

Extinction! Safari - Extensions

LEVEL UP your coding skills with [Prodigy Learning](#) and their [Coding Credentials](#) program! The agent is an amazing resource in Minecraft that is often under-utilized by students. Consider checking out Prodigy Learning and their coding courses, and revisiting the lesson to use the agent to help with design challenges, such as building an elevator or creating a labyrinth in the museum gardens.

Other Extension Ideas:

- To save time on the activity, students can be tasked with only taking notes on 3 platforms each, and at the end of the activity they can trade information to complete their knowledge of extinction events that have happened in the past.
- Students can also be encouraged to draw a timeline (can be done as a class) to track extinction events, and then students can visualize the rate at which extinction events have accelerated.
- Have students write a reflection at the end of their Book and Quill to record their responses to discussion questions posed in the video such as:
 - What is happening to the rate of extinction?
 - What are the common threads in all extinction events?
