of products and services enabling clients to transfer, invest and manage the receipt and disbursement of funds, while providing the related information reporting. These products and services include:

- U.S. dollar and multi-currency clearing
- ACH
- Lockbox
- Disbursement and reconciliation services
- Check deposits
- Other check and currency-related services
- Trade finance and logistics solutions
- Commercial card
- Deposit products, sweeps and money market mutual funds

Investment banking provides clients with sophisticated capital-raising alternatives, as well as balance sheet and risk management tools, through:

- Advisory
- Equity underwriting
- Loan syndications
- Investment-grade debt
- Asset-backed securities
- Private placements
- High-yield bonds
- Derivatives
- Foreign exchange hedges
- Securities sales

TREASURY & SECURITIES SERVICES

TSS is a global leader in transaction, investment and information services. TSS is one of the world's largest cash management providers and a leading global custodian. TS provides cash management, trade, wholesale card and liquidity products and services to small and mid-sized companies, multinational corporations, financial institutions and government entities. TS partners with the Commercial Banking, Retail Financial Services and Asset Management businesses to serve clients firmwide. As a result, certain TS revenue is included in other segments' results. WSS holds, values, clears and services securities, cash and alternative investments for investors and broker-dealers, and manages depositary receipt programs globally.

As a result of the transaction with The Bank of New York on October 1, 2006, selected corporate trust businesses were transferred from TSS to the Corporate segment and are reported in discontinued operations for all periods presented.

Financial ratios			
ROE	**47%**	48%	57%
Overhead ratio	**66**	70	73
Pretax margin ratio[b]	**32**	28	24

(a) TSS was charged a credit reimbursement related to certain exposures managed within the IB credit portfolio on behalf of clients shared with TSS.
(b) Pretax margin represents Income before income tax expense divided by Total net revenue, which is a measure of pretax performance and another basis by which management evaluates its performance and that of its competitors.

2007 compared with 2006

Net income was a record $1.4 billion, an increase of $307 million, or 28%, from the prior year, driven by record net revenue, partially offset by higher noninterest expense.

Total net revenue was $6.9 billion, an increase of $836 million, or 14%, from the prior year. Worldwide Securities Services net revenue of $3.9 billion was up $615 million, or 19%. The growth was driven by increased product usage by new and existing clients (primarily custody, securities lending, depositary receipts and fund services), market appreciation on assets under custody, and wider spreads on securities lending. These gains were offset partially by spread compression on liability products. Treasury Services net revenue was $3.0 billion, an increase of $221 million, or 8%, from the prior year. The results were driven by growth in electronic transaction volumes and higher liability balances, offset partially by a shift to narrower-spread liability products. TSS firmwide net revenue, which includes Treasury Services net revenue recorded in other lines of business, grew to $9.6 billion, up $1.0 billion, or 12%. Treasury Services firmwide net revenue grew to $5.6 billion, up $391 million, or 7%.

Noninterest expense was $4.6 billion, an increase of $314 million, or 7%, from the prior year, reflecting higher expense related to business and volume growth, as well as investment in new product platforms.

2006 compared with 2005

Net income was $1.1 billion, an increase of $227 million, or 26%, from the prior year. Earnings benefited from increased net revenue and the absence of prior-year charges of $58 million (after-tax) related to the termination of a client contract, partially offset by higher compensation expense.

Total net revenue was $6.1 billion, an increase of $570 million, or 10%. Worldwide Securities Services net revenue of $3.3 billion grew by $473 million, or 17%. The growth was driven by increased product usage by new and existing clients (primarily custody, fund services, depositary receipts and securities lending) and market appreciation on assets under custody. Treasury Services net revenue of $2.8 billion was up 4%. The growth was driven by higher liability balances, offset partially by a shift to narrower-spread liability products. TSS firmwide net revenue, which includes Treasury Services net revenue recorded in other lines of business, grew to $8.6 billion, up $778 million, or 10%. Treasury Services firmwide net revenue grew to $5.2 billion, an increase of $305 million, or 6%.

Total noninterest expense was $4.3 billion, up $216 million, or 5%. The increase was due to higher compensation expense related to increased client activity, business growth, investment in new product platforms and incremental expense related to SFAS 123R, partially offset by the absence of prior-year charges of $93 million related to the termination of a client contract.

Treasury & Securities Services firmwide liability balances[g]	**316,651**	262,678	220,781

(a) International electronic funds transfer includes non-US$ ACH and clearing volume.
(b) Wholesale cards issued include domestic commercial card, stored value card, prepaid card and government electronic benefit card products.
(c) Loan balances include wholesale overdrafts, commercial cards and trade finance loans.
(d) Liability balances include deposits and deposits swept to on-balance sheet liabilities such as Commercial paper, Federal funds purchased and repurchase agreements.
(e) Firmwide revenue includes TS revenue recorded in the CB, Regional Banking and AM lines of business (see below) and excludes FX revenue recorded in the IB for TSS-related FX activity.

(in millions)	2007	2006	2005
Treasury Services revenue reported in CB	**$ 2,350**	$2,243	$2,062
Treasury Services revenue reported in other lines of business	**270**	207	180

TSS firmwide FX revenue, which includes FX revenue recorded in TSS and FX revenue associated with TSS customers who are FX customers of the IB, was $552 million, $445 million and $382 million for the years ended December 31, 2007, 2006 and 2005, respectively.

(f) Overhead ratios have been calculated based upon firmwide revenue and TSS and TS expense, respectively, including those allocated to certain other lines of business. FX revenue and expense recorded in the IB for TSS-related FX activity are not included in this ratio.
(g) Firmwide liability balances include TS' liability balances recorded in certain other lines of business.

Treasury & Securities Services firmwide metrics include certain TSS product revenue and liability balances reported in other lines of business for customers who are also customers of those lines of business. Management reviews firmwide metrics such as liability balances, revenue and overhead ratios in assessing financial performance for TSS as such firmwide metrics capture the firmwide impact of TS' and TSS' products and services. Management believes such firmwide metrics are necessary in order to understand the aggregate TSS business.

ASSET MANAGEMENT

With assets under supervision of $1.6 trillion, AM is a global leader in investment and wealth management. AM clients include institutions, retail investors and high-net-worth individuals in every major market throughout the world. AM offers global investment management in equities, fixed income, real estate, hedge funds, private equity and liquidity, including both money-market instruments and bank deposits. AM also provides trust and estate and banking services to high-net-worth clients, and retirement services for corporations and individuals. The majority of AM's client assets are in actively managed portfolios.

Financial ratios			
ROE	**51%**	40%	51%
Overhead ratio	**64**	67	68
Pretax margin ratio[(a)]	**36**	33	33

(a) Pretax margin represents Income before income tax expense divided by Total net revenue, which is a measure of pretax performance and another basis by which management evaluates its performance and that of its competitors.

2007 compared with 2006

Net income was a record $2.0 billion, an increase of $557 million, or 40%, from the prior year. Results benefited from record net revenue, partially offset by higher noninterest expense.

Net revenue was $8.6 billion, an increase of $1.8 billion, or 27%, from the prior year. Noninterest revenue, primarily fees and commissions, was $7.5 billion, up $1.7 billion, or 29%, largely due to increased assets under management and higher performance and placement fees. Net interest income was $1.2 billion, up $189 million, or 19%, from the prior year, largely due to higher deposit and loan balances.

Institutional revenue grew 28%, to $2.5 billion, due to net asset inflows and performance fees. Private Bank revenue grew 37%, to $2.6 billion, due to higher assets under management, performance and placement fees, and increased loan and deposit balances. Retail revenue grew 28%, to $2.4 billion, primarily due to market appreciation and net asset inflows. Private Client Services revenue grew 7%, to $1.1 billion, reflecting higher assets under management and higher deposit balances.

The provision for credit losses was a benefit of $18 million, compared with a benefit of $28 million in the prior year.

Noninterest expense was $5.5 billion, an increase of $937 million, or 20%, from the prior year. The increase was due primarily to higher performance-based compensation expense and investments in all business segments.

2006 compared with 2005

Net income was a record $1.4 billion, up $193 million, or 16%, from the prior year. Improved results were driven by increased revenue offset partially by higher performance-based compensation expense, incremental expense from the adoption of SFAS 123R and the absence of a tax credit recognized in the prior year.

Total net revenue was a record $6.8 billion, up $1.1 billion, or 20%, from the prior year. Noninterest revenue, principally fees and commissions, of $5.8 billion was up $1.2 billion, or 27%. This increase was due largely to increased assets under management and higher performance and placement fees. Net interest income was $971 million, down $110 million, or 10%, from the prior year. The decline was due primarily to narrower spreads on deposit products and the absence of BrownCo, partially offset by higher deposit and loan balances.

Institutional revenue grew 41%, to $2.0 billion, due to net asset inflows and higher performance fees. Private Bank revenue grew 13%, to $1.9 billion, due to increased placement activity, higher asset management fees and higher deposit balances, partially offset by narrower average spreads on deposits. Retail revenue grew 22%, to $1.9 billion, primarily due to net asset inflows, partially offset by the sale of BrownCo. Private Client Services revenue decreased 1%, to $1.0 billion, as higher deposit and loan balances were more than offset by narrower average deposit and loan spreads.

Provision for credit losses was a benefit of $28 million compared with a benefit of $56 million in the prior year. The 2006 benefit reflects a high level of recoveries and stable credit quality.

Total noninterest expense of $4.6 billion was up $718 million, or 19%, from the prior year. The increase was due to higher performance-based compensation, incremental expense related to SFAS 123R, increased salaries and benefits related to business growth, and higher minority interest expense related to Highbridge, partially offset by the absence of BrownCo.

(a) Derived from following rating services: Morningstar for the United States; Micropal for the United Kingdom, Luxembourg, Hong Kong and Taiwan; and Nomura for Japan.

(b) Derived from following rating services: Lipper for the United States and Taiwan; Micropal for the United Kingdom, Luxembourg and Hong Kong; and Nomura for Japan.

(c) Held-for-investment prime mortgage loans transferred from AM to Treasury within the Corporate segment during 2007 were $6.5 billion. There were no loans transferred during 2006 or 2005. Although the loans, together with the responsibility for the investment management of the portfolio, were transferred to Treasury, the transfer has no material impact on the financial results of AM.

(d) The sale of BrownCo, which closed on November 30, 2005, included $3.0 billion in both loans and deposits.

AM's client segments comprise the following:

Institutional brings comprehensive global investment services – including asset management, pension analytics, asset-liability management and active risk budgeting strategies – to corporate and public institutions, endowments, foundations, not-for-profit organizations and governments worldwide.

Retail provides worldwide investment management services and retirement planning and administration through third-party and direct distribution of a full range of investment vehicles.

The **Private Bank** addresses every facet of wealth management for ultra-high-net-worth individuals and families worldwide, including investment management, capital markets and risk management, tax and estate planning, banking, capital raising and specialty-wealth advisory services.

Private Client Services offers high-net-worth individuals, families and business owners in the United States comprehensive wealth management solutions, including investment management, capital markets and risk management, tax and estate planning, banking and specialty-wealth advisory services.

JPMorgan Asset Management has established two high-level measures of its overall performance.

- Percentage of assets under management in funds rated 4 and 5 stars (3 year). Mutual fund rating services rank funds based on their risk-adjusted performance over various periods. A 5 star rating is the best and represents the top 10% of industry wide ranked funds. A 4 star rating represents the next 22% of industry wide ranked funds. The worst rating is a 1 star rating.
- Percentage of assets under management in first- or second-quartile funds (one, three and five years). Mutual fund rating services rank funds according to a peer-based performance system, which measures returns according to specific time and fund classification (small, mid, multi and large cap).

Assets under supervision

2007 compared with 2006

Assets under supervision ("AUS") were $1.6 trillion, an increase of $225 billion, or 17%, from the prior year. Assets under management ("AUM") were $1.2 trillion, up 18%, or $180 billion, from the prior year. The increase in AUM was the result of net asset inflows into liquidity and alternative products and market appreciation across all segments. Custody, brokerage, administration and deposit balances were $379 billion, up $45 billion. The Firm also has a 44% interest in American Century Companies, Inc., whose AUM totaled $102 billion and $103 billion at December 31, 2007 and 2006, respectively, which are excluded from the AUM above.

2006 compared with 2005

AUS were $1.3 trillion, up 17%, or $198 billion, from the prior year. AUM were $1.0 trillion, up 20%, or $166 billion, from the prior year. The increase in AUM was the result of net asset inflows in the Retail segment, primarily in equity-related products, Institutional segment flows, primarily in liquidity products and market appreciation. Custody, brokerage, administration and deposit balances were $334 billion, up $32 billion. The AUM of American Century Companies, Inc., totaled $103 billion and $101 billion at December 31, 2006 and 2005, respectively, which are excluded from the AUM above.

(a) Excludes Assets under management of American Century Companies, Inc., in which the Firm had a 44% ownership at December 31, 2007.
(b) 2006 data reflects the reclassification of $19 billion of assets under management into liquidity from other asset classes. Prior period data were not restated.
(c) In 2006, assets under management of $22 billion from Retirement planning services has been reclassified from the Institutional client segment to the Retail client segment in order to be consistent with the revenue by client segment reporting.
(d) Reflects the sale of BrownCo ($33 billion) in 2005.

The Corporate sector comprises Private Equity, Treasury, corporate staff units and expense that is centrally managed. Private Equity includes the JPMorgan Partners and ONE Equity Partners businesses. Treasury manages capital, liquidity, interest rate and foreign exchange risk and the investment portfolio for the Firm. The corporate staff units include Central Technology and Operations, Internal Audit, Executive Office, Finance, Human Resources, Marketing & Communications, Legal & Compliance, Corporate Real Estate and General Services, Risk Management and Strategy & Development. Other centrally managed expense includes the Firm's occupancy and pension-related expense, net of allocations to the business.

(a) The Firm adopted SFAS 157 in the first quarter of 2007. See Note 4 on pages 111–118 of this Annual Report for additional information.
(b) 2007 included the classification of certain private equity carried interest from Principal transactions to Compensation expense.
(c) Included a gain of $1.3 billion on the sale of BrownCo in 2005.
(d) Included insurance recoveries related to material legal proceedings of $512 million and $208 million in 2006 and 2005, respectively. Includes litigation reserve charges of $2.8 billion in 2005.
(e) Includes tax benefits recognized upon resolution of tax audits.
(f) Included a $622 million gain from the sale of selected corporate trust businesses in the fourth quarter of 2006.

2007 compared with 2006

Net income was $1.8 billion, compared with $842 million in the prior year, benefiting from strong Private Equity gains, partially offset by higher expense. Prior-year results also included Income from discontinued operations of $795 million, which included a one-time gain of $622 million from the sale of selected corporate trust businesses.

Net income for Private Equity was $2.2 billion, compared with $627 million in the prior year. Total net revenue was $4.0 billion, an increase of $2.8 billion. The increase was driven by Private Equity gains of $4.1 billion, compared with $1.3 billion, reflecting a higher level of gains and the change in classification of carried interest to compensation expense. Total noninterest expense was $589 million, an increase of $422 million from the prior year. The increase was driven by higher compensation expense reflecting the change in the classification of carried interest.

Net loss for Treasury and Other Corporate was $390 million compared with a net loss of $580 million in the prior year. Treasury and Other Corporate Total net revenue was $278 million, an increase of $1.4 billion. Revenue benefited from net security gains compared with net security losses in the prior year and improved net interest spread. Total noninterest expense was $1.2 billion, an increase of $193 million from the prior year. The increase reflected higher net litigation expense driven by credit card-related litigation and the absence of prior-year insurance recoveries related to certain material litigation partially offset by lower compensation expense.

2006 compared with 2005

On August 1, 2006, the buyout and growth equity professionals of JPMorgan Partners ("JPMP") formed an independent firm, CCMP Capital, LLC ("CCMP"), and the venture professionals separately formed an independent firm, Panorama Capital, LLC ("Panorama"). The investment professionals of CCMP and Panorama continue to manage the former JPMP investments pursuant to a management agreement with the Firm.

On October 1, 2006, the Firm completed the exchange of selected corporate trust businesses, including trustee, paying agent, loan agency and document management services, for the consumer, business banking and middle-market banking businesses of The Bank of New York. These corporate trust businesses, which were previously reported in TSS, are now reported as discontinued operations for all periods presented within Corporate. The related balance sheet and income statement activity were transferred to the Corporate segment commencing with the second quarter of 2006. Periods prior to the second quarter of 2006 were revised to reflect this transfer.

Net income was $842 million compared with a net loss of $3.6 billion in the prior year, benefiting from lower net litigation costs and improved Treasury investment performance. Prior-year results included a $752 million gain on the sale of BrownCo.

Net income for Private Equity was $627 million, compared with $821 million in the prior year. Net revenue was $1.1 billion, a decrease of $379 million. The decrease was driven by lower Private Equity gains. Noninterest expense was $167 million, a decrease of $78 million from the prior year.

Net loss for Treasury and Other Corporate was $580 million compared with a net loss of $4.6 billion. Treasury and Other Corporate net revenue was a negative $1.1 billion compared with negative $2.7 billion. The improvement reflected higher net interest income, which was driven by an improved net interest spread, an increase in AFS securities and lower security losses. Prior-year results included a gain of $1.3 billion on the sale of BrownCo. Noninterest expense was $980 million, a decrease of $4.1 billion from the prior year. Insurance recoveries relating to certain material litigation were $512 million in 2006, while the prior-year results included a material litigation charge of $2.8 billion and related insurance recoveries of $208 million. Merger costs were $305 million, compared with $722 million in the prior year.

Discontinued operations include the results of operations of selected corporate trust businesses that were sold to The Bank of New York on October 1, 2006. Prior to the sale, the selected corporate trust businesses produced $173 million of Income from discontinued operations in 2006, compared with $229 million in the prior year. Income from discontinued operations for 2006 also included a one-time gain of $622 million related to the sale of these businesses.

(a) The Firm adopted SFAS 157 in the first quarter of 2007. See Note 4 on pages 111–118 of this Annual Report for additional information.
(b) 2007 included the classification of certain private equity carried interest from Net revenue to Compensation expense.
(c) Included a gain of $752 million ($1.3 billion pretax) on the sale of BrownCo in 2005.
(d) Included insurance recoveries (after-tax) related to material legal proceedings of $317 million and $129 million in 2006 and 2005, respectively. Includes litigation reserve charges (after-tax) of $1.7 billion in 2005.
(e) Includes tax benefits recognized upon resolution of tax audits.
(f) Included a $622 million gain from the sale of selected corporate trust business in the fourth quarter of 2006.

Private equity portfolio

2007 compared with 2006

The carrying value of the private equity portfolio at December 31, 2007, was $7.2 billion, up from $6.1 billion from December 31, 2006. The portfolio increase was due primarily to favorable valuation adjustments on nonpublic investments and new investments, partially offset by sales activity. The portfolio represented 9.2% of the Firm's stockholders' equity less goodwill at December 31, 2007, up from 8.6% at December 31, 2006.

2006 compared with 2005

The carrying value of the private equity portfolio declined by $95 million to $6.1 billion as of December 31, 2006. This decline was due primarily to sales, partially offset by new investment activity. The portfolio represented 8.6% of the Firm's stockholder equity less goodwill at December 31, 2006, down from 9.7% at December 31, 2005.

Consolidated balance sheets overview

The following is a discussion of the significant changes in the Consolidated balance sheet items from December 31, 2006.

Deposits with banks; Federal funds sold and securities purchased under resale agreements; Securities borrowed; Federal funds purchased and securities sold under repurchase agreements

The Firm utilizes Deposits with banks, Federal funds sold and securities purchased under resale agreements, Securities borrowed, and Federal funds purchased and securities sold under repurchase agreements as part of its liquidity management activities to manage the Firm's cash positions and risk-based capital requirements, and to support the Firm's trading activities and its risk management activities. In particular, Federal funds purchased and securities sold under repurchase agreements are used as short-term funding sources. The increase from December 31, 2006, in Federal funds sold and securities purchased under resale agreements and Securities borrowed reflected a higher level of funds that were available for short-term investment opportunities and a higher volume of securities needed for trading purposes. The decrease in Federal funds purchased and securities sold under repurchase agreements was due primarily to a lower level of AFS securities in Treasury, partly offset by higher amounts to fund trading positions. For additional information on the Firm's Liquidity risk management, see pages 70–73 of this Annual Report.

Trading assets and liabilities – debt and equity instruments

The Firm uses debt and equity trading instruments for both market-making and proprietary risk-taking activities. These instruments consist primarily of fixed income securities, including government and corporate debt; equity, including convertible securities; loans; and physical commodities inventories. The increase in trading assets from December 31, 2006, was due primarily to the more active capital markets environment, with growth in client-driven market-making activities, particularly for debt securities. In addition, a total of $33.8 billion of loans are now accounted for at fair value under SFAS 159 and classified as trading assets at December 31, 2007. The trading assets accounted for under SFAS 159 are primarily certain prime mortgage loans warehoused by RFS for sale or securitization purposes, and loans warehoused by IB. For additional information, refer to Note 5 and Note 6 on pages 119–121 and 122, respectively, of this Annual Report.

Trading assets and liabilities – derivative receivables and payables

The Firm utilizes various interest rate, foreign exchange, equity, credit and commodity derivatives for market-making, proprietary risk-taking and risk-management purposes. Both derivative receivables and derivative payables increased from December 31, 2006, primarily driven by increases in credit derivative and interest rate products due to increased credit spreads and lower interest rates, respectively, as well as a decline in the U.S. dollar. For additional information, refer to Derivative contracts, Note 6 and Note 30 on pages 79–82, 122 and 168–169, respectively, of this Annual Report.

Securities

Almost all of the Firm's securities portfolio is classified as AFS and is used primarily to manage the Firm's exposure to interest rate movements. The AFS portfolio decreased from December 31, 2006, primarily due to net sales and maturities of securities in Treasury. For additional information related to securities, refer to the Corporate segment discussion and to Note 12 on pages 59–60 and 134–136, respectively, of this Annual Report.

Loans and Allowance for loan losses
The Firm provides loans to customers of all sizes, from large corporate and institutional clients to individual consumers. The Firm manages the risk/reward relationship of each portfolio and discourages the retention of loan assets that do not generate a positive return above the cost of risk-adjusted capital. Loans increased $36.2 billion, or 8%, from December 31, 2006, primarily due to business growth in wholesale lending activity, mainly in IB, CB and AM; organic growth in the Home Equity portfolio; and the decision during the third quarter of 2007 to retain rather than sell subprime mortgage loans. These increases were offset partly by a decline in consumer loans as certain prime mortgage loans originated after January 1, 2007, are classified as Trading assets and accounted for at fair value under SFAS 159. In addition, certain loans warehoused in the IB were transferred to Trading assets on January 1, 2007, as part of the adoption of SFAS 159. The Allowance for loan losses increased $2.0 billion, or 27%, from December 31, 2006. The consumer and wholesale components of the allowance increased $1.5 billion and $443 million, respectively. The increase in the consumer portion of the allowance was due to increases of $1.2 billion in RFS, reflecting higher estimated losses related to home equity and subprime mortgage loans, and $231 million in CS, reflecting a higher level of estimated net charge-offs in the credit card portfolio. The increase in the wholesale portion of the allowance was primarily due to loan growth in IB and CB. For a more detailed discussion of the loan portfolio and the Allowance for loan losses, refer to Credit risk management on pages 73–89 of this Annual Report.

Goodwill
Goodwill arises from business combinations and represents the excess of the cost of an acquired entity over the net fair value amounts assigned to assets acquired and liabilities assumed. The increase in Goodwill primarily resulted from certain acquisitions by TSS and CS, and currency translation adjustments on the Sears Canada credit card acquisition. Partially offsetting these increases was a reduction resulting from the adoption of FIN 48, as well as tax-related purchase accounting adjustments. For additional information, see Notes 18 and 26 on pages 154–157 and 164–165, respectively, of this Annual Report.

Other intangible assets
The Firm's other intangible assets consist of MSRs, purchased credit card relationships, other credit card-related intangibles, core deposit intangibles and all other intangibles. The slight decline in Other intangible assets reflects amortization, primarily related to credit card business-related intangibles and core deposit intangibles. This decrease was offset largely by an increase in the MSR asset, as additions from loan sales and purchases were offset partially by fair value changes reflecting modeled servicing portfolio runoff and negative fair value adjustments, as declining interest rates during the second half of 2007 drove an increase in estimated future prepayments. For additional information on MSRs and other intangible assets, see RFS's Mortgage Banking business discussion and Note 18 on pages 46–47 and 154–157 of this Annual Report.

Deposits
The Firm's deposits represent a liability to customers, both retail and wholesale, for funds held on their behalf. Deposits are generally classified by location (U.S. and non-U.S.), whether they are interest or noninterest-bearing, and by type (i.e., demand, money market deposit accounts, savings, time or negotiable order of withdrawal accounts). Deposits help provide a stable and consistent source of funding for the Firm. Deposits rose from December 31, 2006, primarily due to a net increase in wholesale interest-bearing deposits in TSS, AM and CB, driven by growth in business volumes. For more information on deposits, refer to the RFS, TSS, and AM segment discussions and the Liquidity risk management discussion on pages 43–48, 54–55, 56–58, and 70–73, respectively, of this Annual Report. For more information on wholesale liability balances, including deposits, refer to the CB and TSS segment discussions on pages 52–53 and 54–55, respectively, of this Annual Report.

Commercial paper and other borrowed funds
The Firm utilizes Commercial paper and other borrowed funds as part of its liquidity management activities to cover short-term funding needs, and in connection with TSS's cash management product whereby clients' excess funds, primarily in TSS, CB and RFS, are transferred into commercial paper overnight sweep accounts. The increases in Commercial paper and other borrowed funds were due primarily to the Firm's ongoing efforts to build further liquidity, growth in the volume of liability balances in sweep accounts and higher short-term requirements to fund trading positions. For additional information on the Firm's Liquidity risk management, see pages 70–73 of this Annual Report.

Long-term debt and trust preferred capital debt securities
The Firm utilizes Long-term debt and trust preferred capital debt securities to build liquidity as part of its longer-term liquidity and capital management activities. Long-term debt and trust preferred capital debt securities increased from December 31, 2006, reflecting net new issuances, including client-driven structured notes in the IB. For additional information on the Firm's long-term debt activities, see the Liquidity risk management discussion on pages 70–73 of this Annual Report.

Stockholders' equity
Total stockholders' equity increased $7.4 billion from year-end 2006 to $123.2 billion at December 31, 2007. The increase was primarily the result of Net income for 2007, net shares issued under the Firm's employee stock-based compensation plans, and the cumulative effect on Retained earnings of changes in accounting principles of $915 million. These were offset partially by stock repurchases and the declaration of cash dividends. The $915 million increase in Retained earnings resulting from the adoption of new accounting principles primarily reflected $287 million related to SFAS 157, $199 million related to SFAS 159 and $436 million related to FIN 48 in the first quarter of 2007. For a further discussion of capital, see the Capital management section that follows; for a further discussion of the accounting changes, see Accounting and Reporting Developments on page 99, Note 4 on pages 111–118, Note 5 on pages 119–121 and Note 26 on pages 164–165 of this Form Annual Report.

The Firm's capital management framework is intended to ensure that there is capital sufficient to support the underlying risks of the Firm's business activities and to maintain "well-capitalized" status under regulatory requirements. In addition, the Firm holds capital above these requirements in amounts deemed appropriate to achieve management's regulatory and debt rating objectives. The process of assigning equity to the lines of business is integrated into the Firm's capital framework and is overseen by ALCO.

Line of business equity

The Firm's framework for allocating capital is based upon the following objectives:

- integrate firmwide capital management activities with capital management activities within each of the lines of business;
- measure performance consistently across all lines of business; and
- provide comparability with peer firms for each of the lines of business.

Equity for a line of business represents the amount the Firm believes the business would require if it were operating independently, incorporating sufficient capital to address economic risk measures, regulatory capital requirements and capital levels for similarly rated peers. Capital is also allocated to each line of business for, among other things, goodwill associated with such line of business' acquisitions since the Merger. In management's view, this methodology assigns responsibility to the lines of business to generate returns on the amount of capital supporting acquisition-related goodwill. At the time of the Merger, the Firm assigned to the Corporate segment an amount of equity capital equal to the then-current book value of goodwill from and prior to the Merger. Return on equity is measured and internal targets for expected returns are established as a key measure of a business segment's performance. The Firm may revise its equity capital-allocation methodology again in the future.

In accordance with SFAS 142, the lines of business perform the required goodwill impairment testing. For a further discussion of goodwill and impairment testing, see Critical accounting estimates and Note 18 on pages 96–98 and 154–157, respectively, of this Annual Report.

Line of business equity	Yearly Average	
(in billions)	**2007**	2006
Investment Bank	**$ 21.0**	$ 20.8

(a) 2007 and 2006 include $41.7 billion of equity to offset goodwill and $12.5 billion and $8.0 billion, respectively, of equity, primarily related to Treasury, Private Equity and the Corporate Pension Plan.

Economic risk capital

JPMorgan Chase assesses its capital adequacy relative to the risks underlying the Firm's business activities, utilizing internal risk-assessment methodologies. The Firm measures economic capital primarily based upon four risk factors: credit risk, market risk, operational risk and private equity risk, principally for the Firm's private equity business.

Economic risk capital	Yearly Average	
(in billions)	**2007**	2006
Credit risk[a]	**$ 30.0**	$ 26.7
Market risk	**9.5**	9.9
Operational risk	**5.6**	5.7
Private equity risk	**3.7**	3.4
Economic risk capital	**48.8**	45.7
Goodwill	**45.2**	43.9
Other[b]	**24.7**	21.1
Total common stockholders' equity	**$118.7**	$110.7

(a) Incorporates a change to the wholesale credit risk methodology, which has been modified to include a through-the-cycle adjustment (described below). The prior period has been revised to reflect this methodology change.
(b) Reflects additional capital required, in management's view, to meet its regulatory and debt rating objectives.

Credit risk capital

Credit risk capital is estimated separately for the wholesale businesses (IB, CB, TSS and AM) and consumer businesses (RFS and CS).

Credit risk capital for the overall wholesale credit portfolio is defined in terms of unexpected credit losses, both from defaults and declines in the portfolio value due to credit deterioration, measured over a one-year period at a confidence level consistent with the level of capitalization necessary to achieve a targeted "AA" credit rating. Unexpected losses are losses in excess of those for which provisions for credit losses are maintained. The capital methodology is based upon several principal drivers of credit risk: exposure at default (or loan-equivalent amount), default likelihood, credit spreads, loss severity and portfolio correlation.

In 2007, an updated capital methodology was introduced for credit exposures in the IB and for certain non-IB credit exposures related to publicly traded entities. The updated methodology includes a through-the-cycle adjustment to capital levels that reflects capital that would be needed across the various credit cycles. Capital methodologies employed across all wholesale businesses now employ a through-the-cycle approach.

Credit risk capital for the consumer portfolio is based upon product and other relevant risk segmentation. Actual segment level default and severity experience are used to estimate unexpected losses for a one-year horizon at a confidence level equivalent to the targeted "AA" credit rating. Statistical results for certain segments or portfolios are adjusted to ensure that capital is consistent with external benchmarks, such as subordination levels on market transactions or capital held at representative monoline competitors, where appropriate.

Market risk capital

The Firm calculates market risk capital guided by the principle that capital should reflect the risk of loss in the value of portfolios and financial instruments caused by adverse movements in market variables, such as interest and foreign exchange rates, credit spreads, securities prices and commodities prices. Daily Value-at-Risk ("VAR"), monthly stress-test results and other factors are used to determine appropriate capital levels. The Firm allocates market risk capital to each business segment according to a formula that weights that segment's VAR and stress-test exposures. See Market risk management on pages 90–94 of this Annual Report for more information about these market risk measures.

Operational risk capital

Capital is allocated to the lines of business for operational risk using a risk-based capital allocation methodology which estimates operational risk on a bottom-up basis. The operational risk capital model is based upon actual losses and potential scenario-based stress losses, with adjustments to the capital calculation to reflect changes in the quality of the control environment or the use of risk-transfer products. The Firm believes its model is consistent with the new Basel II Framework and expects to propose it for qualification under the Basel II advanced measurement approach for operational risk.

Private equity risk capital

Capital is allocated to privately and publicly held securities, third-party fund investments and commitments in the Private Equity portfolio to cover the potential loss associated with a decline in equity markets and related asset devaluations. In addition to negative market fluctuations, potential losses in private equity investment portfolios can be magnified by liquidity risk. The capital allocation for the Private Equity portfolio is based upon measurement of the loss experience suffered by the Firm and other market participants over a prolonged period of adverse equity market conditions.

Regulatory capital

The Board of Governors of the Federal Reserve System (the "Federal Reserve Board") establishes capital requirements, including well-capitalized standards for the consolidated financial holding company. The Office of the Comptroller of the Currency establishes similar capital requirements and standards for the Firm's national banks, including JPMorgan Chase Bank, N.A., and Chase Bank USA, N.A.

JPMorgan Chase maintained a well-capitalized position, based upon Tier 1 and Total capital ratios at December 31, 2007 and 2006 as indicated in the tables below.

Capital ratios

December 31,	**2007**	2006	Well-capitalized ratios
Tier 1 capital ratio	**8.4%**	8.7%	6.0%
Total capital ratio	**12.6**	12.3	10.0
Tier 1 leverage ratio	**6.0**	6.2	NA
Total stockholders' equity to assets	**7.9**	8.6	NA

Risk-based capital components and assets

December 31, (in millions)	**2007**	2006
Total Tier 1 capital	**$ 88,746**	$ 81,055
Total Tier 2 capital	**43,496**	34,210
Total capital	**$ 132,242**	$ 115,265
Risk-weighted assets	**$ 1,051,879**	$ 935,909
Total adjusted average assets	**1,473,541**	1,308,699

Tier 1 capital was $88.7 billion at December 31, 2007, compared with $81.1 billion at December 31, 2006, an increase of $7.7 billion. The increase was due primarily to net income of $15.4 billion; net issuances of common stock under the Firm's employee stock-based compensation plans of $3.9 billion; net issuances of $2.0 billion of qualifying trust preferred capital debt securities; and the after-tax effects of the adoption of new accounting principles reflecting increases of $287 million for SFAS 157, $199 million for SFAS 159 and $436 million for FIN 48. These increases were partially offset by decreases in Stockholders' equity net of Accumulated other comprehensive income (loss) due to common stock repurchases of $8.2 billion and dividends declared of $5.2 billion. In addition, the change in capital reflects the exclusion of an $882 million (after-tax) valuation adjustment to certain liabilities pursuant to SFAS 157 to reflect the credit quality of the Firm. Additional information regarding the Firm's capital ratios and the federal regulatory capital standards to which it is subject is presented in Note 28 on pages 166–167 of this Annual Report.

Basel II

The minimum risk-based capital requirements adopted by the federal banking agencies follow the Capital Accord of the Basel Committee on Banking Supervision. In 2004, the Basel Committee published a revision to the Accord ("Basel II"). The goal of the new Basel II Framework is to provide more risk-sensitive regulatory capital calculations and promote enhanced risk management practices among large, internationally active banking organizations. U.S. banking regulators published a final Basel II rule in December 2007, which will require JPMorgan Chase to implement Basel II at the holding company level, as well as at certain key U.S. bank subsidiaries.

Prior to full implementation of the new Basel II Framework, JPMorgan Chase will be required to complete a qualification period of four consecutive quarters during which it will need to demonstrate that it meets the requirements of the new rule to the satisfaction of its primary U.S. banking regulators. The U.S. implementation timetable consists of the qualification period, starting any time between April 1, 2008, and April 1, 2010, followed by a minimum transition period of three years. During the transition period Basel II risk-based capital requirements cannot fall below certain floors based on current ("Basel I") regulations. JPMorgan Chase expects to be in compliance with all relevant Basel II rules within the established timelines. In addition, the Firm will continue to adopt Basel II rules in certain non-U.S. jurisdictions, as required.

Dividends

The Firm's common stock dividend policy reflects JPMorgan Chase's earnings outlook, desired dividend payout ratios, need to maintain an adequate capital level and alternative investment opportunities. The Firm continues to target a dividend payout ratio of approximately 30–40% of Net income over time. On April 17, 2007, the Board of Directors increased the quarterly dividend to $0.38 per share.

The following table shows the common dividend payout ratio based upon reported Net income.

Common dividend payout ratio

Year ended December 31,	**2007**	2006	2005
Common dividend payout ratio	**34%**	34%	57%

For information regarding restrictions on JPMorgan Chase's ability to pay dividends, see Note 27 on pages 165–166 of this Annual Report.

Stock repurchases

On April 17, 2007, the Board of Directors approved a stock repurchase program that authorizes the repurchase of up to $10.0 billion of the Firm's common shares, which supersedes an $8.0 billion stock repurchase program approved in 2006. The $10.0 billion authorization includes shares to be repurchased to offset issuances under the Firm's employee stock-based plans. The actual number of shares repurchased is subject to various factors, including market conditions; legal considerations affecting the amount and timing of repurchase activity; the Firm's capital position (taking into account goodwill and intangibles); internal capital generation; and alternative potential investment opportunities. The repurchase program does not include specific price targets or timetables, may be executed through open market purchases or privately negotiated transactions, or utilizing Rule 10b5-1 programs, and may be suspended at any time.

For the year ended December 31, 2007, under the respective stock repurchase programs then in effect, the Firm repurchased a total of 168 million shares for $8.2 billion at an average price per share of $48.60. During 2006, under the respective stock repurchase programs then in effect, the Firm repurchased 91 million shares for $3.9 billion at an average price per share of $43.41.

As of December 31, 2007, $6.2 billion of authorized repurchase capacity remained under the current stock repurchase program.

The Firm has determined that it may, from time to time, enter into written trading plans under Rule 10b5-1 of the Securities Exchange Act of 1934 to facilitate the repurchase of common stock in accordance with the repurchase program. A Rule 10b5-1 repurchase plan allows the Firm to repurchase shares during periods when it would not otherwise be repurchasing common stock – for example, during internal trading "black-out periods." All purchases under a Rule 10b5-1 plan must be made according to a predefined plan that is established when the Firm is not aware of material nonpublic information.

For additional information regarding repurchases of the Firm's equity securities, see Part II, Item 5, Market for registrant's common equity, related stockholder matters and issuer purchases of equity securities, on pages 13–14 of JPMorgan Chase's 2007 Form 10-K.

OFF–BALANCE SHEET ARRANGEMENTS AND CONTRACTUAL CASH OBLIGATIONS

JPMorgan Chase is involved with several types of off-balance sheet arrangements, including special purpose entities ("SPEs") and lending-related financial instruments (e.g., commitments and guarantees).

Special-purpose entities

The basic SPE structure involves a company selling assets to the SPE. The SPE funds the purchase of those assets by issuing securities to investors in the form of commercial paper, short-term asset-backed notes, medium-term notes and other forms of interest. SPEs are generally structured to insulate investors from claims on the SPE's assets by creditors of other entities, including the creditors of the seller of the assets.

SPEs are an important part of the financial markets, providing market liquidity by facilitating investors' access to specific portfolios of assets and risks. These arrangements are integral to the markets for mortgage-backed securities, commercial paper and other asset-backed securities.

JPMorgan Chase uses SPEs as a source of liquidity for itself and its clients by securitizing financial assets, and by creating investment products for clients. The Firm is involved with SPEs through multi-seller conduits and investor intermediation activities, and as a result of its loan securitizations, through qualifying special purpose entities ("QSPEs"). This discussion focuses mostly on multi-seller conduits and investor intermediation. For a detailed discussion of all SPEs with which the Firm is involved, and the related accounting, see Note 1 on page 108, Note 16 on pages 139–145 and Note 17 on pages 146–154 of this Annual Report.

The Firm holds capital, as deemed appropriate, against all SPE-related transactions and related exposures, such as derivative transactions and lending-related commitments and guarantees.

The Firm has no commitments to issue its own stock to support any SPE transaction, and its policies require that transactions with SPEs be conducted at arm's length and reflect market pricing. Consistent with this policy, no JPMorgan Chase employee is permitted to invest in SPEs with which the Firm is involved where such investment would violate the Firm's Code of Conduct. These rules prohibit employees from self-dealing and acting on behalf of the Firm in transactions with which they or their family have any significant financial interest.

Implications of a credit rating downgrade to JPMorgan Chase Bank, N.A.

For certain liquidity commitments to SPEs, the Firm could be required to provide funding if the short-term credit rating of JPMorgan Chase Bank, N.A., was downgraded below specific levels, primarily "P-1", "A-1" and "F1" for Moody's, Standard & Poor's and Fitch, respectively. The amount of these liquidity commitments was $94.0 billion and $74.4 billion at December 31, 2007 and 2006, respectively. Alternatively, if JPMorgan Chase Bank, N.A., were downgraded, the Firm could be replaced by another liquidity provider in lieu of providing funding under the liquidity commitment, or in certain circumstances, the Firm could facilitate the sale or refinancing of the assets in the SPE in order to provide liquidity. These commitments are included in other unfunded commitments to extend credit and asset purchase agreements, as shown in the Off-balance sheet lending-related financial instruments and guarantees table on page 68 of this Annual Report.

As noted above, the Firm is involved with three types of SPEs. A summary of each type of SPE follows.

Multi-seller conduits

The Firm helps customers meet their financing needs by providing access to the commercial paper markets through VIEs known as multi-seller conduits. Multi-seller conduit entities are separate bankruptcy-remote entities that purchase interests in, and make loans secured by, pools of receivables and other financial assets pursuant to agreements with customers of the Firm. The conduits fund their purchases and loans through the issuance of highly rated commercial paper to third-party investors. The primary source of repayment of the commercial paper is the cash flow from the pools of assets. JPMorgan Chase receives fees related to the structuring of multi-seller conduit transactions and receives compensation from the multi-seller conduits for its role as administrative agent, liquidity provider, and provider of program-wide credit enhancement.

Investor intermediation

As a financial intermediary, the Firm creates certain types of VIEs and also structures transactions, typically derivative structures, with these VIEs to meet investor needs. The Firm may also provide liquidity and other support. The risks inherent in derivative instruments or liquidity commitments are managed similarly to other credit, market and liquidity risks to which the Firm is exposed. The principal types of VIEs the Firm uses in these structuring activities are municipal bond vehicles, credit-linked note vehicles and collateralized debt obligations vehicles.

Loan Securitizations

JPMorgan Chase securitizes and sells a variety of its consumer and wholesale loans, including warehouse loans that are classified in Trading assets, through SPEs that are structured to meet the definition of a QSPE (as discussed in Note 1 on page 108 of this Annual Report). The primary purpose of these vehicles is to meet investor needs and to generate liquidity for the Firm through the sale of the loans to the QSPEs. Consumer activities include securitizations of residential real estate, credit card, automobile and education loans that are originated or purchased by RFS and CS. Wholesale activities include securitizations of purchased residential real estate loans and commercial loans (primarily real estate-related) originated by the IB.

Consolidation and consolidation sensitivity analysis on capital

For more information regarding these programs and the Firm's other SPEs, as well as the Firm's consolidation analysis for these programs, see Note 16 and Note 17 on pages 139–145 and 146–154, respectively, of this Annual Report.

Special-purpose entities revenue

The following table summarizes certain revenue information related to consolidated and nonconsolidated VIEs and QSPEs with which the Firm has significant involvement. The revenue reported in the table below primarily represents contractual servicing and credit fee income (i.e., for income from acting as administrator, structurer, liquidity provider). It does not include mark-to-market gains and losses from changes in the fair value of trading positions (such as derivative transactions) entered into with VIEs. Those gains and losses are recorded in Principal transactions revenue.

Revenue from VIEs and QSPEs

Year ended December 31, (in millions)	2007	2006	2005
VIEs:[a]			
Multi-seller conduits	**$ 187**[b]	$ 160	$ 172
Investor intermediation	**33**	49	50
Total VIEs	**220**	209	222
QSPEs	**3,479**	3,183	2,940
Total	**$ 3,699**	$3,392	$3,162

(a) Includes revenue associated with consolidated VIEs and significant nonconsolidated VIEs.

(b) Excludes the markdown on subprime CDO assets that was recorded in Principal transaction revenue during the fourth quarter of 2007.

American Securitization Forum subprime adjustable rate mortgage loans modifications

In December 2007, the American Securitization Forum ("ASF") issued the "Streamlined Foreclosure and Loss Avoidance Framework for Securitized Subprime Adjustable Rate Mortgage Loans" ("the Framework"). The Framework provides guidance for servicers to streamline evaluation procedures of borrowers with certain subprime adjustable rate mortgage ("ARM") loans to more quickly and efficiently provide modification of such loans with terms that are more appropriate for the individual needs of such borrowers. The Framework applies to all first-lien subprime ARM loans that have a fixed rate of interest for an initial period of 36 months or less, are included in securitized pools, were originated between January 1, 2005, and July 31, 2007, and have an initial interest rate reset date between January 1, 2008, and July 31, 2010. JPMorgan Chase has adopted the Framework, and it expects to begin modifying eligible loans by the end of the first quarter of 2008. For additional discussion of the Framework, see Note 16 on page 145 of this Annual Report.

Off–balance sheet lending-related financial instruments and guarantees

JPMorgan Chase utilizes lending-related financial instruments (e.g., commitments and guarantees) to meet the financing needs of its customers. The contractual amount of these financial instruments represents the maximum possible credit risk should the counterparty draw upon the commitment or the Firm be required to fulfill its obligation under the guarantee, and the counterparty subsequently fail to perform according to the terms of the contract. Most of these commitments and guarantees expire without a default occurring or without being drawn. As a result, the total contractual amount of these instruments is not, in the Firm's view, representative of its actual future credit exposure or funding requirements. Further, certain commitments, primarily related to consumer financings, are cancelable, upon notice, at the option of the Firm. For further discussion of lending-related commitments and guarantees and the Firm's accounting for them, see Credit risk management on pages 73–89 and Note 31 on pages 170–173 of this Annual Report.

Contractual cash obligations

In the normal course of business, the Firm enters into various contractual obligations that may require future cash payments. Commitments for future cash expenditures primarily include contracts to purchase future services and capital expenditures related to real estate–related obligations and equipment.

The accompanying table summarizes, by remaining maturity, JPMorgan Chase's off–balance sheet lending-related financial instruments and significant contractual cash obligations at December 31, 2007. Contractual purchases and capital expenditures in the table below reflect the minimum contractual obligation under legally enforceable contracts with terms that are both fixed and determinable. Excluded from the following table are a number of obligations to be settled in cash, primarily in under one year. These obligations are reflected on the Firm's Consolidated balance sheets and include Federal funds purchased and securities sold under repurchase agreements; Commercial paper; Other borrowed funds; purchases of Debt and equity instruments; Derivative payables; and certain purchases of instruments that resulted in settlement failures. Also excluded are contingent payments associated with certain acquisitions that could not be estimated. For discussion regarding Long-term debt and trust preferred capital debt securities, see Note 21 on pages 159–160 of this Annual Report. For discussion regarding operating leases, see Note 29 on page 167 of this Annual Report.

The following table presents maturity information for off-balance sheet lending-related financial instruments and guarantees.

Off–balance sheet lending-related financial instruments and guarantees

By remaining maturity at December 31, (in millions)	2007 2008	2009-2010	2011-2012	After 2012	**Total**	2006 Total
Lending-related						
Consumer[a]	**$ 740,080**	**$ 2,852**	**$ 3,222**	**$ 69,782**	**$ 815,936**	$ 747,535
Wholesale:						
Other unfunded commitments to extend credit[b][c][d][e]	**97,459**	**61,710**	**73,725**	**18,060**	**250,954**	229,204
Asset purchase agreements[f]	**28,521**	**45,087**	**14,171**	**2,326**	**90,105**	67,529

Contractual cash obligations

By remaining maturity at December 31, (in millions)						
Time deposits	**$ 243,923**	**$ 3,246**	**$ 2,108**	**$ 600**	**$ 249,877**	$ 204,349
Long-term debt	**28,941**	**55,797**	**36,042**	**63,082**	**183,862**	133,421
Trust preferred capital debt securities	**—**	**—**	**—**	**15,148**	**15,148**	12,209
FIN 46R long-term beneficial interests[k]	**35**	**79**	**2,070**	**5,025**	**7,209**	8,336
Operating leases[l]	**1,040**	**1,943**	**1,644**	**6,281**	**10,908**	11,029
Contractual purchases and capital expenditures	**1,597**	**576**	**131**	**130**	**2,434**	1,584
Obligations under affinity and co-brand programs	**1,092**	**2,231**	**2,079**	**75**	**5,477**	6,115
Other liabilities[m]	**690**	**937**	**917**	**3,112**	**5,656**	5,302
Total	**$ 277,318**	**$ 64,809**	**$ 44,991**	**$ 93,453**	**$ 480,571**	$ 382,345

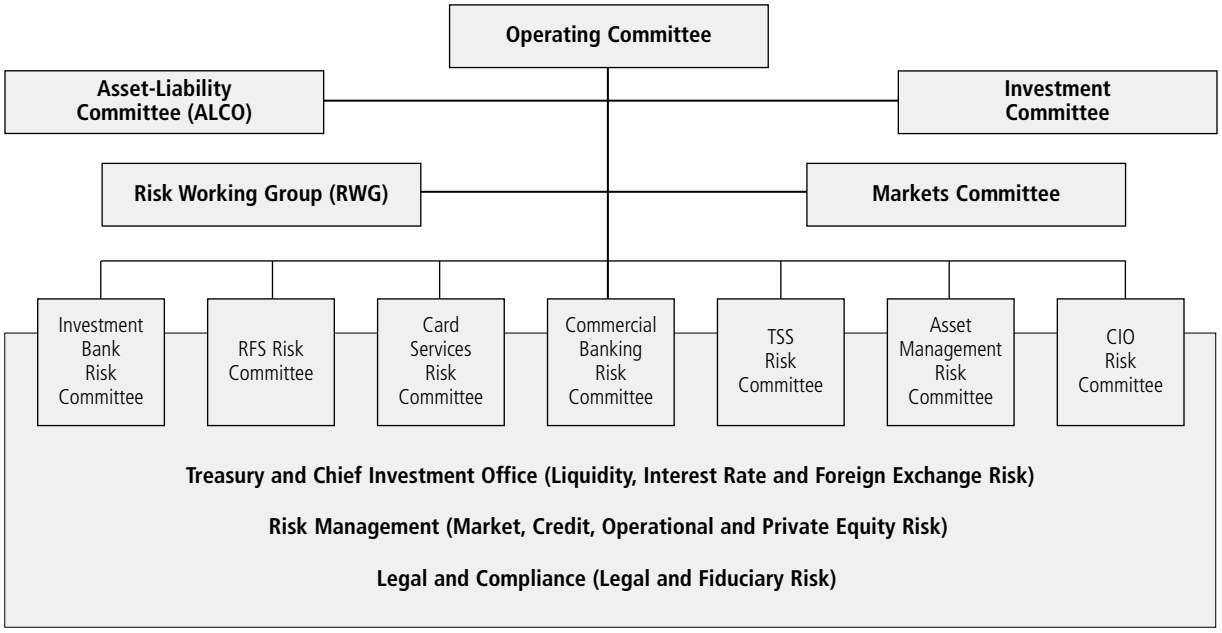
(a) Included credit card and home equity lending-related commitments of $714.8 billion and $74.2 billion, respectively, at December 31, 2007; and $657.1 billion and $69.6 billion, respectively, at December 31, 2006. These amounts for credit card and home equity lending-related commitments represent the total available credit for these products. The Firm has not experienced, and does not anticipate, that all available lines of credit for these products will be utilized at the same time. The Firm can reduce or cancel these lines of credit by providing the borrower prior notice or, in some cases, without notice as permitted by law.
(b) Includes unused advised lines of credit totaling $38.4 billion and $39.0 billion at December 31, 2007 and 2006, respectively, which are not legally binding. In regulatory filings with the Federal Reserve Board, unused advised lines are not reportable. See the Glossary of terms, on page 181 of this Annual Report, for the Firm's definition of advised lines of credit.
(c) Represents contractual amount net of risk participations totaling $28.3 billion and $32.8 billion at December 31, 2007 and 2006, respectively.
(d) Excludes unfunded commitments for private third-party equity investments of $881 million and $589 million at December 31, 2007 and 2006, respectively. Also excludes unfunded commitments for other equity investments of $903 million and $943 million at December 31, 2007 and 2006, respectively.
(e) Included in Other unfunded commitments to extend credit are commitments to investment and noninvestment grade counterparties in connection with leveraged acquisitions of $8.2 billion at December 31, 2007.
(f) Largely represents asset purchase agreements to the Firm's administered multi-seller, asset-backed commercial paper conduits. The maturity is based upon the weighted-average life of the underlying assets in the SPE, which are primarily asset purchase agreements to the Firm's administered multi-seller asset-backed commercial paper conduits. It also includes $1.1 billion and $1.4 billion of asset purchase agreements to other third-party entities at December 31, 2007 and 2006, respectively.
(g) JPMorgan Chase held collateral relating to $15.8 billion and $13.5 billion of these arrangements at December 31, 2007 and 2006, respectively.
(h) Included unused commitments to issue standby letters of credit of $50.7 billion and $45.7 billion at December 31, 2007 and 2006, respectively.
(i) Collateral held by the Firm in support of securities lending indemnification agreements was $390.5 billion and $317.9 billion at December 31, 2007 and 2006, respectively.
(j) Represents notional amounts of derivatives qualifying as guarantees. For further discussion of guarantees, see Note 31 on pages 170–173 of this Annual Report.
(k) Included on the Consolidated balance sheets in Beneficial interests issued by consolidated variable interest entities.
(l) Excluded benefit of noncancelable sublease rentals of $1.3 billion and $1.2 billion at December 31, 2007 and 2006, respectively.
(m) Included deferred annuity contracts. Excludes contributions for pension and other postretirement benefits plans, if any, as these contributions are not reasonably estimable at this time. Also excluded are unrecognized tax benefits of $4.8 billion at December 31, 2007, as the timing and amount of future cash payments is not determinable at this time.

Risk is an inherent part of JPMorgan Chase's business activities. The Firm's risk management framework and governance structure are intended to provide comprehensive controls and ongoing management of the major risks inherent in the Firm's business activities. The Firm's ability to properly identify, measure, monitor and report risk is critical to both its soundness and profitability.

- Risk identification: The Firm's exposure to risk through its daily business dealings, including lending, trading and capital markets activities, is identified and aggregated through the Firm's risk management infrastructure.
- Risk measurement: The Firm measures risk using a variety of methodologies, including calculating probable loss, unexpected loss and value-at-risk, and by conducting stress tests and making comparisons to external benchmarks. Measurement models and related assumptions are routinely reviewed with the goal of ensuring that the Firm's risk estimates are reasonable and reflect underlying positions.
- Risk monitoring/control: The Firm's risk management policies and procedures incorporate risk mitigation strategies and include approval limits by customer, product, industry, country and business. These limits are monitored on a daily, weekly and monthly basis, as appropriate.
- Risk reporting: Risk reporting is executed on a line of business and consolidated basis. This information is reported to management on a daily, weekly and monthly basis, as appropriate. There are eight major risk types identified in the business activities of the Firm: liquidity risk, credit risk, market risk, interest rate risk, private equity risk, operational risk, legal and fiduciary risk, and reputation risk.

Risk governance

The Firm's risk governance structure starts with each line of business being responsible for managing its own risks. Each line of business works closely with Risk Management through its own risk committee and, in most cases, its own chief risk officer to manage risk. Each line of business risk committee is responsible for decisions regarding the business' risk strategy, policies and controls.



Overlaying the line of business risk management are four corporate functions with risk management–related responsibilities, including Treasury, the Chief Investment Office, Legal and Compliance and Risk Management.

Risk Management is headed by the Firm's Chief Risk Officer, who is a member of the Firm's Operating Committee and who reports to the Chief Executive Officer and the Board of Directors, primarily through the Board's Risk Policy Committee. Risk Management is responsible for providing a firmwide function of risk management and controls. Within Risk Management are units responsible for credit risk, market risk, operational risk and private equity risk, as well as Risk Management Services and Risk Technology and Operations. Risk Management Services is responsible for risk policy and methodology, risk reporting and risk education; and Risk Technology and Operations is responsible for building the information technology infrastructure used to monitor and manage risk.

Treasury and the Chief Investment Office are responsible for measuring, monitoring, reporting and managing the Firm's liquidity, interest rate and foreign exchange risk.

Legal and Compliance has oversight for legal and fiduciary risk.

In addition to the risk committees of the lines of business and the above-referenced corporate functions, the Firm also has an Investment Committee, an ALCO and two risk committees, namely, the Risk Working Group and the Markets Committee. The members of these committees are composed of senior management of the Firm, including representatives of line of business, Risk Management, Finance and other senior executives.

The Investment Committee oversees global merger and acquisition activities undertaken by JPMorgan Chase for its own account that fall outside the scope of the Firm's private equity and other principal finance activities.

The Asset-Liability Committee is responsible for approving the Firm's liquidity policy, including contingency funding planning and exposure to SPEs (and any required liquidity support by the Firm of such SPEs). The Asset-Liability Committee also oversees the Firm's capital management and funds transfer pricing policy (through which lines of business "transfer" interest and foreign exchange risk to Treasury in the Corporate segment).

The Risk Working Group meets monthly to review issues such as risk policy, risk methodology, Basel II and regulatory issues and topics referred to it by any line of business risk committee. The Markets Committee, chaired by the Chief Executive Officer, meets weekly to review and determine appropriate courses of action with respect to significant risk matters, including but not limited to: limits; credit, market and operational risk; large, high risk transactions; and hedging strategies.

The Board of Directors exercises its oversight of risk management, principally through the Board's Risk Policy Committee and Audit Committee. The Risk Policy Committee oversees senior management risk-related responsibilities, including reviewing management policies and performance against these policies and related benchmarks. The Audit Committee is responsible for oversight of guidelines and policies that govern the process by which risk assessment and management is undertaken. In addition, the Audit Committee reviews with management the system of internal controls and financial reporting that is relied upon to provide reasonable assurance of compliance with the Firm's operational risk management processes.

LIQUIDITY RISK MANAGEMENT

The goal of liquidity risk management is to ensure that cost-effective funding is available to meet actual and contingent liquidity needs over time.

JPMorgan Chase uses a centralized approach for liquidity risk management. Global funding is managed by Treasury, using regional expertise as appropriate. Management believes that a centralized framework maximizes liquidity access, minimizes funding costs and permits global identification and coordination of liquidity risk.

Governance

ALCO approves and oversees the execution of the Firm's liquidity policy and contingency funding plan. Treasury formulates the Firm's liquidity and contingency planning strategies and is responsible for measuring, monitoring, reporting and managing the Firm's liquidity risk profile.

Liquidity monitoring and recent actions

Treasury monitors historical liquidity trends, tracks historical and prospective on- and off-balance sheet liquidity obligations, identifies and measures internal and external liquidity warning signals to permit early detection of liquidity issues, and manages contingency planning (including identification and testing of various company-specific and market-driven stress scenarios). Various tools, which together contribute to an overall liquidity perspective, are used to monitor and manage liquidity. These include analysis of the timing of liquidity sources versus liquidity uses (i.e., funding gaps) over periods ranging from overnight to one year; management of debt and capital issuance to ensure that the illiquid portion of the balance sheet can be funded by equity, long-term debt, trust preferred capital debt securities and deposits the Firm believes to be stable; and assessment of the Firm's capacity to raise incremental unsecured and secured funding.

Liquidity of the parent holding company and its nonbank subsidiaries is monitored separately from the Firm's bank subsidiaries. At the parent holding company level, long-term funding is managed to ensure that the parent holding company has sufficient liquidity to cover its obligations and those of its nonbank subsidiaries within the next 12 months. For bank subsidiaries, the focus of liquidity risk management is on maintenance of unsecured and secured funding capacity sufficient to meet on- and off-balance sheet obligations.

An extension of liquidity management is the Firm's contingency funding plan. The goal of the plan is to ensure appropriate liquidity during normal and stress periods. The plan considers various temporary and long-term stress scenarios where access to unsecured funding is severely limited or nonexistent, taking into account both on- and off-balance sheet exposures, and separately evaluates access to funds by the parent holding company, JPMorgan Chase Bank, N.A., Chase Bank USA, N.A., and J.P. Morgan Securities Inc.

In response to the market turmoil in the latter half of 2007, JPMorgan Chase took various actions to strengthen the Firm's liquidity position. In anticipation of possible incremental funding requirements that could have resulted from draws under unfunded revolving credit facilities and/or potential consolidation or purchase of assets from VIEs, the parent holding company increased issuance of commercial paper, long-term debt and trust preferred capital debt securities, and bank subsidiaries increased retail and wholesale unsecured funding liabilities. In addition, JPMorgan Chase Bank, N.A., maintained sufficient secured borrowing capacity, when aggregated with unsecured funding sources, to cover anticipated on- and off-balance sheet obligations of bank subsidiaries.

As of December 31, 2007, the Firm's liquidity position remained strong based upon its liquidity metrics.

Funding

Sources of funds

Management uses a variety of unsecured and secured funding sources to generate liquidity, taking into consideration, among other factors, market conditions, prevailing interest rates, liquidity needs and the desired maturity profile of liabilities. Markets are evaluated on an ongoing basis to achieve an appropriate global balance of unsecured and secured funding at favorable rates. The Firm's ability to generate funding from a broad range of sources in a variety of geographic locations enhances financial flexibility and limits dependence on any one source. Diversification of funding is an important component of the Firm's liquidity management strategy.

Deposits held by the RFS, CB, TSS and AM lines of business are generally a consistent source of unsecured funding for JPMorgan Chase Bank, N.A. As of December 31, 2007, total deposits for the Firm were $740.7 billion. A significant portion of the Firm's deposits are retail deposits, which are less sensitive to interest rate changes and therefore are considered more stable than market-based wholesale deposits. The Firm also benefits from stable wholesale liability balances originated by CB, TSS and AM through the normal course of business. Such liability balances include deposits that are swept to on–balance sheet liabilities (e.g., Commercial paper, Federal funds purchased and securities sold under repurchase agreements). These liability balances are also a stable and consistent source of funding due to the nature of the businesses from which they are generated. For further discussions of deposit and liability balance trends, see the discussion of the results for the Firm's business segments and the Balance Sheet Analysis on pages 40–58 and 61–62, respectively, of this Annual Report.

Additional sources of unsecured funds include a variety of short- and long-term instruments, including federal funds purchased, commercial paper, bank notes, long-term debt and trust preferred capital debt securities. Decisions concerning timing of issuance and the tenor of liabilities are based upon relative costs, general market conditions, prospective views of balance sheet growth and a targeted liquidity profile.

Funding flexibility is also provided by the Firm's ability to access secured funding from the repurchase and asset securitization markets. The Firm maintains reserves of unencumbered liquid securities that can be financed to generate liquidity. The ability to obtain collateralized financing against liquid securities is dependent on prevailing market conditions. The ability to securitize loans, and the associated gains on those securitizations, are principally dependent upon the credit quality and yields of the assets securitized and are generally not dependent upon the credit ratings of the issuing entity. Transactions between the Firm and its securitization structures are reflected in JPMorgan Chase's consolidated financial statements and are discussed in the notes to the consolidated financial statements. These relationships generally include retained interests in securitization trusts, liquidity facilities and derivative transactions. For further details, see Off–balance sheet arrangements and contractual cash obligations, Note 16 and Note 31 on pages 66–68, 139–145 and 170–173, respectively, of this Annual Report.

Bank subsidiaries' access to the Federal Reserve Account Window is an additional source of secured funding; however, management does not view this as a primary means of funding the Firm's bank subsidiaries.

Issuance

During 2007, JPMorgan Chase issued $95.1 billion of long-term debt and trust preferred capital debt securities. These issuances included $52.2 billion of IB structured notes, the issuances of which are generally client-driven and not for funding or capital management purposes, as the proceeds from such transactions are generally used to purchase securities to mitigate the risk associated with structured note exposure. The issuances of long-term debt and trust preferred capital debt securities were offset partially by $49.4 billion of long-term debt and trust preferred capital debt securities that matured or were redeemed during 2007, including IB structured notes. The increase in Treasury-issued long-term debt and trust preferred capital debt securities was used primarily to fund certain illiquid assets held by the Parent company and to build liquidity. During 2007, Commercial paper increased $30.7 billion and Other borrowed funds increased $10.8 billion. The growth in both Commercial paper and Other borrowed funds was used to build liquidity further by increasing the amounts held of liquid securities and of overnight investments that may be readily converted to cash. In addition, during 2007, the Firm securitized $28.9 billion of residential mortgage loans, $21.2 billion of credit card loans and $1.2 billion of education loans. The Firm did not securitize any auto loans during 2007. For further discussion of loan securitizations, see Note 16 on pages 139–145 of this Annual Report.

In connection with the issuance of certain of its trust preferred capital debt securities, the Firm has entered into Replacement Capital Covenants ("RCCs") granting certain rights to the holders of "covered debt," as defined in the RCCs, that prohibit the repayment, redemption or purchase of the trust preferred capital debt securities except, with limited exceptions, to the extent that JPMorgan Chase has received specified amounts of proceeds from the sale of certain qualifying securities. Currently the Firm's covered debt is its 5.875% Junior Subordinated Deferrable Interest Debentures, Series O, due in 2035. For more information regarding these covenants, reference is made to the respective RCCs entered into by the Firm in connection with the issuances of such trust preferred capital debt securities, which are filed with the U.S. Securities and Exchange Commission under cover of Forms 8-K.

Cash flows

For the years ended December 31, 2007, 2006 and 2005, Cash and due from banks decreased $268 million, and increased $3.7 billion and $1.5 billion, respectively. The following discussion highlights the major activities and transactions that affected JPMorgan Chase's cash flows during 2007, 2006 and 2005.

Cash Flows from Operating Activities

For the years ended December 31, 2007, 2006 and 2005, net cash used in operating activities was $110.6 billion, $49.6 billion and $30.2 billion, respectively. JPMorgan Chase's operating assets and liabilities support the Firm's capital markets and lending activities, including the origination or purchase of loans initially designated as held-for-sale. During each of the three years ended December 31, 2007, net cash was used to fund loans held-for-sale primarily in the IB and RFS. In 2007, there was a significant decline in cash flows from IB loan

originations/purchases and sale/securitization activities as a result of the difficult wholesale securitization market and capital markets for leveraged financings, which were affected by a significant deterioration in liquidity in the credit markets in the second half of 2007. Cash flows in 2007 associated with RFS residential mortgage activities grew reflecting an increase in originations. The amount and timing of cash flows related to the Firm's operating activities may vary significantly in the normal course of business as a result of the level of client-driven activities, market conditions and trading strategies. Management believes cash flows from operations, available cash balances and the Firm's ability to generate cash through short- and long-term borrowings will be sufficient to fund the Firm's operating liquidity needs.

Cash Flows from Investing Activities

The Firm's investing activities primarily involve AFS securities, loans initially designated as held-for-investment and Federal funds sold and securities purchased under resale agreements.

For the year ended December 31, 2007, net cash of $73.1 billion was used in investing activities, primarily to fund purchases in Treasury's AFS securities portfolio to manage the Firm's exposure to interest rate movements; net additions to the wholesale retained loan portfolios in the IB, CB and AM, mainly as a result of business growth; a net increase in the consumer retained loan portfolio, primarily reflecting growth in RFS in home equity loans and net additions to RFS's subprime mortgage loans portfolio, which was affected by management's decision in the third quarter to retain (rather than sell) new subprime mortgages, and growth in prime mortgage loans originated by RFS and AM (and held in Corporate) that cannot be sold to U.S. government agencies or U.S. government-sponsored enterprises; and increases in securities purchased under resale agreements as a result of a higher level of cash available for short-term investment opportunities in connection with Treasury's efforts to build the Firm's liquidity. These net uses of cash were partially offset by cash proceeds received from sales and maturities of AFS securities; and credit card, residential mortgage, education and wholesale loan sales and securitization activities, which grew in 2007 despite the difficult conditions in the credit markets.

For the year ended December 31, 2006, net cash of $99.6 billion was used in investing activities. Net cash was invested to fund net additions to the retained wholesale loan portfolio, mainly resulting from capital markets activity in IB leveraged financings; increases in CS loans reflecting strong organic growth; net additions in retail home equity loans; the acquisition of private-label credit card portfolios from Kohl's, BP and Pier 1 Imports, Inc.; the acquisition of Collegiate Funding Services, and Treasury purchases of AFS securities in connection with repositioning the portfolio in response to changes in interest rates. These uses of cash were partially offset by cash proceeds provided from credit card, residential mortgage, auto and wholesale loan sales and securitization activities; sales and maturities of AFS securities; the net decline in auto loans and leases, which was caused partially by management's decision to de-emphasize vehicle leasing; and the sale of the insurance business at the beginning of the second quarter.

For the year ended December 31, 2005, net cash of $12.9 billion was used in investing activities, primarily attributable to growth in consumer loans, primarily home equity and in CS, reflecting growth in new account originations and the acquisition of the Sears Canada credit card business, partially offset by securitization activity and a decline in auto loans reflecting a difficult auto lending market. Net cash was generated by the Treasury investment securities portfolio primarily from maturities of securities, as purchases and sales of securities essentially offset each other.

Cash Flows from Financing Activities

The Firm's financing activities primarily reflect transactions involving customer deposits and long-term debt (including client-driven structured notes in the IB), and its common stock and preferred stock.

In 2007, net cash provided by financing activities was $183.0 billion due to a net increase in wholesale deposits from growth in business volumes, in particular, interest-bearing deposits at TSS, AM and CB; net issuances by Treasury of Long-term debt and trust preferred capital debt securities primarily to fund certain illiquid assets held by the Parent company and to build liquidity and by the IB from client-driven structured notes transactions; and growth in Commercial paper issuances and Other borrowed funds in Treasury due to growth in the volume of liability balances in sweep accounts, in TSS and CB, higher short-term requirements to fund trading positions and to further build liquidity. Cash was used to repurchase common stock and to pay dividends on common stock, including an increase in the quarterly dividend in the second quarter of 2007.

In 2006, net cash provided by financing activities was $152.7 billion due to net cash received from growth in deposits, reflecting new retail account acquisitions and the ongoing expansion of the retail branch distribution network; higher wholesale business volumes; increases in securities sold under repurchase agreements to fund trading positions and higher AFS securities positions in Treasury; and net issuances of Long-term debt and trust preferred capital debt securities. The net cash provided was offset partially by the payment of cash dividends on stock and common stock repurchases.

In 2005, net cash provided by financing activities was $45.1 billion due to: growth in deposits, reflecting new retail account acquisitions, the ongoing expansion of the retail branch distribution network and higher wholesale business volumes; and net new issuances of Long-term debt and trust preferred capital debt securities; offset partially by the payment of cash dividends and common stock repurchases.

Credit ratings

The credit ratings of JPMorgan Chase's parent holding company and each of its significant banking subsidiaries as of December 31, 2007, were as follows.

	Short-term debt			Senior long-term debt		
	Moody's	S&P	Fitch	Moody's	S&P	Fitch
JPMorgan Chase & Co.	P-1	A-1+	F1+	Aa2	AA-	AA-
JPMorgan Chase Bank, N.A.	P-1	A-1+	F1+	Aaa	AA	AA-
Chase Bank USA, N.A.	P-1	A-1+	F1+	Aaa	AA	AA-

On February 14, 2007, S&P raised the senior long-term debt ratings on JPMorgan Chase & Co. and the principal bank subsidiaries to "AA-" and "AA", respectively, from "A+" and "AA-", respectively. S&P also raised the short-term debt rating of JPMorgan Chase & Co. to "A-1+" from "A-1". On February 16, 2007, Fitch raised the senior long-term debt ratings on JPMorgan Chase & Co. and the principal bank subsidiaries to "AA-" from "A+". Fitch also raised the short-term debt rating of JPMorgan Chase & Co. to "F1+" from "F1". On March 2, 2007, Moody's raised the senior long-term debt ratings on JPMorgan Chase & Co. and the operating bank subsidiaries to "Aa2" and "Aaa", respectively, from "Aa3" and "Aa2", respectively.

The cost and availability of unsecured financing are influenced by credit ratings. A reduction in these ratings could have an adverse effect on the Firm's access to liquidity sources, increase the cost of funds, trigger additional collateral requirements and decrease the number of investors and counterparties willing to lend. Key factors in maintaining high credit ratings include a stable and diverse earnings stream, leading market positions, strong capital ratios, strong credit quality and risk management controls, diverse funding sources and disciplined liquidity monitoring procedures.

If the Firm's ratings were downgraded by one notch, the Firm estimates the incremental cost of funds and the potential loss of funding to be negligible. Additionally, the Firm estimates the additional funding requirements for VIEs and other third-party commitments would not be material. Currently, the Firm believes a downgrade is unlikely. For additional information on the impact of a credit ratings downgrade on the funding requirements for VIEs, and on derivatives and collateral agreements, see Special-purpose entities on pages 66–67 and Ratings profile of derivative receivables mark-to-market ("MTM") on page 81, of this Annual Report.

CREDIT RISK MANAGEMENT

Credit risk is the risk of loss from obligor or counterparty default. The Firm provides credit (for example, through loans, lending-related commitments and derivatives) to customers of all sizes, from large corporate clients to the individual consumer. The Firm manages the risk/reward relationship of each credit extension and discourages the retention of assets that do not generate a positive return above the cost of the Firm's risk-adjusted capital. In addition, credit risk management includes the distribution of the Firm's wholesale syndicated loan originations into the marketplace (primarily to IB clients), with retained exposure held by the Firm averaging less than 10%. Wholesale loans generated by CB and AM are generally retained on the balance sheet. With regard to the consumer credit market, the Firm focuses on creating a portfolio that is diversified from both a product and a geographic perspective. Within the mortgage business, originated loans are either retained in the mortgage portfolio, or securitized and sold selectively to U.S. government agencies and U.S. government-sponsored enterprises.

Credit risk organization

Credit risk management is overseen by the Chief Risk Officer and implemented within the lines of business. The Firm's credit risk management governance consists of the following functions:

- establishing a comprehensive credit risk policy framework
- calculating the allowance for credit losses and ensuring appropriate credit risk-based capital management
- assigning and managing credit authorities in connection with the approval of all credit exposure
- monitoring and managing credit risk across all portfolio segments
- managing criticized exposures

Risk identification

The Firm is exposed to credit risk through lending and capital markets activities. Credit risk management works in partnership with the business segments in identifying and aggregating exposures across all lines of business.

Risk measurement

To measure credit risk, the Firm employs several methodologies for estimating the likelihood of obligor or counterparty default. Losses generated by consumer loans are more predictable than wholesale losses, but are subject to cyclical and seasonal factors. Although the frequency of loss is higher on consumer loans than on wholesale loans, the severity of loss is typically lower and more manageable on a portfolio basis. As a result of these differences, methodologies for measuring credit risk vary depending on several factors, including type of asset (e.g., consumer installment versus wholesale loan), risk measurement parameters (e.g., delinquency status and credit bureau score versus wholesale risk rating) and risk management and collection processes (e.g., retail collection center versus centrally managed workout groups). Credit risk measurement is based upon the amount of exposure should the obligor or the counterparty default, the proba-

bility of default and the loss severity given a default event. Based upon these factors and related market-based inputs, the Firm estimates both probable and unexpected losses for the wholesale and consumer portfolios. Probable losses, reflected in the Provision for credit losses, primarily are based upon statistical estimates of credit losses as a result of obligor or counterparty default. However, probable losses are not the sole indicators of risk. If losses were entirely predictable, the probable loss rate could be factored into pricing and covered as a normal and recurring cost of doing business. Unexpected losses, reflected in the allocation of credit risk capital, represent the potential volatility of actual losses relative to the probable level of losses. Risk measurement for the wholesale portfolio is assessed primarily on a risk-rated basis; for the consumer portfolio, it is assessed primarily on a credit-scored basis.

Risk-rated exposure
For portfolios that are risk-rated (generally held in IB, CB, TSS and AM), probable and unexpected loss calculations are based upon estimates of probability of default and loss given default. Probability of default is the expected default calculated on an obligor basis. Loss given default is an estimate of losses that are based upon collateral and structural support for each credit facility. Calculations and assumptions are based upon management information systems and methodologies which are under continual review. Risk ratings are assigned and reviewed on an ongoing basis by Credit Risk Management and revised, if needed, to reflect the borrowers' current risk profiles and the related collateral and structural positions.

Credit-scored exposure
For credit-scored portfolios (generally held in RFS and CS), probable loss is based upon a statistical analysis of inherent losses over discrete periods of time. Probable losses are estimated using sophisticated portfolio modeling, credit scoring and decision-support tools to project credit risks and establish underwriting standards. In addition, common measures of credit quality derived from historical loss experience are used to predict consumer losses. Other risk characteristics evaluated include recent loss experience in the portfolios, changes in origination sources, portfolio seasoning, loss severity and underlying credit practices, including charge-off policies. These analyses are applied to the Firm's current portfolios in order to estimate delinquencies and severity of losses, which determine the amount of probable losses. These factors and analyses are updated on a quarterly basis.

Risk monitoring
The Firm has developed policies and practices that are designed to preserve the independence and integrity of extending credit and are included to ensure credit risks are assessed accurately, approved properly, monitored regularly and managed actively at both the transaction and portfolio levels. The policy framework establishes credit approval authorities, concentration limits, risk-rating methodologies, portfolio review parameters and guidelines for management of distressed exposure. Wholesale credit risk is monitored regularly on both an aggregate portfolio level and on an individual customer basis. For consumer credit risk, the key focus items are trends and concentrations at the portfolio level, where potential problems can be remedied through changes in underwriting policies and portfolio guidelines. Consumer Credit Risk Management monitors trends against business expectations and industry benchmarks.

In order to meet credit risk management objectives, the Firm seeks to maintain a risk profile that is diverse in terms of borrower, product type, industry and geographic concentration. Management of the Firm's wholesale exposure is accomplished through loan syndication and participations, loan sales, securitizations, credit derivatives, use of master netting agreements and collateral and other risk-reduction techniques, which are further discussed in the following risk sections.

Risk reporting
To enable monitoring of credit risk and decision-making, aggregate credit exposure, credit metric forecasts, hold-limit exceptions and risk profile changes are reported regularly to senior credit risk management. Detailed portfolio reporting of industry, customer and geographic concentrations occurs monthly, and the appropriateness of the allowance for credit losses is reviewed by senior management at least on a quarterly basis. Through the risk reporting and governance structure, credit risk trends and limit exceptions are provided regularly to, and discussed with, senior management, as mentioned on page 69 of this Annual Report.

2007 Credit risk overview
Despite the volatile capital markets environment in the second half of 2007, the wholesale portfolio overall experienced continued low levels of nonperforming loans and criticized assets. However, in the second half of 2007, credit market liquidity levels declined significantly, which negatively affected loan syndication markets, resulting in an increase in funded and unfunded exposures, particularly related to leveraged lending, held on the balance sheet. This exposure is diversified across clients and industries and is performing, but subject to market volatility and potentially further writedowns. In response to these events, the Firm has strengthened underwriting standards with respect to its loan syndications and leveraged lending, consistent with evolving market practice. For additional information on unfunded leverage acquisitions related to loan syndications, see Note 31 on pages 170–173 of this Annual Report.

In 2007, the domestic consumer credit environment was also negatively affected by the deterioration in residential real estate valuations, leading to increased credit losses primarily for Home Equity and Subprime Mortgage loans with multiple risk elements ("risk layered loans"). The Firm responded to these changes in the credit environment through the elimination of certain products, changes and enhancements to credit underwriting criteria and refinement of pricing and risk management models.

More detailed discussion of the domestic consumer credit environment can be found on page 84 of this Annual Report.

CREDIT PORTFOLIO

The following table presents JPMorgan Chase's credit portfolio as of December 31, 2007 and 2006. Total credit exposure at December 31, 2007, increased $187.2 billion from December 31, 2006, reflecting an increase of $106.1 billion in the wholesale credit portfolio and $81.1 billion in the consumer credit portfolio as further described in the following pages. During 2007, lending-related commitments increased $123.6 billion ($55.2 billion and $68.4 billion in the wholesale and consumer portfolios, respectively), managed loans increased $42.0 billion ($29.3 billion and $12.7 billion in the wholesale and consumer portfolios, respectively) and derivatives increased $21.5 billion. Within loans, RFS loans accounted for at lower of cost or fair value declined, as prime mortgage loans originated with the intent to sell after January 1, 2007, were classified as Trading assets and accounted for at fair value under SFAS 159. In addition, certain loans warehoused in IB were transferred to Trading assets on January 1, 2007, as part of the adoption of SFAS 159. Also effective January 1, 2007, $24.7 billion of prime mortgages held-for-investment purposes were transferred from RFS ($19.4 billion) and AM ($5.3 billion) to the Corporate sector for risk management purposes. While this transfer had no impact on the RFS, AM or Corporate financial results, the AM prime mortgages that were transferred are now reported in consumer mortgage loans.

In the table below, reported loans include loans accounted for at fair value and loans held-for-sale, which are carried at lower of cost or fair value with changes in value recorded in Noninterest revenue. However, these held-for-sale loans and loans accounted for at fair value are excluded from the average loan balances used for the net charge-off rate calculations.

Total credit portfolio

As of or for the year ended December 31, (in millions, except ratios)	Credit exposure		Nonperforming assets[i]		Net charge-offs		Average annual net charge-off rate

(a) Loans (other than those for which the SFAS 159 fair value option has been elected) are presented net of unearned income and net deferred loan fees of $1.0 billion and $1.3 billion at December 31, 2007 and 2006, respectively.
(b) Represents securitized credit card receivables. For further discussion of credit card securitizations, see Card Services on pages 49–51 of this Annual Report.
(c) Loans past-due 90 days and over and accruing includes credit card receivables – reported of $1.5 billion and $1.3 billion at December 31, 2007 and 2006, respectively, and related credit card securitizations of $1.1 billion and $962 million at December 31, 2007 and 2006, respectively.
(d) Included credit card and home equity lending-related commitments of $714.8 billion and $74.2 billion, respectively, at December 31, 2007; and $657.1 billion and $69.6 billion, respectively, at December 31, 2006. These amounts for credit card and home equity lending-related commitments represent the total available credit for these products. The Firm has not experienced, nor does it anticipate, all available lines of credit being used at the same time. The Firm can reduce or cancel these lines of credit by providing the borrower prior notice or, in some cases, without notice as permitted by law.
(e) Included unused advised lines of credit totaling $38.4 billion and $39.0 billion at December 31, 2007 and 2006, respectively, which are not legally binding. In regulatory filings with the Federal Reserve Board, unused advised lines are not reportable.
(f) Represents the net notional amount of protection purchased and sold of single-name and portfolio credit derivatives used to manage the credit exposures; these derivatives do not qualify for hedge accounting under SFAS 133. Includes $31.1 billion and $22.7 billion at December 31, 2007 and 2006, respectively, which represents the notional amount of structured portfolio protection; the Firm retains a minimal first risk of loss on this portfolio.
(g) Represents other liquid securities collateral held by the Firm as of December 31, 2007 and 2006, respectively.
(h) Represents distressed wholesale loans held-for-sale purchased as part of IB's proprietary activities, which are excluded from nonperforming assets. During the first quarter of 2007, the Firm elected the fair value option of accounting for this portfolio of nonperforming loans. These loans are classified as Trading assets at December 31, 2007.
(i) Excluded nonperforming assets related to (1) loans eligible for repurchase as well as loans repurchased from GNMA pools that are insured by U.S. government agencies of $1.5 billion and $1.2 billion at December 31, 2007 and 2006, respectively, and (2) education loans that are 90 days past due and still accruing, which are insured by U.S. government agencies under the Federal Family Education Loan Program, of $279 million and $219 million at December 31, 2007 and 2006, respectively. These amounts for GNMA and education loans are excluded, as reimbursement is proceeding normally.

WHOLESALE CREDIT PORTFOLIO

As of December 31, 2007, wholesale exposure (IB, CB, TSS and AM) increased $106.1 billion from December 31, 2006, due to increases in lending-related commitments of $55.2 billion and loans of $29.3 billion. The increase in overall lending activity was partly due to growth in leveraged lending funded and unfunded exposures, mainly in IB. For further discussion of unfunded leveraged exposures, see Note 31, on pages 170–173 of this Annual Report.

Partly offsetting these increases was the first-quarter transfer of $11.7 billion of loans warehoused in IB to Trading assets upon the adoption of SFAS 159.

The $21.5 billion Derivative receivables increase from December 31, 2006, was primarily driven by increases in credit derivative and interest rate products due to increased credit spreads and lower interest rates, respectively, as well as a decline in the U.S. dollar.

Wholesale

As of or for the year ended December 31, (in millions)	Credit exposure		Nonperforming assets[e]	
	2007	2006	**2007**	2006

Memo:				
Nonperforming – purchased[e]	**—**	251	**NA**	NA

(a) As a result of the adoption of SFAS 159 in the first quarter of 2007, certain loans of $11.7 billion were reclassified to trading assets and were excluded from wholesale loans reported. Includes loans greater than or equal to 90 days past due that continue to accrue interest. The principal balance of these loans totaled $75 million and $29 million at December 31, 2007 and 2006, respectively. Also see Note 5 on pages 119–121 and Note 14 on pages 137–138 of this Annual Report.
(b) Includes unused advised lines of credit totaling $38.4 billion and $39.0 billion at December 31, 2007 and 2006, respectively, which are not legally binding. In regulatory filings with the Federal Reserve Board, unused advised lines are not reportable.
(c) Represents the net notional amount of protection purchased and sold of single-name and portfolio credit derivatives used to manage the credit exposures; these derivatives do not qualify for hedge accounting under SFAS 133. Includes $31.1 billion and $22.7 billion at December 31, 2007 and 2006, respectively, which represents the notional amount of structured portfolio protection; the Firm retains a minimal first risk of loss on this portfolio.
(d) Represents other liquid securities collateral held by the Firm as of December 31, 2007 and 2006, respectively.
(e) Represents distressed loans held-for-sale purchased as part of IB's proprietary activities, which are excluded from nonperforming assets. During the first quarter of 2007, the Firm elected the fair value option of accounting for this portfolio of nonperforming loans. These loans are classified as Trading assets at December 31, 2007.

Net charge-offs (recoveries)

Wholesale

Year ended December 31, (in millions, except ratios)	**2007**	2006
Loans – reported		
Net charge-offs (recoveries)	**$ 72**	$ (22)
Average annual net charge-off (recovery) rate[a]	**0.04%**	(0.01)%

(a) Excludes average wholesale loans held-for-sale and loans at fair value of $18.6 billion and $22.2 billion for the years ended December 31, 2007 and 2006, respectively.

Net charge-offs (recoveries) do not include gains from sales of nonperforming loans that were sold as shown in the following table. Gains from these sales were $1 million and $82 million during 2007 and 2006, respectively, which are reflected in Noninterest revenue.

Nonperforming loan activity

Wholesale

Year ended December 31, (in millions)	**2007**	2006
Beginning balance	**$ 391**	$ 992
Additions	**1,107**	480
Reductions:		
Paydowns and other	**(576)**	(578)

Returned to performing	**(136)**	(133)
Sales	**(87)**	(184)
Total reductions	**(984)**	(1,081)
Net additions (reductions)	**123**	(601)
Ending balance	**$ 514**	$ 391

The following table presents summaries of the maturity and ratings profiles of the wholesale portfolio as of December 31, 2007 and 2006. The ratings scale is based upon the Firm's internal risk ratings and generally correspond to the ratings as defined by S&P and Moody's.

Wholesale credit exposure – maturity and ratings profile

	Maturity profile[c]				Ratings profile			
					Investment-grade ("IG")	Noninvestment-grade		
December 31, 2007 (in billions, except ratios)	<1 year	1–5 years	>5 years	Total	AAA/Aaa to BBB-/Baa3	BB+/Ba1 & below	Total	Total % of IG
Loans	**44%**	**45%**	**11%**	**100%**	**$ 127**	**$ 62**	**$ 189**	**67%**
Derivative receivables	**17**	**39**	**44**	**100**	**64**	**13**	**77**	**83**
Lending-related commitments	**35**	**59**	**6**	**100**	**380**	**67**	**447**	**85**
Total excluding loans held-for-sale and loans at fair value	**36%**	**53%**	**11%**	**100%**	**$ 571**	**$ 142**	**713**	**80%**
Loans held-for-sale and loans at fair value[a]							**24**	
Total exposure							**$ 737**	
Net credit derivative hedges notional[b]	**39%**	**56%**	**5%**	**100%**	**$ (61)**	**$ (7)**	**$ (68)**	**89%**

	Maturity profile[c]				Ratings profile			
					Investment-grade ("IG")	Noninvestment-grade		
December 31, 2006 (in billions, except ratios)	<1 year	1–5 years	>5 years	Total	AAA/Aaa to BBB-/Baa3	BB+/Ba1 & below	Total	Total % of IG
Loans	44%	41%	15%	100%	$ 104	$ 57	$ 161	65%
Derivative receivables	16	34	50	100	49	7	56	88
Lending-related commitments	36	58	6	100	338	53	391	86
Total excluding loans held-for-sale and loans at fair value	37%	51%	12%	100%	$ 491	$ 117	608	81%
Loans held-for-sale and loans at fair value[a]							23	
Total exposure							$ 631	
Net credit derivative hedges notional[b]	16%	75%	9%	100%	$ (45)	$ (6)	$ (51)	88%

(a) Loans held-for-sale relate primarily to syndication loans and loans transferred from the retained portfolio. During the first quarter of 2007, the Firm elected the fair value option of accounting for loans related to securitization activities, and these loans are classified as Trading assets.

(b) Ratings are based upon the underlying referenced assets. Represents the net notional amounts of protection purchased and sold of single-name and portfolio credit derivatives used to manage the credit exposures; these derivatives do not qualify for hedge accounting under SFAS 133. Includes $31.1 billion and $22.7 billion at December 31, 2007 and 2006, respectively, which represents the notional amount of structured portfolio protection; the Firm retains a minimal risk of losses on this portfolio.

(c) The maturity profile of Loans and lending-related commitments is based upon the remaining contractual maturity. The maturity profile of Derivative receivables is based upon the maturity profile of Average exposure. See page 80 of this Annual Report for a further discussion of Average exposure.

Wholesale credit exposure – selected industry concentration

The Firm focuses on the management and the diversification of its industry concentrations, with particular attention paid to industries with actual or potential credit concerns. At December 31, 2007, the top 10 industries to which the Firm is exposed remained unchanged from December 31, 2006. The increases across all industries were primarily due to portfolio growth. The notable rise in Asset managers was a result of portfolio growth and the Firm revising its industry classification during the third quarter of 2007 to better reflect risk correlations and enhance the Firm's management of industry risk. Below are summaries of the top 10 industry concentrations as of December 31, 2007 and 2006. For additional information on industry concentrations, see Note 32, on pages 173–174 of this Annual Report.

Wholesale credit exposure – selected industry concentration

Total excluding loans held-for-sale and loans at fair value	$ 608,260	81%	$ 113,049	$ 5,026	$ (22)	$ (50,733)	$ (6,591)
Loans held-for-sale and loans at fair value[c]	22,507						
Total	$ 630,767						

(a) Rankings are based upon exposure at December 31, 2007.
(b) For more information on exposures to SPEs included in All other, see Note 17 on pages 146–154 of this Annual Report.
(c) Loans held-for-sale relate primarily to syndication loans and loans transferred from the retained portfolio. During the first quarter of 2007, the Firm elected the fair value option of accounting for loans related to securitization activities; these loans are classified as Trading assets at December 31, 2007.
(d) Credit exposure is net of risk participations and excludes the benefit of credit derivative hedges and collateral held against Derivative receivables or Loans.
(e) Ratings are based upon the underlying referenced assets. Represents the net notional amounts of protection purchased and sold of single-name and portfolio credit derivatives used to manage the credit exposures; these derivatives do not qualify for hedge accounting under SFAS 133. Includes $31.1 billion and $22.7 billion at December 31, 2007 and 2006, respectively, which represents the notional amount of structured portfolio protection; the Firm retains a minimal risk of losses on this portfolio.
(f) Represents other liquid securities collateral held by the Firm as of December 31, 2007 and 2006, respectively.

Wholesale criticized exposure

Exposures deemed criticized generally represent a ratings profile similar to a rating of "CCC+"/"Caa1" and lower, as defined by S&P and Moody's. The total criticized component of the portfolio, excluding loans held-for-sale and loans at fair value, increased to $6.8 billion at December 31, 2007, from $5.0 billion at year-end 2006. The increase was driven primarily by downgrades in the wholesale portfolio.

At December 31, 2007, Banks and finance companies, Building materials/ construction and Telecom services moved into the top 10 of wholesale criticized exposure, replacing Agriculture/paper manufacturing, Business services and Utilities.

Industry concentrations for wholesale criticized exposure as of December 31, 2007 and 2006, were as follows.

	2007		2006	
December 31, (in millions, except ratios)	Credit exposure	% of portfolio	Credit exposure	% of portfolio
Top 10 industries[a]				
Automotive	**$ 1,338**	**20%**	$ 1,442	29%
Real estate	**1,070**	**16**	243	5
Retail and consumer services	**550**	**8**	278	5
Banks and finance companies	**498**	**7**	74	1
Building materials/construction	**345**	**5**	113	2
Media	**303**	**4**	392	8
Chemicals/plastics	**288**	**4**	159	3
Healthcare	**246**	**4**	284	6
Consumer products	**239**	**4**	383	7
Telecom services	**219**	**3**	20	1
All other	**1,742**	**25**	1,638	33
Total excluding loans held-for-sale and loans at fair value	**$ 6,838**	**100%**	$ 5,026	100%
Loans held-for-sale and loans at fair value[b]	**205**		624	
Total	**$ 7,043**		$ 5,650	

(a) Rankings are based upon exposure at December 31, 2007.
(b) Loans held-for-sale relate primarily to syndication loans and loans transferred from the retained portfolio. During the first quarter of 2007, the Firm elected the fair value option of accounting for loans related to securitization activities; these loans are classified as Trading assets at December 31, 2007. Loans held-for-sale exclude purchased nonperforming loans held-for-sale.

Presented below is a discussion of several industries to which the Firm has significant exposure, as well as industries the Firm continues to monitor because of actual or potential credit concerns. For additional information, refer to the tables above and on the preceding page.

- Automotive: Automotive Original Equipment Manufacturers and suppliers based in North America continued to be affected by a challenging operating environment in 2007. As a result, the industry continued to be the largest segment of the Firm's wholesale criticized exposure; however, most of the criticized exposure remains undrawn, is performing and is substantially secured.
- Real estate: Exposure to this industry grew in 2007 mainly due to growth in leveraged lending activity, primarily in the IB. On a portfolio basis, the Firm's Real estate exposure is well-diversified by client, transaction type, geography and property type. Approximately half of this exposure is to large public and rated real estate companies and institutions (e.g., REITS), as well as real estate loans originated for sale into the commercial mortgage-backed securities market. CMBS exposure totaled 5% of the category at December 31, 2007. These positions are actively risk managed. The remaining Real estate exposure is primarily to professional real estate developers, owners, or service providers and generally involves real estate leased to third-party tenants. Exposure to national and regional single-family home builders represents 16% of the category, down from 21% in 2006, and is considered to be at a manageable level. The increase in criticized exposure was largely a result of downgrades to a small group of homebuilders within the Real estate portfolio.
- Retail and consumer services: In 2007, criticized exposure to this industry increased as a result of downgrades of select portfolio names. Overall, the majority of the exposure remains rated investment grade and the portfolio is diversified by client, geography and product market served. The bigger portfolio names in terms of exposure tend to be large cap companies with access to capital markets. For smaller cap clients with more reliance on bank debt, exposures are often highly structured and/or secured.
- Banks and finance companies: This industry group, primarily consisting of exposure to commercial banks, is the largest segment of the Firm's wholesale credit portfolio. Even though criticized exposures grew in 2007 due to downgrades to select names within the portfolio, credit quality overall remained high, as 83% of the exposure in this category is rated investment grade.
- All other: All other in the wholesale credit exposure concentration table on page 78 of this Annual Report at December 31, 2007 (excluding loans held-for-sale and loans at fair value) included $377.0 billion of credit exposure to 22 industry segments. Exposures related to SPEs and high-net-worth individuals were 34% and 14%, respectively, of this category. SPEs provide secured financing (generally backed by receivables, loans or bonds on a bankruptcy-remote, nonrecourse or limited-recourse basis) originated by a diverse group of companies in industries that are not highly correlated. For further discussion of SPEs, see Note 17 on pages 146–154 of this Annual Report. The remaining All other exposure is well-diversified across industries and none comprise more than 3% of total exposure.

Derivative contracts

In the normal course of business, the Firm uses derivative instruments to meet the needs of customers; to generate revenue through trading activities; to manage exposure to fluctuations in interest rates, currencies and other markets; and to manage the Firm's credit exposure. For further discussion of these contracts, see Note 30 on pages 168–169 of this Annual Report.

The following tables summarize the aggregate notional amounts and the net derivative receivables MTM for the periods presented.

Notional amounts of derivative contracts

December 31, (in billions)	Notional amounts[a] 2007	2006
Interest rate contracts		
Interest rate and currency swaps[b]	**$ 53,458**	$ 40,629
Future and forwards	**4,548**	4,342
Purchased options	**5,349**	5,230
Total interest rate contracts	**63,355**	50,201
Credit derivatives	**$ 7,967**	$ 4,619
Commodity contracts		
Swaps	**$ 275**	$ 244
Future and forwards	**91**	68
Purchased options	**233**	195
Total commodity contracts	**599**	507
Foreign exchange contracts		
Future and forwards	**$ 3,424**	$ 1,824
Purchased options	**906**	696
Total foreign exchange contracts	**4,330**	2,520
Equity contracts		
Swaps	**$ 105**	$ 56
Future and forwards	**72**	73
Purchased options	**821**	680
Total equity contracts	**998**	809
Total derivative notional amounts	**$ 77,249**	$ 58,656

(a) Represents the sum of gross long and gross short third-party notional derivative contracts, excluding written options and foreign exchange spot contracts.
(b) Includes cross currency swap contract notional amounts of $1.4 trillion and $1.1 trillion at December 31, 2007 and 2006, respectively.

Derivative receivables marked to market ("MTM")

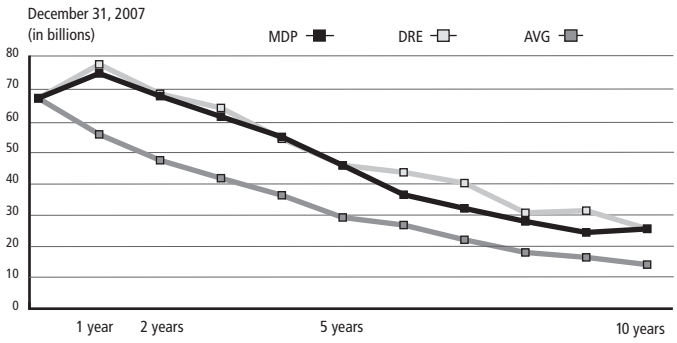
December 31, (in millions)	Derivative receivables MTM 2007	2006
Interest rate contracts	**$ 36,020**	$ 28,932
Credit derivatives	**22,083**	5,732
Commodity contracts	**9,419**	10,431
Foreign exchange contracts	**5,616**	4,260
Equity contracts	**3,998**	6,246
Total, net of cash collateral	**77,136**	55,601
Liquid securities collateral held against derivative receivables	**(9,824)**	(6,591)
Total, net of all collateral	**$ 67,312**	$ 49,010

The amount of Derivative receivables reported on the Consolidated balance sheets of $77.1 billion and $55.6 billion at December 31, 2007 and 2006, respectively, is the amount of the mark-to-market value ("MTM") or fair value of the derivative contracts after giving effect to legally enforceable master netting agreements and cash collateral held by the Firm. These amounts represent the cost to the Firm to replace the contracts at current market rates should the counterparty default. However, in management's view, the appropriate measure of current credit risk should also reflect additional liquid securities held as collateral by the Firm of $9.8 billion and $6.6 billion at December 31, 2007 and 2006, respectively, resulting in total exposure, net of all collateral, of $67.3 billion and $49.0 billion at December 31, 2007 and 2006, respectively. Derivative receivables increased $18.3 billion from December 31, 2006, primarily driven by increases in credit derivative and interest rate products due to increased credit spreads and lower interest rates, respectively, as well as a decline in the U.S. dollar.

The Firm also holds additional collateral delivered by clients at the initiation of transactions, but this collateral does not reduce the credit risk of the derivative receivables in the table above. This additional collateral secures potential exposure that could arise in the derivatives portfolio should the MTM of the client's transactions move in the Firm's favor. As of December 31, 2007 and 2006, the Firm held $17.4 billion and $12.3 billion of this additional collateral, respectively. The derivative receivables MTM also does not include other credit enhancements in the form of letters of credit.

While useful as a current view of credit exposure, the net MTM value of the derivative receivables does not capture the potential future variability of that credit exposure. To capture the potential future variability of credit exposure, the Firm calculates, on a client-by-client basis, three measures of potential derivatives-related credit loss: Peak, Derivative Risk Equivalent ("DRE"), and Average exposure ("AVG"). These measures all incorporate netting and collateral benefits, where applicable.

Peak exposure to a counterparty is an extreme measure of exposure calculated at a 97.5% confidence level. However, the total potential future credit risk embedded in the Firm's derivatives portfolio is not the simple sum of all Peak client credit risks. This is because, at the portfolio level, credit risk is reduced by the fact that when offsetting transactions are done with separate counterparties, only one of the two trades can generate a credit loss, even if both counterparties were to default simultaneously. The Firm refers to this effect as market diversification, and the Market-Diversified Peak ("MDP") measure is a portfolio aggregation of counterparty Peak measures, representing the maximum losses at the 97.5% confidence level that would occur if all counterparties defaulted under any one given market scenario and time frame.



Derivative Risk Equivalent exposure is a measure that expresses the riskiness of derivative exposure on a basis intended to be equivalent to the riskiness of loan exposures. The measurement is done by equating the unexpected loss in a derivative counterparty exposure (which takes into consideration both the loss volatility and the credit rating of the counterparty) with the unexpected loss in a loan exposure (which takes into consideration only the credit rating of the counterparty). DRE is a less extreme measure of potential credit loss than Peak and is the primary measure used by the Firm for credit approval of derivative transactions.

Finally, AVG is a measure of the expected MTM value of the Firm's derivative receivables at future time periods, including the benefit of collateral. AVG exposure over the total life of the derivative contract is used as the primary metric for pricing purposes and is used to calculate credit capital and the Credit Valuation Adjustment ("CVA"), as further described below. Average exposure was $47.1 billion and $35.6 billion at December 31, 2007 and 2006, respectively, compared with derivative receivables MTM, net of all collateral, of $67.3 billion and $49.0 billion at December 31, 2007 and 2006, respectively.

The MTM value of the Firm's derivative receivables incorporates an adjustment, the CVA, to reflect the credit quality of counterparties. The CVA is based upon the Firm's AVG to a counterparty and the counterparty's credit spread in the credit derivatives market. The primary components of changes in CVA are credit spreads, new deal activity or unwinds, and changes in the underlying market environment. The Firm believes that active risk management is essential to controlling the dynamic credit risk in the derivatives portfolio. In addition, the Firm takes into consideration the potential for correlation between the Firm's AVG to a counterparty and the counterparty's credit quality within the credit approval process. The Firm risk manages exposure to changes in CVA by entering into credit derivative transactions, as well as interest rate, foreign exchange, equity and commodity derivative transactions.

The graph to the right shows exposure profiles to derivatives over the next 10 years as calculated by the MDP, DRE and AVG metrics. All three measures generally show declining exposure after the first year, if no new trades were added to the portfolio.

Exposure profile of derivatives measures

The following table summarizes the ratings profile of the Firm's derivative receivables MTM, net of other liquid securities collateral, for the dates indicated.

Ratings profile of derivative receivables MTM

Rating equivalent	**2007**		2006	
December 31, (in millions, except ratios)	Exposure net of all collateral	% of exposure net of all collateral	Exposure net of all collateral	% of exposure net of all collateral
AAA/Aaa to AA-/Aa3	**$ 38,314**	**57%**	$ 28,150	58%
A+/A1 to A-/A3	**9,855**	**15**	7,588	15
BBB+/Baa1 to BBB-/Baa3	**9,335**	**14**	8,044	16
BB+/Ba1 to B-/B3	**9,451**	**14**	5,150	11
CCC+/Caa1 and below	**357**	**—**	78	—
Total	**$ 67,312**	**100%**	$ 49,010	100%

The Firm actively pursues the use of collateral agreements to mitigate counterparty credit risk in derivatives. The percentage of the Firm's derivatives transactions subject to collateral agreements increased slightly to 82% as of December 31, 2007, from 80% at December 31, 2006.

The Firm posted $33.5 billion and $26.6 billion of collateral at December 31, 2007 and 2006, respectively. Certain derivative and collateral agreements include provisions that require the counterparty and/or the Firm, upon specified downgrades in their respective credit ratings, to post collateral for the benefit of the other party. The impact of a single-notch ratings downgrade to JPMorgan Chase Bank, N.A., from its rating of "AA" to "AA-" at December 31, 2007, would have required $237 million of additional collateral to be posted by the Firm. The impact of a six-notch ratings downgrade (from "AA" to "BBB") would have required $2.5 billion of additional collateral. Certain derivative contracts also provide for termination of the contract, generally upon a downgrade of either the Firm or the counterparty, at the then-existing MTM value of the derivative contracts.

Credit derivatives

The following table presents the Firm's notional amounts of credit derivatives protection purchased and sold as of December 31, 2007 and 2006.

	Notional amount				
	Credit portfolio		Dealer/client		
December 31, (in billions)	Protection purchased[(a)]	Protection sold	Protection purchased	Protection sold	**Total**
2007	**$ 70**	**$ 2**	**$ 3,999**	**$ 3,896**	**$ 7,967**
2006	$ 52	$ 1	$ 2,277	$ 2,289	$ 4,619

(a) Included $31.1 billion and $22.7 billion at December 31, 2007 and 2006, respectively, that represented the notional amount for structured portfolio protection; the Firm retains a minimal first risk of loss on this portfolio.

JPMorgan Chase has counterparty exposure as a result of credit derivatives transactions. Of the $77.1 billion of total Derivative receivables MTM at December 31, 2007, $22.1 billion, or 29%, was associated with credit derivatives, before the benefit of liquid securities collateral.

Dealer/client business

At December 31, 2007, the total notional amount of protection purchased and sold in the dealer/client business increased $3.3 trillion from year-end 2006 as a result of increased trade volume in the market. The risk positions are largely matched when securities used to risk-manage certain derivative positions are taken into consideration and the notional amounts are adjusted to a duration-based equivalent or to reflect different degrees of subordination in tranched structures.

Credit portfolio activities

In managing its wholesale credit exposure, the Firm purchases single-name and portfolio credit derivatives; this activity does not reduce the reported level of assets on the balance sheet or the level of reported off–balance sheet commitments. The Firm also diversifies its exposures by providing (i.e., selling) credit protection, which increases exposure to industries or clients where the Firm has little or no client-related exposure. This activity is not material to the Firm's overall credit exposure.

Use of single-name and portfolio credit derivatives

December 31, (in millions)	Notional amount of protection purchased	
	2007	2006
Credit derivatives used to manage:		
Loans and lending-related commitments	**$ 63,645**	$ 40,755
Derivative receivables	**6,462**	11,229
Total[a]	**$ 70,107**	$ 51,984

(a) Included $31.1 billion and $22.7 billion at December 31, 2007 and 2006, respectively, that represented the notional amount for structured portfolio protection; the Firm retains a minimal first risk of loss on this portfolio.

The credit derivatives used by JPMorgan Chase for credit portfolio management activities do not qualify for hedge accounting under SFAS 133, and therefore, effectiveness testing under SFAS 133 is not performed. These derivatives are reported at fair value, with gains and losses recognized in Principal transactions revenue. The MTM value incorporates both the cost of credit derivative premiums and changes in value due to movement in spreads and credit events; in contrast, the loans and lending-related commitments being risk managed are accounted for on an accrual basis. Loan interest and fees are generally recognized in Net interest income, and impairment is recognized in the Provision for credit losses. This asymmetry in accounting treatment between loans and lending-related commitments and the credit derivatives utilized in credit portfolio management activities causes earnings volatility that is not representative, in the Firm's view, of the true changes in value of the Firm's overall credit exposure. The MTM related to the Firm's credit derivatives used for managing credit exposure, as well as the MTM related to the CVA, which reflects the credit quality of derivatives counterparty exposure, are included in the table below. These results can vary from period to period due to market conditions that impact specific positions in the portfolio.

Year ended December 31, (in millions)	**2007**	2006	2005
Hedges of lending-related commitments[a]	**$ 350**	$ (246)	$ 24
CVA and hedges of CVA[a]	**(363)**	133	84
Net gains (losses)[b]	**$ (13)**	$ (113)	$ 108

(a) These hedges do not qualify for hedge accounting under SFAS 133.
(b) Excludes gains of $373 million, $56 million and $8 million for the years ended December 31, 2007, 2006 and 2005, respectively, of other Principal transactions revenue that was not associated with hedging activities. The amount for 2007 incorporates an adjustment to the valuation of the Firm's derivative liabilities as a result of the adoption of SFAS 157 on January 1, 2008.

The Firm also actively manages wholesale credit exposure mainly through IB and CB loan and commitment sales. During 2007, 2006 and 2005, these sales of $4.9 billion, $4.0 billion and $4.9 billion of loans and commitments, respectively, resulted in losses of $7 million in 2007 and gains of $83 million and $81 million in 2006 and 2005, respectively. These results include gains on sales of nonperforming loans, as discussed on page 76 of this Annual Report. These activities are not related to the Firm's securitization activities, which are undertaken for liquidity and balance sheet management purposes.
For a further discussion of securitization activity, see Liquidity Risk Management and Note 16 on pages 70–73 and 139–145, respectively, of this Annual Report.

Lending-related commitments

Wholesale lending-related commitments were $446.7 billion at December 31, 2007, compared with $391.4 billion at December 31, 2006. The increase reflected greater overall lending activity. In the Firm's view, the total contractual amount of these instruments is not representative of the Firm's actual credit risk exposure or funding requirements. In determining the amount of credit risk exposure the Firm has to wholesale lending-related commitments, which is used as the basis for allocating credit risk capital to these instruments, the Firm has established a "loan-equivalent" amount for each commitment; this amount represents the portion of the unused commitment or other contingent exposure that is expected, based upon average portfolio historical experience, to become outstanding in the event of a default by an obligor. The loan-equivalent amount of the Firm's lending-related commitments was $238.7 billion and $212.3 billion as of December 31, 2007 and 2006, respectively.

Emerging markets country exposure

The Firm has a comprehensive internal process for measuring and managing exposures to emerging markets countries. There is no common definition of emerging markets but the Firm generally, though not exclusively, includes in its definition those countries whose sovereign debt ratings are equivalent to "A+" or lower. Exposures to a country include all credit-related lending, trading and investment activities, whether cross-border or locally funded. In addition to monitoring country exposures, the Firm uses stress tests to measure and manage the risk of extreme loss associated with sovereign crises.

The table below presents the Firm's exposure to the top five emerging markets countries. The selection of countries is based solely on the Firm's largest total exposures by country and not the Firm's view of any actual or potentially adverse credit conditions. Exposure is reported based on the country where the assets of the obligor, counterparty or guarantor are located. Exposure amounts are adjusted for collateral and for credit enhancements (e.g., guarantees and letters of credit) provided by third parties; outstandings supported by a guarantor outside the country or backed by collateral held outside the country are assigned to the country of the enhancement provider. In addition, the effect of credit derivative hedges and other short credit or equity trading positions are reflected in the table below. Total exposure includes exposure to both government and private sector entities in a country.

Top 5 emerging markets country exposure

At December 31, 2007	Cross-border					
(in billions)	Lending[a]	Trading[b]	Other[c]	Total	Local[d]	**Total exposure**
South Korea	$ 3.2	$ 2.6	$ 0.7	$ 6.5	$ 3.4	$ 9.9
Brazil	1.1	(0.7)	1.2	1.6	5.0	6.6
Russia	2.9	1.0	0.2	4.1	0.4	4.5
India	1.9	0.8	0.8	3.5	0.6	4.1
China	2.2	0.3	0.4	2.9	0.3	3.2

(a) Lending includes loans and accrued interest receivable, interest-bearing deposits with banks, acceptances, other monetary assets, issued letters of credit net of participations, and undrawn commitments to extend credit.
(b) Trading includes (1) issuer exposure on cross-border debt and equity instruments, held both in trading and investment accounts, adjusted for the impact of issuer hedges, including credit derivatives; and (2) counterparty exposure on derivative and foreign exchange contracts as well as security financing trades (resale agreements and securities borrowed).
(c) Other represents mainly local exposure funded cross-border.
(d) Local exposure is defined as exposure to a country denominated in local currency, booked and funded locally.

CONSUMER CREDIT PORTFOLIO

JPMorgan Chase's consumer portfolio consists primarily of residential mortgages, home equity loans, credit cards, auto loans and leases, education loans and business banking loans, and reflects the benefit of diversification from both a product and a geographic perspective. The primary focus is serving the prime consumer credit market. RFS offers home equity lines of credit and mortgage loans with interest-only payment options to predominantly prime borrowers; there are no products in the real estate portfolios that result in negative amortization.

The domestic consumer credit environment in 2007 was negatively affected by the deterioration in valuations associated with residential real estate. For the first time in decades, average home prices declined on a national basis, with many specific real estate markets recording double-digit percentage declines in average home prices. The negative residential real estate environment has also had an effect on the performance of other consumer credit asset classes, including auto loans and credit card loans. Geographic areas that have seen the most material declines in home prices have exhibited higher delinquency and losses across the consumer credit product spectrum.

Significant actions have been taken to tighten credit underwriting and loan qualification standards, especially related to real estate lending. Maximum loan-to-value and debt-to-income ratios have been reduced, minimum required credit risk scores for loan qualification have been increased and collateral valuation methods have been tightened. These actions have resulted in significant reductions in new loan originations of risk layered loans, and improved alignment of loan pricing with the embedded risk.

Account management and loan servicing policies and actions have also been enhanced. Delinquency management, loss mitigation, and asset disposition efforts have been increased, while collection intensity, exposure management, debt restructuring, and other similar practices have been strengthened to effectively manage loss exposure.

The following table presents managed consumer credit–related information for the dates indicated.

Consumer portfolio

As of or for the year ended December 31, (in millions, except ratios)	Credit exposure		Nonperforming assets[f]		Net charge-offs		Average annual net charge-off rate[g]

(a) Includes RFS, CS and residential mortgage loans reported in the Corporate segment.
(b) Excludes operating lease-related assets of $1.9 billion and $1.6 billion for December 31, 2007 and 2006, respectively.
(c) Loans past-due 90 days and over and accruing include credit card receivables – reported of $1.5 billion and $1.3 billion for December 31, 2007 and 2006, respectively, and related credit card securitizations of $1.1 billion and $962 million for December 31, 2007 and 2006, respectively.
(d) Represents securitized credit card receivables. For a further discussion of credit card securitizations, see CS on pages 49–51 of this Annual Report.
(e) The credit card and home equity lending-related commitments represent the total available lines of credit for these products. The Firm has not experienced, and does not anticipate, that all available lines of credit will be utilized at the same time. The Firm can reduce or cancel these lines of credit by providing the borrower prior notice or, in some cases, without notice as permitted by law.
(f) Excludes nonperforming assets related to (1) loans eligible for repurchase as well as loans repurchased from GNMA pools that are insured by U.S. government agencies of $1.5 billion for December 31, 2007 and $1.2 billion for December 31, 2006, and (2) education loans that are 90 days past due and still accruing, which are insured by U.S. government agencies under the Federal Family Education Loan Program of $279 million and $219 million as of December 31, 2007 and 2006, respectively. These amounts for GNMA and education loans are excluded, as reimbursement is proceeding normally.
(g) Net charge-off rates exclude average loans held-for-sale of $10.6 billion and $16.1 billion for 2007 and 2006, respectively.

The Firm regularly evaluates market conditions and overall economic returns and makes an initial determination of whether new originations will be held-for-investment or sold within the foreseeable future. The Firm also periodically evaluates the expected economic returns of previously originated loans under prevailing market conditions to determine whether their designation as held-for-sale or held-for-investment continues to be appropriate. When the Firm determines that a change in this designation is appropriate, the loans are transferred to the appropriate classification. During the third and fourth quarters of 2007, in response to changes in market conditions, the Firm designated as held-for-investment all new originations of subprime mortgage loans, as well as subprime mortgage loans that were previously designated held-for-sale. In addition, all new prime mortgage originations that cannot be sold to U.S. government agencies and U.S. government-sponsored enterprises have been designated as held-for-investment. Prime mortgage loans originated with the intent to sell are accounted for at fair value under SFAS 159 and are classified as Trading assets in the Consolidated Balance Sheets.

The following discussion relates to the specific loan and lending-related categories within the consumer portfolio.

Home equity: Home equity loans at December 31, 2007, were $94.8 billion, an increase of $9.1 billion from year-end 2006. The change in the portfolio from December 31, 2006, reflected organic growth. The Provision for credit losses for the Home equity portfolio includes net increases of $1.0 billion to the Allowance for loan losses for the year ended December 31, 2007, as risk layered loans, continued weak housing prices and slowing economic growth have resulted in a significant increase in nonperforming assets and estimated losses, especially with respect to recently originated high loan-to-value loans in specific geographic regions that have experienced significant declines in housing prices. The decline in housing prices and the second lien position for these types of loans results in minimal proceeds upon foreclosure, increasing the severity of losses. Although subprime Home equity loans do not represent a significant portion of the Home equity loan balance, the origination of subprime home equity loans was discontinued in the third quarter of 2007. In addition, loss mitigation activities continue to be intensified, underwriting standards have been tightened and pricing actions have been implemented to reflect elevated risks related to the home equity portfolio.

The following tables present the geographic distribution of consumer credit outstandings by product as of December 31, 2007 and 2006.

Top 5 States Consumer Loans - Managed
(at December 31, 2006)

Mortgage: Prior to the third quarter of 2007, subprime mortgage loans and substantially all of the Firm's prime mortgages, both fixed-rate and adjustable-rate, were originated with the intent to sell. Prime mortgage loans originated into the held-for-investment portfolio consisted primarily of adjustable-rate products. As a result of the decision to retain rather than sell subprime mortgage loans and new originations of prime mortgage loans that cannot be sold to U.S. government agencies and U.S. government-sponsored enterprises, both fixed-rate and adjustable-rate products are now being originated into the held-for-investment portfolio. Mortgages, irrespective of whether they are originated with the intent to sell or hold-for-investment, are underwritten to the same standards applicable to the respective type of mortgage.

Mortgage loans at December 31, 2007, including loans held-for-sale, were $56.0 billion, reflecting a $3.6 billion decrease from year-end 2006, primarily due to the change in classification to Trading assets for prime mortgages originated with the intent to sell and elected to be fair valued under SFAS 159 offset partially by the decision to retain rather than sell subprime mortgage loans and new originations of prime mortgage loans that cannot be sold to U.S. government agencies and U.S. government-sponsored enterprises. As of December 31, 2007, mortgage loans on the Consolidated balance sheet included $15.5 billion of subprime mortgage loans, representing 28% of the total mortgage loan balance. The Provision for credit losses for mortgage loans included $166 million in increases to the allowance for loan losses for the year ended December 31, 2007, as housing price declines in specific geographic regions and slowing economic growth have resulted in increases in nonperforming assets and estimated losses for the subprime product segment. The Provision for credit losses also reflects the decision to retain rather than sell subprime mortgage loans. Loss mitigation activities have been intensified, products have been eliminated and underwriting standards continue to be tightened to reflect management's expectation of elevated credit losses in the subprime market segment. Nonperforming assets have also increased in the prime product segment. Borrowers are generally required to obtain private mortgage insurance for prime mortgage loans with high loan to value ratios. Recoveries on these insurance policies offset credit losses on these loans to the extent foreclosure proceeds are greater than 80% of the loan to value ratio at the time of origination. Additional housing price declines could result in an increase in the number of foreclosures for which proceeds are less than 80% of the original loan to value ratio, resulting in increased losses for this product segment.

Auto loans and leases: As of December 31, 2007, Auto loans and leases of $42.4 billion increased slightly from year-end 2006. The Allowance for loan losses for the Auto loan portfolio was increased during 2007, reflecting an increase in estimated losses from low prior-year levels and deterioration in the credit environment.

All other loans

All other loans primarily include Business Banking loans (which are highly collateralized loans, often with personal loan guarantees), Education loans, Community Development loans and other secured and unsecured consumer loans. As of December 31, 2007, other loans, including loans held-for-sale, of $28.7 billion were up $1.6 billion from year-end 2006, primarily as a result of organic growth in Business Banking loans.

Credit Card

JPMorgan Chase analyzes its credit card portfolio on a managed basis, which includes credit card receivables on the Consolidated balance sheets and those receivables sold to investors through securitization. Managed credit card receivables were $157.1 billion at December 31, 2007, an increase of $4.2 billion from year-end 2006, reflecting organic growth in the portfolio.

The managed credit card net charge-off rate increased to 3.68% for 2007, from 3.33% in 2006. This increase was due primarily to lower bankruptcy-related net charge-offs in 2006. The 30-day delinquency rate increased slightly to 3.48% at December 31, 2007, from 3.13% at December 31, 2006. The Allowance for loan loss was increased due to higher estimated net charge-offs in the portfolio. The managed credit card portfolio continues to reflect a well-seasoned portfolio that has good U.S. geographic diversification.

ALLOWANCE FOR CREDIT LOSSES

JPMorgan Chase's allowance for credit losses is intended to cover probable credit losses, including losses where the asset is not specifically identified or the size of the loss has not been fully determined. At least quarterly, the allowance for credit losses is reviewed by the Chief Risk Officer, the Chief Financial Officer and the Controller of the Firm, and discussed with the Risk Policy and Audit Committees of the Board of Directors of the Firm. The allowance is reviewed relative to the risk profile of the Firm's credit portfolio and current economic conditions and is adjusted if, in management's judgment, changes are warranted. The allowance includes an asset-specific and a formula-based component. For further discussion of the components of the allowance for credit losses, see Critical accounting estimates used by the Firm on pages 96–97 and Note 15 on pages 138–139 of this Annual Report. At December 31, 2007, management deemed the allowance for credit losses to be appropriate (i.e., sufficient to absorb losses that are inherent in the portfolio, including losses that are not specifically identified or for which the size of the loss has not yet been fully determined).

Summary of changes in the allowance for credit losses

Year ended December 31,	2007			2006		
(in millions)	Wholesale	Consumer	Total	Wholesale	Consumer	Total
Loans:						
Beginning balance at January 1,	**$ 2,711**	**$ 4,568**	**$ 7,279**	$ 2,453	$ 4,637	$7,090

(a) Reflects the effect of the adoption of SFAS 159 at January 1, 2007. For a further discussion of SFAS 159, see Note 5 on pages 119–121 of this Annual Report.
(b) Partially related to the transfer of Allowance between wholesale and consumer in conjunction with prime mortgages transferred to the Corporate sector.
(c) The ratio of the wholesale Allowance for loan losses to total wholesale loans was 1.67% and 1.68%, excluding wholesale loans held-for-sale and loans accounted for at fair value at December 31, 2007 and 2006, respectively.
(d) The ratio of the consumer allowance for loan losses to total consumer loans was 2.01% and 1.71%, excluding consumer loans held-for-sale and loans accounted for at fair value at December 31, 2007 and 2006, respectively.
(e) Prior periods have been revised to reflect the current presentation.

The allowance for credit losses increased $2.3 billion from December 31, 2006. The consumer and wholesale components of the allowance increased $1.5 billion and $779 million, respectively. The increase in the consumer portion of the allowance included increases of $1.3 billion and $215 million in RFS and CS, respectively. The increase in the wholesale portion of the allowance was primarily due to loan growth in the IB and CB.

Excluding Loans held-for-sale and loans carried at fair value, the Allowance for loan losses represented 1.88% of loans at December 31, 2007, compared with 1.70% at December 31, 2006.

To provide for the risk of loss inherent in the Firm's process of extending credit, management also computes an asset-specific component and a formula-based component for wholesale lending-related commitments. These components are computed using a methodology similar to that used for the wholesale loan portfolio, modified for expected maturities and probabilities of drawdown. This allowance, which is reported in Other liabilities, was $850 million and $524 million at December 31, 2007 and 2006, respectively. The increase reflected growth in lending-related commitments and updates to inputs used in the calculation.

Provision for credit losses

For a discussion of the reported Provision for credit losses, see page 33 of this Annual Report. The managed provision for credit losses includes credit card securitizations. For the year ended December 31, 2007, the increase in the Provision for credit losses was due to an increase year-over-year in the allowance for credit losses largely related to home equity loans, higher credit card net charge-offs in the consumer businesses and an increase in the wholesale businesses. The increase in the allowance in the wholesale businesses was due to the weakening credit environment as well as growth in the wholesale portfolio. The prior year benefited from a lower level of credit card net charge-offs, which reflected a lower level of losses following the change in bankruptcy legislation in the fourth quarter of 2005.

Year ended December 31,	Provision for loan losses			Provision for lending-related commitments			Total provision for credit losses		
(in millions)	**2007**	2006	2005	**2007**	2006	2005	**2007**	2006	2005

MARKET RISK MANAGEMENT

Market risk is the exposure to an adverse change in the market value of portfolios and financial instruments caused by a change in market prices or rates.

Market risk management
Market risk is identified, measured, monitored, and controlled by Market Risk, a corporate risk governance function independent of the lines of business. Market Risk seeks to facilitate efficient risk/return decisions, reduce volatility in operating performance and make the Firm's market risk profile transparent to senior management, the Board of Directors and regulators. Market Risk is overseen by the Chief Risk Officer and performs the following functions:

- Establishment of a comprehensive market risk policy framework
- Independent measurement, monitoring and control of business segment market risk
- Definition, approval and monitoring of limits
- Performance of stress testing and qualitative risk assessments

Risk identification and classification

Market Risk works in partnership with the business segments to identify market risks throughout the Firm and to define and monitor market risk policies and procedures. All business segments are responsible for comprehensive identification and verification of market risks within their units. Risk-taking businesses have functions that act independently from trading personnel and are responsible for verifying risk exposures that the business takes. In addition to providing independent oversight for market risk arising from the business segments, Market Risk is also responsible for identifying exposures which may not be large within individual business segments, but which may be large for the Firm in aggregate. Regular meetings are held between Market Risk and the heads of risk-taking businesses to discuss and decide on risk exposures in the context of the market environment and client flows.

Positions that expose the Firm to market risk can be classified into two categories: trading and nontrading risk. Trading risk includes positions that are held by the Firm as part of a business segment or unit, the main business strategy of which is to trade or make markets. Unrealized gains and losses in these positions are generally reported in Principal transactions revenue. Nontrading risk includes securities and other assets held for longer-term investment, mortgage servicing rights, and securities and derivatives used to manage the Firm's asset/liability exposures. Unrealized gains and losses in these positions are generally not reported in Principal transactions revenue.

Trading risk
Fixed income risk (which includes interest rate risk and credit spread risk), foreign exchange, equities and commodities and other trading risks involve the potential decline in Net income or financial condition due to adverse changes in market rates, whether arising from client activities or proprietary positions taken by the Firm.

Nontrading risk
Nontrading risk arises from execution of the Firm's core business strategies, the delivery of products and services to its customers, and the discretionary positions the Firm undertakes to risk-manage exposures.

These exposures can result from a variety of factors, including differences in the timing among the maturity or repricing of assets, liabilities and off–balance sheet instruments. Changes in the level and shape of market interest rate curves also may create interest rate risk, since the repricing characteristics of the Firm's assets do not necessarily match those of its liabilities. The Firm is also exposed to basis risk, which is the difference in the repricing characteristics of two floating-rate indices, such as the prime rate and 3-month LIBOR. In addition, some of the Firm's products have embedded optionality that impact pricing and balances.

The Firm's mortgage banking activities give rise to complex interest rate risks, as well as option and basis risk. Option risk arises primarily from prepayment options embedded in mortgages and changes in the probability of newly originated mortgage commitments actually closing. Basis risk results from different relative movements between mortgage rates and other interest rates.

Risk measurement

Tools used to measure risk
Because no single measure can reflect all aspects of market risk, the Firm uses various metrics, both statistical and nonstatistical, including:

- Nonstatistical risk measures
- Value-at-risk ("VAR")
- Loss advisories
- Drawdowns
- Economic value stress testing
- Earnings-at-risk stress testing
- Risk identification for large exposures ("RIFLE")

Nonstatistical risk measures

Nonstatistical risk measures other than stress testing include net open positions, basis point values, option sensitivities, market values, position concentrations and position turnover. These measures provide granular information on the Firm's market risk exposure. They are aggregated by line of business and by risk type, and are used for monitoring limits, one-off approvals and tactical control.

Value-at-risk

JPMorgan Chase's primary statistical risk measure, VAR, estimates the potential loss from adverse market moves in an ordinary market environment and provides a consistent cross-business measure of risk profiles and levels of diversification. VAR is used for comparing risks across businesses, monitoring limits, one-off approvals, and as an input to economic capital calculations. VAR provides risk transparency in a normal trading environment. Each business day the Firm undertakes a comprehensive VAR calculation that includes both its trading and its nontrading risks. VAR for nontrading risk measures the amount of potential change in the fair values of the exposures related to these risks; however, for such risks, VAR is not a measure of reported revenue since nontrading activities are generally not marked to market through Net income.

To calculate VAR, the Firm uses historical simulation, which measures risk across instruments and portfolios in a consistent and comparable way. This approach assumes that historical changes in market values are representative of future changes. The simulation is based upon data for the previous 12 months. The Firm calculates VAR using a one-day time horizon and an expected tail-loss methodology, which approximates a 99% confidence level. This means the Firm would expect to incur losses greater than that predicted by VAR estimates only once in every 100 trading days, or about two to three times a year.

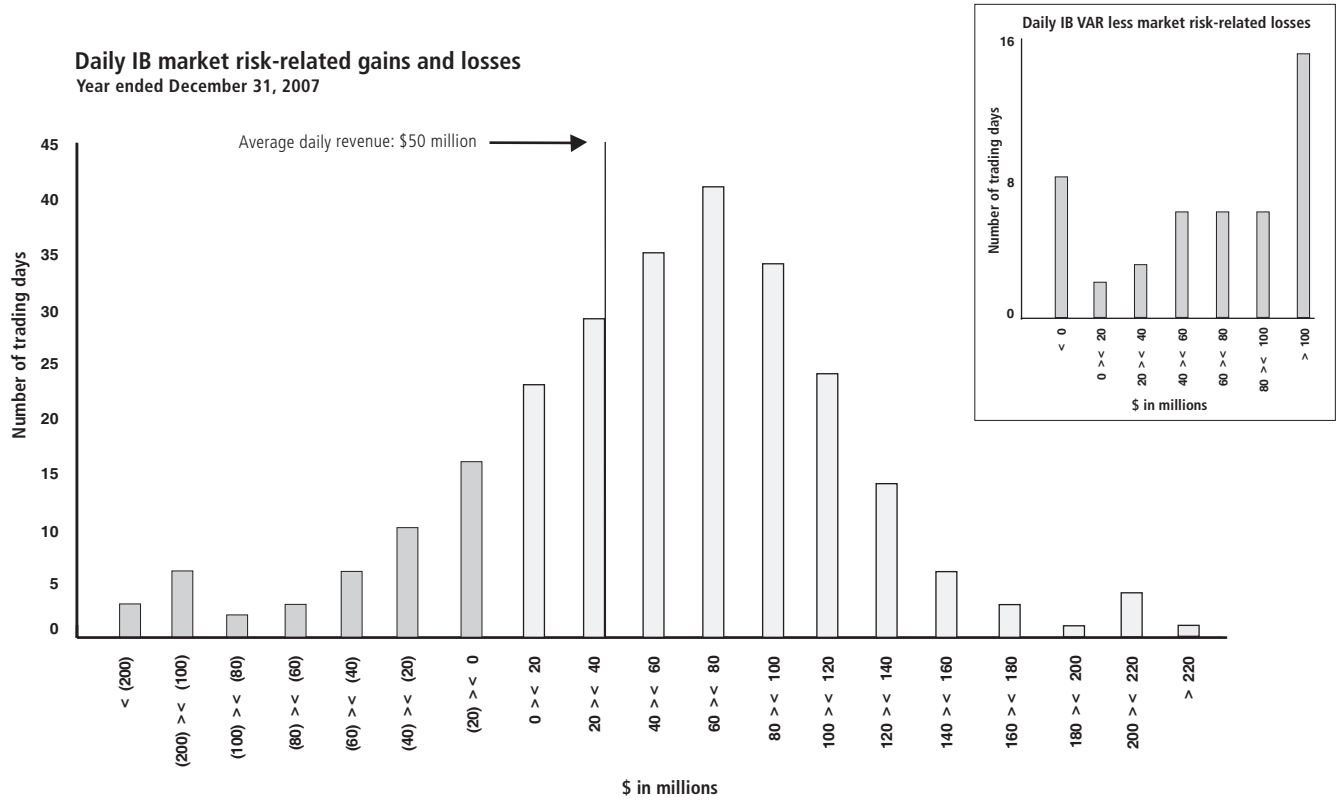
IB Trading and Credit Portfolio VAR

IB trading VAR by risk type and credit portfolio VAR

	2007			2006				
As of or for the year ended December 31, (in millions)	Average VAR	Minimum VAR	Maximum VAR	Average VAR	Minimum VAR	Maximum VAR	At December 31, 2007	At December 31, 2006
By risk type:								
Fixed income	**$ 80**	**$ 25**	**$ 135**	$ 56	$ 35	$ 94	**$ 106**	$ 44
Foreign exchange	**23**	**9**	**44**	22	14	42	**22**	27
Equities	**48**	**22**	**133**	31	18	50	**27**	49
Commodities and other	**33**	**21**	**66**	45	22	128	**27**	41
Less: portfolio diversification	**(77)**[c]	**NM**[d]	**NM**[d]	(70)[c]	NM[d]	NM[d]	**(82)**[c]	(62)[c]
Trading VAR[a]	**107**	**50**	**188**	84	55	137	**100**	99
Credit portfolio VAR[b]	**17**	**8**	**31**	15	12	19	**22**	15
Less: portfolio diversification	**(18)**[c]	**NM**[d]	**NM**[d]	(11)[c]	NM[d]	NM[d]	**(19)**[c]	(10)[c]
Total trading and credit portfolio VAR	**$ 106**	**$ 50**	**$ 178**	$ 88	$ 61	$ 138	**$ 103**	$ 104

(a) Trading VAR includes substantially all trading activities in IB; however, particular risk parameters of certain products are not fully captured, for example, correlation risk. Trading VAR does not include VAR related to held-for-sale funded loans and unfunded commitments, nor the DVA taken on derivative and structured liabilities to reflect the credit quality of the Firm. See the DVA Sensitivity table on page 92 of this Annual Report for further details. Trading VAR also does not include the MSR portfolio or VAR related to other corporate functions, such as Treasury and Private Equity. For a discussion of MSRs and the corporate functions, see Note 18 on pages 154–156, Note 4 on page 113 and Corporate on pages 59–60 of this Annual Report.

(b) Includes VAR on derivative credit valuation adjustments, hedges of the credit valuation adjustment and mark-to-market hedges of the retained loan portfolio, which are all reported in Principal transactions revenue. For a discussion of credit valuation adjustments, see Note 4 on pages 111–118 of this Annual Report. This VAR does not include the retained loan portfolio, which is not marked to market.



(c) Average and period-end VARs were less than the sum of the VARs of their market risk components, which was due to risk offsets resulting from portfolio diversification. The diversification effect reflected the fact that the risks were not perfectly correlated. The risk of a portfolio of positions is therefore usually less than the sum of the risks of the positions themselves.

(d) Designated as not meaningful ("NM") because the minimum and maximum may occur on different days for different risk components, and hence it is not meaningful to compute a portfolio diversification effect.

IB's average Total Trading and Credit Portfolio VAR was $106 million for 2007, compared with $88 million for 2006. Average VAR was higher during 2007 compared with the prior year, reflecting an increase in market volatility as well as increased risk positions, most notably in fixed income and equity markets. These changes also led to an increase in portfolio diversification, as Average Trading VAR diversification increased to $77 million during 2007, from $70 million during 2006. In general, over the course of the year, VAR exposures can vary significantly as positions change, market volatility fluctuates and diversification benefits change.

VAR back-testing

To evaluate the soundness of its VAR model, the Firm conducts daily back-testing of VAR against daily IB market risk-related revenue, which is defined as the change in value of Principal transactions revenue less private equity gains/losses plus any trading-related net interest income, brokerage commissions, underwriting fees or other revenue. The daily IB market risk-related revenue excludes gains and losses on held-for-sale funded loans and unfunded commitments and from debit valuation adjustments ("DVA"). The following histogram illustrates the daily market risk–related gains and losses for IB trading businesses for the year ended December 31, 2007. The chart shows that IB posted market risk–related gains on 215 out of 261 days in this period, with 53 days exceeding $100 million. The inset graph looks at those days on which IB experienced losses and depicts the amount by which VAR exceeded the actual loss on each of those days. Losses were sustained on 46 days, with no loss greater than $225 million. During 2007, losses exceeded the VAR measure on eight days due to the high market volatility experienced during the year. No losses exceeded VAR measure during 2006.

The Firm does not include the impact of DVA taken on derivative and structured liabilities to reflect the credit quality of the Firm in its Trading VAR. The following table provides information about the sensitivity of DVA to a one basis point increase in JPMorgan Chase credit spreads.

Debit Valuation Adjustment Sensitivity

(in millions)	1 Basis Point Increase in JPMorgan Chase Credit Spread
December 31, 2007	**$ 38**

Loss advisories and drawdowns
Loss advisories and drawdowns are tools used to highlight to senior management trading losses above certain levels and are used to initiate discussion of remedies.

Economic value stress testing
While VAR reflects the risk of loss due to adverse changes in normal markets, stress testing captures the Firm's exposure to unlikely but plausible events in abnormal markets. The Firm conducts economic-value stress tests for both its trading and its nontrading activities at least once a month using multiple scenarios that assume credit spreads widen significantly, equity prices decline and interest rates rise in the major currencies. Additional scenarios focus on the risks predominant in individual business segments and include scenarios that focus on the potential for adverse moves in complex portfolios. Periodically, scenarios are reviewed and updated to reflect changes in the Firm's risk profile and economic events. Along with VAR, stress testing is important in measuring and controlling risk. Stress testing enhances the understanding of the Firm's risk profile and loss potential, and stress losses are monitored against limits. Stress testing is also utilized in one-off approvals and cross-business risk measurement, as well as an input to economic capital allocation. Stress-test results, trends and explanations are provided each month to the Firm's senior management and to the lines of business to help them better measure and manage risks and to understand event risk-sensitive positions.

Earnings-at-risk stress testing
The VAR and stress-test measures described above illustrate the total economic sensitivity of the Firm's balance sheet to changes in market variables. The effect of interest rate exposure on reported Net income also is important. Interest rate risk exposure in the Firm's core nontrading business activities (i.e., asset/liability management positions) results from on– and off–balance sheet positions. The Firm conducts simulations of changes in NII from its nontrading activities under a variety of interest rate scenarios. Earnings-at-risk tests measure the potential change in the Firm's Net interest income over the next 12 months and highlight exposures to various rate-sensitive factors, such as the rates themselves (e.g., the prime lending rate), pricing strategies on deposits, optionality and changes in product mix. The tests include forecasted balance sheet changes, such as asset sales and securitizations, as well as prepayment and reinvestment behavior.

Earnings-at-risk also can result from changes in the slope of the yield curve, because the Firm has the ability to lend at fixed rates and borrow at variable or short-term fixed rates. Based upon these scenarios, the Firm's earnings would be affected negatively by a sudden and unanticipated increase in short-term rates without a corresponding increase in long-term rates. Conversely, higher long-term rates generally are beneficial to earnings, particularly when the increase is not accompanied by rising short-term rates.

Immediate changes in interest rates present a limited view of risk, and so a number of alternative scenarios also are reviewed. These scenarios include the implied forward curve, nonparallel rate shifts and severe interest rate shocks on selected key rates. These scenarios are intended to provide a comprehensive view of JPMorgan Chase's earnings-at-risk over a wide range of outcomes.

JPMorgan Chase's 12-month pretax earnings sensitivity profile as of December 31, 2007 and 2006, were as follows.

	Immediate change in rates			
(in millions)	+200bp	+100bp	-100bp	-200bp
December 31, 2007	**$ (26)**	**$ 55**	**$(308)**	**$ (664)**
December 31, 2006	$ (101)	$ 28	$ (21)	$ (182)

The primary change in earnings-at-risk from December 31, 2006, reflects increased prepayments on loans and securities due to lower market interest rates. The Firm is exposed to both rising and falling rates. The Firm's risk to rising rates is largely the result of increased funding costs. In contrast, the exposure to falling rates is the result of higher anticipated levels of loan and securities prepayments.

Risk identification for large exposures ("RIFLE")
Individuals who manage risk positions, particularly those that are complex, are responsible for identifying potential losses that could arise from specific, unusual events, such as a potential tax change, and estimating the probabilities of losses arising from such events. This information is entered into the Firm's RIFLE database. Trading management has access to RIFLE, thereby permitting the Firm to monitor further earnings vulnerability not adequately covered by standard risk measures.

Risk monitoring and control

Limits
Market risk is controlled primarily through a series of limits. Limits reflect the Firm's risk appetite in the context of the market environment and business strategy. In setting limits, the Firm takes into consideration factors such as market volatility, product liquidity, business trends and management experience.

Market risk management regularly reviews and updates risk limits. Senior management, including the Firm's Chief Executive Officer and Chief Risk Officer, is responsible for reviewing and approving risk limits at least once a year.

The Firm maintains different levels of limits. Corporate-level limits include VAR and stress. Similarly, line-of-business limits include VAR and stress limits and may be supplemented by loss advisories, nonstatistical measurements and instrument authorities. Businesses are responsible for adhering to established limits, against which exposures are monitored and reported. Limit breaches are reported in a timely manner to senior management, and the affected business segment is required either to reduce trading positions or consult with senior management on the appropriate action.

Qualitative review
The Market Risk Management group also performs periodic reviews as necessary of both businesses and products with exposure to market risk in order to assess the ability of the businesses to control their market risk. Strategies, market conditions, product details and risk controls are reviewed, and specific recommendations for improvements are made to management.

Model review

Some of the Firm's financial instruments cannot be valued based upon quoted market prices but are instead valued using pricing models. Such models are used for management of risk positions, such as reporting against limits, as well as for valuation. The Model Risk Group, independent of the businesses and market risk management, reviews the models the Firm uses and assesses model appropriateness and consistency. The model reviews consider a number of factors about the model's suitability for valuation and risk management of a particular product, including whether it accurately reflects the characteristics of the transaction and its significant risks, the suitability and convergence properties of numerical algorithms, reliability of data sources, consistency of the treatment with models for similar products, and sensitivity to input parameters and assumptions that cannot be priced from the market.

Reviews are conducted of new or changed models, as well as previously accepted models, to assess whether there have been any changes in the product or market that may impact the model's validity and whether there are theoretical or competitive developments that may require reassessment of the model's adequacy. For a summary of valuations based upon models, see Critical Accounting Estimates used by the Firm on pages 96–98 of this Annual Report.

Risk reporting

Nonstatistical exposures, value-at-risk, loss advisories and limit excesses are reported daily for each trading and nontrading business. Market risk exposure trends, value-at-risk trends, profit and loss changes, and portfolio concentrations are reported weekly. Stress-test results are reported monthly to business and senior management.

PRIVATE EQUITY RISK MANAGEMENT

Risk management

The Firm makes direct principal investments in private equity. The illiquid nature and long-term holding period associated with these investments differentiates private equity risk from the risk of positions held in the trading portfolios. The Firm's approach to managing private equity risk is consistent with the Firm's general risk governance structure. Controls are in place establishing target levels for total and annual investment in order to control the overall size of the portfolio. Industry and geographic concentration limits are in place and intended to ensure diversification of the portfolio. An independent valuation function is responsible for reviewing the appropriateness of the carrying values of private equity investments in accordance with relevant accounting policies. At December 31, 2007 and 2006, the carrying value of the private equity businesses were $7.2 billion and $6.1 billion, respectively, of which $390 million and $587 million, respectively, represented publicly traded positions. For further information on the Private equity portfolio, see page 60 of this Annual Report.

OPERATIONAL RISK MANAGEMENT

Operational risk is the risk of loss resulting from inadequate or failed processes or systems, human factors or external events.

Overview

Operational risk is inherent in each of the Firm's businesses and support activities. Operational risk can manifest itself in various ways, including errors, fraudulent acts, business interruptions, inappropriate behavior of employees, or vendors that do not perform in accordance with outsourcing arrangements. These events could result in financial losses and other damage to the Firm, including reputational harm.

To monitor and control operational risk, the Firm maintains a system of comprehensive policies and a control framework designed to provide a sound and well-controlled operational environment. The goal is to keep operational risk at appropriate levels, in light of the Firm's financial strength, the characteristics of its businesses, the markets in which it operates, and the competitive and regulatory environment to which it is subject. Notwithstanding these control measures, the Firm incurs operational losses.

The Firm's approach to operational risk management is intended to mitigate such losses by supplementing traditional control-based approaches to operational risk with risk measures, tools and disciplines that are risk-specific, consistently applied and utilized firmwide. Key themes are transparency of information, escalation of key issues and accountability for issue resolution.

The Firm's operational risk framework is supported by Phoenix, an internally designed operational risk software tool. Phoenix integrates the individual components of the operational risk management framework into a unified, web-based tool. Phoenix enhances the capture, reporting and analysis of operational risk data by enabling risk identification, measurement, monitoring, reporting and analysis to be done in an integrated manner, thereby enabling efficiencies in the Firm's monitoring and management of its operational risk.

For purposes of identification, monitoring, reporting and analysis, the Firm categorizes operational risk events as follows:

- Client service and selection
- Business practices
- Fraud, theft and malice
- Execution, delivery and process management
- Employee disputes
- Disasters and public safety
- Technology and infrastructure failures

Risk identification and measurement
Risk identification is the recognition of the operational risk events that management believes may give rise to operational losses. All businesses utilize the Firm's standard self-assessment process and supporting architecture as a dynamic risk management tool. The goal of the self-assessment process is for each business to identify the key operational risks specific to its environment and assess the degree to which it maintains appropriate controls. Action plans are developed for control issues identified, and businesses are held accountable for tracking and resolving these issues on a timely basis.

Risk monitoring
The Firm has a process for monitoring operational risk-event data, permitting analysis of errors and losses as well as trends. Such analysis, performed both at a line-of-business level and by risk-event type, enables identification of the causes associated with risk events faced by the businesses. Where available, the internal data can be supplemented with external data for comparative analysis with industry patterns. The data reported enables the Firm to back-test against self-assessment results. The Firm is a founding member of the Operational Risk Data Exchange, a not-for-profit industry association formed for the purpose of collecting operational loss data, sharing data in an anonymous form and benchmarking results back to members. Such information supplements the Firm's ongoing operational risk analysis.

Risk reporting and analysis
Operational risk management reports provide timely and accurate information, including information about actual operational loss levels and self-assessment results, to the lines of business and senior management. The purpose of these reports is to enable management to maintain operational risk at appropriate levels within each line of business, to escalate issues and to provide consistent data aggregation across the Firm's businesses and support areas.

Audit alignment
Internal Audit utilizes a risk-based program of audit coverage to provide an independent assessment of the design and effectiveness of key controls over the Firm's operations, regulatory compliance and reporting. Audit partners with business management and members of the control community in providing guidance on the operational risk framework and reviews the effectiveness and accuracy of the business self-assessment process as part of its business unit audits.

REPUTATION AND FIDUCIARY RISK MANAGEMENT

A firm's success depends not only on its prudent management of the liquidity, credit, market and operational risks that are part of its business risks, but equally on the maintenance among many constituents – clients, investors, regulators, as well as the general public – of a reputation for business practices of the highest quality. Attention to reputation always has been a key aspect of the Firm's practices, and maintenance of reputation is the responsibility of everyone at the Firm. JPMorgan Chase bolsters this individual responsibility in many ways, including through the Firm's Code of Conduct, training, maintaining adherence to policies and procedures, and oversight functions that approve transactions. These oversight functions include a Conflicts Office, which examines wholesale transactions with the potential to create conflicts of interest for the Firm, and regional reputation risk review committees, which review certain transactions with clients, especially complex derivatives and structured finance transactions, that have the potential to affect adversely the Firm's reputation. These regional committees, whose members are senior representatives of business and control function in the region, focus on the purpose and effect of its transactions from the client's point of view, with the goal that these transactions are not used to mislead investors or others.

Fiduciary risk management
The risk management committees within each line of business include in their mandate the oversight of the legal, reputational and, where appropriate, fiduciary risks in their businesses that may produce significant losses or reputational damage. The Fiduciary Risk Management function works with the relevant line-of-business risk committees with the goal of ensuring that businesses providing investment or risk management products or services that give rise to fiduciary duties to clients perform at the appropriate standard relative to their fiduciary relationship with a client. Of particular focus are the policies and practices that address a business' responsibilities to a client, including client suitability determination; disclosure obligations and communications; and performance expectations with respect to risk management products or services being provided by the Firm that give rise to such fiduciary duties. In this way, the relevant line-of-business risk committees, together with the Fiduciary Risk Management function, provide oversight of the Firm's efforts to monitor, measure and control the risks that may arise in the delivery of the products or services to clients that give rise to such duties, as well as those stemming from any of the Firm's fiduciary responsibilities to employees under the Firm's various employee benefit plans.

CRITICAL ACCOUNTING ESTIMATES USED BY THE FIRM

JPMorgan Chase's accounting policies and use of estimates are integral to understanding its reported results. The Firm's most complex accounting estimates require management's judgment to ascertain the valuation of assets and liabilities. The Firm has established detailed policies and control procedures intended to ensure that valuation methods, including any judgments made as part of such methods, are well-controlled, independently reviewed and applied consistently from period to period. In addition, the policies and procedures are intended to ensure that the process for changing methodologies occurs in an appropriate manner. The Firm believes its estimates for determining the valuation of its assets and liabilities are appropriate. The following is a brief description of the Firm's critical accounting estimates involving significant valuation judgments.

Allowance for credit losses

JPMorgan Chase's allowance for credit losses covers the wholesale and consumer loan portfolios as well as the Firm's portfolio of wholesale lending-related commitments. The allowance for credit losses is intended to adjust the value of the Firm's loan assets for probable credit losses as of the balance sheet date. For further discussion of the methodologies used in establishing the Firm's allowance for credit losses, see Note 15 on pages 138–139 of this Annual Report.

Wholesale loans and lending-related commitments

The methodology for calculating both the Allowance for loan losses and the Allowance for lending-related commitments involves significant judgment. First and foremost, it involves the early identification of credits that are deteriorating. Second, it involves judgment in establishing the inputs used to estimate the allowances. Third, it involves management judgment to evaluate certain macroeconomic factors, underwriting standards, and other relevant internal and external factors affecting the credit quality of the current portfolio and to refine loss factors to better reflect these conditions.

The Firm uses a risk rating system to determine the credit quality of its wholesale loans. Wholesale loans are reviewed for information affecting the obligor's ability to fulfill its obligations. In assessing the risk rating of a particular loan, among the factors considered are the obligor's debt capacity and financial flexibility, the level of the obligor's earnings, the amount and sources for repayment, the level and nature of contingencies, management strength and the industry and geography in which the obligor operates. These factors are based upon an evaluation of historical and current information, and involve subjective assessment and interpretation. Emphasizing one factor over another or considering additional factors could impact the risk rating assigned by the Firm to that loan.

The Firm applies its judgment to establish loss factors used in calculating the allowances. Wherever possible, the Firm uses independent, verifiable data or the Firm's own historical loss experience in its models for estimating the allowances. Many factors can affect estimates of loss, including volatility of loss given default, probability of default and rating migrations. Consideration is given as to whether the loss estimates should be calculated as an average over the entire credit cycle or at a particular point in the credit cycle, as well as to which external data should be used and when they should be used. Choosing data that are not reflective of the Firm's specific loan portfolio characteristics could also affect loss estimates. The application of different inputs would change the amount of the allowance for credit losses determined appropriate by the Firm.

Management also applies its judgment to adjust the loss factors derived, taking into consideration model imprecision, external factors and economic events that have occurred but are not yet reflected in the loss factors by creating estimated ranges using historical experience of both loss given default and probability of default. Factors related to concentrated and deteriorating industries also are incorporated where relevant. These estimates are based upon management's view of uncertainties that relate to current macroeconomic and political conditions, quality of underwriting standards and other relevant internal and external factors affecting the credit quality of the current portfolio.

As noted on page 77 of this Annual Report, the Firm's wholesale allowance is sensitive to the risk rating assigned to a loan. Assuming a one-notch downgrade in the Firm's internal risk ratings for its entire Wholesale portfolio, the Allowance for loan losses for the Wholesale portfolio would increase by approximately $1.5 billion as of December 31, 2007. This sensitivity analysis is hypothetical. In the Firm's view, the likelihood of a one-notch downgrade for all wholesale loans within a short timeframe is remote. The purpose of this analysis is to provide an indication of the impact of risk ratings on the estimate of the Allowance for loan losses for wholesale loans. It is not intended to imply management's expectation of future deterioration in risk ratings. Given the process the Firm follows in determining the risk ratings of its loans, management believes the risk ratings currently assigned to wholesale loans are appropriate.

Consumer loans

For consumer loans, the Allowance for loan losses is calculated for individual pools of loans with similar risk characteristics utilizing a methodology that is intended to estimate losses that have occurred, but are not yet apparent in the loan portfolios. Significant management judgment is involved in determining the allowance for loan losses. The allowance is sensitive to changes in the economic environment, delinquency status, credit bureau scores, the realizable value of collateral, borrower behavior and other risk factors. Significant differences in management's expectations for these factors could have a significant impact on the estimation of the allowance for loan losses.

The allowance is determined by applying statistical loss factors and other risk indicators to pools of loans by asset type to arrive at an estimate of incurred losses in the portfolio. Management applies judgment to the statistical loss estimates for each loan portfolio category using delinquency trends and other risk characteristics to estimate charge-offs. Management utilizes additional statistical methods and considers portfolio and collateral valuation trends to review the appropriateness of the primary statistical loss estimate.

The statistical calculation is adjusted to take into consideration model imprecision, external factors and current economic events that have occurred but are not yet reflected in the factors used to derive the statistical calculation, and is accomplished in part by analyzing the historical loss experience for each major product segment. Management applies its judgment within estimated ranges in determining this adjustment. The estimated ranges and the determination of the appropriate point within the range are based upon management's judgment related to uncertainties associated with current macroeconomic and political conditions, quality of underwriting standards, and other relevant internal and external factors affecting the credit quality of the portfolio.

Fair value of financial instruments, MSRs and commodities inventory

A portion of JPMorgan Chase's assets and liabilities are carried at fair value, including trading assets and liabilities, AFS securities, certain loans, MSRs, private equity investments, structured notes and certain repurchase and resale agreements. Held-for-sale loans and physical commodities are carried at the lower of cost or fair value. At December 31, 2007, approximately $635.5 billion of the Firm's assets were recorded at fair value.

Fair value is based upon quoted market prices, where available. If listed prices or quotes are not available, fair value is based upon internally developed models that primarily use as inputs market-based or independently sourced market parameters. The Firm ensures that all applicable inputs are appropriately calibrated to market data, including but not limited to yield curves, interest rates, volatilities, equity or debt prices, foreign exchange rates and credit curves. In addition to market information, models also incorporate transaction details, such as maturity. Fair value adjustments, including credit (counterparties' and the Firm's), liquidity, and input parameter uncertainty are included, as appropriate, to the model value to arrive at a fair value measurement. For further information, see Note 4 and Note 5 on pages 111–118 and 119–121, respectively, of this Annual Report.

On January 1, 2007, the Firm adopted SFAS 157, which established a three-level valuation hierarchy for disclosure of fair value measurements. An instrument's categorization within the hierarchy is based upon the lowest level of input that is significant to the fair value measurement. Therefore, for instruments classified in level 1 and 2 of the hierarchy where inputs are principally based on observable market data, there is less judgment applied in arriving at a fair value measurement. For instruments classified within level 3 of the hierarchy, judgments are more significant. In arriving at an estimate of fair value for an instrument within level 3 management must first determine the appropriate model to use. Second, due to the lack of observability of significant inputs, management must assess all relevant empirical data in deriving valuation inputs. Finally, management judgment must be applied to assess the appropriate level of valuation adjustments, where relevant. The judgments made are typically affected by the type of product and its specific contractual terms and the level of liquidity for the product or within the market as a whole.

The following table summarizes the Firm's assets accounted for at fair value on a recurring basis by level within the valuation hierarchy at December 31, 2007.

December 31, 2007	Debt and equity securities	Derivative receivables[a]	AFS securities	Mortgage servicing rights	Private equity	Other[b]	Total[a]
Level 1	49%	2%	84%	—%	1%	25%	21%
Level 2	45	96	16	—	5	48	74
Level 3	6	2	—	100	94	27	5
Total	100%	100%	100%	100%	100%	100%	100%
Total assets held at fair value on the balance sheet (in billions)	$ 414.3	$ 77.1	$ 85.4	$ 8.6	$ 7.2	$ 42.9	$ 635.5
Level 3 assets as a percentage of total Firm assets[c]							5%

(a) Based upon gross mark-to-market valuation of the Firm's derivatives portfolio prior to netting positions pursuant to FIN 39, as cross-product netting is not relevant to an analysis based upon valuation methodologies.
(b) Includes securities purchased under resale agreements, Loans (excluding loans classified within Trading assets – Debt and equity instruments), and certain retained interests in securitizations. For further information, see Note 4 on pages 111–118 of this Annual Report.
(c) Includes level 3 assets accounted for at fair value on a recurring basis and at the lower of cost or fair value.

Instruments for which unobservable inputs are significant to their fair value measurement include certain loans (including purchased non-performing loans, leveraged loans and unfunded commitments, and subprime loans); certain residual or retained interests in securitizations and less liquid securities including certain MBS assets; certain complex and structured derivative transactions, MSRs, and nonpublic private equity.

The Firm reviews and updates the fair value hierarchy classifications on a quarterly basis. Changes from one quarter to the next related to the observability of inputs to a fair value measurement may result in a reclassification between hierarchy levels.

Level 3 assets (including assets measured at the lower of cost or fair value) were 5% of total Firm assets at December 31, 2007. These assets increased during 2007 principally during the second half of the year, when liquidity in mortgages and other credit products fell

dramatically. The increase was primarily due to an increase in leveraged loan balances within level 3 as the ability of the Firm to syndicate this risk to third parties became limited by the credit environment. In addition, there were transfers from level 2 to level 3 during 2007. These transfers were principally for instruments within the mortgage market where inputs which are significant to their valuation became unobservable during the year. Subprime and Alt-A whole loans, subprime home equity securities, commercial mortgage-backed mezzanine loans and credit default swaps referenced to asset-backed securities constituted the majority of the affected instruments, reflecting a significant decline in liquidity in these instruments in the third and fourth quarters of 2007, as new issue activity was nonexistent and independent pricing information was no longer available for these assets.

To ensure that fair valuations are appropriate, the Firm has numerous controls in place to ensure that its fair valuations are appropriate. An independent model review group reviews the Firm's valuation models and approves them for use for specific products. All valuation models within the Firm are subject to this review process. A price verification group, independent from the risk taking functions, ensures observable market prices and market-based parameters are used for valuation wherever possible. For those products with material parameter risk for which observable market levels do not exist, an independent review of the assumptions made on pricing is performed. Additional review includes deconstruction of the model valuations for certain structured instruments into their components, and benchmarking valuations, where possible, to similar products; validating valuation estimates through actual cash settlement; and detailed review and explanation of recorded gains and losses, which are analyzed daily and over time. Valuation adjustments, which are also determined by the independent price verification group, are based upon established policies and are applied consistently over time. Any changes to the valuation methodology are reviewed by management to confirm the changes are justified. As markets and products develop and the pricing for certain products becomes more or less transparent, the Firm continues to refine its valuation methodologies.

Imprecision in estimating unobservable market inputs can impact the amount of revenue or loss recorded for a particular position. Furthermore, while the Firm believes its valuation methods are appropriate and consistent with other market participants, the use of different methodologies or assumptions to determine the fair value of certain financial instruments could result in a different estimate of fair value at the reporting date. For a detailed discussion of the determination of fair value for individual financial instruments, see Note 4 on pages 111–118 of this Annual Report.

Goodwill impairment

Under SFAS 142, goodwill must be allocated to reporting units and tested for impairment. The Firm tests goodwill for impairment at least annually, and more frequently if events or circumstances, such as adverse changes in the business climate, indicate that there may be justification for conducting an interim test. Impairment testing is performed at the reporting-unit level (which is generally one level below the six major business segments identified in Note 34 on pages 175–177 of this Annual Report, plus Private Equity which is included in Corporate). The first part of the test is a comparison, at the reporting unit level, of the fair value of each reporting unit to its carrying amount, including goodwill. If the fair value is less than the carrying value, then the second part of the test is needed to measure the amount of potential goodwill impairment. The implied fair value of the reporting unit goodwill is calculated and compared with the carrying amount of goodwill recorded in the Firm's financial records. If the carrying value of reporting unit goodwill exceeds the implied fair value of that goodwill, then the Firm would recognize an impairment loss in the amount of the difference, which would be recorded as a charge against Net income.

The fair values of the reporting units are determined using discounted cash flow models based upon each reporting unit's internal forecasts. Management applies significant judgment when determining the fair value of its reporting units. Imprecision in estimating the future earnings potential of the Firm's reporting units can impact their estimated fair values. To assess the reasonableness of the valuations derived from the discounted cash flow models, the Firm also analyzes market-based trading and transaction multiples, where available. These trading and transaction comparables are used to assess the reasonableness of the estimated fair values, as observable market information is generally not available.

Income taxes

JPMorgan Chase is subject to the income tax laws of the various jurisdictions in which it operates, including U.S. federal, state and non-U.S. jurisdictions. These laws are often complex and may be subject to different interpretations. To determine the financial statement impact of its accounting for income taxes, including the provision for income tax expense and its unrecognized tax benefits, JPMorgan Chase must make assumptions and judgments about how to interpret and apply these complex tax laws to numerous transactions and business events.

Disputes over interpretations with the various taxing authorities may be settled upon audit or administrative appeals. In some cases, the Firm's interpretations of tax laws may be subject to adjudication by the court systems of the tax jurisdictions in which it operates. The Firm's consolidated federal income tax returns are presently under examination by the Internal Revenue Service ("IRS") for the years 2003, 2004 and 2005. The consolidated federal income tax returns of heritage Bank One Corporation, which merged with and into JPMorgan Chase on July 1, 2004, are under examination for the years 2000 through 2003, and for the period January 1, 2004, through July 1, 2004. Both examinations are expected to conclude in the latter part of 2008. The IRS audit of the 2006 consolidated federal income tax return has not yet commenced. Certain administrative appeals are pending with the IRS relating to prior examination periods, for JPMorgan Chase for the years 2001 and 2002, and for Bank One and its predecessor entities for various periods from 1996 through 1999. For years prior to 2001, refund claims relating to income and credit adjustments, and to tax attribute carrybacks, for JPMorgan Chase and its predecessor entities, including Bank One, either have been or will be filed. Also, interest rate swap valuations by a Bank One predecessor entity for the years 1990 through 1993 are, and have been the subject of litigation in both the Tax Court and the U.S. Court of Appeals.

The Firm adjusts its unrecognized tax benefits as necessary when additional information becomes available. The reassessment of JPMorgan Chase's unrecognized tax benefits may have a material impact on its effective tax rate in the period in which it occurs.

Accounting for uncertainty in income taxes
In June 2006, the FASB issued FIN 48, which clarifies the accounting for uncertainty regarding income taxes recognized under SFAS 109. FIN 48 addresses the recognition and measurement of tax positions taken or expected to be taken, and also provides guidance on derecognition, classification, interest and penalties, accounting in interim periods and disclosure. The Firm adopted and applied FIN 48 under the transition provisions to all of its income tax positions at the required effective date of January 1, 2007, resulting in a $436 million cumulative effect increase to Retained earnings, a reduction in Goodwill of $113 million and a $549 million decrease in the liability for income taxes. For additional information related to the Firm's adoption of FIN 48, see Note 26 on page 164 of this Annual Report.

Changes in timing of cash flows related to income taxes generated by a leveraged lease
In July 2006, the FASB issued FSP FAS 13-2. FSP FAS 13-2 requires the recalculation of returns on leveraged leases if there is a change or projected change in the timing of cash flows relating to income taxes generated by a leveraged lease. The Firm adopted FSP FAS 13-2 at the required effective date of January 1, 2007. Implementation of FSP FAS 13-2 did not have a significant impact on the Firm's Consolidated balance sheet and results of operations.

Fair value measurements – adoption of SFAS 157
In September 2006, the FASB issued SFAS 157, which is effective for fiscal years beginning after November 15, 2007, with early adoption permitted. SFAS 157 defines fair value, establishes a framework for measuring fair value, and expands disclosures about assets and liabilities measured at fair value. JPMorgan Chase chose early adoption for SFAS 157 effective January 1, 2007 and recorded a cumulative effect increase to Retained earnings of $287 million, primarily related to the release of profit previously deferred in accordance with EITF 02-3. The adoption of SFAS 157 primarily affected IB and the Private Equity business within Corporate. For additional information related to the Firm's adoption of SFAS 157, see Note 4 on pages 111–118 of this Annual Report.

Fair value option for financial assets and financial liabilities – adoption of SFAS 159
In February 2007, the FASB issued SFAS 159, which is effective for fiscal years beginning after November 15, 2007, with early adoption permitted. SFAS 159 provides the option to elect fair value as an alternative measurement for selected financial assets, financial liabilities, unrecognized firm commitments and written loan commitments. JPMorgan Chase chose early adoption for SFAS 159 effective January 1, 2007, and as a result, it recorded a cumulative effect increase to Retained earnings of $199 million. For additional information related to the Firm's adoption of SFAS 159, see Note 5 on page 119–121 of this Annual Report.

Derivatives netting – amendment of FASB Interpretation No. 39
In April 2007, the FASB issued FSP FIN 39-1, which permits offsetting of cash collateral receivables or payables with net derivative positions under certain circumstances. The Firm adopted FSP FIN 39-1 effective January 1, 2008. The FSP did not have a material impact on the Firm's Consolidated balance sheet.

Investment companies
In June 2007, the AICPA issued SOP 07-1. SOP 07-1 provides guidance for determining whether an entity is within the scope of the AICPA Audit and Accounting Guide *Investment Companies* (the "Guide"), and therefore qualifies to use the Guide's specialized accounting principles (referred to as "investment company accounting"). Additionally, SOP 07-1 provides guidelines for determining whether investment company accounting should be retained by a parent company in consolidation or by an equity method investor in an investment. In May 2007, the FASB issued FSP FIN 46(R)-7, which amends FIN 46R to permanently exempt entities within the scope of the Guide from applying the provisions of FIN 46R to their investments. In February 2008, the FASB agreed to an indefinite delay of the effective date of SOP 07-1 in order to address implementation issues, which effectively delays FSP FIN 46(R)-7 as well for those companies, such as the Firm, that have not adopted SOP 07-1.

Accounting for income tax benefits of dividends on share-based payment awards
In June 2007, the FASB ratified EITF 06-11, which must be applied prospectively for dividends declared in fiscal years beginning after December 15, 2007. EITF 06-11 requires that realized tax benefits from dividends or dividend equivalents paid on equity-classified share-based payment awards that are charged to retained earnings should be recorded as an increase to additional paid-in capital and included in the pool of excess tax benefits available to absorb tax deficiencies on share-based payment awards. Prior to the issuance of EITF 06-11, the Firm did not include these tax benefits as part of this pool of excess tax benefits. The Firm adopted EITF 06-11 on January 1, 2008. The adoption of this consensus did not have an impact on the Firm's Consolidated balance sheet or results of operations.

Fair value measurements – written loan commitments
On November 5, 2007, the Securities and Exchange Commission ("SEC") issued SAB 109, which revises and rescinds portions of SAB 105, "Application of Accounting Principles to Loan Commitments." Specifically, SAB 109 states that the expected net future cash flows related to the associated servicing of the loan should be included in the measurement of all written loan commitments that are accounted for at fair value through earnings. The provisions of SAB 109 are applicable to written loan commitments issued or modified beginning on January 1, 2008. JPMorgan Chase does not expect the impact of adopting SAB 109 to be material.

Business combinations / Noncontrolling interests in consolidated financial statements
On December 4, 2007, the FASB issued SFAS 141R and SFAS 160, which amend the accounting and reporting of business combinations, as well as noncontrolling (i.e., minority) interests. JPMorgan Chase is currently evaluating the impact that SFAS 141R and SFAS 160 will have on its consolidated financial statements. For JPMorgan Chase, SFAS 141R is effective for business combinations that close on or after January 1, 2009. SFAS 160 is effective for JPMorgan Chase for fiscal years beginning on or after December 15, 2008.

NONEXCHANGE-TRADED COMMODITY DERIVATIVE CONTRACTS AT FAIR VALUE

In the normal course of business, JPMorgan Chase trades nonexchange-traded commodity derivative contracts. To determine the fair value of these contracts, the Firm uses various fair value estimation techniques, which are primarily based upon internal models with significant observable market parameters. The Firm's nonexchange-traded commodity derivative contracts are primarily energy-related.

The following table summarizes the changes in fair value for nonexchange-traded commodity derivative contracts for the year ended December 31, 2007.

For the year ended December 31, 2007 (in millions)	Asset position	Liability position
Net fair value of contracts outstanding at January 1, 2007	$ 5,830	$ 3,906
Effect of legally enforceable master netting agreements	19,671	19,980
Gross fair value of contracts outstanding at January 1, 2007	25,501	23,886
Contracts realized or otherwise settled	(13,716)	(13,227)
Fair value of new contracts	18,699	16,962
Changes in fair values attributable to changes in valuation techniques and assumptions	—	—
Other changes in fair value	3,714	4,145
Gross fair value of contracts outstanding at December 31, 2007	34,198	31,766
Effect of legally enforceable master netting agreements	(26,108)	(25,957)
Net fair value of contracts outstanding at December 31, 2007	$ 8,090	$ 5,809

The following table indicates the schedule of maturities of nonexchange-traded commodity derivative contracts at December 31, 2007.

December 31, 2007 (in millions)	Asset position	Liability position
Maturity less than 1 year	$ 11,958	$ 10,662
Maturity 1–3 years	15,057	12,370
Maturity 4–5 years	5,484	3,804
Maturity in excess of 5 years	1,699	4,930
Gross fair value of contracts outstanding at December 31, 2007	34,198	31,766
Effects of legally enforceable master netting agreements	(26,108)	(25,957)
Net fair value of contracts outstanding at December 31, 2007	$ 8,090	$ 5,809

FORWARD-LOOKING STATEMENTS

From time to time, the Firm has made and will make forward-looking statements. These statements can be identified by the fact that they do not relate strictly to historical or current facts. Forward-looking statements often use words such as "anticipate," "target," "expect," "estimate," "intend," "plan," "goal," "believe," or other words of similar meaning. Forward-looking statements provide JPMorgan Chase's current expectations or forecasts of future events, circumstances, results or aspirations. JPMorgan Chase's disclosures in this report contain forward-looking statements within the meaning of the Private Securities Litigation Reform Act of 1995. The Firm also may make forward-looking statements in its other documents filed or furnished with the SEC. In addition, the Firm's senior management may make forward-looking statements orally to analysts, investors, representatives of the media and others.

All forward-looking statements are, by their nature, subject to risks and uncertainties, many of which are beyond the Firm's control. JPMorgan Chase's actual future results may differ materially from those set forth in its forward-looking statements. While there is no assurance that any list of risks and uncertainties or risk factors is complete, below are certain factors which could cause actual results to differ from those in the forward-looking statements.

- local, regional and international business, economic and political conditions and geopolitical events;
- changes in trade, monetary and fiscal policies and laws;
- securities and capital markets behavior, including changes in market liquidity and volatility;
- changes in investor sentiment or consumer spending or saving behavior;
- ability of the Firm to manage effectively its liquidity;
- credit ratings assigned to the Firm or its subsidiaries;
- the Firm's reputation;
- ability of the Firm to deal effectively with an economic slowdown or other economic or market difficulty;
- technology changes instituted by the Firm, its counterparties or competitors;
- mergers and acquisitions, including the Firm's ability to integrate acquisitions;
- ability of the Firm to develop new products and services;
- acceptance of the Firm's new and existing products and services by the marketplace and the ability of the Firm to increase market share;
- ability of the Firm to attract and retain employees;
- ability of the Firm to control expense;
- competitive pressures;
- changes in the credit quality of the Firm's customers;
- adequacy of the Firm's risk management framework;
- changes in laws and regulatory requirements or adverse judicial proceedings;
- changes in applicable accounting policies;
- ability of the Firm to determine accurate values of certain assets and liabilities;
- occurrence of natural or man-made disasters or calamities or conflicts;
- the other risks and uncertainties detailed in Part 1, Item 1A: Risk Factors in the Firm's Annual Report on Form 10-K for the year ended December 31, 2007.

Any forward-looking statements made by or on behalf of the Firm speak only as of the date they are made and JPMorgan Chase does not undertake to update forward-looking statements to reflect the impact of circumstances or events that arise after the date the forward-looking statement was made. The reader should, however, consult any further disclosures of a forward-looking nature the Firm may make in any subsequent Annual Reports on Form 10-K, Quarterly Reports on Form 10-Q, or Current Reports on Form 8-K.

MANAGEMENT'S REPORT ON INTERNAL CONTROL OVER FINANCIAL REPORTING

JPMorgan Chase & Co.

Management of JPMorgan Chase & Co. is responsible for establishing and maintaining adequate internal control over financial reporting. Internal control over financial reporting is a process designed by, or under the supervision of, the Firm's principal executive and principal financial officers, or persons performing similar functions, and effected by JPMorgan Chase's Board of Directors, management and other personnel, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with accounting principles generally accepted in the United States of America.

JPMorgan Chase's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records, that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the Firm's assets; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the Firm are being made only in accordance with authorizations of JPMorgan Chase's management and directors; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use or disposition of the Firm's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

Management has completed an assessment of the effectiveness of the Firm's internal control over financial reporting as of December 31, 2007. In making the assessment, management used the framework in "Internal Control – Integrated Framework" promulgated by the Committee of Sponsoring Organizations of the Treadway Commission, commonly referred to as the "COSO" criteria.

Based upon the assessment performed, management concluded that as of December 31, 2007, JPMorgan Chase's internal control over financial reporting was effective based upon the COSO criteria. Additionally, based upon management's assessment, the Firm determined that there were no material weaknesses in its internal control over financial reporting as of December 31, 2007.

The effectiveness of the Firm's internal control over financial reporting as of December 31, 2007, has been audited by PricewaterhouseCoopers LLP, an independent registered public accounting firm, as stated in their report which appears herein.

PRICEWATERHOUSECOOPERS
PRICEWATERHOUSECOOPERS LLP • 300 MADISON AVENUE • NEW YORK, NY 10017

Report of Independent Registered Public Accounting Firm
To the Board of Directors and Stockholders of
JPMorgan Chase & Co.:

In our opinion, the accompanying consolidated balance sheets and the related consolidated statements of income, changes in stockholders' equity and comprehensive income and cash flows present fairly, in all material respects, the financial position of JPMorgan Chase & Co. and its subsidiaries (the "Firm") at December 31, 2007 and 2006, and the results of their operations and their cash flows for each of the three years in the period ended December 31, 2007 in conformity with accounting principles generally accepted in the United States of America. Also in our opinion, the Firm maintained, in all material respects, effective internal control over financial reporting as of December 31, 2007, based on criteria established in Internal Control – Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). The Firm's management is responsible for these financial statements, for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting, included in the accompanying "Management's report on internal control over financial reporting." Our responsibility is to express opinions on these financial statements and on the Firm's internal control over financial reporting based on our integrated audits. We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audits to obtain reasonable assurance about whether the financial statements are free of material misstatement and whether effective internal control over financial reporting was maintained in all material respects. Our audits of the financial statements included examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, and evaluating the overall financial statement presentation. Our audit of internal control over financial reporting included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. Our audits also included performing such other procedures as we considered necessary in the circumstances. We believe that our audits provide a reasonable basis for our opinions.

As discussed in Note 4, Note 5, and Note 26 to the consolidated financial statements, effective January 1, 2007 the Firm adopted Statement of Financial Accounting Standards No. 157, "Fair Value Measurement," Statement of Financial Accounting Standards No. 159, "Fair Value Option for Financial Assets and Financial Liabilities," and FASB Interpretation No. 48, "Accounting for Uncertainty in Income Taxes."

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (i) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (ii) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (iii) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

Note: In 2006, the Firm exchanged selected corporate trust businesses for The Bank of New York's consumer, business banking and middle-market banking businesses. The fair values of the noncash assets exchanged was $2.15 billion.

The Notes to consolidated financial statements are an integral part of these statements.

Note 1 – Basis of presentation

JPMorgan Chase & Co. ("JPMorgan Chase" or the "Firm"), a financial holding company incorporated under Delaware law in 1968, is a leading global financial services firm and one of the largest banking institutions in the United States of America ("U.S."), with operations worldwide. The Firm is a leader in investment banking, financial services for consumers and businesses, financial transaction processing and asset management. For a discussion of the Firm's business segment information, see Note 34 on pages 175–177 of this Annual Report.

The accounting and financial reporting policies of JPMorgan Chase and its subsidiaries conform to accounting principles generally accepted in the United States of America ("U.S. GAAP"). Additionally, where applicable, the policies conform to the accounting and reporting guidelines prescribed by bank regulatory authorities.

Certain amounts in the prior periods have been reclassified to conform to the current presentation.

Consolidation

The consolidated financial statements include the accounts of JPMorgan Chase and other entities in which the Firm has a controlling financial interest. All material intercompany balances and transactions have been eliminated.

The most usual condition for a controlling financial interest is the ownership of a majority of the voting interests of the entity. However, a controlling financial interest also may be deemed to exist with respect to entities, such as special purpose entities ("SPEs"), through arrangements that do not involve controlling voting interests.

SPEs are an important part of the financial markets, providing market liquidity by facilitating investors' access to specific portfolios of assets and risks. For example, they are critical to the functioning of the mortgage- and asset-backed securities and commercial paper markets. SPEs may be organized as trusts, partnerships or corporations and are typically established for a single, discrete purpose. SPEs are not typically operating entities and usually have a limited life and no employees. The basic SPE structure involves a company selling assets to the SPE. The SPE funds the purchase of those assets by issuing securities to investors. The legal documents that govern the transaction describe how the cash earned on the assets must be allocated to the SPE's investors and other parties that have rights to those cash flows. SPEs are generally structured to insulate investors from claims on the SPE's assets by creditors of other entities, including the creditors of the seller of the assets.

There are two different accounting frameworks applicable to SPEs: the qualifying SPE ("QSPE") framework under SFAS 140 and the variable interest entity ("VIE") framework under FIN 46R. The applicable framework depends on the nature of the entity and the Firm's relation to that entity. The QSPE framework is applicable when an entity transfers (sells) financial assets to an SPE meeting certain criteria defined in SFAS 140. These criteria are designed to ensure that the activities of the entity are essentially predetermined at the inception of the vehicle and that the transferor of the financial assets cannot exercise control over the entity and the assets therein. Entities meeting these criteria are not consolidated by the transferor or other counterparties as long as they do not have the unilateral ability to liquidate or to cause the entity to no longer meet the QSPE criteria. The Firm primarily follows the QSPE model for securitizations of its residential and commercial mortgages, and credit card, automobile and education loans. For further details, see Note 16 on pages 139–145 of this Annual Report.

When an SPE does not meet the QSPE criteria, consolidation is assessed pursuant to FIN 46R. Under FIN 46R, a VIE is defined as an entity that: (1) lacks enough equity investment at risk to permit the entity to finance its activities without additional subordinated financial support from other parties; (2) has equity owners that lack the right to make significant decisions affecting the entity's operations; and/or (3) has equity owners that do not have an obligation to absorb the entity's losses or the right to receive the entity's returns.

FIN 46R requires a variable interest holder (i.e., a counterparty to a VIE) to consolidate the VIE if that party will absorb a majority of the expected losses of the VIE, receive the majority of the expected residual returns of the VIE, or both. This party is considered the primary beneficiary. In making this determination, the Firm thoroughly evaluates the VIE's design, capital structure and relationships among the variable interest holders. When the primary beneficiary cannot be identified through a qualitative analysis, the Firm performs a quantitative analysis, which computes and allocates expected losses or residual returns to variable interest holders. The allocation of expected cash flows in this analysis is based upon the relative rights and preferences of each variable interest holder in the VIE's capital structure. The Firm reconsiders whether it is the primary beneficiary of a VIE when certain events occur as required by FIN 46R. For further details, see Note 17 on pages 146–154 of this Annual Report.

All retained interests and significant transactions between the Firm, QSPEs and nonconsolidated VIEs are reflected on JPMorgan Chase's Consolidated balance sheets and in the Notes to consolidated financial statements.

Investments in companies that are considered to be voting-interest entities under FIN 46R in which the Firm has significant influence over operating and financing decisions are either accounted for in accordance with the equity method of accounting or at fair value if elected under SFAS 159 ("Fair Value Option"). These investments are generally included in Other assets with income or loss included in Other income.

For a discussion of the accounting for Private equity investments, see Note 6 on page 122 of this Annual Report.

Assets held for clients in an agency or fiduciary capacity by the Firm are not assets of JPMorgan Chase and are not included in the Consolidated balance sheets.

Use of estimates in the preparation of consolidated financial statements

The preparation of consolidated financial statements requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities, of revenue and expense, and of disclosures of contingent assets and liabilities. Actual results could be different from these estimates. For discussion of Critical accounting estimates used by the Firm, see pages 96–98 of this Annual Report.

Foreign currency translation

JPMorgan Chase revalues assets, liabilities, revenue and expense denominated in foreign (i.e., non-U.S.) currencies into U.S. dollars using applicable exchange rates.

Gains and losses relating to translating functional currency financial statements for U.S. reporting are included in Other comprehensive income (loss) within Stockholders' equity. Gains and losses relating to nonfunctional currency transactions, including non-U.S. operations where the functional currency is the U.S. dollar, are reported in the Consolidated statements of income.

Statements of cash flows

For JPMorgan Chase's Consolidated statements of cash flows, cash is defined as those amounts included in Cash and due from banks.

Significant accounting policies

The following table identifies JPMorgan Chase's other significant accounting policies and the Note and page where a detailed description of each policy can be found.

Note 2 – Business changes and developments

Purchase of additional interest in Highbridge Capital Management

In January 2008, JPMorgan Chase acquired an additional equity interest in Highbridge Capital Management, LLC ("Highbridge"), a manager of hedge funds with $27 billion of assets under management. As a result, the Firm owns 77.5% of Highbridge as of January 2008. The Firm had acquired a majority interest in Highbridge in 2004.

Acquisition of the consumer, business banking and middle-market banking businesses of The Bank of New York in exchange for selected corporate trust businesses, including trustee, paying agent, loan agency and document management services

On October 1, 2006, JPMorgan Chase completed the acquisition of The Bank of New York Company, Inc.'s ("The Bank of New York") consumer, business banking and middle-market banking businesses in exchange for selected corporate trust businesses plus a cash payment of $150 million. The Firm also may make a future payment to The Bank of New York of up to $50 million depending on certain new account openings. The acquisition added 339 branches and more than 400 ATMs, and it significantly strengthened Retail Financial Services' distribution network in the New York tri-state area. The Bank of New York businesses acquired were valued at a premium of $2.3 billion; the Firm's corporate trust businesses that were transferred (i.e., trustee, paying agent, loan agency and document management services) were valued at a premium of $2.2 billion. This transaction included the acquisition of approximately $7.7 billion in loans net of Allowance for loan losses and $12.9 billion in deposits from The Bank of New York. The Firm also recognized core deposit intangibles of $485 million which will be amortized using an accelerated method over a 10-year period. JPMorgan Chase recorded an after-tax gain of $622 million related to this transaction in the fourth quarter of 2006. For additional discussion related to the transaction, see Note 3 on page 110 of this Annual Report.

JPMorgan Partners management

On August 1, 2006, the buyout and growth equity professionals of JPMorgan Partners ("JPMP") formed an independent firm, CCMP Capital, LLC ("CCMP"), and the venture professionals separately formed an independent firm, Panorama Capital, LLC ("Panorama"). The investment professionals of CCMP and Panorama continue to manage the former JPMP investments pursuant to a management agreement with the Firm.

Sale of insurance underwriting business

On July 1, 2006, JPMorgan Chase completed the sale of its life insurance and annuity underwriting businesses to Protective Life Corporation for cash proceeds of approximately $1.2 billion, consisting of $900 million of cash received from Protective Life Corporation and approximately $300 million of preclosing dividends received from the entities sold. The after-tax impact of this transaction was negligible. The sale included both the heritage Chase insurance business and the insurance business that Bank One had bought from Zurich Insurance in 2003.

Acquisition of private-label credit card portfolio from Kohl's Corporation

On April 21, 2006, JPMorgan Chase completed the acquisition of $1.6 billion of private-label credit card receivables and approximately 21 million accounts from Kohl's Corporation ("Kohl's"). JPMorgan Chase and Kohl's have also entered into an agreement under which JPMorgan Chase will offer private-label credit cards to both new and existing Kohl's customers.

Collegiate Funding Services

On March 1, 2006, JPMorgan Chase acquired, for approximately $663 million, Collegiate Funding Services, a leader in education loan servicing and consolidation. This acquisition included $6 billion of education loans and will enable the Firm to create a comprehensive education finance business.

BrownCo

On November 30, 2005, JPMorgan Chase sold BrownCo, an on-line deep-discount brokerage business, to E*TRADE Financial for a cash purchase price of $1.6 billion. JPMorgan Chase recognized an after-tax gain of $752 million on the sale. BrownCo's results of operations were reported in the Asset Management business segment; however, the gain on the sale, which was recorded in Other income in the Consolidated statements of income, was reported in the Corporate business segment.

Sears Canada credit card business

On November 15, 2005, JPMorgan Chase purchased Sears Canada Inc.'s credit card operation, including both private-label card accounts and co-branded Sears MasterCard® accounts, aggregating approximately 10 million accounts with $2.2 billion (CAD$2.5 billion) in managed loans. Sears Canada and JPMorgan Chase entered into an ongoing arrangement under which JPMorgan Chase will offer private-label and co-branded credit cards to both new and existing customers of Sears Canada.

Chase Merchant Services, Paymentech integration

On October 5, 2005, JPMorgan Chase and First Data Corp. completed the integration of the companies' jointly owned Chase Merchant Services and Paymentech merchant businesses, to be operated under the name Chase Paymentech Solutions, LLC. The joint venture is a financial transaction processor for businesses accepting credit card payments via traditional point of sale, Internet, catalog and recurring billing. As a result of the integration into a joint venture, Paymentech has been deconsolidated and JPMorgan Chase's ownership interest in this joint venture is accounted for in accordance with the equity method of accounting.

Cazenove

On February 28, 2005, JPMorgan Chase and Cazenove Group plc ("Cazenove") formed a business partnership which combined Cazenove's investment banking business and JPMorgan Chase's U.K.-based investment banking business in order to provide investment banking services in the United Kingdom and Ireland. The new company is called JPMorgan Cazenove Holdings.

Note 3 – Discontinued operations

On October 1, 2006, JPMorgan Chase completed the acquisition of The Bank of New York's consumer, small-business and middle-market banking businesses in exchange for selected corporate trust businesses plus a cash payment of $150 million. The Firm may also make a future payment to The Bank of New York of up to $50 million depending on certain new account openings.

The transfer of selected corporate trust businesses to The Bank of New York (see Note 2 above) included the trustee, paying agent, loan agency and document management services businesses. JPMorgan Chase recognized an after-tax gain of $622 million on this transaction. The results of operations of these corporate trust businesses were transferred from the Treasury & Securities Services ("TSS") segment to the Corporate segment effective with the second quarter of 2006, and reported as discontinued operations. Condensed financial information of the selected corporate trust businesses follows.

Selected income statements data[a]

Year ended December 31, (in millions)	2006	2005
Other noninterest revenue	$ 407	$ 509
Net interest income	264	276
Gain on sale of discontinued operations	1,081	—
Total net revenue	1,752	785
Noninterest expense	385	409
Income from discontinued operations before income taxes	1,367	376
Income tax expense	572	147
Income from discontinued operations	$ 795	$ 229

(a) There was no income from discontinued operations during 2007.

The following is a summary of the assets and liabilities associated with the selected corporate trust businesses related to the Bank of New York transaction that closed on October 1, 2006.

Selected balance sheet data (in millions)

	October 1, 2006
Goodwill and other intangibles	$ 838
Other assets	547
Total assets	$ 1,385
Deposits	$ 24,011
Other liabilities	547
Total liabilities	$ 24,558

JPMorgan Chase provides certain transitional services to The Bank of New York for a defined period of time after the closing date. The Bank of New York compensates JPMorgan Chase for these transitional services.

Note 4 – Fair value measurement

In September 2006, the FASB issued SFAS 157 ("Fair Value Measurements"), which is effective for fiscal years beginning after November 15, 2007, with early adoption permitted. The Firm chose early adoption for SFAS 157 effective January 1, 2007. SFAS 157:

- Defines fair value as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date, and establishes a framework for measuring fair value;
- Establishes a three-level hierarchy for fair value measurements based upon the transparency of inputs to the valuation of an asset or liability as of the measurement date;
- Nullifies the guidance in EITF 02-3, which required the deferral of profit at inception of a transaction involving a derivative financial instrument in the absence of observable data supporting the valuation technique;
- Eliminates large position discounts for financial instruments quoted in active markets and requires consideration of the Firm's creditworthiness when valuing liabilities; and
- Expands disclosures about instruments measured at fair value.

The Firm also chose early adoption for SFAS 159 effective January 1, 2007. SFAS 159 provides an option to elect fair value as an alternative measurement for selected financial assets, financial liabilities, unrecognized firm commitments and written loan commitments not previously recorded at fair value. The Firm elected fair value accounting for certain assets and liabilities not previously carried at fair value. For more information, see Note 5 on pages 119–121 of this Annual Report.

Following is a description of the Firm's valuation methodologies for assets and liabilities measured at fair value. Such valuation methodologies were applied to all of the assets and liabilities carried at fair value effective January 1, 2007, whether as a result of the adoption of SFAS 159 or previously carried at fair value.

The Firm has an established and well-documented process for determining fair values. Fair value is based upon quoted market prices, where available. If listed prices or quotes are not available, fair value is based upon internally developed models that primarily use, as inputs, market-based or independently sourced market parameters, including but not limited to yield curves, interest rates, volatilities, equity or debt prices, foreign exchange rates and credit curves. In addition to market information, models also incorporate transaction details, such as maturity. Valuation adjustments may be made to ensure that financial instruments are recorded at fair value. These adjustments include amounts to reflect counterparty credit quality, the Firm's creditworthiness, constraints on liquidity and unobservable parameters that are applied consistently over time.

- Credit valuation adjustments ("CVA") are necessary when the market price (or parameter) is not indicative of the credit quality of the counterparty. As few classes of derivative contracts are listed on an exchange, the majority of derivative positions are valued using internally developed models that use as their basis observable market parameters. Market practice is to quote parameters equivalent to an "AA" credit rating; thus, all counterparties are assumed to have the same credit quality. Therefore, an adjustment is necessary to reflect the credit quality of each derivative counterparty to arrive at fair value.
- Debit valuation adjustments ("DVA") are necessary to reflect the credit quality of the Firm in the valuation of liabilities measured at fair value. This adjustment was incorporated into the Firm's valuations commencing January 1, 2007, in accordance with SFAS 157. The methodology to determine the adjustment is consistent with CVA and incorporates JPMorgan Chase's credit spread as observed through the credit default swap market.
- Liquidity valuation adjustments are necessary when the Firm may not be able to observe a recent market price for a financial instrument that trades in inactive (or less active) markets or to reflect the cost of exiting larger-than-normal market-size risk positions (liquidity adjustments are not taken for positions classified within level 1 of the fair value hierarchy). The Firm tries to ascertain the amount of uncertainty in the initial valuation based upon the degree of liquidity of the market in which the financial instrument trades and makes liquidity adjustments to the carrying value of the financial instrument. The Firm measures the liquidity adjustment based upon the following factors: (1) the amount of time since the last relevant pricing point; (2) whether there was an actual trade or relevant external quote; and (3) the volatility of the principal risk component of the financial instrument. Costs to exit larger-than-normal market-size risk positions are determined based upon the size of the adverse market move that is likely to occur during the period required to bring a position down to a nonconcentrated level.
- Unobservable parameter valuation adjustments are necessary when positions are valued using internally developed models that use as their basis unobservable parameters – that is, parameters that must be estimated and are, therefore, subject to management judgment. These positions are normally traded less actively. Examples include certain credit products where parameters such as correlation and recovery rates are unobservable. Unobservable parameter valuation adjustments are applied to mitigate the possibility of error and revision in the estimate of the market price provided by the model.

The Firm has numerous controls in place intended to ensure that its fair valuations are appropriate. An independent model review group reviews the Firm's valuation models and approves them for use for specific products. All valuation models within the Firm are subject to this review process. A price verification group, independent from the risk taking function, ensures observable market prices and market-based parameters are used for valuation wherever possible. For those products with material parameter risk for which observable market levels do not exist, an independent review of the assumptions made

on pricing is performed. Additional review includes deconstruction of the model valuations for certain structured instruments into their components, and benchmarking valuations, where possible, to similar products; validating valuation estimates through actual cash settlement; and detailed review and explanation of recorded gains and losses, which are analyzed daily and over time. Valuation adjustments, which are also determined by the independent price verification group, are based upon established policies and are applied consistently over time. Any changes to the valuation methodology are reviewed by management to confirm the changes are justified. As markets and products develop and the pricing for certain products becomes more or less transparent, the Firm continues to refine its valuation methodologies.

The methods described above may produce a fair value calculation that may not be indicative of net realizable value or reflective of future fair values. Furthermore, while the Firm believes its valuation methods are appropriate and consistent with other market participants, the use of different methodologies or assumptions to determine the fair value of certain financial instruments could result in a different estimate of fair value at the reporting date.

Valuation Hierarchy

SFAS 157 establishes a three-level valuation hierarchy for disclosure of fair value measurements. The valuation hierarchy is based upon the transparency of inputs to the valuation of an asset or liability as of the measurement date. The three levels are defined as follows.

- Level 1 – inputs to the valuation methodology are quoted prices (unadjusted) for identical assets or liabilities in active markets.
- Level 2 – inputs to the valuation methodology include quoted prices for similar assets and liabilities in active markets, and inputs that are observable for the asset or liability, either directly or indirectly, for substantially the full term of the financial instrument.
- Level 3 – inputs to the valuation methodology are unobservable and significant to the fair value measurement.

A financial instrument's categorization within the valuation hierarchy is based upon the lowest level of input that is significant to the fair value measurement.

Following is a description of the valuation methodologies used for instruments measured at fair value, including the general classification of such instruments pursuant to the valuation hierarchy.

Assets

Securities purchased under resale agreements ("resale agreements")

To estimate the fair value of resale agreements, cash flows are evaluated taking into consideration any derivative features of the resale agreement and are then discounted using the appropriate market rates for the applicable maturity. As the inputs into the valuation are primarily based upon readily observable pricing information, such resale agreements are generally classified within level 2 of the valuation hierarchy.

Loans and unfunded lending-related commitments

The fair value of corporate loans and unfunded lending-related commitments is calculated using observable market information including pricing from actual market transactions or broker quotations where available. Where pricing information is not available for the specific loan, the valuation is generally based upon quoted market prices of similar instruments, such as loans and bonds. These comparable instruments share characteristics that typically include industry, rating, capital structure, seniority, and consideration of counterparty credit risk. In addition, general market conditions, including prevailing market spreads for credit and liquidity risk, are also considered in the valuation process.

For certain loans that are expected to be securitized, such as commercial and residential mortgages, fair value is estimated based upon observable pricing of asset-backed securities with similar collateral and incorporates adjustments (i.e., reductions) to these prices to account for securitization uncertainties including portfolio composition, market conditions and liquidity to arrive at the whole loan price. When data from recent market transactions is available it is incorporated as appropriate. If particular loans are determined to be impaired because of poor borrower performance and hence are not qualified for securitization, they are marked for individual sale with consideration of potential liquidation proceeds and property repossession/liquidation information, as appropriate.

The Firm's loans carried at fair value and reported in Trading assets are generally classified within level 2 of the valuation hierarchy, although subprime loans reside in level 3. Loans carried at fair value and reported within Loans are predominantly classified within level 3 due to the lack of observable pricing. These loans include leveraged lending funded loans, high-yield bridge financing and purchased nonperforming loans.

Securities

Where quoted prices are available in an active market, securities are classified in level 1 of the valuation hierarchy. Level 1 securities included highly liquid government bonds, mortgage products for which there are quoted prices in active markets and exchange-traded equities. If quoted market prices are not available for the specific security, then fair values are estimated by using pricing models, quoted prices of securities with similar characteristics or discounted cash flows. Examples of such instruments are collateralized mortgage obligations and high-yield debt securities which would generally be classified within level 2 of the valuation hierarchy. In certain cases where there is limited activity or less transparency around inputs to the valuation, securities are classified within level 3 of the valuation hierarchy. For instance, in the valuation of certain collateralized mortgage and debt obligations and high-yield debt securities the determination of fair value may require benchmarking to similar instruments or analyzing default and recovery rates. For cash collateralized debt obligations ("CDOs"), external price information is not available. Therefore, cash CDOs are valued using market-standard models, such as Intex, to model the specific collateral composition and cash flow structure of each deal; key inputs to the model are market spreads data for each credit rating, collateral type and other relevant contractual features. Asset-backed securities are valued based on external prices or spread data, using current

market assumptions on prepayments and defaults. For those asset-backed securities where the external price data is not observable or the limited available data is opaque, the collateral performance is monitored and the value of the security is reviewed versus the ABX index, an index of mortgage-backed securities backed by subprime mortgages.

Commodities

Commodities inventory is carried at the lower of cost or fair value. The fair value for commodities inventory is determined primarily using pricing and data derived from the markets on which the underlying commodities are traded. Market prices may be adjusted for liquidity. The Firm also has positions in commodity-based derivatives that can be traded on an exchange or over-the-counter. The pricing inputs to these derivatives include forward curves of underlying commodities, basis curves, volatilities, correlations, and occasionally other model parameters. The valuation of these derivatives is based upon calibrating to market transactions, as well as to independent pricing information from sources such as brokers and dealer consensus pricing services. Where inputs are unobservable, they are benchmarked to observable market data based upon historic and implied correlations, then adjusted for uncertainty where appropriate. The majority of commodities inventory and commodities-based derivatives are classified within level 2 of the valuation hierarchy.

Derivatives

Exchange-traded derivatives valued using quoted prices are classified within level 1 of the valuation hierarchy. However, few classes of derivative contracts are listed on an exchange; thus, the majority of the Firm's derivative positions are valued using internally developed models that use as their basis readily observable market parameters – that is, parameters that are actively quoted and can be validated to external sources, including industry pricing services. Depending on the types and contractual terms of derivatives, fair value can be modeled using a series of techniques, such as the Black-Scholes option pricing model, simulation models or a combination of various models, which are consistently applied. Where derivative products have been established for some time, the Firm uses models that are widely accepted in the financial services industry. These models reflect the contractual terms of the derivatives, including the period to maturity, and market-based parameters such as interest rates, volatility, and the credit quality of the counterparty. Further, many of these models do not contain a high level of subjectivity as the methodologies used in the models do not require significant judgment, and inputs to the model are readily observable from actively quoted markets, as is the case for "plain vanilla" interest rate swaps and option contracts and credit default swaps. Such instruments are generally classified within level 2 of the valuation hierarchy.

Derivatives that are valued based upon models with significant unobservable market parameters and that are normally traded less actively, have trade activity that is one way, and/or are traded in less-developed markets are classified within level 3 of the valuation hierarchy. Level 3 derivatives include credit default swaps referenced to mortgage-backed securities, where valuations are benchmarked to implied spreads from similar underlying loans in the cash market, as well as relevant observable market indices. In addition, the prepayment and loss assumptions on the underlying loans are priced using a combination of historical data, prices on market transactions, and other prepayment and default scenarios and analysis. Other complex products, such as those sensitive to correlation between two or more underlyings, also fall within level 3 of the hierarchy. For instance, the correlation sensitivity is material to the overall valuation of options on baskets of single name stocks; the valuation of these instruments are typically not observable due to the customized nature. Correlation for products such as these are typically estimated based on an observable basket of stocks, then adjusted to reflect the differences between the underlying equities.

Mortgage servicing rights and certain retained interests in securitizations

Mortgage servicing rights ("MSRs") and certain retained interests from securitization activities do not trade in an active, open market with readily observable prices. While sales of MSRs do occur, the precise terms and conditions typically are not readily available. Accordingly, the Firm estimates the fair value of MSRs and certain other retained interests in securitizations using discounted cash flow ("DCF") models.

- For MSRs, the Firm uses an option adjusted spread ("OAS") valuation model in conjunction with the Firm's proprietary prepayment model to project MSR cash flows over multiple interest rate scenarios, which are then discounted at risk-adjusted rates to estimate an expected fair value of the MSRs. The OAS model considers portfolio characteristics, contractually specified servicing fees, prepayment assumptions, delinquency rates, late charges, other ancillary revenue, costs to service and other economic factors. The Firm reassesses and periodically adjusts the underlying inputs and assumptions used in the OAS model to reflect market conditions and assumptions that a market participant would consider in valuing the MSR asset. Due to the nature of the valuation inputs, MSRs are classified within level 3 of the valuation hierarchy.
- For certain retained interests in securitizations (such as interest-only strips), a single interest rate path DCF model is used and generally includes assumptions based upon projected finance charges related to the securitized assets, estimated net credit losses, prepayment assumptions and contractual interest paid to third-party investors. Changes in the assumptions used may have a significant impact on the Firm's valuation of retained interests and such interests are therefore typically classified within level 3 of the valuation hierarchy.

For both MSRs and certain other retained interests in securitizations, the Firm compares its fair value estimates and assumptions to observable market data where available and to recent market activity and actual portfolio experience. For further discussion of the most significant assumptions used to value retained interests in securitizations and MSRs, as well as the applicable stress tests for those assumptions, see Note 16 on pages 139–145 and Note 18 on pages 154–156 of this Annual Report.

Private equity investments

The valuation of nonpublic private equity investments, held primarily by the Private Equity business within Corporate, requires significant management judgment due to the absence of quoted market prices, inherent lack of liquidity and the long-term nature of such assets. As such, private equity investments are valued initially based upon cost. Each quarter, valuations are reviewed utilizing available market data to determine if the carrying value of these investments should be adjusted. Such market data primarily includes observations of the trading multiples of public companies considered comparable to the private companies being valued. Valuations are adjusted to account for company-specific issues, the lack of liquidity inherent in a nonpublic investment and the fact that comparable public companies are not identical to the companies being valued. Such valuation adjustments are necessary because in the absence of a committed buyer and completion of due diligence similar to that performed in an actual negotiated sale process, there may be company-specific issues that are not fully known that may affect value. In addition, a variety of additional factors are reviewed by management, including, but not limited to, financing and sales transactions with third parties, current operating performance and future expectations of the particular investment, changes in market outlook and the third-party financing environment. The Firm applies its valuation methodology consistently from period to period, and the Firm believes that its valuation methodology and associated valuation adjustments are appropriate and similar to those used by other market participants. Nonpublic private equity investments are included in level 3 of the valuation hierarchy.

Private equity investments also include publicly held equity investments, generally obtained through the initial public offering of privately held equity investments. Publicly held investments in liquid markets are marked-to-market at the quoted public value less adjustments for regulatory or contractual sales restrictions. Discounts for restrictions are quantified by analyzing the length of the restriction period and the volatility of the equity security. Publicly held investments are primarily classified in level 2 of the valuation hierarchy.

Liabilities

Securities sold under repurchase agreements ("repurchase agreements")

To estimate the fair value of repurchase agreements, cash flows are evaluated taking into consideration any derivative features and are then discounted using the appropriate market rates for the applicable maturity. As the inputs into the valuation are primarily based upon observable pricing information, repurchase agreements are classified within level 2 of the valuation hierarchy.

Beneficial interests issued by consolidated VIEs

The fair value of beneficial interests issued by consolidated VIEs (beneficial interests) is estimated based upon the fair value of the underlying assets held by the VIEs. The valuation of beneficial interests does not include an adjustment to reflect the credit quality of the Firm as the holders of these beneficial interests do not have recourse to the general credit of JPMorgan Chase. As the inputs into the valuation are generally based upon readily observable pricing information, the majority of beneficial interests issued by consolidated VIEs are classified within level 2 of the valuation hierarchy.

Deposits, Other borrowed funds and Long-term debt

Included within Deposits, Other borrowed funds and Long-term debt are structured notes issued by the Firm that are financial instruments containing embedded derivatives. To estimate the fair value of structured notes, cash flows are evaluated taking into consideration any derivative features and are then discounted using the appropriate market rates for the applicable maturities. In addition, the valuation of structured notes includes an adjustment to reflect the credit quality of the Firm (i.e., the DVA). Where the inputs into the valuation are primarily based upon readily observable pricing information, the structured notes are classified within level 2 of the valuation hierarchy. Where significant inputs are unobservable, structured notes are classified within level 3 of the valuation hierarchy.

The following table presents the financial instruments carried at fair value as of December 31, 2007, by caption on the Consolidated balance sheet and by SFAS 157 valuation hierarchy (as described above).

Assets and liabilities measured at fair value on a recurring basis

December 31, 2007 (in millions)	Quoted market prices in active markets (Level 1)	Internal models with significant observable market parameters (Level 2)	Internal models with significant unobservable market parameters (Level 3)	FIN 39 netting[d]	Total carrying value in the Consolidated balance sheet
Federal funds sold and securities purchased under resale agreements	$ —	$ 19,131	$ —	$ —	$ 19,131
Trading assets:					
Debt and equity instruments[a][b]	202,483	187,724	24,066	—	414,273
Derivative receivables	18,574	871,105	20,188	(832,731)	77,136
Total trading assets	221,057	1,058,829	44,254	(832,731)	491,409
Available-for-sale securities	71,941	13,364	101	—	85,406
Loans	—	359	8,380	—	8,739
Mortgage servicing rights	—	—	8,632	—	8,632
Other assets:					
Private equity investments	68	322	6,763	—	7,153
All other	10,784	1,054	3,160	—	14,998
Total other assets	10,852	1,376	9,923	—	22,151
Total assets at fair value	$303,850	$ 1,093,059	$ 71,290	$(832,731)	$ 635,468
Deposits	$ —	$ 5,228	$ 1,161	$ —	$ 6,389
Federal funds purchased and securities sold under repurchase agreements	—	5,768	—	—	5,768
Other borrowed funds	—	10,672	105	—	10,777
Trading liabilities:					
Debt and equity instruments	73,023	15,659	480	—	89,162
Derivative payables	19,553	852,055	19,555	(822,458)	68,705
Total trading liabilities	92,576	867,714	20,035	(822,458)	157,867
Accounts payable, accrued expense and other liabilities[c]	—	—	25	—	25
Beneficial interests issued by consolidated VIEs	—	2,922	82	—	3,004
Long-term debt	—	48,518	21,938	—	70,456
Total liabilities at fair value	$ 92,576	$ 940,822	$ 43,346	$(822,458)	$ 254,286

(a) Included loans classified as Trading assets. For additional detail, see Note 6 on page 122 of this Annual Report.
(b) Included physical commodities inventory that are accounted for at the lower of cost or fair value.
(c) Included within Accounts payable, accrued expense and other liabilities is the fair value adjustment for unfunded lending-related commitments.
(d) FIN 39 permits the netting of Derivative receivables and Derivative payables when a legally enforceable master netting agreement exists between the Firm and a derivative counterparty. A master netting agreement is an agreement between two counterparties who have multiple derivative contracts with each other that provide for the net settlement of all contracts, as well as cash collateral, through a single payment, in a single currency, in the event of default on or termination of any one contract.

Changes in level 3 recurring fair value measurements

The table below includes a rollforward of the balance sheet amounts for the year ended December 31, 2007 (including the change in fair value), for financial instruments classified by the Firm within level 3 of the valuation hierarchy. When a determination is made to classify a financial instrument within level 3, the determination is based upon the significance of the unobservable parameters to the overall fair value measurement. However, level 3 financial instruments typically include, in addition to the unobservable or level 3 components, observable components (that is, components that are actively quoted and can be validated to external sources); accordingly, the gains and losses in the table below include changes in fair value due in part to observable factors that are part of the valuation methodology. Also, the Firm risk manages the observable components of level 3 financial instruments using securities and derivative positions that are classified within level 1 or 2 of the valuation hierarchy; as these level 1 and level 2 risk management instruments are not included below, the gains or losses in the tables do not reflect the effect of the Firm's risk management activities related to such level 3 instruments.

	Fair value measurements using significant unobservable inputs[a]					
For the year ended December 31, 2007 (in millions)	Fair value, January 1, 2007	Total realized/unrealized gains/(losses)	Purchases, issuances settlements, net	Transfers in and/or out of Level 3	Fair value, December 31, 2007	Change in unrealized gains and (losses) related to financial instruments held at December 31, 2007

(a) MSRs are classified within level 3 of the valuation hierarchy. For a rollforward of balance sheet amounts related to MSRs, see Note 18 on pages 154–157 of this Annual Report.
(b) Reported in Principal transactions revenue.
(c) Changes in fair value for Retail Financial Services mortgage loans originated with the intent to sell are measured at fair value under SFAS 159 and reported in Mortgage fees and related income.
(d) Realized gains (losses) are reported in Securities gains (losses). Unrealized gains (losses) are reported in Accumulated other comprehensive income (loss).
(e) Reported in Other income.
(f) Represents a net transfer of a liability balance.

Assets and liabilities measured at fair value on a nonrecurring basis

Certain assets, liabilities and unfunded lending-related commitments are measured at fair value on a nonrecurring basis; that is, the instruments are not measured at fair value on an ongoing basis but are subject to fair value adjustments only in certain circumstances (for example, when there is evidence of impairment). The following table presents the financial instruments carried on the Consolidated balance sheet by caption and by level within the SFAS 157 valuation hierarchy (as described above) as of December 31, 2007, for which a nonrecurring change in fair value has been recorded during the year ended December 31, 2007.

December 31, 2007 (in millions)	Quoted market prices in active markets (Level 1)	Internal models with significant observable market parameters (Level 2)	Internal models with significant unobservable market parameters (Level 3)	Total carrying value in the Consolidated balance sheet
Loans[a]	$ —	$ 2,818	$ 16,196	$ 19,014
Other assets	—	267	126	393
Total assets at fair value on a nonrecurring basis	$ —	$ 3,085	$ 16,322	$ 19,407
Accounts payable, accrued expense and other liabilities	$ —	$ —	$ 103	$ 103[b]
Total liabilities at fair value on a nonrecurring basis	$ —	$ —	$ 103	$ 103

(a) Includes debt financing and other loan warehouses held-for-sale.
(b) Represents the fair value adjustment associated with $3.2 billion of unfunded held-for-sale lending-related commitments.

Nonrecurring fair value changes

The following table presents the total change in value of financial instruments for which a fair value adjustment has been included in the Consolidated statement of income for the year ended December 31, 2007, related to financial instruments held at December 31, 2007.

Year ended December 31, 2007

(in millions)	2007
Loans	$ (720)
Other assets	(161)
Accounts payable, accrued expense and other liabilities	2
Total nonrecurring fair value gains (losses)	$ (879)

In the above table, Loans principally include changes in fair value for loans carried on the balance sheet at the lower of cost or fair value; and Accounts payable, accrued expense and other liabilities principally includes the change in fair value for unfunded lending-related commitments within the leveraged lending portfolio.

Level 3 assets analysis

Level 3 assets (including assets measured at the lower of cost or fair value) were 5% of total Firm assets at December 31, 2007. These assets increased during 2007 principally during the second half of the year, when liquidity in mortgages and other credit products fell dramatically. The increase was primarily due to an increase in leveraged loan balances within level 3 as the ability of the Firm to syndicate this risk to third parties became limited by the credit environment. In addition, there were transfers from level 2 to level 3 during 2007. These transfers were principally for instruments within the mortgage market where inputs which are significant to their valuation became unobservable during the year. Subprime and Alt-A whole loans, subprime home equity securities, commercial mortgage-backed mezzanine loans and credit default swaps referenced to asset-backed securities constituted the majority of the affected instruments, reflecting a significant decline in liquidity in these instruments in the third and fourth quarters of 2007, as new issue activity was nonexistent and independent pricing information was no longer available for these assets.

Transition

In connection with the initial adoption of SFAS 157, the Firm recorded the following on January 1, 2007:

- A cumulative effect increase to Retained earnings of $287 million, primarily related to the release of profit previously deferred in accordance with EITF 02-3;
- An increase to pretax income of $166 million ($103 million after-tax) related to the incorporation of the Firm's creditworthiness in the valuation of liabilities recorded at fair value; and
- An increase to pretax income of $464 million ($288 million after-tax) related to valuations of nonpublic private equity investments.

Prior to the adoption of SFAS 157, the Firm applied the provisions of EITF 02-3 to its derivative portfolio. EITF 02-3 precluded the recognition of initial trading profit in the absence of: (a) quoted market prices, (b) observable prices of other current market transactions or (c) other observable data supporting a valuation technique. In accordance with EITF 02-3, the Firm recognized the deferred profit in Principal transactions revenue on a systematic basis (typically straight-line amortization over the life of the instruments) and when observable market data became available.

Prior to the adoption of SFAS 157 the Firm did not incorporate an adjustment into the valuation of liabilities carried at fair value on the Consolidated balance sheet. Commencing January 1, 2007, in accordance with the requirements of SFAS 157, an adjustment was made to the valuation of liabilities measured at fair value to reflect the credit quality of the Firm.

Prior to the adoption of SFAS 157, privately held investments were initially valued based upon cost. The carrying values of privately held investments were adjusted from cost to reflect both positive and negative changes evidenced by financing events with third-party capital providers. The investments were also subject to ongoing impairment reviews by private equity senior investment professionals. The increase in pretax income related to nonpublic Private equity investments in connection with the adoption of SFAS 157 was due to there being sufficient market evidence to support an increase in fair values using the SFAS 157 methodology, although there had not been an actual third-party market transaction related to such investments.

Financial disclosures required by SFAS 107

SFAS 107 requires disclosure of the estimated fair value of certain financial instruments and the methods and significant assumptions used to estimate their fair values. Many but not all of the financial instruments held by the Firm are recorded at fair value on the Consolidated balance sheets. Financial instruments within the scope of SFAS 107 that are not carried at fair value on the Consolidated balance sheets are discussed below. Additionally, certain financial instruments and all nonfinancial instruments are excluded from the scope of SFAS 107. Accordingly, the fair value disclosures required by SFAS 107 provide only a partial estimate of the fair value of JPMorgan Chase. For example, the Firm has developed long-term relationships with its customers through its deposit base and credit card accounts, commonly referred to as core deposit intangibles and credit card relationships. In the opinion of management, these items, in the aggregate, add significant value to JPMorgan Chase, but their fair value is not disclosed in this Note.

Financial instruments for which fair value approximates carrying value

Certain financial instruments that are not carried at fair value on the Consolidated balance sheets are carried at amounts that approximate fair value due to their short-term nature and generally negligible credit risk. These instruments include cash and due from banks, deposits with banks, federal funds sold, securities purchased under resale agreements with short-dated maturities, securities borrowed, short-term receivables and accrued interest receivable, commercial paper, federal funds purchased, securities sold under repurchase agreements with short-dated maturities, other borrowed funds, accounts payable and accrued liabilities. In addition, SFAS 107 requires that the fair value for deposit liabilities with no stated maturity (i.e., demand, savings and certain money market deposits) be equal to their carrying value. SFAS 107 does not allow for the recognition of the inherent funding value of these instruments.

Financial instruments for which fair value does not approximate carrying value

Loans

The majority of the Firm's loans are not carried at fair value on a recurring basis on the Consolidated balance sheets nor are they actively traded. The following describes the inputs and assumptions that the Firm considers in arriving at an estimate of fair value for the following portfolios of loans.

Wholesale

Fair value for the wholesale loan portfolio is estimated, primarily using the cost of credit derivatives, which is adjusted to account for the differences in recovery rates between bonds, upon which the cost of credit derivatives is based, and loans.

Consumer

- Fair values for consumer installment loans (including automobile financings and consumer real estate), for which market rates for comparable loans are readily available, are based upon discounted cash flows adjusted for prepayments. The discount rate used for consumer installment loans are based on the current market rates adjusted for credit, liquidity and other risks that are applicable to a particular asset class.
- Fair value for credit card receivables is based upon discounted expected cash flows. The discount rates used for credit card receivables incorporate only the effects of interest rate changes, since the expected cash flows already reflect an adjustment for credit risk.

Interest-bearing deposits

Fair values of interest-bearing time deposits are estimated by discounting cash flows using the appropriate market rates for the applicable maturity.

Long-term debt related instruments

Fair value for long-term debt, including the junior subordinated deferrable interest debentures held by trusts that issued guaranteed capital debt securities, is based upon current market rates and is adjusted for JPMorgan Chase's credit quality.

Lending-related commitments

The majority of the Firm's unfunded lending-related commitments are not carried at fair value on a recurring basis on the Consolidated balance sheets nor are they actively traded. Although there is no liquid secondary market for wholesale commitments, the Firm estimates the fair value of its wholesale lending-related commitments primarily using the cost of credit derivatives (which is adjusted to account for the difference in recovery rates between bonds, upon which the cost of credit derivatives is based, and loans) and loan equivalents (which represent the portion of an unused commitment expected, based upon the Firm's average portfolio historical experience, to become outstanding in the event an obligor defaults). The Firm estimates the fair value of its consumer commitments to extend credit based upon the primary market prices to originate new commitments. It is the change in current primary market prices that provides the estimate of the fair value of these commitments. On this basis, the estimated fair value of the Firm's lending-related commitments at December 31, 2007 and 2006, was a liability of $1.9 billion and $210 million, respectively.

The following table presents the carrying value and estimated fair value of financial assets and liabilities as required by SFAS 107.

	2007			2006		
December 31, (in billions)	Carrying value	Estimated fair value	Appreciation/ (depreciation)	Carrying value	Estimated fair value	Appreciation/ (depreciation)

Net appreciation			**$ 0.9**			$ 3.2

Note 5 – Fair value option

In February 2007, the FASB issued SFAS 159, which is effective for fiscal years beginning after November 15, 2007, with early adoption permitted. The Firm chose early adoption for SFAS 159 effective January 1, 2007. SFAS 159 provides an option to elect fair value as an alternative measurement for selected financial assets, financial liabilities, unrecognized firm commitments, and written loan commitments not previously carried at fair value.

The Firm's fair value elections were intended to mitigate the volatility in earnings that had been created by recording financial instruments and the related risk management instruments on a different basis of accounting or to eliminate the operational complexities of applying hedge accounting. The following table provides detail regarding the Firm's elections by consolidated balance sheet line as of January 1, 2007.

(in millions)	Carrying value of financial instruments as of January 1, 2007[c]	Transition gain/(loss) recorded in Retained earnings[d]	Adjusted carrying value of financial instruments as of January 1, 2007
Federal funds sold and securities purchased under resale agreements	$ 12,970	$ (21)	$ 12,949
Trading assets – Debt and equity instruments	28,841	32	28,873
Loans	759	55	814
Other assets[a]	1,176	14	1,190
Deposits[b]	(4,427)	21	(4,406)
Federal funds purchased and securities sold under repurchase agreements	(6,325)	20	(6,305)
Other borrowed funds	(5,502)	(4)	(5,506)
Beneficial interests issued by consolidated VIEs	(2,339)	5	(2,334)
Long-term debt	(39,025)	198	(38,827)
Pretax cumulative effect of adoption of SFAS 159		320	
Deferred income taxes		(122)	
Reclassification from Accumulated other comprehensive income (loss)		1	
Cumulative effect of adoption of SFAS 159		$ 199	

(a) Included in Other assets are items, such as receivables, that are eligible for the fair value option election but were not elected by the Firm as these assets are not managed on a fair value basis.
(b) Included within Deposits are structured deposits that are carried at fair value pursuant to the fair value option. Other time deposits which are eligible for election, but are not managed on a fair value basis, continue to be carried on an accrual basis. Demand deposits are not eligible for election under the fair value option.
(c) Included in the January 1, 2007, carrying values are certain financial instruments previously carried at fair value by the Firm such as structured liabilities elected pursuant to SFAS 155 and loans purchased as part of the Investment Bank's trading activities.
(d) When fair value elections were made, certain financial instruments were reclassified on the Consolidated balance sheet (for example, warehouse loans were moved from Loans to Trading assets). The transition adjustment for these financial instruments has been included in the line item in which they were classified subsequent to the fair value election.

Elections

The following is a discussion of the primary financial instruments for which fair value elections were made and the basis for those elections:

Loans and unfunded lending-related commitments
On January 1, 2007, the Firm elected to record, at fair value, the following:

- Loans and unfunded lending-related commitments that are extended as part of the Investment Bank's principal investing activities. The transition amount related to these loans included a reversal of the Allowance for loan losses of $56 million.
- Certain Loans held-for-sale. These loans were reclassified to Trading assets – Debt and equity instruments. This election enabled the Firm to record loans purchased as part of the Investment Bank's commercial mortgage securitization activity and proprietary activities at fair value and discontinue SFAS 133 fair value hedge relationships for certain originated loans.

Beginning on January 1, 2007, the Firm chose to elect fair value as the measurement attribute for the following loans originated or purchased after that date:

- Loans purchased or originated as part of the Investment Bank's securitization warehousing activities
- Prime mortgage loans originated with the intent to sell within Retail Financial Services ("RFS")

Warehouse loans elected to be reported at fair value are classified as Trading assets – Debt and equity instruments. For additional information regarding warehouse loans, see Note 16 on pages 139–145 of this Annual Report.

The election to fair value the above loans did not include loans within these portfolios that existed on January 1, 2007, based upon the short holding period of the loans and/or the negligible impact of the elections.

Beginning in the third quarter of 2007, the Firm elected the fair value option for newly originated bridge financing activity in the Investment Bank ("IB"). These elections were made to align further the accounting basis of the bridge financing activities with their related risk management practices. For these activities the loans continue to be classified within Loans on the Consolidated balance sheet; the fair value of the unfunded commitments is recorded within Accounts payable, accrued expense and other liabilities.

Resale and Repurchase Agreements

On January 1, 2007, the Firm elected to record at fair value resale and repurchase agreements with an embedded derivative or a maturity greater than one year. The intent of this election was to mitigate volatility due to the differences in the measurement basis for the agreements (which were previously accounted for on an accrual basis) and the associated risk management arrangements (which are accounted for on a fair value basis). An election was not made for short-term agreements as the carrying value for such agreements generally approximates fair value. For additional information regarding these agreements, see Note 13 on page 136 of this Annual Report.

Structured Notes

The IB issues structured notes as part of its client-driven activities. Structured notes are financial instruments that contain embedded derivatives and are included in Long-term debt. On January 1, 2007, the Firm elected to record at fair value all structured notes not previously elected or eligible for election under SFAS 155. The election was made to mitigate the volatility due to the differences in the measurement basis for structured notes and the associated risk management arrangements and to eliminate the operational burdens of having different accounting models for the same type of financial instrument.

Changes in Fair Value under the Fair Value option election

The following table presents the changes in fair value included in the Consolidated statement of income for the year ended December 31, 2007, for items for which the fair value election was made. The profit and loss information presented below only includes the financial instruments that were elected to be measured at fair value; related risk management instruments, which are required to be measured at fair value, are not included in the table.

Year ended December 31, 2007 (in millions)	Principal transactions[b]	Other	Total changes in fair value recorded
Federal funds sold and securities purchased under resale agreements	$ 580	$ —	$ 580
Trading assets:			
Debt and equity instruments, excluding loans	421	(1)[c]	420
Loans reported as trading assets:			
Changes in instrument-specific credit risk	(517)	(157)[c]	(674)
Other changes in fair value	188	1,033[c]	1,221
Loans:			
Changes in instrument-specific credit risk	102	—	102
Other changes in fair value	40	—	40
Other assets	—	30[d]	30
Deposits(a)	(906)	—	(906)
Federal funds purchased and securities sold under repurchase agreements	(78)	—	(78)
Other borrowed funds(a)	(412)	—	(412)
Trading liabilities	(17)	—	(17)
Accounts payable, accrued expense and other liabilities	(460)	—	(460)
Beneficial interests issued by consolidated VIEs	(228)	—	(228)
Long-term debt:			
Changes in instrument-specific credit risk(a)	771	—	771
Other changes in fair value	(2,985)	—	(2,985)

(a) Total changes in instrument-specific credit risk related to structured notes was $806 million for the year ended December 31, 2007, which includes adjustments for structured notes classified within Deposits and Other borrowed funds as well as Long-term debt.
(b) Included in the amounts are gains and losses related to certain financial instruments previously carried at fair value by the Firm such as structured liabilities elected pursuant to SFAS 155 and loans purchased as part of IB trading activities.
(c) Reported in Mortgage Fees and related income.
(d) Reported in Other income.

Determination of instrument-specific credit risk for items for which a fair value election was made

The following describes how the gains and losses included in earnings during 2007 that were attributable to changes in instrument-specific credit risk were determined:

- Loans: for floating-rate instruments, changes in value are all attributed to instrument-specific credit risk. For fixed-rate instruments, an allocation of the changes in value for the period is made between those changes in value that are interest rate-related and changes in value that are credit-related. Allocations are generally based upon an analysis of borrower-specific credit spread and recovery information, where available, or benchmarking to similar entities or industries.
- Long term debt: changes in value attributable to instrument–specific credit risk were derived principally from observable changes in the Firm's credit spread. The gain for 2007, was attributable to the widening of the Firm's credit spread.
- Resale and repurchase agreements: generally, with a resale or repurchase agreement, there is a requirement that collateral be maintained with a market value equal to or in excess of the principal amount loaned. As a result, there would be no adjustment or an immaterial adjustment for instrument-specific credit related to these agreements.

Difference between aggregate fair value and aggregate remaining contractual principal balance outstanding

The following table reflects the difference between the aggregate fair value and the aggregate remaining contractual principal balance outstanding as of December 31, 2007, for Loans and Long-term debt for which the SFAS 159 fair value option has been elected. The loans were classified in Trading assets – debt and equity instruments or Loans.

December 31, 2007 (in millions)	Remaining aggregate contractual principal amount outstanding	Fair value	Fair value over (under) remaining aggregate contractual principal amount outstanding
Loans			
Performing loans 90 days or more past due			
Loans reported as Trading assets	$ —	$ —	$ —
Loans	11	11	—
Nonaccrual loans			
Loans reported as Trading assets	3,044	1,176	(1,868)
Loans	15	5	(10)
Subtotal	3,070	1,192	(1,878)
All other performing loans			
Loans reported as Trading assets	56,164	56,638	474
Loans	9,011	8,580	(431)
Total loans	$ 68,245	$ 66,410	$ (1,835)
Long-term debt			
Principal protected debt	$ (24,262)	$ (24,033)	$ (229)
Nonprincipal protected debt[(a)]	NA	(46,423)	NA
Total Long-term debt	NA	$ (70,456)	NA
FIN 46R long-term beneficial interests			
Principal protected debt	$ (58)	$ (58)	$ —
Nonprincipal protected debt[(a)]	NA	(2,946)	NA
Total FIN 46R long-term beneficial interests	NA	$ (3,004)	NA

(a) Remaining contractual principal not applicable as the return of principal is based upon performance of an underlying variable, and therefore may not occur in full.

At December 31, 2007, the fair value of unfunded lending-related commitments for which the fair value option was elected was a $25 million liability, which is included in Accounts payable, accrued expense and other liabilities. The contractual amount of such commitments was $1.0 billion.

Note 6 – Principal transactions

Principal transactions revenue consists of realized and unrealized gains and losses from trading activities (including physical commodities inventories that are accounted for at the lower of cost or fair value), changes in fair value associated with financial instruments held by the Investment Bank for which the SFAS 159 fair value option was elected, and loans held-for-sale within the wholesale lines of business. For loans measured at fair value under SFAS 159, origination costs are recognized in the associated expense category as incurred. Principal transactions revenue also includes private equity gains and losses.

The following table presents Principal transactions revenue.

Year ended December 31, (in millions)	**2007**	2006	2005
Trading revenue	**$ 4,736**	$ 9,418	$ 6,263
Private equity gains[a]	**4,279**	1,360	1,809
Principal transactions	**$ 9,015**	$ 10,778	$ 8,072

(a) Includes Private Equity revenue on investments held in the Private Equity business within Corporate and those held in other business segments.

Trading assets and liabilities

Trading assets include debt and equity instruments held for trading purposes that JPMorgan Chase owns ("long" positions), certain loans for which the Firm manages on a fair value basis and has elected the SFAS 159 fair value option and physical commodities inventories that are accounted for at the lower of cost or fair value. Trading liabilities include debt and equity instruments that the Firm has sold to other parties but does not own ("short" positions). The Firm is obligated to purchase instruments at a future date to cover the short positions. Included in Trading assets and Trading liabilities are the reported receivables (unrealized gains) and payables (unrealized losses) related to derivatives. Trading positions are carried at fair value on the Consolidated balance sheets. For a discussion of the valuation of Trading assets and Trading liabilities, see Note 4 on pages 111–118 of this Annual Report.

The following table presents the fair value of Trading assets and Trading liabilities for the dates indicated.

December 31, (in millions)	**2007**	2006
Trading assets		
Debt and equity instruments:		
U.S. government and federal agency obligations	**$ 36,535**	$ 17,358
U.S. government-sponsored enterprise obligations	**43,838**	28,544
Obligations of state and political subdivisions	**13,090**	9,569
Certificates of deposit, bankers' acceptances and commercial paper	**8,252**	8,204
Debt securities issued by non-U.S. governments	**69,606**	58,387
Corporate debt securities	**51,033**	62,064
Equity securities	**91,212**	86,862
Loans[a]	**57,814**	16,595
Other[b]	**42,893**	22,554
Total debt and equity instruments	**414,273**	310,137
Derivative receivables:[c]		
Interest rate	**36,020**	28,932
Credit derivatives	**22,083**	5,732
Commodity	**9,419**	10,431
Foreign exchange	**5,616**	4,260
Equity	**3,998**	6,246
Total derivative receivables	**77,136**	55,601
Total trading assets	**$491,409**	$365,738
Trading liabilities		
Debt and equity instruments[d]	**$ 89,162**	$ 90,488
Derivative payables:[c]		
Interest rate	**25,542**	22,738
Credit derivatives	**11,613**	6,003
Commodity	**6,942**	7,329
Foreign exchange	**7,552**	4,820
Equity	**17,056**	16,579
Total derivative payables	**68,705**	57,469
Total trading liabilities	**$157,867**	$147,957

(a) The increase from December 31, 2006, is primarily related to loans for which the SFAS 159 fair value option has been elected.
(b) Consists primarily of private-label mortgage-backed securities and asset-backed securities.
(c) Included in Trading assets and Trading liabilities are the reported receivables (unrealized gains) and payables (unrealized losses) related to derivatives. These amounts are reported net of cash received and paid of $34.9 billion and $24.6 billion, respectively, at December 31, 2007, and $23.0 billion and $18.8 billion, respectively, at December 31, 2006, under legally enforceable master netting agreements.
(d) Primarily represents securities sold, not yet purchased.

Average Trading assets and liabilities were as follows for the periods indicated.

Year ended December 31, (in millions)	**2007**	2006	2005
Trading assets – debt and equity instruments	**$ 381,415**	$ 280,079	$ 237,073
Trading assets – derivative receivables	**65,439**	57,368	57,365
Trading liabilities – debt and equity instruments[a]	**$ 94,737**	$ 102,794	$ 93,102
Trading liabilities – derivative payables	**65,198**	57,938	55,723

(a) Primarily represents securities sold, not yet purchased.

Private equity

Private equity investments are recorded in Other assets on the Consolidated balance sheet. The following table presents the carrying value and cost of the Private equity investment portfolio, held by the Private Equity business within Corporate, for the dates indicated.

December 31, (in millions)	**2007**		2006[a]	
	Carrying value	Cost	Carrying value	Cost
Total private equity investments	**$ 7,153**	**$ 6,231**	$ 6,081	$ 7,326

(a) 2006 has been revised to reflect the current presentation.

Private Equity includes investments in buyouts, growth equity and venture opportunities. These investments are accounted for under investment company guidelines. Accordingly, these investments, irrespective of the percentage of equity ownership interest held, are carried on the Consolidated balance sheets at fair value. Realized and unrealized gains and losses arising from changes in value are reported in Principal transactions revenue in the Consolidated statements of income in the period that the gains or losses occur. For a discussion of the valuation of Private equity investments, see Note 4 on pages 111–118 of this Annual Report.

Note 7 – Other noninterest revenue

Investment banking fees

This revenue category includes advisory and equity and debt underwriting fees. Advisory fees are recognized as revenue when the related services have been performed. Underwriting fees are recognized as revenue when the Firm has rendered all services to the issuer and is entitled to collect the fee from the issuer, as long as there are no other contingencies associated with the fee (e.g., the fee is not contingent upon the customer obtaining financing). Underwriting fees are net of syndicate expense. The Firm recognizes credit arrangement and syndication fees as revenue after satisfying certain retention, timing and yield criteria.

The following table presents the components of Investment banking fees.

Year ended December 31, (in millions)	**2007**	2006	2005
Underwriting:			
Equity	**$ 1,713**	$ 1,179	$ 864
Debt	**2,650**	2,703	1,969
Total Underwriting	**4,363**	3,882	2,833
Advisory	**2,272**	1,638	1,255
Total	**$ 6,635**	$ 5,520	$ 4,088

Lending & deposit-related fees

This revenue category includes fees from loan commitments, standby letters of credit, financial guarantees, deposit-related fees in lieu of compensating balances, cash management-related activities or transactions, deposit accounts and other loan servicing activities. These fees are recognized over the period in which the related service is provided.

Asset management, administration and commissions

This revenue category includes fees from investment management and related services, custody, brokerage services, insurance premiums and commissions and other products. These fees are recognized over the period in which the related service is provided. Performance-based fees, which are earned based upon exceeding certain benchmarks or other performance targets, are accrued and recognized at the end of the performance period in which the target is met.

Mortgage fees and related income

This revenue category primarily reflects Retail Financial Services' mortgage banking revenue, including fees and income derived from mortgages originated with the intent to sell; mortgage sales and servicing; the impact of risk management activities associated with the mortgage pipeline, warehouse and MSRs; and revenue related to any residual interests held from mortgage securitizations. This revenue category also includes gains and losses on sales and lower of cost or fair value adjustments for mortgage loans held-for-sale, as well as changes in fair value for mortgage loans originated with the intent to sell and measured at fair value under SFAS 159. For loans measured at fair value under SFAS 159, origination costs are recognized in the associated expense category as incurred. Costs to originate loans held-for-sale and accounted for at the lower of cost or fair value are deferred and recognized as a component of the gain or loss on sale. Net interest income from mortgage loans and securities gains and losses on available-for-sale ("AFS") securities used in mortgage-related risk management activities are not included in Mortgage fees and related income. For a further discussion of MSRs, see Note 18 on pages 154–156 of this Annual Report.

Credit card income

This revenue category includes interchange income from credit and debit cards and servicing fees earned in connection with securitization activities. Volume-related payments to partners and expense for rewards programs are netted against interchange income. Expense related to rewards programs are recorded when the rewards are earned by the customer. Other fee revenue is recognized as earned, except for annual fees, which are deferred and recognized on a straight-line basis over the 12-month period to which they pertain. Direct loan origination costs are also deferred and recognized over a 12-month period.

Credit card revenue sharing agreements

The Firm has contractual agreements with numerous affinity organizations and co-brand partners, which grant the Firm exclusive rights to market to the members or customers of such organizations and partners. These organizations and partners endorse the credit card programs and provide their mailing lists to the Firm, and they may also conduct marketing activities and provide awards under the various credit card programs. The terms of these agreements generally range from three to 10 years. The economic incentives the Firm pays to the endorsing organizations and partners typically include payments based upon new account originations, charge volumes, and the cost of the endorsing organizations' or partners' marketing activities and awards.

The Firm recognizes the payments made to the affinity organizations and co-brand partners based upon new account originations as direct loan origination costs. Payments based upon charge volumes are considered by the Firm as revenue sharing with the affinity organizations and co-brand partners, which are deducted from Credit card income as the related revenue is earned. Payments based upon marketing efforts undertaken by the endorsing organization or partner are expensed by the Firm as incurred. These costs are recorded within Noninterest expense.

Note 8 – Interest income and Interest expense

Details of Interest income and Interest expense were as follows.

Year ended December 31, (in millions)	2007	2006	2005
Interest income[a]			
Loans	**$36,660**	$ 33,121	$ 26,056
Securities	**5,232**	4,147	3,129
Trading assets	**17,041**	10,942	9,117
Federal funds sold and securities purchased under resale agreements	**6,497**	5,578	3,562
Securities borrowed	**4,539**	3,402	1,618
Deposits with banks	**1,418**	1,265	660
Interests in purchased receivables[b]	**—**	652	933
Total interest income	**71,387**	59,107	45,075
Interest expense[a]			
Interest-bearing deposits	**21,653**	17,042	9,986
Short-term and other liabilities	**16,142**	14,086	10,002
Long-term debt	**6,606**	5,503	4,160
Beneficial interests issued by consolidated VIEs	**580**	1,234	1,372
Total interest expense	**44,981**	37,865	25,520
Net interest income	**26,406**	21,242	19,555
Provision for credit losses	**6,864**	3,270	3,483
Net interest income after Provision for credit losses	**$19,542**	$ 17,972	$ 16,072

(a) Interest income and Interest expense include the current period interest accruals for financial instruments measured at fair value except for financial instruments containing embedded derivatives that would be separately accounted for in accordance with SFAS 133 absent the SFAS 159 fair value election; for those instruments, all changes in value, including any interest elements, are reported in Principal transactions revenue.

(b) As a result of restructuring certain multi-seller conduits the Firm administers, JPMorgan Chase deconsolidated $29 billion of Interests in purchased receivables, $3 billion of Loans and $1 billion of Securities, and recorded $33 billion of lending-related commitments during the second quarter of 2006.

Note 9 – Pension and other postretirement employee benefit plans

The Firm's defined benefit pension plans are accounted for in accordance with SFAS 87 and SFAS 88, and its other postretirement employee benefit ("OPEB") plans are accounted for in accordance with SFAS 106. In September 2006, the FASB issued SFAS 158, which requires companies to recognize on their Consolidated balance sheets the overfunded or underfunded status of their defined benefit postretirement plans, measured as the difference between the fair value of plan assets and the benefit obligation. SFAS 158 requires unrecognized amounts (e.g., net loss and prior service costs) to be recognized in Accumulated other comprehensive income ("AOCI") and that these amounts be adjusted as they are subsequently recognized as components of net periodic benefit cost based upon the current amortization and recognition requirements of SFAS 87 and SFAS 106. The Firm prospectively adopted SFAS 158 on December 31, 2006, and recorded an after-tax charge to AOCI of $1.1 billion at that date.

SFAS 158 also eliminates the provisions of SFAS 87 and SFAS 106 that allow plan assets and obligations to be measured as of a date not more than three months prior to the reporting entity's balance sheet date. The Firm uses a measurement date of December 31 for its defined benefit pension and OPEB plans; therefore, this provision of SFAS 158 had no effect on the Firm's financial statements.

For the Firm's defined benefit pension plans, fair value is used to determine the expected return on plan assets. For the Firm's OPEB plans, a calculated value that recognizes changes in fair value over a five-year period is used to determine the expected return on plan assets. Amortization of net gains and losses is included in annual net periodic benefit cost if, as of the beginning of the year, the net gain or loss exceeds 10 percent of the greater of the projected benefit obligation or the fair value of the plan assets. Any excess, as well as prior service costs, are amortized over the average future service period of defined benefit pension plan participants, which for the U.S. defined benefit pension plan is currently 10 years. For OPEB plans, any excess net gains and losses also are amortized over the average future service period, which is currently six years; however, prior service costs are amortized over the average years of service remaining to full eligibility age, which is currently four years.

Defined benefit pension plans

The Firm has a qualified noncontributory U.S. defined benefit pension plan that provides benefits to substantially all U.S. employees. The U.S. plan employs a cash balance formula, in the form of pay and interest credits, to determine the benefits to be provided at retirement, based upon eligible compensation and years of service. Employees begin to accrue plan benefits after completing one year of service, and benefits generally vest after five years of service (effective January 1, 2008, benefits will vest after three years of service). The Firm also offers benefits through defined benefit pension plans to qualifying employees in certain non-U.S. locations based upon factors such as eligible compensation, age and/or years of service.

It is the Firm's policy to fund the pension plans in amounts sufficient to meet the requirements under applicable employee benefit and local tax laws. The amount of potential 2008 contributions to its U.S. defined benefit pension plans, if any, is not reasonably estimable at this time. The amount of potential 2008 contributions to its non-U.S. defined benefit pension plans is $33 million.

JPMorgan Chase also has a number of defined benefit pension plans not subject to Title IV of the Employee Retirement Income Security Act. The most significant of these plans is the Excess Retirement Plan, pursuant to which certain employees earn pay and interest credits on compensation amounts above the maximum stipulated by law under a qualified plan. The Excess Retirement Plan is a nonqualified, noncontributory U.S. pension plan with an unfunded projected benefit obligation in the amount of $262 million and $301 million, at December 31, 2007 and 2006, respectively.

Defined contribution plans

JPMorgan Chase offers several defined contribution plans in the U.S. and in certain non-U.S. locations, all of which are administered in accordance with applicable local laws and regulations. The most significant of these plans is The JPMorgan Chase 401(k) Savings Plan (the "401(k) Savings Plan"), which covers substantially all U.S. employees. The 401(k) Savings Plan allows employees to make pretax and Roth 401(k) contributions to tax-deferred investment portfolios.

The JPMorgan Chase Common Stock Fund, which is an investment option under the 401(k) Savings Plan, is a nonleveraged employee stock ownership plan. The Firm matches eligible employee contributions up to a certain percentage of benefits-eligible compensation per pay period, subject to plan and legal limits. Employees begin to receive matching contributions after completing a one-year-of-service requirement and are immediately vested in the Firm's contributions when made. Employees with total annual cash compensation of $250,000 or more are not eligible for matching contributions. The 401(k) Savings Plan also permits discretionary profit-sharing contributions by participating companies for certain employees, subject to a specified vesting schedule.

OPEB plans

JPMorgan Chase offers postretirement medical and life insurance benefits ("OPEB") to certain retirees and postretirement medical benefits to qualifying U.S. employees. These benefits vary with length of service and date of hire and provide for limits on the Firm's share of covered medical benefits. The medical benefits are contributory, while the life insurance benefits are noncontributory. Postretirement medical benefits also are offered to qualifying U.K. employees.

JPMorgan Chase's U.S. OPEB obligation is funded with corporate-owned life insurance ("COLI") purchased on the lives of eligible employees and retirees. While the Firm owns the COLI policies, COLI proceeds (death benefits, withdrawals and other distributions) may be used only to reimburse the Firm for its net postretirement benefit claim payments and related administrative expense. The U.K. OPEB plan is unfunded.

The following table presents the changes in benefit obligations and plan assets, funded status and accumulated benefit obligations amounts reported on the Consolidated balance sheets for the Firm's U.S. and non-U.S. defined benefit pension and OPEB plans:

As of or for the year ended December 31, (in millions)	Defined benefit pension plans				OPEB plans[d]	
	U.S.		Non-U.S.			
	2007	2006	**2007**	2006	**2007**	2006

(a) Overfunded plans with an aggregate balance of $3.3 billion and $2.3 billion at December 31, 2007 and 2006, respectively, are recorded in Other assets. Underfunded plans with an aggregate balance of $491 million and $596 million at December 31, 2007 and 2006, respectively, are recorded in Accounts payable, accrued expense and other liabilities.
(b) At December 31, 2007 and 2006, approximately $299 million and $282 million, respectively, of U.S. plan assets related to participation rights under participating annuity contracts.
(c) Reflects adjustments related to pension plans in Germany and Switzerland, which have defined benefit pension obligations that were not previously measured under SFAS 87 due to immateriality.
(d) Includes an unfunded accumulated postretirement benefit obligation of $49 million and $52 million at December 31, 2007 and 2006, respectively, for the U.K. plan.

The following table presents pension and OPEB amounts recorded in Accumulated other comprehensive income (loss), before tax.

As of or for the year ended December 31, (in millions)	Defined benefit pension plans				OPEB plans	
	U.S.		Non-U.S.

(a) Includes various defined benefit pension plans, which are individually immaterial.

The estimated amounts that will be amortized from AOCI into Net periodic benefit cost, before tax, in 2008 are as follows.

	Defined benefit pension plans		OPEB plans	
Year ended December 31, 2008 (in millions)	U.S.	Non-U.S.	U.S.	Non-U.S.
Net loss	$ —	$ 27	$ —	$ —
Prior service cost (credit)	4	—	(15)	—
Total	$ 4	$ 27	$ (15)	$ —

Plan assumptions

JPMorgan Chase's expected long-term rate of return for U.S. defined benefit pension and OPEB plan assets is a blended average of the investment advisor's projected long-term (10 years or more) returns for the various asset classes, weighted by the asset allocation. Returns on asset classes are developed using a forward-looking building-block approach and are not strictly based upon historical returns. Equity returns are generally developed as the sum of inflation, expected real earnings growth and expected long-term dividend yield. Bond returns are generally developed as the sum of inflation, real bond yield and risk spread (as appropriate), adjusted for the expected effect on returns from changing yields. Other asset-class returns are derived from their relationship to the equity and bond markets.

For the U.K. defined benefit pension plans, which represent the most significant of the non-U.S. defined benefit pension plans, procedures similar to those in the U.S. are used to develop the expected long-term rate of return on defined benefit pension plan assets, taking into consideration local market conditions and the specific allocation of plan assets. The expected long-term rate of return on U.K. plan assets is an average of projected long-term returns for each asset class, selected by reference to the yield on long-term U.K. government bonds and "AA"-rated long-term corporate bonds, plus an equity risk premium above the risk-free rate.

The discount rate used in determining the benefit obligation under the U.S. defined benefit pension and OPEB plans was selected by reference to the yield on a portfolio of bonds with redemption dates and coupons that closely match each of the plan's projected cash flows; such portfolio is derived from a broad-based universe of high-quality corporate bonds as of the measurement date. In years in which this hypothetical bond portfolio generates excess cash, such excess is assumed to be reinvested at the one-year forward rates implied by the Citigroup Pension Discount Curve published as of the measurement date. The discount rate for the U.K. defined benefit pension and OPEB plans represents a rate implied from the yield curve of the year-end iBoxx £ corporate "AA" 15-year-plus bond index with a duration corresponding to that of the underlying benefit obligations.

The following tables present the weighted-average annualized actuarial assumptions for the projected and accumulated postretirement benefit obligations and the components of net periodic benefit costs for the Firm's U.S. and non-U.S. defined benefit pension and OPEB plans, as of and for the periods indicated.

Weighted-average assumptions used to determine benefit obligations

	U.S.		Non-U.S.	
December 31,	**2007**	2006	**2007**	2006
Discount rate:				
Defined benefit pension plans	**6.60%**	5.95%	**2.25-5.80%**	2.25-5.10%

Rate of compensation increase	**4.00**	4.00	**3.00-4.25**	3.00-4.00
Health care cost trend rate:				
Assumed for next year	**9.25**	10.00	**5.75**	6.63
Ultimate	**5.00**	5.00	**4.00**	4.00
Year when rate will reach ultimate	**2014**	2014	**2010**	2010

Weighted-average assumptions used to determine Net periodic benefit costs

	U.S.			Non-U.S.		
Year ended December 31,	**2007**	2006	2005	**2007**	2006	2005
Discount rate:						
Defined benefit pension plans	**5.95%**	5.70%	5.75%	**2.25-5.10%**	2.00-4.70%	2.00-5.30%
OPEB plans	**5.90**	5.65	5.25-5.75[a]	**5.10**	4.70	5.30
Expected long-term rate of return on plan assets:						
Defined benefit pension plans	**7.50**	7.50	7.50	**3.25-5.60**	3.25-5.50	3.25-5.75
OPEB plans	**7.00**	6.84	6.80	**NA**	NA	NA
Rate of compensation increase	**4.00**	4.00	4.00	**3.00-4.00**	3.00-3.75	1.75-3.75
Health care cost trend rate:						
Assumed for next year	**10.00**	10.00	10.00	**6.63**	7.50	7.50
Ultimate	**5.00**	5.00	5.00	**4.00**	4.00	4.00
Year when rate will reach ultimate	**2014**	2013	2012	**2010**	2010	2010

(a) The OPEB plan was remeasured as of August 1, 2005, and a rate of 5.25% was used from the period of August 1, 2005, through December 31, 2005.

The following table presents the effect of a one-percentage-point change in the assumed health care cost trend rate on JPMorgan Chase's total service and interest cost and accumulated postretirement benefit obligation:

For the year ended **December 31, 2007** (in millions)	1-Percentage-point increase	1-Percentage-point decrease
Effect on total service and interest costs	**$ 4**	**$ (3)**
Effect on accumulated postretirement benefit obligation	**59**	**(51)**

At December 31, 2007, the Firm increased the discount rates used to determine its benefit obligations for the U.S. defined benefit pension and OPEB plans based upon current market interest rates, which will result in a decrease in expense of approximately $10 million for 2008. The 2008 expected long-term rate of return on U.S. pension plan assets and U.S. OPEB plan assets remained at 7.50% and 7.00%, respectively. The health care benefit obligation trend assumption declined from 10% in 2007 to 9.25% in 2008, declining to a rate of 5% in 2014. As of December 31, 2007, the interest crediting rate assumption and the assumed rate of compensation increase remained at 5.25% and 4.00%, respectively. At December 31, 2007, pension plan demographic assumptions were revised to reflect recent experience relating to form and timing of benefit distributions, and rates of turnover, which will result in a decrease in expense of approximately $9 million for 2008.

JPMorgan Chase's U.S. defined benefit pension and OPEB plan expense is most sensitive to the expected long-term rate of return on plan assets. With all other assumptions held constant, a 25–basis point decline in the expected long-term rate of return on U.S. plan assets would result in an increase of approximately $27 million in 2008 U.S. defined benefit pension and OPEB plan expense. A 25–basis point decline in the discount rate for the U.S. plans would result in a decrease in 2008 U.S. defined benefit pension and OPEB plan expense of approximately $3 million and an increase in the related projected benefit obligations of approximately $171 million. A 25-basis point decline in the discount rates for the non-U.S. plans would result in an increase in the 2008 non-U.S. defined benefit pension and OPEB plan expense of approximately $21 million. A 25-basis point increase in the interest crediting rate for the U.S. defined benefit pension plan would result in an increase in 2008 U.S. defined benefit pension expense of approximately $9 million and an increase in the related projected benefit obligations of approximately $64 million.

Investment strategy and asset allocation

The investment policy for the Firm's postretirement employee benefit plan assets is to optimize the risk-return relationship as appropriate to the respective plan's needs and goals, using a global portfolio of various asset classes diversified by market segment, economic sector and issuer. Specifically, the goal is to optimize the asset mix for future benefit obligations, while managing various risk factors and each plan's investment return objectives. For example, long-duration fixed income securities are included in the U.S. qualified pension plan's asset allocation, in recognition of its long-duration obligations. Plan assets are managed by a combination of internal and external investment managers and are rebalanced to within approved ranges, to the extent economically practical.

The Firm's U.S. defined benefit pension plan assets are held in various trusts and are invested in a well-diversified portfolio of equities (including U.S. large and small capitalization and international equities), fixed income (including corporate and government bonds), Treasury inflation-indexed and high-yield securities, real estate, cash equivalents and alternative investments. Non-U.S. defined benefit pension plan assets are held in various trusts and are similarly invested in well-diversified portfolios of equity, fixed income and other securities. Assets of the Firm's COLI policies, which are used to fund partially the U.S. OPEB plan, are held in separate accounts with an insurance company and are invested in equity and fixed income index funds. In addition, tax-exempt municipal debt securities, held in a trust, were used to fund the U.S. OPEB plan in prior periods; as of December 31, 2006, there are no remaining assets in the trust. As of December 31, 2007, the assets used to fund the Firm's U.S. and non-U.S. defined benefit pension and OPEB plans do not include JPMorgan Chase common stock, except in connection with investments in third-party stock-index funds.

The following table presents the weighted-average asset allocation of the fair values of total plan assets at December 31 for the years indicated, and the respective approved range/target allocation by asset category, for the Firm's U.S. and non-U.S. defined benefit pension and OPEB plans.

	Defined benefit pension plans								
	U.S.			Non-U.S.			OPEB plans[b]

Years 2013–2017	3,296	626	597	95

Note 10 – Employee stock-based incentives

Effective January 1, 2006, the Firm adopted SFAS 123R and all related interpretations using the modified prospective transition method. SFAS 123R requires all share-based payments to employees, including employee stock options and stock appreciation rights ("SARs"), to be measured at their grant date fair values. Results for prior periods have not been retrospectively adjusted. The Firm also adopted the transition election provided by FSP FAS 123(R)-3.

JPMorgan Chase had previously adopted SFAS 123, effective January 1, 2003, using the prospective transition method. Under SFAS 123, the Firm accounted for its stock-based compensation awards at fair value, similar to the SFAS 123R requirements. However, under the prospective transition method, JPMorgan Chase continued to account for unmodified stock options that were outstanding as of December 31, 2002, using the APB 25 intrinsic value method. Under this method, no expense was recognized for stock options granted at an exercise price equal to the stock price on the grant date, since such options have no intrinsic value.

Upon adopting SFAS 123R, the Firm began to recognize in the Consolidated statements of income compensation expense for unvested stock options previously accounted for under APB 25. Additionally, JPMorgan Chase recognized as compensation expense an immaterial cumulative effect adjustment resulting from the SFAS 123R requirement to estimate forfeitures at the grant date instead of recognizing them as incurred. Finally, the Firm revised its accounting policies for share-based payments granted to employees eligible for continued vesting under specific age and service or service-related provisions ("full career eligible employees") under SFAS 123R. Prior to adopting SFAS 123R, the Firm's accounting policy for share-based payment awards granted to full career eligible employees was to recognize compensation cost over the award's stated service period. Beginning with awards granted to full career eligible employees in 2006, JPMorgan Chase recognized compensation expense on the grant date without giving consideration to the impact of post-employment restrictions. In the first quarter of 2006, the Firm also began to accrue the estimated cost of stock awards granted to full career eligible employees in the following year.

In June 2007, the FASB ratified EITF 06-11, which requires that realized tax benefits from dividends or dividend equivalents paid on equity-classified share-based payment awards that are charged to retained earnings should be recorded as an increase to additional paid-in capital and included in the pool of excess tax benefits available to absorb tax deficiencies on share-based payment awards. Prior to the issuance of EITF 06-11, the Firm did not include these tax benefits as part of this pool of excess tax benefits. The Firm adopted EITF 06-11 on January 1, 2008. The adoption of this consensus did not have an impact on the Firm's Consolidated balance sheet or results of operations.

Employee stock-based awards

In 2007 and 2006, JPMorgan Chase granted long-term stock-based awards to certain key employees under the 2005 Long-Term Incentive Plan (the "2005 Plan"). In 2005, JPMorgan Chase granted long-term stock-based awards under the 1996 Long-Term Incentive Plan as amended (the "1996 plan") until May 2005, and after May 2005, under the 2005 Plan thereafter to certain key employees. These two plans, plus prior Firm plans and plans assumed as the result of acquisitions, constitute the Firm's stock-based compensation plans ("LTI Plans"). The 2005 Plan became effective on May 17, 2005, after approval by shareholders at the 2005 annual meeting. The 2005 Plan replaced three existing stock-based compensation plans – the 1996 Plan and two nonshareholder approved plans – all of which expired before the effectiveness of the 2005 Plan. Under the terms of the 2005 Plan, 275 million shares of common stock are available for issuance during its five-year term. The 2005 Plan is the only active plan under which the Firm is currently granting stock-based incentive awards.

Restricted stock units ("RSUs") are awarded at no cost to the recipient upon their grant. RSUs are generally granted annually and generally vest 50 percent after two years and 50 percent after three years and convert to shares of common stock at the vesting date. In addition, RSUs typically include full career eligibility provisions, which allow employees to continue to vest upon voluntary termination, subject to post-employment and other restrictions. All of these awards are subject to forfeiture until the vesting date. An RSU entitles the recipient to receive cash payments equivalent to any dividends paid on the underlying common stock during the period the RSU is outstanding.

Under the LTI Plans, stock options and SARs have been granted with an exercise price equal to the fair value of JPMorgan Chase's common stock on the grant date. The Firm typically awards SARs to certain key employees once per year, and it also periodically grants discretionary share-based payment awards to individual employees, primarily in the form of both employee stock options and SARs. The 2007 grant of SARs to key employees vests ratably over five years (i.e., 20 percent per year) and the 2006 and 2005 awards vest one-third after each of years 3, 4 and 5. These awards do not include any full career eligibility provisions and all awards generally expire 10 years after the grant date.

The Firm separately recognizes compensation expense for each tranche of each award as if it were a separate award with its own vesting date. For each tranche granted (other than grants to employees who are full career eligible at the grant date), compensation expense is recognized on a straight-line basis from the grant date until the vesting date of the respective tranche, provided that the employees will not become full career eligible during the vesting period. For each tranche granted to employees who will become full career eligible during the vesting period, compensation expense is recognized on a straight-line basis from the grant date until the earlier of the employee's full career eligibility date or the vesting date of the respective tranche.

The Firm's policy for issuing shares upon settlement of employee share-based payment awards is to issue either new shares of common stock or treasury shares. On April 17, 2007, the Board of Directors approved a stock repurchase program that authorizes the repurchase of up to $10.0 billion of the Firm's common shares, which supersedes an $8.0 billion stock repurchase program approved in 2006. The $10.0 billion authorization includes shares to be repurchased to offset issuances under the Firm's employee stock-based plans. During 2007, the Firm settled all of its employee stock-based awards by issuing treasury shares.

In December 2005, the Firm accelerated the vesting of approximately 41 million unvested, out-of-the-money employee stock options granted in 2001 under the Growth and Performance Incentive Program, which were scheduled to vest in January 2007. These options were not modified other than to accelerate vesting. The related expense was approximately $145 million, and was recognized as compensation expense in the fourth quarter of 2005. The Firm believed that at the time the options were accelerated they had limited economic value since the exercise price of the accelerated options was $51.22 and the closing price of the Firm's common stock on the effective date of the acceleration was $39.69.

RSU activity

Compensation expense for RSUs is measured based upon the number of shares granted multiplied by the stock price at the grant date, and is recognized in Net income as previously described. The following table summarizes JPMorgan Chase's RSU activity for 2007.

Year ended December 31, 2007

(in thousands, except weighted average data)	Number of Shares	Weighted-average grant date fair value
Outstanding, January 1	88,456#	$ 38.50
Granted	47,608	48.29
Vested	(30,925)	38.09
Forfeited	(6,122)	42.56
Outstanding, December 31	99,017#	$ 43.11

The total fair value of shares that vested during the years ended December 31, 2007, 2006 and 2005, was $1.5 billion, $1.3 billion and $1.1 billion, respectively.

Employee stock option and SARs activity

Compensation expense, which is measured at the grant date as the fair value of employee stock options and SARs, is recognized in Net income as described above.

The following table summarizes JPMorgan Chase's employee stock option and SARs activity for the year ended December 31, 2007, including awards granted to key employees and awards granted in prior years under broad-based plans.

Year ended December 31, 2007

(in thousands, except weighted-average data)	Number of options/SARs	Weighted-average exercise price	Weighted-average remaining contractual life (in years)	Aggregate intrinsic value
Outstanding, January 1	376,227#	$ 40.31		
Granted	21,446	46.65		
Exercised	(64,453)	34.73		
Forfeited	(1,410)	40.13		
Canceled	(5,879)	48.10		
Outstanding, December 31	325,931#	$ 41.70	4.0	$ 1,601,780
Exercisable, December 31	281,327	41.44	3.2	1,497,992

The weighted-average grant date per share fair value of stock options and SARs granted during the years ended December 31, 2007, 2006 and 2005, was $13.38, $10.99 and $10.44, respectively. The total intrinsic value of options exercised during the years ended December 31, 2007, 2006 and 2005 was $937 million, $994 million and $364 million, respectively.

Impact of adoption of SFAS 123R

During 2006, the incremental expense related to the Firm's adoption of SFAS123R was $712 million. This amount represents an accelerated noncash recognition of costs that would otherwise have been incurred in future periods. Also as a result of adopting SFAS 123R, the Firm's Income from continuing operations (pretax) for the year ended December 31, 2006, was lower by $712 million, and each of Income from continuing operations (after-tax), and Net income for the year ended December 31, 2006, was lower by $442 million, than if the Firm had continued to account for share-based compensation under APB 25 and SFAS 123. Basic and diluted earnings per share from continuing operations, as well as basic and diluted Net income per share, for the year ended December 31, 2006 were $.13 and $.12 lower, respectively, than if the Firm had not adopted SFAS 123R.

The Firm recognized noncash compensation expense related to its various employee stock-based incentive awards of $2.0 billion, $2.4 billion (including the $712 million incremental impact of adopting SFAS 123R) and $1.6 billion for the years ended December 31, 2007, 2006, and 2005, respectively, in its Consolidated statements of income. These amounts included an accrual for the estimated cost of stock awards to be granted to full career eligible employees of $500 million and $498 million for the years ended December 31, 2007 and 2006 respectively. At December 31, 2007, approximately $1.3 billion (pretax) of compensation cost related to unvested awards has not yet been charged to Net income. That cost is expected to be amortized into compensation expense over a weighted-average period of 1.4 years. The Firm does not capitalize any compensation cost related to share-based compensation awards to employees.

Cash flows and tax benefits

Prior to adopting SFAS 123R, the Firm presented all tax benefits of deductions resulting from share-based compensation awards as operating cash flows in its Consolidated statements of cash flows. Beginning in 2006, SFAS 123R requires the cash flows resulting from the tax benefits of tax deductions in excess of the compensation expense recognized for those share-based compensation awards (i.e., excess tax benefits) to be classified as financing cash flows.

The total income tax benefit related to stock-based compensation arrangements recognized in the Firm's Consolidated statements of income for the years ended December 31, 2007, 2006 and 2005, was $810 million, $947 million and $625 million, respectively.

The following table sets forth the cash received from the exercise of stock options under all share-based compensation arrangements and the actual tax benefit realized related to the tax deduction from the exercise of stock options.

Year ended December 31, (in millions)	**2007**	2006	2005
Cash received for options exercised	**$ 2,023**	$ 1,924	$ 635
Tax benefit realized	**238**	211	65

Comparison of the fair and intrinsic value measurement methods

The following table presents Net income and basic and diluted earnings per share as reported, and as if all 2005 share-based payment awards were accounted for at fair value. All 2007 and 2006 awards were accounted for at fair value.

Year ended December 31, (in millions, except per share data)	2005
Net income as reported	$ 8,483
Add: Employee stock-based compensation expense included in reported Net income, net of related tax effects	938
Deduct: Employee stock-based compensation expense determined under the fair value method for all awards, net of related tax effects	(1,015)
Pro forma Net income	$ 8,406
Earnings per share:	
Basic: As reported	$ 2.43
Pro forma	2.40
Diluted: As reported	$ 2.38
Pro forma	2.36

The following table presents the assumptions used to value employee stock options and SARs granted during the period under the Black-Scholes valuation model.

Year ended December 31,	**2007**	2006	2005
Weighted-average annualized valuation assumptions			
Risk-free interest rate	**4.78%**	5.11%	4.25%
Expected dividend yield	**3.18**	2.89	3.79
Expected common stock price volatility	**33**	23	37
Expected life (in years)	**6.8**	6.8	6.8

Prior to the adoption of SFAS 123R, the Firm used the historical volatility of its common stock price as the expected volatility assumption in valuing options. The Firm completed a review of its expected volatility assumption in 2006. Effective October 1, 2006, JPMorgan Chase began to value its employee stock options granted or modified after that date using an expected volatility assumption derived from the implied volatility of its publicly traded stock options.

The expected life assumption is an estimate of the length of time that an employee might hold an option or SAR before it is exercised or canceled. The expected life assumption was developed using historic experience.

Note 11 – Noninterest expense

Merger costs

On July 1, 2004, Bank One Corporation merged with and into JPMorgan Chase ("the Merger"). Costs associated with the Merger and the Bank of New York transaction are reflected in the Merger costs caption of the Consolidated statements of income. A summary of such costs, by expense category, is shown in the following table for 2007, 2006 and 2005.

Year ended December 31, (in millions)	**2007**	2006	2005
Expense category			
Compensation	**$ (19)**	$ 26	$ 238
Occupancy	**17**	25	(77)
Technology and communications and other	**188**	239	561
Bank of New York transaction[a]	**23**	15	—
Total[b]	**$ 209**	$ 305	$ 722

(a) Represents Compensation and Technology and communications and other.
(b) With the exception of occupancy-related write-offs, all of the costs in the table require the expenditure of cash.

The table below shows the change in the liability balance related to the costs associated with the Merger.

Year ended December 31, (in millions)	**2007**	2006	2005
Liability balance, beginning of period	**$ 155**	$ 311	$ 952
Recorded as merger costs	**186**	290	722
Recorded as goodwill	**(60)**	—	(460)
Liability utilized	**(281)**	(446)	(903)
Liability balance, end of period[a]	**$ —**	$ 155	$ 311

(a) Excludes $10 million and $21 million at December 31, 2007 and 2006, respectively, related to the Bank of New York transaction.

Note 12 – Securities

Securities are classified as AFS, Held-to-maturity ("HTM") or Trading. Trading securities are discussed in Note 6 on page 122 of this Annual Report. Securities are classified primarily as AFS when purchased as part of the Firm's management of its structural interest rate risk. AFS securities are carried at fair value on the Consolidated balance sheets. Unrealized gains and losses after any applicable SFAS 133 hedge accounting adjustments are reported as net increases or decreases to Accumulated other comprehensive income (loss). The specific identification method is used to determine realized gains and losses on AFS securities, which are included in Securities gains (losses) on the Consolidated statements of income. Securities that the Firm has the positive intent and ability to hold to maturity are classified as HTM and are carried at amortized cost on the Consolidated balance sheets. The Firm has not classified new purchases of securities as HTM for the past several years.

The following table presents realized gains and losses from AFS securities.

Year ended December 31, (in millions)	**2007**	2006	2005
Realized gains	**$ 667**	$ 399	$ 302
Realized losses	**(503)**	(942)	(1,638)
Net realized Securities gains (losses)[a]	**$ 164**	$ (543)	$ (1,336)

(a) Proceeds from securities sold were within approximately 2% of amortized cost.

The amortized cost and estimated fair value of AFS and HTM securities were as follows for the dates indicated.

	2007				2006			
December 31, (in millions)	Amortized cost	Gross unrealized gains	Gross unrealized losses	Fair value	Amortized cost	Gross unrealized gains	Gross unrealized losses	Fair value

Other	1,556	1	82	1	1,638	2
Total securities with gross unrealized losses	$25,254	$304	$ 9,562	$242	$34,816	$ 546

Impairment of AFS securities is evaluated considering numerous factors, and their relative significance varies case-by-case. Factors considered include the length of time and extent to which the market value has been less than cost; the financial condition and near-term prospects of the issuer of a security; and the Firm's intent and ability to retain the security in order to allow for an anticipated recovery in fair value. If, based upon an analysis of each of the above factors, it is determined that the impairment is other-than-temporary, the carrying value of the security is written down to fair value, and a loss is recognized through earnings.

Included in the $172 million of gross unrealized losses on AFS securities at December 31, 2007, was $98 million of unrealized losses that have existed for a period greater than 12 months. These securities are predominately rated AAA and the unrealized losses are primarily due to overall increases in market interest rates and not concerns regarding the underlying credit of the issuers. The majority of the securities with unrealized losses aged greater than 12 months are obligations of U.S. government-sponsored enterprises and have a fair value at December 31, 2007, that is within 4% of their amortized cost basis.

Due to the issuers' continued satisfaction of their obligations under the contractual terms of the securities, the Firm's evaluation of the fundamentals of the issuers' financial condition and other objective evidence, and the Firm's consideration of its intent and ability to hold the securities for a period of time sufficient to allow for the anticipated recovery in the market value of the securities, the Firm believes that these securities were not other-than-temporarily impaired as of December 31, 2007 and 2006.

The following table presents the amortized cost, estimated fair value and average yield at December 31, 2007, of JPMorgan Chase's AFS and HTM securities by contractual maturity.

By remaining maturity at December 31, 2007 (in millions, except rates)	Available-for-sale securities			Held-to-maturity securities		
	Amortized cost	Fair value	Average yield[b]	Amortized cost	Fair value	Average yield[b]
Due in one year or less	$ 6,669	$ 6,673	4.28%	$ —	$ —	—%
Due after one year through five years	6,264	6,280	3.63	—	—	—
Due after five years through 10 years	1,315	1,286	4.66	40	41	6.88
Due after 10 years[a]	70,540	71,167	5.57	4	4	6.07
Total securities	$ 84,788	$ 85,406	5.31%	$ 44	$ 45	6.81%

(a) Includes securities with no stated maturity. Substantially all of the Firm's mortgage-backed securities and collateralized mortgage obligations are due in 10 years or more based upon contractual maturity. The estimated duration, which reflects anticipated future prepayments based upon a consensus of dealers in the market, is approximately four years for mortgage-backed securities and collateralized mortgage obligations.
(b) The average yield is based upon amortized cost balances at year-end. Yields are derived by dividing interest income by total amortized cost. Taxable-equivalent yields are used where applicable.

Note 13 – Securities financing activities

JPMorgan Chase enters into resale agreements, repurchase agreements, securities borrowed transactions and securities loaned transactions, primarily to finance the Firm's inventory positions, acquire securities to cover short positions and settle other securities obligations. The Firm also enters into these transactions to accommodate customers' needs.

Resale agreements and repurchase agreements are generally treated as collateralized financing transactions carried on the Consolidated balance sheets at the amounts the securities will be subsequently sold or repurchased, plus accrued interest. On January 1, 2007, pursuant to the adoption of SFAS 159, the Firm elected fair value measurement for certain resale and repurchase agreements. For a further discussion of SFAS 159, see Note 5 on pages 119–121 of this Annual Report. These agreements continue to be reported within Securities purchased under resale agreements and Securities sold under repurchase agreements on the Consolidated balance sheets. Generally for agreements carried at fair value, current period interest accruals are recorded within Interest income and Interest expense with changes in fair value reported in Principal transactions revenue. However, for financial instruments containing embedded derivatives that would be separately accounted for in accordance with SFAS 133, all changes in fair value, including any interest elements, are reported in Principal transactions revenue. Where appropriate, resale and repurchase agreements with the same counterparty are reported on a net basis in accordance with FIN 41. JPMorgan Chase takes possession of securities purchased under resale agreements. On a daily basis, JPMorgan Chase monitors the market value of the underlying collateral, primarily U.S. and non-U.S. government and agency securities that it has received from its counterparties, and requests additional collateral when necessary.

Transactions similar to financing activities that do not meet the SFAS 140 definition of a repurchase agreement are accounted for as "buys" and "sells" rather than financing transactions. These transactions are accounted for as a purchase (sale) of the underlying securities with a forward obligation to sell (purchase) the securities. The forward purchase (sale) obligation, a derivative, is recorded on the Consolidated balance sheets at its fair value, with changes in fair value recorded in Principal transactions revenue.

Securities borrowed and securities lent are recorded at the amount of cash collateral advanced or received. Securities borrowed consist primarily of government and equity securities. JPMorgan Chase monitors the market value of the securities borrowed and lent on a daily basis and calls for additional collateral when appropriate. Fees received or paid are recorded in Interest income or Interest expense.

December 31, (in millions)	**2007**	2006
Securities purchased under resale agreements[a]	**$169,305**	$122,479
Securities borrowed	**84,184**	73,688
Securities sold under repurchase agreements[b]	**$126,098**	$143,253
Securities loaned	**10,922**	8,637

(a) Included resale agreements of $19.1 billion accounted for at fair value at December 31, 2007.
(b) Included repurchase agreements of $5.8 billion accounted for at fair value at December 31, 2007.

JPMorgan Chase pledges certain financial instruments it owns to collateralize repurchase agreements and other securities financings. Pledged securities that can be sold or repledged by the secured party are identified as financial instruments owned (pledged to various parties) on the Consolidated balance sheets.

At December 31, 2007, the Firm had received securities as collateral that could be repledged, delivered or otherwise used with a fair value of approximately $357.6 billion. This collateral was generally obtained under resale or securities borrowing agreements. Of these securities, approximately $333.7 billion were repledged, delivered or otherwise used, generally as collateral under repurchase agreements, securities lending agreements or to cover short sales.

Note 14 – Loans

The accounting for a loan may differ based upon the type of loan and/or its use in an investing or trading strategy. The measurement framework for Loans in the consolidated financial statements is one of the following:

- At the principal amount outstanding, net of the Allowance for loan losses, unearned income and any net deferred loan fees for loans held-for-investment;
- At the lower of cost or fair value, with valuation changes recorded in Noninterest revenue for loans that are classified as held-for-sale; or
- At fair value, with changes in fair value recorded in Noninterest revenue for loans classified as Trading assets or risk managed on a fair value basis.

See Note 5 on pages 119–121 of this Annual Report for further information on the Firm's elections of fair value accounting under SFAS 159. See Note 6 on page 122 of this Annual Report for further information on loans carried at fair value and classified as trading assets.

Interest income is recognized using the interest method, or on a basis approximating a level rate of return over the term of the loan.

Loans within the held-for-investment portfolio that management decides to sell are transferred to the held-for-sale portfolio. Transfers to held-for-sale are recorded at the lower of cost or fair value on the date of transfer. Losses attributed to credit losses are charged off to the Allowance for loan losses and losses due to changes in interest rates, or exchange rates, are recognized in Noninterest revenue.

Nonaccrual loans are those on which the accrual of interest is discontinued. Loans (other than certain consumer loans discussed below) are placed on nonaccrual status immediately if, in the opinion of management, full payment of principal or interest is in doubt, or when principal or interest is 90 days or more past due and collateral, if any, is insufficient to cover principal and interest. Interest accrued but not collected at the date a loan is placed on nonaccrual status is reversed against Interest income. In addition, the amortization of net deferred loan fees is suspended. Interest income on nonaccrual loans is recognized only to the extent it is received in cash. However, where there is doubt regarding the ultimate collectibility of loan principal, all cash thereafter received is applied to reduce the carrying value of such loans. Loans are restored to accrual status only when interest and principal payments are brought current and future payments are reasonably assured. Loans are charged off to the Allowance for loan losses when it is highly certain that a loss has been realized.

Consumer loans are generally charged to the Allowance for loan losses upon reaching specified stages of delinquency, in accordance with the Federal Financial Institutions Examination Council policy. For example, credit card loans are charged off by the end of the month in which the account becomes 180 days past due or within 60 days from receiving notification of the filing of bankruptcy, whichever is earlier. Residential mortgage products are generally charged off to net realizable value at no later than180 days past due. Other consumer products, if collateralized, are generally charged off to net realizable value at 120 days past due. Accrued interest on residential mortgage products, automobile financings, education financings and certain other consumer loans are accounted for in accordance with the nonaccrual loan policy discussed in the preceding paragraph. Interest and fees related to credit card loans continue to accrue until the loan is charged off or paid in full. Accrued interest on all other consumer loans is generally reversed against Interest income when the loan is charged off. A collateralized loan is considered an in-substance foreclosure and is reclassified to assets acquired in loan satisfactions, within Other assets, only when JPMorgan Chase has taken physical possession of the collateral, regardless of whether formal foreclosure proceedings have taken place.

The composition of the loan portfolio at each of the dates indicated was as follows.

December 31, (in millions)	**2007**	2006
U.S. wholesale loans:		
Commercial and industrial	**$ 97,347**	$ 77,788
Real estate	**13,388**	14,237
Financial institutions	**14,760**	14,103
Lease financing	**2,353**	2,608
Other	**5,405**	9,950
Total U.S. wholesale loans	**133,253**	118,686
Non-U.S. wholesale loans:		
Commercial and industrial	**59,153**	43,428
Real estate	**2,110**	1,146
Financial institutions	**17,225**	19,163
Lease financing	**1,198**	1,174
Other	**137**	145
Total non-U.S. wholesale loans	**79,823**	65,056
Total wholesale loans:[(a)]		
Commercial and industrial	**156,500**	121,216
Real estate[(b)]	**15,498**	15,383
Financial institutions	**31,985**	33,266
Lease financing	**3,551**	3,782
Other	**5,542**	10,095
Total wholesale loans	**213,076**	183,742
Total consumer loans:[(c)]		
Home equity	**94,832**	85,730
Mortgage	**56,031**	59,668
Auto loans and leases	**42,350**	41,009
Credit card[(d)]	**84,352**	85,881
Other	**28,733**	27,097
Total consumer loans	**306,298**	299,385
Total loans[(e)(f)]	**$ 519,374**	$483,127
Memo:		
Loans held-for-sale	**$ 18,899**	$ 55,251
Loans at fair value	**8,739**	—
Total loans held-for-sale and loans at fair value	**$ 27,638**	$ 55,251

(a) Includes Investment Bank, Commercial Banking, Treasury & Securities Services and Asset Management.
(b) Represents credits extended for real estate–related purposes to borrowers who are primarily in the real estate development or investment businesses and for which the primary repayment is from the sale, lease, management, operations or refinancing of the property.
(c) Includes Retail Financial Services, Card Services and the Corporate segment.
(d) Includes billed finance charges and fees net of an allowance for uncollectible amounts.
(e) Loans (other than those for which SFAS 159 fair value option has been elected) are presented net of unearned income and net deferred loan fees of $1.0 billion and $1.3 billion at December 31, 2007 and 2006, respectively.
(f) As a result of the adoption of SFAS 159, certain loans are accounted for at fair value and reported in Trading assets and therefore, such loans are no longer included in loans at December 31, 2007.

The following table reflects information about the Firm's loan sales.

Year ended December 31, (in millions)	**2007**	2006[b]	2005[b]
Net gains/(losses) on sales of loans (including lower of cost or fair value adjustments)[a]	**$ 99**	$ 672	$ 464

(a) Excludes sales related to loans accounted for at fair value.
(b) Prior periods have been revised to reflect the current presentation.

Impaired loans

JPMorgan Chase accounts for and discloses nonaccrual loans as impaired loans and recognizes their interest income as discussed previously for nonaccrual loans. The following are excluded from impaired loans: small-balance, homogeneous consumer loans; loans carried at fair value or the lower of cost or fair value; debt securities; and leases.

The table below sets forth information about JPMorgan Chase's impaired loans. The Firm primarily uses the discounted cash flow method for valuing impaired loans.

December 31, (in millions)	**2007**	2006
Impaired loans with an allowance	**$ 782**	$ 623
Impaired loans without an allowance[a]	**28**	66
Total impaired loans	**$ 810**	$ 689
Allowance for impaired loans under SFAS 114[b]	**224**	153

(a) When the discounted cash flows, collateral value or market price equals or exceeds the carrying value of the loan, then the loan does not require an allowance under SFAS 114.
(b) The allowance for impaired loans under SFAS 114 is included in JPMorgan Chase's Allowance for loan losses.

Year ended December 31, (in millions)	**2007**	2006	2005
Average balance of impaired loans during the period	**$ 645**	$ 990	$ 1,478
Interest income recognized on impaired loans during the period	**—**	2	5

Note 15 – Allowance for credit losses

JPMorgan Chase's Allowance for loan losses covers the wholesale (risk-rated) and consumer (scored) loan portfolios and represents management's estimate of probable credit losses inherent in the Firm's loan portfolio. Management also computes an allowance for wholesale lending-related commitments using a methodology similar to that used for the wholesale loans.

The Allowance for loan losses includes an asset-specific component and a formula-based component. The asset-specific component relates to provisions for losses on loans considered impaired and measured pursuant to SFAS 114. An allowance is established when the discounted cash flows (or collateral value or observable market price) of the loan is lower than the carrying value of that loan. To compute the asset-specific component of the allowance, larger impaired loans are evaluated individually, and smaller impaired loans are evaluated as a pool using historical loss experience for the respective class of assets.

The formula-based component covers performing wholesale and consumer loans. It is based on a statistical calculation, which is adjusted to take into consideration model imprecision, external factors and current economic events that have occurred but are not yet reflected in the factors used to derive the statistical calculation. The statistical calculation is the product of probability of default ("PD") and loss given default ("LGD"). For risk-rated loans (generally loans originated by the wholesale lines of business), these factors are differentiated by risk rating and maturity. PD estimates are based on observable external data, primarily credit-rating agency default statistics. LGD estimates are based on a study of actual credit losses over more than one credit cycle. For scored loans (generally loans originated by the consumer lines of business), loss is primarily determined by applying statistical loss factors and other risk indicators to pools of loans by asset type.

Management applies its judgment within estimated ranges to adjust the statistical calculation. Where adjustments are made to the statistical calculation for the risk-rated portfolios, the estimated ranges and the determination of the appropriate point within the range are based upon management's view of the quality of underwriting standards, relevant internal factors affecting the credit quality of the current portfolio and external factors such as current macroeconomic and political conditions that have occurred but are not yet reflected in the loss factors. Factors related to concentrated and deteriorating industries are also incorporated into the calculation where relevant. Adjustments to the statistical calculation for the scored loan portfolios are accomplished in part by analyzing the historical loss experience for each major product segment. The estimated ranges and the determination of the appropriate point within the range are based upon management's view of uncertainties that relate to current macroeconomic and political conditions, the quality of underwriting standards, and other relevant internal and external factors affecting the credit quality of the portfolio.

The Allowance for lending-related commitments represents management's estimate of probable credit losses inherent in the Firm's process of extending credit. Management establishes an asset-specific allowance for lending-related commitments that are considered impaired and computes a formula-based allowance for performing wholesale lending-related commitments. These are computed using a methodology similar to that used for the wholesale loan portfolio, modified for expected maturities and probabilities of drawdown.

At least quarterly, the allowance for credit losses is reviewed by the Chief Risk Officer, the Chief Financial Officer and the Controller of the Firm and discussed with the Risk Policy and Audit Committees of the Board of Directors of the Firm. As of December 31, 2007, JPMorgan Chase deemed the allowance for credit losses to be appropriate (i.e., sufficient to absorb losses that are inherent in the portfolio, including those not yet identifiable).

The table below summarizes the changes in the Allowance for loan losses.

Year ended December 31, (in millions)	2007	2006	2005
Allowance for loan losses at January 1	**$ 7,279**	$ 7,090	$ 7,320
Cumulative effect of change in accounting principles[a]	**(56)**	—	—
Allowance for loan losses at January 1, adjusted	**7,223**	7,090	7,320
Gross charge-offs	**(5,367)**	(3,884)	(4,869)
Gross recoveries	**829**	842	1,050
Net charge-offs	**(4,538)**	(3,042)	(3,819)
Provision for loan losses	**6,538**	3,153	3,575
Other[b]	**11**	78	14
Allowance for loan losses at December 31	**$ 9,234**	$ 7,279	$ 7,090
Components:			
Asset-specific[c]	**$ 188**	$ 118	$ 247
Formula-based[c]	**9,046**	7,161	6,843
Total Allowance for loan losses	**$ 9,234**	$ 7,279	$ 7,090

(a) Reflects the effect of the adoption of SFAS 159 at January 1, 2007. For a further discussion of SFAS 159, see Note 5 on pages 119–121of this Annual Report.
(b) 2006 amount primarily relates to loans acquired in the Bank of New York transaction.
(c) Prior periods have been revised to reflect current presentation.

The table below summarizes the changes in the Allowance for lending-related commitments.

Year ended December 31, (in millions)	2007	2006	2005
Allowance for lending-related commitments at January 1	**$ 524**	$ 400	$ 492
Provision for lending-related commitments	**326**	117	(92)
Other[a]	**—**	7	—
Allowance for lending-related commitments at December 31	**$ 850**	$ 524	$ 400
Components:			
Asset-specific	**$ 28**	$ 33	$ 60
Formula-based	**822**	491	340
Total Allowance for lending-related commitments	**$ 850**	$ 524	$ 400

(a) 2006 amount relates to the Bank of New York transaction.

Note 16 – Loan securitizations

JPMorgan Chase securitizes and sells a variety of its consumer and wholesale loans, including warehouse loans that are classified in Trading assets. Consumer activities include securitizations of residential real estate, credit card, automobile and education loans that are originated or purchased by RFS and Card Services ("CS"). Wholesale activities include securitizations of purchased residential real estate loans and commercial loans (primarily real estate–related) originated by the IB.

JPMorgan Chase–sponsored securitizations utilize SPEs as part of the securitization process. These SPEs are structured to meet the definition of a QSPE (as discussed in Note 1 on page 108 of this Annual Report); accordingly, the assets and liabilities of securitization-related QSPEs are not reflected in the Firm's Consolidated balance sheets (except for retained interests, as described below) but are included on the balance sheet of the QSPE purchasing the assets. The primary purpose of these vehicles is to meet investor needs and to generate liquidity for the Firm through the sale of loans to the QSPEs. Assets held by JPMorgan Chase-sponsored securitization-related QSPEs as of December 31, 2007 and 2006, were as follows.

December 31, (in billions)	2007	2006
Consumer activities		
Credit card	**$ 92.7**	$ 86.4
Auto	**2.3**	4.9
Residential mortgage:		
Prime[a]	**51.1**	34.3
Subprime	**10.6**	6.4
Education loans	**1.1**	—
Wholesale activities		
Residential mortgage:		
Prime[a]	**20.5**	18.1
Subprime	**13.1**	25.7
Commercial and other[b][c]	**109.6**	87.1
Total	**$ 301.0**	$ 262.9

(a) Includes Alt-A loans.
(b) Cosponsored securitizations include non-JPMorgan Chase originated assets.
(c) Commercial and other consists of commercial loans (primarily real estate) and non-mortgage consumer receivables purchased from third parties.

The Firm records a loan securitization as a sale when the accounting criteria for a sale are met. Those criteria are: (1) the transferred assets are legally isolated from the Firm's creditors; (2) the entity can pledge or exchange the financial assets or, if the entity is a QSPE, its investors can pledge or exchange their interests; and (3) the Firm does not maintain effective control to repurchase the transferred assets before their maturity or have the ability to unilaterally cause the holder to return the transferred assets.

For loan securitizations that meet the accounting sales criteria, the gains or losses recorded depend, in part, on the carrying amount of the loans sold and are allocated between the loans sold and the retained interests, based upon their relative fair values at the date of sale. Gains on securitizations are reported in Noninterest revenue. When quoted market prices for the retained interests are not available, the Firm estimates the fair value for these retained interests by determining the present value of future expected cash flows using modeling techniques. Such models incorporate management's best estimates of key variables, such as expected credit losses, prepayment speeds and the discount rates appropriate for the risks involved.

Interests in the securitized loans may be retained by the Firm in the form of senior or subordinated interest-only strips, senior and subordinated tranches and escrow accounts. The classification of retained interests is dependent upon several factors, including the type of interest (e.g., whether the retained interest is represented by a security certificate) and when it was retained, due to the adoption of SFAS 155. The Firm has elected to fair value all interests in securitized loans retained after December 31, 2005, that have an embedded derivative required to be bifurcated under SFAS 155; these retained interests are classified primarily as Trading assets. Retained interests related to wholesale securitization activities are classified as Trading assets. Prior to the adoption of SFAS 155, for consumer activities, senior and subordinated retained interests represented by a security certificate were classified as AFS; retained interests not represented by a security certificate were classified in Other assets.

For those retained interests that are subject to prepayment risk (such that JPMorgan Chase may not recover substantially all of its investment) but are not required to be bifurcated under SFAS 155, the retained interests are recorded at fair value; subsequent adjustments are reflected in earnings or in Other comprehensive income (loss). Retained interests classified as AFS are subject to the impairment provisions of EITF 99-20.

Credit card securitization trusts require the Firm to maintain a minimum undivided interest in the trusts, representing the Firm's interests in the receivables transferred to the trust that have not been securitized. These seller's interests are not represented by security certificates. The Firm's undivided interests are carried at historical cost and are classified in Loans.

2007, 2006 and 2005 Securitization activity

The following tables summarize new securitization transactions that were completed during 2007, 2006 and 2005; the resulting gains arising from such securitizations; certain cash flows received from such securitizations; and the key economic assumptions used in measuring the retained interests (if any) other than residential MSRs (for a discussion of residential MSRs, see Note 18 on pages 154–157 of this Annual Report), as of the dates of such sales.

Servicing fees collected	94	4	17	—	—	—	—	—
Other cash flows received	298	—	—	—	—	—	—	3
Proceeds from collections reinvested in revolving securitizations	129,696	—	—	—	—	—	—	—
Key assumptions (rates per annum):								
Prepayment rate[a]	16.7–20.0% PPR	1.5% ABS	9.1-12.1% CPR				22.0–43.0% CPR	0.0–50.0% CPR
Weighted-average life (in years)	0.4–0.5	1.4–1.5	5.6-6.7				1.4–2.6	1.0–4.4
Expected credit losses	4.7–5.7%	0.6–0.7%	—%[e]				0.6–2.0%	—%[e]
Discount rate	12.0%	6.3–7.3%	13.0-13.3%				16.0–18.5%	0.6–0.9%

(a) PPR: principal payment rate; ABS: absolute prepayment speed; CPR: constant prepayment rate.
(b) The auto securitization gain of $9 million does not include the write-down of loans transferred to held-for-sale in 2005 and risk management activities intended to protect the economic value of the loans while held-for-sale.
(c) Includes Alt-A loans.
(d) As of January 1, 2007, the Firm adopted the fair value election for the IB warehouse and a portion of the RFS mortgage warehouse. The carrying value of these loans accounted for at fair value approximates the proceeds received from securitization.
(e) Expected credit losses for prime residential mortgage, education and certain wholesale securitizations are minimal and are incorporated into other assumptions.
(f) Interests in subprime residential mortgage securitizations for consumer activities are held by the Investment Bank and the key assumptions used in measuring these retailed interests are reported under subprime residential mortgages for wholesale activities.

In addition to the amounts reported for securitization activity in the preceding table, the Firm sold residential mortgage loans totaling $81.8 billion, $53.7 billion and $52.5 billion during 2007, 2006 and 2005, respectively, primarily for securitization by the Government National Mortgage Association ("GNMA"), Federal National Mortgage Association ("FNMA") and Federal Home Loan Mortgage Corporation ("Freddie Mac"); these sales resulted in pretax gains of $47 million, $251 million and $293 million, respectively.

Retained servicing

JPMorgan Chase retains servicing responsibilities for all originated and for certain purchased residential mortgage, credit card and automobile loan securitizations and for certain commercial activity securitizations it sponsors, and receives servicing fees based upon the securitized loan balance plus certain ancillary fees. The Firm also retains the right to service the residential mortgage loans it sells to GNMA, FNMA and Freddie Mac. For a discussion of mortgage servicing rights, see Note 18 on pages 154–157 of this Annual Report.

The Firm provides mortgage servicing on a recourse and nonrecourse basis. In nonrecourse servicing, the principal credit risk to the Firm is the cost of temporary servicing advances of funds (i.e., normal servicing advances). In recourse servicing, the servicer agrees to share credit risk with the owner of the mortgage loans such as FNMA or Freddie Mac or with a private investor, insurer or guarantor. Losses on recourse servicing occur primarily when foreclosure sale proceeds of the property underlying a defaulted mortgage are less than the outstanding principal balance and accrued interest of the loan and the cost of holding and disposing of the underlying property. The Firm's mortgage loan securitizations are primarily nonrecourse, thereby effectively transferring the risk of future credit losses to the purchaser of the securities issued by the trust. As of December 31, 2007 and 2006, the amount of recourse obligations totaled $557 million and $649 million, respectively.

Retained securitizations interest

At both December 31, 2007 and 2006, the Firm had, with respect to its credit card master trusts, $18.6 billion and $19.3 billion, respectively, related to undivided interests, and $2.7 billion and $2.5 billion, respectively, related to subordinated interests in accrued interest and fees on the securitized receivables, net of an allowance for uncollectible amounts. Credit card securitization trusts require the Firm to maintain a minimum undivided interest of 4% to 12% of the principal receivables in the trusts. The Firm maintained an average undivided interest in principal receivables in the trusts of approximately 19% for 2007 and 21% for 2006. The Firm also maintains escrow accounts up to predetermined limits for some credit card, automobile and education securitizations to cover the unlikely event of deficiencies in cash flows owed to investors. The amounts available in such escrow accounts are recorded in Other assets and, as of December 31, 2007, amounted to $97 million, $21 million and $3 million for credit card, automobile and education securitizations, respectively; as of December 31, 2006, these amounts were $153 million and $56 million for credit card and automobile securitizations, respectively.

The following table summarizes other retained securitization interests, which are primarily subordinated or residual interests, and are carried at fair value on the Firm's Consolidated balance sheets.

December 31, (in millions)	**2007**	2006
Consumer activities		
Credit card[a][b]	**$ 887**	$ 833
Auto[a][c]	**85**	168
Residential mortgage[a]:		
Prime[d]	**128**	43
Subprime	**93**	112
Education loans	**55**	—
Wholesale activities[e][f]		
Residential mortgages:		
Prime[d]	**253**	204
Subprime	**294**	828
Commercial and other	**42**	117
Total[g]	**$ 1,837**	$2,305

(a) Pretax unrealized gains/(losses) recorded in Stockholders' equity that relate to retained securitization interests on consumer activities totaled $(14) million and $3 million for credit card; $3 million and $4 million for automobile and $44 million and $51 million for residential mortgage at December 31, 2007 and 2006, respectively.

(b) The credit card retained interest amount noted above includes subordinated securities retained by the Firm totaling $284 million and $301 million at December 31, 2007 and 2006, respectively, that are classified as AFS securities. The securities are valued using quoted market prices and therefore are not included in the key economic assumptions and sensitivities table that follows.

(c) In addition to these auto retained interests, the Firm had $188 million of senior securities at December 31, 2006, that were classified as AFS securities. These securities were valued using quoted market prices and therefore were not included in the key economic assumption and sensitivities table that follows. The Firm did not have any such securities at December 31, 2007.

(d) Includes Alt-A loans.

(e) In addition to these wholesale retained interests, the Firm also retained subordinated securities totaling $22 million and $23 million at December 31, 2007 and 2006, respectively, predominately from resecuritizations activities that are classified as Trading assets. These securities are valued using quoted market prices and therefore are not included in the key assumptions and sensitivities table that follows.

(f) Some consumer activities securitization interests are retained by the Investment Bank and reported under Wholesale activities.

(g) In addition to the retained interests described above, the Firm also held investment-grade interests of $9.7 billion and $3.1 billion at December 31, 2007 and 2006, respectively, that the Firm expects to sell to investors in the normal course of its underwriting activity or that are purchased in connection with secondary market-making activities.

The table below outlines the key economic assumptions used to determine the fair value of the Firm's retained interests other than residential MSRs (for a discussion of residential MSRs, see Note 18 on pages 154–157 of this Annual Report) in its securitizations at December 31, 2007 and 2006, respectively; and it outlines the sensitivities of those fair values to immediate 10% and 20% adverse changes in those assumptions.

(a) PPR: principal payment rate; ABS: absolute prepayment speed; CPR: constant prepayment rate.
(b) Expected credit losses for prime residential mortgage, education loans and certain wholesale securitizations are minimal and are incorporated into other assumptions.
(c) Includes Alt-A loans.
(d) Residual interests from subprime mortgage Net Interest Margin securitizations are valued using a 30% discount rate.
(e) Prepayment risk on certain wholesale retained interests for commercial and other are minimal and are incorporated into other assumptions.

The sensitivity analysis in the preceding table is hypothetical. Changes in fair value based upon a 10% or 20% variation in assumptions generally cannot be extrapolated easily because the relationship of the change in the assumptions to the change in fair value may not be linear. Also, in the table, the effect that a change in a particular assumption may have on the fair value is calculated without changing any other assumption. In reality, changes in one factor may result in changes in another, which might counteract or magnify the sensitivities.

Expected static-pool net credit losses include actual incurred losses plus projected net credit losses, divided by the original balance of the outstandings comprising the securitization pool. The table below displays the expected static-pool net credit losses for 2007, 2006 and 2005, based upon securitizations occurring in that year.

	Loans securitized in:[a]					
	2007		2006		2005	
	Residential mortgage[b]	Auto	Residential mortgage[b]	Auto	Residential mortgage[b]	Auto
December 31, 2007	**7.8%**	**NA**	16.1%	0.7%	11.6%	0.5%
December 31, 2006	**NA**	**NA**	4.4	0.6	3.5	0.7
December 31, 2005	**NA**	**NA**	NA	NA	3.3	0.9

(a) Static-pool losses are not applicable to credit card securitizations due to their revolving nature.
(b) Primarily includes subprime residential mortgages securitized as part of wholesale activities. Expected losses for prime residential mortgage securitizations are minimal for consumer activities.

The table below presents information about delinquencies, net charge-offs (recoveries) and components of reported and securitized financial assets at December 31, 2007 and 2006 (see footnote (c) below).

	Total Loans		Nonaccrual and 90 days or more past due[e]		Net loan charge-offs (recoveries) Year ended	
December 31, (in millions)	**2007**	2006	**2007**	2006	**2007**	2006

Total loans securitized[b]	**112,817**	120,854	**4,395**	1,713	**2,814**	2,298
Total loans reported and securitized[c]	**$ 632,191**[d]	$ 603,981	**$ 9,603**	$ 5,154	**$ 7,352**	$ 5,340

(a) Includes Alt-A loans.
(b) Total assets held in securitization-related SPEs were $301.0 billion and $262.9 billion at December 31, 2007 and 2006, respectively. The $112.8 billion and $120.9 billion of loans securitized at December 31, 2007 and 2006, respectively, excludes $168.1 billion and $122.5 billion of securitized loans, in which the Firm's only continuing involvement is the servicing of the assets; $18.6 billion and $19.3 billion of seller's interests in credit card master trusts; and $1.5 billion and $256 million of escrow accounts and other assets, respectively.
(c) Represents both loans on the Consolidated balance sheets and loans that have been securitized, but excludes loans for which the Firm's only continuing involvement is servicing of the assets.
(d) Includes securitized loans that were previously recorded at fair value and classified as Trading assets.
(e) Includes nonperforming loans held-for-sale of $45 million and $120 million at December 31, 2007 and 2006, respectively.
(f) Excludes nonperforming assets related to (i) loans eligible for repurchase as well as loans repurchased from GNMA pools that are insured by U.S. government agencies of $1.5 billion and $1.2 billion at December 31, 2007 and 2006, respectively, and (ii) education loans that are 90 days past due and still accruing, which are insured by U.S. government agencies under the Federal Family Education Loan Program of $279 million and $219 million at December 31, 2007 and 2006, respectively. These amounts for GNMA and education loans are excluded, as reimbursement is proceeding normally.

Subprime adjustable-rate mortgage loan modifications

See the Glossary of Terms on page 183 of this Annual Report for the Firm's definition of subprime loans. Within the confines of the limited decision-making abilities of a QSPE under SFAS 140, the operating documents that govern existing subprime securitizations generally authorize the servicer to modify loans for which default is reasonably foreseeable, provided that the modification is in the best interests of the QSPE's beneficial interest holders, and would not result in a REMIC violation.

In December 2007, the American Securitization Forum ("ASF") issued the "Streamlined Foreclosure and Loss Avoidance Framework for Securitized Subprime Adjustable Rate Mortgage Loans" ("the Framework"). The Framework provides guidance for servicers to streamline evaluation procedures for borrowers with certain subprime adjustable rate mortgage ("ARM") loans to more efficiently provide modifications of such loans with terms that are more appropriate for the individual needs of such borrowers. The Framework applies to all first-lien subprime ARM loans that have a fixed rate of interest for an initial period of 36 months or less, are included in securitized pools, were originated between January 1, 2005, and July 31, 2007, and have an initial interest rate reset date between January 1, 2008, and July 31, 2010 ("ASF Framework Loans").

The Framework categorizes the population of ASF Framework Loans into three segments. Segment 1 includes loans where the borrower is current and is likely to be able to refinance into any available mortgage product. Segment 2 includes loans where the borrower is current, is unlikely to be able to refinance into any readily available mortgage industry product and meets certain defined criteria. Segment 3 includes loans where the borrower is not current, as defined, and does not meet the criteria for Segments 1 or 2.

ASF Framework Loans in Segment 2 of the Framework are eligible for fast-track modification under which the interest rate will be kept at the existing initial rate, generally for five years following the interest rate reset date. The Framework indicates that for Segment 2 loans, JPMorgan Chase, as servicer, may presume that the borrower will be unable to make payments pursuant to the original terms of the borrower's loan after the initial interest rate reset date. Thus, the Firm may presume that a default on that loan by the borrower is reasonably foreseeable unless the terms of the loan are modified. JPMorgan Chase has adopted the loss mitigation approaches under the Framework for securitized subprime loans that meet the specific Segment 2 screening criteria, and it expects to begin modifying Segment 2 loans by the end of the first quarter of 2008. The Firm believes that the adoption of the Framework will not affect the off-balance sheet accounting treatment of JPMorgan Chase-sponsored QSPEs that hold Segment 2 subprime loans.

The total amount of assets owned by Firm-sponsored QSPEs that hold ASF Framework Loans (including those loans that are not serviced by the Firm) as of December 31, 2007, was $20.0 billion. Of this amount, $9.7 billion relates to ASF Framework Loans serviced by the Firm. Based on current economic conditions, the Firm estimates that approximately 20%, 10% and 70% of the ASF Framework Loans it services that are owned by Firm-sponsored QSPEs will fall within Segments 1, 2 and 3, respectively. This estimate could change substantially as a result of unanticipated changes in housing values, economic conditions, investor/borrower behavior and other factors.

The total principal amount of beneficial interests issued by Firm-sponsored securitizations that hold ASF Framework Loans as of December 31, 2007, was as follows.

December 31, 2007 (in millions)	**2007**
Third-party	$19,636
Retained interest	412
Total	$20,048

Note 17 – Variable interest entities

Refer to Note 1 on page 108 of this Annual Report for a further description of JPMorgan Chase's policies regarding consolidation of variable interest entities.

JPMorgan Chase's principal involvement with VIEs occurs in the following business segments:

- Investment Bank: Utilizes VIEs to assist clients in accessing the financial markets in a cost-efficient manner. The IB is involved with VIEs through multi-seller conduits and for investor intermediation purposes as discussed below. The IB also securitizes loans through QSPEs, to create asset-backed securities, as further discussed in Note 16 on pages 139–145 of this Annual Report.
- Asset Management ("AM"): Provides investment management services to a limited number of the Firm's mutual funds deemed VIEs. AM earns a fixed fee based upon assets managed; the fee varies with each fund's investment objective and is competitively priced. For the limited number of funds that qualify as VIEs, AM's relationships with such funds are not considered significant variable interests under FIN 46R.
- Treasury & Securities Services: Provides services to a number of VIEs which are similar to those provided to non-VIEs. TSS earns market-based fees for the services it provides. The relationships resulting from TSS' services are not considered to be significant variable interests under FIN 46R.
- Commercial Banking ("CB"): Utilizes VIEs to assist clients in accessing the financial markets in a cost-efficient manner. This is often accomplished through the use of products similar to those offered in the IB. CB may assist in the structuring and/or ongoing administration of these VIEs and may provide liquidity, letters of credit and/or derivative instruments in support of the VIE. The relationships resulting from CB's services are not considered to be significant variable interests under FIN 46R.
- The Private Equity business, included in Corporate, may be involved with entities that could be deemed VIEs. Private equity activities are accounted for in accordance with the AICPA Audit and Accounting Guide *Investment Companies* (the "Guide"). In June 2007, the AICPA issued SOP 07-1, which provides guidance for determining whether an entity is within the scope of the Guide, and therefore qualifies to use the Guide's specialized accounting principles (referred to as "investment company accounting"). In May 2007, the FASB issued FSP FIN 46(R)-7, which amends FIN 46R to permanently exempt entities within the scope of the Guide from applying the provisions of FIN 46R to their investments. In February 2008, the FASB agreed to an indefinite delay of the effective date of SOP 07-1 in order to address implementation issues, which effectively delays FSP FIN 46(R)-7 as well for those companies, such as the Firm, that have not adopted SOP 07-1. Had FIN 46R been applied to VIEs subject to this deferral, the impact would have been immaterial to the Firm's consolidated financial statements as of December 31, 2007.

As noted above, the IB is primarily involved with multi-seller conduits and VIEs associated with investor intermediation activities. A discussion of these VIEs follows:

Multi-seller conduits

Funding and liquidity

The Firm is an active participant in the asset-backed securities business, and it helps customers meet their financing needs by providing access to the commercial paper markets through VIEs known as multi-seller conduits. Multi-seller conduit entities are separate bankruptcy-remote entities that purchase interests in, and make loans secured by, pools of receivables and other financial assets pursuant to agreements with customers of the Firm. The conduits fund their purchases and loans through the issuance of highly rated commercial paper to third-party investors. The primary source of repayment of the commercial paper is the cash flow from the pools of assets. In most instances, the assets are structured with deal-specific credit enhancements provided by the customers (i.e., sellers) to the conduits or other third parties. Deal-specific credit enhancements are generally structured to cover a multiple of historical losses expected on the pool of assets, and are typically in the form of overcollateralization provided by the seller, but also may include any combination of the following: recourse to the seller or originator, cash collateral accounts, letters of credit, excess spread, retention of subordinated interests or third-party guarantees. The deal-specific credit enhancements mitigate the Firm's potential losses on its agreements with the conduits.

JPMorgan Chase receives fees related to the structuring of multi-seller conduit transactions and receives compensation from the multi-seller conduits for its role as administrative agent, liquidity provider, and provider of program-wide credit enhancement.

As a means of ensuring timely repayment of the commercial paper, each asset pool financed by the conduits has a minimum 100% deal-specific liquidity facility associated with it. Deal-specific liquidity facilities are the primary source of liquidity support for the conduits. The deal-specific liquidity facilities are typically in the form of asset purchase agreements and are generally structured so that the liquidity that will be provided by the Firm as liquidity provider will be effected by the Firm purchasing, or lending against, a pool of nondefaulted, performing assets. In limited circumstances the Firm may provide unconditional liquidity.

The conduit's administrative agent can require the liquidity provider to perform under its asset purchase agreement with the conduit at any time. These agreements may cause the liquidity provider, including the Firm, to purchase an asset from the conduit at an amount above the asset's then current fair value – in effect providing a guarantee of the initial value of the reference asset as of the date of the agreement.

The Firm also provides the multi-seller conduit vehicles with program-wide liquidity facilities, in the form of uncommitted short-term revolving facilities that can be accessed by the conduits to handle funding increments too small to be funded by commercial paper, and in the form of uncommitted liquidity facilities that can be accessed by the conduits only in the event of short-term disruptions in the commercial paper market.

Because the majority of the liquidity facilities will only fund nondefaulted assets, program-wide credit enhancement is required to absorb losses on defaulted receivables in excess of losses absorbed by deal-specific credit enhancement. Program-wide credit enhancement may be provided by JPMorgan Chase in the form of standby letters of credit or by a third-party surety bond provider. The amount of program-wide credit enhancement required varies by conduit and ranges between 5% and 10% of total assets.

The following table summarizes the Firm's involvement with Firm-administered multi-seller conduits.

	Consolidated		Nonconsolidated		**Total**	
December 31, (in billions)	**2007**	2006	**2007**	2006	**2007**	2006

Program-wide limited credit enhancements	**—**	—	**2.5**	1.6	**2.5**	1.6
Maximum exposure to loss[(a)]	**—**	1.0	**88.9**	67.0	**88.9**	68.0

(a) The Firm's maximum exposure to loss is limited to the amount of drawn commitments (i.e., sellers' assets held by the multi-seller conduits for which the Firm provides liquidity support) of $61.2 billion and $43.9 billion at December 31, 2007 and 2006, respectively, plus contractual but undrawn commitments of $27.7 billion and $24.1 billion at December 31, 2007 and 2006, respectively. Since the Firm provides credit enhancement and liquidity to Firm-administered, multi-seller conduits, the maximum exposure is not adjusted to exclude exposure that would be absorbed by third-party liquidity providers.

Assets funded by the multi-seller conduits

JPMorgan Chase's administered multi-seller conduits fund a variety of asset types for the Firm's clients. Asset types primarily include credit card receivables, auto loans and leases, trade receivables, education loans, commercial loans, residential mortgages, capital commitments (e.g., loans to private equity, mezzanine and real estate opportunity funds secured by capital commitments of highly rated institutional investors), and various other asset types. It is the Firm's intention that the assets funded by its administered multi-seller conduits be sourced only from the Firm's clients and not be originated by or transferred from JPMorgan Chase.

The following table presents information on the commitments and assets held by JPMorgan Chase's administered multi-seller conduits as of December 31, 2007 and 2006.

Summary of exposure to Firm-administered nonconsolidated multi-seller conduits

	2007				2006			
December 31, (in billions)	Unfunded commitments[a]	Funded assets	Liquidity provided by third parties	Total exposure	Unfunded commitments[a]	Funded assets	Liquidity provided by third parties	Total exposure
Asset types:

(a) Unfunded commitments held by the conduits represent asset purchase agreements between the conduits and the Firm.
(b) The ratings scale is presented on an S&P equivalent basis.
(c) Weighted average expected life for each asset type is based upon the remainder of each conduit transaction's committed liquidity plus the expected weighted average life of the assets should the committed liquidity expire without renewal, or the expected time to sell the underlying assets in the securitization market.

The assets held by the multi-seller conduits are structured so that if the assets were rated, the Firm believes the majority of them would receive an "A" rating or better by external rating agencies. However, it is unusual for the assets held by the conduits to be explicitly rated by an external rating agency. Instead, the Firm's Credit Risk group assigns each asset purchase liquidity facility an internal risk-rating based on its assessment of the probability of default for the transaction. The ratings provided in the above table reflect the S&P-equivalent ratings of the internal rating grades assigned by the Firm.

The risk ratings are periodically reassessed as information becomes available. As a result of the deterioration in the credit markets during the second half of 2007, a number of asset purchase liquidity facilities had internal ratings downgrades. These downgrades involved facilities across various asset types. The largest concentration of downgrades related to residential mortgage and education loan exposures. As of December 31, 2007, 99% of the assets in the conduits were risk rated "A-" or better.

Commercial paper issued by the multi-seller conduits
The weighted average life of commercial paper issued by the multi-seller conduits was 51 days in 2007, compared with 36 days in 2006, and the average yield on the commercial paper was 5.3% in 2007, compared with 5.0% in 2006.

In the second half of 2007, the asset-backed commercial paper market was challenging as investors were concerned about potential subprime mortgage exposures. These concerns negatively affected the ability of many VIEs to reissue maturing commercial paper. However, investors have continued to purchase the commercial paper issued by the Firm-administered multi-seller conduits, although at higher yields and shorter maturities. Commercial paper spreads widened most significantly in December 2007, reflecting commercial paper investors' concerns about year-end redemptions and their need to have cash available.

In the normal course of business, JPMorgan Chase trades and invests in commercial paper, including commercial paper issued by the Firm-administered conduits. The percentage of commercial paper purchased by the Firm across all Firm-administered conduits during 2007 ranged from less than 1% to approximately 10% on any given day. The largest daily amount held by the Firm in any one multi-seller conduit during 2007 was approximately $2.7 billion, or 16%, of the conduit's commercial paper outstanding. Total commercial paper held by the Firm at December 31, 2007 and 2006, was $131 million and $1.3 billion, respectively. The Firm is not obligated under any agreement (contractual or noncontractual) to purchase the commercial paper issued by JPMorgan Chase-administered conduits.

Significant 2007 activity
In July 2007, a reverse repurchase agreement collateralized by prime residential mortgages held by a Firm-administered multi-seller conduit was put to JPMorgan Chase under its deal-specific liquidity facility. The asset was transferred to and recorded by JPMorgan Chase at its par value based on the fair value of the collateral that supported the reverse repurchase agreement. During the fourth quarter of 2007, additional information regarding the value of the collateral, including performance statistics, resulted in the determination by the Firm that the fair value of the collateral was impaired. Impairment losses will be allocated to the expected loss note ("ELN") holder (the party that absorbs the majority of the expected loss from the conduit) in accordance with the contractual provisions of the ELN note.

On October 29, 2007, certain structured CDO assets originated in the second quarter of 2007 and backed by subprime mortgages were transferred to the Firm from two Firm-administered multi-seller conduits. It became clear in October that commercial paper investors and rating agencies were becoming increasingly concerned about CDO assets backed by subprime mortgage exposures. Because of these concerns, and to ensure the continuing viability of the two conduits as financing vehicles for clients and as investment alternatives for commercial paper investors, the Firm, in its role as administrator, transferred the CDO assets out of the multi-seller conduits. The structured CDO assets were transferred to the Firm at their par value of $1.4 billion. As of December 31, 2007, the CDO assets were valued on the Consolidated balance sheet at $291 million.

There are no other structured CDO assets backed by subprime mortgages remaining in JPMorgan Chase-administered multi-seller conduits as of December 31, 2007. In addition, the Firm has no plans to permit the multi-seller conduits to purchase such assets in the future.

Consolidation analysis
The multi-seller conduits administered by the Firm are not consolidated at December 31, 2007, because each conduit had issued ELNs, the holders of which are committed to absorbing the majority of the expected loss of each respective conduit.

Implied support
The Firm's expected loss modeling treats all variable interests, other than the ELNs, as its own to determine consolidation. The Firm does not consider the October 2007 transfer of the structured CDO assets from the multi-seller conduits to JPMorgan Chase to be an indicator of JPMorgan Chase's intent to provide implicit support to the ELN holders. Instead, this action was a one-time, isolated event, limited to a specific type of asset that is not typically funded in the Firm's administered multi-seller conduits and for which the Firm has no plans (in its capacity as administrator) to allow the conduits to purchase in the future.

The Firm did not have and continues not to have any intent to protect any ELN holders from potential losses on any of the conduits' holdings and has no plans to remove any assets from any conduit unless required to do so in its role as administrator. Should such a transfer occur, the Firm would allocate losses on such assets between itself and the ELN holders in accordance with the terms of the applicable ELN.

Expected loss modeling
In 2006, the Firm restructured four multi-seller conduits that it administers. The restructurings included enhancing the Firm's expected loss model. In determining the primary beneficiary of the conduits it administers, the Firm uses a Monte Carlo–based model to estimate the expected losses of each of the conduits and considers the relative rights and obligations of each of the variable interest holders. The variability to be considered in the modeling of expected losses is based on the design of the entity. The Firm's traditional multi-seller conduits are designed to pass credit risk, not liquidity risk, to its variable interest holders, as the assets are intended to be held in the conduit for the longer term.

Under FIN 46R, the Firm is required to run the Monte Carlo-based expected loss model each time a reconsideration event occurs. In applying this guidance to the conduits, the following events are considered to be reconsideration events as they could affect the determination of the primary beneficiary of the conduits:

- New deals, including the issuance of new or additional variable interests (credit support, liquidity facilities, etc);
- Changes in usage, including the change in the level of outstanding variable interests (credit support, liquidity facilities, etc);
- Modifications of asset purchase agreements; and
- Sales of interests held by the primary beneficiary.

From an operational perspective, the Firm does not run its Monte Carlo-based expected loss model every time there is a reconsideration event due to the frequency of their occurrence. Instead, the Firm runs its expected loss model each quarter and includes a growth assumption for each conduit to ensure that a sufficient amount of ELNs exists for each conduit at any point during the quarter.

As part of its normal quarterly model review, the Firm reassesses the underlying assumptions and inputs of the expected loss model. During the second half of 2007, certain assumptions used in the model were adjusted to reflect the then current market conditions. Specifically, risk ratings and loss given default assumptions relating to residential subprime mortgage exposures were modified. For other nonmortgage-related asset classes, the Firm determined that the assumptions in the model required little adjustment. As a result of the updates to the model, during the fourth quarter of 2007 the terms of the ELNs were renegotiated to increase the level of commitment and funded amounts to be provided by the ELN holders. The total amount of expected loss notes outstanding at December 31, 2007 and 2006, were $130 million and $54 million, respectively. Management concluded that the model assumptions used were reflective of market participant's assumptions and appropriately considered the probability of a recurrence of recent market events.

Qualitative considerations
The multi-seller conduits are primarily designed to provide an efficient means for clients to access the commercial paper market. The Firm believes the conduits effectively disperse risk among all parties and that the preponderance of economic risk in the Firm's multi-seller conduits is not held by JPMorgan Chase. The percentage of assets in the multi-seller conduits that the Firm views as client-related represent 99% and 98% of the total conduits' holdings at December 31, 2007 and 2006, respectively.

Consolidated sensitivity analysis on capital
It is possible that the Firm could be required to consolidate a VIE if it were determined that the Firm became the primary beneficiary of the VIE under the provisions of FIN 46R. The factors involved in making the determination of whether or not a VIE should be consolidated are discussed above and in Note 1 on page 108 of this Annual Report.
The table below shows the impact on the Firm's reported assets, liabilities, Net income, Tier 1 capital ratio and Tier 1 leverage ratio if the Firm were required to consolidate all of the multi-seller conduits that it administers.

As of or for the year ending
December 31, 2007

(in billions, except ratios)	Reported	Pro forma
Assets	$1,562.1	$1,623.9
Liabilities	1,438.9	1,500.9
Net income	15.4	15.2
Tier 1 capital ratio	8.4%	8.4%
Tier 1 leverage ratio	6.0	5.8

The Firm could fund purchases of assets from VIEs should it become necessary.

Investor intermediation
As a financial intermediary, the Firm creates certain types of VIEs and also structures transactions, typically derivative structures, with these VIEs to meet investor needs. The Firm may also provide liquidity and other support. The risks inherent in the derivative instruments or liquidity commitments are managed similarly to other credit, market or liquidity risks to which the Firm is exposed. The principal types of VIEs for which the Firm is engaged in these structuring activities are municipal bond vehicles, credit-linked note vehicles and collateralized debt obligation vehicles.

Municipal bond vehicles
The Firm has created a series of secondary market trusts that provide short-term investors with qualifying tax-exempt investments, and that allow investors in tax-exempt securities to finance their investments at short-term tax-exempt rates. In a typical transaction, the vehicle purchases fixed-rate longer-term highly rated municipal bonds and funds the purchase by issuing two types of securities: (1) putable floating-rate certificates and (2) inverse floating-rate residual interests ("residual interests"). The maturity of each of the putable floating-rate certificates and the residual interests is equal to the life of the vehicle, while the maturity of the underlying municipal bonds is longer. Holders of the putable floating-rate certificates may "put", or tender, the certificates if the remarketing agent cannot successfully remarket the floating-rate certificates to another investor. A liquidity facility conditionally obligates the liquidity provider to fund the purchase of the tendered floating-rate certificates. Upon termination of the vehicle, if the proceeds from the sale of the underlying municipal bonds are not sufficient to repay the liquidity facility, the liquidity provider has recourse either to excess collateralization in the vehicle or the residual interest holders for reimbursement.

The third-party holders of the residual interests in these vehicles could experience losses if the face amount of the putable floating-rate certificates exceeds the market value of the municipal bonds upon termination of the vehicle. Certain vehicles require a smaller initial investment by the residual interest holders and thus do not result in excess collateralization. For these vehicles there exists a reimbursement obli-

gation which requires the residual interest holders to post, during the life of the vehicle, additional collateral to the vehicle on a daily basis as the market value of the municipal bonds declines.

JPMorgan Chase often serves as the sole liquidity provider and remarketing agent of the putable floating-rate certificates. As the liquidity provider, the Firm has an obligation to fund the purchase of the putable floating-rate certificates; this obligation is triggered by the failure to remarket the putable floating-rate certificates. The liquidity provider's obligation to perform is conditional and is limited by certain termination events which include bankruptcy or failure to pay by the municipal bond issuer or credit enhancement provider, and the immediate downgrade of the municipal bond to below investment grade. In vehicles in which third-party investors own the residual interests, in addition to the termination events, the Firm's exposure as liquidity provider is further limited by the high credit quality of the underlying municipal bonds, and the excess collateralization in the vehicle or the reimbursement agreements with the residual interest holders.

As remarketing agent, the Firm may hold the putable floating-rate certificates; at December 31, 2007 and 2006, respectively, the Firm held $617 million and $275 million of these certificates on its Consolidated balance sheets. The largest amount held by the Firm at any time during 2007 was $1.0 billion, or 5%, of the municipal bond vehicles' outstanding putable floating-rate certificates. During 2007 and 2006, the Firm did not experience a draw on the liquidity facilities.

The long-term credit ratings of the putable floating-rate certificates are directly related to the credit ratings of the underlying municipal bonds, and to the credit rating of any insurer of the underlying municipal bond. A downgrade of a bond insurer would result in a downgrade of the insured municipal bonds, which would affect the rating of the putable floating-rate certificates. This could cause demand for these certificates by investors to decline or disappear, as putable floating-rate certificate holders typically require an "AA-" bond rating. At December 31, 2007 and 2006, 99% of the underlying municipal bonds held by vehicles to which the Firm served as liquidity provider were rated "AA-" or better. At December 31, 2007 and 2006, $702 million and $606 million, respectively, of the bonds were insured by a third party. During 2007 and 2006, the municipal bond vehicles did not experience any bankruptcy or downgrade termination events.

The Firm sometimes invests in the residual interests of municipal bond vehicles. For VIEs in which the Firm owns the residual interests, the Firm consolidates the VIEs. The likelihood that the Firm would have to consolidate VIEs where the Firm does not own the residual interests and that are currently off-balance sheet is remote.

Exposure to nonconsolidated municipal bond VIEs at December 31, 2007 and 2006, including the ratings profile of the VIE's assets, were as follows.

	2007				2006			
December 31, (in billions)	Fair value of assets held by VIEs	Liquidity facilities[c]	Excess/ (deficit)[d]	Total exposure	Fair value of assets held by VIEs	Liquidity facilities[c]	Excess/ (deficit)[d]	Total exposure
Nonconsolidated Municipal bond vehicles[a][b]	**$ 19.2**	**$ 18.1**	**$ 1.1**	**$ 18.1**	$ 11.1	$ 10.3	$ 0.8	$ 10.3

	Ratings profile of VIE assets[e]						
	Investment-grade				Noninvestment-grade		
December 31, (in billions)	AAA to AAA-	AA+ to AA-	A+ to A-	BBB to BBB-	BB+ and below	Fair value of assets held by VIEs	Wt. avg. expected life of assets (years)
Nonconsolidated municipal bond vehicles[a]							
2007	**$ 14.6**	**$ 4.4**	**$ 0.2**	**$ —**	**$ —**	**$ 19.2**	**10.0**
2006	9.4	1.6	0.1	—	—	11.1	10.0

(a) Excluded $6.9 billion and $4.6 billion at December 31, 2007 and 2006, respectively, which were consolidated due to the Firm owning the residual interests.
(b) Certain of the municipal bond vehicles are structured to meet the definition of a QSPE (as discussed in Note 1 on page 108 of this Annual Report); accordingly, the assets and liabilities of QSPEs are not reflected in the Firm's Consolidated balance sheets (except for retained interests that are reported at fair value). Excluded nonconsolidated amounts of $7.1 billion and $4.7 billion at December 31, 2007 and 2006, respectively, related to QSPE municipal bond vehicles in which the Firm owned the residual interests.
(c) The Firm may serve as credit enhancement provider in municipal bond vehicles in which it serves as liquidity provider. The Firm provided insurance on underlying municipal bonds in the form of letters of credit in the amount of $103 million and $82 million at December 31, 2007 and 2006, respectively.
(d) Represents the excess (deficit) of municipal bond asset fair value available to repay the liquidity facilities if drawn.
(e) The ratings scale is presented on an S&P equivalent basis.

Credit-linked note vehicles

The Firm structures transactions with credit-linked note ("CLN") vehicles in which the VIE purchases highly rated assets (such as asset-backed securities) and enters into a credit derivative contract with the Firm to obtain exposure to a referenced credit which the VIE otherwise does not hold. The VIE then issues CLNs with maturities predominantly ranging from one to 10 years in order to transfer the risk of the referenced credit to the VIE's investors. Clients and investors often prefer using a CLN vehicle since the CLNs issued by the VIE generally carry a higher credit rating than such notes would if issued directly by JPMorgan Chase. The Firm's exposure to the CLN vehicles is generally limited to its rights and obligations under the credit derivative contract with the VIE as the Firm does not provide any additional financial support to the VIE. Accordingly, the Firm typically does not consolidate the CLN vehicles. As a derivative counterparty in a credit-linked note structure, the Firm has a senior claim on the collateral of the VIE and reports such derivatives on its balance sheet at fair value. Substantially all of the collateral purchased by such VIEs is investment-grade, with a significant majority being rated "AAA". The Firm divides its credit-linked note structures broadly into two types: static and managed.

In a static credit-linked note structure, the CLNs and associated credit derivative contract either reference a single credit (e.g., a multinational corporation) or all or part of a fixed portfolio of credits. The Firm generally buys protection from the VIE under the credit derivative. As a net buyer of credit protection, the Firm pays a premium to the VIE in return for the receipt of a payment (up to the notional amount of the derivative) if one or more reference credits defaults, or if the losses resulting from the default of the reference credits exceed specified levels.

In a managed credit-linked note structure, the CLNs and associated credit derivative generally reference all or part of an actively managed portfolio of credits. An agreement exists between a portfolio manager and the VIE that gives the portfolio manager the ability to substitute each referenced credit in the portfolio for an alternative credit. By participating in a structure where a portfolio manager has the ability to substitute credits within pre-agreed terms, the investors who own the CLNs seek to reduce the risk that any single credit in the portfolio will default. The Firm does not act as portfolio manager; its involvement with the VIE is generally limited to being a derivative counterparty. As a net buyer of credit protection, the Firm pays a premium to the VIE in return for the receipt of a payment (up to the notional of the derivative) if one or more credits within the portfolio defaults, or if the losses resulting from the default of reference credits exceed specified levels. Exposure to nonconsolidated credit-linked note VIEs at December 31, 2007 and 2006, was as follows.

	2007				2006			
December 31, (in billions)	Derivative receivable	Trading assets[c]	Total exposure[d]	Par value of collateral held by VIEs	Derivative receivable	Trading assets[c]	Total exposure[d]	Par value of collateral held by VIEs
Credit-linked notes[a]								
Static structure	**$ 0.8**	**$ 0.4**	**$ 1.2**	**$ 13.5**	$ 0.2	$ 0.1	$ 0.3	$15.9
Managed structure[b]	**4.5**	**0.9**	**5.4**	**12.8**	0.4	0.2	0.6	8.9
Total	**$ 5.3**	**$ 1.3**	**$ 6.6**	**$ 26.3**	$ 0.6	$ 0.3	$ 0.9	$24.8

(a) Excluded fair value of collateral of $2.5 billion and $2.0 billion at December 31, 2007 and 2006, respectively, which were consolidated.
(b) Includes synthetic CDO vehicles, which have similar risk characteristics to managed CLN vehicles; 2006 amounts have been revised to reflect this presentation. 2007 trading assets amounts include $291 million of transactions with subprime collateral.
(c) Trading assets principally comprise notes issued by VIEs, which from time to time are held as part of the termination of a deal or to support limited market-making.
(d) On-balance sheet exposure that includes Derivative receivables and trading assets.

Collateralized Debt Obligations vehicles

A CDO typically refers to a security that is collateralized by a pool of bonds, loans, equity, derivatives or other assets. The Firm's involvement with a particular CDO vehicle may take one or more of the following forms: arranger, warehouse funding provider, placement agent or underwriter, secondary market-maker for securities issued, or derivative counterparty.

Prior to the formal establishment of a CDO vehicle, there is a warehousing period where a VIE may be used to accumulate the assets which will be subsequently securitized and will serve as the collateral for the securities to be issued to investors. During this warehousing period, the Firm may provide all or a portion of the financing to the VIE, for which the Firm earns interest on the amounts it finances. A third-party asset manager that will serve as the manager for the CDO vehicle uses the warehouse funding provided by the Firm to purchase the financial assets. The funding commitments generally are one year in duration. In the event that the securitization of assets does not occur within the committed financing period, the warehoused assets are generally liquidated.

Because of the varied levels of support provided by the Firm during the warehousing period, which typically averages six to nine months, each CDO warehouse VIE is assessed in accordance with FIN 46(R) to determine whether the Firm is considered the primary beneficiary that should consolidate the VIE. In general, the Firm would consolidate the warehouse VIE unless another third party, typically the asset manager,

provides significant protection for potential declines in the value of the assets held by the VIE. In those cases, the third party that provides the protection to the warehouse VIE would consolidate the VIE.

Once the portfolio of warehoused assets is large enough, the VIE will issue securities. The proceeds from the securities issuance will be used to repay the warehouse financing obtained from the Firm and other counterparties. In connection with the establishment of the CDO vehicle, the Firm typically earns a fee for arranging the CDO vehicle and distributing the securities (as placement agent and/or underwriter) and does not typically own any equity tranches issued. Once the CDO vehicle closes and issues securities, the Firm has no further obligation to provide further support to the vehicle. At the time of closing, the Firm may hold unsold positions that the Firm was not able to place with third-party investors. The amount of unsold positions at December 31, 2007, was insignificant. In addition, the Firm may on occasion hold some of the CDO vehicles' securities as a secondary market-maker or as a principal investor, or it may be a derivative counterparty to the vehicles. At December 31, 2007 and 2006, these amounts were not significant.

Exposures to CDO warehouse VIEs at December 31, 2007 and 2006, were as follows.

December 31, 2007 (in billions)	Funded loans	Unfunded commitments[a]	Total exposure[b]
CDO warehouse VIEs			
Consolidated	**$ 2.4**	**$ 1.9**	**$ 4.3**
Nonconsolidated	**2.7**	**3.4**	**6.1**
Total	**$ 5.1**	**$ 5.3**	**$ 10.4**

December 31, 2006 (in billions)	Funded loans	Unfunded commitments[a]	Total exposure[b]
CDO warehouse VIEs			
Consolidated	$ 2.3	$ 2.5	$ 4.8
Nonconsolidated	3.6	5.9	9.5
Total	$ 5.9	$ 8.4	$ 14.3

	Ratings profile of VIE assets[c]					
	Investment-grade				Noninvestment-grade	
December 31, (in billions)	AAA to AAA-	AA+ to AA-	A+ to A-	BBB to BBB-	BB+ and below	Total exposure
Nonconsolidated CDO warehouse VIEs						
2007	**$ —**	**$ —**	**$ —**	**$ —**	**$ 2.7**	**$ 2.7**
2006	—	—	—	0.8	2.8	3.6

(a) Typically contingent upon certain asset-quality conditions being met by asset managers.
(b) The aggregate of the fair value of loan exposure and any unfunded contractually committed financing.
(c) The ratings scale is based upon JPMorgan Chase's internal risk ratings and is presented on an S&P equivalent basis.

Consolidated VIE assets

The following table summarizes the Firm's total consolidated VIE assets, by classification, on the Consolidated balance sheets, as of December 31, 2007 and 2006.

December 31, (in billions)	**2007**	2006
Consolidated VIE assets		
Securities purchased under resale agreements[a]	**$ 0.1**	$ 8.0
Trading assets[b]	**14.4**	9.8
Investment securities	**—**	0.2
Loans[a]	**4.4**	15.9
Other assets	**0.7**	2.9
Total consolidated assets	**$ 19.6**	$ 36.8

(a) Included activity conducted by the Firm in a principal capacity, primarily in the IB.
(b) Included the fair value of securities and derivative receivables.

The interest-bearing beneficial interest liabilities issued by consolidated VIEs are classified in the line item titled, "Beneficial interests issued by consolidated variable interest entities" on the Consolidated balance sheets. The holders of these beneficial interests do not have recourse to the general credit of JPMorgan Chase. See Note 21 on page 159 of this Annual Report for the maturity profile of FIN 46 long-term beneficial interests.

Other topics related to VIEs

VIEs Structured by Unrelated Parties

The Firm enters into transactions with VIEs structured by other parties. These transactions include, for example, acting as a derivative counterparty, liquidity provider, investor, underwriter, placement agent, trustee or custodian. These transactions are conducted at arm's length, and individual credit decisions are based upon the analysis of the specific VIE, taking into consideration the quality of the underlying assets. Where these activities do not cause JPMorgan Chase to absorb a majority of the expected losses of the VIEs or to receive a majority of the residual returns of the VIEs, JPMorgan Chase records and reports these positions on its balance sheet similar to the way it would record and report positions from any other third-party transaction. These transactions are not considered significant for disclosure purposes under FIN 46(R).

Note 18 – Goodwill and other intangible assets

Goodwill is not amortized. It is instead tested for impairment in accordance with SFAS 142 at the reporting-unit segment, which is generally one level below the six major reportable business segments (as described in Note 34 on pages 175–177 of this Annual Report); plus Private Equity (which is included in Corporate). Goodwill is tested annually (during the fourth quarter) or more often if events or circumstances, such as adverse changes in the business climate, indicate there may be impairment. Intangible assets determined to have indefinite lives are not amortized but instead are tested for impairment at least annually, or more frequently if events or changes in circumstances indicate that the asset might be impaired. The impairment test compares the fair value of the indefinite-lived intangible asset to its carrying amount. Other acquired intangible assets determined to have finite lives, such as core deposits and credit card relationships, are amortized over their estimated useful lives in a manner that best reflects the economic benefits of the intangible asset. In addition, impairment testing is performed periodically on these amortizing intangible assets.

Goodwill and other intangible assets consist of the following.

December 31, (in millions)	**2007**	2006
Goodwill	**$ 45,270**	$ 45,186
Mortgage servicing rights	**8,632**	7,546
Purchased credit card relationships	**2,303**	2,935
All other intangibles:		
Other credit card–related intangibles	**$ 346**	$ 302
Core deposit intangibles	**2,067**	2,623
Other intangibles	**1,383**	1,446
Total All other intangible assets	**$ 3,796**	$ 4,371

Goodwill

The $84 million increase in Goodwill from 2006 primarily resulted from certain acquisitions by TSS and CS, and currency translation adjustments on the Sears Canada credit card acquisition. Partially offsetting these increases was a reduction in Goodwill from the adoption of FIN 48, as well as tax-related purchase accounting adjustments. For additional information see Note 26 on pages 164–165 of this Annual Report.

Goodwill was not impaired at December 31, 2007, or 2006, nor was any goodwill written off due to impairment during 2007 and 2006.

Goodwill attributed to the business segments was as follows.

December 31, (in millions)	**2007**	2006
Investment Bank	**$ 3,578**	$ 3,526
Retail Financial Services	**16,848**	16,955
Card Services	**12,810**	12,712
Commercial Banking	**2,873**	2,901
Treasury & Securities Services	**1,660**	1,605
Asset Management	**7,124**	7,110
Corporate (Private Equity)	**377**	377
Total Goodwill	**$ 45,270**	$ 45,186

Mortgage servicing rights

JPMorgan Chase recognizes as intangible assets mortgage servicing rights, which represent the right to perform specified residential mortgage servicing activities for others. MSRs are either purchased from third parties or retained upon sale or securitization of mortgage loans. Servicing activities include collecting principal, interest, and escrow payments from borrowers; making tax and insurance payments on behalf of the borrowers; monitoring delinquencies and executing foreclosure proceedings; and accounting for and remitting principal and interest payments to the investors of the mortgage-backed securities.

The amount initially capitalized as MSRs represents the amount paid to third parties to acquire MSRs or is the estimate of fair value, if retained upon the sale or securitization of mortgage loans. The Firm estimates the fair value of MSRs for initial capitalization and ongoing valuation using an option-adjusted spread model, which projects MSR cash flows over multiple interest rate scenarios in conjunction with the Firm's proprietary prepayment model, and then discounts these cash

flows at risk-adjusted rates. The model considers portfolio characteristics, contractually specified servicing fees, prepayment assumptions, delinquency rates, late charges, other ancillary revenue and costs to service, and other economic factors. The Firm reassesses and periodically adjusts the underlying inputs and assumptions used in the OAS model to reflect market conditions and assumptions that a market participant would consider in valuing the MSR asset. During the fourth quarter of the 2007, the Firm's proprietary prepayment model was refined to reflect a decrease in estimated future mortgage prepayments based upon a number of market related factors including a downward trend in home prices, general tightening of credit underwriting standards and the associated impact on refinancing activity. The Firm compares fair value estimates and assumptions to observable market data where available and to recent market activity and actual portfolio experience.

The fair value of MSRs is sensitive to changes in interest rates, including their effect on prepayment speeds. JPMorgan Chase uses or has used combinations of derivatives, AFS securities and trading instruments to manage changes in the fair value of MSRs. The intent is to offset any changes in the fair value of MSRs with changes in the fair value of the related risk management instruments. MSRs decrease in value when interest rates decline. Conversely, securities (such as mortgage-backed securities), principal-only certificates and certain derivatives (when the Firm receives fixed-rate interest payments) increase in value when interest rates decline.

In March 2006, the FASB issued SFAS 156, which permits an entity a one-time irrevocable election to adopt fair value accounting for a class of servicing assets. JPMorgan Chase elected to adopt the standard effective January 1, 2006, and defined MSRs as one class of servicing assets for this election. At the transition date, the fair value of the MSRs exceeded their carrying amount, net of any related valuation allowance, by $150 million net of taxes. This amount was recorded as a cumulative-effect adjustment to retained earnings as of January 1, 2006. MSRs are recognized in the Consolidated balance sheet at fair value, and changes in their fair value are recorded in current-period earnings. Revenue amounts related to MSRs and the financial instruments used to manage the risk of MSRs are recorded in Mortgage fees and related income.

For the year ended December 31, 2005, MSRs were accounted for under SFAS 140, using a lower of cost or fair value approach. Under this approach, MSRs were amortized as a reduction of the actual servicing income received in proportion to, and over the period of, the estimated future net servicing income stream of the underlying mortgage loans. For purposes of evaluating and measuring impairment of MSRs, the Firm stratified the portfolio on the basis of the predominant risk characteristics, which are loan type and interest rate. Any indicated impairment was recognized as a reduction in revenue through a valuation allowance, which represented the extent to which the carrying value of an individual stratum exceeded its estimated fair value. Any gross carrying value and related valuation allowance amounts which were not expected to be recovered in the foreseeable future, based upon the interest rate scenario, were considered to be other-than-temporary.

Prior to the adoption of SFAS 156, the Firm designated certain derivatives used to risk manage MSRs (e.g., a combination of swaps, swaptions and floors) as SFAS 133 fair value hedges of benchmark interest rate risk. SFAS 133 hedge accounting allowed the carrying value of the hedged MSRs to be adjusted through earnings in the same period that the change in value of the hedging derivatives was recognized through earnings. The designated hedge period was daily. In designating the benchmark interest rate, the Firm considered the impact that the change in the benchmark rate had on the prepayment speed estimates in determining the fair value of the MSRs. Hedge effectiveness was assessed using a regression analysis of the change in fair value of the MSRs as a result of changes in benchmark interest rates and of the change in the fair value of the designated derivatives. The valuation adjustments to both the MSRs and SFAS 133 derivatives were recorded in Mortgage fees and related income. With the election to apply fair value accounting to the MSRs under SFAS 156, SFAS 133 hedge accounting is no longer necessary. For a further discussion on derivative instruments and hedging activities, see Note 30 on pages 168–169 of this Annual Report.

The following table summarizes MSR activity, certain key assumptions, and the sensitivity of the fair value of MSRs to adverse changes in those key assumptions for the years ended December 31, 2007 and 2006, during which period MSRs were accounted for under SFAS 156.

Year ended December 31, (in millions)	**2007**	2006
Balance at beginning of period after valuation allowance	**$ 7,546**	$ 6,452
Cumulative effect of change in accounting principle	**—**	230
Fair value at beginning of period	**7,546**	6,682
Originations of MSRs	**2,335**	1,512
Purchase of MSRs	**798**	627
Total additions	**3,133**	2,139
Change in valuation due to inputs and assumptions[(a)]	**(516)**	165
Other changes in fair value[(b)]	**(1,531)**	(1,440)
Total change in fair value	**(2,047)**	(1,275)
Fair value at December 31	**$ 8,632**	$ 7,546
Change in unrealized (losses) gains included in income related to MSRs held at December 31	**$ (516)**	NA

(a) Represents MSR asset fair value adjustments due to changes in market-based inputs, such as interest rates and volatility, as well as updates to assumptions used in the MSR valuation model. This caption also represents total realized and unrealized gains (losses) included in Net income per the SFAS 157 disclosure for fair value measurement using significant unobservable inputs (level 3). These changes in fair value are recorded in Mortgage fees and related income.

(b) Includes changes in the MSR value due to modeled servicing portfolio runoff (or time decay). This caption represents the impact of cash settlements per the SFAS 157 disclosure for fair value measurement using significant unobservable inputs (level 3). These changes in fair value are recorded in Mortgage fees and related income.

The table below outlines the key economic assumptions used to determine the fair value of the Firm's MSRs at December 31, 2007 and 2006, respectively; and it outlines the sensitivities of those fair values to immediate 10% and 20% adverse changes in those assumptions.

Year ended December 31, (in millions, except rates and where otherwise noted)	**2007**	2006
Weighted-average prepayment speed assumption (CPR)	**12.49%**	17.02%
Impact on fair value of 10% adverse change	**$ (481)**	$ (381)
Impact on fair value of 20% adverse change	**(926)**	(726)
Weighted-average discount rate	**10.53%**	9.32%
Impact on fair value of 10% adverse change	**$ (345)**	$ (254)
Impact on fair value of 20% adverse change	**(664)**	(491)
Contractual service fees, late fees and other ancillary fees included in Mortgage fees and related income	**$ 2,429**	$ 2,038
Third-party Mortgage loans serviced at December 31 (in billions)	**$ 614.7**	$ 526.7

CPR: Constant prepayment rate.

The sensitivity analysis in the preceding table is hypothetical and should be used with caution. Changes in fair value based upon a 10% and 20% variation in assumptions generally cannot be easily extrapolated because the relationship of the change in the assumptions to the change in fair value may not be linear. Also, in this table, the effect that a change in a particular assumption may have on the fair value is calculated without changing any other assumption. In reality, changes in one factor may result in changes in another, which might magnify or counteract the sensitivities.

The following table summarizes MSR activity for the year ended December 31, 2005, during which period MSRs were accounted for under SFAS 140.

Year ended December 31, (in millions, except rates and where otherwise noted)	2005[c]
Balance at January 1	$ 6,111
Originations of MSRs	1,301
Purchase of MSRs	596
Total additions	1,897
Other-than-temporary impairment	(1)
Amortization	(1,295)
SFAS 133 hedge valuation adjustments	90
Balance at December 31	6,802
Less: valuation allowance[a]	350
Balance at December 31, after valuation allowance	$ 6,452
Estimated fair value at December 31	$ 6,682
Weighted-average prepayment speed assumption (CPR)	17.56%
Weighted-average discount rate	9.68%
Valuation allowance at January 1	$ 1,031
Other-than-temporary impairment[b]	(1)
SFAS 140 impairment (recovery) adjustment	(680)
Valuation allowance at December 31	$ 350
Contractual service fees, late fees and other ancillary fees included in Mortgage fees and related income	$ 1,769
Third-party Mortgage loans serviced at December 31 (in billions)	$ 467.5

(a) The valuation allowance in the preceding table at December 31, 2005, represented the extent to which the carrying value of MSRs exceeded the estimated fair value for its applicable SFAS 140 strata. Changes in the valuation allowance were the result of the recognition of impairment or the recovery of previously recognized impairment charges due to changes in market conditions during the period.
(b) The Firm recorded an other-than-temporary impairment of its MSRs of $1 million in 2005, which permanently reduced the gross carrying value of the MSRs and the related valuation allowance. The permanent reduction precluded subsequent reversals. This write-down had no impact on the results of operations or financial condition of the Firm.
(c) During the fourth quarter of 2005, the Firm began valuing MSRs using an OAS valuation model. Prior to the fourth quarter of 2005, MSRs were valued using cash flows and discount rates determined by a "static" or single interest rate path valuation model.
CPR: Constant prepayment rate

Purchased credit card relationships and All other intangible assets

During 2007, Purchased credit card relationships and all other intangible assets decreased $632 million and $575 million, respectively, primarily as a result of amortization expense.

Except for $513 million of indefinite-lived intangibles related to asset management advisory contracts which are not amortized, but instead are tested for impairment at least annually, the remainder of the Firm's other acquired intangible assets are subject to amortization.

The components of credit card relationships, core deposits and other intangible assets were as follows.

	2007			2006		
December 31, (in millions)	Gross amount	Accumulated amortization	Net carrying value	Gross amount	Accumulated amortization	Net carrying value
Purchased credit card relationships	**$ 5,794**	**$ 3,491**	**$ 2,303**	$ 5,716	$ 2,781	$ 2,935
All other intangibles:						
Other credit card–related intangibles	**422**	**76**	**346**	367	65	302
Core deposit intangibles	**4,281**	**2,214**	**2,067**	4,283	1,660	2,623
Other intangibles	**2,026**	**643**[a]	**1,383**	1,961	515[a]	1,446

(a) Includes amortization expense related to servicing assets on securitized automobile loans, which is recorded in Lending & deposit-related fees, of $9 million and $11 million for the years ended December 31, 2007 and 2006, respectively.

Amortization expense

The following table presents amortization expense related to credit card relationships, core deposits and All other intangible assets.

Year ended December 31, (in millions)	2007	2006	2005
Purchased credit card relationships	**$ 710**	$ 731	$ 703
All other intangibles:			
Other credit card–related intangibles	**11**	6	36
Core deposit intangibles	**554**	568	623
Other intangibles[a]	**119**	123	128
Total amortization expense	**$1,394**	$ 1,428	$ 1,490

(a) Amortization expense related to the aforementioned selected corporate trust businesses were reported in Income from discontinued operations for all periods presented.

Future amortization expense

The following table presents estimated future amortization expense related to credit card relationships, core deposits and All other intangible assets at December 31, 2007.

Year ended December 31, (in millions)	Purchased credit card relationships	Other credit card-related intangibles	Core deposit intangibles	All other intangible assets	**Total**
2008	$ 615	$ 23	$ 479	$ 114	$ 1,231
2009	438	29	397	103	967
2010	356	38	336	86	816
2011	293	43	293	76	705
2012	254	51	251	73	629

Note 19 – Premises and equipment

Premises and equipment, including leasehold improvements, are carried at cost less accumulated depreciation and amortization. JPMorgan Chase computes depreciation using the straight-line method over the estimated useful life of an asset. For leasehold improvements, the Firm uses the straight-line method computed over the lesser of the remaining term of the leased facility or the estimated useful life of the leased asset. JPMorgan Chase has recorded immaterial asset retirement obligations related to asbestos remediation under SFAS 143 and FIN 47 in those cases where it has sufficient information to estimate the obligations' fair value.

JPMorgan Chase capitalizes certain costs associated with the acquisition or development of internal-use software under SOP 98-1. Once the software is ready for its intended use, these costs are amortized on a straight-line basis over the software's expected useful life, and reviewed for impairment on an ongoing basis.

Note 20 – Deposits

At December 31, 2007 and 2006, Noninterest-bearing and Interest-bearing deposits were as follows.

December 31, (in millions)	**2007**	2006
U.S. offices:		
Noninterest-bearing	**$ 129,406**	$ 132,781
Interest-bearing (included $1,909 at fair value at December 31, 2007)	**376,194**	337,812
Non-U.S. offices:		
Noninterest-bearing	**6,342**	7,662
Interest-bearing (included $4,480 at fair value at December 31, 2007)	**228,786**	160,533
Total	**$ 740,728**	$ 638,788

At December 31, 2007 and 2006, time deposits in denominations of $100,000 or more were as follows.

December 31, (in millions)	**2007**	2006
U.S.	**$134,529**	$ 110,812
Non-U.S.	**69,171**	51,138
Total	**$203,700**	$ 161,950

At December 31, 2007, the maturities of time deposits were as follows.

December 31, 2007 (in millions)	U.S.	Non-U.S.	**Total**
2008	$ 159,663	$ 84,260	$ 243,923
2009	2,040	307	2,347
2010	819	80	899
2011	530	156	686
2012	1,211	211	1,422
After 5 years	347	253	600
Total	$ 164,610	$ 85,267	$ 249,877

Note 21 – Long-term debt

JPMorgan Chase issues long-term debt denominated in various currencies, although predominantly U.S. dollars, with both fixed and variable interest rates. The following table is a summary of long-term debt carrying values (including unamortized original issue discount, SFAS 133 valuation adjustments and fair value adjustments, where applicable) by contractual maturity for the current year.

By remaining maturity at **December 31, 2007** (in millions, except rates)		2007 Under 1 year	1–5 years	After 5 years	**Total**	2006 Total
Parent company						
Senior debt:[a]	Fixed rate	**$ 5,466**	**$ 14,669**	**$ 9,251**	**$ 29,386**	$ 20,316
	Variable rate	**11,406**	**29,022**	**7,118**	**47,546**	28,264
	Interest rates[b]	**0.96–6.63%**	**0.75–7.43%**	**1.25–6.00%**	**0.75–7.43%**	0.75–12.48%
Subordinated debt:	Fixed rate	**$ 903**	**$ 9,387**	**$ 17,471**	**$ 27,761**	$ 26,012
	Variable rate	**24**	**36**	**1,828**	**1,888**	1,989
	Interest rates[b]	**5.75–6.75%**	**5.90–10.00%**	**1.92–9.88%**	**1.92–10.00%**	1.60–10.00%
	Subtotal	**$ 17,799**	**$ 53,114**	**$ 35,668**	**$ 106,581**	$ 76,581
Subsidiaries						
Senior debt:[a]	Fixed rate	**$ 1,493**	**$ 2,588**	**$ 2,325**	**$ 6,406**	$ 10,449
	Variable rate	**8,603**	**36,263**	**15,690**	**60,556**	41,216
	Interest rates[b]	**3.70–6.67%**	**4.38–4.87%**	**3.85–14.21%**	**3.70–14.21%**	1.76–17.00%
Subordinated debt:	Fixed rate	**$ 801**	**$ 9**	**$ 8,359**	**$ 9,169**	$ 4,025
